BY B. F. U.

THE Rev. John Jasper's scientific ultimatum that "the sun do move" has been more than matched by the astronomical table formulated by a Welsh curate in a sermon recently delivered to an English congregation. He said: "A starr is but a lidl dot in the skyee. Saw many starrs mek one plannat. Saw many plannats mek a constellshon. Saw many constellshons mek one milkee we. Six milkee wes mek one rorribor-rallias."

We learn from *Knowledge*, an English scientific weekly, of which Prof. R. A. Proctor is editor, that at Alcira, a Spanish town near Valencia where the cholera is at present raging, of the 16,000 inhabitants it contains, 5,432 have been inoculated with the protective choleraic virus. Of those inoculated, 7 only have been attacked with the disease, and all have recovered. Of the 10,500 who have not taken this precaution, 64 have been stricken with cholera, and 30 have died,—a pretty strong argument in favor of the new preventive.

On Sunday, June 21, the Parker Memorial Society by invitation joined the Parker Memorial Science Class on an excursion to Lily's Grove, near Waltham, where they had a very pleasant picnic. Some orthodox people now wonder what the world is coming to, when a religious society can go picnicking on Sunday? The water, woods, and sky are as beautiful and the capacity to enjoy them as great on Sunday as on any other day. The birds do not stop singing, and the flowers do not hide their beauties or withhold their fragrance on that day.

ORSON S. MURRAY, who died June 14 at his residence in Warren County, Ohio, at the age of seventy-nine, was prominent years ago as an anti-slavery agitator and a radical free thinker. He prepared himself for the ministry, and for six years published the *Vermont Telegraph* in the interest of the Baptists. But he soon became an independent liberal thinker; and during fourteen years he edited the *Regenerator*, which was published in New York. Mr. Murray was a man of strong convictions; and his writings were marked by vigor, directness, and an uncompromising spirit.

THE committee appointed to manage the fund for a memorial to the late Mr. Fawcett, the blind Postmaster-General of England, has decided, "in accordance with what are certain to be the wishes of the majority of the subscribers, to establish a university scholarship for a blind person of either sex, and to appropriate the balance of the fund to the higher education of the blind in connection with the Royal Normal College and Academy of Music for the Blind at Upper Norwood, in some distinct form with which the name of Mr. Fawcett will be identified." His well-known advocacy of the equal rights of women makes the clause "for a blind person of either sex" exceptionally appropriate.

PERE HYACINTHE has been lecturing in Paris on universal suffrage and the separation of Church and State. He said that the Church and State could be safely separated only after a previous religious reformation. Macaulay said that the way to prepare men for liberty was to give them liberty. The way to inaugurate a religious reformation and to prepare the French people for the separation of Church and State is to dissolve the unholy union; and Pere Hyacinthe with his intelligence, if he were not a priest, would see this. Hyacinthe is a natural orator; and, if his mind had not been perverted by priestly teachings and a priestly office, he might at this time be doing noble work in the cause of intellectual liberty and political reform. But he lacks the genius to escape from the thralldom in which he was born, to rise above ecclesiastical influences, and to become an untrammelled, independent advocate of justice and freedom.

THE *Week* (Toronto) says the opinion that England has been made contemptible in the eyes of continental nations by England's recent foreign policy is not honestly held by any well-informed writers, and that whatever disappointment there is over the matter is among foreign statesmen, who would like to see England humbled, and thought they saw, in a possible war with Russia, an opportunity to strike a rival of whom they are jealous. "The best proof that Mr. Gladstone's policy in this matter was right is to be found in the fact that the verdict of those who speak the mother tongue the world over has been on England's side; and she stands better with them to-day, and enjoys a surer meed of glory than has happened to her on some occasions when Englishmen were more vainglorious. Let foreign journalists and disappointed Tories rave as they may, the British Government, on the Russian incident at any rate, carried with it the conscience of the civilized world."

IN spite of the praise lavished upon Mr. Lowell on his return to his native land, much of which is deserved,—for, as a man of letters, he has abroad conferred honor upon his country,—he can hardly be considered a representative of the most patriotic and democratic spirit and progressive ideas and tendencies of the American people. While Mr. Lowell has been very popular with the heredi-

tary aristocracy and the literary class, the two classes in England that are the least in sympathy with our republican institutions and with general reform, there is nothing to show, as a writer in the *Literary World* observes, "so much as exchanged calls with the men who represent the future and perhaps the speedy future of England,—men like Bright, Dilke, and Chamberlain,"—a fact that contributed perhaps to our ex-minister's unpopularity among Americans in London. This remark may seem rather ungracious; but, if we mistake not, it is demanded in the interest of truth.

THE thoroughly practical and non-sentimental side of the character of the average American citizen of to-day could not be better illustrated than it has been by the lack of enthusiasm shown by the people at large in furnishing the necessary funds for the pedestal for the magnificent, magnanimous, and poetic gift of France to America,—the Bartholdi statue of "Liberty enlightening the World,"—and the cool criticism of its merit as a work of art to which this munificent tribute to Republican ideas has been subjected since its reception. If the French nation had been the recipient instead of the donor of this statue, into what ferment of enthusiastic appreciation would not its reception have worked the public mind? When we remember that, in the supreme struggle for American independence, France was the only European power which offered any help or encouragement to the rebellious and liberty-loving American colonists, it seems most ungrateful and in the worst possible taste to look so splendid "a gift-horse in the mouth," in the fashion so many of our newspaper critics are now doing.

MR. SAVAGE, in a recent sermon, raised the question, "Is Christianity to be a permanent religion?" and said, in reply, that it could not be answered, because he did not "know of six people in all the world, belonging to the different forms and phases of religious life, who agree as to what Christianity really is." Mr. Savage applies to Christianity the "point of view" method of definition and interpretation which Dr. James Freeman Clarke applies to the "Preamble-creed" of the Unitarian Conference. Is there no way to ascertain, definitely, what Christianity really is? Is it not a system the leading doctrines of which can be learned with certainty from sources acknowledged to be authoritative as to its teachings by all Christian sects and by non-Christians, too? What would be thought of a man who, if asked, "Is Mohammedanism to be a permanent form of religious life?" should reply, "The question cannot be answered, because there is a difference of opinion as to what Mohammedanism really is"? In regard to the fundamental and the main distinctive doctrines of their system, the great mass of Christians, Catholic and Protestant, are substantially agreed,—a fact that should not be lost sight of, because many in this age who have outgrown or nearly outgrown belief in Christianity, continue from reverence for the name, or because they belong to sects that still retain it, to call themselves Christians.

THE DANGER IN WORDS.

Naturally there is much less interest manifest in Christendom over the appearance of the revised Old Testament than there was when the revised New Testament appeared, four years ago. In the latter, it was apprehended that Christian systems of theology were more involved. The New Testament is the character of the Christian Church. Any changes, therefore, in its contents were believed to affect matters of the deepest vital concern to Christianity. There will, consequently, be less popular objection to the acceptance of the revised Old Testament than there has been to the acceptance of the New, if acceptance shall be urged; but, probably, there will also be more indifference concerning either its acceptance or rejection. It cannot be said that the revised New Testament has, as yet, been popularly accepted at all. Has a single Christian Church, we wonder, anywhere adopted it for habitual use? Does it take the place of the common version in family reading? Clergymen may use it for reference in their studies. They may sometimes bring it into the pulpit to read from for a special purpose; and, in the quotation of texts, they may refer to the changes it has introduced. But, in Christendom generally, it has not even begun to take the place of the old version. In Liberal Christian churches, where Scriptural texts are not regarded as having supreme authority, and verbal accuracy is deemed of much less account than the moral or religious lesson that is involved, it is, naturally, not considered a matter of very great moment which version lies on the pulpit desk; and, in evangelical churches, the power of old associations has proved stronger than any desire for a correct translation of even what they call the infallible Word of God.

This strength of old associations, this tenacious hold which a certain collocation of words, often repeated, gets upon the human brain, is one of the most powerful obstacles to religious progress. People cling to words to which habit has wonted the ear rather than to the realities of thought. Assuming the Calvinistic theory of the Bible to be true,—namely, that it is a literal message from God to man and absolutely essential to salvation,—or even holding the modern modified theory, that the Bible, though not plenary infallible, is yet an inspired message from heaven in its precept and doctrine,—assuming either of these theories, which would be the logical inference? It would be rationally supposed that people so believing would be eager to have the message in its most correct form. If Almighty Power has spoken to man through a written revelation, then it is certainly of great importance that man should know exactly what that revelation says.

Scholars in theology have always seen this point, and hence immense labor has been bestowed on the text of the Bible for the purpose of ascertaining both what was originally written and the meaning of it. This is a labor beset with great difficulties; and it stands to reason that a version of the Bible prepared under the highest Biblical and lingual scholarship of the present day will be much nearer to being an authentic transcript of what the original message really was than the translation could possibly be which was made by the scholars whom King James called together two and three-quarter centuries ago, eminent as they were for their time, and noble as was the work which they produced as illustrative of the strength and beauty of the English language. Yet the mass of Christian people will prefer the familiar King James' version to the more accurate new ver-

sion; will prefer the words and sounds to which they have been bred, which they learned in their childhood and have been wont to hear at home and in church, rather than any change of words which fidelity to the original message may require. The logic of their doctrine about the Bible would demand that they should be eager to know precisely what God said through the original penmen; but, in fact, the impress of the old words upon their brains is so strong that they actually resist knowing anything back of the King James' translation. Habit, the sentiment of old association, is stronger than their logic.

And here is the evil of the use of ecclesiastical liturgies. Words, because of old associations, become more sacred than ideas. Sound is revered rather than thought. The progressive minds in the Episcopal Church have as yet been able to make little headway in their effort for a change in the liturgical selections of the Prayer-book. There are sentences in the readings that are abhorrent not only to truth, but to all genuine reverence and all true moral feeling; and yet, because of the long familiarity of the people with them in their forms of worship, these sentences are retained. It is much to be regretted that Unitarian churches are adopting to some extent the same faulty readings. It was in a Unitarian church that we heard a congregation solemnly praying in their responsive readings that the Almighty would pour out his "wrath" upon their enemies, and gravely asseverating, "Moab is my washpot; over Edom will I cast out my shoe." What aid to worshipful feeling or to moral impulse can there possibly be in such sentences? Or in these, which stand in the Psalter and are liable to be read wherever in religious services that selection from the Psalms is used in regular order: "The Lord hath said, I will bring my people again, as I did from Basan; . . . that thy foot may be dipped in the blood of thine enemies, and that the tongue of thy dogs may be red through the same"? Or in this prayer: "Let the eyes of my adversaries be blinded, that they see not; and ever bow thou down their backs; let thy wrathful displeasure take hold of them; let them fall from one wickedness to another, and not come into thy righteousness"? Could a more vindictive supplication than this be conceived,—a prayer that one's enemy should not even have a chance for repentance, should not even be permitted to return to righteousness? Yet this petition stands in the Prayer-book of a Christian Church to-day. How does it harmonize with Jesus' precept, "Love your enemies, bless them that curse you"?

But, because Christian people have become habituated to reading such sentences as a religious exercise in the Prayer-book and in the Bible, they resist any change. They appear to think that the religion consists in repeating the words without regard to the thought behind them. It must be hoped, indeed, for the credit of human nature that, where words are in themselves so revolting, the mind does become callous to their meaning, and they are recited without any thought of their atrocious significance. Yet what is this but to excuse such utterances by confessing that the worship has become a mere formality of speech, a lip service, without heart and without understanding? And, if this happens where the readings are unedifying and even revolting, may it not also happen where the words are good and their meanings still acceptable to the understanding? That is, must not the stated and formal repetition of the same words in religious services tend to destroy their force as an expression of living thought, at the same time that it indelibly stamps their form upon the brain?

One proviso, however, may be admitted as a partial offset to this danger. Well-selected liturgical readings, kept open to change as advancing thought may require, and the words strong with simple dignity and charged with the meanings to which the pure heart and the sound mind would instinctively respond, might be of great use in impressing right sentiments upon people in a way that would help them in their lives, and especially in impressing such sentiments upon the growing minds of the young.

WM. J. POTTER.

CHRISTO ET ECCLESIAE.

The Prayer Machine at Harvard.

The recent clash of arms at Harvard College between young agnosticism and mildewed Christianity is both noteworthy and amusing, and even pitiful in some of its aspects. Reference is had to the petition of a large body of the students to be released from compulsory attendance at prayers, and the adverse report of Chairman A. P. Peabody upon the petition, in behalf of the Board of Overseers. The brief and carefully worded petition takes the manly ground that the custom of compulsory attendance at prayers is a religious test imposed, and is, therefore, a tyrannical encroachment upon civil liberty. The great length of good Dr. Peabody's report is itself a confession of weakness; and the whole tenor of it is so humble, apologetic, almost beseeching, that one's pity would be aroused, were his amusement not so prominent a feeling. The Doctor's little hortatory homily is full of the most edifying unction (to Christians), and the points so deftly made, the whole subject so thoroughly canvassed, every loophole so carefully guarded, that, if one but grants the premises, the argument seems almost impregnable, except in one particular. But this particular, this slip, really invalidates the entire argument. Dr. Peabody admits that "voluntary attendance could not be safely calculated upon even from the students who, under present conditions, most appreciate and enjoy the service." For, he says, in churches where there is a daily service, with no lack of earnest and devout Sunday worshippers, even in the English cathedrals surrounded by the families of ecclesiastics, the attendance is so pitifully small that the service is sustained solely on the theory that it has a sacrificial efficacy apart from any benefit that can accrue to those present.

Now, the question is how to reconcile this true and damaging admission with the assertions in another portion of the report: that to "many" of the students daily prayers are "welcome and edifying," and that "the manifest solemnity and heartiness with which a large number take part in the singing and in the responsive reading indicate the reverse of carelessness and indifference; and the air of close attention, and the expression of earnest interest in many countenances during the reading of Scripture, show that the words of prophet, apostle, and Saviour are heard with the inward no less than with the outward ear."

Daily attendance "could not be safely calculated upon," and yet the "welcome and edifying" rite is engaged in by "a large number" with "solemnity and heartiness" and "earnest interest"! Such logic as this is not merely limping: it has no legs at all.

But, of course, we do not admit the first premises upon which the whole argument is based,—that a Christian rite of prayer and Scripture reading is not a sectarian rite, and therefore not a religious test. The Christian metaphysics, Dr. Peabody virtually says, should hold "the supreme place in education." Think of that! He contrives—very cunningly, although innocently and unconsciously

—so to mingle the words *moral* and *religious* as to convey the idea that the childish metaphysics of the Bible and the moral order of society are one and inseparable. And so it has always been with the theologians of every religion. They fight harder for their metaphysical dreams than for anything else on earth. The Canadian Jesuits of the seventeenth century were willing to be torn limb from limb by the greasy red aborigines, provided they could (by fair means or foul) get a drop of water on the forehead of a single one of the fiendish wretches, and thereby insure his instant admission to heaven. As Father Pijart was slyly baptizing an Indian infant under the pretence of giving it moistened sugar, the little sister of the baby cried out, "Father, he is baptizing him!" "Do you not see," said Pijart, "that I am only giving him sugar?"* I do not charge any Harvard professor with Jesuitism, of course, but only with something distantly approaching it.

The prayer-service, Dr. Peabody says, is "at the least harmless and unobjectionable"; "no reasonable objection can be made to it," etc. And he so works himself up with a kind of ostrich-head enthusiasm as to believe that there is no objection to it, except in the minds of a few lazy ones who want to sleep late, and go to a late breakfast. Infatuated doctor! How far you are from the truth! The writer had nine years' experience of academic and university life at Miami, Yale, and Harvard, and he never met with a single student—however sincerely religious he might have been—who did not admit that he was bored by daily prayers. To cut prayers is the object of every student's life. To succeed in doing so puts him in good humor for two or three days. And rightly. For young men and women naturally love honesty, and hate hypocrisy. Therefore, they despise the nauseous hypocrisy of a compulsory prayer-service. We learn from Dr. Peabody that the daily grind at Harvard consists of the "responsive reading of a psalm, a lesson from Scripture, two hymns and a prayer, with the simultaneous repetition of the Lord's Prayer,"—all got through with in "from ten to fourteen minutes"! That is, about two minutes each to the six separate parts of the services, the whole service evidently as perfunctory as the telling of beads or reading from a breviary.

One can hardly retain his respect for the colleges in view of this prayer outrage. And yet I, for one, would be the last to move for its abolition. For so odious is it that I believe it is one of the most powerful engines in the country for the downfall of the pestiferous Christian metaphysics. And with the dissolution of the theology, we may hope, will disappear likewise certain erroneous and unmanly Orientalisms of the Christian ethics,—such as the glorification of poverty, for example.

What Harvard should have is a daily un compulsory service in practical ethics,—a bright, honest little talk from each of the professors in turn, or from volunteers out of the Senior Class, giving a bit of practical experience or knowledge that will help the boys through the day, and build up their moral characters for life. The miserable prayer-fetich usurps the precious time and opportunity for such a talk as this. And the result is, and has been for twenty-five years, Harvard's reputation for unmoralness, lack of moral enthusiasm, a *blase*, *nil admirari* intellectuality. One of the finest colleges in America, the University of Virginia, founded by Thomas Jefferson, has never had daily religious services, conducted by the college officials; and yet it is abreast of Harvard in Greek and Latin scholarship, has as fine a list of graduates as any college in the land, and is pervaded

by religious and moral enthusiasm. Were President Eliot quietly to change the character of the service at Harvard, making it a helpful and really popular meeting such as I have described he would do more for the moral education of New England than any other man in the country, and would be lauded by the youth of posterity as the best president in the college annals.

I had intended, but have not space, to allude to one of the straws at which Dr. Peabody catches in his report; namely, the college motto, *Christo et Ecclesiae*. This reference of his is certainly amusing to one who knows the spirit of Harvard. I am sure every one who knows anything of Harvard will bear me out, when I say that, if there are any two objects of thought in the whole universe which are conspicuous by their absence from the minds of students and professors, they are Christ and the Church. If you were privately to accuse any live, young professor with giving the whole bent of his thought and the entire energy of his life *Christo et Ecclesiae*, he would take it as an affront. Verily, Time's wallet is full of absurdities!

W. S. K.

CHRISTIANITY AND LEGISLATION.

II.

Before civilization could emerge again, a more vigorous race with sounder ways of living had to come forward.

Before speaking of feudalism, however, a word should be said of the effect of Christianity upon that strange outbreak of Arabian fanaticism which remodelled the Eastern world, and came so near to conquering Europe. The influence of Christianity on Mohammedanism is well known. The main doctrines of prayer, almsgiving, temperance, absence of caste, submission to rulers, protection of the lowly, and proselyting by the sword, were to be found in both religions; and, in both, the key-note was the belief in salvation by faith, for an immortal future. In the absence of a pure ideal, the sensual side of Islam triumphed; but apart from this there was not the first step taken toward a legal system. The judicial function was never separated from the religious, precedents were not followed. In short, there was not the most elementary conception of law. Their military organization had, however, an effect in suggesting to the followers of the rival faith the mode in which the cross and the sword could be used together in the legal organization of a conquered land. And here one very important event occurred, which is fairly to be credited to Christianity; and that is the change of slavery into serfdom, which paved the way for feudalism. The organization of the Church was aristocratic, but it was not an aristocracy of blood. The lowest born might, and sometimes did, rise to her highest offices; and her influence was thrown strongly for the white slave at a time when he had no other advocate. When half a dozen centuries had rolled by, and the colored man needed the same protection, he did not find it; but her course in the dark ages is none the less to her credit. Other than this very important point there was not a great deal that could be called Christian legislation then. The limitation of blood feuds by substituting money payments for revenge was a change which occurred everywhere in non-Christian as well as Christian countries where wealth began to accumulate and society to crystallize. The main assistance which the Church gave to the process was through the protection afforded to the criminal who fled to her sanctuaries, and by her festivals of the Peace of God, in which fighting was forbidden, and by certain forms of religious trial in

which the accused might clear himself by taking an oath called compurgation, or by undergoing an ordeal by fire or water or the holy eucharist. Each of these had some effect for a time; but they were soon outgrown, and then became grievous burdens. Their application was pretty extensive; for the Church claimed jurisdiction of most of the minor crimes and all proceedings against ecclesiastics, and they often appear in important proceedings by the side of the more feudal ordeal of battle.

The feudal law was not constructed on what would have seemed to any other age a Christian model, and yet it was then so to a great extent. It was a law of conquest, military through and through, with an aristocracy who had all the power and a servile class who did all the work. Every free man was a soldier with an established place in the national army. Loyalty and bravery were its prime and almost its only virtues. The common rights in land of the early Teutons were extinguished by it, and of brotherhood in Christ it would be hard to find a trace. The stranger was a deadly foe everywhere; and the proverb, "One night a guest, three nights a servant," was a colloquial description of the *droit d'aubaine*, by which the stranger who stayed more than a short time in a place became the serf of the lord of the manor. The administration of justice, being generally left to the local noble, was doubtful in the extreme. Wherever a feudal castle sprang up, robbery and violence became irrepressible. One very important thing is to be credited to the Church, and that is the tightening of the marriage tie; but the position of woman was very low. The feudal law is the only known system by which women were disposed of in marriage by persons not related to them; and the brutal custom known as *droit de seigneur*, or *jus primae noctis*, flourished under it. It is all very well to sing the romantic praises of chivalry; but, when we leave its romances for its laws, we find brutality everywhere. The Church had great power, it is true; but society had feudalized the Church instead of the Church Christianizing society. The Church took her lands on military tenure, and established her military orders. She grew so powerful that she owned the soil of half of Europe, and her knights were the most powerful army of the age. "All the valor and all the chivalry of Christendom followed the banner of the Church in any field and against any foe."

As the civil courts grew too lenient, she organized that great criminal court of her own, the Inquisition. Her legal practice was vicious; for the trials were secret, and torture was employed freely. The presumption of innocence was ignored; and the accused could be put to the torture at once, without proof of guilt. Still more demoralizing were the proceedings against guilty ecclesiastics, which were hushed up as speedily as possible. No other court ever had such tremendous power or made such frightful use of it. And the end of it all was that the knightly orders of the Church were disbanded, her lands were taken from her, and her court suppressed. No State in Europe adopted her canon law, which, indeed, when taken with the comments of the casuists, was one of the most injurious codes ever compiled.

It is unnecessary to do more than allude to the long struggle over wills, trusts, written titles, the statute of mortmain, etc., in which the Church did her best to acquire land, and the aristocracy did its best to prevent her; but the traces remain like glacial scratches on the bed-rock of our laws. And it is not to be forgotten that a new mortmain law, or a law to change the administration of religious trusts, is pretty sure to come under our

* Parkman's *Jesuits in North America*, p. 97.

own consideration, if the wealth of churches continues to increase in this country as it is doing now.

Summing up the influence of Christianity upon the feudal law, it must be allowed to have been enormous. There was scarcely anything that the Church did not claim the right to supervise. But the law was essentially a law of conquest to the very last. As to its crying evil, the absence of any civil control over the great nobles and their vassals, the Church had nothing to say. The thing that arrested feudalism and opened the way to better legislation was the growth of an industrious commercial middle class. The progress of this class has been the progress of modern civilization, but it was by no means favored by the Church; for it was an independent business class that soon turned its attention to the reform both of feudal law and church government.

HENRY W. HOLLAND.

LIFE AND DEATH.

IV.

All motion is properly held to take place in space and time. Space has three dimensions, and in it motion may eventuate in an infinite number of directions. Time having but linear extension, as a consequence of this limitation, admits of motion in only two directions, exactly opposed to each other, forward and backward.

The fact that the philosophic conception of time presents the possibility of motion taking place not only in one, but in two directions,—backward from the future toward the past as well as forward from the past toward the future,—appears, so far as my own personal knowledge goes, to have been hitherto unaccountably overlooked by physicists. As a consequence of this oversight, only those modes of the unknown antecedents of motion which induce its flow from the past toward the future have been recognized by scientists as forces of nature. The existence of other modes of this unknown, inducing the flow of motive currents in the opposite direction, from the future toward the past, has until now been apparently ignored, or, possibly, its assertion frowned or laughed down by the arrogant priesthood of orthodox science.

It is for these reasons, and also because some antithetical distinction of language must be made in the designation of these two sets of forces, that I believe the retention of the present restricted meaning of the term "natural forces" advisable. And as the modes of the unknown which induce the flow of motive currents from the future toward the past are identifiable with the ideals, objects of desire, and purposes which form part of the religious and moral (ethical) life of impulsive and willing sentient beings, the term "ethical forces" seems for these modes perfectly correct and appropriate. Whether the laws by which the two groups of forces and motions are swayed will be found to be distinct or identical is a question demanding close and deep investigation. That the ethical modes of force and motion are governed by a set of laws as immutable as those of the mechanics of nature, and admitting of the building of the logical temple of a mechanics of morality (etho-mechanics) as firmly founded as that of mathematics, and never to be questioned by reason, is one of my deepest and most secure convictions.

The philosophic eye of science peers back, back, into the dim shadowy perspective of the past, searching the depths of nature for antecedents and causes of the real, tangible, actual events of the present.

The prophetic glance of ethics looks forward

into the gray dawn of the future, scanning its brightening heights for the objects of the real, tangible, actual present's purposes and desires.

The real, tangible, actual events and purposes of the present,—so men have thought and spoken before this day! But what is this present? Where, in eternity, is its beginning and its end?

A million years ago is in the past; one year or month ago is there also; so is the hour which has just fled, and the minute which has last taken wing!

The forms of the future are not yet born,—not those of a thousand years hence, nor those of tomorrow, nor even those of the second now hovering o'er us, awaiting to alight!

The present has no extent in time. An infinite diaphragm moving through eternity: what it simultaneously touches, that comes bounding out of the future into co-existence; what it together releases, that together sinks back lost in the deep, deep, the unfathomably deep abyss of the past!

But, though this present appears not to exist, yet it is only in its moving plane that we are conscious of our being. The countless memories of the past are but images reflected from its mirror. All our hopes and anticipations of the future likewise are but pictures painted upon its glassy surface.

Here, in this present, is the field of battle where the powers of the past and those of the future meet and contend for the mastery. The latter's triumph is the victory of life, the success of the former its funeral knell.

And now we close, formulating our conception of the law of the origin of life and death in the struggle for supremacy between natural and ethical forces.

Life and death, and their vicissitudes, are the resultants of the conflict, play, and composition of forces acting in twofold direction in time:—

1. *From the future toward the past (ethical, morpho-impulsive, or morphocratic forces), cognizable by their reflection in the conscious present as desire, purpose, will, or impulse.*

2. *From the past toward the future (natural or morpho-compulsive forces), cognizable by their reflection in the conscious present as logical or emotional cognition.*

And

1. *Whenever, at any point in space and moment in time, the algebraic sum (net dynamic value) of the ethical forces exceeds the algebraic sum (net dynamic value) of the natural forces then and there acting, a process of liberation, birth, and life (biotic evolution) must result.*

2. *Whenever, at any point in space and moment in time, the algebraic sum (net dynamic value) of the natural forces exceeds the algebraic sum (net dynamic value) of the ethical forces then and there acting, a process of enslavement, death, and decay (biotic involution) must result.*

In the course of the elaboration of these essays, I have become at every step more and more aware of their crudities of thought and imperfections of presentation. And, undoubtedly, I might have laid the subject by until such time when the currents of my mind, freed of their last turbidity, should spread a placid lake mirroring the undistorted truth. But, while hesitating, I recalled the fact that, after all, the stepping-stones of the world's progress are not those of unquestioned truth, but rather those of mistake and correction; and that often the merest suggestion of a new idea, however crude its form, thrown into the waters of the mental world, may carry with it that accelerative effect of force, so much to be desired in human affairs.

CHARLES FROEBEL.

EDITORIAL NOTES.

BY B. F. U.

MR. FROEBEL'S essay on "Life and Death," the publication of the last part of which has been long deferred, is concluded this week.

MONCURE D. CONWAY, on June 23d gave an address before the graduating class of the alumni of Lafayette College (Presbyterian) at Easton, Pa., on "Carlyle and Emerson." Mr. Conway is willing to make engagements for lectures and may be addressed care of Eustace Conway, 18 Exchange Place, New York.

REFERRING to Mr. Beecher in connection with his lectures on "Evolution," the *Christian Register* remarks, "Instead of meriting reproach for such a radical step, he ought to be commended by his orthodox brethren for his caution in waiting until the subject had been so thoroughly discussed in print and in liberal pulpits that even his exhaustless originality must be severely taxed to say anything new upon it."

HELEN M. GOUGAR, of Lafayette, Ind., has published a card, which reads as follows:—

To the Public.—Inasmuch as John G. Williams, editor of the *Lafayette Sunday Times*, has published a full retraction of all charges made against me and my home, and has also given the assurance to proper parties that I shall not henceforth be referred to directly or indirectly in his paper, provided I will recall my offer of \$100 to any person who might publicly whip him, I do hereby recall my offer, so long as his assurance is made good.

THE *Presbyterian*, with its usual breadth of thought and magnanimity, thus concludes a paragraph in regard to the misunderstanding between Spencer and Harrison about the publication by the Appletons of a volume containing their controversial articles, which appeared originally in the *Nineteenth Century*:—

What will be the outcome of the dispute we cannot tell, but it looks as if the world might obtain some new "data" for agnostic "ethics."

REFERRING to Gladstone's request that he be permitted to decline the honor of an earldom, the *Boston Advertiser* sensibly remarks: "By this renunciation, which is not for himself alone, but for his posterity, who would by his acceptance obtain all the advantages of exalted rank, he marks more conspicuously the differences between the quality of his character and ambition and that of his great rival, Disraeli. By his declination of a patent of nobility, he has cheapened the worth of that reward of political service forever."

THE following in regard to Henry C. Wright we find in an exchange: "He was a moderate speaker, but solid, and drove his arguments with a sledge-hammer. He told us once, when listening to a discourse delivered by Stephen S. Foster in the church, Mr. Foster said something that caused him to laugh aloud. The speaker stopped, and, looking down at Mr. Wright, said: 'Henry, why do you laugh? Jesus never laughed.' 'Well,' said Mr. Wright, in his moderate way, 'he would have been a better man if he had.'"

THEODORE STANTON writes from Paris to the *Inter-Ocean*: "It is a well-known fact that Victor Hugo advocated women's suffrage, and his great liberality of mind made him the friend of all demands for the amelioration of the condition of the female sex. It was not surprising, therefore, to see hundreds of women in line last Monday. Nor were these female mourners limited to natives of this country. Poland, Bohemia, and Italy, as well as France, were touchingly represented by women and young girls bearing flowers to Victor Hugo's grave."

HENRY B. STANTON, in *Random Recollections*, says that Dr. Beman, of Troy, a leader of the New School of Presbyterians, used to repeat the following with gusto:—

"In Adam's fall,
We sinned all.
In Cain's murder,
We sinned furdur.
By Dr. Green
Our sin is seen."

The allusion is to Dr. Ashbel Green, who was president of Princeton College, and of the Old School Presbyterians.

SAYS the *Congregationalist*: "It is stated, on good authority, that, so far as can be remembered, no young man born and bred in a Congregational church in Hartford within the last fourteen years has become a minister. This is a sad showing; but, before throwing stones at Hartford, it will be well to inquire carefully whether there are not various other places of which the statement would be equally true. Most of our ministers usually have come from the country, but, for twenty years past, we think the proportion from the cities has been growing less; and the fact deserves the most thoughtful and serious consideration."

In the *Banner of Light*, we find the following mention of Mr. W. E. Coleman, who has been for several years a frequent contributor to the *Religio-Philosophical Journal* and the author of articles which have appeared occasionally in *The Index*:—

At the late meeting of the American Oriental Society in Boston, May 6th last, on motion of Prof. C. R. Lanman, Sanskritist of Harvard University, Mr. William Emmette Coleman, a well-known Spiritualist and *littérateur* of San Francisco, Cal., was elected a corporate member of said society. Mr. Coleman has also been recently chosen a member of the Páli Text Society, which is composed of the principal Buddhist scholars of the various countries of the world, and was founded in 1882 for the publication of correct texts of the Buddhist sacred writings, with translations, etc. A large portion of the Tripitaka, or Buddhist Bible, has never been published in the original Páli; and but a small portion has yet been translated into English or other European languages.

An editorial paragraph in *Unity*, signed "S.," commends to Mr. Abbot and others who remain "outside of the National Unitarian Conference because that body in its constitution recognizes, in some sense, 'the Lordship' of Jesus Christ, the following passage from the late book of that radical scientist, Prof. John Fiske, the book on the *Destiny of Man*":—

The future is lighted for us with the radiant colors of hope. The dream of poets, the lesson of priest and prophet, the inspiration of the great musician, is confirmed in the light of modern knowledge; and, as we gird ourselves up for the work of life, we may look forward to the time when, in the truest sense, the kingdoms of this world shall become the kingdoms of Christ, and he shall reign forever and ever, king of kings and lord of lords.

If a full consideration of the above passage shall fail to make Mr. Abbot and others who declare that their position is antichristian decide to return to the National Unitarian Conference, they must, indeed, be incorrigible.

A WRITER in the *Providence Journal* says of Theodore Parker: "No man, not even Garrison or Phillips, had more intensely bitter enemies than he. There is no use in disguising the fact, this late day, that, as a whole, what were called the 'better classes' in Boston were opposed to him, and that they especially deprecated the bold stand he took against slavery and against the churches, which, in his judgment, were altogether too timid and time-serving and afraid to lift up their voices in rebuke of a system which, in his eyes, was the sum of all abominations and villanies. Writing to a friend, after having ground out one of his largest grists in the form of a sermon preached in

his Music Hall 'mill' on Fast Day, the subject of his discourse being 'The Chief Sins of the People,' he says: 'Men in the streets look long favored at me as I go by. Nevertheless, the good God lets the skies rain on me and the sun shine (I saw my shadow to-day), and I am allowed to ride in the cars and walk on the sidewalk.'"

THE New York *Tribune* says that whether Judge Stallo will be "particularly welcome at the Vatican, as well-nigh the most conspicuous free thinker in this country, is not, perhaps, a matter about which President Cleveland thought fit to ask himself." As Judge Stallo is accredited to the court of Humbert, King of Italy, and not to the Vatican, why should the President have concerned himself about his religious views? Says the *Cincinnati Graphic*, Judge Stallo "is well known as a prominent attorney, an able jurist, and a scholarly gentleman. He is a representative German, and his appointment will be particularly gratifying to those of his race everywhere. While Cincinnati regrets to lose Judge Stallo even temporarily as a resident, the city rejoices at the honor conferred upon him, and congratulates the country upon the ability and character of its new representative at the Italian Court."

THE *Independent* says: "As usual, the unbelievers have made haste to claim Victor Hugo. The wish was father to the thought, though it is evident he was out of all sympathy with the churches, and quite as far from their theology." He believed, it is affirmed, in God and immortality, and honored Jesus. "His ethical position as a man and an author was unmistakably Christian." The *Independent* says that the venerable Archbishop of Paris "was certainly in a position to know what he was doing" when he offered Victor Hugo the consolation and the *viaticum* of the Church. And the following is quoted from a memorandum the poet wrote Aug. 2, 1883: "I give fifty thousand francs to the poor. I wish to be carried to the cemetery in their hearse. I refuse the prayers (*oraisons*) of all churches. I ask for a prayer (*prière*) from all souls. I believe in God." "His great work," says the *Independent*, "*Les Misérables*, is Christian in its primary intention; and we repeat, with Dr. Pressensé, that 'we shall forever bless the memory of Victor Hugo for the manner in which he reproduces the drama of a good conscience in the admirable chapter entitled 'Une Tempête sous un Crâne.''" Yet the fact remains that Victor Hugo was an "unbeliever" in the sense in which that word has been, and still is, commonly applied to those who reject the distinctively Christian doctrines. He did not believe in the miraculous birth or superhuman character of Jesus, nor did he regard him as a Saviour in any theological sense. He did not believe in Christianity as a divinely revealed system, or as a system having any other than a natural origin and growth. He did not believe that the Bible was written by divine inspiration, or that its miraculous narratives are true, or that it possesses any authoritative character as to religion and morals. He was an unbeliever in the sense in which they are unbelievers, and so called by the Christian clergy and press, who reject Christianity as a revealed religion, and according to the current use of the word. The fact that Victor Hugo was an illustrious man whose praise is on millions of lips does not change the fact, though it may explain the attempt of the *Independent*, by special pleading, to conceal or obscure the fact. One peculiarity of *quasi-Christian* papers is the flexibility of their definitions, which enables them to say that a man is a believer or an unbeliever as may suit their purpose, without much regard to his real religious convictions.

For *The Index*.

HOMER'S ANTHROPOMORPHISM.

All things were, in world of Homer,
Conscious, purposive, like man:
Notion of insentient nature
In a later age began.
Blue sky was a giant godhead
With ambrosial, beamy hair:
Earth, all-bearing, flower-tressed mother,
Lay beneath him green and fair.
Ocean was a hoary father,
With his blue arms stretching wide
To receive the streams and rivers,
As they to his bosom glide.
'Neath the rough bark of the forests
Lovely Dryads darkling dwelt;
Oft for mortal youths emotions
Sweet of love and longing felt.
Pouted coral lips of Nalads
Up through fountains and through streams;
Oreads swift through glade and forest
Flitting seemed the lunar beams.
Striding o'er the mount in ridges,
Quivered maid and huntress bright,
Roamed the Moon, with silver arrows
Putting stags and boars to flight.
Winds and beams and swaying branches
And the cascade's fitful sound
Mythic fancy deemed the noise of
Shouting nymph and baying hound.
O'er the urns of famous rivers
Manlike figures pensive hung
Far aloof in mountain caverns,
While to light their waters sprung.
Had each lonely isle of ocean
Genius loci, damsel fair
Spell-bound mortal voyagers keeping,
Whom the wild waves landed there.
In the morning-red dwelt Eös,
Who the dewy dawnlight gave;
'Mid a cloud of roses drove she
From the ocean's orient wave:
Phosphor sparkled bright before her,
While the wind of morning blew;
Turned to pearls on flower and grass-blade
At her coming midnight's dew.
Nought of our insentient forces
Primitive poet, Homer, knew,—
Saw he *will* behind each movement
Which his eager vision drew,
Knew he not the earth which bore him
Was a flying ship of space,
Tender of a mighty orb, which kindled
Air to brightness with its rays.
He in terms of will and feeling
Sang of all things which he saw;
Countless gods beheld he, swaying
Earth and man by whim, not law;
Fair humanities enthroned he
Over mountains, vales, and streams;
Skyey archer's golden arrows
Deemed he roseate morning's beams.
Dewdrops as of dawn eternal
On the myths of Homer lie:
Back from age of science, reason,
To his fable-world we fly;
In his beauteous dreams, illusions
Bathe as in some fount of youth;
Gladly barter for their freshness
All the trophies won by truth.
But to Homer, too, did conscience
Teach the lore of right and wrong,
Dictates of the higher reason
Dominate his epic song:
E'en his gods, like men, a higher
Power than their own wills did own,
Not in terms of mortal nature
To be imaged or made known.

B. W. BALL.

The Index.

BOSTON, JULY 2, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms—Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

A MINISTER'S PARTING CHARGE.

Given at South Place, London, May 17.

BY MONCURE D. CONWAY.

(Revised for THE INDEX by the author.)

In this our day, the religious interest of the world has become very complex; and the position of the unorthodox is environed with difficulties unknown to the forerunners of free thought. The old free thinkers, such as Voltaire and Paine, had a harder task perhaps than the free thinkers of our time; but it was a much simpler one, and mainly for this reason: they had to deal with a bald, dogmatic literalism and a brutally candid intolerance. They could have no hesitation whatever in meeting the dogmas with flat denial, the intolerance with plain affirmation of the rights of thought and conscience. There were no Broad Churches in those days. No Christians ventured to take their side against oppression, none apparently regarded as sceptic as having rights, the dogmas of none seemed softened by sympathy for humanity outside the fold of believers. The persecuted heretics could have no misgivings in dealing with their persecutors: they knew these were in the wrong. They could have no fear of bruising the tender piety of men who had them by the throat. But how is it now? It is plain those free thinkers won a victory they never lived to enjoy: the bald dogmas they denied are nearly obsolete, the intolerance they resisted is repudiated by the majority of Christians. But it is more difficult to administer a victory than to win it, and especially, as in this case, where the victory is especially advantageous to the vanquished. Now that bigotry has become vulgar and dogmas are re-edited to suit new conditions, Christians have become communicants in the household of humanity. They have eaten the bread of common sense, and drunk the wine of a moral passion, so that a free thinker must beware, lest in exposing a

superstition, he smite a brother. Ostensibly, the superstition goes on, the dogma, become mystical bread to the new Christian, remains a stone as offered to mankind, is represented in statutes still unjust and institutions not yet humanized. But there is a new light shining on these, so that they are turning to what the late Dean of Westminster used to call "innocent archaisms." Lately, I sat through evensong in the chapel of Peterhouse, at Cambridge, a college six centuries old. Ere service began, I looked at the great stained windows. There, Abraham, with knife uplifted over his son, seemed to say, "Behold, these scholars still believe in a deity demanding human sacrifices, and whose religion rests on sacrifice of his own son." And there was Moses with horns of light on his head, who said, "Behold, these learned men still believe in a deity who got tired after six days' work, and rested, and forbade mankind work or pleasure on that day." And John, preaching in the wilderness, said, "Behold, in this university which produced a Newton and a Darwin, my baptismal exorcism still goes on." Then I closed my eyes, and listened to the singing of prayers, creed, hymns,—piteous supplications that bore one back to distant age, when priests and peasants, surrounded by battle, murder, and sudden death, moved in procession through their villages, uttering plaintive cries to appease the wrath of God,—cries now cooled and toned to the formal liturgy, and set in scientific harmonies. Then, opening my eyes, I found the darkness had disappeared. All around the ancient chapel were blazing electric lights. They revealed a number of boys and men whose happy faces and euphonic looks did away with any distress that might have been caused by their piteous pleadings to be spared. The electric lights illumined the stained windows; and Abraham, Moses, and the rest faded into picturesque shades of distant lands and ages. The apostles' creed being sung, with organ accompaniment, did not sound so very incredible. One may sometimes hear a merry maid sing a sorrowful ditty at the piano, without supposing she is torn with anguish. The juxtaposition of electric lights with mediæval prayers, science of to-day summoned to illumine superstitions of antiquity, typifies fairly the kind of age we are in. Evensong being over, we may converse with these university gentlemen, and find them generally living amid the electric lights of their century, rejoicing in its science, literature, and art, with mainly an æsthetic or antiquarian interest in the symbols of past beliefs, which weave an antique frame round the beautiful scene of their culture.

From the university there goes forth a new kind of faith,—a Christianity modified by electric light. In that intense light, things past are revealed as past. It is bringing that "lucidity" for which Matthew Arnold pleads. This was impressively shown at the annual meeting of the Christian Evidence Society, last Wednesday. That Society used to hurl about its attacks, virulent as its logic was bad,—which is saying much; and some of you may remember how that just man, the late Archbishop of Canterbury, had to repudiate its misrepresentations of a printed work of mine. But the electric light has been discovered since then, and other changes have gone on. The Christian Evidence Society last week had to deplore a diminished income,—only twenty-three pounds in hand; but it can be congratulated on an increase of good sense. The Archbishop of Canterbury opened with a candid address, in which he said it was a scientific society. Its business is to show that there is genuine evidence for Christianity. To produce such evidence was no easy task. It was neces-

sary to follow the ins and outs of their adversaries' view. They all knew that what infidels chiefly attack is not Christianity at all. What they ridicule is what no man in the Evidence Society believed. And, on the other hand, he would caution the Society against caricaturing the opinions they oppose. They have no more right to caricature Evolution than evolutionists have to caricature Christianity. He wanted the Society's lecturers to go to the British Museum, and study the matters they undertake to talk about. They must understand what is *not* evidence, and not think any stone good enough to throw at an unbeliever. If they threw a stone into what they considered darkness, they may hit a man in the dark. If Christians had only used fair arguments, Christianity would have been saved many and vast troubles. In conclusion, the Archbishop expressed his satisfaction in learning that Dr. Temple's Bampton Lectures are to be used as a text-book by the Society. That is remarkable. Dr. Temple accepts the doctrine of Evolution. And so we have got so far as an evolutionist Archbishop of Canterbury! For the rest, amiable as the Archbishop's tone was, there was some mental confusion at one point. He said that what infidels ridicule and attack is not Christianity at all, but its caricature, which all repudiate. According to that, Christians have but seeming opponents: they and the so-called infidels repudiate the same thing. Why, then, call them infidels? Why found a society to oppose them, if they reject only what Christians equally reject? The society needed is one to inform people what Christian doctrines really are, but that is a society that will never exist. For one reason, because there are more than a hundred antagonistic sectarian views of Christian doctrine in the country; for another, because no man is prepared to defend Christian dogmas before a competent antagonist. It has been long since the dogmas of Christianity have been defended at all by any except its retained attorneys. A friend lately asked me to name a modern book in favor of Christian dogmas written by an impartial critic,—one not in any pulpit,—and I was unable to remember one. But even the pulpit council have ceased to defend the dogmas declared essential in the creeds. You ask them about total depravity, and Jehovah's curse on the whole human race, dooming it to endless fiery tortures because of the apple eaten by Adam. They answer by talking of the poetry of the Bible. You ask them about Jehovah's exaction of a blood ransom, the sacrifice of the most innocent of men, before he could allow any being to escape hell. They answer by asserting the civilizing influence of Christianity. You ask them about Jehovah's wrath, and his determination that all except orthodox Christian believers shall perish everlastingly, and they go off into arguments for the existence of a deity, or for a future life. I have never been able to find defenders of the faith who would actually defend the faith, and these many years have concluded that it is not polite to bring them to bay. The old dogmas are practically surrendered.

There were other interesting features of the Evidence Society. The Dean of Windsor said that, though there are more infidels than ever, there are also more church-goers than ever; but he failed to state that this is not because heretics have come round to the Church, but because the Church has come round to the heretics. It is possible now for a rationalist to enjoy the social advantages of the Church, and yet listen to sermons therein not very different from his own views. The same Dean, and other speakers also, testified to the improved tone of their opponents.

Free thinkers, they said, are now more reverent, courteous, and charitable. It was gratifying to hear this testimony from the clergy. Free thinkers, as is well known, have so long been in the habit of breaking their Christian opponents on the wheel, burning them at the stake, and thrusting those who ridiculed them into Holloway Gaol, that it is satisfactory to learn of their gentler frame of mind from the representatives of charity and toleration. Then Mr. Samuel Smith, M.P., made a notable speech, in which he admitted that all the objections to Christianity could not be met in the scientific way. Exact science trains minds to demand absolute proof, and Christianity is not susceptible to that kind of proof. So I understood the only layman who spoke. He proceeded to say that the unanswerable arguments for Christianity are holy lives. There I agree with him. I hope there are no infidels that would not be glad to support a Christianity which produced holy lives. Let it produce a generation of believers inflexibly just to all men, whether pagans or atheist, gentle to all; let it abolish its laws which make independence of thought criminal, and impose an oppressive Sabbath on the poor; let it produce a Church in which genius can find freedom in place of that whose pulpit the greatest souls of our time had to leave after being trained for it,—Darwin, Carlyle, Emerson, Renan; let us see the holy lives, the humane lives, the single-hearted devotion to truth which does not aim to have truth on its side, but to be on the side of truth,—a love that embraces mankind irrespective of color, caste, or creed,—and there will be no more infidelity. For it would be impossible that such a generation should worship a deity wrathful, jealous, and vindictive; impossible that it should diffuse false and mean ideas of God; impossible that it should subordinate morality and charity to the metaphysics of antiquity, or devote to idle ceremonies before an idle majesty in the heavens wealth and energy that might renovate the earth and relieve the sufferings of mankind.

That there are many Christians so called, who do high service to mankind, is true. In this, they cooperate with thinkers and philanthropists who are not believers in Christianity; and, as the old sectarian divisions are more and more submerged under the flowing tide of humanity, it becomes increasingly difficult to discover the meaning or utility of a system of dogmas unrelated to the thought or work of the present time. There is too much reason to suspect that the system is maintained for its advantages to a class,—advantages of a sordid kind. If the Archbishop of Canterbury's candor had gone a little farther, he might have exhibited to the Evidence Society the cross presented to him the other day,—a cross surrounded by the evangelists and apostles in silver, a coronet above with figures of ancient bishops, the whole glittering with sapphires, pearls, and diamonds. "Brethren," he might have said, "behold the evidence of Christianity!"

It is said that St. Thomas Aquinas once visited a grand cathedral, and was shown its vast treasures. The sacristan said to him, "The Church can no longer say, Silver and gold have I none." "No," answered Aquinas, "and it can no longer say, Rise, take up thy bed, and walk." We can hardly anticipate the decline of any system which is able to decorate its master's gallows with diamonds, whose symbol of salvation is hid under plenteousness of pearls; but we may feel assured that inside that system there is a heart not to be satisfied by the richest relics of a vanished spirit and power. It will search and sweep diligently for the pearl that is lost, the pure faith that to-day

as of old can say to prostrate man, "Arise," and when it is found will rejoice over that more than all these treasures of an ecclesiastism which daringly consecrates itself with the name of one who, being rich, for man's sake became poor.

Seated among those eminent champions of the ancient faith, noting their lowered tone toward ideas they used to denounce, observing their shyness of alluding to dogmas once forced on Europe with sword and stake, I saw one moving among them whom they did not recognize, but whose presence they felt. It was the Lord of those servants come back to reckon with them. Long ago, he had distributed his possessions among them as a trust, and gone into a far country,—had been lost amid the ages,—but at length he has returned. The world is beginning to understand him, to realize him, and before all mankind his professed servants are called to give an account of their trust. At first, they scoffed him, called him an infidel, declined to consider his claims; but now they feel his stern eye must be met, that the hour of reckoning is indeed come, for beside this returning traveller are the heart and brain of the age. What account of itself can be given by Orthodoxy, with its worship of the letter and parrot-cry of "Lord, lord!" What has it to say? "Lord, I believed you a hard man, very particular to have everybody agree to every word you said, determined to send to hell all who thought differently from yourself. So I was afraid. For fear of thinking erroneously, I never thought at all. For fear of altering your talent, so that you wouldn't know it again, I hid it in a sacramental napkin, and buried it in a sod of ceremonies; and, lo! here you have the very letter and form of what you gave me."

And what is the lord answering to this one? "Servile servant! you say that you have kept my talent; but, nay, you have lost it. This bit of the first century which you have hoarded into the nineteenth is by no means what I meant you to preserve. You ought to have taken my talent to the changers,—to the ages, to the new needs of man by which the past is revised, changed, renewed: then should I this day have seen my contribution to mankind multiplied by the generations that have elapsed, swelled by the centuries; and it would have represented the science, wisdom, charity of this greater day as fully as it represented that of the more ignorant time when it was given you. You have in a way kept it,—kept it till the world has outgrown it, kept it till time has vulgarized it into cant, till it is rusty with superstition, till common sense ridicules it and common sentiment recoils from it. You have kept my talent till it has ceased to be currency, and can only be foisted on the ignorant by fraud. The only thing it is fit for now is the museum of myths. It shall be given to those who have improved that which was intrusted to them, who have added to the wisdom of antiquity the wisdom of every age that has followed, who can detach the transient from the permanent, mythology from religion, and who can utilize this talent as a legend when it is no longer of use for religion or virtue."

But what would this returning lord have to say to those who have doubled the talents he gave them, who have parted from the dead letter to gain the living spirit, who have followed growing knowledge, have drawn on the new resources of the world? To such a one he says, "Well done, faithful servant: thou hast been faithful over a few things, I will make thee ruler over many things: enter into the joy of thy lord!" "But who are you?" asks this free and cultured man of the present; "and what have you to do with these my treasures of science and art, earned by my own strength? And what joy is this you bid me enter?

I acknowledge no lord but truth, and seek no joy but in its possession."

"Nay," answers this lord, "I am the soul of humanity, representing the ideal and the hope that make the human religion the joy of the earth. It were a mistake in you free thinkers to suppose that your freedom and your knowledge are independent of what the past has wrought for you amid its ignorance. It were a grievous error to suppose that your science and power end in themselves. With all the facts of science and all the inventions of skill, and with the arts of beauty, you are but faithful over a few things. Only by the spirit that binds and bends all these to the perfection of man, and through him to the happiness of his world, can you fulfil all your trust, and enter the higher joy."

We need not feel troubled that this lord should be identified in the popular mind with Jesus. In a sense, the popular mind is right. This old religious society of ours—shall I not always say "ours," though parted from you?—has lived through two generations of unparalleled research into the foundations of Christian faith; and the verdict of that trial has been, "Exit Christianity." Not, indeed, that which many good hearts deem Christianity to-day, but the dogmatic system set up by Constantine as a new cross on which every brave thinker was nailed, for a thousand years.

In a sense, the command of our age has also been, "Exit Christ"; for Christ is an imperial title by which the son of man was made the son of Jehovah, or of Jove, heir of his absolutism, brandisher of his thunderbolts. But Jesus,—that is, Saviour,—name of the lowly for that ideal man who took their side against wolves in sheep's clothing, martyr of an ideal right, prophet of peace and good will among men,—this Jesus is a recovery of our own time, a son of our own century. It is a characteristic of our age that its scepticism and criticism have penetrated beyond the conventional garnish of the sepulchres of Saviours, have rolled away stony dogmas from their tomb, and revealed to the people the real nature of the heroes whose names were on their lips while their hearts were unknown. Buddha, Zoroaster, Confucius, have come forth in beautiful resurrections; and, above all, Jesus has descended from his cold apotheosis as Christ, to be a new figure in our time,—the elder brother of those who, like him, confront priestcraft and superstition, giver of a cause whose immortal fire has kindled great souls through darkest ages, flaming summit answering to summit, making one brotherhood of hearts sundered by time and space, one fraternity of the faithful and the free through the ages.

Christendom is committed to the worship of a true man. The founders of historic Christianity never intended anything of that kind. They borrowed the prestige of Jesus among the poor to strengthen their despotism over the poor, and to that end made the friend of man his enemy, whose function was to rain fire and brimstone on the world like another Jehovah. But an age has come wherein learning and thought are free. Those imperial and priestly devices are exposed; that fabrication of an Olympian Christ, to reverse what the living Jesus had done, has perished; the automaton that could only say, "Depart, ye cursed, into hell fire," painted with the name of one who said, "Love your enemies," has crumbled under criticism: the real man has been revealed, and Christendom finds him just the man beloved of radicalism and dreaded by authority.

Undoubtedly, the transition from the Jehovah-Christ to the human Jesus has brought on a danger not merely to the Church, but to social development. The radicalism of Jesus is of the super-

naturalistic type. At any rate, so it appears in the New Testament, whatever may have been his real view. And if, to-day, Jesus can be quoted to justify hostility to wealth, socialistic superstitions, and other wild notions, the authority which has compelled men to worship him as a god and accept his words as infallible has only to thank itself for these dangers. If the crisis be safely passed, it will be by the growth of a rational, religious spirit which calls no man master, while recognizing that every great soul intrusts to the world a power able to secure farther and larger powers, but ultimately destructive, if not improved and enlarged by and with the general development of the world.

As one organ of this rational religious spirit, and steadily developed by it, this Society must be charged by one whom it has instructed that it will remain strong only by preserving its continuity with the past that created it, that it will make that strength a universal benefit only by sowing products of that past like seed, selecting and cultivating, so that seed-time and harvest shall not fail. It is a long, moral evolution that has placed you here. You are latest in a procession of believers in the good and true which started forth in an immemorial past to seek a better world. That procession has moved on through the ages amid crumbling altars, mouldering temples, chanting in tongues that have ceased, fulfilling prophecies that have passed away, but holding on to the love that never faileth; and, when you, too, have passed away, and your children, and your children's children, the procession will still move on toward the land of humanity's promise. It will move on, and learn things unknown to us. Even we have moved past some of the traditions of our fathers: we have abandoned the supplications they offered to a still distant deity, and cannot sing all the hymns suited to the day of their pilgrimage. But you can see to it that their standard of fidelity, of truthfulness, of moral earnestness, of aspiration after the perfect, is upheld in your time; that the pillar of truth is followed, though its fire sometimes turn to cloud; and that, though those who come after you may see farther than you, they shall know that it is because you faithfully marched as far as you saw in your time. Let me again remind you that you can be as good as faithful men of the past only by being better, that you can keep faith with them only by carrying forward their faith to a larger form. This is your duty even to your gainsayers; and, by this, you are in real, however unacknowledged, unity with the truth that is in them. "The wise man," said Confucius, "uses what is in man to reform man." A sculptor might as well despise his quarry of marble because blemished here and there as the religious reformer despise the great stratum of religious tradition because mingled with faults and superstitions. Here, for instance, is the Bible this week published anew, with many errors eradicated. That book has largely formed our speech; it has chiefly moulded our consciousness; it is the poetry of our people. The recent translators have not ventured to handle some errors of the old translation, but others they have preserved simply because the age has not generally attained the religious elevation required for their elimination. Thus, the revisers have continued the confusion of the names translated God and Lord,—Elohim, Eloah, Jahve (Jehovah),—as if they all represented one deity, or one conception. Really, it is as if a writer on Greek and Roman religion should lump together Zeus, Jupiter, Herakles, Apollo, and the rest as "God." Under those several names in the Bible, different deities are hid; and they represent an evolution through many ages. When the Bible is truly translated and truly read, it will be seen that

the human mind moved on from the worship of the elements to the worship of an order in nature, then to a purposing power in the universe, then to a power governing the affairs of man, then to a patriarchal deity, then to a deity taking on the form of man. By theological confusion of these deities, the recklessness of the elemental deity was inherited as the cruelty of the governing deity, each successive conception was saddled with the faults of his predecessor, until at length even the human-hearted god was compelled to repeat curses originating in destructive natural forces. But it is the advantage of the religious thought of our time to distinguish what theology has confused, to interpret the moral development traced in these ancient forms, and to recognize in the human-hearted god the appeal of humanity against wrathful and cruel personifications of the remorseless forces of nature. That appeal means a deification of the purest and best elements in the moral nature of man. This incarnation of a divine ideal is found in the legend of Zoroaster, in the legend of Herakles, in the legend of Buddha, and in that of Jesus. It is under this last name that it has informed the race to which we belong, and it is to that human conception of what is divine that the religion of humanity appeals to-day.

It is but natural that free thinkers should dwell most upon the faults of the particular system that claims authority over themselves. The great evil is always that by which we suffer. Distance lends a certain enchantment to the Greek religion and Buddhism; but, really, the religion in which those derisively called Christians believed, before it was superseded by Christianity, represented an advance upon previous religions,—particularly in this, that the religion of Jesus was especially identified with the womanly qualities. Buddhism was gentle and compassionate, but it did not quite escape Oriental ideas of woman. In conversation with the chief priest of Ceylon, I asked him what had become of Maia, the mother of Buddha. "She has become a god," he said. "A goddess, you mean." "No," said he, "a god; for we believe that by great virtue and devotion a woman may in another life become male." "And I," was my reply, "would rather say that by great virtue and devotion a man may finally become a woman." He looked to see if I were jesting, but I was not. The disciples of Jesus once marvelled at finding him discoursing to a woman; but that incident is one of many in the gracious teacher's life which have trained you and me, along with many who would disown us, to cherish the womanly qualities as more related to the refined and spiritual character which religion fosters. Nature made man stronger than woman; and, through the long ages of war, the womanly characteristics were despised, because they were not military. Men made gods in their own image, fierce and warlike. But among the victims of war arose this religion: Jesus was a captive preaching to his fellow-captives; his life and teaching were idealized and developed against the god of battles and proud Cæsarism. Against consecrated cruelty and deified despotism, it raised the virtues of humility, gentleness, peacefulness, forgivingness, patience under injuries, love of enemies. Its courage was moral, the fortitude of woman. And, in the progress of civilization, it is these womanly qualities which have become socially the strongest. As more and more the brutal art of war is abhorred, and the military hero becomes extinct, society finds its strength in fraternity, its power in peace, its best arbitrations in reason and right. The ideal manliness of our time is gentlemanliness. The man of our time is more womanly, more tender, more sympathetic, securing thus a happier home and a

more beautiful society than were possible to the ages of strife and vengeance.

But this more peaceful society has been developed amid institutions based upon the privilege of power, the right of might,—institutions consecrated by a gross perversion of the religion of peace taught by Jesus, or even by its suppression. The gentle, self-denying virtues taught by him were repudiated by the Church, because they could not rebuild the reign of the Cæsars in a Holy Empire. Eventually, the kid was seethed in its mother's milk: the poor were made serfs by authority of their lowly friend. Jesus was made over by ever-servile theology into a war-god, an ally of the god of battles, against whom he had rebelled, and combined with a personification of Jehovah's unpardoning Spirit. And, although the worship of Mary and of many tender-hearted saints in the course of time somewhat subdued this hardness, Protestantism restored the unmitigated masculinity of primitive belief by resuscitating Judaism and its barbarian deity. On these are founded our laws and traditions of government, so that now, if rulers adopt a just and peaceful policy, it must be forced on them by a public sentiment formed in homes where kindness reigns and in a society developed by peace. They who would animate politics with this finer spirit of courtesy find much in the New Testament to sanction their efforts. The divine ideal therein is a Prince of Peace, fulfilling earlier dreams of humanity oppressed by tyranny and scourged by ages of war.

Herein is another trust confided by the past to this religious society. It lives at a time when humanity requires that religion shall not only be identified with a perfect manhood, but that it shall now add to that a perfect womanhood. The Jehovistic spirit which cast down the maternal ideal, the image of Mary, from the Christian altar, must be superseded, and the womanly element restored, not in any image, but in reality. This cannot be done by a Church which derives its traditions from mediævalism. It cannot be done by dissenting denominations, generally fettered by Judaism and its god of vengeance. It can be done only by the growing civility of secular society, and this can be consecrated and led only by a religion detached from Judaism and from the traditions of imperial and belligerent Christendom. Such a religion is represented by your society. By your history, by your convictions, you are pledged to stand for the cause of peace, for universal charity, for humanity. A great cause it is, and I charge you this day to be faithful to it. In standing for it, you have with you the hearts of millions who as yet cannot venture to meet with you. The earliest traditions of Christian faith are with you; and, if you are true to those virtues which alone can build up a happier, more peaceful world, Christians will increasingly find themselves and their longings better interpreted and represented here than in their own sectarian pulpits.

Even if for a time you cannot find a leader to represent your cause in this place, I trust that you will yet stand by this venerable home of your fathers and your faith. Let your light be kept trimmed and burning, remembering—each man and woman of you—that this is the very time when from each is most required his help of heart and hand. Do not despair of a cause with which all high moral and social tendencies are co-operating. Be faithful, let patience have its perfect work, and your leader will appear. And, when he shall appear, gather around him as you have gathered around me, with your strength and your support. However feeble and faltering he may be, lend him your courage, endow him with your spirit, aid him by your means to keep abreast of

the culture and resources of the age. Be sure he will come!

And now, as I sorrowfully part from you, it is with confidence that what work I have done here will be seen in the future as but a leaf on the stem of your growth,—the best I could do, but still a mere contribution to the full flower which shall crown your fidelity and your hope.

CORRESPONDENCE.

A SUNDAY IN LONDON.

Editors of The Index:—

Wishing to get a glimpse of the workings of liberal thought in London, I first rolled over the quiet asphalt (blessed boon to nerves) to the South Place Chapel, with which Mr. Conway was so long associated. I found the house only half-filled, but waited in vain for the eager courtesy that seats visitors in American churches. Upon application to one in authority, I was pointed to a side bench against the wall that was available for strangers. On the opposite wall, I saw the names of Bruno, Bacon, Fox, Channing, Mann, Moses, Buddha, and Socrates. Probably the name of Jesus was inscribed on the side hidden from view. Hymns were sung from a theistic hymn book, and an anthem was warbled, in which the soprano wished about twenty times for "wings like a dove," and said she would pray morning, noon, and evening. I wondered if music and reason would ever come to terms. Why may not sound sense be combined with sweet strains?

The preacher was F. Sydney Morris, of York, a minister who has developed into an agnostic. He did not sympathize with the eagerness of the soprano singer; and, instead of praying, he uttered a soliloquy on the mental constitution of the world, ending with the sentiment that our question now is not, Where is rest? but, Where is duty? He announced his readings as being taken from "the Hindu Scriptures," "the Hebrew Scriptures," and "the Spanish Gipsy."

The text was, "Vox populi, vox Dei"; and, in an able, clearly uttered discourse, he showed its falsity. It was described as a convenient maxim for suppressing progress. Popular opinion about God and immortality proves no more than did popular opinion of the flatness of the earth. "The self-constituted ministers of a phantom deity" had directed this opinion wrongly, but they were losing control. General intelligent opinion was, in the long run, sound; and, when the voice of the people follows knowledge and the highest intelligence, the maxim may become true. His benediction consisted of a wish to that effect.

Such a service I might style the last gasp of the "Church" before transformation into a lyceum. The theme reminded me of the neat reply of a sister of the Wesleys. When her brother, to close the discussion, said dogmatically, "I tell you, sister, the voice of the people is the voice of God!" she replied, "Yes: the people cried, 'Crucify him!'"

The free thinkers, besides having some eighty meeting places about London, have organized an "open air propaganda"; and I went to Regent Park to hear Mr. Trumper. They do not arrest out-door speakers here, being yet behind Boston in the guardianship of citizens; and I found six circles of listeners under shady trees. One British matron was proclaiming the terrors of "judgment day." A loud-voiced gentleman was preaching "Christ crucified." Mr. Trumper was introduced by some remarks about the "Holy Pigeon," and proceeded to prove that "theological sin was impossible." He devoted his "hennergies" to showing that the "attributes" of God were "holily" fit for a devil, and, if God deliberately made sinners, it was not sinful for them to sin. Near by, a pleasing young man discoursed upon socialism,—co-operation, men working with each other, instead of competition, working against each other. Socialism promises plenty, work, and leisure. Now, each British workman produces £400 per annum, and receives less than 400 crowns. When all work, three hours a day will supply every need. A paper called "Justice, the organ of the social democracy," was sold. It was full of earnest writing of a good order.

The next circle was addressed, for over an hour, by a man who stood on a stool marked "Christian Evidence Society." He attacked Haeckel on Evolution with all the ignorant and silly jests that have emanated from the pulpit in twenty years, and had the

effrontery to say that Darwin did not favor the idea of man's descent from animals, and had not written about it. When discussion was invited, I found myself on top of the Christian Evidence stool, informing the British public that Darwin had written on *The Descent of Man*, and asking them if one so ignorant of Darwin's works was competent to disprove evolution. I received hearty applause; but the speaker got mad, and berated me for "discourtesy," to the delight of part of the audience. "Mr. Orange-blossom" was introduced, and asked how the animals got from Noah's ark to Australia. The speaker said winds sometimes carried seeds. "But," said Orange-blossom, "they don't carry kangaroos."

An excited circle had gathered around the Holy Pigeon man; and hot discussions were going on with considerable wit, but with dangerous accusations. "Sullivan, you're lying, because you can go to confession to-morrow, and wipe it all off." "But your leprosy sticks to you like h—l, and you've got no remedy," was answered.

Crowds were met returning from Hyde Park, with a band of music, coconut carts, and lemonade wagons. A mass meeting had been held to protest against the new tax on beer. "A pretty mob that is," said coachee, "to set themselves against a hact of Parliament."

In the evening, I went to the Hall of Science. The lecture was to begin at 7.30. Doors were opened at seven, with admission at threepence, sixpence, and a shilling. In a few minutes, the place was packed; and the people patiently endured half an hour's vigorous piano-pounding by a skillful young lady. Mr. Bradlaugh and two daughters then walked up the aisle to the platform amid vast applause; and Miss Bradlaugh announced the subject, "England, Russia, and India." Mr. Bradlaugh is a large man, with the massive, clean face characteristic of Beecher and Ingersoll. Such an impression does he give of physical force that you wait with dread for an expected shout, and an agreeable surprise is experienced when he begins in a mild and slightly high-pitched tone. But at times he develops intense vehemence, though he never roars, and always enunciates distinctly. He is certainly an effective speaker, and has unlimited control over his followers. He deprecated war, declared the "encouragement of national antipathies to be a misfortune and a crime." It is true Russia has stolen land in Asia, but so has England. "She bought the fringe of India, and stole the garment; paid for the tissue paper wrapper, and stole the parcel." She should take her stand at the borders of India, and not concern herself about Russia's stealings outside. The way to hinder Russia is, not by fighting her, but by satisfying India, giving the right of self-government to her people. England would steal Russia, if she could, and would declare it "necessary for the civilization and Christianization of the barbarous Cossacks." So do not be too censorious of Russia. A storm of applause and cheers followed the lecture, which really deserved it; for it was full of information, candid admissions, pacific sentiments, and lofty exhortations. If more of the Tory parsons and dissenting ministers of England would imitate this despised free thinker, the British Lion would not be so often concerned in bloody scrapes.

The impression of the day upon my mind is: the British people are thinking for themselves; knowledge is spreading fast; superstition, bigotry, war, injustice, are being confronted by their victims, who, through the benefits of science, are rising to newness of life.

ROBERT C. ADAMS.

LONDON, June 7, 1885.

RELIGIOUS FREEDOM IN NEW HAVEN.

Editors of The Index:—

Gov. H. B. Harrison of Connecticut, said: "If elected, I shall be guided in my administration by the one principle of the equality of all citizens before the law."

If you would seek the most perfect caricature of religious liberty which the belated tendencies of American life can furnish, visit New Haven. You may not find it in the number of arrests and imprisonments for heresy, but in the innumerable other ways in which heresy is punished, as shown in the mute, servile, prevaricating spirit which fastens on the people a yoke of almost mediæval bondage. Here, the ecclesiastical power is assuredly the chief power

of the realm: the newspaper is its valet and clown, the echo of its wishes and behests; for you see the Editorial sandwiched between the Sermon and Religious Notes. Here, the candidate for the highest office in the nation labored hard, in one of his last efforts before the election, to convince the people that he was a Catholic by birth and a Protestant by profession. Here, anything pertaining to the Church, no matter what, ranks among the first items of intelligence. A Reverend is the very highest title of honor, church membership a sure sign of respectability. You may in some quarters, perhaps, be permitted to hint your dislike of creeds and sects, if you own yourself at the same time a follower of Jesus and an adorer of the Bible. And any one who is not ready at any time to join in the Lord's Prayer and the Doxology is a begrunted sceptic, and one who avows antipathy toward the Church is surely a native of heathendom. Still, toleration does go so far as to allow one to have what convictions he pleases, if he will but keep them to himself; and I had almost said to do what he pleases, if he only does it on the sly. Make the proprieties the chief article in your creed, and your chances are good; keep up appearances, and you are hail fellow well met. Piety, in short (whose only substitute is riches), will secure for you a front seat on whatever occasion.

There is, of course, a good and bad piety; but it is the bad one I see imaged in the manners and customs around me. And, as proof of this, I will cite not only the State laws, but the example of Yale and other institutions of a public and semi-public character, that may fairly serve as indexes of a people's religious ideal, or as showing at least one of its marked characteristics.

The Constitution of the State of Connecticut says that "no preference shall be given by law to any Christian sect or mode of worship." Good, if the "Christian" were only left out. For see what follows: "It being the duty of all men to worship the Supreme Being, the Great Creator and Preserver of the Universe, etc. . . . And each and every society and denomination of Christians in this State shall have and enjoy the same equal rights and privileges." But I must quote more to get the true interpretation: "Any person who shall blaspheme against God, either of the persons of the Holy Trinity, the Christian religion, or the holy Scriptures, shall be fined and imprisoned," etc. And, still more, Christian churches and parsonages are exempt from taxation. The clergy have the right to solemnize marriages. The Sabbath must be kept holy, all secular labor as well as amusement being prohibited on that day, and for the violation of Sunday laws the accused is not allowed trial by jury. The governor, too, appoints Fast and Thanksgiving Days.

Then, in the public schools throughout the State, unless New Haven stands alone, God, Christ, and the Bible are duly honored. The school boards, taking their clew from these State enactments, prescribe Scripture reading and the Lord's Prayer as part of the daily routine, no matter what the religion of the teacher or the pupil may be!

And this is the state of things in Connecticut, where perhaps the loudest accusations have been heard concerning the alleged union of Church and State in Utah, the home of the Mormons. But the picture is not complete. In the New Haven poorhouse is a chapel where religious services are held by Catholic and Protestant on alternate Sundays; and this priest and minister are salaried officials of the institution, receiving from the public treasury a yearly compensation for their services. The Protestant Orphan Asylum and the Asylum of St. Francis receive each from the State an annual gift of two thousand dollars, though the people have an asylum of their own for this purpose, equal to all needs in that direction.

Twelve out of the twenty-four who met in convention in 1818, to remodel the Constitution of the State of Connecticut, were Yale alumni. What their theories were then may be judged from what their practices are to-day. And it may be safely assumed that the influence of Yale to-day, on the religious habits of the community, is at least in the proportion of twelve to twenty-four. On the Green, in the centre of the town, are three churches in line; and the three gates to this public square are the entrance to these temples of worship, immediately back of which, and between them and the colleges, is the old State House. Yale was founded at a time of a close union of Church

and State, when a member of the Congregational Church only, was a freeman and a voter. And, if I mistake not, this same spirit dominates Yale to-day, of which it is as proud even as Saturn with her rings, which are a sign of arrested planetary growth. In its interior to-day is the church altar, at its portals the font of baptism; for Yale has its pastor as well as its professor, its chapel no less than its class-room. Religious exercises, public and private, are enjoined on the students. Every class has its deacons; and all must attend morning devotions as well as a regular Congregational service once or twice a week, though the student is free on Sunday to elect his place of worship, but not to neglect it. How many are there, I wonder, among the ten or eleven hundred students who feel their consciences outraged by this compulsory law? Are there among them no Catholics, Universalists, Unitarians, Jews, theists, sceptics, humanitarians, none whose attitude toward the differing, warring creeds of the day is one of inquiry or non-committal? It is not surprising that ex-President Woolsey should say he did not think the existing connection between Church and State amounted to much, and that he would even favor some form of union. Only recently, the custom of having six State senators in the corporation of the college has been changed by substituting alumni of five years' standing. The remaining members of the corporation are still the governor, lieutenant-governor, and twelve clergymen. And the law requires that the president of the college must be a clergyman.

A glance at the New Haven Hospital will assist this diagnosis of the case in hand. A hospital is classed with charitable institutions, toward which the public is apt to be charitable in more senses than one. And the one in question has its sins, maladies which knife nor vial can cure, but which need the cauterizing process of plain speech; for they are among the chief causes of disease, both physical and moral, making hospitals and asylums a necessity. Closely associated with the barbarous treatment shown its hands or employes is another act of tyranny, the same in essence, however different in appearance,—the ignoring of the principle of human rights. The New Haven Hospital receives its support from various sources,—the patients, a corporate organization, the State and the public. The stockholders comprise a long list of the benevolently inclined. The State grants annual subsidies. Annual deficits are made up by public contributions. Its greatest pleasure is to recognize its responsibility to the public. Prof. Farnham recently said, "We would be justly blamed by the public, if we were to allow any improprieties." Now, it is one of these "improprieties" (though not such likely as he had in his mind) of which I mean to speak.

Perhaps one of the most conspicuous objects in one of these hospital wards—and there are six of them—is the Bible, on a centre-stand, which it is the nurse's duty to dust off every morning, and, above it on a pillar, a scroll filled with Bible-texts, which must also be changed daily, in order to present a new lesson. No harm in that, is there? perhaps the reader will exclaim. It would certainly be hard to tell what good there is in it; for the Bible is never opened, and the texts are never read. But there is something back of this. These nurses, all of them, have to attend religious exercises every evening in their dormitory, where the Bible is read, prayer offered, and hymns sung. Not wishing to raise the question as to the good there is in this to those with whose belief it accords strictly, I do not ask the question whether there is not a harm, an infinite harm in it, to those with whose beliefs or sentiments it does not accord. Now, among these nurses are Catholics, Jews, and non-believers; yet they are "put through" the same as the rest. Poor things! they dare not say their souls are their own, intelligent and educated as many of them are. I admit many of them may not feel it a grievance, but this is the saddest aspect of the whole thing. But this is not all. Connected with the hospital is a chapel, where services are held every Sunday evening by different denominations, I suppose. It is the ward-master's duty to ring the bell at the hour of six; and the nurses who can escape from duty feel it their duty to attend, and to urge others to do the same, to which they are incited by the example of the head nurse, whose piety is supposed to be of the strictest orthodox type, or, if not, must be of a very flexible nature. Then added to this are the services conducted in the wards, supposedly for the

benefit of patients. This has been done now for years by an Episcopal minister in flowing robes, who has the privilege of all the wards, in which he repeats the litanies of his Church every Sunday evening. And this he does, when there may not be one person in the ward who cares to hear him, and when most of its inmates actually abhor the ceremony. But, in his tour through the wards, he is often accompanied by a group of nurses, whose presence adds to the *éclat*, if not to the "grace," of the performance. The Episcopal Church has one rival, though not a dangerous one, seemingly; for the Methodist choir advances no farther than the hall-way leading to the ward, where it sings of "Christ's redeeming love," "Whose blood was shed for me," etc. How much comfort there is in all this for patients afflicted with various maladies, and with minds no less variously disposed in religious matters, perhaps some one can tell. Judging from the patients' own symptoms on such occasions, which ought to be a good criterion, the comfort is all "in my eye." But, of course, their souls are benefited, though they do not know it. Praising the Lord and proclaiming his gospel are always a seasonable act, and can hurt no one; and some soul may be saved from eternal perdition.

And what a disgrace it would be to have no regular religious exercises in the hospital! Only infidels, ungodly people, sinners, could think of such a thing. Now, this is the theory, I have no doubt, by which these religious observances are justified. But it only proves too clearly, I think, to the unbiassed mind, that the whole business is wrong, iniquitous in the extreme, a gross violation of the rights of conscience, a travesty of the true religious instinct and worship. Its strongest condemnation is in the excuse offered for it by many, that it is harmless. There must be those who are in high positions of trust in the hospital who are not in sympathy with these practices. Why are they silent? Is reputation worth more than the truth? Are the interests of science and of morality not one? Or is religion a something unrelated to either of these,—a mystery, say, with which reason and common sense have nothing to do?

In view of facts such as these, it is no matter of surprise that candidates for political preferment in this State should not only avoid giving umbrage to the clergy, but be extremely solicitous to have their good-will, and that all pledges as to equal rights of citizens should be couched in the most general terms. In the history of Connecticut, candidates for civil offices once received their first nomination in an assembly of clergymen. And, in one sense, this is true to-day. T. W. CURTIS.

"A DARK SEANCE."

Editors of The Index:—

In your issue of May 21 there appears a letter from Mrs. Isabella Beecher Hooker in reply to my account of a visit to "A Dark Séance," which you kindly published on April 23. I regret that Mrs. Hooker allowed a month to pass before writing, as that long interval has carried me across the Atlantic, and I would rather have been in Boston to answer for myself; but, even at this late day, I will, with your permission, reply to Mrs. Hooker as briefly as possible. First, then, the hands which touched mine in the darkness were the medium's. I have no interest whatever in the matter save the love of truth; and I trust that years of patient study with the telescope, the microscope, and the blowpipe have taught me something of the laws of evidence, and given me some little power of discrimination. Second, the people on the opposite side of the circle, toward whom the "medium's" back was turned, did not acknowledge that "the hands were busy there," but kept calling to the medium: "Don't forget us. Come this way, won't you?" etc., as I stated in my letter. Third, the fact that Mrs. Hooker and her audiences and "the spiritualistic press" are believers in Spiritualism goes for nothing! All the world believed that the earth was flat, and that the "sun was made to rule the day, the moon to rule the night"; but the universal belief did not prove it, and one man, Copernicus, stood out for the truth. Fourth, because I told the medium my position, and expressed a desire to know the truth, I was invited to her *séance* avowedly as a reporter. As I left the house after the *séance*, the last words her money-taker said to me were to be sure and send him a paper with the report in; and of this the medium was fully aware. So, on my part, there was no deception in the matter.

Fifth, and last, for Mrs. Hooker I feel respect, only; but I must maintain the position I took in my previous letter, inasmuch as I dealt simply with facts. And, although I fully agree with Mrs. Hooker as to the implication of these facts regarding the medium, I have nothing to take back, nothing for which to apologize; and I must leave all deductions to your readers, with the simple explanation that I have in no way exaggerated the case, nor "set down aught in malice."

PETER ANNET.

LIVERPOOL, June 9, 1885.

F. S. WRITES: "The Paris correspondent of the Boston *Evening Transcript* of July 22 writes deprecatingly of the secularizing of the Panthéon on the occasion of the obsequies of Victor Hugo, and says: 'We have, therefore, in this act of secularizing the Panthéon, a reward held out by the State for the renunciation of Christian doctrine,' and that hereafter 'no man will be considered great enough to be buried there, if he has any weakness for religious ceremonies.' He regards it as a certain proof of the atheistic tendencies of politics in France. It would seem that, to this writer's mind, the only alternative is some form of doctrinal Christianity or blank atheism. How long is it going to take to get it through the heads of a class of newspaper writers that the great ideas that form the basis of all the great historic religions have no dependence upon any form of Christian doctrine? No secularization of public edifices consecrated to some special Christian creed is going to destroy or lessen men's reverence for the great principles upon which the happiness and progress of man and society must ever rest. Victor Hugo was no atheist, but a firm believer in immortality; and yet, with the penetration of genius, he saw that this great fact did not depend in the slightest degree upon the personalities and events which constitute all that distinguishes doctrinal Christianity. Hence, he regarded the rites and ceremonials growing out of these personal events as of no account in the welfare of humanity, but as bolstering up institutions which have proved themselves to be barriers to the genius which lives within the human spirit and to all progress and development."

THE London *Inquirer* says that the unveiling of the Darwin memorial statue at the Natural History Museum was an event second in interest to the burial of Darwin in Westminster Abbey three years ago. The presence of the Prince of Wales showed that royalty had the grace to pay homage to a greater majesty than that of courts. The presence of the Archbishop of Canterbury showed that the Church at last sees the uselessness, if not the folly, of setting itself against the resistless might of science. The burial of Darwin in our Pantheon was a national event; but the deepest significance was, as Prof. Huxley pointed out, international. Contributions to the memorial "have flowed in from all countries and all classes, from the bishop to the seamstress, and in sums from £5 to 2d." The federation of the world, which in politics is still so shadowy a dream, is in science an accomplished fact; and England owes to Darwin a leadership which she is in danger of losing in other fields.

BOOK NOTICES.

THE RUSSIAN REVOLT. Its Causes, Condition, and Prospects. By Edmond Noble. Boston: Houghton, Mifflin & Co. 1885. pp. 269. Price \$1.00.

Mr. Noble, who has travelled extensively in Russia, and has acquainted himself thoroughly with its people, language, and literature, has evidently made a very careful study of one of the great problems of the advancing civilization of to-day, and gives us in this interesting work the results of his investigations and thought on the subject. His researches and observations are made from a thorough evolutionist's point of view, and he is apparently very radical in his religious opinions; but this personal bias, though plainly perceptible all through the work, is not made offensively so, and to those who are in sympathy with the author's views gives an added zest to a book which cannot fail to interest even those who do not accept the philosophical or theological ideas it in-dorses.

He traces the successive steps by which Russia, from a free, migrant, and peaceful race of people, became the great but harassed nation it now is. Prominent among these causes he considers the conversion

of the early Slavs to Greek Christianity and their enslavement by the Tatar Mongols. In the chapter entitled "Byzantinism," Mr. Noble shows how Byzantine Christianity "gradually, if not simultaneously, promulgated in Russia the three ideas of unity in deity, unity in sovereignty, and unity in territory,"—the ideas which, carried out, have made Russia the terrible autocracy it now is.

Among the forces which, in the author's opinion, have been and now are at work, ultimately to disintegrate this cast-iron government, is the religious protest of the common people against a faith forced upon them. So strong is this dissent that to-day, Mr. Noble states, "upwards of fourteen million Russian subjects of the Tsar live outside the Greek Church in a state of protest against its authority." Other forces were set at work in the reforms introduced by Peter the Great, and in the contact with the intellectual progress of other nations made necessary by emigration and immigration, and the consequent imbibing of higher ideals of liberty and self-government by all classes of thoughtful Russians.

In the chapter on "Domestic Slavery," Mr. Noble gives a deeply interesting review of the position of women in Russia in the past, and their more hopeful and encouraging prospects at present. The style is crisp, vivid, strong, and often condenses in a sentence the results of much thought and study. The author gives a startling picture of the extent and strength of the forces working in Russia for revolt, but does not think them yet strong enough successfully to cope with the government. S. A. U.

OLD SOUTH PRIZE ESSAYS, I. The Policy of the Early Colonists of Massachusetts toward Quakers and Others whom they regarded as Intruders. 1881. By Henry L. Southwick. Boston: Old South Meeting House. 1885. pp. 21.

This essay, which took the first of the Old South prizes offered in 1881 for essays on subjects in American history, is by a graduate of the Dorchester High School in 1880. It treats the subject indicated by the title with independence and fairness, and with as much fulness as is possible within the limit imposed upon the contestants for the prize.

We condense as we read Mr. Southwick's statement of historical facts which make the saddest chapter in the history of New England. He points out that the Puritans who settled in Massachusetts Bay aimed to establish a theocracy, with the Bible as supreme authority in civil as well as ecclesiastical affairs. Freedom of conscience to them "was the synonyme for the deadliest of heresies, for moral looseness and for social anarchy." As Mr. Quincy says, "They came here, not to acquire liberty for all sorts of consciences, but to vindicate and maintain the liberty of their own." "They objected," Col. Higginson remarks, "to the Church of England, not that it persecuted, but that its persecution was wrongly aimed." Sincere and full of zeal, they tried to reduce to practice the views which they held. They aimed to regulate their commonwealth by the Bible, especially the Old Testament. In the necessity of a union between Church and State they firmly believed; and, Judge Story observes, this was "their fundamental error." To do justice to their motives, we must keep in mind their beliefs and purposes. They wished to have it understood that "New England was a religious plantation, not a plantation for trade"; and to keep out heretics was, they believed, their right and duty. The right of franchise they restricted to church members.

It is not strange that, with their views and their zeal, they persecuted, banished, and killed dissenters. As early as 1629, John and Samuel Brown, reputed "sincere in their affection for the good of the plantation," were sent back to England because they adhered to the forms of the Episcopal Church. Roger Williams was banished by an order of the General Court held at Boston in September, 1635. Soon afterward, Mrs. Hutchinson, for "weakening the hand and hearts of the people against the ministers," and "being like Roger Williams and worse," was banished with her followers. Baptists were banished, fined, and whipped for heresy. But among the Puritans were those who had no sympathy with the persecution. "It doth not a little grieve my spirit," wrote Sir Richard Saltonstall, one of the original founders of the colony, in 1652, to Wilson and Cotton, ministers of Boston, "to hear what sad things are reported daily of your tyranny and persecution in New England, as that you fine, whip, and imprison

men for their conscience. First you compel such to come into your assemblies as you know will not join you in your worship; and, when they show their dislike thereof, or witness against it, then you stir up your magistrates to punish them for such, as you conceive, their public affronts. I hope you do not assume to yourselves infallibility in judgment, when the most learned of the Apostles confesseth he knew but in part, and saw but darkly, as through a glass."

The Quakers gave the Puritans more trouble than all other heretics put together. They had heard of New England as a place where "the servants of the Lord were forbidden to serve him"; and to New England they came, to break down Puritan intolerance, and to proclaim the truth by the authority of the "Inner Light." Ann Austin and Mary Fisher, who arrived in Boston in 1656, were seized, their persons were examined for marks of witchcraft, their papers burned, and they were sent back to England. A few months later, eight more Quakers landed in Boston; and, on their arrival, they were thrown into jail. Laws were passed (there had been none against Quakers up to this time) that Quakers coming into Massachusetts should be imprisoned and whipped, that masters of vessels bringing a Quaker into any part of the plantation should be fined £100. A fine of forty shillings for every hour was imposed for harboring Quakers. Every Quaker who, after having been once banished, returned, should, "for the first offence, suffer the loss of one ear; for the second offence, the loss of the other; and, for a third offence, should have his tongue bored through with a hot iron." In 1658, the penalty was made death against all Quakers who should return after they had been banished. But these persecutions caused the Quakers to "swarm to Massachusetts as the hot-bed of bigotry, and therefore in the greatest need of their remonstrances and preaching." They were fined, imprisoned, and scourged by order of the General Court to the number of about thirty. How many were punished by sentence of the county court is unknown. The execution of Mary Dyer, William Robinson, Marmaduke Stevenson, and William Leddra, in which the persecution reached its climax, will ever be a stain on the history of New England. "In all these barbarities, the clergy heartily concurred." But protests against the rigorous policy of the magistrates grew louder and more numerous; and, expressing as they did a growing sentiment, relaxation of the severity of the persecution followed, and with it a decline of Quaker fanaticism. "It is most evident that Quaker excesses were engendered by Puritan persecution. Quaker men were stripped of all their property, starved in Puritan jails, tortured and mutilated; Quaker women dragged through jeering crowds stripped for the lash, until, driven to a perfect frenzy by their inhuman treatment, they were goaded on to acts of defiance and indelicacy." "But what the Puritan clergy, who were the instigators of the laws, most violently opposed was the theology of the Quakers. This was the primary cause of the persecution, and this the Puritan ministers never for a moment faltered in their determination to root out." But, while we deplore and condemn the persecutions of the Puritans, we should remember that a large minority were opposed to these persecutions, and that the age was one in which "persecution was practised by every dominant sect in Christendom."

B. F. U.

THE *Herald of Health* is publishing a valuable series of papers—mainly autobiographical—upon the health and working habits of many of the best known literary men and women of Europe and America. The June number contains an interesting contribution from Hon. F. E. Spinner, giving a graphic account of how he has preserved his health and strength to his eighty-fourth year. The May number contained a similar article from Rev. Dr. Bartol, and next month we are promised one from Rev. James Freeman Clarke. Other papers by Edward Everett Hale, Ferd. de Lesseps, Hon. W. E. Gladstone, and others, are anticipated, which, together with an article on the health habits of Victor Hugo, soon to appear, will constitute a valuable contribution to hygienic science, and to our knowledge of the eminent men of our time. A German poet has well said,—

"E'en from the body's purity
The mind receives a secret, sympathetic aid";

and we cannot doubt that, in promoting the knowledge of the laws of health through the medium of his

valuable journal, Dr. Holbrook is indirectly aiding in the promulgation of rational views concerning the great questions of religion, philosophy, and morals, in which the readers of *The Index* are chiefly interested. We have had too much bilious and dyspeptic theology in these latter days. We should all aid in spreading the gospel of health.

A NOTE from L. Prang & Co. states that Mr. I. M. Gaugengigl has just finished a painting called "On the Promenade," representing two French swells at the time of the Directory. The "Incroyable" costume of the dandies is very effectively rendered, and the picture has already been sold. It is, however, still on exhibition at Lowell's gallery in Boston. The Art Students' League in New York is making renewed efforts for the approaching season's work. Mr. I. Carroll Beckwith will have charge of the antique class. Two large painting classes will be taught by Mr. I. Alden Weir, and a special life class for women will be under the charge of Mr. Walter Shirlaw.

A SEASIDE RETREAT.

Ocean Cottage, on Horseneck Beach, is situated about thirteen miles south-west from New Bedford on the open sea. Those wishing a pleasant and quiet summer resort, with all the accommodations of a first-class hotel without the restraints of a fashionable watering place, will be pleased with our home. We have one of the finest beaches in the country, with the surf at our door; excellent bathing and fishing; an inlet close by for those wishing to sail in smooth waters. Seldom any mosquitoes about the hotel.

For particulars, address
JOSIAH WOOD,
No. 84 ALLEN ST., NEW BEDFORD, MASS.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price, by

THE INDEX,
44 BOYLSTON STREET, BOSTON.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counterforces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammeled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.

H. T. MARSHALL'S
PATENT ADJUSTABLE LACE CONGRESS.

THE COMING SHOE.

By means of its Lacing Adjustment, it can be made as comfortable as any Lace Shoe, and is just as convenient as any Congress in putting on or off, as it requires no lacing and unlacing after being once adjusted to the foot.

The most durable elastic is used, yet does not draw the foot and ankle as in ordinary congress. Every one who wears them likes them.

Take no substitute until you have seen and tried on a pair. If your dealer does not have them or order them for you, write to subscriber for directions how to get them. All Shoes warranted that are stamped with name of Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes, Base Ball, Bicycle, and Lawn Tennis Shoes.

H. T. MARSHALL, Brockton, Mass.
 N.B.—Patent stamp woven in one strap of each shoe.

A large assortment of these shoes at retail at
 No. 17 Water Street, Boston.

PIC-NIC SUGGESTIONS.
 Book now in press. Suggestions for Sunday-school picnics, excursions, etc., from experienced Sunday-school workers from various sections, both city and country. Replete with valuable hints. Worth many times its cost to any Superintendent. Price, postpaid, 25c., or will send free to any one sending us names of Superintendents of all Sunday-schools in his place. Address, DAVID C. COOK, P.O. 99, 18 & 15 Washington St., Chicago.

The Secret of the East;

OR,

The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion.
 A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Beaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

- I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts.; one hundred, \$1.50.
- II. *The Bible and Science*, by John Weiss. 5 cts.
- III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition. 5 cts.
- IV. *Transcendentalism*, by Theodore Parker. Never before published. 5 cts.
- V. *The Public School Question*, stood by a Catholic American citizen (F. E. Abbot). 5 cts.
- VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett. 5 cts.
- VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.

Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

Address FREE RELIGIOUS ASSOCIATION,

TO CAPITALISTS.

For Investments or Loans, write to
 J. M. LINDLEY,
 REAL ESTATE AGENT,
 BOZEMAN, MONTANA.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extractions.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnerbund.)

Editor, C. Hermann Boppe.

TERMS, PER ANNUM, IN ADVANCE:
 UNITED STATES AND CANADA:

Freidenker..... \$2.50
 Turnersche Ausgabe des *Freidenker*
 (*Amerikanische Turnzeitung*)..... 3.00

EUROPE:

Freidenker..... \$3.00
 Turnersche Ausgabe des *Freidenker*
 (*Amerikanische Turnzeitung*)..... 3.50
 Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirteenth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing CONSIDERABLY MORE READING MATTER, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading "Turnersche Ausgabe des *Freidenker*."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.
 (Organ of the German-American Teachers' Association.)

Editor:

MAXIMILIAN GROSSMANN, Milwaukee, Wis.

Associate Editors:

H. H. FICK, Chicago, Ill.
 H. SCHURICHT, Chicago, Ill.

16 large quarto pages, with four-page cover.
 Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

Orders for all kinds of books promptly filled. Radical and Freethought Publications a specialty.

Address all orders to
 FREIDENKER PUBLISHING CO.,
 470 East Water St.,
 MILWAUKEE, WIS.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its managers will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

CURRENT TOPICS.

BY B. F. U.

If the explosion of powder and the other noisy demonstrations usual on the Fourth of July may be regarded as indications, independence and patriotism continue to burn brightly in the hearts of the American people. There are many, however, in whom these important civic virtues have suffered no abatement, who would be glad if our national birthday could be celebrated with less noise and more reason, with less that is appropriate only to a semi-civilized condition, and more that is suited to the character and claims of an enlightened people.

The plumbers of Milwaukee, who have been on a strike, have opened co-operative shops, which are taking in work enough to keep most of the strikers in the city busy. They have cut the rates established by the master plumbers, and are hiring the men brought into the city by the latter, and, an exchange says, "so far are more than holding their own."

In a letter to an English paper, "Ouida" gives an account of cruelties to animals perpetrated in Naples. She says that, if the skin is worth a centime, the animal is skinned alive, as it is believed to be more supple, and therefore sells higher, when stripped from the living animal. Old horses, young kids and lambs, dogs and cats, are all skinned alive. There are dog-stealers—legally appointed municipal officers—who go about the city, and drive all the animals they can find into a court, where they are every day flayed alive, and their skins sold for the public profit. The municipal authorities are compromised in these cruelties, and the merciless wretches who inflict them on the poor brutes are in no danger of punishment.

The Boston Herald says: "It is one of the things that fills the minds of honest and scholarly men with contempt for the degrees conferred by our American institutions that they are bestowed, for the most part, on those who are conspicuous chiefly for their intellectual obscurity, and have done nothing, and are never likely to do anything, to deserve them. . . . In America, the degree is sel-

dom associated with genuine merit. It is often an exceedingly disagreeable appendage to a man's name, and causes him great inconvenience, if he is mistaken, as he sometimes is, for a man of learning and genuine ability. Unless the degrees can be bestowed upon men who deserve them, and whose merit the educated public indorses, they had better not be bestowed at all."

THE *Congregationalist* says that there is not "anywhere on earth a first-class daily journal thoroughly deserving to be described as a Christian newspaper." This our orthodox contemporary deplores, and it endeavors to show how such a paper can be established and how it should be conducted. The money must be put up by Christian capitalists, there must be competent editors, the paper must be "clean," "valuable," and "Christian," etc. Commenting on the *Congregationalist's* article, which is two columns in length, the Springfield Republican says: "There are plenty of ministers out of a job who would take the place of editor-in-chief at low rates. In the *Congregationalist's* ideal newspaper, 'every line is to be fit for the most innocent girl's reading.' Certainly, so should the Bible be; but we should not dare to quote in the *Republican* some of the characteristic features of King Solomon's domestic arrangements. But the *Congregationalist*, secondly, wants things boiled down (!). This, from a two-column article in a prolix religious journal, is 'too awful funny,' as the girls say. Third, it should be 'Christian.' Exactly. It strikes us from a careful observation that about as much steady-going Christianity is ploughed into the daily journals of the country every twenty-four hours as into any other business; but we are willing to take our turn with the lawyers, doctors, merchants, and business world generally, in having a better way shown up for 'poor we-uns.' But, if we are going to be taught by object lessons, we want a good example."

REFERRING to Rev. Dr. Newman's prayer for the success and prosperity of the New York State Undertakers' Society, the Montreal Star says: "From an undertaker's point of view, the progress of the 'profession,' the combination to keep up prices, the denunciation of the vultures of cremation, the imposing convention, are all doubtless very gratifying. . . . Still there is some reason to fear that the funeral business is 'progressing' more than is desirable in the public interest. It is not the fault of the undertaker any more than extravagance in dress is the fault of the dry-goods merchant. It is due to our own exceeding bad taste. The tendency is for funerals to become more and more public. Private sorrow and personal vanity are offensively thrust upon the attention of the public. Funerals are so conspicuous in Montreal that visitors must wonder when we find time to attend to anything else. A funeral being unfortunately made into a public parade, much silly extravagance naturally follows. Any funeral adjunct, however extravagant, that can be invented by an undertaker or a convention of undertakers, will be adopted and paid for, first by people who are rich in money and poor

in taste, and finally by the people who are poor in both. Among the poor, a funeral in the family is something to be remembered with pride,—a public demonstration, not only of the family's grief, but also of its social importance. It is considered of great importance to get a great number of people to take part in the procession."

IN a letter to Deputy Passy, of Paris, John Bright writes: "If European nations would accept commercial liberty,—that is, moderate or abolish customs,—Europe might soon tend to an era of perpetual peace. At present, all resources are swallowed up by military exigencies. The people's interests are sacrificed to the most miserable and culpable fantasies of foreign politics. The real interests of the masses are trodden under foot in deference to false notions of glory and national honor. I cannot help thinking that Europe is marching toward some great catastrophe of crushing weight. The military system cannot indefinitely be supported with patience; and the population, driven to despair, may possibly, before long, sweep away the royalties and pretended statesmen who govern in their names. I hope your country and mine will remain at peace, and be real friends."

GEN. McCook, ex-Governor of Colorado, in a letter to Secretary Lamar, states that, notwithstanding the unlawfulness of leasing or conveyance of lands by Indian tribes, substantially all the lands in the Indian Territory, set apart for exclusive Indian occupation, are in the possession of white men under leases from Indians who had no legal right to lease, and with the tacit recognition of the Interior Department whose duty it is to remove the intruders. The Indians' country, he says, is overrun with speculators and adventurers, who have despoiled the Indians of their property and destroyed their opportunities of self-support and improvement. He declares it is a country where "force reigns and rapine dwells," and that the representations of the men who ask for the support of the army to protect them "are not the prayers of the weak appealing for protection, but the demands of the strong, who, from a ripe experience, evidently believe that the future and the past will be the same."

THE renewal of the order of the prefect of Rome, forbidding the procession of the Catholic Church in the streets of that city, together with the laying of the corner-stone of the Victor Emanuel monument on the Capitol, amid great enthusiasm of the people, put the clerical press almost in despair. One of the papers says that the condition of the pope is now an object of scorn and derision. Recently, a band of pilgrims visited the pope, when an address was read in which he was called Peter, and it was declared that he was in the bondage of Herod. This leads an exchange to remark: "It is certainly a strange captivity, when the captor can be visited and addressed in this manner in his own resident city. When this address was read, the pope was surrounded by fifteen cardinals, thirty bishops and archbishops, and a full royal pageant."

OLD FACES IN NEW MASKS.

"There is nothing new under the sun," said the melancholic Solomon—or the Hebrew writer who figured under that kingly name—more than twenty centuries ago. We of the nineteenth century are apt to think that we live in an age of *new* things. In many respects, of course we do. Yet it often happens that the seemingly new things are only old things in fresh disguise. Not a few of the inventions and discoveries which have specially marked our own time were known, it is now understood, to ancient peoples, who have either kept themselves excluded from the rest of the world, as the Chinese, or were overwhelmed by some onslaught of barbarism, and left, like the ancient Egyptians, only the relics and ruins of their civilization to excite the wonder of modern antiquarians and scholars.

Theories and philosophies of the universe are continually repeating themselves. Auguste Comte's Positivism had its forerunner in Confucius. Agnosticism is a new word, but it is a new word for a very old thing. In its essential principles, it was the system of Buddha, and the basis of the Buddhist religion. Pessimism is another word much affected to-day; but it is a word that very well describes King Solomon's mood of mind and whatever philosophy he was considered to have had, as portrayed in the dismal Book of Ecclesiastes. The old scholastic disputes of the Middle Ages between the Nominalists and Realists reappear in the latest articles of metaphysical philosophy which have come from the printing-press. Transcendentalism is Plato revived; and Plato's spiritual philosophy, again, was anticipated in the ancient religion of the Hindus. In prehistoric Egypt,—marvellous Egypt,—the principles of almost all kinds of knowledge appear to have been known, some of which the modern world has not yet rediscovered.

But natural science, at least, is new. Yes, the modern world is ahead of the ancient in most of the details of the knowledge of nature, as also in the practical application of the sciences and arts to modes of living. Yet, when we leave the details of the special sciences and endeavor to go back of them to certain general principles and forces which might account for the beginning and continuance of things in the universe as a whole, it is surprising how soon we find ourselves repeating the same speculations about atoms and forces, heats and coolings, gases and solids, attractions and repulsions, expansions and contractions, substance and power, which the old philosophers of Greece and Asia busied themselves with centuries before the Christian era. Some of those old philosophical and religious writers seem by their guesses to have almost hit the modern scientific theory of evolution. One of the most ancient of the Vedic hymns deals with the problem of the world's creation very much as an evolution poet might do it to-day. Paul's memorable sentence, "The whole creation groaneth and travaileth in pain together until now," was anticipatory of the scientific phrase, "the struggle for existence." The New Astronomy is even intimating that something akin to the old Asiatic theory of the periodic emanation and reabsorption or destruction of the material universe may be the actual law of creation and destiny of the solar and stellar systems of worlds.

In ethics, especially, has it become the fashion to coin new words and formulas for old ideas. "The egoistic and altruistic dispositions," "the self-regarding and other-regarding motives," are the grandiloquent phrases under which ethical writers now speak of our old familiar acquaint-

ances, "self-love" and "neighbor-love." Common-place truths are thus sometimes put into such strange and fine garb as to be mistaken for new philosophical theories. The practice reminds us of the story of the school-boy who was eager to display to his grandmother his new acquisitions in natural philosophy, by explaining to her the homely process of sucking an egg. "You see, grandma," he said, "we perforate an aperture in the apex and a corresponding aperture in the base; and, by applying the egg to the lips and forcibly inhaling the breath, the shell is entirely discharged of its contents." "Dear me," exclaimed the old lady, "what wonderful improvements they do make! Now, in my younger days, we just made a hole in each end, and sucked." The grandmother knew the thing very well, and she could describe it in terse Anglo-Saxon; but she did not recognize in it the boy's scholastic vocabulary. So in most of the modern treatises and magazine articles on the subject of morals there is a plentiful use of strange and learned terms. Many honest and not at all ignorant people are led to suppose that, under these new and uncouth words, some before-unheard-of system of ethics is announced,—some "wonderful improvements" in theories of conduct. But strip off the finery of the new phraseology, and below the disguise may be readily detected the old and simple Hebrew precept,—"Thou shalt love thy neighbor as thyself." Modern ethical theories may deal in many high-sounding formulas, but beneath the best of them the substance of thought consists of this old commandment and the Golden Rule,—which mankind in all nations somehow contrived to discover before any philosophical theories of morality were ever thought of.

WM. J. POTTER.

HONOR TO GOETHE.

Faust, Egmont, Iphigenia, Götz, Wilhelm Meister, Hermann and Dorothea, have been guiding stars of literary progress for the last hundred years. They shine brighter than ever now. Whole forests of criticism and imitation have sprung up under this genial radiance, and art has found its choicest themes. Science, too, remembers gratefully that forerunner of Darwin and Spencer, who gave botanists the inspiring truth that the various parts of the flower are only modifications of the leaf, assuming new forms to meet new conditions. His discoveries, claimed also for Oken and D'Azyr, that men have a mid jaw-bone, like other animals, and that the skull is only a highly developed vertebra, have been of great help in bringing to light our real origin. Goethe advanced, as Haeckel says, with gigantic strides, so far beyond the naturalists of his own age that scarcely any of them could follow him; though this failure to appreciate him was largely due to his obstinate partiality for his worthless theory of color, which scientific men have been unanimous in rejecting, but which fascinated Hegel and Schopenhauer.

We who read *The Index* have a peculiar right to honor Goethe, because his views of theology and philosophy were so much like our own. While paying religion all the respect due to its historic importance, he pointed out the defects in its various manifestations as clearly and boldly as could have been done by his own Mephistopheles. There was little change in his views from 1781 to 1831. In the former year, he wrote thus to Lavater: "It is a robbery for you to tear out all the noble feathers of a thousand different fowls, in order to deck your own bird of paradise. . . . Even a supposed voice from heaven would not convince me that water can burn, or a virgin

bring forth a child, or the dead arise. Rather hold I this for blasphemy against the great God and his revelations in nature. I am as earnest in my faith as you in yours; and, if I were to speak openly, I should speak for the aristocracy which I think inspired by God as zealously as you do for the monarchy of Christ."

In 1831, he places among Faust's last speeches that which, with the change of a few words in Bayard Taylor's admirable version, runs thus:—

"The sphere of earth is known enough to me;
The view beyond is barred immutably:
A fool who there his blinking eyes directeth,
And to find men above the clouds expecteth!
Firm let him stand, and look around him well!
This world means something to the capable.
Why needs he through Eternity to wend?
He here acquires what he can comprehend."

Earlier in the same great poem is the well-known suggestion of Mephistopheles that no student of theology can hope to succeed, unless he sticks to only one teacher, taking all he says as infallible, and, in general, holding sacredly by words. Such passages should be kept in mind, as we hear about the course of Goethe lectures which begins next week at Concord. Nothing shows better the extent of his fame than that he should be thus honored by the adherents of a system about which he wrote, in 1827, thus: "Of the Hegelian philosophy, I do not want to know anything, although Hegel himself pleases me. I have, in any case, already got all the philosophy that I shall need until my end,—indeed, properly speaking, I do not need philosophy at all." (Düntzer, *Life of Goethe*, Vol. II., p. 396.) It was thirty or forty years before that he had made Mephistopheles exclaim:—

"I say to thee, a speculative wight
Is like a beast on moorlands lean,
That round and round some fiend misleads to evil plight,
While all about lie pastures fresh and green."

It would be easy to fill columns with quotations on almost every subject, showing how far Goethe rose above his age, and how fully he enjoyed the light of those views which are now most advanced. We may well say of *Faust* what its author said of *Reynard the Fox*, that it is the world's unholy bible.

No bible, however, is infallible; and there is one subject on which Goethe was not so far advanced as many of his own contemporaries, like Schiller, Fichte, Rousseau, Franklin, and Paine. No American can forget that the great question of the age was whether the people should govern themselves or be governed by kings and princes. The great agitation for political liberty began before Goethe was born, and lasted after his death. His ablest works were written during the crisis of the struggle. It must be frankly acknowledged that he took the wrong side from first to last, and amid the constant protest of his friends. His first successful work, *Götz von Berlichingen*, degrades those heroes of 1525, who died in a vain attempt to set free his enslaved countrymen, into mere robbers and murderers. There is as great a misrepresentation as Shakspeare committed against Joan of Arc. The ability of men of humble rank to set their country free is disparaged with similar disregard, not only of the truth of history, but of the rights of citizens, in *Egmont*. This was at the outbreak of the French Revolution, to which grand movement Goethe responded by his *Bürgergeneral*, a farce evidently written in order to expose the sacred cap of liberty to cruel scorn. Faust's final working out of his own salvation is made to depend largely on his achievements in protecting a good-natured emperor, who had shown himself utterly unfit to reign, from being deposed by the best of his subjects. This is all the more significant because Goethe passed more than

fifty happy years as one of the ministers of an absolute sovereign, acquiesced without protest, so far as we know, in driving away the free-souled Fichte from his professorship in 1799, and took an active part in suppressing, in 1816, the journal in which Oken advocated political reform. The life-long favorite of princes and fine ladies could, perhaps, scarcely be expected to do justice to the oppressed. But we cannot honor him as we do Victor Hugo and Emerson.

Neither can we forget how he deserted women after winning their hearts; how this infidelity almost cost Frederika her life, as he acknowledges; how he kept poor Christiane, whom he finally married, almost twenty years as his mistress; how much likeness there is to Don Juan in the adventures of his Egmont, Wilhelm, and Faust; and how his *Melusina* and *Elective Affinities* represent marriage as too narrow a restraint upon human fickleness. The last-named work, which has a place in the Concord curriculum, brings the offenders to a bad end; and so do the notorious novels about Captain Kidd and Jack Sheppard. More generous views of matrimony, as well as of politics, would certainly have increased his title to honor. But there is no doubt of his place beside Shakespeare, Dante, and Homer, among the world's greatest poets.

F. M. HOLLAND.

SUCCESSFUL FRAUD AS A NATIONAL EDUCATOR.

With all but a small minority of men, who may be characterized as defiant, the triumph of any fraud exercises a great fascination, partly through more or less distrust of their own intellects, partly through moral cowardice, which prompts them to avoid a conflict. Even in matters of personal injustice, many will yield rather than fight; and men are almost always more ready to acquiesce in the sacrifice of the rights of others than in the sacrifice of their own.

When any wrong has triumphed in a country, both individual and national character are more or less perfectly reduced to submission to the successful fraud,—a truth which the rulers of the miserable human race have never been slow to perceive, and they have rarely shown any lack of promptitude in availing themselves of it. The innumerable examples furnished by history of the crushing of justice by tyrants, through fraud and violence, are a sufficient attestation of the value of their discovery. The only safeguard against their machinations is perfect and complete exposure. After this has been effected, if the individual or the body politic has not sufficient vigor for self-preservation, it will be damned,—I use the term in the etymological sense.

It is as furnishing means for this exposure that, in my opinion, the great value of *The Index* consists. Many of us, it is true, are more or less interested in the discussion going on between the idealists and realists,—on the one hand, the apparently convincing proof that everything is generated in the ego, and, on the other, the inquiry as to why the ego, which generates everything within itself, takes the trouble of addressing itself to other egos outside of itself. Yet I am obliged to confess that, while I would not yield to a single reader of *The Index* in admiration of philosophical and literary excellence, my chief interest in its success and continuance springs from the fact that it is a medium for the perfectly free discussion of all questions of practical importance to humanity. Although its primary and principal object is, as I understand it, the secularization of the government, the complete divorce of Church and State,

nevertheless that liberal spirit which has presided over its management, from its foundation to the present time, has always refused to exclude the discussion of questions of reform, which, though they cannot be said to have any connection with this object, are nevertheless of capital importance to the human race. Notwithstanding the acknowledged ability, therefore, which marks *The Index*, I, for one, must say that, if this perfect freedom of expression, which is its most distinctive feature, were suppressed, my interest in its success would instantly cease. In spirit, it is the legitimate successor of the *Liberator* and the *National Anti-slavery Standard*.

In accordance with this characteristic, we find in its columns energetic appeals in favor of womanhood suffrage and the rights of the laborer, discussions of Mormonism, apologies for the "mugwump" movement, and even disguised defences of Irish disloyalists, who manifest the strength of their convictions by assassinating rent-paying tenants, hamstringing their cattle, and blowing up with dynamite public edifices on the opposite side of the Irish Sea, with imminent peril to life and limb of innocent men, women, and children.

The first of the frauds which have passed unchallenged in our history was the national pretence in the belief that "all men are created equal." This belief was, as every one knows, avowed by the nation in 1776; and, although the single colony of Georgia was permitted to annul the principle and enter the confederation of the original thirteen with the plague spot of slavery, the pretence was kept up, and the Constitution so adroitly worded that, although slavery was never named expressly, the institution itself entered under cover of a hypocritical verbiage, and rapidly infected the entire nation, with what enormous disaster we were effectually taught in the culminating rebellion of its supporters.

The national hypocrisy which was generated by this pretence, and which found its expression in spread-eagle Fourth of July orations and in almost universal national boastfulness, rendered it easy for the enemies of liberal government to plan and execute their criminal designs, and made a corresponding self-sacrifice on the part of Garrison and his coadjutors one of the most difficult tasks ever encountered by a band of generous men and women united to attack a powerful wrong firmly enthroned in Church and State and in the hearts of a people thoroughly debauched through acquiescence in a successful fraud. The abolitionists were the *enfants perdus* of this battle, and have never been surpassed in the world's history in intellectual comprehension, moral integrity, and unflinching determination. The effects of this enormous fraud still paralyze the nation and thwart the efforts of the liberal party, notwithstanding our incurable boastfulness, which endeavors to ignore the humiliating fact. Through these means, the nation has been intellectually stultified and morally blinded,—a truth which is everywhere patent through the spirit of compromise, an abnormal capacity for hair-splitting in justification of wrong, and a general tendency to the use of indirection, deception, and trickery in our national politics, in which no one dreams of expecting or requiring honesty. If any one did so, he would be set down as an entertaining example of simplicity.

The pretences of the Christian Church constitute another obtrusive example of successful fraud, which has exercised a most disastrous influence on our national character. It has constantly and ostentatiously thrust itself forward as the sole representative of the spirit of Jesus, who ever ministered tenderly to the needs of the wretched of

earth, and taught explicitly that true religion consisted in succoring the miserable, the least of whom he especially singled out as his brethren. The Church which assumes his name has remorselessly outraged the rights of these very brethren of Jesus, everywhere acquiescing in and generally apologizing for and defending the institution which crushed them to the dust, in some instances even buying and selling them on the auction-block. And the late Judge Black, who was an exceedingly orthodox member of an evangelical church, among his very last utterances declared his devotion to the lost cause of slavery, without rebuke, so far as I know, from a single Orthodox writer or speaker. And now its recognized defenders impudently arrogate to that Church the credit of abolishing the institution, publicly vilifying the only men and women who ever raised their voices against it. The ruinous intellectual and moral effects engendered by the acceptance of this fraud are incalculable.

This kind of persistent effrontery assumes a peculiar form in the Romish Church. The recent Plenary Council in Baltimore had the coolness to declare "emphatically" that there is no antagonism between "the laws, institutions, and spirit of the Catholic Church and those of this country." An example of more brazen impudence has never been presented to an admiring world. For, if there is one principle which is recognized in America and secured by civil enactment, it is the right freely to judge public men and measures,—the right of free discussion. Now, I fancy that Innocent XIII will be regarded as authority in the Romish Church in the United States. It is but a few years since he publicly uttered these words:

"We cannot conceal the fact that, with a strange impudence, things have reached such a pitch that anti-Catholic schools have been opened under our own eyes, at the very gates of the Vatican.

"The situation resulting is such that we are compelled to see error establish its chair in our city, while efficacious means for imposing silence are denied us."

The italics are my own. But little imagination is required on the part of those who are even moderately acquainted with the doings of popery to form a tolerably correct idea of the nature of the "efficacious means" the lack of which the Holy Father laments.

These fraudulent pretensions, also, are generally allowed to pass without exposure; and thus another disastrous influence is added to those so long active in confusing the intellect and moral sense of the nation. I cannot say what may be the condition of things in Boston, but in Philadelphia there is not a single newspaper into whose columns even a brief presentation of these facts would be admitted. And, quite recently, a pretentious literary club of this city "gave a reception" (whatever that may mean) to Ryan, the archiepiscopal mouthpiece of His Holiness here, a man who has never made a single contribution to the literature or science of the world, and whose sole recommendation for the honor is that he represents the obscurantism of which his Church is the most conspicuous advocate and support. When this dignitary was introduced to his see, the most notable banner in the procession which escorted him bore the inscription, "Filial obedience to our ecclesiastical superiors," a fact of which the president of the club and his associates could not have been ignorant. One woman knelt before His Grace and solicited the privilege of kissing his hand, which was kindly accorded to her.

Now, if Col. Ingersoll, who is probably, at least the equal of His Grace in intellect, and is very certainly superior to him in loyalty, not only to the

country, but to those enlightened principles which one would expect in a literary club,—if Col. Ingersoll were to take up his residence in Philadelphia, we should look in vain for any such recognition of his services to the nation and the party of light and progress. The president of the Penn Literary Club is the son of a distinguished Unitarian clergyman. William Hogan, once a Romish priest, says that he has found the Unitarians of the country especially friendly to popery.

The reason of the singular discrimination referred to above is that the archbishop is the representative of retrogression, while the energetic Colonel is an aggressive leader in the attack on popular wrong and error. His Grace is said to be very insinuating,—not an uncommon trait in those whom the Romish Church selects to represent her, especially in very responsible and conspicuous positions.

Quite recently, the public was notified that the Catholic Historical Society (Catholic history, you know, is quite different from vulgar history) would hold a meeting in the rooms of the Pennsylvania Historical Society, and that an accomplished papist would hold forth in a dissertation showing "William Penn's friendly relations with the Catholic Church." This discourse will naturally be characterized by that peculiarity to which I have referred parenthetically. Penn's own words are: "And that Principle which introduces Implicit Faith and Blind Obedience in Religion will introduce Implicit Faith and Blind Obedience in Government. This is that Fatal Mischief which Popery brings with it into Civil Society, and for which such Societies should beware of it and all those that are Friends to it."

The latest instance of successful fraud on a large scale is the accession to power of a political party whose entrance upon the discharge of governmental functions was both planned and executed in fraud and violence, without which the opposing candidates at the last presidential election would unquestionably have been inaugurated. So little disguise was there in this matter that the party journals favoring the usurpation openly declared beforehand that the South would be made "solid"—that was the term—through these means, and all this in the face of ostentatious professions that the whole was done in the interest of "civil service reform,"—the purification of American politics. A more barefaced usurpation the history of the world does not furnish,—a usurpation which was accomplished through the defeat of constitutional government in this country. And the people have been publicly complimented, even by Republican journals, on their cheerful acquiescence in this outrage. Much of this acquiescence on the part of Republicans is the result of a vain hope that they will still be allowed the undisturbed enjoyment of the emoluments of office. "The Golden Age" (with some change in the interpretation of the phrase) has returned. Theodore Parker's admirable *bon mot* has not lost its force. According to that truly great and independent man, the American doctrine of the Holy Trinity takes this form: "I believe in the golden eagle, I believe in the silver dollar, and I believe in the copper cent."

This latest lesson in fraud, as a national educator, is the legitimate consequence of those which preceded it, and paved the way for it. Its results will conform to the principle which I have endeavored to elucidate in this communication, that the inevitable consequence of successful fraud is national deterioration. It is another example of what a distinguished living French historian calls "the vicious reactionary spirit of the nineteenth century."

HOWARD WORCESTER GILBERT.

PULPIT INSINCERITY.

A prominent clergyman, who "confessed a disbelief of several doctrines upheld by him in his pulpit," asked why he did not avow from the pulpit what he admitted in conversation, answered: "The time is not ripe for that: my congregation is not ready. You know what St. Paul said: 'I have fed you with milk, and not with meat; for hitherto ye were not able to bear it, neither yet now are ye able.'" The *Christian Register*, alluding to this case, pertinently remarks, "It is quite likely that the congregation would be ready, if the minister was, and perhaps even rejoice to get meat instead of the insincere milk of the Word." The "insincere milk of the Word," which many congregations get from the pulpit, is skimmed, watered, adulterated, and unfit even for intellectual babes and sucklings, such as those to whom Paul wrote. May not the difficulty with some of the clergymen who imagine "the time is not ripe" for the utterance of their thought be in their own unripeness, morally if not intellectually, rather than in the unripeness of the time? They seem to think that "the time is not ripe" for them to speak their thoughts until they have been made popular by the labors and sacrifices of those foolish enough, with their mistaken ideas of duty, to give the world, through evil and through good report, their honest convictions,—those who believe that "To side with truth is noble when we share her wretched crust, Ere her cause bring fame and profit, and 'tis prosperous to be just."

Socrates, Jesus, Luther, Bruno, Galileo, Paine, Parker, Emerson, and Darwin did not think it necessary to wait for the time to ripen before making known their ideas, the expression and defence of which, indeed, they seemed to think the most effectual way to prepare the people to understand and accept them. But the thought of some ministers is so profound and precious that it must be kept from the people for a generation or two, because, forsooth, "the time is not ripe" for it! If such ministers would but indulge the luxury of talking in the pulpit with entire sincerity and frankness, they would experience a sense of relief, and feel that inward peace and that self-respect which come from conscious loyalty to truth, and at the same time discover that multitudes in the churches and outside of them are ready and glad to hear from the pulpit their most radical views. There might be, among some of the older members of their congregation, a little stir,—just what is needed, probably; but the radical utterances would surprise nobody by reason of newness or novelty. These clergymen should therefore tell the people all they know and honestly believe in regard to religion, and cultivate courage and independence in learning more and in giving the results of their study and thought to their congregations. Nothing in this age of increasing intelligence can be more fatal to the moral influence of the clergy than insincerity in the pulpit.

B. F. UNDERWOOD.

COL. R. E. WHITMAN writes from Glen Haven, N.Y.: "Mr. Newton's paper, published in *The Index*, is a clear expression of what thousands are thinking and feeling. It breathes a live religion, a true and vigorous faith. He touches the keynote of revolt against so-called religion, when he says: 'The very violence of the denunciations of religion may, then, simply prove the depth of feeling which has been outraged, the intensity of the loss which appears to have been sustained. Humanity has been fed on dogmatic gravel long enough. It asks for bread, and, despairing, seeks it elsewhere.' All honor to Mr. Newton."

EDITORIAL NOTES.

BY B. F. U.

SAYS the *Jewish Messenger*: "We recognize it (the new revision), as a step in advance, but only a step. The marginal readings strike us as evincing more Hebrew knowledge than the text. The work of the American revisers appears in several instances to have surpassed their English colleagues in exactness and scholarship. It would be both unjust and impertinent for the Jewish pulpit and press to fail to acknowledge the merits, such as they are, of the new version. We hope that in the next revision, a century or so to come, rabbis and Catholic priests will be found among the revisers."

THEOLOGICALS are in the habit of ascribing everything good or imagined to be so, in the natural world and in the affairs of men, to God, and dwelling on the wonderful wisdom of his works. But Talmage says, "What God does is not so wonderful as what he does not do." So it seems when one imagines such a God as Talmage believes in, and thinks of a cyclone, an earthquake, or a pestilence. Carlyle, in one of his fault-finding moods, complained that "God does nothing." So long as men construct gods in their own image, and hold to the notion that the order of nature is subject to personal will and volition like their own, we must expect all sorts of speculation as to what God does and "what," to quote Talmage, "he does not do," and such expressions of disappointment and despair as that of Carlyle from men who cannot reconcile with their fancies the irreversible facts of nature.

REV. M. J. SAVAGE, in a sermon on "The People's Sunday," says: "I would have cheap Sunday afternoon trains into the country on every road leading out of the city. I would have cheap steamers down the harbor. I would have art galleries and reading-rooms wide open and free." "This for the afternoon. On Sunday morning, I would have everybody, so far as possible, go to church. . . . And, then, the Sunday evenings, if I could have my way, should be given to the home in the company of wife and children and friends." To Mr. Savage's sensible ideas in regard to "The People's Sunday," we add the suggestion that there should be also forenoon trains into the country for such as prefer to spend the early part of the day in the fields and woods, where can be found at all hours "tongues in trees, books in the running brooks, sermons in stones, and good in everything."

A WRITER in the *Banner of Light*, after protesting against attempts to expose the trickery of mediums in a public circle, where there are "common rights and a common understanding as to the conditions," concludes as follows: "There are frauds, I admit. I find them, every day and hour, in every department of society. I have not the least doubt that ninety-nine out of every one hundred of so-called exposers are themselves the veriest frauds. If not in this, then in other things. They might find ample employment in casting the monstrous beams out of their own eyes. They prove their fraudulent character by violating the common understanding and obligations of all circles. We should resent these things, and teach these charlatans that we have rights which they shall respect." Our spiritualistic contemporary calls attention to the "remarks on 'exposers,'" from which this extract is taken, and "which readers in the latitude of Boston," it thinks, "may peruse with profit at the present time."

THE following is from an article in the *Liverpool Mercury* by a writer whom we recognize as

one of the contributors to *The Index*: "When this curious family, so closely allied to the salt-water lobster, first arrived in the Kentucky cave, in that misty past which is scarcely measurable in terms of years, so far back is it, they were doubtless of the same size as their relatives, and as keen of eye as any of them; but, in the deep, dark recesses of the cavern, where no ray of sunlight ever comes, their eyes were of no service, and so died out. Any organ which is not used will finally be lost, just as the arm of a Hindu fakir, which he holds above his head through the weary years to please his god, will become shrivelled up and useless. So, too, with the organs of thought. If men put their thinking out, as they send their washing, to be done by some one else, they will become incapable of reasoning intelligently. Then they will follow their leaders like a flock of sheep, and, at the dictation of the 'unco guid,' shout for the closing of museums on the only day on which those for whom they are primarily intended can get a chance of visiting them."

THE words we recently credited to the editor of *Liberty* should have been credited to an editorial contributor to that paper. Our quotation was from a paragraph which we found reprinted in an exchange, and taken, as we supposed, from an editorial article, when the copy of *Liberty* in which it appeared was not at hand. The editor of *Liberty* thinks it "altogether likely that Mr. Underwood in committing this offence knew what he was doing," and calls attention to it "simply to show the devices of which this Free Religionist is capable,—devices quite in keeping with the political methods which he champions." At the same time, he observes that the quoted words command his approval, and that "there is no harm done in this case." Still, this correction is due him, and is cheerfully made. The invitation to notice some of the "material in *Liberty*" which invites criticism we shall accept when the editor of that paper becomes broad and just enough to discuss principles without indulging in petty personalities and spiteful abuse of those who take exception to the anarchistic theories he has adopted and is trying to disseminate.

In a letter to the Boston *Herald*, Don Piatt says:—

The rule of the majority is to the last extent exacting and brutal. When brought to bear upon our eminent men, it is also senseless. Poor Garfield, with his sensitive temperament, was almost driven to suicide by abuse while alive. He fell by the shot of an assassin, and passed in an instant to the roll of popular saints. One day it was contempt to say a word in his favor, the next it was dangerous to repeat any of the old abuse. History is, after all, the crystallization of popular beliefs. As a pleasant fiction is more acceptable than a naked fact, and as the historian shapes his wares, like any other dealer, to suit his customers, one can readily see that our chronicles are only a duller sort of fiction than the popular novels so eagerly read,—not that they are true, but they deal in what we long to have the truth. Popular beliefs, in time, come to be superstitions, and create gods and devils. Thus, Washington is deified into an impossible man, and Aaron Burr has passed into a like impossible human monster. Through the same process, Abraham Lincoln, one of our truly great, has almost gone from human knowledge. I hear of him, read of him in eulogies and biographies, and fail to recognize the man I encountered, for the first time, in the canvass that called him from private life to be President of the then disuniting United States.

In the Providence *Evening Telegram*, we find the following favorable mention of Mr. Hinckley and his society:—

The society bearing the name of Free Religion in our midst has had its best guarantee of usefulness to the community in the number of earnest-minded and sincere people who have gathered about Mr. Hinckley,

who has been the leader in all good work undertaken by them. The society has been singularly fortunate in its minister as a man full of moral solicitudes, tempered by a just and reasonable mental control. There have been few, if any, moral and philanthropic plans set on foot in Providence during the past several years in which Mr. Hinckley has not appeared as an adviser and worker. We speak, of course, only of those plans to benefit the less favored classes, to which all who were interested were invited, regardless of sectarian or political association. To the call of these, the minister of the Free Religious Society has been found always obedient. Let the Ten Hour Law, the Civil Service, the Equal Rights of Citizens, Temperance, suffice to illustrate what we mean. Such movements often win for those who lead them a reputation for idealism and Quixotism; but they will demonstrate often that, though the knight rides a tilt alone against a gigantic wrong, the knight is greater than the dull opposing force, in that he is a man and alive,—life always wins in the end.

A Tokio correspondent of the *Chicago News* writes thus of Japan: "There is a remarkable absence of pauperism in this country. The rich men are few and far between,—that is, counting riches as we count riches in America; but a man with an income of \$1,000 a year is considered a wealthy man, and a peasant or farmer who has \$100 laid by for 'a rainy day' is ranked almost among the capitalists of his district. In all the empire, it is estimated that there are less than ten thousand paupers,—a wonderful record for a population of thirty-seven million. Not to make comparisons, which Mrs. Partington says are 'odorous,' I suppose you have at least ten thousand paupers in Illinois. Perhaps your readers will begin to think I am falling into the habit—a habit as old as the days of Shakspeare—of travellers who praise everything in foreign lands, and depreciate everything in their own. There is a tendency in that direction when one compares the social life, the happiness and contentment of all classes here, with the relative conditions which prevail in America. I am not opposed to missions or missionaries, but I honestly believe that enlightened Japanese missionaries could do much good in America."

A GERMAN journal, describing Bismarck in the Reichstag, says:—

When he begins to speak, the color of his face changes from pale to red, and gradually assumes a light bronze shade, which gives his powerful skull the appearance of polished metal. It is a surprise to hear Bismarck speak for the first time. The soft, almost weak voice is out of all proportion with his gigantic frame. It sometimes becomes so soft that we fear it will die out altogether; and, when he has spoken for a while, it grows hoarse. The Chancellor sometimes speaks very fast, sometimes very slowly, but never in a loud tone. He has no pathos whatever. Some of his most remarkable words, which in print look as if they had been spoken with full force, as if they must have had the effect of a sudden thunderbolt on the audience, are, in reality, emitted in an ordinary tone of well-bred conversation. Personal attacks upon his enemies are spoken by Bismarck with ironical politeness, and in such an obliging tone, as if they concealed the kindest sentiments. But, if his anger cannot be heard, it can be seen: his face gradually grows red, and the veins on his neck swell in an alarming manner. When angry, he usually grasps the collar of his uniform and seems to catch for breath. His brows are lowered still more, so that his eyes are almost invisible. His voice grows a shade louder, and has a slight metallic ring in it. The sentences drop from his lips in rapid succession. He throws back his head, and gives his face a hard, stony expression. But it is difficult to discern when his anger is real and when artificial. The Chancellor has been seen trembling with rage, and more like the elements let loose than like anything else.

"THERE has been and is," says the Boston *Sunday Herald*, "a decided belief that the Christian religion, while accomplishing something for humanity in the way of philanthropy, does not appeal to the unselfish life of humanity with

nearly the force that pure altruism does. It is thought that the rewards held out in the future life debase the purity and consistency of human conduct. Men feel that philosophy takes higher ground than religion, and content themselves, as George Eliot did, with an ethical working system that controls the forces of this world without the intervention of Christianity. The avenues of cultivated thought and the lines of practical life are full of these ideas, and to a great degree they are guiding the conduct of the world. . . . There can be no doubt that, when presented as a scheme of rewards and punishments, Christianity, in the light of the resurrection of Jesus Christ, takes on odious and repulsive features, and aids the revolt toward agnosticism. The reply is that this statement of the truth of the resurrection is not Christianity. It is an attempt to influence the renovation of humanity from wrong motives, and has filled the churches of the land, wherever this kind of motive has been presented, with insincerity and hypocrisy." But the *Herald* thinks that "what Christianity means is that Jesus Christ is enthroned in the heart of humanity, and that he leads the higher life of the world."

GEORGE ELIOT. *For The Index.*

As when the siren voices held in thrall,
In days of old, the wanderers by sea,
Enchanting them with wondrous melody,
So did thy spirit to our spirits call,
And keep them spell-bound in new realms of thought;
And even as the song, divinely sweet,
With undertone of sadness still is fraught,
So, too, thy voice with sorrow was replete.
Thyself a shining light, thou knew the shade;
But, from the silence of the soul's recess,
The lamp of thy great genius shone afar:
The weary worker in his loneliness
Descried the ray, and dreamed it could not fade.
To him thou art as an immortal star!

GOWAN LEA.

WORDS. *For The Index.*

If every bitter phrase our lips let fall
Sped winged forth,
Homeward to fly some day at Memory's call,
From south or north,
From west or east, with threefold piercing power,—
Would we forego
The sneer unjust, the taunt, in anger's hour?
Ah, no! Ah, no!
If one should say, "This night, but newly dead,
The pall shall drape
Your friend, who now sits hale and rosy-red,"—
Would we not shape
Each act, each look, with longing, lingering love
And tenderness,
Anointing him with the full strength thereof?
Ah, yes! Ah, yes!
If we could know! O hearts that break anew
Each morn and eve,
Had all your speech been just and kind and true,
Ye would not grieve
As they that have no hope, thinking on graves
Where, cool and green,
Above dear silent forms the long grass waves
Or winds blow keen.

NORTHUMBERLAND, PA.

HELEN T. CLARK.

WHEN we consider that what gives a man value among men, and holds firmly our regard for him, is trustiness,—the thing meant when it is said, "you can depend upon him,"—we are inclined to rate integrity first, and to count the absence of it as the most moral defect.—*Anonymous.*

The Index.

BOSTON, JULY 9, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms—Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

DISCUSSION OF SOCIALISM.

Addresses following Dr. E. Heber Newton's Essay at the Convention of the Free Religious Association, May 29, 1885.

Address of Mr. Frederick A. Hinckley.

Mr. President, Ladies and Gentlemen,—Twenty-three hundred years ago, in the kingdom of China dwelt one of the world's great souls, who declared, "Whatsoever ye would that man should not do unto you, ye should not do unto them." Eighteen hundred years ago, the Galilean carpenter's son proclaimed in the affirmative form the same truth. From other regions, from India and Persia and Arabia, and from all around the globe, have come down to us that constant aspiration and longing of humanity for the coming of the time when all class lines should be wiped out, and all men in the world should stand side by side, hand in hand, and shoulder to shoulder in one brotherhood. It is the same aspiration, it is the same longing, which speaks in Socialism to-day. All down these years, men have been meeting in churches; and they have been trying to save their souls for the kingdom of future bliss, unmindful of the fact that the best way and the quickest way to save the human soul for the future is to save the human body for the here and now. And to-day it is the same old question we are considering. And as we look through the various channels of society, and try to find out how well that dream has been realized, how practical has become the religion of which men have talked and for which they have longed in all these years, what do we see? We see on the one hand the mansions of wealth, on the other the hovels of poverty. It is not necessary that we should stop to investigate. The most momentous problem of the day, which stares us in the face so plainly that there is no one so blind but he must see and feel its force,—the problem of social sci-

ence, the problem of a reformed political economy, the problem of religion itself,—is so to order the conditions of this world that every child born into it shall have a fair opportunity of growing up happily and usefully, and of leading a progressive and beautiful, an earnest and loving life.

And if, to-day, after all these years of study, after all the earnest life-work which has been put into the ages of the history of mankind, if to-day the thinking and feeling people of America are not ready to take this problem into their keeping, to devote to it their best efforts, to do all they can to help its solution, then rest assured, friends, other agencies will come in, other forms of settlement be found, which will be neither pleasant nor creditable to us to contemplate. For, if the history of the world shows anything, if the history of all the great causes for the enlargement of the rights of humanity shows us anything, it shows us that the time comes when it is not safe for the thought and the conscience of the people to leave certain questions alone. And I hesitate not to say, earnestly and solemnly, that the time has come, in the history of the relation between labor and capital, when the thoughtful and the loving and the just people of our communities can no longer remain silent concerning it. [Applause.]

Why, friends, if we could only forget all about the future, if we could only sink all our differences of theology, of metaphysics, of philosophy, in this grand thought of standing side by side and shoulder to shoulder, for the practical interests of humanity, what an influence we could have right off here to-day! [Applause.] The summons has come to us on this platform this afternoon, the summons has come to us from the Episcopal Church. Already the question is agitating the progressive minds in all the communions; and I believe that it is for you and for me now, in a spirit generous, hearty, and enthusiastic, to assure our brother who has come here that we answer him from the depths of our hearts, and that, by the Eternal, we will stand by his side, and by the side of all men who, like him, feel the momentous issue which is upon us,—stand side by side with him and with all noble souls in striving to bring about that time when all human kind, without distinction of race, condition, color, sex, shall be blended into one grand humanity and genuine religion, capable of winning all our hearts, having fused all our purposes and melted us into one. [Applause.]

Address of Mr. Henry B. Blackwell.

Ladies and Gentlemen,—It is eminently fitting that in the Parker Memorial Hall this subject should be considered; for you remember that Theodore Parker preached one of his most impressive sermons to show the importance, the necessity, of some change in the individualism of the society of his day, and you recollect the illustration that he made of the social ideal, as it presented itself then. And it is not fifty years since, here in New England, that the bravest effort ever made, perhaps,—certainly as brave as any,—was made to inaugurate a perfect Christian society in the form of the Brook Farm Association. And all over the country, under the influence of that movement, there were more than fifty combinations of men and women who tried to live a Christian life in a sense in which it is impossible to live a Christian life to-day. I was then young enough to feel the ardor of the enthusiasm of the advocacy of social problems, and to take the heartiest interest in those attempts at their solution. I had a sister who for some time was in the Brook Farm community. I had other friends, one of whom passed away only a few months ago, who was, I some-

times think, the best man I ever knew,—Charles H. Codman, known to most of you,—who spent his childhood in the Brook Farm Community.

And, although that movement was not successful, pecuniarily, because it ignored and overlooked those fundamental laws of business which are the pecuniary laws of gravitation, and which will have their way; and though failure was therefore fore-ordained from the commencement, because it hadn't a material basis for success,—yet I never met a man or woman who was at Brook Farm, who did not say it was the most happy, the most useful, and the most delightful portion of their lives. I recall old Miles Greenwood, of Cincinnati, known for many years as one of the most enterprising and successful pioneers in the manufacture of iron in the Mississippi Valley, a man of Herculean frame, of great native powers, though small cultivation. I remember he once said to me: "Mr. Blackwell, I have made a half million dollars,"—and in those days half a million meant more than five millions means to-day,—"but I have never lived except when I lived in the community of Robert Owen at New Harmony." Said he: "I had existed before, and I have existed since. I have been what men call a successful man, but I never knew what it was to live except when I was at New Harmony." And I have heard such sentiments expressed by many others. And although Horace Greeley had to go back to the *Tribune* office, and Charles A. Dana, another Brook Farm boy, has found his material basis in the editorship and proprietorship of the *New York Sun*, and although those forty or fifty movements faded away like the rainbow that has been spoken of, they left their impress in the minds and the hearts of the generation that is now passing away. It took form in the anti-slavery movement and the woman suffrage movement, and all the great social movements that have been agitated since then for the improvement and elevation of society.

Now, I don't like the name "Socialism" very well, because it seems to be so vague. There is not a man who wants to live on the earnings of his neighbors, who is not liable to call himself a socialist. It means anything that men choose to make it. I like better the word co-operation. Because I cannot forget that, while it is true we are made brothers and sisters in this world, it is also true that we are made our own natural care-takers in this world, and that no man and no woman can safely trust the management and direction of his or her personal affairs to any society or any organization or any government. [Applause.] I believe to the very marrow of my bones in the doctrine of individualism. [Applause.] I stand to-day with Thomas Jefferson on the principle that "the best government is that which governs least." I claim that more important than to secure any organic change is our duty to make government take its hand off of industry, and to do away with these legislative monopolies which bind and fetter the industry of men and the industry of nations. [Applause.] I want, first of all, a political society that is true to the ideal of Socialism, a society that recognizes woman as the equal of man [applause], and every man as the equal of every other man. I don't expect to see a government succeed while a certain class undertake to manage the affairs of the other class, and that the best and the most Christian class which we have. I want that every man and woman, in the first place, should be recognized as members of society; and then, perhaps, we may have a government worthy of the word.

Then, again, I don't want to be tied up with the doctrine that monopolies are necessary. And yet they are necessary. Railroad companies are

just as essential to the building of railroads as anything can be, but I would criticise them sometimes. What can be more necessary than manufacturing corporations? And yet manufacturing corporations are selfish. When I saw, only yesterday, that in Rhode Island they had adopted the ten-hour law for women and children, I thanked God. [Applause.] And yet, to-day, when I spoke to one of the most public-spirited and earnest friends of human happiness and human welfare whom I have ever known, who is also a Rhode Island manufacturer, I learned that it was a question, even in the mind of that good friend of human rights, whether the passing of this law was or was not a benefit. And, certainly, it is true that it was done by demagogism. It was done, not from a sense of right on the part of the Legislature of Rhode Island, but because the workingmen organized themselves and defeated certain members of the Legislature; and the members of the Legislature, taking alarm because certain other members had been defeated and their own heads were in danger, enacted the ten-hour law for women and children. Well, now, you know that is a very poor motive; and yet that is the way in which reform comes. Reformers themselves are selfish.

I recollect that Mormonism, with its attendant evil of polygamy, grew directly out of one of the noblest movements, in some respects, we have ever seen in this country, when the men and women who had been impressed by the preaching of Smith,—a genius and, I presume, a self-deluded fanatic, but, I believe, a sincere man,—driven by persecution, took up their march to Salt Lake City under Brigham Young, and underwent privations and sufferings that were worthy of the early Christian martyrs. And for what? To sacrifice their individuality to a religious despotism which would condemn men to ignorance, and is content to place woman in worse than slavery. Thus has the fruit of the sacrifices of the zeal of those pioneer Mormons become a menace and a danger to our very institutions of Church and State. A zeal without knowledge is not safe; and I think the first duty we all owe to each other is to make our own lives, as nearly as we can, a success, according to our own best conception of what success means. [Applause.] Let us live truly by our own conception of duty, and do all we can to lead others to do the same.

It is the first duty of a man in business to pay his debts. He cannot afford to put borrowed capital into socialistic experiments or into churches or into any good and charitable cause, so long as he needs the money to make his own footing secure. We ought, first of all, to be able to stand on our own feet, to represent ourselves, and, if we have any more vitality left, then we ought to do what we can to help other people to stand on their feet, and get into a position to help themselves. And so, while I am hardly a socialist, still I recognize the nobility of the aspiration, and sometimes feel as if I am willing to give up everything, except the advocacy of women's rights [laughter and applause], and go out with other men and women to do as the Brook Farmers did,—to try to live a Christian life, and try to have the kingdom of God around us. It would be the most glorious happiness a man or woman could enjoy, to do that very thing. But we have all got to consider. We have all got to look at both sides, and be careful that, in our advocacy of Socialism, we do not lose sight of that other doctrine,—the doctrine of individuality. [Applause.] Both of these gospels have to be preached; and I am not now preaching the gospel of selfishness, but the gospel of self-help.

I was reading, only a day or two ago, of one of the most noble instances of human heroism of which I have ever read or heard. It occurred in my own city of Cincinnati, and in a printing-office, among laboring people. You all read the account,—how, by the upsetting of a can of benzine, a fire was started and instantly spread through the combustible material in the midst of which men and women were working, and in a moment, almost before you could tell it, the building was in flames. The brother of the employer rushed up into that dangerous place, and began assisting the poor girls to get out of the window, lowering them down one after another by a rope, and, finally, while descending himself, the rope was burned, and he was dashed to pieces. And a poor colored man, who has not yet had his own social equality fully recognized in that city, bravely sacrificed his health, and almost his life, in trying to break the fall of the girls who jumped from the upper windows of the building. But, while this man who lowered down the girls by the rope sacrificed himself in saving three or four of them, another man had the coolness and the presence of mind to see that there was a trap-door in the roof of the room; and, in a few moments, he threw open that trap-door, and saved a dozen or more lives, without any risk or any danger to himself. Now, you see how the presence of mind of this man was worth more than the heroism of the other man. He looked to see what could be done; and, while the other man was laboriously lowering a single girl by the rope, he saved a dozen by the trap-door, where they all might have been saved, if they had only kept their wits about them. That is what we must do. We have got to try to help our fellow-men and our fellow-women; but we must begin by studying the laws of nature and of common sense, and by making our own lives solvent. And, if we can make ourselves solvent, we have put ourselves in a place where we have a right to try, also, to make other lives solvent and successful.

The PRESIDENT.—Mr. Blackwell has told us something about the Brook Farm experiment, and of his having a sister and friends in that institution. But we have a gentleman on this platform at this moment who was himself there, one of the original Brook Farmers; and he has not yet lost his dream, though long ago awakened rudely from it,—his dream in a better state for humanity, through the principle of Socialism. I have the pleasure now to introduce to you Mr. John Orvis.

Address of Mr. John Orvis.

I remember during the early period of the associated movement, by which was known that great socialistic agitation out of which the Brook Farm sprang, that, as it came up before the minds of seers, whose hearts had been awakened to the claims of humanity through the anti-slavery and other causes, they were made to feel that there was a broader question than that of mere chattel slavery, or the rights of the negroes. An anti-slavery lecturer myself at that time, I felt called upon to embrace the new and larger movement. And I never shall forget the feeling with which that course on my part was regarded by Mr. Garrison, by Mr. Phillips, by Pillsbury, and Foster, and those with whom I had been associated. They said, "Mr. Orvis, you are recreant to the claims of the slave." I made no reply, but kept steadfast to my faith. Some eighteen or twenty years ago, in a labor-reform convention, which was held in the Meionaeon, we managed to get Wendell Phillips to be present. After he had been listening awhile, he was called upon to speak; and he said, in his crushing manner, with

that coolness and deliberation which of itself was a battery against which common men could not stand: "This is the negroes' hour. Co-operation, the most beneficent word in the English language, will yet have its day; but it must wait at least half a century. When the negroes' claims are conceded, then women's claims are next to be considered." Some of us rose and asked Mr. Phillips by what authority he claimed to announce that this was the negroes' hour, or woman's hour, specifically. The fact that these other questions were here, in the providence of God, was reason enough for their consideration. And we told Mr. Phillips that neither the question of slavery, nor the right of a man to himself, nor the rights of a woman, would ever be justly settled until this broader question of an equitable and just relation in a true social order was solved.

Now, it would seem to me, from what I have heard this afternoon, that really the Nihilists, these so-called dangerous classes, are the only people who have a real faith in religion; who have a faith, I mean, in the practical doctrines of the Christian religion, who have a faith in justice, who have a faith in righteousness, and who demand that these things shall be made practical. What do you witness? The orthodox religious world, on the one side, facing these dangers, as they think, of Socialism, say that there is no hope for human salvation, except in the vicarious atonement of Christ; and they call upon us to accept him as our final great teacher, and, despairing of happiness and justice and righteousness here, to look for it only hereafter. On the other hand, there are the political economists, who equally despair, and who are teaching the doctrine that justice does not enter into the principles of political economy. They have seized the ideas which have been given to them by the apostles of the evolution theory of Herbert Spencer and of Darwin, of the survival of the fittest, and they say, "That is the law in human society, as everywhere else"; and he is the fittest who is the strongest, who is the most unscrupulous, who survives in the midst of an internecine conflict. Here we are relegated back to the old doctrine of Thrasymachus, as he sat at the feet of Plato, who attempted to demonstrate to his pupils that justice was more profitable than injustice; and, calling upon them to define what justice is, Thrasymachus says, "I proclaim that might is right, and justice the interest of the strong." We have got back, in our political economy, to that; and the Anarchists and the Socialists are the only people who raise any protest against it.

Now, we have heard a good deal during this meeting of the necessity of scientific direction. I believe in science, of course; but has the world been really uplifted by science? Was there any science in the teaching of Jesus, in that great command, "Thou shalt love the Lord thy God with all thy heart and mind and soul and strength, and thy neighbor as thyself"? What is the meaning of that? That you shall love justice, that you shall love right, that you shall love love and justice before all other things. Who now has any faith in the practicability of love? Who believes in justice as you believe in gravitation? And what is justice but righteousness, and what is science as applied to society but justice?

Now, if we believed in moral truth as we believe in gravitation, do you think that the iniquities, the crimes, and the overreaching and fraud which exist everywhere in society would remain to-day? Not at all. We have got, then, to come back to this fundamental teaching. This question of the rights of labor is at the front. It came up when the Northern men had been South

and settled the question for the negro slave; when they marched home, their hearts beating dead marches in sympathy for their slain comrades, their reversed arms, whether they knew it or not, were charged to the muzzle with the rights of the laboring man everywhere. That question is up; and it is never to be settled, or to go down, until it is finally righted. [Applause.]

And, friends, it is to be settled in this way: It is to come before the people, just as Garrison placed the great issue of slavery before the people. It is to be considered in its moral bearings. Never before has the labor question, or any aspect of Socialism, except sporadically, been presented on that basis. It is for us to decide whether we will take up this question of social equity, and adjust it, as we may, or whether we will pass through a period of blood and revolution. It is for the privileged, it is for the educated, it is for the wealthy, it is for the wise, to say, "We will take hold of this problem, and settle it on the basis of righteousness," or, neglecting it, leave it to be settled as the issue of slavery was settled. [Applause.]

Address of Mr. Giles B. Stebbins.

Mr. Chairman and Friends,—I so admire the wonderful patience and endurance of this audience that I shall show my respect for them by saying but very few words. And let me say, first, that I am especially gratified that, in such a company of men and women, favored by fortune beyond the average, there has been such earnest, intelligent, and thoughtful interest manifested in the affairs of those who may be thought to be below them. It is the lifting up of the lowly. Now, a fact or two, in order to help us a little in any work in that direction. It is, I think, demonstrated by the latest statistics that all over the civilized world there is a little uplifting of the average condition of the laboring man,—very little, but still it is gaining. And, in this country, most favored of all countries, it is found that the percentage of the value of the products of labor which goes to the laboring man is larger than in any other country in the world. That shows the uplifting tendency of our free institutions.

Now, this afternoon, as I listened to the gentleman, Dr. Newton, who gave the opening address, I was especially glad that he presented us the higher aspect of a great movement of our time, because you cannot judge any movement in political economy or religion or anything else, unless you take into your consideration both its higher and, perchance, its lower aspects. I am more familiar with the West, the home of my adoption, than with the East, the home of my birth. I know, for instance, that in my city of Detroit, if you go among the men who talk the most and the loudest about Socialism, you will find a disagreeable preponderance of bad beer and worse tobacco and mean whiskey. And, more than that, these men are not like the patriarch of old, who said, "Would that I could curse God, and die"; but they curse God and live on, and drink their bad beer and whiskey.

Now, that is the bad side of Socialism. The movement is not to be judged by that; but, taking that extreme into account, we must also take in the other extreme, which our friend so admirably and ably portrayed before us in his excellent address this afternoon. You remember, doubtless, in the story of the old French Revolution, that, when the Bastille was besieged, the liberated prisoners joined with the ferocious mob that assaulted it to batter down its walls. They didn't stop to build up anything: that was not the work of the hour. They said in their desperation and

in their fresh awakening from despair: "Smite down these battlements, tear away these foundations, wrench down these iron bars! Give us a sight of the blue sky, and give us a breath of pure air to breathe!" That was the first desire. That is the first desire of ignorant and sometimes embroiled men, who feel that they are crushed, and want some remedy. But time changed all that. The children of the men who tore down the foundations of the Bastille are to-day building up, and trying to build wisely, the foundations of an enduring, glorious French Republic. And so the children of the ignorant and embroiled in our time, let us hope, will by and by be doing something for a better future for us all.

Let me say here, just a word, that my feelings are decidedly with corporations. I have been familiar with a number of capitalists and employers of laborers in different parts of this country, and have met the gentlemen under circumstances where they would sit down with me, or were sitting down together, and talking over these matters confidentially. And so I have got at their real feelings touching this subject. They were able men, they were humane men, they were just men, in the main; and I think that, really, to-day, there is often found quite as much justice on the part of the employer toward the employed as there is on the part of the employed toward the employer. But this varies with character. Now, I have heard these men express themselves in this confidential way: that they have small faith in strikes. They didn't like labor unions, but they always spoke with the utmost respect and confidence of the coming of co-operation at some time in the distance. And they always said, too,—and that is a good lesson for the workingmen,—that co-operation never could be possible, unless the workingmen are intelligent and self-respectful and wise and frugal. And so there is this work for the workingman to do for himself on the one side, and this work for the capitalist and the employer to do for the workingman on the other.

But, leaving that, a word only in regard to the other topics that have come up here this afternoon. I think that to-day, so far as the religious aspects of Socialism are concerned, there is a strong tendency, among the lower class of socialists especially, to reject everything that has had a religious nature in the past. They scoff at the very name of religion. They sneer at the future life. They laugh at the priesthood. They would destroy the Church, its good and its evil alike. I don't wonder at all at this. The day of all that will pass by. I want to express my gratification at watching, here in the good city of Boston, through this Anniversary Week, the trend, the turn, of popular thought. I have seen signs of a healthy reaction. It seems to me the trend of the best thought (and I have noted this in different assemblies during the week) is toward the three great foundations of the religious life of the world: first, toward the conception of a supreme, infinite intelligence, or toward that philosophy of things so tersely and charmingly stated by Waldo Emerson, when he says,—

"Ever fresh the broad creation,
A divine improvisation,
From the heart of God proceeds,—
A single will, a million deeds."

I think we are tending in that direction. I saw in the Unitarian Association, and elsewhere, a tendency toward a higher ethics, toward a nobler morality, toward a more complete consecration to duty. One of the best signs of the times is that my friend Hudson Tuttle, on his great Ohio farm, and Dr. Taylor, in his pulpit in New York, are trying to block out some deeper and more search-

ing system of ethics, not wrought out from any creeds and dogmas, but from the spiritual realities of the soul of man.

And, then, it seems to me the trend is in another direction also: all these problems are to be wrought out, not by the clash and jargon of conflicting sounds as of old, but by a frank expression of opinion on such a platform as this. That is to be the method of settling difficulties and arriving at conclusions.

So I have noted a trend of thought toward a confidence in a continuous personal existence hereafter. Years ago, in the days when, a New England boy, I used to delight to make a pilgrimage up to the good city of Boston now and then to listen to that glorious great man (whose greatness was only exceeded by his goodness) for whom this building is named, there was one emphatic statement he used to make often and grandly: that the deepest, the grandest, and the most convincing proof of the immortal life was that the soul of man had demanded it in all ages and in all countries. I think Theodore Parker was right; and I think that that immortal, that undying desire, that testimony of the soul, is broader and deeper than any testimony of the senses, and is an overwhelming evidence in regard to the continuity of our personal existence in a great hereafter. And yet it should be borne in mind that there are in this country, and throughout the civilized world, to-day millions of men and women, among them some of the gifted, the great, and the noble, and a large company of the plain, middling class that are always the world's best saviors, who not merely believe this through faith, but, after the old apostolic idea, with the knowledge added to faith; who believe in the real existence of their friends, not lost, but only gone before, and of their real presence sometimes in hours of privileged spiritual communion and communication. And so we can leave this question, and all these great questions, to the consideration of platforms like this.

One word, and I close. An allusion made by Mr. Newton to the Church Congress in the city of Detroit not long ago brought that important meeting to my mind. Occupied otherwise, I had opportunity only to attend the sessions for perhaps four or five hours. But I must say that, attending during those four or five hours, listening to the addresses of distinguished clergy and laity in the Episcopal Church, I was refreshed with a sense of the new atmosphere that we are breathing,—I heard so little of the Thirty-nine Articles, so little of the old formalism, so little of the old idea of the supremacy and unity of the Church and State, and I heard, and everybody heard, so much that partook of the spirit of the new days, so much that partook of sympathy with labor, so much that showed an earnest desire for the benefit of the great mass of the people, and so much—best of all, in my opinion—that indicated that, even among the Episcopal clergy, the day is dawning when the supremacy of man's conscience shall be recognized, and the rights of his reason and of his intuitive faculties shall be held above all books, all creeds, forms, and ceremonies, and confessions of faith. We have a great deal to do in this world to bring this better day, and the work which is being done here on this platform is one of the agencies for hastening on the brighter time. [Applause.]

Address of George A. McNeill.

I wish to thank the Free Religious Association, in behalf of the socialists here assembled, for the privilege of the "benefit of the clergy" [laughter], as you know we have all been ranked as destroyers, infidels, and outcasts. But we are told to-day, what some of us have realized for years, that

there is a true Christian religious spirit of inspiration permeating and inspiring us in our efforts to bring Socialism to bear upon our own time. And, in behalf of such socialists as I may represent, I thank our distinguished friend from New York for that historical and that inspiring address which he has given us to-day. [Applause.] Some of us have read the last chapter of Henry George's book, and some of us have interpreted that chapter in its true spirit. But the religious aspect of Socialism is hardly worth as much consideration as the social aspect of religion. The fact is, my friends, that to-day the Church is on its knees, asking what it shall do to be saved; and it is practically calling upon us socialists and labor reformers to save it. And there is nothing else under heaven that can save the Church, except the acceptance of the Christ that it crucifies day by day. For, when Christ stood before Pilate, he stood there a communist and a socialist, crucified, not so much because of the fact of the faith he preached, as because of the danger to government at that time. For eighteen hundred years, the Church has been pointing the despairing soul of man to a future heaven. But it now comes to us at last, or will come to us to-morrow, saying, "We are going to give you something of that heaven here." And, if you want to fill the souls of the despairing with a longing for that heaven in which I believe, give us some taste of it here, that shall make us hunger for more. [Applause.]

Socialism is the destructive and constructive force of humanity moving upward. And, when our friend from Detroit tells us that the Socialism of Detroit is found in the beer garden, it is not found in any worse place than Christ found it. For he was accused of associating with publicans and sinners, and that is all you can say of the beer drinkers. But I have visited these men in their beer gardens. In eighteen States of this Union have I associated with the different nationalities who gather here under our flag; and, though not a drinking man myself, I have often found in those beer gardens more of the genuine religious inspiration than I could find in the churches of the land since the days that our honored Theodore Parker preached in Music Hall. All hail to the Church! I would do it no dishonor. It is the great organized conservative force that has held, by its superstitions as well as by its truths, something of that glorious hope which is now revealing itself as a new light and a new gospel to those priests who are not dumb dogs that dare not bark, —the blind leaders of the blind. We have this week seen a revered doctor of divinity, a representative of the Orthodox Congregational Church in this city, speaking words for Socialism. And to-day that conservative Church, of which I am a member and which I honor, is represented here by our friend from New York. It is glorious that these two extreme conservative bodies have met together this week on a common platform, saying to the Church, "You must reorganize on the social foundation that Christ laid down." Dr. Lyman Abbott said that Jesus Christ not only came to save souls, but he came to save society; and that is what Socialism proposes to do.

Now, my friends, our friend, the distinguished advocate of woman's suffrage, belongs to that fast disappearing class—we are personal friends, and he will excuse the allusion—who are clinging to the idea of individualism, terribly afraid they will lose something of their own, if you put them in the grand whole,—afraid that legislation will in some way interfere with the individual. And while my friend was glad, as all of us are glad, that the Rhode Island Legislature has lifted itself to the level of enacting a ten-hour law, he still be-

lieves in the Jeffersonian doctrine. Now, the truth is, legislation has woven around our limbs its chains for centuries. We stand bound, in wrist and limb, by systems which have been constructed and upheld by legislative enactment; and we can only be emancipated by legislative interference. Wealth is power, and numbers are power, and knowledge is power. And when capital holds its wealth and the power of the cultured class on its side, and seeks to hold us down to the level of the civilization of a hundred years ago, then we rise in our numbers, and use demagogues, if necessary, to enfranchise ourselves. And I believe that to-day, if some demagogue should vote for woman's suffrage in the Massachusetts Legislature, as doubtless many demagogues did, our friend would vote for them rather than for a non-woman suffragist. [Laughter.]

Now, my friends, I don't want to detain you; but I would like to say one or two things about the practical steps in that slow process of evolution which, as we are taught by history and experience, we must take. I know the danger of delusion; but there is one safe, practical step that we can take, one safe, practical step that we must take. Before I mention what that step is, let us look at the condition of things to-day in this free republic, with its high protective duties upon the importation of the cheaper products of Europe. According to the reports of the Boards of Trade, we find that there are millions, I won't say how many, but it is enough to say that there are a million willing men in this country who are unable to find work. The mills in this State and other States are stopping. Why? Because, the political economists of the old school tell us, there has been over-production,—too much cotton cloth, too many boots and shoes, too many musical instruments, too many carpets, too many hats and caps. But, if every man and child were supplied with the things that are necessary for health and comfort, there would be no such thing as over-production. What is the trouble, then? Capital finds very small chance for investment, dividends are diminishing, incomes decreasing, and wages being reduced in this great land of plenty. What can we do to avert the calamity which is threatening us? The remedy is simply to reduce the hours of labor. It is a very simple thing; and yet, if, when that great army of the republic came from the South and went into our workshops as producers, they had gone to work on the eight-hour system, there would have been no panic in 1873. A reduction of two hours a day upon eight million workers means the setting to work of two million unemployed workers: it means higher wages and more intelligence. Here, then, my friends, is a suggestion of a practical step to be taken.

The discussion of this question as a sentiment, and the discussion of this question as a religious matter, are important. But it is also important that the minds of thinking, practical men should be directed to the question, What shall be done now? Not what shall be done to-morrow, but what shall be done now? And, when they look and study as closely as they may, they will find the safest, broadest, and most effective step that can be taken to emancipate labor is in the direction of a reduction of the hours of labor. If I could speak to the united clergy who gather here on this Anniversary Week, I would say to them, "Go back to your churches preaching the gospel of Christ and less hours of labor." Our friend, the clergyman, has told us that, when Christ preached that grand evangel of hope to the poor of his day, they flocked to hear him. Why? Not so much because of the hope in that glorious future promised them as in the hope of some immediate benefit to them

and theirs. Now, that man who does not hope that his children will enjoy more of life and the benefits of civilization than he has enjoyed, that man who has no hope that his children will have a better chance than he has had, that man whose religion does not force him to make a better opportunity for his children on the earth, has no right to hope in a glorious future after death. Let us have, then, I say, a taste of that hope now. I know that many socialists are charged with infidelity and unbelief, and with a contempt for the Church. But where have they been taught that feeling? They have been taught it by precept and example, by the Church itself; and the contempt which the Church has manifested toward every uprising of the poor, and every new departure of free thought, has taught these people, when they do rise, to turn back upon the Church with the same feeling of contempt. Happily, under the auspices of the Free Religious society, the socialists can to-day shake hands with the Church, and express their willingness to go forward to the building up of that Church which Christ founded, and of that hope which he inspired, and which we wish to realize.

The PRESIDENT.—We had expected to hear on this platform one whom we always welcome most cordially, and listen to with the greatest interest, Mrs. Spencer. Unfortunately, we are disappointed. She had herself expected to be present to speak on this topic this afternoon. Yesterday, a telegraphic despatch came from her, announcing that her health would not permit her to make the journey. I wish, especially, she could be here at this moment to sum up the discussion of this subject in a speech similar to the one that she made at the Free Religious Convention in Albany, where a subject kindred to this had been under discussion. Seldom have I heard upon any platform a speech so appropriate to the occasion, which brought out so clearly the various points in the discussion as it had proceeded, and which, also, inspired our hearts with so much of faith and cheer. We cannot have her here to-day. And so it happens, almost for the first time, that we have not had the voice of any woman upon the platform in this Convention. At the festival this evening, a woman is to preside over our tables, Mrs. Cheney. And let me say here, as she has left the house, what I should not, perhaps, like to say of her in her presence. Last evening, at the annual business meeting of the Association, owing to a constitutional necessity which arose from a change of the By-Laws of the Association two or three years ago, she was the one who in regular order was rotated out of office as a director in the Association,—an office which she has held from the very beginning of the Association. No one has brought into the councils of the Executive Committee a more judicial mind, a more sympathetic heart, a firmer conviction of the principles which underlie this movement, and a more faithful persistency in adhering to those convictions, through all the crises through which the Association from time to time may seem to have been passing. She has been faithful through all; and to-night, very appropriately, she presides over our festival. But, though she retires from the directorship of the Association, she does not retire from membership. We shall have her sympathy and her judgment and her wise counsels still.

Shall we hear any further remarks upon this subject this afternoon? The speakers, so far as advertised, I think have all been heard from.

Joanna J. Kaime, a representative of the Canterbury Shaker Community, arose in the audience, and, asking permission to say a few words, was cordially invited to the platform.

Remarks of Joanna J. Kaime.

I felt as though I could not leave the city of Boston without expressing the great pleasure I have enjoyed here in attending the meetings of Anniversary Week with you. When I look back and realize the changes that have taken place since the time the founder of our institution, who was a woman, came to this country, a little more than a century ago, and first pronounced many of the views I have heard expressed here this afternoon and during this week, I say to myself, The world does indeed move. Ann Lee, whom I am pleased to call "mother," first pronounced in this country, as we understand it, the equality of the sexes, and the duality of the Godhead, which is now recognized and indorsed by many outside of our institution. To set aside the doctrine of the Trinity was then considered almost blasphemous. Yet she did that, and established a parental form of government. She denied, too, there was any such thing as a literal physical resurrection.

Perhaps she established the co-operative system as early as any one. Of course, she preached the doctrine of peace and unity; and, coming at the time of the American Revolution, she was imprisoned as one who was a Tory, and as preaching what was detrimental to a republican form of government, which our fathers were trying to establish. But the institution which she so early established has survived so far, and prospered; and whatever there may be of error, whatever there may be of wrong in it, I know that time and the blessing of God will purify it. It has been our effort to live true to the teachings of Christ, and to show ourselves to the world as earnest, honest, Christian workers.

I am glad to meet in this hall with the members of the Free Religious Society. My early days were so blessed with the ideas advanced by the anti-slavery movement, and all the way up since I joined the institution I am in, that I feel I live in the very atmosphere of free thought. My father was an intimate friend of Mr. Nathaniel Rogers, and the *Herald of Freedom* was as well known in our family as the Bible. I remember reading with tears of the murder of our lamented Lovejoy in the West. I have kept pace with the progress of all these movements, and I always feel it a pleasure when I meet any of the friends of woman suffrage or of Free Religious thought.

I came upon this platform to speak these few words, simply from a conviction of a religious duty I owe the institution of which I have been a member almost forty years. That institution has afforded me every opportunity for freedom of thought, for freedom in every respect; and if any advancement is lacking, and there is much which I hope to gain in the future, it is not owing to our institution. I thank you, Mr. President, for the privilege I have enjoyed. I am very glad to have met all these friends here, and hope you may prosper as our prayers go up to God for your success.

Remarks of Mary E. Wilson, of the Canterbury Community.

My dear Friends,—In listening to the earnest speeches this afternoon and throughout the week in behalf of a purer Christianity, of woman suffrage, and temperance, and moral reform, I said often to myself: "Can I leave the city without telling the friends that I live in a home where I believe the kingdom of heaven is established upon the earth? Can I leave the city without proclaiming this truth, and inviting all who have any interest in this direction, who are seeking and asking what they shall do to be saved, to come with us; to go wherever the spirit of God will lead

you to seek a higher life and a greater truth that will bring your souls nearer God?" I have found this life. I have found the truth that has been spoken of this afternoon. It is in Christ. It is a Christian life. It is the purity, the uprightness, the honesty, the nobility, that alone gives a noble character to any one in this world. And it is this character that will bring about the reform that is needed, that will result in the Free Religious associations, that will result in the greatest benefit to mankind. And the Shakers, my friends, are thoroughly in earnest in this work. They are really members of your Association. We are not able to become actual members, for we did not know the fee to pay in; but in life and in principle we are members. And I want it to go far and near. I ask you to bear it in mind, and remember us in your prayers before God as brothers and sisters, as co-workers with you in this universal brotherhood.

This principle is thoroughly exemplified in our societies. Practical peace is there taught, and it is there practised. And there are many other noble principles I might speak of, all taken from the noble pattern of the life of Jesus. We live after that pattern. We have no other pattern, no other Saviour, no other God but the God that you are serving.

Remarks of Mrs. A. M. Diaz.

As a woman, I would like to call your attention to one point brought up by Mr. Blackwell and others, with regard to what question should take precedence. And I want to say that where one human being claims the right to decide questions of right and duty and conscience for other human beings, as men now do for women, that claim should have, certainly, a very prominent place in our councils. Because that might be said to be wicked. Anything which is opposed to the Divine Order is wicked, is sinful; and the Divine Order is the freedom of every individual in everything according to the laws of his being. And while man thwarts that Divine Order in woman, by claiming the right to decide for her, he is wicked and sinful. There is a great deal more that might be said; but at this late hour it would not be proper, and we will put it off for another time. I didn't want to leave without bringing out that idea, as a woman, because I didn't think a man could handle it. They don't know how it feels. [Laughter.]

The PRESIDENT.—This discussion is getting exciting; and woman, after all, has made good her right to be heard in it. But the clock shows that time will not wait. The hour for adjournment has arrived, and more than arrived; and, with your permission, I will now pronounce the Convention adjourned.

CORRESPONDENCE.**"BEYOND THE VALLEY."**

Editors of The Index:—

This book narrates the experiences of one of the principal pioneers of the new religious thought which is so rapidly supplanting the old in all the more enlightened portions of modern Christendom. His experience forms one of the most remarkable episodes in the history of mental development. Commencing his career as an ignorant, unlettered youth, destitute of even the most ordinary education, he astonished the thinking world by inditing a work in exposition of the great scientific ideas which have since so convulsed the religious world by their bearing on all the prevailing systems of religious beliefs, even before Spencer or Darwin had written a line, losing all the details of the voluminous work on the doctrine that associative progressive development,

** Beyond the Valley. A sequel to The Magic Staff. An Autobiography of Andrew Jackson Davis. Boston: Colby & Rich, publishers. 1885. Price \$1.50.*

through the impelling action of invisible or spiritual forces, was the central principle lying at the foundation of all phenomena, physical and mental. His subsequent works comprise some thirty volumes, on a vast variety of subjects, most of which have been translated into foreign languages, all treating from the same stand-point as the first one, and unfolding a philosophical system more comprehensive and sweeping than any the world has yet had.

This thrilling and beautiful work will prove intensely attractive to those minds who are not too much hampered by the religious prejudices of their creeds, or contracted by that gross materialism which admits the existence of nothing substantial that does not fall within the scope of the external senses. Besides the interesting personal experiences of the author, there are interspersed throughout the work discussions of vital questions of the greatest practical import to every one. Among them is a chapter on crime and the cure of criminals, which the writer would earnestly commend to the attention of thinkers, and also of the author's discussion of insanity, the true relations of the sexes, and several others equally interesting. The whole work is written in language wonderfully clear, concise, simple, and beautifully poetic.

In this book, Mr. Davis brings a large amount of evidence in refutation of the gossip in connection with his recent divorce, including letters from Mrs. Davis. It seems to the writer that no candid mind can read this work without being impressed with the integrity and generous and justice-loving character of its author. Instances of his remarkable faculty of clairvoyance and psychophonic and psychometric powers are as well attested as any facts in human nature; and the writer respectfully suggests to the Society for Psychical Research that they would find a far more prolific and a richer field of inquiry in the experiences and psychical developments of Mr. Davis than in experiments with any half-fledged and undeveloped mind-readers and subjects, who in many cases do not possess the faculty of vision without the use of their eyes equal to that of an ordinary sleep-walker. No reader of this work will complain that it is wanting in variety or that the author lacks the power of language to express the poetical and philosophical thoughts with which it is filled. To those prejudiced minds who have imagined that Mr. Davis' philosophy was lacking in the religious or devotional element, the closing chapter, which consists of a series of morning meditations, is commended to their attention as one of the most beautiful expressions of this sentiment to be found in the English language, which are as philosophical as they are poetic.

F. S.

BOOK NOTICES.

BEYOND THE VALLEY. A Sequel to The Magic Staff. An Autobiography by Andrew Jackson Davis. Boston: Colby & Rich. 1885. pp. 402.

In this volume, Mr. Davis resumes the narrative of his life in much the same style which marks the volume to which it is a sequel. There are many to-day, doubtless, who regard Mr. Davis as a seer, and others, with no belief whatever in his power to discern spirits, who have read some of his works with interest, and to whom his visions and fancies furnish valuable materials for psychological study. The period covered by this "sequel" has not been marked by any experiences in Mr. Davis' life which will seem very striking or remarkable to those who are familiar with *The Magic Staff*. Although the narrative is interspersed with reflections often practical and sensible, there are some portions of the work that are, to our mind, unwholesomely ghostly. The main thought is much like that to be found in the author's other works,—spiritualistic, mystical, and sentimental.

A subject to which a disproportionate amount of space is given, and to which the writer again and again recurs, is his marriage. Evidently, one of the main purposes of the book is to give the reasons which led him, by the advice and direction of his "ever watchful guardian," Galen, recently to apply to the courts of New York for the decree which adjudged his marriage null and void, on the ground that the divorce obtained by his wife from her former husband in Indiana was not valid in the State of New York. He discovered, it seems, soon after his marriage in 1855 that, although "pleasantly associated

with a gentle, loving, and intelligent woman," he was not united, as he had supposed, to his "eternal mate in conjugal life." On Oct. 4, 1884, when he was walking upon "Crescent Beach," between Old Nahant and the city of Boston, a voice from above said: "Nullify your legal tie. The time is almost come." Three days later, Galen said, "You may write to Mary nothing will tempt you to return to New York until she and you are on the way to legal personal liberty." We may be permitted to doubt whether Galen or any other spirit out of the flesh uttered these words, although Mr. Davis is probably sincere in thinking so. We believe him, too, when he says: "I am an advocate of perfect individual liberty, but I am no libertine. I am wholly for the freedom of the affections, but I am no free lover (in the licentious meaning of the term)." It is none the less true that his theory of eternal spirit mates, to which he gives such prominence, in connection with his own personal experience, would, if people should adopt it and attempt to carry it out, leave marriage with no other foundation than mere fancy, whim, and caprice. When Mr. Davis, with all his supposed spiritual knowledge and wisdom, and with the help of Galen and other wise spirits who have been in the Summer Land many centuries, has had such poor success in trying to find, and perhaps has not yet found, his true eternal spirit mate, how are ordinary men and women going to discover theirs? Mr. Davis was mistaken, as he thinks, as to his "spiritual counterpart" in 1855. He may be mistaken again. What confidence can plain, practical people, who are not "interiorly" illumined, have in their ability to select, without numerous trials at least, their eternal spirit mates? When men and women married, and with children who need the care, protection, and love of parents and the influences of home, discover, as one or both of them may think, that they are not spiritually mated, should they separate and search further for their true mates, or forbear with each other and remain together, deferring the eternal mating business till they get into eternity? Marriage is founded in the love of the sexes, in the desire for offspring, in the need of a home, in the requirements and interests of civilized life. It is refined and elevated by the cultivation of the nobler parts of our nature. It will be improved by larger knowledge, and by more judgment and forethought in the selection of conjugal companions. But we do not see how Mr. Davis' theory in regard to eternal spirit mates can either be proved true or be of any value in adding to the permanence or the purity of the marriage relation. It is enough that husbands and wives who are strongly attached, and who believe that death is but the entrance to a larger life, will find satisfaction in believing that their love will continue undiminished in the life beyond. B. F. U.

OBITER DICTA. New York: John B. Alden.

This is one of Mr. Alden's judicious reprints of English writings, likely to please fastidious readers. It was issued in London anonymously, and met with a warm welcome from the English reading public, selling rapidly through several editions. The author is said to be Augustine Birrell, who has an article on Emerson in *Good Words* for June. The work consists of seven essays, critical, didactic, philosophic, humorous, and egotistic, on the following subjects: "Carlyle," whom he criticises in a supercilious manner, which makes one long to hear the fierce philosopher's estimate of him; "On the Alleged Obscurity of Mr. Browning's Poetry,"—poetry which to the author of *Obiter Dicta* is not at all obscure. "No other English poet," he declares, "living or dead,—Shakspeare excepted,—has so heaped up human interest for his readers as has Robert Browning." The essay "On Truth-hunting" seems to discourage in the main any such quest, for he avers that "nothing so much tends to blur moral distinctions and to obliterate plain duties as the free indulgence of speculative habits." The essay on "Actors" must be rather disheartening to men like Booth, Irving, Salvini, etc., since his dictum is that "no man of lofty genius or character ever condescended to remain an actor." He evidently doubts even Shakspeare's genius in this sentence. He finds a subject more to his taste in "A Rogue's Memoirs," meaning thereby the memoirs of Benvenuto Cellini, of whom he writes: "Though, doubtless, we prefer saints to sinners, we may be forgiven for liking the company of a live rogue better than that of the lay-

figures and empty clock-cases, labelled with distinguished names, who are to be found doing duty for men in the works of our standard historians. What would we not give to know Julius Cæsar one-half so well as we know this outrageous rascal?" The drift of his essay entitled "The Via Media" may be learned from the concluding words: "The world is full of doleful creatures who move about demanding our sympathy. I have nothing to offer them but doses of logic and stern commands to move on or fall back. Catholics in distress about infallibility; Protestants devoting themselves to the dismal task of paring down the dimensions of this miracle, and reducing the credibility of that one, as if any appreciable relief from the burden of faith could be so obtained; sentimental sceptics, who, after laboring to demolish what they call the chimera of superstition, fall to weeping, as they remember they have now no lies to teach their children; democrats who are frightened at the rough voice of the people, and aristocrats flirting with democracy. Logic, if it cannot cure, might at least silence these gentry." The closing essay has for its subject "Falstaff," in whose character, as depicted by Shakspeare, the author of *Obiter Dicta* sees much to admire. These essays are very readable, however much one may dissent from the opinions contained therein. The style is piquant from its very egotism and assumption of being authoritative. S. A. U.

BIRDS IN THE BUSH. By Bradford Torrey. Boston: Houghton, Mifflin & Co. 1885. pp. 300. Price \$1.25.

The readers of Mr. Torrey's book will doubtless arise from its perusal with some doubts as to whether "a bird in the hand" is really "worth two in the bush"; that is, if the birds in the bush are studied with the loving interest and philosophical scrutiny evidently bestowed upon them by this writer, who weaves from his observation of their songs and habits many curious and fanciful bird romances, which will be read with interest even by those who are not themselves bird lovers or students of ornithology. "At best," he says, "it is very little we can know about what is passing in a bird's mind. We label him with two or three *sesquipedalia verba*, give his territorial range, describe his notes and his habits of nidification, and fancy we have rendered an account of the bird. But how should we like to be inventoried in such a style? 'His name was John Smith; he lived in Boston, in a three-story brick house; he had a baritone voice, but was not a good singer.' All true enough, but do you call that a man's biography?"

A unique feature of this book about birds is that nearly all the birds of which Mr. Torrey treats are those to be found on Boston Common, and the unobservant frequenter of the Common and the Public Garden will no doubt be surprised to learn that more than threescore different species of birds can be found therein. The titles of the chapters will give an idea of the scope of the work,—“On Boston Common,” “Bird-Songs,” “Character in Feathers,” “In the White Mountains,” “Phyllida and Coridon,” “Scraping Acquaintance,” “Minor Songsters,” “Winter Birds about Boston,” “A Bird-lover's April,” “An Owl's Head Holiday,” and “A Month's Music.” S. A. U.

THE CHILDHOOD OF JESUS. By W. C. Gannett. London: Sunday School Association.

This is a reprint by an English Unitarian Association of Rev. Mr. Gannett's rationalistic interpretation of the boy-life of Jesus for the use of Unitarian Sunday-schools. This is made interesting by relations of the mode of life among the people and in the land where Jesus lived; and the meagre details supplied by the New Testament writers are helped out by descriptions of the usual life of the children of that age and country, and by inferences drawn from the allusions found in the allegories and sayings ascribed to Jesus. The narrative part of each chapter is followed by review questions, with "hints for the class-talks" and "hints for conversation" on the topics treated.

THE *Art Amateur* for July has an interesting notice of a French artist who died last May, Alphonse de Neuville. He was one of those men of natural talent who persisted in pursuing his career in spite of early discouragements. He painted scenes of military life and life on the seashore. So careful was he in the study of all the details of his work that the walls of his studio were full of bullet marks where the painter

had fired, in order to get models for effects in his pictures. It gives also an account of the life of Henri Scott, a young artist only thirty-eight years old, who was suddenly stricken down in the Louvre, just after he had come from the varnishing of his picture at the Salon of 1884, and who was taken home and never recovered consciousness. Like many young artists, he found his best chance for becoming known in work for illustrated papers. He contributed many spirited sketches to *La Vie Moderne*. His success stimulated him to overwork, which was probably the cause of his early death. Several pine woodcuts from his sketches are given, and a drawing of the artist by Adrian Marie. One of these sketches is of the beautiful Abbey of Mont St. Michel on the island of the same name, of which a full description is given. "Art Life in Rome" contains some good hints to artists, and a pleasant notice of the new Cleopatra of Mr. William Story. The *Art Amateur* is good reading for warm weather, and would afford profitable matter for discussion to groups at watering-places. E. D. C.

In the July number of the *North American Review*, David Dudley Field and Henry George have a "conversation" on "Land and Taxation." Dorman B. Eaton gives his ideas as to the results of civil service reform. "Is Christianity Declining?" is the subject of an article by Rev. Dr. C. H. Parkhurst. Gail Hamilton writes on "Prohibition in Practice"; President J. B. Angell, George T. Curtis, and Justice T. M. Cooley on "The Extradition of Dynamite Criminals"; and William Clarke on "An English Imperialist Bubble." The other articles are by President S. C. Bartlett, on "The Subterranean History of Man," and by Thomas W. Knox, on "The European Influences of Asia." These, with the free-hand "Comments," make an unusually strong number.

THE Boston publishers are already sending to the trade tempting announcements as to what they propose to offer for the holiday season. D. Lothrop & Co., who promise to outdo all their previous efforts in the line of beautiful gift books, among other elegant books will offer *Heroines of the Poets*, *Stabat Mater*, and *The Old Arm-chair*, with illustrations specially designed by Lungren, Hassam, Miss Humphrey, and others.

ROSE KINGSLEY, who is one of the choicest of English writers, has a new book, which is to have fine original illustrations and reproductions of rare engravings, in the press of D. Lothrop & Co., entitled *The Children of Westminster Abbey*.

A SEASIDE RETREAT.

Ocean Cottage, on Horseneck Beach, is situated about thirteen miles south-west from New Bedford on the open sea. Those wishing a pleasant and quiet summer resort, with all the accommodations of a first-class hotel without the restraints of a fashionable watering place, will be pleased with our home. We have one of the finest beaches in the country, with the surf at our door; excellent bathing and fishing; an inlet close by for those wishing to sail in smooth waters. Seldom any mosquitoes about the hotel.

For particulars, address
JOSIAH WOOD,
No. 84 ALLEN ST., NEW BEDFORD, MASS.

Just Published: TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

A COMPLETE LADIES' GUIDE.
 20,000 Sold in Little Over a Year.
 Agents find it the most popular work on the market. "The very best book to put into the hands of a girl or woman."—E. N. HALE, M. D. Cloth, postpaid \$2.00; Morocco, \$2.50. Circulars Free. Sanitary Pub. Co., 159 La Salle St., Chicago, Ill.

H. T. MARSHALL'S
 PATENT ADJUSTABLE LACE CONGRESS.

THE COMING SHOE.

By means of its **Lacing Adjustment**, it can be made as comfortable as any Lace Shoe, and is just as convenient as any Congress in putting on or off, as it requires no lacing and unlacing after being once adjusted to the foot. The most durable elastic is used, yet does not draw the foot and ankle as in ordinary Congress. Every one who wears them likes them. Take no substitute until you have seen and tried on a pair. If your dealer does not have them or order them for you, write to subscriber for directions how to get them. All Shoes warranted that are stamped with name of **Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes, Base Ball, Bicycle, and Lawn Tennis Shoes,**

H. T. MARSHALL, Brockton, Mass.
 N.B.—Patent stamp woven in one strap of each shoe.

A large assortment of these shoes at retail at
 No. 17 Water Street, Boston.

PIC-NIC SUGGESTIONS.
 Book now in press. Suggestions for Sunday-school picnics, excursions, etc., from experienced Sunday-school workers from various sections, both city and country. Replete with valuable hints. Worth many times its cost to any Superintendent. Price, postpaid, 25c., or will send free to any one sending us names of Superintendents of all Sunday-schools in his place. Address, **DAVID C. COOK** PUBL. CO., 18 & 19 Washington St., Chicago.

The Secret of the East;

OR,

The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D. and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address
THE INDEX,
 44 Boylston Street, Boston, Mass.

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

NATURALISM vs. SUPERNATURALISM. By B. F. UNDERWOOD. 10 cts.

WHAT KIND OF MORALITY DID JESUS AND THE APOSTLES TEACH? By F. M. HOLLAND. 5 cts.

GOD OR THE GALILEAN? By FELIX L. OSWALD. 5 cts.

THE SCIENTIFIC AND METAPHYSICAL METHODS IN THE HISTORY OF HUMANITY. By WILLIAM FREY. 15 cts.

AN AGNOSTIC VIEW OF THE DOCTRINE OF VICARIOUS ATONEMENT. By W. H. SPENCER. 5 cts.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

Address **THE INDEX,** 44 Boylston Street, Boston, Mass.

A FEW COPIES of *The Spirit of the New Testament: The Revelation of the Mission of Christ*, by A. WOMAN, have been left for sale at this office, and can be had upon application. Price, cloth, \$1.25, postage 13 cts.; in paper covers, \$1.00, postage 10 cts.

Address
THE INDEX,
 44 Boylston Street, Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for **THE INDEX.** Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and pacificity. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
 " 13 " 25 " . . . 8c. " "
 " 26 " 51 " . . . 6c. " "
 " 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the above calculated, will be made.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and
 Intelligently Seek Truth without
 regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

TERMS OF SUBSCRIPTION:

One Copy One Year, - - - \$2.50
 One Copy Six Months, - - - \$1.25
 Specimen Copy Sent Free.

Address all letters and communications to
JNO. C. BUNDY, Chicago, Ill.,
 Publisher and Editor.

THE FREETHINKER'S MAGAZINE.

H. L. GREEN, Editor and Publisher.

SALAMANCA, N.Y.
 Published bi-monthly. Single copies, 25 cents. \$1.50 per year. The last number out is a very valuable one. Send 25 cents in postage stamps, and it will be forwarded to you.

THE FREETHOUGHT DIRECTORY.

Mr. GREEN is preparing a FREETHOUGHT DIRECTORY in which he desires to publish the name and address of every outspoken Freethinker in the United States and Canada. Send your name and address and five two-cent postage stamps, and they will appear in the DIRECTORY. Address
H. L. GREEN, Salamanca, N.Y.

THE ABSENCE OF DESIGN IN NATURE. By Prof. H. D. GARRISON. A Lecture delivered before the Philosophical Society of Chicago. Price 10 cts. For sale at THE INDEX office.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its manage will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

BY B. F. U.

LAST week, employes of rolling-mills in Cleveland, mostly Poles and Hungarians, who had been hired because of the cheapness of their labor, and who were on a strike for higher wages, marched to all the rolling-mills in the city, broke down the doors and gates, assaulted those whom they found at work, and forced them to depart. The city authorities did not exhibit much courage or efficiency, and the State militia had to be called upon to restore order. Intelligent workingmen not less than their employers must regret such lawless acts.

The bill for the gradual extinction of slavery, introduced by the new government of Senator Saraiva into the Chamber of Deputies of Brazil, aims at steady emancipation by the means of indemnity to the slave owners, like the British Act of Emancipation in the West Indian Islands. The premier expects that by 1892 there will be no slaves in the country, and that this great social and industrial revolution will have taken place with but little friction or temporary injury even to the social condition or business prosperity of that country.

FREE thinkers in Germany, as in this country, are generally disinclined to unite in an organization for the advancement of their views. Still, the German League of Free Thinkers, we learn from the *Milwaukee Freidenker*, numbers about one thousand members. The additions the past year have been two hundred. There are affiliated societies that hold regular meetings in Berlin, Stuttgart, Cologne, Hamburg, Bremen, Vienna, and other cities. The Berlin organization bears the name of Lessing, as others do the names of Humboldt and Feuerbach. Dr. Louis Büchner is the best known member of the League.

THE French Republicans will issue, before the date of the next election, a manifesto, demanding a reduction in the period of military service to the shortest time compatible with the exigencies

of the national defence, economic reforms, especially a readjustment of taxation, and a policy which will guarantee freedom of conscience, and oppose that clericalism "which, under the mask of religion, is really a union of all the factions hostile to the Republic." The manifesto will condemn a foreign policy of adventure, and appeal for a union of all French Republicans against the Monarchists. There is, it is evident, a lack of unity and of well defined policy among the Republicans of France, and it will not be surprising if the Monarchists make gains in the autumn election.

THE French Chamber of Deputies, for the purpose of encouraging an increase of population, has made a liberal appropriation, to be used in supporting and educating every seventh child born in French families and in needy circumstances. In the present state of European affairs, the statesmen of France are, doubtless, impressed with the importance of a large population, from which to draw for military purposes; but an increase of population by paternal provisions like that of the Chamber of Deputies is hardly possible, except by lowering the average intelligence and moral and social condition of the people. War and the armed defence of nations by the necessity imposed of stimulating increase of population, thereby intensifying the struggle for existence among the poor, and selecting the young and able-bodied for the battle-field, are a continual hindrance to the advance of civilization.

A CLERGYMAN writes from Boston to the *Brooklyn Times* that many people who have grown dissatisfied with Unitarianism, and are not quite ready to become Methodists or Baptists, are going to Episcopalian churches. "Undoubtedly," he says, "that Church is the most successful assailant of modern rationalism here for the present." We have heard the Episcopal Church spoken of as a Church that "never interferes with politics or religion." We cannot vouch for the truth of this statement; but we know many free thinkers who attend Episcopalian churches, and we are inclined to think that they do not attend from any interest in what is commonly called religion. The method of the Episcopal Church of assailing rationalism seems to be that of quietly absorbing it, and saying nothing about it, and at the same time holding out to all classes of intelligent people strong social attractions. We recognize in this no assault upon modern rationalism, but rather its acceptance, and one of the means of its diffusion and incorporation into the beliefs and life of the world.

IN an apostrophe to Gen. Grant last Sunday, Rev. Dr. Nettan said: "O illustrious sufferer in yonder cottage! what a lesson thou art teaching to the warriors and statesmen of the world and to the youth of that country thou hast saved, by finding within thyself at this supreme moment those elements of repose and happiness which to-day excite the admiration of mankind, and fill the hearts of angels with delight!" There are those who appreciate Gen. Grant's military ser-

vices, but do not forget those of a multitude of other heroes, many of them now resting in Southern graves, who contributed to the work of "saving" the country; and there are those who view with respect Gen. Grant's patient and dignified bearing during his trying illness, but do not care to hear it preached about and praised as something rare and exceptional, in order to magnify by contrast the virtues of one man, when in almost every community are men and women suffering and dying upon whom the gaze of "warriors and statesmen," Dr. Newman, and the rest of mankind, is not fixed, and in whom the courage, fortitude, and thoughtfulness for others are not less admirable than in those whom circumstances have raised to eminence.

AFTER eight days of interruption of its business, with attendant inconvenience to the public and expense to the city treasury, the Chicago Car Company, in a conference between a committee of the strikers, the officers of the company, and representatives of the city government, agreed to take back all the strikers, and to investigate the conduct of the sixteen men who, the strikers have declared, were discharged for no other reason than that they were leaders in the agitation which led to formal complaints by the drivers and conductors, and secured from the superintendent recent concessions. In agreeing to these peaceful terms of settlement, the company has yielded to a strong public opinion, which desires to see the legal rights of the company respected, and at the same time its employes treated with fairness and justice. One of the orthodox ministers of Chicago, when the excitement was at its height, in his Sunday sermon, talked about mowing the streets with artillery, etc., if necessary to enforce the law; but there was, fortunately, no need of carrying out this rather premature suggestion, for the law-abiding spirit was strong among the strikers and the people generally, although there was an element which only a strong police force restrained. And the peaceable ending of the difficulties, which at one time threatened to be very serious, gives satisfaction to all classes. Sooner or later, the disagreements arising between corporations and their employes, especially when the interests of the public are directly concerned, must be settled by some kind of arbitration and according to common sense. Especially when a corporation, established for the convenience of the public, asks for special protection against their workmen and those in sympathy with them, on account of alleged injustice done them, the corporation should be required to submit the matters in dispute to a board of arbitration. Had this been done in Chicago at the beginning of the difficulty, the strike could have been avoided, and loss to the company and its employes and to the tax-burdened city prevented. Of the sixteen men discharged by the Car Company, fourteen have been reinstated; and the president of the company has stated that there was no adequate cause for their discharge by the superintendent, thereby virtually condemning the action against which the employes protested.

BOURBONISM.

Bourbonism is a word that is not found in the dictionaries, unless it be in very late editions. Yet it is a word with a well-known and very expressive meaning. Of the sovereigns and princes in Europe of the Bourbon stock, it has become a proverb that they never learn anything new and never forget anything old. Their brains are of the iron-clad order, impervious to a change of impressions of any sort. Hence, they are conservatives, not from principle, but from sheer habit. That to which they were born and bred is to them a divine right,—an order of things that should be fixed and eternal. The progressive course of events, new ideas, proposed reforms, affect them not in the least in respect to their beliefs and efforts. If things move on and jostle them out of place and power, things are at fault, not they; nor will they deign to change their plans or principles to suit the new emergencies: they will wait for things to come back to them. Of course, things will not go back. There is a logic of events that is continually pushing to the front new problems for solution, new political and social conditions. The politics of Europe have progressed, and the Bourbons accordingly and inevitably have been left behind. They complain and talk of their divine rights, and do not cease to present their claims; but society cannot stop to listen.

This represents the general attitude of the Bourbon stock. It is true especially of the individuals of the Bourbon blood who have sat upon thrones. It was the marked characteristic of the late Count de Chambord, claimant of the throne of France, who lived and died in a firm religious faith that nothing had happened in France since 1830 which at all impaired his right to be its sovereign. In the Count de Paris, a more progressive kind of blood mingles; and he appears to have used his eyes and brain to some purpose in learning what is going on in his own time. And Alphonso, of Spain, though but a weak monarch, seems to have heard something of the echoes of the acclamations of praise that followed King Humbert's heroic visits to his cholera-stricken subjects in Naples last autumn, and a few days ago actually broke away from his keepers, and went *incognito* into the cholera district of his kingdom, greatly to the consternation of his ministers and parliament. But these occasional individual exceptions do not break the force of the proverb that Bourbon blood is incapable of learning and incapable of forgetting; and so *Bourbonism* is a word which has been coined to represent that cast of mind which is insensible to conditions of political change, and sets itself doggedly to stem all the currents of progress.

It is in respect to politics that the word is specially used. The Bourbons in French politics are those who do not recognize the fact that France has ever been a republic or an empire. The Bourbons in Italy are those who have no political recollection that Humbert or Victor Emanuel has ever reigned as king of that country. The Bourbons of the Democratic party in the United States are those who persist in believing that the ascendancy of that party means the return to power of the same party with the same principles which had the administration of the national government in the days before the slave-holders' rebellion. The Bourbons of the old Whig party were those who continued to believe, as late as 1860 and 1861, that nothing of importance had been taking place in Kansas and Nebraska, or had happened to the Missouri Compromise. And now a well-defined Bourbonism is developing itself in the Republican party. It consists of those of the party who appear

to be unable to see that the conditions of political questions, or the issues that divide the political parties, are at all different from what they were in the time of the war and the years immediately following. The Bourbonism of the Democratic party shows itself, too, in the too oft rehearsed claim that Tilden and Hendricks were only kept out of office in 1877 by Republican fraud and usurpation,—a claim repeated at the last Yale College Commencement, where Vice-President Hendricks was foolishly introduced as a man who had twice been elected to that office. And a spirit akin to this species of Bourbonism appears among those Republicans who maintain that it was only by fraud and usurpation, on the other side, that the present Democratic administration came into national power at Washington. The truth is, in our view, that both of those Presidential elections, considering the unusual incidents and excitement attending them,—the Republican in 1876 and the Democratic in 1884,—furnished a signal proof of the strength of our national polity, and will be so regarded by the impartial historian.

But it is not in politics only that this quality of mind called Bourbonism may be seen. It prevails especially in religious matters. Those Christians who decline to recognize any new version of the Bible are Bourbons in religion. Those members of the Southern Presbyterian Church who voted to depose Dr. Woodrow from his professorship in the Theological Seminary at Columbia, because he had ventured to teach a mild form of evolution, are Bourbons. The Pope's encyclicals, which from time to time fulminate from the port-holes of the Vatican the most sonorous denunciations of all those features of human progress which specially characterize the present age, represent the very essence of Bourbonism. The Orthodox preachers, here and there, who are still preaching in their old logical rigor the Five Points of Calvinism, are the Bourbons of Orthodoxy. But every sect has its Bourbons, even the most liberal. They are those who stand by the creed and ways of the fathers, and remain blind to the fact that there are children and grand-children who may also have brains and conscience. Even the Liberalism that is outside of the churches displays its Bourbonism. There are Liberals who keep fighting on the same field of battle where Paine and Voltaire made the assault, and seem not to have learned that all the enemy who are worth thinking about have left for other intrenchments. They keep firing away at forts which were long ago silenced, and are only garrisoned now by a few belated stragglers or by members of the theological invalid corps. Too much of the argument of modern Liberalism against the Bible and the churches is of this sort. It may have its use against the Bourbonism of the other side, but neither that nor this appears to have any true appreciation of the mental and moral forces which are summoned to the solution of to-day's problems.

Reformers, as well as other people, need to be on their guard against making a fetish of the cause to which they have specially given their labors. It is much to know when a cause has been won. It is a mark of the highest military genius if a general discerns when he has conquered, and can move forward at once to use the advantages which his success puts in his hands. Had McClellan seen at Malvern Hill what the Confederate commanders have since told him, that he was then and there complete master of the field, the war might have been closed in '62. So the most efficient reformers, besides ability, vigilance, and zeal, have the additional wisdom of knowing when their reform is accomplished. After the work is really done, to go on thrashing the old straw, while the same energy is called for in fresh

fields that are ready for the sower or even crying for the harvesters,—this is one of the saddest kinds of Bourbonism.

WM. J. POTTER.

CHRISTIANITY AND LEGISLATION.

III.

I ought not to leave unmentioned the revival of the Roman law in the twelfth and thirteenth centuries; for it was a very important event in European history, and, as Blackstone says, "established in the twelfth century a new Roman empire over most of the States of the continent."

The papal lawyers saw at once that it could be used to strengthen her hands at the expense of the feudal aristocracy; and they procured for it her sanction, and did their best to introduce it. Its despotic doctrine of the divine right of kings pleased royalty everywhere; and it cannot be denied that the Roman rules of trial had a good effect in limiting the abuses of trial by battle and trial by compurgation or ordeal. But it was so alien to the time that its best legal points remained unappreciated, while its worst, its hideous sanction of torture, came into general use, in spite of the instinctive repugnance of Teutonic nations. Notwithstanding its faults, however, the Roman law had a power of growth in it which the feudal law had not; and to-day it is the basis not only of our maritime law, but of most of the codes of Europe. In England, under the Normans, who had a genius for legislation, it was for a time popular, and was even cited as decisive for a few years under Edwards I. and II.; and it is the basis of Bracton's work. But it was always regarded as an alien system by the mass; and, when the Norman element had merged itself in the people, the Roman law was ignored by the king's courts, though still administered by the ecclesiastical courts, with more or less modification, as canon law, until their abolishment by the Puritans. During all this time, the jurisdiction of these priestly tribunals in England was very extensive, though rather ill-defined, including a large part of the minor offences, heresy and some crimes like adultery and embezzlement, which we now punish severely at law. Here, also, her judicial processes were very bad. She was seldom allowed to use torture, as she did on the continent, and she had to have a royal warrant before she could burn a heretic; but she ignored the simplest rules of evidence, and often allowed her clerks to escape punishment by taking an oath of innocence. A very considerable part of the community was shielded from all severe punishment for crime by this law of benefit of clergy, and her rule against interest on money was a constant embarrassment to trade.

"It is difficult even to imagine [says Sir J. F. J. Stephen] a state of society in which, on the bare suggestion of some miserable domestic spy, any man or woman whatever might be convened before an archdeacon or his surrogate, and put upon his or her oath as to all the most private affairs of life,—as to relations between husband and wife, as to relations between either and any woman or man with whom the name of either might be associated by scandal, as to contracts to marry, as to idle words, as to personal habits, and, in fact, as to anything whatever which happened to strike the ecclesiastical lawyer as immoral or irreligious." And such is the survival of obsolete laws in England that even "to this day there is no legal reason why any ecclesiastical court in England should not try any person for adultery or fornication, and enjoin penance upon them, to which they must submit under pain of six months' imprisonment. No doubt, however, the first proceeding of the kind would be the last.

The public would not endure it." Add to this her autocratic doctrine of the divine right of kings, which it required a civil war to destroy, and we can easily see why the Roman and the canon law should have been so much disliked by the English people, and why the Christian religion, guided by this unpopular code, had exceedingly little influence upon the common law.

Its name appeared often. The earliest Saxon codes, which consisted mostly of regulations for compounding blood feuds, contained expressions of Christian sentiment, which would have been impressive, if they had not been united with barbarous provisions, which made them wholly inoperative. When feudalism had been forced upon the common law and oppression was at its height, the court solemnly declared that Christianity was a part of the common law; but the only particular in which it ever enforced the law of love, without special legislative sanction, was to punish blasphemy with death. Feudalism, however, was never so bad in England as it was on the continent. In the absence of castles for the nobles or a standing army for the king, life was more orderly, and law more certain and free from aristocratic interference. A middle class sprang up; and trade began with its laws, which after a time were recognized by the State. It is true that much of this legislation was founded on mistaken ideas about co-operation and the State regulation of profits and labor. A certain amount of interference was, indeed, necessary in those lawless times. Each trade had to have its guild for its own protection. But, as civilization thrived and constraint was outgrown, the repeated experience of year after year proved the advantage of free competition; and, slowly, the law adapted itself to it, and developed its true business character.

The first step in its rise was the success of the king in taking the administration of justice, to a considerable extent, into his own courts (largely by certain legal fictions), instead of leaving it to the local courts,—a reform which was more important in its effects, for a time, than the Magna Charta, although it afterward led to the Star Chamber and other abuses. With this came legislative improvement, and especially that wonderful idea of a representative government, chosen by the people, to hold the national purse-strings,—an idea which was entirely new and vitally important. And in the course of time came the other equally original conception of a trial by lawyers before a jury, based upon evidence, guided by precedent, and in criminal matters enforced by the State, and secured by *habeas corpus*, which was the safeguard of British independence.

These two conceptions of how to make and how to enforce law—which seem to us so simple, so matter-of-fact—were as novel then as they were effective. Both were democratic. Both the judicial machinery, which put the administration of justice in the hands of the people, and the legislative machinery, which gave them the control of the government, were the invention of the most brilliant of modern races. The same Norman genius, which, when it had allied itself with the upper class in Europe, produced the aristocratic feudal system, when it took the side of the people in England, produced the democratic common law. That mighty Northern race, whose banners were borne in triumph from the Orkneys to the Sicilies, from Dublin to Jerusalem,—a race which created a new language, a new art, a new literature,—shaped both the two great legal conceptions, the mediæval and the modern, the military and the commercial, the feudal and the common law.

In the narrow field that I have chosen, it would be out of place to describe the moral benefits conferred by the Church, which counterbalanced her lack of jurisprudence. I am confined to the legal side; and, from that side, it must be said that her abuses were so great that the first thing that an English reformer turned to for ages was the clergy. And there he found himself invariably opposed by the whole power of the Church. Over and over again came the same conflict, until the Reformation shook off the supremacy which men had accorded to Rome, and left the king free to make reforms, which swept away her interference with English laws.

H. W. HOLLAND.

MYTHOLOGY.

That which is best, it has been well said, may become the worst, worst possible. We see this abundantly illustrated in the mythologies, vast structures of superstition, resting with crushing weight on all the powers of the mind, and blighting, as with fatal spell and paralyzing terror, the whole life. This came not seldom of a gross literalism taking a bright poetic image or metaphor as strict prosaic truth, a figure of speech as naked statement of fact. It was long ago said by Emerson, speaking of the attitude held by Christianity, past and present, in relation to Jesus, "the idioms of his language and the figures of his rhetoric have usurped the place of his truth; and churches are built, not on his principles, but on his tropes." "Christianity," he declares, "became a mythus, as the poetic teaching of Greece and of Egypt before."

So is it everywhere when the mind attempts to rest in concrete and sensuous rather than to rise and dwell in spiritual and invisible. Mr. Tylor speaks of the "tendency to clothe every thought in a concrete shape, which has in all ages been a mainspring of mythology." This has been perpetually the infirmity, the disposition fixed and, we may almost say, irresistible, to take everything in the letter; in thought, every concept, however in itself ethereal, abstract, or purely spiritual, in liminary, sensuous form.

No language is free from the liability to become this snare. Every line of a poet, every bright, radiant metaphor, striking image or figure, may, by a process of degradation, be reduced to the plane of a literal, poor, and even very gross prose; and out of that will germinate an elaborate, blinding, and enslaving myth. The *nomina*, as Max Müller felicitously puts it, become *numina*, words are made powers, things, gravest realities; names given as personal to some natural object, not seldom, for picturesqueness of effect, are transmuted to deities, made objects of worship, and carry always incantation, frequently witchery and nightmare. The history of many words in all the mythologies and religions, including with them our own, the Christian, is very instructive in this regard.

No blight has ever come to the mind comparable to this that has been wrought by mythology. It is the one arrest, set-back, that has held the spirit as enchanted and enslaved in the witch's castle. And no inconsiderable part of this has arisen from what has been called "verbal myth," misapprehension of words, and especially those of more ethereal, spiritual, or metaphorical import, and building up from them structures of mere and sensuous fancy, culminating generally in darkest superstition and a maddening intoxication. Personalization of that which is impersonal, conceiving natural objects or forces as persons, and arming them as spectres with unknown potencies for ill, also pragmatism and materialization, a crass literalism in dealing with the most vivid, animating pictures and

graphic symbolism in speech, have been the perpetual peril and fatal spell to the mind.

But, conversely to this which has been said in regard to the best, it may be affirmed that that which is worst contains elements that are very best, are of priceless value and unending help for us. The mythology shows transparent as we become free and instructed, read into it and through it; and we find features there of truest beauty and enriching worth. It is the home and repository of what was originally a genuine symbolism. These representations that lie at the basis of many of the myths were pictures, apt similitudes, drawn by poets who could see, read something of the cipher they discovered in nature, and report what they saw.

Even with barbaric and savage races there is not seldom as clear, penetrating perception, as apt and striking statement in uttering some syllable of the beauty and the mystery, as in the most gifted and cultured. The Finns have it, the Kirghis, and the Red Indians of America. Max Müller says that the great Finnish epic, the *Kalevala*, longer than the *Iliad* of Homer, and carried down as it was through untold generations by oral transmission alone, is "not less beautiful than the *Iliad*, and possesses merits not dissimilar." It is a great storehouse of the poetic conceptions, as well as the superstitions, the religion, and mythology of that remarkable people. The Esthonians in Lapland, Maoris in New Zealand, and rude races elsewhere, have pictures as bright, vivid, suggestive of the facts all about us in nature, and the overarching presence that shines amid all, as ever Greek, Hindu, or Hebrew conceived.

Mythology is thus not a dull, dead, dry, effete thing of the past, of a speculative interest only, entertaining or amusing to the curious who would see what wild freaks have been wrought by the fancy in ages ago: it is not a fossil. It is, or rather it contains, living substance, and carries incalculable value to all who would know man's present also, and what lies in the possibilities of the future. Illumined and made diaphanous by the methods of to-day, it becomes a clear, intelligible, and very impressive record of the mind's thought, scripture of its strength and its weakness. These concepts and images are significant and striking, often withal quick with vitalizing power.

We can see a rich symbolism in the myths of the classic and northern races, and in the legends, tales, etc., that have sprung from these myths, and been borne down to our own time. The nursery tales, many of them, are exceedingly interesting, when read in the light of this illumination. They show us something of the boundless fertility of the human mind in devising images whereby to hint its thought in the expressive language of figure, all the more engaging to us that the real and recognized meaning of many of the terms had long since been forgotten.

To the Greek, the sun under one type was an *Archer*. No power less than his could bend that bow, as is shown in the various tales. The arrows, swift, piercing, were infallible. They invariably slew the enemies of the god. The Python was laid at Apollo's feet, brought low by the unerring spear. These arrows, again, or the spear, are, in other stories, a sword,—the sword of Theseus,—which he alone could take up from beneath the great stone under which his father Aigeus had placed it, with the swift sandals; the good sword Gram of Sigurd, which Odin had buried to the hilt in the tree trunk of Volsung's hall, and which Sigmund alone could draw; the stout blade Durandal of Roland; the brand Excalibur of King Arthur, that he alone could unfix from the miraculous stone, and that must of course be thrown into the lake when the king had received

his mortal wound. They are also probably the arrow of Abaris, upon which he rode as upon the wings of light; the "Glaive of Light," in the Scottish tale; and enchanted sword of Beowulf in our old Anglo-Saxon poem, with which he slays the monster Grendel.

Perseus, as he enters the Gorgon's den, wears the helmet of Hades, or cap of invisibility; i.e., the covering darkness. This is the *Tarn-kappe*, or the *Nebel-kappe*, of such miraculous quality, in the Teutonic legends,—an apt expression to indicate the mantle of concealment that the night throws about the advancing hero. Clad in this, which not only shielded him, but armed, giving the strength, as the tale tells, of twelve men, Sigfried engaged and conquered Queen Brynhild, of Isenstein, as related in the *Nibelungen Lay*.

Perseus wears also the *golden sandals*, wings of light, that bear him on swiftly as a dream. These are the *talaria* depicted upon Hermes: they acquired the talismanic power of wish, and come down to us, after long journeyings,—found also in other mythologies,—as the Fortunatus' hat and Fortunatus' purse of modern time.

The *Daidalean Labyrinth* was the mazes of the starry heavens, in which the mind to this hour becomes bewildered and lost. With the Arabian, one figure under which he describes the sky is "the valley of diamonds." And, in the Hindu personalization, we have the sky, milky way, etc., represented under the image of the star-maiden, Tara-Bai. She is seen sitting on a gold and ivory throne. "She was tall and of a commanding aspect. Her black hair was bound by long strings of pearls, her dress was of fine-spun gold, and round her waist was clasped a zone of restless, throbbing, light-giving diamonds. Her neck and her arms were covered with a profusion of costly jewels; but brighter than all shone her beaming eyes, which looked full of gentle majesty."

In the golden fleece, the apples in the garden of the Hesperides, the palace and the gardens of King Alkinoos, the magic ring seen in the *cestus* of Aphrodite, the necklace of Harmonia, the horn of Amaltheia, etc., we have a significant symbolism, occult to most eyes, but plain and impressive to those who penetrate the realm of mythic representation. This ring has had a wonderful fortune, coming down in almost numberless forms in modern tales, folk-lore, etc., all carrying reminiscence of the original meaning as type of fruitfulness and abundance. It was the ring guarded by the dwarf Andvari in the Volsung tale, whose possession gave into the hands of the owner boundless treasures, the priceless dower and the destruction of so many into whose hands it came. It was the *lotos* of Hindu and Egyptian mythology, the horn of Oberon, Huon, etc., horn of plenty, Jemschid's glass, the cauldron of Ceridwen, the Round Table of Arthur, the San Greal, also (both forms of the same symbol); and, finally, the horse-shoe, nailed over so many doors, and the shoe thrown for luck after the departing mariner or the newly married couple.

Some of the most beautiful images are employed to represent the dawn, in almost all the mythologies. Even the Maoris have their poetic descriptions here. In the Norse, it is said that Freyr one day, mounted upon the seat of Odin, saw that a maiden, wondrously beautiful, had just opened her father's door, and this was her beauty which shone out over the snow. Freyr was smitten with uncontrollable love, and he must send his most faithful messenger to woo and win her. We have not yet attained any happier symbolism in describing the relation of this wondrous phenomenon to the ineffable unseen majesty,—"whose open palace-door, the Dawn."

The conception of the *Moirai*, or Fates,—same with the *Norus*, as given in the Norse,—carries a deep truth. How more strikingly could the presiding power that stands over all life, and apportions to each his lot and measure, be represented than by the distaff and the shears? Who that has ever looked upon Michelangelo's Fates has not felt impressed anew with sense of the momentous fact of this stern, inexorable destiny? The flax is being paid out; the thread is being spun; and Atropos, with her unerring shears, is here, before our eyes, severing perpetually.

We are all taught by object lessons: they are our horn-book to life's farthest end. On the ladder of similitude we climb; we see by an illustration; we are quickened, waked, inspired, by a radiant image. Hence, the value, priceless, imperishable, which we have hinted in all this of myth, tale, realistic representation under whatever form, whether by speech or art. Huxley says a parable or a proverb will sometimes penetrate where an argument, any didactic statement, will utterly fail. The great teachers have understood this secret in all the ages. The apologue and the tale, any expression under figure or symbol, have their undying worth and never-exhausted power.

The Zulus say that, on the day when tails were given out, the hyrax failed to go for his, since he did not like to be out in the rain, as the day happened to be rainy. He therefore sent, by one who was going, to have his brought to him. The consequence was he never got any tail. This illustrates, with quaint force, the truth put in our Old English proverb, "If you wish a thing done, go; if not, send." The Zulu knew how to state it so it should strike in and be remembered.

In the Arthurian legend, we have an enchanted tower described,—the mysterious prison in which Merlin was confined. "No such strong tower in the world," says Merlin, "as this wherein I am confined; and it is neither of wood, nor of iron, nor of stone, but of air, without anything else; and made by enchantment so strong that it can never be demolished while the world lasts. Neither can I go out nor can any one come in, save she who has enclosed me here, and who keeps me company when it pleaseth her: she cometh when she listeth, for her will is here." Arthur could not reach him, he could not reach Arthur henceforth any more; Sir Gawain, though he could hear him and hold some converse, could not find, could not see him. He is held in most impalpable, yet most stern and irresistible prison. How more happily could the captures and incarcerations we all sometimes know be described? Ere we be aware, we are locked in the enchanted castle, enclosed in "a bush of hawthorne," and no power on earth can take us out. Nay, in a sense, we are all there, from life's beginning to its end.

Other examples there are, many of them, in the myths and legends, which we cannot even instance here, alike significant, pregnant, suggestive. They tell much, and that in the most forcible way. It is by symbol that we have the vehicle—sole vehicle—for the highest and noblest thought. That which has enslaved shall liberate, enlarge, and exalt: what has enmeshed, bewitched, brought terror and nightmare to the spirit, shall yet inspire and transport it with untold vision and joy. Mythology, which has been the bane of the world, carrying blight, such as nothing else in history has, shall be seen to open, in the deep wealth it contains and also conceals, to the richest treasures that can possibly come to mind and thought.

With a force quite other, but certainly not less grave than the writer saw or meant, we can apply

the passage: "For since by man came death, by man came also the resurrection of the dead."

CHARLES D. B. MILLS.

BEECHER AND EVOLUTION.

Henry Ward Beecher is not what is popularly called "a power in the world of thought." He is rather an echo in that world. Considered as interpreter, he is unreliable and hampered. But he wields influence in a narrow circle which it is impossible to discredit. His just finished sermons or pleas or fogisms on evolution meander between a bid for notoriety and an attempt to placate his own conscience. Through fear or oratorical fervor or some distortion of intelligence, Beecher habitually misrepresents himself. Given certain worldly prestige, he would to-day avow, as he long ago under properly favorable auspices might have done, that he stands intellectually outside of Christian lines. Actually, he is there; but, morally, he lags. In the anxiety to maintain the old and the new together, he endeavors to change both as little as fits a possible case. But it seems needless to observe that this supposes a lamentable confusion of thought and reason. What Mr. Beecher says of evolution, any man of less ability who has superficially examined the question could as pertinently say. Taken aside from its brilliant language, it contributes nothing to significant events. It is true his appeals awaken thought in hearers and readers who might not otherwise approach the subject in debate. Yet this thought would take quite another and more positive form, did the speaker possess purer intellectual vision and more courage of conviction. In fact, people do not believe in Henry Ward Beecher. They distrust his character so strongly that their suspicion besets them when they meet with his mental belongings. Perhaps this explains why his present position is regarded as a disguise, by means of which he designs to play both ways in a conflict between departing and arriving philosophies.

I do not, of course, sympathize with the too great sensitiveness of a dying theology; but I can well see for just how little Beecher's turnabout stands and should stand, and why it is so deprived of influence. Heber Newton, who occupies a similar position in respect to dogmatic progress in another direction, has a supreme clear-headedness which excites my respect. While I do not recognize his Episcopalianism gleaming through the new body of his thought, and while I do believe he should get out of the Church into freeing conditions, yet Newton impresses me as a man of earnest feeling and lucidity, which it is impossible to gather from Beecher's exposition. The stake with either man is not a heavy one. The movement into which they make some motion as though of assistance is going on with that inexorable power which isolated effort can neither much hinder nor help. The main suggestion of their trouble is of the chaotic condition of the Churches. Ministers nowadays rarely know what they believe in relation to formal Christianity. They make broad definitions here and narrow ones there,—as men are broad or narrow; but, in the end, they emerge like Beecher and Newton upon a platform which no exercise of direct reason can reconcile to the creeds of the Churches to which they are supposed to yield adherence. Perhaps Unitarianism furnishes more instances of this unsettling of allegiance than any single sect, though the confusion appears and is increasing in every other quarter as well as there. Beecher, however, in addition to the sin common to all half-seceders, has weightier offences of mental abasement to answer for, which deprive his teaching of its share of respect. Men like

Newton and not a few Unitarians are entirely coherent in their heretical thought itself as long as they are not called upon to reconcile it with their old-time oaths made over creeds which rarely enter into active discussion. But Beecher drops more largely and immediately into fault. In his handling of evolution, he displays instant traces of mischievous corruption, such as resides in undue anxiety over results and in willingness to stretch facts to unnatural conclusions. Thus he offends twofoldly. We are justified in supposing that new thought cannot be crucified in that way. What fits to truth is well. What does not fit to truth has no right to ask for truth's remodelment. Mr. Beecher, interested now in a play that looks like an attempted climax for an uncertain life, should regard more courageously the honorable bounds of his task.

HORACE L. TRAUBEL.

HENRY WARD BEECHER'S POSITION.

Mr. Beecher's series of discourses on Evolution and Religion, announced some weeks ago, and now concluded, or at least suspended for the season, has caused no sensation in orthodox circles, and, although it has attracted some attention, does not seem to have made any perceptible impression upon the public. Among careful thinkers familiar with the subject, Mr. Beecher's utterances are of course a matter of small interest or importance, except as they represent minds in which there is a constant conflict between the progressive tendencies of modern thought and the conservatism of traditional beliefs and old and popular methods of thinking. Mr. Beecher's recent sermons, which are without any original ideas or novel criticisms, merely repeat what he has uttered in previous discourses or presented in published writings. His thoughts respecting Evolution are marked by inconsistencies and contradictions too palpable not to be seen, partially, at least, by himself, although hidden often in the flowers of rhetoric, which divert attention from the subject they are designed to illustrate.

Yet we should consider that Mr. Beecher treats Evolution in the only way in which it can be made a subject of interest to the class of minds to whom his discourses appeal, who must accept the theory, if at all, with those very inconsistencies and absurdities which result from holding on to some of the erroneous notions of a theological system, while dropping some of its essential elements, and accepting a part of a scientific conception, while rejecting some of its most important implications, and striving to fuse into a new synthesis and to form into a new system the parts thus severed from the two unlike orders of thought to which they belong.

There can of course be no coalescence of these parts, so dissimilar and torn from their natural relations, and no assent by a logical and systematic thinker to any incongruous theory predicated upon their union; but the average mind is not logical, and its methods of thought are discursive and desultory rather than systematic. With the majority, who are more impressed by authority than by argument, assent to a proposition does not imply an understanding of its terms or a perception of its meaning; and inconsistencies in a theory, fatal to its acceptance by a logical thinker, to them may be no objection whatever. In times of unusual intellectual activity and progress, these inconsistencies are likely to be relatively greater; for the transition from the old to the new thought will be rapid, and will involve radical changes, outstripping the slower process of readjustment. People who have partially outgrown a written creed do not

always see either the difference between it and their new creed, or the inconsistencies in the latter; but, gradually, erroneous notions fade out of the mind, truths that once could not have been received or understood are accepted and assimilated, incongruities which were supposed to be intelligently believed, but were only assented to, disappear, and by a process which involves the acquiring of knowledge, the elimination of error, continual adjustments and readjustments of thought, the mind advances to larger and truer conceptions, acquiring at the same time greater capacity and power.

Mr. Beecher, who reflects and represents the religious thought and the friendly attitude toward science of large numbers, is, therefore, doing a needed work. In our opinion, he gives the people whom he addresses the best thought he has; and it is far above the average thought of the pulpit, in quality as well as in manner of presentation. He often contradicts his own utterances; and his offences against logic—if they were moral offences—would make him what some think he now is, one of the greatest sinners of the age. But he is a man of large emotional nature, of variable moods, with an active imagination; and from such a man we should not expect consistency of views nor accuracy and precision of statement. He sometimes speaks more under the influences of his early education and associations than under those of his later years. At other times, he is more in the present, when he responds to its spirit and aims to voice its thought. He is not a man of science nor a great thinker, but a theologian and a preacher, considering which fact, his acceptance of Evolution, and eloquent defence of the theory against the criticisms of his orthodox brethren in the pulpit, entitle him to our gratitude.

In the expression of his thoughts and feelings, Mr. Beecher is, if we mistake not, quite as frank as are the majority of the members of his profession; and he has often shown true courage in the pulpit. Many ministers who are less hampered by early theological teachings and inherited predilections, and even the majority of liberal lecturers, are less brave than he in defining their position and declaring their views on subjects concerning which those whom they represent, and upon whom they depend for support, are not agreed. While Mr. Beecher is being condemned by conservatives for too much radicalism, and by radicals for too much conservatism, he is liable to suffer injustice from both these classes of critics. In spite of his limitations and defects, he is, we believe, doing a work which, although not of a high order and in many respects open to criticism, is characterized by honesty of purpose and more than average courage, and is in the line of progress.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

MR. F. E. ABBOT is announced to read a paper before the Concord School of Philosophy, on July 30, at 9.30 A.M., on the following subject: "Is Pantheism the Legitimate Outcome of Modern Science?"

MRS. E. POWELL BOND is the unanimous choice of the Florence Free Congregational Society for its speaker for the coming year; and she will probably be engaged by the executive committee to take charge of the Sunday-school, and to speak on one or two Sundays a month, the other Sundays to be supplied by outside talent. A more capable person could not be selected. Mrs. Bond is not only a

radical thinker and an earnest and effective speaker, but she has had large experience as a teacher, and possesses in an eminent degree the power of interesting and instructing the young. She has long been a favorite with the Florence Free Congregational Society, whose desk she has often occupied, and of whose Sunday-school some years ago she had charge.

We take the following from the *Boston Traveller*: "There is a church in Milton County, Ga., that is badly split up on the subject of cyclone pits. It seems that a goodly number of members of the church have dug cyclone pits, which is considered by a majority of the church as a flagrant violation of their doctrines and a temptation to God to wipe them off the face of the earth. As the pit-diggers were more fearful of cyclones than of the wrath of the majority, they have been turned out of the church. They immediately organized themselves into a church, under the name of Cyclone Primitives."

SAYS an exchange: "Mrs. Vinnie Graff and Mrs. M. C. H. Baker have been admitted as members of the vestry at St. Luke's Protestant Episcopal Church, Chad's Ford, Delaware County. They are the first women to hold such office in the Episcopal Church of the United States." Quite a number of learned Bishops and Divinity Doctors have preached sermons and written essays of late, to show the dignified position of woman in the Church. They all alike make the unwarrantable assertion that every step of progress in woman's condition should be attributed to the Christian religion; and yet, now for the first time, according to the above item, the Episcopal Church confers on woman the dignity of a member of the vestry. This Church has had its choice for centuries between devout women, who were communicants in high standing, and "worldly-minded," "ungodly" men outside, and has always chosen the latter.

ACCORDING to the *Pall Mall Gazette* there is in London an annual holocaust of twenty thousand girls, between the ages of thirteen and sixteen, to men of wealth, rank, and position. This statement may be and probably is an exaggeration; and the late revelations of the *Gazette*, generally, are too sensational in style to be entitled to unqualified credence. But there ought to be manliness and public spirit enough in England to make the alleged doings reported by that paper a matter of the most thorough investigation; and wretches, however high their rank in society, who have been concerned in the business of procurement and the corruption and ruin of youth, should, even if they cannot be punished any other way, be held up to popular scorn and loathing as long as their names are remembered among men. The *Woman's Journal*, referring to the indignation in certain quarters in London at, not the vices, but the disclosures in regard to them, says that their attitude suggests the story of the debtor, the beggar, and the drunken soldier: "It was in the days before imprisonment for debt had been abolished in England. Rumors of a French invasion had thrown all classes of the population into excitement. An imprisoned debtor was talking through the bars with a very ragged beggar and a soldier who was more than half tipsy. 'If the French effect a landing, what will become of our liberty?' cried the imprisoned debtor. 'Yes, and of our property?' echoed the beggar. 'Oh, d—n our liberty and our property!' said the drunken soldier. 'What will become of our religion?' If Mr. Stead has been needlessly indelicate in his disclosures, he deserves criticism; but it comes from a curious source."

The Index.

BOSTON, JULY 16, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

MENTAL HYGIENE.

BY F. B. TAYLOR.

It has not been long since the science of medicine was as purely curative as the recognized science of morals is to-day. But recently there has been a great awakening, at least among the scientific and thinking, to the importance of sanitary measures and hygienic rules. Decided advancement has been made in this regard, and some of the benefits of the new method have been realized; and we are now on the way to much greater improvements and benefits.

It cannot be supposed, however, that this partial reform in methods of insuring physical health has been easily accomplished, or that it came early in the history of medical science. It did not answer the first cry of anguish. It did not grow out of a supposition that perhaps pills and powders are not all that is needed to preserve the body in health and energy. But it slowly arose from the certainty that comes by contemplating a long series of failures, and from the frequent repetition of the same lesson. It has been forced upon the medical profession and the people—so far as it has been accepted by either—by the irresistible logic of premature graves, crowded hospitals, and never vacant sick-beds.

Is there less need of reform in our treatment of mental diseases? Not unless there are fewer evidences of failure in the present system. Let us look at that feature of the case. Do we suffer from no weaknesses and disorders of the mind except such as are accidental and inevitable in the cause of nature? Do we find as pure and warm love, as perfect sympathy and devotion, in the household as could be desired? Have communities and neighborhoods as little of jealousy and strife as a social idealist might imagine? Are men as free from prejudice and as compe-

tent to reason well as it is possible to make them? Have we only our normal proportion of hypocrites, liars, and traitors? Are all classes as able to supply their own necessities and manage their own affairs as they may hope to become?

But we need by no means confine ourselves to these mild maladies and slight defects, for evidences of the failure of former methods, to secure health and vigor of mind. There is too abundant proof of the prevalence of vilest, most loathsome, and deadly diseases, and of the most abject and helpless incapacity. We lock our doors and bar our windows; we put our plate and jewelry in safes; we deposit our money in banks; we light our streets as much for safety as convenience; we never venture into certain sections after dark. Yet we are robbed of everything portable, from a stick of wood or a fowl to our bank deposits and bond investments; our houses are burned over our heads; we are assassinated in our beds, knocked down on the streets, or drawn into some dark den and murdered for the clothes we wear; and we are surrounded always by a cloud of beggars. The cry for help is never out of our ears. Then we build prisons for the robbers and murderers and almshouses and asylums for the incompetent, and punish the former in a way to make them more brutal and provide for the latter in a manner that renders them more hopeless.

Surely, there may be found in such a condition of affairs grounds for a suspicion, at least, that the treatment of mind disorders, which has been in vogue for so long, may not be in all respects perfect. I think there is doubt enough in the case to warrant a careful diagnosis, and perhaps some search for a new method of treatment. There is hint enough in recent developments of hygienic science to suggest the direction of that search.

The mind of humanity is, indeed, fearfully diseased. But it does not need doctoring half as much as dieting. Men do not so much need to be reformed as preformed. We have given the reformatory plan a fair trial, extending over thousands of years; and it has failed to accomplish the ends which all desired and hoped for. So far as preformation has yet been tried, it has produced the most satisfactory results: witness the encomiums upon popular education.

Character is always preformed. It is the result of influences. I believe all will agree to this, although there is a difference of opinion as to some of the forces at work in the formation of human character. The atheist sees only the finger-marks of material nature upon the pottery of the mind, while the theist puts God at the wheel. But man is always the clay. He is formed. To be sure, there is a great deal of talk about self-made men, about defying the fates and hewing out a path for ourselves regardless of surroundings; and there are many instances where men have risen superior to circumstances by force of inherent individual power. But what is this inherent force but the strength of a character already formed by influences? A man can do nothing beyond what his character and surroundings permit. We cannot fix this truth too firmly in the popular mind. It is one of the very few that we do not hear often enough.

A man can do nothing beyond what his character and surroundings allow. Think where that leads, and see if it is not a good doctrine as well as a true. It means that we have no right to expect more of man, in mental and moral affairs, than he is able to perform,—as, with certain classes, we have always done. It means that we are to measure a man's moral responsibility by his moral muscle. It means that, whenever we see one who

through weakness of character is unable to master circumstances, we must aid him. It means, more than all, that we are to give serious, careful attention to every influence that can operate in the formation of character. It teaches the broadest charity, the warmest sympathy, the most efficient helpfulness, and the best system of training.

To develop this system of mental hygiene in all its details would require a treatise. I can only point to its possibility and importance, and hint at its method and scope.

Character, I have said, is the result of influences. The influences concerned in the formation of character are of two kinds: past influences, which have crystallized into tendencies; and present influences, or circumstances. Under the former head comes up for discussion the whole subject of heredity, a wide theme for both popular and scientific thought. It has already received some attention, but is far from being appreciated in its relations to health of either mind or body. The people, as a rule, have no idea that their conduct ought to be moulded with reference to the interests of humanity a hundred years hence. They have heard from the sentimental orator that, "as the waves upon the smooth lake's surface ever widen from the pebble to the shore, so the influence of a life may reach out even to the borders of time." They have been told that no force or motion ever dies, and that, "as somewhere in the atmosphere the vibrations of Adam's love-whispers and Abel's death groans still exist, so, in the subtler atmosphere of minds, every human act and thought vibrates throughout eternity." But they have regarded these as beautiful poetic conceptions, and nothing more. They have yet to learn that the facts of heredity are common-sense, every-day facts, to be regarded in the workshop, in the parlor, in the kitchen, and especially in nursery and school-room. They have yet to be made to feel that the duty to the third and fourth generations is as real a duty as that to friends and neighbors. Let it be preached. Let it be preached till all understand it, feel it, act upon it. The facts are few and simple: your children *will* inherit your mental features and complexion, your neighbor *will* be infected by your mental small-pox, and transmit it to his children. If the intellect or moral sensibilities have wasted or calloused, the same consumption will appear in posterity.

Present influences that may affect the health of the mind are found in the home, in school in society, in business, in government, in religion. These are some of the faces of the many-sided, mould in which the human mind is cast. We are to learn, first of all, that they *do* determine its form. This is the important thing that mental hygiene is to teach: that the mind grows up from germs and under influences that determine its character as definitely as climate settles the matter of vegetation, and is affected by external conditions that control its health, as locality, season, atmospheric conditions, do the health of the body. How few, judging from common conduct, really understand this! Most people seem to think their minds "just grown"; and most people, no doubt, are very near correct in this supposition. Half of our race have not yet risen above the constant struggle for the maintenance of a physical existence. They can scarcely be said to exist mentally. They have no chance to think of their minds. But there are also thousands of mental waifs and street Arabs whose bodies live in brown stone fronts, and are clothed in satin and velvets. There are thousands of mothers who forsake the souls of their children upon a nurse's doorstep as soon as they are born. The same excuse might

perhaps be presented for these mothers that is pleaded by the mothers of other foundlings,—“no means of caring for it.” These are the people who have used all their large M’s to spell “Money,” and so have to omit “Mind” and “Morals” from the form on which their children’s characters are to be printed.

In speaking about the relation of home to mental health, I need not stop to say that whatever parents do children will imitate,—that, if we are selfish or coarse or cross, our children will be the same. This we have heard often enough. I am referring to something clear back of this. The entire business of the home ought to be arranged with direct reference to the mental welfare of its inmates. Its location, the people to be admitted, hours of work, time for play, father’s time at home,—all should be determined mainly by this consideration, because it is the most important. Especially should the system of home government be based on well-defined rules of mental health. The switch-marks on a child’s body may soon fade out, but those on the mind are often carried through life. The soul is a very delicate being, and it may be terribly lacerated and scarred by what seems not very severe punishment.

Where parents so often err from ignorance, teachers may go wrong from indolence or carelessness, may choose the easiest method of instruction and discipline without reference to its permanent effects upon the characters of the children. Some of the best governed schools, so far as conformity to rule is concerned, are worst in moral and intellectual influence. Machine-made characters will not stand the wear of real life. Teachers succeed well on a low moral plane who would utterly fail in working on higher principles.

But not only in childhood and youth must the mind be taken care of and its healthy growth provided for. It is easier to rear a strong, healthy body than to keep it in health during active life; for then come the work, the excesses, and abuses which undermine the strongest constitution. This is equally true of the mind. It not infrequently happens that in a short time, after entering active life, the best of moral constitutions is broken down by bad social and business habits. Bartley Hubbard’s is a true modern instance. A man may depend upon his home for his mental and moral start in life; but he must look largely to his field, his shop, his store, his office, for the outcome. It is a universal law of nature that action and reaction are equal, and it is just as true of mind as of matter. The powder exerts as much force upon the cannon as upon the ball; the hammer receives as great a shock as it imparts to the iron; every act or thought presses back upon the mind with just as much force as that with which it is impelled. Every day of thoughtless, careless life takes so much from the thinking power. In every short-weight or slack-measure package, the merchant ties up a piece of his own moral character, and sells it for eight and a third cents a pound or a shilling a yard. The lawyer loses some of his manhood with every forced case. Every false account must be balanced from your own conscience. A large amount of the commercial conscience of the country seems to have been consumed in that way.

The part performed by religion in developing and shaping the mental and moral nature is important, because religion is the recognized and established science of morals. But we have always expected too much of it, a great deal more than it has ever promised or performed. It has been considered the business of the Church not only to cure people of moral diseases, but to furnish them new moral constitutions. We have required our

physician not only to successfully amputate the decaying limb, but to furnish a new and normal one of flesh and blood. A skilful doctor can do much for a sick man, and the Church has done no little for certain sick souls. But the Church can no more take the place of correct habits of thinking and acting than medicine can make up for dissipation. Yet there are thousands of people who, during the greater part of their lives, deliberately stultify and debauch their moral nature with the intention of calling upon the Church some day to be cured. Such a man might be patched up so that he would do for a heaven where he should have an eternity in which to outgrow his deformities, but he can never be made a decent citizen of the United States. If one is to be morally large and strong and healthy, he must breathe a pure moral atmosphere, feed upon wholesome moral nourishment, and engage in healthful, vigorous moral work. In fine, we are more responsible for the moral condition of others than of ourselves.

What we need is a new system of training as a basis of morals and economy. Men should be taught that excellence of character is the only passport to happiness. They should be taught that a character cannot be had for the asking at any time in life, but can only be enjoyed as the fruit of life itself. Our attention should be directed less to our individual condition and interests, and more to those of the race. Above all, we should be brought to realize our actual partnership in all human happiness and all human woe, and thereby to appreciate our interest in increasing the former and lessening the latter. We should learn that our freedom is always exactly measured by our strength of character, and that character is the complement of daily and hourly experiences.

Such a system, assiduously taught to all the people, made the basis of moral growth and the goal of perfection, would be essentially new, trite as some of its maxims may seem. But new conditions of life always produce new habits of thought; and I believe the rationalists of America are destined to produce a revolution in moral culture no less complete than that which our country represents in governmental affairs. There are signs of it everywhere. Busy hands are at work clearing away the rubbish of demolished superstitions, and selecting from the mass of new material that which is fit, for the temple of a new philosophy and religion in one. Already, foundations have been laid by the strong men of science, and a beautiful corner-stone made ready by the free thinkers in religion. Whoever can add to so noble a building one stone that shall endure and do honor in its place may think himself most happy.

For *The Index*.

THE ARTIST’S SEARCH FOR BEAUTY.

The artist, young Francesco, had a soul
 Athirst for beauty, in what form soe’er
 He found it. Born beneath Italian skies,
 Where countless charms of Nature ministered,
 And filled his senses keen with rare delight,
 He lived in sights and dreams of loveliness,—
 In azure skies and ocean’s changing hues,
 In lights and shades upon the mountain sides,
 In feathery palms and fragrant orange trees
 Most sweet at night-fall, and in thousand forms
 Of flowers fair, delighting every sense,
 Forget-me-nots and blue anemones,
 Rosemary, sweet-briar, yellow daffodils.
 In these, he found communion and delight.
 And, when he looked for some pursuit in life,
 No commonplace or mercenary one
 Would please him, but to make some form, some shape
 Of beauty, that might be a “joy for aye.”

Was his intent; and then to Florence he
 Wended his way, to study works of art.
 And there, within the Tuscan capital,
 Enriched with noblest, rarest work of man,
 What forms and shapes of loveliness he saw
 In grand cathedral, Brunelleschi’s Dome,
 And Angelo’s embodiments divine,
 Ghiberti’s wondrous “Gates of Paradise,”
 And Santa Croce, where, with reverent awe,
 He read the names of all the honored dead!
 Then ardent longing kindled all his soul
 To shrine some thought within a sculptured form,
 To fasten in Carrara block some shape
 Of haunting beauty, effluence divine
 Of all his life and thought, dream of his dreams,
 That should remain while generations passed,
 And shed a halo on Francesco’s name.
 Then deep in mythologic lore he plunged,
 And stored his mind with rarest poetry,
 And toiled for years with marble and with clay,
 Till, in the fresh meridian of his life,
 Renown and honor Florence gave to him.
 Then married he the gentle Angela,
 Fair girl, with eyes like Parma violets,
 And loved the tender beauty in her face.
 The happy months sped on, their home made bright
 With light of love, and love of all things fair.
 How quick the days passed by with Angela
 To cheer and stimulate Francesco’s toil!
 The shapeless stones before him came to life
 In forms of beauty. Yet before him still
 He saw a vision of diviner mould,—
 The figure of “Italia,” in whose face
 He meant to set the look of Angela
 Idealized, in which rare masterpiece
 He would embody all his love for her,
 For Italy, his country, and for art.
 A happy year was that, with heart at rest,
 With earnest toil, with pleasant twilight strolls
 On the broad Ponte, in the evenings cool,
 Or to see Giotto’s work against the sky,—
 The slender, airy, graceful Campanile;
 And, on the festa days, with happy throngs,
 To wander in the warm, transparent air.
 But, when the year had flown, Angela too
 Had left him, leaving but an infant frill,
 Ere yet his masterpiece was quite complete.
 It lacked expression. In its soulless face,
 No look of Angela, though features fair
 It had. And she was gone! Gone from his life!
 The wailing child, in old Teresa’s care,
 Soothed not his grief; and all things he had loved
 Were valueless. He wandered up and down
 The rooms now void, for lack of one so dear.
 His dreary studio, the marble form
 Unfinished, only fired his heated brain
 To madness. Weeks and months passed by,
 His chisel idle. Then, in wild carouse,
 He sought to drown remembrance of his grief.
 One night, he threw himself upon his bed,
 In fitful slumber. In the darkened room,
 A sudden radiance streamed of moonbeams pale;
 And, in its light, his eyes, half opened, saw
 Strange forms and shapes, and, listening, he heard
 Sweet melody and voices soft, and words:

“Come away! Come away!
 Leave this froward child of clay!
 Far from every care of earth,
 Thy freed soul shall find new birth.
 Leave him now! On his brow
 Press thy lips, but do not wake him.
 Now so nigh, one soft sigh,
 Then away, and aye forsake him.”

“Yet a little, little longer,
 I must linger, I must tarry,
 Else a weary, weary burden
 Back to heaven I shall carry.
 How to heaven can I go,
 When my heart is here below?”

Then Francesco saw a phantom
Of surpassing beauty rise,
All its earthly looks transfigured,
Yet with sad and tear-stained eyes.
Round about the broad, white brow,
Asphodels were hanging low.

Spake the vision: "Thou, Francesco,
Lovest beauty: in thy heart
Is the love of all things lovely;
Formed by nature or by art.
But one beauty thou dost miss,
And I came to tell thee this:
Underneath thy careless eyes,
Beauty sweet, unfolding, lies.
Dost thou see my eyelids yet,
Stained with saddest tears, are wet?
Beauty nobler yet thou lovest,
When unworthy life thou chooseth."
Then the shape, in air dissolving,
Faded from his sight away;
And the room returned to darkness
Till the dawning of the day.

Francesco woke in the gray light of morn,
The midnight vision filling all his mind
With thought of Angela, his spirit guest
Of beauty wondrous, save those sad-stained eyes.
Ah, heavenly visitant, could he but catch
That look unearthly while the phantom fair
Yet lingered with him, then forevermore
Those lineaments divine of Angela
And Italy in that one form would be
Imprisoned, semblance sweet of all he loved.
His chisel then he seized with eager haste,
To catch the evanescent image fair.
Again, in wholesome toil, the days passed by,
Each touch rewarding all the sculptor's care.
The wondrous beauty glowing in his soul
He wrought upon the statue's face; and yet
Its eyes, reproachful, sad, were bent on him
With just the look the midnight vision wore.
With finest touch and nicest care, he strove
To change this imperfection, yet in vain,
Until, at length discouraged, sick at heart,
By sad spell haunted, he a veil threw o'er
Its features, glad to hide them from his sight.
Turning away, he heard Teresa's voice
And saw the smiling infant on her arm.
The passing months had worked with subtle charm.
With dimpled hands outstretched, the little one
Asked for caressing; and Francesco saw
In its fair features, crowned with golden rings,
And in its violet eyes, sweet, tender looks
Of Angela; and now, at length, he knew
A beauty he had missed, and day by day
New charms unfolded. Now, the daily toil
Was crowned with frolic, and the sculptor felt
New ardor and incentive for his work.
Filled with deep shame for all his past neglect,
He strove, each day, to make the infant glad;
And, for such sweet possession, life itself
Must be ennobled. So the years rolled on,
Till one bright day Francesco from his toil
Paused for an instant, since the playful child,
In frolic mood, had torn the statue's veil;
And, gladdened by the beauty thus revealed,
His eyes the likeness of his mother wore,
The look the marble never had expressed.
With gentle touches, then, Francesco's hand
Guided the chisel, while with eager haste
The fleeting semblance sought he to imprint
Upon the statue fair, and soon its eyes
Beamed soft on him with hope and tenderness,
Vision of Angela and Italy,
Embodiment complete of all his thought.
And oft a happy presence, with soft eyes,
No more reproachful nor with sad tears stained,
Seemed, in communion sweet, to dwell with him.

ANNA OLCOTT COMBELL.

CORRESPONDENCE.

ANOTHER SUNDAY IN LONDON.

Editors of The Index:—

At the Theistic Church, Swallow Street, Piccadilly, Rev. Charles Voysey preaches. He has done good work in disseminating liberal views about religion; and his lecture on the Bible, republished by the Free Religious Association, is a good antidote to Bibliolatry. At his church, a revised Prayer-book occupies the attention for a whole dreary hour of the service; and one misses the spice of hell, devil, and miracle, which gives a zest to the original and genuine formula. The sermon was a warning against atheism, than which "the old Orthodoxy even was better." Mr. Voysey seems to belong to the class who do great service in starting the liberal current, but in time become chiefly concerned lest it should carry ships past the fort designed as a final haven by these teachers. The flock may roam in new pastures, but not beyond the theological fence erected by the shepherds. But ships get an impetus from sailing, and flocks acquire a taste for ever new pastures. Progress may not be readily checked, when liberty to explore has been granted. The main sentiment of the service seemed to be "praise to God on high"; but, as the world revolves daily, some might be bewildered in searching for the locality.

It was "Hospital Sunday," when collections are everywhere made for "England's noblest charities." Another collection was suggested at the door to those who wished to contribute to pay off the debt of £500 on the Theistic Church, but I saw no one so disposed. At St. Paul's Cathedral, three priests in vestments were performing mysterious rites before an altar adorned with a gilt cross and large candles. Heathen temples in China and India came to mind, where equally impressive and unintelligible actions take place, all, doubtless, instructive and comforting to those who know and like them. The sympathy and brotherhood of all religions received another illustration. Buddhist, Brahmin, and Christian seemed members of one family, and why one should despise another for a difference in a twist of the elbow in their modes of adoration of Deity appeared absurd; nor was any superiority in the methods of Christian worship apparent. Standing yesterday at the tombs of Herschel and Darwin, side by side in Westminster Abbey, I heard the usher cry, "This way to the tombs of the kings!" I silently answered: "Here are the only kings worth notice,—rulers in realms of thought, whose authority was always beneficial and whose good influence is eternal. Hereditary tyrants, slaughterers of men, despoilers of the people, will be despised and then forgotten; but these names will live forever in the archives of the advancing kingdom of man." So the priests of the cathedral, directing the mind to God through vestment, chalice, and cross, will be displaced by those who, turning the telescope to the star and the microscope to the flower, reveal to man the wondrous work and methods of infinite force.

A visit to George Jacob Holyoake pleasantly and profitably occupied the afternoon. Emerging from the damp air and gas of the underground railway at South Kensington, in his house, next door, were found the sweetness and light of intellect. His rooms contain many treasures, among them pictures and autographs of noted men,—Garibaldi, Mazzini, Beecher, Spencer,—a bust of Voltaire made in his lifetime, costing one hundred and fifty guineas, swords and flags of historic interest. But it was the treasures of the mind that I sought. I said: "Mr. Holyoake, I have observed that, of all active free thinkers, you have succeeded best in retaining the respect and good will of Christians. Can you tell me the reason?"

For an hour, I listened eagerly to a flow of sensible, witty, practical comment on methods of liberal work, which I wish could have been preserved. In substance, some of his utterances were as follows: "I made it a point always to assume that my opponent in discussion was as sincere a man as myself. I never humiliated him. I tried so to treat him that he would like to come again, for I have found public discussion to be the best educator. If I raised a laugh at his ideas, I tried not to let it have any personal significance. Then I admit the good there is in things that I oppose, and try to state my antagonist's position fairly, sometimes making it more forcible than he himself has done. I do not concern my-

self much about questions relating to the existence of God or the authority of the Bible; but I look to see what false ideas about God I can expose, and what bad teachings of the Bible I can correct, giving credit for what is good in it, not caring whether Moses, Paul, or Peter was the spokesman. Then I work for the improvement of man's condition at the same time that I try to refute his mental errors. Many of the so-called infidels (a name I abhor, for it means faithless) are merely anti-theologians, and not secularists. By promoting popular benefits, you commend yourself and your ideas to society at large." Means of usefulness were discussed, and the opening of museums on Sunday was made the means of illustrating the right methods of secular work.

Mr. Holyoake is engaged in writing an autobiography, which will be rich in personal reminiscences of many noted men who have been co-workers with him in social and industrial reform. It is quite probable that Mr. Holyoake will be a member of the next Parliament. He is much more popular with members than Mr. Bradlaugh is, and the oath question is not likely to be raised.

By Mr. Holyoake's advice, I found my way at night to a queer little room on the bank of the Thames at Hammersmith, where Mr. William Morris, the popular poet, gave a lecture on "The Hopes of Civilization." He gave a history of industrial society, tracing the development of the laborer from the chattel slave up to serf and wage earner, and prophesied the transformation of society by the abolition of all class distinctions, the equality of workmen and the now so-called masters, and the securing of the whole proceeds of production to the workman, capital to have no share of the profits. This is the point in which socialism especially goes beyond co-operation. I procured tracts and papers, and perhaps shall some day understand the theories sufficiently to describe them. But I had the gratification of meeting Mr. Edwin D. Mead at this place; and his clear mind has doubtless grasped the ideas, and I trust will give *The Index* readers the benefit.

ROBERT C. ADAMS.

LONDON, June 14, 1885.

SILVER COINAGE.

Editors of The Index:—

It is said this clamor for a restoration of our ancient right of unlimited coinage comes of a desire to cheat somebody, and palm off "85 cents" for a dollar. To say that the coin which by the dictionary, and by the statute for a hundred years past, a dollar is, is not one hundred cents, or one hundred cents' worth, is a silly attack on the decimal notation; and, by the demonstration of my former paper, it is plain that, instead of being too cheap, silver is, if anything, too dear as a debt payer, if, indeed, amount of purchasing power (computed by what experts call the method "of geometric mean") is the test of honest payment; for a given quantity of silver is the market equivalent to-day of a greater aggregate of products than at any time for the past twenty-five years, I think I may safely say since history began. The wolf in the fable had just as much ground of complaint against the lamb for wickedly interfering with the lawful gratification of his wolfship's aesthetic and ethical craving for pure water, with this difference: it is not recorded of the lambs that their consciences were touched by the accusation, so that, with religious resignation, they marched up to the slaughter, lustily bleating the praises of a high standard of riparian rights based on lupine expectations.

In my former paper, I tried to show the nature of value—what constitutes it, and the necessary implications arising from that constitution—for the purpose of combating a chief error in the current thinking, which even professors do not scruple to employ to bolster up a bad cause. Passing from the examination of the statics to the dynamics of value, let us see if, by a study of the forces producing value-change and the laws of their operation, we may forecast the future.

Here, again, we are confronted by an inert mass of popular error, which, since professors will not try to correct, I must. That error is the notion that the value of a thing can be ascertained by reference to the amount of labor that went to its making, or at least that would be required for its reproduction. It is an error that bankrupt economic thinking as surely as the attempt to put it in practice would ruin

a trader. By that doctrine, a concern having a million dollars of embodied labor in its plant—machinery, unwrought material, and unsold product—could never fall by the pressure of a half or quarter million indebtedness. By that doctrine, what shall I say of my friend who got left last fall with maple flooring embodying \$3,000 of labor, and which he was fain to sell for \$2,000, but on the Rink boom realized in the winter \$5,000 for, and toward the last selling for three times cost price? Shall we say he swindled? His goods were not worth so much? It is all stuff: the market laughs such a doctrine to scorn. Every huckster understands that the amount of embodied labor in his garden truck and poultry, or even what they cost him, has nothing to do with their market value, is impossible of ascertainment any how, and, if it could be precisely known, would be information of no practical use to him, nor theoretical use either, unless he was going to become an editor, and flood the market with economic twaddle. Every business man knows, and every student of economics understands, that there are just two forces, and no third, whose interplay and tremulous equilibrium always and everywhere determine how much a thing is worth. Those two forces are supply and demand. All careful thinkers know that variation in value is the varying ratio of stress between those two forces, is the ever-fluctuating equilibrium between them. Increase or diminish supply with a fixed demand, and you will carry value from zero all the way up indefinitely toward infinity. Diminish or increase demand with a fixed supply, and you will get exactly the same result. Demand here does not mean mere longing and desire, but desire backed and measured by a definite amount of commodities offered in exchange. The value which the world's money has taken on is the equilibrium, through long years of adjustment, between two forces, one a demand for money, approximately fixed,—or rather growing at some normal rate,—and the other the quantity of precious metals in sight, also increasing at a rate approximately corresponding. Under free conditions, the quantity of money, and so its value, is determined by the quantity of mined metals, just as, under unlimited milling privileges, the quantity of flour, and so its price, is determined by the amount of visible wheat. Nothing can be plainer than the law that, if one-half of the precious metals is denied the right to become money at all,—demand not growing less,—money must rise in value. Add to this the fact that the present annual gold production is consumed in the arts, and it is plain that monometalism means lowering of prices for years to come, and so industrial strangulation.

If, from some caprice that potatoes were too bulky and coarse a food for our advanced civilization, its use, except as food for cattle, were suddenly interdicted, the stock on hand would go down in price and the competing foods would go up, especially wheat. Such an innovation by removing the pressure of demand from one product and transferring it to another might make and unmake dealers in those commodities according as they were "long" or "short" in them at the time of the removal; but the economical effect upon society at large would be only temporary, because the annual yield in those things constitutes substantially the entire stock, and a doubling of the value of any one would so stimulate its production as that the normal level of prices would be restored. Not so with gold. The annual production of that metal is a very small proportion of the stock, and the sources and methods of its production are so peculiar that they do not respond readily to the stimulus of increased demand. Even if a doubled value should induce a doubling of the annual output, a century would not suffice to restore the old level of prices.

Few will go farther than I in appreciation of the importance of keeping open and free all the channels of international intercourse, not only industrial and commercial, but social and intellectual as well; but that there should be a fixed relation between our dollar and the pound I deny. It is a matter of no sort of importance to any but exchange brokers, and trifling to them. The metals go, when they go at all, as bullion, in total disregard of the money name we may put upon its divisions. If we measured in silver alone and Europe in gold alone, I am unable to see how we are hurt or discommoded. A silver dollar "pays as it goes" precisely as a gold dollar does, and will always be in request the world over at the precise value of the dollar which it is. A bushel

of wheat and a pound of cotton will exchange for just as much silk and tea measured in one coin as the other. I have heard many mouth-filling words of warning and seen much solemn shaking of empty heads over the calamity of all our gold going out of the country, but never any definite description of what would come of our being "out of harmony with Europe." I forget: I have seen in a respectable paper that we would have to exchange our gold dollars for German silver at a loss of fifteen cents on each dollar!

It is a thousand times more important that our money should stand true, steady, and uniform as a valuator of products than that it should go kiting after the British pound. That is a very respectable money when held in check by competition with silver; but, with a monopoly of the money function, it is foisted up into a value against nature and against equity. The industries and productive enterprise have just expectations as well as creditors. "A perfect standard indeed!" "Perfect" is a strong word for mundane things. It is the best money metal in the world,—"perfect," if you please, in that regard,—but as a "standard" flagrantly unfit, much inferior to silver alone, and immeasurably inferior to them jointly. The function of a definition standard coin as a *valuator*, as compared to its function for manual delivery in payment, is every year as a thousand to one and more, as every business man's experience will attest. All competent writers consider uniformity of purchasing power from year to year as the paramount object of desire in the constitution of a money unit, overriding immeasurably all others. No one will have the hardihood to claim that for gold as against silver. The annual production of gold has in this century varied as 37 to 1 in a period of twenty-five years; while silver production is more steady, and its increase is amenable to the same laws that control products generally. I have already shown that silver is a truer and more uniform valuator to-day than gold by all the difference of its alleged "fall" in price. Nobody proposes to discard gold. Under monopolistic conditions, its behavior is intolerable. Allowed to "stand guard" at our present legal ratio of sixteen, it will be a security against the disastrous effect of an undue possible appreciation of silver. In the mean time, it is better it should be at a premium than silver at a discount.

E. D. STARK.

THE POSITIVIST CHURCH IN LIVERPOOL.

Editors of The Index:—

Auguste Comte founded his church on the lines, as he himself expressed it, of "Catholic organization without Catholic doctrine"; and, without the excuse of age, wealth, or power, his Church is already as dogmatic as that nightmare of civilization, the Romish Church. When Prof. Huxley wrote his famous address on "The Scientific Aspects of Positivism," he said that the only thing he could see to admire in M. Comte was "his arrogance, which is undoubtedly sublime"; and the followers of the arrogant Frenchman are not one whit behind their master, judging from their conduct in Liverpool.

Passing through a quiet street in this city last Sunday night, I saw a signboard in front of a little birch building, bearing the strange legend, "The Church of Humanity." Entering, I found a room with some fifty rush-bottomed chairs, an organ at the rear, hymn-books, sheets with the order of service printed, a collection box, a stove, a small acolyte in a black cassock which seemed uncomfortable, and about six mild-mannered-looking men and women. Above the heads of all, ranged round the room on brackets, were the heads of thirteen "saints" and M. Comte himself. The "saints" seemed to include anybody between Moses and Voltaire; but I failed to see the head of M. Comte's good old housekeeper among them, which omission was amply atoned for in the life-sized image, in terra cotta, of the "Virgin Mother of Man" with a babe in her arms, standing under a gorgeous golden canopy in the altar! The "Virgin Mother" stood on a pedestal covered with light blue cloth, on which stood two candles. On either side of her, a little in front, were two reading-desks gorgeously painted; while a third desk, a little higher, and meant for a pulpit, stood at one side. A polished mahogany rail between the desks completed the idea of an altar, and railed off the common people from the holy of holies.

By the time the service began there were nearly twenty people present; and the priests took their places, one in each desk. The small acolyte took his place within the altar-rail; and, as he passed the "Virgin Mother," he made a lowly obeisance as the Romanists do, though the chief priests seemed to omit that part of the ceremony. One of the priests was a pleasant-faced man, such as one meets every day; but the other, who was evidently the great man, was every inch a Jesuit, close shaven, with a tonsure, thin lips, keen eyes, a white tie, and a clerical coat. In every point was he fitted for his post, even to a rich brogue and a careful habit of speech, which sounded curiously when he spoke of the "my-raculous powers of mankind."

When the service began with a solemn tune on the organ, the priests stood up, as did the people; and the Jesuit read the service in the most perfect manner. He might have graduated from a Romish Church, as perhaps he did. But it seemed strange, indeed, to hear the new words set to the old tune, and hear this priestly-looking man intoning, "Not in ourselves, not in ourselves is our help, but in thee, O Humanity, . . . revealed in thy own great name by the word of thy servant, Auguste Comte"; and then, at a certain part of the service, he turns toward the image of the woman, and prays! all the people accompanying him, the prayer being just what some of us were brought up to utter, with the exception of Auguste Comte being substituted for Jesus Christ and Humanity for God Almighty. The change did not strike me as being a good one. In fact, the man who supplants Jesus Christ for M. Comte makes a mistake. The entire service was of uniform character; and the wording of the directions was exactly the same, as for instance, "Standing at the right side of the altar and facing the people, he shall say:—

"Thus saith Humanity:—

"I am the source of all purity, and the giver of all sanctity. I seek a pure heart, and there is the place of my rest," etc.

The climax was reached, however, when the Jesuit, the lay brother, and the small acolyte all knelt down at the feet of the "Virgin Mother of Man," and the Jesuit began to recite the Italian phrases which were in the service, with a translation. Never did I realize how slight is the difference between the dead, classic Latin and the sweet Italian of to-day, until I heard this Jesuit intone his phrases with the pious snivel so peculiar to complete sanctification, and the organ joined in the amen, while all the people united in singing, in that delightful manner suggestive of heaven (?), "A-a-a-men."

We sang some hymns. The lay brother with the ordinary face read a selection from "Wordsworth, a Positivist Saint." The Jesuit retired for a minute behind a saffron curtain, which formed a vestry. Then, on returning, he "preached."

He took no text, but he used all the old phrases of the Church. He talked of soul and spirit, of infinite and eternal, of the perfect Mother and perfect love, of "adoring contemplation which holds the fickle, wandering hearts of men to the holy, true things of eternity"; and he preached a thin, supercilious sort of morality, which seemed to have neither aim nor object except the good of a very remote posterity, and a Positivism of a distant time, yet was to bring little, if any, good to the living man, till it recalled some of the impossible commandments of an older creed, and the pertinent question of Boyle Roach, "What has posterity ever done for us, that we should be looking after posterity?" The sermon, taking it altogether, was an incomprehensible conglomeration of involuted platitudes; and the entire service was one long, wearisome parody on Romanism.

If I had to choose a despotism, I would prefer one with age to recommend it before this new-fangled but dogmatic young monster, which, judging from its present promise, would be more cruel and tyrannical than any of the old creeds that have cursed the earth. It is too late to force such a creed on the world. Science is too large a child to smother easily, and the Positivists are too late. After reading Comte and spending an evening with his faithful disciples, I can heartily indorse Prof. Huxley's statement that, to leave them, "it is as good as a shower-bath to turn . . . and refresh one's self with Mr. Spencer's profound thought, precise knowledge, and clear language."

PETER ANNET.

THE STATUE OF BRUNO AT ROME.

Editors of The Index:—

The following very interesting letter has been received, with a receipt for the subscriptions (\$187.73) which were forwarded by me on the 1st of June last.

It does not seem that \$600, the amount suggested by the committee to be raised in America, is at all unreasonable, in view of the facts presented.

Who now will add their names to the second instalment of contributions to the noble purpose of making Bruno immortal?

I will forward as before all moneys sent to me for the statue. Respectfully yours,

T. B. WAKEMAN,
Authorized Agent,

No. 93 Nassau Street, New York City.

July 10, 1885.

ROME, ITALY, June 20, 1885.

Honorable Sir,—I hope by the time I am writing this that you will have received my last letter in reply to yours of May 16, wherein I endeavored to give you the information you desired. But, in case you may not, I will repeat it here in a few words.

The monument to Bruno will be a statue in bronze, with a base and bas-reliefs, etc., and will cost about twenty-five thousand to thirty thousand francs.

We Italians hope to contribute thereto about twenty thousand francs. The work of the sculptor Ferrari will be *gratis*. We have also to hope that, when it is seen that the work is going on bravely, the Commune of Rome (the municipal government) will contribute a quarter of the amount above proposed for Italy. This is highly probable, if the ensuing elections result in sending to the capital an increased number of Liberals.

We are very much pleased that our "first number" has been so favorably received by you. We would send you more copies of it, so that you might distribute it among the free thinkers of America who are contributors to the fund, if we did not, in sending them, incur an expense greater, we fear, than the value of the brochure itself. We send you copies, however, for the two other members of the Committee of Honor in America, Hon. Elizur Wright and Col. R. G. Ingersoll. We have not sent to them before, as we received their names through Mr. Bradlaugh without their address.

I would not forget to thank you for the 938 francs (\$187.73) which you have sent, with the list of subscribers. We shall publish it in the journals at Rome, which we will forward to you. At the same time, I ought to say to you that we still hope for much more from the Americans. Why may they not more than twice double the sum they have already given? Excuse the presumption of this question for the sake of Bruno.

To your inquiry as to the contributions of the other countries of Europe, I can only say that, outside of France, England, Spain, and Russia, the other Europeans have responded very freely to our appeal.

From the countries above named, we have received some contributions, but, as yet, very little in comparison with that which we expect from them. As to Italy, we have every reason to be sure of our success. Our ideas have penetrated everywhere; but what a pity that here, too, the Liberals are not of the wealthy!

We learn that at Paris one of the streets leading to the Sorbonne has been named "Giordano Bruno," and that the Counsel Provisional (?) of Paris has voted 200 francs to our philosopher of Nola (Bruno). Accept my thanks for the honor done in printing my letter in your journals; and, if you wish for further information, you have only to write to us.

Wishing you to accept the sentiments of our highest consideration, we are, on the part of the committee,

Yours respectfully,

Dr. MARCELLO CAMPODONICO, Pres.

GIOVANNI AMICI, Sec'y.

"IS A SCIENTIFIC BASIS FOR RELIGION POSSIBLE?"

Editors of The Index:—

This subject has been very ably handled by some of our best speakers; but, as it is a question in whose answer all are interested, it seems to me fitting that all sides thereof should have a hearing. I have read with much interest Mr. W. D. Le Sueur's address be-

fore the Free Religious Association, hoping to find that the speaker was so far beyond the average thought as to be able to give a definite answer to the question, that would be in itself a demonstration. But, though an able discourse, it is evident, from his whole cast of thought, that the author has not reached that point; and his answer to the question is but another opinion, which leaves the question still unanswered.

What is termed *religion* is the beliefs and opinions of man regarding something (God) which they know nothing about. How, then, can there be a scientific basis for religion? When that something (God) is understood by all alike, when all ideas regarding the Creator start from the same perfect stand-point, as do all ideas in the understanding of mathematics, then shall we have a scientific basis for—what? Not religion. There will no longer be religion, but a demonstrable understanding of God and his creation, which is theology,—not what is termed theology to-day, but the old theology of Jesus' time; in other words, the science, not of man, but of God.

The word "theology" is now misapplied, and for that reason liberal thinkers are more or less prejudiced against it. While I understand the feeling, and regret the misapplication of the term as much as any one can, I shall not on that account relinquish the word, but do my best to rescue it from its present position, and place it where it belongs. Free religion means free opinions, and the Free Religious Association, if consistent with its title, is an association which encourages free expression of ideas and opinions regarding the Creator and man's relation to his Creator,—a most excellent society, and one which cannot fail to aid progression, because it encourages earnest thought and study. But that is one thing; and theology, or the science of Spirit, is quite another. Let it be plainly understood that by *theology* I do not mean what the Churches term theology to-day; for their theology is not theology, it is *religion*,—the beliefs and opinions of man regarding God, his creation, etc.

Because some one may call a pear an apple is no reason that I should. If one should call a dream the reality, and the reality a dream, is that a reason that we should also?

The old *theology* taught and practised by Jesus and his disciples and by Paul had a scientific basis, and consequently was demonstrable. The so-called theology of to-day has no scientific basis, and can have none, because it is in reality only man's opinions. When an opinion is found to be scientific, it is no longer an opinion: it is understanding or knowledge. Our object is, or ought to be, to elevate and make better our fellow-men; and I think the way to accomplish this is not to tell them what they ought, and what they ought not to do, but to give them a practical, demonstrable knowledge of God and man, the nature and origin of matter, etc.

The first step in this direction is to call things by their proper names; and, secondly, to define those names, so that we may all understand them and make a correct application of them. To-day, the term *religion* is understood to mean man's opinions regarding God and man, and regarding man's relation and obligation to God. These opinions have been found to be incapable of demonstration and without a scientific basis, and are therefore entitled to no more respect than a man's opinion regarding mathematics.

Old theology (the science of God, the understanding of Spirit and its creation), not modern theology, is worthy all respect and reverence. It is a demonstrable truth which brings man to the realization of God and his creation, and to the knowledge of the origin of matter and all materiality. It shows man what he is, and how he can attain unto that perfect manhood accounted by Jesus to be both possible and desirable.

The religions of the day have, indeed, the form of godliness, but have denied the power thereof. Old theology acknowledges the power, and not only teaches that evil is not goodness, but destroys the evil in us.

Not until the people cease to reason from a material stand-point, and begin to reason from an opposite direction, will they come out of the darkness and perplexity of man's opinions. When man comprehends his relation to God and worships *self* less, he will be able to comprehend and worship God. Not, however, with words and forms: they avail not with God. True worship of God is doing his will; and we can neither do his will, nor teach it, unless we know it.

And we cannot know it, unless we are his children; and we are not the children of Spirit, unless we have an understanding of spirit.

A teacher of any branch of learning must first understand that which he professes to teach. A teacher of theology must understand God and his creation, the relation which man holds to God, and the origin of matter, in order to be able to teach it to others. Without a scientific basis for his views, they are worth no more than those his pupils may have. Old theology was, in Jesus' time, and can now be, taught and demonstrated as clearly as can mathematics; and the popular idea that God is *unknowable* has done more than all else to keep the people in the darkness of ignorance respecting their Creator and themselves.

This darkness is what Jesus, in his time, termed "death," when he said, "Let the dead bury their dead." The "life in Christ" was the release from the bondage of ignorance, through the knowledge of the law of Spirit; and, if man has in the past attained that knowledge, there is no excuse for supposing he may not in the present time, else where or in what direction is the much boasted progress of man?

E. J. ARENS.

A CORRECTION.

Editors of The Index:—

Oblige me by correcting an unaccountable error in my communication published in *The Index* of the 9th inst. Instead of "Innocent XIII.," the name of the reigning pope, "Leo XIII.," was of course required. The blunder was possibly a *lapis calami* of my own, and is, in any case, of but little consequence, since every reader would correct it for himself.

Very truly yours,

HOWARD WORCESTER GILBERT.

PENN'S PARK, PA., July 10, 1885.

BOOK NOTICES.

A SYSTEM OF PSYCHOLOGY. By Daniel Greenleaf Thompson. London: Longmans, Green & Co. 1884. 8vo. Vol. I., pp. 613; Vol. II., pp. 589. Price 30 shillings.

An article from the pen of Mr. T. B. Wakeman, contributed to *The Index* some months ago (No. 35, Vol. V., New Series, Feb. 26, 1885), bestowed upon this work high praise, while subjecting to frank criticism some of its positions. In that article, the value of the work was not, in our opinion, overestimated; and, of those parts in which Mr. Thompson shows the most ingenuity and appears to the best advantage as a thinker, no adequate mention was made, rather from the limits of the article, we believe, than from any lack of appreciation on the part of its writer.

This work, which was written in the midst of the cares and duties of a practitioner of law in New York City, not only shows rare devotion to philosophic study and a noble enthusiasm to discover and to make known the truth on themes among the highest that can occupy the human mind, but proves the author to be a man of large intellectual grasp, of keen critical and analytical ability, and at the same time of large constructive power and capacity for generalization, of ample acquaintance with philosophy and literature, and with a knowledge of some of the sciences, physiology in particular, which we rarely find in an American who has not made them his special studies. He is thoroughly at home among the English philosophers, and draws largely from them; but there is not a little in his work which is original in thought, illustration, proof, or argument.

Among the chapters of the work that we have read with deep interest are those on "Some Theories of Intuition Knowledge" and "Necessary Truths." In the latter chapter, the author defends and illustrates the doctrine, first fully formulated by George Henry Lewes, that the distinction between truths implied by the words "necessary" and "contingent" is illusory; that all truths are equally necessary; that the fundamental meaning of the term "necessity," as applied to first truths which is not common to all truths, is that of a more intimate and indissoluble association, springing from the fact of their greater universality. The force of association is so great that it gives these truths in the individual mind a precedence over all other truths, from the fact that they are never contradicted. By reason of their universality, the necessity of these "necessary truths" is thrown out into greater

prominence; and it seems proper enough to retain the word "necessity" as a separate characteristic of this class of truths, although in fact the word expresses only an attribute common to all truths. The universality of the experience gives stronger associations, greater certainty, and a more prominent position to the truth in the individual mind. "Necessary" not less than "contingent" truths are learned by experience. Experience implies a non-ego capable of producing impressions upon, or making presentations to, an ego, and an ego capable of receiving presentations. "The experience philosophy holds that all knowledge is derived from sensations, representations, and associations of sensations, and associations of representations of them. . . . It posits sensation from without and reflection from within as the two ultimate constituents of cognition." "So far as I have been able to learn, those who defend the experiential origin of knowledge have always been willing to allow that a sensation implies mind as much as matter, and that without mind there could be no sensation any more than there could be without matter." "Therefore, if the *a priori* philosophers mean to say that all cognition involves an element from non-ego and an element from ego, having a source outside of and one within the mind, it is only by a wholly unwarrantable perversion of fact that any one can raise a substantial issue between them and the experientialists." "All the terms we possess, even the names of the most abstract and general qualities, are derived from and imply experience. Indeed, it has been remarked by philosophers of both schools that all words describing thoughts and feelings were originally used to designate physical phenomena. And, though they may have passed beyond the stage of sole relevancy to the external world, they do not emancipate themselves from a reference to and implication of experience."

The cognitions upon which the conviction of necessary truths are founded took their rise with the earliest intelligence. The mind has been unconsciously shaped by them through countless generations; and the earliest associations of the mind's experiences are now "consolidated in mind and frame," making them to appear so indissoluble that they seem to be, by reason of their universality and evidentness, fundamentally different from other truths. "That other truths, now generally received and known, may in process of time attain to the same universal recognition, so as to be in their explicated form (as they are already implicitly) in every man's mind, is not a hazardous prediction. Indeed, human nature may receive such modifications that cognitions, not now formed, but latent as germs in the mind, may spring forth, become a part of the mind, and lead to realms of knowledge of which we have not now the faintest glimmering."

We have given but the leading thought of one chapter of a work whose table of contents alone would take more space than can here be given to these volumes. To some readers, the chapters of the work to which our attention has been especially attracted will by no means be the most interesting. The parts which treat of the material conditions of states of consciousness (in which space and force are made complementary aspects of matter, both being realities and having their origin in sensations of resistance and non-resistance, the sensation of non-resistance or extension being as much a sensation as the sensation of resistance); of vegetable and animal life; of the genesis and development of states of consciousness, from the lowest sensations to the æsthetic and ethical emotions; of volitional development; of abnormal development as illustrated by dreams, hypnotism, double consciousness, etc.; of primary, secondary, and tertiary pleasures and pains; the *summum bonum*; the connection of mind and body, which the author treats as one of concomitance and correspondence,—are all profoundly instructive and interesting. One need not assent to all that Mr. Thompson advances, in order to appreciate his robust thought, his masterly reasoning, his clear, strong style, and truly philosophic spirit, in marked contrast to the qualities that are characteristic of most of the books on psychology that have been written in this country,—books made up chiefly of theological and metaphysical speculations, antiquated distinctions, and absurd classifications of mental powers, and written in utter ignorance of psychology as a science.

This work, although by an American, comes to us from a London publisher, because probably the au-

thor received no encouragement from any publishing house in this country. The number of readers here who will care to purchase so profound and elaborate a work, compared with the number with whom the demand is for superficial and pretentious works which solve all the problems of the universe in a few pages, must be small. In English reviews, we understand, it has received very high praise, as it has from a few of the first-class periodicals on this side of the water; but, as yet, Mr. Thompson, who is "a kinsman of a later generation" to the illustrious Sir Benjamin Thompson, Count Rumford, to whose memory these valuable volumes are inscribed, has not received from his countrymen, whom he has honored abroad among thinkers, any adequate recognition of his services to the cause of science and philosophy.

We commend the work as an intellectual tonic to all who are tired of the mixture of metaphysical mysticism and literary dilettanteism which is so commonly inflicted upon audiences and readers in this country to-day in the name of philosophy. B. F. U.

THE WORKS OF THOMAS CARLYLE: *Sartor Resartus*; *Past and Present*; *The Diamond Necklace*; *Mirabeau*. New York: John B. Alden.

Mr. Alden proposes to publish a complete edition of the works of Carlyle, in thirteen volumes, at the nominal price of \$1.20 per volume, or postage prepaid \$1.44 per volume, and offers this specimen volume for a short time at \$1.00, as an inducement to possible subscribers to the set. Nothing in the way of good literature could be cheaper than this well-bound, clearly printed book, containing four of Carlyle's most highly prized and popular works, making a large-sized volume of over seven hundred and fifty pages, all for \$1.00. This is an opportunity never before offered, and which may never again occur, to the student of limited means to become the possessor of the works of one of the master minds of this century.

TWO PORTRAITS of marked interest, in the July *Century*, are the frontispiece picture of Frederic Mistral and the full-page portrait, after a daguerreotype, of Henry Clay. George Bancroft contributes a vivid sketch of Clay's personality; and Alphonse Daudet writes of his friend Mistral, the Provençal poet. Of timely importance is the Indo-Afghan paper, "The Gate of India," by W. L. Fawcett. It shows that the evident Russian trend toward the Khyber Pass is only one of a long succession of advances from the direction of Afghanistan upon the wealth of India, from before the time of Alexander the Great's conquest down to 1750, the year the founder of the Afghan empire invaded India. A description of "George Eliot's County" is by Miss Rose G. Kingsley, the daughter of Canon Kingsley. Two short stories accompany the instalments of Mr. Howells' "Rise of Silas Lapham" and Henry James' "Bostonians": they are Frank R. Stockton's continuation of his famous story, "The Lady or the Tiger?" under the title, "The Discourager of Hesitancy," and another illustrated story by Ivory Black (T. A. Janvier), entitled "Roberson's Medium." The war papers of the July number, profusely illustrated, comprise "McClellan's Change of Base," by Gen. D. H. Hill; "Rear-guard Fighting at Savage's Station," by Gen. W. B. Franklin; "The Seven Days' Fighting about Richmond," by Gen. James Longstreet; and points of minor interest in "Memoranda." The poems are nine in number, by well-known writers, none of exceptional merit. Oliver Wendell Holmes has an article in the "Open Letter" Department on International Copyright.

THE *Atlantic* for July is an excellent vacation number, being mainly devoted to story, song, and travel. The serials,—*"The New Portfolio,"* by O. W. Holmes; *"The Prophet of the Great Smoky Mountains,"* by Miss Murfree; and Mrs. Oliphant's "Country Gentleman,"—in the chapters given this month, continue to hold the reader's undiminished interest. The short story, "The Singular Case of Jeshurun Barker," is a fanciful psychological study by John Wilkinson. Whittier has a long poem, "The Two Elizabeths." Other poems are by Frank D. Sherman, Andrew Hedbrook, and Nora Perry. The out-door papers are "A Mexican Vacation Week," by Sylvester Baxter; "A Bit of Bird-life," by Olive Thorne Miller; "On Horseback," by Charles Dudley Warner; and "South-western Kansas seen with Eastern Eyes," by M. H. Leonard. Horace E. Scudder has an article on

"Childhood in Mediæval Art," E. E. Hale one on "Daniel De Foe and Thomas Sheppard," and W. L. Alden writes of "Garibaldi's Ideas."

THE *Revue de Belgique* for June opens with an account of those historic lyrics in which Victor Hugo doomed the Napoleons to eternal infamy. Then comes a summary of Herbert Spencer's principles of government, suggested by the translation of his new work, *The Individual against the State*, into French, under the title of *L'Individu contre l'Etat*. The essayist urges that the more closely the government confines itself to its legitimate function of protecting the citizens against each other, the more thoroughly will this fundamental condition of their welfare be secured, and the more easily will all other individual interests be taken care of by individual effort. Men who have security and liberty need nothing more from the State. There is also a description of Cairo, and an argument showing, by the testimony of Shakspeare's contemporaries, that he really wrote his plays.

AMONG the many interesting articles in the July *St. Nicholas*, we have space only to call attention to Edward Eggleston's description of "A School of Long Ago"; a graphic description in narrative form by Charles Barnard and John H. Gibbons of the American Navy, of life on board of a United States school-ship, is entitled "A School Afloat," and handsomely illustrated; "Washington's First Correspondence," by Rev. Henry A. Adams; "The Liberty Bell," a timely poem by E. S. Brooks. The story of "Clotilda of Burgundy" is told in the "Historic Girls" series, and Mozart is treated of in "From Bach to Wagner." Edmond Alton's "Among the Law-makers," and Lieutenant Schwatka's "Children of the Cold," are unabated in interest. The serial stories are by E. P. Roe, J. T. Trowbridge, and William M. Baker. The illustrations, as usual, are numerous and beautiful.

"WIDE AWAKE" for July has stories from Octave Thanet, Mrs. Frémont, Margaret Sidney, E. S. Brooks, Mrs. A. D. T. Whitney, Lizzie W. Champney, and others; and poems by John Boyle O'Reilly, Joel Benton, M. E. B., E. L. Gould, Fannie L. Newbury, H. P. Richardson, Mary E. Wilkins, Margaret J. Preston, F. E. Saville, and Clara Doty Bates; and bright articles on instructive topics by Rose G. Kingsley, Yang Phou Lee, Prof. A. B. Palmer, Sarah W. Whitman, and Edward E. Hale. The illustrations, it is needless to say, are worthy of the first-class artists who contribute them.

A SEASIDE RETREAT.

Ocean Cottage, on Horseneck Beach, is situated about thirteen miles south-west from New Bedford on the open sea. Those wishing a pleasant and quiet summer resort, with all the accommodations of a first-class hotel without the restraints of a fashionable watering place, will be pleased with our home. We have one of the finest beaches in the country, with the surf at our door; excellent bathing and fishing; an inlet close by for those wishing to sail in smooth waters. Seldom any mosquitoes about the hotel.

For particulars, address JOSTIAH WOOD,
No. 84 ALLEN ST., NEW BEDFORD, MASS.

Just Published: TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price, by

A COMPLETE LADIES' GUIDE.
 20,000 Sold in Little Over a Year.
 Agents find it the most popular work on the market. "The very best book to put into the hands of a girl or woman."—E. M. HALE, M. D. Cloth, postpaid \$2.00; Morocco, \$2.50. Circulars Free. Sanitary Pub. Co., 159 La Salle St., Chicago, Ill.

H. T. MARSHALL'S
PATENT ADJUSTABLE LACE CONGRESS.

THE COMING SHOE.

By means of its Lacing Adjustment, it can be made as comfortable as any Lace Shoe, and is just as convenient as any Congress in putting on or off, as it requires no lacing and unlacing after being once adjusted to the foot.

The most durable elastic is used, yet does not draw the foot and ankle as in ordinary Congress. Every one who wears them likes them.

Take no substitute until you have seen and tried on a pair. If your dealer does not have them or order them for you, write to subscriber for directions how to get them. All Shoes warranted that are stamped with name of Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes, Base Ball, Bicycle, and Lawn Tennis Shoes.

H. T. MARSHALL, Brockton, Mass.

N.B.—Patent stamp woven in one strap of each shoe.

A large assortment of these shoes at retail at No. 17 Water Street, Boston.

PIC-NIC SUGGESTIONS.

Book now in press. Suggestions for Sunday-school picnics, excursions, etc., from experienced Sunday-school workers from various sections, both city and country. Replete with valuable hints. Worth many times its cost to any Superintendent. Price, postpaid, 25c., or will send free to any one sending us names of Superintendents of all Sunday-schools in his place. Address, DAVID C. COOK, PUBL. CO., 18 & 19 Washington St., Chicago.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediaevalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

TRACTS.

- No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.
- No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extractions.* Price 10 cents; 12 copies, \$1.00.
- No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.
- No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.
- No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.
- No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.
- No. 10.—*The Impachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*
- No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.
- No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.
- No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.
- No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.
- No. 15.—*The Battle of Syracuse.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address THE INDEX,

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American *Turnerbund*.)

Editor, C. Hermann Ruppe.

TERMS, PER ANNUM, IN ADVANCE:
 UNITED STATES AND CANADA:

Freidenker.....\$2.50
 Turnersche Ausgabe des *Freidenker*
 (*Amerikanische Turnzeitung*)..... 3.00

EUROPE:

Freidenker.....\$3.00
 Turnersche Ausgabe des *Freidenker*
 (*Amerikanische Turnzeitung*)..... 3.50

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirtieth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing CONSIDERABLY MORE READING MATTER, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading, "Turnersche Ausgabe des *Freidenker*."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.
 (Organ of the German-American Teachers' Association.)

Editor:

MAXIMILIAN GROSSMANN, Milwaukee, Wis.

Associate Editors:

H. H. FICK, Chicago, Ill.
 H. SCHURMERT, Chicago, Ill.

16 large quarto pages, with four-page cover.
 Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

Orders for all kinds of books promptly filled. Radical and Freethought Publications a specialty.

Address all orders to
 FREIDENKER PUBLISHING CO.,

BY B. F. U.

ABOUT eight thousand people were at the Camp of the Spiritualists at Onset Bay, last Sunday.

THE *London Globe* says that the Salvation Army at Cambridge exhibited on a recent Sunday a banner bearing the inscription, "Why give ten pence a pound for lamb, when you can get the Lamb of God for nothing?" The *Globe* adds, "Surely, it was for a lesser outrage than this that Foote was sent to prison."

THE June number of that admirably edited and printed German paper, *Rundschau*, contains some suggestions for restricting individual monopoly of land, which it may at some future day become necessary to put in practice, even in America. Already would the English reformer do well to consider the need of requiring that every owner of real estate which is neither inhabited nor cultivated, or which is in excess of a fixed ratio to number of occupants, should sell it to any one who offers the market value assessed by the State.

THE Mahdi, in an address to his soldiers lately published, said: "Oh, ye faithful, I assure you that, if you die in the morning fighting against the infidels, you will, even ere it is noon, be with the prophet in paradise. Silken robes of green will clothe you, and golden bracelets adorn you. You will repose by the banks of cool rivers, sipping refreshing drinks, while sixty ever youthful hours, bright as the moon, will smile upon you." Doubtless, such assurances make the "faithful" reckless of their lives in fighting the "infidels,"—a fact which, with the Mahdi and his supporters, is, no doubt, a very practical and convincing argument against agnosticism. The Mahdi says he will soon be in Cairo; and he declares that he will kill all the infidel, if they do not turn Mussulmans and pay taxes. The press is to be suppressed, with the exception of one paper, to be edited by himself.

THE monument to Giordano Bruno at Rome is to be dedicated Feb. 17, 1886, the two hundred eighty-sixth anniversary of the death at the stake of this martyr for free thought. The whole structure will be about ten feet high. In front will be a palm and a crown of laurel; beneath, the inscription, "To Giordano Bruno, and to the martyrs of the Inquisition." The other sides of the pedestal will represent Huss at the stake, Arnold di Brescia preaching liberty, and Bruno saying to his judges, "You, perhaps, are more afraid as you pronounce this doom than I in listening." There will also be medallions of Huss, Arnold, Servetus, Vanini, and other martyrs. The bronze statue represents the Awakener of Sleepy Souls, as he styled himself, speaking to the people from a book on which is written, "A great Deity made him the prophet, neither the last one nor yet an ordinary one, of the better age which is to come." The sculptor Ferrari gives his services gratuitously, but there is still need of money. Subscriptions may be sent to T. B. Wakeman, Esq., 93 Nassau Street, New York.

A WRITER in the *Athenæum* endeavors to show that it was the charred substance of the liver and not of the heart that was preserved, when Shelley's body was reduced to ashes, and says that the crowds that have, during the past sixty years, visited the lonely spot beneath the pyramid of Caius Cestius, to mourn over the poet's untimely fate, have been strangely deceived by the touching words engraved on the marble "*Cor Cordium*," since underneath is not the heart, but the liver, of their favorite poet. But the deception mentioned, supposing it real, is insignificant, compared with that involved in the supposition that the heart is any more sacred than the liver. The ancients thought that the heart was the seat of the affections; but, when we know that this notion is without foundation,—in fact, that dispositions and moods depend perhaps more upon the condition of the liver than upon that of the heart,—and that for the mourner of departed intellectual and moral worth neither have any significance which is not derived from primitive ignorance, what a waste of words to discuss whether it was the heart or the liver that escaped the action of fire in the cremation of Shelley's body! Such a discussion, certainly without practical value, can hardly add to the poetry and sentiment associated with the old classic custom of preserving the ashes of the dead.

A PARAGRAPH in a religious paper mentions that a brick, found in the Nile deposits years ago, which some thought must have been there many thousands of years, was ascertained, on full investigation, to belong to the age of the Cæsars. The paragraph concludes thus: "The brick passed away, and scientific atheistic lecturers never mention that brick nowadays." When scientific investigators discover a mistake in their observations or conclusions, they correct it at once, whether it makes for or against any theory. Nothing is more admirable than the candor with

which Darwin in his voluminous and valuable writings says on many pages, "I find I was in error," etc., and then proceeds to correct a mistake, discovered in many cases only by himself. Yet it has been common for the clergy to point to these confessions of error and mistake as evidences of the worthlessness of Darwin's observations as the basis of an induction and of the unreliableness of science, "falsely so called." In spite of mistakes made now and then in the study of prehistoric archæology, we are in possession of abundant proofs of the most unimpeachable character, showing the antiquity of the human race; but there are still many people who hold to the old theological theory of man's creation six thousand years ago, and regard as atheists all who question it. And, to such, an allusion to an error by scientific men, even though it was corrected by them, outweighs in importance the multitude of observations and evidences that no amount of criticism has been able to invalidate.

REV. HOWARD CROSBY, in a sermon at Dartmouth College, gives what the *Presbyterian* calls "a sharp thrust at the critics who are dismembering the Pentateuch, and assigning Deuteronomy to a period after the Babylonian captivity." "Imagine," he said, if you can, "the Messiah, in selecting the fittest words to meet Satan's assault, taking up a fragment of a forged book, a book which was a stupendous lie, framed by priestcraft." More charitable and reasonable would it be to suppose that Jesus was a religious enthusiast, who, although a reformer, shared many of the erroneous beliefs and traditions of his people, and quoted honestly what he believed to be words of inspired prophecy applicable to himself. Nothing ascribed to him gives any hint that he had subjected the popular claim as to the genuineness and authenticity of the Pentateuch to careful scrutiny, that he had the learning necessary for the task, that he was sufficiently imbued with the scientific spirit or acquainted with the methods and canons of historical criticism to be either competent or inclined to make the Jewish writings the subject of a critical and exhaustive investigation. Or, if this view is not entirely acceptable, we might "imagine" that words were ascribed to Jesus that he never uttered, and acts related of him that had no other foundation than the superstitious fancy and devotion of those who, years after his death, wrote about him. The art of reporting speeches word for word, as they fell from the lips of the speaker, was unknown in that far-off age; and it was common for even accomplished historians to weave together in their narrative fact and fable, reality and romance, expecting them to be read without discrimination. Considering these facts, the judicial mind in this age will be slow to imagine anything of a reformer that implies he was a rascal or an impostor, simply because, in the half-legendary narrative of his doings and sayings, are found alleged acts and utterances which seem inconsistent with one another, or that appear as anomalous features of the life and character of the individual of whom they are recorded.

FACED BACKWARDS.

The New York *Independent* is one of the recognized leaders of liberal Orthodoxy. It has had a large influence in mitigating the rigid beliefs of old-fashioned Calvinism. When it is itself, we expect to see it taking the side of the party of progress in the theological discussions of the evangelical world, face forwards. But, occasionally, it surprises us by the reversed attitude. Now and then, it is guilty, even in its editorial columns, of the vice of theological *Bourbonism*. Perhaps, in the necessary division of labor in so large an establishment, it sometimes permits a tyro to try the editorial quill, who is fresh from some stationary theological seminary; or perhaps, in its wide liberality, its responsible editor sometimes turns a sympathizing eye to the feelings of that class of its readers who are still in the backwoods of Orthodoxy. Whatever the cause, we occasionally see this great journal of multitudinous pages and bewildering departments quite wheeled about, face backwards.

A marked illustration of the journalistic feature here referred to was given in a recent editorial article under the caption of "Jonah and the Whale." The *Independent* editor—or his *Bourbonistic* substitute for the time being—began with a story of a man who had been greatly troubled with doubts concerning the Bible, but had finally been able to rid himself of them all except his scepticism in regard to the story of the whale swallowing Jonah. The man confessed his lack of faith in this particular to "an elderly Christian lady, who was in the habit of believing the Bible, and believing it just as it reads." "You don't believe that?" said the woman. The man repeated that he had hitherto found the story too much for him. "Well," was her reply, "that gives me no trouble. If the Bible said that Jonah swallowed the whale, I would believe it." This story was quoted from a preacher whom the *Independent* editor remembered to have once heard. The preacher may well have been Mr. Moody. It sounds like one of his stories, and we recall that he once said the same thing to show the kind of faith he himself had in the infallibility of the Bible. The *Independent* begins its application of the story by expressing its "decided sympathy with the general attitude of this good woman's mind, whatever may be the true interpretation of the narrative of Jonah and the whale." And thence it goes on, in a column and a half article, to elaborate an argument which, if it means anything, means the old dogma that the Bible is literally infallible. This, certainly, is what the "elderly Christian lady" believed; and the story is pointless, unless it be used to illustrate an argument to the same end.

If the *Independent* writer were to seek to evade this conclusion by claiming that he only expressed sympathy with the "general attitude" of the good woman's mind, he would undermine the entire logical structure of his article. Her attitude, "general" as well as particular, was that of implicit acceptance of every statement in the Bible, simply because she found it there; and the *Independent* recognizes the logical force of its illustrative story by arguing against those fast and loose theories of Biblical interpretation which are the ear-marks of liberal Orthodoxy, and which result, when human reason is admitted as an arbiter in Biblical study. It says,—and the sentence represents the pith of its article,—"If one has a theory of inspiration which divorces God from the words of the Bible, then those words have lost their power with him as divine words, and he can play with them at his pleasure." What does this mean, if it does not

mean that the antiquated dogma of plenary inspiration and verbal infallibility is the true doctrine with which one should come to the study of the Bible? That this is the meaning is confirmed by this subsequent sentence: "If there is any one thing which we would emphasize more than another, that one thing is simple, childlike, trustful, unhesitating, loving, and complete faith in the Word of God." By the *Word of God* here, of course, only another name for the Bible is intended; and the mood of mind toward it so strongly commended is precisely that of the pious, believing woman of the story. Nothing whatever is said of bringing to the reading of the Bible that high and sacred prerogative of human intelligence,—reason. It is not to be read with the understanding: it is to be read "with the heart," and with the credulous, unhesitating, complete faith of a little child in listening to fairy stories. It is to be read with a faith which would accept the statements, not only that a whale swallowed Jonah, but that Jonah swallowed a whale, if only such statements are found within the pages of the book.

This, if we understand the English language, is the meaning of the article in question. Yet, if we were to say that this is what the *Independent* really believes when in its right mind and with its responsible editor at the helm, we should expect to be charged with libelling its views. If we have read its columns aright, the "general attitude" of its mind toward the Bible is that of the new school of criticism, represented by Prof. Robertson Smith and scholars of his way of thinking. We have supposed that it prided itself on being one of the fathers of the New Orthodoxy, that its sympathies were with the progressive professors of Andover, and that it would look with no favor upon any reactionary movement in the theology of the Congregational churches. We cannot now imagine that it holds the old theory that God dictated the very words of the Bible, and that the Bible is throughout and in every particular infallibly and verbally true. We would, therefore, like to know what the *Independent* itself really thinks of this special editorial article, which is somehow so strangely faced backwards? It would be interesting to have its opinion of what is "the true interpretation of the narrative of Jonah and the whale." Does it believe that narrative as it stands in the Bible? Does it have that simple, childlike, unhesitating, complete faith in the whole Bible and everything in it possessed by the "elderly Christian lady," who would accept the story of Jonah even if it read that Jonah swallowed the whale? If it could not follow her in the bland, childlike, trusting credulity of such a complete faith as that,—and we believe it could not,—what is the reason that it could not? Where, in fine, and on what grounds does it draw the line between its own belief concerning the Bible and that of the elderly female Christian who rebuked some doubting Thomas?

WM. J. POTTER.

HAS CHRISTIANITY BENEFITED WOMAN?

Commenting in the July number of the *North American Review*, Mrs. Harriet R. Shattuck says, "If the human race has been benefited by Christianity, and if woman is a part of the human race, then the only logical conclusion is that woman has been benefited by Christianity." The difficulty with Mrs. Shattuck's syllogism is that her major premise is yet to be substantiated.

When we consider the very small portion of the human race that have ever heard of the Christian religion, and the still smaller portion that accept

and believe it, it is nonsense to talk of its benefits to the whole human family.

"The Buddhist religion is the one most extensively accepted in the world, having, in round numbers, about 340,000,000 adherents. There are not more Roman Catholics in the world than people of all other religious classes. The total number of Roman Catholics is about 200,000,000 against about 80,000,000 of the Greek Church, 100,000,000 Protestants, and 6,500,000 of other Oriental churches than the Greek. Of the 1,400,000,000 people in the world, about 1,000,000,000 are not Christians, but, with the exception of the 6,000,000 Jews, are what are called heathens." This shows that we cannot speak of the benefits of the Christian religion to the races of mankind. And even in professedly Christian countries, the benefits of its principles are limited to a few favored classes.

Look at the mighty multitude in the slums of the cities in England and America, as ignorant, impoverished, and brutalized as humanity is anywhere on the face of the earth. Look at the weary, wizened children as well as men and women in our factories and workshops. Look at the hard battles awakened labor is everywhere fighting for itself to-day against Christian institutions and monopolies. The equality of the human family is the glittering generality taught alike in what we choose to call the Christian religion and republican government; but the idea is nowhere as yet believed or acted upon, and in neither case has the slightest practical application to the masses.

Every form of religion and government has thus far been based on the principle of caste and class, and the greatest blessings of advancing civilization have been monopolized by the few at the expense of the many; and women have invariably belonged to the ostracized classes. But, while many are awake to their degradation in the State, and are demanding new laws and amendments to the constitutions, their religious emotions so entirely obscure their judgment that they are wholly oblivious to their degradation in the Church that sedulously teaches their inferiority and subjection.

Imagine a black man in the old days of slavery, working in the rice swamps in the broiling sun, commenting thus in the *North American Review*: "If the human race has been benefited by a republican form of government, and if the black man is a part of the human race, then the only logical conclusion is that the black man has been benefited by a republican form of government."

True, for two centuries he was worked within an inch of his life, scantily fed and clothed, his back scarred with the lash, he was kept in hopeless ignorance of all his natural rights; and now, on the slightest provocation, he is imprisoned, tortured, and worked by the civil authorities in most of the Southern States. If the master has been benefited by republican government, he certainly has not: the black skin still draws down on him unrelenting persecution.

The blessings and benefits of each step in progress do not come to all classes. It takes centuries for the simplest principles of justice to be so applied as to mitigate the miseries of the masses. All religions and governments being alike the outgrowth of human experience, differing in different latitudes, no one of them can be said to have brought any special benefit to the human race as a whole, and much less to all classes under any one of them. The recent revelations now shaking London society to its foundation do not show that womanhood in that city has received any special benefit from Christianity. Nothing more horrible has ever blackened the pages of history than the reports we read of the annual sacrifice in London

of 20,000 girls to men who make the laws of the kingdom and hold high places in all the professions. Think of English law making a girl of thirteen responsible for her own protection! There is no greater mistake than to suppose that blessings contributed by human powers, like the rain and sunshine, come alike with refreshing influence to all.

The grand principles that Confucius, Buddha, Mohammed, Jesus, and Theodore Parker proclaimed have all had their influence, inspiring here and there the lives of the few refined and receptive, through a happy combination of circumstances, and these few indirectly moulding the lives of others. Thus, the little leaven working through the centuries has ever and anon shown us the goodness of which human nature is capable. In this way, no true word spoken, no noble deed done, has been without some influence through the ages; but, in each slowly passing generation, the few have invariably robbed the many of their rightful heritage.

A religion that teaches the inferiority and subjection of the mother of the race; that ostracizes her in the practical affairs of the Church, giving her no voice in its discipline or rulers; that makes man the head of the family, while the wife is the weaker vessel owing obedience,—such a religion cannot be said to benefit woman.

The law of life and growth is liberty, justice, equality; and whatever spirit robs woman of her natural rights,—to think, to know, to be all of which she is capable,—and relegates the whole sex to certain limits of man's choosing, cannot be the spirit of a true religion.

The Christian religion has done this eighteen hundred years, if we are to accept the facts of life, the teachings of the Bible, the action of the Church, and the popular sentiment of Christian communities.

ELIZABETH CADY STANTON.

VICTOR HUGO AND THE THEATRE FRANÇAIS.

I have long felt that the most admirable thing in France is the Théâtre Français, and my opinion has been strikingly supported by what has taken place at the "House of Molière" during the past month. As soon as Victor Hugo died, the manager began to offer the public two of his best dramas. "Hernani" and "Ruy Blas" have appeared on this stage a number of times since the first of June, and on the 15th inst. occurred an extraordinary representation in honor of the poet's memory.

The evening's performance opened with the second act of "Le Roi s'amuse," with Got, Mounet-Sully, and Mlle. Bartet in the principal characters, and was followed by the first act of "Marion Delorme," interpreted by Delaunay, Mounet-Sully, and Mme. Barretta. After each of these plays, the other actors and actresses of the troop came before the curtain, one by one, and recited selections from Victor Hugo's vast literary legacy. The entertainment closed with a one-act allegory in verse, entitled "Apothéose," written for the occasion by a young poet and ardent admirer of "the master," M. Paul Delair.* One verse of this piece has created some comment. France, in the person of Mlle. Bartet, exclaims, referring to Victor Hugo and other spirits in heaven:—

"Quelques-uns près de lui, pas un seul au-dessus,
Avec Shakespeare, avec Homère, avec Jésus!"

The free thinkers are not satisfied with all of

* This clever little *pièce de circonstance* is published by Paul Ollendorff, 28 rue Richelieu.

Victor Hugo's companions; and, of course, the orthodox are shocked at this sacrilegious placing of a poet, and above all this poet, on a par with the Saviour. At the theatre the other night, this passage was warmly applauded.

It is not my intention here to consider critically all or any of these many interpretations, especially as I do not feel that I am competent to do so. It may be true, as an American dramatist who sat next to me said, that Edwin Booth renders the part of Triboulet, or rather Bertuccio, in a "Fool's Revenge," in a far more masterly manner than does Got in the piece that served Tom Taylor as his model. M. Francisque Sarcey, the celebrated dramatic critic, may also be right when he states in the *Temps* that the selections from Victor Hugo's works were badly made and badly read, and that M. Delair's "Apothéose" is "unfinished," "full of holes, and abounding in gross evidences of carelessness." And that large body of well-qualified judges in all countries who hold that Victor Hugo does not possess "the dramatic sense" may, too, be correct in their appreciation of his plays. To me, the interest and charm of this memorable occasion centred elsewhere. My mind was continually reverting to the past. I was occupied more with the remarkable history of "Le Roi s'amuse" and "Marion Delorme" than with the merits or demerits of the dramas or the actors. And, during the readings from Victor Hugo's works and the enactment of M. Delair's Apotheosis, I was astonished at the varied talent that could produce such different and yet such superior creations, and experienced only sentiments of pleasure at the deserved deification of such a genius.

During the representation of the second act of "Le Roi s'amuse," I was absorbed in recalling the abrupt and arbitrary manner in which Louis Philippe's government prohibited the playing of the piece almost at the moment when the curtain went down on the "first night"; in going over in my mind the author's indignant protest and bold arraignment of the July Monarchy in the preface to the drama; and in picturing to myself that great scene at the Bourse, where Victor Hugo pleaded his own cause before the Tribunal of Commerce and a vast crowd of enthusiastic auditors. These closing words of this his first—if I am not mistaken—public harangue were continually coming back to me: "This century has witnessed but one great man,—Napoleon,—and one great thing,—Liberty. We have no longer the great man: let us try to have the great thing." How Hugoist these lines are! And yet their author was then but thirty years old. And, when the curtain went down the other evening at the end of the act, I thought how, on the night of Nov. 22, 1832, in this same theatre, perhaps this same curtain fell not to rise again on "Le Roi s'amuse" for a whole half-century,—not until 1882.

Likewise, during the first act of "Marion Delorme," my mind was ever recurring to the preface, wherein Victor Hugo states how, during the Restoration, the censor would not let his drama appear on the stage, even for one evening. And, then, the poet, little imagining the fate that would attend "Le Roi s'amuse" a year later, goes out of his way to praise the more liberal régime introduced by Louis Philippe, and exclaims, "Now, art is free." I remembered, too, the wonderful rapidity with which this versified five-act drama was thrown off, for, begun on the first of June, 1829, it was finished on the 24th of the same month; and I recalled this paragraph from the obituary notice which appeared the other day in the *Temps*: "He [Victor Hugo] read it ["Marion Delorme"] aloud for the first time in that *hôtel* of

the Place Royale, which plays such a grand part in the history of Romanticism, before the most brilliant assemblage that a poet ever had; for among those present were Balzac, Delacroix, Musset, Alexandre Dumas, De Vigny, Sainte-Beuve, Villemain, Mérimée, Soulié, Soumet, and the Deverias." But the public was not allowed to share the pleasure of this *élite*. The author appealed in vain from the censor to the king. "I admire very much your talent," said Charles X., as he offered the poet a new pension of four thousand francs. "As for myself, there are but two poets,—yourself and Désaugiers." Victor Hugo refused the money; and, two years later, Charles X., an exile in England, must have perused with peculiar sensations the newspaper accounts of the first night of "Marion Delorme."

When Americans go to the Théâtre Français, they generally read the piece beforehand. I should suggest that, in the case of Victor Hugo's dramas, they devote their attention especially to the prefaces, where the history of the plays is given; for in these plays, as in almost everything that he wrote, the artistic yields to the political and social interest. I believe that future generations will admire and remember Victor Hugo, not so much for the poetry and art of his productions as for his having been a powerful, enthusiastic, and fearless leader of the progressive movements of the last half of the nineteenth century. It was in this spirit that I judged the performance at the Théâtre Français; and, in this same spirit, I feel sure that our descendants will judge the whole vast work of this "Titan of Literature."

THEODORE STANTON.

PARIS, JUNE, 1885.

A RUSE OF CREED-MONGERS.

Among all the scholarly criticisms of the revised Old Testament now so liberally dispensed as food for a semi-rational appetite, I have as yet met with but one allusion to what, it seems to me, ought to interest the public, both ecclesiastical and secular, more than any one, or even all, of the items of textual revision noted by reviewers of the new version. It is many years since I first asked myself *why* the English translators of the Hebrew and Greek Scriptures, early and late, have treated the synonymes *Christ* and *Messiah* otherwise in one compartment of the Bible than in the other; why they have rarely translated the words in the New Testament, yet always translated them in the Old Testament, in the authorized version of which the word "Christ" does not once appear, and the word "Messiah" occurs but twice. This small but notable vestige of apparent connivance on the part of the makers of our English Bible is adverted to by a contributor to the *New York Sun* in one of a series of articles on the revision, but with no attempt to probe its rational significance. I wonder if anybody has done this, even privately. It is no less a desideratum, if indeed all the ostensible teachers and students of what is called God's word, in closet, pulpit, Sunday-school, and theological institute, have never thought of it. To recognize the fact and what it signifies is all that is requisite to evince the predetermined policy of the English Bible-makers to follow the lead of Paul in subsidizing Judaism and the ancient Hebrew Scriptures in support of Christianity and of ecclesiastical dogmas, which, even in the sixteenth century, lacked the prestige of age.

The revisers of King James' version must have discovered the artifice of his commissioners. They cannot be supposed to have blinked the sinister purport of what the last committee of revision have styled "a literary inconsistency." But with

this they have temporized. What they have done relevant to its amendment is inadequate. By substituting the verbal adjective "anointed" for the transliterated epithet "Messiah" in the two only instances of its occurrence, they have rendered the translation of the Book of Daniel consistent with that of all the co-ordinate parts of the Old Testament, and this is creditable; but they have not obliterated the far greater and more glaring literary incongruity between the two canonical compartments of the whole Bible. Perhaps it was deemed advisable to assimilate the diction of the New Testament to that of the Old rather than the reverse, as the better of two methods of abating the said literary inconsistency which are exclusively practical. Then they should have counselled a re-revision of the New Testament, by omitting to do which they seem rather to have sanctioned the error of their predecessors than to have complemented their work.

The literary abnormality here specified is one which all lovers of good literature, unless overborne by religious prejudice, must wish to have abolished, as it can be but in one of two ways, either of which is feasible,—namely, abandon the policy of double-dealing with the two mystical *équivoques* named above, and either translate them as often as they occur in the New Testament just as they are translated in the Old Testament, or else transfer them untranslated in the Old Testament just as they are transliterated in the New Testament. This is what every right-minded thinker will adjudge to be expedient, as the only method compatible with literal perspicuity. And what objection to this proposal can be mooted by any truth-seeker or sincere Biblist, believing as the latter does that the book is divinely inspired and therefore uniquely one,—a revelation of truth, the two cardinal divisions of which are as congeneric as any two subdivisions of either? Only one objection is conceivable, and that possible only from an ecclesiastical point of view. It is this: it would endanger the creeds of Christendom, it would shake the temple of Paul's "mystery of godliness" to its very foundations.

Let the New Testament be translated after the manner of the Old Testament, and many an incident in the memoirs of Jesus now citable as a premise of Christian reasoning would become irrelevant to the dogma of his supernatural personality and function. The passage concerning an alleged deposition of suborned witnesses at his arraignment before Pontius Pilate would contain no cue of mystery. "We found this fellow perverting the nation, and forbidding to pay tribute to Cæsar, declaring himself to be anointed king,—*legonta heauton christon basilea einai*." But Jesus denied the charge, and requested the summons of his disciples, who would have testified that he had often adjured them to "tell no man that he was the anointed," in the Jewish acceptance of the term. And Pilate, penetrating the animus of his accusers, put the question to the accused, "Art thou the king of the Jews?" The reply was explicit: "Thou sayest that I am a king. To this end was I born, and for this cause came I into the world, that I should bear witness to the truth." "Then said Pilate to the chief priests and to the people, I find no fault in this man." There was no hint of a supernatural Christhood in that case, though the confession, or rather profession, of Jesus involved a trait of character and a phase of impersonal ambition which, to the blind zeal of his religious persecutors, were the head and front of his offending,—the sole incentive to his arraignment: albeit, nothing of this was in the indictment, which, as a pretext of bigotry, was only too plainly forged.

Per contra, let the mystical terms which stand for the right of coronation be transliterated in the Old Testament just as they are in the New Testament, and, lo! the first king of the Jews would figure as "the Christ of God," and Saul in the mouth of David would rival Jesus in the mouth of Peter. Then we should hear the second candidate for the regal function in old Jewry saying of the ruling king, "God forbid that I should do this thing to the Lord's Christ!" Then would the forty-fifth chapter of Isaiah open with "Thus saith the Lord to his Christ, to Cyrus," with no contextual intimation of other than political and military functions; while, elsewhere in the same document, the prophet would designate a *Christhood* of another forte, but no less respectably human, saying of himself, "The spirit of the Lord God is upon me, because he hath Christized me to preach good tidings."

Luke tells us that the whole passage here indicated, which constitutes the sixty-first chapter of Isaiah, was rehearsed in public by Jesus in the beginning of his didactic profession, and self-appropriated as a graphic expression of his own character and humanitarian calling. The good tidings thus foretold, succinctly stated, are triune. They concern the Fatherhood of God and the Brotherhood of Man, whence proceeds by relative necessity the Deathless Maturity of Personality. The Church's Holy Trinity is no other than a misconceptive transfiguration of these sublime truths,—a monastic travesty of the gospel of Jesus, which is called *his* because he both preached and practised its rudiments more successfully, though not more faithfully, than the prophet into whose labors he entered and whose conceptions of moral truth he expanded. These two functionaries of human enlightenment are better exemplars of manliness than the average of historic sages. The doctrine of their consecutive inculcation is properly entitled the Gospel of Reason. So far were both from being religionists of any caste that neither found occasion to employ the word "religion." Both were rationalists of normal type; each was an arch-advocate of *RIGHTEOUSNESS* as the one thing needful to complement all minor conditions of happiness; and the man of Nazareth, whose amenities excelled the record of his manners, has been aptly styled "the model gentleman for all time."

For the conceit that Jesus was the Christ in the ecclesiastical sense of the title,—that is, the Saviour of the world in the rôle typified by the paschal lamb of Judaism,—thanks to the distempered brain of Paul. There is no evidence that anybody ever heard of it before its announcement by that converted persecutor of the surviving disciples of Jesus. We are told in the book of apostolic Acts that "the disciples [of Paul, not of Jesus] were called Christians first in Antioch," some dozen years after the crucifixion of Jesus. This certifies that Christianity is adventitious to the gospel of Jesus, with which it is nominally combined. But there is no affinity of one for the other. Though mixed as oil and water, they will not blend. But this dissidence the dazed victims of faith will never see in their vernacular light,—the light of unreason, which is darkness. The Church is bound to know Paul only as an apostle of Jesus and Jesus only as Paul's backer. So, for eighteen centuries, the clergy have been preaching Paul's religion in the name of Jesus, whose own truthful teachings have been thus far virtually nullified. And one of the means by which this ecclesiastical mischief has been wrought, or at least a great hindrance to its undoing, is the equivocal method of translating the Bible, as aforesaid. All revisers of the English version of either Testament who leave this part of their appropriate work unperformed

will come short of their duty as caterers for the religious wants of Virtue's would-be votaries, as I deem worthy to be designated all adult persons who voluntarily help support a creed which sets at naught all human righteousness as the means of salvation from evil, to this end preferring Paul's *faith*—in a stupendous fiction!

GEORGE STEARNS.

THE CONCORD LECTURES ON GOETHE.

I.

The series began Thursday evening, the 16th with Mr. Albee's essay, showing how desire for self-culture animated all Goethe's life and writings. This is the reason that his works are so incomplete. Thoreau's method was incommunicable. Goethe is ever trying to teach himself; and, therefore, he teaches us how to teach ourselves. Faithful to this practical aim, he kept on the hither side of things, avoiding the incomprehensible. His relations to women were ruled by this constant desire to learn, even at their expense. But those whom he wounded thus healed themselves ere long by marriage. In saying this, Mr. Albee failed to do justice to Frederica. No exception need, however, be taken to the statement that he was too much of a critic to succeed always as a poet, or that his prose gradually grew too didactic and his verse too symbolic.

On Friday morning, a large audience listened to Mrs. E. D. Cheney's beautiful description of the *Aye Womanly*, as it has been called by Mr. Dwight. This abstract ideal of womanhood is honored, at the end of *Faust*, in that mystic chorus which sums up this drama of all human life. Woman had long been represented as man's tempter. In *Faust*, she shows herself to be his savior. There is no contempt for women in Goethe's writings. He understands her better than any other poet. Lotte, in *Werther*, is a wonderful creation of genius, which won all hearts and made them nobler. Differentiation of sex increases with improvement of type in the animal world, but it is not so in the spiritual. Jesus, the Buddha, Raphael, seem womanly; and Zenobia, Joan of Arc, and Lucretia Mott appear manly. George Sand, George Eliot, Currer Bell, and Craddock were supposed to be really men by good judges. Mrs. Cheney's own experience in charity and reform did not enable her to draw a dividing line between the sexes. She would not say with George Sand that there is only one sex, but the difference is too subtle for analysis. In the *Elective Affinities*, Charlotte is more reasonable than Edward. Tasso is morbidly sensitive. The search after the type of woman best adapted to further man's development gives what unity of story there is to *Wilhelm Meister*. This influence of woman over man takes various forms in Goethe's works; but the only happy love he paints is that of the peasants, Hermann and Dorothea,—a statement which did scanty justice to the home life of Götz and Elizabeth. It is the fate of Gretchen that first calls Faust out of himself, and opens the way for his final salvation. The second part of this poem, which holds the riches of a hundred dramas, though it justifies Margaret Fuller's complaint of Goethe's lacking the artist's love of structure, shows us, not the love of man for woman, but only the marriage of German thought to Greek beauty, giving birth to the modern poet.

A lady in the audience commenced the discussion by asking a question, which no one answered; namely, "How does the womanly really differ from the manly?" Mr. Sanborn suggested that what the lecturer called the *Ever Womanly* might just as well be called the *Ever Manly*, according to her

own arguments. An analogy was sought for in the difference between mercy and justice. Miss Peabody quoted, in proof of their identity, the text, "Mercy and truth . . . have kissed each other." "They can't be exactly the same thing, if they do that," remarked Mr. Sanborn. Mr. Davidson said that the reverence for woman at the close of *Faust* was largely due to Goethe's study of the *Paradiso*, where Dante is drawn up through heaven after heaven by gazing at Beatrice. He also mentioned the curious fact that the last word of the second line of the mystic chorus "*Ereigniss*," "event," is supposed to have been originally dictated "*Erreichniss*," "attainment," and to have been misunderstood by the amanuensis.

On Friday evening, Mr. D. J. Snider traced the fundamental idea of *Faust* to its historic roots. First, we find a Faust of the Orient, in the Greek legends of Cyprian and Theophilus, sorcerers who sell themselves to Satan, repent of the bargain, and are saved by the omnipotent power of the Church. Theophilus begins by rebellion against monasticism; and the German nun, Hroswitha, who turned his story into Latin verse in the tenth century, is the first true precursor of Goethe. The earliest appearance of Faust, with his right name, however, is in the sixteenth century. Then rebellion showed itself in two forms,—that of the Protestants, like Luther, who remained Christian, and that of various unbelievers, who wandered outside of Christianity in their search for liberty. Among these extremists there really was a certain John Faust, who studied under Melancthon at Wittenberg, and who was popularly believed to have been carried off about 1550 by the devil, to whom he had sold himself. This story was published in 1587, and often afterward in various forms by the Lutherans, as an awful warning against thinking too boldly. This Faust of Protestantism is the victim of his own struggles to get free. It does not seem possible that he can be saved. The Church no longer can claim such power. It was out of these two Fausts that Goethe moulded a third one, who is saved. His denials and assaults on social order must be forgiven, for they are all caused by love of truth. This Faust of secularism has more in him of the modern man than any other character in literature. Especially American is his resolution to find hell or freedom.

Prof. Thomas Davidson said there is no connection of the Faust spirit with Protestantism. This was a thoroughly moral and religious movement. Faust represents an unbelief which is diametrically opposed to Protestantism, and is really to be traced to Averroism, a mediæval form of materialism derived from Moslemism, and containing a germ of modern Spiritualism in its fancy,—that, by thinking strongly, you can turn your thought into a real thing. His view may be reconciled with that of the essayist by remembering that long before the Reformation there were two movements against Romanism. That which rested on the Bible produced Wycliffe, Huss, and finally Luther. That which sought to emancipate reason from all authority found imperfect representatives in Abelard and the Averroists, but could not manifest itself fully before the sixteenth century. Then the same causes which made Luther possible opened the way for more daring unbelievers than had been seen for centuries, like John Faust, Paracelsus, and Gruet, who was beheaded, at Calvin's request, for denying the justice of persecution and the inspiration of Moses. It should also be noticed that Paracelsus shows the same form of unbelief which marks Goethe's *Faust*, and which was one of the best products of the sixteenth century; namely, a denial of the infallibility of

books, and an assertion of the superior authority of facts. Goethe's great drama opens with a passionate outburst of scorn for books, and of desire to know Nature as she is. The author's object is simply to attack that false appearance of knowledge which still blocks the way to truth, by insisting that the study of metaphysics, theology, and dead languages is more useful than that of science, and that committing text-books to memory is so pressing a necessity as to leave no place in our common schools for industrial education. Thus, Goethe's *Faust* still holds a place among our most advanced books.

Saturday morning saw both Dr. Hedge and Dr. Bartol mount the platform. The latter's subject was "Goethe and Schiller." These names, said Bartol, are not to be put in the same lecture on any ground of equality. Schiller gives us manna for to-day: Goethe's nectar makes us immortal. Goethe's gold brightens ever more and more: Schiller's lacquer fades away. Schiller moulds: Goethe makes. Schiller composes: Goethe crystallizes. Schiller is a planet, Goethe a self-luminous sun. It is true that Schiller was the better playwright, but Goethe's stage is the world. In short, Goethe has Schiller in tow. Here the brilliant lecturer went rather too far. We have a collection of poems which Schiller and Goethe wrote in concert, sometimes in alternate lines; and the best judges are still unable to tell which pen was at work in any particular spot. It is also to be remembered that Schiller far surpassed Goethe in sympathy with the oppressed. More just was the comparison of Goethe with Emerson. Emerson spins a thread: Goethe weaves a web. Emerson snatches a trumpet from the angels: Goethe greets us with an orchestral symphony. Both Emerson and Darwin were anticipated by Goethe. *Faust* is the world-tale, the crowning product of the nineteenth century.

Then Dr. Hedge unfolded the true meaning, recently discovered by Hermann Baumgard, of *Das Mährchen*, or, as we may call it in English, *The Fairy Tale*. Goethe wrote this just ninety years ago, in Germany's darkest hour, to prophesy that return to power which has now taken place. Two will-of-the-wisps, who represent the liberal ideas of French philosophy, cross the stream of current events, and feed the serpent, typifying German literature with gold that makes her self-luminous. Then they visit that old woman, the Church, and turn one of her pet dogmas into stone. To revive it, she seeks the ideal beauty, for whom the Genius of Germany feels a love under which he is pining away. To revive him, Science must appear as an old man with a lamp, which makes gold and annihilates brass, casts no shadow, but cannot enlighten what is totally dark. Together, they enter the underground temple of History. There sit four kings, one of gold, Wisdom, one of silver, Prestige, one of brass, Force, and one of mixed metals, the German empire in Goethe's day. This last power sinks to ruins. The other three, with the aid of Science and Religion and of the National Genius, at last wedded to the Ideal, rehabilitate Germany, despite the aimless opposition of that shadow of a giant, Superstition.

The Concord School of Philosophy has evidently emancipated itself from its original fondness for oracular utterances, not to be questioned and scarcely to be understood. The most marked defect last year—the proneness to indiscriminate adulation—has this year been avoided, with scarcely any exception. The presence of critical experts, like Snider, Davidson, and Prof. Hewett, of Cornell University, is the best assurance that a great work will be done for mental culture.

F. M. HOLLAND.

EDITORIAL NOTES.

BY B. F. U.

THERE are several hundred persons in Boston who think that they are the authors of, or that they have the clew to, new systems of philosophy or new methods of cure. Each believes that the others are wrong in the main, and that he is right. Dr. Arens, a "Christian scientist," who is endeavoring to make his philosophy known to the readers of *The Index*, does not claim to have discovered a new system or method; but he has gone back to "the old theology," which he interprets in the light of "the understanding and the spirit." He does not deal with opinions, he says, but with demonstrations. Our readers must judge whether he makes good his claim.

MR. W. C. GANNETT sends us a tract, one of the *Unity Series*, entitled "The Faiths of Evolution." It is the part of Mr. Potter's anniversary discourse printed some months ago in *The Index*, and more recently in a volume of sermons, in which the author states the leading articles of his religious belief. It is in good type and very cheap,—one hundred copies for sixty cents. We are pleased to note that the Unitarian publishers have had the good taste and sense to print our worthy colleague's name in this tract without the theological title, Reverend,—a title which the Unitarian editors and ministers have been most too generous in bestowing, as though they thereby justified or excused themselves in retaining and applying to one another such a title.

On the occasion of the transfer of the Niagara Park Association to the State of New York, Hon. Erastus Brooks, in his address, said: "Hereafter, neither the descendants of the tribes along the Niagara, as once on the visit of remonstrance of Red Jacket to this spot of the land of his ancestors, nor any of our own people, nor the people of any other tribe, nation, or kindred, will behold Niagara barred, blocked, or walled from human eyes; nor will any entrance fee be demanded to see the mighty waters beneath our feet, any more than the sun or stars in the heavens. The bow of promise seen so often here by day and by night, through the spray rising from the shores of Canada and the shores of the United States, is that spanning of the arch which, we trust, will hold the people of two great nations in the bonds of honorable and perpetual peace."

THE West Newton English and Classical School, advertised in *The Index* this week, offers to pupils all the advantages of a large school, with the stimulus of many competitors in class studies, and the advantage and comforts, with the personal attention and careful discipline, of a well-ordered home. Its methods of instruction are the most improved, regard being had for the physical, mental, and moral needs of the pupils, including individual peculiarities. It is a family and day school for both sexes, where students are prepared for Harvard, Yale, Vassar, and other colleges, or graduate into the active spheres of life. The school has been from its foundation entirely unsectarian, is conducted in a broad and catholic spirit, and aims "to give," as Prof. Allen, the Principal, says, "a symmetrical and harmonious development to the whole complex nature of the child,—body, heart, and will." The school, which is situated in West Newton, nine miles from Boston, is one we can confidently and cordially recommend to the attention of parents who desire to place their daughters in an educational institution of high character, under experienced teachers, and free from sectarian influences.

The Index.

BOSTON, JULY 23, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

No WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrears is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

IX.

THE MARTYR PERIOD.

The period in Roman history extending from the year 96 A.D. to the year 180 A.D. includes the reigns of the "five good emperors,"—Nerva, Trajan, Hadrian, Antoninus Pius, and Marcus Aurelius Antoninus. These emperors exercised, in the main, a mild and beneficent sway over their subjects. Their government was paternal and humane, inspired as it was by the lofty ethical precepts of the Stoic philosophy. The empire was at the height of its power and magnificence. If we may not accept in full the eulogy of Gibbon, we must at least admit that at no previous era in the history of the race had the condition of the masses of the people been so favorable to their prosperity and happiness.

In Christian history, this was the period during which probably all of our canonical Gospels were written. The Christian dogmas were beginning to assume their final and authoritative form. The Catholic, or orthodox, Church was separating itself from Gnosticism, on the one hand, and from Ebionism on the other. Controversies about doctrine led to the appearance of the early patristic literature. Ecclesiasticism was growing; and in opposition to the doctrinal tendencies of the time appeared Montanism, that fanatical protest against early ecclesiasticism, which aimed to restore the primitive democratic equality of the earliest Christian communities, and advocated a return to the simple faith of the fathers. Strangely, as it would seem, this period was also coincident with the earlier Christian persecutions: it was the heroic era in the history of the Church.

The Earliest Martyrs.—Growing Influence of the Church at Rome.

The destruction of Jerusalem by Titus, in the year 70 A.D., was an event of great significance to primitive Christianity. Thereafter, the Church of the apostles, dis severed from Judaism and the Temple worship, assumed a position of much less relative importance than it had heretofore maintained among the followers of the new faith. As the Church at Jerusalem receded from its foremost position, the Church at Rome came to the front, increasing steadily in power and influence. The Epistle of Clement of Rome to the Corinthians, written probably in the last years of the first Christian century, already exhibits something of that spirit of paternal supervision and authority which was finally assumed by the bishop of Rome as the supreme pontiff.

Paul, not improbably, and Peter, according to a current though questionable tradition, had already suffered martyrdom at Rome during the reign of Nero. Their names were thus united in the popular mind, to strengthen the growing tendency to throw a halo of superiority and supremacy around the Roman Church. The blood of these earliest martyrs became in very truth the seed of the Roman hierarchy. Shocking as was the barbarity of Nero's persecution, however, it can hardly be said to have been consciously aimed at the Christian religion. So insignificant were the Christians as a sect, that the emperor could not have foreseen any danger to the empire from the extension of their faith. Their very insignificance, indeed, and their identification in the popular mind with the despised Jews, appear to have been the occasions of their martyrdom. To the later reign of Domitian has been assigned the martyrdom of Flavius Clemens,—a Roman of wealth and rank, who had embraced the new religion,—on the charge of atheism, though the history of this occurrence is involved in obscurity; and his execution may have been due to political or social rather than to religious causes, his religion serving merely as a pretext to cover the real designs of the emperor. The martyrdom of John, the evangelist, has been assigned by some to the reign of Domitian. The accounts of this event, however, are wholly legendary and unreliable.

The Reigns of Trajan, Hadrian, and Antoninus Pius.

As the new religion became more prominent, its universalizing tendencies were emphasized in opposition to the prevailing ethnical systems; and its uncompromising hostility to the popular *cultus* caused it to be regarded with growing disfavor by the government. The reigns of Trajan and Hadrian, however, were generally favorable to its expansion; and these wise and humane emperors cannot be charged with any deliberate persecution of its followers. The few instances of prosecution for religious causes during these reigns, based upon charges of denying the gods, failure to offer sacrifices, and holding secret meetings, or "illicit assemblies," were conducted under laws of the empire already existing, and originally promulgated without reference to Christianity or any particular form of religious faith. These prosecutions were instigated by popular clamor, and were local and unimportant in their character.

Pliny, the governor of Bithynia, who regarded the new religion as "a culpable and extravagant superstition," was forced by accusations brought under the laws of the empire to arrest, condemn, and execute certain Christians who refused to renounce their faith. He was not incited to this course by any special edict or command of the emperor, nor did he in any way exceed the man-

dates of existing laws. The celebrated rescript of Trajan, issued on receipt of despatches from Pliny concerning the prosecution of the Christians, appears to have been intended to favor and protect the accused rather than to urge on their persecutors. It required that punishment should only be inflicted according to the due forms of law, and ordained that opportunity should be offered for recantation and conformity to the law, which, if accepted, would be a sufficient defence against the prosecution. Dean Milman, an able and candid Christian historian, testifies to the forbearance of Trajan and Hadrian as well as Pliny in their dealings with the Christians, declaring that "Trajan is absolved, at least by the almost general voice of antiquity, from the crime of persecuting the Christians," and asserting further that, "under a less candid governor than Pliny and an emperor less humane and dispassionate than Trajan, the exterminating sword of persecution would have been let loose, and a relentless and systematic edict for the suppression of Christianity would have hunted down its followers in every quarter of the empire."*

It is evident that the attacks on Christianity at this time originated with the ignorant and superstitious populace of certain localities, remote, usually, from the capital; and that, in so far as they received the sanction of the imperial government, they were instigated by no general desire to persecute or destroy. The Christians were still often confounded with the Jews, who, both in Palestine and in Mesopotamia, were manifesting signs of discontent and rebellion. A few years later, this rebellious spirit culminated in the insurrection of Bar-Cochba, in which many thousands of lives were sacrificed. This tended to inflame and augment the popular prejudice against both the Christian and the Jews.

The unyielding and fanatical temper of the Christians themselves undoubtedly helped to stimulate this spirit of persecution. Martyrdom was often counted as the greatest of blessings, and was regarded as a certain assurance of admission to the glories of the heavenly kingdom. In the correspondence of Ignatius, bishop of Antioch, says Dean Milman, "there is throughout a wild eagerness for martyrdom. . . . He even deprecates the interference of his Christian friends in his behalf. He fears lest their ill-timed and, as he thinks, cruelly officious love might by some influence . . . deprive him of that glorious crown." The following passages from the Epistle of Ignatius to the Romans are illustrative of a spirit which prevailed very generally among the Christians of his time:—

I write to the churches, and I declare to all that willingly I die for God, if it be that you hinder me not. I beg of you do not become to me an unreasonable love. Let me be for the beasts, by whose means I am enabled to obtain God. I am God's wheat, and by the teeth of the beasts I am ground, that I may be found God's pure bread. Rather entreat kindly the beasts that they may be a grave for me, and leave nothing of my body. . . . Supplicate our Lord for me, that by these instruments I may be found a sacrifice to God. . . . May I have to rejoice of the beasts prepared for me! And I pray that they may be found ready for me; and I will kindly entreat them quickly to devour me, and not, as they have done to some, being afraid of them, to keep from touching me. . . . And, should they not be willing, I will force them. . . . Those who say "Martyr" to me scourge me. It is true that I desire to suffer, but I do not know if I am worthy.

The Gnostic heretics of this period were denounced by their orthodox opponents, not only for their errors of opinion upon dogmatic questions, but also for holding that martyrdom was unnecessary

* Milman also says of an order of Hadrian reaffirming that of Trajan. The edict does credit to the humanity and wisdom of Hadrian.—*History of Christianity*, vol. II.

and non-essential to salvation. The reigns of Trajan, Hadrian, and Antoninus Pius, on the whole, were favorable to the growth of the new religion. The latter emperor both professed and practised in accordance with the humane maxim of Scipio, which asserted that he would rather save the life of a single citizen than cause the death of a thousand enemies. There is no reliable evidence of the persecution of the Christians during his reign; nor are there any notable instances of martyrdom, with the possible exception of Polycarp, the venerable bishop of Smyrna, whose execution, however, is usually referred to the reign of his successor. The general voice, even of Christian antiquity, is favorable to the justice and tolerance of Antoninus Pius.*

Marcus Aurelius and the Persecution of the Christians.

The attitude of the great emperor, Marcus Aurelius, toward the Christian Church, has been severely and, as we think, unjustly attacked by Christian apologists and historians of recent times. A man of the purest personal character and loftiest religious sentiments,—accepting the exalted ethical principles of the Stoic philosophy,—it is difficult to conceive that he could deliberately persecute the adherents of any form of religion on account of their belief. "Marcus Aurelius," says Dr. Hedge, "standing midway between the first appearance of Christianity and its civil enfranchisement, represents the high-water mark of Roman greatness, as he does the height of Imperial virtue in the annals of mankind. . . . Neither in St. Louis nor in English Alfred, to whom Merivale compares him, do I find the same piety, the moral sublimity, which I admire in the Roman sovereign."†

The character of Marcus Aurelius was moulded by a nature at once profoundly religious and intensely practical. Though a careful student of philosophy, holding his teachers in reverent regard, he never lost himself in the mazes of metaphysical speculation, or permitted his mind to fall into the profound pessimism of the Oriental mystics, with its resulting absorption from the affairs of practical life and despair of the future of humanity. His teaching was as universal and as practical as that of Paul. He professed, indeed, no belief in dogmas of a merely speculative character. His theology was, as nearly as possible, a sort of cosmic theism. "He saw clearly," says Renan, "that, where the Infinite is concerned, no formula is absolute. . . . He distinctly separated moral beauty from all theoretical theology. He allows duty to depend upon no metaphysical opinion of the First Cause."‡ Herein, Marcus Aurelius anticipated the rationalistic philosophies of Spinoza and Herbert Spencer. Very deeply religious, nevertheless, was his attitude toward that Unknowable Reality of which all phenomena are dependent manifestations. "All that thou arrangeest is suited to me, O Kosmos!" he says. "Nothing of that which comes from thee is premature or backward to me. I find my fruit in that which thy seasons bear, O Nature! From thee comes all. In thee is all: to thee all returns."§ It may be said of Marcus Aurelius, as Carlyle once affirmed of Margaret Fuller:—He accepted the universe. He designated himself as "a man ready to quit life without regret"; yet he found

in life more of good than of evil, and accepted whatever of care and trouble fell to his lot with manly resignation. "The character of Marcus," again says Dr. Hedge, "is revealed in his self-communings, which have come down to us, an imperishable volume,—the so-called *Meditations of the Emperor Antoninus*. Better preaching I have not found, nor thoughts more edifying, in any Christian writer of that time. A sombre spirit, but how sweet, how grand!"

There was about Marcus Aurelius nothing of the autocrat or tyrant. Though clothed with unlimited power, he used it all to promote and increase the liberties of his people. He recognized all men as possessing a common humanity with himself.* One day, he thus reproached himself: "Thou hast forgotten what holy relationship unites each man to the human race,—a relationship not of blood or of birth, but the participation of the same intelligence. Thou hast forgotten that the rational faculty of each one is a god, derived from the Supreme Being."

Matthew Arnold says that Marcus Aurelius "is, perhaps, the most beautiful figure in history," and adds: "The great record for the outward life of a man who has left such a record of his inward aspirations . . . is the clear consenting voice of all his contemporaries—high and low, friend and enemy, Pagan and Christian—in praise of his sincerity, justice, and goodness." Niebuhr declares him to be "certainly the noblest character of his time"; and Renan closes his lecture before the Royal Academy with the following memorable words: "The religion of Marcus Aurelius is the absolute religion,—that which results from the simple fact of a high moral conscience placed face to face with the universe. It is of no race, neither of any country. No revolution, no change, no discovery, will have power to affect it."

It is, nevertheless, unhappily the fact that Christians were condemned under the laws of the empire, and upon some the penalty of death was inflicted, during the reign of this exemplary ruler. Even so candid and careful an historian as Dean Milman attributes to Marcus Aurelius the promulgation of an edict which repealed the acts of toleration granted by his predecessors, and opened anew the flood-gates of oppression and persecution. From the testimony of Watson, Renan, and other unbiassed historians, it appears, however, that this edict was issued for the protection rather than the persecution of the Christians, aiming to renew the wise provisions of Trajan's rescript, which compelled a strict adherence to legal forms in the prosecution of alleged violators of the laws of the empire.

To this period is usually assigned the martyrdom of the venerable Polycarp, the bishop of Smyrna, whose calm dignity and patient endurance furnish so fine a picture in the annals of the martyrs. The *Martyrium* of Polycarp, however, can hardly be deemed with certainty a reliable historical record; though conservative historians have generally accepted it as a genuine document of the Smyrnian Church. Nor does it appear to be certain that the time of Polycarp's death is definitely assignable to the reign of Marcus Aurelius. Certain chronological notes appended to the *Martyrium* by a later writer than its unknown author would fix the date in the year 155 A.D., or some six years previous to the accession of the great Stoic emperor. At all events, there is no evidence that the emperor was directly or indirectly influential in promoting this act of persecution, or that he even knew of the event

before its occurrence. "Polycarp," says Dean Milman, "closed the nameless train of Asiatic martyrs."

At Lyons and Vienne, however, on the borders of Gaul and Italy, a colony of Christian emigrants from Phrygia, in Asia Minor, in doctrine and customs akin to the Montanists, suffered, about the year 177, from an ebullition of popular fury, to which some of them fell victims. They were first assaulted with mob violence, beaten, stoned, dragged helpless about the streets, and finally compelled through fear to remain in confinement within their own houses. The order for their arrest, issued by the authorities, was in reality an act of mercy, inasmuch as it protected them for the time from the violence of the mob. Their leaders were accused before the magistrates of the most odious crimes,—of incest, concubinage, banquets upon human flesh, and the grossest offences against decency and morality. They were convicted on the testimony of their heathen slaves, and hurried to execution. It is a fact of strange significance that the institution of slavery, tolerated, if not justified, by the Christian Fathers, thus early in the history of the Church appeared as an avenging Nemesis in retribution for the fatal inconsistency which ignored the fundamental ethical and social doctrines of the new religion, or feared to carry them to their logical conclusions in practice.

Even the more moderate of the non-Christian populace appear, at the time, to have believed these charges against the Christians, and to have consented to the execution of the condemned. In accordance with the practice of the time, many were subjected to horrible tortures. Some perished in loathsome dungeons, others by the customary modes of execution. Among the victims were Sanctus, a deacon of Vienne; a recent convert named Maturus; one Attalus, a Phrygian; and Pothinus, the aged bishop of Lyons. The most remarkable of the martyrs, however, was Blandina, a female slave, who, after suffering the most horrible tortures unflinchingly, was thrice exposed to wild beasts in the public arena. At last, having been tossed by an infuriated bull, and terribly mutilated, she was despatched by the sword of an attendant gladiator. She bore all her sufferings with the most heroic endurance, steadfastly proclaiming, "I am a Christian, and no wickedness is practised among us."

It is the testimony of Watson* and other unbiassed and competent historians that the emperor was not aware of the proceedings at Lyons and Vienne until a considerable time after the commencement of the persecutions; and the only influence which he appears to have exerted subsequently was directed toward the protection of the accused from mob violence, by enforcing the provisions of the rescript of Trajan. The only instance of alleged persecution of the Christians at Rome is the condemnation and execution of Justin, the noted Christian apologist, with several of his companions. Justin had obtained unusual notoriety by his contests with Marcion and the Jew, Trypho, and had especially incurred the hostility of one Crescentius, a Cynic philosopher, with whom he had been involved in debate and controversy. By the machinations of Crescentius, he was accused before the tribunal of Rusticus, an imperial justice, tried, condemned, and executed. The emperor took no part in his prosecution, nor was there at any time any general persecution of the Church at Rome during this reign. On the contrary, the Christians were everywhere making their way to positions of trust and profit. They were enrolled among the impe-

*A writer in the *Encyclopædia Britannica* says of this emperor, "Instead of stirring up the persecutions of the Christians, and gloating over the sufferings of their martyrs, he extended to them the strong hand of his protection through all the empire."—Art. "Antoninus Pius."

rial legions, and it is even asserted that they had obtained a foothold in the imperial household.*

On the whole, the reign of Marcus Aurelius was, to a marked degree, favorable to the progress of civilization, and not inimical to the advancement of the nobler phases of the Christian faith. The emperor instituted numerous reforms in the government and regulation of the empire. He elevated the position of woman, and mitigated the severity of the institution of slavery, instituting regulations favorable to the manumission and protection of the servile classes. The public charities founded by Nerva and Trajan were protected and extended under his influence. Free schools were established for the children of the poor. The gratuitous distribution of food to the needy was continued, under an improved system. An institution was opened for the care and assistance of poor young girls. Renan, speaking of Marcus Aurelius, declares, "His fortune was immense, but all employed for good."

The testimony of the most trustworthy among the early Christian writers should be conclusive as against the orthodox defamers of Marcus Aurelius. Tertullian, himself a Montanist, as, probably, were Blandina and the martyrs of Lyons and Vienne, testifies as follows: "You will see that the princes who have been severe toward us are those who have held to the honor of being our persecutors. On the contrary, all the princes who have respected divine and human laws include but one who persecuted the Christians. We can even name one of them who declared himself their protector,—the wise Marcus Aurelius. If he did not openly revoke the edicts against our brethren, he destroyed their power by the severe penalties against their accusers." We have also the unqualified statement of Origen, writing about the middle of the third century, that "the number of Christian martyrs was small and easy to be counted, God not permitting that all of this class of men should be exterminated." Watson, the most recent biographer of Marcus Aurelius, fixes the number of Christians who suffered death during his reign at about a hundred,† which is doubtless a liberal estimate.

(To be concluded.)

CORRESPONDENCE.

MOODY, THE EVANGELIST, IN CHICAGO.

Editors of *The Index* :—

This famous evangelist does a good deal of comedy in the Chicago pulpit, and his visits are always welcome. He needs Mr. Sankey, however, to refine and elevate his performance. Without him, it becomes tiresome, while the tone of it is a trifle common and absurd. It gravitates toward the earth, and not upwards to the sky. To the credit of Mr. Moody, be it said that he himself does not see the comedy he is acting. To him, at least, it is all honestly real and true. He is the Rev. Mr. Jasper of the white race; and, like that simple-minded Christian, he believes "de sun do move." Believing it, he is brave enough to say so. He speaks his honest thought, like a man. He will not lift his faith one inch above the level of his Bible to meet the claims of science, nor drop it one inch below to gratify wealthy sinners. His innocent ignorance wins our admiration. To him, every sentence in the Bible is inspired; to him, it is, "Thus saith the Lord." He wants no "revised versions" nor new translations: it is enough for him that the Lord hath said it.

Mr. Moody preached on Easter Sunday at the Chicago Avenue Tabernacle, to an immense congregation. His text was the whole Bible; and he claimed infallibility for every word of it, the Old Testament

and the New. He said: "I have very little sympathy with the class of people who are rising up now and trying to make us disbelieve the Old Testament, because they say it does not speak with the same authority that the New Testament does. If you are going to throw out one of the Testaments, it will not be long before the whole will go." This may be very amusing to those "advanced" theologians who see in it only the dogmatic assertion of an unlearned enthusiast; but Mr. Moody fortifies his dogma with such logical strength that we see at once it is impossible to overthrow it without toppling over the whole Christian structure. He shows that the Christian religion is a fabric woven of Old Testament threads and New Testament threads in such intricate proportions that it must be impossible to separate them without destroying the fabric altogether. He shows that Christ himself was a believer in the Old Testament; and this argument, we think, is irresistible. He shows that Christ believed in the Old Testament miracles, which our "advanced" doctors of divinity refuse to believe.

Mr. Moody's argument is so very remarkable for the rude strength of it that it is well worth study. He says: "You will find people who will say, 'You don't believe the story of Noah and the flood!' I believe it as implicitly as I believe the Sermon on the Mount. 'As it was in the days of Noah, so shall it be in the coming of the Son of Man.'" The ingenious blending together of the story of the flood and Christ's use of it is well done. So again: "Men say, 'You don't believe that story of those people looking at that brazen serpent on a pole, and being healed!' I believe it. Christ believed it; and he connected it with his cross, for he said that, even as Moses lifted it up and the people were healed, so should every one that repented and believed have everlasting life." Again: "They say, 'You don't believe that story of the Israelites eating bread in the desert!' I believe it as much as I do the death of Christ, because he said, 'Your fathers ate manna in the desert.'" And again: "These men will say, 'You don't believe the story of Jonah and the whale!' Oh, yes! I believe that just as much as I believe the resurrection of Jesus Christ. If the story of Jonah and the whale is not true, the story of Christ's resurrection is not true, because he says, 'As Jonah was three days in the belly of the whale, so shall Christ be three days in the bowels of the earth.'" Lacking the imaginative poetry, there is a Biblical force in these illustrations that reminds us of John Bunyan. A short time ago, Dr. Barrows, a Presbyterian minister of some eminence, in a sermon at Central Music Hall, spoke jestingly of Jonah and the whale. He told the congregation that they need not believe that story. But Mr. Moody will not cheapen his Bible for the patronage of men who doubt the power of the Lord. What Christ believed he can believe. Rejecting with disdain the kindly aid of those apologists who are always coming to the relief of the Bible by suggestions that this or that story is not to be taken literally, but figuratively, he insists that Jonah was thrown overboard, and was swallowed by a whale. He throws proper contempt upon the "scientists who have discovered that a whale's throat is not larger than a man's fist, and say, 'A whale couldn't swallow a man.'" "I don't think," says Mr. Moody, "there would be any trouble in God making a fish large enough to swallow Jonah." From this argument, the learning of all the colleges retires baffled and dismayed. Because it would be "no trouble" for God to make a very large whale or a very small Jonah, therefore the story must be true. As mariners in a storm sometimes throw overboard one-half the cargo to save the other, so the Christian theologians, struggling in the storm of truth and reason now beating upon their system, try to save the New Testament by sacrificing the Old. Mr. Moody will not consent to this: it must all be saved or—lost. "If you break down one part of it," he says, "you break down the whole."

With great plainness of speech, Mr. Moody wagers the whole Bible against any single falsehood in it. False in one, false in all. He says: "The first book in the Bible teaches us about Abraham talking with God, and God talking with Abraham. If that did not take place, whoever wrote Genesis knew he was a liar. . . . You go into the Book of Exodus, and you find it telling of the Israelites going through the Red Sea. If that is not true, then whoever wrote the Book of Exodus was lying." Mr. Moody thinks that the mod-

ern preachers are becoming altogether too squeamish about the "supernatural." Why, he says, "everything about Jesus in the New Testament is supernatural. We find Gabriel dropping into the town of Nazareth, and telling that virgin that she was to be the mother of that child. That was supernatural, wasn't it?" The easy familiarity with which Mr. Moody describes those wonderful things really deprives them of half their mystery. The message of Gabriel to Mary does not seem so very miraculous, when we learn that the archangel just "dropped in" to mention it to "that virgin." And so the story of the shepherds and the wise men, and all the other wonders that attended the birth of Christ. Shall the story of Jonah be rejected, and these believed? "The resurrection which we are celebrating to-day," says Mr. Moody, "wasn't that supernatural? . . . Look at his coming out of that sepulchre, wasn't that supernatural?" It is not easy to escape from Mr. Moody's logic. Why should one miracle be believed and not another, especially when the only evidence of the truth of either is a statement in the same book? If Christ could raise himself from the dead, why not Lazarus? "He could have raised everybody in the graveyard just as easily as he raised Lazarus, but he did not wish to do it." He merely desired to bring to life "his friend Lazarus," as Mr. Moody calls him. For fear that the other dead men might consider themselves invited, he mentioned Lazarus by name, "because," says Mr. Moody, "if he had not done so, the whole cemetery would have come out." This, of course, would have been very inconvenient, especially to those families where widows had married again.

A morbid faith like Mr. Moody's is injurious, not only to the owner of it, but also to society, which becomes its victim. Such a faith deteriorates not only the mental stamina of a man, but also his moral usefulness. In a general way, it is of no consequence to society whether a man believes or disbelieves the assertions of history; but his beliefs or doubts concerning the assertions of theology may be of great importance to his fellow-men. When a man's belief becomes a part of his religion, the liberty of all other men is placed in jeopardy. It is of no public concern whether a man believes or doubts the story of William Tell, society cares not whether we believe or disbelieve that Horatius kept the bridge, it is of no concern to others whether we believe that Caesar's death was due to his own ambition or to the ambition of the men who slew him; but it is of serious importance whether we believe or disbelieve the story of Jonah and the whale. When a man's religion teaches him that certain beliefs are pleasing to his gods, while certain doubts offend them, he volunteers at once to be the champion and avenger of his deities. To this condition Mr. Moody's faith has brought him, and he deliberately utters the following sentiment without having sufficient moral capacity to perceive its enormity:—

"I believe that unbelief is as black a sin in the sight of God as stealing."

Stealing is punished as a felony throughout all the civilized world; and, if Mr. Moody's theology is true, unbelief should be punished in the same way, for, whatever is a crime in the sight of God, must be a crime in the sight of man. Here is where a man's religious belief becomes of importance to society, for every true believer desires to see God vindicated; and, if he believes that unbelief is as black a crime as stealing, he must desire to see it punished. Out of a belief like Mr. Moody's have come the intolerance, cruelty, and persecutions of hundreds of years. It is a bad belief, immoral and dangerous. In the Middle Ages, stealing was a felony the penalty of which was death; and the men who administered it, being of Mr. Moody's opinion that unbelief was as black a crime as stealing, they logically made unbelief a capital felony, also. He, too, would punish men for unbelief, if he had the power to make the laws. Secular belief injures nobody, but religious belief is liable to grow into wickedness and oppression. Mr. Moody would make an excellent Grand Inquisitor, for his exactions are heavy. Here is what he required of his congregation. He said, "I want you to believe in the whole Bible, from Genesis to Revelation, every line." Not to believe every line was, he thought, as black a crime as stealing.

Mr. Moody's faith has so narrowed his mental vision that he does not see that he himself is guilty of unbelief in the eyes of nearly all the rest of the

* Matthew Arnold asserts that "Marcus Aurelius incurs no moral reproach by having authorized the punishment of the Christians; he does not thereby become in the least what we mean by a persecutor."—*Essay on Marcus Aurelius*.

† *Marcus Aurelius Antoninus*. By Paul Barron Watson.

world. Even among Christians, he is in a pitiful minority. All who are not Jews are Gentiles, says the Hebrew. All who are not Mohammedans are infidels, says the Mussulman. All who are not Catholics are heretics, says the papist. Here are three of the great religions of the world, to neither of which does Mr. Moody belong. To all of them he is heretic, Gentle, infidel; and yet he believes that unbelief is a crime. Let him unwind the foolish faith that cramps his intellect, and his soul will soon expand with charity and toleration. Let him understand that belief and unbelief depend upon evidence; and, as neither of them are under the control of human will, so neither can be a crime. If unbelief were "a crime in the sight of God," he would soon furnish the evidence that would make unbelief impossible.

M. M. T.

TARIFF vs. FREE TRADE.

Editors of *The Index*.—

My commentator answers vaguely, evidently trying to fit his book-learned answer to facts not generally discussed in books. He does as well as could be expected. He seems to admit that, in the particular case stated, free trade would ruin unprotected workingmen, but insists that "such ruinous competition could not be general," "that losses in one direction would be accompanied by gains in another."

True, the losses of a robber's victims are accompanied by gains to himself; but such gains do not justify his vocation. They might even be accompanied by the gains of those who make and replace the stolen goods, but such gains could not justify a public policy of robbery.

But there is no escape in the dust cloud of *any pretended gains*. For, if losses can with gain to a trader be inflicted on workingmen in one line, in the manner pointed out in my first article, and admitted by my commentator, corresponding losses may be inflicted on workingmen in every other line in like conditions. That first case was sufficient to put in a nutshell the pith of one branch of the tariff discussion, to show the expediency of a tariff in the conditions named. It cleared away some heaps of irrelevant and confusing rubbish; but, by its very terms, it was *general*,—applicable at once to any line, and all lines in similar conditions. All as well as each are operated at the same time, and are affected in the same manner. Under *special* conditions that operate themselves as a protection, workingmen might escape the ruin pointed out: otherwise, they could not.

My critic now needs to go back and deal with that original case in some more effective way, if he can. If he must rest where he now stands on *that*, his whole case is gone. "Free" trade under the conditions named is absurd for the victimized workingmen, whatever it may be for those traders holding a virtual monopoly and having power to fix prices and the terms of bargains.

It is simplicity itself. It has piled up immense gains for its contrivers and operators: it has simply exhausted and pauperized every land and every people subjected to the trade conditions that are its central, energizing force,—conditions that in effect compel one man to sell a whole hide and permits him to take back the tail for pay! From such calculated destruction, such intended virtual slavery for workingmen, "protection" can in some good degree protect.

The main issue needs nothing more to be said. As to the side issues, one word. My critic starts a practical difficulty. What are we to receive from England for our cotton and grain, if we choose to turn our own work into our own cotton and woollen goods, our own hardware and pottery, and not receive these goods from England?

To devise ways and means by which England can pay for what she must have of our cotton and grain may be important to Englishmen and the advocates of their scheme of trade, but it is not our business. In the trade-war which she relentlessly wages on all sides, and in which she has so long been victorious, she needs no help from other people. We secure by our protective laws the interests of our governing classes, our working people; and England can secure the interests of her moneyed and governing classes, if she thinks that is most expedient for her.

We are little concerned with the mercantile theory or any theory separated from practical facts, and no one probably believes that "money is the only wealth."

But it is important to a people seeking, first of all, a high position for their workingmen compared to that of workingmen in other parts of the world that relatively high wages for them should be maintained. To accomplish this object and end, a relatively large amount of money in actual circulation is a convenient, if not an essential, means. Partly to practically secure this means to that desired end, we regulate trade by tariff, to secure, if possible, a balance of trade in our favor rather than against us; and so that, by an accession of money from abroad when that balance is in our favor, and by not being compelled to send money out of the country to settle that balance when it is against us, workingmen may enjoy what Alexander Hamilton called "the benefits of a full compared with the evils of a scanty circulation."

We do not forget that, if prices here for products were relatively lower than prices abroad, products and not money would go in payment of an adverse balance. And so no money would leave the country. But we are seeking cheapness by machinery, by inventions, by the general cultivation and elevation of men, by means that ennoble, not by means that degrade workingmen; and so by tariffs we resist this temporary cheapness, in order at last to reach a permanent and more secure cheapness,—the cheapness of organization and co-operation of free men, the cheapness of modern railroad freight transportation, not the cheapness of transportation by the slaves who built the Pyramids.

JOSEPH SHELDON.

THE SILVER COINAGE.

Editors of *The Index*.—

The act of 1873 was a double immorality. First, it was surreptitious and not respondent to any popular demand, and was yet an act that profoundly affected the interests of every person in America. It was a clear case of manipulated legislation in the interest of a powerful class,—powerful not in numbers, but powerful in its influence over Congress. Had it been in response to a clear popular vote, it would still have been a piece of immoral legislation, in that it took away from millions of public and private debtors a valuable option in the mode of payment, which, as it turns out so far, is worth fifteen per cent. of the entire face of the obligations (and no one knows how much more it will be worth), and conferring it upon creditors. The act of 1878 and the joint resolution of the same year, reaffirming the legality and absolute honesty for all purposes of our standard dollar, and partially restoring its use to us, was legislation upon full discussion in response to popular demand and over a Presidential veto. Yet our professors treat the act of 1873 as a sacred thing, build upon it, and imply that it is desecrating the very holy of holies to call it in question, while they whistle the act of 1878 down the wind as a "silver craze."

One is glad to relieve the monotony of denial and refutation in criticism by finding one economic truth in the professor's statements. Wages do not fall simultaneously with a fall in prices of products. Sentiment and sympathy and habit are strong factors in resisting downward tendency in wages. Falling prices first involve proprietors in loss and failure, then come discharge of hands and half-time employment, and still afterward comes the painful and wasteful process of cutting down wages. At such crises, wages never go down fully to correspond with fall in products, so that those who can hold on to their places are really advantaged economically by what brings ruin to thousands of their fellows. The professor is therefore quite right in saying wages do not rise promptly as prices rise. First, idle hands are employed; and even then will not wages go up so fast as products. The great benefit of advancing prices is it gives employment for willing hands. It is not high wages or low wages, but steady employment, that gives national wealth and all forms of social well-being. So that the one truth of our professor, by suppression of its correlative and corrective truth and by exaggeration of its importance, is made to serve as an ally of economic error.

Prof. Sumner could hardly pack into a short space more error of fact and fallacy of implication than he puts into his closing paragraph. It is not true, as there implied, that capitalists relunct to become creditors. I affirm the exact contrary. They were never so anxious within the memory of man to become creditors as to-day. For proof, I refer to current

prices and rate of interest. It shows an excess of confidence in money, but a great "want of confidence" in all other values. Capital in abundance to loan at low rate of interest, but shunning the productive industries, means expected appreciation in purchasing power of money.

The professor perpetrates an error similar to that in the ante-inaugural silver letter of our President, when he pictures the calamity of falling prices simultaneously with a lowering of the value of money, and the consequent withdrawal of gold from circulation. Everybody knows that gold cannot go out of circulation except on rising prices, and rising prices show the money supply to be at about the international level. Lowering of prices and lowering of value of money simultaneously are simply clotted nonsense, come from what source the statement may.

The objection of bulk and cumbersomeness I can hardly treat with patience and sobriety. They seem to me so transparent sham and flapping. Ocean transportation of gold, silver, bonds, and jewelry, is a percentage upon its value, without reference to weight or bulk. For domestic use, except for small payments, as everybody knows, money is "handled" by paper. Mr. Dorsheimer, of New York, would be happy with silver certificates, if the dollar they stood for were only a little more bulky and cumbersome,—480 instead of 412 1-2. The *Tribune* is more bitter, if possible, at silver certificates than at the coin. Our "advanced civilization," as represented by security mongers and their allies, I am sure would take kindly enough to silver dollars with silver enough in them to enable them to harvest the abnormal dollar-value already achieved by limitation of coinage. Mr. Sherman, trimming to Pacific coast sentiment, favors hoarding silver bullion and issuing paper payable in it at a gold valuation! That is gold coquetting with silver, and every seductive word a false pretence! Instead of sharing with gold the money sovereignty which determines the value of the money unit, our ex-secretary would make silver a scullion drudging in the dungeon at such wages as gold should dictate. The politician artfully treats it as a banker's question; to wit, how the government may be possessed of sufficient assets readily convertible to redeem its paper. That is as the little finger to the loin. It is not a question of administering the treasury department. It is, What shall be the legal import and the effective value of the dollar? Shall it mean one bushel of wheat or four, one day's wages or four? And, if the latter, what and to whom accruing is to be the compensating benefit that justifies the social distress incident to every step on that painful road?

Standard coin, in vaults public and private, and bullion *freely coinable* at a fixed weight, everybody knows is serving its proper money function. The ballast out of sight in the hold is as necessary to a successful voyage as the flaunting sail. Where coin floats its proper amount of paper circulation, it is serving in the highest and most economic degree its full money function. The fear of losing the fifteen cents fiat it is that causes all this clamor against "useless accumulation," "won't circulate," etc. It is the fear that our standard dollar will lose the character of a token coinage, and become in fact and the general practice what it is in law and in equity,—to wit, a definer, a regulator, and measure of value,—that is the real objection. For myself, I am very sorry to have been convinced by Mr. Warner's argument that the present rate of coinage can never make it other than a token coin, and that our increase of population would prevent a coinage of fifty million a year from eliminating the fiat from it within the present generation, unless such a *policy*, settled and proclaimed by the country, and pointing to a future constitution of our money, induced financiers to discount the future, and so restore the 16 to 1 ratio of the metals.

It is a clamorous bigotry and a weak begging of the question in issue to assert that "gold is the world's standard anyhow, and we must come to it." The world is not quite so unanimous as that yet. The British single standard has never been represented by any philosophic historian or any philanthropic economist as an economic success or a social amelioration up to 1850. From that time, Australia and California, with universal double standard outside the empire, broke the ruinous effect of that policy, and gave it a new lease of life. A general single standard is an experiment absolutely without precedent against the adjustment of thousands of years, and—thank God!—not yet achieved in the legislation of this country.

though we are tasting a little of its practical effects. Without any history or any memory, it would be of no consequence whether a dollar meant a quart of meal, a year's wages, or a coach and four. With all things adjusted to a new scale of prices, it would be indifferent to creditor and debtor, employer or employed, rich or poor, where prices are: high or low, it is all one. The process of appreciation it is that hurts and chokes out enterprise. It is an inevitable but compensated hardship when it comes simply as a recovery of what was lost by fiction and paper inflation,—a return to a metallic basis. It is cruel and sinister, it is spoliation, when effected by change in long-established definitions or legislative limitation.

I forbear further criticism. Only a profound conviction that a single standard is an economic blunder, is the colossal crime of the century, could have constrained me so to tax the reader's patience.

E. D. STARK.

LIFE THE CAUSE OF ALL ACTION.

Editors of *The Index* :—

Having defined the term "religion" in what I consider to be its strict and correct sense, to me the question of a scientific basis for it no longer exists. If religion has or can have a scientific basis, the question so common and now considered so legitimate—namely, "What is your religious belief?"—would be as ridiculous as the question, "What is your mathematical belief?"

Anything having a scientific basis admits of no beliefs, but is a something which must be comprehended. Religion is composed of ideas or opinions conceived by man; and, as men's opinions differ, we have various religions.

I do not wish to be understood as affirming that there is no truth in religion. Just as it is possible for a person to produce harmony on any musical instrument without understanding the science thereof, or for one to be what is called a natural mathematician without a scientific understanding of the principle, so it is possible for a person to have a correct opinion regarding God and man; but whatever there may be of truth in religion will be found accountable to science, and capable of being taught as provable knowledge. It will, in fact, be found to be *theology*, and not religion. Theology and religion should not be confounded. The former means demonstrable knowledge, and the latter is man's opinions. A theologian should be one who understands the science of God, as a mathematician is one who understands the science of mathematics. Those who are termed theologians, however, are simply those who profess and teach a religion. A theological seminary should be an institution where theology—science of God—is taught; but, instead, it is an institution where religions—opinions of man—are taught.

The term Christianity should only be applied to the exercise or demonstration of the Christ principle—knowledge of the Creator—which Jesus taught and fulfilled, whereas it is applied to the adoption of and adherence to a religion or form of belief in and worship of God. The term Christian should only be applied to such as understand and demonstrate the Christ principle, and one who adopts and adheres to a religion should simply be termed a religious person. By *old theology*, I refer, not to that which is to-day termed theology, but to the primitive knowledge of the Creator and the creation, which was restored in its harmony and power to the world by Jesus in the beginning of what is called the "Christian era."

When man's opinions are called theology,—the science of God,—and when the adoption of and adherence to these opinions is considered as a means or condition of salvation, man is really worshipping the creature rather than the Creator. He is worshipping an opinion rather than a truth; and, therefore, his "kingdom of God" is identical with what Jesus would have called the "kingdom of man." Equally true is it that what is to-day called wisdom is what Jesus termed foolishness with God. Still, many good people are vainly trying, through this same wisdom, to search out spiritual truths, or the mysteries of the Creator and creation.

The first step toward a comprehension of old theology is the realization that *life*, not *matter*, is the cause of all action. This statement is contrary to man's philosophy; but it is a true statement, and cannot be gainsaid. All have life, and are interested in that life. Man's existence, all things, depend on life. Therefore, life is universal; and *life*, the cause of

all action, is the scientific basis from which to work out the problem of life. This conclusion—i.e., that life is the cause of all action—is not arrived at through the evidence of sight, but through the evidence of the understanding; and through this evidence alone can we discern spiritual truths. Life produces all changes in matter, matter being but the innocent instrument through which the life acts.

If this thought appear strange to those unfamiliar with it, they must remember that "truth is stranger than fiction." Let us suppose, for illustration, that a person is killed by a railroad accident. The life of man made the cars, laid the track, put the water into the boiler, kindled the fire, and opened the valve that set the engine in motion. Life did not make the track strong enough, or else caused some obstruction to be placed in the way, hence the accident. The person who was killed was brought into or near the cars by his life,—the body has no independent action,—therefore life was the cause of the accident.

Brains have no action or intelligence independent of the life, and are simply an instrument for the life to act through. Wherever matter has been supposed to cause action, as in chemical actions and in what are termed natural actions,* in every case, life, not matter, is the cause. Strange as these statements may appear to some, they are no more strange than the idea that the earth revolved was to those who believed it to be stationary. They based their evidence on the material senses; and, had the material senses been an unchangeable basis, their belief would have become a knowledge. It was not, however, a reliable basis; and, through man's spiritual perception (an opposite source), he gained a knowledge of the earth and sun which we can neither see ourselves nor make evident to the material senses of another, but which we can comprehend through the spiritual senses, and can teach others.

We have reasoned mostly through the senses of seeing, hearing, feeling, tasting, etc.; and they, being fallible, have led us deeper into materiality. It is useless to hope, through such a course, to discover spiritual things. The course of reasoning must be reversed to attain that issue. My aim in succeeding articles on this subject shall be to prove that old theology has a scientific basis, and that each may build for himself thereon.

E. J. ARENS.

In the August number of the *Atlantic*, "The New Portfolio," by Oliver Wendell Holmes, is continued. Mrs. Oliphant's story is on the eve of its dénouement, and Miss Murfree's "Prophet of the Great Smoky Mountains" comes to a pathetic end. "On Horseback," by Charles Dudley Warner, is continued in an amusing strain. Three of the solid articles of the number are "The Port Royal of Mère Angelique," by Maria E. MacKaye; "Should a College Educate?" by E. R. Sill; and a critical article, by Harriet Waters Preston, on Miss Ingelow and Mrs. Walford. Dr. Holmes' "Two Anniversary Poems" are a striking feature of the *Atlantic* for August. There is some more excellent poetry by Edith Thomas, Andrew Hedbrook, and Kathleen Wright. Philander Deming has a characteristic tale to tell, Wong Chin Foo relates "The Story of San Tszon," a legend of Buddhism, and there is a pleasant little conceit about Shakspeare. Reviews of Ormsby's *Don Quixote*, "Stepniak's" book on Russia, Pater's *Marius*, the *Epicurean*, Hutton's and Walford's books on London, an unusually lively Contributors' Club, and minor criticism, finish a number which is up to the *Atlantic's* usual standard. Houghton, Mifflin & Co., Boston.

THE *North American Review* for August has articles by Dr. John B. Hamilton, Dr. John H. Rauch, Dr. John C. Peters, Dr. H. C. Wood, and Dr. Charles A. Seale on the question "Can Cholera be Averted?" A very readable article from the pen of Dr. Felix L. Oswald is entitled "The Animal Soul." M. J. Savage has a paper on "A Profane View of the Sanctum." The other articles are: "Temperance Reform Statistics," by Prof. W. J. Beecher; "The Price of Gas," by Charles Hull Botsford; "The Spoliation of the Public Lands," by George W. Julian; and "Comments."

THE fiftieth anniversary of the "Garrison mob" of Oct. 21, 1835, will render timely two papers in the *August Century*, by the sons of William Lloyd Gar-

* See *Old Theology*, chapter i.

ison, descriptive of their father's origin and early life. T. W. Higginson will contribute a short prefatory article on the anti-slavery agitators, and a finely engraved portrait of Garrison will be the frontispiece.

A MAGNIFICENT full-page portrait of John McCullough, the actor, portraits of several of the St. Louis editors, and a number of handsome pictures, including one of the Soldiers' Home at Dayton, Ohio, appear in the Cincinnati *Graphic* of July 18.

"BABYLAND'S" illustrated story title-page for July tells of thirteen mischievous things accomplished in just five minutes by one of the inhabitants thereof.

West Newton English and Classical School.

The 33d year of this Family and Day School for Boys and Girls begins September 16.

Graduate of Swarthmore College, Boston University, and Newnham College, Cambridge, England.

The Religion OF PHILOSOPHY; OR, *The Unification of Knowledge.*

A COMPARISON

of the Chief Philosophical and Religious Systems of the World, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God.

By RAYMOND S. PERRIN.

Octavo, cloth. \$4.00.

C. P. Putnam's Sons,

27 and 29 West 23d Street, New York.

A SEASIDE RETREAT.

Ocean Cottage, on Horseneck Beach, is situated about thirteen miles south-west from New Bedford on the open sea. Those wishing a pleasant and quiet summer resort, with all the accommodations of a first-class hotel without the restraints of a fashionable watering place, will be pleased with our home. We have one of the finest beaches in the country, with the surf at our door; excellent bathing and fishing; an inlet close by for those wishing to sail in smooth waters. Seldom any mosquitoes about the hotel.

For particulars, address JOSIAH WOOD,
No. 84 ALLEN ST., NEW BEDFORD, MASS.

Just Published: TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

TOKOLOGY A Book for every woman. Alice B. Stockham, M. D.

A COMPLETE LADIES' GUIDE.

10,000 Sold in Little Over a Year.

Agents find it the most popular work on the market. "The very best book to put into the hands of a girl or woman."—E. M. HALE, M. D.

Cloth, postpaid \$2.00; Morocco, \$2.50. Circulars Free.

Sanitary Pub. Co., 159 La Salle St., Chicago, Ill.

H. T. MARSHALL'S
PATENT ADJUSTABLE LACE CONGRESS.

THE COMING SHOE.

By means of its Lacing Adjustment, it can be made as comfortable as any Lace Shoe, and is just as convenient as any Congress in putting on or off, as it requires no lacing and unlacing after being once adjusted to the foot.

The most durable elastic is used, yet does not draw the foot and ankle as in ordinary Congress. Every one who wears them likes them.

Take no substitute until you have seen and tried on a pair. If your dealer does not have them or order them for you, write to subscriber for directions how to get them. All Shoes warranted that are stamped with name of Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes, Base Ball, Bicycle, and Lawn Tennis Shoes,

H. T. MARSHALL, Brockton, Mass.

N.B.—Patent stamp woven in one strap of each shoe.

A large assortment of these shoes at retail at No. 17 Water Street, Boston.

PIC-NIC SUGGESTIONS.

Book now in press. Suggestions for Sunday-school picnics, excursions, etc., from experienced Sunday-school workers from various sections, both city and country. Replete with valuable hints. Worth many times its cost to any Superintendent. Price, postpaid, 25c., or will send free to any one sending us names of Superintendents of all Sunday-schools in his place. Address, DAVID C. COOK, PUB. CO., 18 & 16 Washington St., Chicago.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion.
A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

- I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts.; one hundred, \$1.50.
- II. *The Bible and Science*, by John Weiss.
- III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.
- IV. *Transcendentalism*, by Theodore Parker. Never before published.
- V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).
- VI. *How Shall We Keep Sunday?* Answer in Four Parts: 1. Sunday in Bible. 2. Sunday in Church His. 3. Sunday in the Massachusetts I. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.
- VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.
- No. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.
- Reason and Revelation*, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

BOZEMAN, MONTANA.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extraneous.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

A FEW COPIES of *The Spirit of the New Testament: The Revelation of the Mission of Christ*, by A. WOMAN, have been left for sale at this office, and can be had upon application. Price, cloth, \$1.25, postage 13 cts.; in paper covers, \$1.00, postage 10 cts.

Address THE INDEX,
44 Boylston Street, Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total as above calculated, will be made.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

THE FREETHINKERS' MAGAZINE.

H. L. GREEN, Editor and Publisher.

SALAMANCA, N.Y.
Published bi-monthly. Single copies, 25 cents. \$1.50 per year. The last number out is a very valuable one. Send 25 cents in postage stamps, and it will be forwarded to you.

THE FREETHOUGHT DIRECTORY.

Mr. GREEN is preparing a FREETHOUGHT DIRECTORY in which he desires to publish the name and address of every outspoken Freethinker in the United States and Canada. Send your name and address and five two-cent postage stamps, and they will appear in the DIRECTORY. Address H. L. GREEN, Salamanca, N.Y.

THE ABSENCE OF DESIGN IN NATURE. By Prof. H. D. GARRISON. A Lecture delivered before the Philosophical Society of Chicago. Price 10 cts. For sale at THE INDEX office.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.
Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its management will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

CURRENT TOPICS.

BY B. F. U.

IN Lima, which has a population of about 100,000, there are 126 Catholic churches and 12 monasteries and convents. People attend mass in the morning, and go to bull-fights, cock-fights, and similar entertainments in the afternoon. It is more or less so all over Peru.

KARL BLIND, writing in the *Westliche Post*, says that there is ample documentary evidence that Victor Hugo's ancestors were German artisans, and that the name "Victor" given to the poet was really only a Franco-Latin substitute for the name of Hugo's father, Sigisbert, which means "brilliant with victory."

PROF. PARKER, of the University of Pennsylvania, who examined the brain of Doran who was executed for the murder of his jailer, declares that its conformation tallied exactly with that of the "criminal brain" of the books. Its weight was but forty-three and one-fourth ounces, or nearly seven ounces below the normal weight; and it was "more like the brain of a monkey than that of a Webster." Unfortunate creatures of the class to which this criminal belonged should be restrained, and prevented, if possible, from perpetuating their bad qualities; but how far can they be held morally responsible for their criminal deeds? Will or can a man with a "criminal brain" be a conscientious, just, and merciful man? Education may improve him, but can hardly change the main characteristics of his nature and disposition.

THE power of the priesthood is being continually curtailed in Italy. Civil marriage is taking the place of what the clergy call the "sacrament." No priest can perform the religious rites of marriage until the civil marriage has been performed by a magistrate, in the presence of witnesses. It is a criminal offence for an ecclesiastic to dictate or influence the making of a will. With parents, it is optional whether children shall be baptized by the priest and registered in the parish books. The civil register is always open to them to record every birth, regardless of religious rites. "The

former priestly power," writes a correspondent of the *New York Evangelist*, "over the important items of 'birth, marriage, and death,'—which has always been construed by the people as the power of life and death,—is no longer, as formerly, in the hands of the clericals. Every day is it less and less in their power to curse with their word and influence, even in remote parishes, the individual who may fall under their displeasure."

PRESIDENT MCCOSH, in his address at Woodstock, Conn., on the 4th, said: "There is a deep and growing dissatisfaction with the mode in which honorary degrees are conferred at commencements and on other occasions. They are bestowed on no principle that I can discover. The avowed principle on which they are commonly bestowed is to secure friends to the college, in ministers of religion, in teachers, in wealthy or influential men. But this end is not always secured. The public are shrewd enough to see through the whole thing, and despise the action and the actors. Trustees should see the sneer that gathers on the face of intelligent people, when they hear or read of a degree bestowed on some person who has done nothing to deserve it. A decent, respectable minister gets a D.D., and it is supposed that he is thereby pre-engaged to the college, to which he will send all the boys in his congregation. But he is surrounded by a half dozen ministers who feel that they are quite as good as he is; and, having been overlooked, they are tempted to send their boys elsewhere."

THE *London Sunday School Chronicle*, referring to the unveiling of Darwin's statue at the British Museum, says: "Now, we have come to see that, whatever acceptance may be given to the idea of the 'Origin of Species,' it is but a method of explaining divine operations, and that Darwin's theory can be harmoniously fitted into the old faith." How Darwin's theory "can be fitted into the old faith," which teaches the fall of man from a high position, given him when he came from the hand of his Maker, it is difficult to see. Perhaps some future revision of those passages of Scripture which relate to man's fall will clear up this difficulty. But what kind of a divine revelation is that which reveals truth only when it has been discovered by the unassisted human reason, and established in defiance of the supposed teachings of this revelation and of the opposition of its expounders? A book revelation, whose authority is used to suppress scientific truth and social and political reform when they are in their infancy and in need of aid, and which is discovered to be in harmony with them only when they have become popular after years of labor and sacrifice on the part of those denounced as "infidels," is a revelation belief in which, as such, cannot be outgrown any too soon.

AT a reception given Hon. Henry B. Stanton, on June 27, in New York, by the Press Club, the guest was introduced by the President of the Club as a "Nestor of the press, undimmed in intellect, and crowned with the love and esteem of all who know him." "Glance over his past," continued

the President. "He was born four years before Abraham Lincoln. When he began to write for newspapers, Lincoln was employed at \$6 a month to manage a ferry across the Ohio, at the mouth of Anderson's Creek. Stephen A. Douglas was a boy twelve years old, living with his widowed mother on a sterile Vermont farm. Fred Douglass was a pickaninny on a Maryland plantation. Horace Greeley had not yet entered a country printing-office. Thurlow Weed was editing a country newspaper. Charles Dickens was a boy thirteen years old, employed in an attorney's office. Thackeray was a boy of fourteen attending school in London. William Cullen Bryant had just come to this city. James Gordon Bennett was trying to establish a commercial school here. Henry J. Raymond and Charles A. Dana were wearing check aprons at district schools. Erastus Brooks was attending a grocery in Boston. James Watson Webb was an adjutant in the regular army. Manton Marble, George W. Childs, and William Henry Hurlbert were enwrapped in the cocoon of futurity. A. K. McClure was just learning to walk. Joseph R. Hawley had just been born in a country town in North Carolina. John W. Forney was a boy nine years old, running around unshod. And scores of other newspaper men who have won fame and fortune were not even literary larvae."

SOCIALIST leaders who urge workingmen to resort to violence to secure concessions from their employers do harm to the cause of labor, and are the worst enemies of democratic institutions. Lawless violence makes an arbitrary use of legal force, which often appears at the time heartless and cruel, a necessity. What would result, if, at any time, dissatisfied men could at pleasure defy law, destroy property, and dictate terms to the established authorities? There can be no industrial prosperity, no popular reform, no extension of freedom, no progress, without security of life and property, which is necessarily imperilled or weakened by every act of lawless violence that goes unpunished. The self-constituted leaders of workingmen who urge them to acts such as were committed recently in Cleveland direct their influence against the very conditions of society that are the most important to popular freedom, education, and advancement. Intelligent workingmen, looking beyond the moment, instead of restricting their own liberties and opportunities by encouraging mob law and riotous demonstrations, will turn to education, agitation, and the ballot for reforms which some in their ignorance and short-sightedness imagine they can secure by coming together, arming themselves with clubs, and making raids upon private property. There is nothing that gives greater satisfaction to those who have no sympathy with the masses, and who rejoice whenever anything occurs to which they can point in seeming confirmation of their theory that the working class must be "kept under with a strong hand," than the very acts of lawlessness which these poor sons of toil, in their simplicity, think will redress their grievances and right their wrongs.

THE PERPLEXING PROBLEM.

A short time since, it was reported that a tidily dressed and respectably appearing young woman in New York City broke a pane of glass in a shop-window, and took out some articles of merchandise, in broad daylight, and in full view of a policeman who was standing near. On being arrested, she was not found to be insane, as was first supposed, but confessed that she did the act deliberately for the purpose of being sent to prison, where, at least for a time, she might have respite from her battle with hunger. She was alone in the world, unable to get work or bread, and would not sink to the one resource of shame open to a young woman for gaining a livelihood. A few weeks earlier, while the inclement winter was still lingering, an American family in the same city was accidentally discovered in a starving condition. The husband and father, on whose labor the family depended for subsistence, had been sick for months. The children were all small, and one or two had died from insufficient nourishment. One article of furniture after another had been sold or pawned to procure medicines and delicacies for the sick man, and bread for the rest. They were too self-respecting to beg, too proud to let their neighbors, none of whom were intimate friends, know of their condition; and the tragedy was well-nigh complete in the slow starvation of the self-forgetful wife, when a neighboring woman, whose sympathizing suspicions had been aroused, entered the house, and saw, with little need of words to tell it, the whole sad story.

After such cases of destitution and suffering become known, it is, of course, easy to say that they need not be; that the lone woman could have found help through the Associated Charities, or some one of the many benevolent agencies connected with the churches of the city, and need not have resorted to larceny for the sake of shelter and food; and that there are numerous charitable organizations in New York which would have been alert to offer all the aid needed in so unquestionably worthy a case as that of the starving family. But benevolent organizations, it is apologetically claimed, cannot be expected to know by instinct the wants of people that are kept secret; and society cannot be held responsible for the sufferings of people who are too proud to seek help or to let their destitution be known. The starving family was overwhelmed with donations of all sorts, from benevolent societies and individuals, as soon as the newspapers reported the case; and the poor woman who preferred crime to shame, a prison before beggary, will doubtless find ample sympathy and assistance now that the story of her single-handed struggle with poverty has been made public.

Yet such cases as these lead a large class of persons of benevolent disposition to look somewhat deeper into this problem of poverty and social order, which is the perplexing problem of the day. Many such persons are led to ask whether cases like these ought to be found at all in modern society, and especially in society which calls itself Christian,—whether the conditions of human society ought to be such that a self-respecting, capable woman, willing to work, seeking work, should be compelled to choose between beggary and crime, and a self-reliant, honest, industrious family should be brought to the alternative of beggary or starvation? Can those social conditions be just and righteous conditions where superfluous wealth piles itself up on one side, and honest industry is left to starve on the other, or is only saved from starving by the charity which is doled out from the mansions of luxury? Or, if these are right or even necessitated conditions of human society,

then is the obligation wholly on the side of the struggling, self-respecting poor to let their wants be known, and not at all on the other side to learn the poor's needs? Is it not rather a true instinct that causes the honest poor to shrink from publishing their wants, and thus taking their position with beggars, and that prevents them from even learning what and where are the charitable societies which would gladly help them? And is there not, on the other hand, a just obligation resting on those who have the means and the power, so to live that, without any prying or impertinent curiosity, they would know something of the struggles and needs of their poorer neighbors, and could discern how to help without hurt to the proper pride of self-respect? And may not the methods of organized benevolent societies, too, be adjusted more in accordance with the demands of this principle of the highest individual benevolence? A neighbor's rights to a certain privacy are to be honorably respected. Yet, if all one's duty to one's neighbor were done, could the latter ever come secretly into a condition of starvation? Duty to one's neighbor has, indeed, something to say about "searching out the cause that one knows not." But this "searching" may be in the official manner of the policeman or in the prying spirit of meddling gossip, or it may be with that true neighborliness that invites confidences and detects by sympathy. What is needed is such a structural order of society that it would be impossible for an honest man or woman, or an upright, industrious family, to be so alone in the world that the terrible pressure of the alternative between crime or beggary, on the one hand, and starvation, on the other, could ever come to them.

That earnest men and women are beginning seriously to ponder this problem, and, though the problem is an old one, are bringing to it new zeal and fresh thought, is one of the best signs of the times.

WM. J. POTTER.

THE CONCORD LECTURES ON GOETHE.

II.

Half is better than the whole, says a Greek proverb; and it is almost too much for me to try to report seven of the twelve lectures given in Concord last week.

Goethe's greatest work, *Faust*, occupied three more sessions. Mr. D. J. Snider gave a masterly "History of the Poem," soon to appear as part of his new book. He showed how inevitably Goethe's whole life was occupied with writing it. The problem of the need of denial and protest met him early, but it was not until old age that he reached the solution. *Wilhelm Meister* answers the same question by showing the function of error in human discipline. The Satanic spirit of negation of Truth called upon him in his youth to do it justice; but sixty years must elapse before he could exorcise it out of himself and out of the world, by shutting it up in print. The lecturer felt, therefore, obliged to differ from those eminent German critics who think that *Faust* was never so complete as in 1790, when only the First Part was published, and with the omission, not only of all the scenes between the dialogue of Faust and Wagner and that of Mephistopheles with the student, but also of the "Walpurgisnacht" and of that "prose scene" in which pity for Margaret makes Faust, for the time, master over the tempter. Those who call this *Faust* of 1790 a unity and that of 1831, with its two parts, only a fragment of a fragment, suppose that Goethe's original purpose was to have his hero perish like Götz and Werther, and win no salvation.

This latter view was defended by Prof. Davidson,

who says that the conception of the poem passes through three distinct stages. The second of these introduces the purpose of saving Faust, and found its earliest expression in 1797. The damnation of Faust, at the close of Part First, seems, for the time, to satisfy the author's ideas of justice. Goethe's endings are usually weak, and that finally given to the poem is too operative. It also teaches bad morality. No one ought to be drawn up into heaven. We want to climb there. "If I'm to be drawn up, I shall not go."

This was said at one of the two sessions in which Prof. Harris gave a minute analysis of the whole poem. Faust's attitude in the beginning toward nature was correctly described as that of a pantheistic adorer, not a scientific observer. The well-known confession of faith in the garden scene was admirably explained by comparing it with Emerson's "Brahma." It is characteristic of a seducer to believe in a God who is indifferent to moral distinctions, and who could have exclaimed,—

"And one to me are shame and fame."

Much less probable is the statement that the magic glass in which Faust, according to the best engravings illustrating the poem, sees the undraped form of Margaret was the mirror of fashion, and displayed only a milliner-constructed beauty. This called out a vigorous protest from Mr. Snider against the common fault of critics in passing off their own pet theories as those of the author they profess to expound. This last speaker also pointed out the importance of the prose scene, near the end of the First Part, where Faust is carried, by his pity for the ruined Margaret, into a generosity so noble that Mephistopheles ceases to be a tempter to evil, and becomes the instrument with which Faust finally makes himself worthy of salvation.

The minute analysis of the Second Part by Prof. Harris was particularly interesting in comparing the flames into which rush the wild masqueraders, who represent Pan and his attendant fauns, satyrs, nymphs, gnomes, and giants at the carnival, to the French Revolution burning up the wicked despotism established by Louis XIV. The account of the reappearance, a little later, of the student to whom Mephistopheles has exposed the uselessness of the university studies, failed to mention the plain satire, generally acknowledged by commentators on Fichte, who was too revolutionary to please Goethe.

It must be added that all these critics were too ready to represent Faust as denying any possibility of knowledge, whereas his main antagonist is simply to books.

In treating of "Goethe's Relation to English Literature," Mr. Sanborn said that scarcely a trace of influence from England was to be found in Goethe's works, and that he paid much more attention in early life to French than English authors. This last statement may be true, but it is certainly true that French literature at that time was thoroughly permeated by English thought. Buckle shows that France interpreted Newton, Locke, and the Deists to the rest of Europe. During the discussion that followed, Prof. Harris said that Goethe's study of *The Vicar of Wakefield* led him into putting episodes into his novels. According to Prof. White, of Cornell, Goethe had been deeply influenced, while a student at Strasburg, by English authors, especially Ossian, whom he translated, and Shakspeare, with whom he kept in close relations ever after. His *Werther* shows knowledge of Richardson. Prof. Hewitt, also of Cornell, mentioned that Goethe's acquaintance with Oriental literature was due to Sir William Jones and other English pundits. Mr. Snider quoted Goethe's saying in

his *History of his Botanical Studies* that he owed more to three men than to any others,—Spinoza, Shakspeare, and Linnæus. In his Titanic youth, he imitated Shakspeare. Later in life, he sought to compliment him, though always owning his superiority. The prominent theme in *Wilhelm Meister* is "Hamlet," and the characters of the two heroes are very similar. Sterne, too, was much read by Goethe, who translated from him many axioms. It may here be mentioned that the lecturer had spoken of Goethe's fondness for Byron, of his antagonism to Newton, and of his influence over Carlyle and Emerson. No full view was given during the session, however, of his immense benefit to both England and America in encouraging individualism. The omission to show how far he is to be blamed for the prevalence of loose ideas about marriage in this country is less to be regretted than the withholding of the tribute of honor fairly due to him for his great services in giving science a permanent place in literature.

Among the ladies who lectured was Mrs. Caroline K. Sherman, of Chicago. Her subject was "Child-life as portrayed in Goethe's Works"; and she maintained that it is no idle accessory, but always has a destined bearing on the whole. The hero of *Wilhelm Meister* learns human nature by studying his son. He is led to value property and to comprehend social life for the sake of Felix. The portraits of this boy and his playmate, Mignon, by Mrs. Sherman, were particularly charming. She also spoke of the glorious Euphorion, and that son of Götz von Berlichingen who is more at home in the kitchen than in the stable, and who is so proud of having learned a description of the castle by heart that he does not care to be told that it really is his own father who is its lord. Such good boys cannot be made so interesting as bad ones, like Felix, whose naughtiness is the occasion of winning Natalia for his father. Mrs. Cheney thought that good children might be made very interesting by artistically bringing them into collision with circumstances. Prof. Davidson spoke out for the boy who preferred his mother's society to the ostler's. He acknowledged that Mrs. Sherman had stated exactly Goethe's opinions in all their value and in all their shortcomings. His views of education have a worth that has not yet been rightly recognized, especially as regards the necessity of right social surroundings. But it must be plainly understood that he does not take the highest ground, either in his life or in his works. Emerson was perfectly right in saying, "He is incapable of a self-sur-render to the moral sentiment." The greatest thing is not to develop our nature as it is, but to rise above it. Goethe sometimes insists upon this, but not in the spirit of martyrdom. He never gives up what he is enjoying until he is getting tired of it. He does preach renunciation. If you would know what a man isn't, consider what he preaches oftenest. Neither Faust nor Wilhelm really renounces much. Faust's altruism is put off to the end of his life. Goethe is a great dissolving power, but his works do not breathe the highest morality.

Goethe's life and opinions were presented with masterly clearness and accuracy by the Cornell professors. Mr. H. S. White told how he developed himself at Frankfort, Leipzig, Strasburg, and Wetzlar, prior to his journey in 1775, at the age of twenty-six, to Weimar, where he passed most of his subsequent life. Among the most important traits of the young Goethe's character, thus depicted, was his faith in what Tennyson calls "the higher Pantheism." The Lisbon earthquake of 1755 shook his belief in a personal Deity, as it did Voltaire's;

but Goethe never passed beyond the bounds of what would now be called a liberal faith. His convictions, especially in early life, were unsettled. But, even then, we find him protesting against the dogma of endless misery; and his own creed was Toleration always.

Those fifty-seven years which were spent mostly at Weimar, and which gave the world *Faust*, *Wilhelm Meister*, *Hermann and Dorothea*, *Tasso*, *Egmont*, *Iphigenia*, the matchless ballads, and the momentous scientific discoveries, were made to pass before the audience in all their grandeur and beauty, as Prof. Hewitt told what he had seen in the Saxon Athens. As this lecture is to appear in *Harper's Magazine*, with illustrations, I need only mention that one of its finest passages is the description of the house of Goethe, and of the fidelity with which its treasures testify to his fondness for both art and science. It is pleasant to know that the hoard of manuscripts, which has so long been stored up there, is already open to scholars. Among the discoveries are said to be Goethe's Diary, from 1777 to 1832, and also a draft, hitherto unknown, of *Götz von Berlichingen*. Prof. Davidson remarked that his own visit to Weimar had made him feel how thoroughly German Goethe was, especially when at his best. His attempt to introduce the southern calmness into his later works made them too cold.

I need only add that some justice was done during this part of the course to that noble friend of freedom, Schiller.

F. M. HOLLAND.

EVOLUTION AND MR. BEECHER.

For eight or nine Sundays in succession, Mr. Beecher has been preaching the evolution heresy. A great intellect, worn indeed, but still strong, attempts again the impossible feat of reconciling truth and error, science and theology. As the Christian churches are not able to suppress the new theory, he advises them to adopt it, and revive their perishing creed. He has seen civilized branches grafted on to wild and worthless trees, while out of the process has come a wholesome and a bountiful crop. He thinks that philosophy may be grafted on to theology with like success, but the experiment will fail. It always has failed, because there is no affinity between the constituent parts. There has never been any religious carpentry that could dovetail together truth and falsehood, for it is the law of the universe that they shall never harmonize. A truth, although but recently discovered, has been the truth from the foundation of the world; and a lie, no matter how venerable and religious it may be, can never become the truth, nor serve as an ethical substitute for it. The Christian theory and the evolution theory can never blend into one harmonious doctrine, nor work together under the same law. Mr. Beecher's failure is a proof of that. Out of all the Scriptures, he could not bring a text as evidence that the inspired writers knew anything about the law of evolution; nor could he find a text in sympathy with that law. Baffled, he retreats upon miracles, and takes as the text of his last sermon on the great science of creation one of the most unscientific statements in the Bible:—

And when he had thus spoken, he cried with a loud voice, Lazarus, come forth! And he that was dead came forth, bound hand and foot with grave-clothes; and his face was bound about with a napkin. Jesus saith unto them, Loose him, and let him go. (John xi., 43, 44.)

As this text contradicts, not only the science of evolution, but every other science also, it was of little value to the sermon; and Mr. Beecher made only a figurative and rhetorical use of it in an

eloquent peroration. The Christian Church is Lazarus, dead, and bound with grave-clothes. Evolution is a new Christ calling upon the Church to come forth out of the grave of ignorance. "And," says the great preacher, "out of antiquity, out of ecclesiastical rules, out of every form of entombment and of bandages, methinks I hear that voice calling out of heaven to-day: Loose men! Take off the bandages, and let them go." The defect in all this eloquence is that it seems to lack sincerity: it appears to be theatrical, a part of the entertainment contracted for and paid for by the Plymouth congregation. At the beginning of the service, Mr. Beecher makes an ostentatious attempt to unwind the bandages; but he is very careful to wind them tightly again at the end of it. He closed the services by administering the "sacrament of communion."

In the wantonness of intellectual power, in cynical sport, Mr. Beecher preaches atheistic science, and then administers the "sacraments." The only explanation of this inconsistent conduct is that he revels in the fun of it, as the French priests in Voltaire's time used to ridicule the mass while chanting it. Only strong moral convictions can restrain this levity, especially when it earns great wages. Mr. Beecher exhorted the young men of the congregation to read atheistic and scientific works, but not to give up faith in the religion which had produced the noble lives of fathers and mothers dear to them. There are two faults in this advice: it is contradictory and equivocal. What religion was it that produced those noble lives? The very religion that Mr. Beecher was then repudiating. If not, what did he mean? Why did he not instruct those young men that the noble lives of their fathers and mothers were produced, not by erroneous beliefs, but in spite of them. Noble lives have been produced in all the sects and in all the Churches, even where the faiths have been antagonistic and contradictory to each other. Among all the creeds that exist now or that ever have existed in this world, noble lives have been developed, but not because of the errors those creeds contained. Would Mr. Beecher advise the Roman Catholic youth to read atheistic books, to accept the philosophy of Spencer and the theories of Darwin, and at the same time cling to the old faith of their fathers? Is there any merit in cherishing religious mistakes because our fathers and our mothers believed them? If so, is it not equally pious to ride in stage coaches because they did, and thresh wheat with a flail? If such a sentiment as that is to prevail, when will progress begin?

Mr. Beecher's preaching is a sort of intellectual gymnastics, daring and mysterious. Like the Japanese juggler who keeps a dozen daggers whirling in the air together, and catches every one of them by the handle as it falls, and never by the blade, so he entertains his congregation with a dozen dangerous doctrines all spinning around at the same time. With unbounded assurance, he says that they are all harmless, if the performer will handle them right. In one breath, he asserts that "the atonement, founded on a fable of Adam's fall, will give place to more glorious development of the outcome of God's nature"; and, in the next, he says that "it is only the truth as it is in Jesus that gives to a man's whole nature—physical, social, moral, and spiritual—the food it needs." To keep those two principles whirling in the air together without one hitting the other, and without hurting the conjurer, is a wonderful feat. Is not "the fable of Adam's fall," and the doctrine of the atonement founded upon it, a part of "the truth as it is in Jesus"?

While invoking the aid of science to purify and

reconstruct religion, Mr. Beecher condescends to employ the arts of those little preachers who pretend that they possess a superior article of truth which they have been specially ordained to distribute among the nations. Mr. Beecher knows that, in science, truths are not graded as to quality. All truths are equal there. Neither moral science nor physical science makes any discrimination in favor of the truth as it is in Jesus, nor against the truth as it is in Plato, Mohammed, Goethe, Emerson, or Darwin. Truths are unsectarian, and they all work together in harmony on the same eternal plan. For ages, it has been the assumption of the creeds that their dogmas must not be subjected to the same tests by which the truth of all other statements and opinions may be ascertained. They pretend to have some "divine" truths which are beyond the test of rational experiment and investigation. These truths must be permitted to contradict logic, because they are superior to it. These doctrines may be false in fact, yet their "spiritual" quality redeems their errors, and converts them into "the truth as it is in Jesus."

Mr. Beecher keeps on hand a strong reserve of "spiritual" truths, the shadows of dead scriptures slain in the fight with science. These are to save his religion when the substance of it shall have perished utterly. In plaintive eloquence, he inquires: "Is evolution going to overturn all those great spiritual truths on which character has hitherto been founded? Is it going to turn us over to the unkindly justice of a material world? Is it to crucify afresh a loving Saviour, and leave us without hope and without God?" This plea is vain: it has been heard a thousand times before. Whenever some great scientific truth has burst upon the world, and compelled the recognition of mankind, it has been required to explain its purpose in appearing, and especially whether or not its intention was to "crucify afresh a loving Saviour." Mr. Beecher's plea is easily translated. It means this: Although the statement in the text involves a physical impossibility, and is therefore morally and scientifically untrue,—although Lazarus was not raised from the dead in fact,—yet the story of his resurrection contains a "spiritual" truth on which character has hitherto been founded, and on which character may be founded again. This distinction cannot be admitted. No doctrine, statement, or opinion that is false in fact or ethically unsound can ever be developed into a spiritual truth; and, although character may be founded upon it, as Mr. Beecher says, yet that character would be better and more useful, if the foundation were true. If the evolution theory is true, it can only harmonize with so much of Christianity as is true; and it has no power to give the rest of it a dispensation to stay.

M. M. TRUMBULL.

CHRISTIANITY AND LEGISLATION.

IV.

The Reformation was as much a legal as a doctrinal change. Its first aim was simony, and its second celibacy; and it lent a reverent ear to the Jewish law. The character of current Christianity was so much altered by it that the relations of religion to jurisprudence became, for a time, far more intimate. The practical moral principles of the early Christians were brotherhood in Christ and self-surrender, but they were not in a position to embody these in law. When they did become powerful, these principles had altered into salvation through the Church; and this proved to be barren of any valuable legal results. In the Reformation, men turned from the Church back to the Bible. There was a great gain in independence and purity, but the pressure of the

Mosaic law was found to be too severe. Everywhere, the attempt practically to enforce it was abandoned,—not to return to the old theories, but to move slowly forward by practical, utilitarian routes. It was not that there was anything novel in the idea of a law founded on religion. The family altar had been the centre of the Roman law and of the earlier barbarous systems. The feudal law took its model and its highest sanction from the Catholic Church. The union of Church and State seemed as much a matter of course then as their separation does to us to-day. But, notwithstanding this, and notwithstanding the faith in holy writ, it proved to be impracticable to go back to the Mosaic rules.

In New England, this was very striking. With ample opportunity and zeal, the pilgrims tried to make society over on the basis of Christian law. They were no fools. They were a picked set of men, of extraordinary fitness for such an undertaking; and they threw their whole souls with tremendous earnestness into the attempt. For four years, the entire government of Massachusetts Bay was left to a group of elders; and, for many years, the political organization was by churches, the parish and the town being synonymous. The suffrage was given only to church members; and the General Court appealed to the elders for legal advice, left minor offences to the churches to punish, and gave them supervision over the minor courts. The court combined the functions of legislative and common law, admiralty, equity, and ecclesiastical and royal courts for some years. It has sometimes been supposed that the attempt to make the Bible a part of the law of this Commonwealth was a well-meant but empty tribute to its sacred authority; but evil-doers, in the early days of the Bay Colony, found it a very unpleasant fact.

In the first half-score of years (1630-1641), the legislature relied so entirely on the common law, supplemented by the Mosaic rules, that it made no important addition to our statutes. The power which they claimed from the Bible was so broad that they did not need to extend it. I will mention some of those representative cases, which I find on the records, of men who were punished in a way that would not now seem tolerable. Thus, people were punished for undutifulness to husbands, for insolent carriage to magistrates, for going into other men's houses on Sunday, and for not going to the ordinances. The prohibition against cards and dice was not aimed at gambling, but at tempting Providence by appeals to the sacred lot. Some of the other offences which I find punished go beyond even Mosaic strictness, though based upon its provisions. Not improving one's time, dancing, playing, lying, living unquietly with one's wife, meddling with physic, courting a maid without her friends' consent, breaking the rule of hospitality, and keeping company with bad men without reproving them, and kissing a woman in the street,—all were treated as criminal. One man was banished on the somewhat vague charge that he was not fit to live with us, and another admonished that the court was weary of his novel disposition. Some of their proceedings must have been annoyingly inquisitive: sending to a man's house, for instance, to make sure that he was bringing up his children in the fear of God; and stopping him on Sunday, to make certain that he was going to church.

It would be a great mistake to suppose that we were living under a lawless religious despotism. These offences would most of them have been punished in England, either in the common law or ecclesiastical courts, at that time; for the idea of confining the interference of the State to well-

defined offences, which are injurious to others, had not been arrived at then.

The attempts to regulate private affairs were constant. Our thrifty forefathers were much exercised over feminine extravagance, and it took them a long while to find out the limit of masculine ability. The wearing of laces was a terrible thing; and their souls were stirred over short sleeves, and cuffs and ruffs, and knots of ribbon and slashed and embroidery. They forbade keeping Christmas or selling cakes, except for solemn occasions of weddings and funerals. They would have no drinking of healths and no smoking of tobacco.

If human nature was too strong for them, they did not acknowledge it without long struggle. Their efforts to stop business competition ought to touch the heart of a socialist. For the first three years, Plymouth was organized upon a co-operative plan; and nothing but the threatened extinction of the colony brought healthier methods. Long after, laws were current regulating the price of provisions and clothing, laws fixing the charges of inn-keepers and millers, laws settling wages and determining profits, laws paying bonuses to favored trades and even furnishing capital, laws fixing the rate of interest, and hindering speculation, and even laws forbidding trading altogether, and authorizing towns to readjust the terms of any unreasonable contract. Some of these were speedily repealed, and others became inoperative; but the colonists were loath to give up the religious idea.

In the body of liberties of 1641, which was, in many ways, a manly defence of freedom, and was for half a century in force, they provided that, in case of the defect of law in any particular case, it should be decided by the word of God; and this, unfortunately, opened the way to all kinds of persecution. Under it, it was said that death was the punishment for any one who should pick up sticks on the Lord's Day. The express provisions of the law were severe enough; for they punished idolatry, blasphemy, witchcraft, perjury, burglary, arson, and striking a parent with death, and authorized the use of torture. But even this was exceeded by the code proposed to the General Court by the Rev. Mr. Cotton, probably commissioned to prepare one for their consideration, who wished to enforce not only these, but the provision of the Mosaic codes, putting to death the revilers of chief magistrate and dividing as spoils the women taken in battle. Although these last savage provisions were not enforced, so far as I can find, they were part of the fundamental law of the colony; and, even a century later, bounty was paid for an Indian woman's scalp. In this first half-century there was a continual stream of mischievous religious legislation, until the horrors of the witchcraft trials aroused a younger and cooler generation to a perception of the wrong; and they put a stop to it, and went back to the common law, which, with all its imperfections, still embodied pretty fairly their sound common sense.

They had established a substantially democratic form of government in 1634; and a judicial organization soon followed, although it was a quarter of a century before the suffrage was extended to non-communicants. But the religious regulations slowly faded, although a Justices' Court arrested the Rev. Mr. Breck for heresy, in 1735, and the legislature supported their right to do so; and, in 1773, James Bell escaped from the usual punishment for manslaughter by pleading benefit of clergy; and even at this day there are some absurd remnants, like our laws against Saturday evening amusements. It should be said

vanced wing of their own body, with which they have little in common beyond the idea of intellectual freedom. But between orthodox Christianity and radical Unitarianism the distance is great, the differences many, and the grounds for fellowship and sympathy few."

THE latest literary enterprise of John B. Alden, the New York publisher, comes to us in a pamphlet of one hundred and sixty pages entitled *Alden's Cyclopadia of Universal Literature*. This is part first, and includes short sketches and specimens of the style of twenty-seven writers whose names begin with the letter A. The price is fifteen cents in this pamphlet form, and sixty cents for a bound volume of four hundred and eighty pages. Other volumes will follow as rapidly as possible at the same rates. Volume one will be ready some time in August.

LOWELL, in his rhymes descriptive of an anti-slavery bazaar at Faneuil Hall and of the celebrities assembled there, thus portrayed Mrs. Maria Weston Chapman, whose long and useful life has just closed:—

"There was Maria Chapman, too,
With her swift eyes of clear steel blue,
The coiled-up mainspring of the fair,
Originating everywhere
The expansive force, without a sound,
That whirls a hundred wheels around;
Herself, meanwhile, as calm and still
As the bare crown of Prospect Hill;
A noble woman, brave and apt,
Cumæa's sibyl not more rapt,
Who might, with those fair tresses shorn,
The Maid of Orleans' casque have worn;
Herself the Joan of our Arc,
For every shaft a shining mark."

GEN. GRANT, in his seventh annual message, mentioned five questions of vital importance demanding legislation at that very session of Congress: namely, the States be required to give each child the opportunity to acquire a good common school education; no sectarianism in the schools, education compulsory, and after 1890 no new voters who cannot read and write; Church and State to be forever separate, and church property to be taxed; the extinction of polygamy, and stopping the importation of women for improper purposes; legislation for speedy resumption of specie payments. In an interesting speech at the reunion of the army of the Tennessee at Des Moines, Ia., a few months before, he dwelt upon the question of education, saying, "Leave the matter of religion to the family altar, the church, and the private school, supported entirely by private contributions"; and, in a subsequent letter, he defined his position as entertaining no hostility to free education going as high as State or nation felt able to provide, but insisting upon giving all common school privileges before public means are appropriated to the higher education of a few. Certainly, these were wise utterances.

MR. GEORGE ILES concluded a recent lecture in the free thought hall, Montreal, on George Jacob Holyoake, thus:—

Mr. Holyoake is now enjoying the Indian summer of his life with the respect and confidence of a circle of friends in England only inferior in variety of conviction and social standing to those who gather around Mr. Gladstone and Mr. Bright. His consideration, sympathy, and unfailing good nature make him beloved of his friends. Yet his kindness did not come to him all at once: the original capital of it, of course, Nature gave; but he has diligently improved it by constant self-control. When a young man, he describes himself as resentful, wilful, and imperious: every year since then has brought with it advances in the highest of the arts,—that of self-improvement as applied to character. When, fifteen years ago, blindness befell him for a time, he met the calamity with fortitude, and, like another Milton, dictated pages he could not see. His friends, who

included Darwin, Lewes, Stopford Brooke, Spencer, and Tyndall, contributed for an annuity, in recognition of his effective and disinterested public services. Mr. Holyoake is engaged upon his autobiography, which I have reason to believe will rank among the most interesting books of our time. As thinker, speaker, writer, reformer, our hero merits our respect, more still as a man; for

"Man is his own star, and the soul that can
Render an honest and a perfect man
Commands all light, all influence, all fate.
Nothing to him falls early or too late.
Our acts our angels are, or good or ill,
Our faithful shadows that walk with us still."

A CONTRIBUTOR to the *Christian Register* declares that there is nothing in the teachings of Jesus "to give us ground for belief that he is necessary to humanity as a mediator between God and man, being himself a man." "Believing this, how can we come to our Father God, feeling our need and his love, and ask him to answer our petitions 'for Christ's sake'?" "Can any one fail to see the inconsistency of this form of words at the close of our prayers among those who hold the views of the Unitarian Church as set forth in the 'statement' from which we have quoted? And yet this form is still used in some of our churches. Furthermore, we not only pray to be heard and answered for Christ's sake, but we actually pray to Christ. At the close of our church service, pastor and people rise up and pray for 'grace, mercy, and peace from God, the Father, and our Lord Jesus Christ,' thus using an old orthodox formula which recognizes Christ as 'one and the same with God,'—God and Christ as one person, equally the object of our worship, to whom we are to address ourselves in prayer." A Unitarian brother replies that the benediction is "not a prayer," but "the expression of a wish," and therefore allowable, and that he shall continue to use the old formula. The *Presbyterian* notices this discussion, and remarks, "A wish which is uttered for others and addressed to some power or being higher than ourselves has in it all the elements of prayer." Another Unitarian brother says in the *Register* that, in his opinion, the questions, "May we ascribe personality to God?" and "Is it right to pray to him?" "are answered by the authority of Christ." For, since God is repeatedly declared by Christ to be our Father, how can we think of him otherwise than as a person?" And in regard to prayer: "Away with metaphysical subtleties then! Enough to know that the Son of God says, 'Ask, and ye shall receive.'"

In an address to the graduating class of the Lucy Cobb Institute at Athens, Ga., Major J. C. Whitner made a plea for the education of woman, in which he said:—

Come with me, young friends, back through the corridors of the centuries,—back, back to that mysterious epoch when, after consultation around creation's council-table, the triune God determined to create man in his own image. You and I will be content with the "face meanings" of the Bible, and not look through the telescope reversed so as to throw this era so dimly distant as to require man's impotent and impudent ratiocination from existing conditions to unauthorized conclusions, which necessarily prescribe limitations to even Jehovah's plans, methods, and periods of procedure.

The orator proceeded to show that "man leads and woman follows, man plans and woman executes, man commands and woman obeys, and thus we have a God-made clerk." "Train a girl in the office," he says, "and she does as has been dictated, and is happiest when not expected to go farther. Train a boy there; and, if healthy, though he be not in his teens, he will in six months, true to the nature given him, not only try to control other clerks, but even to boss the boss himself. He is right. All honor to the lad.

Now let him, then, go ahead, and let his sister follow behind him." The author of this piece of "impotent and impudent ratiocination" seems not to be lacking in confidence; but it is the confidence of ignorance, not of knowledge. He is being deservedly laughed at by the women whom he, in his conceit, thought he was instructing and delighting with irresistible eloquence. "Now, let him, then, go" and reflect on the absurdities of his harangue, revise his theology, enlarge his observation, overcome his conceit, get some ideas, and be careful not to become again a laughing-stock for the girls who, he imagines, do "as has been dictated, and are happiest when not expected to go farther."

ARBOR DAY, 1886.

Unto the future day,
Unto the fairer skies,
May the rich tribute rise
And with the free winds play!

We do not plant for ill—
Nay, nor for plaudits sweet!
On hither shores we meet
To shape the new born will.

The hope we further here,
Oh nature, guide from wrong,
Through seasons strange and strong
Rocked in the distant sphere!

Dim forests now unseen,
Far shadows cast before:
Towards what fruitful shore
Doth man in mystery lean?

This day of wisely care
Is not by spade and pick
Turned as a juggler's trick
To lay a folly bare.

Deep with the forest-child
We trust our manhood's dream,
And earth with soil and stream
Will keep it undefiled.

HORACE L. TRAUBEL.

For The Index.

WHEN?

Will the day be bright,
Or will it be night,
When my eyes must close in death?
Will the sun look down,
Or the storm-cloud frown,
As I draw my last breath?

Will the dawn be nigh,
Or the sunset sky
Grow red, as I pass away?
Will the wintry gloom
Or the summer's bloom
Bring me that fateful day?

Will some star on high
Light my sightless eye,
And the moon her secret keep,
As the chilling breath
Of the monarch Death
Gives me deep and endless sleep?

Will some friend be near,
Who with pitying tear
Shall view my pallid face,
And my faults forget,
And with fond regret
Give me a last embrace?

Oh, the few score years
Of life's hopes and fears!
O Time fleeing quickly past!
What is wealth and power
In that solemn hour,
When man feels it is his last!

W. McD.

The Index.

BOSTON, JULY 30. 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

IF PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

IX.

THE MARTYR PERIOD.

Stoicism a Preparation for Christianity.

Reviewing the period of the Stoic emperors from the stand-point of comparative religion, we cannot doubt that the public recognition and general diffusion of the principles of Stoicism were strongly influential in preparing the way for the progress of Christianity. Reichele asserts of the post-Aristotelian period, in the development of philosophy, that "it supplied the scientific mould into which Christianity, in the early years of its growth, was cast, and bearing the shape of which it has come down to us.* While, on its dogmatic side, the influence of Platonism, and especially of the Neo-Platonic school of Alexandria, is predominant, on its social and ethical side, Stoicism was scarcely less influential. Both Stoicism and Neo-Platonism were products of the intermingling of Greek with Semitic thought, the latter even predominating in the direction and development of Stoicism. Zeller affirms that "the Stoic philosophy contains no feature of importance which we can pronounce with certainty to be taken from the popular faith. Even the true worship of God, according to their view, consists only in the mental effort to know God, and in a moral and pious life."† And again: "Even at Athens there were teachers, not a few, whose foreign extraction indicates the age of Hellenism. Next to the later Neo-Platonic school, this remark is of none more true than of the Stoic. With this fact we may always connect the world-citizenship of this

* Oswald J. Reichele, B.O.L. and M.A., vicar of Sparsholt, Berks.

† The Stoics, Epicureans, and Sceptics, p. 343. By Dr. E. Zeller, professor at Heidelberg.

school.* A recent writer in the *Nineteenth Century* has well stated the relation of Stoicism to Christianity, and of both to the pre-existing faiths. "The new tone of Greek ethical thought displayed in the rise of Stoicism," he says, "must have been due, according to our national-psychological stand-point, to some cross-fertilization by the ideas of a different race; and Sir Alexander Grant† has shown that all the eminent Stoics were of Semitic origin. The similarity which has struck most observers between Stoicism and Christianity receives its explanation from our present stand-point, when we remember that both were cross-fertilizations of Hellenism by Semitism. The difference, too, may be due to the fact that, in one case, the less intense Semites were the missionaries, while Christianity was propagated by the fiery zeal of the Jews. The spread of Stoicism among the Romans cannot but have had some influence in preparing the way for Christianity."‡

The Persecutions of Diocletian and Decius.

The emperors, from the reign of Marcus Aurelius to that of Decius (249–251 A.D.), if not friendly to Christianity, were at least indifferent to it. Elagabalus (218 A.D.), who assumed the manners and state of an Oriental despot, conceived the idea of a universal eclectic *cultus*, which should fuse the Jewish and Samaritan with the Pagan and Christian religions, with the sun as the supreme object of adoration, and the emperor as his earthly incarnation and representative,—a conception similar to that of Kuhn-Aten, the fourth Amen-hotep of Egypt. Alexander Severus (222–249 A.D.) carried his eclecticism so far that he enlarged the temples of Isis and Osiris, and enshrined in the palace as his household deities Orpheus, Abraham, Jesus, and Apollonius of Tyana. He awarded a piece of ground, the ownership of which was in dispute, to the Christians, for the alleged reason that it was better for it to be devoted to the worship of God in any form than to any profane or secular occupation.§

During the reigns of Decius and Diocletian, a more general opposition was stirred up against Christianity than at any previous period. An attempt was made throughout the empire to suppress the churches, and prevent the further spread of the faith. Actual violence, however, appears to have been offered only to the bishops and leading ecclesiastics, while the humbler converts were seldom molested. Numbers of the clergy doubtless suffered imprisonment and death, exactly how many it is now impossible to determine. The occasion of these more general persecutions is doubtless to be discovered in the increasing claims of the new religion to exclusive recognition and universal supremacy,—claims which threatened to override, not only the ancient religion of the empire, but also its secular authority. Even Dean Milman refers it in part also to the relaxation of morals in the Christian communities, and the growth of the spirit of ecclesiastical domination, with its accompanying dissensions and jealousies.

Extent of the Persecutions.—Exaggeration of Later Historians.

In reviewing the subject of the persecution and martyrdom of the Christians under the empire

† Aristotle's Ethics (third edition), I., p. 307.

‡ "The God of Israel," by Joseph Jacobs, *Nineteenth Century*, September, 1879.

§ The story of the alleged martyrdom of Vivia Perpetua and Felicitas in Northern Africa, during the reign of Septimius Severus, though usually accepted as historical, bears suggestions of its apocryphal character. The exact place of their martyrdom is uncertain; the testimony of the *Acta Martyrum* is of doubtful authenticity; the very minutiae of the recital suggest doubt of its reality; while the names "Eternal Life" (*Vivia Perpetua*) and "Happiness" (*Felicitas*) suggest an allegorical rather than an historical interpretation of the narrative.

from the stand-point of an impartial investigator of the historical evidence, the conclusion is unavoidable that the extent and enormity of these acts of the Pagan emperors have been greatly exaggerated by Christian historians and apologists. Admitting that there is a substantial foundation for the charges of oppression, violence, and infliction of the penalty of death in many instances, these enormities sink into insignificance compared with those perpetrated by Christian authority in later times. Gibbon estimates the total number of the martyrs at about two thousand, and asserts that "the number of Protestants who were executed by the Spaniards during a single reign and in a single province far exceeded that of the primitive martyrs in the space of three centuries of the Roman Empire." Niebuhr, whose candor and impartiality can hardly be doubted, confirms the opinion of Dodwell and other historians that the persecution of Galerius and Diocletian, generally affirmed to be the most general and disastrous of all, was a mere shadow compared with the persecution of the Protestants in the Netherlands by the Duke of Alva. According to Grotius, the number of Dutch martyrs was at least one hundred thousand. Motley says of these persecutions: "The barbarities committed amid the sack and ruin of those blazing and starving cities are almost beyond belief. Unborn infants were torn from the bodies of their living mothers, . . . and whole populations were burned and hacked to pieces by soldiers in every mode which cruelty in its wanton ingenuity could devise." The Spanish Inquisition, during the eighteen years of Torquemada, punished, according to the lowest estimate, one hundred and five thousand persons, of whom eight thousand eight hundred were burnt alive.

The persecution of the Jews of Spain and Russia by the Christians furnish examples of barbarity and wholesale slaughter, before which even the crimes of Nero pale into obscurity and insignificance. In Andalusia, two thousand Jews were executed, and seventeen thousand otherwise punished, in a single year. In our own day, the annals of Jewish persecution in Russia and Bulgaria compare in infamy with the recitals of the worst atrocities of the early Christian ages. Recollecting the treatment of the Indian and the negro in our own country, American Christians ought in all decency to refrain from slandering the memories of the dead Roman emperors. The Pagan massacre, in which an entire village of non-combatants—disabled old men, women, and little children—were put to the sword and fire,—an act to this day neither rebuked nor disavowed by the government,—closes our mouths forever from the indiscriminate censure and condemnation of Diocletian, Decius, and Marcus Aurelius.

General Causes of the Persecutions.

Bearing in mind the generally conceded policy of toleration toward alien religions which characterized the government of the Roman Empire, it is of great interest and importance to account for the apparent violation of this policy in the treatment of the Christians. The true explanation of the proven facts of the martyr period appears to lie largely in the character of the new religion itself, and in a general and not unnatural misconception of some of its noteworthy customs, ideas, and dogmas on the part of the populace and those in authority. All the other religions which, with the growth of the empire, came in contact with the popular faith and attracted the attention of the government, were ethnic and limited in their sway, and did not aim at universal dominion. Hence, they were mutually tolerant within their respective

spheres. Rome, as the capital of the empire, recognized and to some extent assimilated them. Judaism alone of the older faiths was intolerant, exclusive, and repelled recognition and assimilation. Christianity was never an ethnic religion: it aimed from the first at universal dominion. From its very nature, it could admit of no compromise with the idolatrous Paganism of the nations. It resolutely refused to be combined with other faiths, or assimilated into the eclectic *cultus* of the capital. It resented the tolerance and indifference of Rome with an intolerant demand for exclusive recognition.

Erecting no altars and offering no sacrifices, denying the very existence of the gods of Rome, meeting in secrecy, contrary to the laws of the empire, admitting none save those who had been united with them by the ordinance of baptism to participation in their worship, the Christians came to be regarded naturally and not without reason as inimical to the popular religion, and as a source of danger to the security of the State. Exaggerated reports concerning the character of their baptismal ceremony and their "love-feasts" not unnaturally gave rise to popular suspicions of the general prevalence of immorality in the Christian communities. The New Testament Epistles and patristic writings contain abundant evidence that these suspicions were not wholly unwarranted. Paul's doctrine of a new life outside the sanctions of the law was doubtless as grievously misinterpreted in many instances as were the ethical precepts of Epicurus. This fact is conceded by able Christian writers. Prof. Lindsay, of Glasgow University, says: "In the Epistles of Paul, we find evidence that many of the Gentile Christians were even disposed to think of the new life of Christianity as one entirely outside the realm of ordinary moral law. This lawless or immoral tendency was strongly checked in the Christian Church, and only gained headway in the sects outside of it; but traces of the tendency are not infrequent."

In rightly estimating the circumstances of the period under consideration, however, we should not forget that there was no authoritative Church at this time,—no generally recognized *consensus* of Christian belief and practice,—but only as yet a number of distinct and unrelated communities, differing in customs and in doctrine, but all claiming the Christian name. Although the influence and authority of the Church at Rome were beginning to be recognized by a considerable portion of these communities, and the orthodox faith was endeavoring to clarify itself from the heresies of the sects, it yet lacked the power to enforce its authority; and, so far as the general public could see or understand, all the churches claiming the name of Christian had an equal right to it. Some of the Gnostic sects were openly given to immoral practices. A system akin to Plato's proposed custom of "complex marriage" prevailed in certain communities claiming the Christian name; and we even have authentic testimony to the fact that a bishop held a view of the obligations of Christian hospitality which involved a practical recognition of this odious system.* Facts of this kind, though only occasionally coming to the surface, would naturally prejudice the people and their rulers against the entire body of Christian believers.

We have already alluded to the popular misconception of the doctrine of the approaching destruction of the world by fire, in connection with the conflagration at Rome, which served as the excuse for the persecutions of Nero. In a like manner, a misunderstanding of the Christian sacrament of the eucharist, conceived symbolically or

actually as the body and blood of Christ, doubtless gave rise to the rumor that children were sacrificed and eaten at the secret evening repasts. It is noteworthy that a similar slanderous accusation has often been the occasion of Christian persecution of the Jews; and this belief still prevails among the ignorant people in Russia, Bulgaria, and the East.*

The Montanists: Their Beliefs and Practices.

Many of the later martyrs were affiliated with the peculiar sect known as Montanists, from one Montanus, their founder, a native of Phrygia. This sect originated about the middle of the second century. Its doctrines were, in some respects, a survival—in others, an exaggeration and distortion—of the early Christian belief. The Montanists were, as nearly as possible, the exact counterparts of the Gnostics, against whose peculiar doctrines they uttered their severest protest. They believed in the continuance of the miraculous gifts said to have been possessed by Jesus and the apostles, in prophecy by supernatural inspiration, in ecstasy and "speaking with tongues," in prolonged fasting and other ascetic observances. In opposition to the growing power of the presbyters and bishops, they taught the doctrine, naturally drawn from the principles of Pharisaic Judaism, of a universal priesthood, in whose ranks they even included women. They saw in the ecstatic phenomena of hysteria the manifestations of a supernatural power. In some respects, the Montanists were prototypes of the modern Quakers, believing their "mediums" or prophets to be the immediate recipients of divine inspiration. They retained the primitive Christian anticipation of the early destruction of the world, and the return of Christ in glory to reign over a regenerated earth. In praying, "Thy kingdom come," they therefore prayed literally, as did Jesus and his disciples, for the end of the world. They exercised fanatical severity in discipline, requiring unmarried women to go veiled, forbidding any to wear ornaments or any save the plainest and simplest clothing. They regarded marriage as merely a concession to the sensual nature of man, and forbade second marriages as adultery. They taught the impossibility of a second repentance, and the eternal punishment of the unregenerate. Tertullian, one of their chief representatives, held that there were seven mortal sins, which, if committed after baptism, were unpardonable, and doomed the sinner to eternal perdition.

These fanatical people, with their hysterical visions and ecstasies, their secret assemblies and social exclusiveness, their rigid asceticism and irrational millennialism, were regarded by the populace very much as witches and professors of the "black art" were looked upon during the prevalence of the witchcraft delusion in Europe and America. The educated public sentiment of the time abhorred the professors of magic and sorcery; and, while not sufficiently comprehending the method of science to regard alleged supernatural phenomena as the result of fraud, delusion, or abnormal physical and nervous conditions, they assigned to them a significance and an origin wholly evil, and regarded their practitioners as worthy of condign punishment.

The Christian persecutions, therefore, were a natural consequence of ignorance, credulity, and superstition on both sides. While the Christians often suffered from unjust accusations, and, in

the persons of their leaders, probably represented a higher standard of morality than that which generally prevailed in corresponding social circles in Pagan society, on the other hand, individuals, and even entire congregations, were open to just charges of immorality and gross superstition. It is hardly to be wondered at that indignation, justly aroused against a few, should often expend itself upon those who were blameless. The new doctrine, but little understood, was sometimes condemned, in the persons of its most worthy defenders, for evils which appeared in the lives of some of its professors, even as free thought and rational religion in our own day often suffer unmerited odium, owing to the unworthy lives of some of their advocates.

Development of Christian Doctrine: Incarnation and Atonement.

During this period, two leading doctrines of the Christian faith took form, and finally became recognized as fundamental to the Christian system. These were the doctrines of the divine incarnation and atonement for sin by an expiatory sacrifice, involving the shedding of blood. The latter, prefigured in the ancient Hebrew faith, was no less also a doctrine of the popular Pagan religion. Personal mutilation, the sacrifice of animals, and even at times of human beings, characterized a certain phase in the development of nearly all the early religions of the world; and, accompanying these rites, we find the belief in their placating or atoning efficacy. One of these rites, often celebrated at this period, was the *taurobolium*, or *criobolium*, a kind of baptism in the blood of a sacrificed bull or ram. In the performance of this rite, the worshipper stood naked beneath a perforated platform, and was drenched from head to foot in the blood of the slaughtered animal. This horrible experience was thought to be a certain ransom from all sin, and a pledge of happiness in the life to come. As the worshipper, reeking with the deluge of blood, passed out through the crowd, the people pressed around him to win some share, even by a touch of the atoning blood, in his salvation from the consequences of sin. The doctrine of salvation by the blood of Christ appropriately took form during the sanguinary period of the martyrs; and Origen even attributes a saving efficacy to the blood of the persecuted followers of the Nazarene, of a like character to that claimed for the blood of Christ.

The doctrine of the incarnation was never a Jewish belief, and was absorbed by Christianity directly from heathenism. "We have, then," says Prof. Allen, "in the mind of Paganism at this epoch, the two characteristic religious ideas of the age—incarnation and expiatory sacrifice—distinctly conceived and plainly developed. . . . The important thing to notice of them is that they are the ideas of that age. They are not peculiar to Christianity: it would be truer to say that, in origin and essence, they are rather Pagan than Christian. That they had a powerful effect in shaping the Christian belief there can be no doubt. At least, they predisposed the mind of the Roman world to accept that belief so broadly and so easily as it did."*

Justin Martyr was one of the earliest of the Christian Fathers to place especial emphasis upon the doctrine of salvation by the blood of Christ. He also recognized the likeness of the Christian ceremony of the eucharist to certain heathen rites. In his First Apology, he says: "Of the food called by us Eucharist, no one is allowed to partake but him who believes the truth of our doc-

*"The Christianity which the emperors aimed at repressing was," says Matthew Arnold, "in their conception of it, something philosophically contemptible, politically subversive, and morally abominable. As men, they sincerely regarded it much as well-conditioned people among us regard Mormonism; as rulers, they regarded it much as liberal statesmen with us regard the Jesuits."—*Essay on Marcus Aurelius*.

* *History of the Christian Church*, vol. iii. By Rev. Dr. Philip Schaff.

* *Christian History*, vol. i. "The Mind of Paganism."

trines, and who has been washed with the washing that is for the forgiveness of sins and to regeneration, and who so lives as Christ has directed. For we do not receive them as ordinary food or ordinary drink; but as, by the word of God, Jesus Christ, our Saviour, was made flesh, . . . so also the food which was blessed by the prayer of the Word which proceeded from him . . . is, we are taught, both the flesh and blood of that Jesus who was made flesh. . . . The same thing in the mysteries of Mithra, also, the evil demons initiated and caused to be done; for bread and a cup of water are placed in the mystic rites for one who is to be initiated, with the addition of certain words, as you know or may learn." In his dialogue with the Jew, Trypho, he adduces many alleged symbols of the blood of Christ from the Hebrew writings and ceremonials, arguing particularly from the expression, "washing his robe in the blood of the grape," which he connects with Jesus' Oriental and symbolical statement, "This is my blood," that Jesus could have had no human parentage, but was in fact the son of that God who made the grape and the vine.

The Christianity of this period, as well as the apostolic age, was deeply tainted with irrational superstitions. Justin Martyr was a firm believer in the active influence of demons in human affairs. Athenagoras, whom Dr. Jackson alleges to have been "the superior of all in his own age, in literary merit and broad philosophical culture," and who wrote "the best defence of the Christians of his age,"* alludes, as to an uncontradicted fact, to "the angels who have fallen from heaven and haunt the air and the earth, and are no longer able to rise to heavenly things, and the souls of giants who are the demons who wander about the world." Elsewhere, in the tone of the Persian dualism, he speaks of "the Prince of Matter, who exercises a control and management contrary to the good that is in God."

From the demonism and puerile superstition of the Christian Fathers, mingled though it is with powerful arguments for monotheism and against idolatry, and with injunctions for a higher purity of thought and life, we and the rational world will henceforth turn to the lofty ethics, the pure spirituality, the refined culture and noble life of Marcus Aurelius, the Stoic emperor, as to a well of refreshment after passing through a parched and barren desert. Surely, the closer we approach to the source of that religion under the influence of which we have been reared and nurtured, the more clearly do we perceive it to be no unique or infallible system of thought and belief, but rather of like texture and character with all the other religions of the world. It is divine as they are divine,—as the world and all things therein are divine,—and no otherwise. It is human as they are human, fallible as they are fallible. It arose by a natural process of evolution out of pre-existing systems, to complete the overthrow of the prevailing though effete polytheistic *cultus*, and to supplement the narrowness and partialism of the decaying ethnic religions by the principles of universalism and human brotherhood. In the presence of its errors and its superstitions, and equally of the good that is in it, our conceit of Christian infallibility drops away, from very shame. We can doubt no longer that in every land and every faith may be traced, together with much human imperfection, the working of the Power Eternal that brings beauty from ashes, order from chaos, a nobler humanity from the conflicts of the ages, and in the future will evolve from the turmoil and contradictions of our present social order a new and yet diviner manhood.

* *Christian Literature Primers.*

In looking back, finally, over the period now under discussion, we cannot doubt that the sufferings and deaths of the Christian martyrs were powerfully instrumental in promoting and establishing the new religion. This, however, is a phenomenon not peculiar to any single form of faith. So has it always been since the world began. That cause, that opinion, for which people willingly give their lives, is ever on the road to triumph.

"The head that once was bowed to earth
Up in the heavens now towers,
And the martyr of a former day
Becomes the saint of ours.
While he who now, denounced and scorned,
Speaks boldly for the right,
Shall in the glorious future shine
A prophet, crowned with light.

"The Man rejected and despised
Is worshipped and adored,
The felon scorned and crucified
Becomes a glorious God;
And, bright with gold, that blood-stained cross,
The emblem once of shame,
Raised high above all other signs,
Exalts his blessed name.
And thus the truth,—the hated truth,—
Each day still mightier grown,
Doth move the nations by its power,
And make the world its own."

CORRESPONDENCE.

MR. CONWAY UPON ENGLAND.

Editors of The Index:—

To misrepresent English social life is a characteristic of many American writers, the last of whom is Mr. Conway through Theodore Stanton in *The Index* of June 11. Had not Mr. Conway resided among us, been greatly respected by us, and been followed by the Gladstonian party, I could account for his recent asperity; but, considering the whole of his following in England are Liberals and Radicals, sworn supporters of Mr. Gladstone, I cannot conceive why he should thus asperse his friends through their cause by announcing the new electorate is "illiterate and groggy, and the leader of the cause an unconscious humbug."

First, to those who are apt to listen to international bandying and to believe that the new electorate is both illiterate and groggy, I refer to Charles Dickens, whose works are the biographical focus through which may be viewed the whole of our national character and existence. What Dickens saw and wrote about the matter, Mr. Gladstone also sees; namely, the more their responsibility is increased, the more dignified and self-respectful they become. Adam Bede may not elect diplomatists and the *elite*; but Adam Bede will elect men of principle whose conduct is guided like his own, through religion and patriotism.

If a groggy element has ever been imparted into the English electorate, it was by Lord Beaconsfield, when he gave the franchise to the cities and the boroughs without including the peasantry. If drunkenness is rife anywhere in England, it is in the cities, where men have enjoyed the vote for many years, and who have not as yet upset the Constitution. Statistics prove that the convictions for drunkenness in the country are quite nominal in comparison to what they are in the cities; and yet the peasant, mostly the parent of the townsman, was disqualified to have a vote. That disqualification, thanks to Mr. Gladstone, has been removed. By its removal, a powerful conservative break is likely to be added to the Constitution. If the English peasant is not sober, industrious, and conservative, he decidedly, like Esau, has sold his birthright. The denial of his rights by Lord Salisbury may influence him in the coming elections to vote for the Gladstonian party; but I question whether his old friends, the clergy and the aristocracy, who are ever near him, will not persuade him to vote conservative. Under these our actual circumstances, and instead of an appeal to the country being fraught with perils we have never dreamed of, we anticipate our future House of Commons will have sent to it men who have not the misfortune to be born peers, or sons of peers, but who have the felicity to be endowed with governing powers like Chatham and Burke, and whose wisdom in like man-

ner will pilot the empire into safe harbors far away from ignominy and ruin. Instead of England becoming a jelly-fish democracy through Mr. Gladstone's recent extension of the franchise, it will become England alive at last to her true interests, the interests of the people, and not of an aristocratic minority whose existence until now has been based upon war and the denial of man's natural rights. Because an anomaly, a sham, a fraud, is about to be annihilated, I do not think we need put ourselves in Mr. Conway's sackcloth and ashes. Because the horizon is clearing, because man's responsibility is widened and his individuality developed, which means a nation strengthened and buttressed tenfold, I do not think we should view the future of England in Mr. Conway's inverse order. Because Mr. Conway chooses to say Mr. Gladstone is too old to govern, I do not think the world forgets how, in his old age, he has passed two of the wisest and most powerful measures ever passed by an Englishman,—the Irish Land Act and the Extension of the Franchise. Moreover, it is not general that an unconscious humbug holds his own, especially over the English, as Mr. Gladstone has done for more than half a century. It is not general for an unconscious humbug to bestow benefits upon his race. It is not general for an unconscious humbug to refrain from taking his state pension, especially if he is poor. Neither is it general for an unconscious humbug to be free from vanity, to refuse a peerage, to have a proud monarch and a haughty Cecil entreating him to forfeit the liberties of the House of Commons, which he would have done, had he guaranteed to offer no opposition to their George Bute-like policy, which lost us America.

WILLIAM LAW.

9 WOBURN PLACE, RUSSELL SQUARE, W.C., LONDON.

BOOK NOTICES.

THE COMING CREED OF THE WORLD. Is there not a Faith more Sublime and Blissful than Christianity? A Voice crying in the Wilderness. By Frederick Gerhard. Philadelphia: W. H. Thomas, 404 Arch Street. 1884. pp. 526. Price \$2.00.

Mr. Gerhard's creed, which he thinks is "the coming creed of the world," is belief in one God, the author and ruler of all things, and in religion as the feeling of dependence upon this Being, the sense of duty and obedience to and love of him, and, which is next in importance, love of man. Everything that occurs in the universe is according to law. Reason is the highest gift of God to man. The revelations in nature and in the human conscience are the only divine revelations. Man is immortal, and will improve after death, until he "has reached perfection, and has joined the Great Spirit of the world, and has become one with it." The author claims that Christianity is an inconsistent and pernicious system,—although Jesus was a teacher of truth,—and that the Christian clergy are the foes of human progress. Considerable space is given to a statement of the errors of the Bible, absurdities of the Christian theology, and the crimes and cruelties of Christian persecutors.

The theory of evolution, as taught by Darwin and others, is mere conjecture, or hardly more. Atheism, agnosticism, materialism, and pantheism are all wrong as to philosophy and bad in tendency. Voltaire is referred to as an atheist, as one who, "during his whole life, was not able to recognize God," yet, "when the end approached, threw himself upon God's great fatherly care, and breathed his last upon it, in the belief in him, the eternal God."

Of modern Spiritualism, our author is doubtful; but in somnambulism dreams, presentiments, etc., he finds abundant proofs of the mind's independence of the body and of the immortality, not of the soul, but of the *spirit*. "The activity of the soul is dependent on the sensual organs; and, as these organs die with the body, the soul also must lose its activity with them, and cannot be immortal. It is different with the spirit, which does not depend upon the organs of the body; for a man may be deprived of the use of his senses, yet he will be able to *think*,—that is to say, be spiritually active." The last chapter is devoted to marriage and parentage, children and their education, rights and duties, and morality in general. It contains many good though commonplace thoughts. The author is opposed to prohibitory laws; for, he says, "facts do not prove that immoderate drinking is the cause of crime." He is opposed to Sunday laws,

to capital punishment, and "what is called the emancipation of woman," who, he thinks, should be "the fixed point in the continual motion of the world."

The work, although marked by evident sincerity and earnestness, cannot fairly be regarded as any new addition to religious criticism or to religious thought. It is mainly a repetition of what has been said and resaid, published and republished, thousands of times. All that is of any value in the volume in regard to natural religion is far better stated in the first part of Paine's *Age of Reason*. The author has but scant acquaintance with the best Biblical criticism of the past quarter of a century, or with the methods of our greatest thinkers in dealing with the religious books and beliefs of the past and the religious problems of the present. While the work is commonplace in thought and style, the many theories, opinions, and criticisms, wise or otherwise, brought together under the title of *The Coming Creed of the World*, form an ensemble that is decidedly unique.

B. F. U.

THE PHILOSOPHY OF DISENCHANTMENT. By Edgar Everson Saltus. Boston: Houghton, Mifflin & Co. 1885. pp. 223. Price \$1.25.

The author of this volume has gleaned from ancient and modern literature numerous passages expressing discontent and affirming the worthlessness of life, due either to melancholy moods, to which genius is peculiarly subject, or to a soured nature and a pessimistic disposition, such as may arise from repeated failures and disappointments in life, vanity, and inappreciation,—imagined or real,—or excesses, such as not only impair the vitality, but taint and distort the mind, or to a philosophy of asceticism or indulgence, each of which leads to the other, and both in the long run to the same results. The second chapter is devoted to the life and philosophy of Schopenhauer, the "high priest of pessimism." "His grandmother," we are told, "lost her reason at the death of her husband,—a circumstance as unusual then as in more recent years; his two uncles passed their melancholy lives on the frontiers of insanity; and his father enjoyed a reputation for eccentricity which his end fully justified." It is not strange that the son, with all his intellectual keenness, was eccentric in conduct and thought. The world will be slow to accept his view that life is an evil *per se*, that chaos is better, and that the extinction of the race preferably by asceticism or absolute chastity, is of all things the most desirable.

And that part of Hartmann's philosophy set forth by Mr. Saltus, that the interest of the Unconscious is opposed to man's; that it is to the advantage of the former that man should live; and that, in furtherance of its aims, it has surrounded man with such illusions as are capable of making him believe life is worth living, when in fact it is not; and that the extinction of life will be brought about, if not sooner by a gigantic suicide, in accordance with a common resolution executed simultaneously by all the inhabitants of earth, at least by the continual weakening of passion with the development of consciousness, and the consequent decline and decay of humanity. Another pessimistic supposition credited to Renan is that, with the advance of science, some one may yet discover a force capable of blowing this globe into fragments, and which, if successfully used, would put an end to the race. Mr. Saltus thinks "the world is not yet ripe for a supreme quietus, and, in the mean time, the worth of life may still be questioned." He is of the opinion that, speaking broadly, "life may be said to be always valuable to the obtuse, often valueless to the sensitive; while to him who commiserates with all mankind, and sympathizes with everything that is, life never appears otherwise than as an immense and terrible affliction." Is this concluding sentence sustained by what is known of the lives of the best men and women, the most affectionate, benevolent, philanthropic, whose work and pleasure have consisted largely in alleviating distress and promoting the well-being of others?

B. F. U.

THE JOURNALS OF MAJOR-GEN. C. G. GORDON, C.B., AT KARTOUM. Printed from the Original Manuscripts. Introduction and Notes by A. Egmont Hake, author of *The Story of Chinese Gordon*, etc. With Portraits, Two Maps, and Thirty Illustrations after Sketches by Gen. Gordon. Boston: Houghton, Mifflin & Co. 1885. pp. 479. Price \$2.00.

These interesting journals afford abundant evidence that Gen. Gordon possessed many of the qual-

ities of a hero. His courage, his unselfish spirit, his honesty and sincerity of purpose are beyond question. At Kartoum, he was not greatly concerned about his own personal safety. He thought of the fate of the helpless people who surrounded him. To the cause in which he was enlisted, he was thoroughly devoted. With his sensitive conscience, he felt constrained to act according to his ideas of right and duty, even though he disregarded in some respects the policy of the government that sent him on his mission. He had the power of impressing himself profoundly upon men of different races, languages, and religions, and of making them yield voluntary obedience to his will. But these journals, which clearly reveal the varying phases of his personal feelings, prove that he was impulsive and petulant; that his judgment was defective, as shown, indeed, in the miscalculated venture upon which he staked his life; that he was egotistic, passionate, and erratic,—which explains in part at least his success in winning the confidence of a semi-civilized people,—and at times a levity and a trifling disposition as exhibited in his wearisome small talk quite inconsistent with the character of the ideal hero. His journals show an intense self-consciousness manifested in constant self-criticism or self-condemnation. He was at times full of suspicions, and even imagined that Gladstone, who could feel only devout admiration for such a man, actually desired his death. He was subject to religious hallucinations; and they influenced his actions, impaired his judgment, and contributed to the disasters in the Soudan. The English government should never, in any way, have been identified with Gen. Gordon's enterprises; nor should the operations in Egypt have been made dependent upon his romantic movements, which led unhappily to the sacrifice of many brave men whose valor and endurance cannot redeem from disaster and disgrace the ill-starred expedition which resulted in Gordon's death and the failure of his schemes.

B. F. U.

THE Catholic World for July is a very readable number. In "A New England Pilgrimage," Edith W. Cook tells of her experiences among the mountains of Northern New Hampshire. Monsignor Seton, D.D., has an article on "The Origin of Historical Societies." A bright paper entitled "American Boarding House Sketches" is from the posthumous writings of the late Lady Blanche Murphy. John Ball, in temperance article entitled "A Revelation of the Census," says: "Since *Helpers' Impending Crisis*, no unprofessional writer has shown a greater power of massing facts and hurling them with Grant-like force on the enemy than Mrs. Elizabeth Thompson. They first repel, then attract, then astound the reader; for, the first repugnance to statistics overcome, the story they tell amazes by its revelations, and arouses the moral sense to aggressiveness by its lessons." Thomas Ewing Steele gives brilliant prophecies of "The Future of French Canada." R. H. Clarke, LL.D., writes on "Freedom of Worship in Practice." John Augustus O'Shea has an interesting paper on the apparently uninteresting subject of "The Nosology of Regicides." It is rather amusing, from a liberal thinker's point of view, to read the estimate of "Victor Hugo and his Work," given here from a really generous Catholic writer, P. F. de Gournay. Other articles are: an attack from the Catholic stand-point on our public school system, entitled "Two Education Reports"; "Among the Insects in a Southern City," by T. F. Galway; and "A Farming Experiment in West Virginia." Among the "New Publications" reviewed, we note *The Revision of the Anglican Version of the Hebrew and Chaldee Books of Holy Scripture*; *Nature and Thought*, by St. George Mivart; *The Philosophy of Disenchantment*; *The Morals of Christ*; and *Essays and Speeches of Jeremiah S. Black*.

"CONCERNING THE SUPPRESSED BOOK" is the title of the first article by the editor in the August number of the *Popular Science Monthly* which examines the Spencer-Harrison correspondence, that ended in destroying the book those gentlemen had jointly produced. It is shown that the charge of "piracy" is groundless, and that Harrison, instead of being robbed by the American publishers, was in fact protected by them, and his interests as substantially cared for as they would have been under an international copyright law. An article of great interest is "Genius and Insanity," by Mr. James Sully. "The Future of National Banking" is the subject of an article by Mr.

E. R. Leland, of Wall Street, who discusses some of the more important methods that have been proposed as substitutes for our present system now passing away with the decrease of the national debt. Dr. Mary Putnam-Jacobi gives an account of "An Experiment in Primary Education," made by herself on her own child, in which the study of things was made to take the place of the study of words, with some decidedly novel and striking results. Sir John Lubbock's illustrated articles "On Leaves," begun in July, is completed in this number. The speeches of Prof. Huxley and the Prince of Wales, at the presentation of the Darwin statue to the British Museum, are given, together with several interesting articles not here noticed. The Religion OF PHILOSOPHY;

OR,

The Unification of Knowledge.

A COMPARISON

of the Chief Philosophical and Religious Systems of the World, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God.

By RAYMOND S. PERRIN.

Octavo, cloth. \$4.00.

G. P. Putnam's Sons,

27 and 29 West 23d Street, New York.

A SEASIDE RETREAT.

Ocean Cottage, on Horseneck Beach, is situated about thirteen miles south-west from New Bedford on the open sea. Those wishing a pleasant and quiet summer resort, with all the accommodations of a first-class hotel without the restraints of a fashionable watering place, will be pleased with our home. We have one of the finest beaches in the country, with the surf at our door; excellent bathing and fishing; an inlet close by for those wishing to sail in smooth waters. Seldom any mosquitoes about the hotel.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

TOKOLOGY

A Book for every woman. Alice B. Stockham, M. D.
A COMPLETE LADIES' GUIDE.
20,000 Sold in Little Over a Year.
Agents find it the most popular work on the market. The very best book to put into the hands of a girl or woman. E. M. HALE, M. D. Cloth, postpaid \$2.00; Morocco, \$2.50. Circulars Free. Sanitary Pub. Co., 159 La Salle St., Chicago, Ill.

H. T. MARSHALL'S PATENT ADJUSTABLE LACE CONGRESS.

THE COMING SHOE.

By means of its Lacing Adjustment, it can be made as comfortable as any Lace Shoe, and is just as convenient as any Congress in putting on or off, as it requires no lacing and unlacing after being once adjusted to the foot.

The most durable elastic is used, yet does not draw the foot and ankle as in ordinary Congress. Every one who wears them likes them.

Take no substitute until you have seen and tried on a pair. If your dealer does not have them or order them for you, write to subscriber for directions how to get them. All Shoes warranted that are stamped with name of Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes, Base Ball, Bicycle, and Lawn Tennis Shoes.

H. T. MARSHALL, Brockton, Mass.

N.B.—Patent stamp woven in one strap of each shoe.

A large assortment of these shoes at retail at No. 17 Water Street, Boston.

PIC-NIC SUGGESTIONS.

Book now in press. Suggestions for Sunday-school picnics, excursions, etc., from experienced Sunday-school workers from various sections, both city and country. Replete with valuable hints. Worth many times its cost to any Superintendent. Price, postpaid, 25c., or will send free to any one sending us names of Sunday-schools of all Sunday-schools in his place. Address, DAVID C. COOK PUBL. CO., 18 & 15 Washington St., Chicago.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist; analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvelously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—Boston Evening Transcript.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. Full of Figures, Facts, and Interesting Extracts. Price 10 cents; 12 copies, \$1.00.

No. 5.—*God in the Constitution*, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*The Sabbath*, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*Compulsory Education*, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American *Turnerbund*.)

Editor, C. Hermann Beppe.

TERMS, PER ANNUM, IN ADVANCE:

UNITED STATES AND CANADA:

Freidenker..... \$2.50

Turnerische Ausgabe des *Freidenker*

(*Amerikanische Turnzeitung*)..... 3.00

EUROPE:

Freidenker..... \$3.00

Turnerische Ausgabe des *Freidenker*

(*Amerikanische Turnzeitung*)..... 3.50

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirtieth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing CONSIDERABLY MORE READING MATTER, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading "Turnerisch" Ausgabe des *Freidenker*.

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

CURRENT TOPICS.

BY B. F. U.

SIR MOSES MONTEFIORE, the distinguished Hebrew philanthropist, who died at Ramsgate July 28, was born in London, Oct. 24, 1784. A long and useful life was his.

SAYS the *Literary Monthly* of Hamilton College: "When the class of '85 entered college, fourteen of its members were looking toward the ministerial profession. Now, upon the eve of graduation, only three can be found who are certain of entering the ministry. This is probably a smaller proportion than ever known in the history of the college."

SAYS the *Nonconformist*, "If the weak-kneed Liberals, most of them rich men, who, by their desertion of Mr. Gladstone, promoted Mr. Bradlaugh to martyrdom, had spent half their fortunes upon propagating secularism, they could not possibly have given it so much aid as by the singular method they have chosen for showing their attachment to Christianity."

MRS. HESTER M. POOLE writes in the *Religio-Philosophical Journal*: "Mrs. Elizabeth Thompson, of New York, well known for her many charities, has a new scheme in progress. It is to organize traveling bands of singers of religious music, to give concerts in halls and public places, in order to awaken religious sentiments. These companies are to be trained and fully equipped for that purpose."

THE pope, in his latest allocution, condemns the Italian government for prohibiting the public procession of the sacrament to the sick,—a prohibition made in the interest of the public health, at a time when cholera is greatly feared. The government is also condemned for permitting the recent anti-clerical congress in Rome. The old gentleman seems to be dissatisfied generally, and there is nothing that the secular government of Italy is likely to do that will receive his approval.

SURGEON sees at this time more unbelief among dissenters than in the Episcopal Church. "In

fact, non-conformity in certain quarters is eaten through and through with a covert Unitarianism, less tolerable than Unitarianism itself. So frequently are the fundamental doctrines of the gospel assailed that it becomes needful before you cross the threshold of many a chapel to ask the question: 'Shall I hear the gospel here to-day, or shall I come out hardly knowing whether the Bible is inspired or not? Shall I not be made to doubt the atonement, the work of the Holy Ghost, the immortality of the soul, the punishment of the wicked, or the deity of Christ?'"

THE grief of the American people over the death of the leader of their armies is as genuine as it is general; but one cannot help noticing a disposition on the part of some to make profit out of the national sorrow by unseemly displays, designed rather to advertise their wares than to express their feelings, and which serve to reveal the greed rather than the grief of their owners. But, if such mourning decorations are in bad taste,—to speak mildly,—what shall be said of such despatches as that published last week in some of the papers, speaking of the "pique" of Saratoga because the body of Gen. Grant was not to be taken there, and a despatch, in one of the papers at least, that, "if Gen. Grant were placed on view at Saratoga, it would bring much additional business to the hotels?"

THE Springfield *Republican* wants to know what disposition will now be made of Rev. J. P. Newman, who, it says, "is of a tender and attaching nature; and, when his tendrils are torn rudely off from one support, it will be necessary to provide him another. For some time, he has adorned—oh, so tastefully!—the sketches of the illustrated papers and the long letters of special correspondents. The public eye has been unable to contemplate the pathetic figure of the dying soldier for any length of time without catching a glimpse of the parson on the piazza or in the pines. The public, listening painfully for the faint utterances of the great man, or reading those admirable little notes, sometimes playful for his friends' sake, often serious and noble for his country's sake, has been sure to hear and read beside them the pious platitudes of Newman. The public has understood, in a feeble and general way, that Dr. Newman had Grant's spiritual interests in charge, and could be trusted to pray for him in case he should forget it, and to use his professional acquaintance with celestial procedure in his behalf. Dr. Newman's prayers have even been telegraphed to us, when they were unusually effective. . . . And, now, is there any way of getting quite rid of this too frequent person? He has, no doubt, some oak in view that he may cling to and obscure as much as possible."

TWO OR three weeks ago, some young men who were playing a game of cricket in a town in the south of England were set upon and badly beaten, not at their innocent game, but with fists and clubs, by a large number of their townsmen, who had assembled for the purpose of stopping "the desecration of the Sabbath." The Boston *Herald* pertinently observes: "It would be a fine question

of casuistry which is the worse offence, fighting on the Sabbath or playing cricket on the Sabbath. But the incident is illustrative of that English spirit of intolerance which we inherit in a large measure from our ancestors. It is a characteristic of the Anglo-Saxon mind that, in order to do one's duty, one should not only do right himself, but forcibly prevent his neighbor from doing what he (the thinker) considers to be wrong. This, we say, is a race characteristic, and shows itself in the social affairs and legislative actions both of this country and of England. Other races view these matters from an entirely different standpoint; for, with the Germanic and Latin people, attempts at interference are rarely, if ever, made, so long as the action disapproved of does not directly or personally affect the happiness of others; that is to say, individual freedom of action—and this, perhaps, is the greatest freedom a man can enjoy—is accorded to him in a much greater measure on the continent of Europe, under monarchical governments, than under the free political systems of England and the United States."

AN examination by a committee composed of Cardinal Manning, the Archbishop of Canterbury, the Bishop of London, and Messrs. Morley and Reid, of the evidence upon which was based the statement respecting criminal vice in London, has satisfied the committee "that, on the whole, the statements of the *Pall Mall Gazette* are substantially true." It is not strange that there is a crusade rapidly extending throughout England for the protection of young girls from the vice of men who use their wealth and position to corrupt and ruin the fair daughters of the English poor. A petition presented by the Salvation Army to the House of Commons July 30, urging the immediate passage of the criminal act amendment, bore five hundred thousand signatures, and was a mile and a half long. The bill, the passage of which is thus urged, was drawn about three years ago. It put the age below which a girl cannot legally barter away her honor at sixteen; but, by some process, which is unexplained, it lost a year in reaching the House of Lords. Mr. Gladstone has written a letter in favor of making the protected age eighteen years, and the pressure upon Parliament for immediate legislation on this grave subject is too strong to be resisted. Even those who would gladly have suppressed the paper which contained the ghastly disclosures will be compelled now, by an aroused public sentiment, to favor the protection of young girls from those who would make them the prey of their foul appetites. The people will not see in these recent disclosures any social reasons why the aristocracy of England should be the ruling class; and, possibly, some of those who belong to this class may be led to reflect on the resemblance of the state of society in London, as shown by these revelations, to that which, in France, preceded the Revolution that swept the aristocracy of that day from the land. But the English people are less mercurial than the French, and will probably accomplish the same results by less violent methods.

SOCIAL RECONSTRUCTION.

We wrote last week of the perplexing problem, which is newly interesting thinking men and women, how to effect a happier social order. What can be done, so that at least all honest and industrious people can have an equitable share in the desirable things of life? The problem of crime comes, indeed, alongside of this question, and complicates the solution of it. But, on the other hand, were exact justice to be done in respect to possessions and opportunities to all honest members of society, crime would doubtless be diminished, and the problem of dealing with it much simplified.

We sympathize fully with the hope of those persons who look for a new social order in which there shall be peace and plenty for all, and the wrongs and miseries that have accumulated through centuries of selfish aggrandizement and injustice shall be righted. Unless modern civilization can find a remedy for pauperism, stay the evils which its own aggressive ambitions have nourished, and discover a way for more nearly equalizing, not necessarily the lot nor the wealth, but the opportunities of mankind for happiness, enlightenment, and progress, then we may say that modern civilization is a confessed failure; and, like civilizations before it, it may be doomed to perish, surfeited to death by its own luxuriant successes, which no moral principle has mastered and guided to noble and permanent uses. That there is a danger here which stares the proud and complacent nineteenth century in the face, it were folly to be so optimistic as to refuse to see; but it were worse than folly to be so pessimistic as to despair of finding a remedy.

In regard, however, to any social reconstruction that is to come or which may be rationally aimed at, there are two things which have proved so essential to human progress that they may be considered as permanent elements of society itself, not to be put aside by any socialistic theories. The first of these elements is the principle of *competition*, so far as it conduces to the development of individual faculty and the strengthening of that basic quality of character, *self-reliance*. The principle of competition, it is true, is the root of some of the worst evils of modern society. Unbalanced by the law of justice or by feelings of sympathy, it has fostered those forms of selfish, grasping aggrandizement in property and power under which the weaker members of society groan, heavily burdened. Competition, swayed only by selfish passion,—competition which not merely means a noble ambition in one's self to rise, but an ignoble desire and effort to push others down that one may keep above them without having to rise so high,—such competition is the diabolism of human society. But competition, so far as it means a laudable effort to be independent, and offers stimulus for that self-exertion which achieves independence, is a force that lies so near to the motive power of human progress that philanthropy may well hesitate to tamper with its sources.

The conditions of human society, in truth, differ from those of brute life largely in the fact that man has the faculty of ameliorating his own lot and the spur to exercise the faculty. Upon man himself has thus been placed, to a large extent, the responsibility of his own destiny; and to this spur to individual exertion must be chiefly credited the intellectual and material advance of mankind. Modern civilization especially is thoroughly infused with this principle. It is the parent of the enormous industrial progress of the later centuries, and has produced that accumulation of material wealth, which, if rightly directed, is quite as important a condition of intellectual and moral prog-

ress as it is of physical culture and comfort. It would be a great disaster to the human race at large, were individuals to know that they would be cared for whether they put forth any exertions themselves or not. And no theory of socialism will, in our opinion, ever prove anything but failure, which does not in some way preserve the spur to individual endeavor and honest industry which the principle of competition supplies. The problem for social reformers to solve is to show how this valuable part of the principle of competition can be combined with the principle of co-operation.

The other thing that has proved itself so essential to human progress that no new theories of social reconstruction can safely set it aside is the integrity of the family relation. Some of the social theorists openly proclaim war upon the single family as the unit of society. They would abandon special family interests, and combine a company of like-minded persons in a family by themselves without regard to ties of blood and marriage. Possibly, such an absorption of families into a family might be an economical arrangement, and conduce to material prosperity. But economy and material prosperity are not the ends of human society. They do not cover the highest objects of human life. The affections and the moral nature have their place, and a supreme place, when the objects of human existence are considered in any large way. And experience and social philosophy would agree in the conclusion that the affectional and moral interests of mankind could not be so well secured in any family arrangement which could be artificially devised as they are secured in the family life which natural social evolution has devised in the unitary marriage. Upon this the history of the human race, on the principle of seeking that which is the most favorable to social stability and happiness, has put the seal of its authoritative approval. Any socialistic theories which are to find favor with the coming generations of humanity must then, we believe, leave the integrity of the family untouched. There may, it is true, be a great deal of arrant selfishness in building up and pushing and maintaining the interests of a family, as there is in excessive exertions for individual aggrandizement. But to strike down the family institution because of this evil is to cut down a tree, sound in root and trunk, for the sake of getting rid of a rotten branch. The problem is, again, to combine the integrity of the single family with the neighborly co-operation of families in all rational aims and enterprises for promoting their common welfare.

And if, for the best good of society, the integrity of the family is to remain untouched, and the stimulus to individual endeavor which inheres in the principle of competition is to be conserved, it does not appear as if any very revolutionary methods or ideas are to have play in the introduction of a higher and happier social order. After all, is not the one thing needed a new baptism of human society into the spirit of the old commandment, "Love thy neighbor as thyself," or a revival in the human heart of the ancient and well-nigh universal sentiment of the Golden Rule? Mankind for ages and in all the great systems of religion have repeated this rule of life. With their hearts and with their understandings, they have assented to its truth. Yet how rarely has it been lived! No nation has ever lived by it, no community of any considerable influence has ever lived by it. Individuals here and there may have made it the guide of their conduct; but how far below its high demands falls the action, or even the effort, of any average community, even in the most enlightened sections of Christendom!

We said above that no revolutionary methods or ideas seem to be required to bring in a better social order. But this saying, perhaps, needs modification. It might be more correct to say that no new revolutionary ideas and methods are needed; for if people, the people of Christendom, were at once to begin to act upon the principle of the Golden Rule,—were, from this day forward, really to put into practice, in all their social relations, the old commandment, "Love thy neighbor as thyself,"—an actual revolution would be produced in human society, such as the world has never before seen. The Golden Rule means exact rectitude and equity between man and man in their social relations. Let that commandment be kept, and justice, plenty, and peace would encompass the earth. It is an old-fashioned way; but is there any other way of accomplishing the result than by impressing this law, through continued iteration and reiteration, upon the moral nature of man, until it becomes an instinct of action? Without this, neither legislation nor new social philosophies and experiments, however needful in their place, will avail.

WM. J. POTTER.

THE CHANCES OF UNITARIANISM.

The nineteenth century is an age of eclecticism. Politics, art, and religion have agreed to abandon their ultra claims, and worship in the temple of expediency. And yet the history of the last ninety years has frequently confirmed the experience of earlier times, that compromise parties rise to become more obnoxious than the partisans of either extreme,—a result not easy to avoid, if the mediator undertakes to harmonize the discords of irreconcilable principles. The attempt to reconcile the Republic and the Bourbons led to a relapse into military despotism. Abdul Aziz exasperated the Ulemmas without conciliating the party of reform. The sordid arithmetic of the high license plan satisfies neither the brewers nor the teetotalers.

But, even with the best possible motives, compromise parties may fail to master the difficulties of their task. Our liberal Unitarians, men like Strauss and Theodore Parker, who honestly undertook to build a temple of truth on the ruins of Christian theism, have certainly done their best with the available materials. They worked the quarries of science and ethics with equal success; and, if the basis of their enterprise had been worthy of the superstructure, their edifice might have become a sanctuary for the truth-seekers of all churches and sects. Unitarians have promoted knowledge for its own sake, and disdained to "patronize and muzzle" its exponents. Unitarians have encouraged philanthropy for that noblest purpose of teaching the poor the art of self-help. Unitarians almost alone have practised charity without demanding in return a charitable connivance at the juggles of pious charlatanism. Unitarianism has identified its cause with the promotion of earthly happiness, of secular education, and the propaganda of social and political liberty: it has sent forth a series of enthusiastic reformers into a world thirsting for reform; but all its claims to success have been outweighed by an utter want of union and consistency.

Yet that deficiency is but the natural outcome of a hopeless enterprise. The cause of reform and the promotion of human happiness might prosper in a community of atheists. They might be reconciled with the absolution of a benevolent despot, and even with military tyranny; but they are wholly incompatible with conformity to that system of Nature-hating fanaticism and depreciation of earthly welfare embodied in the doctrines of

the New Testament. Minerva disdains to prostitute her divinity to the purposes of Hindu pessimism. The steeds of the Sun refuse to labor in the yoke of Buddha Sakyamuni. Genius, fettered by the associations of childhood and the pledges of heedless youth, will sooner or later break those bonds, and rebel against the thralldom of the hideous superstition that has deluged this world with blood, turned the garden spots of earth into dreary deserts, and arrested the progress of mankind for fifteen hundred years. For the favorites of Nature have never despised her blessings. They have never insulted her bounty by rejecting her gifts: they have been true children of their mother Earth, and sympathized with all the earthly loves and hopes of their brethren, ever striving to realize those hopes on this side of the grave and regain our lost terrestrial paradise.

What claim to the homage of such men has the fanatic who has poisoned the life-blood of mankind with the virus of pessimism? Why should the party of progress linger in a moral desert? Shall we cultivate the gardens of earth in the name of him who enjoined the renunciation of that earth as the first condition of salvation? Shall we strengthen the bonds of the natural affections by the doctrine of natural depravity and the threat which rejects the disciple who fails to hate his father and his mother, his brothers and his playmates,—“yea, and his own life”? Can we hope to reach the goals of civilization by following a teacher too busy with the mysteries of cloud-cuckoo-town to waste one word on such worldly concerns as the abolition of slavery, the promotion of science, of education, of earth-redeeming forest culture, or physical regeneration,—a moralist who repeatedly denounced labor and industry as worldly vanities, and inveighed even against the common forethought for the needs of the next day? Shall we face the demon of intemperance with the exorcism of him who turned water into wine, and informed his disciples that men cannot be defiled by things that enter their mouths; in other words, that the health of the body is of too little importance to deserve a serious thought?

The attempt to reconcile such doctrines with the teachings of science has produced its unavoidable harvest of discord,—of discord and its practical result, disintegration. Hypocrites, rite-mongers, and self-stultifiers will gravitate toward fraternities more inclined to appreciate their peculiar talents. Men who decline to include reason among the “blessings to be sacrificed for the love of Jesus” will drift in the opposite direction. They may drift into materialism, and hold with Henry Thoreau that “one world at a time is enough.” If men of a gnostic turn, they will decide the choice between God and the Galilean, and stand to their convictions, regardless of consequences.

We may continue to enjoy the distinctive privilege of producing scores of such men, but not without the distinctively Christian privilege of losing them as soon as their eyes get opened to the real significance of our test dogmas. The living will not be chained to the dead. *Sic vos, non vobis*, will continue to be the reward of our painstaking colleges, cultivating philosophy and natural science—in the name of the Galilean Buddhist. We may continue to furnish our infidel opponents a desirable quota of eloquent free thinkers. We may continue to furnish our orthodox opponents a not less welcome contingent of accomplished Jesuits. But, if we should ever get tired of letting others reap the reward of our labors, we have to decide the alternative of Giordano Bruno,—we have to choose between ghostland and earth. If we would share the advantages of dogmatical conformity, we ought to disarm suspicion by a pilgrimage to Ox-

ford, and a three weeks' penance in the woodshed of the Rev. Tollemach-Tollemach; we ought to sanctify our chapel by the addition of three steeples, and, above all, we ought to change our misleading name.

If, on the other hand, we should prefer to deserve that name, we should thoroughly purify our rites as well as our tenets from every suspicion of Jesuitism. The worshippers of Nature's god must cease to turn their faces toward Galilee.

We know our compromise friends and their ready-made answer: “The mission of Unitarianism is not destructive, but constructive.” Just so. And, if we ever hope to fulfil that mission, the best beginning would be a pledge to abstain for the next twenty five years from every allusion to that rehash of Buddhistic chimeras called the New Testament. Its author, whether a conscious or unconscious imitator, was an apostle of Anti-naturalism. In his name, no honest man can construct anything but La Trappes.

FELIX L. OSWALD.

OCCIDENTAL BUDDHISM.

The necessity of defending the dogma of sole inspiration has compelled Christian writers to deny the influence of Buddhism on our western faith or on the shaping of Jewish thought as expressed by Jesus. This point will be yielded as the exclusive claim to inspiration is yielded. Placed in the line of evolution, as a natural result, the necessity follows to trace the historic causes of Christianity. The supernatural origin disposed of, what was the natural origin, or the origins?

Buddhism has been traced out of India to the East, where it became a victorious idea in Thibet, China, and Japan. But, even in Asoka's day, Buddhism was not an acclimated faith to the east of India. It had the position and power assigned to exiled goodness, to oppressed truth. Confucianism, arising contemporaneously, became the national faith, while the State religion remained Taoism; that is, Confucianism gained the position of moral supremacy, while the worship of ancestors, according to Tao custom, remained. Confucius, while about as clearly a sceptic of the gods as were Buddha and Socrates, was, after all, in no way inclined to overturn the ancient worship. Buddhism became a power in the way of checking the drift toward subversion of worship. Its concentration of purpose on “Right Life” gave a moral power to the Taoism into which it was infused.

But the real current of Buddhist influence flowed westward. This would be apparent from the elements absorbed from it, even if all historic record of its drift into the Occident were lost.

We might presuppose such a tendency by analogy. Every race trend has been to the West, from the age of the River Driftmen till now. Ideas have gone with races. The Aryan stock has always passed toward Europe, although by détours. Buddhism is distinctively Aryan.

We do not, however, rely on this general tendency. It is what Buddhism has positively given to western religious thought that detects its presence. A careful study of Christianity shows the evolutionary chain to be a very broken one from early Aryanism, if we leave out Buddhism. Somewhere back of even Brahminism, we find a primitive social custom of this sort; till twenty, all the young were considered scholars, and compelled to pursue such a course of education as the times afforded,—mainly religious, including, above all, duty to parents; from twenty until fifty, all persons performed civil functions; at fifty, another sharp change took place, retiring all to forest life.

This was evidently a custom not of the earlier patriarchal state, but of a social condition as late as the household community, or possibly the village community. It implied fixedness of residence. The adult residents in the forest were to devote themselves to worship. In this way, the tie between the dead and the living was kept ever clear and strong. It is equally evident that the family condition of social life had not been long outgrown; for here was the family, so all-important a thought that one section of the living had for its only object the sustenance of the dead,—the careful thought and devoted worship of the fathers. This was a natural religion under the patriarchate. The family dead were fed, loved, and carried about in the household idols. During the prevalence of the household community, this intense family feeling had not lapsed. At this point was the custom referred to. The aged served the fathers; that is, the gods.

It needs little consideration to determine some of the tendencies of this custom. It would involve the desire to be as ghostlike as possible on the part of the attendants. These old people would show their grace by giving their food to the gods, and themselves fasting. They would despise the flesh as inferior to the condition of ghosts. They would seek, above all, communion with the ghosts. Fasting, prayer, self-abasement, even flesh laceration, would almost certainly accrue. Here were all the elements of monkery. And, in fact, monasticism was born at this time and in this way. Brahminism, appearing in India at a later date, and during the tribal period or feudal era of the Aryans in India, took on the same forms, absorbed the monastic idea. But the same Brahminism, moving westward as Abramism in the Semitic stock, was wholly exempt from any notions of the sort. The Jews were never ascetic or other-worldly. Long life, many wives, abundance of children, and milk and honey were their ideals. This was an intensely strong and clearly outlined characteristic of Hebrew religious thought.

Meanwhile, 500 B.C., Buddha began to proclaim a reformation. Whatever else he taught or denied or undertook, he did not undertake to change the current of asceticism. His career was that of a mendicant friar. His church or body of disciples was organized into a society to practise rites of abstinence, poverty, and self-abasement. The Buddhistic church was an order of monks, and nothing else. Buddha could see no better path than for himself to desert wife and children and home, and take up a forest life, or wandering mendicancy. The origin of his views is evident. It was national heredity.

This was between four and five centuries before Jesus. These doctrines were destined to spread eastward, where they would be met by Confucianism, a contemporaneous thought; and, westward, they would be met and modified by Socrates, also a contemporary. That is, monasticism rises in the south, Greek philosophy in the west, moral formalism, or the code of earthly rectitude, in the east. Buddha cared wholly for meditation, fasting, and prayer,—a system of association with the unseen. Confucius cared only for the seen: to do was his religion. When asked if there were gods, he answered, Yes; but the less you have to do with them, the better. Socrates sought the truth about things, without consideration of here or hereafter. Greek philosophy was the religion of knowing. So here at one time arose the religion of doing, the religion of praying, and the religion of knowing. They were destined to a fusion, very naturally. Rationalism, as it now exists, is a blending of Confucius, Socrates, and Buddha.

If we had no knowledge to the contrary, we

should be confident that an aggressive faith like Buddhism, which was little more than preceding Brahminism, brought down to the people, and infused with propagandic zeal, would be the one of the three that would not only seek to impress itself on other religions, but would succeed in doing it. Greek philosophy established the school, and went only indirectly into the conflict, although its final power is supreme. Confucianism had no missionary force. It was the gospel of labor, of honest doing, set into a formalistic schedule, that made it peculiarly national. Buddhism was Brahminism set on fire with love. It was the first religion specifically preached for the poor. Reaching in two hundred years the farthest east, it was not likely to limit its efforts to that direction. Historically, we find that it did not. Within fifty years, under Artaxerxes Longimanus, Buddhist missionaries were located in Persia. In Bactria there were hermits and mendicants professing Buddhism two hundred years after Buddha. King Asoka, his most famous royal disciple, sent preachers of the truth to Greece. Alexander, in his conquests, opened a direct intercourse with India, which was never closed. This was four hundred years before Jesus, and was in addition to the commercial intercourse by sea. But this is not all. Early Christian writers, like Jerome, speak distinctly of Buddhism.

This is more than enough to account for the presence in the west of monasticism, indigenous to India and never indigenous to the West. The Hebrews, with scarcely a thought of a future life, begat no forms of unworldly self-sacrifice. Polygamy, not celibacy, was their natural condition. Circumcision, as a religious rite, indicates that life was considered by them the all-important idea in religion. To the gods they gave the foreskin, as indicating their idea of a God as chiefly a giver of life. The closest tie between a man and a god was symbolized by the organ of generation. How, then, shall we account for the uprising of ascetic sects shortly before Jesus? The Jews, coming home from captivity, brought clearer notions of a future life. They began to talk of rewards and punishments beyond the grave. The Sadducees at a later date were largely under the influence of Hellenic thought. The other half of the people, the Assideans, were more pietistic and inclined to devoteism. Still later, we find the Sadducees, Pharisees, and Essenes. Here is Greek influence in the Sadducee party; in the Essenes, Hindu influence; and the Pharisees are the legitimate old Jew party. The Essenes are a fully developed form of asceticism, withdrawing themselves from the world largely for communion with the spirits. They tilled the soil, but were fond of hermit life, dwelling often in caves. Property they held in common, and they refused marriage. The vow of celibacy was their primal distinction. Home life was not wholly given over, but it was an inferior existence.

So we find just previous to Jesus the western and the eastern indigenous modes of emotion and thought meeting; and we see what is liable to be the product.

Western Asia weds Greece to India, and the product is Christianity. Jesus came, as Buddha came, "to the poor." The early church held property in common. The predominant thought in Christianity was contempt of this world and preparation for the next. The same influence—that is, the eastern—which affected Jesus, operated still more powerfully on his followers. They were not only his disciples, but disciples of the age. The Greek schools held Jesus back. He was by no means so much of a Christian as his followers were. The Hindu influence did not culminate in him, but in the apostles, and in the Church of the

first three centuries. John the Baptist was certainly an Essene. So also seems to have been James, the brother of Jesus. Jesus never spoke a word against this sect, but was severe in dealing with all others. Paul was still more completely at the cross roads where the two philosophies concentrated influence, but his face was toward Greece and Rome. From him came the start of that wonderful sacerdotalism that, belonging gorgeously to this world, mothered the great crowd of cenobites and ascetics and monks that came from the inoculation of Buddhism.

Here we see the east and the west, Buddha and Socrates, meeting, and naturally producing a new product involving both: that product was at last a monkery devoted to the study of Aristotle; for such was the curious fact, that the Aryan custom of ignoring the world became a retreat from active life to study Greek philosophy.

That Buddhism is an actual and practical factor in all Occidental religious thought and life thus appears conclusive. It is present wherever celibacy has a priesthood. It is equally present in Protestant contempt for "the world and the flesh" as fitly to be classified with a devil. Puritanism was a sporadic revival of the Buddhist spirit. It at first antagonized the Greek spirit of beauty and love of logic. When it became the patron of these, it passed away. The triumph of Puritanism in Edwards sounded its decay. Its own universities killed it.

The peculiarity of the present phase of religious thought under the overmastering influence of material investigation and invention is to create a western Confucianism, a practical religion of doing. Speculation and introverted meditation, metaphysics and worship, are both dying out of the Churches. That is, Greece and India are equally losing control of modern life. Fatefully, at the same time, classic studies are no longer to the taste of our scholarship. Confucianism, *par excellence*, is the school instead of the kirk. The rise of the religion of doing is a drift toward education in the place of worship. It is this-worldliness in the place of other-worldliness. Curiously, on the seal of Martin Luther was "Laborare est orare." Thus, Protestantism had a prophecy in its forehead.

E. P. POWELL.

THE CONCORD LECTURES ON GOETHE.

III.

The ablest of these lectures was that on July 25 by Prof. Davidson on "Goethe's Titanism," or, in other words, his "revolt against established conceptions of the divine and the institutions formed thereon." Prof. Davidson began by comparing the Greek view, according to which each man must save himself, with the Christian view, according to which we claim nothing for ourselves, but look for everything as a free gift from God.

The Christian ideal is not a perfect one. It is essentially one-sided, and needs to be supplanted by the Hellenic ideal, which contains elements, both of manliness and of truth, which the Christian ideal lacks. All popular systems of religious thought, though in many ways of great value, contain much that is erroneous. Hence there must sooner or later come revolt, Titanism. This always seems like impiety, whereas it frequently turns out to be the very opposite. When such a revolt is crushed, the revolters are spoken of as atheists and traitors. When it succeeds, they may be counted as prophets and heroes. Goethe's Titanism, like that of his favorite hero, Prometheus, is against the old order of things in favor of something more spiritual. His unfinished drama represents the philanthropic Titan sitting amid the

images he has made of men yet to live, and rejecting thus the offer of Jove to give them life in return for worship:—

"I honor thee? Wherefore?
Hast thou e'er soothed the anguish
Of the heavily laden?
Hast ever wiped away the tears
Of the grief-oppressed?
Have I not been forged into a man
By almighty Time
And by eternal Fate,
My lords and thine?"

"And didst thou fancy
I should hate life,
And flee to deserts
Because all blossom-dreams
Did not bear fruit?
—Here sit I, and mould men
After mine own image,—
A race to be like me,
To suffer and to weep,
To enjoy and to be glad,
And pay no heed to thee,
Like me."

Goethe's *Prometheus*, *Götz*, and *Werther* are all Titanic. The reason he left *Prometheus* a fragment is that he never finished a work until he had completed that stage in his own culture which it represents, and his Promethean Titanism lasted all his life. His rapid progress, too, made him see that the conception of revolt against Jupiter is too antiquated. He found a better representation of Titanism in Faust, the seeker after truth, and laid *Prometheus* aside. The greatness of Goethe's Titanism consisted mainly in its war against the external, enslaving God of tradition and conventionality, in the name of the internal, freeing God, whose kingdom is within us. This Titanism did not altogether cease at any period of his life, though it tended more and more to become a compromise, especially during that reactionary period which followed the French Revolution. In closing his greatest work, he abandoned the Promethean spirit in which it had been begun, sixty years before. Faust does not reach heaven by his own efforts, but by the aid of good angels, like a mediæval saint. Goethe's Titanism had never been of that kind which imparts perfect satisfaction to the Titan, and therefore can endure forever. He could never entirely surrender himself to the God within him, careless of happiness. He wavered between the Christian spirit and the Greek spirit, without ever being able to seize either in its purity. Their union is the great problem of our time. To reject the outer God of mythology and all his works, to cling to the inner God who is the very life of our life, the self of our self, to crush out mercilessly the little temporal self, in order that the great, the eternal, the divine self may be free to manifest itself,—that is our task, a task to be performed Titanically by ourselves, and by none other. There is no salvation anywhere but in our deepest selves. No outer God with the best of wills can save us, for salvation means being strong in and through ourselves.

If Titanism needs any limitation, it is only that suggested by the Professor himself in the discussion called out three days later by Mr. Snider's masterly essay on *Wilhelm Meister*. This novel presents the Rousseau theory of education, that of letting children be taught by the consequences of their own mistakes. Prof. Davidson did not believe that it was necessary to learn everything from one's own experience. The aim of a teacher should be to give the pupil the results of all human experience, so as to let the new work begin where the old work left off. "The unheroic hero" of *Wilhelm Meister*, as he was justly called by the essayist, begins where a man might have begun in the days of Jehoshaphat.

The less of Wilhelm Meisterism we have in education, the better.

Of course, children should be encouraged to find out facts for themselves, a point on which Miss Peabody gave the audience the benefit of her rich experience. No duty is more sacred than that of thinking freely and independently, but this cannot be done with much advantage by those who fail to take a just estimate of what has been found out by others.

How important it is to hold fast to the best results of human thought was manifest at the next session, that of Tuesday evening, July 28, when the Concord School of Philosophy came out, boldly and plainly, against one of the most valuable and firmly established truths of science. It is more than two hundred years since Newton announced his great discovery, that sunlight is composed of colored rays. This fact he proved by separating it with a prism into that brilliantly colored band known as the spectrum. The experiment has been repeated millions of times with invariable success, and is well known to the children in our schools. Scientific men accepted this truth almost as soon as it was made known to them, and have held it with ever-growing firmness. This was in no blind idolatry; for even Newton could not save his secondary theory, that light is a stream of atoms, from being displaced by the arguments presented in his own lifetime, though more strongly afterward, to prove that light is a series of waves in some unknown medium. This undulatory theory is now preferred by men of science, but they are still all convinced that white light results from the union of colors. This truth is held all the more firmly because it has been made the basis of all our knowledge about the constituents of the sun, the stars, and the planets. Spectrum analysis has taught us nearly all we know about what these bodies really are. Separating sunlight by the prism into its component rays shows, for instance, the presence on that luminary of sodium, which is found in salt. Many such discoveries have been made, and many more await us. This is mentioned to show the significance of the attempt made by Prof. Harris, with the approval of other prominent members of the School, to establish Goethe's theory, that sunlight cannot be decomposed into colored rays, and that the colors arise out of modifications of light by darkness. According to Goethe, there are but two pure colors,—yellow, which is caused by looking at light through some dark medium, and blue, which is darkness seen through light. From these two colors are derived all the rest. This theory was published seventy-five years ago, and has not yet met with any favor among men of science. A few metaphysicians, like Schelling, Schopenhauer, and Hegel, found it agreed with their other theories. Trained observers, who study such facts experimentally, are satisfied that Goethe was wholly in the wrong. Tyndall has, I think, recently refuted him much more elaborately than would be thought necessary by most physicists. Our text-books of optics have as little to say about the great poet as our geographies do about a recent English author who is trying to prove that the earth is flat. Many such fancies have been weighed by Science in her balance, and left behind in her onward march.

What Goethe really did for this progress, in showing how the different parts of the plant develop one from another, by a law according to which the latest product is the most complex and perfect, as well as how closely men are related to other animals, was eloquently set forth by Mr. Snider. He also quoted that momentous passage in which Goethe anticipated Herbert Spencer: "The more imperfect a being is, the more do its individual parts resemble each other, and the more

do these parts resemble the whole. The more perfect a being is, the more dissimilar are its parts. In the former case, the parts are more or less a repetition of the whole: in the latter case, they are totally unlike the whole. The more the parts resemble each other, the less subordination is there of one to the other. Subordination of parts indicates high grade of organization." Mention was also made of the rather unfavorable comparison of Goethe to Lamarck by Huxley, in the *Encyclopædia Britannica* (vol. viii., p. 748, ninth edition).

Mrs. Howe's lecture on "The Women of Goethe" has been postponed, so that it cannot be reported in this article. Nor can I do more than give the titles of the papers on "Goethe as Playwright," "The Novelettes in *Wilhelm Meister*," "The *Elective Affinities*," "Goethe's Relation to Kant and Spinoza in Philosophy," and "The Style of Goethe." Mr. Hawthorne did not appear. On the whole, the course has been very interesting and satisfactory. Goethe's most important work, *Faust*, has been discussed thoroughly, though it would have been better to have had these four lectures given in immediate succession. Other errors in arrangement were apparent, especially that of putting Mrs. Cheney's noble exposition of one of the last passages Goethe wrote so near the beginning of the course. Too little attention was given to his important services in art criticism, as well as to the question how far his influence during the past century has been for good or evil. His heterodoxy of views was acknowledged frankly, and there has been a gratifying willingness to take the facts as they are. The ladies and gentlemen who have spoken in this course deserve hearty thanks.

F. M. HOLLAND.

NOTE.—The kindness of Prof. Davidson enables me to add a summary of a lecture which has been merely mentioned. On Monday morning, Mr. William Ordway Partridge gave a very excellent and well-prepared paper on "Goethe as a Playwright." He began by laying down in systematic order the laws of dramatic effectiveness, and then proceeded to try Goethe's works in accordance with these laws. The result was by no means favorable to Goethe as a playwright. Indeed, his works were shown to violate almost every canon of dramatic art, to show little sense of dramatic effect, to be deficient in unity, and to reach no satisfactory conclusion. The plays criticised were *Götz*, *Egmont*, *Iphigenie*, *Tasso*, and *Faust*. Some of the remarks on these were very pointed, and showed great critical skill. In the conclusion, an attempt was made to account for Goethe's failure as a dramatist, and a graceful tribute paid to him as an epic and lyric poet.

The discussion which followed was lively, and was shared in by Dr. Harris, Mr. Sanborn, Mr. Snider, Prof. Davidson, Miss Peabody, and others. It was admitted by all the speakers that the position taken by the youthful essayist was correct, and that Goethe was not a great playwright.

WOMAN AND THE BIBLE.

In the *New Englander* for July, Rev. W. W. Patton says that "an element of ingratitude appears in this unbelief [of woman], as one reflects upon the special indebtedness of womanhood to the Bible." He declares that the influences that have brought woman "out of ignorance and dishonor, to occupy the throne upon which she now sits," can be traced mainly to Christianity. "Lecky, himself a rationalist," he says, "admits that primitive Christianity, before it was corrupted by ascetic notions [the italics are Mr. Patton's], contributed largely

to this result." Then Mr. Patton quotes a few fragments of sentences from the historian, like the following: "Christian sentiment is chiefly a glorification of the feminine qualities of gentleness, humility, and love." Lecky is here speaking, not simply of "primitive Christianity," but of that "Christian sentiment," largely based upon reverence for the Virgin, and which was strongest during Catholic ascendancy.

The quotation is from a sentence in which Lecky mentions as the true reason, in his opinion, "why sculpture has always been peculiarly Pagan, and painting peculiarly Christian," that "sculpture is especially suited to represent male beauty, or the beauty of strength, and painting, female beauty, or the beauty of softness, and that Pagan sentiment was chiefly a glorification of the masculine qualities of strength and courage and conscious virtue, while Christian sentiment is chiefly a glorification of the feminine qualities of gentleness, humility, and love." "Michael Angelo, whose genius loved to expatiate on the sublimity of strength and defiance, failed signally in his representation of the Christian ideal; and Perugino was equally unsuccessful, when he sought to portray the features of the heroes of antiquity." Pursuing the same line of thought, this historian says: "It can hardly, I think, be questioned that, in the great religious convulsions of the sixteenth century, the feminine type followed Catholicism, while Protestantism inclined more to the masculine type. Catholicism alone retained the Virgin worship, which at once reflected and sustained the first. . . . A religion which prescribed to the distracting mind unreasoning faith in an infallible Church, and to the troubled conscience an implicit trust in an absolving priesthood, has ever had an especial attraction to a feminine mind. A religion which recognized no authority between man and his Creator, which asserted at once the dignity and the duty of private judgment, and which, while deepening immeasurably the sense of individual responsibility, denuded religion of meretricious ornaments and of most æsthetic aids, is pre-eminently a religion of men." Although this author argues that Protestantism strengthens character, love of truth, the sense of duty, liberty, and self-assertion, and has purified and dignified marriage, and "conferred a great benefit on woman," still, he says, "it must be owned that neither in its ideal type nor in the general tenor of its doctrines or devotions is it as congenial to their nature as the religion [Catholicism] it superseded."

Thus, we see that, according to Lecky, the Pagan type of character predominates in Protestant countries, while the essentially Christian type predominates in Catholic countries. Does Mr. Patton think that the condition of woman in Catholic countries, compared with her condition in the Protestant portions of Christendom, affords any proof of the superiority of the Christian over the Pagan type of character? An impartial and fair-minded man like Mr. Lecky can see that these two types of character contain elements of excellence of which the other is deficient, that the extremes of one have been corrected by the influence of the other, that the ideal type is one that combines all that is noble, beautiful, and lovable in both, without the defects of either. But Mr. Patton is incapable of taking a judicial view of this subject; and, in his eagerness to make a point in controversy, he misrepresents the authors he quotes, as in the instance given above.

Since Mr. Patton is so fond of quoting from Lecky, it is strange that the following passage from the *History of European Morals* escaped his notice:—

The types of female excellence exhibited in the early Jewish history are, in general, of a low order,

and certainly far inferior to those of Roman history or Greek poetry; and the warmest eulogy of a woman in the Old Testament is probably that which was bestowed upon her who, with circumstances of the most aggravated treachery, had murdered the sleeping fugitive who had taken refuge under her roof. The combined influence of the Jewish writings and of that ascetic feeling which treated women as the chief source of temptation to man was shown in those fierce invectives against this sex which form so conspicuous and so grotesque a portion of the writings of the Fathers, and which contrast so curiously with the adulation bestowed upon particular members of the sex. Woman was represented as the door of hell, as the mother of all human ills. . . . She should live in continual penance on account of the curses she has brought upon the world. . . . Their [women's] essentially subordinate position was continually maintained. It is probable that this teaching had its part in determining the principles of legislation concerning the sex. . . . But, in the whole feudal legislation, women were placed in a much lower legal position than in the pagan empire.

Mr. Lecky adds that Christian legislation rendered it impossible for women "to succeed to any considerable amount of property, and which almost reduced them to the alternative of marriage or a nunnery. The complete inferiority of the sex was continually maintained by the law; and that generous public opinion which, in Rome, had frequently revolted against the injustice done to girls, in depriving them of the greater part of the inheritance of their fathers, totally disappeared."

Women "arrived during the empire," he says, "at a point of freedom and dignity which they subsequently lost and have never wholly regained"; and Sir Henry Maine thinks that "no society which preserves any tincture of Christian institutions is likely to restore to married women the personal liberty conferred on women by the middle Roman law." It is idle to say that the subordinate position of woman upon which legislation inimical to her has been based has not been encouraged by Christianity, when it was expressly taught by Paul, and when, as Mr. Holland, in *The Rise of Intellectual Liberty*, says, "precisely the same words are used, not only in the Greek text of the Epistles, but in our English versions, to command the obedience and subjection of wives to husbands, as of slaves to masters, and of all men to God."

St. Paul was the principal author of the Christian theology, formulated into creeds by Augustine, Calvin, and other theologians; and his views of woman have prevailed, and still prevail, in all Christian countries, in proportion as they accept the Bible as an authority. Christianity in its origin and doctrines is an Orientalism; and only where it has been modified by Roman and Germanic influences, and by modern extra-Christian and anti-Christian thought, do its representatives regard woman's position other than one of subserviency and subordination, and, where it exists even in this modified form, every effort made to improve the condition of woman is constantly opposed by appeals to the Bible.

During the decay of ancient institutions, Christianity put itself in opposition to a strong tendency of the times by emphasizing the duty of chastity and marital fidelity; but its teachings in regard to woman caused her to be regarded as impure, and led to an unhealthy asceticism, which proclaimed war upon nature, and produced a revulsion toward its opposite extreme, while the independence and intellectual culture of woman were discouraged, and for centuries she ceased to figure in history except as a devotee. It is as true of the advancement of woman as of progress in general, during the past three hundred years, that "the decadence of theological influence has been one of the most invariable signs and measures of our progress."

Some there are who, recognizing this fact, attempt to defend Christianity by making a distinction between Pauline Christianity and the moral precepts of Christ; but the influence of a system must be judged not so much by its precepts of virtue as by its doctrines which have been widely accepted, and have been favorable or otherwise to the practice of these precepts. That Christianity, like the older religions, has been necessary to the attainment of the present social condition, such as it is, and that it has met certain wants and contributed some elements to human progress, is as true as that in other respects it has been reactionary and has retarded progress. Christianity would long since have become extinct in every enlightened, progressive country but for its modifications in the popular mind and in practical life, making it agree largely with the requirements of science and industry. If we should ascribe all the art, literature, science, virtue, and freedom in ancient Rome to the pagan religion, we would not be more unreasonable than are theologians like Mr. Patton, who, whenever they speak of anything worthy in our modern civilization, ascribe it to the influence of the Bible and Christianity.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

ONLY in countries where Germanic sentiment has taken root do we see marks of any elevation of the female sex superior to that of pagan antiquity; and, as the elevation of the German woman in her deepest Paganism was already striking to Tacitus and his contemporaries, it is highly unreasonable to claim it as an achievement of Christianity.—*F. W. Newman*.

THE Roman religion was essentially domestic, and it was a main object of the legislator to surround marriage with every circumstance of dignity and solemnity. Monogamy was from the earliest times strictly enjoined; and it was one of the great benefits that have resulted from the expansion of Roman power, that it made this type dominant in Europe. In the legends of early Rome, we have ample evidence both of the high moral estimate of women and of their prominence in Roman life. The tragedies of Lucretia and Virginia display a delicacy of honor, a sense of the supreme excellence of unsullied purity, which no Christian nation could surpass.—*Lecky*.

THE *American Israelite*, criticising the claim that everything good should be called Christian, says: "The bubble of Christian virtue, Christian liberty, Christian civilization, burst long ago. Civilization and liberty, like righteousness and virtue, are not the products of any creed. They have their roots in human nature, and thrive in a congenial atmosphere, purified by commerce, industry, science, mental and moral culture. The civilized man's creed is civilizing: the deteriorated man's religion breeds corruption. Man forms and reforms his religious conceptions. We think one can be a very excellent man and an orthodox Christian besides; and Governor Hoadly, of Ohio, is a splendid man, and no Christian at all."

SAYS R. L. Perrin, in *The Religion of Philosophy*: "If the Phœnician navigators in the Mediterranean, eight hundred years before Christ, brought to the shores of Greece the knowledge of the arts of Egypt, the manufactures of Tyre, and the products of India and Africa, is it to be wondered at that the religious forms and ceremonies of these early ages should have been gradually transplanted from one country to another? It is true that there is no recognized historical movement which indicates

the growth of Christianity out of Buddhism; but is not the intercourse which is known to have existed between the ancient nations sufficient to account for the resemblance between their religions?"

At the present day, although the standard of morals is far higher than in Pagan Rome, it may be questioned whether the inequality of the censure which is bestowed upon the two sexes is not as great as in the days of Paganism, and that inequality is continually the cause of the most shameful and the most pitiable injustice. . . . The character of the seducer, and especially of the passionless seducer, who pursues his career simply as a kind of sport, and under the influence of no stronger motive than vanity or a spirit of adventure, and who designates his successes in destroying the honor of women his conquests, has been glorified and idealized in the popular literature of Christendom in a manner to which we can find no parallel in antiquity.—*Lecky*.

THE *Investigator* is not pleased with the notion of the *Christian Statesman* that the cholera, pestilence, and famine are sent by God to punish men for unbelief and ungodliness. "As if God," says our heterodox neighbor, "who, it is said, is all mercy and benevolence, and takes better care of his creatures than an earthly parent does of his children, afflicts mankind with the cholera; earthquakes, pestilences, famines, wars, distress of nations, and every other plague and calamity that the most devilish ingenuity and hatred can invent! 'Miserable comforters,' as Job said of his tormentors, are orthodox Christians! They seem to have 'eaten of the insane root which takes the reason prisoner.' May the Lord, if there is one, have mercy on them, and forgive their blasphemy, if he can." The concluding sentence is doubtless a prayer, although the editor of the *Investigator* is theoretically opposed to praying; but the prayer is extremely hypothetical and agnostical, and will not improve its authors' chances with "the Lord, if there is one," and he regards doubt and unbelief as is commonly represented.

A WRITER in the *Boston Evening Transcript*, after mentioning that Prof. Thomas Davidson, in the discussion on Goethe at Concord, defined Christianity as "salvation by grace," takes exception to his definition, and says: "There is nothing in the world so easy as to falsely define Christianity. This the essayist [Prof. Davidson] did as it seems to the present writer. . . . Christianity in truth is simply the spirit of Christ, who is the supreme manifestation of God; and they who follow this spirit are Christians, whether they live in India or America, or before or since the Christian era. . . . Creeds are not Christianity; nor is the Church, under whatever name. But he who loves the right and does it, and who helps his fellow-men to do the same, is a Christian, even though he never heard of Christ, or though he misunderstand or repudiate him. All such, in whatever creed or nation, form together the invisible and universal Church, through whose agency the human race has gone upward and onward." Prof. Davidson's conception of Christianity, so far as we can judge from his definition quoted above, is evidently more correct than that of his critic. To define a great historic religion like Christianity as the *spirit* of an individual is simply absurd. The *spirit* of a person, sect, or party may be humane, yet its *principles* may be wrong and its *influence* bad. Christianity involves certain affirmations, certain doctrinal beliefs, the most distinctive of which is, as Prof. Davidson says, "salvation by grace."

THE statement that "he who loves the right and does it, and who helps his fellow-men to do the same, is a Christian, even though he never heard of Christ, or though he misunderstand or repudiate

The Index.

BOSTON, AUGUST 6, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

WOMAN AND THE CHURCH.

An Address delivered before the Hartford Equal Rights Club,
June 12, 1885.

BY FRANCES ELLEN BURR.

The position of the Church toward woman is a question that has come to the front in the last few months, having been started in the suffrage convention in Washington last winter by the resolutions presented by Mrs. Colby, of Nebraska. These resolutions had some able advocates as well as opponents; and chief among the former was Mrs. Stanton, from whom our little club has had some breezy letters upon the subject.

There is no question that the Church—and by Church I mean churches of all denominations—has looked upon woman as belonging to a class to be governed in religious matters rather than to govern. The feeling of the Church toward woman may perhaps be described in the comprehensive words so often used to children: "Little children should be seen, and not heard." However, I do not feel so much like attacking the Church as I do like attacking women for so tamely accepting a situation that places them under a dictatorship, notwithstanding the fact that they form a large majority in an organization that denies them any controlling power, and notwithstanding the fact, also, that its support depends so largely on women. The work of putting women on an equality with men in the Church is not one that belongs to men: women themselves are the ones to do this. Let women unitedly demand equality in this matter, with a proviso that, if it be refused, they will withdraw from the Church, and equality would not long be withheld. But let them sit with folded hands, waiting for men to thrust freedom upon them, and they would not be fit for it, should it

come. The slave that will not work for his freedom is unworthy of it. Women all over the land enrich the treasuries of the Church from year to year; they largely support the men who preach to them the lessons of humility and submission; and they stand meekly at the altar, and respond in acquiescence to a marriage ceremony in which they are told to obey their husbands. So long as they are blind to the incongruities of the situation, can we expect ecclesiastical bodies to come forward and tender offices of trust and responsibility to them? We might as well expect them to tender such trusts to those who are literally blind. Women have got to come by the slow process of growth or evolution to a realization of the gravity of the situation,—a situation that keeps them in a state of serfdom. They have got to come to a point where they shall unite in the taking of their rights in these things. It is easier for them to do this in church matters than in the case of political disfranchisement, for they have simply to withdraw their presence and support from the Church. They could gradually get an ecclesiastical machine of their own into pretty fair working trim. It is easier to imagine a church run by women alone than one by men alone. The religious element of a church is furnished largely by women. Fancy prayer-meetings and revival meetings made up of men alone! John Newland Maffitt, in his palmiest days, would have found he had undertaken a more difficult task than he ever did before, if he had undertaken to get up a first class revival in a congregation of men alone. Take all the women out of the Moody and Sankey meetings, and you remove a vital element of their success. To attempt a revival under such circumstances would be about as encouraging as it would be for Nature to try to get up a summer in December.

If women could be moved as by one impulse to realize the situation, they would soon take themselves out from under the ecclesiastical yoke. The only way for them to do it is to take themselves out of the Church, and become their own priests and ministers. The Rev. Dr. Patton, of Washington, attacked the woman suffragists as atheists; but, as women are ever charged with doing, he used no reason, nor looked at the facts as they are, but jumped to his conclusions. I do not believe a woman in that convention had any feelings of hostility toward religion. Attacking the Church as to its mode of organization and attacking religion are two widely different things. Religion does not consist in the stone and mortar of a church, nor in a gowned priest,—or ungowned, if you please,—nor in creeds nor ceremonies. Religion, in the sense in which I am using it, is the aspiration of the soul for a spiritual life,—for a life beyond this. Every one, I take it, has this desire, this longing, deep planted within. The wild Indian, who trod these hills before the white man ever came, had visions of happy hunting grounds beyond this life, and of a Great Spirit over all. This stretching out after the invisible is a feeling inherent in the human breast, and is one of the grandest proofs of a life beyond this. In nature's grand economy, such a demand is never created without a corresponding supply. The poet Shelley speaks of the grub in the chrysalis dreaming of his future wings. Man in this chrysalis state is ever dreaming of spiritual wings. Like the sky-lark that soars and sings, and ever mounts straight up, so we are ever mounting up on wings invisible. It is this feeling that makes men forever try to embody their religion in creeds and churches, which are but an outward, clumsy form of an inward, spiritual life. Religion is subjective: creeds, churches, and theology are objective. The crystallizing process of trying to put religion into

him," is the statement of one who has evidently outgrown belief in Christianity, but still retains reverence for the name; and, with such, "there is nothing in the world so easy as to falsely [erroneously] define Christianity." A definition of Christianity which implies that the moral and philanthropic man is a Christian, whether he be a Catholic or a Unitarian, a Buddhist or Mohammedan, an Agnostic or an Atheist, is a definition that does not define. They who use it simply substitute for the word "morality" the word "Christianity"; and thus, when the essential teachings of Christianity are called in question, they avoid the trouble of defending untenable doctrines and the inconvenience and unpleasantness of discarding a name that stands for popular belief, and is endeared to them by many associations, by defining Christianity to mean only that which is held in common by all intelligent men and women, irrespective of their religious belief. If Christianity were nothing more than the disposition and effort to do right, there could be no discussion among intelligent people as to its influence; but, so long as it is understood by its millions of adherents to include numerous theological doctrines, nothing is gained by ignoring the fact, and referring to it simply as "the spirit of Christ" and of all who love the right and do it, whatever their beliefs.

A RELIGIOUS journal quotes the answer of a West India Islander to a question, What happens after death? as a good definition of the agnostic's belief:—

We Ulu men do not know if this is so or not, and we wonder how they know; for we have never heard of any one who has come back to tell them. We Ulu men do not know whither we go; but the breath that goes out of the mouth is lost two arms' length away, and we believe that we mix with the wind and follow it wherever it goes. And our bodies certainly rot away.

Very ignorant, no doubt, is the heathen who made the above answer; but how much more does the Christian editor know about the subject than does the simple islander, who, to the missionary statements about the state of the soul after death, said, "We Ulu men do not know if this is so or not"? The answer is so intelligent that we suspect the islander had been in contact with some civilized minds, who were conscious of their inability to solve the problem of human destiny. We have met Indians in Oregon who spoke very much as above, but, as we ascertained, only when they had heard Christian preaching, and the doubts and discussion to which it had given rise among the white settlers. Paradoxical as it may seem, people who know the most generally doubt the most. A simpleton believes whatever is told him. A Humboldt, a Darwin, a Huxley, a George Eliot, is more or less an agnostic in regard to matters that are beyond the province of observation, experience, and verification. And the difference between the agnosticism of those who call themselves agnostics and of enlightened men and women who call themselves Christians is simply one of degree, when indeed it is anything more than a difference of phraseology.

TO NATURE.

For The Index.

Nature, I would be thy child,
Sit and worship at thy feet,
Read the truth upon thy face,
Wait upon thine accent sweet;
I would put my hand in thine,
Bow my head upon thy knee,
Live upon thy love alone,
Fearless, trusting all to thee.

GOWAN LEA.

church and creed must necessarily mix more or less of the earthly with what is spiritual and divine. But I am not attacking churches. I see the need there has been of them, and still is, though to a lessening extent. They would never have existed, if the need had not also existed; and they will never go out of existence till people, in the process of religious evolution, shall reach a point where they can be their own priest, creed, and church. The Church can never be removed by the battering-rams of nihilism or atheistical opposition. Negations cannot accomplish much. Atheistic France, in the days of her great Revolution, tried to strike out everything but the roughest materialism: they even introduced a new calendar, putting ten days into the week, and left Sunday to "shift for itself," as Carlyle says, in his peerless history of that wonderful Revolution. The Christian era was to be struck out, so far as dating was concerned; and everything thereafter was to be dated from year one of the republic, which corresponded to 1792, Christian era. This new calendar, "calculated for the meridian of Paris, and gospel of Jean Jacques,"—as Carlyle puts it in his facetious irony,—lasted thirteen years. And he adds further on: "And solely as paper then, and as a hope, must this poor new constitution exist; in which shape we may conceive it lying, even now, with an infinity of other things in that limbo near the moon. Further than paper it never got, nor ever will get."

Mere materialism is cold, blank, and cheerless: it is the negation of night. The soul finds no life in negations: it needs the warm sunlight of an affirmative,—a positive *something* to take the place of church and creed before the need of these will die out. Defective as the Church is, it has been a stepping-stone to something better. It has been a torch—though a feeble one—to light people out of the black night of materialism. Notwithstanding the wars that have been waged and the blood that has flown like rivers, and the iniquities innumerable that have been committed in the name of religion, we can easily see how, rejecting the higher spirit and philosophy that should characterize true religion, and clinging to the outer husks of form and ceremony as being their only hope of heaven, the defenders of the Church should have fought with a bitterness and intolerance that has never been aroused in any other cause. They felt that they were fighting for their eternal welfare and the glory of God; for a man's God never rises much above his own level. If he is a warrior, his God is one also,—witness the warlike character of the Israelites' God, and of other nations as well. If a man believes in burnt offerings and sacrifices, so does his God. These Gods are essentially human, and unworthy the infinite power or spirit that guides the laws of the universe. Out of the sacrificial slaughter-houses of the old Mosaic dispensation arose the idea of a God sacrificing his own son for the sins of the world,—an idea utterly foreign to any just conception of an infinite being of love and tenderness. And to the same source also must be traced the ceremony of eating and drinking the body and blood of that Son. Christ is to me a wonderfully beautiful character and most lovable; but to eat his body or drink his blood, though only symbolically, is to me an utterly repugnant ceremony. I have never heard the idea advanced by any one, and have often wondered that it never has been; for there must be others who feel the same about it. While I respect the faith and sincerity of others, I must nevertheless acknowledge that this ceremony, to them so sacred, is to me abhorrent. And I say this in no irreverent spirit. A symbol should represent a truth back of it; and this symbol does

not represent a thing we would in reality do, for we would not in reality eat the body and drink the blood of friend or foe: no one but a cannibal would do that. It is said that Christ himself instituted this ceremony. If so, it was doubtless because, with his clear spiritual vision, he could see how a people imbued with the bloody gospel of the old Israelites could not be freed from it in a day. The higher spiritual truths he taught must necessarily be presented in a form the most readily seized by them. But, whatever the motive for instituting such a ceremony, I should still have to be excused from participating in it. If Christ himself could see the feeling that prompts me to say this, he would see that it is said in no irreverent spirit. His is a character that appeals to our reverence, admiration, and love. But that human institution, the Church, partakes of human weaknesses and cruelties. Its eternal punishment doctrine is well described by Burns, in his "Holy Willie's Prayer," beginning,—

"O Thou who in the heavens dost dwell,
Who, as it pleases best thyself,
Sends one to heaven, and ten to hell,
All for thy glory,
And not for any good or ill
They've done afore thee!"

The Christian, or rather the Jewish, doctrine of sacrifice is essentially barbaric in origin, and has caused a vast amount of misery in the world. No wonder that this, and that other barbaric doctrine, eternal punishment, have struck the light of reason out of so many minds. How many have felt themselves commissioned by the Almighty to sacrifice some innocent person "for the Lord's sake," it would be impossible to tell. I once began to collect accounts of this kind, but the business grew so sickening I had to leave it. The most notable case of late years is that of the Pocasset murderer, who, in the hamlet of Pocasset, Mass., on the 1st of May, 1879, deliberately murdered his little girl as a test of his faith in the God of Abraham. That story of Abraham and Isaac is responsible for many bloody harvests. The latest one (June, 1885) comes from Wilkes-barre, Pa., where a man named Williams, a hard-working, honest miner, joined the Salvation Army, and soon blossomed out into a first-class fanatic, saying that the Lord came to him at night, and bade him make some human sacrifice. So he started out with a butcher-knife, and began an indiscriminate onslaught on whomever he met, but was captured before he had succeeded in his purpose, but not till he had injured a number severely. These fanatics are consistent. The trouble is not with them, but with the hideous doctrine. If it was right for Abraham to sacrifice his son, why was it not right for Charles F. Freeman, of Pocasset, to sacrifice his little daughter? The old Mosaic theology sowed the seed from which later years have reaped many a bloody harvest, the work being perpetuated and pushed on by the Christian "fathers." Let us hope that the Christian "mothers" may yet take a turn at Bible and creed making, and introduce into them a little more of the milk of human kindness. I do not claim that women alone are any better than men alone; but I do claim that it takes the two elements to make a complete whole, in governments ecclesiastical as well as political.

But, notwithstanding these objectionable features, the Church has been the expression of the soul struggling out of darkness into light; and, in the light of the higher spiritual life, these weak points are thrown into the background, and we see its better features. With Emerson, I can say:

"I like a church; I like a cowl;
I like a prophet of the soul;
And on my heart monastic aisles

Fall like sweet strains or pensive smiles;
Yet not for all his faith can see
Would I that cowed churchman be."

How the very poetry of ecclesiasticism clusters about the cathedrals of England! Wipe these out of her history, and you would destroy the very essence of one of its most poetic and beautiful features. Bi-hop Coxe felt this, when he wrote a poem beginning:—

"The chimes, the chimes of Motherland,
Of England green and old,
That out from fane and ivied tower
A thousand years have rolled."

And that wonderful organization, the Romish Church, antedates the Protestant by some centuries, and, according to Macaulay, is destined to outlive the latter. Though cruel and despotic in asserting its own supremacy, it has one beautiful feature,—its worship of the Virgin Mary. But such a series of crimes and persecutions as it has practised—not only through its terrible Inquisition, but also outside of it—would have killed any other organization; but it lives in vigor, notwithstanding its background of cruelty. Macaulay's masterly word-painting of this organization, in his review of Von Ranke's History of the Popes, has never been equalled on this particular subject. He says:—

"There is not, and there never was on this earth, a work of human policy so well deserving of examination as the Roman Catholic Church. The history of that Church joins together the two great ages of human civilization. No other institution is left standing which carries the mind back to the times when the smoke of sacrifice rose from the Pantheon, and when camelopards and tigers bounded in the Flavian Amphitheatre. The proudest royal houses are but of yesterday, when compared with the line of the supreme pontiffs. That line we trace back in an unbroken series from the pope who crowned Napoleon in the nineteenth century to the pope who crowned Pepin in the eighth; and far beyond the time of Pepin the august dynasty extends, till it is lost in the twilight of fable. The republic of Venice came next in antiquity; but the republic of Venice was modern, when compared with the papacy; and the republic of Venice is gone, and the papacy remains. The papacy remains, not in decay, not a mere antique, but full of life and useful vigor. The Catholic Church is still sending forth to the farthest ends of the earth missionaries as zealous as those who landed in Kent with Augustine, and is still confronting hostile kings with the same spirit with which she confronted Attila. The number of her children is greater than in any former age. Her acquisitions in the New World have more than compensated for what she has lost in the Old. Her spiritual ascendancy extends over the vast countries which lie between the plains of the Missouri and Cape Horn,—countries which, a century hence, may not improbably contain a population as large as that which now inhabits Europe. The members of her communion are certainly not fewer than one hundred and fifty millions, and it will be difficult to show that all other Christian sects united amount to one hundred and twenty millions. Nor do we see any sign which indicates that the term of her long dominion is approaching. She saw the commencement of all the governments and of all the ecclesiastical establishments that now exist in the world, and we feel no assurance that she is not destined to see the end of them all. She was great and respected before the Saxon set foot on Britain, before the Frank had passed the Rhine, when Gracian eloquence still flourished in Antioch, when idols were still worshipped in the temple of Mecca. And

she may still exist in undiminished vigor when some traveller from New Zealand shall, in the midst of a vast solitude, take his stand on a broken arch of London bridge to sketch the ruins of St. Paul's."

The bulwarks of such an organization as that may well seem impregnable to the assaults of time, to say nothing of the puny assaults of woman suffragists. But the subtle alchemy of evolution undermines the strongest bulwarks of despotism. The Church herself is being evolutionized, for the great principles of truth and right underlie all evolution. The human mind is subject to the laws of evolution no less than the vegetable and animal kingdoms below us. Our planet is one great ball, or aggregation of particles, that have been built up under this same law. There is no escaping it. Not even this wonderful organization over which Macaulay gets so eloquent can escape it. Churches, Protestant and Catholic, as well as political despotisms, have got to succumb to it. And it is this fact that gives our little puny suffrage societies such unbounded hope. We have truth on our side, and truth is stronger than an army, or legions of armies with all their banners. So we wait and hope, at times almost exultant in the sure consciousness that neither Church nor State can reverse nature's decrees. When woman was created an intelligent being with brains of her own, it was not intended by the power that created her that her intellectual faculties should lie dormant; it was not intended that she should be kept in a state of subjection, like the cattle on a thousand hills. Neither priests nor law-givers, nor men of high nor low degree, should assume the position of specially appointed vicegerents of the Almighty to rule over women,—a vicegerency founded upon sex. And women should not accept such a position as the God-appointed relation of woman to Church and State. Brains, not sex, govern; and let us remember that brains lie in the head, and that both sexes alike have them. Women should awake to the fact that their reason was given them to use; and, so long as they refuse to use it, and allow men to do their thinking for them, they will remain a subject class in Church as well as State. The women of Utah swallow whole the Mormon religious scheme,—if it is allowable to debase the word "religious" by applying it to such a wholesale system of prostitution,—a system in which religion is made to serve base ends by reducing women to a state of serfdom as abject as that of a Turkish harem. Christian women of enlightened lands point to Mormondom with a shudder; but do not Christian women use as little reason in swallowing without a grimace the male system of Orthodoxy? The lecturer who referred to theology as *heology* expressed the situation with admirable brevity. We need a system of theology—if there is any need of theology at all—that shall be made up equally of the two elements, masculine and feminine. We need a God who shall represent the woman side as well as the man side of nature. When Disraeli was twitted with being a Jew, he said, "One half of the Christian world worships a Jewess, and the other half worships her son." Now, the son of this Jewess had as much of the feminine in his nature as the masculine: strike out the feminine part of him, and you have no Christ. The man who is wholly masculine is intellectually weak, as is the woman who is wholly feminine. The Heenans and Sullivans of the prize ring are wholly masculine. It requires both elements to make the perfect balance. And this rule holds good with religions as well as governments. The world has given *heology* and a masculine God a thorough trial, and it has not proved a success. Governments, ecclesiastical and political, have been

lop-sided; and lop-sidedness is a token of something wrong. But Nature rights all wrongs, though it takes ages to do it; for she has eternity to work in. Victor Hugo said, "The nineteenth century is to be woman's century." Perhaps the revisers of the Bible snuffed this battle from afar. The eleventh verse of the sixty-eighth Psalm of the old version reads, "The Lord gave the word; great was the company of those that published it." This passage in the new version reads, "The Lord giveth the word; the women that publish the tidings are a great host." The host is coming. Women are to-day occupying pulpits of their own; and we have a Bible translated by one woman alone,—a work pronounced by competent Hebrew scholars to be an accurate and literal translation. I think we need have no fears that the ecclesiasticism of the past is to rule in the future. The night of its long reign is passing away. Already we are in the morning twilight, and soon we shall have the full dawn. The dark ages can never return.

CORRESPONDENCE.

CHRISTIANITY AND WOMAN.

Editors of The Index:—

So long as Mrs. Stanton holds the popular misconception of what Christianity is, it will be impossible for her to admit the major premise of Mrs. Shattuck's syllogism; namely, that "the human race has been benefited by Christianity." But the popular is by no means the right conception.

In order to know what anything is, it is also necessary to know what it is *not*: and this is eminently true of Christianity. Whatever the "Church" or State may teach concerning the inferiority and subjection of women, concerning masculine superiority or headship, certainly cannot be chargeable to the spirit of the Christ; and this spirit is the vital essence of Christianity, whether it was manifest in the days of Adam or Homer or Plato or Paul or Mrs. Stanton. Whenever and wherever, in the history of the world, this spirit has dominated, the human race has been benefited, man and woman alike; for neither can be or ever has been *really* benefited without the other. Man is spirit, and spirit is free. Freedom is realized through conflict by transcending the manifold limits of time and sense. All who in conflict overcome abide *consciously* in the law of their being. The law of man's being makes it possible for him to rise to the level of his source, which is God. Man may become Godlike: this is the supreme consciousness and teaching of the Christ, and the realization of this consciousness and teaching is the process of history.

Religion is from everlasting. The Christ is not the originator of it; nor does he anywhere profess to be, in so far as a "form of religion and government" are "based on the principle of caste and class, and the greatest blessings of advancing civilization have been monopolized by the few at the expense of the many." In so far as "women have belonged to the ostracized class," the spirit of the Christ, or Christianity, in its true meaning, has *not* prevailed. The conclusions to be deduced from this fact are most unflattering to that half of the human unit who claim to have established the existing order in "Church" and State by virtue of an alleged monopoly of the intellectual faculty of the race. But no woman will help her cause (and her cause is man's cause, too) by endeavoring to undermine that only secure foundation upon which humanity shall yet build a veritable "republic of God." The sins of alleged Christianity the past eighteen hundred years cannot be charged to the spirit of the Christ, but are due rather to an absence of his spirit. In spite, however, of the deplorable history of the past, there has always been a remnant who have, through crucifixion, death, and burial, joyously arisen, and drawn men up to them. These are the Christians, by whatever name they may be called, in whatever nation they may be found.

Christianity cannot be exclusively identified with any form of theology. The latter is but the result of man's endeavor, or want of endeavor, to know truth, and comes more nearly to the absolute truth only as man, climbing slowly toward the level of his source,

gains with his higher altitude a broader horizon and a better point of sight.

Christianity *has* benefited the human race, and, unless Mrs. Stanton denies that woman is a human being, she must admit that Christianity *has* benefited woman.

CHARLOTTE F. DALEY.

CHRISTIANITY AND WOMAN.

Editors of The Index:—

Mr. Francis E. Abbot wrote the following letter eight years ago to a convention of the National Suffrage Association held in Washington. It is so clear and concise, and contains so many telling points, that it is worth reproducing at this time, when the question, "What has Christianity done for woman?" is up for consideration.

E. C. STANTON.

BOSTON, MASS., Jan. 10, 1877.

Dear Mrs. Stanton,—It is with some little pain, I confess, that I accept your very courteous invitation to write a letter for your Washington convention on the 19th instant; for what I must say, if I say anything at all, is what I know will be very unacceptable—I fear very displeasing—to the majority of those to whom you will read it. If you conclude that my letter will obstruct, and not facilitate the advancement of the cause you have so faithfully labored for these many years, you have my most cheerful consent to deliver it over to that general asylum of profitless productions,—the waste-basket.

Running this risk, however, I have this brief message to send to those who now meet on behalf of woman's full recognition as politically the equal of man, namely: that every woman suffragist who upholds Christianity, tears down with one hand what she seeks to build up with the other,—that the Bible sanctions the slavery principle itself, and applies it to woman as the divinely ordained subordinate of man,—and that, by making herself the great support and mainstay of instituted Christianity, woman rivets the chain of superstition on her own soul and on man's soul alike, and justifies him in obeying this religion by keeping her in subjection to himself. If Christianity and the Bible are true, woman is man's servant, and ought to be. The Bible gave to negro-slavery its most terrible power,—that of summoning the consciences of the Christians to its defence; and the Bible gives to woman-slavery the same terrible power. So plain is this to me that I take it as a mere matter of course, when all the eloquence of the woman-suffrage platform fails to arouse the Christian women of this country to a proper assertion of their rights. What else could one expect? Women will remain contented subjects and subordinates just so long as they remain devoted believers in Christianity; and no amount of argument or appeal or agitation can change this fact. If you cannot educate women as a whole out of Christianity, you cannot educate them as a whole into the demand for equal rights.

The reason of this is short: Christianity teaches the rights of God, not the rights of man or woman. You may search the Bible from Genesis to Revelations, and not find one clear, strong, bold affirmation of *human rights as such*; yet it is on human rights as such—on the equality of all individuals, man or woman, with respect to natural rights—that the demand for woman suffrage must ultimately rest. I know I stand nearly alone in this, but I believe from my soul that the woman movement is fundamentally *anti-Christian*, and can find no deep justification but in the ideas, the spirit, and the faith of free religion. Until women come to see this, too, and to give their united influence to this latter faith, political power in their hands would destroy even that measure of liberty which free thinkers of both sexes have painfully established by the sacrifices of many generations. Yet I should vote for woman suffrage all the same, because it is woman's right.

Yours very cordially,

FRANCIS E. ABBOT.

DIFFERENCE BETWEEN THE UNCREATED AND THE CREATED LIFE.

Editors of The Index:—

Having found life to be the cause of all action, the next thing to consider is the quality of this life, or cause. There are two kinds of life, and consequently two kinds of action; namely, the uncreated Life and its action, and the created life and its action.

The uncreated Life and its Thought are an eternal living substance, which is unchangeable, without beginning and without end,—perfection. It is the *first cause*, and, created, underlies and sustains all created life.

The uncreated Life is a separate quality from its creation, and can no more blend or mix with its creation than the soul of man can blend or mix with the material products of its thought.

All created life holds its existence in the uncreated Life. The created life is the life of the mineral, vegetable, and animal kingdoms, of which the life of the animal kingdom, alone, is a conscious life. The animal life is conscious of its existence with a material form and outline, and, being changeable, is, of course, an opposite quality to the unchangeable, uncreated Life. The latter is Spirit, and the former was created spiritual.

The life (soul) of man is a changeable, movable spiritual life. It is not only conscious of its existence with a material form and outline, but is the highest form of created life, and is capable of comprehending its origin and Creator.

We will term the uncreated Life perfect Life, perfect Love, and perfect Truth. The life of man is an opposite quality to this perfect Life, because it is created and changeable; and, although capable of becoming like unto Perfection, it is liable to imperfection.

The soul of man claims to possess love and truth. Perfect Truth is Purity, with which hatred or impurity has no identity, it being, in fact, but the absence of Love, and therefore no-thing to the Love itself. Perfect Love, or Purity, loves the sinner as much as the saint, because to it there is no sin or impurity. But to the sinner there is impurity (produced and recognized by the soul of man alone); and his recognition of this impurity separates the sinner from the saint in thought, and clouds his soul, and prevents him from realizing that perfect Love. The soul of man can not only hate, but it recognizes hatred as an entity, and has therefore no portion of the perfect Love. And its recognition of hatred as something denser or clouds the soul, and is a hindrance to its realization of perfect Love. Perfect Truth can neither recognize nor produce its absence, a lie; and, as the life of man can both recognize and produce a lie, there can be no portion of the perfect Truth in it.

Thus, the life, truth, and love, which the life of man claims to possess, are found to be no portion of the perfect, uncreated Life, Truth, and Love. All conscious life has thought; and the perfect, uncreated, unchangeable Life must have perfect, unchangeable thoughts, which are co-existent and co-eternal with it. The created life or soul of man, being changeable, must have changeable or material thoughts. These thoughts are the first product of the life, and according to them the life acts. The action of the life of man is, therefore, independent of its Creator (the uncreated Life and its Thought), who completed it when it was made, and thereafter merely sustains it and its fruit or offspring. If the life of man entertain opinions which are not demonstrable, in reasoning from and acting in obedience to these opinions, it is not advancing toward spiritual knowledge or demonstrable truth, but is working from a changeable or material stand-point, and thereby growing more and more material.

If the life of man understand first its origin, and realize that it is no part of the Creator, or uncreated Life and its Thought, but is an opposite quality,—a changeable, spiritual life, responsible for its acts because capable of comprehending Truth, and governing itself thereby,—it will seek that comprehension; and its acts will bear witness of the realization of it.

The created life or soul would no longer ask its Creator to add unto or take away from the work which that Creator completed and pronounced good, but would strive to realize and become like unto that perfect Good in the image and likeness of whose Idea it was originally created.

Asking the uncreated, unchangeable Life, which is Love itself, to love the created life more, or to forgive sin (the absence of itself, and nothing to it), would be equivalent to limiting the Creator, or attempting to model the unchangeable Love in accordance with the created life's ideas of a changeable love. The uncreated Life, being unchangeable, can neither love more nor less, but must remain ever the same; and the created life must, through the realization of that unchangeable Love, destroy in itself its absence,—hatred,—and thus become like unto that Love.

The first step toward that result is, as I have before said, the understanding that life, not matter, is the cause of all action. The next step is to understand the quality of the uncreated Life and of the created life, and to realize that thought is the first product of the life of man, and that according to the thought the life acts. Then, through the realization of this knowledge of the quality of the Creator and of the spiritual creation, the life or soul of man will become more and more like unto that perfect Love, until it becomes impregnable to outward tribulation. This will be the reward of those who faint not in well doing. This is the peace which Jesus spoke of giving to his disciples, not that which the world calls peace, which may be broken at any time, but the inward peace, which surpassed all understanding of this world.

E. J. ARENS.

BOOK NOTICES.

POEMS, ORIGINAL AND TRANSLATED. By Charles T. Brooks. With a Memoir by Charles W. Wendte. Selected and edited by W. P. Andrews. Boston: Roberts Brothers. 1885. Price \$1.25.

It is a very engaging portraiture of a refined and winning type of intellectual manhood which is unfolded to us through these poems, Mr. Andrews' preface, and Mr. Wendte's memoir. The memoir, which fills about one-half of the two hundred and thirty-five pages of the volume, is written *con amore*, and will doubtless be warmly welcomed by the many who knew and loved the amiable and scholarly gentleman who was for so many years the presiding genius of the Channing Memorial Church in Newport, R.I., and who will be remembered in the future history of that church as its first and dearly beloved pastor.

Judging from the story of his life as related by Mr. Wendte, its events were not of a kind to bring out in any marked manner whatever latent strength of purpose or character there might be in his gentle, kindly nature, though he met the little transient ills common to humanity which came to him with serene patience. His amiability, liberality, purity of life and thought, his literary tastes and scholarly attainments, seemingly won for him the friendship and love of all who knew him; and, whenever his worldly prospects looked gloomy or threatening, these friends were swift to come to his aid with substantial offers of assistance. Though never rich, he yet never knew what poverty or genuine hardship meant; nor do the pages of this book reveal any cause for those deeper trials of soul strength which make part of so many anguished lives. His were mostly "ways of pleasantness" and "paths of peace." So the poetry which is given to us here, though evincing true poetic feeling and expression, a purely sweet nature, sincerity of purpose, loftiness of aim, and a high degree of scholarship, is not such as will be likely to make him in any way particularly noteworthy among American poets. He was a genuinely literary man, and an unwearied and enthusiastic writer of interesting books, both original works and translations (a long list of which is furnished in the appendix); but he cannot be claimed as a true genius in originality of thought or strength of expression. The portrait of Mr. Brooks which is given in the frontispiece indicates the lovely, benign, and intellectual character of the man as portrayed in this volume. S. A. U.

UNITY SONGS RESUNG. Compiled by C. H. K. Chicago: The Colegrove Book Company. pp. 139. Price \$1.25.

This dainty volume in "blue and gold" is a selection, made by Charles H. Kerr, one of the editors of *Unity*, from the poems contributed to that paper between December, 1879, and March, 1885, and are most of them from writers well known to Unitarian readers, such as W. C. Gannett, F. L. Hosmer, James Vila Blake, J. T. Sunderland, Hattie and Florence Tyng Griswold, Celia P. Woolley, Abbie M. Gannett, Alice Williams Brotherton, Fanny Driscoll, Ella Wheeler Wilcox, and others. These songs are not all attuned to one key: they range over a wide field of poetic subjects, from the purely devotional to the descriptive and amatory. One would judge, from the fact that out of this group of twenty-seven singers sixteen are women, that the Unitarian faith has peculiar attractions for the more intellectual and refined types of that sex; and some of the most exquisite of the seventy-five poems the volume contains

are the productions of feminine brains. Of these seventy-five, forty-two were written by women. Mr. Kerr has made his selections with excellent judgment and taste; and the book should be a welcome and inspiring visitor to every household, whether Unitarian or otherwise. S. A. U.

LOOK WITHIN FOR FIVE THOUSAND FACTS THAT EVERYBODY WANTS TO KNOW. Chicago: A. H. Anderson & Co. Price 15 cents.

These "facts" are condensed statements in regard to every-day questions in mechanics, statistics, history, medicine, politics, agriculture, religion, etc. It is a very useful pocket cyclopædia on matters in which the majority are interested, but about which the best informed are liable to make mistakes.

West Newton English and Classical School.

The 34th year of this Family and Day School for Boys and Girls begins September 16.
Address NATH'L T. ALLEN,
WEST NEWTON, MASS.

HOWARD COLLEGIATE INSTITUTE, WEST BRIDGEWATER, MASS.

The Religion OF PHILOSOPHY;

OR,
The Unification of Knowledge.

A COMPARISON

of the Chief Philosophical and Religious Systems of the World, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God.

By RAYMOND S. PERRIN.

Octavo, cloth. \$4.00.

C. P. Putnam's Sons,

27 and 29 West 23d Street, New York.

A SEASIDE RETREAT.

Ocean Cottage, on Horseneck Beach, is situated about thirteen miles south-west from New Bedford on the open sea. Those wishing a pleasant and quiet summer resort, with all the accommodations of a first-class hotel without the restraints of a fashionable watering place, will be pleased with our home. We have one of the finest beaches in the country, with the surf at our door; excellent bathing and fishing; an inlet close by for those wishing to sail in smooth waters. Seldom any mosquitoes about the hotel. For particulars, address JOSIAH WOOD,

No. 84 ALLEN ST., NEW BEDFORD, MASS.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

TOKOLOGY A Book for every woman. Alice B. Stockham, M. D.
A COMPLETE LADIES' GUIDE.
 10,000 Sold in Little Over a Year.
 Agents find it the most popular work on the market. The very best book to put into the hands of a girl or woman. — E. M. HALE, M. D.
 Cloth, postpaid \$2.00; Morocco, \$2.50. Circulars Free.
 Sanitary Pub. Co., 159 La Salle St., Chicago, Ill.

H. T. MARSHALL'S PATENT ADJUSTABLE LACE CONGRESS.

THE COMING SHOE.

By means of its Lacing Adjustment, it can be made as comfortable as any Lace Shoe, and is just as convenient as any Congress in putting on or off, as it requires no lacing and unlacing after being once adjusted to the foot.

The most durable elastic is used, yet does not draw the foot and ankle as in ordinary Congress. Every one who wears them likes them.

Take no substitute until you have seen and tried on a pair. If your dealer does not have them or order them for you, write to subscriber for directions how to get them. All Shoes warranted that are stamped with name of Patentee and Manufacturer of Men's, Boys', and Youth's Fine Boots and Shoes, Base Ball, Bicycle, and Lawn Tennis Shoes.

H. T. MARSHALL, Brockton, Mass.
 N.B.—Patent stamp woven in one strap of each shoe.

A large assortment of these shoes at retail at
 No. 17 Water Street, Boston.

PIC-NIC SUGGESTIONS.
 Book now in press. Suggestions for Sunday-school picnics, excursions, etc., from experienced Sunday-school workers from various sections, both city and country. Replete with valuable hints. Worth many times its cost to any Superintendent. Price, postpaid, 25c., or will send free to any one sending or naming of Superintendent of all Sunday-schools in his place. Address, DAVID C. COOK PUBL. CO., 18 & 15 Washington St., Chicago.

The Secret of the East;

OR,

The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvelously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

TRACTS.

- No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.
- No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extractions.* Price 10 cents; 12 copies, \$1.00.
- No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.
- No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.
- No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.
- No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.
- No. 10.—*The Impachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*
- No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.
- No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.
- No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.
- No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.
- No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address THE INDEX,
 44 Boylston Street, Boston, Mass.

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnerbund.)

Editor, C. Hermann Beppe.

TERMS, PER ANNUM, IN ADVANCE:
 UNITED STATES AND CANADA:

Freidenker..... \$2.50
 Turnersche Ausgabe des *Freidenker*
 (*Amerikanische Turnzeitung*)..... 3.00

EUROPE:

Freidenker..... \$3.00
 Turnersche Ausgabe des *Freidenker*
 (*Amerikanische Turnzeitung*)..... 3.50
 Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirteenth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing considerably MORE READING MATTER, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading "Turnersche Ausgabe des *Freidenker*."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblätter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.
 (Organ of the German-American Teachers' Association.)

Editor:

MAXIMILIAN GROSSMANN, Milwaukee, Wis.

Associate Editors:

H. H. FICK, Chicago, Ill.

H. SCHUBERT, Chicago, Ill.

16 large quarto pages, with four-page cover.
 Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

CURRENT TOPICS.

BY B. F. U.

THE real hero, President Bascom says, is often not worshipped at all, oftener crucified.

MR. ROWLAND CONNOR is doing good work in the West. He has just finished a course of able and instructive lectures in East Saginaw, Mich., on "The Books of the Bible." The lectures have been quite fully reported in the papers of that city.

IN the Chinese quarter in New York, last Saturday, the imperial standard hung at half-mast, and a bulletin was issued as follows: "Gen. Grant, a very great war general, and head man of the Americans, is dead. He was a very good man. It is requested that everybody observe to-day, his funeral day, quietly, and pass proper respect to his memory."

IN regard to the exposures of vice in London, Col. Ingersoll, in reply to a question by a reporter, said: "I have never read the *Pall Mall Gazette*. If the charges are made in good faith, the editor is in the right. Virtue does not live on ignorance, and vice flourishes in the dark. All the guilty parties will object to the publication, but I see no reason why good people should. If the charges are true, they ought to have been published. I know, in a general way, what the facts are claimed to be; and nothing could be more horrible."

THE *Freidenker* quotes the statement made by the editor of a newspaper published in Columbus, Ohio, and called *The Orphan's Friend* (*Waisenfreund*), that the joy of the saints in heaven is undoubtedly increased by their beholding the torments of the damned, and that this is the meaning of Psalm xci, 8: "Only with thine eyes shalt thou behold and see the reward of the wicked."

RECENTLY, the police broke in the doors of the Asylum of San Filippo de Neri at Leghorn, and found twenty little girls held in captivity.

The institution was under the supervision of a Catholic priest,—Father Bruzza. Apparently repentant Magdalenes, enrolled as Sisters of Charity in the service of the house, went about the city making new victims, securing clients, and soliciting alms. The priest denies the charge; but the evidence against him is declared to be conclusive, and he is now in the municipal prison, as is the Mother Superior.

OUR Hebrew brethren do not intend to be outdone in praising Grant. From one of their papers, the *Occident*, we take the following, by Rabbi Browne: "Moses liberated three millions of people—his own brethren—from Egyptian bondage. Grant liberated three millions of people, a race not his own, from American bondage, over the dead bodies of his own brethren, breaking the negro's chains. These three millions of broken chains the angels of heaven have been linking together, so that our American Moses might climb on his self made path to the realms of bliss, and shake hands with his prototype, our own Moses of old."

REV. ROBERT LAIRD COLLIER has figured lately as a somewhat sensational newspaper correspondent. Whether describing his reception by an English nobleman, a bull-fight in Mexico, or some popular demonstration, he always revels in superlatives. Thus, writing to the *Boston Herald*, after mentioning Gen. Grant's funeral, he says: "Grant is felt to have had the most consummate intellect, and to have lived the most illustrious career, of this century. He was altogether the most splendid man America has yet given to the world." Last Sunday in a sermon, Mr. Collier said: "The written history of this man will never reach the truth. This must be left to the larger and subtler insight of legend. . . . Washington, Lincoln, Grant,—it is the edict of legend that the greatest of these is Grant." For such exaggerated, for such utterly false statements as these, especially by a moral and religious teacher, there can be no excuse. Enough can be said in praise of Gen. Grant to express the popular feeling, and at the same time to do full justice to the memory of the illustrious dead, without going beyond the bounds of all truth and common sense.

MINNEAPOLIS, where the American Woman Suffrage Association is to hold its next annual meeting, October 13-15, is quite a distance from Boston, the head-quarters of the "remonstrants"; but the telegraph has almost destroyed the advantages as well as the disadvantages of distance, and the A. W. S. A. will need to keep a sharp lookout lest the tactics of its enemies, who lack neither money nor energy, and are fertile in resources, strengthen the opposition with which it has to contend. We suggest that some of the remonstrants be invited to attend the convention, and to show the strength or the weakness of their position. The people of the West like to "hear both sides"; and a debate between Mrs. Lucy Stone or Mrs. Mary A. Livermore and Mrs. Kate Gannett Wells, or between Henry B. Blackwell, the man of facts and figures, and any of the gentlemen who

spoke against woman suffrage before the Massachusetts Legislative Committee last winter, would attract large audiences, be instructive as well as lively, and help to awaken and extend an interest in this important reform.

JOSEPH SMITH, son of the Prophet and president of the Reorganized Church of Jesus Christ of Latter Day Saints,—branches of which hold service in many cities and towns of New England as well as in the West,—is in Utah on his long-contemplated mission of restoring Mormonism to its "primitive purity." The members of the hierarchy at Salt Lake City are not a little disturbed by his presence in the city, where he has commenced preaching. He is fiercely assailed in the Mormon papers, especially in the *Deseret News*, the official organ of the Church. The Utah Latter Day Saints had better elect Joseph Smith president, abandon polygamy, and put themselves in harmony with the laws of the United States. They have received so many revelations they might now manage to get one authorizing them to make Smith their leader and to forbid polygamy.

THE London correspondent of the *Boston Herald*, referring to the movement for disestablishment, says: "This will be the most burning question at the coming elections. Both Church and clergy, by their conduct, are almost daily helping the Radical cry of 'Divorce the Church and State.' The newspapers continue to bring charges against the clergy for drunkenness and loose morals on the one hand, and bigotry and clerical oppression on the other." A case is related of a rector, in a parish where the value of the living is £1,052 annually, or nearly a sovereign per head, who wrote to an old man eighty-two years old, of irreproachable character and patriarchal appearance, saying, "I feel it my painful duty to pronounce you cut off from church communion, and I pray that God may save your soul," thus concluding after the fashion of an assize judge, who has donned the black cap, and is pronouncing the sentence of death against a murderer. The old gentleman, being a practical man, although suffering from the infirmities of age, wrote the rector, inquiring whether the reason of his letter was not because some part of his tithe remained unpaid. The rector replied, repeating his "black cap prayer," and the next Sunday, before his congregation, publicly announced his anathema against the octogenarian, using, it is said, the excommunication in the Prayer-book, which has long been obsolete in the Church of England. The account says: "The farmer thus treated meditates obtaining legal redress, believing the attack as one made upon his personal character. Meanwhile, the people of the whole diocese of Norwich appear to be intensely excited; and, undoubtedly, the whole Radical press of the realm will adopt the aggressive incident as a pivot for renewed attacks upon a union of Church and State, that invites bigotry and ecclesiastical autocracy. Parliament will also be asked to inquire into the affair."

CREDULITY.

Credulity, scepticism, and faith are words that respectively represent certain attitudes of mind which, with the relations between them, we propose to treat in three successive articles. Faith, among theological writers, is often confounded with credulity, and usually is made the antagonist of scepticism; but rather, when genuine, is it the product of the two.

Credulity is a quality of mind that is apt to be ridiculed and scorned. It is popularly associated with mental weakness, and as such is despised. Especially is it treated with contempt by men of the world, so called; that is, by men who have travelled much, and have mingled largely with the various classes of their fellow-beings, and who are commonly thought, and who think themselves, to understand better the world and human life because they have gone over more areas of mankind, and think they have discovered that things are not what they seem. Henceforth, this class of persons regard themselves as proof against every form of cheat, delusion, jugglery, mental or moral pretence, by which, in their view, ordinary mortals, who have not had their opportunity, are constantly duped. You will not catch them expressing confidence in this neighbor's honesty or in that one's purity; for have they not learned, they boastfully say, what moral hypocrites lie concealed under the fairest moral appearances? They even smile incredulously at claims put forth for woman's virtue, and wonder at the weakness that is thus deceived. Now, possibly, this class of men—who, in their own eyes, have so much worldly wisdom—would have been wiser in the realities of human life, if they had not gone over such large areas, but had gone deeper; if they had studied life less in its superficial and more in its cubic contents; if they had known more of home and of home virtues, and less of the possible follies and vices abroad, which may be found by those who seek them. With all their affected wisdom, they might have been a little wiser, if they had had some of that quality of credulity which they so scorn in others. As to their mission in the world,—that of scoffing at confiding and credulous souls, treating all faith in human goodness and integrity as only an amiable, deluded weakness, and thus undermining the very foundations of social sincerity and confidence,—there is nothing more lamentable or more despicable.

Credulity, it is true, is often a weakness, and it may rise to such excess as to become of the nature of crime,—a crime against the spirit of inquiry, of investigation and research, on which so much of important and saving truth depends. Yet it is a weakness that is associated with kindly, generous, and magnanimous natures. Better, a thousand times better, believe too well of your friend than too ill of him. Better credit your neighbor with ten virtues that he may not possess than harbor ungrounded suspicions of his integrity. Better run the risk that your companion may turn out a hypocrite and deceive you than run the risk of doing him the injustice of assuming that he is a hypocrite, and have him turn out an honest man.

But credulity is not always even a weakness, nor necessarily associated with weak natures. It is sometimes found in strong characters, and is even the spur and stimulus of heroic careers; and, in itself, at its root, not considering now its possible excesses and malformations, it is a quality of character that is admirable and to be cherished. What, then, is the genesis of this quality? What of its ancestry and kindred? Considered etymologically, credulity means the disposition to believe

or to accept things for just what they seem. More exactly, it means, in common usage, the disposition to believe very readily, often too readily, and to accept things for just what they seem *at first sight*, without scrutiny or question or thought of question. But, already, we see that the word in common usage has a taint of evil. It has become stained with objectionable and odious excesses of the quality of mind that it names.

Yet credulity, in its simple etymological sense of *disposition to believe*, to accept things unquestioningly for just what they seem, is a natural and inherent tendency of the human mind when it makes its first advent into conscious existence. The disposition is just as natural, and it is just as impossible that it should not exist, as it is natural for a living body to breathe, and impossible that it should not breathe. We cannot conceive of a human being, nor of any other living creature, starting in life in any other way than by instinctive, involuntary acceptance of surrounding facts, so far as there is any cognition of them, for what they purport to be. The scientific definition of organic, or individual, life is that it is the result of a long series of adaptations between an inner vital energy and an outer environment. To suppose, therefore, that, when organic conscious life has come, it should not accept these adaptations as anything real, should refuse to trust them and to confide itself to them, and should deny and reject them, would be to suppose an absolute contradiction in the very heart of nature's processes; for, without these adaptations, there would have been no conscious being at all. Or could we suppose a conscious being to come, and then to have power to deny the reality of its apparent relations to surrounding things, and to refuse to act as if they were real, by that act of disbelief and refusal life would soon cease. In other words, nature will not, cannot, perpetuate any utter disbelief and rejection of her processes. Such disbelief is an insanity that at once effects its own cure. Man comes into existence, then, naturally and necessarily, as a believer, and not a doubter; as an affirmer, not a denier. And we may go further, and say, in consequence, that he comes also as a positive, creative, and constructive force, and not as a destroyer. Whatever human beings may think, become, or do afterwards, they necessarily, by a stern law of nature, begin their career on this planet by the implicit acceptance of certain apparent facts and relations amid which they find themselves as if they were real. Without a shadow of doubt, they confide in them, trust them, believe them; and, upon this confidence and belief, they *begin* to build all the great structures of knowledge, character, and power that are afterwards reared.

This point may seem metaphysical and obscure in statement, yet, in reality, is very simple. And, simple as it is, it presents a solid basis for all practical philosophy, ethics, and religion. To illustrate: the infant, whether human or brute, accepts in perfect trust the instinct that puts it into vital connection with the provision nature has arranged for its sustenance. It has no possible question of the veracity of this tendency; no more thought of denying the reality of the other side of the vital relation thus established than it has of denying its own side,—that is, its own consciousness of the instinct. The one is just as real as the other. And, if nature, in her provisions for sustaining life, makes an affirmation that life is a cherished object with her, not less affirmative and trustworthy in the same direction is the *infantile instinct* that impels the young life to seek nature's providings. So with all the instinctive tendencies of functions that have for their end the preserva-

tion and safety of existence, and that make the first elements of conscious life: they are necessarily accepted and followed for what they purport to be.

But with the developing instincts there awaken other sensations and perceptions that enlarge the sphere of relations to the external world; and these, too, are accepted with the same trust in their faithfully representing realities. The child *sees*, and believes that things exist just as he sees them. He *hears*, and believes in the reality of what he hears. He *touches*, and believes that there is something there just as his fingers report to him. He becomes conscious, not only of a motherly bounty for his boy's needs, but of a motherly tenderness, carefulness, and love, which watch over him day and night, in sickness and in health, and gratify other needs that have been born within him; and he can no more doubt the reality of this higher maternal bounty than he can doubt the physical. It is pledged to him in smiles and caresses and acts and promises that have never yet failed of fulfilment. The parental provision for his wants that he finds in his own home, however narrow and poor that home may be, is a providence he does not doubt. There is a time when to the child his parents' wisdom and goodness are boundless. This is the age of simple credence, of innocent credulousness, of repose upon appearances as realities, of childly readiness to believe that all is good and true and fair. And this is the attitude of credulity,—the instinctive acceptance of things for what they seem; and, with this inherent vital confidence in the *truth* of things as they are related to him, man begins the task of life.

WM. J. POTTER.

MAN vs. NATURE.

No recent discovery in geology is more significant than this: that decline in the activities and powers of nature heralded the advent of man. Volcanic fires were dying out. The fires of life were burning low. Chimborazo was dying, and the high orders of life over all the world were declining. The time had come when Nature must bring forth a child who could help her. Man came. "Earth's hollow need was prophet of his coming." "Adam," says the apostle of Mormonism, Orson Pratt,—*"Adam came into Eden with one of his wives, and assisted at the creation."* Profoundly true that man assisted, and does assist, at the creation, which was and always is. Man found the elephant, the tiger, the lion, all great or hurtful things, to be waning dynasties; and he has rendered assistance in working their extermination. Soldiers of the French army in Algiers have killed many elephants, and more than five hundred lions and tigers. Dr. Gerard made dissections, and found that almost every lion and tiger had consumption, and almost every elephant had Bright's disease. The bullets shot by men had merely hastened the work which Nature herself was doing. In assailing so many individuals, she is killing the species. Man must help her, and correct her.

For Nature is not good. Let us be brave, and say what we see. In the name of man, her pain-racked child, I indict her. We walk under the shadow of a dark mystery. Evil is not a fleeting shadow cast over the earth by the deed of an Adam. Evil is real, primal, colossal. A cyclone sweeps over Bengal, and slays twenty-five thousand men and women and babes, and countless animals called dumb. Insects innumerable infest our fruits and grains, and destroy every year more wealth than the combined armies of the north and south destroyed in any year of the civil war. A

low fungus attacks the potato, and brings on Ireland the miseries of famine. Man himself is scourged by invisible thongs; he is bitten by invisible mouths; he is pierced by invisible lances; he is compassed about by an army of invisibles. They camp in the waters, they bivouac in the air. This is the night-side of the organic world: the inorganic has its analogue.

Far back, in the tertiary epoch, deserts began to break out on the Pacific slope of America, as hives may break out on a sick child; and Humboldt, having his eye on the factors which dominate in desert-making, anticipated a time when the whole coast would be a hopeless desert. Man forbid! Painful to this day is my recollection of a desert. Approaching the Mohave desert in California, I saw everywhere the signs of impending ruin. The vultures, which I had seen whirling through the air, began to disappear,—proof that there was no longer anything to die. The tar-weeds had gone, and the penstemons. Nature was taking on more and more a sinister look. Her weeds, as they approach the desert, are characterized more and more by tarry exudations and poisonous spines. Reptiles, insects, weeds, show how sharp had been the struggle for life, before Nature died into a desert. I reached the desert, and found only the cactus. It is the devil's own. It rose before me in sprawling, flattened trunks, jointed like claws of a lobster, and armed with barbed spines; in stems twisted into horrid shapes, and bristling with horrid thorns; in clumps shaped like a pumpkin, and spined like a sea-urchin; in pillars of diablo's temple, channelled and ribbed from plinth to capital, and beset with rosettes of serrated spikes.

The desert of the desert is Death's Valley. The Amargosa sweeps through alkaline sand from a desert in Nevada to a sink in the Mohave. Many a band of emigrants, seeking the fertile valleys of California, has followed the arid trough of the Amargosa into the Valley of Death. Eighty Mormons, journeying to San Diego, at that time one of the "Stakes of Zion," were entrapped in this sink; and to this day their skeletons, and skeletons of their wagons, lie bleaching on the burning sand. Not much "assistance," O thou much believing, much suffering, polygamous saint, did the God of thy imagination get from his Adam in the desert of Mohave!

We have preferred to look at Nature as she is,—deserts to be redeemed, lives to be killed, the inorganic world to be amended, and all but a segment of the organic world to be destroyed.

We take that sweetish, oily fluid, glycerine, composed of carbon, oxygen, and hydrogen, and pour into it a fine stream of nitric acid. Atoms are now breaking away from their old molecules, and forming new ones. With the mental vision, we look into the new molecule, and see how the atoms are grouped. We see that the oxygen atoms cannot be grouped about the carbon and hydrogen; for, if they were, their affinities would be satisfied. The oxygen must lie against the nitrogen, for which it has no liking. When powder burns, the explosion is not absolutely instantaneous; for the oxygen lies in one molecule and the carbon in another. When nitro-glycerine burns, the explosion is instantaneous; for the carbon and oxygen lie in the same molecule. A more terrific agent of destruction it is impossible for science to find or make. On this line, we have reached absolute perfection; for we have made that which, with irresistible force, expands instantaneously to nine hundred times its normal bulk.

With this agent, we are to lay our hands mightily on the earth as destroyers. At the touch of a baby's hand, electric life sped through a wire into a murderous granite reef charged with dynamite,

and Hell Gate was shattered. Let Alps and Hoo-sac thrust now their ribs of granite athwart the highways of man, we'll break them into shreds, With such an agent for remodelling the globe, man, perchance, may open gateways for the rain, and redeem the deserts. What we have done is but

... "A star of promise,
The faintest reflex of a distant sun,
Which wakes an eager salutation in us,
'Till nobler heights are won."

We must find other agents of destruction, and work on other lines. We must do more at killing.

Every one will remember the Black Hole of Calcutta,—a hundred and forty men thrust into a close room, only twenty feet square. Suppose that in the airless prison house had been a vat filled with the juice of corn or rye, and the men had been plunged into the vat. The grain juice holds oxygen enough; but the men, having no power to wrest it from the embrace of other elements, would have died of asphyxia. Pick up in any damp place a bit of horn or leather, and you will find it coated with a greenish mould. The mould is a little rod-like plant, called *penicillium*. Put *penicillium* into a little Calcutta hole, and it will die, as the man died, for want of oxygen. Thrust it into a little vat of corn-juice. Now, it has an advantage over man: it will wrench the oxygen it needs from the liquid in which it is bathed. It behaves as carbon in nitro-glycerine, which wrenches oxygen from nitrogen. Burning without air is explosion. Living without air is fermentation. The product of one is gas, the end of the other is alcohol or—if the life is led in a human body—death. We have in each a most powerful agent of destruction. Lives which hide from the eye of day, and skulk and burrow in dark vats or in the body of man or beast, are destroying every year millions of higher lives. Fire-water is not the worst work of these wrenchers of oxygen. Terrible are the zymotic diseases. Myriads of organisms, in the form of transparent rods, swarm through the body, as if they had mistaken it for a vat, and were trying to make it all over into whiskey. When we are told that cholera never sets out from India, its fatherland, on an invasion of the world, without slaying at least a million human beings, we stand aghast. But what is this to the annual death harvest of all zymotic diseases? When shall we cease to fight these scourges with invocations in the church, and to welcome them right royally by dirt in the streets? When shall we cease to invoke a suprasensible world against the subsensible? We have created the rock-rending dynamite; but when shall we evoke the dynamite that shall blast and destroy this whole underworld of lives that breathe from the blood and tissues of men? The cry which goes up from stricken Spain and threatened America is for an agent of death to the invisible myriads which to-day may be sailing on the air or floating in the water, and to-morrow may bivouac in the bodies of men. If the invisible life-world could be killed,—every wriggling rod or point of life,—man would be near his elysium. Some day, perchance, it can. The day seems far off, when we remember that the only slayer of the microbe of cholera found, till now, is corrosive sublimate; but slay we must, or be slain. Before the world can become an Eden, a garden of delight to man, a whole segment of nature must be wiped out. But what if it comes back again through spontaneous generation? That such a thing as spontaneous generation did occur when Nature was young, no naturalist, I think, will deny. Science has well-nigh demonstrated that it does not occur now: if it does, then Nature has in her bosom a perennial spring of evil.

There is another world, one within the range of our vision, which must be destroyed.

A few weeks ago, I came from Florida to New England. The last labor I saw in Florida was that of pumping an insecticide over orange trees. The "scale insect" must be killed, or the orange growers will be impoverished. I passed a day on Cape Cod, and the first labor I saw in Massachusetts was the pumping of a vile decoction of tobacco over a cranberry bog to kill the "fire-worm," so named because it sweeps through a bog like a devouring flame. It must be killed, or Cape Cod will revert to a waste of sand and barren bogs. Two volumes of agricultural reports lie on my table, and I find that four-fifths of their contents are devoted to the problem of killing. I find in the proceedings of an agricultural society that a farmer proposes as the division of a day to him who would be a successful farmer sixteen hours for labor,—that is, for killing weeds and worms,—seven hours for sleep, forty-five minutes for breakfast, dinner, and supper, and fifteen minutes for mental improvement and feeding the hogs!

The insect world, with the exception of a very few species, should be destroyed. It were better for man if he could destroy the whole animal world save about one species in five hundred, and the whole vegetable world except one species in three hundred.

In the flood myth, Javeh is represented as having discovered his mistake, and destroyed the world. Unhappily, the world behaves as if it had been started anew, just as the myth describes; as if man had started from a commodore whose first impulse on touching land was to get drunk, and whose ship, to stock a new world, had borne a cargo of rattlesnakes and doves, of thistles and corn, of tigers and horses, of mosquitoes and silk-worms,—the bad and the partially good,—and, down in the hold, the seeds of cholera, typhoid, scarlatina, every zymotic scourge. Pity the ark was not quarantined!

The world may be redeemed, but not through the redemption of man alone. "The whole creation groaneth and travaileth." Man cannot have his Eden as long as "every tree that is pleasant to the sight and good for food" holds its life at the mercy of myriad mouths of insects.

I believe that *this* is to be the better world. I believe that, if the genius and energy put forth to destroy our fellow-men were to be directed against the enemies of man, in nature, it would very soon be that better world. With the old prophet of Israel, I dream of a world where "nothing shall hurt or destroy in all the holy mountain," "no lion shall be there." I am of those who,

"Rowing hard against the stream,
See distant gates of Eden gleam."

W. D. GUNNING.

LECTURES BEFORE THE CONCORD SCHOOL OF PHILOSOPHY.

Immediately after the lectures on Goethe came another series, but a much shorter one, on the question, "Is Pantheism the Legitimate Outcome of Modern Science?" The first speaker, Mr. Fiske, was greeted by a large and enthusiastic audience, on Wednesday evening, July 29. His paper on "The Idea of God as affected by Modern Knowledge" was so long, and yet so concise, as to make any summary difficult. Belief in God he thought indispensable to the rational and healthy working of our minds. The fact is above our comprehension. His own presentation of it might seem too much at variance with existing creeds, too unreal for those who prefer to believe in a Deity swayed by human passion, and too much in conformity with

the supposed tendency of science to banish God from the world. As for the philosophizers who hope for this, the man of real science might say, "Lord, save me from my friends!" Never have men's minds changed so much as in this century. With our railroads, telegraphs, and labor-saving machines have come wholly new developments of astronomy, chemistry, philology, comparative anatomy, archæology, history, and Biblical criticism.

This is the age of ideas: its grandeur dwarfs all the others. The man who had his education before 1880 is separated from the men of more recent culture by a wider gulf than ever existed before. Creeds lose their hold. It is no longer a struggle between Church and Church. Religion herself is called upon to explain her existence, and say why she should not be ruled out of human affairs. Will science destroy faith in God as it has belief in ghosts?

Examination of the idea of God discloses a permanent element, which must remain unshaken. We must all admit, as did our ancestors, that we depend on something outside of ourselves: the world exists independent of us. We differ from primitive men only in that they personified all the forces of nature. This tendency has joined with that for worshipping ancestors to create religions. Paganism is an inextricable tangle of ancestor worship and nature worship. The latter preponderated with thoughtful nations, like the Greeks, Hindus, and Norse. Worship of ancestors preponderated with the Romans, Chinese, and early Hebrews. The word translated "God" in Genesis, "*Elohim*," is plural, and means a number of tutelary deities. One of them, Jehovah, gradually came to be thought more powerful than the rest. His worship supplanted that of Baal, a personification of nature. Then he was believed in as the only God of the earth. Finally, he was revered as supreme over all the universe. This is the Christian view, though it is encrusted with pagan superstitions, like worshipping saints and the Virgin. The word "God" seems to be derived from Woden, the Norse god, after whom Wednesday is named; and in Christianity there are two views. There is one favored by Augustine and other Latin Fathers, and derived from the Roman worship of ancestors. This makes the universe inert, and governed by a God who is outside of it, and is like a man, though so much greater than men are separated from him. This conception is dominant to-day: every Christian child grows up under it. Five-sixths of Christian doctrine is derived from Augustine. This view leads to the misconception of a conflict between religion and science. Agassiz objected to Darwin, as Leibnitz had done to Newton, that the new theory put natural forces in the place of God. Such objections were anthropomorphic, even polytheistic. To Agassiz and Leibnitz, the forces of nature were little gods. This view necessarily calls out atheism and materialism. Voltaire and Büchner are as much successors of Augustine as are Calvin and Paley. The assumption that one part of the universe is nearer God than another leads to the theory of two regions of phenomena, one governed by its own laws, the other governed by the direct action of God. Every scientific discovery changes the boundary line between these two realms. This calls out a cry that soon there will be nothing more left for God to do. People who think thus lay great stress on the argument from design, not seeing that this cannot prove God infinite.

A far higher view was taken by Clement of Alexandria, Origen, and other Greek Fathers, who saw God immanent in the universe, its ever-present life. This view cannot conflict with science: the physical forces are simply manifestations of God.

Mr. Fiske once spoke of the former view as anthropomorphic, and this as cosmic; but even this contains an anthropomorphic element. To eliminate this would be to abolish the idea of God. The old argument from design has been destroyed by Darwinism, but there are signs of purpose in the universe which cannot be ignored without reducing it to a farrago of nonsense. Scientific philosophy teaches that the universe is animated by a single principle of life. Is this principle, force, power, something material, a blind necessity? Material it cannot be. All we really know is mind; the universe is mind-stuff; we can conceive of it only as a form of consciousness. There is a meaning in the orderly sequence of events, tending to a mighty goal. The fundamental idea underlying religion is fully justified; all things work together for the evolution of the highest.

Mr. Fiske did not say what part sin plays in the evolution of the highest, or what meaning it has in the orderly sequence of events. It may also be objected that we each have just as much knowledge of matter as of any mind except our own. We are convinced of the existence of material as well as mental phenomena. Why believe that the cause partakes solely of the nature of one class of the effects? Why suppose that this cause consists of any one principle rather than of many principles working in harmony?

Many of Dr. Abbot's friends were assembled next morning, when he began by showing what philosophy is the legitimate outcome of science. No one doubts the value of the discoveries made by the scientific method, which begins with observation and experiment, then makes hypotheses, and ends in verification. This method presupposes that the universe, of which we form a part, exists independent of us, and external to us; that this universe is known; and that there is an objective reality in the known relations between its parts. The current philosophy, which sees no reality except that of phenomena, and which cannot consistently recognize that anything really exists, except in so far as it is represented in the individual consciousness, lays the axe at the root of the tree of knowledge. We read in *Alice in Wonderland* of a Cheshire cat, which gradually disappeared, leaving only its grin in sight. What is usually called philosophy tries to conceive of the grin without the cat. Kant and his followers do not give sufficient reality to the relations between objects, but the reality of these relations is affirmed in all propositions. The true philosophy is that of scientific realism, according to which things in themselves are necessarily intelligible, and there is nothing unknowable but the non-existent. The unknown exists, but not the unknowable, which is a figment of the imagination, an offence to reason. Every discovery converts the unknown into the known, and thus shows that what is unknown is knowable. The universe is made up of relations which are known, or at least knowable; and, therefore, it is intelligible. Its existence does not depend upon my consciousness, but my consciousness depends upon the universe. The true philosophy knows not merely phenomena, but relations which are realities.

The next question is, What idea of God is the legitimate outcome of this scientific philosophy? If there is an infinite mind, it must know the relations of the universe; and its nature must be identical with that of the mind of man. You may call this anthropomorphism. Hard words can never make a true principle false. The universe is infinitely intelligible; and, therefore, its origin can be nowhere except in an infinite intelligence. This intelligible universe is also intelligent. It is both the subject and object of knowledge, its own object of thought. It is an infinite self-conscious

intellect. Nature is as necessarily the product of infinite mind as philosophy is of finite mind. Our study of evolution has brought us to the question whether it is mechanical or organic. The central struggle in thought is whether the universe is a machine or an organism. The latter view gives all there is in the other, and more. A machine implies a machinist: it is a means adapted to external ends. An organism must be adapted to internal ends also; and there must be an internal agent, not merely an external one. Machines must be explained by reference to organisms. The conception of an organism explains itself. To understand evolution, we must suppose that there is a purpose. Spencer and Haeckel acknowledge that there is one, in using such words as "adjustment" and "adaptation." The universe is not a machine, but an organism. It is alive with a power working everywhere by organic means for organic ends, feeling infinite tenderness for all that is written within itself. Evil is simply the pressure on the finite of its own finitude. It is the shadow side of all finite reality. Thus, the universe is real and intelligible. It is an intellect and an organism. Its life-principle is an infinite power, acting by means for ends. There is an infinite love for the finite; and thus there is an infinite Person, an eternal Spirit. This is the scientific idea of God. Is it pantheistic? It does not make spirit and matter hostile to each other. It says that the all is God, and God is the all. But it does not deny his personality, and thus is not mere pantheism. God is both immanent and transcendent. He is not to be confounded with matter or banished from his own universe. The faith of the future will build its altar, not to an unknown, but to a known God.

Dr. Abbot's phraseology was so technical that in some parts of this imperfect summary, which has been submitted to his inspection, it seemed best to use more familiar though less accurate words. Nothing else so profound and original has been given this year in Concord. His system of philosophy can safely challenge criticism. The strength of his theological arguments cannot be adequately estimated until they appear in full. It is well to consider deeply and earnestly what conclusion should be drawn from the intelligibility of the universe, and what reason we have to accept it as a self-conscious organism rather than as an unconscious organism, the tree of life. Among the criticisms made on this lecture was Rev. Mr. Gill's, that organisms are mortal, and Prof. Davidson's, that it is a poor compliment to the Deity to make him intelligent. Intelligence is an adjustment to surroundings, and therefore finite. It can cause nothing. Ideas produce no realities. Action depends on volition, not intelligence; and volition implies desire, a result of limitation.

The scientific view of force was presented with admirable boldness and strength in a paper contributed by Dr. Edmund Montgomery, one of the ablest physiologists in this country, to which he came after making a brilliant reputation in Germany, not only as a practising physician, but as a writer on such subjects as the beginnings of life. Great respect must be paid to the opinion, coming from such a source, that there are very many forces which cannot properly be regarded as one. Accordingly, pantheism is not the legitimate outcome of modern science. This paper deserves most careful study, and will, I am informed, soon appear in *The Index*. It should be added that the reception given by the School to these and other expressions of agnosticism, among which was a speech by Mr. Courtlandt Palmer, was extremely courteous.

F. M. HOLLAND.

CHARITY WORK.

Mr. Potter's article in *The Index* of July 30 tells some very pathetic stories and puts some very hard questions; but I wish he belonged to the Irishman's Club, where every man was bound to answer his own questions. I have watched charitable operations with great interest; and I am coming more and more to the belief that it is not by any change in circumstances, or in the structural order of society, that poverty and crime can be prevented, or even much lessened, but only by the cultivation of the moral virtues and an increased sense of personal responsibility. It is from the want of the sterling virtues of honesty, prudence, temperance, industry, and humility that the rich become poor, and the poor poorer.

When I see a young man, who has laid up three or four hundred dollars, spend it all on showy furniture, when he marries, and plan his style of living on the full extent of his present income, having no thought of the probable increase of family and possible decrease of work, I say to myself, "They are preparing cases for the Associated Charities." When young men refuse to do the work which is ready to be done, because they "do not like it," I am sure that they do like smoking, and will soon like drinking, and will finally swell the ranks of paupers and criminals. When I hear of a person who wants a situation, and will not ask advice and help from those who have known her in better days, I think it is not self-respect which actuates her, but that she is either an impostor, whose friends of better days have had good reason to cast her off, or else that she is ashamed that she is obliged to work, and wants to keep up a genteel fiction.

All this sounds very hard-hearted; and it is much pleasanter to pity the poor creatures who suffer, and lay the blame on an impersonal society, and try to remedy the evil in a lump. My view of the matter does not give the philanthropist an easy task. He must seek out causes, and there are some which do belong to general fault rather than individual shortcomings. One of these is sickness, the most expensive of evils except crime, since it takes one well person to care for every sick one; and sickness is only partially the fault of the individual. There is a small residuum of poverty, suffering, and perhaps even crime, which cannot be prevented by the best efforts of the individual. For this, charity is needed; but charity abounds in our communities, and needs rather to be directed than stimulated. Individual influence of one human being on another, giving sympathy, help, advice, encouragement, but without lessening the sense of responsibility, or encouraging dependence and weakness, seems to me the best means of reaching those who, from causes beyond their control, have fallen behind in the race of life.

I hope those who have had experience in charitable efforts will let the readers of *The Index* have the benefit of it; for this is one of the most important of all practical subjects, and we are all much in the dark about it.

E. D. CHENEY.

A CRITICISM CRITICISED.

We learn from the *Woman's Journal* that one Rev. Robert Nourse lectured in Washington, D.C., lately on "Blighted Women." He criticised the position which, he said, was assumed by a convention of women suffragists held in that city, respecting the influence of Christianity on woman, and arrayed against it "the Apostles' Creed, the Athanasian Creed, the Westminster Confession, the Heidelberg Catechism, and all the unformulated creeds

of the leading bodies of evangelical Christendom. Then he instanced the hymnology of the churches, Watts' songs, the Wesleys, Moody and Sankey, adding, 'I don't believe any Christian composer could or would write a melody to float the absurdity. Nor could the morning stars have shouted for joy at the creation, if God had made woman inferior to man, instead of a helpmeet, as the good old Bible puts it; and then, quoting T. W. Higginson, Huxley, and Darwin in their utterance, he charged these scientists with having taken rank with savages in their interpretation of woman's sphere.' He also declared, among other things, "that Christ gave to the world an entirely new idea of woman, that the Christian Church is the only organization which has succeeded in elevating the female sex." The *Woman's Journal* makes this comment only: "Dr. Nourse is partly right and partly wrong. He is right in claiming Christianity for woman's rights, but wrong in charging suffragists, like those named above, with being in conflict with civilization in their advocacy of woman's equality."

We should be glad to be informed what new idea of woman Christ gave to the world, and on what teaching of the New Testament is based the statement that this preacher "is right in claiming Christianity for woman's rights." We have rarely taken any notice of the theological claims made in the supposed interests of the woman suffrage movement, with which we are in the fullest sympathy, and were when its advocacy was confined mainly to those who were denounced from the orthodox pulpit as "infidels"; but, of late, these assumptions appear almost too often to be allowed to pass unquestioned. They are heard at almost every woman suffrage convention from the lips of preachers who use the platform, not unfrequently, to defend their theological system quite as much as to speak for woman suffrage; and great care is taken to guard against any reply to these assumptions, for the reason, perhaps, that it is thought that their identification with the movement will strengthen it. If the radical free thinkers in this State have not been alienated from the woman suffrage movement, it is because they value the movement solely for the justice of its aims. As to the preacher quoted by the *Woman's Journal*, it is evident from his words that he has no true conception of woman's position or rights. He does not question that Paul taught the right doctrine in regard to woman. Certain it is that both the Old Testament and the New teach woman's inferiority and enjoin her subordination to man. There are certain moral precepts in the Christian and Jewish churches, such as the Golden Rule, which, if fully carried out by enlightened minds, would secure to woman political equality with man; but these precepts do not belong exclusively to any one religion, nor can they take the place or serve the purpose of clear and distinct teachings regarding human rights and duties, without an understanding of which these precepts cannot be realized in practice. Christianity, the Christianity of the New Testament, fell short of teaching the rights of man: much more did it fall short of teaching the rights of woman. So long as the authority of the Scriptures is used to block the way of every reform in its infancy, that is not a wise expediency which would identify any particular reform with the attempts to perpetuate that authority.

B. F. U.

THAT is a tender and noble attribute of civilized human nature which forgets prejudices and animosities after the life of one toward whom they have been felt is ended, and is but a narrow and ignoble spirit that would carp at their manifestation.—*Boston Herald*.

EDITORIAL NOTES.

BY B. F. U.

ALL theologies, Pagan, Hebrew, and Christian, have curiously enough been at accord in denouncing woman as the cause of all our woes.—*B. W. Ball*.

WHATEVER you believe to be true and false, that proclaim to be true and false; whatever you think admirable and beautiful, that should be your model, even if all your friends and all the critics storm at you as a crotchety-monger and an eccentric.—*G. H. Lewes*.

GEN. GRANT, who was able to enjoy a good joke, even when it was against himself, related, a few days before his death, that Quartermaster Ingalls, during the siege of Petersburg, had a queer-looking dog, which was the object of much curious attention. Gen. Grant once asked its owner if he expected to take that dog into Richmond. "Yes," was Ingalls' reply: "he comes of a very long-lived breed."

To a Boston reporter, Col. Ingersoll said lately: "Sheol is a great relief. It is not so hot as the old place. The nights are comfortable, and the society is quite refined. The worms are dead, and the air reasonably free from noxious vapors. It is a much worse word to hold a revival with, but much better for every-day use. It will hardly take the place of the old word when people step on tacks, put up stoves, or sit on pins; but for use at church fairs and mite societies it will do about as well."

THE orthodox *Congregationalist* says of Sir Moses Montefiore: "Few men have ever more warmly attracted general love and respect by a life of honor and large philanthropy, which latter knew no limitation of race or station. A Hebrew of the Hebrews, it may yet almost be doubted whether his name, with a generous sum, was ever withheld from any solicitation for aid to a worthy object." Yet this man rejected the Messiah; and, for his unbelief, according to the creed of the *Congregationalist*, he must suffer everlasting torment.

MRS. CAROLINE H. DALL writes of the late Maria Weston Chapman, in the *Boston Transcript*: "Miss Martineau fell in love with Mrs. Chapman on her first arrival in Boston. She was never tired of wondering at her splendid and stately beauty." "So far as I can judge, Mrs. Chapman accepted Miss Martineau's latest views of life and death." "For herself there was no one associated with the movement, who valued William Lloyd Garrison as she did. She rated him at his true worth, and stood unflinchingly by his side during the conflicts of half a century. I have not written these pages because I think that anything I can say is worthy of my subject. Her portrait should be drawn by sunbeams. No human imagination ever conceived anything more luminous than her magnificent presence."

SAM JONES, the Southern revival orator, knows how to use vigorous language; and, although he is as far behind the age Scripturally as he is politically, he can convey a lesson and point a moral with a Bible story most effectively. To a convention lately held in Atlanta, Ga., he said:—

You don't want to have a fuss. Well, I'll tell you every good man dreads a fuss; but he don't fear anything that walks on the earth. The Church lays back on the idea that it must have peace. Old Joshua went out one day, and fought all day long. He was crowding the enemy, when he looked up and saw the sun going down. He said, "Lord, if you will just give me three or four more hours of sunshine, I'll clean these fellows off the face of the earth." And

the Lord just made that old sun rack back on the dial; and Joshua won a victory, the fame of which has lasted until this day. God despises a coward. I had rather die at the mouth of a cannon doing my duty than to run away from it because I was afraid. God intrusts all the noble causes on this earth to men who are game.

THE *Toronto Globe* gives extracts from Louis Riel's diary, from which we take the following:—

I thank thee, O my God, for having so protected me. Middleton's troops have given me a cannon. They have placed it at my disposal. O my God, give me grace to take it and make a good use of it. Oh, for the sake of Jesus Christ, my redeemer, of the blessed Virgin Mary, of St. Joseph and of St. John the Baptist, be with me, so that I may not fail to get possession of a good cannon or two, two or three cannons, with all the necessary ammunition. . . . O my God, thou hast kindly said to me, "I am going to be angry at it." Deign to be angry at the mounted police. Oh, be angry against them! I accuse them, before thee, in the name of Christ, of blaspheming the name of the Virgin, of outraging the name of the Holy Spirit, of offending by blasphemy against the holy sacrament of baptism. Punish frightfully the mounted police. Be angry against them; for they are entirely opposed to thy holy spirit of justice, to thy spirit of right, to thy spirit of truth. For the love of Jesus Christ, save us wondrously.

OF Mr. F. M. Holland's work, *The Rise of Intellectual Liberty*, the *Nation* says: "This title is unfortunate, for it seems to imply that the history of free thought in ancient and in Christian times presents a continuous development. The story itself, however, is truly told, its parts judiciously proportioned, and the relations of the different events and phenomena ably brought out. Moreover, all that tediousness which is apt to belong to comprehensive sketches of history is entirely avoided: the book is decidedly one to sit up late over. The most original part of the work is the concluding chapter, in which the author undertakes, by an inductive examination of history, to settle such questions as whether rationalism is favorable to morality, whether Christianity tends to the development of women's minds, whether the world's best work is done by book-men, etc. Mr. Holland claims special credit for having kept his mind free from prejudice in this investigation."

THE *Boston Herald* thinks that the irony of fate has rarely been illustrated more significantly than in Newman's display of pyrotechnics over the remains of our dead hero: "Hiring in a dancing girl in rosy tights, six-inch skirts, and a blaze of spangles, to attitudinize and pirouette round the coffin, could hardly have been more flagrantly out of place than an hour and a half of such tinsel rhetoric as this of a discourse that has made 'the judicious' shudder from sea to sea. When Dr. Newman preached his world-famous extravaganza over the body of Gov. Sanford's son in California, a boy of twelve or fourteen years old, and summoned all the generations to come to make pilgrimages to the tomb of this youth, beautiful as Apollo, wise as Ulysses, and saintly as Fénelon, people could afford to laugh over the sentimental burlesque, and even to feel that the \$10,000 the sacred orator is reported to have received for the effusion were a cheaper price than any self-respecting man, however hard up, could have been hired to do a like job for. But it is too serious a matter repeating this extravaganza at a time when the whole nation is so profoundly moved as to-day. . . . It is a wrong to the plain, simple, grand old commander that such fustian should be spoken over his bier. The whole nation should resent it. Nay, the pope himself ought to put it in the *Index Expurgatorius* as the most damaging blow that has been struck this many a day at the dignity and authority of the clerical office. It adds a new terror to dying."

The Index.

BOSTON, AUGUST 13, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, } Editors.

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

A SHEAF OF POEMS.

BY GEORGE ILES.

I.

In the dim long ago of our planet's history there was a time when our ancestors, whatever their form, first began to distance their competitors in the struggle for dominion. When the branch of the tree of life whereon we now find ourselves first sprang forth toward its height and breadth of supremacy, what was it that gave the human stock its point of upward departure amid the races surrounding it, many of them individually stronger, swifter, and as cunning? Very probably it was articulate speech which first differentiated our species radically from all others, and, by making communication ample and easy, developed intelligence, and cleft the gulf which, with every era, has yawned wider between the human race and the mere beasts of jungle or swamp or prairie. As facility and completeness in powers of expression developed mind more and more, language became gradually perfected, and mankind arose to emotion, intellect, and conscience.

As with our race, so with the men who go to make it up: we accord supremacy to such of them as can adequately express the ideas and sentiments of which all men are profoundly conscious. Of these chiefs of mankind, poets are those who have the gift of utterance in its highest form. With the music of rhyme and rhythm, they give voice to the aspirations, impressions, and problems which move us universally, but find us dumb. And this fine gift of poetry usually goes with others of high vitality, wide range of sympathy, and extreme sensibility. Poets live more than other men, touch life at more points, see farther into its motives. They are more alive to the pagantry of nature in the seasons, the sublimity of the mountain, the forest, and the sea. They move us, not simply because they throb with the impulses of our common human nature, but because they bring all these to their loftiest and finest reaches. What in ordinary mortals is a fitful gleam of

inspiring insight is with poets a persistent illumination, whose pictures can be caught and detained to move and lift us all.

In bringing before you this afternoon a selection of poems, I shall endeavor to illustrate a single phase of nineteenth century thought,—poetry, as interpretative of the dawn of science and of the new ideas to which science, in its conquering march, has given rise. Ours is the age when knowledge has been most accumulated, and the methods of science have first been discussed and attempted to be defined. New knowledge has largely discredited old theories, with which were interwoven in former times the systems of religion, powerful for the moral guidance of mankind. Hence, a conflict between intellect and sentiment, to which our poets give expression in some of their noblest stanzas. Science in its commercial applications has enormously increased the world's wealth, and gold is the chief object of modern effort. Mankind ever rises to a more and more commanding eminence in our modern pantheon; and, if the violence of battle-fields is passing away, it is but giving place to the meaner strife and strategy of markets and exchanges. All this it becomes the province of the poet, as far as his power can be exerted, to combat and resist. It is his mission to take the slave of mill or warehouse or exchange and point him to the stars, to show him that life is more than the means of living, and that only the lower powers of enjoyment are satisfied, which neglect patriotism and nature and art for the heaping up of treasure, which, alas! so often takes wings, and leaves its victim poor indeed.

Science, thundering along in its victories, is practically kept in rather a narrow track. It has overcome and subjugated many regions by lens and theodolite and micrometer, and these conquests are often wrongly held to leave little territory of worth or significance unsubdued. But science, broadly interpreted, means the knowledge of all things; and we must not overrate the importance of what can be or has been reduced to rule and definition, while a vastly greater sphere of truth remains unknown.

Physics, chemistry, astronomy, and similar sciences have but begun to yield their secrets. More difficult of access, but more important to mankind, are the intricate laws of mind, will, and moral sense. After all, what has emerged from the sea of life into the upper air of the known and measured is but an islet, not more real than the vast hidden bulk which holds it up. Our sentiments and emotions deserve recognition not less than the intellect, and the appeal to them of poetry is of at least as much benefit as that of science to mind. We are the better for listening to the singers who would temper our constant drive after hard fact and material success. Surely, if the desire within us to be better can be quickened, as much is done as when the mind is informed. In opening the springs of generous emotion, in recalling us to the impressive questions of the destiny of man and of men, and restating in the light of modern thought the old problems of a Supreme Intelligence and a Supreme Conscience, our poets fulfil the noblest office of literature.

Perhaps the greatest thought of man has been that of God; and, however much it may be expanded and modified in these latter days, it has unquestionably served to prepare us for the idea of a universe whose parts consent in one orderly procession of law. George Herbert, the cleric of the seventeenth century, says in his poem on "Man," with singular anticipation of what science long afterward was to teach:—

"Man is all symmetry,
Full of proportions, one limb to another,

And all to all the world besides ;
Each part may call the farthest brother,
For head with foot hath private amity,
And both with moon and tides.
Nothing has got so far
But man hath caught and kept it as his prey,
His eyes dismount the highest star,
He is in little all the sphere ;
The herbs do gladly heal our flesh,
For they find their acquaintance there."

How finely does Emerson in the "Problem" declare man in his best work to be impelled by universal forces which speak through him from the utmost diameters of space and time !—

I like a church ; I like a cowl ;
I love a prophet of the soul ;
And on my heart monastic aisles
Fall like sweet strains, or pensive smiles ;
Yet not for all his faith can see
Would I that cowed churchman be.

Why should the vest on him allure,
Which I could not on me endure ?

Not from a vain or shallow thought
His awful Jove young Phidias brought,
Never from lips of cunning fell
The thrilling Delphic oracle ;
Out from the heart of nature rolled
The burdens of the Bible old ;
The litanies of nations came,
Like the volcano's tongue of flame,
Up from the burning core below,—
The canticles of love and woe ;
The hand that rounded Peter's dome,
And groined the aisles of Christian Rome,
Wrought in a sad sincerity ;
Himself from God he could not free ;
He builded better than he knew,—
The conscious stone to beauty grew.
Know'st thou what wove yon wood bird's nest
Of leaves, and feathers from her breast ?
Or how the fish outbuilt her shell,
Painting with morn each annual cell ?
Or how the sacred pine tree adds
To her old leaves new myriads ?
Such and so grew these holy piles,
Whilst love and terror laid the tiles.
Earth proudly wears the Parthenon,
As the best gem upon her zone ;
And Morning opes with haste her lids,
To gaze upon the Pyramids ;
O'er England's abbeys bends the sky,
As on its friends, with kindred eye ;
For, out of Thought's interior sphere,
These wonders rose to upper air ;
And Nature gladly gave them place,
Adopted them into her race,
And granted them an equal date
With Andes and with Ararat.

These temples grew as grows the grass ;
Art might obey, but not surpass.
The passive Master lent his hand
To the vast soul that o'er him planned ;
And the same power that reared the shrine
Bestrode the tribes that knelt within.
Ever the fiery Pentecost
Girds with one flame the countless host,
Trances the heart through chanting choirs,
And through the priest the mind inspires.
The word unto the prophet spoken
Was writ on tables yet unbroken ;
The word by seers or sibyls told,
In groves of oak, or fanes of gold,
Still floats upon the morning wind,
Still whispers to the willing mind.
One accent of the Holy Ghost
The heedless world hath never lost.
I know what say the fathers wise,—
The Book itself before me lies,
Old Chrysostom, best Augustine,
And he who blent both in his line,
The younger *Golden Lips* or mines,
Taylor, the Shakspeare of divines.
His words are music in my ear,
I see his cowed portrait dear ;
And yet, for all his faith could see,
I would not the good bishop be.

Seagrave, in the same strain, says :—

Rivers to the ocean run, nor stay in all their course ;
Fires ascending seek the sun ; both speed them to their
source ;
So my soul that's born of God pants to view his glorious
face ;
Ever tends to his abode, to rest in his embrace.

Of freedom as the condition of progress, we
have had many bards, none, perhaps, more impres-

sive than Bryant, who says, in his poem on the
antiquity of freedom :—

O Freedom! thou art not as poets dream,
A fair young girl, with light and delicate limbs,
And wavy tresses gushing from the cap
With which the Roman master crowned his slave
When he took off the gyves. A bearded man,
Armed to the teeth, art thou ; and one mailed hand
Grasps the broad shield, and one the sword ; thy brow,
Glorious in beauty though it be, is scarred
With tokens of old wars ; thy massive limbs
Are strong with struggling. Power at thee has launched
His bolts, and with his lightnings smitten thee ;
They could not quench the life thou hast from heaven ;
Merciless Power has dug thy dungeon deep,
And his swart armorers, by a thousand fires,
Have forged thy chain ; yet, while he deems thee bound,
The links are shivered, and the prison-walls
Fall outward ; terribly thou springest forth,
As springs the flame above a burning pile,
And shoutest to the nations, who return
Thy shoutings, while the pale oppressor dies.

Thy birthright was not given by human hands ;
Thou wert twin-born with man. In pleasant fields,
While yet our race was few, thou sat'st with him,
To tend the quiet flock and watch the stars,
And teach the reed to utter simple airs.
Thou by his side, amid the tangled wood,
Did'st war upon the panther and the wolf,
His only foes ; and thou with him did'st draw
The earliest furrow on the mountain-side,
Soft with the deluge. Tyranny himself,
Thy enemy, although of reverend look,
Hoary with many years, and far obeyed,
Is later born than thou ; and, as he meets
The grave defiance of thine elder eye,
The usurper trembles in his fastnesses.

Thou shalt wax stronger with the lapse of years,
But he shall fade into a feeble age,—
Feebler, yet subtler. He shall weave his snares,
And spring them on thy careless steps, and clap
His withered hands, and from their ambush call
His hordes to fall upon thee. He shall send
Quaint maskers, wearing fair and gallant forms,
To catch thy gaze, and uttering graceful words
To charm thy ear ; while his sly imps, by stealth,
Twine round thee threads of steel, light thread on thread,
That grow to fetters, or bind down thy arms
With chains concealed in chaplets. Oh! not yet
May'st thou unbrace thy corselet, nor lay by
Thy sword ; nor yet, O Freedom! close thy lids
In slumber ; for thine enemy never sleeps.
And thou must watch and combat till the day
Of the new earth and heaven. But would'st thou rest
Awhile from tumult and the frauds of men,
These old and friendly solitudes invite
Thy visit. They, while yet the forest-trees
Were young upon the unviolated earth,
And yet the moss-stains on the rock were new,
Beheld thy glorious childhood, and rejoiced.

Campbell, who came in as science began to
eclipse old wonders with greater, said distrust-
fully :—

When Science from Creation's face
Enchantment's veil withdraws,
What bright illusions yield their place
To cold material laws !

But Lowell, who has seen not only the dawn,
but the noon, of modern thought, has written :—

I grieve not that ripe Knowledge takes away
The charm that Nature to my childhood wore ;
For, with that insight, cometh, day by day,
A greater bliss than wonder was before ;
The real doth not clip the poet's wings,—
To win the secret of a weed's plain heart
Reveals some clew to spiritual things,
And stumbling guess becomes firm-footed art ;
Flowers are not flowers unto the poet's eyes,
Their beauty thrills him by an inward sense.
He knows that outward seemings are but lies,
Or, at the most, but earthly shadows, whence
The soul that looks within for truth may guess
The presence of some wondrous heavenliness.

Matthew Arnold, of all our poets, is he who
chiefly feels the unworthiness of the ordinary
aims of men. He describes the attrition of life :—

This is the curse of life ! that not
A nobler, calmer train
Of wiser thoughts and feelings blot
Our passions from our brain ;

But each day brings its petty dust
Our soon-choked souls to fill,
And we forget because we must,
And not because we will.

And, in his elegy on his father, says :—

O strong soul, by what shore
Tarriest thou now? For that force,
Surely, has not been left vain !
Somewhere, surely, afar,
In the sounding labor-house vast
Of being, is practised that strength,
Zealous, beneficent, firm !
Yes, in some far-shining sphere,
Conscious or not of the past,
Still thou performest the word
Of the Spirit in whom thou dost live,—
Prompt, unwearied, as here !
Still thou upraisest with zeal
The humble good from the ground,
Sternly represses the bad ;
Still, like a trumpet, dost rouse
Those who, with half-open eyes,
Tread the border-land dim
'Twixt vice and virtue ; reviv'st,
Succorest !—this was thy work,
This was thy life upon earth.

What is the course of the life
Of mortal men on the earth?—
Most men eddy about
Here and there,—eat and drink,
Chatter and love and hate,
Gather and squander, are raised
Aloft, are hurl'd in the dust,
Striving blindly, achieving
Nothing ; and then they die,—
Perish,—and no one asks
Who or what they have been,
More than he asks what waves,
In the moonlit solitudes mild
Of the midmost Ocean, have swell'd,
Foam'd for a moment, and gone.

And there are some whom a thirst
Ardent, unquenchable, fires,
Not with the crowd to be spent,
Not without aim to go round
In an eddy of purposeless dust.
Effort unmeaning and vain.
Ah, yes ! some of us strive
Not without action to die
Fruitless, but something to snatch
From dull oblivion, nor all
Glut the devouring grave !

In the poem entitled the "Buried Life," he says :—

But often in the world's most crowded streets,
But often in the din of strife,
There rises an unspeakable desire
After the knowledge of our buried life ;
A thirst to spend our fire and restless force
In tracking out our true, original course ;
A longing to inquire
Into the mystery of this heart which beats
So wild, so deep in us,—to know
Whence our lives come and where they go.
And many a man in his own breast then delves,
But deep enough, alas ! none ever mines.
And we have been on many thousand lines,
And we have shown, on each, spirit and power ;
But hardly have we, for one little hour,
Been on our own line, have we been ourselves,—
Hardly had skill to utter one of all
The nameless feelings that course through our breast,
But they course on forever unexpress'd.
And long we try in vain to speak and act
Our hidden self, and what we say and do
Is eloquent, is well, but 'tis not true !
And then we will no more be rack'd
With inward striving, and demand
Of all the thousand nothings of the hour
Their stupefying power ;
Ah, yes, and they benumb us at our call !
Yet still, from time to time, vague and forlorn,
From the soul's subterranean depth upborne
As from an infinitely distant land,
Come airs and floating echoes, and convey
A melancholy into all our day.

Story, in his poem, "Io Victis," has a fine chord
of sympathy with what the world sometimes calls
failure :—

I sing the hymn of the conquered, who fell in the battle of
life,—
The hymn of the wounded, the beaten, who died o'er-
whelmed in the strife ;
Not the jubilant song of the victors, for whom the resound-
ing acclaim
Of nations was lifted in chorus, whose brows wore the
chaplet of fame,—
But the hymn of the low and the humble, the weary, the
broken in heart,
Who strove and who failed, acting bravely a silent and
desperate part ;

Whose youth had no flower in its branches, whose hope
turned in ashes away,
From whose hands slipped the prize they had grasped at,
who stood at the dying of day
With the work of their life all around them, unptiled, un-
heeded, alone,
With death swooping down o'er their failure, and all but
their faith overthrown.
While the voice of the world shouts its chorus, its prean for
those who have won;
While the trumpet is sounding triumphant and high to the
breeze and the sun
Gay banners are waving, hands clapping, and hurrying
feet
Thronging after the laurel-crowned victors,—I stand on the
field of defeat,
In the shadow, 'mongst those who are fallen and wounded
and dying, and there
Chant a requiem low, place my hand on their knotted
brows, breathe a prayer,
Hold the hand that is hapless, and whisper, "They only the
victory win
Who have fought the good fight, and have vanquished the
demon that tempts us within;
Who have held to their faith, unseduced by the prize that
the world holds so high;
Who have dared for a high cause to suffer, resist, fight,—
if need be, to die."
Speak, History! Who are life's victors? Unroll thy long
annal, and say.
Are they those whom the world called the victors, who won
the success of a day?
The martyrs, or Nero? The Spartans, who fell at Ther-
mopylae's tryst,
Or the Persians and Xerxes? His judges, or Socrates?
Pilate, or Christ?

Rev. Abram J. Ryan, of Mobile, in his "Song of
the Mystic," has expressed the aspiration of a fine
soul with the peculiar rich imagery of his church:

I walk down the Valley of Silence,
Down the dim, voiceless valley, alone!
And I hear not the fall of a footstep
Around me, save God's and my own!
And the hush of my heart is as holy
As hovers where angels have flown.

Long ago was I weary of voices
Whose music my heart could not win;
Long ago was I weary of noises
That fretted my soul with their din;
Long ago was I weary of places
Where I met but the human and sin.

I walked through the world with the worldly,
I craved what the world never gave,
And I said, "In the world each Ideal,
That shines like a star on life's wave,
Is wrecked on the shores of the Real,
Then sleeps like a dream in a grave."

And still did I pine for the perfect,
And still found the false with the true;
I sought 'mid the human of heaven,
And caught a mere glimpse of its blue;
And I wept when the clouds of the mortal
Veiled even that glimpse from my view.

And I toiled on heart-tired of the human,
And I moaned 'mid the masses of men,
Till I knelt long ago at an altar,
And heard a Voice call me. Since then,
I walk down the Valley of Silence
That lies far beyond human ken.

Do you ask what I found in the valley?
'Tis my trysting-place with the Divine.
And I fell at the feet of the Holy,
And about me a voice said, "Be mine!"
And then rose from the depths of my spirit
An echo,—"My heart shall be thine."

Do you ask how I live in the valley?
I weep, and I dream, and I pray;
But my tears are as sweet as the dewdrops
That fall on the roses in May;
And my prayer, like a perfume from censer,
Ascendeth to God, night and day.

In the hush of the Valley of Silence,
I dream all the songs that I sing;
And the music floats down the dim valley,
Till each finds a word for a wing,
That to men, like the dove of the deluge,
The message of peace they may bring.

But far on the deep there are billows
That never shall break on the beach;
And I have heard songs in the silence
That never shall float into speech,
And I have had dreams in the valley
Too lofty for language to reach.

And I have seen thoughts in the valley,—
Ah me! how my spirit was stirred!

And they wear holy veils on their faces,
Their footsteps can scarcely be heard.
They pass through the valley like virgins,
Too pure for the touch of a word.

Do you ask me the place of the valley,
Ye hearts that are harrowed by care?
It lieth afar, between mountains,
And God and his angels are there.
And one is the dark mound of Sorrow,
And one the bright mountain of Prayer.

Emerson, again, in his lines entitled "Blight,"
has a fine rebuke for the science which investigates
Nature from without, as if the unloving and
unlovely student were an alien to her:—

Give me truths;
For I am weary of the surfaces,
And die of inanition. If I knew
Only the herbs and simples of the wood,
The rare and virtuous roots, which in these glades
Draw untold juices from the earth,
Untold, unknown, and I could surely spell
Their fragrance, and their chemistry apply
By sweet affinities to human flesh,
Driving the foe and establishing the friend,—
Oh, that were much, and I could bear a part
Of the round day, related to the sun
And planted world, and full executor
Of their imperfect functions.
But these young scholars who invade our hills,
Bold as the engineer who fells the wood,
And travelling often in the cut he makes,
Love not the flower they pluck, and know it not;
And all their botany is Latin names.
The old men studied magic in the flowers
And human fortunes in astronomy,
And an omnipotence in chemistry,
Preferring things to names, for these were men,
Were unitarians of the united world;
And, wheresoever their clear eye-beams fell,
They caught the footsteps of the SAME. Our eyes
Are armed, but we are strangers to the stars,
And strangers to the mystic beast and bird,
And strangers to the plant and to the mine.
The injured elements say, "Not in us";
And night and day, ocean and continent,
Fire, plant, and mineral say, "Not in us,"
And haughtily return us stare for stare,
For we invade them impiously for gain;
We devastate them unreligiously,
And coldly ask their pottage, not their love.
Therefore they shove us from them, yield to us
Only what to our griping toil is due;
But the sweet affluence of love and song,
The rich results of the divine consents
Of man and earth, of world beloved, and lover,
The nectar and ambrosia, are withheld;
And, in the midst of spoils and slaves, we thieves
And pirates of the universe, shut out
Daily to a more thin and outward rind,
Turn pale and starve. Therefore, to our sick eyes
The stunted trees look sick, the summer short,
Clouds shade the sun, which will not tan our hay,
And nothing thrives to reach its natural term;
And life, shorn of its venerable length
Even at its greatest space is a defeat,
And dies in anger that it was a dupe;
And, in its highest noon and wantonness,
Is early frugal, like a beggar's child;
Even in the hot pursuit of the best aims
And prizes of ambition, checks its hand,
Like Alpine cataracts frozen as they leaped,
Chilled with a miserly comparison
Of the toy's purchase with the length of life.

Of man as the incarnation of the divine, Faber
says, in his lines on the indwelling Spirit:—

God is never so far off
As even to be near:
He is within; our spirit is
The home he holds most dear.
To think of him as by our side
Is almost as untrue
As to remove his throne beyond
Those skies of starry blue.
So all the while I thought myself
Homeless, forlorn, and weary,
Missing my joy, I walked the earth
Myself God's sanctuary.

Whittier, in his "Questions of Life," restates
the old problems debated so often by the Ganges,
the Nile, and the Sea of Galilee:—

A bending staff I would not break,
A feeble faith I would not shake,
Nor even rashly pluck away
The error which some truth may stay,
Whose loss might leave the soul without

A shield against the shafts of doubt.
And yet, at times, when over all
A darker mystery seems to fall,
(May God forgive the child of dust,
Who seeks to know, where faith should trust?)
I raise the questions, old and dark,
Of Uzdum's tempted patriarch,
And (speech confounded), build again
The baffled tower of Shinar's plain.

I am: how little more I know!
Whence came I? Whither do I go?
A centred self, which feels and is;
A cry between the silences;
A shadow-birth of clouds at strife
With sunshine on the hills of life;
A shaft from Nature's quiver cast
Into the Future from the Past;
Between the cradle and the shroud,
A meteor's flight from cloud to cloud.

Thorough the vastness, arching all,
I see the great stars rise and fall,
The rounding seasons come and go,
The tided oceans ebb and flow;
The tokens of a central force,
Whose circles, in their widening course,
Overlap and move the universe,—
The workings of the law whence springs
The rhythmic harmony of things,
Which shapes in earth the darkling spar,
And orbs in heaven the morning star.
Of all I see, in earth and sky,—
Star, flower, beast, bird,—what part have I?

This conscious life,—it is the same
Which thrills the universal frame
Whereby the caverned crystal shoots
And mounts the sap from forest roots,
Whereby the exiled wood-bird tells
When Spring makes green her native dells.
How feels the stone the pang of birth,
Which brings its sparkling prism forth?
The forest-tree, the throb which gives
The life-blood to its new-born leaves?
Do bird and blossom feel like me,
Life's many-folded mystery,—
The wonder which it is To Be?
Or stand I severed and distinct,
From Nature's chain of life unlinked?
Allied to all, yet not the less
Prisoned in separate consciousness,
Alone, o'erburdened with a sense
Of life, and cause, and consequence?

CORRESPONDENCE.

INEFFECTIVE STRICTURES.

Editors of *The Index*:—

One may be amused—if he is not too much dis-
pleased—to read the "arguments" that are sometimes
put forth with airs of scientific assurance on ques-
tions about which the writers seem really to know
very little. A bunch of these I have lately seen in an
article in an able and thoughtful journal, ranking,
perhaps, in these respects even with *The Index*, but
which need not be named, as my object is not to
direct attention to any person, but to help to more
discriminating habits a class of rather unthinking
readers, who usually are ready to accept as of weight
whatever they find in their favorite paper, especially
if it falls in with their own preconceptions.

The article referred to professes to discuss "The
Materialization of Spirits." Properly, this is a purely
scientific question, to be determined only by much
careful investigation of phenomena. To what pur-
pose is it for the writer, instead of examining what
purports to be high evidence on this point, to launch
into various general observations true to triteness,
and serving apparently only to introduce the men-
tion of great names? To what purpose to quote Prof.
Haeckel's opinion that this is "an age of natural sci-
ence," and Prof. Huxley's, that it is our "duty to
expose a supposed law to every possible kind of
verification"? No one thinks otherwise. Believers
and disbelievers in "materialization" are at one here.
Still further from the point is it to quote any pro-
fessor's views as to the propriety of physicists, seeking
in phenomena the evidence of "a Creator acting for
a definite purpose." It is not a question of "Crea-
tor" or no Creator, nor of his "purpose," definite or
otherwise. Quite as little is the doctrine of the eter-
nity or imperishability of matter, or the denial of this,
involved, though on this the writer, again quoting
Haeckel, enlarges.

All these things are simply irrelevant. Notwith-
standing this is "an age of natural science," and that

it is our "duty to expose a supposed law to every possible kind of verification," and notwithstanding, too, all possible opinions in respect to a Creator or his purposes, or as to the indestructibility of matter, the bare question of fact still stands as the only question, "Do deceased spirits ever assume visible or tangible forms?"

Though here, by the way, in the quotation from Haeckel, may be noticed a very common kind of logic, even among distinguished scientists. It is affirmed that "science teaches that matter is eternal and imperishable." On what ground? Simply that "never yet has an instance been observed of even the smallest particle having vanished, or even of an atom being added to the already existing mass." In other words, the want of proof that an atom has ever been added or has perished is assumed to be equivalent to proof that neither has ever been done. Here is a fallacy palpable enough to all logicians, if not to the men of natural science. The true scientific position is much more modest. We do not know. Quite possibly, the question may remain forever unanswerable.

Nor does the unhappy fact that "the [pretended] materialization of spirits is offered as an attraction to the curious, the credulous, and the ignorant, who are willing to hire a seat," etc., touch the question. That counterfeit money abounds, and that many have often been deceived by it, is a fair ground, indeed, for careful examination, but does not disprove the existence of the genuine. One certainly cannot wonder that those who have found themselves repeatedly treated to mere fraud in their personal investigations, or who have read of its frequent occurrence, should be extremely cautious. This is eminently their "duty," and not more so in the opinion of Mr. Huxley than in that of the most intelligent and experienced Spiritualists, some of whom are among the keenest and most exacting observers. But summarily to set down all "materializations offered" as fraudulent is to assume to speak from a knowledge of the subject which not one man in ten thousand of those who deny the fact of materialization possesses.

And here, let me say, is the weakness—yes, and the folly—of the great body of the writers who, with the airs of knowledge, presume to deny the reality of the phenomena of Spiritualism. They speak from their ignorance. They assume that what they have not been able to verify—and sometimes, I fear, have not even sought faithfully to verify—no one has. That difficulties—some not yet explicable—often stand in the way of this verification, the most experienced and acute observers are ready to admit. A letter from the scholarly investigator, M. A. (Oxon.), now before me says: "Many people complain that they cannot get satisfactory evidence. And there are many who never will. It is absurd to say, as some do, that anybody who will take a little trouble can see for himself." And he instances an eminent savant who has devoted much time and money to the investigation without obtaining personal conviction through it. "His belief rests on second-hand evidence." So that—account for it whether we can or not—it may often be that one is entirely right in saying that he has never yet met with any direct convincing proof in his own observation, though he has much sought for it. This is one thing, and quite permissible. But when, in view of the number of distinguished men in almost every branch of intellectual cultivation, including even the technically "scientific," who, against all their previous training and prejudices, have been convinced by the evidence offered to them of the fact of spirit intercourse and even of "materialization," one disdainfully ridicules it, and remits it to "the credulous and the ignorant," what insufferable arrogance is it! If the writer now under review will take up some single well-authenticated and minute account of a spirit's materialization, such, for instance, as that given in the *London Light* of February 28, where several independent witnesses give their several reports of what they, as members of a party of fourteen, all of the highest character for intelligence and integrity (names and residences given in full), witnessed, in a light sufficient to show the time by their watches, of the gradual formation of a spirit form from Mr. Eglington's side,—if, I say, he will examine these accounts, and tell us wherein they fall short of credible evidence of a spirit's materialization,—he will do something to purpose. But, if he has never heard of this and a great number of other well-authenticated cases,—every instance of proved apparition being a materialization of some

kind and degree,—and has never critically investigated them, of what value is his opinion that spirit materialization cannot occur? To say that he cares not for the proffered evidence, that it is not worth his attention, that no evidence can prove such things, that such stories are all sheer imposture, and so on, would be only to imitate the lofty and unreasoning scorn of some who yet style themselves "scientific."

But is this science? Is this the way in which, to quote his own words, "an enlightened man, a lover of truth and justice, attempts to prove that reason should be guided by research"? Such scientific methods will never demolish Spiritualism "any more than," to use one of his singular comparisons, "a goat can cause an earthquake." They have been essaying it for more than a generation, and behold where Spiritualism stands to-day.

There is, perhaps, some little show of argument in one part of the article. It is where it is urged that "the slowly changing forms of matter must be considered," and that "there is no known scientific basis on which to found the belief that a man, having ceased to perform his organic function, and dissolving in the water or the earth or crematory, can in any one of these conditions 'assume the same figure like the king that's dead.'"

That ordinarily the forms of matter change slowly is consistent with the further fact that they often change rapidly and even instantaneously, and with the still further fact that the laws or methods of these changes are by no means yet understood. No transformation of the atoms composing the physical body is, however, in "materialization" assumed. By what laws or in what way the spirit gathers to itself a body recognizable by the senses is yet matter for study. In respect to the limits of spirit power over matter, we really know nothing. The door into this department of science has hardly been opened.

If by "scientific basis" the writer means some established theory of the method or means by which spirits materialize, his assertion is true enough; but it obviously does not touch the question of the fact. But if he means there is no well-ascertained body of phenomena substantiating the fact, he propounds a negative, not only in its very nature incapable of truth, but one contradicted by an amount of evidence entitled to the highest respect.

Mr. Charles Bray's quoted opinion that, "If it were possible for the mind's identity to be continued after death with a different body, it would not constitute the same person," is a rather queer statement to come from a philosopher. The identity of the mind only, even if immortality be allowed it, does not constitute identity (!) is the amount of it. And his reason for this is that "our identity or personality is made up of our body and mind,"—an assumption too unphilosophic for any general acceptance, and requiring no answer.

JOSEPH D. HULL.

3 COPELAND PLACE, BOSTON.

"SEMITIC" AND "ARYAN."

Editors of *The Index* :—

Will you kindly inform me through the medium of your paper, or otherwise, as may be most convenient, why it is that eminent scholars, such as Max Müller, call one of the "two great families that have been the principal actors in that great drama which we call the history of the world" *Semitic*, the other being the *Aryan*?

Semitic, or Shemitic, evidently means descendants of Shem, the eldest son of Noah, but the belief in the destruction of mankind by the Noachian deluge, and the subsequent re-peopleing of the earth by Shem, Ham, and Japhet, and their descendants, no longer exists among scientific men; and the term "Semitic," as applied to a large part of the human race, seems to me a misnomer.

T. W. J.

BEEVILLE, TEXAS, July 20, 1885.

[It was comparative philology that originated the terms "Semitic" and "Aryan" to designate two great divisions of the human race. Although the Hebrew patriarch Shem is doubtless as mythical as the Greek god Apollo, the word "Shemitic," or, as it is more commonly written, Semitic, is of course derived from the Hebrew name Shem, and was applied to those peoples popularly believed to have descended from Shem, or that were subsequently found to be related to them. The existing Semitic peoples are first the Jews and second the Arabians. The Syrians are also Semitic. The ancient Assyrians, Babylonians, Chal-

deans, Carthaginians, and Phoenicians were Semitic. Moses, Jesus, and Mohammed were Semitic. The Semitic languages, Hebrew, Arabian, Chaldean, etc., are kindred forms of speech. The fact that Shem was a myth, and that the story, the derivation of a division of the race from him, is a fable, does not invalidate the peculiar philological signification of the word "Semitic," although it is to be regretted, perhaps, that some word, not associated with current superstition, could not have been selected. The Sanskrit word *Arya*, meaning "respectable," "honorable," was applied to the Sanskrit-speaking people of India whose ancestors came across the river Indus from Central Asia. The word is believed to have signified originally "agriculturist" at a time when the most respectable portion of the people of that part of Asia were engaged in cultivating the earth, raising cattle, etc. But German students of Sanskrit soon found that that language was clearly related to the languages of the West, the Greek, Latin, German, and English, and thus indicated that the Hindus, Greeks, Romans, and Germans had a common ancestry, and called them all Aryans, or Indo-Europeans. We never think now of the ancient meaning of the word "Aryan," but only of its philological signification. And so the people will gradually come to regard the word "Semitic."—B. F. U.]

CARD.

We have been appointed for the United States of America upon the International Committee for the purpose of securing the erection of the statue to the memory of Giordano Bruno at Rome. We approve of the object of the Committee, and request that all subscriptions therefor should be sent to T. B. Wakeman, No. 93 Nassau Street, N. Y., who has been duly authorized by the Committee at Rome to receive and forward the same.

Dated July, 1885.

ROBERT G. INGERSOLL.
ELIZUR WRIGHT.
T. B. WAKEMAN.

[It is proposed to raise for the Bruno statue by subscription \$600. An instalment of \$200 has already been sent to Rome, and handsome acknowledgment made by the Committee. Col. Ingersoll has generously promised to give a lecture in New York, in early autumn, for the benefit of the fund; and it is hoped that the proceeds will raise the amount to be sent from this country to nearly or quite \$1,000. The character, services, and sacrifices of Bruno should make his name dear to every free thinker; and there should be no difficulty in obtaining the amount named. A monument such as is to be erected to the memory of Bruno at Rome will be a fitting rebuke to the Romish Church, and a perpetual reminder of the progress of intellectual freedom. The monument will be twenty-six feet high. The figure of Bruno will be of bronze, and about ten feet in height, standing on a granite pedestal. Among the inscriptions are these words, by the martyr, written in the book he is represented as holding in his hands: "The highest God has destined me to be an Apostle, not last or least, of the better Age to come." On other sides of the monument are bas-relief figures, which represent the condemnation of Bruno, the martyrdom of Huss, and Arnaldo da Brescia speaking to the people. Huss, Servetus, Vanini, and other martyrs of freedom are also appropriately represented. The monument was designed by Prof. Ettore Ferrari, who, the International Committee say, "honors with his noble genius and soul both Art and the Liberal Cause."—B. F. U.]

A PARIS correspondent of the *Catholic Review*, evidently an ecclesiastic, in a letter headed "Victor Hugo: His Awful Death," etc., writes: "Every Catholic heart has shuddered at the thought of the scandal occasioned by the civil obsequies of Victor Hugo. The Intransigent papers all reproduce the letter of M. Lockroy, and are very exultant over the matter. They appear to think that the Church, in losing Hugo, has lost everything, and France into the bargain. But the Church contemplates the pagan funeral of Hugo as serenely as she did that of Gambetta. She has seen so many other distinguished personages die in revolt against her and against the law of Christ, she has no fear: she is not to be pitied, but rather the unhappy dupes of atheistic republicanism, whom the diabolical fury of the Lodges tries to seduce by the

spectacle of the public apostasy of the 'Princes' (as they are now called) of the Republic. As to Hugo, he has died the death he obstinately willed and sought. He ordered guards to be placed near him who would defend him against every 'invasion' of the divine mercy and of the Catholic priest. He was well 'guarded,' well 'protected,' as the *Justice* acknowledges, with cynical frankness. If a return to God has been wrought in the understanding and soul of Victor Hugo at the moment of the terrible journey, it is a secret between God and him." Something—indeed, much—has been gained, when a dying free thinker in France can be "well 'guarded,' well 'protected,'" against the presence of priests and the mummeries of priestcraft.

BOOK NOTICES.

THE SONG CELESTIAL, OR BHAGAVAD-GITA (from the Mahābhārata). Being a Discourse between Arjuna, Prince of India, and the Supreme Being, under the form of Krishna. Translated from the Sanskrit text by Edwin Arnold, M.A. Boston: Roberts Brothers. 1885. Price \$1.00.

Of this poem in the original, Mr. Arnold says: "It enjoys immense popularity and authority in India, where it is reckoned as one of the 'five jewels' of Devanāgiri literature. In plain but noble language, it unfolds a philosophical system which remains to this day the prevailing Brahminic belief. . . . The weight of evidence tends to place its composition at about the third century after Christ, and perhaps there are really echoes in this Brahminic poem of the lessons of Galilee and of the Syrian incarnation." The poem has already been translated by able scholars into French, Latin, Italian, Greek, and English prose; and the present translator, in his preface, modestly says, "If I venture to offer a translation of the wonderful poem after so many superior scholars, it is in grateful recognition of the help derived from their labors, and because English literature would certainly be incomplete without possessing in popular form a poetical and philosophical work so dear to India."

We have space only for a few short quotations from Mr. Arnold's rendering of this noble poem, by which we hope to give our readers a foretaste of the many beautiful gems of thought which await their more leisurely perusal:—

"He who shall draw,

As the wise tortoise draws its four feet safe
Under its shield, his five senses back
Under the spirit's buckler from the world
Which else assails them,—such a one, my Prince,
Hath Wisdom's mark."

"Yet may it chance,
O Son of Kunti! that a governed mind
Shall some time feel the sense-storms sweep, and wrest
Strong self-control by the roots. Let him regain
His kingdom! Let him conquer this, and sit
On Me intent. That man alone is wise
Who keeps the mastery of himself."

"No heart that holds one right desire
Treadeth the road of loss."

"Even as the unknowing toil, wedded to sense,
So let the enlightened toil, sense-freed, but set
To bring the world deliverance, and its bliss."

"Beyond denial, hard
Man's heart is to restrain, and wavering;
Yet may it grow restrained by habit, Prince,
By wont of self-command. This Yōg, I say,
Cometh not lightly to th' ungoverned ones;
But he who will be master of himself
Shall win it, if he stoutly strive thereto."

"The faith of each believer, Indian Prince,
Conforms himself to what he truly is.
Where thou shalt see a worshipper, that one
To what he worships lives assimilate
(Such is the shrine, so is the votary)."

"Serenity of soul, benignity,
Sway of the Silent Spirit, constant stress
To sanctify the nature,—these things make
Good rite and true religiousness of Mind."

"There is 'right' action: that which—being enjoined—
Is wrought without attachment, passionlessly,
For duty, not for love, nor hate, nor gain.
There is 'vain' action: that which men pursue
Aching to satisfy desires, impelled
By sense of self, with all-absorbing stress."

"A Brahman's virtues, Prince,
Horn of his nature, are serenity,
Self-mastery, religion, purity,
Patience, uprightness, learning, and to know
The truth of things which be."

"The gift lovingly given, when one shall say,
'Now must I gladly give,' when he who takes
Can render nothing back, made in due place,
Due time, and to a meet recipient,
Is gift of Sattrocan, fair and profitable."

S. A. U.

STUDENT SONGS. Comprising the Newest and Most Popular College Songs. Compiled and edited by William H. Hills, Harvard Class of 1880. Cambridge, Mass.: Moses King. Price 50 cents.

A great deal of fun, a little sentiment, and not much wisdom mark the musical taste of our college boys, judging from this collection of over sixty of the most popular college airs and songs. These airs must be popular with others as well, for over forty thousand copies of this volume have already been sold. The titles of some of these songs are sufficient to provoke a smile, such as "Mush, Mush"; "Gee! Whoa! Dobbin!" "Halico! Calico!" "Ching-A-Ling-Ling"; "The Poco's Daughter"; "Drink, Puppy, Drink"; "Polly-Wolly-Woodle"; "The Beautiful Ballad of Waska-Wee"; and many others. We are glad to see the "Wellesley College Song" incorporated into this collection, as an indication of the future opening for women, which is hinted at in the second verse of this song, which we quote:—

All hail to the College Beautiful!
All hail to the brave and bright!
She has taken her place in the swift sandaled race,
Where the strong man smiles in his might.
Oh, shining arise the lights in her eyes,
And her hands are hot for the prize.
Now fast and far let the race be tried:
She runs in her weakness, and he in his pride;
But, run as they will, they will run side by side,
And share in the victor's right!

EGYPT AND BABYLON. From Sacred and Profane Sources. By George Rawlinson, M.A. New York: John B. Alden. Fine cloth, gilt tops, price 60 cts.

This work, by the renowned author of *The Seven Great Monarchies of the Ancient Eastern World*, and other works of like character, all of which are considered excellent authorities on the subjects treated, is now brought within the means of every student through Mr. Alden's cheap reprint. It contains citations from or references to all the notices of Babylon and Egypt in the Hebrew Scriptures from Genesis to Daniel, and is a valuable work for the student of history to consult in regard to these ancient nations.

A GRATIFYING proof of the success of Mr. W. M. Salter as pastor of the Ethical Society in Chicago is seen in the publication of fifteen of his lectures in a German translation, edited by that able writer on ethics, Gizycki. The handsomely printed volume of three hundred and sixty-three pages is entitled, after the first subject presented, *Die Religion der Moral*. Other themes are "Wendell Phillips," "The Higher Law," "The Social Ideal," "The Problem of Poverty," etc. Mr. Salter's eloquence and philanthropic fervor lose little by translation; but his quotation from the poets should have been left in English, and only a literal rendering added in the notes. The German publisher is Wilhelm Friedrich, Kgl. Hofbuchhandlung, Leipzig. Price 3 marks.

"OUR LITTLE ONES" for August is, as is usual with this charming magazine for "the nursery," rich in beautiful illustrations of its instructive stories, most of which in this number deal with animal life. In the seventeen articles it contains, including prose and poetry, are given stories of birds, chickens, dogs, kittens, grasshoppers, and fish, all told in a very interesting way.

THE Milwaukee *Freidenker* has just finished two series of interesting articles, the one advocating cremation, the other telling how successfully women have studied and practised medicine in Russia.

West Newton English and Classical School.

The 33d year of this Family and Day School for Boys and Girls begins September 16.
Address NATH'L T. ALLEN,
WEST NEWTON, MASS.

HOWARD COLLEGIATE INSTITUTE,

WEST BRIDGEWATER, MASS.
A Boarding and Day School for Girls and Young Women, reopens Sept. 15, 1885. For catalogue, address the Principal, HELEN MAGILL, Ph.D., Graduate of Swarthmore College, Boston University, and Newnham College, Cambridge, England.

The Religion OF PHILOSOPHY;

OR,

The Unification of Knowledge.

A COMPARISON

of the Chief Philosophical and Religious Systems of the World, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God.

By RAYMOND S. PERRIN.

Octavo, cloth. \$4.00.

C. P. Putnam's Sons,

27 and 29 West 23d Street, New York.

A SEASIDE RETREAT.

Ocean Cottage, on Horseneck Beach, is situated about thirteen miles south-west from New Bedford on the open sea. Those wishing a pleasant and quiet summer resort, with all the accommodations of a first-class hotel without the restraints of a fashionable watering place, will be pleased with our home. We have one of the finest beaches in the country, with the surf at our door; excellent bathing and fishing; an inlet close by for those wishing to sail in smooth waters. Seldom any mosquitoes about the hotel.

For particulars, address JOSIAH WOOD,
No. 84 ALLEN ST., NEW BEDFORD, MASS.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

THE INDEX,
BOYLSTON STREET, BOSTON.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counterforces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammelled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

CURRENT TOPICS.

BY B. F. U.

A DESPATCH from Newport says that last Sunday "the fashionable churches were well attended by fashionable people, who listened to fashionable clergymen speaking of the vanities and frivolities of this life."

ACCORDING to the reports in daily papers, fully twelve thousand persons were in attendance last Sunday at the Lake Pleasant Camp Meeting. Excursion trains brought people from many places in Massachusetts and Connecticut.

"AN Individual Spiritualist" quotes in the *Investigator* a statement of the *Banner of Light*,—that "the invisibles themselves are the real leaders," and adds: "This means, of course, the mediums through whom the invisibles manifest. But I see no difference, in principle, whether I am led by a medium or a minister. I don't wish to be led by either of them. I prefer to be my own leader."

"UNITY" quotes this remark of a teacher of elocution, which it says will do to think over during vacation: "All the ministerial throat difficulties that we hear so much of originate in that assumed oratorical, or false or falsetto, tone in which so many preach, generally without being conscious of it; and the false tone is assumed because they do not really mean what they say." This seems to justify Ingersoll's use of the word *paronitis*.

THE papers state that a lawyer at Galveston, Texas, having declared that no reliance could be placed upon petitions, and having been rebuked by the court for the remark, soon after appeared in court with a petition praying for the hanging of Luke Howard, a worthy citizen of the place. The petition had fifty signers, among whom were the father-in-law and brother-in-law of Mr. Howard. Every signature was shown to be genuine, and all the signers were men well known.

THE *Pall Mall Gazette* revelations are not helping the Protestant evangelists in France in their work. A Paris letter writer says: "The conclusion drawn, by even some of the most serious dailies, is that the religion of the English is nothing but hypocrisy, and that henceforth English missionaries and evangelists had better stay at home instead of overrunning the continent with

their Bibles and prayer-books and evangelistic meetings. What effect such articles may have on the laborers in France of the British and foreign Bible societies, and of the gifted evangelists, Messrs. Gibson, McAll, and others, we cannot yet foresee."

"THE elevation of Baron Rothschild to the peerage," remarks the *Boston Advertiser*, "not only marks the disappearance of the civil ostracism to which the Hebrew race has been subjected in England, but it is an important recognition of the growing influence of the higher Jewish element in modern society. Sir Nathaniel de Rothschild, as the new peer will be called, is the eldest son of the first Jew who ever sat and voted in the House of Commons, and is himself the first Jew, in the strictest sense of the term, who ever sat in the House of Lords. Jews can now triumphantly recall the controversy over the act for the removal of Jewish disabilities in England,—a controversy that agitated the last generation as the Bradlaugh case, or almost any other, has agitated this one."

PRESIDENT CLEVELAND's letter to the man who had signed a petition for office of an unworthy applicant, and after the appointment wrote to the President that "not a man whose name was on the petition had the remotest idea that the appointment was possible," has the approbation of all honest men, irrespective of party. The letter has been widely published, and we give here only the concluding paragraph: "Your confession comes too late to be of immediate use to the public service; and I can only say that, while this is not the first time I have been deceived and misled by lying and treacherous representations, you are the first one that has so frankly owned his grievous fault. If any comfort is to be extracted from this assurance, you are welcome to it."

MARGERY DEANE does not believe that the line dividing mortal and immortal beings should be drawn between man and the higher brutes. Writing from Newport to the *Boston Transcript*, she mentions the death of her "tiny black spaniel called 'Toots,'" and adds: "I reckon myself happy if I may believe so many people have kind words and even tears for me as had this little fellow, whom everybody here knew and loved, when my life goes out. Few men or women have been more truly faithful and loving for so long a period; and such qualities are not so common in the world that we should be ashamed to mourn for them, even in a dog. He began his life in Belgium, and his breed was rare in America; but it was the truthful, beautiful nature that made him precious, and somewhere, I believe, it still exists, and will forever."

THE published statement that George W. Childs regards Newman as an insincere sycophant who has used Grant's illness and death to glorify himself may be most too unqualified a statement, but it is not likely that he will fail to take advantage of the prominence into which his relations with Gen. Grant have brought him to promote his personal interests. A New York correspondent writes: "It

would be the joy of his life to be the actual owner of a fine church, and he now thinks that he sees his way clear to acquiring such a property. He has had several offers from publishers who wish him to write some sort of a book memorial of Grant; and he calculates that, with the profits of this venture, he could establish his desired pulpit. Of course, his conspicuousness at Mt. McGregor and in the funeral has advertised him to the whole country; and, with his undeniable power with most hearers, he ought to be able to hold a large congregation together."

THE *Boston Evening Transcript*, referring to the progress of democracy in England as illustrated by the emphasis of Canon Farrar in speaking of Grant, at the Westminster Abbey, put upon the lowly origin of most of America's great men, and the ludicrous attempts of a class in this country to convey the impression, especially to British visitors, that there is a great difference between themselves and the rest of their fellow-citizens, remarks: "The thing is preposterous; for everybody knows that even in Boston there is next to nothing of social consequence that is not founded on money, and money made, if not by the existing generation, by the generation before it,—always in vulgar struggle with vulgar people, and sometimes by less creditable means. The snobbery cultivated at Harvard, for example, to which President Eliot referred in his last Commencement address, that shows some kind of a line between the sons of business men and those of professional men, for instance, is pitiful and un-American in origin, and would only excite the contempt and amusement of the English aristocrats who entertained Prof. Lowell."

REV. A. H. SMITH, in a paper published in the *Honolulu Gazette* of May 6, has this to say of the unchristianized Chinese: "There is in China a great respect for law,—a respect which is indefinitely greater than in the United States, where there appears to be too often no respect for anything. There is likewise a great respect for reason. The Chinese are a peaceable people; and a quarrel no sooner begins than there emerge 'peace-talkers' and 'reason-talkers,' who will contrive to settle the matter, if it be soluble. In general, the most angry crowd can be quieted by 'talking reason' to them in a good-natured manner. It is much easier to adjust a disturbance, even for a foreigner to adjust one, in China than in the United States. It is safer for an American to travel all over China than for a Chinese to travel in the United States. There is a bitter hostility to foreigners on the part of the Chinese literati, but this springs largely from ignorance as to the motives of foreigners for coming among them. Yet this hostility, great as it is, is probably less than that felt toward the Chinese in the United States, where the relation of the two races is supposed to be well understood. Notwithstanding this blind aversion to 'foreign devils' *per se*, it is common for foreigners to travel all over China and never to be insulted by any overt act. The Chinese are among the politest of the human race."

SCEPTICISM.

What is the relation of scepticism to credulity? Why does the child's natural disposition to accept things for just what they purport to be not continue? How does the age of simple credence vanish? And how does the childish readiness to believe that all is good and true and fair disappear? It is because experience comes in to teach that facts are not always at first correctly or wholly seen, and that a larger sphere of facts is continually coming to light which must modify first impressions derived from only a limited survey. The child soon learns that the first evidences of his senses may have to be corrected by a mental judgment. He discovers, indeed, that his senses, which he could not help but put such implicit belief in, do, nevertheless, deceive and delude him. He puts out his hand for an object the other side of the room with as much confidence as for the rattle close by his side, but learns, to his astonishment, that he cannot reach it. It is not where he thought it was. A red ball has delighted him. So he puts his fingers on a live coal, expecting the same pleasure, but discovers that it hurts him. He steps on what looks just like the solid floor where he has been walking safely; but it gives way, and he falls. And thus slowly, and not without many disasters, hurts, and chagrins, he adjusts the evidence of his senses by the evidence of experience.

He learns, too, alas! by the same evidence of experience, that, as all is not material gold that glitters, so all is not moral gold that makes a show of goodness. He discovers, and perhaps quite early, that words are not always true to facts; that promises are not always followed by fulfilment; that the people about him who seemed so good and tender, and are so affectionate still, can also frown and fret and scold. And, as he grows older, he finds that there are many bad people in the world, and that some he had believed to be good turn out to be bad; that some things which had been taught him as truth prove to be errors; and that people are everywhere contending over different and contradictory opinions and beliefs, each party maintaining that only its own are true and worthy of acceptance. He discovers, also, in the unfolding experience of life, that evil thoughts come into his own mind; that evil passions spring up in his own breast; that temptations to carnal indulgence, to anger, to untruthfulness, to avarice, are striving within him for mastery over his better impulses and his more honorable ambitions. Thus, in the din of passions and the conflict of opinions, he finds that his predisposition to believe only in a world of moral truth and goodness is corrected by the facts of a larger experience; and, just as in regard to the evidence of the senses he had to call in the aid of a mental judgment to make the necessary adjustment between appearance and reality, so, in the domain of moral belief, he relies upon the same help to save his confidence in the moral soundness of the world.

And all this experience that follows the first brief period of unquestioning credence is the age of inquiry and investigation, the age of probings and questionings, and very likely of doubts and scepticism. The disappointed and baffled mind, finding its first trust to be broken,—finding that to be error which it had taken for truth, and that to be bad which had the appearance of goodness,—is often prone to ask despairingly whether there is anywhere any genuine standard of truth and goodness, any sure guidance for man, in the difficult straits of life; whether truth and goodness are not, after all, mere words, which, as they are used

so often without any corresponding realities in human life, so have no corresponding realities anywhere in the universe. This is the attitude of scepticism, of doubt, of denial. It is not simply, as is apt to be taught, the doubt or denial of certain commonly accepted theological beliefs: to doubt or to deny most of the popular theology of the day may indicate, indeed, only a healthy spirit of inquiry, or even a larger, firmer, and more satisfying belief; but the scepticism that is complete, and the only scepticism that is perilous, is that which goes below theological beliefs, below even the question of the existence of a Supreme First Cause, and doubts whether there be any truth and any goodness, divine or human.

Goethe, in *Faust*, makes Mephistopheles, the Satanic agency of the drama, define himself as "the spirit that constantly denies," and who gives, as a reason for his denial, that "everything that has originated deserves to be annihilated." This is the spirit of thorough scepticism,—the spirit that has passed through every phase of waning belief, from the perfect credence in which life started, until everything is denied as much as it was then affirmed, including even a moral worth and aim in the universe. This spirit is essentially destructive. It antagonizes the creative process; it saps the vigor of the human mind and heart. In its mental phases, it is bad enough; but, in its moral, it is ruinous. To disbelieve in any *goal of truth* takes away all motive to mental endeavor and progress; but to disbelieve in *goodness* is to corrupt life at its fountain with a destructive poison. It may not be just to aver that any persons ever reach this depth of degradation implied in utter moral scepticism. Yet the class of people alluded to in the article on credulity last week,—those who are habitually incredulous of human goodness, and who smile contemptuously at expressions of confidence in the average man's honesty and the average woman's purity, and who delight to illustrate their worldly wisdom by showing up, with an "I-told-you-so" air, the flaws in their neighbors' characters,—such persons are dangerously near the verge of this moral abyss.

Yet scepticism, though capable of reaching this degrading excess, is a quality of mind that, in its origin, is natural and desirable. It starts, as we have seen, in that inquiry which is necessarily made when the discovery first comes that things are not wholly what they outwardly seem. When the child learns that the live coal he delightedly and confidently touches makes him cry with pain, that the chair he expectantly reaches for on the other side of the room does not come at his bidding, he takes his first lesson in scepticism. Then he begins to doubt what he has before trusted: he begins to doubt and inquire, to try, test, and prove,—in other words, to use his reason as well as his senses. And the word "scepticism," etymologically considered, only means this harmless and even praiseworthy and necessary kind of doubting and proving by trial. Literally, it signifies the act of *looking about, of considering*,—an act which is not in the interest of denial, but of truth. And this quality of scepticism is commendable, too, when the relation that has to be corrected is not merely relation to material facts, but to mental reality; when it is found that certain beliefs or opinions or habits have been heretofore accepted on insufficient evidence, and must either be put upon new grounds of reason or must be abandoned. Scepticism is thus useful in removing superstition, and clearing the rubbish of obsolete opinions from the path of human progress. It is only when it runs to excess that it becomes an evil,—only when, turning from its work of lopping off dead or useless growths, it attacks the

roots of all belief and virtue, that it is to be resisted.

So, last week, we found credulity to be in itself a good and necessary quality of mind, only becoming an evil when in excess. And both credulity and scepticism have come, in common parlance, to have a taint of evil, because, in both, this illegitimate excess so often occurs. Credulity becomes an evil, if it receives no correction from experience, but continues in full force after new conditions of evidence are presented, and the period of inquiry and of rational investigation was intended to begin. It then stands in the way of a robust mental health and growth. So far as credulity is a generous trust in the mental and moral soundness of the universe, so far as it consists in an instinctive readiness to believe in the *best* concerning both persons and things, so far it is good and worthy to be sought. But so far as it sustains superstitions and irrational opinions that should have become obsolete, and opposes the application of reason to any questions that concern human welfare, so far it is an evil to be assiduously shunned. And so of scepticism. It is an evil if, instead of applying a natural restraint and corrective to that implicit credence of appearances in which conscious existence begins, it roots out the very faculty of credence, and ends in blank denial and despair. But so long as it is a fearless trust of the spirit of inquiry, a bold confidence in reason, and a brave, believing search for truth over boundless seas, with only the human mind at the helm, so long it may be followed with safety, though out of sight of all the landmarks of old beliefs: so far it is a discovery and to be commended,—a renewing and creative force in life, denying necessarily much of past belief, but believing in man himself, and working for the future. Credulity and scepticism represent, in fact, mutually balancing and correcting tendencies of human nature. They are the natural counterparts of each other. Let the two tendencies be properly developed together, and each will present the needed antidote and remedy for the excesses of the other.

WM. J. POTTER.

GRANT.

Americans probably mourn less for Grant than they suppose. Thought is sometimes taken for emotion. The public mind is, no doubt, fixed for the moment upon the dead soldier, and has given some measure of its mental impressions to a natural though not abounding grief. But I question a wider extension of real emotion in the matter. The extravagant nonsense that Newman has fathered, and the fulsome tone of popular comment, do no more, from their very extreme temper, than expose the hollowness of the efforts put forth to add to the common experience of the hour. Had the feeling been all that it pretended, its expression would have been quite different from what we perceive. The picture of a mourning world is the fancy of men who cannot distinguish between rhetoric and truth.

Grant's life included features hinting of exaltation. He is not responsible for the claims made by unbalanced admirers. He was always remarked as among modest men who read their own merits small, and gave liberally to the merits of others. But it has struck me to inquire whether a great part of this superabundant praise that now clouds the public judgment is not a tribute purely to his military qualities, whether it does not inherently confine itself to that point, as though bound there of its own nature, inevitably, paying this obeisance without regard to the motives that bent his career? Had the pluck

spoken for something less than patriotism and justice, would the deference have been lowered? Was Grant the representative of an idea or a profession? Was he to the North what Lee was to the South? If the popular mind grasps the higher conception, and sees the soldier's work in its relations to national supremacy and progressive moral sense, how far is it willing to go in doing honor to men in less ostentatious walks, who labored for the same ends it so approves in him?

We are assured that Grant—buried with exceptional pomp—was our *first* citizen. Assuming much, Mr. Newman brushes aside antiquity's heroes in this presence, and shows us that Nature surpassed herself when she occupied her hands with his departed friend. Impoverished editors, thinking to effect a startling characterization, lead us up to admire a frail tissue of impossibility. The pulpits break out in weepings and wailings, as though worlds vanished with this valued soul. The soldier was our "savior." The hero was the one bulwark of American nationality. The one-time tanner was the sower of seed by which the nation lived. "Who will do our thinking for us now?" the absurd eulogist feebly cries. Had Grant not been, or had he stopped his work midway, woe must have wrung the popular soul, and the republic must have gone down in hideous ruin.

That is the queer logic of the street. That is the way our "leaders" argue, while practically disavowing every word of lament. It is well to know that the fashion of the hour, and not the hour's conviction, dictates such unpardonable assertion. Grant would have been the last man to have chosen such terms for the best soul he knew. He certainly would have resented their application to himself. He was clear-headed, and saw by what drift of time and tide he was elevated. He knew that the war would have ended with Southern discomfiture, had he never existed. He realized that men of heroic mould were gathered at his side. The national "savior," he well recognized, was impersonal; and, though he was of it, it was not more than partly of him. He gave evidence of his innate distaste for professional militarism. He was not the brand of which "soldiers of fortune" are constituted. Brought into the vortex, he did his part in extrication, but must have acknowledged that what came of many minds was solved of many minds, no odds what may have been the brilliant powers of exceptional men.

I resist the idea that Grant was "our first citizen." The first citizens of momentous eras are never the military chieftains. This is particularly to be noted of our later times. History repeats the manifestation over and over again. The remembered souls are those that labored simply for amelioration. The guiding voices are, such as sung for the softening of life. The days of Homer and Jesus and Buddha and Shakspeare, the days in which Italy so liberally gave to classicism, rendered no great names in soldiery that have a message for later trust. The age of Grant is not less certainly the age of Emerson and Garrison. Has the era of Lee and Jackson escaped the finger of Parker and Weiss? This is a grave enigma we send down the avenues of time,—this mystery that puts its robes of splendor upon swordsmen, and leaves the vaster moral individualities to their fate. Can we answer it by pointing to the *final* honor? Gonsalvo de Cordova was a good man; but, where every child has his thought of Columbus, the great captain goes begging, even in the memory of grown men. Can life be relied upon to finally bring events out in their just proportions? The lesson of a year is not so pointed as the lesson of a century.

I should sorrow to be thought wilfully unjust in these reflections. I have in mind no end more vicious than that of appealing to men to take the facts of history, and accept their speech. The myths we can laugh at when they are a thousand years old are to-day at our doors, refreshed for new illusion. From the soldier to soldiering, and then to barbarism, are few steps to men who fail to perceive the patriot's spring of action. Not less subtle is the movement that leads from the poet to poetry, and next to the eternities. The same space, yet so different the vista beyond! This indicates the danger of Grant, and the infinite possibility of Hugo, who are the two men foremost in what is called national esteem these later days. I view these suggestions with an anxiety that reaches far.

The mass of men do not penetrate much below the flesh. The strong arm stops the curious where moral courage is ignored. Grant in the Wilderness, Von Moltke on French territory, Sherman marching to the sea, Wellington facing Napoleon, are more striking to rustic imaginations than to investigators who descend beneath the first show of circumstance. The more substantial civilizing elements—those, notably, that go to the service of science—elude the common touch. It takes a long vision to trace the line of the mountain-tops. Great characters are rarely heroic in the ways marked out for them by public thought. The issues of life bring their own results; and many a struggle, as chanced of that which assured us of nationality, has its Grants and Lincolns, who, however indubitably large and excellent, labor under tribute that belongs, in justice, to martyrs who preceded them. Blaine is right. The Rebellion summed up a great moral crisis. But I am not satisfied, as he is, that the tale is all told when Lincoln and Grant have been mentioned.

The most striking features in Grant's character are least emphasized. Men dwell most upon the stories of his battles. Of these events I think least. Not victory, but what secured and what was done with victory is the important consideration. Had Grant but the military lustre, I could regard him as materially less in stature. Indeed, while it appeared he was not specifically statesman nor philosopher nor writer, he was found to be each and all in that measure which seemed required of him in moments of grave decision. Herein, he laid hold of greatness. Finely balanced for his occasions, the man always ruled his vestments. He was tanner when he was President, and President when he was tanner. But people are not satisfied when we say this. They distrust our point of emphasis. They take isolated acts, and write a meagre verdict, as though life expressed itself in one verse.

Countries are not saved in crises by the existence of an individual. Least of all could that be possible in our day. Grant was saved by the nation: the nation was not saved by Grant. Or, if that seems an incomprehensible statement, we must admit that the vital force was an interacting, interwoven one. Above the power to do is the power to bid potently that things be done. Back of the late comer is always the pioneer. Earlier than Lincoln and Grant were Whittier and Phillips. The North had one arm on Southern fields, but was not nerveless in civic council and heroic labor. That one man might strike Richmond to the dust, others had striven—perhaps more feebly—to weaken resistance. Many men and many blows prophesied the end. These questions are never questions of any one man, however great; for even giants are only comparatively strong, and the best man does not encompass the end of possibility and virtue. Temperate love

shames passion back to its shadows. Grant knew that he was not America. He must have seen that union was maintained by powers larger than exceptional personalities.

The spindles to-day pursue their wonted direction. Poets sing, and the hours still beckon us onward. The sun shines as gladly upon the soldier's tomb as it did twenty years ago upon his glorious successes. This can have only one meaning. Foolish talkers may say otherwise; but the world's hosts dare not follow them, save to turn back disappointed. We have memory and work. Are they not enough? What each man can extract of lasting value from the departed life,—that is Grant. Not the moment's flame, not the forced grief, not the savage applause of warfare, but the virtues that make for liberty and peace, have most to say for the dead warrior.

HORACE L. TRAUBEL.

PROFESSOR NEWMAN AT EIGHTY.

On the 27th of June, 1885, Francis William Newman attained his eightieth year. The South Place Religious Society, in London, observed this occasion by passing a resolution of cordial congratulation to the veteran scholar on the undiminished strength of mind and remarkable health of body at fourscore,—to him a period of labor, indeed, but not of sorrow. The Society ascribed much of the progress of thought during its own long life to the influence of Prof. Newman, who brought to the liberal cause fine scholarship and the highest moral and religious spirit. Excellent speeches, as I am informed, were made at this Sunday morning meeting by Mr. Mark Marsden, himself a veteran helper of every free and noble cause in London, and Mr. Conpland, author of a recent admirable study of Goethe's *Faust*; and the feeling in the Society was one of enthusiasm. George Hickson, who may be described as chief corner-stone of South Place, presided, and has just communicated to me Prof. Newman's response:—

Dear Sir,—I thank you for transmitting to me the very unexpected and necessarily welcome Resolution passed on Sunday morning last, at South Place Chapel.

I trust that there is between us something better than agreement in opinion,—that is, concord of sentiment. Eminently, we hold Truth to be natural and beneficial to man, to be a reality higher than each of us, because each is finite in knowledge and capacity. Therefore, each has possibly something to learn from those who differ from him.

Truth, being spiritual, is a far nobler possession than things material; and, of all Truth, that moral Truth which teaches Universal Justice and Universal Kindliness is best.

I thank your Society much for their cordial act.

Faithfully yours,

F. W. NEWMAN.

It may be incidentally mentioned that, on the Sunday following this Resolution, the discourse at South Place was given by Arthur Hutton, M.A., who for eight years was a priest under Father (now Cardinal) Newman, in his Oratory at Birmingham.

My own personal debt to Prof. Newman is great. While I was yet a Methodist preacher, riding Rockville Circuit in Maryland, I got hold of his book, *The Soul: Her Sorrows and her Aspirations*. I read it, mainly on horseback, amid the woods, and must have preached a good deal of it to my rural and village congregations, before I discovered how many of my traditional idols had been left without pedestals by this affirmation of purely spiritual religion. I gave the book to a dear friend, William Henry Farquhar, at the Hicksite Quaker settlement of Sandy Spring, in my Circuit; and he astonished me by pointing out how many dogmas,

superstitions, and forms lay broken in the crypt beneath Newman's nicheless temple of God. This Quaker teacher and scholar introduced the book in many families. In after years, he visited Prof. Newman, in England; and the two men have since maintained a friendly correspondence. The chief Quaker preacher at Sandy Spring in those years was Roger Brooke, already very aged, though he had lost no fibre of his powerful brain. A book must be good indeed to satisfy "Uncle Roger," and Newman's did nearly satisfy him. This Sandy Spring Solomon told me, when speaking of it, that, during the violence of the controversy about Thomas Paine, early in the century, an eminent sympathizer with Paine sent him the *Age of Reason*, and asked him how he could answer that? Having read the book, the Quaker replied, "I have no need to answer this book, for it attacks only the abuses of Christianity." Thus, he was a Hicksite before Hicks. I believe that, from the time that Prof. Newman's voice reached those Southern Friends, they have shown less inclination to label their religion Christianity. This is but one of the examples I have known of the far-reaching influence of Prof. Newman's writings. His correspondence, if ever published, will show his spiritual children in many regions of the globe, and each a centre from which a true spirit is going forth.

The letter copied above is quite characteristic of this ripe thinker and worker. In the course of my long personal acquaintance with Prof. Newman, I have found that, while he might be technically classed as a "theist" (though faith in immortality does not attach to his theism), his real religion is the love of goodness and of humanity. Though he strongly deplores doctrines which he regards as of immoral tendency,—such as "philosophical Necessity,"—no differences of opinion, certainly none about Deity, could ever alienate him from any one whose heart was right with his in its unwearied devotion to every humane and moral cause. Thus, lately, when the personal prestige of a faithless Premier silenced even the Quakers in presence of a mean and wicked war against the Soudanese, Prof. Newman wrote a letter to the Positivist leader, Frederic Harrison, gratefully acknowledging that he and his co-religionists had nobly taken the place of the Quakers in their testimony against the nation's murderous aggressions.

Though Prof. Newman has uttered the severest rebuke of every war waged by England during his time, it has not been because of any non-resistant theory. He holds that standing armies should be superseded by the drilling of all citizens sufficiently to know how to defend their country. He has, I believe, opposed every English war of his time, because each was unjust, but was among the first to sympathize with the anti-slavery war in America, and rendered larger services to the Union cause in England than have ever been made known. The young generation of Americans may not realize how much peril from the Confederate propaganda in England threatened their country in the early years of the war; but peril there was, and the Confederate agents understood it well. Palmerston and Gladstone were against us, and emboldened a mob that meant mischief. Prof. Newman is by no means an eccentric man, as some represent, but remarkably practical in his methods and purposes. His vegetarianism, for instance, did not arise from any abstract theory more than did his hostility to recent European wars. When the cattle-plague was raging in England, and all meat became very expensive, he thought that the poor, who imagined flesh-eating essential to their strength, should be undeceived, and that persons of influence ought to

set them the example of abstinence from that luxury. The custom adopted from simple friendship for the people was continued because found healthful to himself. In the same way, he sympathized with the anti-vaccinationists because of their oppression by a medical Popery, as Herbert Spencer calls it, and espoused their case against compulsory vaccination before reaching a theoretical agreement with them on the main question.

In truth, there is hardly anything in Prof. Newman's public career which may not be best interpreted by reference to his profound humanity. It was this that led him, after his graduation, to leave the attractions offered by Oxford and London to a youth of his position, and go out as a missionary to the East: Love for a Saviour meant to this man endeavors to save others. It was at Aleppo, that he was trying to convert a humble Moslem carpenter, who, after listening to all the Oxonian's arguments, gravely, and with touching humility, replied that Allah, though he had given the English many advantages, had withheld from them one; namely, knowledge of the true religion by which one may be saved. Newman then felt that his Church and creed could not save men. This poor carpenter was in the position of a humble disciple of Jesus in the presence of a learned and haughty Greek or Roman. It is notable that both Newman and Colenso should have been in a sense converted by those they went to convert. A London wit has put Colenso's case in a non-sense-rhyme:—

"There was a my Lord of Natal
Who had a Zulu for a pal;
Says the Zulu, 'Look here!
Ain't the Pentateuch queer?'
Which converted my Lord of Natal."

Both men were always characterized by the humility which accompanies true culture and greatness of mind. Young Newman returned home, tried hard to find the true religion whereby a man may be saved. On the search, he was immersed, and became a Plymouth Brother, and finally found that the true religion he already possessed in that longing to save man from all the evils that afflict and degrade him. While doing so much service to every reform of his time, he has done large services to literature. His classical works have at length compelled Oxford to follow University College, London, and make him an "Emeritus Professor," despite his repudiation of Christianity. Of his works on Biblical and religious subjects, I need not here write, but may call attention to the wonderful vigor of an intellect which, in its seventy-ninth year, had amused itself by turning *Robinson Crusoe* into perfect Latin, while giving the world two such powerful essays as "The Christian Commonwealth" and "Christianity in its Cradle." I do not agree with everything in them. I do not think that in the latter he emphasizes sufficiently the doubts suggested by the silence of Paul and other first-century writers concerning miraculous and other pretensions ascribed to Jesus, or does justice to the explanations of Comparative Mythology. I do not think Jesus claimed exceptional powers, and doubt whether he was even a theist in the ordinary sense. But Prof. Newman's statement is comprehensive, able, and intensely interesting; and, it should be added, he is careful to say that on such documents no trustworthy complete account can be founded. It is, I believe, the first book of a general character ever written and printed on the principles of the spelling reformers. In that, as in everything else, Prof. Newman has the courage of all his opinions.

Before leaving England, I visited my dear old friend and teacher, at Weston-super-Mare, where

for a good many years he has resided with his second wife. He has been twice married, both wives being orthodox, but each reserving in her creed a saving clause for good men, however unorthodox. His home, "Norwood Villa," is beautiful, and situated in one of the pleasantest places of seaside resort in England, within a half-hour of Bristol. Although he and his wife are vegetarians, except as to eggs, there is no asceticism about them; and it is wonderful what a luxurious table is spread before their guests. The poverty of English tables as to vegetables is notorious; and it might prove useful to them as an instruction in the resources of their island, if vegetarianism were compulsory for a year or so.

In the drawing-room, I remarked a fine picture, an excellent design in black and white, representing the Newmans in their youth. In the interior of their home appears the mother, a beautiful lady of dignified mien, the lovely daughter, and John Henry (already a strange, mystical kind of person in appearance). Francis was the handsome one of the family, closely resembling his mother. In the picture, he is shown wearing spectacles, turning from a book he is reading as if to speak to his sister. It is a charming picture, and would be invaluable to an engraver. The mother appeared to me as a kind of Rachel, in whose womb two nations had struggled. Prof. Newman told me that once, in their early clerical days at Oxford, he expressed to his brother a doubt concerning the "authority of the congregation" (or some such point). John said, "Have a care! If you go that far, you will go farther." Francis replied, "When I see farther, I will go farther." The lives of the two men were foreshadowed in those words. I saw John Henry Newman (not yet humiliated by the Cardinal's hat) celebrating mass at daybreak for one or two poor people (for the morning was horrible), bending his aged knees before an ancient Roman fetich, to which he had been driven back as penalty of not going forward. Francis William Newman, when I last saw him, impressed me as a man who had reaped all the rewards of having gone farther when he saw farther. No tinsel has been offered to reward the fidelity of a man who refuses a throne in heaven as reward of virtue,—as if it were some calamity to be compensated! In that, I suspect the Cardinal secretly envies his unbelieving brother, even if he does not recognize that his unwelcome decorations accurately illustrate Christian notions of the rewards of piety. I walked with Prof. Newman for some two miles beside the sea, on a charming spring day. His mind and body were sound, his step elastic, his heart happy. "Picturesque in age as in youth," I thought, recalling the picture. I had often been amazed at the extent of his knowledge, but on this occasion was destined to be still further surprised; for, as I was going to America, he talked about the political history of the United States during the present century, of the Monroe doctrine, and events that led to it, and of our contemporary affairs, with a minuteness of information which I believe could not be found in any other Englishman. And, with all his knowledge and his extraordinary powers of conversation, he is of childlike—of grand—simplicity. Moreover, though he bears on his heart the burden of all who are wronged, he has a fine humor: his laugh is merrier than Carlyle's, though never loud. Problems of the Unknowable vex not his soul. "My prevalent belief is that our best state (morally) is simple uncertainty concerning Future Life. Whichever way Supreme Will settles it, that (I am confident) will be the Best Way for me, and for all." These are his words to me in a private note. As I parted from him, receiving the last pressure

of his hand and kindly benediction from his large, soft gray eye, I recognized England's real "Grand Old Man," one that never did or said a mean thing in his life. He and his brother are, I think, the most striking figures in England. Each has written something of his personal experience, proving its fundamental relation to our age of Storm-and-Stress. What would not that genius be worth who could rightly tell the spiritual history of these two men in their relation to each other and to their time? Alas that Arthur Clough is no longer alive! he who saw them as two ships anchored side by side in the evening, but at dawn two towers of sail, long leagues apart; and who sang, with hope in his pathos:—

To veer, how vain! On, onward strain,
Brave barks! In light, in darkness, too,
Through winds and tides, one compass guides,—
To that and your own selves be true.

But O blithe breeze! and O great seas!
Though ne'er, that earliest parting past,
On your wide plain they join again,
Together lead them home at last.

One port, methought, alike they sought,
One purpose hold, where'er they fare:
O bounding breeze! O rushing seas!
At last, at last, unite them there!

M. D. CONWAY.

CHRISTIANITY AND LEGISLATION.

V.

The century that followed the collapse of ecclesiastical government was singularly deficient in any indications of legal or intellectual advance here, though there was a noiseless gain in wealth and numbers. Toward its close, however, came those seductive French speculations about a perfect state of nature; and the notions of equality and liberty that belong to it had a very great effect in coloring the conceptions of the great lawyers who drew our national Constitution. The French influence in it is very plain. It is true that the declaration that all men are born free and equal has been explained away by our courts to a mere shadow of its sonorous self, and its influence is on the wane; but, whether we treat it as a glittering generality or a blazing ubiquity, it played a great part in our national history.

The next feature of legal importance was the influence of Jeremy Bentham, about the beginning of this century. It was avowedly and exclusively utilitarian, and the Christian element in it was still more obscure than in the preceding nature movement. Both were attempts to get at the substance below the formalities, but they differed as widely as English and French methods are apt to do. Neither was helped by the Church, and the comparatively unobtrusive utilitarian one has proved far the more potent of the two. It would not have brought about the Revolution, but it has silently reshaped the Constitution that that Revolution gave us. The scheme of three non-partisan co-equal divisions of our government has been replaced by a better (though still incomplete) system of party government, with Congress supreme. Everything tends to competition and centralization. The towns have lost power, and the Union has become a nation; and, still, the process of evolution goes on.

In other departments of the law, our improvement has been considerable. In this century there has been a great amelioration in criminal law. We have put the gallows almost out of sight, and done away many vicious restraints upon business competition and individual rights. We have greatly improved our legal process by simplifying pleading and removing restrictions upon

evidence, so as to bring disputed issues more fairly before the jury. We have made unreligious education compulsory and thorough. In one direction, the growth of freedom has not been an unmixed good. In giving married women more rights, we have increased the frauds upon creditors, and the growth in divorces and in illegitimacy seems to be a part of the same movement toward individualism; and I may remark, as an explanation of the intermixture of evil with its good effects, that it is one of the few reforms which is not based on any clear utilitarian reasons, but mainly rests on the older notion of inalienable natural rights.

In general, we adopted the cautious English plan of making no changes for mere theory, and of remedying evils only so far as they are found to be practically oppressive,—a plan which gives us a somewhat patchwork garment, but one that is always fairly serviceable and comfortable. There are a good many weak places in it still; and in the most important of these, the treatment of the lower classes, the plan by which reform will be effected is not certain. In the questions of socialism, intemperance, charity, and the punishment of crime, sentiment is by no means in accord with science; but, probably, we can safely assume that the utilitarian methods will finally prevail. In our legal growth, we have been through each of Comte's three stages in this country,—the religious stage in the early days, the metaphysical or philosophical in the days that followed the Revolution, and the positive or practical one at the present time. And, now, civilization has grown so complicated that we are afraid to trust to mere impulse, whether it claims to be religious or philosophical; and yet we have not got a clear view of the scientific laws that should enlighten our wishes. There is a constant natural selection going on,—a struggle for existence between good and bad laws; and Christianity is, of course, a very powerful influence in this selection, a far more potent one than might be supposed from surveying the law alone, and especially so in the direction of humanity and purity. And Christianity is growing to be so broad that it may fairly claim to represent not only these, but all our other best instincts, whether founded on the Bible or not, and to press their enforcement. What, then, will the result be?

Glancing back at the early days, we see that the gentle spirit of Christianity was so alien to the law of Rome that she could not guide it. She Romanized herself into a despotism instead of Christianizing Rome, and her legal influence was slight.

In the East, too, she gave up too much for success. Mohammed sacrificed the vital principles of purity and order for power; and, from this orientalized Christianity, no legal system resulted.

In the Middle Ages, Christianity had far more influence upon legislation; but here, too, she gave up the doctrine of brotherhood, and took upon herself an alien form. And this was so hostile to progress that the feudal system which resulted had no permanence.

The common law, on the other hand, grew up in open opposition to her; and there was little effort at adaptation until the Reformation brought them together, facing in the same direction, by purifying, not degrading the Church.

Still, by some thinkers, they are put in opposition to each other on the most important questions of the day; and, still, religious impulse is set up against social science, and allegiance is claimed to impracticable ideals. In the science of law, an ideal so remote that it is not possible to attempt to carry it into effect is an injury; for it makes men content with shortcoming. And it is, there-

fore, especially necessary that reform should take a practical and scientific shape. I think it must be confessed that, in the past, Christianity has not identified herself with the principles upon which legal reformation was possible. I am not attacking Christianity or belittling its splendid power. It would be a poor work to ransack the past for weapons to abuse so beneficent an agency, but it is the part of wisdom to become familiar enough with past blunders to avoid their repetition. No doubt, the law needs improvement sadly, and the force of Christianity ought to be of assistance to us in the endeavor to right it; but I think that the lesson of the past is that that force has been often misapplied, and is misapplied to-day.

How, then, are we to get rid of this miserable variance, and use the vast motive power of our faith in God and the right to strengthen and purify legislation? That is the greatest question of the day. If we look around to see how it is now used, the prospect is not encouraging. It is claimed, in business matters, that Christianity requires that speculators should not be allowed to make large fortunes, and that all business competition is illegal, and poor people should be relieved from any compulsion to pay their debts. It is claimed that Christian judges ought to decide cases, not according to the letter of the law, but according to eternal justice; and that Christian lawyers ought not to defend criminals in cases where they know that they are guilty; and that there ought to be no capital punishment, and pardons should be granted upon proof of penitence. It is claimed that soup kitchens and other indiscriminate charities are Christian. It is claimed that war is unchristian,—was ever,—and the private ownership of land, and the scientific law of natural selection. And the mantle of Christ's authority is spread over things as remote as our tariff law and our law freeing frauds committed on Sunday from punishment.

It is easy enough to show that these views are wrong in themselves, and not a part of a wise Christianity. But there they are; and many other cases will readily come to the reader's mind, where Christianity is not urging those things which scientific examination shows to be necessary for our health, and is urging what is mischievous and bad. Unless its direction can be better guided, I fear that the present divorce must continue. How is all this to be helped? If the examination that I have made means anything, it is that neither the Church council nor the Bible nor conscience is sufficient, without some additional illumination; and I submit that there is only one source from which this may be expected, and that is from science. A sound Christianity must, I think, be based on the assumption that all the laws of nature and human nature are from God, and that they must be studied and made use of, so far as they have any bearing on man's progress in civilization, if we would make any sound advance. When Christianity appeals to science for light, and uses the knowledge so obtained to direct our legislation, then, and not before, we may see the true union of religion and law, and give a real shape to Hooker's splendid conception: "Of law there can be no less acknowledged than that her seat is the bosom of God, her voice the harmony of the world. All things in heaven and earth do her homage, the very least as feeling her care, and the greatest as not exempted from her power." But, until this is the case,—and there seems almost no prospect of it at present,—we must secularize our courts with the same jealous care that we take to keep the church from our capital and our school-house.

HENRY W. HOLLAND.

WHAT IS CHRISTIANITY?

Religious systems are not exempt from the law or the process of evolution, but like worlds, living organisms, languages and governments, the arts and sciences, are continually subject to modification, and with age pass from simple to more complex forms and conditions. The philosophic thinker of these times, therefore, in estimating the character and influence of a religion, does not consider simply its germinal, embryonic, or infantile stage. That would be as absurd as to consider a tree with reference only to the seed or sapling from which it grew.

Christianity is an historic religion; and any just estimate of it must include, not merely the moral teachings and the spirit ascribed to Jesus, but the entire movement which he initiated, or with which his name is identified, embracing the Greek, Catholic, and Protestant Churches.

A complete description and history of a tree would include a consideration of all its successive stages of growth, from its germination to its decay and death. A religious system, long established and widely accepted, is not simply what its primitive teachers taught, but all that has been legitimately developed therefrom. We must consider not only what was taught, but what was omitted, its adaptedness to the needs and capacities of men, its power to make itself felt, its influence on character, on education, on art, science, philosophy, and literature, on social, political, and industrial life; and, as in ascertaining the quality of a species or variety of tree, we must inquire regarding the soil in which the seed was planted, and the climate and other conditions favorable or unfavorable to its growth, so, in judging a religion, we should ever be mindful of the intellectual, moral, and social environment in which it has been developed. We would not affirm of any variety of tree, after ages of natural and artificial selection in the most favorable soil and climate, that its foliage and fruit belonged to the species from the beginning; nor after a variety had through ages, in a most unfavorable medium, become degenerate, would we think of pointing to its condition as a fair test and illustration of the beauty or value of trees of that species. So, in estimating the value of the various forms which Christianity has assumed among peoples widely different in character and surroundings, we have no right to ascribe, on the one hand, all that is best, nor, on the other hand, all that is worst in the Christian Churches or in Christian literature to the teachings of Jesus and Paul.

Extremely unreasonable is the denial that the existing forms of organized Christianity should be regarded as parts of this religion, simply because Jesus established no church, or because these forms of Christianity have not escaped the influence of the environment in which they have flourished. To the first objection, it is sufficient to say that organization was a legitimate result of the teachings of Jesus and his disciples, and began while they were yet alive; and, to the second, it need only be mentioned that an essential condition of the growth of any system of religion is a flexibility that admits of modification, and enables it to accept and assimilate in its organized life the elements of other systems with which it comes in contact, and to adjust itself more or less to the intellectual, moral, social, and industrial changes amid which it lives. It is undeniable that organized Christianity has been compelled to drop virtually some of its originally most distinctive teachings, while there has been gradually incorporated into its system and polity much that has modernized it, and made its continued existence possible in an age like this, in spite of the fact that its Ori-

ental characteristics are utterly alien to Western civilization. For instance, as Strauss observes, "Christianity, in common with Buddhism, teaches a thorough cult of poverty and mendicity. The mendicant monks of the Middle Ages, as well as the still flourishing mendicancy at Rome, are genuinely Christian institutions, which have only been restricted in Protestant countries by a culture proceeding from quite another source."

If Christianity, through its teachers, had continued to inculcate and to emphasize certain teachings of the New Testament, it would long ago have become extinct among every progressive people. Its teachings in regard to the blessedness of poverty, indiscriminate charity, the sufferance of injuries, chastity, and self-denial, to the point of the extirpation of natural instincts, among other teachings connected with the doctrine clearly taught by Jesus and Paul that the end of the world was near at hand, are no part of the Christianity held to-day by its most enlightened adherents.

While it is evident enough that the various forms of Christianity are but so many varieties of the same system, derived largely, of course, from pre-existent systems, modified in adjustment to the various conditions in which they have been developed, the majority of the people, under the influence of theological methods of thinking, insist that their own particular interpretation of Christianity, or that of their Church, is the only Christianity proper; and that all other Churches should, except so far at least as they have adopted this interpretation, be disregarded in estimating the character and computing the influence of the Christian religion. Thus, while theology claims to be a science, and pretends to afford the mind a solution of the great problems of life and destiny, it fosters a sectarian spirit and a narrow view of religion, utterly opposed alike to a scientific conception of the subject and to that breadth of thought and catholicity of spirit which the man of science brings to its study.

The distinction between primitive Christianity and ecclesiastical Christianity is proper enough; but Christianity, as taught by Paul, its first great systematic expounder, and by his successors, in the peculiar environment in which it grew and gained ascendancy, developed into the organized forms of Christianity which appeared as naturally as varieties of plants in different mediums spring from the same seed. And what is called modern Christianity is but a continuation of the same process of development under vastly changed conditions.

They who insist that they will accept as Christianity only the words of Jesus himself forget, in their desire to escape the logical necessity of adding the teachings of Paul, that we do not know with certainty just what Jesus did or did not teach. We have nothing written by him. There is no certainty, no proof, that the reports of his speeches, which have descended to us, were made by persons who heard or saw him. If we were satisfied on this point, still there would be hardly less uncertainty as to the correctness of the reports. When we consider what is now regarded as highly probable by scholars who have carefully investigated the subject, that the authors of the four Gospels simply collected and put in their own different styles the written and oral traditions of their day in regard to Jesus, some idea can be formed of the extreme difficulty of determining the value of the Gospels as records of the sayings and doings of the Judean reformer. Possibly, he never said some of the things ascribed to him and for which he has been criticised, as, for instance, "I am not come but to the lost sheep of the house of Israel,"—his promise to his disciples as to ruling over the twelve tribes, etc.; while it is probable

that many of his wisest and best utterances were unappreciated, and escaped all record. Under the circumstances, one who defines Christianity to be merely the words of Jesus in distinction from other parts of the New Testament bases his definition upon an uncertainty not likely to be removed.

In a communication printed in another column, which has suggested these reflections, Mrs. Shattuck says that all are Christians "who try to be what Jesus Christ was and to do what he did." Assuming that we have a correct account of what Christ was and what he did, after divesting the narrative of its supernatural features in order to conceive of him as a man, still, with our present conception of life and duty, we could not hold him up for unqualified admiration or imitation. It is neither possible nor desirable to live such a life in this age. Rather, we admire the man who has a family, and loves his wife and children; who is attached to his country; who is interested in the practical affairs of this life; who is industrious; who endeavors to make life pleasant; who will defend his home and country when they are unjustly assailed; who endeavors to accumulate a competence; who lives, indeed, a life very unlike, in many respects, that which Jesus lived.

B. F. UNDERWOOD.

The Index.

BOSTON, AUGUST 20, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks those ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

EDITORIAL NOTES.

BY B. F. U.

DAVID SWING proposes to limit suffrage to those who can show, at least, \$500 worth of property. There is something wiser than wit in the *Cleveland Plain Dealer's* comment: "This would have ruled out Christ and all the apostles, except Judas."—*Christian Register*.

SAYS F. W. Newman: "It is hard to point to anything in the teaching of Jesus at once new to Hebrew and Greek sages, and likewise in general estimate true." With less courtesy, but more vigor, Buckle expresses the same view: "Whoever asserts that Christianity revealed to the world truths with which it was previously unacquainted is guilty either of gross ignorance or of wilful fraud."

A SCHOLARLY writer, who was for several years an orthodox clergyman, and who, we believe, still regards himself as a Christian, writes: "Your views (on which I am glad to see you are somewhat strenuous) as to how much Christianity has done for woman, or rather how little, seem to me just. Organized or historical Christianity has done far less for her than is now claimed generally by ecclesiastics, and far more to hinder that elevation than is commonly recognized. An able arraignment of Christianity on this point is one of the things laid out for you to do some day."

THE communication from "F. S.," which appeared in *The Index* of July 9, in praise of Mr. Davis' *Beyond the Valley*, comes to this office reprinted on a slip,—evidently designed as an advertisement,—with the signature and other words, which in *The Index* showed it to be a communication, carefully omitted. The communication did not give an editorial opinion of the book, which was, however, frankly expressed in the same paper from which "F. S.'s" letter is now reprinted in a manner to convey an impression that is false, and that does injustice to this journal.

A FRIEND writes: "I rejoice that the craze over Gen. Grant does not mar *The Index*, and that such ridiculous extravagance as Robert Laird Collier's and Newman's is properly characterized by you. While Grant was personally a man little to my liking, he had some good qualities; and his actual work, whatever may be thought of his military genius by those more competent than I to judge, was a great one. This entitles him to great honor. But the thing has been overdone ridiculously in public eulogies, in newspaper parades of insignificant circumstances, and, finally, in the site of his burial-place, and the silly outlay on a temporary tomb. When the great monument or mausoleum comes to be built, we shall see how deep and abiding is the sentiment that has delighted to exhibit itself so flashily." This writer takes a sensible view of the subject.

"THE gospel of Jesus," says the author of *The Religion of Philosophy*, "is pathetic, when we consider the conditions of its birth; but it is uninspiring to our age, it is contradicted in the lives of all men and women who can be said to have formed a true conception of the dignity, the opportunities, and the responsibilities of life. . . . The word 'Christianity' has been made to do service for all sorts of mutilated beliefs, until, in these days of scientific and historical criticism, when culture and unbelief have become convertible terms, we are calmly told that Christianity does not necessarily imply a belief in the divinity of Christ, a personal God, heaven or hell, baptism, the scheme of salvation, or the sanctity of the Church; that Jesus and his disciples, the early Fathers, all the Christian councils, the Bible, and every form of ecclesiastical authority, were mistaken; that they gave but symbolic utterance to the great truths of a religion of humanity which is now voiced in the language of science and thought; that, had all these mediums of Christian enunciation spoken more plainly heretofore, they would not have been understood; but, now that the world has been enlightened, Christianity suffers nothing by accommodating itself to the latest inductions of evolution and by preaching, not the gospel of the Nazarene, but that of humanity. Whether this is an utter rout of Christian dogma or a disingenuous method of retaining possession of the emoluments of a church after renouncing its creed, we leave it to the fair-minded to judge. Infinitely more respectable are those Christians who stand or fall by an honest interpretation of the doctrines of Christ."

For *The Index*.

A SHEAF OF POEMS.

BY GEORGE ILES.

II.

Thoreau gives us a poem entitled the "Fisher's Boy," to show how much may lie in receptiveness as well as action, in reflection as well as in the bustle of many tasks:—

My life is like a stroll upon the beach,
I walk as near the water's edge as I can go,
Sometimes I let the waves my steps o'erreach,
Sometimes I wait until they overflow.

My sole employment is, and constant care,
To place my gains beyond the reach of tides,
Each smoother pebble and each shell more rare
That Nature kindly to my hand confides.

I have but few companions on the shore,
They scorn the strand that sail upon the sea,
Yet oft I think the ocean they've sailed o'er
Is better known upon the beach to me.

The middle sea contains no purple dulse,
Its deeper waves cast up no pearls to view;
Along the shore, my hand is on its pulse,
And I converse with many a shipwrecked crew.

In a view of lighter mood, Clough gives this about atheism:—

"There is no God," the wicked saith,
"And truly it's a blessing;
For what he might have done with us
It's better only guessing."

"There is no God," a youngster thinks,
"Or really if there may be,
He surely did not mean a man
Always to be a baby."

"Whether there be," the rich man thinks,
"It matters very little;
For I and mine, thank somebody,
Are not in want of victual."

Some others also to themselves,
Who scarce so much as doubt it,
Think there is none when they are well,
And do not think about it.

But country folks who live beneath
The shadow of the steeple;
The parson and the parson's wife,
And mostly married people;

Youths green and happy in first love,
So thankful for illusion;
And men caught out in what the world
Calls guilt and first confusion;

And almost every one when age,
Disease, and sorrow strike him,—
Inclines to think there is a God,
Or something very like him."

Lowell has no fear that the fount of conscience and aspiration which gave us the religions may not yield us guidance and solace for all new wants and sorrows. He says:—

God is not dumb that he should speak no more;
If thou hast wandered in the wilderness,
And find'st not Sinai, 'tis thy soul is poor;
There towers the mountain of the Voice no less,
Which whoso seeks shall find; but he who bends,
Intent on manna still and mortal ends,
Sees it not, neither hears its thundered lore.

Slowly the Bible of the race is writ,
And not on paper leaves nor leaves of stone;
Each age, each kindred, adds a verse to it,
Texts of despair or hope, of joy or moan.
While swings the sea, while mists the mountains shroud,
While thundered surges burst on cliffs of cloud,
Still at the prophets' feet the nations sit.

Of the conflict between nature, broadly observed, and its finest and last products, the soaring brain and sympathetic heart of man, our poets give us pathetic statements. Tennyson says in "In Memoriam":—

The wish, that of the living whole
No life may fail beyond the grave,
Derives it not from what we have
The likeliest God within the soul?

Are God and Nature, then, at strife.
That Nature lends such evil dreams?
So careful of the type she seems,
So careless of the single life;

That I, considering everywhere
Her secret meaning in her deeds,
And finding that of fifty seeds
She often brings but one to bear,

I falter where I firmly trod,
And falling with my weight of cares
Upon the great world's altar-stairs
That slope thro' darkness up to God,

I stretch lame hands of faith, and grope,
And gather dust and chaff, and call
To what I feel is Lord of all,
And faintly trust the larger hope.

"So careful of the type"? But no.
From scarped cliff and quarried stone
She cries, "A thousand types are gone:
I care for nothing, all shall go.

"Thou makest thine appeal to me:
I bring to life, I bring to death:
The spirit does but mean the breath:
I know no more." And he, shall he,

Man, her last work, who seemed so fair,
Such splendid purpose in his eyes,
Who rolled the psalm to wintry skies,
Who built him fanes of fruitless prayer,

Who trusted God was love indeed,
And love creation's final law,—
Tho' Nature, red in tooth and claw
With ravine, shrieked against his creed,—

Who loved, who suffered countless ills,
Who battled for the True, the Just,
Be blown about the desert dust,
Or sealed within the iron hills?

No more? A monster then, a dream,
A discord. Dragons of the prime,
That tare each other in their slime,
Were mellow music matched with him.

O life as futile, then, as frail!
O for thy voice to soothe and bless!
What hope of answer or redress?
Behind the veil, behind the veil.

Let us turn back to one of the early chapters of poetic literature, and find how the Roman poet Lucretius anticipated our modern nebular theory, and clearly observed how the fittest survive in the struggle for existence:—

For seeds of bodies from eternal strove,
And used by stroke, or their own weight, to move,
All sorts of union tried, all sorts of blows,
To see if any way would things compose;
And so no wonder they at last were hurled
Into the decent order of this world,—
And still such motions, still such ways, pursue,
As may supply decaying things by new. . . .
But more, these years must numerous kinds deface,
They could not all preserve their feeble race;
For those we see remain and bear their young,
Craft, strength, or cunning has preserved so long.

Of the future, he says:—

And, were the soul immortal, would the mind
Complain of death, and not rejoice to find
Herself let loose, and leave the clay behind?

Were souls immortal ne'er began,
But crept into the limbs to make up man,
Why can they not remember what was done
In former times? Why all their memory gone?

Death, in his universal sweep, attacks even the grave:—

For sepulchres themselves must fall
In Time's abyss, the common grave of all.

For the repining he has little consolation:—

Besides what harm had the sun idly ran
Nor warmed the mud, nor kindled it to man?
What harm to us, if we had ne'er began?
True, those that are in being once should strive,
As long as pleasure will invite, to live;
But they who ne'er had tasted joys nor seen,
What hurt to them suppose they ne'er had been?

Of utmost scepticism, he says:—

He that says nothing can be known, o'erthrows
His own opinion, for he nothing knows;
So knows not that ———.

Great poems of the past always seem to have a modern tone. Profound poetic genius, while expressing the thoughts of its own age, has spoken the thought of all ages. Omar Khayyam, the Persian astronomer-poet who flourished in the eleventh century, might have written his quatrains this year, so pregnant are they with the spirit of

our times. I select some stanzas from Mr. Fitzgerald's version :—

Some for the Glories of This World; and some
Sigh for the Prophet's Paradise to come;
Ah, take the Cash, and let the Credit go,
Nor heed the rumble of a distant Drum!

The Worldly Hope men set their Hearts upon
Turns Ashes, or it prospers; and anon,
Like Snow upon the Desert's dusty Face,
Lighting a little hour or two, was gone.

Think, in this batter'd Caravanserai
Whose Portals are alternate Night and Day,
How Sultan after Sultan with his Pomp
Abode his destin'd Hour, and went his way.

Ah, my Belovéd! fill the cup that clears
To-day of past Regret and future Fears:
To-morrow!—Why, to-morrow I may be
Myself with Yesterday's Sev'n thousand Years.

For some we loved, the loveliest and the best
That from his Vintage rolling Time has prest,
Have drunk their Cup a Round or two before,
And one by one crept silently to rest.

Why, all the Saints and Sages who discussed
Of the Two Worlds so learnedly are thrust
Like foolish Prophets forth; their Words to Scorn
Are scatter'd, and their Mouths are stopt with Dust.

Myself, when young, did eagerly frequent
Doctor and Saint, and heard great argument
About it and about; but evermore
Came out by the same door wherein I went.

With them the seed of Wisdom did I sow,
And with my own hand wrought to make it grow;
And this was all the Harvest that I reaped,—
"I came like Water, and like Wind I go."

There was the Door to which I found no Key;
There was the Veil through which I could not see:
Some little talk awhile of Me and Thee
There was—and then no more of Thee and Me

And fear not lest Existence, closing your
Account, and mine, should know the like no more;
The Eternal Saki from that Bowl has poured
Millions of Bubbles like us, and will pour.

When You and I behind the Veil are past,—
Oh, but the long, long while the World shall last!—
Which of our Coming and Departure heeds
As the Seven Seas should heed a pebble cast?

O threats of Hell and hopes of Paradise!
One thing at least is certain,—*This* Life flies;
One thing is certain, and the rest is Lies,
The Flower that once has blown forever dies.

Strange, is it not, that, of the myriads who
Before us passed the door of Darkness through,
Not one returns to tell us of the Road,
Which, to discover, we must travel, too?

The Revelations of Devout and Learned
Who rose before us, and, as Prophets burned,
Are all but Stories, which, awake from Sleep,
They told their fellows, and to sleep returned.

I sent my Soul through the Invisible,
Some letter of that After-life to spell;
And by and by my Soul returned to me,
And answered, "I Myself am Heaven and Hell."

Heaven but the Vision of fulfilled Desire,
And Hell the Shadow of a Soul on fire,
Cast on the Darkness, into which Ourselves,
So late emerged from, shall so soon expire.

We are no other than a moving row
Of Magic Shadow-shapes that come and go
Round with this Sun-illuminated Lantern, held
In Midnight by the Master of the Show;

Impotent Pieces of the Game He plays
Upon this Checker-board of Nights and Days;
Hither and thither moves, and checks and slays,
And one by one back in the Closet lays.

The Ball no question makes of Ayes and Noes,
But Right or Left, as strikes the Player, goes;
And He that tossed you down into the Field,
He knows about it all—HE knows—HE knows!

The Moving Finger writes; and, having writ,
Moves on: nor all your Piety nor Wit
Shall lure it back to cancel half a Line,
Nor all your Tears wash out a Word of it.

And that inverted Bowl they call the Sky,
Whereunder crawling cooped we live and die,
Lift not your hands to it for help,—for it
As impotently rolls as you or I.

With Earth's first Clay They did the Last Man knead,
And there of the Last Harvest sowed the Seed;
And the first Morning of Creation wrote
What the Last Dawn of Reckoning shall read.

And this I know: whether the one True Light
Kindle to Love or Wrath consume me quite,
One Flash of It within the Tavern caught
Better than in the Temple lost outright.

What! out of senseless Nothing to provoke
A conscious Something to resent the yoke
Of unpermitted Pleasure, under pain
Of Everlasting Penalties, if broke!

What from his helpless Creature be repaid
Pure Gold for What he lent us, dross-alloyed,—
Sue for a Debt we never did contract,
And cannot answer,—oh, the sorry trade!

O Thou who didst with pitfall and with gin
Beset the Road I was to wander in,
Thou wilt not with Predestined Evil round
Enmesh, and then impute my Fall to Sin.

O Thou who Man of baser Earth didst make
And ev'n with Paradise devi-e the Snake:
For all the Sin wherewith the Face of Man
Is blackened, Man's Forgiveness give—and take!

Employing the old simile of potter and clay, the poet imagines himself listening to voices from a potter's shelves :—

After a momentary silence spake
Some vessel of a more ungainly make :
"They sneer at me for leaning all awry;
What! did the Hand, then, of the Potter shake?"

"Why," said another, "Some there are who tell
Of one who threatens he will toss to Hell
The luckless Pots he marred in making. Pish!
He's a Good Fellow, and 'twill all be well."

And Lyall makes a Hindu king reply to a Christian missionary, who has unfolded his system of theology, in these stanzas :—

"I think till I weary with thinking,"
Said the sad-eyed Hindu king;
"And I see but shadows around me,
Illusion in everything.

"How knowest thou aught of God,
Of his favor or of his wrath?
Can the little fish tell what the eagle thinks,
Or map out the eagle's path?"

"Can the finite the infinite search?
Did the blind discover the stars?
Is the thought that I think a thought,
Or a throb of the brain in its bars?"

"For aught my eye can discover,
Your God is what you think good,—
Yourself flashed back from the glass
When the light pours on it in flood.

"You preach to me to be just;
And this is his realm, you say;
But the good are dying of hunger,
While the bad gorge every day.

"You say that he loveth mercy,
And the famine is not yet gone;
That he hateth the shedder of blood,
Yet he slayeth us every one.

"You say that my soul shall live,
That the spirit can never die :—
If he were content when I was not,
Why not when I have passed by?"

"You say I must have a meaning :
So must dirt, and its meaning is flowers.
What if our souls are but nurture
For lives that are greater than ours?"

"When the fish swims out of the water,
When the bird soars out of the blue,
Man's thought may transcend man's knowledge,
And your God be no reflex of you."

Hindu thought, which regards consciousness as an evil, and a human life as a transient bubble on an infinite sea, has been presented in Byer's recollections of Northern India in a poem entitled "The Circuit of Being" :—

The snowflake that glistens at morn on Kailāsa,
Dissolved by the sunbeams descends, to the plain;
Then, mingling with Gunga, it flows to the ocean,
And, lost in its waters, returns not again.

On the rose-leaf at sunrise bright glistens the dewdrop,
That in vapor exhaled falls in nourishing rain,
Then in rills back to Gunga through green fields meanders,
Till onward it flows to the ocean again.

A snowflake still whitens the peak of Kailāsa,
But the snowflake of yesterday flows to the main;
At dawning a dewdrop still hangs on the rose-leaf,
But the dewdrop of yesterday comes not again.

The soul that is freed from the bondage of nature
Escapes from illusions of joy and of pain,

And, pure as the flame that is lost in the sunbeams,
Ascends into God, and returns not again.
It comes not and goes not, it comes not again.

Very touching is the poem of Richard Realf, entitled "My Slain," expressing the pain of parting with old illusions before the accommodation to newly found truth has become vital :—

This sweet child which hath climbed upon my knee,
This amber-haired, four-summered little maid,
With her unconscious beauty troubleth me,
With her low prattle maketh me afraid.
Ah darling! when you cling and nestle so,
You hurt me, though you do not see me cry,
Nor hear the weariness with which I sigh,
For the dear babe I killed so long ago.
I tremble at the touch of your caress;
I am not worthy of your innocent faith;
I who with whetted knives of worldliness
Did put my own child-heartedness to death,
Beside whose grave I pace forevermore,
Like desolation on a shipwrecked shore.

There is no little child within me now,
To sing back to the thrushes, nor leap up
When June winds kiss me, when an apple-bough
Laughs into blossoms, or a buttercup
Plays with the sunshine, or a violet
Dances in the glad dew. Alas! alas!
The meaning of the daisies in the grass
I have forgotten; and, if my cheeks are wet,
It is not with the blitheness of the child,
But with the bitter sorrow of past years.
O moaning life, with life irreconciled;
O backward-looking thought, O pain, O tears!
For us there is not any silver sound
Of rhythmic wonders springing from the ground.

Woe worth the knowledge and the bookish lore
Which makes men mummies, weighs out every grain
Of that which was miraculous before,
And sneers the heart down with the scoffing brain;
Woe worth the peering analytic days
That dry the tender juices in the breast,
And put the thunders of the Lord to test,
So that no marvel must be, and no praise,
Nor any God except necessity.
What can ye give my poor, starved life in lieu
Of this dead cherub which I slew for ye?
Take back your doubtful wisdom, and renew
My early, foolish freshness of the dunce,
Whose simple instincts guessed the heavens at once.

No perception of the lack of clear evidence in the matter can quiet in many of us the recurring question, If a man die, shall he live again? Stedman finely states this old question in his lines entitled the "Undiscovered Country" :—

Could we but know
The land that ends our dark uncertain travel,
Where lie those happier hills and meadows low,—
Ah, if beyond the spirit's inmost cavel
Aught of that country could we surely know,
Who would not go?

Might we but hear
The hovering angels' high imagined chorus,
Or catch betimes with wakeful eyes and clear
One radiant vista of the realm before us,—
With one rapt moment given to see and hear,
Ah, who would fear?

Were we quite sure
To find the peerless friend who left us lonely,
Or there, by some celestial stream as pure,
To gaze in eyes that here were loveliest only,—
This mortal coil, were we quite sure,
Who would endure?

Shortly after this poem appeared, a response to it was published under the caption of "Hope" :—

We cannot know
Aught of that far-off realm by us named heaven,
Where, in our fancy, lilies, pure as snow,
Fleck all the emerald meadows which are riven
By wondrous singing streams. We cannot know
Until we go.

We may not tell,
If our freed spirit, searching, shall discover
The kindred souls of those we loved so well,
Who, when they passed death's midnight river over,
Passed speechless and alone. We may not tell!
Nor yet rebel.

Have we not left
That grand impulse to every great endeavor
Which swatches the broken heart by partings cleft?
Hope, skyward, burns its beacon-light forever,
Beckoning us toward the truth: this we have left,
Who are bereft.

Blanco White, in his sonnet on "Night," made a notable addition to speculation on this point. He imagines Adam in the garden of Eden on the day of his creation before his first experience of darkness:—

Mysterious Night, when our first parent knew
Thee from report divine, and heard thy name,
Did he not tremble for this lovely frame,
This glorious canopy of light and blue?
Yet, 'neath a curtain of translucent dew,
Bathed in the rays of the great setting flame,
Hesperus with the host of heaven came;
And lo! Creation widened in man's view!
Who could have thought such darkness lay concealed
Within thy beams, O Sun? or who could find,
Whilst fruit and leaf and insect stood revealed,
That to such countless orbs thou mad'st us blind?
Why do we, then, shun Death with anxious strife?
If Light can thus deceive, wherefore not Life?

George Eliot, who resigned hope of personal immortality, nevertheless found high impulse within the range of mortal life and duty. She sang:—

Oh, may I join the choir invisible
Of those immortal dead who live again
In minds made better by their presence: live
In pulses stirred to generosity,
In deeds of daring rectitude, in scorn
For miserable aims that end with self,
In thoughts sublime that pierce the night like stars,
And with their mild persistence urge man's search
To vaster issues.

So to live is heaven:
To make undying music in the world,
Breathing as beauteous order that controls
With growing sway the growing life of man.
So we inherit that sweet purity
For which we struggled, failed, and agonized
With widening retrospect that bred despair.
Rebellious flesh that would not be subdued,
A vicious parent, shaming still its child,
Poor anxious penitence, is quick dissolved;
Its discords, quenched by meeting harmonies,
Die in the large and charitable air.
And all our rarer, better, truer self,
That sobbed religiously in yearning song,
That watched to ease the burthen of the world,
Laboriously tracing what must be,
And what may yet be better,—saw within
A worthier image for the sanctuary,
And shaped it forth before the multitude
Divinely human, raising worship so
To higher reverence more mixed with love,—
That better self shall live till human Time
Shall fold its eyelids, and the human sky
Be gathered like a scroll within the tomb
Unread forever.

This is life to come,
Which martyred men have made more glorious
For us who strive to follow. May I reach
That purest heaven, be to other souls
The cup of strength in some great agony,
Enkindle generous ardor, feed pure love,
Beget the smiles that have no cruelty,—
Be the sweet presence of a good diffused,
And in diffusion ever more intense.
So shall I join the choir invisible,
Whose music is the gladness of the world.

Among American poets is one who has forsaken the minor key so dear to his fellow-singers and told us in exuberant verse that life is good and that joy is here to-day for all who will see it and take it. I will conclude by giving you Wasson's "All's Well":—

Prophetic Hope, thy fine discourse
Foretold not half life's good to me;
Thy painter, Fancy, hath not force
To show how sweet it is to be!
Thy witching dream
And pictured scheme
To match the fact still want the power;
Thy promise brave
From earth to grave
Life's bloom may beggar in an hour.

Ask and receive, 'tis sweetly said;
Yet what to plead for I know not;
For wish is worsted, Hope o'ersped,
And aye to thanks returns my thought.
If I would pray,
I've nought to say
But this, that God may be God still,
For him to live
Is still to give,
And sweeter than my wish his will.
O wealth of life beyond all bound!
Eternity each moment given!

What plummet may the Present sound?
Who promises a future heaven?
Or glad, or grieved,
Oppressed, relieved,
In blackest night, or brightest day,
Still pours the flood
Of golden good,
And more than heartfelt fills me aye.

My wealth is common; I possess
No petty province, but the whole;
What's mine alone is mine far less
Than treasures shared by every soul.
Talk not of store,
Millions or more,—
Or values which the purse may hold,—
But this divine!
I own the mine
Whose grains outweigh a planet's gold.

I have a stake in every star,
In every beam that fills the day;
All hearts of men my coffers are,
My ores arterial tides convey;
The fields, the skies,
The sweet replies
Of thought to thought, are my gold-dust;
The oaks, the brooks,
And speaking looks
Of lover's faith and friendship's trust.

Life's youngest tides, joy-brimming, flow
For him who lives above all years,
Who all-immortal makes the Now,
And is not ta'en in Time's arrears;
His life's a hymn
The seraphim
Might hark to hear or help to sing,
And to his soul
The boundless whole
Its bounty all doth daily bring.

"All mine is thine," the sky-soul saith;
"The wealth I am must thou become,
Richer and richer, breath by breath,—
Immortal gain, immortal room!"
And since all his
Mine also is,
Life's gift outruns my fancy far,
And drowns the dream
In larger stream,
As morning drinks the morning star.

CORRESPONDENCE.

WHAT IS CHRISTIANITY?

Mr. Underwood objects to the definition of Christianity made by "a writer in the *Transcript*." Yet that definition, if rightly understood, must be accepted as the only true one. Christianity, as its name indicates, is "the spirit of the Christ," or "the Christian spirit," if one prefers; that is, Christianity is the animating principle which inspires the life and work of all persons who try to be what Jesus Christ was and to do what he did. Whether they recognize him as their example, or whether they repudiate or misunderstand him, all such persons are Christians. The fact that for fifteen hundred years various sects have called their creeds "Christianity" makes no difference with the truth. These sects are Christian in so far as they manifest Christ's spirit or animating principle, and are unchristian in so far as they depart from his spirit or animating principle. The additional fact that Christianity "is understood by millions of adherents to include numerous theological doctrines" does not prove that it *does* contain these doctrines. If Christ did not inculcate them, these dogmas are no part of Christianity. They only show how an intentional misinterpretation or an unconscious misunderstanding can pervert an original into a counterfeit; and, also, how fatal to truth is the substitution of the "letter" for the "spirit."

Roman Catholicism, that greatest perversion of true Christianity, and the many Protestant creeds that have too often made miserable work in trying to improve the original Christian idea, cannot, any of them, be called "Christianity." Neither can one name as "Christianity" that agglomeration of all creeds which is called the historical Christian Church. That part of any of these creeds which manifests the spirit of Christ's teachings is Christianity, the rest is not; and, if the followers of these various creeds call their religion, and theirs alone, by the name of the great teacher, it is no excuse for our doing so. Let us be exact and honest, and not call that by the

name of Christ which Christ never taught or desired to be taught. We must go back to the originator of the name. We must prune away all the illegitimate excrescences, from those of St. Augustine down, and see what *Christ* was and what he did, in order to find out what "Christianity" really is. And we shall conclude that it is the religion of those who follow the example of Christ in endeavoring, as he did, to manifest "the Father." That universal spirit of brotherly love which joins together persons of whatever creed in the endeavor after the best is the real Christianity, and the invisible, spiritual union of these true Christians forms the true and universal Church.

Whether one joyfully acknowledges Christ as the leader and master, or whether he believes not in him, depends largely upon whether he has been brought up on the *dogmas* of any of the various churches, and has revolted from them, or whether he has gone further and come, through perfect freedom, to see the *truths* of real Christianity. They who have "outgrown belief in" so-called Christianity are very apt to make the mistake of discarding Christ and Christianity, as well as the absurd theological dogmas with which St. Augustine and his imitators have incrustated the original truth. But they who, through an earnest seeking after truth, have *grown into* a belief in Christianity, will not often misinterpret its teachings or repudiate its great teacher. Such as they cannot be said to have "outgrown a belief in Christianity," as *The Index* charges; neither can they be accused of having "reverence for the name" (or letter), when to them the spirit is all.

If the editor is not satisfied with this definition, and will give a better and a truer one, no one will be more ready to accept it than

Yours respectfully,

H. R. SHATTUCK.

MR. SAVAGE'S "INFINITE AND ETERNAL ENERGY."

Editors of The Index:—

Allow me to express through your columns my thanks to Mr. Savage for the great pleasure I derived in reading the address delivered by him before the Free Religious Association, at Parker Memorial Hall, Boston, on May 29, 1885. The copy of your journal in which this paper is printed has only just reached me, and has afforded me a very pleasant afternoon. The delightfully clear manner in which Mr. Savage places the facts connected with his subject before his readers is very helpful. One finds this particularly so in the first part of his address. I hope, however, Mr. Savage will pardon me, if I beg of you for a little space in your columns for stating and asking the explanation of one or two difficulties which presented themselves to me in the reading of the two concluding parts.

After carefully laying down his definition of religion, Mr. Savage asks: "What, then, are some of the elements of religion—truths that may well enough be called doctrines—that are capable of demonstration?" And, in answer to this very important question, he says, "I would set down the existence of 'an Infinite and Eternal Energy,' from which all things proceed." This is the first of the "truths"; and, as is seen further in the address, it is the most important "truth."

I would, however, ask here: (1) What does Mr. Savage understand by "an Infinite and Eternal Energy"? (2) How does Mr. Savage *know* it is "Infinite and Eternal"? and (3) If "all things proceed" from this "Infinite and Eternal Energy," by what canon of logic or train of reasoning did Mr. Savage arrive at this "Energy," which did not "proceed" from some other "Energy"?

Further on, Mr. Savage endeavors to justify his use of "Infinite and Eternal Energy" by remarking that "even a partial expression may be more nearly correct than silence or no expression at all." On the contrary, the history of science teaches us in a sufficiently strong manner to avoid what Mr. Savage calls "partial expressions." By their very nature, they are unscientific. If "partial expression" means anything, it means "partial truth"; and what a *partial* truth is I do not know.

And what is this expression a "partial expression" of? Of the "Infinite and Eternal Energy"? Of "God"? If so, then all that Mr. Savage has told us is simply that we do not comprehend the universe. Surely, we do not need the "Infinite and Eternal Energy" to instill in us the amount of religious fervor

and feeling which Mr. Savage thinks is necessary, in order to make us appreciate that fact.

"He who asserts mere force," continues Mr. Savage, "may be as dogmatic as he who asserts God." Certainly, but I do not think he is so unscientific. By calling "force" "God," "the theist" had a special end in view. He intended, by means of it, "to express and interpret the greatest and most inclusive of all human relations." Whether or not a "partial expression" can in any way aid him in this "effort," I leave it for Mr. Savage to determine. At any rate, without some further explanation, I cannot think it could.

My last difficulty, and one which I think the most important as regards the subject upon which Mr. Savage gave his address, I will try to put in as few words as I possibly can.

"Religion upon analysis," explains Mr. Savage, "may be resolved into these four elements: (1) It is thought,—the creed, the theology. (2) It is emotion,—fear, awe, reverence, hope, love, worship. (3) It is ritual. (4) It is purpose,—the endeavor of man . . . to get into the right relation to the Power not himself."

Here, tersely and pointedly stated, we have the *raison d'être* of religion. This is the structure for which we are to find a scientific basis. Truly, it is a fine structure; and many will think a most desirable one. But what is the foundation upon which it is to be erected? What is this scientific basis? Mr. Savage does not answer this directly. He, however, again and again lays it down that "religion is a man's attempt to express and perfect an eternal relation" between himself and the universe; between himself and the "Infinite and Eternal Energy"; between himself and "God." This basis, therefore, is found to be "God"; or, to put it into the modern scientific phraseology, "an Infinite and Eternal Energy." I do not ask Mr. Savage to explain to me what he means by *perfecting* a relation between himself and this "Power," nor do I ask him where is the utility in "expressing," no matter how often, "a partial expression"; but I do ask him, and I ask him this, in all earnestness and sincerity, how can he build up a system of religion which shall impose upon its votaries a theology, a ritual, the expression of the tenderest and sweetest emotions, and a life for getting "into right relation to the Power not himself," by means of "an Infinite and Eternal Energy." If I may be allowed to say so, it is asking too much—or, perhaps, I ought to say, too little—from the men and women of this age. It is as vain a presentation to the human intellect as the idea of Humanity of the Positivists. For the religious emotion to be fully called into play, there must be undoubted realization to the mind of the being that is to be its object. The relation must be one to which we may arrive not *after* a long mental exertion: it must be a relation that is immediate and ever-present. God must be known not *after* a long series of scientific experiments and deductions, but in each and every one of the experiments. He must be known in the first step as well as in the last step. He must not be "above" us or *behind* us. He must be *in* us. "The progressive endeavor," as Mr. Savage very beautifully puts it, "to reconcile man with himself, man with his fellow, and man with the external conditions of his life," cannot prosper, even if we could "fear" or "reverence" or "love" or worship the "Infinite and Eternal Energy." "Energy" it is, and "Energy" it always will be, no matter how we mystify it with our metaphysical adjectives.

I thank you for your courtesy in allowing me the use of your columns.

Yours very truly,
ISAAC ISAACS.

LIVERPOOL ENG., July 3, 1885.

CREATED AND UNCREATED.

Editors of *The Index*:—

The better the life of man realizes the perfect Love, the purer the thought of that life becomes; and, as the life acts according to its thought, the better will the acts be, or the more will man love his fellow-man. When that time shall have come, there will be no evil to restrain, therefore no need for the law, but each man will be a law unto himself or his own judge, knowing—not merely *believing*—that the deeds done in the flesh stand, not to perfect Love, his Creator, but to himself as a judgment against him, if they be evil, and as a proof of the righteousness within him, if they be according to the perfect will of the Creator. The uncreated Love, Truth, and Life is unchangea-

ble and perfect, without outline, and is entirely outside of and distinct from its spiritual creation with form and outline, and must consequently be separate from the products of that creation.

As I have before explained, the soul may, through the comprehension of the perfect quality of its Creator, become like unto it; but it can never become a portion of it.

The created life must always remain a distinct entity in form, outline, and quality from the Creator, even when it shall be in union with the uncreated Will. Nothing can be subtracted from nor added to perfection; but the soul of man may, through realizing that perfection, become a perfect likeness of it.

The uncreated Life is Spirit; and, when the soul of man becomes like unto it, it will be spiritual as it was originally created.

The uncreated Life, or Creator, is the eternal Substance which underlies and sustains all created life. Through it, all things exist. It is perfect and unchangeable, therefore incorruptible.

The substance of man is the life, or soul, of man, because it produces and sustains the matter body. The body, or matter, is formed and sustained in outline through the action of man's life, or soul; for, when the soul leaves the body, the body decays, loses its outline, and, after undergoing many changes, it finally becomes dust. Matter is incapable of independent action, therefore the life of man must be the actor.

The substance (life) of man is, therefore, changeable. It can lie and can speak the truth; it can do good and can do evil. It had a beginning, then it sinned and suffered, and death—the absence of life—has power over it; whereas the uncreated Life, or Substance, is eternal, unchangeable, and all-powerful. Thus, the substance or soul of man is, in quality, the opposite of the uncreated Life, or Substance.

The matter body is the product or coarser fabric of the created life, and is the opposite in quality to it. It must, therefore, be the absence of spirit. No doubt Paul understood the origin of matter, when he affirmed that the things which are seen (material things) are not made out of the things which do appear (spiritual things). All that is seen with the material eye is the lust of the eye and the pride of the created life. It is not created by the Father (the uncreated Life), but is a visible appearance to, and the coarser fabric of, the created life.

The uncreated Life is the Wisdom that knows all things (but not the absence of things,—nothing). It knows itself (Spirit) and its creation which is spiritual (the opposite quality to itself), but has no recognition of its absence, matter, nor of suffering in matter. The wisdom of the creature (soul) is only of and in matter and material things. Sickness and death as well as sin are products of the creature: they are not known to, nor recognized by, the uncreated Wisdom; but, to the creature, they are material facts, and knowledge of them is called by the creature science. All of this so-called wisdom is of this world. It is the invention of the soul, and is no portion of the uncreated Wisdom.

The soul's wisdom is progress in material knowledge, which is changeable and fallible.

Mathematics and music are demonstrable; and they are, therefore, infallible. They are not invented by the soul; but the soul perceives them, and, according to its realization of that perception, demonstrates them. All material science is changeable and destructible, because all materiality upon which it is built changes, and will some time pass away to each of us. In fact, man is not positive in any material knowledge. You may say that man is sure that he exists with a material body. I grant that he is as sure of that as he is of anything; but, if he live after the change called death, it must be without this material body, and, if that be the eternal existence, this existence must be temporal. Therefore, man was mistaken as to his real existence, and even that knowledge is changeable and fallible.

Thus far, I have endeavored to show you that the life of man is a created, changeable life, exactly the opposite in quality from the uncreated, unchangeable Life (the Creator): one is limitless, and the other limited; one is eternal, and the other temporal; one is incorruptible, and the other corruptible; that the changeable created life produced changeable or material thoughts, and that the life acting in accordance with those thoughts proceeded in a direction entirely opposite and away from Spirit, seeking wisdom in

materiality. This material wisdom is what Jesus called foolishness with God; that is, to God, or the uncreated Life, the material wisdom is foolishness,—nonsense,—nothing; that the created life is, and must always remain, a separate life from the uncreated Life, it being an opposite quality to it; that the Creator sustains the created life and its offspring unconsciously to the created life, and, being unchangeable, neither adds to nor takes away from that which he created and completed; that the Creator does not change his plans for the creature, and that he is no respecter of persons; that man is a free agent; that the soul is the soil, and the thoughts are the seed, and that according to the seed sown will the fruit or act be. If the life, or soul, of man have the correct knowledge of the quality of the uncreated Life and of the created life, and realize life to be the cause of all action, it has, as it were, the rule for our problem. But we must not stop here. The rule will not benefit us, unless we make use of it. Our lives must bear witness of our realization of that Perfection. The correct thought sown in the life or soul of man will spring forth, and, if the soil (soul) be prepared for it, will bring forth abundant fruit after its kind. If the thought, or seed, sown be spiritual, then shall the soul bring forth spiritual fruit for the future; but, if the thought, or seed, sown in the soul be material, then shall the soul bring forth material fruit meet for corruption. For, in every case, "as a man" (soul) "soweth, so shall he also reap."

E. J. ARENS.

Be firm! one constant element in luck
Is genuine, solid, old Teutonic pluck.

—O. W. HOLMES.

Thou must be true thyself,
If thou the truth wouldst teach;
Thy soul must overflow, if thou
Another's soul wouldst reach.
It needs the overflow of heart
To give the lips full speech.

A SEASIDE RETREAT.

Ocean Cottage, on Horseneck Beach, is situated about thirteen miles south-west from New Bedford on the open sea. Those wishing a pleasant and quiet summer resort, with all the accommodations of a first-class hotel without the restraints of a fashionable watering place, will be pleased with our home. We have one of the finest beaches in the country, with the surf at our door; excellent bathing and fishing; an inlet close by for those wishing to sail in smooth waters. Seldom any mosquitoes about the hotel.

For particulars, address
JOSIAH WOOD,
No. 84 ALLEN ST., NEW BEDFORD, MASS.

The Secret of the East;

OR,
 The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

- IV. *Transcendentalism*, by Theodore Parker. Never before published.
- V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).
- VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.
- VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00. Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

Address **FREE RELIGIOUS ASSOCIATION,**
 44 Boylston Street, Boston, Mass.

TRACTS.

- No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.
- No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.
- No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.
- No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.
- No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.
- No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.
- No. 10.—*The Impachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*
- No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.
- No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.
- No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.
- No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.
- No. 15.—*The Battle of Syracuse.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address **THE INDEX,**
 44 Boylston Street, Boston, Mass.

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

NATURALISM vs. SUPERNATURALISM. By B. F. UNDERWOOD. 10 cts.

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American *Turnerbund*.)

Editor, **C. Hermann Boppe.**

TERMS, PER ANNUM, IN ADVANCE:
 UNITED STATES AND CANADA:

Freidenker..... \$2.50
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)..... 3.00

EUROPE:

Freidenker..... \$3.00
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)..... 3.50

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirteenth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing CONSIDERABLY MORE READING MATTER, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading, "Turnerische Ausgabe des Freidenker."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.
 (Organ of the German-American Teachers' Association.)

Editor:

MAXIMILIAN GROSSMANN, Milwaukee, Wis.

Associate Editors:

H. H. FICK, Chicago, Ill.
 H. SCHRIEDT, Chicago, Ill.

16 large quarto pages, with four-page cover.
 Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

CURRENT TOPICS.

BY B. F. U.

THE orthodox *Congregationalist* says: "We suppose there was no avoiding it,—evidently it was in accord with Gen. Grant's own wish,—but the permitting Rev. Dr. Newman to preach such a funeral discourse at Mt. MacGregor was worse than a mere infliction upon the public. His sermon was more than questionable, in point alike of theology, good sense, and good taste; and no disregard of the proprieties or discourtesy to the family of the dead is involved in expressing the evidently general and deep public regret that the solemnities of the week should have been marred by such a 'spread-eagle' performance."

THE performing preacher Talmage delivered a harangue in Wesleyan Chapel at Finsbury, behind which is the grave of John Wesley, and in front of which is Bunhill burial-ground, where lie the bones of John Bunyan, Isaac Watts, Daniel Defoe, and Horne Tooke. After the regular service, the mountebank came into the church porch, and addressed to the crowd standing in front of the graveyard, says a despatch to the *New York Herald*, "a theological stump speech in full voice, and then with a smiling face he gave out a stirring hymn, after singing which the populace made the police men happy by again freeing the thoroughfare."

M. JULES FERRY, an uncompromising foe of the clericals, has worked faithfully in the cause of non-sectarian and compulsory education. Under the old monarchy, the sums expended for educational purposes never exceeded 4,000,000 francs a year. Last year, the appropriation for public instruction was 131,581,000 francs; and the Minister, in asking for the sum, reported to the Chamber that there was not a child in France who was not learning at least a primary education. In 1873, male and female normal schools were opened in nearly every department; and, in the matter of secondary and classical instruction, the same progress has been made throughout the country.

A CONTRIBUTOR to the *Christian Statesman*, who "enjoyed special accommodations in witnessing the

funeral services over the remains of Gen. Grant," expresses regret that the general "neglected to make a formal profession of faith in Christ, and that his baptism was deferred till his last illness, and when he was in a state of semi-consciousness." This writer hopes that Gen. Grant believed in Christ and "trusted alone for salvation in the atonement which he has made," but thinks Dr. Newman "absolutely fails to furnish, either from the testimony of our nation's beloved hero himself or from his own knowledge as his intimate spiritual adviser and chaplain, such evidence as satisfies the candid inquirer."

THE *Cincinnati Commercial*, with more plainness and vigor than elegance, expresses some truth that needs to be told: "The history of the war is being converted to childish myths, and Gen. Grant into as mythical a character as Jack the Giant Killer, by these liars, who think that anything marvellous or goody-goody told of Grant will make the lie a merit, and who think more of glorifying themselves than of honoring him. The goody-goody liars, who are inventing Sunday-school stories about Grant, and are making him out such a good boy that he should have died young, think their lying pious. But pious lies are the worst. They should be gently shot with guns loaded with salt, not to tame them, but to make them smart."

A WRITER in John Swinton's paper, replying to the claim that Paine was the author or, if he were not, that he furnished the ideas of the Declaration of Independence, has this to say: "Jean Jacques Rousseau had presented his famous work, *The Origin of Inequality among Men*, before the academy at Dijon, France, when Thomas Paine was an uninstructed and unheard-of youth of eighteen, learning his trade of a stay-maker. Jean Jacques Rousseau's great work, *The Social Contract*; or, *Principles of Political Rights*, had created a sensation in Europe, and been widely read and profoundly studied in America before Paine had ever been heard of. In *The Social Contract*, Rousseau proclaimed the principles of universal suffrage and popular sovereignty, and declared war against the Church. I do not wish to detract one iota from the merits of Thomas Paine. He was a sincere, courageous, and singularly unselfish lover of liberty, and rendered priceless services to the cause of the American Revolution; but writing the Declaration of Independence, or furnishing ideas for it, formed no part of such services." We may add that the proof is clear and conclusive that the Declaration of Independence was drafted by Jefferson, as he himself positively states and as John Adams testifies. There is no evidence, none whatever, that Paine had anything whatever to do with writing that celebrated manifesto.

THE programme of addresses of the annual meeting of the New York Freethinkers' State Convention, to be held at Albany September 11, 12, and 13, is given in the *New York Herald*, as follows: "On Friday morning, September 11, an opening address by J. J. McCabe, President of the Albany Liberal Association, after which there will be a general discussion and a business meeting. In the after-

noon, Charles Watts of England, Vice-president of the National Liberal League, will speak on 'Secularism, Destructive and Constructive.' In the evening, Elizabeth Cady Stanton will lecture upon 'Religious Liberty for Women.' On Saturday morning, Courtlandt Palmer of New York, President of the Nineteenth Century Club, will speak on 'The Aristocracy of Free Thought.' In the afternoon, Mrs. Mattie P. Krekel, of Missouri, Vice-President of the National Liberal League, speaks on 'The Demands of Liberalism.' In the evening, James Parton, of Massachusetts, lectures on 'Victor Hugo.' On Sunday morning, Mr. T. B. Wakeman, of New York, will discuss 'The Outlook of Liberalism.' In the afternoon, Helen H. Gardener, of New York, speaks on 'Historic Facts and Theologic Fictions.' The Convention concludes on Sunday evening with a lecture by Col. Robert G. Ingersoll, whose subject will be announced at the time."

ACCORDING to London despatches, the meeting in sympathy with the movement for the protection of girls and the suppression of criminal vice was attended by fully one hundred and fifty thousand persons. Addresses were delivered from twelve platforms, one of which was used exclusively by ladies. The temperance, trade, and socialist societies and the Salvation Army were prominent; and banners of almost every organization dotted the vast assemblage. Notwithstanding the fact that Lord Lynton presided at the chief platform, some of the speeches against the aristocracy were most sanguinary; and one account says, "While the procession was passing through Pall Mall, the Carlton and other aristocratic clubs in the vicinity were greeted with a perfect storm of groans and hisses, the bands, meanwhile, playing the 'Dead March.' Denunciatory epithets were hurled into the very windows of these fashionable resorts; and, at one time, the excitement became so intense that the police feared they would be unable to restrain the hot blood of some of the ringleaders, and that the clubs would be attacked. All the routes occupied by the detachments of the procession, which started from ten points, were blocked for nearly an hour. Each contingent contained great wagon-loads of cheering women. The crowds which lined the streets showed an extraordinary sympathy with the participants in the demonstration, all of whom seemed to have both heart and soul in the business in hand." A resolution, put simultaneously from all the platforms at the sound of the bugle, pledging assistance in enforcing the Criminal Amendment Act, was carried amid the wildest enthusiasm. The demonstration did not have the countenance of the leading dignitaries of the Church of England. The Bishop of Winchester said that it was, in his opinion, likely to increase and stimulate the prurient curiosity of the young of both sexes, and rather create a vicious appetite and encourage vicious indulgence than to promote a healthy public opinion; but the general view seems to be that such a demonstration in London was needed, and will result in much good.

FAITH.

In preceding articles, we have aimed to show how credulity and scepticism are mental qualities which are the natural counterparts and correctives of each other. When these two mental tendencies are properly developed together, the reciprocal control and balance resulting between them brings the intellectual attitude of *Faith*.

Credulity represents man's natural predisposition to believe. Scepticism represents man's equally natural disposition, though developed later under the teachings of experience, to inquire, to question, to sound the foundations of belief. Faith represents man's mental attitude when belief rests, beyond a question, on rational foundations. Faith is belief that has been tested by facts, investigation, reason, and yet stands. Hence, it is more than mere opinion: it is the maturity of opinion; it is perception cultured by experience; it is belief founded on knowledge; it is conviction sustained, because penetrated and animated by, reason; it is intuition subjected to the analysis and receiving the indorsement of science; it is man's natural predisposition to credence, searched and sifted under the stern disciplines of life, and adjusted in the court of human intelligence. Faith is knowledge itself become so familiar, such a second nature, that it may be acted upon without thinking of the reason of the action. It is that serene equipoise between the inner and outer forces of existence testified to by instinct in the first stages of human life, broadening into wider ranges as life unfolds, and confirmed by rational judgment.

This is not, of course, the view of faith that is usually accepted. Faith is commonly regarded as synonymous with belief in certain theological doctrines, and with adherence to certain ecclesiastical traditions. Ordinarily, that person is said to have faith who believes in a specific and supernatural revelation of religious truth, and is a strict observer of the outward forms of piety. But faith is not to be confounded with these mere accidents of opinion and practice, which may exist in connection with it or may not. The acceptance of religious views by inheritance or tradition is not faith. To believe merely on the faith of others is not to have a faith for one's self. To believe thus and so because Paul or Jesus or Moses so believed is not faith, but imitation, *parrottry*. The veriest scepticism, indeed, often lurks under the most tenacious adherence to old creeds, and the most rigid observance of old forms. It is no rare thing for a soul that is full of doubts to cling all the more intensely to traditional religious beliefs, from a fear that, if these are not true, there is only blank nothingness beyond. Having no living faith of its own, such a soul thinks to be on the side of safety by professing the faith of the dead. This may have been a very good faith in the prophets and saints with whom it was once vital; but, to a soul thus clinging to it, it is not so much faith as the refuge of despair.

A great faith trusts to *truth* above all things, and it quite as often compels the surrender of old beliefs as adherence to them. It was by faith, according to the Old Testament story, that Abraham went out seeking a country, not staying in one already found. Jesus and Paul were heretics to the Judaism of their day, abrogators of the established religion; yet they were incarnations of a living faith. The popular doctrine of faith puts its eyes in the back of the head, and makes it look only to the past for authority. But it is only timidity and doubt that do not dare to leave old landmarks and trust to present guidance. All the great religious leaders, of all ages, have walked with confident step, their backs to the past, look-

ing to the future. Such a faith goes deeper toward the centre of things than do any traditional beliefs and observances, whether it be associated with them or dissociated from them. It is a force below creeds and organizations and ceremonies, the producer of them and their supporter so long as they have vitality for any soul; but their burier also when they are dead, and the creator of new forms of thought and act to take their places. In other words, genuine faith goes below creeds and ritual, below Church and Scripture and prophet, and clings to that which Church, Scripture, prophet, creed, and ritual have tried in their various ways to express; namely, the principle of Truth and the law of Righteousness.

We hear much in our time about the conflict between reason and religion, and of the danger to faith from the advance of science, and from the scepticism that lurks in the widely accepted philosophy of the day. It is sometimes said that reason and faith are antagonistic terms; that religion cannot even begin until the voice of reason is silenced; that the evidence of faith is something different from, and even contrary to, the evidence of experience; and that it is only when the lamp of experience goes out that faith becomes a guide. But, in all this kind of apprehension and argument, religion and faith are regarded as necessarily identical with certain theological beliefs. The religion is a creed-religion or a book-religion. The faith means acceptance of these beliefs, and trust in certain supernatural agencies. All such beliefs and trusts are in danger from the advance of science. If religion be identical with any now accepted system of theological opinions, then probably it is destined to come to an end. If faith be really in conflict with reason, if its light only begins where the light of experience ceases, then it is most certainly doomed to disaster. Human reason is the great active worker in this world. No belief is safe for which, if its right to existence is once questioned, rational thought has not won the victory, and set the seal of permanence.

But, if we regard faith as the attitude of mind which results from man's native predisposition to accept as trustworthy the reports of his own perceptions, internal and external, after those reports have been thoroughly searched and sifted by reason and experience, then we reach a basis that is beyond the possibility of decay or change, so long as human nature remains what it is and what it has always been. And the net generic result of this attitude of mind, accumulated through all the generations of human existence, when we eliminate the variable expressions from the permanent substance, is that Truth and Righteousness are realities, and that there is a Power in the universe evermore working to give them the supremacy. To this proposition, intuition and experience, religion and reason, conscience and science, the wisdom of the prophet and the common sense of the common people, give their united assent. Whatever amid the struggles of conflicting beliefs has passed away, this has stood. Doctrines once accepted as truth have been one after another announced to be superstitious and been discarded, but this has remained. Religions, philosophies, civilizations, have risen and gone to decay; but this has survived. The human race has passed through many life-and-death struggles with its own ignorance and passions, and over large sections of mankind, and for long periods, error, deception, and wrong seem to have held almost unmolested sway; but man's confidence in the reality of Truth and Righteousness, and in their power, past and future, has outlived all the ignorance and passion and wrong, and grown the stronger by its conflicts with them. And this is the essence of faith.

We are left, therefore, with a view of faith that is very practical. The more faith one has in truth and right, the stronger will be his sense of personal obligation to serve their interests. This faith may be so strong, may rise to such height of power, that all sense of duty, or of compulsory obligation, may be lost in the service, and the work may be done in enthusiastic love. When faith in truth and goodness rises to this height in any human minds, then the great prophets and helpers come, who carry mankind onward by the contagious example of their confidence through great stretches of progress. They are the openers of new realms of thought, the promoters of wider sympathies, the leaders into a finer social order. But it is a kind of faith that all need and all in a measure may have,—a faith in truth and right that no obstacle can dismay nor defeat conquer. It is needed in individual struggles with temptation, to make conquest the easier and surer. It is needed in the discouraging conflicts of politics, in the competitions of trade, in the arena of home life, where ideal standards of right are so often trampled under foot by ruthless selfishness and lust of power. It is needed in all efforts that are attempted for the amelioration of man's social condition,—in all enterprises for the removal of ignorance and oppression, and for the lifting from men's shoulders of the heavy burdens of poverty, intemperance, and licentiousness, and the hundred forms of wretchedness which are the progeny of these evils. It is needed in all problems of education, in all plans and processes for the training of the young. It is needed, in fine, wherever man throws himself into any breach to render any service to humanity. Without it, he is half-hearted, loses courage, and fails. With it, he throws himself into the work with sublime confidence, careless of his own safety or profit, but assured that the idea which asserts itself with such supreme obligation to his own conscience must ultimately mount the throne of human society; and hence he goes on to victory.

WM. J. POTTER.

THE CONTRASTED THEORIES OF MIND.

It is not an easy task to decide the question of superiority between two philosophers, who have followed out almost parallel lines of thought, and whose systems have been dominated by a common error.

Herbert Spencer is the greatest modern apostle of the philosophy of the *Unknowable*; while, throughout the writings of George Henry Lewes, the same logical chimera prevails, although it is to a great extent overcome in the culminations of his psychological studies.

Both of these writers have made great strides in the science of psychology. Both have contributed largely to the new science of sociology. As a sociologist, as one who has traced out the causes and effects of social conditions, throwing light upon the true significance of national and personal character, Spencer stands pre-eminent in the world of thought. But, in that delicate analysis of mental procedures, which explains the connection between what are known as natural, vital, and intellectual phenomena, Lewes is entitled, among modern writers, to the first place. It is unnecessary, for the purpose of this article, to review the achievements of Spencer in the field of social science. Here he has patiently accumulated an array of facts which completely removes from the mind of the student the vulgar notion that man presides over the universe, with the assistance of a divine Providence, and that everything happens with reference to his rewards and punishments.

The philosophy of history, of morals, and of the intellect has ever contradicted this belief; but it survives as the most primitive and firmly established of religious tenets.

The sociology of Spencer has made the natural, as distinguished from the supernatural development of society, so patent that this great idea has insensibly taken possession of the age. Christianity is struggling to conform her faith to this broader view of life; and the responsibility of individuals and of nations is visibly broadened and heightened by this new gospel of the nature of man. These things have been accomplished for the most part by the industry and genius of an individual. The age is replete with thought upon these subjects, the materials for the construction of this new philosophy are near at hand; but, as all great reforms have found their instruments in individuals, as all great movements have required their leaders, it is to Spencer that we clearly owe the advance in social science, and the accompanying subjugation of primitive superstitions which is a characteristic of our age.

It has been possible, however, to firmly establish in the mind of our century the true principles of human development, without supplying a satisfactory or original analysis of mind. The data of sociology have been formulated upon lines which lead up to a true conception of mind, but Spencer has not realized that conception. The incompleteness of Spencer's psychology, and the painful confusion which characterizes his manipulation of ultimate terms (or his metaphysics), I have endeavored to fully explain in the review* of his system which has just been published; but so much has been said in opposition to the pre-eminence which I have accorded to Lewes as a psychologist, that a reiteration of the advanced position of that writer may be of interest.

The distinguishing feature of Spencer's system is that he declares the mind to be a mystery. The distinguishing feature of Lewes' system is that he denies that the mind is a mystery. Spencer's is the philosophy of the *Unknowable*. This mystery is enthroned as the great emblem of consciousness. Lewes' philosophy is the unity of life and mind, and aims to bring both of these great facts within the operation of natural laws.

Spencer recognizes no mystery in life. He clearly affiliates vital with natural activities; but, when it comes to thought, or consciousness, he becomes an agnostic, and makes his obeisance to the *Unknowable*. Lewes, on the other hand, affiliates natural with vital phenomena, and extends this harmony to all the operations of the mind, disclosing common governing principles in all orders of activity.

Spencer distinctly tells us that consciousness is unknowable, and that the most general terms of existence, which are space, time, matter, force, and motion, are also unknowable. Lewes, in opposition to this argument, says that "it is doubtless mysterious that an organism can feel and think; but the fact that it does is all that we are concerned with, and it is neither more nor less mysterious than the fact that the organism can live and move."† Here, we have the assertion that, whatever mystery is involved in mind, it is neither greater nor less than that which is involved in the simplest and most familiar fact of all existence, which is motion. Lewes has already shown that life is simply motion; and he now declares that feeling and thought are neither more nor less mysterious, neither more nor less difficult to understand, than the simplest of all

facts, which is motion. What room, may it be asked, is there in this theory of mind for the *Unknowable*?

Spencer, on the contrary, says, in his *Principles of Psychology*, "Mind still continues to us a something without any kinship to other things; and from the science which discovers by introspection the laws of this something there is no passage by transitional steps to the sciences which discover the laws of those other things."* Again, toward the end of the same volume, he repeats: "Mind is known only as an aggregate of states of consciousness, which cannot be conceived as forms of matter and motion, and do not, therefore, necessarily conform to the same laws of redistribution. . . . The development of mind itself cannot be explained by a series of deductions from the Persistence of Force."† Although these assertions are all accompanied with the reminder that the obverse of mind, or its physical aspect, may be accounted for by natural laws, still it is repeated many times that mind in itself is not a natural or comprehensible phenomenon.

If Spencer does not believe that there is an impassable gulf between the subjective and the objective aspects of mind, that mind in itself is something quite different from mind viewed as a physical phenomenon, why does he insist upon the distinctions just quoted, and why does he fortify these distinctions with chapters and chapters of specious reasoning, as all students of his system are aware that he does? Why is he continually reminding us that mind can be understood from its objective side, but never from its subjective; that, physically speaking, the mind is plain enough, but, mentally speaking, it is an impenetrable mystery? To those who have reached a solution of the great enigma of the nature of language, it is evident that we are invariably obliged both to speak and to think *physically*. Is it not evident that Spencer is puzzled by the difference between the objective and the subjective phases of consciousness, and, as has been the case with all great philosophers, is he not making the world pay very dearly for his confusion?

Who can make this charge against Lewes? Who can read his immortal dictum, which is given so many different expressions in his *Problems of Life and Mind*,—"Motor perceptions are condensed in intuitions, and generalized in conceptions,"—without acknowledging that he has brought the activities of the mind within the range of natural laws, without perceiving that he has risen above the confusions and contradictions of the *Unknowable* into the calm sphere of the unity of life and mind?

"I am as fully persuaded," says Lewes, "that all intellectual operations have mechanical principles, both when accompanied by consciousness and when not, as that our reflex and automatic actions are mechanically determined."‡ If we will turn to his luminous exposition of the difference between organism and mechanism, we will at once perceive that, by mechanical principles, he means the universal principle motion, which is the ultimate fact in all phases of activity, whether mechanical, physical, vital, or mental. Spencer recognizes the presence of mechanical principles in the mind; but he says that mind in itself cannot be explained by, or deduced from, motion.

I have gone so thoroughly into this question of the relation of the categories of thought, or the aspects of motion to consciousness, in the review of Spencer's system above referred to, that it would be superfluous to repeat the argument here. There

is no attempt in either Spencer or Lewes to reduce the categories of thought to a single principle. The idea that such a reduction is either necessary or possible does not seem to have occurred to either of them. It is the discovery of the nature of language that has made this solution possible. Language is but a system of metaphors, an endless chain of expressed resemblances. The distinctions between words are purely relative. As all facts are related to a single fact, all words are related to a single word. To retrace this analysis with a synthesis, mind is the product of language. All thought is composite, and is generated from the simple activities of an organism. These activities are joined together, or articulated, by language. Ideas are the result of this articulation. Thus it is that the unity or synthesis of knowledge results from a true analysis of mind. This argument could be indefinitely elaborated by examining the nature of perception, by detecting the initial principle of consciousness in the simple adjustment of the creature to its environment, or the contrast of subject and object. All the metaphors of speech, all the resemblances of which mind is composed, can be reduced to this contrast of subject and object; and this final contrast or difference is lost in the identity of a universal principle.

Lewes has contented himself with identifying the ultimate fact in feeling and thought with that of nature. Spencer has demarcated mind from nature. He has failed to unite subject and object in a single principle: hence, the unreality of religion in his hands. For how are we to give to religion the dignity and simplicity of truth, until God is acknowledged as the most general fact in the universe, the end of every analysis and the beginning of every synthesis? Consciousness, with Spencer, is the *Unknowable*, or God,—an impenetrable mystery. Consciousness, with Lewes, is the function of conditions. It is an individual phenomenon: it is personal, not divine.

RAYMOND S. FERRIN.

POVERTY AND WEALTH.

I.

In the year 1880, the population of the United States comprised fifty millions. Of these, a little more than half were men and boys, a little less than half women and girls. One-half of the entire number were minors, and about one-fourth under ten years of age. About three millions were over sixty, and about one million over seventy years old.

Of course, only a part of these could be occupied: all below ten years (thirteen millions) are too young to bear the strain; those between the ages of ten and fifteen (six millions) should devote this part of their lives exclusively to education. It is a misfortune that necessity compels many boys and girls to contribute to the support of their families at this early age. Such is, however, the case; for, in 1880, nearly one-fifth of this class (one million) were at work. Between the ages of fifteen and fifty-nine (twenty-eight millions), most of the work of life should be done; yet but little more than one-half of these (fifteen millions) are recorded as having been occupied. Among those over fifty-nine years of age (three millions), much feebleness prevails, and many should rest; but, just at this age, also, it is that poverty is most bitterly felt, and the most painful efforts have often to be made to keep the wolf from the door. Hence, we find a full third (one million) of these still at work.

The assessed valuation of the total property held in this country in 1880 was 16,900 millions of dollars. Of this, 13,000 millions was the valuation of the real estate, and 3,900 millions that of the personal property.

* The Religion of Philosophy.
† Study of Psychology, p. 11.

* Vol. I., p. 140. † Principles of Psychology, vol. I., p. 508.
‡ Problems of Life and Mind, vol. II., p. 96.

Comparing these figures with those of the population, we find the average estate of each inhabitant to be 336 dollars; or, assuming an average of five persons to each family, 1,680 dollars would be the average of family property in this country.

Is property in this country so distributed? No. Here it is that we are brought face to face with that portentous fact of the inequalities of fortune. Well enough do we know that certain individuals count their wealth by millions, while others have not wherewithal to buy a crust and a night's shelter. One estate in this community is estimated at two hundred millions. If the balance of individual average property were to remain, so far as possible, undisturbed, six hundred thousand human beings would have to be stripped of all, that this one estate may be enjoyed; or, four dollars—and this is more than one per cent.—must be taken from each individual's average. Eighty-five estates of this magnitude would absorb the entire property of the country, leaving nothing for the toiling millions to call their own; and, though there are not eighty-five men so rich, there are very many more millionaires; but 16,900 individuals possessed of only one million each would own it all.

But to pass from property to incomes: what are their sources and distribution? Many persons possessed of little or no estate are in the enjoyment of large revenues from salaries; others, again, receiving no salary whatever, derive their income from rents, or from interest on loans, or the exchange of commodities. A portion of the community live upon realizations from two or all of these sources; a very large portion, children, many aged and helpless, beggars and prostitutes, are dependent upon gifts, while the true criminal classes subsist entirely by theft, robbery, and fraud.

What the sum total of incomes of the people of the United States amounts to to-day can hardly be estimated, but the highest incomes are well known to amount to fortunes in themselves. A well-founded estimate for the income of the presumably richest man in the country is ten millions. From that, we range down to the smallest sum with which life can be sustained, say one hundred dollars; but this last sum means slow starvation, with less it is more rapid.

The largest salary ever paid has probably been about \$100,000 per annum. At least, this sum some railway managers are reported to have received. The smallest salary is nothing; for at this boys, and even young men, are frequently glad to enter as apprentices to some trade. The average pay of the hands borne on the rolls of large manufacturing establishments, according to the last census, is 347 dollars per year,—less than seven dollars per week.

The rate of interest which may be obtained on the best security is now not over three per cent. per annum.

The questions of the distribution of property and incomes are indissolubly connected with that of the distribution of happiness; for, as our happiness is co-extensive with our liberty to follow the bent of our inclinations, so this liberty is in its turn limited by the boundaries of our possessions. What special form these possessions may assume, whether it be that of money, shelter, knowledge, food, clothing, land, or leisure, is only of secondary importance. So long as our property in any one of these forms is no more than sufficient for the satisfaction of our immediate wants, our needs in other directions may remain unrelieved; but, as soon as the amount of our estate in this one form rises in excess of our immediate requirements, we can generally obtain all other forms by exchange.

The origin of all evil and misery is traceable, proximately, to the present distribution of happi-

ness and the means for its attainment, ultimately to the competition for the latter's possession. This competition is active, not only between what may be termed "individuals of the same order or degree of individuality," such as different human beings, but even between individuals of different orders or degrees, such as citizens and the state, states and the race-organism, and race-organisms and the All.

The happiness of each individual is found in its liberty; that is to say, in the "right of way" of its will to the domain of the objects of desire. Were the desires of all human beings equally intense and directed to the same objects, there would be no difficulty in assigning to each and all their just share of the world's happiness and property. But not only do the desires, wants, and needs of different individuals differ most widely, but those of each individual are, in the course of time, subject to very considerable variations. Indeed, as careful investigation demonstrates that all human desires arise from a sense of want engendered by contrast with the sense of possession, it follows that the range of these desires, though proximately diminished, must always be ultimately increased with satisfaction.

For this reason, it appears certain that the full measure of all the desires of which the human race is capable can never be permanently satisfied; and the full measure of the desires of which any one human being is capable cannot be even temporarily satisfied, except at the cost of the satisfaction of his neighbor's desires. Hence arises the question: "To how much satisfaction of desire—that is to say, how much happiness—is any one individual entitled?" And hence, also, the further question: "What share of the total wealth of the race may each one justly claim?"

Generally speaking, each individual seeks its own happiness, regardless of that of others. Hence, whenever more than one strive for the possession of the same object of desire, there must ever arise that "interference of wills" which constitutes the main source of all those evils of social condition for the existence of which humanity may be justly held responsible. And, hence, it follows that the right to happiness, and its means, of each individual, must be limited by the equal rights of all other individuals of the same order or degree; but, as a part is always less than the whole, so its rights must also always be less, and the title to happiness and wealth of any one individual, however great, can never equal or compete with the title of the social organism, of which the individual is a part. The happiness and power of each human being are only entitled to respect in so far as they tend to increase proximately the happiness of the human race, ultimately that of universal life and being.

True or net happiness is the difference between the sum-total of our joys and pains. But our joys as well as our pains may be the result of the direct satisfaction or non-satisfaction of our own desires, or they may result from our perception of joyful or painful states in others, or from both sources. When our joys are dependent upon our perceptions of the joys of others, and these others' joys upon their perception of ours, it is plain that the happiness of all is increased by each increase of the happiness of one; but, when any one derives joy from beholding pain and suffering in others, the joy and pain increase together, and may involve a loss to the happiness of all.

The thesis that the maximum possible happiness of the All is dependent upon the equality or proportion of its distribution among the component individuals is mathematically demonstrable; for, even as the maximum product which can be formed by the multiplication of a certain number of parts into which any number is divided is greatest when

these parts are equal, so, also, that portion of the happiness of all which arises through sympathy must be greatest when happiness is most equally meted out.

It has been already stated that happiness depends in a large measure upon the distribution of the means for its attainment, property and income. But to this an important element, the intelligence and will to put property and income to proper and legitimate use, must be here added. And here we must ask, "What constitutes legitimate use?" Clearly, that use which is conducive to the happiness, not of one's self, nor of others only, but of all collectively.

CHARLES FROEBEL.

CHANGE.

"The voice of the Almighty saith, 'Up and onward, for evermore.'"—Emerson.

It is the inconvenience attending the breaking up of social incrustations that makes conservatives. This inconvenience is real, and has been considerable; and the progress of society will be most accelerated when the sacrifice of change is reduced to the minimum for the individual. For this, the truth that "passing away" is a law of all social institutions must be kept in mind. "The changes which break up at short intervals the prosperity of men are advertisements of a nature whose law is growth. Evermore, it is the order of nature to grow; and every soul is by this intrinsic necessity quitting its whole system of things, its friends, and homes, and laws and faith, as the shellfish crawls out of its beautiful but stony case, because it no longer admits of its growth, and slowly forms a new house. As insurrection is giving way to revolution, so must evolution take its place in the method of social affairs.

As the light brightens and vision clears, the bridges the fancy spanned to solid beyonds are found to be floating gossamers, and the thoughts of man are coming back to earth to deal with the realities that surround his actual present being; and, when he has enough considered these, he will be convinced that human nature is prone to good, because it is a part of nature, and that its real uplifting and glorification consist in striving to comprehend the whole. When this process begins, the wistful gaze turns forward, and the "unconscious will" of society no longer drags on the resisting individual. Happily, it is becoming common; and, at the same time, men are making new estimates of their effects, and with truer calculation. Instead of using terms of the absolute, they are distinguishing the more from the less absolute.

The minimum of individual hardship will attend social change, when this comparative method becomes universal. "The good time coming" will be when men shall live their lives, and be in harmony with their times, intelligently watching for their demands, and cheerfully and honestly conforming to them. Such times will come to a generation that is self-reliant, earnest, and not meanly selfish, one that could know no sectional politics, nor cherish policies born of tribal jealousy and a spirit of social non-intervention, suitable for the ages when incursions for plunder were the only means of securing the desired commodities of other nations. That generation is not, I fear, near akin to the present; for, though the moral balance is quivering, and events are hastening for great changes soon to occur, so much, yet strong and venerable even in its injustice, must first be swept away, that, though "time be no longer slow" under the most favorable conditions, much will be required. But labor on. Between the present and that time there intervene vast gulfs of evil to be filled and smoothed away.

Whoever champions the cause of conservatism will find friends in plenty, and among them many who will be glad to have him maintain what themselves would be ashamed to assert. Such champions, then, will be men, either of lopped faculties, unconsciously disingenuous, or of abnormally developed faculties, who would seize upon the whole world, and make of it for themselves a huge eye. Such there will be while great individual interests exist, and are being furthered without regard to the demands of the social system that is, while the relations between the individual and the social unit are artificial; and this, be assured, will always be. The gap will narrow down, only to be more closely discerned.

All men think nowadays,—the delver in his hole, the chopper in the wood, the prisoner in his cell, the tramp on the highway, even the lord in his palace. When this appalling volume of thought is pulverized,—and most of it, “shining dirt” that it is, washed away,—it will be found that the difference between men is not great. Let this be perceived, and material regalia will be less held of value. When men throw aside their artificial distinctions, and go on together with an honest purpose, new experiences afford mutual explanations. Thus, each individual feels the good of his neighbor; and they are drawn together. And this is the socialism that men desire, the individual brain kept vigorous by the pulsations of the social heart.

H. F. BERNARD.

MR. EMERSON'S ANTI-SLAVERY POSITION.

The *Index* has several times referred, with just disapproval, to the view taken by Dr. Holmes, in his memoir of Emerson, as to the latter's connection with the abolitionists. As a farther proof how thoroughly Emerson was identified with that body, then despised and hated, I will call attention to this extract from a speech of one of their ablest and most determined opponents, Caleb Cushing. The extract is from a speech delivered by him in Faneuil Hall, Boston, Dec. 8, 1859; and I am indebted to Albert C. Perkins, Esq., of Brooklyn, N.Y., for calling my attention to it:—

I say, in this Commonwealth of Massachusetts and in the adjoining State of New York, there is a handful of men of highly intellectual mind, of the highest culture, literary and scientific,—men who would seem to be born to bless their day and generation, such as Wendell Phillips, Lloyd Garrison, Waldo Emerson, Theodore Parker, and Gerrit Smith,—who by constant brooding upon one single idea—that idea, if you please, a right one abstractly—have come to be monomaniacs of that idea [applause], and so have become utterly lost to the moral relations of right and wrong.

This deliciously paradoxical sentiment—that it was the opponents of slavery who were “utterly lost to the moral relations of right and wrong,” and Caleb Cushing alone who stood for the moral sentiment—is made to include Emerson as one of the parties to the indictment.

T. W. HIGGINSON.

EDITORIAL NOTES.

BY B. F. U.

You see, it's this way. You have a mind,—yes. Well, you go to the Boston mind cure, and they cure you of it.—*Brooklyn Eagle*.

THE death of Mrs. Helen Hunt Jackson, better known as “H. H.” and “Saxe Holm,” gives special interest to two connected stories, among the last of her literary work, which will be published in the October and November numbers of *Wide Awake*.

THERE are a hundred deer forests in the highlands of Scotland, varying in size from a few thousand acres to seventy thousand, the rental ranging

from £400 to £4,000 per annum. In all, it has been estimated that over 2,000,000 acres are devoted to the maintenance of deer in Scotland, and that about 5,000 stags are annually killed.—*Exchange*.

SAYS the Pittsburgh *Despatch*: “The cholera would not be so fatal in Spain, were the people to substitute cleanliness for fasting, and a little spunk for prayer. Fasting reduces them to the worst possible physical condition to resist disease, and it always was doubtful whether heaven helps those who pray heartily only when in a pinch.”

GEN. CLINTON B. FISK relates this anecdote of Gen. Grant: “I was sitting with the general and a number of others, when an officer high in rank rushed in, shouting: ‘O boys, I’ve such a good story to tell you! There are no ladies present, I believe!’ ‘No, but there are gentlemen present,’ was the curt reply of Grant.” The story was not told.

A UNITARIAN minister having “expressed himself in an uncomfortable way about the ‘motley collection of people’ who pass for ‘religious liberals,’” and make up Unitarian congregations, the *Christian Register* is moved to remark: “Something in the tone of all this recalls the story told of Rev. Dr. —, who, on entering the heavenly world, looked about for a moment upon the throngs of spirits, and exclaimed: ‘A very common lot, seems to me. Where’s Dr. Channing?’”

IN averting what the London tattlers would have exaggerated into a sensational breach of promise case, the New York *Herald* says that Lord Coleridge has displayed that tact which has done so much to raise him to his exalted condition. The only precedent it is able to recall is the conduct of the presiding officer in Mr. Gilbert's operetta, “Trial by Jury,” who during the hearing grew enamoured of the fair plaintiff, and suddenly stopped the case, crying:—

“Barristers, and you, attorneys,
Go upon your homeward journeys;
Lay your briefs upon the shelf:
I will marry her myself.”

The *Herald* scents danger to the legal profession. Meanwhile, the Lord Chief Justice, with his bride, it is announced, will spend their honeymoon on the Lake of Lucerne, where, in the intervals of wooing, he will be able, it is suggested, to inquire into the authenticity of the beautiful and romantic story of William Tell.

THE Misses Bush, principals of the Belvidere Seminary, located at Belvidere, N.J., announce that they have added to their institution a department which they have called, with the permission of the widow of Wendell Phillips, the Wendell Phillips Memorial Industrial School. Their plan embraces practical methods of teaching, the cultivation of the physical and moral as well as the mental powers, and preparation of the students for pursuits or occupations that will enable them to be self-sustaining. Connected with this school is a kindergarten, which combines the pleasing and useful occupations of the school-room and garden. Leaving the kindergarten, the children are grouped in companies under the care of guardians and teachers, who daily instruct them in habits of industry, economy, order, temperance, and kindness to one another. There is a library, scientific and commercial department, a school of art and design, including music, painting, illustrating, modelling, and the ceramic art, and a department of printing and journalism, besides other important features. The school is entirely unsectarian. Full information can be obtained by addressing Belvidere Seminary, Belvidere, Warren County, N.J.

THIS word of comment is from a thoughtful critic: “Gunning's article is unique. He meant it to be striking, and it is so. Its pessimism,

more apparent than real, consists in some detached expressions which he would not render tame by qualifying. Nature is *not*, however, man's enemy, in my apprehension, when viewed *largely*. But she is certainly no cossetting nurse. What men see in her depends more upon what they are, I think, than on anything else. Years ago, I read an article from the orthodox (nominally) Prof. Stowe, an introduction to a book at whose title you will laugh, *The Philosophy of the Plan of Salvation*, by Rev. Walker, in which (the introduction) this fact was ably illustrated in a dialogue between two men, one genial and sunny, the other cynical and gloomy. ‘Nature’ and ‘God’ and *omnia cetera*, if *cetera* there be, fared very differently in the two men's mouths. While I certainly believe in an objective world, its *color* is largely ‘in our eye,’ considerably in our liver. The main point of Gunning's article is excellent,—‘What are we here for?’ if not to make the evolving and of course imperfect creation better, if we can? and we can.” The work mentioned above, *The Philosophy of the Plan of Salvation*, is an ingenious and original work, whose arguments, Joseph Barker stated, had a powerful influence in restoring his belief in Christianity. The work, years ago, was translated into several languages, and was, if it is not now, used as a text-book in many theological schools in Europe and the United States. Some ten years ago, we had a public discussion with the author, which was continued through five evenings, his notes of which appeared in one of his late volumes. He was at that time a professor in Wheaton College, Illinois. We were forcibly impressed with the dignity and nobility of his personal character.

THE PAST.

There it lies in shadow,—the outworn Past:
No more it sways the Present from the urns
And charnels of its storied dead, no more
Repeat its creeds and consecrated myths
The generations of to-day with servile,
Parrot-like, unquestioning iteration.
Men's ancestors, forefathers, are no more
As household deities adored; no more
Their customs, usages, are sacrosanct.
The hearthfire's gods, Penates, Laræ, are
At length dethroned. Reason is paramount.

To sunlike beams and breezes fresh of Truth
Men's minds, like vernal lawns, lie open wide.
The foul breath of the Past no more will breathe
The generations of to-day. Each age will soon
Construct its own environment, its shrines,
Abodes to suit its current mood, refusing
To be housed in structures long ago upreared,
Unventilated, dark with stains of blood.
The palaces of kings, the monstrous shrines
Of hierarchies old, which Europe's soil
Incumber, will ere long in ruinous heaps
Be strewn, because they symbolize the Past,
Its tyrannies and superstitions foul.

Happy art thou, America, because
Thine unpolluted acreage, where bloom
The virgin blossoms of the wilderness,
The sealike prairies' golden flowerage,
Ne'er groaned beneath the architecture huge
Of priests and kings, upreared with tears and sighs
By drudges guerdonless, that loathed their toil.
The forms putrescent of the dead will soon
To earth and air by purifying flames
Be given, no longer life empoisoning
With fetid exhalations of decay.
Thus in the living Now will life be lived,
With Reason like the Morning Star aloft,
The torch to more and more enlightenment,
To final justice, that shall lift from slough
Of want and woe all wearing human shape.

B. W. BALL.

The Index.

BOSTON, AUGUST 27, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

Is Pantheism the Legitimate Outcome of Modern Science?*

BY EDMUND MONTGOMERY.

The question here proposed is a timely one. It ought to receive a prompt and decisive answer. After so much accurate research into the constitution of things, modern science ought to be able to tell us whether it rightly leads to the conclusion that all natural occurrences are manifestations of one and the same eternal power. If this is its legitimate outcome, then we may safely rejoice that the long conflict between science and religion has at last ended in peaceful union; that modern science and modern Christianity, in spite of so much ostensible enmity, have, nevertheless,—each by its separate road,—reached the same haven of truth and repose. For impartial judges will hardly deny that modern Christianity, freeing itself more and more thoroughly from authoritative decrees, trusting more and more implicitly the dictates of rational self-consciousness, has come in its inmost heart to avow the transcendent unity of all that is essentially real, and therewith its identity with the one eternal power, from which everything is believed to originate, and in which we ourselves are said "to live and move and have our being." Indeed, the rationale of modern Christianity, in its esoteric formulation, has become one with the philosophy now taught in our foremost Christian universities,—a philosophy endeavoring to prove the reality-constituting efficiency of thought, and the resting of all such reality in one supreme, universal Intelligence.

It is an historical fact that human thinking, whenever it has been free to expand to its utmost, has all but invariably reached pantheistic conclusions. From whatever manifold data it may start, it generally ends by identifying and unifying everything. The manifest interdependence of all natural phenomena, and their unitary wielding from a hidden sphere of efficiency, has always impressed

* Read before the Concord School of Philosophy, July 31, 1885.

contemplative minds with a keen sense of its paramount import.

In the Vedas, the great Power underlying phenomena is made to exclaim: "I am the light in the sun and moon; I am the brilliancy in flame, the radiance in all shining things, the light in all lights, the sound in the air, the fragrance in earth, the eternal seed of all things that exist, the life in all; I am the goodness of the good; I am the beginning, middle, end, the eternal in time, the birth and death of all."

An ancient Egyptian hymn thus addresses the same unitary Power: "Thou art the Lord of lords, who revealeth himself in all that is, and hath names in everything. Thou art Youth and Age. Thou givest life to the earth and its streams. Thou art heaven, thou art earth, thou art fire, thou art water, thou art air, and whatever is in the midst of them."

It is universally felt, the world over, that the essence of reality is acting-power, which to us means phenomena-producing efficiency. And it is a natural tendency of our human comprehension to unify such power, to regard all phenomenal revelations as the manifestation of one and the same eternal efficiency.

In its early poetic rapture, the mind of world-dependent man, intoxicated with pantheistic veneration and awe, finds divine presence and fulfillment in every natural object and event. But, sooner or later, ripened experience, with its miseries and disappointed hopes, causes it to relinquish its youthful faith in temporal facts and aspirations. Sickened at all the cruel happenings of this delusive and transitory realm of sense, it ends in yearning toward deliverance from the insufficiency of time-mutations through reunion with the eternally One.

The transcendent enlightenment that in the solitude of Bohimanda filled the ardent soul of Gautama with blessed peace, and the message of deliverance to all men; that in the Judean wilderness entered the compassionate heart of Jesus, bracing it with unwavering fortitude to show—in opposition to all the killing powers of this earth—the way to the kingdom "which shall never be destroyed," there to become "perfect, as the Father in heaven is perfect"; the enlightenment that, with ineffable satisfaction, has entranced the mystics and saints of all ages and climes,—that beatific enlightenment has ever consisted in the penetration of the dreamlike evanescence of this whole checkered display of sense, urging the undying life in us to draw near and nearer the unbroken light of eternal Perfection, renouncing for evermore the delusive allurements of this temporal scene of passionate strife.

Manifest existence, restless shifting in Time,—it is only an unreal semblance, a phenomenally estranged emanation from eternal All-Being. This is the conviction that has ever formed the central incentive to saintly life.

Now, is it true that modern science, assiduously testing such phenomenal existence, following it up in all its intricate relations with rigorous precision,—that genuine objective science has actually arrived at the same ancient pantheistic conclusion? Does it, in all verity, likewise teach us that the things and events of this world are but transient manifestations of one and the same transcendent and eternal Force, Energy, Power, or whatever name may be given to the inferred cause and substratum of all apparent existence?

If—as now claimed by eminent philosophers—science has positively shown that all natural phenomena are but so many modes of manifestation of one persistent Force or Efficiency, all such modes being mutually convertible, so that new phenom-

ena only arise through metamorphosis of previous modes of manifestation,—if such is really the verdict of modern science, then assuredly its outcome is full-fledged Pantheism.

I have no desire whatever to contest any legitimate outcome, and if it were Buddhistic Nirvana or even the place where Dives received his compensation. But let us scrutinize somewhat more attentively the great principle of the Conservation of Energy, or Persistence of Force, which seems so suddenly and strangely to have landed modern science in the mystic realm of transcendental Pantheism. I say *transcendental* Pantheism, because natural science has often before been tempted to acknowledge, in the common material substratum, a pantheistic One-and-All, differing altogether from the transcendental source of immaterial energy here assumed.

Natural science has reached the principle of the Conservation and Transmutation of Energy by detaching, from the constant quantity known as matter or rather mass, all modes of motion, and therewith all activity in nature. To such activity it gives the name of energy, and maintains with regard to it, that it is likewise a constant quantity, never diminishing nor augmenting, but undergoing transmutations from one mode into another.

Mayer, of Heilbronn, the illustrious discoverer of this great magistral and potent abracadabra of modern science, explains that matter, the passive half of nature, being notably a ponderable object, activity or energy is distinguished from it by being an imponderable "object"; and that this immaterial object is the cause of all effects, at once producer and product, at once *natura naturans* and *natura naturata*,—effect of itself, veritable *causa sui*. One mode of energy, kinetic energy, for example, is the cause of another mode of energy, heat, for example; and the kinetic energy causes the heat-effect simply by converting itself into it. Mayer says, "Since *c* becomes *e*, and *e* becomes *f*, etc., we must regard these various magnitudes as different modes, under which one and the same object makes its appearance."

Modern science, however, while playing such surprising juggling tricks with the immaterial "object" called energy, refrains from doing the like with the material object called mass. And here it is that our pantheistic imagination encounters its first serious check. Never, by any means, does modern science contrive to make it plausible that one kind of mass becomes converted into another kind of mass,—a pound of oxygen into a pound of hydrogen, or a pound of carbon into a pound of sulphur. And no alchemy of art or thought can avail to make different masses result from the varied manifestation of one and the same unitary power. For, even if we admit that our present chemical elements are really compounds, consisting of multiples of one and the same primordial unit of mass, such original homogeneous substratum science looks upon, and is in fact compelled to look upon, as made up of discrete elements of stuff,—of such stuff, we may philosophically add, as matter is likely to be, independently of our perceiving it. As far as natural science can at all proceed with its analysis,—and, by dint of its newly acquired appliance of spectral analysis, it can proceed very far,—it everywhere detects persistent, individuated units, as the original material of which all things in nature are composed. It finds elementary separateness, primordial multiplicity, and by no means indiscernible Oneness, invariably underlying that reality which we perceive as the objects of this world. These are, evidently, compounds of definite given units, not differentiations of a conjectured unity. They are gradually elaborated combinations of primitive particles of world-stuff, not

particularizations within the identical perfection of pre-existent All-Being. Further into the mystery of creation science cannot penetrate. But such is its ultimate, veritable, legitimate outcome,—an outcome utterly and uncompromisingly unpantheistic.

And now to revert to the energy by which the natural compounds are moved to display their various modes of activity, it is, indeed, only a whimsical fiction, a conceptual trick of our abstracting and unifying mind, to conceive such energy as one and the same immaterial, indestructible entity, entering in and out the inert masses, and metamorphosing itself into all manner of modes. A motion cannot possibly exist independently of its moving mass. It cannot detach itself from such a mass, and become a separate thing, in order to enter some other mass. Energy is avowedly a product of mass and velocity. How then can energy, leaving its mass behind, nevertheless remain quantitatively equal?

Modern science, so naïvely proud of this its will-o'-the-wisp conception of natural efficiency, has obviously—here at the very starting-point of its deductions—lost itself in fancies as erratic as any dream of speculative philosophy. With deeply felt humiliation, be it confessed that the notion of an immaterial agent, playing in mid-air, in free space, a complicated game of billiards with elements of mass, is not a very edifying cosmological outcome of our much vaunted modern science. And this outcome is certainly not Pantheism.

But, perhaps, by allowing full swing to conceptual Thought, that arch-juggler, by force of some dexterous dialectical handling of the stubborn results of science, may, after all, succeed in bringing about a pantheistic outcome. Indeed, accepting the notion of Energy as formulated by modern science, if the stolid *caput mortuum* of things called mass could only itself be somehow converted into such energy, then we should have in our world but one single immaterial entity, metamorphosing itself into every known mode of manifestation; and that would evidently be Pantheism.

Nothing easier, says our juggler; for, if mass were not energy, how could it affect our own being so as to become conscious to us? In fact, when the matter is reconsidered, it will become clear that mass, instead of being effectless inertia, must itself constitute a very centre of efficacious energy. Mass exists, and is known to us by its resistance; and what is resistance but energy? It is measured by means of its weighing pressure; and what is weighing pressure but again energy? Obviously, in whatever way we may ascertain the existence of mass, and by whatever sense we may realize such existence, energy, and nothing but energy, is found as the whole essence and substance of it. Mass, then, is no effectless *caput mortuum*, as assumed by philosophically unenlightened science, no inert plaything of a disparate immaterial power, but is itself identical with that power, forms itself part of the energy-emanating potency, through which our phenomenal world issues into manifest existence. I think our dialectical juggler may confidently challenge any one within hearing distance to disprove the truth of these assertions,—assertions which undoubtedly have the genuine pantheistic ring.

But now arises the supreme puzzle in the world problem; and that is to fix the veritable seat of the nature-constituting power, of the phenomena-producing efficiency. Here, again, our consummate juggler steps in, seizes upon the only reality which his art has left in existence, and with a facile turn of his dialectical skill shows us that this sole efficiency in nature can be nothing but mental intelligence. For is it not true that the subjective sen-

sations of resistance and pressure, or other subjective sensations standing as signs for these,—is it not true that such mental facts are the only actual data from which our conscious being, our understanding or intelligence, constructs that phenomenon of solidity which we call mass? And are not all other properties of this intelligence-constructed nucleus of objective phenomena, its motions included, likewise put together by our constructive intelligence from other data of sense, which are also only purely mental facts? Resisting, extended, shaped, visible, tangible, audible, tastable, scented objects, and all their sundry relations to each other within that system of phenomenal existence which in our consciousness constitutes the world we know,—is it not all in all the work of our constructive intelligence? And, this being so, is it not undeniable that all objective world phenomena are intellectual constructions, products of synthetic thought; that Thought is thus the veritable, universal power, the great and sole creator and artificer of phenomenal existence? No reality whatever, no world, external to thought.

If mental philosophy be admitted into the system of knowledge here designated under the name of "modern science," then this its Eleatic, neo-Platonic, neo-Kantian, transcendentalistic outcome is outright Pantheism, whatever theistic twists may be given to it in some quarters. It does not essentially affect the pantheistic character of this outcome, whether the all-efficient, reality-constituting power be conceived by human understanding as eternal Reason, or creative Will, or all-embracing, supermental Perfection: the universal meaning of it all is an entity infinitely transcending all modes of phenomenal existence, being the common, identical source and origin of them all.

On various occasions, whilst propounding and defending my own naturalistic views, I have endeavored, to the best of my ability, to enter into the spirit of this profound and venerable system of thought that from old has inspired so many noble minds, and from which all other philosophy has emanated. In the light of a new science of vitality and organization, I have sought to give a different explanation to its truths and to lay open its deficiencies and fallacies. Here I will only reassert that the ethical aims of genuine Transcendentalism and the ethical aims of genuine Naturalism are diametrically opposed to each other, and can never be reconciled. If supreme reality and truth are indeed pre-existent facts, securely resting in a universal Intelligence, and our phenomenal world means only the inadequate rethinking on our part of such eternal reality and truth, then, consistently, our final aim must necessarily be the dissipation, through adequate thinking, of the illusive phenomenalism which differentiates our individual intelligence from universal Intelligence. Our inmost striving can only be for deliverance from the sensewrought confusion of temporality, leading to complete reidentification with the eternally One.

Asceticism and Quietism are the necessary outcome of all lofty Pantheism; and Pantheism, the necessary outcome of the religion of self-questioning consciousness, as well as of that of an *ens amplissimum*, or Absolute.

The central belief of Naturalism, on the other hand, is the conviction of the extra-mental existence and veritable reality of powers actually affecting our sensibility. It firmly maintains, as a steadfast basis of all its reasoning, that individual perceptions are compelled by powers not forming part of our own consciousness, and that these perceptions signify representatively, but with minute precision, the true characteristics of the compelling powers. All doings of natural life, all investigations of natural science, are, in fact, prompted by

this fundamental belief, and find their realization and verification in the world of perceptual compulsion. It follows therefrom that what we consciously realize as our own body is likewise only a group of such compelled perceptions, and that not these perceptions themselves, but the powers compelling them, are constituting our real bodily existence,—an existence forming part of the great system of extra-mental powers, of which our whole perceptual world is but a more or less faithful symbolical representation.

Naturalism further recognizes that this our extra-mental being is standing in most manifold and complicated relations to other extra-mental existents, and that it has been gradually, phylogenetically moulded and intimately organized through constant interaction with these existents. In consequence of this, its vital reactions are found to constitute pre-organized responses to the actions of the other power-complexes, and its own actions show themselves capable of influencing in pre-established ways the existence of other power-complexes.

Veritable reality then, the reality phenomenally represented in consciousness, is found to consist of a system of definite, interdependent, interacting, extra-mental power-complexes. These efficient existents, compelling the perceptual objects of our consciousness, have to be looked upon as of complex nature, because analysis proves them to be composed of constituent parts. The dreamlike phenomenality in nature, the transient appearance and evanescence of perceptive realizations, is evidently due to the nature of our consciousness, and not to the nature of the power-complexes, compelling its perceptions. Our consciousness, or mind, represents in fitful gleams, under varying conditions and temporal intermissions, the incomparably more steadfast existence and nature of the extra-mental power-complexes. And the natural phenomena or perceptive objects of our conscious world are therefore by no means manifestations of one and the same Force or Unknowable, but, on the contrary, manifestations of an extra-mental, non-phenomenal nature, at least as diversified and specialized as its mental representations. Pantheism is consequently no legitimate outcome of Naturalism, the genuine philosophy of natural science.

The utterly erroneous conception, that manifest existence consists of nothing but phenomena which are mutually convertible, has given rise to this pseudo-scientific revival of the pantheistic philosophy of the Absolute. But not even within the world of phenomena, which exists only in individual consciousness, does one phenomenon or mode of manifestation become really metamorphosed into another. Physical modes, which as such are only peculiar conscious phenomena, do not become transformed into other such physical modes, or into any other kind of conscious phenomenon whatever. The preceding mental state, whether objective or subjective, whether physical or purely ideal, whether extrinsically compelled or intrinsically arising, does not itself produce the following mental state, as Fichte once tried to make us believe. Much less does an extra-mental power-complex become transformed into its mental representation; for example, that definite power-complex steadfastly abiding out there into that occasionally appearing conscious object which I call a tree. And still less are the changes in phenomenal manifestations caused by one power-complex being metamorphosed into another power-complex. The action and effect of one power-complex on another does not consist in their being mutually transformed one into the other. And neither is the change perceived by us, during activity, as motion, itself an efficient entity, passing over from one power-com-

plex to another. Changes in nature, while occurring, affect our sensibility, and are realized by us through the shifting of the whole or of parts of our perceptual objects. It is this sensible shifting which we call motion. Quite obviously, such motion is a mere mental sign of the changing influences which the extra-mental complexes exert on each other. But, by illusively objectifying and fictitiously endowing with independent efficiency this mere mental sign of veritable change, modern science arrives at its false conclusion concerning the persistence of Force and convertibility of its modes. It mistakes motion, the perceptual phenomenon, for an actual and direct manifestation of objective extra-mental Force. And as changes manifest themselves to us as motions, and one mode of motion seems to produce or to transform itself into another, it rashly concludes that motion, which thus stands for all activity in nature, is itself the causative force; that its various modes are therefore modes of efficient power, and that the unitary entity, thus metamorphosing itself into all manner of modes, is an all-efficient Unknowable. This pantheistic conclusion is—as has been here clearly shown—the outcome of illegitimate reasoning, and not of genuine modern science.

The results of modern science point to a gradual elaboration of abiding and diversified power-complexes, not to the metamorphosis of fleeting modes of manifestation of one and the same eternal Power. The philosophy of Evolution is quite incompatible with the philosophy of a Protean, all-powerful Unknowable. Evolution, which conceives "every kind of being as the product of modifications wrought by insensible gradations on a pre-existing kind of being," cannot be brought in harmony with the convertibility of one mode of an Unknowable into another.

The extra-mental power-complexes with which modern science actually deals modify each other, mostly very gradually, through intricate modes of interaction. They are therefore slow results of complicated elaboration, which process is altogether operated in the non-phenomenal sphere of extra-mental subsistence.

Our own personality we are justified in regarding as the most consummate outcome, within our own ken, of this natural process of development,—a development wholly inscrutable in its origin and efficiency. The mental phenomena of our personality are certainly not produced by motions within the perceptual body, which constitutes for us and others its sensible realization. But they are the outcome of transcendent activities, occurring in that mysterious entity which beyond all consciousness is carrying on with unremitting faithfulness the wondrous functions of life.

In our being are consolidated the hard-won results of endless vital travail. Wrought from insentient chaos, our world-harmonized existence, with delicately sensitive throb, now answers to most subtle and far-reaching influences. Sympathetically, with ever-widening comprehension, it echoes the thrill of connatural existence. But—how precarious this precious, toil-wrought inheritance of high-pitched, consentient vitality! Within this very moment of actual presence, we here on earth, sole-surviving embodiment of ever-struggling, victorious life, only through the unrelaxing effort of uplifting efficiencies are snatched, from instant to instant, from the grasp of all-engulfing Time and Death; a dizzy whirl of creative commotion, significantly shaping and livingly sustaining our being. And, on this restless foil of incessant formative stir, in self-luminous glory the transcendent import of our time-conquering, world-responsive nature stands revealed within the phenomenal repose of our all-realizing mental presence.

Actual living existence, thus recognizing its transcendent indebtedness to the Past and its sacred duty to a Future wholly dependent on it,—can it have the heart in self-indulgent renunciation to abandon its creative trust and task, giving itself up to the quietistic aims of Pantheism, by which it may well enough succeed in losing its own being in the eternal nonentity of Nirvana, but by which it will also most assuredly cause surviving human life to drop from its cultured height, and swiftly to fall a prey to the hideous miseries of mere instinct-driven savagery?

A creed which, universally and consistently lived up to, involves the voluntary extermination of the human race, leaving our fair dwelling-place one vast arena of murderous brute passions, and which, lived up to only by the better part of mankind, would lead to degradation of social existence,—such a creed is not the one fostered by science. Nowise is the legitimate outcome of modern science Pantheism.

CORRESPONDENCE.

CHARITY WORK.

Editors of The Index:—

Having spent much time during the past fifteen years or more in charity work, I would like to make a few suggestions based on this personal experience, as your writer in the last issue invites.

I. Intemperate use of stimulants among the poorer classes can be combated with fair success only by instructing all, old or young, in the average evil results of such excesses, both physical, mental, and legal. High price for liquor licenses, prohibition, temperance pledges, missionary work, not using the average results as facts to argue from, but exaggerations or misstatements, are worse than useless in getting the desired reform, as human beings can best be turned away from a certain course by fears of actual suffering in themselves. Cases of true dipsomaniacs of either sex—and there are many such—should be confined where they can do the minimum amount of harm to the community.

II. Extravagant living is hard to argue against, since the so-called upper classes continually set the pernicious example for others to follow, who may lack that strong individuality which is needed wisely to shape their lives. Still, something can be done with this evil surely by the persistent striving to encourage economy from purely selfish grounds, as giving, on the whole, the greatest sum of happiness.

III. Church tribute, under its many guises, is another great cause of much poverty among the middle and lower classes; and education of the masses is the only hope for real permanent relief from stupidity and superstition. Far too little weight is given to this matter by charity organizations, whose agents must needs be aware of the fact, if ordinary discretion and insight alone are but used by their investigators; and, knowing it, there can be no valid excuse in concealing it.

IV. Sickness, involving expense of physicians, drugs, and appliances at home or elsewhere, is to some degree provided for in the larger cities; but, in small places and country districts, a system of co-operation might easily be made, which would, at small total expense, insure some medical care to the sick, and a small fee to the physician, who now is so often unpaid and so freely called. Neighbors could agree to pay so much regularly from their earnings to a sick-fund, which would not be onerous, and yet would provide for emergencies of this sort.

V. Charity aid consists of two kinds: the giving needed temporary aid, in money or otherwise, to proven worthy cases promptly and cheerfully; the getting employment of a reliable character for good unemployed. To indulge a morbid form of curiosity in the rich in favoring the visiting the poor in their homes is simply weak, as it gains no good object. Poor people can see and judge of what a visitor seeks quite as well and correctly as any one else; and undeserved insults or assaults in such circumstances are not the rule, it may be depended on. It is not charity to visit a poor person, provided he be honest, and furnish him with some platitudes, theories, or lay

sermons, and forthwith depart to make a record more or less correct for the inspection of many. Poor have their rights as well as rich, and it is as much an impudent trespass to enter uninvited the home of the former as that of the latter.

VI. In all other affairs of life, experienced workers are the most desirable. So should it be invariably in charity work. The inexperienced, timid, over-nice, over-sympathetic, even, are not the proper persons to select to visit for the purpose of aiding the poor; for poverty, vice, dirt, disease, violence of all kinds, are closely wedded in all poor localities, and cannot be seen separately, except in extremely rare cases. From the very nature of things, therefore, women are not as proper to become promiscuous visitors to the poor as men. Neither are young or very old men suitable; but kindly, sensible, middle-aged men of experience are the best for the work.

VII. If each person would but deny himself considerably in luxuries, the object being to contribute from such savings to those less fortunate and in distress in his immediate neighborhood, the need of public charities would be much less than now; and such self-denial can be as easily learned as any much more fashionable habit by any one, if only the courage to face ridicule at first is mastered.

VIII. In *The Index* of March 6, 1884, there was published a short article bearing on the contributing evil of a falsely stimulated pauper immigration here. This evil has since then met with some considerable opposition, and a resulting decrease is noted. Let us hope the good will continue.

IX. Parents should be forced always to contribute to, if not wholly support, their children,—not, as now, to be able to be rid of them far too often by simply abusing or neglecting them,—legally as it were, for the cases are so settled in the courts. This crowding many children into institutions for years together is quite as bad a practice as that of imprisoning older people of both sexes with many other criminals, if ever they are to be decent citizens again later.

X. Politics and true charity cannot live together, hence the constant troubles and scandals at our State House here in regard to State charity, not to speak of the great expense involved in maintaining such department.

JOHN DIXWELL.

BOSTON, MASS., Aug. 14, 1885.

A LETTER FROM NORTH CAROLINA.

Editors of The Index:—

The women of the North can have little conception of the hindrances which their sisters of the South encounter in their efforts to accept new and progressive ideas. The other sex, in a blind sort of way, hold fast to an absolute kind of chivalry akin to that of the renowned Don Quixote, by which they try to hold women in the background, as a kind of porcelain liable to crack and breakage, unless daintily handled. Women here see the spirit of the age and the needs of change far more clearly than the men, and act up to this light, but with a flexible grace that disarms opposition. They see the necessity of work, and are turning their attention to methods for remunerative labor, far more difficult to obtain at the South than at the North.

Soon after my arrival at my son's house, Mr. Appleton Oaksmith, I was gratified at receiving a visit from Mrs. Mary Bayard Clarke, a poet of the South, and well known as a fearless advocate of progressive ideas, but so winsome in her advocacy and clear in her arguments that few have the courage to withstand her. We passed a happy period together, and I learned from her much of the state of opinion South, with cultivated men and women. Her husband is a distinguished judge on the bench, and her accomplished daughter took the initiative in the Dignity of Labor (I quote the title of one of my lectures of forty years' standing), as you will see by the following, which I cut from a New Orleans paper: "In the North Carolina State exhibits is a large collection of mounted fishes prepared specially under the direction of the State authorities. These are mounted by Davidson's method of ichthy-taxidermy, are properly classified, and have been examined and commended by Prof. Jordan and other ichthyologists. They are the work of the firm of Clarke & Morgan, of New Berne, the junior member, Mrs. Mary D. Morgan, having prepared about one-half of the collection. The firm have also a collection of aquatic fowls on exhibi-

tion. They do a fair business in scientific and millinery taxidermy, and have a contract to duplicate the collection of fishes for the North Carolina State Museum. Mr. Clarke does the field work, Mrs. Morgan attends to the shop work, and thus solves the question of a living for herself and two fatherless children."

It is further stated that Mrs. Morgan not only mounts her birds in a beautiful, artistic manner, but is a good shot, and brings down her own birds. I am soon to visit her room, when I shall be able to speak with better understanding in the matter. In the mean while, I trust these birds are for scientific purposes, and do not go for the decoration of ladies' bonnets. Every woman ought to set her face against the cruel, wicked vanity of ornamenting her hat with these rare and beautiful creatures. The practice, if persisted in, will soon deprive us of birds of song, and most especially of the lovely humming-bird, the winged gem of our aerial denizens. If we are rightly informed, Mrs. Morgan's birds are of the aquatic kind. And she does not confine herself to birds. She is now preparing an alligator eight feet in length, which was ordered for a museum in Berlin. You will see by this that North Carolina women are fully up to the times.

Mrs. Mary Bayard Clarke is a graceful, accomplished woman, and a fine conversationalist. She writes courageously, expressing opinions in advance of those around her with fine poetic inspiration and good, sensible prose. She is a great favorite, and the centre of the intelligence and grace of New Berne. She tells a story with admirable taste and spirit. On the mother's side, she is allied to the Bayards of chivalric memory, as also to the Cabinet minister of the present administration. The Polks, also, the president and archbishop, are her relatives. Bishop Polk, the friend and neighbor of Gen. Andrew Jackson, was an uncle of hers, by whom is told the following characteristic story of the hero of New Orleans; and the bishop used to say it ought to be told to the general's fast friend, Major Downing (Seba Smith):—

Bishop Polk was always a welcome guest at the Hermitage, often walking in the garden in company with Gen. Jackson, and continuing the practice of meditating there after the death of its brave owner. One twilight, being thus employed, he was joined by a young acolyte ambitious of ecclesiastical honors; and the conversation naturally turned upon the character of the departed hero, when the young man asked,—

"Well, Bishop, do you think Gen. Jackson was a good man, and when he died that he went right into heaven?"

This was a home question, but the bishop was equal to the occasion. Turning to Michael, who for thirty years had been gardener at the Hermitage, he replied:

"Here is Michael, who knew him better than any of us. What do you say, Michael? Do you think the general was a good man, and, when he died, he went right into heaven?"

"I don't know, your Reverence, so much about what your honor calls good; but this I know,—if the general took a notion to go into heaven, all hell couldn't keep him out!"

Is not this a refreshing piece of positivism, putting our flimsy agnosticism quite to shame?

Mrs. Clarke uses a writing machine, which it would seem is not well known in this part of the country. Having occasion to write a business letter, the person addressed very considerably wrote her back: "Do not be at the trouble of printing your letters to me. I am not an ignorant person. I can read writing very well."

Yours cordially,

ELIZABETH OAKES SMITH.

HOLLYWOOD, N.C., Aug. 11, 1885.

CHRISTIANITY.

Editors of *The Index* :—

Strictly speaking, it may be true that "it would be absurd to consider a tree with reference only to the seed from which it grew"; but it is truer still that nothing can be evolved into a tree that was not first involved into the seed from which that tree has grown. The whole tree is contained *potentially* in the seed-germ, and nothing can be called a part of the tree that was not implicitly in the germ. Devices for keeping off canker-worms, fancy seats or towers, birds' nests, etc., are not parts of the tree. So that only is Christianity which has been developed from, is the natural and legitimate outgrowth of, the original Christian idea or germ; i.e., the teaching of Christ, the meaning of his spiritual life. Anything

that is not the legitimate outgrowth of the Christian idea is not included in Christianity. All such are excrescences. We should distinguish between the real tree, that which is growing from the germ, and the additions that have in different forms been attached to its outside, and form no part of its life. One who knows trees will recognize what is tree and what is paraphernalia, and so one who knows Christianity will recognize what is Christianity and what is paraphernalia. What Christ stood for, what his life meant, is the germ. All that has developed from, has its origin in, that germ, is Christianity. All that has been tacked on is something else. (1)

Again, since it is the letter that killeth, and the spirit only that giveth life,—in other words, since we should seek the inner spiritual meaning of a teaching, and not take it literally,—the teachings of Christ regarding poverty, chastity, etc., which are objected to, must be taken in the light of the spirit with which they were uttered. Why were these things to be done? What did Christ mean by these injunctions? We may be sure that in these, as in all else that he said, there is a meaning not on the surface, and only to be seen by the eyes of the spirit; for it was to man *as spirit* that Christ was talking. The world too generally, whether so-called "orthodox" or so-called "liberal," takes the letter for all, mistakes the physical for the spiritual, matter for mind or soul; and, while it does this, it cannot understand Jesus, nor recognize the germ of Christianity from which the tree has sprung,—a tree often very nearly hidden, it is true, but yet flourishing among us to-day, and visible to those who have eyes to see. (2)

What Christ came to earth for was to manifest God as the Father of mankind, to proclaim to all men that they are brothers, equal in the eyes of a common Father. This was what he stood for, distinctively, and as distinguished from other great teachers. In him "there is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female": all men are equal, children of one Father. It was the spiritual life that Jesus lived and taught, and all that he said must be taken in its spiritual and not in its pragmatical sense. Regarded thus, there has never another lived who is so great a teacher and example as he. (3)

Further still, it was only with Christianity that man came to the consciousness that *as man*, as a personality, he is a free being. This consciousness of freedom in its full realization is the ultimate end of man's progress. Toward this realization, he has always been tending; and all history is nothing more than the progress of this idea toward fulfilment. To this conception that man (i.e., spirit; for man is spirit, and not matter) is free, the Orientals have not attained. They only recognize that one is free; and, since only that one is free, and the rest are not free, the one is a despot. The Greeks were the first to perceive the glimmer of this truth; but they only saw that *some* men are free, not all. It was the German nations, under the influence of Christianity, that first attained to the consciousness that man, all men, is free; that is, that the essence of spirit is freedom. Ever since then, this idea has grown and grown, slowly, as all good things grow, until here in America it comes nearer realization than ever before. The germ, the spiritual idea of freedom for all, was planted eighteen hundred years ago. The tree of freedom is not yet full grown; but "let patience have her perfect work," and we shall one day see the realization. (4)

Finally, it is true that we admire, and justly, the man who faithfully performs the common duties of life; but we must also admire that man who loved the whole human race as his family, whose country to defend and protect was the whole world, who was perfectly pure in life and heart, and whose religion was morality and philanthropy in such perfect accord that all the every-day man or woman need do, or indeed has done, is to try to follow his example in the way that is determined by their own peculiar environment. We cannot understand Christ by abstracting particulars from his teachings, and taking them according to the letter. The *spirit* of his life, the *universal* meaning of his words and acts, will alone teach us the lesson of his coming, and the true import of the religion that bears his name. (5)

H. R. SHATTUCK.

[1] Our critic seems to have been misled in the above reasoning by the old and exploded notion of

potential powers. The potentiality of the seed germ, precisely stated, is its capability of reaching successive stages of development, aided by a definite series of conditions, which, co-operating with it, constitute one of the prime factors of which the seed germ is the other in producing the result. Given an acorn and atmosphere and soil, and an oak tree will be evolved from them. The tree is not in miniature either in the acorn or in the medium: it is produced by the co-operation of both. Conditions initiate variations, which in time change the *structure and quality* of the tree. What is evolution but a process by which, in changing environments, the most complex have been evolved from the simplest forms of life? In unfavorable mediums there has been degeneracy. In both cases, the organisms have been "the natural and legitimate outgrowth of the original" germs *under different conditions*. This is as true of religious as of vegetal and animal life. With its Messianic claim as a dominant idea, with its doctrine of allegiance to the Christ and salvation through his mediation, Christianity, in the peculiar environment in which it took root and grew, developed into the Greek and Romish systems. In a different age and under different circumstances, it would have assumed a different form and character. To the "excrescences" of Christianity, the additions attached to it, unassimilated, and forming no part of its life, we do not here allude.

(2) The spirit of an utterance does not change it, if it be erroneous, into a truth. Sincere and well-meaning error is often the most dangerous. If language has any definite meaning, Jesus taught that which, if reduced to practice, would be condemned and opposed by the best men and women of this age.

(3) The doctrine of the fatherhood of God and the brotherhood of man was taught by philosophers and poets ages before Jesus lived. Did not Paul, in his address to the Athenians, quote from one of their poets, "For we are all his offspring"? The doctrine was not uncommon when Jesus lived.

(4) If we understand the main statements in this paragraph, they are not, in our opinion, just to the ancients, and they make claims for Christianity that cannot be sustained. The Greeks had a passionate love of liberty, conceptions of which, however, have become broader with decline of belief in the Christian system and the development of the arts and sciences, commercial intercourse, and a thousand secular agencies that have brought nations together and interlinked their interests. But what were the people's idea of liberty in *this* country, even where "it comes nearer realization than ever before," when, within the memory of men who still live, the pulpits, the courts, and the sentiment of the nation supported a system that kept millions in slavery; and when to-day women are disfranchised, and laws exist discriminating against men on account of religious opinions and making support of churches compulsory?

(5) We try to interpret the life and character of Jesus, as we would any other man, from his acts and his words. In so far as he encouraged poverty, discouraged marriage, enjoined non-resistance and disregard of this world, and neglected to give any exposition of human rights or any ideas of government, or to say a word in favor of science and the industrial pursuits of life, all of which are of vast importance to intellectual and moral as well as to physical progress, we do not see how he can fairly be held up as a perfect example to follow in this world. Only by ignoring his errors and shortcomings, idealizing him, and making him therefore an unreal character, is it possible to regard Jesus as a model man. This implies no inappreciation of his real excellences. The assumption of esoteric or hidden spiritual meanings in absurd doctrines is no proof of spirituality in any exalted sense of the word; and they who thus deal with the palpable errors of the New Testament give no evidence of a spiritual insight superior to the wisdom of those who judge Jesus of Nazareth as they do Socrates, Epictetus, and Emerson.—B. F. U.]

THE following extracts from the two best known expositors of the doctrine of the correlation and conservation of forces have a bearing on a subject to which Dr. Montgomery gives prominence in his essay printed in *The Index* this week. Grove says: "The evolution of one force or mode of force into another has induced many to regard all the different natural agencies as reducible to unity, and as resulting from one force, which is the efficient cause of all the others. Thus, one author writes to prove that elec-

trictly is the cause of every change in matter; another, that chemical action is the cause of everything; another, that heat is the universal cause, and so on. If, as I have stated it, the true expression of the fact is that each mode of force is capable of producing the others, and that none of them can be produced but by some other as an anterior force, then any view which regards either of them as abstractedly the efficient cause of all the rest is erroneous. The view has, I believe, arisen from a confusion between the abstract, or generalized, meaning of the term 'cause' and its concrete or special sense, the word itself being indiscriminately used in both these senses." The following is from Dr. Mayer's "Remarks on the Mechanical Equivalent of Heat": "It is plain that the expression 'equivalent' is here used in quite a different sense from what it bears in chemistry. . . . There is no thought here either of the quantitative equality or the transformation of the bodies in question."

M. A. G. (who is a most estimable woman) writes: "The article on 'The Rights of Animals' in *The Index* of January 29, and the reply to Mr. Savage in the number of April 16, I have read with the deepest interest and pleasure; and I want to thank the writer personally. It is the clearest, most decided, and most powerful and satisfactory plea in behalf of what man is usually pleased to call the lower creatures that I have ever read. This is a subject in which I have been greatly interested for years. Greater protection for animals is greatly needed, and more sympathy with their sufferings and wrongs. All other rights have been recognized, save only the rights of animals. I have long been a believer in their immortality; and what is said in these articles has done me good, and comforted me not a little. I could not believe in a loving God who would create beings with every capability of suffering mentally as well as physically with ourselves, and then forsake them at the last, and give them over to death, with no future recompense for the sufferings, the terrible wrongs, and the burdens borne so patiently and meekly here, with no better life, no happiness beyond. Oh, no! that he would not do. Christ has said, 'In my house are many mansions.' They who speak with scorn of the inferior beings here may be much surprised some day at the position which their silent progress here has gained for them in another world. Heaven will doubtless be full of surprises."

BOOK NOTICES.

THE August number of the *Andover Review* opens with a study of the life and leading characteristics of Cardinal Newman, by Rev. Francis B. Hornbrooke. Rev. Newell Woolsey Wells, of Brooklyn, follows with a comparison of Mr. Froude's *Becket* with Lord Tennyson's. E. A. Meredith, LL.D., for several years inspector of prisons in Canada, points out the evils of our jail system, and advocates their reform in an article entitled "Compulsory Education in Crime." Ex-President Woolsey contributes an elaborate examination of the passages in the Fourth Gospel which speak of "The Disciple whom Jesus loved." The personality of the Apostle John and the peculiar relations subsisting between him and Jesus are strongly depicted. The editorial space is given up to the fourth paper in the series on Progressive Orthodoxy, and treats of certain questions which are now under discussion, and will be read with keen interest. The number concludes with book reviews and notices. Houghton, Mifflin & Co., Boston.

THE contents of the *Freethinkers' Magazine*, which we are glad to observe improves with every number, for July are as follows: "The Church and Slavery," by Oliver Johnson (reprinted from the *Commonwealth*); "Mrs. Stanton Criticized," by Hon. A. B. Bradford (reprinted from the *Truth-Seeker*); "The Past and Present," by J. J. McCabe; "Antiquity of Sacred Writings," by William D. Coleman; "Free Religious Festival," by F. M. Holland; "Free Religion," by B. F. Underwood (reprinted from *The Index*); "Who are Freethinkers?" by Charles Weil, M.D.; "Lo, Here," by J. D. Curtis; "Extracts from Letters"; and "Editorials," among others entitled "The Free-thought Movement," "The Freethinkers' Convention," and "The Freethought School," to which are added book reviews, notes, etc., making the reading offered in this number varied and of more than usual interest. Mr. H. L. Green, the publisher and editor, informs us that the magazine will be published monthly after this year. (Salamanca, N.Y.)

"MIND" for July contains a great variety of articles of absorbing interest to those whose aspirations are toward a better comprehension of the mysterious realms of sentient existence and its multifarious relations. B. Hodgson has an important and lucid essay on our "Consciousness of External Reality," in which an advance on the conclusions of previous great thinkers is attempted. E. H. Rhodes treats of the "Measurement of Time" in an essay of great scientific importance, in which he shows that "it is not time itself that we measure, but the duration of events, just as it is not space that we measure, but its material limitations." I. A. Macdonald discourses on the "Science of History," criticising the view of the evolution of human consciousness held by Spencer and many others on the ground taken by Prof. Green,—that consciousness is entirely diverse from all evolutionary and successive events, in the fact that, in realizing these successions, it must hold them in one indivisible moment independent of time. Hence, in consciousness itself, time is not. But Dr. Edmund Montgomery has shown in previous numbers of *Mind* that, as all our consciousness is momentary and not successive, it never in itself persists, but must be newly created from moment to moment; and whatever is remembered of the past is newly reproduced from extra-conscious sources. He continues his profound and thorough investigations into the nature of our realization of "Space and Touch." By the closest reasoning, he refutes many metaphysical and psychological theories of our cognizance of space, and shows it to be given in the very nature of feeling itself. Henry H. Donelson, of the Johns Hopkins University, contributes a valuable scientific paper on the "Temperature Sense." The discussions in this number are on "Mill's Propositions and Inferences of Mere Existence," by J. H. Levy, and an able and interesting paper by H. M. Stanley on the much-mooted question, "Is the Design Argument Scientific?" Among the critical notices is a lengthy one on Dr. James Martineau's great work on the "Types of Ethical Theory," lately published, and of other new English and foreign works. There are notices of most of the new books bearing on topics coming within the scope of this review.—F. S.

THE *Art Amateur* for August is quite a rich and varied number. "My Note Book" contains many interesting and suggestive paragraphs, which are stimulating to thought, if we do not always accept them as wholly true. It describes the almost unrelieved dullness of a Royal Academy exhibition in London in terms which recall the "Academy headache" which one generally brings away from it, although it is put in contrast with the more offensive horrors of the Paris Salon. It is a misfortune for national reputations that the best artists often keep their works in their own studios, and allow the general public no chance to see them. Those who like gossip about art will be interested in the account of "Two Curious Sales," and the description of the luxurious home of the painter Gérôme, "an improvised paradise of the Eastern World." There is an interesting paper on Jewish art, illustrated by some woodcuts of pictures by Frank Moss, of Philadelphia, and a statue by the Russian Antoloski. They are all Christian subjects. The statue of "Christ" bound "before the people" appears to be simple and severe in style and realistic in treatment. Another surprise is "Victor Hugo as an Artist," and the sketches here given certainly have a weird and impressive effect; but we could easily spare the view of the poet lying in state,—an artificial heightening of the ghastliness of death not to be perpetuated in art. The account of "A New-Port Nursery," some pretty figure designs, and two good drawings from Annibale Carracci will please those who look for decorative art. There are also articles on bric-à-brac, old china, and amateur photography.—K. D. C.

West Newton English and Classical School.

The 33d year of this Family and Day School for Boys and Girls begins September 16.
Address NATH'L T. ALLEN,
WEST NEWTON, MASS.

HOWARD COLLEGIATE INSTITUTE,

WEST BRIDGEWATER, MASS.

The Religion OF PHILOSOPHY;

OR,
The Unification of Knowledge.

A COMPARISON

of the Chief Philosophical and Religious Systems of the World, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God.

By RAYMOND S. PERRIN.

Octavo, cloth. \$4.00.

C. P. Putnam's Sons,

27 and 29 West 23d Street, New York.

A SEASIDE RETREAT.

Ocean Cottage, on Horseneck Beach, is situated about thirteen miles south-west from New Bedford on the open sea. Those wishing a pleasant and quiet summer resort, with all the accommodations of a first-class hotel without the restraints of a fashionable watering place, will be pleased with our home. We have one of the finest beaches in the country, with the surf at our door; excellent bathing and fishing; an inlet close by for those wishing to sail in smooth waters. Seldom any mosquitoes about the hotel.

For particulars, address JOSIAH WOOD,
No. 84 ALLEN ST., NEW BEDFORD, MASS.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crago.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

THE INDEX,
BOYLSTON STREET, BOSTON.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counterforces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammelled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

The Secret of the East;

OR,
 The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript*.

- V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).
- VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles E. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.
- VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.
- Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

Address **FREE RELIGIOUS ASSOCIATION,**
 44 Boylston Street, Boston Mass.

TRACTS

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extraneous.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address **THE INDEX,**
 44 Boylston Street, Boston, Mass.

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnerbund.)

Editor, **C. Hermann Beppe.**

TERMS, PER ANNUM, IN ADVANCE:
 UNITED STATES AND CANADA:

Freidenker..... \$2.50
 Turnersche Ausgabe des *Freidenker*
 (*Amerikanische Turnzeitung*)..... 3.00

EUROPE:

Freidenker..... \$3.00
 Turnersche Ausgabe des *Freidenker*
 (*Amerikanische Turnzeitung*)..... 3.50
 Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirtieth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing CONSIDERABLY MORE READING MATTER, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading "Turnersche Ausgabe des *Freidenker*."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.
 (Organ of the German-American Teachers' Association.)

Editor:

MAXIMILIAN GROSSMANN, Milwaukee, Wis.

Associate Editors:

H. H. FICK, Chicago, Ill.
H. SCHURICHT, Chicago, Ill.

16 large quarto pages, with four-page cover.
 Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

Orders for all kinds of books promptly filled. Radical and Freethought Publications a specialty.

CURRENT TOPICS.

BY B. F. U.

GEORGE JACOB HOLYOAKE, in his paper the *Present Day*, refers to *The Index* in very complimentary terms, and says it is a journal "of which we have no counterpart in England."

AMONG the speeches published by Victor Hugo in 1851 is one translated in the *Friedenker*, which declares, in the strongest language, his conviction that the priests should not be allowed to have anything to do with the schools or the instruction of children.

CHARLES BRADLAUGH has issued a manifesto to his Northampton constituents, commending to them the example of the Middlesex voters who continued to return John Wilkes every time the Commons declined to receive him, until at last Wilkes was admitted to his seat. The principle for which Mr. Bradlaugh and his supporters are contending is one of such importance that Northampton can afford to go unrepresented in Parliament a while longer, in order to secure its triumph.

A WRITER in the *Boston Transcript* says that Dr. James Martineau, in a preface to one of his books, issued some years ago, "confessed to having felt and shown 'a certain secondary sympathy with the beliefs' to which, primarily, he was opposed," and adds, "The secret of Dr. Martineau's career the last forty years lies in this 'secondary sympathy,' holding him back from his professed task of progressive leadership, and causing him, in fact, to lend himself more to the system which he was outliving (as he believed) than to that for which he was professedly living."

The following paragraph is from a letter received lately from a gentleman who is eminent as a philosophical writer: "The most urgent problem right before us is that of labor and capital. The slave question was nothing to it. Justice has to be done here also. Drafts on eternity, demand and supply, market wages, *laissez faire*, will answer no longer, especially in this new world of equal political rights. An enormous store of inorganic work-

ing power and efficacious mechanical appliances inherited by all, but wholly controlled and utilized by capital accumulated in the hands of a few! It will work no longer. Society has to be reorganized on a new basis of equity. *The Index* is helping to prepare the new era. Let us votaries of the naturalistic creed loudly and clearly proclaim the justice of this greatest of practical causes,—not dominion of the poor, but their fair share in the inheritance of our race."

STOECKER, the court chaplain and Jew baiter, was recently convicted of libel. The trial attracted much attention; "for the jurors had to decide not only whether the particular utterance named was libellous, but also, it would appear, had to satisfy themselves as to the larger question, as to what constitutes a lie,—the prosecution being permitted to introduce an unlimited amount of evidence to show that the clerical defendant was an habitual liar, and part of his defence being in substance (not, of course, in terms) that, because he was this, his utterances could not afford ground for action; could not, that is, damage the character of the party assailed. There appeared to be literally no end to the false statements he had made; but, he argued, they were not lies, for they either were such errors as the most honest of men occasionally make, or else were so notoriously and easily proved false that formulating them could hurt nobody."

THE *Christian at Work*, referring to the Roman emperor who used to gratify his pampered appetite anew on a dish composed of the brains of singing birds, exclaims: "The fiend! Think of his slaughtering dozens of canaries for one mouthful of their precious little brains! Think of his gulping down a heaven full of song and joy, so to speak, at one swallow, as the cerebra of a whole district of these rare and beautiful birds disappear down his all-capacious throat! A feeling of horror creeps over us as we endeavor to imagine how much feathered music was quenched, and how much of daintiest life, arrayed in what splendors of plumage, was extinguished, in order that the imperial monster might have surfeit at an unnatural feast! But, really, is our fashionable young lady any better, who encourages the wanton and wicked killing of the most wonderful little creature the Lord—it seems to us—ever made, just to add its lustrous but dead form to her bonnet?"

THE notices of Thompson's *Psychology* (Trübner & Co., publishers), which have appeared in first-class English periodicals, have been numerous, full, and favorable. The author, Daniel Greenleaf Thompson, has been warmly received by English thinkers; and, at the instance of Prof. Alexander Bain, Herbert Spencer, Prof. Spencer Baynes, and Prof. Robertson, he has been elected an honorary member of the Athenæum, which is the first club in London, and is composed, it is said, of the "most distinguished people at home, and less distinguished people abroad." Mr. Thompson is a thinker and author of whom his countrymen ought to feel proud; but the *Popular Science Monthly*, the *Springfield Republican*, the *Brooklyn Union*,

and the *Chicago Times*, besides *The Index*, are, so far as we know, the only papers that have contained any adequate notices of his work. This has been due in part to the fact, probably, that but few copies were sent to the press in this country, the author thinking evidently that such a work was not likely to receive much notice from our journals, and that it would make its way in America anyhow, if it succeeded in England. Some time ago, the author, in a letter of thanks for the notice of his book in *The Index*, wrote, "I do not think the work can be of much interest, even to the educated general reader; but I do know that it represents ten years of faithful, critical work issuing from a very thorough early education, and it ought to be worth something." It is, without doubt, the most profound, extensive, and original work on psychology that this country has produced; and its value will yet be appreciated here, as it is already by the best English thinkers.

THE pulpit demeanor of Rev. Mr. Downs, of the Bowdoin Square Baptist Church of this city, recently arrested, and now awaiting trial for improper relations with the wife of one of his parishioners, has been not simply devoid of dignity and good taste, but of common decency. He may be innocent of the charges made against him; but his low pandering to the prurient tastes of the large and motley crowds that have filled his church, out of curiosity to see and hear a minister who is charged with adultery, is most reprehensible, and shows him to be a man utterly unfit for a moral teacher. The exhibition he is making of himself is a public scandal, and nothing but his profession saves him from the severest censure from every quarter. His vulgar harangues are reported and published in the daily papers for the same reason that accounts of slugging matches, dog fights, the details of trials for seductions, etc., are given to the public,—because the mass of newspaper readers revel in this unwholesome sort of reading. Mr. Downs last week received an invitation to speak at Cottage City, Mass. The invitation was from the "general committee chosen to entertain the people here during the season," who wrote to the minister charged with adultery: "Knowing of your recent publicity, ability, and future acquittal, they will deem it an act of generosity on your part if the people of Cottage City can be favored with your presence on this occasion. . . . Our season ends here on Saturday, September 5, on which day we have our annual illumination; and we think it only proper to end up the festivities of the season with something substantial on the Lord's day." This invitation has been accepted; and it is certain, whatever be the weather, that the exhibition will draw a big crowd. Meanwhile, Mr. Downs' ministerial brethren who have not acquired distinction by their brains, and who have not been charged with any criminal offence, remain in the same obscurity from which the Bowdoin Square Church parson suddenly emerged a few weeks ago. Mr. Downs' success, which can be only temporary, will not, it is hoped, lead others to emulate his scandalous conduct.

CONDITIONS OF HAPPINESS.

For several weeks, a large portion of the people of the United States have been specially seeking pleasure; but now the time approaches when regular work must be resumed. Desirable, however, as are these seasons of recreation, it is doubtful whether those whose lot in life allows the privilege secure more solid enjoyment than do those who, from habit or necessity, remain at home all through the summer weeks, pursuing their ordinary vocations, and seldom have an opportunity to take a mere pleasure jaunt. Certain it is that they do not secure such enjoyment, if they labor under the delusion that the happiness of life consists in the vacation-season and not in the vocation work. There is a tendency in these days to seek recreation for its own sake, to pursue entertainment as if that were the main object of existence; and too many thoughtless young persons are disposed to envy the position of those whose circumstances enable them to pass a great part of the year in going from one pleasure resort to another. To have a "good time" seems to them the foremost purpose in life; and a very good purpose it would be if the "good time" did not too often mean merely mental and physical—not to say moral—dissipation.

But the truth is that, leaving aside those occupations of such constant and wearing physical toil that they tend to brutalize the mental faculties and allow no time nor disposition for anything but physical rest, there is really little difference among the various employments in which mankind are engaged in respect to the main object of life or the essential conditions of happiness. That main object is the development of personal character to its highest capabilities of virtuous activity and usefulness, and genuine happiness can only be obtained through such development. Neither happiness nor character can be given with one's vocation, nor with one's social position and circumstances. Employment itself, any honest employment, is an excellent shield against moral temptations; but the humble employment as well as the lofty furnishes this safeguard. Moral principles and pursuits, mental and affectional enjoyments, override all distinctions of class or calling, and find entrance into obscure homes quite as often as into conspicuous and costly dwellings. The mechanic, the clerk, the school-teacher, the saleswoman, may have as much time and taste for a book or for art or nature as does the high magnate of trade or of the stock exchange, who counts his wealth by millions. Once get above poverty and its physical distresses, and there is no occasion for any one class of people to look upon another with envy because of supposed superior opportunities for happiness or for the formation of noble character.

Indeed, if there be in this country any class of people who are to be congratulated because of the natural advantage of their position, it is not the rich nor those who are anxiously seeking to be rich, nor the fashionable, and pleasure-seeking class, with their ceaseless round of amusements and travels; but it is the quiet, inconspicuous people, who have a moderate but adequate income from their own labor, and are content with the quiet pursuits and pleasures which their own homes afford them. This class of people have few ambitions beyond those objects and pursuits in which their daily vocations consist. They live in honest and kindly relations with their neighbors; they are good citizens; they have books enough, but not so many as to become a weariness to flesh and mind, suggesting a constantly augmented task unfulfilled; they are satisfied with their lot and

its natural opportunities, finding in it ample room for mental and moral growth, and for all the achievements which make life worth living. It is the simple tastes, temperate desires and habits, sound sense, moral clear-sightedness and fidelity of this class of people, which furnish the sure reliance of this country in any political or social emergency which is likely to befall it.

But, whatever his lot or position, every person has his own work to do, his own problem of character to work out; and success forbids that he should spend any time in gazing with vain envy at his neighbor's field. Envy is a vice which gnaws with fatal result at the very heart of happiness. Contentment is a condition of both success and happiness,—a contentment which does not antagonize any healthful ambition. There is a passive contentment, and there is an active contentment. A merely passive contentment may accept a hard lot placidly, gracefully, but sink, perhaps, under its burdens. An actively contented spirit is one that studies its lot to learn all the possible good involved in it, and exerts itself with the express purpose of extracting all the good which the lot, whatever it be, can possibly yield. A mind thus content is always master of the situation. At home or abroad, in recreation or work, it finds all needed opportunity for those simple fidelities and enjoyments in which it has discovered the secret of life's felicity; and it knows that there is no power outside of itself which can rob it of these satisfactions. Let the pagan philosopher, Epictetus, teach us,—who, though poor and infirm, and only a freed slave in position, could say: "In whatsoever condition I am, wherever I go, it will be well with me there; for it was well with me here, not on account of the place, but of the principles, which I shall carry away with me,—for no one can deprive me of these. On the contrary, they alone are my property; and their possession sufficeth me wherever I am and whatever I do."

WM. J. POTTER.

WHAT IS CHRISTIANITY?

The able editorial in *The Index* of August 20 on this question, though certainly valuable in showing the inadequacy of some answers to it, seems to me, after all, to conduct us to a point where the impossibility of a just definition of it is plainly to be seen.

And this appears in the necessity under which the writer lies, in common with all writers, of using qualifying adjectives, when he would have us know just what is meant. Thus, he speaks of "primitive Christianity," of "organized Christianity," of "ecclesiastical Christianity," of "Christianity as taught by Paul," and of "the various forms which Christianity has assumed." Every fair and definite writer will find himself under the same necessity; for what has been and still is called Christianity has never been at any two periods, or in any two regions of the world, precisely the same thing. Acute scholars have long been accustomed to distinguish between Christianity as taught by Jesus himself (assuming that we have an entirely correct account of this in the Gospels,—a tolerably large assumption, and one in the face of considerable difficulties) and "Pauline Christianity," or as taught by Paul, and "Johannean Christianity," or as taught, or said to be taught, by John.

And after the apostolic times came "Patristic Christianity," or as taught by the Fathers, embracing various marvellous and childish things, before which the New Testament legends pale,—itself no unit, but varying with its date and teacher. How much of all this ought properly to be included under the title "Primitive Christianity" writers are

not agreed, especially when discussing church government. Christianity is indeed "a historic religion," changing its aspect in some of its most conspicuous features with the centuries. The concrete or embodied Christianity among us to-day is certainly not much the same thing with that of our fathers on this soil only a century ago. Nor is it the same with that prevailing in parts of Europe to-day. The Christianity of Scotland is not that of Spain, and neither is that of Russia. The two or more Christianities side by side in Germany and most of Western Europe, Popish and Protestant, "evangelical" and "liberal," Calvinistic, Arminian, Lutheran, Trinitarian, Unitarian, High Church, Low Church, Broad Church,—and the catalogue of differences might be greatly extended,—in what sense are all these the same? The "various forms of Christianity," indeed! Then there is doctrinal Christianity and practical Christianity, schemes of belief and rules of ethics; also theoretical Christianity, as set forth in its standards of doctrine and practice, and concrete or actual Christianity, as really held in the minds of the people and illustrated in their lives. Patently, these are not quite the same thing among us now. Are they anywhere? Have they ever been?

That there is something in common in all these forms is probably generally believed. But will it not require no small ingenuity to tell us just what it is? *How much is held by all Christians in common, and not held by others than Christians?* Will some one undertake to make this plain?

If the question be asked, What is true or pure Christianity in distinction from what has been corrupted? it is to be feared that most people would reply, as the editor suggests, "That of our church or sect," or, possibly, each for himself, "My own private interpretation." On second thought, however, they would probably fall back on this, "True Christianity is the teachings of Christ." This would be a capital definition, if there were full accord as to what those teachings were. But now, as in Paul's day, "there are, it may be, so many kinds of voices in the world" on this as well as other points.

The question, "What is true Platonism?" would be properly answered by a reference to the Republic, the Gorgias, Timæus, Dialogues, etc. So the question, "What is true Christianity?" is properly answered by a reference to the accounts in the earliest records of what Christ taught, with this great disadvantage, however, that he committed nothing to writing himself. But if, in any way, we can ascertain just what he taught, that and that only is strictly Christianity. As neo-Platonism is not exactly Platonism, so the modifications which Christianity received at the hands of its earlier or later expositors are not strictly a part of Christianity. But, as one may be essentially a Platonist without accepting all that Plato taught, so it would seem that one may rightly be said to accept essential Christianity without receiving all that is claimed to be Christ's teaching. How much he might reject—either on the ground of insufficient evidence that it was taught by Christ, or on the ground that, if taught by him, it is, nevertheless, untrue—and yet hold essential Christianity is too hard a question for any very exact answer.

The attempt to answer it by asserting that we have an infallible record, by the letter of which all opinions must be tried, is an assumption too monstrous for respectful attention.

That every honest or benevolent man may properly be called a Christian is a proposition that few probably will maintain. One may be just, humane, forgiving, patient, humble, self-sacrificing, devout, and "go about doing good," may manifest

in short, the eminent virtues of Christ, and so be a Christian *in spirit*, while repudiating much that he is told Christ taught. (Indeed, would it not be hard to find the man who holds *everything* that is recorded in the New Testament as Christ's teaching?) In other words, there is such a thing as a Christian spirit, and there is furthermore such a thing possibly as Christian doctrine. Why may not one cherish heartily much of the former, and reject as heartily much of the latter?

In such a case—and perhaps the number of such cases is immensely greater than at first may be thought—should it properly be said of him that he holds or that he rejects “Christianity”? So far as the aim of Christianity is the moulding of his spirit or character, he is in accord with it. So far as it is the teaching of problems in theology or philosophy, and it may be incomprehensible or incredible statements respecting God and man and their mutual relations, he rejects it utterly. So different may be the two things that pass commonly under the same name, Christianity.

JOSEPH D. HULL.

HARRIET MARTINEAU'S RELIGION.

When Harriet Martineau's *Autobiography* first appeared a few years ago, I think the following passage made the deepest impression on me of anything in it: “Amidst many alternations of feeling,” she wrote, a score of years before her death, “I soon began to enjoy breathings of the blessed air of freedom from superstition, which is the same thing as freedom from personal anxiety and selfishness; that freedom under a vivid sense of which my friend and I, contrasting our superstitious youth with our emancipated maturity, agreed that not for the universe would we again have the care of our souls upon our own hands.”

Mrs. F. Fenwick Miller's new biography of “the good lady of Ambleside”* contains much fresh information, chiefly of an autobiographical nature, concerning Harriet Martineau's religious, or, as her enemies would say, irreligious views. Mrs. Miller gives us many excerpts from Miss Martineau's heretofore unpublished correspondence with Mr. Henry G. Atkinson, the dearest friend of her maturity; and we are thus enabled to see that as late as 1876, the year of her death, she still held the same opinions on religion as in 1855, when her *Autobiography* was hurriedly penned, under the very shadow of the King of Terrors, as she then supposed.

But before the preparation of the *Autobiography*, and long before the writing of the letters which Mrs. Miller has selected from the correspondence with Mr. Atkinson, Miss Martineau had declared to the world in *Eastern Life*, published in 1848, that she had ceased to have a theology. Her belief then was as follows: “The best state of mind was to be found, however it might be accounted for, in those who were called philosophical atheists. . . I knew several of that class, some avowed, and some not; and I had for several years felt that they were among my most honored acquaintances and friends. And, now I knew them more deeply and thoroughly, I must say that, for conscientiousness, sincerity, integrity, seriousness, effective intellect, and the true religious spirit, I knew nothing like them.”

And what was Miss Martineau's conception of “the true religious spirit”? Doubtless, Bulwer expressed her own views, when he says, in *Ernest Maltravers*, “I would rather make people religious through their best feelings than their worst, through their gratitude and affections rather than their

fears and calculations of risk and punishment.” Miss Martineau would probably also have said Amen to these words of Montesquieu, when he asks the Lord, in one of the *Persian Letters*, what he is to do in order to please him: “I do not know whether I am wrong, but it seems to me that the best way to accomplish this object is to live like a good citizen in the society where you have placed me, and like a good father in the family that you have given me.”

In her letters to Mr. Atkinson, Miss Martineau tells us as distinctly as Bulwer or Montesquieu what she understands by “the true religious spirit.” Four years before her death, she writes her friend as follows: “I mean to try to do justice to what I think and believe, by avowing the satisfaction I truly feel with my release from selfish superstition and trumpery self-regards, and with the calm conclusions of my reason about what to desire and expect in the position in which each one of us mysterious human beings finds him or herself. It is all we have to do now (such as you and I), to be satisfied with the conditions of the life we have left behind us, and fearless of the death which lies before us. Nobody will ever find me craving the ‘glory and bliss’ which the preachers set before us, and pray that we may obtain. Some of them are very good and kind, I know; but they will never create any longing of the sort in me. But why should I scribble on in this way to you? Perhaps because our new evangelical curate has written me almost the worst and silliest letter of this sort that I ever saw.” In January, 1876, she writes, “I am fully satisfied with my share of the interest and amusement in life, and of the value of the knowledge which has come to me by means of the Brain, which is worth all the rest of us.” A month before she died, and when she was convinced that her dissolution was near at hand, Harriet Martineau wrote as follows: “I cannot think of any future as at all probable, except the ‘annihilation’ from which some people recoil with so much horror. I find myself here in the universe,—I know not how, whence, or why. I see everything in the universe go out and disappear, and I see no reason for supposing that it is not an actual and entire death; and, for my part, I have no objection to such an extinction. I well remember the passion with which W. E. Forster* said to me, ‘I had rather be damned than annihilated.’ If he once felt five minutes’ damnation, he would be thankful for extinction in preference. The truth is, I care little about it anyway. Now that the event draws near, and that I see how fully my household expects my death pretty soon, the universe opens so widely before my view, and I see the old notions of death and scenes to follow to be so merely human,—so impossible to be true, when one glances through the range of science,—that I see nothing to be done but to wait, without fear or hope, or ignorant prejudice, for the expiration of life. I have no wish for further experience, nor have I any fear of it. Under the weariness of illness, I long to be asleep; but I have not set my mind on any state. I wonder if all this represents your notions at all. I should think it does, while yet we are fully aware how mere a glimpse we have of the universe and the life it contains. Above all, I wish to escape from the narrowness of taking a mere human view of things, from the absurdity of making God after man's own image,” etc.

But Mrs. Miller's sympathetic memorial is not confined to the religious aspect of Harriet Martineau's noble character. We are given a complete and yet condensed account of that whole long and remarkable existence. Mr. Ingram, the well-known

biographer of Poe, who is editing this “Eminent Women Series,” could not have selected a better person to whom to confide the difficult task of depicting the mind and heart of Harriet Martineau; for Mrs. Fenwick Miller is a prominent and active member of the school of which Miss Martineau was one of the founders, and which, in spite of man, society, and the devil, is determined to renovate and innovate old-fashioned and old-fogy England.

THEODORE STANTON.

PARIS, August, 1885.

POVERTY AND WEALTH.

II.

What circumstances are responsible for the present unequal distribution of happiness? How is this difference between the fortunes of rich and poor brought about? Do we not all come into the world in like nakedness? When and where, then, does this inequality in our lot have its beginning?

Children are not born equal, but with an unlike inheritance of undeveloped mental and bodily qualities; and, without question, were all children started in life with the same external advantages, the greatest differences in wisdom and worldly surroundings would soon arise between them. A teacher in this city (New York), a year or two ago, for the purpose of instructing his pupils in business methods, started a school bank; but not many months had passed before the stock of this bank was virtually controlled by a very few of the sharpest boys.

Unfortunately for the happiness of mankind, the inequalities of advantage with which the young are launched into life are by no means confined to the limits of inherited differences in bodily and mental capacity. The superior quality of the rich child's food gives it large physical odds, the superiority of its education large mental odds, in the race, which are but partially balanced by the lack of necessity for exertion. Later on, when the rich man's children have arrived at man's or woman's estate, the assistance of powerful parents or friends still attends their side to smooth their way until the time when the parents' death, putting a princely income at their command, renders further progress mere child's play. For, although it may be indeed objected that the credit of the wealthy frequently leads them to hazard enterprises by which a fortune of assets is almost at one blow converted into one of debts, yet it is nevertheless also true that, when a fortune has grown to certain proportions, so long as merely ordinary caution is observed, its advance is almost more difficult to check than to accelerate.

The inequalities of fortune of this world are maintained by the spirit of inertia which prevails in all things pertaining to human life, as well as in the phenomena of the inorganic world. We are loath to disturb or permit the disturbance of those conditions to which we have become accustomed; and no sooner is a demand for change advanced than society unites to defend existing conditions, merely because they are existing, and utterly regardless of the question of their good or evil character. This is the spirit of “divine right,”—the right of that which has been and is, to continue to be,—which ever opposes progress. In its name, the despot gives battle for the inheritance of his throne, the nobleman for his titles and privileges, the planter for his slaves, the landlord for his estates, and the tenant for his leasehold.

It is often said that the law by which we are governed is a law of the rich. But is this view correct? We cannot afford to be unjust, for by being so we wrong ourselves no less than others.

It is, indeed, true that the power of legislation is

* “Eminent Women Series”: *Harriet Martineau*. By Mrs. F. Fenwick Miller. London: W. H. Allen & Co., 13 Waterloo Place.

* The well-known English Liberal leader and Member of Parliament.

mainly in the hands of the wealthy, and is applied by them, when and where they dare, unscrupulously enough, for the exclusive protection of the social interests of their class. But it must not be forgotten that, while the few have the power thus to subject the great mass to any enactment, yet, whenever the multitude refuses to be bound by any ordinance, the legislative few are impotent to enforce obedience. Nor is this all; for whenever this great multitude, virtually the "poor," have assumed a threatening attitude, the few have always paled, and trembling worked their will; and, hence, we perceive that, while the great body of the law unquestionably consists of enactments for the protection of the privileges of the wealthy and the maintenance of existing inequalities of fortune, there also already exists a smaller portion of mostly recent legislation tending toward the elimination of these inequalities and the protection of the interests of the poor.

The law of the rich is a law for the defence of those who possess against the aggressions of those who would acquire. For this reason, it is very emphatic in prescribing and variously limiting the modes in which property may be acquired.

Besides title founded upon discovery and that based on unquestioned possession, the law of the rich sanctions acquisition by inheritance, gift, exchange, and purchase. The absolute freedom of commercial exchange is both a recognition and a consequence of absolute title through actual possession. Gift is an exchange of property for the love and good will which it is in the power of the one who receives to bestow upon the giver. Inheritance may be interpreted as a posthumous gift.

As a necessary consequence of its origin, title to property under the rich man's law is limited only by defects in the mode of its acquisition, such as robbery, theft, and fraud. The true inwardness of the rich man's condemnation of these modes is to be found in the fact that they set at nought the theory of the absolute or divine right of the rich to the property which they control.

That portion of the law of property which protects the interests of the poor derives its title from the use to which property is put. At present, this portion is still chiefly in the undeveloped condition of public opinion out of which all law arises.

The limitations to title which the poor man's law of property seeks to draw must logically be based upon defective use—misuse or nonuse—of property. Fully developed, the poor man's law will either limit absolute property to that amount which equal distribution of the world's wealth would accord to each, or it will entirely abolish it. It neither can nor will abolish inequalities of control, but will replace absolute ownership by trusteeship for the public good.

All law is founded upon the notions of right and wrong prevalent among a people. Our notions of right and wrong spring from a root of religious beliefs: the outward tie which binds together those who own to the same system of religious beliefs is the church. Hence, as there is a law for the rich and a law for the poor, so, also, there must be a church for the poor and a church for the wealthy.

The church of the rich teaches that this world was made by a God-Creator for his own pleasure and glory, and was by him at the beginning approved: therefore, then, it was perfect. In that perfect state, man was given absolute, irresponsible dominion over creation: it was his property by divine right. Hence it is that at this day all title to property must depend upon the mode of its acquisition in the past. When this is faultless, the title is absolute, of God-ordained origin, and may not be questioned.

But, even to this day, the heart of man is bent

on change. Had there been no change since the beginning, the perfect state would still exist. Hence, all change is evil, and who lusts after it vile and sinful. Property justly acquired is sacred. Woe to him, here and hereafter, who dares to dispute the rights of the God-ordained owner.

At the end of time, the world will be again destroyed; and, then, all who have persisted in sinful desire for change will go to everlasting torments in hell, all who have yielded obedience to God's ordinances, and respected the divine right of property, will enter upon the joys of a heavenly kingdom.

The church of the poor teaches that we live in an uncreated world; that we are but parts of an eternal, universal, living being, having neither a beginning nor an end, animated by an immortal spirit of change, a God within it. As we believe that this spirit of change is good, so our desire for change is good also. The purpose of this world is the happiness of all that breathe; and, so long as misery exists, a perfect state can only be expected in and from the future. Our actions are righteous, in so far as they make the world happier; and the only divine right to property is that of its use in the service of all. A time will come, not in the mystical beyond, but in this world, when all shall be happy. Then and here shall we enter, not as subjects into a celestial kingdom, but as citizens into the republic of heaven.

CHARLES FROEBEL.

THE MINISTERIAL FUNCTION.

There can be no disputing that the masses do not ask, *What is true?* but desire that which growth and usage have made agreeable. The preaching of Moody gives satisfaction. From the learned reasoning of Huxley and Tyndall the common mind turns away without edification or interest. The scholars' studies are too recondite and abstruse, and require too great preparation and effort of mind to be comprehended: they appeal to the educated and thinking classes, with no attempt at effect, no concern for results.

The popular minister has his province and mission in popular effects, successful appeals to feelings, traditional bias, and the concrete sentiment of the hour. He stands between the men of ideas, the great thinkers, who determine the final trend of thought, and the people; and his real work is that of the teacher, to ascertain and bring into common understanding and practice the abstract truths and principles which science reveals and establishes. Only by facing the light and elucidating it to the people, as Mr. Beecher is now doing with the doctrine of evolution, can his work be fairly done or fully realized. Permanent results must take hold of the thoughts of the people. Feelings and habits are at last determined by ideas; and the true teacher is he who dares to set forth new and radical truth, so as to awaken and revolutionize the thoughts of men.

Wonderful changes in philosophy and religion, in mechanics and art, in church, school, society, and home, are taking place. He is a dull man, and an unfit teacher or leader, to stand between the high and the holy, the abstract and the absolute, on the one hand, and the common people, on the other, who does not see and magnify his opportunity, who does not move forward in the great avenues of progress, and arouse humanity with a fresh, earnest, and loving enthusiasm for that which is both true and good.

Not as formerly is the minister's word "both law and gospel" in his parish. Neither church, priest, nor Bible has that sanctity, authority, and influence which, only a few years since, these all possessed in the most intelligent community. While so-called sacred things are becoming secularized, the so-called

secular, the common life of society, business, and home, all things natural, human, material, useful, are becoming sacred, divine. Life of man, animal, and plant is being lifted into a new aspect, a new order, a better appreciation; and men are learning that it is an abuse of nature as much as of God not to live and act nobly, grandly, lovingly, in the great brotherhood of all animated life. There is no theological devil, and the theologic God is nothing apart from nature.

But imperfection exists, else there would be no room for progress and improvement. Is it the minister's sphere to deal in fiction? Certainly, it has ever been so. And, until humanity shall have taken on a more intellectual caste, no doubt it will continue so, and perhaps, if religion is to continue, it must always be; for religion is admittedly and universally a subtle something in human relation to the unknown, about which there is, and can be, no possible universal agreement, no fairly scientific statement. It is likened to mind, to "spirit," to intangible matter, a persuasion of the mind and heart, an affection of nervous sensibility with an infinite relationship in hope and fear. Shall the minister be only a priest to turn the crank of ritualistic praying machinery? or may he be also the poet and prophet, and more the latter than the former?

Yea, verily, he must be true poet and prophet, but can be so only as he is more the philosopher than the priest; and the tendency of things is toward a synthesis of the philosophic and poetic functions. Fiction must conform to truth; poetry and music must be truthful, conformed to knowledge; and science must make room for emotion, must show the worth and beauty of morality, the imperishable nature of duty, and the highest possible good of love regulated by reason.

In short, morality and the love of the true, the beautiful, and the good, must become the religion of the world.

A. N. ADAMS.

SPIRITS TWAIN.

For The Index.

Through paths unfrequented,
All noiselessly, and as the lightning fleet,
By airy fancy or by sweet charmed,
We pass, on winged feet.

By day, aloft we soar,
Piercing the heaven's limitless, blue dome;
By night, its glittering, starry splendors o'er,
Close, closer still, we roam.

Then to the sapphire sea,
Where liquid emeralds and rubies glow,
Down into coral depths and treasures, we
Close, close together go!

Sometimes, a darker spell
From saddest Memory lures us with its trend
Past the dark Cypress in the Yew-tree dell,
Where over graves we bend.

We heed nor bolt nor bar,
But enter at our will the palace gate,
With no credentials, but as guests from far;
We neither stand nor wait.

We know no bond nor mete,
In sky, in cloud, in sea, in air, at home;
On mountain peaks, afar, with silent feet,
O'er all the earth we roam.

Close, close, how close we cling!
Nor marriage rite, nor thou, O child most dear,
Nor friends, long tried and ever true, can bring
Soul unto soul so near.

How finely tuned are we!
We know true hearts below the forms of speech.
Between us twain is subtle sympathy,
Closer than love can teach.

Yes: where have we not been
On land, on sea, on cloud or sunny sky?
What places dark, what spots so fair, we've seen,
My thought, my thought and I?

ANNA OLCOTT COMMELIN.

EDITORIAL NOTES.

BY B. F. U.

FUNK & WAGNALLS have in press a volume by Miss Kate Sanborn, entitled *The Wit of Women*, which will be dedicated to the late George W. Burnham, the gentleman to whom she was engaged to be married at the time of his death, and from whom she received a legacy of \$30,000.

AMONG the "comments" in the September number of the *North American Review* is a brief letter from Mr. M. J. Savage, in which he says: "I will not open up the larger question as to whether it is a good thing or a bad thing, but it seems to me unquestionably a true thing that Christian monasticism is not an exotic. It roots itself not only in the words of the apostles, but is the teaching of Christ himself."

THE priest, Roman or English Episcopal, wears in the street a uniform by which he is recognized; and once the Congregational minister did the same, wearing a black coat when all others wore blue or fancy-colored. This separation by dress betokened a peculiar sympathy of the clerical class among themselves; but it also showed, as it still shows, an exclusiveness of feeling toward society at large.—*Christian Register*.

THE Bruno statue fund increases hopefully. The first instalment of \$200, which was completed by Mr. Photius Fisk, who made up the deficit of \$14.27, has been sent to Rome. The second \$200 is being raised. Among the contributions, we notice \$18.30 from attendants at the Concord School of Philosophy. T. B. Wakeman, 93 Nassau Street, New York, is the authorized agent; and to him all subscriptions to the fund should be sent.

AFTER stating that without leisure there could be no art and science, and without wealth no leisure, Strauss points out that the love of acquisition, which should, like every other impulse, be kept within reasonable bounds, and subordinated to higher aims, is entirely ignored in the teachings of Jesus, and adds: "It [Christianity] only prolongs its existence among the enlightened and commercial nations of our time by the emendations which a cultivated and profane reason has made in it; and yet this Reason is so magnanimous, or perhaps so weak and hypocritical, as to impute the good effect, not to itself, but to Christianity, to whose spirit it is nevertheless entirely opposed."

"We are perpetually reminded of the evils produced by wealth and the sinful love of money," says Buckle; "and yet, assuredly, no other passion, except the love of knowledge, has been productive of equal benefit to mankind. To it, we owe all commerce and industry: industrial undertakings and trade have made us acquainted with the production of many countries; have aroused our curiosity, enlarged the field of our vision by bringing us in contact with nations of various ideas, customs, and languages; accustomed us to vast undertakings, to foresight and prudence; taught us, besides, many useful technical crafts; and, lastly, endowed us with invaluable means for the preservation of life and the alleviation of suffering. All this we owe to the love of money. Could theology succeed in extirpating it, all these influences would cease, and we should in a measure relapse into barbarism."

THE Hartford *Daily Times* of August 22, referring to Raymond S. Perrin's work, *The Religion of Philosophy*, says: "The secular press, as a rule, eulogized the book. The *Times* pointed out what it thought the best things in it. The religious press, as a rule, denounced the book, which was expected from that quarter, since the book boldly

assails some things which the Churches uphold. Even some of the secular journals in which the chair of literary criticism is filled by clergymen treated this elaborate work in a purely sectarian spirit. This falls short of the true requirements of good literary criticism. . . . It is evident that literary criticism, if made at all, should be adequate to the subject; and the book in question is a work of great care and long and able thought." The *Boston Post* gives an outline of Mr. Perrin's main views in a lengthy notice, which concludes as follows: "Such is the essential thought of Mr. Perrin's book, which is marked by an independent spirit and a scholarly style, and contains evidence of years of research and patient study. However much we may differ from the author in some of his conclusions, his work is one that invites us to high intellectual attitudes, and deals in a philosophical spirit with the profoundest problems that can engage the attention of man."

TO THE question, "What was the supreme thought in your mind when eternity seemed so near?" put by Dr. Newman to Gen. Grant after his recovery from his seemingly fatal collapse, the General replied, "The comfort of the consciousness that I had tried to live a good and honorable life." Commenting on this, the *Independent* calls attention to the gospel plan of salvation in the following style:—

The honest effort "to live a good and honorable life" may well be a source of comfort at any time, and especially so in the hour and article of death; and we see no impropriety in referring to it as such. But it would be a great mistake to make such an effort, or such a life, even though the best that any man ever lived, the basis on which sinners are to rest for their peace with God and their hope of salvation. Sinners are saved, if at all, through grace, and by the suffering and death of Christ, and upon the condition of their repentance toward God and faith in the Lord Jesus Christ.

The honest effort "to live a good and honorable life," "or such a life, even though the best that any man ever lived," which involves repentance or sorrow for every departure from the right, and a constant desire to realize the ideal moral life by personal purity and working for others as well as self, is no sufficient basis for the hope of salvation!—a hope which the vilest and meanest may cherish, if it is based on belief in Jesus Christ and salvation by his sufferings and death, upon the condition of repentance before death, or, as some hold now, perhaps after death. There is evidently still need of iconoclasts like Ingersoll to go before the people, and expose the demoralizing as well as the absurd doctrines of the orthodox theology, which some of the editorial writers of the *Independent* are defending of late in a manner that gratifies even the *Congregationalist* of this city.

HOW SHOULD Christians behave toward agnostics? Are there any honest agnostics? or is it safe to assume that every man who sincerely looks into the Christian religion, desiring the truth in his heart, will inevitably become a believer? If there are unbelievers of honest hearts and open minds, what is the best practical word we can say to them? The Church that rests in ancient formulas has no word for such men, since they can neither repent nor believe.

What would *Unity* think, if an Agnostic should write in this style of Christians: "How should agnostics behave toward Christians? Are there any honest Christians? or is it safe to assume that every man who sincerely looks into the Christian religion will inevitably become an Agnostic? If there are Christians of honest hearts and open minds, what is the best practical word we can say to them?" Leaving the writer of the above to think out what is the best word that can be said to Agnostics, if among them are any "of honest

hearts and open minds," we will say the best word that occurs to us just now to such as the writer of the paragraph quoted above: Consider whether it is modest or wise to assume that your doctrinal belief is certainly right, and that the Agnostic's position is certainly wrong, whether it is reasonable to doubt that Agnostics are as honest and sincere as Christians, and, if it is not, whether it is charitable and just to raise the question "Are there any honest Agnostics?" The writer of the paragraph and such as he might, since they assume their own intellectual integrity and moral honesty, leave unquestioned the same qualities in a class of thinkers, among whom are men like Darwin and Spencer, and women like George Eliot and Harriet Martineau. Come up, *Unity*, on higher ground, and treat this subject rationally and philosophically, and not like an orthodox preacher who has always regarded "infidels" with horror, and is but just beginning to suspect that there may be found a few honest men among them, and is wondering as to the best way to make them realize their ignorance and folly.

THE facts pointed out by Helmholtz in regard to the defects of the eye as an optical instrument illustrate that the process of evolution is not keeping pace with the requirements of modern times, that the artificial development of the human faculties has outstripped the natural evolution of portions of the human body. But man's ingenuity serves him well here as elsewhere; for, with the help of the lens in microscope and telescope, he is possessed of an organ with which he can study objects infinitesimally small and penetrate the immensity of a solar system. Meanwhile, the eye is probably losing in strength and capacity, and gaining only in discrimination. In some directions, the improvement is marked, as in the hands which have gained wonderful delicacy of touch, reaching its greatest perfection, however, only by careful training. It has been pointed out that, in using the keys of an instrument or in working the strings of a harp, no amount of practice enables the player to overcome the weakness of the third finger. It is almost impossible, when the middle and little fingers are pressed upon the keys so as to produce a continuous sound, to bring the third, or ring, finger into intermittent use with sufficient strength to produce equality in the tones. The reason is that the muscle by which this finger is moved is connected by lateral accessory tendons with the muscles of the fingers next to it; and, when these are held down, the tendons prevent freedom of action in the muscular fibres of the third finger. The accessory tendons are sometimes found in one, sometimes in both hands. As its recurrence is not constant, it is, without doubt, of a rudimentary nature, and not improbably the last vestige of a former webbed formation of hand and foot, as the downwardly projecting point on the helix of the ear is regarded by Darwin as the remnant of a once pointed ear. Within the past few years, it has not been uncommon to remove the restriction, and liberate the third finger by a surgical operation, dividing the accessory tendons, which admits of the elevation of this finger an inch higher above the plane of the hand, and entire freedom in its use. Dr. Forbes, demonstrator of anatomy at Jefferson College, has performed numerous operations of this kind, and in each case with success. The operation is so simple and easily performed, and gives the third finger such delightful freedom without diminishing power in any other direction, that it promises soon to become a part of every conservatory course. In the distant future, it is probable that the student of music will know of a binding tendon only as an occasional recurrence illustrative of reversional heredity.

The Index.

BOSTON, SEPTEMBER 3, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

IF PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

X.

CHRISTIANITY THE STATE RELIGION.

Divorce between the Popular Faith and Scholastic Theology.

The student of the ethnic religions, in the earlier periods of their development, must often have noted the fact that their dogmatic and ritualistic peculiarities, as reported in their sacred literatures, are frequently artificial accretions—the speculative and formal productions of an established priesthood—rather than genuine presentations of the spontaneous and natural faith of the people. The beliefs and practices of the masses often have very little in common with the dogmas and ceremonies of the established religion. In India, for many generations, all save the priestly caste were forbidden the study of the Vedas; and recent investigations of able scholars, like Barth* and Haug,† would assign to these sacred writings a priestly rather than a popular origin. In China, Confucianism, with its remarkable freedom from supernaturalism and its pure morality, has always been the religion of the State and of the educated classes, far removed from the superstitions of the majority. Zoroastrianism was confessedly a religion of the priesthood. Buddhism has its esoteric philosophy, its refined system of metaphysics, remote from its popular dogmas and from the noble ethical teachings of its founder. Greece and Rome had their secret rites and doctrines for the few; while the many cultivated the religion of the domestic altar, and fed their religious natures upon superstitions such as are connected with all primitive animistic beliefs. The religion of Egypt also presents like phenomena. We may well pause a moment to inquire whether there are any evidences of a similar divorce of the thought of the educated few from the lives and opinions of the many in the history of primitive Christianity.

* *The Religions of India.* By A. Barth.

† *The Religion of the Persians.*

Testimony of the Patristic Literature.

If we were to look for evidence solely to the literature of the Fathers, we would discover no indications of such a divergence between the popular and scholastic beliefs. These writings present only one side of the question,—that of the dogmatic theologian. Here, we observe a steady tendency toward the condemnation and elimination of heresies, and the consolidation of that hierarchical system which finally triumphed in the supremacy of the Catholic Church. In Irenæus, writing during the last quarter of the second century, we find nearly all the Christian dogmas fully developed. The divine incarnation, the miraculous birth, the sacrificial eucharist regarded as the actual flesh and blood of Jesus, the belief in the second coming of Christ, the vicarious atonement, apostolic succession, and the eternal punishment of unbelievers,—all these doctrines are plainly set forth in his writings. Origen, writing about the middle of the third century, did indeed suggest the possible salvation of all men; but his belief, borrowed probably from Oriental sources, was exceptional and heretical. The teachings of Christian scholars tended more and more to a consensus of agreement upon the principal articles of their faith. The supreme emphasis came to be placed upon "right belief," upon intellectual dogma, rather than upon the ethical quality of the daily life. In defence of these dogmas, the leaders of the Church were ready to anathematize and persecute the heretics of their own communion, or to offer up their lives as martyrs rather than accede to the demand of the State that they should renounce their creed, and offer sacrifice to the gods of Rome.

The Catacombs: their Significant Testimony.

It is, nevertheless, true that we have conclusive evidence that the belief of the majority was widely different from that which is revealed to us in Christian literature. As the Egyptian tombs, with their sculptures and paintings, testify to the habits and ideas of that ancient people, correcting the long prevalent opinion derived from their later theology that they were of a gloomy and ascetic disposition, so in the sculptures and mural paintings of the catacombs we discover the natural historical corrective of the one-sided evidence presented in the writings of the theologians.

The catacombs were subterranean places of burial of great extent. From a single central hall, or chamber, radiated labyrinthine passages containing many places of sepulture, each of which, when occupied, was sealed up, and identified by mural paintings or sculptures and suitable inscriptions. This use of the catacombs by the Christians dated from the beginning of the second century, and continued until early in the fifth century. In their central halls and subterranean passages, also, for many generations, they were accustomed to meet secretly for religious purposes. Later, when there was no longer any need of secrecy connected with the ceremonials of burial and religious meetings, the catacombs fell into disuse; and from the sixth to the fourteenth century they were buried and forgotten. Even our modern historians have in general neglected to note the remarkable and invaluable testimony of the catacombs to the popular beliefs of the early Christian centuries.

This testimony, it will be observed, is contemporaneous with the period of the development of the dogmatic theology, with the contest of Christianity with Orientalism and the Gnostic heresies, and with the Christian martyrdoms; yet we find here few evidences that these circumstances and ideas materially affected the lives and thought of the masses of the people. A remarkable inscription at the entrance of the catacomb of St. Sebastian

in Rome affirms, indeed, that one hundred and seventy-four thousand martyrs repose there in peace; but the absence of other corroborative testimony, and the conflicting evidence of the inscriptions on the tombs themselves, justify us in regarding this as a theological exaggeration of a later period. All the Christians who died during the time of the persecutions appear to have been regarded subsequently as "martyrs," though they did not personally suffer the punishment of death. The estimate of Gibbon, referred to in our last lecture, is doubtless much nearer the truth of history than this pious exaggeration.*

Character of the Mural Paintings.

One familiar with the patristic literature is at once struck by the apparently incongruous fact that paintings and artistic representations are to be found at all upon Christian tombs of this period. The early Fathers of the Church almost without exception followed the Jewish prejudice, and condemned art as impious and sacrilegious. The general character of these burial-places is Jewish rather than Pagan, but the artistic development connected therewith is distinctively Pagan. "It is as if the popular sentiment had not only run counter to the popular theology," says Dean Stanley, "but had been actually ignorant of it."† The subjects of these artistic representations, though frequently drawn from Hebrew or Christian legends, are almost wholly ignored by contemporary Christian writers. The prevailing character of the early theological writings is arid, gloomy, and repelling; but the art of the earlier catacombs is uniformly cheerful and joyous. In the oldest mural paintings, we find neither the cross of the fifth and sixth centuries, nor the crucifix or crucifixion of the later Catholic period, nor the cypress, skeletons, and death's heads of a still more recent time. In the place of these "sad emblems of mortality," there are wreaths of roses, vines and clusters of grapes, winged genii, and playing children.

Of Old Testament subjects, we find representations of the creation, the salvation of Isaac from sacrifice, the stag panting for the water-brooks, Moses smiting the rock for water, Jonah and the whale, Jonah and the gourd, Daniel in the lions' den, the three children in the fiery furnace, and Susanna and the elders; of New Testament subjects, the raising of Lazarus, the adoration of the magi, the feeding of the multitude, Zaccheus in the sycamore tree, the healing of the paralytic, the washing of Pilate's hands, and the denial and seizing of Peter. A figure representing the deceased in the Oriental attitude of prayer, standing erect, with hands outstretched to receive the gifts of heaven, and with open eyes, is of very common occurrence. Even more perfect representations of this posture in adoration are found in heathen art of this period. The description of one of these might equally well be applied, says Dean Stanley, to the painting on the catacomb of St. Priscilla: "His eyes and arms are raised to heaven; perfect in humanity, beneath the lightsome vault of heaven he stands, and prays,—no adoration with veiled eyes and muttering lips, no prostration with the putting off of sandals on holy ground, no genuflexion like the bending of a reed waving in the wind, but such as Iamus in the mid-waves of Alpheus might have prayed when he heard the voice of Phoebus calling to him, and promising to him the twofold gift of

* For an interesting account of the catacombs of the earlier period, see Stanley's *Christian Institutions*; for a general description, see also article "Catacombs," *Encyclopædia Britannica*, Milman's *History of Christianity*, etc. The inscription above alluded to was manifestly engraved after the catacomb had been fully occupied, and had fallen into disuse. Its use of the word "martyr" does not indicate that all or any considerable portion of the inmates suffered a violent death.

† *Christian Institutions.*

prophecy."* The conception of prayer herein typified, so different from that which pessimistic asceticism transmitted to us through the Roman hierarchy, is one among many evidences which the catacombs present to us of the close relation which the popular phase of primitive Christianity bore to the milder forms of Paganism in the midst of which it had its being.

Heathen and Christian Symbolism commingle.

Many of the decorations of the Christian tombs were borrowed directly from heathen sources. Here we find Orpheus playing on his harp to the beasts, the infant Bacchus represented as the god of the vintage, and the winged Psyche, symbol of the soul. The soul itself is often pictured escaping from the body in the form of a bird. Christian and heathen symbolism are frequently mingled in the same picture: e.g., the Good Shepherd appears surrounded by the three Graces; Apollo with his pipes often seems to have served as the model for the gracious figure of the Man of Nazareth. More frequently than any other impersonation that of the Good Shepherd appears in the paintings of the catacombs,—a graceful form in the bloom of youth, with pipe or crook, strikingly similar to the Hermes Kriophorus, "Mercury with the ram,"—a common figure in the heathen art of the time. Sometimes, he is represented as bearing a lamb in his arms. Once even, in defiance, not only of the orthodox dualism, but in apparent ignorance of the sharp distinction conveyed in words attributed to Jesus himself, instead of a lamb we find pictured a young goat, a kid. This incident, and the divorce which it indicates between the theology of the polemical writers and the simple beliefs of the people, are beautifully treated in the familiar poem of Matthew Arnold:—

"He saves the sheep, the goats he doth not save";
So spake the fierce Tertullian.

But she sighed,
The infant Church. Of love she felt the tide
Stream on her from the Lord's yet recent grave,
And then she smiled, and in the Catacombs,
With eye suffused, but heart inspired true,
She her Good Shepherd's hasty image drew,
And on his shoulder not a lamb, but kid."

Inscriptions: Summary of the Evidence of the Catacombs.

The character of the earlier inscriptions of the catacombs harmonizes with their artistic symbolism. Of dogma, we find absolutely nothing. Of purely religious phrases, two notable expressions frequently recur: *In pace*, "In peace"; and *Vive in Deo*, "Live in God." Sometimes, we find *Vive in Bono*, "Live in the Good." Most frequent of all the inscriptions, however, are simple expressions of natural affection, exhibiting no theological bias whatever: "My most sweet wife"; "My most dear husband"; "My well-deserving father and mother"; "My most sweet child"; "Innocent little lamb." In one place, we read that a husband and wife "lived together without any complaint or quarrel, without taking or giving offence." The simplicity of these inscriptions is evidence of a sincerity and truthfulness that it is to be feared are sometimes wanting in the elaborate eulogies of our modern churchyard literature. Of the heathen monuments of this period, Prof. Allen declares, "The inscriptions sometimes express a pious and humble trust in terms curiously like those of the Christian monuments."† In the presence of a great and impressive event, a common human nature stands revealed behind the masques of the most varying creeds.

To sum up this testimony of the early catacombs, it may be said that we find here no elaborate

Christology, no deification of Jesus, no trinitarian dogma, no horror of eternal punishment, no theology even, save the simplest expression of theism. We find evidence of a Christianity scarcely differentiated from the surrounding Paganism, save in its disuse of polytheistic symbols; but little affected by theological controversies or state persecutions; cherishing gladly a simple trust in the leadership of that Good Shepherd in whose fold there was no distinction of birth, of riches, or of social position.

Differentiation of Christianity from Paganism.

There thus seem to be many points of agreement between the popular conception of Christianity and the contemporary Paganism, the chief difference, superficially noticeable, appearing to be that from the former all polytheistic implications were excluded. Wherein, then, shall we find the secret of their divergence? Wherein, the motive of the impulse which led the devotees of the new faith to forsake and condemn the old? What elements can we discover, held in common by all the Christian believers of this period, which will account for the rapid progress of the new religion, and for the general favor with which it was greeted by the common people?

Evidently, the distinguishing characteristics of the growing faith were not those of notable moral superiority. The careful student of this period can hardly fail to confirm the conclusion of Dr. Hedge, that the primitive Church did not aim primarily at good behavior. "Had this been the end," he declares, "there would have been a rapid and marked improvement in the morals of society. But no such improvement appears."* The admonitions of Paul and of the Fathers prove, on the contrary, that the worst of social conditions were not uncommon within the bosom of the Christian communities. That feature in the teaching of Jesus and the apostles which avoided conflict with the constituted authorities by inculcating the doctrine of non-resistance; which regarded a temporary submission to social injustices as preferable to active protest and forceful opposition, in view of the speedy destruction of the existing order of the world,—lent itself readily to the methods of designing theologians, and retarded the practical application of the ethical principles of the Gospels in the reorganization of society. One principle there was, however, which was so interwoven with the fundamental universalism of the new faith that it could not be kept wholly in abeyance,—the new and radical social doctrine of the equality of all men in the sight of God, the foundation of the Christian socialism of the Gospels, which was so mighty a power to bring hope and better promise for the future to the poor, the weary, and the heavy-laden. Where, if not in this new social doctrine, shall we look for the impulse which carried the new faith onward through this troubled period of its infancy to its final triumph? The practical communism of the earliest generations † was indeed modified by the necessities of living and laboring in the midst of an antagonistic social order, but the great hope for the future endured.

* Article "Christianity in Conflict with Hellenism," in *Unitarian Review*. By Frederic Henry Hedge, D.D.

† "The early Christian communism was an expression of the essential spirit of original Christianity, not an accident, as many students of the Bible would have us believe. Other incidents of this story are unintelligible, except as they presuppose this curious state of things. In that dreadful legend of the early Christian community which is embodied in the Book of Acts, we find Peter exercising his supposed supernatural powers to strike dead Ananias and Sapphira for their lies. Apart from the miracle involved, the feeling of Peter is ethically incomprehensible, until we remember that their lying words covered actions which involved disloyalty to the fundamental institution of that early society. They had vowed their goods to the little Christian commune, and had kept back a part of the price. Their action was a fatal blow to the essential life of the community. Therefore, a singular manifestation of the effect of the first outpouring of the divine Spirit in the Christian Church was communism."—Rev. R. Heber Newton, in discourse preached May 24, 1885.

The kingdom of heaven was yet anticipated upon a regenerated earth. Here and there, the new doctrine reacted upon existing social conditions, tending to reduce the barriers between classes and to improve the condition of the toiling poor. We may instance such evidences of this tendency as are presented in the story of one Hermas, a wealthy convert of the time of Trajan, who received baptism at an Easter festival, with his wife and children, and twelve hundred and fifty slaves, upon whom he subsequently bestowed their freedom, and gifts of money and property. One Chromatius, also, in the reign of Diocletian, is said to have had fourteen hundred slaves baptized with himself, after which they were emancipated.*

The new faith, sustained by the hope of the coming recognition of human brotherhood, presses onward to its secular triumph. We are now to follow it, under the lead of Constantine, its great protector, to the throne of the Cæsars. But, in this immense secular gain, how much is involved of loss, how much of this primitive simplicity, this freedom from dogmatism, this capacity for assimilating the better elements of the existing social order! The spirit of equality will retire yet further into obscurity, giving place to the rule of a despotic hierarchy. Heathen art, at first popularly welcomed to express the feelings of a common humanity, will be condemned and prohibited as impious. The Good Shepherd, the joyous and beautiful figure of the earliest Christian conception, will give place to the Man of Sorrows, "with marred visage." The "life in God," after the death of the body,—the peaceful rest for the weary,—will give way to the pictured horrors of eternal torment. Dogmatic theology, at last triumphant, will touch and blight even the lives and hopes of the common people. Slavery of the body will give place to a profounder enslavement and degradation of the intellect and reason,—a mental bondage for ages so complete that no Christian Epictetus shall arise to assert, "Although I am a slave, I also am a man." Europe, held in the iron embrace of an omnipotent ecclesiasticism, will hurry forward to the gloom of the Dark Ages.

"'Tis true 'tis pity,
And pity 'tis 'tis true."

From Marcus Aurelius to Constantine.

The period from the time of Marcus Aurelius to the final secular triumph of Christianity under Constantine, though it included the era of persecution, was marked by a steady increase in the number of Christian communities, by a growing boldness of the polemical writers in defence of the new theology, and also by certain notable indications that the new faith was coming to be regarded as a possible factor of strength to the imperial government, in case it could be assimilated and directed to its support. For good or ill, Christianity had become a recognized political power. It must either be systematically opposed and undermined, or accepted, and placed, if not above, at least upon an equality with the existing Pagan cultus. Considerations of state policy rather than of moral or religious principle appear to have actuated the successive wielders of the imperial power in their treatment of the growing faith. If any among them were influenced by higher motives than those of selfish aggrandizement, it was the great Stoic emperor, Marcus Aurelius, and

* One can hardly wonder that the poor were ready to make any change in their religion which promised to improve their social condition. This wholesale baptism of slaves, however, throws a curious light upon the methods by which Christianity was so rapidly extended. It recalls the story of an army officer during the War of the Rebellion, who, on hearing of the conversion of thirty men in a rival regiment, under the exhortations of a revivalist, not to be outdone, ordered his corporal to detail at once a file of forty men for baptism! The incidents above narrated are recorded in Dr. Philip Schaff's *History of the Christian Church*.

* Quoted by Dean Stanley in *Christian Institutions*. Those who listened to the discourses of the eloquent Hindu, Protap Chunder Mozoomdar, during his recent visit to this country, will remember that he assumed this Oriental posture during prayer.

† *Christian History*. By Joseph Henry Allen.

Julian, whom Christian prejudice has named "the Apostate," but whose attempt to revive and purify the Pagan religion appears to have been actuated by a sincere abhorrence of what he deemed the errors and superstitions of Christianity.* Neither Constantine nor those earlier emperors, who vouchsafed a quasi-recognition of the government to the new faith by attempting to fuse it with Paganism, give evidence of a tithe of the sincerity and high-minded patriotism which impartial history concedes to Marcus and to Julian.

The limits of this discussion forbid a detailed examination of the relations of the individual emperors to Christianity. We must hasten on to the period of its secular triumph. Maximin, the predecessor of Constantine and Maxentius, was a man of dissolute and tyrannical character, whose early attitude toward Christianity was that of a persecutor. He prohibited the Christians from meeting in the cemeteries and catacombs, as had long been their custom; he confiscated the property of the churches, waged war with the Christian State of Armenia, and even attempted to reorganize the Pagan religion upon the model of the Christian episcopacy. Toward the close of his life, however, he apparently became convinced, not indeed of the moral error, but more probably of the impolicy of this course of action. He issued an edict of toleration, and commanded a cessation of all violent methods of persecution, recommending only the milder measures of persuasion to win back the Christians to the faith of their fathers. His last imperial act was the promulgation of an edict which restored to the churches their confiscated property, and proclaimed complete liberty of conscience in matters of religion throughout the empire. The subsequent course of his successor was therefore no abrupt and revolutionary change in the policy of the government.

CORRESPONDENCE.

A LETTER FROM MILWAUKEE.

Editors of The Index:—

A sermon preached here on a recent Sunday by Rev. Charles Stanley Lester, a Protestant Episcopal clergyman, rector of St. Paul's Church, is such a remarkable outbreak from ecclesiasticism that it merits the attention of the readers of *The Index*.

The subject of the sermon was Public Schools. The text was from Proverbs iv., 7,—"Wisdom is the principal thing, therefore get wisdom."

After explaining that the wisdom so much praised in the Book of Proverbs had no reference to intellectual acquirements, but rather to the discretion and prudence which shall guard one against the pitfalls of life, and to a knowledge of the world and the folly of evil conduct, and that the maxim of ancient time adapted to the circumstances of the present should be understood as meaning wisdom to be the best results of intellectual and moral training, Mr. Lester asks, "How shall we train our children that they may be furnished for the work of life?"

He mentioned the three established agencies, the family, the church, the school, the family and the church being the agencies which co-operate for the child's religious and moral training. The intellectual nature must be left for the school to unfold the reasoning and perceptive powers. Mr. Lester here paid an eloquent tribute to the public schools of our country. "But, side by side," he continued, "with these there has grown up a multitude of private schools, in which the special tenets of the various churches and sects are made a prominent part of the regular instruction, and which advertise as their chief claim to public favor that they are established for the sake of imparting Christian education. This term is misleading; for, properly construed, this should mean a training into the like-

ness of Christ, the subjugation of selfishness, and a cultivation of the sweeter graces of life. This would be Christian education; but it is for this purpose that the Church exists. If the Church is not doing its work, it is a pity; but the school cannot usurp the work of the Church without neglecting some of its own proper functions. Nor can the name Christian be properly applied to education, when the proper work of the school only is meant; for there is no such thing as a Christian alphabet. The alphabet is entirely pagan. We teach children to count in Arabic numbers. We teach them Arabic algebra, Greek geometry, and Latin grammar. These things are entirely pagan, and by no possibility could we Christianize them. The only suggestion ever made toward a christianizing of education was that the boys in the high schools should read the bad Latin and Greek of the Church Fathers instead of the good Latin and Greek of the pagan orators and poets, but it was only a suggestion. In view of the facts, the term Christian education, as it is used in religious newspapers and conventions, becomes an absurdity. But it is not only Christian institutions as such which bid for the support of the country. Every church and every denomination is multiplying schools of its own, and recommending its own superior form of Christian education. One would think there ought to be a special Baptist arithmetic, a superior Roman Catholic geography, a Presbyterian history, a Quaker Latin, a Protestant Episcopal chemistry. The perfect folly of all this is apparent on the face of it. Therefore, why must so many millions of dollars be spent to establish these sectarian schools as rivals to the public schools? We find, when we examine into it, that the real object is that children may be drilled into a certain ritual or taught some especial form of dogmatic theology. These schools are established to widen and strengthen the differences between Christians, to prejudice growing minds, to intensify bigotry; and this narrowing of the intellect is called Christian education. It is to be presumed that a school established for the sake of imparting a bias will make the matter of education secondary,—a means really of gathering the children for the sake of imparting the bias. With some rare exceptions, a comparison of these religious schools with the public schools will show that this presumption is true, and that the standard of scholarship is invariably lower.

"There is danger, too, to the institutions and freedom of this land in encouraging rivals of the public schools. By and by there will be an effort to divide the school fund; and every church and sect in America will clamor for its share of public funds, that it may impart its one-sided education to the children of the land. The success of American institutions depends upon the gradual breaking down of prejudices, upon the obliteration of dividing lines, upon the culture of a real broad-mindedness; and every true parent and citizen will guard his children against the cramping influences of prejudice in their early years. It is not education these sects are interested in. What they want is an opportunity to mould the plastic minds of children in a certain way, which is an act of intellectual injustice to the children. The public schools are called godless. Of course, they are, and ought to be. The alphabet, the multiplication table, geography, are all secular things, with which religion has nothing to do; and, as for history, it is so easy to color it, to suppress part of it under the specious pretext of the glory of God, that no church in Christendom may be safely trusted to teach it. Those countries in Europe which have had long experience with ecclesiastic supervision of education are taking it resolutely out of the hands of the Church. We in this country, caught by the glamour of prospectuses, fascinated by the sound of piety, are in danger of falling into the same old trap. It is time to take warning. The danger is not from Catholic schools alone, but from every school which professes to supply Christian education."

In making these notable extracts from Mr. Lester's sermon, I find a peculiar satisfaction. They have proved refreshing to me from the fact that only a few days since I was "riled" at a religious farce called the laying of the corner-stone of a new Episcopal school building in the village which is my temporary home. There was no hint in any part of the ceremony that the edifice was to have anything whatever to do with the intellectual side of the nature of children. There was a procession of right reverend Fathers in purple velvet and fine linen, and a brother-

hood of young priests in cassocks and girdles, with the head master of the school in white surplice, carrying a cross. The children of the school closed the procession. There was a solemn church service, with singing of hymns, concluded with remarks by the different clergymen. In these remarks there was no point whatever, save the setting forth the superior advantages of a Christian education as compared with the education to be obtained in "godless" schools, with the customary denunciation of public schools.

In that large assemblage grouped upon the grounds, I doubt if there was one besides myself who saw any incongruity in laying the corner-stone of a school building with strictly church ceremonies. It seemed to me very much like the "missed opportunity" mentioned in an article I had just been reading in *The Index*, called "Orthodoxy at Sea." "Fancy" here, too, "the grandeur of the opportunity." It was a perfect June day. The surroundings were beautiful; for nowhere in Wisconsin has nature, with a "cunning hand," created a more idyllic spot than in the lake region in Waukesha County. The spot selected for the school building is on an eminence in a grove of natural trees; and seated about in picturesque groups were the bright-faced children of the school, intent and quiet, eager, not only to see the "show," but to hear some word that could reach their understanding, some special word for them, which was their right. What a field for a preacher to sow good seed! What an opportunity to point toward some attainable ideal of intellectual integrity, some attainable ideal of manly and womanly "grace of life"! But no such word came: the only one approaching to it was when a right reverend Father, with enthusiastic eloquence, pointed to the possibility of some boy from that school becoming a foreign missionary! This was the climax of his hopes from a Christian education. There were men and women, too, listening with devout attention, possessed of the culture and refinement which would make them amenable to breadth of thought, clothed in graceful diction, upon the theme of education. But they heard only the same old story: "God has raised up the means to build this school. He has prospered the work of your hands. Let us give God the glory. Amen." What an opportunity thrown away! Orthodoxy was more than ever offensive in that charming open-air scene. The occasion savored of the cloister and the days when there was a priestly monopoly of education. It did not fit this enlightened era, when a beggar's child has the chance of a free education, and through it to become the equal in position and intelligence of the highest in the land.

Nature, however, was eloquent with unvoiced words, proclaiming the rare possibilities that lay in the opportunity offered these children of "getting wisdom" in contact with this lovely out-door world. Unawares, they will be benefited through the recreations which enter into the school curriculum; but that higher good, which comes of a close study of natural objects and laws, will not be theirs. This study has no place in "Christian education" schools.

MILWAUKEE, August, 1885.

A LETTER FROM LAKE PLEASANT.

Editors of The Index:—

Responding to your kind request, I will give you a few points regarding Lake Pleasant. The Spiritualist Association having this camp in charge organized about ten years ago, and it grows in interest constantly. There are about three thousand campers or citizens, and perhaps fifty thousand persons on the ground at different times during the season. It is claimed that speakers have had an audience of ten thousand, which is indeed a large crowd. Three hundred homes nestle under the soft foliage of this lovely pine grove on these beautiful green hills, and a more enchanting spot does not exist. The place is laid out in regular streets, named and numbered; and the homes range in size from a tent with one or two rooms to good-sized handsome houses, three stories high. Every foot of ground adjoining these cosy homes is ornamented with something to gladden the eyes. Vines, sod, flowers, foliage, pot-plants, vases of growing plants, hanging baskets, shells, lawn chairs, rockeries, and various styles of adornment are seen at every step. Flags are draped in various ways so as to be useful as well as pretty. Every place here looks so cool, fresh, and restful, and withal so dainty

*"The Emperor Julian's watchword was, 'The worship of the gods: no worship of dead men.'"—*Seeley, Roman Imperialism*.

and so much like a miniature city, that I can compare it with nothing else. I am constantly on the lookout for a veritable fairy,—the only suitable inhabitants for such a charming place.

When tired of other amusements, the young people dance, swing, boat-ride, or gather around the music-stand, and listen to the Fitchburg brass band. It is engaged for the season, and is a source of pure delight to all lovers of real first-class music who hear it.

Liquor and fire-arms are not permitted here, and one of the results is good behavior and safety. The people are very sociable with each other, and goodwill seems to prevail. Excursion trains are constantly coming and going, bringing people of almost every class in contact with each other,—orthodox, heterodox, and the out-and-out "ungodly."

To people who attend church, and believe the place in which they assemble to be "consecrated," "holy," it must seem strange to see an audience here. With that thought in my mind, I confess my risibles were excited one day, as I looked around and noticed gentlemen reading tracts or newspapers, ladies doing fancy work, and—oh! worse than all—a man passing through the audience saying, "Pop-corn!" as he offered his harmless refreshments to the crowd. Perhaps some thought of human depravity entered the speaker's mind; for she arose, and offered an unusually long and, no doubt, effectual prayer. This act, in connection with the other things transpiring, only added to my inward amusement, as I have the unfortunate faculty of seeing the ridiculous too frequently.

I have listened to some excellent lectures here, among the best being that of Mrs. Byrns, of your city, Mrs. F. D. Smith, Miss A. M. Beecher, J. Clegg Wright, and Mr. Tisdell. The gentlemen are said to be trance speakers, their subjects given them after they take the platform. Mr. Tisdell is totally blind, and has been for sixteen years, and entirely and deplorably illiterate; yet a grander, stronger speech, more flowing language, or better argument, it seems to me, are not to be found. Mr. Wright is also a wonderful and powerful speaker, and so radical in his views that I was quite delighted to hear him.

There are mediums and so-called mediums, some giving manifestations of spirit power and some manifesting nothing but the workings of their own ignorant, vicious, and depraved natures, and doing this in the guise of mediumship. Among the genuine spirit mediums, and first in interest, I place Dr. Henry Slade. We had some writing from him a couple of times while the slates were on the floor under our feet, the doctor not touching them. He surely does establish the fact of invisible intelligence,—call it what you will; and I beg of you to see him in the interest of truth. Dr. Slade's seances are always given in the day-time, in a perfectly well-lighted room.

Fearing I have trespassed upon your space, I close.

Yours truly,

AMARALA MARTIN.

WALKER'S "PHILOSOPHY OF THE PLAN OF SALVATION."

Editors of *The Index*:—

It is true, as stated in the "Editorial Notes" in *The Index* of August 27, that Mr. James B. Walker's *Philosophy of the Plan of Salvation* is "ingenious and original"; but it ought also to be said that it is utterly unsound, sophistical in much of its reasoning, erroneous in much of what it represents as fact, based on assumptions perfectly groundless, and contradictory in some cases to that Bible which it represents as the Word of God. All these allegations can be substantiated by the contents of the book; but such proof is not needed by the readers of *The Index*, and would not be admitted into any orthodox paper, even those which pretend to liberality of sentiment and freedom of discussion.

C. K. W.

[What is affirmed by C. K. W. of the work named is true; but it is also true of every book with which we are acquainted, written to prove the divine origin and authority of the Bible and the supernatural character of Jesus.—B. F. U.]

In a letter from Stuttgart to Mrs. Sara A. Underwood, dated August 7, Mrs. Clara Neymann, who has been in Germany the past year, writes: "I have read with great interest and pleasure *The Index* through this year, and it seems to me to be better than ever. I would like to give some information as to the Free Religious movement in Germany, but I was so deeply

engaged with all that pertains to the Woman's movement that I found no opportunity to look deeper into its workings. I can only give you some general impressions, and these are not favorable as to the progress of Free Religious thought in Germany. The movement is everywhere hampered by the State authorities, the police, the cowardliness and indifference of the people. Of course, when imprisonment, loss of business and social position, is the result of openly acknowledging one's conviction, there is not much room for the development of sincerity; and hypocrisy is the result. But there are also a great many sincere adherents to the old religions. There are still more believers than I had thought to find in a country where science and philosophy have had such a firm stand in the past, and where scientific investigation is encouraged from above. What a contradiction! On the one side, the government induces and stimulates disbelief in Orthodoxy by the free spirit of its universities and the higher schools in the country; and, on the other hand, it forces parents to have their children educated in some one religion in their special faith throughout all the primary classes and in all the public schools of the country. Respect is paid to every faith, be it Catholic, Protestant, or Hebrew. Separate religious instruction is also given in all the girls' schools. The Jewish rabbi, the Catholic priest, the Protestant minister, give separate lessons to their adherents. In this way, religion is fostered in the juvenile minds; and free thought has a much severer and harder struggle here than in America. Women who can nowhere attain a university education generally remain unenlightened; and, when married, the husband in but exceptional cases takes the trouble to influence their views, and submits to their church attendance and the education of their children in the old faith. There are a number of influential Free Religious and free thinkers' associations that have a difficult task and little encouragement. Last Sunday, I gave a lecture here in Stuttgart before the Free Thinkers' Association, on the 'Free Religious Movement in America.' It was very well received. I spoke therein my conviction that the new religion which is to bless humanity will celebrate its resurrection upon American soil. We in America have free access to the best European and Asiatic thought, we live in the midst of a highly developed civilization, we experience its shortcomings, and we have entire freedom of expressing and exchanging our views and opinions. Thus, hampered in nothing but in our own shortcomings, may we not hope that America, which is the home of the free, may also become the home of the true? Let us at all events strive for it, for alone in this ardent struggle is contained the germ for future salvation."

AFTER writing the paragraph relating to Rev. Mr. Downs' public demeanor, printed on another page, we received a letter from a clergyman, from which the following is an extract: "Rev. Mr. Downs' pulpit service has already risen in the market in proportion apparently as his character is called in question. See the unctuous note from the secretary of the 'committee chosen to entertain the people here'; i.e., in Cottage City. The committee 'have the best interests of Cottage City at heart,' and so deeply that they 'are in quest of an able man to deliver a discourse' there. Nothing but ability could reach the case, the high case of 'the best interests of Cottage City'; and the discourse must be accordingly 'on the Sabbath day,'—not on a Sunday, that would sound too secular. But the committee immediately rises to a far higher plane, taking a seat on the very supreme bench of human judgment, if not a trifle higher. 'Knowing,' they say, not believing in or confident of, but 'knowing of your recent publicity, ability, and future acquittal (I), they will deem it an act of generosity on your part if,' etc. The subject of discourse the committee will not presume to prescribe, nor even to express its secret hope. It probably is sure enough about what it will be,—something not remote from Mr. Downs and his recent experiences. Nor do they limit the expense, as this is not customary 'when on a spree.' We simply 'should be glad to know your terms.' And they intimate that they can pay well; for 'we have secured one of the two large tabernacles here which will accommodate several thousand people, as the place of holding the services.' The committee further intimate to the clergyman thus invited to make a show of himself for staring thousands that this will be his last chance, as then the season ends. 'We think it only proper

to end up (*sic*) the festivities of the season with something substantial on the Lord's day.' And to this has the dignity of the pulpit of to-day come! Many cheeks will mantle with shame over it, and especially the honest and single-minded and decorous ministers of the gospel. Probably, if the real veridancy and vulgarity of the source of this letter could be known by them, it would take off some of the edge of the insult. But the fact that Mr. Downs himself could furnish such a letter for publication, as it would seem he must, would restore that edge, and more than restore it, at once."

MR. CHARLES K. WHIPPLE, in the September number of the *North American Review*, after stating that the writers of the New Testament and Jesus "never once speak of the Christian disciple as a citizen and a law-maker," says: "If we hold Christianity to mean the rules of life contained in the Christian Scriptures, I do not see how Mr. George can find confirmation there for his doctrine above stated. Certainly, there is much in the New Testament to conflict with that doctrine. The writers of that book and Jesus never once speak of the Christian disciple as a citizen and law-maker. He is always addressed as a subject, and a subject bound to render obedience (except in matters of faith) to whatever the ruling power may require of him. Neither does Christianity (so defined) at all 'assert the natural rights of man.' On the contrary, it enjoins on the disciple submission and non-resistance, even when the ruling power is as oppressive as Nero and Tiberius were. The reason for this absence of inculcation of civil and political duties seems to have been that Jesus, and therefore the apostles, really expected a winding up of human affairs, and the establishment of new heavens and a new earth, within the lifetime of their own generation. But, whether this reason or some other induced the policy in question, the fact remains that the New Testament rule for Christians is non-resistance and patient submission to injury; and, this being so, the French and American Revolutions and our late war against rebellion and slavery were violations of that rule. People that write about Christianity rarely define the particular sense in which they use that word, and seem to assume that their readers will understand it as they do. But the popular conception of Christianity is a heterogeneous mixture, including sometimes more, sometimes less, of the following things: the teaching and example of Jesus and the apostles recorded in the New Testament; the teaching of Moses, the prophets, and the other writers recorded in the Old Testament; the doctrines of the creeds; the customs of the Churches. Since Christianity is so differently understood and interpreted by different people, he that writes about it would do well to state clearly his own view of its meaning and scope. I hold Christians to be those who, accepting Jesus of Nazareth as the fulfilment of the Messianic prophecies of Hebrew Scripture, acknowledge him, therefore, as Christ and Lord, and acknowledge the duty of conforming their lives to his precepts."

BOOK NOTICES.

THE DÆMON OF DARWIN. By the author of *Biogen*. Boston: Estes & Lauriat. 1885. pp. 64.

We have here a work prepared originally as a memorial address to be delivered from the Chair of Anatomy of the National Medical College at Washington, at the opening of the session, Oct. 2, 1882. The first part is devoted to the death and burial of Darwin, and contains an extract from Huxley's memorial address on the great naturalist, in which he is likened to Socrates. In part second, Darwin is represented in hades, the underworld, where, instructed by his Dæmon, he witnesses the many transformations of matter from chaos to worlds, from matter to man; and the transubstantiation of matter from the corporeal to the spiritual state, being the evolution of the human soul. This Dæmon is finally recognized as Socrates, who says: "Who else should greet thee here than he whose spirit guided thine earth-life through? Thou knew'st it not, but all men saw thy method was Socratic. Thy natal star was mine, that beamed upon thee in the Abbey Church. Thy Nemesis and I am one. 'Twas my familiar spirit speaking through the course of nature's evolution from the moner to the man, pointing the way of truth through mundane matter to the substance of soul, that clothes thy spirit in brightness. This, thy Dæmon, is the Love of Truth." Part third consists of a dialogue between

Socrates and Darwin in the overworld, testing the theory of the latter by the Socratic method. The main idea is that the process of evolution is unchecked by death; that the "spiritual body is evolved from the grosser states of matter which compose the earthly body, and thus fitted to survive." "No thau-maturgy this, the growth of soul," continues Socrates, "but natural law, which operates on matter to a defined result, yielding soul substance in the process: matter still, but altered in the aggregation of the atoms and their modes of motion, sensed by the rational soul in terms of thought. So doth thy new philosophy confirm the old. So mayst thou, from thy lofty station with the stars, disseminate thy fruitful spirit everywhere, that earth-born man, his feet the solid ground of nature treading, firmly may cross the threshold of the unseen world to view eternal verities." Although fanciful, this little work is thoughtful, suggestive, and interesting. B. F. U.

HISTORY OF THE ARGUMENTS FOR THE EXISTENCE OF GOD. By Aaron Hahn, rabbi of the Tifereth Israel Congregation, Cleveland, Ohio. Cincinnati: The Block Publishing and Printing Co. 1885. pp. 205.

The aim of this work is to state the arguments which have been adduced in support of the theory of an intelligent Deity, author and governor of the universe. The unity of Nature "with regard to its origin," "its aims, plan, products, and means," "that sameness of the human mind that makes comparative psychology possible," and "the organism of history, as a whole," afford strong proof, Rabbi Hahn thinks, of the existence of a Supreme Being of infinite attributes and perfections. The work is by an earnest thinker and a devout theist; and, while it contributes no new thought or argument to the discussion of the subject, it shows the efforts that have been made to solve the problem of the universe by ascribing it to an intelligent Maker, and is a brief and comprehensive statement of the reasonings which theistic thinkers have employed. The style of the author is clear, and his spirit good. U.

A BUDDHIST CATECHISM ACCORDING TO THE CANON OF THE SOUTHERN CHURCH. By Henry S. Olcott, President of the Theosophical Society, etc. Edited, with Notes, by Elliott Coues. Boston: Estes & Lauriat. 1885. pp. 83.

Mr. Olcott's purpose is to give the facts in the life of Gnatama Buddha and the essential features of his doctrine as held by the Sinhalese Buddhists. It is, the author says, largely a compilation from the works of T. W. Rhys-Davids, Bishop Bigandet, Sir Coomara Swaney, R. C. Childers, and Revs. Samuel Beal and R. Spence Hardy. Its fidelity as an exposition of exoteric orthodox southern Buddhism is avouched by the certificate of the high priest, Sumangala, of Ceylon. Mr. Olcott says that seventeen thousand copies of the work in the Sinhalese language have been distributed throughout the schools and homes of Ceylon, and that a Burmese edition of fifteen thousand copies in the vernacular and in English are now going through the press.

THE THIRTY-NINE ARTICLES OF THE CHURCH OF ENGLAND. By Rev. Joseph Miller, B.D. The Ninth Article, "Harmatology." London: Simpkin, Marshall & Co. pp. 345.

This volume is a useful manual for those who desire to know what has been the historical development of the doctrine of sin. It lays no claim to originality, but keeps within the limits of a brief but orderly exposition of what has been thought on the subject, accompanied by criticisms. The work shows considerable philosophical acumen as well as theological lore.

THE August *Century* opens with a lively account, by Henry Eckford, of life at "Camp Grindstone," the summer meeting-place, for games and races, of the American Canoe Association, in the Thousand Islands. It is profusely illustrated by W. A. Rogers. Howells, in his picturesque series on Italian cities, writes of his walks through Siena, illustrated from Pennell's etchings and pen-and-ink sketches. A portrait of William Lloyd Garrison, engraved by T. Johnson from a life-size photograph in the possession of the Garrison family, is the frontispiece of the number. There is also an interesting group portrait of Garrison, Wendell Phillips, and George Thompson. His birthplace and other places of interest are shown in the pictures which accompany the text. His son, Wendell Phil-

lips Garrison, describes the origin of the great anti-slavery advocate; and his son, Francis Jackson Garrison, recounts his boyhood. These papers are introduced by Thomas Wentworth Higginson, who characterizes the agitation which preceded the Civil War, and gives his views of Garrison's personal qualities. The fiction of the number embraces "A Story with a Hero," by James T. McKay, the concluding part of "Silas Lapham," by W. D. Howells, and the seventh part of "The Bostonians," by Henry James. A paper "On Hotel-keeping, Present and Future," is contributed by George Iles. Of a timely nature also is Henry King's suggestive paper (with map), on "The Indian Territory,—What it is, and What it should be." The August contribution to the *Century* War Series contains papers by Gen. Fitz John Porter on Malvern Hill, "The Last of the Seven Days' Battles," and another chapter from the "Recollections of a Private," both being illustrated.

THE September number of the *Popular Science Monthly* opens with an able and elaborate discussion on "The Relations of Railway Managers and Employés." The paper is very important. Dr. W. G. Thompson considers "The Present Aspect of Medical Education," and gives much information upon the subject. The "Insect Fertilization of Flowers" is a beautifully illustrated article by the German botanist Behrens, and is full of nice points on this curious topic. Prof. E. D. Cope treats of the "Origin of Man and the Other Vertebrates." Dr. Mary Putnam-Jacobi concludes her essay, "An Experiment in Primary Education," in the present number. It is a practice with her own child, and is full of originality. "The Fauna of the Sea-shore," by Moseley; Dr. Brehm's "Siberia and the Exiles"; "How Spelling damages the Mind," by F. A. Fernald,—are readable articles; while that by Prof. Langley, on "Sunlight and the Earth's Atmosphere," is a brilliant and striking performance. Dr. Ray Lankester makes report on "The Recent Progress in Biology," J. G. Frazer expounds "The Primitive Ghost and his Relations," and Mascart contributes a most interesting article on "The Physiology of Colors." "Science versus Immorality," by the editor, is most timely and suggestive. New York: D. Appleton & Co.

THE July number of the *Revue de Belgique* shows how much good will be done, not only in encouraging commerce, but in checking war and slavery, by the formation of the free state of Congo. There are also some important facts about Egypt, and some curious speculations on the condition of men after death. The able argument in favor of confining the study of Greek and Latin to a late period in education meets the plea that we cannot understand our own language, if we know nothing of its forerunners and parents, by reminding us that the Greeks wrote better than has been done since, but without even being aware how much they owed to Sanskrit. The author says he once asked a classical scholar, who boasted of being enabled by his knowledge of Greek and Latin to understand any new word, what was to be understood by the news of the recent discovery of a "hexastyle péripète." The linguist answered that classic etymology showed that this term meant an insect with wings large enough to form a complete covering, and a sting divided into six parts. "Your explanation is extremely learned," was the reply, "and I cannot but be provoked at the 'hexastyle péripète'; for it is not the insect it ought to be, but a temple of Jupiter, called so because it has six columns in each of the encompassing aisles."

IN the *North American Review* for September, "Grant's Memorial: What shall it be?" is discussed by Launt Thompson, Karl Gerhardt, O. L. Warner, and Wilson McDonald, sculptors; W. H. Beard, painter; Calvert Vaux and Henry Van Brunt, architects; and Clarence Cook, art critic. The same number of the *Review* contains a consideration of the question, "Shall our National Banking System be Abolished?" by George S. Boutwell, F. J. Scott, S. Dana Horton, and Edward H. G. Clark. "Ouida" contributes a spicy essay on "The Tendencies of English Fiction," and Elizabeth Stuart Phelps writes on "The Great Psychological Opportunity." A very readable article is ex-Sergeant-at-Arms French's "Reminiscences of Famous Americans," which is a series of delightful anecdotes about the famous war senators. The comments are, as usual, interesting.

IN the *Atlantic* for September, Henry James begins a new story, "The Princess Casamassima." Mrs. Oliphant's new serial is interesting just now, and Mr. Warner and Dr. Holmes give entertaining instalments of "On Horseback" and "The New Portfolio." Mr. Howells has a notice of Leopardi, and Mr. Scudder a paper on "Childhood in English Literature and Art." There is an article on the "Greek question" in colleges, by William Cranston Lawton; and, under the title of "A Diplomatic Episode," Rev. S. J. Barrows narrates the attempted seizure of the island of Alto Velo by the United States government. "Mondamin," by Edith M. Thomas, "Mining for a Mastodon," and a careful consideration of "The Poetic Element in the Mediæval Drama," poems and reviews, complete the number. Houghton, Mifflin & Co., Boston.

FAME usually comes to those who are thinking about something else,—very rarely to those who say to themselves, "Go to, now, let us be a celebrated individual!"—O. W. Holmes.

The Encyclopædia Britannica.

(CHEAP.)

Reduced from \$90.00 to only \$55.00. A new subscriber's copy of the Encyclopædia Britannica. 18 vols., Scribner's imprint.

The Religion OF PHILOSOPHY;

OR,

The Unification of Knowledge.

A COMPARISON

of the Chief Philosophical and Religious Systems of the World, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God.

By RAYMOND S. PERRIN.

Octavo, cloth. \$4.00.

C. P. Putnam's Sons,

27 and 29 West 23d Street, New York.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

The Secret of the East;

OR,

The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historical value."—*Boston Evening Transcript.*

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its management will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

"OLD THEOLOGY"

FOR THE

Healing of the Sick.

BY

E. J. ARENS.

Explains the Healing and Teaching of Jesus, the Creation of the Soul, the Origin of Matter, and the Relation which the Soul holds to God.

For Sale by **THE AUTHOR,**
33 Union Park, Boston, Mass.,
Dr. GEO. E. WHIPPLE,
26 Chest. Av., Jersey City Hts., N.J.;
Dr. GEO. B. CHARLES,
Central Music Hall, Chicago, Ill.
 318 Pages. Price \$1.15.

UNITY.

A LIBERAL RELIGIOUS NEWSPAPER.
 16 pp. Weekly.

UNITY seeks to adjust religion and culture; to make thought worshipful, and worship thoughtful; to find a unity beneath conflicting dogmas, a community in all denominations, a sympathy between all religions. It seeks to represent and emphasize the abiding elements of religion, love, justice, truth, worship, practically applied among all men.

Subscriptions, \$1.50 per yr. Sample copies free.

SPECIAL offer to those who see this advertisement. Send 50 CENTS with your address within the next thirty days, and you will receive **UNITY SIX MONTHS ON TRIAL.** Ask also for free sample copy of **UNITY CHURCH-DOOR PULPIT**, a fortnightly pamphlet giving sermons by M. J. Savage, Felix Adler, Washington Gladden, Phillips Brooks, and other distinguished preachers. Address **UNITY, 135 Wabash Avenue, Chicago.**

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion.
 A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, C. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

- I. *Taxation of Church Property,* by James Parton. 5 cts.; ten, 30 cts.; one hundred, \$1.50.
- II. *The Bible and Science,* by John Weiss.
- III. *The Sympathy of Religions,* by T. W. Higginson. Enlarged ed.
- IV. *Transcendentalism* Parker. Never.
- V. *The Public School* stood by a Catholic citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).
- VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.
- VII. *Evolution and Religion,* by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.
- Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.
- Reason and Revelation,* by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

Address **FREE RELIGIOUS ASSOCIATION,**
 44 Boylston Street, Boston, Mass.

TRACTS.

- No. 1.—*Truths for the Times,* by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.
 - No. 2.—*Fear of the Living God,* by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New Edition. Price 5 cents; 12 copies, 50 cents.
 - No. 3.—*Lecture on the Bible,* by the Rev. Charles Voysey, of England, is an over-whelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.
 - No. 4.—*Christian Propagandism,* by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.
 - No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.
 - No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.
 - No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.
 - No. 8.—*The Present Heaven,* by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.
 - No. 9.—*The Christian Amendment,* by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.
 - No. 10.—*The Impeachment of Christianity,* by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*
 - No. 11.—*The God of Science,* by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.
 - No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.
 - No. 13.—*On the Vision of Heaven,* by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.
 - No. 14.—*A Study of Religion: The Name and the Thing,* by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.
 - No. 15.—*The Battle of Myrausae.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.
- Address **THE INDEX,**
 44 Boylston Street, Boston, Mass.

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

NATURALISM vs. SUPERNATURALISM. By B. F. UNDERWOOD. 10 cts.

WHAT KIND OF MORALITY DID JESUS AND THE APOSTLES TEACH? By F. M. HOL-
 ID. 5 cts.

OR THE GALILEAN? By J. L. OSWALD. 5 cts.

SCIENTIFIC AND METAPHYSICAL METHODS IN PHILOSOPHY. By LEWIS G. JAMES. 5 cts.

THE RELIGION OF HUMANITY. By WILLIAM FREY. 15 cts.

AN AGNOSTIC VIEW OF THE DOCTRINE OF VICARIOUS ATONEMENT. By W. H. SPENCER. 5 cts.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

THE CHRISTIAN CHURCH AND WOMAN. By ELIZABETH CADY STANTON. 5 cts.

INAUGURATION OF LIBERAL LECTURES IN CANADA IN 1874. By ALLEN PRINGLE. 5 cts.

Address **THE INDEX, 44 Boylston Street,**
 Boston, Mass.

Frothingham's Sermons.

The sermons are neatly printed in pamphlet form, and our friends who wish to do missionary work for the Liberal cause will find them admirably adapted to that purpose. To such as order them in lots of 25 or more, the price will be reduced to 3 cents. Single copies 5 cents.

Address **THE INDEX,**

BY B. F. U.

COL. WRIGHT's investigations in regard to Sunday labor do not sustain the statement so often made by the clergy and the religious press, that the tendency of the times is to convert Sunday into a day of labor, similar to the other days of the week. They show rather that Sunday in this country has gradually been changed from a day of "rest" to a day of recreation. A certain amount of personal service, such as is necessary to run the cars and steamboats, is of course required to enable those who work in shop and factory to go to the seashore or into the country; but mere toil for wealth is no more common now on Sundays than in former years. The clergy had better try to reconcile themselves to the present situation than to continue their wholesale denunciations of Sunday recreation.

The editor of *Problems of Nature* says: "When all men have red hair, they will be wise enough to accept her [woman's] counsel, and save their fortunes and escape their miseries. She is constructed for this work in a great part, and is prevented a complete success by the men whose heads are covered with black hair. Take out of a legislature the black-haired members, and a bill for woman's suffrage will pass unanimously." The friends of woman suffrage will please take notice, and govern themselves accordingly. Meanwhile, let all men with black and brown hair, and all whose hair is of "the color of sand," bemoan their misfortunes, and let all red-headed men and women rejoice; for they are all natural-born philosophers, and constitute the intellectual aristocracy of the human race. It is safe to say that the discoverer and philosopher from whom we have quoted above is a man "whose hair is red," but it is doubtful whether "his head is level."

Referring to the fact that Mr. Stead of the *Pall Mall Gazette* and Gen. Booth of the Salvation

Army have been indicted as co-conspirators with Mrs. Jarrett, in attempting to prostitute the child Eliza Armstrong, the Springfield *Republican* says: "This is but the beginning of a bitter attempt to ruin the standing and reputation of every man engaged in the late disclosures. The good Mr. Stead's course has wrought is written in the criminal amendment bill, but there is every indication that he is to be damned socially in England. He struck at a class, and nothing but the support of other grades of society lower down can hold him and his paper in their places. By including Mr. Stead in the pending prosecutions, a new element is added to this doleful business, the echo of which will be heard in the November elections."

A MONTREAL correspondent of *The Week* writes: "The Roman Catholic priests regard small-pox as a punishment for spiritual offences, against which material means of protection would be wrong,—nay, impious. They do not openly oppose vaccination, but they do not use their vast power to promote it. Consequently, the epidemic has slain but few victims outside their fold. Of these, the great majority have been infants and young children, that, duly baptized, have without doubt passed to celestial bliss. And among a fecund race, with whom poverty is the rule, grief at the death of offspring soon passes into resignation. . . . How sincerely the small-pox epidemic is regarded by the Roman Catholic Church as a scourge not to be fought by carnal weapons is clear from the bishop's order that prayers be offered to St. Roch, the saint who is believed to be specially charged with the relief of epidemics."

THE poet Whittier, who is two years older than Oliver Wendell Holmes, wrote the latter on his seventy-sixth birthday, which occurred August 29, as follows: "My father used to tell of a poor innocent in his neighborhood, who, whenever he met him, would fall to laughing, crying, and dancing. 'I can't help it, I can't help it: I am so glad you and I are alive'; and I, like the poor fellow, can't help telling thee that I am glad thee and I are alive, glad that thy hand has lost nothing of its cunning and thy pen is still busy. And I say to thee, in the words of Solomon of old, 'Rejoice, O young man, in thy youth, and let thy heart cheer thee in the days of thy youth.' But don't exult over thy seniors who have not found the elixir of life, and are growing old and past their usefulness. I have just got back from the hills and am tired, and a pile of unanswered letters are before me this morning. So I can only say, God bless thee!"

THE massacre of Chinese miners in Wyoming ought to make the face of every American tingle with indignation and shame. What had those Chinese done, that their settlement should be attacked, their houses burned, twenty of their number murdered, and the rest of the community turned out homeless and shelterless? What should we say if an American community in China were thus treated? We have no words of justification for the corporations or contractors who are attempting to supplant American labor in mines by Chinese, and thus bringing the races in antagonism; but

their course furnishes no excuse for the white miners' cruelty and brutality, which must be regarded as a manifestation of that accumulated and ingrained barbarism of centuries which in America as well as in China breaks through the thin coating of civilization that ordinarily conceals it, whenever the passions are aroused, and the mob spirit takes control of a crowd of men.

THE *Golden Gate*, a Spiritualist journal published in San Francisco, observes: "There is a large class of thinkers outside the churches—students, if you please, in the many marvellous manifestations of mind and spirit—who do not wish to be considered or known as Spiritualists. There is so much that goes under the name of Spiritualism that they do not indorse—so much that, to their minds, is unphilosophical, and even downright mischievous—that they keep themselves aloof from everything that bears the popular brand of Spiritualism." This is doubtless true. "And yet," adds the *Golden Gate*, "Spiritualism needs just that class of persons to give to it the breadth that properly belongs to the name. It is surely a good, honest word, comprehensive and catholic. It is broad enough to take in the moral, spiritual, and intellectual nature of man,—yea, all things relating to the here and the hereafter. It is a clean word, and no one has a right to attach to it aught of meaning save that of the highest and purest import."

A MONTREAL correspondent writes: "The religious faith in a persuadable Providence, whose punishments for sin are disease and death, has had some striking illustrations in this city lately. Small-pox has prevailed in an epidemic form among our French-Canadian population. Every grand mass for the appeasement of Heaven has been followed by an increase of cases of disease, due plainly to the crowding together of thousands of worshippers, among whom one or two infected persons had come. Heaven has perhaps been less offended at the petty sins, in a religious sense, of these simple people, than at their neglect of sound drainage, of vaccination, of scavenging, and of the isolation of patients. Now that the epidemic has seriously injured business interests, the English-speaking citizens who chiefly control these interests are aroused to vigorous sanitary measures, and the small-pox is fast diminishing in force. The prayers of the despairing devotee are answered in the form of vaccine lymph, burly guardians of infected premises, good, big, covered carts for the prompt removal of refuse, and a universal looking to drains. If cholera visits America, Montreal will not invite it; and the small-pox may not prove too costly, after all." Since the above was written, the papers report a slight increase in the number of deaths; but, through the influence of physicians and leading citizens, Bishop Fabre has directed the priests of the city to advise the members of their congregations to get vaccinated, and not to attend church if any of their families have the disease. This, it is believed, will have a marked effect on the minds of the French Catholics who have resisted vaccination, and among whom ninety per cent. of the deaths have occurred.

ECCLESIASTICAL EVOLUTION.

Slight straws may show which way the wind is blowing in theological as well as in other matters. It is not merely the character of the new *Andover Review*, nor the prosperity of such a paper as the *Christian Union*, nor the progressive theology of the *Encyclopædia Britannica*, that testify to the fact that Orthodoxy is gradually changing its base. The new and more liberal theology seems, indeed, to be in the atmosphere, and to be absorbed thence by people who seldom read what scholarly men are writing, and who never even heard of the *Britannica* nor of the *Andover Review*. People all over the country have been reading the crude reports by telegraph in the Monday newspapers of Henry Ward Beecher's sermons on Evolution as representing the true method of the world's creation and history, and yet apparently have received no shock therefrom. The doctrine of the sermons themselves, compared with the old Calvinism, is really revolutionary; and yet so largely has Calvinism been undermined in the popular thought that nobody, except a few fossilized Presbyterians, seems to suppose that anything extraordinary is happening in the Plymouth Church in Brooklyn. What is happening there is, in truth, only a somewhat more conspicuous illustration of what is going on pretty generally in orthodox Christendom. The old religious foundations are breaking up. The churches do not adhere with the old strictness to the theological creeds which were once regarded as their sole bulwarks.

Certain indications of this change—small in themselves, but enough to show the direction in which things are moving—have come under our notice in the vacation season just finished, which we have spent mostly in New Hampshire. The Unitarians have been for several years claiming that New Hampshire presents a good field for a liberal missionary work. They have themselves, with no great effort, planted in recent years some new churches there, and taken under their auspices one or two old ones transformed from Orthodoxy. For some reason, not easy perhaps to understand, the soil of the popular mind in that State seems to be prepared for the seed of a more rational religion, and is already spontaneously producing new religious growths. Perhaps it is because the people there, in the sparsely settled country towns, though not reading much of the new theological literature, have been wont to think for themselves. Perhaps the old defection from Calvinism, under the lead of the Free-will Baptist denomination, which has been exceptionally strong in this State, has brought about the present condition of things.

But, whatever be the cause, the claim made by the Unitarians that New Hampshire offers good ground for liberal religious missionary work seems not to be without reason. Their own work in the State is on a liberal basis, looking not merely to denominational ends. Their "Grove Meeting" this year at Weirs (which we by invitation attended and addressed, as we have once before) was, in some of its features, a good specimen of a Free Religious Convention. Mr. Applebee, of the Parker Memorial Society, was the preacher on the first Sunday, both forenoon and afternoon, and was a special favorite with the large audiences that heard him. Rabbi Wise, of Cincinnati, was on the programme, and was expected to give one of the sermons, though for some reason he failed to put in an appearance. At another session, Parker Pillsbury as one of the invited speakers made the principal address; and it was of a character—so we were informed—which would have made it a very acceptable utterance at the Albany Free Thinkers' Convention. The principal speaker

on the last Sunday was M. J. Savage, who is as much at home on the Free Religious platform as at a Unitarian meeting. Other speakers were mostly Unitarians of various shades of belief, though we should not forget the remarks and singing by representatives from the Canterbury Shaker community. Such was the breadth and freedom of this Unitarian gathering, which is attended not only by Unitarians, who go there for the meetings as a whole, but by large numbers of people on Sundays particularly, of various persuasions, from the towns in the vicinity.

Another straw showing how the authority of the old creeds is falling was visible in the little town of Jackson. This town has a location of exceptional beauty, even in a region where beauty is lavished on all sides with a generous hand. It is situated just within the gateway of the high mountain ranges which Mt. Washington crowns. It is justly drawing more and more visitors each year. The whole town has but one small church, which is called a union church, though the prevailing belief among the regular inhabitants is that of the Free-will Baptists; and the settled pastor is of that denomination. The understanding is that the pulpit is to be free to any denomination, the adjective "Christian," probably, being tacitly implied; and, in the summer season, this freedom is practically illustrated by ministers of different creeds being invited to occupy the pulpit from among the guests who are enjoying the pure air and restful scenery of the town. A "union church" (though not always) is apt to be confined to representatives of evangelical societies, but the pulpit of the Jackson church has been as freely open to Unitarian and Universalist as to Orthodox ministers. The settled preacher keeps a sharp look-out at the hotels, and, if he lights upon a clergyman, has him, if possible, in his pulpit the next Sunday. It so happened that, while the senior editor of *The Index* was recently rusticated in this charming mountain town, it got noised abroad somewhat that he was also pastor of a church; and anon came the Baptist minister with a cordial invitation to him to conduct the services in his church. Of course, neither the Baptist nor his flock had ever heard much, if anything, of the Free Religious Association, and were utterly innocent of any knowledge of the "Year-book" controversy, and of debates over the constitution of the National Unitarian Conference. Yet not wishing to receive countenance under the mask of a Unitarian, and possibly thereby involving the good minister in trouble, and not being quite ready, too, to give up the freedom of a Sunday on the mountain-side, we handed him several copies of *The Index*, and asked him particularly to note our "creed," as published in one of the numbers several months ago. If he should still wish us to speak in his church after thus learning our position, we answered that we would do so, but that we should count it no discourtesy if, after a better understanding of things, he should conclude that the freedom of his pulpit did not signify the admission of one who does not even call himself a Christian. He sent word in due time that the invitation still held, and that he had announced its acceptance at his service the preceding day. So the freedom of the Sunday for us had to be sacrificed to the freedom of this Free-will Baptist union pulpit. In a subsequent conversation, this minister said that, though he had his own views, agreeing mainly with those of his denomination, yet he believed in the largest fellowship, and was ready to work with any persons who wanted to work for the prevalence of right. No friction or trouble, he said, arises in his church from working on this plan.

Considering these and kindred evidences of

progress, of a progress going on silently in pews as well as more demonstratively in pulpits and religious newspapers and reviews, is it too much to hope that the Churches of Christendom, at least of Protestant Christendom, may yet be emancipated from the thralldom of a superstitious theology, and that their immense power may be put to use for the instruction of people in a rational philosophy of religion and in a genuine practical uplifting and ennobling of their lives? The possible good which Churches thus emancipated might do is of infinite scope. They would be in a condition to organize the highest thought and the most heroic sentiment and purpose, so as to bring them to bear directly upon the moral, mental, and physical well-being of humanity. There is, of course, a great deal of superstitious theology remaining. Creeds that have survived for centuries do not fall in a day. And evidence may be found, without searching far, that even Calvinism is not yet dead. But the people, generally, are not hearing it from the pulpit, as once they did; and, to the rising generation, it is fast becoming an obsolete system of thought. Science, common sense, general enlightenment, and a finer sentiment of justice and humanity are winning the day.

WM. J. POTTER.

SILAS LAPHAM vs. "SOCIETY."

The story of the rise of Silas Lapham has ended. It is to be hoped, for the peace of mind of the select few who constitute the "Corey set," that the lesson it inculcates will be taken to heart by the Silas Laphams of this country. Their manhood is best served by remaining in Nankeen Square, and not seeking to enter the "Corey set" or to build artistic houses on the Back Bay. For from such ill-placed ambitions came the Laphams' misfortunes,—their daughters' heartaches over their aristocratic lover, Mrs. Lapham's domestic and social perplexities, and Mr. Lapham's failure, which even Providence decreed: poetic justice demands that the sacred precincts of the Back Bay should not be polluted by their presence, and the artistic house burns down.

In the face of all these ill-judged ambitions and overwhelming disadvantages, Mr. and Mrs. Lapham are, after all, the only interesting characters of the story; for the subtleties and "faint, ineffectual sketches" of the "Corey set" reveal but partial glimpses of the real human beings beneath.

Novelists are endeavoring to convince the public that classes only are interesting,—the upper classes, the middle classes, the lower or poorer classes. Humanity so subdivided is held up for subtle analysis, and the "impassable differentiations" contrasted. Such novels are curious and entertaining for the moment, but it is a useless task to banish human nature and substitute conventionalities. People long to read and to know about their kind. They seek for the hands which will clasp theirs in happiness or grief, they listen for the cry of agony or joy which is common to all. These are the reasons why "Si" and "Persis" and Penelope, even Mrs. Millon and Zerilla, are the ones on whom the attention centres.

Society etiquette is not really entertaining, even when necessary; and there are few who "have the difference in their favor" who care to acknowledge that "it is certain that their manners and customs go for more in life than their qualities." If this maxim is accepted as the summing up of modern civilization, then Mr. Howells has struck a keynote in "Silas Lapham."

Many will think that, if it is necessary to drop originality and quality out of their "set," it may be more desirable to drop the "set"; for the absence

of these qualities among people throws a neutral tint over society, and is perhaps the secret of its monotony in all large cities,—this struggle for a dead level, the absence of most of the truly great and eminent figures of the country, the redrawing of the best class of men from the drawing-rooms of the period, and the ill-concealed impatience of most brilliant women at the arbitrary commonplace of the world, in which most of them must perform remain.

It requires no great degree of refinement or character to learn to use wine with discretion, to know when to leave off or to put on gloves; but great qualities of heart and firmness of principle are necessary to the refusal of the Englishmen's and New Yorker's offers. The Bromfield Coreys are becoming familiar figures in that circle of self-elected dulness. The Silas Laphams are not without their value, even in Boston; and Silas' after-dinner tale, taken from his personal experience, was extremely interesting to the gentlemen of the distinguished party of which he was so proud to be a member.

It is a great relief to have the Laphams return to Vermont, and give up the struggle for social distinction; though, surely, it was carried on in a most simple and straightforward manner. Perhaps their entire lack of the necessary push and impudence may have had something to do with their failure: these qualities have occasionally secured a brilliant success to rising men.

It is hard to forgive Penelope her self-abasement before her husband's family. She held up her head so bravely until the last, that it is trying to have her vanish while crying, "Mea culpa."

Thirty years ago, this story of Silas Lapham would not have been comprehended in New England; but now every one enters thoroughly into its spirit. This fact is an acknowledgment that society is at least divided into the upper class, the middle class, the poor class, and a few snobs.

ELLEN M. HENROTIN.

"IF A MAN DIE, SHALL HE LIVE AGAIN?"

The author of the Book of Job, drawing his analogies from a scant knowledge of nature, answered, No. Macaulay said that Emirs in their tents on the sands of Idomea, before arts or letters were born in Ionia, were debating this high question with skill and eloquence and ignorance not surpassed by the *savants* of modern Europe. "There are departments of knowledge," he says, "in which the law of the human mind is progress. With religion, it is not so."

Macaulay's words were a night-cry of despair. They were born out of the heart of the times. No one can fail to see the growth of agnosticism. Many a pulpit, by its silence on the question of an after-life, avows itself agnostic. The couplet of Lowell voices the prevailing thought:—

"And when we hear the fatal 'He is dead,'
So far as flesh has knowledge, all is said."

On this desert air of doubt is projected many an alluring mirage. Is it all mirage?

I approach this subject with misgivings. Huxley once said to me that spiritism was so repulsive to him that he felt not the least interest in the phenomena. It is with a feeling akin to this that I approach a subject which, years ago, I had put on the shelf. I like not the credentials, moral and intellectual, of the spirits: they gabble, they cheat, they lie. Parker has written, through the hand of an obscure woman, a volume of drivel which he calls *Marigolds by the Wayside*. Faraday is explaining the aurora as "shimmer on the wings of animalculæ." Franklin is tapping out dreary nonsense on a rickety old table. Newton thumps out ghostly addenda to the *Principia*. Webster is just

now teaching an Indian ghost in Central New York how to materialize a feather. Galen is whispering in the ear of Andrew Jackson Davis, "Thou shalt forswear thyself, and break the heart of the wife thou hast sworn to cherish."

In my own person, I had cause to put all ghostly matters on the shelf. Some years ago, I was induced to see a materializing medium, in a village on the shore of Lake Ontario. The lady's character for integrity was well attested. She, an amateur astronomer, and myself were the only "visible" persons in the dimly lighted room. I could see no possibility for the concealment or the ingress of confederates. The psychic went into a clothes-press, and passed into mesmeric slumber. Forms purporting to be spirits appeared at the door of the press. A child came, then a man, a woman, then a man whom I recognized. He was an artist living in New York. He was dressed in the most fastidious style, and held in his hand a handkerchief of saintly white. "Claude," I said. "Yes," answered the ghost, in a low whisper. "I am glad you recognize me. I—can't—speak—much. I—can't—hold myself—to-gether—any longer." Then came an Indian woman out in the full light. "Sanky," said my friend, the astronomer. "Yes, brave," said the ghost, in ringing tones; "and that other brave, I want to talk to him." I moved up to the woman, and touched her shawl, her hair, her hand. I planted my eyes full in her face. Her eyes began to swim and melt: her whole form melted away, and where had stood a woman was nothing but empty air.

But Claude. "You know that man?" said my friend, who had some experience with the medium. "Yes," I answered. "If I had seen that face in New York, I would have known it very well; but the puzzle is that Claude is living, and in good health." "If you are sure of the recognition," he answered, "I am sure you will find that he is dead." I wrote to Claude at once, making no allusion to what had happened, and requested an immediate answer. Time passed, but no answer came. I wrote again, but had no response. The matter was getting serious. I brooded over it, and began a magazine article, in which the ghost of Claude bore a conspicuous place. Six weeks had passed; and my article, which I regarded with deep affection, was ready for the press. Returning home one day from a lecture tour, my wife handed me a bundle of letters, and said, "One of these, I think, is from our friend Claude." "I hope not," I said, in a panic of dread. I took the letter, still hoping there might be some mistake. I read it, and my hope was slain. Claude had been absent from the city, but he was still present in the flesh. Under the sting of disappointment, I wrote to him a letter, which I reconstruct from memory:—

My dear Claude,—Six weeks ago, I lost an afternoon in a little village on the shore of Lake Ontario. My hostess entertained me by going to sleep in a clothes-press. I am quite sure that she slept alone; but a little while after the mesmeric slumber began there stood in the door yourself, Claude. I would have known you, if in no other way, by the peculiar twirl you gave to your moustache. You told me that you had passed to the "Summer Land." As the days passed, I expected to hear again of your translation. I had doubted the report of my senses; but, as the weeks passed, and I could hear nothing from you, I came to believe what you had told me at the door of the clothes-press. I had evolved a theory, and was about to publish an article which would startle the whole world of science and theology. As an astronomer brooding over a great discovery, so was I. As the astronomer whose fact in the heaven is found to be only dust on his lens, so at this hour am I. O Claude, Claude! your letter has slain me. Do not think me unkind. You know that I love you, but in all my list of friends there is not one whose death would have given me so much pleasure as yours.

My manuscript never saw the light. But, seriously, what are we to think? Were my senses under a spell? That is the most obvious solution, but will it stand? One day, at the suggestion of William Howitt, I called in the heart of London at the house of Miss Marshall, a noted psychic. I called unknown and unannounced. In a scantily furnished and darkened room, the lady, her little brother, and myself sat at a table. A voice, which seemed to form itself out of the air above me, spoke in a loud and harsh tone, calling me by name, and speaking the names of cherished friends who had passed through death. He or it—whatever you will—called itself John King, and claimed to hail from Ohio. Was I under an hallucination, or was Miss Marshall a trickster? Perhaps an answer may be found in the investigation which followed. It was conducted by Prof. Crookes, one of the first chemists in Europe. He made it a condition of the investigation that Miss Marshall should become an inmate of his house. He reports that, when the woman would pass into a mesmeric sleep in a dimly lighted room, two forms would appear, calling themselves John and Katy King. Here was my "Ohio man" again! Crookes directed his investigation first on the assumption that these Ohio people were confederates of Miss Marshall, who had concealed themselves somewhere in his house. The investigation proved a negative. His report shows that his precautions to settle this question were ample, and that the assumption of confederates was utterly untenable. With this factor eliminated from the problem there remained another before the x —the unknown,—the John and Katy, could be determined. He worked now on the assumption that John and Katy were no other than Miss Marshall herself, who, in some way unknown to him, would disguise herself and leave the cabinet. He applied the test of science. Miss Marshall, sitting in the cabinet, has the advantage of darkness; but he will know what she does there. He will know better even than his eyes could tell him. He attached an electrical apparatus to a wall of the room: from this, he passed two wires through the door of the cabinet, and asked the lady to take her seat. When seated, she took the end of each wire, one in the right hand and the other in the left. The electric current was now complete, and the finger on the index of the apparatus indicated the resistance interposed to the current by her body. The door was closed. Let Miss Marshall do now what she will, the finger on the index will publish her. She cannot leave her seat without breaking the current; and, if the current breaks, the finger sweeps at one bound the full face of the dial. There were present at the experiment Varley, the eminent electrician, Lord Houghton, and others, men of science and men of letters. A little while after the cabinet door was closed, out came the form which called itself Katy King. It stood, and was photographed. All eyes were directed alternately to Katy and the dial: the finger did not move. Miss Marshall had not stirred. Whether the x of the equation was resolved or not, it was certainly not Miss Marshall. The scientific world has accepted from Prof. Crookes the demonstration of a fourth condition of matter,—the ultra gaseous,—on evidence not so strong as the evidence that Katy King was not a natural woman, and yet was a reality sufficiently tangible to reflect light.

Take another fact, of different character. The son of an eminent English author went to Australia as an engineer. He was engaged at once on a work which led him into the interior. On leaving Melbourne, he wrote to his parents that he would not be within reach of postal service for some time, and they must not be disappointed if they did not hear from him again for many weeks.

One evening, not long after the receipt of this letter, while the family was sitting round the open grate, a daughter passed into the mesmeric state, and wrote a letter signed with the name of her brother in Australia. The letter gave an account of the accident by which a few days before he had lost his life. He had tried to sail across a lake, the boat had capsized, and he and all his men except one were drowned. The date of the accident was given, and the name of the man who had saved himself by swimming. This was written at a time when there was no steam communication with Australia; and more than two months must pass before the family could hear of the accident, if accident there had been, through natural channels. The time passed, and there came a letter from the cousin of the engineer. He wrote that a report had reached the city that an engineer and his party had been drowned in a certain lake in the interior. He had gone to the scene of the accident, and had found a man, the only man of the party who had reached the shore. He gave the date and manner of the accident and name of the survivor. Date, manner, name, each answered to that given in the letter which purported to come from the drowned man less than a week after death. I give this remarkable story at no second hand. I had it from the lips of the father and mother.

Take another fact, representing still another phase. Dr. Phelps was a clergyman of ability and high character. Month after month, his house in a Connecticut village seemed to be the very bedlam of tricksters and demons. Stones were thrown through the windows till almost every pane was broken. The contents of bureaus were mysteriously abstracted, and strewn over the floor. Books, plates, shells, would flit through the air before the eyes of the family, as if thrown by invisible hands. Mysterious writing would appear on the wall; and letters, bearing the signature of "Beelzebub," would be dropped on the doctor's knees or table. The clothes were torn again and again from the body of a little son. Footsteps and mysterious poundings were often heard at night. Once, a sheet was seen moving through a room, as if it enfolded a man. The doctor seized the sheet, but there was no man within. The persecution forced the family at last to leave their house. The good doctor and his family were reluctant witnesses to the truth of what I have described, and much more of trickery and malice by agents which they could not detect as fleshly.

These facts cover the range of phenomena which are a standing challenge to science. Unless history is a fog-mist, such things have occurred from the earliest recorded time. It matters not that a thousand tricksters have been detected and exposed. It matters not that a Katy King, bony and fat, was caught at her trick in Philadelphia. There is the experiment of Crookes! Are we to sponge out page after page of history, and remand Wesley and Wallace and De Morgan to the category of dupes, because a transparent fraud is detected at a dark "circle" in Boston? Eliminate the fraud, and there remains a substantial stratum of fact. Suppose the facts are repulsive to Huxley, to you, and to me. So is a tumble-bug repulsive, but the entomologist cannot deny it or ignore it.

I assume that science has shown that mind and matter are two faces of one fact. There can be no manifestation of mind except through matter. Let this be conceded. What then? Newton saw that the universe, revealed to the senses of man, cannot be explained except as we hypothecate another universe infinitely attenuated, and not revealed to the senses. Science has pushed her investigations into that realm of cosmic ether, and

she has already shown that within the ether which bears the pulses of the sun to us in light and heat is a finer ether. With our senses, we touch only the fringe of this great material universe.

To-day, science stands as to man where she stood in Newton's day as to the universe of suns and planets. She cannot interpret man without assuming in man a something which neither scalpel nor scales can reveal. Paul may have had his foot on the granite of science, when he said that there is a spiritual body; that is, a body of other material than this. Smite the granite ledge with dynamite, and blow it into atomies. There remains in the place where it was the all-pervasive ether, undisturbed. Smite the human body with death, and still there may remain the subtler body which pervaded and informed it. The assumption is as fully warranted as Newton's assumption of the all-pervasive ether. Grant it, and the pages of history become luminous. Influx from a world of men, invisible, but not the less material, would be held, not as an impossibility, but merely as a matter for proof.

Within the whole range of attested phenomena, there is nothing which science must rule out as an infraction of law. Rapping on a table? You speak to me from the distance of a thousand miles, and your message comes in electric taps. Katy King? coming never out of light, but always from a darkened chamber? I can imagine Katy meeting the scepticism of Crookes in words something like these: You doubt me, because I do not come to you from the light, and because, having come out of darkness, I cannot abide in the full light. Now, you are a chemist. You have pushed your discoveries into a realm of matter far more attenuated than gas. You work on molecules; and you often find that you cannot make your molecules cohere, unless you put them together in the dark. You cannot form sulphurous vapor in the light. You know that light is simply agitation of ether, and darkness is quiescence of ether; and you know that molecules are so minute and their coherence is often so slight that a pulse of ether—that is, a wave of light—is as a little hammer to clip them asunder. You must have darkness in your laboratory: I must have darkness in mine. I reveal to your eyes not my true self, but only a temporary investment of myself. I take certain molecules from the aura of the psychic or the psychic herself, and build them into an investing body. Turn the light in on my laboratory, and each wave is a little hammer to clip my molecules asunder. The law here is sister to the law there.

I have taken you on your own ground, and of course I have convinced you. To those who yield to authority rather than to science I would say that Swedenborg, in his *Adversaria* (a work which some daughter or son of earth should put into English),—Swedenborg says that in the atmospheres are molecules which spirits can build into investing bodies, and thus show themselves to eyes of flesh.

But what are we to say to the ghostly Claude? to the imbecile Faraday? to the puerile Webster? to the wicked Galen? to the demoniac hordes which infested the house of Dr. Phelps? When Sheridan was pulled up drunk from a London gutter, the policeman asked his name; and he answered, "Wilberforce." If I detect an ignorant spook in sham science, and he tells me he is Faraday, I cannot chastise the spook, but I can let him alone. I let them alone, one and all. Influx from that realm of being into this has been the inspiration of all false religions. Spiritism was the root of Judaism. The Hebrew prophets were "Nabi"; that is, seers,—see-ers, clairvoyants. One of these Nabi, Micaiah, the son of Imla, said to the kings of Israel and Judah: "I saw the Lord sitting upon his throne, and all the

host of heaven standing on his right hand, and on his left. And the Lord said, Who shall entice Ahab, king of Israel, that he may go up and fall at Ramoth-gilead? . . . Then there came out a spirit, and stood before the Lord, and said, I will entice him. And the Lord said unto him, Wherewith? And he said, I will go out, and be a lying spirit in the mouth of all his prophets. And the Lord said, . . . Go out, and do even so." Has Brother Moody ever read the eighteenth chapter of Second Chronicles? If the son of Imla did see a conclave of wicked spirits in conspiracy against men, the darkest demon of them all he mistook for a god, and called him Javeh. This Javeh was discerned by the early Jews, just as other spirits were discerned. He was announced; and his will was published by the Nabi, the "psychics," or "mediums."

As Ahab and Jehoshaphat, contemplating a war, sought the advice of their Javeh through four hundred prophets, so the Greeks going to war sought the will of their Apollo through one prophetess at Delphi.

The oracles, both Jew and Greek, are dumb. So mote it be with all oracles! We have had enough. Rest, thou perturbed ghosts!

W. D. GUNNING.

CHRISTIANITY AND REFORM.

If I were in doubt whether to vote the Republican or Democratic ticket, I should pay much less attention to Jackson's way of appointing officials than to Cleveland's, and I should not be satisfied with finding one or two members of either party to agree with me about the tariff. I should want to know what views on these and other subjects rule the party as it is, and which party is most likely to carry out the needed reforms. It would be as absurd for me to attack the Baptists on account of what took place at Münster three hundred and fifty years ago as to join them because Roger Williams maintained that forced worship stinks in God's nostrils. To make a fair comparison of Moslemism with Christianity, it is not enough to quote characteristic sayings of Mohammed and Jesus, and exceptionally advanced utterances of their adherents. We should consider what each religion is doing and teaching to-day, and how much it is likely to help or hinder the world's progress. So, when we ask if Christianity is really the best system of thought, we ought to consider not merely what it was eighteen centuries ago, or what it has been made by a few of its most enlightened advocates, but what it actually is to-day for the great body of believers of every sect. We have no more right to rule out the Roman Catholics or Presbyterians than the Unitarians. No one individual has a right to speak for all Christendom, or say, I believe thus, and you have no right to talk as if Christianity was any different from my own view.

To speak justly of all the teachings of Christianity would require many volumes. There is room here to mention only one of the best known and most important. Jesus taught, and all Christians believe, that this earth is under the perfectly good and wise rule of the heavenly Father, who orders all things for our good, and gives us the best preparation for heaven. Similar views may be found elsewhere, and are known to have been taught by Cleanthes long before the birth of Jesus. Still, the Greeks and Romans in general, like the Jews, Hindus, and Moslems, believed in deities of such bad character that their rule could not be conducive to holiness. We ought to rebel against such rulers as are said to have murdered Hippolytus on account of his virtue, to have commanded wholesale massacres of women

and children, to have made robbery and murder a religion in Thuggism, and to have peopled Paradise with houris. Buddhism, which otherwise strongly resembles Christianity, is decidedly pessimistic in comparison. Dark ideas of earthly life formerly prevailed among Christians, but were mitigated by faith that this was the necessary preparation for eternal happiness. Christendom has always delighted to repeat such texts as, "All things work together for good to them that love God," "All things are yours," "The earth is the Lord's, and the fulness thereof," "The living God who giveth us richly all things to enjoy," etc. The hymns in all the churches repeat the popular belief that whatever God does is right, and that things in general are as they ought to be. Public worship consists largely in praising those natural conditions under which we live. Even those who discard the Christian name retain much of the Christian optimism. Those who expect no heaven hereafter think they can find one ready for them here. No part of the teaching of Christianity has a more deep and universal influence than this idea, that nature is essentially what God wishes it to be, and that he will, in due time, bring about all important changes needed on this earth.

Pleasant as this view is, it may easily be carried too far. Paul pushed his optimism into a dangerous error, when he taught his converts to be subject unto Nero, because "the powers that be are ordained of God." Just this doctrine is held by some Christian philosophers in America; and the Russian priest still preaches passive obedience, as nearly all the clergy did two hundred years ago. The precept, "Be content with such things as ye have," is precisely what should not be taught to tramps, or to poor people generally. No one now takes literally the command of Jesus, recorded in two Gospels: "Take no thought for your life, what ye shall eat or what ye shall drink, nor yet for your body, what ye shall put on. . . . But seek ye first the kingdom of God and his righteousness, and all these things shall be added unto you." Yet memory of these and similar precepts restrains many a preacher from saying as much as he should to his hearers about the duty of improving their condition as fast as possible. Paul's contented view of slavery had a very bad effect in this country. And here, as well as in England, the religion of the working class makes them altogether too ready to take things as they are. We are all too easily satisfied with the condition of society under which we live. There has been more improvement in this century than in any other; and this is in great part due to the fact that the Church no longer dares to say, "You must not try to change anything; for God has ordained that it should all remain as it is, and they that resist shall receive to themselves damnation."

Christian optimism has had such bad results that we ought to inquire carefully whether it is true or false. There is no sure test of truth except conformity with facts. Propositions which are thus known to be true are robbed of their rightful authority by being degraded into equality with what is merely taken for granted, and assumed to be probable. Nothing more than probability can fairly be claimed for such theories as that nature is what God wishes to be, and that all that seems wrong here will be made right hereafter. No view of heaven has the slightest basis in fact. And, as for the divine government, *The Index* for August 29 contains a powerful argument, by a writer of high reputation in science, Dr. Montgomery, to prove that the various forms of life and matter differ so widely that we have no right to look on them as the manifestations of one supreme power. And, however this may be,

it is certain that nature needs, in many ways, to be improved by men. Think how many weeds and noxious insects and germs of deadly disease are still to be destroyed. A recent writer in *The Index*, on "Man vs. Nature," says, "It were better for man if he could destroy the whole animal world, save about one species in five hundred, and the whole vegetable world, except one species in three hundred." Our existence has been possible only through the slaughter of untold numbers of our fellow-beings, and the main thing to regret is that the work has not gone on more rapidly. Still, the cobra slays ten thousand Hindus every year, and its extirpation is almost impossible; for it is worshipped as a divinity. Ether and chloroform have proved so beneficial, that few remember how much their early use was censured as an attempt to subvert that divine order which made pain the penalty for motherhood. The art of healing might be improved in many directions with incalculable benefit, not only to our happiness, but to our holiness. Our natural appetite for intoxicating drink has been greatly lessened by our own effort. Much is yet to be done in reforming innate propensities so vicious that it is morally wrong to look with complacency at their strength. Nature has more faults than society. But, even in this free land, the relations of employer and laborer ought to be changed for the better, and will be as soon as the proper method is understood. And what we have already achieved in politics shows how much is still to be done by other nations, to insure proper mental and moral development. Tyranny, pauperism, intemperance, disease, ignorance, and other evils, still grow rank and rife on this earth. They will keep on growing until weeded out by human hands.

These facts should be insisted on, for there are none of greater value. The faith which is to save the world consists in believing that there are very many evils, in our natural as well as in our social condition, which ought to be reformed at once, and that the only way to reform them is that of human effort. Foolish to suppose that ignorance, superstition, intemperance, pauperism, and other social evils will cure themselves! They never have done so, and never will. Among the worst obstacles to the progress of our cause is the willingness of its nominal friends to suppose that it will carry itself forward somehow without their help. If there is any one who ought to be called an infidel, it is he who has given up the old faith in God without attaining the new faith in man. Those who expect to find heaven waiting for them here on earth, without their having to do anything for their own improvement or their neighbors', are doomed to disappointment. Heaven is not to be found on earth. It may be made here by every one for himself, and ought to be.

F. M. HOLLAND.

RELIGION AND CRIME.

The *Atlanta Constitution* quotes from Gen. Brinkerhoff of Ohio, who is an authority on the subject of prison and prison reform, to the effect that in this country crime is rising like a flood, and that, "unless we check this flood, society as at present organized must go under"; that "our penal system is a failure, and our society is on the down grade, rushing either to anarchy or Caesarism."

While our Southern contemporary is inclined to a practical and not to the pessimistic view of the subject, believing that this country, although young, has the wisdom and strength to protect itself, and that the first step to be taken is to investigate our criminal laws and penal system and reform them, it asks: "Why does this state of

things exist? Religion was never more active, and money was never more liberally spent for Christianizing the heathen. Education was never more generally distributed. In fact, it is almost compulsory. Never in the history of the country was there such a strong temperance sentiment all over the land, from Maine to Texas. These influences—religion, education, and temperance—have always been regarded as active factors in the suppression of crime; but what are we to say in the face of these statistics?"

Religion, primarily emotion, a feeling of dependence, is powerless to restrain crime, except so far as it is enlightened, and is made to conform to the principles, and becomes suffused with the spirit, of morality. Savages are religious. The most corrupt periods of history have been the most religious; that is, they have been periods in which the religious feelings were the most active, and religious observances the most intimately associated with public and private life. Speaking of the period that just preceded the advent of Christianity, Mommsen says, "A wager might be laid that the more lax any woman was, the more piously she worshipped Isis." The Middle Ages, pre-eminently religious, were ages of ignorance, vice, and crime. Often, the most religious persons among us to-day—those who revel in the excitement of religious revivals—are habitually immoral, and even criminal as in the cases of Guiteau and the James brothers. "Unusual piety is, in the popular eye," Lange observes, "either genuine saintship or a wicked cloak of all that is vile. For the psychological subtlety of the mixture of genuine religious emotions with coarse selfishness and vicious habits, the ordinary mind has no appreciation." Schleiermacher says:—

Religion belongs neither to the domain of science nor morals, is essentially neither knowledge nor conduct, but emotion only, specific in its nature, and inherent in the immediate consciousness of each individual man. Hence comes the vast variety of religious conception and of religious system observed in the world,—variety not only thus to be accounted for, but apprehended as a necessity of human nature. Hence, also, the irrefragable plea for universal toleration, and the sin against God's ordinance, committed in every act of persecution for opinion.

Upon this, Dr. Willis, Spinoza's biographer, remarks:—

This view of Schleiermacher was an immense advance on all previously entertained ideas of the nature and true worth of the religious idea, and has not yet been generally appreciated in all its significance. When we recognize it, however, we readily understand how religious emotion may be associated with crime and immorality as well as with the highest moral excellence; how a *Jacques Clement* and *Balthasar Gerard* may confess themselves to the priest, and take the sacrament of the body and blood of the Saviour by way of strengthening them in their purpose to commit the crimes that have made their memories infamous; how punctilious attention to Bible reading and devout observance among criminals of a less terrible stamp do not necessarily imply hypocrisy and cunning, as so commonly assumed, when these unhappily constituted beings are found again engaged in their objectionable courses. The piety—the religion—displayed is a perfectly truthful manifestation of the emotional element in the nature of man which seeks and finds satisfaction in acts implying intercourse with Deity, but neither seeks nor finds satisfaction in acts of honesty and virtuous life in the world. We have here an explanation of how it happens that our penitentiaries are filled with the worst sort of criminals, whose lives, prior to the detection of their crimes, were characterized by eminent piety and a strict regard for religious observances. That religion, *per se*, has no restraining influence upon the conduct of men is a truth confirmed and attested by our daily and hourly experience, and needs no elaborate argument to substantiate it.

Religion, since it is included in human thought and feeling, certainly belongs to the domain of science; and this Schleiermacher, had he been less a theologian and more a man of science, would never have questioned. Religion is a fact of human nature, and can be studied in the individual and in the race. It must therefore belong to the province of science. The question whether religion has a "scientific basis" is a proper question only when it is asked in regard to any particular theories or conceptions of religion. The above quotations are made only to sustain the view that religion is not necessarily moral, and that it contributes to the restraint of crime only so far as it is purified and dominated by ethics. What is especially needed then at this time, indeed at all times, is that emphasis be put upon moral teachings and moral influences.

No education is worthy of the name that is not dominated by the principles and the spirit of ethics. Education as a mere accomplishment will not secure exemption from vice and crime. If proof of this were needed, we should have only to refer to the corruption of female children in London by men of wealth and social position, educated in the highest schools of learning.

"Temperance," or what is commonly so called, is most important; but something more is needed to prevent crime. Spain is a temperate nation; yet her people delight in brutal sports, crimes of violence are common, and immorality prevails among the nobility, the clergy, and the masses.

What is needed is not a religious revival, but a moral movement that shall elevate religion and make all intellectual acquisition contribute to the advancement of the best interests of society.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

"A STUDY of Primitive Christianity," by Mr. Janes, will be concluded in *The Index* next week; and the series of lectures will soon be reprinted in book form.

THE demand for Walt Whitman's poetry cannot be very great, judging from his statement that his American publisher has paid him the last six months, in the shape of royalty, only \$22.06.

"THERE is much reason to believe that this present life is the most favorable opportunity for the moral renewal in Christ." This sentence is quoted from an editorial in the *Andover Review* by the *Christian at Work*, which calls it "a bit of Satanic euphemism," "a milk-and-water declaration," "the melodious piping, the emasculated euphemism of the *Andover Review*," and expresses a decided preference for the "living gospel and the trumpet call to repentance, such as John declared in the wilderness and Jesus sounded forth beside still Galilee." It is certainly wisdom to emphasize the importance of "moral renewal" in "this present life," whether it be the only life or but the first stage of a never-ending existence.

SAYS Froude of Carlyle:—

He did not believe that the facts alleged in the Apostles' Creed had ever really happened. The resurrection of Christ was to him only a symbol of a spiritual truth. As Christ rose from the dead, so were we to rise from the death of sin to the life of righteousness. Not that Christ had actually died, and had risen again. He was only believed to have died and believed to have risen in an age when legend was history, when stories were accepted as true from their beauty or their significance. As long as it was supposed that the earth was the centre of the universe, that the sky moved round it, and that the sun and moon and stars had been set there for man's convenience, when it was the creed of all nations that gods come down to the earth, and men were taken into heaven, and that between the two regions there

was incessant intercourse, it could be believed easily that the Son of God had lived as a man among men, had descended like Hercules into Hades, and had returned again from it.

OUR venerable friend, Prof. J. B. Turner, of Jacksonville, Ill., in a recent "log cabin sermon," said: "Our three great log cabin men,—Lincoln, Garfield, Grant! What a trio! What a triumph of the log cabin over all the other palaces of the globe! The toil of whose lives saved the Republic, and whose tragic deaths did more to unite in one solid brotherhood of hearts these fifty millions of people than all the policies of their lives. They thus give an eternal lesson of highest import and inspiration to every man on this continent, young or old. I would impress it as the great lesson of the passing hour. I wish every young man here to-day to perpetually heed and remember it, and realize that he, too, was practically born in a cabin; came naked into the world; and can clothe himself with nothing worth keeping except as, following in the footsteps of these great leaders, he schools himself to some one of the multitudinous forms of hard work indispensable to the conquest of the world, the lack of which no birth, no genius, no patrimony, can supply."

WHEN a clergyman perverts facts to make them contribute to a sound thesis, he injures the good cause in behalf of which he preaches; for those whom he seeks to convince are often repelled from his whole argument, if they detect the misstatement. This was illustrated a few months ago, when Rev. Mr. Newman, preaching against infidelity, challenged the specification of any great scientist of modern times who was not a Christian. The name of Charles Darwin—not to speak of more—occurred, of course, to every person of ordinary intelligence who heard the sermon or who read it in print. Rev. Mr. Morehouse falls into a blunder of the same kind, according to the report of his sermon on the same subject, when he challenges "the exponents of infidelity" to specify an infidel who has "built hospitals, schools, or charitable institutions of any kind." The name of Stephen Girard—not to speak of more—will occur to all persons of ordinary intelligence who read Mr. Morehouse's sermon, whether they are "exponents of infidelity" or not. Girard was an infidel of the blackest dye; but he bequeathed more millions to "hospitals, schools, and charitable institutions" in Philadelphia than his Christian contemporaries, who were residents of that city, did all together. He also displayed the most courageous virtue by personal care of the sick in time of pestilence.—*New York Herald*.

AMONG the deaths of last summer, we wish here to mention that of W. C. Kelley, of Wauseon, Ohio, an able and prominent lawyer, a radical free thinker, and a man highly respected for his integrity, uprightness, and many sturdy and sterling qualities of head and heart. He died June 30, aged forty-five years. With but few advantages in early life, by industry, courage, patience, and self-denial, he won a high place at the bar, and became an honored representative of his profession. At Mr. Kelley's funeral, which was conducted at the request of the family by the Fulton County Bar, and consisted of singing by a choir and of addresses by members of the bar, Hon. L. M. Murphy thus referred to the deceased: "By nature, singularly free from cant and impatient of shams, he always gave more heed and attention to the substance than the form of anything, and thus, though not polished nor pretending to be, was always powerful and thorough in his work, holding, with an unyielding grip, every step he won in his business and profession. . . . Condoling profoundly with his stricken wife and all his relatives in their great bereavement,

the bar of Fulton County will follow our brother to his, as it seems to us all, untimely grave, sorrowing that our ranks should thus and so rudely be broken, yet ever remembering and treasuring during our remaining mortal span his many estimable qualities and virtues." Another member of the bar, C. S. Bentley, said: "I remember him as a lawyer who was careful of the conscience of his client. . . . Kelley had also the virtue of personal bravery, not of the swaggering sort. He could and he did look an antagonist square in the face, and express his sentiments, uncomplimentary or otherwise, as freely and forcibly as out of his presence. . . . He was singularly free from professional jealousy. He desired consideration for himself, he demanded it, and he obtained it, too; but he never sought it at the expense of another. . . . The strong column of this life has been broken off midway, and we cover the piteous points of the fracture with the wreaths and flowers of friendship." Mr. Kelley was deeply interested in liberal religious thought, and had, with his invalid wife, a lady of marked intelligence and breadth of thought, for whom his care was unremitting, been a reader of *The Index* from the first number published at Toledo. Several times, he made arrangements for lectures at Wauseon by the writer of this paragraph and probably by others. His strength of character, his honesty, sincerity, and public spirit secured him the respect and confidence of all who knew him.

PATIENCE. For *The Index*.

Swift-beating Heart, in patience curb
Thy eager throbs, thy wild desire;
Nor let opposing foes disturb
Thy aim, nor quench thy steadfast fire.

Patience, stern Will! Though sluggish moves
The event which thou would'st fain control,
Forget not wheels that form new grooves
In virgin soil are hard to roll.

Patience, bold Brain! the startled crowd,
Who "think in herds," ne'er yet did greet
New truth with acclamation loud,
Until crowned victor o'er defeat.

Patience, O Conscience! do not haste
Vainly to hurl indignant jibes
At those whose sense of right is based
On laws which pop'lar rule prescribes.

Patience, proud Soul! e'en though the few
Who ought to know misunderstand
The unthanked work thou'rt called to do,
So that thy work bear Wisdom's brand.

Patience, brave Toiler! Duty asks
Thy isolation. Fear not thou!
In loneliness, the grandest tasks
Were ever wrought, and shall be now!

SARA A. UNDERWOOD.

SONNET. For *The Index*.

With Love, O Past, thy Sons to-day salute thee.

From souls that bore the burden of the fight,
And suns of direst need that gave the day,
And stars that gemmed a crown for every night,
And lips and hearts that smote the error gray;
Through waters sent by rivers to the seas,
And moistened lips of clouds by many shores,
And songs that give a meaning to the breeze,
And dreams that come through newly opened doors,—
We feel the burden of the olden pain.
And trust the father-heart, and, hand in hand,
Partake with death of labor's loss and gain,
And leave no spot unsearched on any land;
For love is witness to the race that keeps
Fond vigil where the parent-nation sleeps!

HORACE L. TRAUBEL.

The Index.

BOSTON, SEPTEMBER 10, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, } Editors.

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearsages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

A Study of Primitive Christianity.

BY LEWIS G. JONES.

X.

CHRISTIANITY THE STATE RELIGION.

The Character and Attitude of Constantine.

The reign of Constantine witnessed the practical dissolution of the Roman Empire by the removal of the capital to the Bosphorus, and the secular triumph of Christianity. As a political leader, a ruler of men, a captain of armies, this emperor well merits the title of "the Great." As an exemplar of religion and morals, he better merits the title of "the Infamous." He shrunk from no crime which seemed requisite to the furtherance of his insatiable ambition. Upon his hands was the blood of the weak and innocent as well as of his enemies in war,—of his own flesh and blood as well as of the stranger. "His father-in-law, his brother-in-law, Licinius, his own son, Crispus, his nephew, the son of Licinius, a boy eleven years old, and, lastly, his wife, Fausta, were his victims." Such a man could in no high or spiritual sense have been converted to the simple, childlike faith, the ideal socialistic system, of the Man of Nazareth. It was the mythical Christ, and not the human Jesus, the Prophet of Righteousness, who commanded his allegiance. If anything in Christian doctrine attracted his intellect, it was, doubtless, the convenient dogma of substitution and atonement, which appealed to his supreme egoism and selfish dread of that unknown future which the great emperor as well as the least of mankind was finally compelled to face. Not until the very close of his career, and upon his death-bed, did he profess repentance, and submit to Christian baptism,—an ordinance which, in the prevailing superstitious belief of the Christians, was efficacious in sweeping away the penalty of all previous sins.

Constantine's services to the Church were rendered while he was in the midst of his crimes, and before he had formally renounced the Pagan-

ism, of which he continued to be the *Pontifex Maximus*,—the legal and recognized head and chief. The story of his conversion to Christianity by a miraculous vision of the cross appears to rest wholly upon his own testimony. An extreme exercise of charity might lead us to interpret this alleged experience as a subjective illusion, similar to Paul's vision of the resurrected Jesus. More probably, however, it should be classed among pious frauds, and regarded as a pure invention of the emperor for the purpose of conciliating the Christians to his support.

Constantine's Eclat: His Recognition of Paganism.

Constantine founded a number of Christian churches in Rome, contributed to their support from the public revenues, and even set apart a basilica within the Lateran palace as a place for Christian worship. Side by side with these temples of the new religion, however, the worship of Cybele and the other Pagan deities continued unopposed even as late as the fifth century,—a hundred years after the recognition of Christianity by the empire. In Constantinople, the new capital, Constantine not only erected several Christian churches, but also a temple to Rhea, the mother of the gods, one to Castor and Pollux, and one to Tyche, the fortune of the city. Christian historians have claimed for him the credit of being the first to grant authoritative recognition of Sunday as the Sabbath, but the edict commanding its celebration makes no allusion to the day as a Christian institution. It was still devoted to the worship of the conquering solar deity. Apollo, Bacchus, Mithra, and Osiris had long received honor as incarnations of the sun-god. To these, the emperor, and apparently the popular sentiment, now added Jesus,—a circumstance the more natural owing to the fact that the popular Christian mythology, now fully developed, had drawn many of its characteristic features from the solar mythos. The 25th of December was set apart as the birthday of the founder of Christianity; and the first day of the week became a holy day, devoted to his worship,—a common inheritance from the heathen cultus of the solar deity. About the same time that the public recognition of Sunday was made obligatory, Constantine issued orders to the haruspices to continue the heathen practice of divination on one or more notable occasions. He also placed the image of Apollo and the name of Jesus together on his coins.

The Worship of the Emperor authorized and continued by Constantine.

The worship of the Emperor, inaugurated by the Cæsars, still continued, and received new impetus and recognition at the hands of Constantine. He went further than any of his predecessors in providing for his own *post-mortem* adoration, ordaining that thereafter, annually, a golden statue of himself should be carried in solemn procession through the streets of Rome, and that every citizen, including the reigning emperor, should prostrate himself before it. "On the top of a monolith of porphyry," says Dr. Hedge, "he placed a statue of Apollo, rededicated to himself, with a halo of rays formed, it is said, of nails taken from the cross [of Jesus] which [the Empress] Helena had brought from Jerusalem. Between the nails, the inscription: 'To Constantine, shining like the sun, presiding over his city, an image of the new risen Sun of Righteousness.' This column, we are told, was long an object of formal worship to the Christians of Constantinople."* The adoration of the em-

peror as an incarnate deity was transmitted, together with the characteristic art of the early Church and many of the forms of primitive Christian worship, to the Oriental Church of our own day, the recognized head of which, the Czar of Russia, is still addressed by his subjects as "our God on earth."*

Sectarian Disputes: The Donatists and Circumcellions.

Tyrant, murderer, and patron of idolatry as was this so-called Christian emperor, this protector of the infant Church, he was excelled in cruelty and infinitely surpassed in bigotry by many of his Christian subjects. The African Church—fertile mother of an evil brood of irrational dogmas—became divided into two great sects, the Donatists and the Catholics. The former claimed to be the only elect people of Christ, the sole inheritors of apostolic succession. The latter stoutly resisted this exclusive claim. The battle of words soon culminated in appeals to physical force. When, by violence or artifice, the Donatists obtained possession of a church belonging to their opponents, they burned its altar, melted its cups, rebaptized all who desired to unite with their services, and even removed the bodies of dead Catholics from the common place of sepulture.† This feud ultimated in the most barbarous scenes of riot, massacre, and licentiousness, to which both parties contributed, and in which they gloried. The Donatists boasted of their martyrs: the Catholics testify to their own barbarities, appealing to the examples of Moses, Joshua, and Elijah, to justify the wholesale destruction of their opponents. Optatus, a Catholic bishop, exultingly cries, "Is the vengeance of God to be defrauded of its victims?" It is probable that more people perished in this earliest sectarian feud than the total number of Christian martyrs during the persecutions of the heathen emperors.

"Where Christianity has outstripped civilization," says Dean Milman, . . . "whether in the bosom of an old society or within the limits of a savage life, it becomes, in times of violent excitement, instead of a pacific principle to assuage, a new element of ungovernable strife."‡ The same able historian thus describes the African Christian of the period now under consideration: "Of his new religion he retained only the perverted language, or rather that of the Old Testament, with an implacable hatred of all hostile sects; a stern ascetic continence, which perpetually broke out into paroxysms of unbridled licentiousness; and a fanatic passion for martyrdom, which assumed the acts of a kind of methodical insanity."§

The Circumcellions, another of these fanatical sects, asserted the theory of the civil equality of mankind; proclaimed the abolition of slavery; took the master from his chariot and placed the slave in his stead, compelling the master to walk by his side; declared all debts to be cancelled, and granted release to the debtors; and, in defence of these doctrines,—which, indeed, have no inconsiderable foundation in the literal teachings of Jesus,—they proclaimed a crusade against the existing order of society. Abandoning their accustomed duties as agricultural laborers, they attacked all who refused to be governed by their interpretation of the gospel teachings. Since Jesus forbade his disciples to use the sword, declaring that "they who take the sword shall perish by the sword," the Circumcellions took huge clubs for their weapons, with which they beat their enemies to death. Their commu-

* For an interesting account of the Oriental Church, see Dean Stanley's *Lectures on the Eastern Church*.

† We are reminded of the present attitude of the Catholics toward those of other faiths,—an attitude which has often ultimated in acts almost as barbarous as those of the Donatists.

‡ *History of Christianity*.

§ *Ibid.*

* Article in *Unitarian Review*, "Christianity in Conflict with Hellenism."

nistic socialism resulted in habits of marital promiscuity and unbridled licentiousness. Their bands of marauders in the name of Christ were accompanied by troops of abandoned women, whom they called "sacred virgins." Their piratical leaders were denominated "captains of the saints." Some of these fanatical sects, of which we can here give but one or two specimen descriptions, were still powerful at the close of the sixth Christian century.

The Conflict of the Creeds: Arius and Athanasius.

During the reign of Constantine, the memorable theological conflict known as the Arian controversy culminated, and resulted in the formal proclamation of the doctrine of the Church concerning the nature of Christ and his relationship to the Supreme Being. This controversy, which appealed exclusively to the metaphysics of theology, grew directly out of the doctrine of the Logos, first formally accepted as an essential feature in the Christian faith by the authoritative recognition of the Fourth Gospel, in the latter part of the second century. The term *Logos*, in the mystical philosophy of the Alexandrian neo-Platonists, represented an attribute rather than a person, an emanation from the supreme Deity rather than the generic inheritor of his personality. The Logos was often described figuratively as the "Son of God," while it remained in the mind of the metaphysician as an attribute co-eternal with God himself,—not *made* by him, but an eternal manifestation of his divine nature. An attribute is of course forever inseparable from its subject. The Christian theologians, however, treated the figurative expressions of this Oriental mysticism as they had treated the Orientalisms of Paul and Jesus. They personified the attribute, and identified the Logos, regarded as the Son of God, with the man Jesus; torturing the Hebrew phrase of the Gospels, originally descriptive of citizenship of the heavenly kingdom, the regenerated Jewish state, into a claim for a special and unique relationship between Jesus and the Father.*

The Logos in Christian teaching was *hypostasized*; that is, as interpreted in the unyielding idiom of the Latin scholars, it was regarded as an independent *substance*, no longer merely as an attribute of God. In this rigid logic, this separate substance, endowed with personality, accreted with the affinity of sonship, could no longer be deemed co-eternal with the Father. Whether "first begotten," as announced by Philo, or "only begotten," as proclaimed in the Christian epic, it must have had a genesis and beginning. Yet it was admitted that *through all time* the Son and Father had dwelt together as separate and co-equal persons.

To the ordinary mind, here was an insoluble contradiction, but not so to the metaphysician. In his thought, time itself had had a beginning. Both the parties to the Arian controversy agreed that there was no *time* when the Father and Son did not dwell together as equal persons. Yet said Arius, a presbyter, "There was when the Son did not exist." The Father dwelt alone in that eternity which was before time began,—in that eternity which, in the cant of the current metaphysics, was not infinite duration, but the actual opposite or negation of duration.

Moreover, said Arius, if the Logos was born or

* Ewald says of this term, "the Son of God": "With it, the reigning king of Israel could formerly be distinguished before all other members of the community of God. . . . It was first used, not to flatter the monarch, but in accordance with the strict idea of the true religion,—that, if all members of the community are children of God, elevated to this dignity by divine grace and education, and at the same time always called to remain faithful to this higher stage of life, then the true King of the community is destined above every one else to attain such an exaltation, in order that he, as standing nearer to God than any one else, may enjoy more fully his grace and protection, while at the same time, should he depart from God, he must feel his chastisement most directly and most severely."—Ewald, p. 114.

created, it could not be "of the same substance" (*ὁμοούσιος*) with the Father, but could only be "of like substance" (*ὁμοιοούσιος*). Around these two Greek words, differing in but a letter, and the metaphysical notions which they represented, was waged the long and bitter battle of opposing theological factions,—a battle whose weapons were not always spiritual or even logical, and in which no place remained for the manifestation of the sweet graces of Christian charity and brotherly love. In such a controversy, we of the present day can have but little interest. If the arguments of Arius were enforced by a more unyielding logic, the doctrine and thought of his opponents were perhaps broader and more catholic than his; but the foundations of both parties rested in an arid waste of metaphysical speculation, as far removed as possible from the lofty ethical impulse which lay at the heart of the teaching of Jesus, and alienated from all rational conceptions of objective truth.

Constantine at first apparently sympathized with the doctrine of Arius, in which was implied the superiority of the Father to the Son, but subsequently threw the weight of his influence on the side of his great opponent, Athanasius, under whose leadership and inspiration the council of Nicaea finally formulated an authoritative statement of the orthodox belief in the following lucid terms:—

*"The Son is begotten from the substance of God, God begotten from God, light from light, very God from very God, begotten, not made, of the same substance with the Father."**

Constantine's Influence as Peace-maker.

During all these theological controversies, Constantine maintained the position of a pacificator, endeavoring to bring harmony out of discord, to consolidate the growing Church into a powerful and homogeneous body, and to make it the support and ally of the imperial throne. Doubtless, he saw in the rapidly growing hierarchy the germs of a power which, through its influence on the conscience and credulity of the people, would soon be able to make and destroy empires, to sustain or overthrow dynasties and kings. With a practical shrewdness which allied itself with the profoundest wisdom of state-craft, he seized upon all possible means to weld together the schismatic sects, and to bind the one holy and Catholic Church to the fortunes of the empire. He flattered the bishops, humbly claiming to be himself but as one of them; yet, in the councils of the Church, he was always the power behind and above the ecclesiastics, guiding their action according to his will.

The radical divorce between dogmatic theology and true religion, between a recognition of the formal observances of ecclesiasticism and that essential nobility of character which constitutes the supreme beauty and glory of manhood, was never more completely exemplified than in the character and example of Constantine. We may admire his statesmanship, his shrewdness, his ability as a ruler; but we must not permit our recognition of these traits, or his position as the first Christian emperor, to lead us to regard him as in any sense a worthy representative of natural morality or of true religion.

'Tis easy for any one that hath his foot unentangled by sufferings both to exhort and to admonish him that is in evil plight.—*Æschylus*.

* For an interesting popular account of the Arian controversy, see *Christian History*, by Joseph Henry Allen. See also Millman's *History of Christianity*, Chadwick's *The Man Jesus*, Savage's *Talks about Jesus*, etc. For more elaborate explanations, see Neander, Mosheim, Baur, etc.

CORRESPONDENCE.

JOHN BROWN AND THE SLAVE-CHILD.

Editors of The Index:—

"The Last Moments of John Brown" is the title which Mr. Thomas Hovenden, of Philadelphia, has given to his powerful piece of historical painting, now on exhibition at the rooms of Williams & Everett, 79 Boylston Street, Boston. I had long known, through friends of the artist, of the energy and enthusiasm he was throwing into this work in his determination to secure historical accuracy. The painting is not for sale, having been executed to order for a New York gentleman. It will excite, of course, great interest here in the cradle of Abolitionism, and, if engraved, will become, I should think, a treasure of homes, humble as well as grand. It is an epitome and focus of the great racial question that bourgeoned into the Civil War. And, further, and chief, it expresses the spirit of reconciliation, the loosening of caste prejudice between the *neri* and the *bianchi*, the white-skinned and the dark-skinned peoples of America. The subject of the painting, in brief, is the kissing of the black child by Brown as he was being led to execution. There are on the canvas twenty-two figures, nearly life-size; and at least nine of them are carefully finished studies, apparently from life. I am told that Mr. Hovenden left no stone unturned in his search for the very uniforms, guns, etc., that were used at the time in which the scene is laid (1859). His friends long sought in vain for a copy of a certain contemporary placard he wanted, but at last one was found. However, it does not appear in the painting after all, and was probably discarded for good reasons. The central figure, it is unnecessary to say, is the martyr-hero himself. He is just stepping down the battered wooden steps of the white porch of the jail, pinioned, the rope around his neck. Behind him and at his side are specimens of Southern chivalry, just emerging from the dark doorway of the jail. In the foreground is the open, manly face of Campbell, the sheriff, who is booted and spurred, and holds a paper clenched in his hand. In his rear is a typical face,—one of those sneering, white-gilled, cruel, sensual physiognomies (with thin, yellow moustache and whiskers) that we learn by experience to call "snaky," and to know as the index to a base and crafty nature. Grouped on either side of the porch railings are spectators, mostly negroes. One of these on the left, a toil-worn slave, holds his cap respectfully in his hard hand as he eagerly questions one of the guard. On the opposite side of the porch, in the painting, there stands a negress in patched and parti-colored clothes, and holds up to be kissed her little child. The old, white-haired hero leans over, pinioned as he is, and presses a momentary kiss on the forehead of the innocent. Clinging to the skirts of the mother is a little white girl, and two or three little black gamins are peeping among the legs of the men, or wherever they can squeeze their heads through to see the show.

The figure of the grand old man—the proto-martyr and Saviour of the black race—lingers longest in one's memory. His dress is a plain, prison-stained suit of brown; and he has on his feet the red slippers which he wore in the jail. The head and form are nobly drawn. There is the springy, elastic fibre that characterized him, and somehow the impression of energy and eagerness is made upon you by his whole action and attitude. This is as it should be, for John Brown had the gladdest heart in Charlestown on that tragic day of the 2d of December.

W. S. KENNEDY.

[The authenticity of the child-kissing incident will be the subject of an article in *The Index* by Mr. Kennedy next week.—Ed.]

SPURIOUS SCRIPTURE.

Editors of The Index:—

As you know, the last twelve verses of the Gospel "after Mark" stand in the new version as an "appendix," with a marginal note calling attention to the fact that it is without authority, as it was wanting in the oldest documents. The early Fathers likewise speak of its not being in the best Greek editions of their day.

The verse which reads, "He that believeth and is baptized shall be saved, and he that believeth not shall be damned," was thus inserted about the time

of the crusade against the Paulocinians, in which one hundred thousand were destroyed, under Justinian and Theodora.

This sect, as well as the Albigenses, held almost identical views with the enlightened portion of the Society of Friends as to the person of Jesus, baptism, etc. I hope that some of the writers of *The Index* will give us the history of the persecutions to which these people were subjected. They quoted Paul as against baptism, etc.; and the Gospel according to the Hebrews expressly denies that Jesus was baptized by John.

Thus in the New Testament is to be found one of the most atrocious pieces of wickedness in the history of mankind! How about its being the Word of God or the holy Scriptures?

DAVID NEWPORT.

ABINGTON, PA.

A WORD ON THE LABOR QUESTION.

Editors of *The Index*:—

After reading *The Index*, I am tempted to add a few words on the Labor Question. It is, no doubt, a shameful moral wrong to regard human labor as a mere article of trade, whose price has to be solely regulated by the laws of demand and supply. But this joining of the socialistic movement on the part of the churches is either dangerous sentimentalism or reckless lust of power. Common laborers, as a rule, are crude specimens of humanity. It is altogether visionary to place any hope in co-operation, so far as productive enterprises are concerned. The moral standard of working people, as a class, is too low, their prudence too short-sighted. No preaching or agitation will raise them to the necessary pitch of honesty or foresight, but may help to inflame them to huge outbursts of destructive wrath. The only practicable scheme is co-partnership, an equitable sharing in the profits of the business proprietors. This cannot be brought about by legislation or religious propaganda. But a little more friction, causing both parties to long for a peaceful and permanent arrangement, will, before long, naturally urge this kind of settlement, which would speedily put an end to this most threatening hostility between labor and capital. Idle dreamers might then continue to agitate for State socialism. The productive laborers would be the last to join. The expansion of individual motives so as to include hyper-individual aims has to be achieved by philosophy, religion, and education, but not enforced by State authority.

M.

"JOHN JENKINS," in the *Investigator*, gives an amusing account of his experience at Onset Bay with "a Boston medium of great success and high pretensions, and celebrated for her skill in producing materialized spirits": "A good-looking white girl was materialized, and called for me! I responded, when the 'apparition' hugged me pretty tight, and I returned the compliment. She was young and pretty. Then she kissed me, and we both kissed; and I tell you, sir, if you've never been kissed by a spirit, you haven't realized what a sweet surprise a ghostly kiss is! I felt foolish, and involuntarily looked over my shoulder to see if my wife Louisa was coming; but it was so dark she could not have seen me, if she had been present. The ghost and I kissed seven or eight times before I thought to ask her who she was. 'Your first love!' she whispered, as she reclined her darling little head on my shoulder. 'What! Amanda Rockett?' said I. 'Your father used to set the dog on me. You remember how he tore my pants?' 'Ye-es!' she whispered. Then we kissed and kissed again, and said, 'Darling!' I squeezed her; and, sir, she was as solid a little ghost as ever you saw in all your editorial life. Finally, she said in a whisper that she must go. 'Not by a long shot!' I thought mentally. 'I've got you; and I'm going to hold on, life or death.' And I did hold on. 'Let go of me!' said she. I held her hand tighter, for I thought she could 'dematerialize' just as well while I held her as if I let go. She twisted and squirmed terribly for a spirit; but, I thought if I had got hold of Amanda once more, I would not let her go as easily as my ghostly mother-in-law escaped me at the Berry séance. She pinched me, but I bore it like a martyr; yet, sir, when a shawl-pin or a hair-pin or some other spiritual implement was plunged into my flesh by that spiritual Amanda of mine, I was forced by pain to drop my hold of the

spirit. Not only the pin entered my hand, sir, but teeth, more savage than those of Amanda's father's bull-dog, were set into my flesh; and I was forced to grope my way to my seat, 'a sadder, if not a wiser man.' I shall exhibit to you the marks of that spirit, the imprint of its teeth, when next I drop into your sanctum. The 'conditions' became unmanageable here, and the 'séance' broke up in disorder. I have only to say, further, that the kisses may have been worth a dollar of any man's money; but the pin and teeth were more than I had bargained for. Amanda was not the name of my first love, either, but Jessie. I had forgotten, it was so long ago; but it occurred to me afterwards that Amanda was the eleventh love, and not the first. The mistake was mine, and not the spirit's."

In a letter published in the *Indian Messenger* of May 17, Prof. Francis W. Newman thus refers to the relations of G. H. Lewes and George Eliot: "They ought (like the old Quakers) to have called their friends together, and expounded the grievance of unjust law, which debarred Mr. Lewes from legal divorce, when his wife had openly taken refuge with another man. In those days, divorce was only by special vote of the House of Lords; and it cost £2,000 in fees. We ought to give her the benefit of an opinion,—not only that the injustice of the law made defiance of it right, but that, in making herself a martyr, she hoped to break it down. This (apparently) she did. For, in spite of our bishops, a divorce court was soon after established. I never heard from any quarter that which seems now to be assumed as her imagined defence,—that 'genius is exempt from moral law.' I am convinced that she would spurn such a doctrine as much as you and I. Our new generation seems to mistake the facts."

In reply to some one who declares that Paul, in forbidding women to preach, merely gave his own personal opinion, and did not write the passage under inspiration, the *Congregationalist* says: "1. No one can get the just sense of Paul's remark in I. Tim. ii., 12, without comparing it with its resemblant passage in the epistle to the Church at Corinth (I. Cor. xiv., 34). There the apostle says, 'Let the women keep silence in the churches; for it is not permitted unto them to speak, but let them be in subjection, as also saith the law.' The Greek scholar will know at once that the natural and literal meaning of the verb (*epitrepō*), here translated 'not permitted,' is, 'it is not committed, or intrusted, to'; and that Paul is, by the very use of this word, shown not to be talking about what he thinks or wishes, but of what was God's intent in the creation of the race and in his ordering of human affairs. And that Paul means exactly the same thing in the passage cited from Timothy is made clear by his proceeding to give the reason why woman should not teach; namely, on account of the priority of man in creation and of woman in transgression. 2. It is not true, as the argument assumes, that the word 'prophecy' in the New Testament is equivalent to the word 'preach.' Dr. Hackett's comment on Acts ii., 17, is: 'This verb [to prophecy] in the New Testament signifies, not merely to foretell future events, but to communicate religious truth in general, under a divine inspiration.' So Smith's Dictionary—article, 'Prophet'—says, 'The prophets of the New Testament were supernaturally illuminated expounders and preachers.' The sense of preaching put upon the word 'prophecy' grew up during the theological conflicts of the beginning of the seventeenth century; and it is an anachronism to apply it earlier, as is sought to be done here. The law now is that woman keep silence in the churches. But, if any one can demonstrate that she is divinely inspired to speak, we will all gladly listen, as to an exception. 3. The cases of the four daughters of Philip, of Anna, and of Priscilla, are not illustrations of female preaching, but of prophesying under special inspiration, or of private religious instruction, such as so many godly women, who would abhor the thought of unsexing themselves by entering a pulpit, are accustomed most usefully to give in the Bible class, or the semi-privacy of a small social friendly circle of inquirers."

HOW GRATEFUL to him who has been absent, on his unexpected return, to find the household talking about him, to see the fresh-cut flowers placed before his picture, to know by a host of signs that he is still loved as when of old he was with the family day by day. Rightly might the dead find fault with us, could they but speak to us, when they find us quickly forgetting them, dropping them out of our homes, our

thoughts, our memories, living as though they had not been. If our dead know our lives, what wounds they must receive from many a household in which they thought themselves loved with a true affection, that could outlast fleeting years, that could live despite of the interruption of all intercourse. If they know not our lives, as indeed we must how often pray may be the case, none the less is the wrong we do them.—R. Heber Newton

For *The Index*.

IMMORTALITY.

Filled with vague fears, I float adown the river,
Whose current bears me, through each passing year,
On to the unknown sea of the forever,—
That mystic sea, so distant, yet so near.

And so, unseen,—for, ah! a dense cloud, stealing
In solemn silence from the vaulted skies,
Hangs darkly o'er that vast expanse, concealing
Its deep, unfathomed waters from my eyes,—

I watch the wreaths of mist in darkness blending
About the souls who voyage on before,
Their lives, like mine, to that bourne ever tending
From which the traveller may return no more.

They shrink in terror from the cloud's embraces,
And stretch their hands out to the vanished past;
But still the shade falls o'er their pallid faces,
And still they glide on toward the ocean vast.

I strive in vain to pierce that spaceless region,
And call aloud, and list with bated breath,
To learn the fate of all the mighty legion
Who pass beneath the shadow of grim Death.

Ah me! that dreary cloud is never rifted;
No light, no sound, steals through those vapors wide,
Toward which my sad and struggling soul is drifted
Upon Life's rapid and resistless tide.

O'er my unanswered wishes, for a season
I ponder with a vague yet bitter pain,
Till through my darkened mind the voice of Reason
Rings clearly like a sweet and thrilling strain:

"O restless soul," she tells me, "cease this straining
To solve that boundless and abysmal sea,
And let thy efforts aid thee in attaining
A truer, nobler immortality.

"Who knows if 'neath that cloud the spirit findeth
The harbor of eternal rest and peace,
Or if, beyond its shade, Life's river windeth
To spheres where light and love shall never cease?"

"Then, since thou canst not read the Future's pages,
Live bravely; leave a memory which shall roll
Like stirring music through the coming ages,
And waken echoes in each list'ning soul.

"For selfish is the life seen in the vision
Of realms where spirits wander through all time
In flowery vales and balmy fields elysian,
Beside this immortality sublime.

"Then crush thy yearnings: rise, and never falter;
Attune thy pulses to the chords which throb
Within the souls who make the world their altar,
And human happiness their only God.

"So, when thou passeth under yon dread portal,
This rarer part, this larger self of thine,
Shall still live on, all deathless and immortal,
In hearts made better by thy deeds divine."

BOOK NOTICES.

OUR FAMOUS WOMEN: An Authorized Record of the Lives and Deeds of Distinguished American Women of our Times. Superbly illustrated with full-page portraits, mainly from photographs taken expressly for this work, and fine engravings from original designs. Hartford, Conn.: A. D. Worthington & Co. 1884. Sold only by subscription.

This handsome volume contains over seven hundred pages, and gives short sketches of the lives, work, and character of thirty-one distinguished American women; namely, L. M. Alcott, Susan B. Anthony, Catherine E. Beecher, Clara Barton, Mary L. Booth, Dr. Elizabeth and Dr. Emily Blackwell, Frances Hodgson Burnett, Rose Terry Cooke, Charlotte Cushman, Lydia Maria Child, Mary Clemmer, Mary Mapes Dodge, Margaret Fuller, Abby Hopper Gibbons, Julia Ward Howe, Clara Louise Kellogg, Mary A. Livermore, Lucy Larcom, Maria Mitchell, Lucretia Mott, Louise Chandler Moulton, Harriet Prescott Spofford, Elizabeth Prentiss, Elizabeth Stuart Phelps, Harriet Beecher Stowe, Elizabeth Cady

Stanton, "Marion Harland," Mrs. A. D. T. Whitney, Anne Whitney, and Frances E. Willard. The writers of these sketches are twenty women, most of them as distinguished as their subjects. Indeed, only eight of these writers are not subjects as well. These are Kate Sanborn, Susan Coolidge, Lucia Gilbert Runkle, Laura Curtis Bullard, Elizabeth T. Spring, Lillian Whiting, Elizabeth Bryant Johnson, and Maud Howe. The writers being all women of recognized literary ability, the publishers have thus been enabled to give the public a work which is thrillingly interesting and instructive from beginning to end; and the success of the volume ought to be such that they may feel encouraged to furnish soon a companion volume to this, containing sketches of the lives of many whose names we miss, even among the many given,—such, for instance, as Helen Hunt Jackson, Constance F. Woolson, Harriet Hosmer, Lucy Stone, Dorothea Dix, Anna Dickinson, "Grace Greenwood," the Cary Sisters, "Fanny Fern," "Gail Hamilton," "Susan Coolidge," Dr. Harriot K. Hunt, Dr. Clemence Lozier, Elizabeth Oakes-Smith, Elizabeth Peabody, Augusta J. Evans, Martha Lamb, Mrs. Elizabeth Thompson, Mary F. Treat, Sara Orne Jewett, Mary Anderson, "Charles Egbert Craddock," and many other American women still living and working, or the remembrance of whose excellent work is still fresh in the minds and hearts of their country men and women.

It would be an improvement in any future volume of this character, if the publishers would insist on a more uniform attention being paid by the writers to definiteness as to dates and precision of statement as to events. And, although this volume seems almost purposely designed to throw odium on the current masculine insinuation that women are more prone to belittle the achievements of those of their own sex than men are, yet it seems to us that in many of these sketches a little less tendency on the part of the writers to throw a glamour of romantic interest over even the more commonplace events in the history of those written about would convey to the reader's mind a more dignified idea of some of the characters portrayed.

But these are minor deficiencies, which in the present instance can be easily overlooked in the fresh, vital interest which these delightful sketches (many of them written by intimate personal friends) will be sure to awaken in relation to persons whose works have endeared them to thousands who have never met and will never meet them, but to whom these revelations will supply a hitherto missing link in the appreciation of that work, in whatever department of life's labor it was accomplished.

Every woman ought to be in possession of this volume, as a never-failing source of inspiration and encouragement, showing as it does under what often adverse circumstances and amid what unpropitious environments these women worked their way to a place in the first ranks of the world's workers, and to a public recognition of the worthiness of their achievements. Every man ought to read it, to enable him to help correct any lingering sex prejudice which may possibly prevent his doing justice to the women he meets in his own daily life or at his own fireside. The book is ornamental to any table or shelf; and the fine, full-page portraits given of seventeen of its characters, with the various other engravings illustrative of incidents in their lives, add greatly to the value of this beautiful volume. S. A. U.

UNCLE TOM'S CABIN; OR, LIFE AMONG THE LOWLY. By Harriet Beecher Stowe. New edition. Boston: Houghton, Mifflin & Co. Price \$1.00.

In conversation recently with a gentleman who has been for many years a public teacher, in referring to the causes which led to the emancipation of the slaves in the United States and indirectly to the War for the Union, he spoke of Mrs. Stowe's great work, and related, in illustration of the powerful hold it took on the public mind at the time of its publication, that he was at that time a student in a Western academy, and a subscriber to the paper (the *National Era*) in which it first appeared as a serial. Having occasion to make a visit to some friends in New England, he was so sure that the story would interest them as it did him that, although, boylike, dialling to be burdened with much luggage on his trip, he yet carried with him all the numbers so far as published to read to his friends, and on his return, having left one number by mistake behind him, sent to have it sought for and returned. That more than thirt-

years after that time, a leading firm of publishers find it profitable to issue a new and cheap edition of this famous work, is in itself a triumphant testimonial to Mrs. Stowe's charm as a story-teller and moralist. S. A. U.

ANNABEL, AND OTHER POEMS. By Ellen P. Allerton. New York: John B. Alden. 1885. Cloth, 70 cents.

Mrs. Allerton has gathered together in this volume the poems contributed by her to many of the leading Western papers and magazines, together with some hitherto unpublished ones. When it is remembered that these poems have been the work of such hours of leisure as could be gained from the housework by the wife of a Western farmer, they will be read with an interest added to that to which their genuine poetic merit entitles them. These are a few of her subjects: "Walls of Corn"; "On the Prairie"; "A Trail of '49"; "The Sod House on the Prairie"; "A House-keeper's Questions"; and "The Talking Friend."

AFTER ALL. A Novel. By Lillian Spencer. Chicago: S. C. Griggs & Co. 1885. Price 50 cents.

The modest title, and the good taste and workmanship shown in the publishers' share in this work, led us to open it with considerable interest. It is evidently the work of an inexperienced and highly romantic writer, who, we hope, will make a study of real men and women and the possibilities of life as encountered by such, before venturing a second time into the field of authorship. The story patterns somewhat after the ghoulish horrors of Emily Brontë's *Wuthering Heights*, without showing any of the ability of that work.

On opening the *Art Amateur* for September, the eye is at once attracted to some pretty, little outline sketches by Edith Scannell, which, we are told, are intended for embroidering on linen. The baby and the dog would be especially suitable for a nursery decoration. Quite different from these are some broad free-pen drawings from Frederick Bridgman, Leon Moran, and George H. Houghton, which illustrate a short article on this very pleasing style of art. There are some excellent suggestions to amateur photographers, now so numerous, on the arrangement and costuming of their groups. The most interesting article in this number, however, is an account of an artistic family named Greatorex, descendants of a well-known organist and composer, whose collection of church music, *The Greatorex Collection*, made his name familiar to lovers of harmony. He was of English family, but came early to New York. While the men of the family have inclined to music, the women for four generations have devoted themselves to painting. A mother and two daughters now represent the family, all of whom have done and are doing excellent work in flower, landscape, and portrait painting. They are now engaged in teaching an art school in New York. Besides all this, they have decorated the ladies' reception room at the Dakota, a large apartment house in New York. This is certainly a noteworthy instance of hereditary talent and accomplished industry. There is, as usual, much interesting matter concerning decorative art and useful designs for ornamental work. Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

THE INDEX,
BOYLSTON STREET, BOSTON.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counter-forces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammeled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.

The Secret of the East;

OR,
 The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its managers will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

- IV. *Transcendentalism,* by Theodore Parker. Never before published.
- V. *The Public School Question,* as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).
- VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.
- VII. *Evolution and Religion,* by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.

Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

Address **FREE RELIGIOUS ASSOCIATION,**
 44 Boylston Street, Boston, Mass.

TRACTS.

- No. 1.—*Truths for the Times,* by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cts.; 12 copies, \$1.00.
- No. 2.—*Fear of the Living God,* by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cts.; 12 copies, 50 cts.
- No. 3.—*Lecture on the Bible,* by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cts.; 12 copies, \$1.00.
- No. 4.—*Christian Propagandism,* by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cts.; 12 copies, \$1.00.
- No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cts.; 12 copies, \$1.00.
- No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cts.; 12 copies, \$1.00.
- No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cts.; 12 copies, 50 cts.
- No. 8.—*The Present Heaven,* by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cts.; 12 copies, 50 cts.
- No. 9.—*The Christian Amendment,* by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cts.; 12 copies, 50 cts.
- No. 10.—*The Impenitency of Christianity,* by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*
- No. 11.—*The God of Science,* by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cts.; 12 copies, \$1.00.
- No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cts.; 12 copies, \$1.00.
- No. 13.—*On the Vision of Heaven,* by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cts.; 12 copies, 50 cts.
- No. 14.—*A Study of Religion: The Name and the Thing,* by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cts.; 12 copies, \$1.00.
- No. 15.—*The Battle of Syracuse.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cts.; 12 copies for \$1.00.

Address **THE INDEX,**
 44 Boylston Street, Boston, Mass.

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judicious fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

CURRENT TOPICS.

BY B. F. U.

THREE hundred Mormon converts from England, Germany, and Scandinavian countries, accompanied by fourteen Mormon elders, arrived in New York last Wednesday, on their way to Utah.

THE *Christian at Work* is apparently losing faith in the power of the Church to overcome evil: "If," it says, "anything can be done to lessen this crime tendency, it ought to be done. And if the Church can do nothing,—and it seems to be doing nothing,—then let us invoke the aid of some other agency."

A BOSTON daily finds something horrible in the fact that "the head of the Goddess of Liberty has been dropped from the postal card of the Democratic administration, and that of Thomas Jefferson substituted." We wish no greater mistake had been made. After figuring so long and prominently on the eighty-five-cent silver dollar, with the hypocritical motto, "In God we Trust," the Goddess is not likely to complain of any other indignity.

UNDERTAKER MERRITT says that his bill for attending the funeral of Gen. Grant is \$14,162.75. "That includes everything I did or furnished here and at McGregor, including the \$5,000 for carriages." "As the public was asked through the war department to pay the bill, there could be no harm in telling the public what it would have to put up." Certainly not; but why should the public be required to "put up" such an amount for the funeral of any man?

CONCERNING ministerial black sheep, the New York *Christian Advocate* remarks: "The churches ought to devise better means of protection for the innocent persons whom such unclean scoundrels afflict and destroy. Their field of operations and

their immunity from permanent expulsion from the pulpit grow larger with the increase of our population. Of course, in Methodism, our Methodist mark of Cain sticks to such a man; but nothing hinders his migration into some other denomination."

SAYS the *Jewish Messenger* in regard to erecting a monument to Gen. Grant: "It is a return to heathenism to heap up a costly and extravagant monument to a man, however worthy of a nation's reverence, when so many practical causes appeal for aid and recognition. Devote the first \$100,000 to the monument,—surely, that sum is large enough,—but let \$900,000 be applied to establish and endow an educational and benevolent institution for all time, and we are sanguine that the amount will be secured within a few weeks."

THE New York Freethinkers' Association at its annual convention, held in Albany last Friday, Saturday, and Sunday, elected T. B. Wakeman president, and J. J. McCabe and Mrs. F. C. Reynolds secretaries. Elizur Wright, Horace Seaver, James Parton, Courtlandt Palmer, Mrs. M. P. Krekel, Miss Helen Gardner, Charles Watts, Joseph McDonough, and J. E. Remsburg were among the speakers. The closing address on Sunday evening was by Col. Ingersoll. The resolutions adopted as the platform of the Association may be found in another column.

DURING the present century, thousands of Scotch peasants have been evicted under circumstances making their distress as great as that of evicted Irish peasants. The conditions of tenure in parts of Scotland are as onerous as those endured on the other side of St. George's Channel. The evil in Scotland is of more recent date than in Ireland, and in the former country has greatly increased since the demand for deer ranges sprung up. An act of Parliament is greatly needed by the Scotch farmers. Out of the Irish land bill is likely to come, before the end of this century, a radical change in the entire land system of the United Kingdom.

THE Archbishop of York is in favor of funeral reform. He suggests: "1. Those who wish to do honor to the dead, and who can spare something, might make a gift to some institution that would benefit the living, while they refused to be lavish in respect of the coffin, the funeral ceremonial, and the mourning apparel. 2. While the use of a few flowers is in all respects simple and natural, the sight of a bier heaped up with the costly and perishable treasures of Covent Garden is not pleasing to the mind of our association. While we bring down the funerals of all to a moderate standard of cost, we may well urge boards of guardians to improve as far as possible the mode in which paupers are buried."

REFERRING to the attitude of Mr. Parnell, the New York *Herald* observes: "It is true that political as well as moral ideas sometimes become epidemic. Indeed, we are not sure that it is not a necessary condition of progress that a certain class of reformers shall rouse the indignation of

the populace by overstatements and unreasonable demands." It is not likely that Parnell's dream of independence will be realized, at least not in this generation, for the dismemberment of the Empire, which would put an end to English power and prestige, will be resisted equally by Tories and Liberals; but the position that Parnell takes may serve to make English rule in Ireland more generous and just than it has been in years past.

MR. CALLADON, before the French Academy of Sciences, said that a building with a metal roof is in no more danger of being struck by lightning than other buildings, provided there is no means of electric communication between the metal and the earth. Some member having suggested that a lot of iron stored in the attic of a building struck by lightning had attracted the electricity, Mr. Calladon replied that the iron had nothing whatever to do with attracting the lightning, but very likely was the cause of the burning of the building after it had been struck; for a combustible substance placed between two conducting surfaces—in this case, the moist atmosphere and the pile of iron—is pretty sure to take fire when the electric current is passed through it from one conducting surface to another. The lightning having struck the house, Mr. Calladon says, it found its way to the metal, and ignited whatever combustible material it passed.

THE nebula of Andromeda, so late as August 10, according to a photograph then taken, presented its ordinary appearance, that of a vast agglomeration of faintly glowing star-mist, in which, it is stated, the most powerful telescopes could distinguish "nothing except a dimly defined nucleus of nebula." On the 18th of August was discovered by Dr. Harting, of the Dorpat University Observatory in Russia, a star of stupendous magnitude, apparently newly born in this nebula, and shining with a peculiar, flickering, orange-like light, surrounded by a cloud-like mist. Since its sudden appearance, it has changed its position in the sky by ten seconds in one direction and two seconds in the other. The theory confidently put forth in some of the papers that a gigantic sun has suddenly come into existence from gaseous nebula, careful thinkers will be slow to accept. Indeed, Andromeda the spectroscope indicates to be a stellar nebula. Newspaper reporters have given very full and definite opinions as to the origin and nature of the "new star" and how it will affect existing astronomical theories; but men of science have as yet been content to state what has been observed, evidently waiting for sufficient data to warrant an opinion before saying more. One of the theories stated is that this is "the star of Bethlehem." A "temporary star" appeared, it is said, in the years 945, 1264, and 1572, giving three periods from the birth of Christ, and that the star now seen in the great nebula of Andromeda is the same visitor that was observed by the "shepherds, abiding in the field, keeping watch over their flock by night," and by the "wise men of the East," at the time Jesus was born.

PULPIT READINGS.

The Unitarian journals, both in England and this country, have been discussing the question whether it is permissible for ministers to read in their pulpits, for what is called the Scripture lesson, from any other books besides the Hebrew and Christian Bible. That this question is under discussion is one of the waymarks of religious progress. It is evident that not a few Unitarian ministers have adopted the custom of selecting their readings from any book, ancient or modern, that can furnish the special moral or religious lesson which they desire to emphasize. It is equally evident that the prevailing traditional usage of the denomination opposes this innovation, and that not infrequently the conservative feelings and, quite probably, too, the conscientious convictions of people in the pews are shocked by hearing selections from Plato read alongside of John's Gospel, and sayings from Epictetus and Buddha mingled with those from Paul and Jesus. But it is encouraging to know that this habit of selecting pulpit readings from a wide variety of Scripture is spreading; and the discussion of the matter, we are sure, will tend to increase and confirm the habit.

For our own part, we adopted the custom many years ago. We began, indeed, nearly twenty-five years ago to select for one of the readings in a vesper service—a service largely musical—from some other book than the Bible on the desk. This service was attended by a miscellaneous audience from various denominations and faiths, and generally filling the house. It was our aim to make the readings harmonize in sentiment; and we soon discovered that the congregation paid special attention to any selections that were made from the scriptures of so-called pagan religions. It was evident that to a very large part of the hearers it was a new and amazing revelation to find that such noble utterances were to be found in the Oriental religions and in the ethical writers of Greece and Rome,—utterances well matching the best portions of the Old and New Testaments. There was no need to make any comment or add any explanation. The simple reading itself became an object lesson for teaching the natural kinship and unity of the various religions of the globe; and this custom, continued now on Sunday evenings for more than twenty years before a large and miscellaneous congregation drawn from all sections of the population, has had, it is clear, a very perceptible influence in broadening and liberalizing the religious views of the local community.

It was not long before we adopted the same method of choosing the pulpit reading from a wide variety of writings, at all services which we conducted. We adopted the method without hesitation, when convinced that it was both right and useful, as one of the rightful prerogatives of a minister in a free pulpit, for the exercise of which he was not required to consult the congregation any more than he was required to consult it as to the convictions he should express in his sermons. And we continue the custom for the following reasons:—

First, it is a matter of principle with us. Believing, as we do, that the religions in respect to their origin and manner of development stand on the same level,—that they have all had a natural birth and growth, and that their literatures, however much they may vary in merit, are all natural productions,—believing thus, we cannot consistently make use of the Hebrew and Christian Bible as if it were a specially holy and sacred book, or held a place of exclusive authority, above the scriptures of other religions, or above noble and

wholesome writings of modern days. Those ministers, it seems to us, who teach in their sermons the naturalness of all the religions, and that natural inspiration is not confined to any special people, teacher, or time, go directly counter to this doctrine, and inculcate the very opposite, when they turn to the Old and New Testaments to cull their Scripture lesson, and never venture to find it elsewhere. To us, it seems a duty, even though we might find the required lesson well-expressed in the Hebrew or Christian records, to show, if possible, that it is confirmed in other writings. In our view, simple truth and justice demand this course.

Secondly, the lesson which the selected reading is intended to convey is greatly strengthened by bringing together the consenting voices of different witnesses. We have ourselves, in numberless cases, noted the effect upon congregations of such accumulated testimonies from various faiths and authors to the same or kindred truths, care being taken not to make the reading so long as to become wearisome. Ministers generally endeavor to select for reading something that shall, at least in a general way, run parallel with the tenor of their discourse. And this effect, which is always desirable, can be much heightened by bringing together kindred expressions of the same sentiment from a variety of sources.

Thirdly, the wide variety of subjects which a live pulpit must treat to-day demands a wider selection of readings than the Old and New Testaments allow, if the readings are to be chosen to illustrate the discourse. It is impossible, in these days, for any minister who does not confine himself to mere exposition of Biblical texts—for any minister who undertakes to treat some of the most pressing ethical questions of the time—to find in the Hebrew and Christian Scriptures passages which shall always be appropriate to the thought of the sermon. Grand in diction and sentiment as are large portions of these old writings, they are yet, as a whole, provincial, and do not adequately and justly touch the full circle of truth which a rational philosophy calls for to-day. In our own experience, we have found it easier to gather readings illustrative of the more heroic intellectual and ethical virtues from other scriptures than the Bible.

Fourthly, the ordinary pulpit Scripture reading, especially if selected without special reference to the thought of the discourse, is apt to become a perfunctory and lifeless part of the service. The very familiarity of the hearers with the chapter selected begets inattention to it, and almost any chapter read through continuously will have portions that can have no vital connection with the thought of the people in the pews or of the minister in the pulpit. They had a meaning once, but were written for a past world. But, on the other hand, passages variously selected to inculcate a special lesson—selected, it should be added, for their strength of thought, purity of sentiment, and beauty of diction—will most certainly command attention, and become at once an instructive, impressive, and living part of a church service.

We venture to commend the arguments above stated, drawn from an experience of many years, to the consideration of the Unitarian editors and ministers who have had this question under discussion. It may not always be convenient to make the miscellaneous selection wanted, but for the sake of the principle it is quite worth while to take considerable pains to overcome this obstacle; and now, much more than fifteen or twenty years ago, it is easy to find collections of choice passages, from the literatures of various religions, adapted to such use.

WM. J. POTTER.

CARRIERS 'TWTX PAST AND PRESENT.

The New York *Herald* of Sept. 8, 1885, contained two items of news, which it is well enough to place on record. The first is in the report of the great yacht race of the preceding day:—

Before the yachts started, and during the progress of the race, carrier pigeons were despatched by Mr. Charles Arnoux from the tug "Luckenbach," to apprise an interested world at home of how things were progressing. These birds took messages to New York, Newark, and Keyport. One of the circling carriers lighted on the leech of the "Puritan's" club topsail, and there were not a few people who took it for an omen of good fortune.

The second item, with the *Herald's* own headings, is as follows:—

THE DOVE DESCENDED.

A CURIOUS INCIDENT IN A CHURCH, WHICH IS REGARDED BY SOME AS A MIRACLE.

[BY TELEGRAPH TO THE HERALD.]

NEW HAVEN, CONN., SEPT. 7, 1885.—While the Rev. Mr. Clark was preaching in East Haven Congregational church, and had finished the prayer preceding the sermon, a dove alighted upon the centre gallery in full view of the congregation, and began cooing. When he had finished his prayer, the dove perched on the gallery railing, opposite the clergyman. When he read the first chapter of St. John's Gospel, at the thirty-second verse,—“I saw the Spirit descending from heaven like a dove, and it abode upon him,”—the dove flew to the desk, and perched upon the open page of the Bible. The pastor's text was from the fourth verse. It then settled upon the platform below the pulpit during the sermon. At the conclusion, the pastor engaged in sacramental services, and closed the Bible. The bird thrice stepped from the book and on again, and then nestled by its side.

When he had concluded, the pastor referred to the interruption and coincidence, and said that the winged visitor might be taken as emblematical of the spirit in the church. Then the bird perched upon the pastor's head. The effect was electrical, and many ladies were in tears. The pastor took the dove and held it to his breast, and gave the benediction. It was Stephen Bradley's pet dove, which had followed his sister to church. The rest of the family had tried to drive the little thing back; but it followed the young lady in, and flew by way of the gallery stairs. Much comment is made in East Haven, and it is regarded as almost miraculous.

The pigeon perched above the streamer of the American yacht, so far as it was regarded as a good omen, flew there from ancient eastern standards. The “fierceness of the dove” (*yonah*), Jer. xxv., 38, which has so mystified King James' translators and their recent revisers, is an allusion to a standard of the Assyrians. How did it become such? The powers of the dove as carrier were well known in antiquity; and that the bird was held sacred on that account may be inferred from the Egyptian bas-reliefs, which show priests sending them off. Probably, they pretended to send messages to the gods, and to receive replies. At any rate, long before the birth of Christ, the dove was regarded as a messenger between earth and heaven. In Syria and Phœnicia, it was forbidden as food; it was sacred to Venus and afterward to Mary; and perhaps some survival of its twofold sanctity causes the Princess of Wales to refuse her presence to the pigeon-shooting sport at Hurlingham, though she does not discountenance the more cruel *battue* of humbler birds.

The antiquarian curiosities of this subject are endless, and some of them of much moral significance. At an early period, the dove was regarded as an authentic sign of divine confirmation of any leader or favorite of the people who had been made king by other means than the right of succession. The “Son of Man” must be approved “Son of God” by the descending dove. The irregular kings of France were of old attended by dove miracles; and,

at length, it became a regular part of the consecration of a monarch in that country to loose white doves in the church, just after the ceremony of unction. In England, the custom has been conventionalized. Before each newly consecrated monarch, a duke bears the sceptre, on which a carved dove perches. It may be partly a reflection on the average rule of these dove-consecrated monarchs, from of old, that the "fierceness of the dove" became a character of the Holy Ghost, which never pardons. In various corners of Europe, the appearance of a dove is still an omen of calamity. Generally, however, the dove of folk-lore signifies a heavenly verdict, as the white dove said to have issued from the mouth of Joan of Arc, the dove seen by Bonapartist reporters hovering over the church during the obsequies of the late Prince Imperial, and this patriotic dove that perched on the New England topsail while naval warfare between Puritan and Cavalier raged off Sandy Hook.

The "Spirit of God" which "brooded" upon the waters at creation is identified in the legend of the deluge. Noah's dove broods over a new world emerging from the waters, and again appears at the baptism of Christ. Its function here was to select a man of the people to be king. But, as we have seen that in Europe royal legitimacy adopted the heavenly appointing power which sometimes broke its line of succession, it would appear that the phenomena attending Christ's baptism were ingeniously embodied in a myth of his birth, this birth being at the same time satisfactorily set in a royal line. In the "Gospel according to the Hebrews,"—the only gospel written in the language (Aramaic) which Jesus spoke,—nothing has been found about his miraculous conception or birth; but there is a notable account of his baptism: there is a supernatural light in the heavens (the star), and the descending dove, having entered Jesus, addresses him in words much like those of Simeon. A student of mythology will find an interesting field awaiting further research in the birth legends of several Hindu saints, said to have been born without human fathers. Although the supernatural conception of Buddha is now warmly repudiated by the priests of Ceylon, there are traces of an early birth legend of that kind connected with him, and also of its being connected with narratives attesting his royal descent. The legends of Buddha and Jesus may be of independent growth: they may represent in both cases chronic conflict between the common people and their rulers,—a revolutionary leader appearing, to be gradually conventionalized into a caryatid of the order he overthrew. The Trinity represents a very ancient firm, of which one partner must always be "sleeping." Whenever the first or the second person wakes up, he overthrows the other, and the firm is broken up. The third person—the Dove—is an indifferent agent of the power that happens to be uppermost: it is ready to hover over the compassionate Christ or to strike down Ananias and Sapphira when they would "deceive the Holy Ghost." Superstitions and wonderful stories concerning the dove recur from time to time throughout Christian history, and represent the religious atmosphere in a quasi-barometrical way. When the Jehovistic, naturalistic, and autocratic side of the Trinity is in the ascendant, the dove appears as a spy, or an unforgiving avenger. When the human element of the Trinity rises paramount, one may hear Wesley singing,—

"Come, Holy Spirit, heavenly Dove,
With all thy quickening powers;
Come shed abroad the Saviour's love,
And that shall kindle ours."

About the same time expect stories like the above from East Haven; or like one which I read

in a Chicago paper just ten years ago, relating that a white dove had flown into the chamber of a young unmarried woman of that region, on the birth of a child, and was believed by many to attest the innocence which she had protested.

MONCURE D. CONWAY.

DISESTABLISHMENT IN SCOTLAND.

In our age, the struggle between sects and churches is rapidly being superseded by a greater struggle between the faith they claim to expound and what the theologians are pleased to term vain philosophies. This being so, the question of disestablishment, *pro* and *con*, which is now agitating Scotland, may seem of minor importance. On examining the matter closely, it will, however, be found that it embraces issues much more profound than the mere question of tithes or no tithes. Presbyterianism is unquestionably the creed of Scotland. Combined, all others from Jews to Baptists, could not afford a respectable minority. But, though all profess the same creed, there is a sad divergence of opinion as regards church government. The Established, Free, and United Presbyterian Churches form the principal divisions; and, nominally, the war is by the two latter against their endowed sister. In reality, as the first seeds of the Reformation in Scotland can be traced to the universities, so the seeds of a new reformation, of which disestablishment is but an episode, can be found among them at the present day.

About 1475, the then bishop of Aberdeen, Elphinstone, appointed Hector Boyce, or De Boice, president of King's College in the University of Aberdeen. Boyce was a correspondent of Erasmus, and had been his fellow-student and friend. He was a man of opinions dangerously liberal for his era; and, while under his care, the University became the chief seat of learning in the kingdom, his theological opinions also became widely disseminated. Fifty years later, the bishops became alarmed at the spread of Lutheran doctrines, and obtained a very remarkable Act of Parliament. In its preamble, it sets forth that Scotland is firm in the faith, and then proceeds: "No manner of persons arriving in the realm bring books of Luther, or shall rehearse his opinions, under pain of escheat of ships and goods, and imprisonment." Within one month after its passing, Dunbar, Bishop of Aberdeen, obtained warrants against citizens possessing the proscribed books and teaching the abominable heresies; and seizures were made of "Tyndale's English Bible, imported by them, also Luther's tracts." Boyce was in fact the pioneer of religious freedom in Scotland, and the Scottish universities are still peculiarly representative of the advanced and advancing opinions of the people. At the Reformation, the previously existing arrangement of parishes was practically retained; and the task of providing for the support of ministers and churches laid on the land owners, who, it is needless to say, promptly transferred the real burden to their tenants. Land owners are in the relation collectively known as heritors. The minister is entitled to a house, glebe, or small farm, and a stipend, consisting partly of money and of so many bushels of oats, barley, etc., now always commuted for money. The stipend is supposed to bear a relation to the wealth of the parish; and the law courts are frequently busy with petitions for augmentation, based upon increased valuations. The Crown is original owner of all property, and all land owners hold from it for considerations. So, also, it was original owner of church presentations; but, in course of time, these became, to a great extent, vested in the land owners. In this way was produced the anomaly of a Church essentially

democratic in its constitution depending on forced State taxation and aristocratic patronage. There can be no doubt that to its liberal recognition of the lay element Presbyterianism owes much of its vitality. The first general assembly consisted of twelve ministers and thirty laymen, and there is now an equal representation in all church courts. The lay force has, however, been a potent element in the Church's revolutions as well as in her progress.

For nearly three hundred years, the Established Church continued the Church of the people. Meanwhile there was growing up a force hitherto uncounted; namely, a trading middle class, unconnected with the landed interests. Abuses multiplied. Men utterly unfit, morally and intellectually, were forced by patrons on unwilling parishes. Stormy meetings of the church courts, ending in an appeal to the civil courts, followed; and it became evident the Church had no efficient control of its own clergy. In 1843 came the disruption, when hundreds of ministers, headed by the redoubtable Thomas Chalmers, renounced the Establishment. Support came to them from every hand. The wealthy merchants of Glasgow, Leith, and Aberdeen, gave funds; mechanics and laborers gave their handiwork, and churches sprang up in a night on sites secured by stratagem. The ministers and many laymen traversed the country, preaching and exhorting in barns and on hillsides. The law courts were filled with actions of interdict. Men who had languished in obscurity as schoolmasters and tutors found preferment in the vacant charges, and party feeling ran so high that a civil war seemed imminent. From this confusion emerged the Free Church of Scotland, which, aided by the remarkable executive ability of its founders, immediately proceeded to a strong and healthy growth. It now has a church in nearly every rural parish, while in the cities it can show nearly two for one of the Establishment. The existence of the Free Church being assured, the Establishment at once assumed the shape of a grievance. There were and are many parishes where ninety per cent. of the population are dissenters, yet are taxed to support the Establishment. Accordingly, since 1843, the efforts after reform have been strenuous; and the abolition of patronage in 1873, instead of acting as a sop, only made the appetite more radical. A religious census is almost impracticable. The writer knew of one compiled from the rolls of membership, and the plan generally adopted in the Established churches of his section was to count all names placed on the roll for twenty years save such as were actually and ascertainedly dead. No allowance was made for removals, apostasy, or emigration. There is, however, no reasonable doubt that the Established Church now contains a small minority of the nation; and, as the people of all other shades of opinion desire its abolition, its days are certainly numbered.

The effect of disestablishment on Presbyterianism generally is a more obscure subject, but it will probably be disastrous. The continual friction between the Churches has served to excite interest, and furnish a vent for nervous energy. It has also distracted attention from the progress made in the country outside church boundaries. When the dissenters succeed in destroying this monopoly, they will wake to find that education has been secularized and the universities emancipated, while freedom of thought has gained advocates among the most influential classes; namely, the educated and those engaged in the work of education. Even now, before entering the theological schools, the student passes through a four years' university course, under professors most of whom are avowed materialists. The product can be found scattered

throughout the churches, Robertson Smiths in everything but fame. Where Boyce sat preparing the people for the coming reformation, Alexander Bain, the friend and biographer of John Stuart Mill, now sits, elected by the students who are by and by to be the preachers and teachers of the country. In that chair, he succeeded many famous men, among others Prof. Huxley; and his strong critical intellect has impressed itself indelibly on the brightest minds of the nation. In the same university, I cannot recall a scientific teacher who is not a Darwinian. In the other universities there is a like feeling toward inquiry and accurate thought. Even the quaint philosophic morality of John Stuart Blackie, mixture as it is of Hellenism and Scotch Wut, has the fresh flavor of his native hills rather than the fustiness of theology.

The forces are within the churches now, and are being constantly recruited: therefore, when disestablishment is accomplished, disintegration will certainly follow. Already, the solemn fasts have become holidays, the divinity which used to enshrine the ministerial presence has passed away. Men will no longer bow to the garbled books of Moses or be bound by the hideous dogmas of Luther and Calvin, but seek according to their conscience a more perfect freedom.

WALTER CRANE.

SOCIAL AND INDUSTRIAL REFORM.*

As the movement of society, at home and abroad, is toward an increasing concentration of wealth, and as this tendency is reacting injuriously upon the community in general, in reducing wages, depressing and contracting trade, and throwing out of employment hundreds of thousands of workers, it is of the first importance that a knowledge of operating causes should be obtained, in order to apply remedial measures to industrial life. To that end, a brief statement of existing conditions is of value.

The first feature of our present industrial system is, that Labor is hired by Capital.

The second is that the abundance or scarcity of labor determines its market value.

The first is the wage system: the second is the law of demand and supply in its regulation of the rate of wages.

These are the laws that govern our industrial system. What is the condition of social life? In all the great business centres, the supply of labor is largely in excess of the demand.

The causes which have led to this are: first, the natural increase of population; secondly, the introduction of labor-saving machinery; third, immigration; and, fourth, the breaking down of small industries, and the conversion of employers of labor into wage-earners.

As the law of demand and supply governs the rate of wages, it is evident that, when the supply is greatly in excess of the demand, the price of labor, like that of any other commodity, must fall.

The need is, therefore:—

First,—Industrial Organization and Centralization, with a view to bring into organic union all the members of the industrial system, and also its political expression in both State and National governments.

Second,—(a) Legislation to shorten the hours of labor, in order to diminish the supply of and increase the demand for labor.

(b) Legislation for the regulation of immigration.

(c) State and national aid for the formation of agricultural colonies.

Third,—The combination of the people into va-

rious co-operative enterprises, similar to those now being carried on in England, France, Germany, and to a growing extent in the United States. This would give to Labor the full control of its earnings, and also have the direct effect of increasing the demand for labor, by diminishing its supply in making the wage-earners their own employers.

Fourth,—The indirect result would be to bring before the community a true way of conducting business, which would prepare the way for a system of Industrial Partnerships, and the organization of labor upon the principle of a right to its share in the profits.

IMOGENE C. FALES.

"THE QUALITY OF MERCY" IN SHAKSPEARE'S PLAYS.

In spite of the cruelties of Lear's two daughters, Regan and Goneril, the barbarities of Richard III., the treacherous murder of Duncan under the roof of Macbeth, and the subsequent compassing of the death of Banquo, the insane "taking-off" of Desdemona by her well-nigh irresponsible husband, the cold and devilish scheme of Shylock to "feed fat his ancient grudge," and numerous other instances which are, doubtless, faithful chronicles of the times they illustrate, let us remind ourselves of the many cases in which mercy is seen to be the dominant attribute, for the time being, of some kingly or ducal character, as well as of some whose only royalty is in themselves.

Miranda, pleading with Prospero for the "allaying" of the "wild waters," in Act I., Scene 2, of "The Tempest," says piteously,—

"Had I been any god of power, I would
Have sunk the sea within the earth, or e'er
It should the good ship so have swallowed, and
The freighting souls within her."

Again, Act III., Scene 1, she says to Ferdinand bearing logs,—

"When this burns,
'Twill weep for having wearied you."

Later, she offers to carry the log to the pile in his stead.

Prospero, in the last scene, forgives his brother his "rankest fault," though to "call him brother would even infect his mouth."

In "Two Gentlemen of Verona," Act I., Scene 2, Julia, reading the letter of Proteus, and repentant for having torn it, says,—

"Poor wounded name! my bosom, as a bed,
Shall lodge thee, till thy wound be thoroughly healed;
And thus I search it with a sovereign kiss."

In "Measure for Measure," Act II., Scene 2, Isabella's monologue on mercy is so familiar as to need no repetition here; and, a few lines farther down, she says, pleading for her brother:—

"Spare him, spare him!
He's not prepared for death! Even for our kitchens,
We kill the fowl of season."

In the closing scene, she entreats the Duke to spare the life of Angelo, who had striven to compass her ruin.

The Duke also says to the "dissolute prisoner, Barnadine":—

"For those earthly faults, I quit them all;
And pray thee, take this mercy to provide
For better times to come."

Shakspeare seems to take a special delight in making his characters bury old grudges in his closing scenes, as if his conscience could not rest, did any poor, faulty mortal remain unshriven. Even the terrible Beatrice, who "speaks poniards," and whose "every word stabs," consents to marry Benedick at the last, as she says:—

"Partly to save your life, for I was told you were in a consumption."

In "Midsummer-Night's Dream," poor Helena says to her false lover and his companions,—

"None of noble sort
Would so offend a virgin, and extort
A poor soul's patience, all to make you sport."

In "Love's Labor Lost," Rosaline says to Biron, suing for her hand,—

"If you my favor mean to get,
A twelvemonth shall you spend, and never rest,
But seek the weary beds of people sick."

The entire play of "The Merchant of Venice" (more full of beautiful imagery and poetry to my mind than even "The Midsummer-Night's Dream") hinges on this moral quality of mercy. In the trial scene, the Duke will not believe that Shylock will enforce the bond, but thinks he will forgive Antonio "a moiety of the principal,"—

"Glancing an eye of pity on his losses,
That have of late so huddled on his back,
Enough to press a royal merchant down,
And pluck commiseration of his state
From brassy bosoms and rough hearts of flint,
From stubborn Turks, and Tartars never trained
To offices of tender courtesy,
We all expect a gentle answer, Jew."

Near the close of Portia's definition of "the quality of mercy," the most exquisite in the English language, and which I need not quote here, she says:—

"We do pray for mercy;
And that same prayer doth teach us all to render
The deeds of mercy."

When she tells Shylock to "have by some surgeon" for Antonio, "to stop his wounds, lest he do bleed to death," and Shylock asks,—

"Is it so nominated in the bond?"

she replies,—

"'Twere good you do so much for charity."

The Duke says to Shylock at the close of the trial,—

"That thou shalt see the difference of our spirit,
I pardon thee thy life before thou ask it,"

and further hints that "humbleness" may change the decree of confiscation into that of a mere fine.

In "As You Like It," though Orlando's brother ill-uses him and Duke Frederick banishes his niece through sudden jealousy, yet the rightful Duke in the Forest of Arden says, in regard to killing the deer:—

"And yet it irks me, the poor dappled fools—
Being native burghers of this desert city—
Should, in their own confines, with forked heads
Have their round haunches gored."

The "melancholy Jaques" was also found

"Weeping and commenting
Upon the sobbing deer."

Old Adam forces upon Orlando in his necessities the five hundred crowns, "the thrifty hire" saved through long years of patient service, and follows him

"To the last gasp, with truth and loyalty."

Orlando, in his turn, refuses to touch food at the Duke's sylvan table until Adam has been relieved. Later, he gives battle to the lioness, that his unnatural brother may be rescued, and leads Oliver to the Duke for

"Fresh array and entertainment."

In "A Winter's Tale," Act II., Scene 3, Antigonus, preparing to carry away the infant daughter of Leontes, says:—

"Come on, poor babe.
Some powerful spirit instruct the kites and ravens
To be thy nurses! Wolves and bears, they say,
Casting their savageness aside, have done
Like offices of pity."

In Act IV., Scene 1, of "King John," Hubert, preparing to put out young Arthur's eyes, says:—

"I must be brief, lest resolution drop
Out at mine eyes, in tender, womanish tears."

Arthur says:—

"The iron of itself, though heat red-hot,
Approaching near these eyes, would drink my tears."

* Read at the four Labor Conferences held in New York, in May and June, 1885.

And quench his fiery indignation
Even in the matter of mine innocence;
Nay, after that, consume away in rust,
But for containing fire to harm mine eye.
Are you more stubborn-hard than hammered iron?"

And later,—

"Only you do lack
That mercy, which fierce fire and iron extends,
Creatures of note for mercy-lacking uses."

In "Richard III.," Act IV., Scene 1, Elizabeth says to the Tower:—

"Pity, you ancient stones, those tender babes,
Whom envy hath immured within your walls!
... Old, sullen playfellow
For tender princes, use my babies well."

Lear, on the heath, exposed to the furious tempest, bids the Fool go before him into the hovel, then bethinks him of other "poor naked wretches that bide the pelting of the pitiless storm," and says reproachfully to himself,—

"Oh, I have ta'en
Too little care of this."

It is needless to multiply quotations. We see how the poet seemed to love the very sound of the word "mercy"; how, like a true poet, he used it in place of the more cumbersome word "compassion." How fond he was of using the adjective "gentle," where his characters address one another! Even Shylock is addressed as "gentle Jew"; and "gentle sir," "kindly sir," etc., occur on nearly every page.

Not only does he strive to bring forth the mercy in human breasts (hellhounds like Gloster excepted), but in how many cases does he attribute it to "stocks and stones and senseless things"! How gladly would he have made all his characters teem with pity, if it had been possible! He loses no opportunity of enforcing its moral beauty. Even the very extravagance of Lear's curses on his daughters shows the king's abnormal state, and enhances the contrast of his two moods. Of Shakspeare, of Burns, of every poet who truly touches the universal heart, it may be said that

"He prayeth best who loveth best
All things, both great and small."

HELEN T. CLARK.

NORTHUMBERLAND, PENN.

A NEW PHASE OF WOMAN SUFFRAGE.

At the morning service of a Catholic church in Charlestown on Sunday, September 6; the officiating priest gave notice of a movement which had been inaugurated, he said, for the enrolment of Catholic women under the School Suffrage Act of 1878, which allows women in this State to vote for school committees. The object of the movement, he declared, was generally to preserve free institutions from sectarian influence, and particularly to counteract the influence of bigoted Protestant men and women, who were discriminating against Catholics in the control and conduct of our public schools. He urged the women of his congregation to exercise the right that the law gave them, in order to oppose Protestant intolerance.

Last week, a number of meetings were held in the vestries of Catholic churches in Boston, at which Catholic women were urged to register, and thereby qualify themselves to vote at the coming municipal election, and thus to neutralize the efforts of those who would exclude Catholics from representation on the school board and otherwise withhold from them their rights in connection with the public schools. At one of the meetings, a speaker said that, of the 47,000 children attending the Boston public schools, over one-half were Catholics, and yet there were only eight members of that faith on the school board; and, of the eleven hundred teachers in the public schools, only

about two hundred were Catholics. But the greatest cause of offence, according to reports of the meetings and published interviews with prominent Catholics, was found in the omission of the name of Dr. Blake, a Catholic, from the woman suffragists' ticket last fall.

This movement, announced less than a fortnight ago,—planned probably months earlier,—has become quite general on the part of Catholic women in Boston; and the number of them who have registered is said to be large. The total number of women who have registered and can vote at the next municipal election is not yet known.

The number of women registered in Boston in 1879 was 989; in 1880, 972; in 1881, 640; in 1882, 498; in 1883, 701; in 1884, 1,100. The increase in 1883 and 1884 was due to the interest aroused among temperance men and women by the action of a sub-committee in closing a school-house in this city in deference to the wishes of certain liquor dealers who had saloons within a distance of the building that made their business illegal. When the women voters, last fall, nominated an independent ticket in advance of the nominations of the old parties, they refused to renominate Dr. Blake, who was on the committee that caused the removal of a school in the interests of liquor saloons. Although Dr. Blake was not present at the committee meeting at which the action was taken, he afterwards gave it his indorsement and approval, and for that reason alone was his name dropped by the women voters, when they made up their ticket. Whether the women voters acted wisely in omitting the name of Dr. Blake from their ticket, all the circumstances considered, may be questioned. Indeed, some of the most influential of the women were in favor of retaining his name, and at the election voted for him. Certain it is that *his name was not rejected because he was a Catholic*. Indeed, so anxious were the women to have the name of another Catholic on their ticket in the place of Dr. Blake that they actually had a committee consult with one or more Catholic priests on the subject, and requested several gentlemen who were Catholics to allow their names to be brought forward. They all refused. From that time till the next election, the Catholic politicians who are prominent in this new movement used all their influence, through the press and other mediums, to convey the false impression that the women suffragists, and the temperance people who worked with them, had set aside the name of Dr. Blake because he was a Catholic. A knowledge of these facts is necessary to a correct understanding of the motives back of the present movement, the object of which clearly is to combine a powerful religious influence with the methods and machinery of party politics to secure in the interests of Catholicism control of the Boston School Board, with the enormous patronage it commands and the opportunities such control will afford for reconstructing or modifying our school system. The Catholic leaders and the politicians in league with them know that the women voters did not omit the name of Dr. Blake because he was a Catholic; they know that the public schools of Boston are to-day so conducted that no Catholic can fairly complain either of the discipline or courses of study; and that, in this city, if teachers are selected for their experience and efficiency, the majority of them must necessarily be non-Catholics. The fact is, the Catholic leaders are not satisfied with our present school system; and what they want and what they aim to secure in Boston, as elsewhere in this country, is a division of the school fund, and the support by the State of Catholic schools, conducted in the interests of their faith.

Catholic women have a right to vote and to vote as they choose, of course, under the School Suffrage Act; but it can hardly be doubted that they will, as a class, vote as their priests wish them to vote. When we consider the attitude of the Catholic Church toward our public schools, the importance of connecting with the woman suffrage movement the just and reasonable demand for the complete secularization of the State seems to be too evident to be honestly disregarded by any intelligent and sagacious friend of political and religious freedom. Catholic women are more under the influence of the Catholic clergy even than are men of the same faith; and, while we encourage a movement which aims to give the former equally with the latter the elective franchise, we should not neglect a work which is needed to prevent those for whose rights we plead from exercising those rights when gained to defeat other righteous reforms, and to impose upon us disabilities.

How this movement to bring our public schools under sectarian domination by the aid of women's votes will succeed, and how it will affect the woman suffrage movement generally, remains to be seen. It is likely to influence many non-Catholic women to exercise their right to vote, and may be the means of strengthening and extending an interest in suffrage among women. We are satisfied that the women who nominated—unwisely, as we believe—a separate ticket have given the priest and politicians, who accuse them of discriminating against Catholics, no just reasons for their charge, which is but a mere pretext with them, although believed, no doubt, by the mass of Catholics. The worst mistake that the women made was in sacrificing principle to expediency in considering at all the religious views of a candidate, and visiting priests and writing to Catholics with a view of securing on the school board a representative of a particular religious denomination. This was clearly wrong, although done with a generous spirit. Candidates for civil and political offices should be selected for their intellectual and moral fitness only, not because of their religious beliefs; and, when women voters in this city went around looking for a Catholic, instead simply of an upright and competent man that they might put his name on their ticket, they made a moral mistake, which, let us hope, will not be repeated by them. In justice to these women, however, it should be said that they but followed the example set them by men in political caucuses in this and other cities.

If the new movement, whatever be the immediate result, shall have the effect to extend the interest in woman suffrage, and at the same time to impress all unsectarian men and women with the profound importance of making our public schools entirely secular and of removing every remaining vestige of the union of Church and State, it will happily afford another illustration to be added to the many illustrations history now furnishes of the accomplishment of reforms by the aid of those indifferent and even opposed to them.

B. F. UNDERWOOD.

LITTLE Jennie was capsized in a boat one day and would probably have been drowned, had she not had presence of mind enough to keep her hands and feet moving, and thus kept herself afloat until help came. When she was retiring that night, her mother told her that she must thank God for having rescued her from a watery grave, which she did in the following way: "Dod, I am oblidthed to oo for helping to thave me fwom dawning—and, then, I had a little thenth my-thelf."—*Rambler*.

EDITORIAL NOTES.

BY B. F. U.

KEEP religion and politics apart, and especially guard the school-house from the influence of sectarianism, no matter of what stripe it may be.—*Boston Traveller*.

A DISCUSSION has been caused about electing school committee on theological issues, which is every way to be deprecated. Sectarian preferences should have no weight in selecting officials to direct our common school system.—*Boston Transcript*.

MISS CLEVELAND has already received \$7,250 for her share of the profits on her book; and this, her friends say, is not a third of the sum that she will receive from her publishers. She is "luckier," remarks an exchange, "than Milton and Burns and such fellows."

MR. HUXLEY says that "however bad our posterity may become, so long as they hold by the plain rule of not pretending to believe what they have no reason to believe, because it may be to their advantage so to pretend, they will not have reached the lowest depths of immorality."

PRANG & Co. have on exhibition at the Boston Museum of Fine Arts original water-color paintings and their chromo-lithographic reproductions, showing the wonderful perfection to which the reproductive art has been brought. Not the least interesting part of the exhibition is a complete series of plates representing the different stages in the printing of a chromo-lithograph in twenty colors.

ABOUT the worst case of heathenism which has come to our ears of late is reported, not from Timbuctoo or the Fiji Islands, but from that highly privileged city on the banks of the Connecticut,—Springfield. A little girl happened in a neighbor's house one morning at the time of family prayers. She was asked to stay, and, accepting the invitation, remained, an interested participant in the proceedings. When they all rose from kneeling, she startled the company with the exclamation: "I like this game first-rate. What is the name of it?" All this is said to have occurred under the shadow of Hope Church. Evidently, the two pastors of that active young parish will not get out of work just yet.—*Congregationalist*.

THE fact that advertisements more or less like the following, taken from the *Boston Sunday Herald*, appear every week in Boston papers, is one of the indications of the vast amount of fraudulent pretension put forth in the name of Spiritualism, and of the ignorance and credulity that still prevail in this latter part of the nineteenth century, even in the "Athens of America,"—

FROM THE GRAVE.

SPIRITS OF DEPARTED SOULS will revisit this earth at PAINE HALL,

To-morrow evening at 8 P.M., through the mediumship of the Spiritual and incomparable phenomenon,

Mlle. LYNDEN and BALABREGA.

Planos weighing a ton will rise and float in mid air; infidels will tremble, the doubting will believe, and believers will be confirmed in the faith. Séances at 8 P.M. Seats 50 cts. A few reserved front seats, \$1.00. Mlle. Lynden will give a limited number of Private Séances at \$1.00 each.

A MONTREAL correspondent of the *Week* writes: "A word here as to the ordinary death-rate of Montreal, which is high. That death-rate parallels an uncommonly high birth-rate, and is swollen by the returns from the Foundling Hospital of the Gray Nunnery. That institution is a striking example of the perversion of benevolence, when unguided by wisdom. To its wicket are brought every week ten to twenty infants, from not only the city, but the surrounding country as

far as Quebec and Ottawa. Even Great Britain has sent in its quota. Frequently born without the physician's care, transmitted in valises and boxes, the wretched infants require the instant application of the baptismal touch, lest their frail bodies be left behind by unregenerated souls. Can philanthropy and religion lift the suspicion of murder from all this?"

AMONG the letters read at the reunion of Whittier's classmates of the Haverhill Academy (the class of '27), on Thursday last, was one from Miss Arethusa Hall, of Northampton, whose age prevented her attendance. She wrote thus concerning the poet:—

I remember Mr. Whittier well as he was then, having enjoyed few opportunities for academic culture, and whom Mr. Duncan introduced to my attention as "a young man who, at the shoemaker's bench, often hammered out fine verses." I recollect the assiduity with which he was reported to study; and I have vividly pictured in my memory his appearance at a public examination, in quite an embarrassed attitude, undergoing the well-sustained ordeal. From that time, I followed his literary career with interest, imbued as it was with the noblest principles of humanity no less than with the deepest poetic feeling. Only a few days since, I read with intense delight, midsummer though it was, "Snow Bound," picturing in many points my own early experience.

SAYS the *Presbyterian*: "About ten years ago, Mr. Gladstone declared in a public speech that more wealth had been created in the previous seventy-five years than in all the years preceding, back to the time of Julius Cæsar. Perhaps this is an exaggeration, but the accumulation of wealth in this century has been unexampled. Has it been so ordered, that the kingdom of Christ may be advanced, the gospel of God's grace preached to the nations, and a Christian civilization borne to all lands and to the isles of the sea?" Certain it is that this accumulation of wealth has gone on in utter disregard of, and opposition to, the letter and the spirit of Christ's alleged teachings: "How hardly shall they that have riches enter the kingdom of heaven!" "It is easier for a camel to go through the eye of a needle than for a rich man to enter the kingdom of heaven." "Lay not up for yourselves treasures upon earth. . . Behold the fowls of the air, for they sow not, neither do they reap, nor gather into barns; yet your heavenly Father feedeth them. Are ye not much better than they? . . Take, therefore, no thought for the morrow; for the morrow shall take thought for the things of itself." "Of him that taketh away thy goods, ask him not again." "Blessed be ye poor; for yours is the kingdom of God." "But woe unto you that are rich! for ye have received your consolation."

A PRIVATE letter from Germany, printed in the *New York Observer*, represents that the Christian religion is "losing ground most fearfully" in the Kaiser's dominions. The writer says: "In Bayreuth, I attended a catechisation in church. Fifty grown-up young men were present. A venerable clergyman addressed them in the chancel. On purpose to keep them in order, a policeman in uniform and a sword at his side walked up and down, threatening those with his lifted finger who became restless. Such things, of course, are not the general rule; but many more could be added to prove the low standard religion occupies among the people. You would find in most towns an astonishing small number of churches, and the vast majority poorly filled or almost empty. You would find in Berlin parishes of twenty, forty, sixty, eighty thousand souls, with two or rarely three clergymen and one church. There is a general desecration of the Sabbath, but all the public pleasure-grounds, beer-houses, theatres overflowing with visitors. An

anti-Christian spirit prevails through all classes, high and low."

In his speech at the reception given him in New York by the Press Club, Hon. Henry B. Stanton related the following incident, which he said occurred seventy-five years ago:—

An aged deacon had a confused idea of the upper lakes, and a mortal dread of the Mohawk Indians. He hung heavily on the skirts of the post-rider, who resolved to shake him off. One day, he handed him the paper; and the deacon bored him for fresh news. With horror depicted on his countenance, he told him that the Mohawks were digging through the banks of the great lakes, and that the water would soon pour down from the west, and that all New England would be drowned by a flood as disastrous as that of Noah's time. The post-rider then put spurs to his horse and fled. The terrified deacon ran to the minister's, and told the terrible news. The clergyman opened the Bible, and read to him from Genesis the promise of God, that he would never again drown the earth by a flood, and that he had set the bow in the cloud as the seal of this covenant with mankind. "Ah, my beloved pastor," responded the shivering deacon, "that doesn't apply. It is not God that's going to do it. God's nothing to do with it. It's them infernal Mohawk Injuns that's cutting down the banks!"

THE following from an article on "What and Where is God?" in a paper called *Problems of Nature*, is fairly entitled to the merit of originality: "A black hair is only a tube burned to coal by a current of electricity coursing through it. A white hair is the tube unburned. . . There is not and there never was on the earth a person whose hair was burned as black as a piece of charcoal when wet who could make a philosopher, scientist, or constructor of any affair requiring great intelligence. Such a producer was never seen, and one never will be seen. No person whose hair was even brown was ever known to be anything eminent in the way of originality or constructing what embraced a great principle of law. No person whose hair was of the color of sand ever made a discovery of a work of nature or fact of any character, the disclosure of which required an operation of the mind; and such a person is always as competent at one avocation as another. No person whose hair is red is anything else than a philosopher in his natural acquirements. And, in all such people, only a worry of the mind of sufficient length of time is needed to convert them into teachers of the facts and laws of a universe."

THE great majority of mankind, indeed the larger part of the populations of the leading races, are in a comparatively undeveloped condition. Intellectually speaking, says De Quincey, "a very large proportion of men never attain maturity. Nonage is their final destiny, and manhood is for them in this respect a pure idea. Finally, as regards human development, but a small moiety of our species ever attain manhood. . . It is a fact forced upon me by the whole experience of life that almost all men are children, more or less, in their tastes and admirations. This needs little proof. Society is actually held together under its present constitution by baby feelings to which I allude. Were there no admiration for wealth carried to accumulation far beyond what is practically disposable, of honors which are no honors, and of tinsel decorations, the foundations of society, as it is, would actually give way." It is not strange, when we consider the limitation of our knowledge, the fickleness of our moods, the servitude we are under to our bodily wants, the low mental and moral condition of our race, the perversity, sordidness, sensuality, and bondage to puerile beliefs and usages, that men have adopted pessimistic and misanthropic views of life. But there is another aspect of life more pleasant to contemplate, and which gives hope to the heart of man.

The Index.

BOSTON, SEPTEMBER 17, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

A Study of Primitive Christianity.

BY LEWIS G. JANES.

X.

CHRISTIANITY THE STATE RELIGION.

Early Councils. The Formation of the Canon.

The formation of the Christian Canon cannot be attributed to the influence of any single person or to the authority of any single council of the Church. Four men, Irenæus, Tertullian, Clement of Alexandria, and Augustine, were chiefly instrumental in determining the selection of the books now deemed canonical and inspired; and several of the early councils indorsed and confirmed their selection. Of these four men, Irenæus was the earliest; and his influence was the most important. Writing more than a hundred years before the first œcumenical or general council of the Church, his methods were uncritical, and his decisions, in most instances, were purely arbitrary. Prof. Davidson says of Irenæus, Clement, and Tertullian: "The three Fathers of whom we are speaking had neither the ability nor inclination to examine the genesis of documents surrounded with an apostolic halo. No analysis of their authenticity or genuineness was seriously attempted. . . . Irenæus was credulous and blundering; Tertullian, passionate and one-sided; and Clement of Alexandria, imbued with the treasures of Greek wisdom, was mainly occupied with ecclesiastical ethics. . . . Their assertions show both ignorance and exaggeration."*

The first collection of Christian writings, however, was not formed by either of these distinguished Fathers of the Church, but by Marcion, who, for his Pauline and Gnostic tendencies, was accounted a heretic. His collection contained one Gospel—not identical with either of our four canonical Gospels—and ten Epistles of Paul, which, however, he did not consider inspired or of divine authority. Irenæus arbitrarily selected our four Gospels, the Acts of the Apostles, thirteen Epistles

Peter, and the Shepherd of Hermas. He rejected of Paul, the First Epistle of John, and the Revelation. In an appendix, as of less authority, he placed the Second Epistle of John, the First of absolutely the Epistle to the Hebrews, the Second of Peter, the Third of John, Jude, and James. Clement of Alexandria, about 210 A.D., accepted all of our New Testament writings except the Epistle to the Hebrews, the Second of John and Jude, which, together with the Revelation of Peter, the Shepherd of Hermas, the Epistle of Barnabas, and the First Epistle of Clement, he placed in an appendix, as of secondary importance. Tertullian, about ten years later, ignored the Second Epistle of Peter, the Third of John and James, and declared Hebrews, Jude, Second John, and First Peter not to be authoritative, ranking them with the apocryphal Shepherd of Hermas. Many early collections of the Christian writings omitted the Apocalypse, which is still ignored by the Eastern Church.

Besides numerous other fragmentary copies of the New Testament writings, there are four great manuscripts of the Greek Bible now extant. The *Codex Sinaiticus*, at St. Petersburg, probably the oldest of the four, dating, it is believed, from about the middle of the fourth century, contains not only the canonical books of the New Testament, but also the Shepherd of Hermas and the Epistle of Barnabas, now deemed apocryphal. The *Codex Vaticanus*, at Rome, of but little later date, ends at Hebrews ix., 4, by mutilation. The *Codex Alexandrinus*, in the possession of the British Government at London, includes the two Epistles of Clement of Rome in the New Testament collection. The *Codex Ephraemi*, at Paris, is a palimpsest; i.e., it is written over another writing, still partially legible. It agrees, in the main, with the other codices, but is of later date, and less perfect and reliable. The variations in these earliest extant collections of the New Testament writings attest the fact that no general and complete agreement has ever been reached respecting the books deemed canonical or authoritative.

The Council of Hippo, in Africa, in the year 393 A.D.,—Augustine being present as the ruling spirit,—declared the books of the Bible as at present published to be canonical, including the Old Testament Apocrypha, but omitting Lamentations. The Council of Carthage, four years later,—Augustine again being present,—confirmed this list, and ordered that no other books should be read in the churches under the title of "Sacred Scriptures." At a second Council of Carthage, A.D. 419, Augustine's selections were again ratified. There is nothing, however, in the action of these councils, or in the character of the men composing them, which would tend to sustain their authority as infallible or even reasonably just and intelligent. Dr. Philip Schaff, the orthodox historian of the Church, says of the bishops who constituted these councils, "Together with abundant talents, attainments, and virtues, there were gathered also . . . ignorance, intrigues, and partisan passions, which had already been excited on all sides by long controversies preceding, and now met and arrayed themselves, as hostile armies for open combat."* Nor is this militant comparison a mere figure of speech, for violent brawls and unseemly physical conflicts were not uncommon at these convocations. At the first Council of Nicæa, Nicholas, bishop of Myra, met the arguments of Arius by bestowing upon the jaw of that venerable presbyter such a violent blow that a temporary disuse of that important organ of debate was rendered necessary. Of the third general council of the Church, held at Ephesus, Dr. Schaff declares that its proceedings were marked by

"shameful intrigue, uncharitable lust of condemnation, and coarse violence of conduct."* Dean Milman affirms that "intrigue, injustice, violence, decisions on authority alone, and that the authority of a turbulent majority, decisions by wild acclamation rather than sober inquiry, detract from the reverence, and impugn the judgments . . . of the later councils."† The impartial historian can hardly perceive any valid reason for exempting the earlier councils from the same judgment.

In the midst of such influences, civil and ecclesiastical, as we have described, were born the "infallible Church" of Catholic Christianity and the "infallible Bible" of Protestantism. When we reflect soberly upon this phenomenon, so extraordinary in its alleged results, so human—not to say sometimes inhuman—in its means and methods, can we fail to conclude that there is not one particle of evidence to sustain the claims for infallibility made on behalf of either the Bible or the Church?

The Natural Evolution of Christianity.

We are now approaching the conclusion of this discussion; but, before we leave it for the consideration of matters of seemingly greater practical import, let us recall the leading features which have impressed themselves on our narrative of the historical evolution of Christianity, and draw from them such natural conclusions as we may concerning the genesis and development of the Christian faith.

The rise, progress, and triumph of Christianity constitute indeed one of the most remarkable phenomena in the world's history. We cannot wonder that an uncritical people, regarding it superficially, have seen in it evidences of supernatural intervention and the working of a greater than human power. A careful study of the development of other religions, however, will illustrate the truth that the rapid growth of Christianity, though indeed remarkable, is not an entirely unique phenomenon in history. The spread of Buddhism was even more rapid, not only in its native India, but also among peoples of alien race, unlike civilization, and different religion. It still numbers more adherents than all the sects of Christendom combined. In later times, the growth of Mohammedanism during the lifetime of its founder far surpassed the progress made by Christianity in the earlier years of its existence.‡ In our own day and in the lifetime of some of its members, the Brahmo-Somaj of India has converted some hundreds of thousands of the native population to its pure theistic faith.

Many of the earliest converts to Christianity were drawn from the Jewish communities scattered among the cities of the Roman Empire. The dissolution of the Jewish commonwealth and the distribution of its people throughout the nations thus became a natural influence of notable import in favoring the spread of the Christian faith. The new religion, however, influenced but little the Judaism of Palestine; and the later accretion of myth and dogma imported into Christianity from Aryan and Egyptian sources speedily resulted in a separation of the Hebrew element, and cut short the progress of the growing faith among the people of its founder.

Jesus, the Myth and the Man.

It is insisted by the dogmatic defenders of Christianity, on the one hand, and by its dogmatic opponents, on the other, that the New Testament narratives must either be accepted as a whole—the supernatural and miraculous elements included—or

* *History of the Christian Church.*

† *History of Christianity.*

* *The Christian Canon*, by Samuel Davidson, D.D. See also abbreviated article by same author in *Encyclopædia Britannica*.

* *History of the Christian Church.*

‡ Dean Stanley, in his *Lectures on the Eastern Church*, in noting the spread of Mohammedanism in Africa, concedes to it some admirable features which are lacking in Oriental Christianity. His frank treatment of this subject is very suggestive and instructive.

rejected entirely as of no historical value. If we have been successful in our treatment of this important branch of our subject, however, it should be clear that, by the canons of a true historical and critical exegesis, it is quite possible to separate the characteristics of the mythical Christ from the genuine features of the Man of Nazareth; and this, too, by the application of no arbitrary rule. Having recovered the picture of the historical Jesus from our investigation of the consenting testimony of the synoptical Gospels, and set over against it the remaining material of the Evangelical writers, the result proves the correctness of the method, almost with the certainty of mathematical demonstration.

On the one hand, we have Jesus, the Man,—a Hebrew of the Hebrews,—true son and successor of the prophets, finding his inspiration, his doctrines, his apt illustrations, his intense moral convictions, all latent in the ideas, the customs, surroundings, and even in the superstitions and prejudices of his people. His doctrine, like Paul's, was, "to the Greeks, foolishness"; but it was by no means unfamiliar or incomprehensible to the people of Galilee and Judea. His aphorisms, quotations, and illustrations show familiarity with the Hebrew scriptures and with the current uncritical methods of expounding and interpreting them in the synagogues, but none whatever with the literature and philosophy of Greece and Rome. The Jesus of the Triple Tradition is a simple, noble, manly personage, full of intense conviction and prophetic enthusiasm, who moves naturally and freely in his native Hebrew environment. The traces of the miraculous which still linger in his story are well-known superstitious belongings of his time and people. Jesus was conscience, humanity, compassion incarnate, but conscience, humanity, and compassion tinged by the habitual atmosphere of Hebrew life and thought. Without the current Jewish expectation of a coming Messiah, and of the kingdom of heaven soon to be established on the earth, the historical Jesus of the Triple Tradition would have had no existence. That three or four Greek writers of a later century should invent such a character, living and moving in an atmosphere so foreign to any other imaginable environment, as some recent writers have suggested,—that, indeed, would be a miracle as difficult for the rigorous and vigorous apostles of iconoclastic radicalism to explain as are some of the legendary stories of the gospel narratives for their orthodox opponents.

On the other hand, when we pass from the man Jesus of the Triple Tradition to the Christ of the excluded birth-legends and the wonderful fabric of mysticism and dogma found in the Fourth Gospel, we pass out of the Hebrew environment into the region of Aryan and Egyptian thought. The Christian *mythos* finds its explanation in legends foreign and abhorrent to the Hebrew mind: in the similar myths which cluster about the story of Krishna in India, and which were reflected in the later traditions of Buddhism; in the like mythological conceptions of the Egyptian Osiris worship, and the current religions of Greece and Rome. Back of these, it rests upon a common substratum of solar mythology, which constituted so important an element in the religions of India, Persia, Greece, Rome, Babylon, Assyria, and Egypt.

The Mythical Element as related to the Progress of Christianity.

To account for the marvellous progress of Christianity among the Aryan peoples of Europe, something more than the life and character of the historical Jesus is demanded by the rational investigator. That the mythical and philosophical accretions which gathered about his story in the gospel

narratives helped to familiarize and popularize his teachings outside the boundaries of Judaism, there can scarcely be a doubt. This influence was greatly aided by the teaching of Paul, who in his own person combined Pharisaic Judaism with the results of Greek philosophical culture, and whose work was a preparation for the new Platonism of the Alexandrian schools, which drew into yet closer contact the alien faiths of Greece and Palestine. Finally, Paul's doctrine of Universalism severed Christianity from the ethnical narrowness of Judaism, and it fell as fruitful seed into a soil prepared by the political ferment succeding the conquests of Alexander and the Cæsars,—into a world united as never before by the liberal and cosmopolitan policy of the Roman Empire.

Under the modifying influence of its mythical and dogmatic accretions, it is evident that the simple ethical teaching of Jesus was largely obscured and misinterpreted. There were three factors, however, in the evolution of Christianity, to which its progress and ultimate triumph appear to be chiefly due, that are traceable directly to the thought of Jesus, and that offer an historical justification for the popular regard in which he is held as the founder of the new faith. These, taking them in the order of their development, were: first, that feature in the teaching of Jesus which based morality upon the inner motive rather than the outward act; secondly, the natural ultimatum and practical application of this principle through the socialistic communism of primitive Christianity,* and particularly in the wider principle of Pauline Universalism; and, thirdly, the outcome and survival of this democratic and equalizing principle in the form of the church organization.

The abrogation of caste and of social distinctions in the church organization was the surviving remnant of the earlier communism, which not even the triumph of the Roman hierarchy could wholly obscure, though it succeeded in transforming the democratic equality of the earlier communities into the subordinated equality of the "Church militant,"—of soldiers marching under the command of an autocratic leader. The organization of the Church was possible only through the principle of Universalism introduced by Paul, but based ultimately upon the thought of Jesus. The separate communities were welded together by the result of the dogmatic controversies, and the circumstances of the political situation, into a compact organization of workers, which gave Christianity a tremendous advantage in its conflict with heathenism. The ethnic religions, in their popular forms, were a matter of family interest rather than of organized, concerted public action. They fostered no universal church. The state religion was usually quite different from the popular faith; and, while the schools of philosophy and secret and select associations of the mystagogues interested the intelligent classes, they did not appeal to the sympathies of the common people.

With this principle of organized Universalism in the primitive Christian faith, the tendency and policy of the Roman Empire coincided; and the Church accordingly took form and being under the guiding influence of the State. "The first form which Christianity assumed," says Tiele, "as an established religion, was Roman. The Roman Catholic Church is simply the Roman universal empire modified and consecrated by Christian ideas. It left the old forms, for the most part, standing; but it ennobled and elevated them by a new spirit. Its organization, and the efforts after unity which controlled all its development, were

* More than a year after these words were written, we are gratified to find our judgment confirmed in the able and scholarly address of Rev. Dr. Heber Newton on "The Religious Aspect of Socialism." See *Index* of June 25, 1885.

inherited from the Romans; and it was by their means that it was enabled to become the teacher of the still rude populations of the north, to preserve rather than diffuse the treasures which it had received from the ancients and from Jesus." *

Christianity and the Religion of the Future.

Looking back over the history of these earliest Christian centuries, is it wonderful, then, that the new religion gained steadily in power, and pressed forward to its ultimate triumph? Nay. The wonder would have been had the event proved otherwise. At every step, we behold the inevitable results of easily discernible and wholly natural causes. Had the simple, unalloyed teaching of the Prophet of Nazareth prevailed throughout the empire, that indeed would have been a miracle. But Christianity triumphant, as we have seen, was far from being the religion of Jesus: it was a compromise with Pagan power and sacerdotalism,—a hybrid product which the Nazarene would never have recognized as the child of his simple enthusiasm for righteousness, his devotion and self-abnegation, his suffering and agony, his poverty and supreme self-sacrifice. Imperial Rome was not the kingdom of righteousness whose coming he desired and prophesied,—no, nor any nation, people, or religious communion which has succeeded it, owning or professing the name of Christian. His was a beautiful ideal, never to be completely realized, as he anticipated, by any earthly society; but let us not doubt that this rejected stone will yet take its place in the temple of the Religion of the Future,—the true religion of humanity,—which shall be neither exclusively Christian nor Buddhist, nor Mohammedan nor Hindu, which shall be known by no sectarian designation. Into its fold shall be welcomed all sincere and earnest seekers for the truth; all who strive for its manifestation in a life of righteousness; all who believe, in the language of one of its prophets, that "Truth is our only armor in all passages of life and death." Its blessed ministry shall lead them, and lead all the world at last, to a perfect recognition of the BROTHERHOOD OF MAN; and to that trustful acceptance of the universe, which, independent even of theistic dogma, stands to all reverent and thoughtful minds as the rational fulfilment of Jesus' doctrine of the FATHERHOOD OF GOD.

A TRANSLATION FROM HORACE.†

Scion of Etruria's monarch—,
In a cask, untitled still,
Mellow wine I've long been keeping
In reserve for thee to spill;
For thy locks, a wreath of roses
And Sabaean perfume rare.
Snatch thyself from each engagement,
And to Tivoli repair.

Ceaseless plenty makes one dainty:
Leave your luxury for a while,
And your villa, that is neighbor
To the clouds, aspiring pile.
Let not Rome, its din and splendor,
Constantly your heart beguile.
To the wealthy, change is tonic,
Though they bask in Fortune's smile.

'Neath a lowly roof, full often
Hath a poor man's healthful fare,
Without couches, gorgeous hangings,
Smoothed the wrinkled front of Care.

Hid no longer, now arises
Starred Andromeda's bright Sire;

* *The History of Religion*, by Prof. C. P. Tiele, of the University of Leyden.

† The poet invites his friend Mæcenas to spend a few days of the heated term beneath his humble roof, far from the splendor and din of Rome.

Flameth Procyon, fierce forerunner
Of the Dogstar's baleful fire;
Drives his panting flock the shepherd,
Weary with the noontide heat,
Where the thickets of the Wood-god
Weave a shadowy, green retreat;
O'er the river's silent margin
Strays no breeze with whispers sweet.

Cares of state meantime annoy thee,
On the city's weal intent.
Farest thou what plots may menace
In the far-off Orient?
O'er events still in the future
Wisely God a veil doth draw;
Smiles he, when o'er-anxious mortal
Would transcend his being's law.
This remember: present moment
Manage duly, use aright.
O'er the future, thou art powerless:
It to mould exceeds thy might.
Now like river in its channel
Flowing calm to ocean wide,
Thus the current of events will
Sometimes smoothly, gently glide;
But, anon, its angry waters,
Freshet-swollen, madly pour,
Bearing ruin, desolation,
Banks and barriers running o'er.
Houses, cattle, trees uprooted,
In a mass it whirls along;
Woods and mountains loud re-echo
Roaring of its torrent strong.

Master of himself and happy
He will be, whome'er can say,
As the shades of evening glimmer,
I have truly lived to-day.
Jove can make to-morrow's heaven
Dark with clouds or bright with sun:
Gladness of a day that's vanished
Cannot be reversed, undone.

In her cruel game exulting,
Fortune playeth still her wiles;
Still her honors keeps transferring,—
Now on me, on thee, she smiles.

While she tarries, I applaud her:
Plumeth she her wings for flight,
In my virtue as a mantle
Wrapt I her caprice's slight.
I resign what she hath given,
Dowerless maiden turn to woo,—
Poverty, unlike to Fortune,
Always honest, modest, true.

Groans the mast 'neath storm-wind's scourges,
Needful 'tis not then for me
Humble vows and prayers to utter,
Lest my rich stuffs strew the sea.
In my skiff, two-oared, then, safely
Through the Ægean's roar I sail,
On to port the bright Twins waft me,
Speeding me with favoring gale.

B. W. BALL.

CORRESPONDENCE.

HOVENDEN'S "LAST MOMENTS OF JOHN BROWN."

Editors of The Index:—

In regard to the authenticity of the anecdote of the scene between John Brown and the slave-child, chosen by Mr. Hovenden, of Philadelphia, as the subject of his historical painting, and described in some detail by me in the last issue of *The Index*, I have just turned to a file of the *New York Tribune* for 1859, and on page 8 of the issue for December 5 I find the *locus classicus*, the original paragraph, which I believe is alone sufficient to justify the painter, and save the pretty incident for the school readers and Decoration Day orators of the future. The exact words

of the *Tribune's* correspondent are these: "On leaving the jail, John Brown had on his face an expression of calmness and serenity. . . . His face was even joyous, and a forgiving smile rested upon his lips. His was the lightest heart, among friend or foe, in the whole of Charlestown that day; and not a word was spoken that was not an intuitive appreciation of his manly courage. Firmly and with elastic step, he moved forward. As he stepped out of the door, a black woman, with her little child in her arms, stood near his way. The twain were of the despised race for whose emancipation and elevation to the dignity of children of God he was about to lay down his life. His thoughts at that moment none can know except as his acts interpret them. He stopped for a moment in his course, stooped over, and with the tenderness of one whose love is as broad as the brotherhood of man kissed it affectionately."

This account is quoted, as it stands, by Mr. James Redpath, in his *Life of John Brown*. But there is internal evidence of its reliability. The *Tribune's* correspondents were carefully selected men, the picked journalists of the day; and their accounts form by far the fullest and best record of the Virginia events. The correspondent who tells the story of Brown and the little black child states in the same article that he was present at the jail when the escort of troops arrived with Mrs. Brown, the night preceding the execution; he was in communication with Capt. Avis, and was admitted to the circle immediately about the scaffold on the fatal field. It is evident, then, that he was an eye-witness to all he relates. Read again his account (quoted above), and see if it does not bear on its face the marks of having been set down by one who saw whereof he spoke, noting especially what he says of the very expression of Brown's face, and the "tenderness" of his love for the little baby.

In view of the detailed statement of one who was beyond reasonable doubt an eye-witness, one is compelled to disregard the adverse witness even of Capt. Avis himself, Brown's jailer. In Mr. F. B. Sanborn's valuable work, *The Life and Letters of John Brown*, just published by Roberts Brothers, it is stated (p. 622) by the author that it was impossible for the incident of the slave-child to have occurred. For, says he, Capt. Avis, now dead, testified in 1882 as follows: "Brown was between Sheriff Campbell and me; and a guard of soldiers surrounded him, and allowed no person to come between them and the prisoner, from the jail to the scaffold, except his escorts." Mr. Sanborn, therefore, calls the incident of the slave-child a "legend," and thinks it arose from Brown's having several times said that he would have no hypocritical pro-slavery preachers at his execution, but would rather be followed to his "public murder" by barefooted, bare-legged, ragged slave-children and their old gray-headed slave mother than by such clergymen. "I should feel much prouder of such an escort," said Brown, "and I wish I could have it." For my part, I can see no propriety or reason in calling the written statement of an eye-witness a "legend"; and I should vastly prefer to think that in the confusion of the party as they emerged from the jail through the narrow little porch, and just before the formal positions of the march to the wagon had been assumed, Brown, with his usual alertness, stooped to kiss the slave-child, and passed on, Capt. Avis being at that instant separated from him by an intervening body, or else having his attention called to the display of military before the door. Nothing is more common than discrepant accounts of eye-witnesses, but it is plain that one of the eye-witnesses to the emergence of Brown from Charlestown jail could not have been mistaken as to such an unusual event as this; while, on the other hand, nothing would be more probable than that the anxious jailer could easily have failed to see a little incident like the one in question.

W. S. KENNEDY.

P. S.—Since the above was penned, Mr. Sanborn writes me as follows (let the reader give his statements such weight as they deserve): "The child-kissing incident is a legitimate myth, but has no historical foundation, and, as I say, was physically impossible. Avis was a man whose word could be taken as to that. Moreover, Brown's first biographer, Redpath, who gave currency to the story, told me five years ago that it was not true. He depended on Ned House (the *Tribune* correspondent) for it (as he said), and he had discovered that House invented it. This agrees with what is otherwise known of House."

DR. BUCHANAN'S "MANUAL OF PSYCHOMETRY."

Editors of The Index:—

The author of this book is a man of large experience, eminent scientific and professional attainments, especially skilled in the physiology and functions of the brain; an enthusiast in his special pursuits and discoveries, yet ready and able to render good "reason for the faith that is in him."

Better than any comments will be some extracts from the chapters of this work, in which he opens his great subject under various headings, some of which are as follows: "Original Sketch of Psychometry," "Later Facts," "Psychic Faculties, Location," etc., "Psychometry in Self-culture," "Conjugal Relations," "Medicine," "Literature," "Prophetic Intuition," "Anthropology," "Religion," "Future Life."

After stating that this is but an opening volume of many that are needed, he says: "As this contains many reports of psychometric experiments with Mr. Buchanan (and others), I would state that all such experiments are as pure and true illustrations as possible,—accurate reports of mental impressions recorded as spoken deliberately. The mind of the psychometer is always carefully guarded from all impressions but those which come from an invisible source by contact, without knowing the object or person described, and with no leading questions asked. . . ."

"The profound productions of Prof. Denton have attracted far less attention than that simple exhibition of psychometry called 'mind reading,' which I have never thought worthy of any special cultivation, but which, as an exhibition, answers the purpose of challenging scepticism, and giving those profoundly ignorant on this subject facts which compel reluctant attention, and thus prepare them for scientific investigation."

These lines, from a poem of John Pierpont read to the Yale College Alumni in 1850, are given, to show, in part, what the psychometric process and its results are, the theme being more fully illustrated on other pages:—

"Mysterious science! that has now displayed
'How fearfully and wonderfully made'
Is man, that even his touch can catch the mind,
That long has left material things behind!
Fearful the thought, that when my clay is cold,
And the next Jubilee has o'er it rolled,
The very page that I am writing now,
With tardy fingers and a care-worn brow,
To other brows by other fingers pressed,
Shall tell the world, not what I had been deemed,
Nor what I passed for, nor what I had seemed,
But what I *was*! Believe it, friends, or not,
To this high point of progress have we got:
We stamp ourselves on every page we write!
Send you a note to China or the pole,—
Where'er the wind blows or the waters roll,—
That note conveys the measure of your soul!"

In the experiments, which fill a large part of these pages, the psychometer sits quietly holding an autograph letter, a stone, a dose of medicine, or any object against the forehead, and thus reads character, gets the history of the stone, feels the effects of the medicine, etc., demonstrating the subtle impress of mind on matter and the delicate impressibility which makes nature an open book to the subject.

Forty-two years ago, Dr. Buchanan made this discovery; and, in New York, W. C. Bryant, J. L. O'Sullivan, and others, paid him marked attention, and testified to his honor and ability, as did sundry eminent medical gentlemen. Quoting further from the work: "Psychometry is the development and exercise of the divine faculties in man, a demonstration of the old conception of poetry and mystic philosophy as to the divine interior of the soul, and the marvellous approximation of man toward omniscience. It is, moreover, a demonstration of the normal dignity of human nature, showing in all humanity neglected and often nearly extinct powers, which have heretofore been deemed utterly incredible, or, if credible at all, only as a miracle from heaven, or as rare, anomalous, mysterious, and inexplicable facts, belonging to some

Manual of Psychometry: The Dawn of a New Civilization. By Joseph R. Buchanan, M.D., author of *Anthropology, Therapeutic Sarcognomy, and Moral Education*. Professor of Physiology and Institutes of Medicine in four medical colleges successively, from 1845 to 1881; and five years dean of Eclectic Medical Institute, the parent school of American Medical Eclecticism; discoverer of the impressibility of the brain,—of Psychometry and Sarcognomy. Published by the author, 29 Fort Avenue, Boston. 500 pages. Price \$2.00.

abnormal phase of life, or else to the hallucination of the visionary, if not to the illusion of the dupe. . . . Do these things not tend to solve the problem of the relations between Mind and Matter? Does it not appear that something emitted from the person or mind of the writer has become attached to or connected with the paper, as if the mental and the physical were capable of entering into a psycho-material combination?"

A single record of an experiment with Mrs. Buchanan must suffice. Last May, a photograph of Gen. Grant was put in her hands, she not knowing what it was; and the report, in part, was as follows: "I feel brain-weary, as if overtaxed. It is a man who studies, engaged in some mental work that calls for a great deal of strength and draws on his memory. [He was ill, and trying to finish his life.] . . . He does not seem like a literary character. I get a fresh feeling, as if it were just now. What an eventful career! Nothing in early manhood that showed such capacity. Some sudden call for energy,—it seems like war. . . . A person of no ordinary power. Some overshadowing condition brought him out. I don't yet see it. . . . Now, I see it. He is a soldier; has wonderful will power and sagacity; one of the great successful Union generals; an iron will, bold, no trepidation, wise in plan and adroit in movement; a great deal of intuition in military affairs. He took in the whole situation. . . . I think it is Gen. Grant. I see him as President."

It may be said that the minds of persons present affect these impressions; but, in some of the experiments, none knew whose writing was being psychometrized. Some thirty years ago, I wrote to Dr. Buchanan, at Cincinnati, to subscribe for his *Journal of Man*, and expressed interest in his researches. We were total strangers, and I did not expect a reply. But soon came a letter with a psychometric description of my character, which I thought correct; and none of the parties in the matter knew anything of me,—not, surely, of some leading traits of character, which were well given.

From these extracts, the reader will see that the book is well worth reading, and its author worthy of thoughtful respect, as a man from whom much can be learned.

G. B. STEBBINS.

TWO DIFFERENT KINDS OF LIFE.

Editors of *The Index* :—

The unchangeable Life is the direct cause of the changeable life; and, because it sustains the changeable life, it is also the indirect cause of the product of that life. As parents are the direct cause of the existence of their children, but the indirect cause of any good or evil deeds which those children may perform, so the Creator, or uncreated Life, is the direct cause of all created life, but the indirect cause of all matter, and of all action in matter, both of which are products of the created life. The created life—i.e., the mineral, vegetable, and animal life—was unconscious when created; and the animal life alone was created with the power of becoming conscious. Consequently, the created life was *unconsciously* the cause of matter and of all action in matter. Suppose a few drops of water encased in a solid rock should freeze, and thereby cause the rock to burst: what would be the cause of the bursting of the rock? The uncreated Life is the indirect cause of it, because the direct cause of the created life of the rock, water, and atmosphere. The created life of the rock, water, and atmosphere, through its action, produced, first, the coarser fabric, or visible matter; and, secondly, the action or manifestation in that matter.

The life of the earth moves or acts independently of the Creator, and moves or changes unconsciously its own product, matter; and through this product or matter is the action of the life made manifest to us,—the conscious animal life. Thus, all mineral life, in acting, moves or changes the mineral matter,—its own product. Through the action of the life of the earth, some of the matter or coarser fabric is thrown off through volcanoes, leaving a vacuum, and, through the pressure of the life of the atmosphere on the earth, the earth falls together, and fills this vacuum, causing a sudden disturbance in the earth and air. All chemical actions are caused indirectly by the life of man. The life of man prepares the alkali and acid, or the opposite qualities; and, when they are brought in contact with each other, the life of the alkali and the life of the acid produce a chemical action. Therefore, the life of the alkali and acid is the direct cause

of the action, and the life of man is the indirect cause of it.

The uncreated Life is the direct cause of all created life, and the created life the direct cause of matter and all action in matter. The conscious created life is the direct cause of sin, sickness, and death. Of sin, because through the matter or coarser fabric which the created life unconsciously produces the life or soul of man became clouded or led away from the true Light or eternal Substance; and sickness and death are but the wages of sin.

If life be the cause of matter and of all action in matter, it is necessary that we understand the science of that cause or life, in order to prove our opinion of the effect of life,—natural science. Observing effects and forming conclusions therefrom is not a trustworthy method for discovering the cause.

E. J. ARENS.

PLATFORM OF THE NEW YORK FREE-THINKERS' ASSOCIATION.

The following resolutions were adopted by the New York Freethinkers' Association as its platform, at the annual meeting held in Albany, Sept. 11-13:—

The Freethinkers of the State of New York, in Convention assembled, resolve as follows:—

First.—That the mother and nurse of all reforms, social, political, and moral, is universal mental liberty, and that its general extension is the condition of all future progress of the human race.

Second.—That, taking our stand on the fundamental American doctrine of the separation of Church and State, we demand, in the interests of liberty, equal rights and secular government, that such separation of Church and State should be completed by the repeal of all laws exempting church and ecclesiastical property from taxation, by the prohibition by law of the appropriation of public moneys for the support of or use by institutions under the management and influence of sectarian denominations, by the repeal of all laws compelling the observance of any day as a Sabbath or holy day, or enforcing the payment of legislative chaplaincies, or of establishing special religious days to be observed by public authority. We therefore call upon all of our fellow-citizens, irrespective of their religious opinions, to aid us in obtaining these requirements of justice.

Third.—That the object of free thought is to extend the benign influence of science, to cultivate the spirit of fraternity, to aid in the triumph of peace, to remove brute force, and to inaugurate a government which shall express the moral power of an enlightened reason. To these ends, we recommend that liberal or secular societies should be formed for social education and recreative purposes; that freethought and secular halls, libraries, and reading rooms should be built or obtained, and that suitable lecturers and teachers should be employed wherever possible in the several counties of our State.

Fourth.—That it is time for liberal and secular societies to take the place of churches and priests in the social recognition and celebration of those great events of human life,—birth, marriage, and death.

Fifth.—That, inasmuch as the government rests upon the consent of the governed, "equality recognizes no distinction of sex," and that woman's complete inclusion into a common participation with man of the knowledge, the uses, and the enjoyments of this earth, is her legitimate position.

Sixth.—That theology, in accounting for toil as a curse and in proclaiming riches as a snare, has unhappily confused the relations of labor and capital, and that human social equality demands that the industry which creates the wealth of the world should enjoy a fair distribution of its benefit.

Seventh.—That, in order to aid practically in the securing of these ends, we request and authorize the officers of this Association to take steps for legal incorporation.

BOOK NOTICES.

The Graphic (Illustrated), of Cincinnati, the only illustrated paper in the West, celebrated its first anniversary last week. In honor of this event, the issue of September 12 is a regular holiday paper in appearance, in size, and in contents. There are ten pages of illustrations, one beautiful colored plate, eight pages of interesting reading matter, and a handsome colored cover. The price of the paper is only ten cents per copy. The pictures include the

following attractive subjects: "Simplicity"; "The Fight of the Spanish Maids"; "A Pinch of Snuff"; "The Queen of the Masque"; "Beatrice"; "The Happy Mother"; "Beauty in the Hammock"; "Country Maids"; "The Kiss in the Fields," etc. The romance entitled "The Master of the Mine," by Robert Buchanan, is commenced in this number. O. O. Hall & Co., publishers, Cincinnati.

In the September number of the *Andover Review*, Rev. S. W. Dike concludes his discussion of "The Religious Problem of Country Town." Rev. Robert J. Nevin gives a thrilling account of the martyrdom of Panzani, who died in Rome last November, and sheds much light upon the policy and methods of Pius IX. and the Jesuits. D. McG. Means, Esq., of New York, contributes a valuable paper on county and town poor-houses. Mr. Henry Cabot Lodge portrays President Madison with skill. Under the head of "Archæological Notes," Prof. Taylor reviews a number of recent discoveries; and Prof. Woodruff notices the very important El Fayoum manuscripts, and gives a careful *résumé* of the discussion which is going on over the alleged Gospel fragment. There are, besides, interesting editorials. Houghton, Mifflin & Co.

The Revue de Belgique for August contains articles on prizes in schools, English painters, and Tilly; the first number of a story apparently designed to show the folly and wickedness of war, "The Hero of Gravelotte"; and a powerful exposure of Taine's injustice toward the French Revolution.

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

The Secret of the East;

OR,

The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historical value."—*Boston Evening Transcript.*

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its management will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

Address **FREE RELIGIOUS ASSOCIATION,**
 44 Boylston Street, Boston, Mass.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quick advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . . 10c. per line.
 " 13 " 25 " . . . 8c. " "
 " 26 " 51 " . . . 5c. " "
 " 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent., on the total as above calculated, will be made.

TRACTS.

No. 1.—*Truths for the Times,* by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God,* by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible,* by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism,* by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. Full of *Figures, Facts, and Interesting Extractions.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven,* by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment,* by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impenachment of Christianity,* by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science,* by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven,* by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing,* by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Myrausae.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address **THE INDEX,**
 44 Boylston Street, Boston, Mass.

Address **THE INDEX,** 44 Boylston Street, Boston, Mass.

UNITY.

A LIBERAL RELIGIOUS NEWSPAPER.
 16 pp. Weekly.

UNITY seeks to adjust religion and culture; to make thought worshipful, and worship thoughtful; to find a unity beneath conflicting dogmas; a community in all denominations; a sympathy between all religions. It seeks to represent and emphasize the abiding elements of religion, love, justice, truth, worship, practically applied among all men.

Subscriptions, \$1.50 per yr. Sample copies free.

SPECIAL offer to those who see this advertisement. Send 50 CENTS with your address within the next thirty days, and you will receive **UNITY** SIX MONTHS ON TRIAL. Ask also for free sample copy of **UNITY CHURCH-DOOR PULPIT**, a fortnightly pamphlet giving sermons by M. J. Savage, Felix Adler, Washington Gladden, Phillips Brooks, and other distinguished preachers. Address **UNITY**, 135 Wabash Avenue, Chicago.

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American *Turnerbund*.)

Editor, **C. Hermann Beppe.**

TERMS, PER ANNUM, IN ADVANCE:
 UNITED STATES AND CANADA:

Freidenker \$2.50

Turnerische Ausgabe des Freidenker (Amerikanische Turnzeitung) 3.00

EUROPE:

Freidenker \$3.00

Turnerische Ausgabe des Freidenker (Amerikanische Turnzeitung) 3.50

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirtieth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing considerably more reading matter, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub heading "Turnerische Ausgabe des Freidenker."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.
 (Organ of the German-American Teachers' Association.)

16 large quarto pages, with four-page cover.
 Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

Orders for all kinds of books promptly filled. Radical and Freethought Publications a specialty.

Address all orders to
FREIDENKER PUBLISHING CO.,
 470 East Water St.,
 MILWAUKEE, WIS.

BY B. F. U.

MISS KATE FIELD will lecture, the coming season, on "The Mormon Monster," "An Evening with Charles Dickens," and "Eyes and Ears in London."

MR. GEORGE W. CABLE will contribute to the *Century* a series of papers on Creole slave-songs and song-dances, including the songs of the Voudous (dealing with the rites of negro serpent worship), etc., which Mr. D. W. Kemble will illustrate.

We find the following, by Prof. D. McGill, D.D., copied in the *Christian Statesman* from the *Christian Instructor*: "Atheists, infidels, blasphemers, and Mormons should be kept out of office, just as drunkards, liars, and debauchees, not by legal disfranchisement and by constitutional tests and disqualifications, but by the influence and votes of Christian people."

THE *Presbyterian* says that Gen. Grant, although, "by his ecclesiastical connections, a Methodist, . . . in the expression of his conviction seems to have been decidedly Calvinistic. The closing sentence of his article in the *Century* on 'The Siege of Vicksburg' reads thus: 'The campaign of Vicksburg was suggested and developed by circumstances; and it now looks as though Providence had directed its course, while the Army of the Tennessee executed the decree.' Executing 'decrees' smacks of the Westminster Catechism, and those instructed therein will readily recognize the sound theology of Gen. Grant's pregnant sentence."

"MAURICE COONEY, of Cohoes," says the *Utica morning Herald*, "is a grocer, a strict Catholic, and for thirty years has been presiding officer of the St. Vincent de Paul Society connected with his church. He is bright, and had read a good deal. On Saturday, he astonished his friends by announcing he would deliver, on Simmons Island, a lecture on the true gospel. The lecture was to have been delivered Sunday. A large crowd

gathered, but was disappointed. His family prevented him leaving the house, declaring that no Catholic should lecture on such a subject, and also decided that Cooney's mind was affected. Cooney tried to get out of the house, but was arrested for breach of the peace. He was afterward declared to be insane. He had prepared a well-written sermon, in which he attempted to expose the Catholic religion, and called the Church a money-making institution."

THE Boston correspondent of the *Springfield Republican* does not apprehend any contest in this city between Protestants and Catholics in regard to school committees. "It is not at all likely," he writes, "that there will be any such contest between Protestants and Catholics as some are fearing. The religious question cannot easily at this late day be brought into the contest for school committee members. The movement to induce Catholic women to register is a political, not a religious one. On the other side, the most zealous advocates of the registration of women are those interested in the temperance cause. There are, no doubt, individuals who are so extreme in their religious views that they would keep Catholics off the school board, if they could. But these are the small minority, and their influence is not great. The women who have voted for school committee in the past, and those who have urged women to register, have generally been tolerant and liberal; and neither the race nor the religious question has entered into their canvass."

SAYS the *Commonwealth*: "The refusal of the women's convention to nominate Dr. Blake was ascribed by certain politicians to the fact of his being a Catholic; but, when the ladies were heard from, it proved that the refusal had nothing whatever to do with the question of religion. The women were not satisfied with the attitude of Dr. Blake in reference to the closing of certain school-houses, in order to facilitate the taking out of liquor-licenses by dealers in their vicinity. On that ground alone, they declined to nominate him; but, we remember, a list was printed of some six or eight names of Catholic gentlemen, who had been urged by the women to stand as their candidates, and who had refused to do so. The absence of a Catholic candidate from the woman's ticket was thus due solely to their inability to find a suitable one, who would consent to serve."

"JOURNAL OF THE AKADEME" is the name of a little periodical that comes to us from Newark, N.J., and of which Alexander Wilder is editor. The March number, the only one we have seen, contains a paper read before "the American Akadēmē," Feb. 17, 1885, by J. B. Turner, on "Differentiation of Energy as the Basis of Philosophy and Religion." The paper is strongly theistic, and shows Prof. Turner as a thinker to good advantage. There is in the same number an article by D. A. Wasson, which considers the question that Plato pondered long, "Whether Virtue can be taught?" The American Akadēmē is a philosophical society which holds monthly meetings at Jacksonville, Ill., the home of Dr.

Jones, the Platonist, whose name appears in the reports. The East has its "Concord School of Philosophy;" why should not the larger West have its "American Akadēmē"? The price of the journal is \$2 per year. Letters may be addressed to Alexander Wilder, 565 Orange Street, Newark, N.J., or to the secretary, Miss S. Hamilton, Jacksonville, Ill.

REV. O. P. GIFFORD, a Baptist minister who preaches in this city, said last Sunday, defending the Book of Jonah as inspired Scripture: "Christ in his day studied Jonah, accepted Jonah. 'Ah!' you say, 'but there is that fish story.' But don't you suppose Peter and Paul and Christ knew that fish story? They accepted it: you do not. Not only did Christ take the Book of Jonah as authoritative, but he made distinct reference to it when he said: 'As Jonah was three days in the whale's belly, so shall the Son of man be three days in the heart of the earth.' Christ accepted it, and Christ is my teacher. Christ put his finger specifically on the fish story. I accept the Book of Jonah as history, because Peter and Paul and Christ accepted it. The most wonderful thing in the Book of Jonah is to observe how God presses his way to the front. When Jonah was thrown overboard, God had prepared a great fish to receive him with open mouth, and God spoke to the fish. He also prepared a gourd and a worm, and sent a vehement east wind." Mr. Gifford, the report says, went on to expatiate, at some length, against the decline of faith, and by way of illustration said, "I do not believe I could call up a single person in this church who would be able to name the books of the Old Testament in their regular order, especially if he did not believe in the story of Jonah."

THEODORE STANTON writes from Paris to the *Chicago Inter-Ocean*: "In my letter last week on the French elections, I forgot to mention a curious feature of the campaign, now introduced for the first time into politics in this country,—for the first time, at least, since the advent of the Third Republic. I refer to the candidacy of women for seats in the Chamber of Deputies. There exists in this city a very aggressive and indefatigable women's suffrage society, of which Mlle. Hubertine Auclert is the ruling spirit. Its motto is, 'Agitate, agitate, agitate.' Mlle. Auclert and her friends, consequently, never let an occasion go by without reminding their countrymen of the existence of their countrywomen. So the women's suffrage society has also put forth a ticket. Among the score of names on it are those of Sarah Bernhardt, Louise Michel, and Mme. Adam, actresses, revolutionists, and society ladies, all mingled together pell-mell. Some of the proposed candidates for political honors have sent formal letters to the society, declining to stand; others accept the responsibility; while still others treat the whole matter with silent contempt. But Mlle. Auclert has gained her point. She has set the newspapers discussing the woman question, and even the *Figaro* has said some sensible things on this subject of women's suffrage."

"THE POWER NOT OURSELVES" AN INTEL-
LIGIBLE POWER.

Every sane mind admits that there is a power in the universe beyond and above human power,—some kind of energy which has given rise to the conception of deities or deity. The question, however, is raised whether there is rational justification for conceiving this power to have purposive intelligence. This may be considered as the pivotal question in modern religious philosophy. Toward answering it, there is one thing revealed by increasing knowledge concerning the universe, and especially scientific knowledge, which gives to the modern world a great advantage over the ancient; and that is, that the power within and behind the phenomena of the universe works not from caprice or passion or by mere chance, but by orderly and intelligible methods to predictable results. The deities to whom the ancients prayed were very generally believed to be affected by personal feelings and whims, or to decide by arbitrary will. They had to be coaxed and sometimes bribed and cozened, in order that their favor might be secured. They were conceived as having the weaknesses, even the jealousies and enmities of, human beings. There are probably people now living who are of such antique mental condition that they still pray to a deity of this nature. But the power, as science teaches, that takes the place of such deities in the world to-day, is methodical and law-abiding. If inexorable to human appeals for personal attention, it is at least impartial. The sun shines alike on the evil and the good, the rain falls upon the just and upon the unjust. Whoever will learn nature's method, and follow in her track, may be sure of her favor.

There are those who think that this power in nature gives little or no evidence of a moral purpose. There are those who have a logical difficulty in ascribing to it a conscious intelligent aim. There are those who are mentally staggered before the conception of a personal Infinite Intelligence. And well they may be. Could the human mind congratulate itself on definitely comprehending a being of Infinite Intelligence and Infinite Personality, its proud plumes the next moment must fall, as it should think of the impossibility of the finite mind comprehending in entirety anything that is infinite.

But those who study this problem are apt to begin on the wrong side,—the infinite side; and, so beginning, they either proceed to dogmatize without knowledge, or, abashed by their own ignorance, they humbly sink back into theological *know-nothingism*, and declare the universe a riddle which it is vain for human beings to try to solve. And this is a mood of mental scepticism which slides easily into moral indifference or worse. The universe, to the eye of science, is no riddle whose answer is merely to be guessed at or which is to go unsolved. It presents a problem for thoughtful observation and study; and the conditions of solving the problem, so far as the solution of it concerns human living, are within the compass of human brains.

Suppose, then, that we approach this problem of infinite power and man's relation to it from the most natural direction; namely, the human, finite side. Anything that is infinite must be within the finite as well as beyond it. *Infinite* power merely means that a certain power with which we must be to some extent acquainted (otherwise we could not say enough about it even to name it) is, to our vision and comprehension, boundless in its scope. But, where it comes within finite conditions and under human observation, it may be studied and its attributes defined. A person may say that he cannot

comprehend how infinite power can be a conscious intelligent being. Very well: let that pass. It is a metaphysical conception, and has its difficulties. But is not infinite power an *intelligible* power? This is a very different question. To discover whether anything is intelligible, it is only necessary that a person should submit it to the test of his own intelligence. To decide, therefore, whether infinite power is intelligible, one has not to soar on wings of imagination into ethereal and celestial realms in an attempt to ascertain by a purely metaphysical speculation how an infinite personal intelligence can possibly exist; but he has simply to observe such ordinary operations of the power as come within the sphere of his daily life. He has only to regard those activities in the realm of nature which every eye in a measure may note, and which, as science reads their story, have produced in slow gradation this marvellous universe, with its myriad arrangements of order, beauty, grandeur, mutual service, progressive life, conscious intelligence and will, which human eyes gaze upon to-day, and of which the human race is itself a part.

This is a point that hardly needs to be illustrated, much less to be argued. The proposition that nature presents an intelligible order is one that stands at the very basis of science, and is the preface of all knowledge. Nature's methods and activities, all her phenomena of force and form, can be analyzed, classified, systematized, by the human mind. But this would be impossible, were not the order, the system, the classification, the regularity of action, the organic tension and aim, there in nature herself. The human mind imports nothing into nature: it only reads off what is already there. Were nature a mere medley of crashing forces and wriggling atoms, its events coming haphazard, with no observable law of cause and effect, there could be no such thing as science; nor would any amount of knowledge or of accumulated experience be of any avail. What happened yesterday would tell nothing of to-morrow. To-day's conjunction of forces might bring benefit: to-morrow, the same conjunction might bring ruin. The only condition on which science can exist and knowledge be applied for human advantage is that nature has an intelligible method and man is a part of an intelligible order of things.

And, if the universe thus presents to the human mind an intelligible order, the power that is behind or within it, and is the animating impulse of it all, must be an intelligible power. This power cannot be separated from nature. Her changing phenomena, her processes and sequences, her movements and forces, are simply the varied exhibitions of the power itself. Their order is its order, their method is its method, their intelligibility is its intelligibility. However one may hesitate, therefore, to affirm conscious intelligence of the animating power that is manifest in the natural universe, there seems no escape from the conclusion that it is an *intelligible* power. Science, experience, the history of the human race, bear witness to the truth of this proposition. And this, certainly, is a truth of greater practical moment to mankind than the other proposition, that the power is an intelligent power. Without the former, it is quite certain that human existence could not be continued; while, even if the latter proposition be true, and the power be also intelligent, it is difficult to see how man could be practically affected by the power in any better, if, indeed, in any other way, than through the intelligibility of its results.

If, then, any persons have a difficulty in retaining a conception of a Supreme Being of infinite intelligence, it may well suffice, both for religious philosophy and for practical duty, if they have an

adequate realization of that other and most undeniable truth,—the irrefragable basis of all science and the element of utility in all experience,—that the eternal and infinite power of the universe is intelligible. And the question, too, may be raised, with no little assurance, whether there is not a logical necessity that any arrangement of things, which responds to human intelligence as an intelligible order, must have had, in some way, a kindred purposive intelligence in the energizing and organizing power that has produced and still sustains them.

WM. J. POTTER.

AN OLD FRIEND'S GREETING.

Prof. Francis W. Newman has sent the following reply to the congratulatory resolution forwarded to him by the Free Religious Association, at its last convention, on the occasion of his eightieth birthday:—

NORWOOD VILLA, WESTON-SUPER-MARE,
ENGLAND, July 25, 1885.

To W. J. Potter, Esq., President of the Free Religious Association:—

Dear Sir,—I am bound to thank you and your Society warmly for your cordial salutation of my attaining the age of eighty years. It is never safe to rely on health or strength, better by far to be thankful for it. But, in my *spirits*, I am certainly as young as ever; and perhaps I ought to add that I largely attribute this to *two* facts. I can never remember to have drunk a sip of wine or beer in a solitary meal (in my boyhood, healths were drunk in company everywhere), and for eighteen years I have disused meals of flesh.

The doctrines of *The Index* did not boldly enough for me claim for the Supreme Power that *personality* without which Mind, Purpose, Wisdom, Goodness, are simply unintelligible. Yet, as I believe, in some points I agree with it, where I differ from Charles Voysey, Frances Cobbe, Mazzini, Theodore Parker, and the Indian Brahmos. Thus, I have sympathy with some of their opponents. Especially, I never could make a dogma of life after death. For ten or fifteen years, I thought this to be a weakness on my part; and I diligently amassed all reasonable pleas on the side of the dogma. I barely account it, now for perhaps nine years, to be unproved, but not disproved, and not to deserve inculcation as a TRUTH until it has been accepted after such a free discussion of both sides as the religious (among us) never allow or dream of. Nor can I, with Mr. Voysey, make a dogma of the duty of church attendance and of public prayer, much less, with the Brahmos, approve of the ostentation before an unbelieving public of hymn singing and other pious addresses to the Most High. In these matters, I think I am more nearly with the chief writers in *The Index*.

The intellectual movement in England toward free thought (and, without freedom, what is thought worth?) in my memory astonishes me. Our battle against vice is waxing hot: that against unjust institutions will soon become hotter; and we shall all rejoice in death that we leave behind us "a better and bonnier world."

Heartily yours,

F. W. NEWMAN.

ROMAN CATHOLICS ON THE DEFENSIVE.

Reformers must often differ among themselves; and I confess to dissenting from much that is contained in the editorial of the last *Index*, on "A New Phase of Woman Suffrage." While agreeing with its main conclusion as to the secularization of the State, I must think that the Roman Catholics, in their recent action—so far as any of them have

taken action—in respect to the Boston School Board, are clearly within their right, and are simply putting themselves on the defensive. No excuses can hide the fact that the women's organization, at the last city election, practically set up a religious test, when they nominated a list containing not one single Roman Catholic to superintend schools of which at least one-half the pupils belong to that faith. It is only necessary to reverse the case to see it fairly. Had a convention of Roman Catholics similarly excluded every Protestant, the newspapers would have rung with it to this day, and every Protestant pulpit in Boston would have blazed with indignation.

So plain is this that the attempt is now made to show that it was an accident. The excuse is too transparent. In such a matter there can be no accidents. It is no excuse to say that the ladies invited one or two gentlemen who declined,—all, so far as I have seen, Roman Catholics of American birth and descent,—and that they tried to find a certain priest, who was, as is generally the case with priests, absent on his professional duties. To do all this was to do next to nothing. They should have invited every decent Roman Catholic in Boston before they nominated a ticket without any,—especially in view of the fact that they had just expressly dropped from their list one of the ablest men of that body. By so doing, they not only invited defeat; but they deserved it. As Napoleon said, "It was worse than a crime: it was a blunder."

It is technically true, I suppose, that Dr. Blake was not dropped as a Roman Catholic. He was dropped, so far as I am informed, on a ground which seems to me wrongly taken, if not absolutely frivolous. To say that he voted for closing a school-house in order not to interfere with a liquor-shop, or that he acquiesced in the act, is to make, as I understand, another statement which is merely technically true. As I understand, the building was a condemned school-house, which Dr. Blake himself had long since reported as unfit for use, and which was used merely as a temporary place for an overflow class or classes. All turns upon this fact. To abandon an established and recognized school-house rather than interfere with a liquor-shop would justly condemn any man. But the case of a building already regarded as undesirable, and ready to be abandoned on other grounds, is very different. The law itself, when introduced into a large city, is at best a rigorous one; and it is neither justice nor policy to overlook the fact. It is the hardest thing for many of our good temperance people to recognize that the liquor traffic, so long as it is a licensed one, has its vested rights, and that we have no more authority to trespass upon them than if the dealer sold only Bibles. We have a right to hold him strictly to his legal limitations; and I, as the president of a Law and Order League, try to do my share to this end. But so has he a right to demand of us that no law should be unreasonably construed to his detriment. Let us only imagine the "liquor-shop" in question to be the Parker House or S. S. Pierce's grocery, and we shall see the injustice of refusing to renew its license because a temporary public school had been established within four hundred feet of it, in a building not intended for permanent use as a school-house. A too zealous school committee might easily close, in this manner, every large hotel in Boston. And yet the legal rights of the smallest licensed dealer are as clear as in the case of these large establishments.

There are three classes of persons about whom many of our reformers seem to feel that they have no rights which any man is bound to respect. Those three are Roman Catholics, Irishmen, and liquor-dealers. Many seem to assume that these

classes are practically synonymous, and that each is necessarily guilty of the sins of all three. This is just the way, as I take it, in which the religious question entered into the matter last year. No one could read the reports of the ladies' meetings or hear the current conversation among them without perceiving that they developed an aversion, not merely to Dr. Blake, but to his fellow-countrymen and co-religionists. One of these very ladies told me that their leader, Rev. Dr. Hale, stated at one of the committees of Conference that he had made up his mind never again to vote for an Irish Catholic for any public office. He may have been misunderstood, but the fact that he was supposed to have said so must have given a color to their thoughts. It does not seem to me that, in this state of mind, they were likely to make a very exhaustive search for a Roman Catholic candidate. A very few refusals, a very few closed front-doors, would have been enough to satisfy their consciences.

Happily for my peace of mind, I am not one of those advocates of woman suffrage who expect that women will begin to vote with their political wisdom full grown. I think that the organization of women voters in Boston made last year great mistakes. They erred in putting themselves under the absolute guidance of a leader who had never been a woman suffragist, and who valued their votes simply to carry a point which he deemed important. They erred in taking up that point, which was a matter only indirectly bearing on education, and, if I am correct as to the facts, was greatly exaggerated. They erred in practically introducing religious exclusiveness into our school politics. As evil often works for good, their act may be remotely beneficial by leading to a larger registration this year. Meantime, they have played directly into the hands of the "remonstrants," who have always maintained that women as voters would be impulsive and impractical, would defeat their own ends by over-zeal, and would commonly be led to the polls blindfold by some favorite clergyman. And, as to the Roman Catholics, if Protestant women nominate tickets which, if chosen, would banish them from the school board, I think that they are quite right in organizing to prevent any such exclusion.

T. W. HIGGINSON.

OUR SUNDAY LAWS.

The working of these laws in Massachusetts reminds me of an attempt once made by the British Parliament to pass an Act to prevent bakers from cooking legs of mutton, meat-pies, etc., for Sunday dinners. One Monday, Cobden arose in the House of Commons, and spoke thus: "Yesterday morning, I sat an hour at the window of my lodgings, watching shabbily dressed but quiet and orderly women and children carry the dishes which they had prepared for dinner, but could not cook at home, to the bake-shops. I was glad to think how happy they would be over a good warm meal at home on their one day of rest, and how much less likely the men and boys would be to go off to the gin-palaces and taverns. That afternoon, I was able to look out from another window into the court-yard of the Bishop of London's palace. Tradesmen and servants were hurrying to and fro, bringing game, hot-house fruit, rare flowers, and choice fish for his lordship's dinner-party. Costly wine was brought up from his cellars, and set on ice. Butlers, cooks, footmen, were all hard at work, preparing to feast men and women who pass their time in idleness and fare sumptuously every day. Ere long, these lovers of Sunday luxury and dissipation came rattling along, disturbing the peace of the whole neighborhood with their carriages. If we must pass another Sabbatarian bill,

I insist that it shall not be against the poor people of London, but against their bishop."

The Sunday laws of Massachusetts do not practically interfere with my own right to do what I please. Perhaps these lines may not fall under the eye of a single reader who is much interfered with personally. It is the poor who feel the weight of all such legislation. Thus, the closing of bakeries and markets is of no importance to owners of good cellars and refrigerators or to boarders in summer hotels. But people who have to eat, drink, and sleep in one or two hot rooms through July and August would be glad of a law, like that of New York and other States, permitting the sale of meat, fish, etc., early Sunday morning. It is more for the benefit of the poor than of the rich that the milkman makes his round, in defiance of the statute. Prohibiting the Sunday sale of baked beans in Boston has troubled only those people who have bad ovens and scanty fuel. The one Sunday law most in the interest of the poor, that forbidding the sale of liquor, is, unfortunately, by no means the most strictly enforced. So the prohibition of Sunday amusements has little effect on the owners of fast horses, yachts, seaside cottages, billiard-rooms, grand pianos, and large libraries. It is those who own none of these things, and perhaps have not even a comfortable sitting-room, who would be glad to have some place of recreation open besides the saloons. Much as poor people gain by not being expected to work on Sunday, they would gain much more if there were greater opportunities of really making it a day of rest. Whatever may be said in favor of going to church, it must be remembered that nobody is there all day long. For people who have no comfortable homes, the churches leave vacant hours, on which the saloons are quick to seize. It should also be remembered that the prohibition of Sunday work and business is easily evaded by the man who makes his money at a desk or writing-table. It is the laborer on the cobbler's bench, in the corn-field, or in the fishing boat, that has to look out for the constable. Here, in Massachusetts, there is one particularly bad result of the law against doing business on Sunday. No one who gets cheated on that day can collect damages for fraud. A man who swapped horses one Sunday afternoon was cheated so badly that he got a verdict from the jury, which would have insured him compensation, if the Supreme Court had not given an opinion, which still stands recorded thus: "An action cannot be maintained for a deceit practised in the exchange of horses on the Lord's Day" (*Robeson v. French*, 12 Met. 24). This was in 1846, but it ought to be clearly understood that this decision is just as much in force now as it was then. It is not a dead letter, and cannot become one. I think there have been no such cases here since. Of course not. No one would be fool enough to go to law, if he knew he would be defeated by a decision like this. No respectable lawyer would take such a case. There has been a similar decision in Vermont. Another phase of the same question came up afterward in Massachusetts. One Sunday, a Jew sold his coat to another, in part payment for some jewelry. He afterward returned the trinkets, and tried to get back his coat, but could not. It was decided (*Myers v. Meinrath*, 101 Mass. 366; and *Cranston v. Goss*, 107 Mass. 441, 1869 and 1871) that no one who sells and delivers property on Sunday can get any pay for it legally, though it be kept by the purchaser. These decisions still stand like lions in the way of justice. They are not needed to prevent doing business on Sunday. That is already provided against sufficiently by

the danger of being fined \$50. No one willing to run this risk would think that of being defrauded serious enough to keep him back. Men don't expect to get cheated, when they try to buy or sell goods. Some men expect to cheat, and they are eager to take advantage of such a state of the law as has just been pointed out. The fact that what little buying and selling takes place on Sunday is done mostly by those who are compelled by their necessities makes it a solemn duty to see that these poor people should not fall victims to fraud. A petition has been prepared, worded substantially like that which, two years ago, secured the passage of a law enabling damages to be collected for injuries sustained on Sunday in consequence of defects in the roads and highways. There is no attempt to repeal or modify the law against doing business on that day, but simply to prevent its giving a sanctuary to crime. All wise friends of the law will be glad to save it from suffering under this calamity. Copies of this petition will be promptly sent, and all aid in urging it gratefully received.

FRED. MAY HOLLAND.

Box 61, CONCORD, MASS.

APOTHEOSIS.

It is the ideal faculty, the pure reason, the source of those truths which wake to perish never, which lifts man above his petty daily surroundings, and perpetually rescues him from the sordidness, meanness, and animalism to which he gravitates by the necessities of his fleshly nature. It is the ideal faculty which "peoples space with life and mystical predominance." It is the ideal faculty possessed in an exceptional degree which imparts to great poets and thinkers their grandeur of thought and character. Existing in a phenomenal world, full of misery, change, want, woe, disease, and death, the subject of an iron necessity and mental perplexity as to his origin, final cause, and destiny, man, with his ideal faculty, is naturally haunted by dreams of perfection, of immortality, and of a celestial sphere, wherein he shall finally emerge from the miseries and limitations of this mortal state. In primitive ages, the ignorant masses saw in every man of noble and commanding stature and countenance, and in every beautiful woman, "a son of God," or of the gods, and a daughter of the gods,—

"Divinely tall and most divinely fair."

It is the ideal faculty which makes the lower orders of men superstitious and which makes them servile to the glamour of a splendid person, of fine raiment, of stately residences, of pomp and ceremonial. It is the ideal faculty which assures us that there must be a better state of existence in store for us than the poor, limited life which we know:—

"The Lethe of nature
Can't trance him again,
Whose soul sees the perfect,
Which his eyes seek in vain."

"The heavens that now draw him
With sweetness untold,
Once found,—for new heavens
He spurneth the old."

As the starry night-sky overarches our poor, little earth, affording to its dwellers an outlook into boundless space and a vague conception of eternal duration, so the ideal faculty overarches in each one of us our lower animal nature, continually lifting us up by aspiration, at least to the heights of eternal truth, beauty, and justice. And in this fact consists the grandeur of human nature. Great poets, philosophers, statesmen, and scientists, and men of great deeds, exercise a certain glamour even over the most intelligent people of

to-day, because we naturally dwell solely on their noble qualities and achievements, giving not a thought to the foibles and lower traits, which are part and parcel of all men and inherent in their constitutions, compounded as they are of dust and spirit. The lover deifies the lady of his heart, the hero-worshipper his hero. Even now, in this age of reason, democracy, cynicism, scepticism, and pessimism, when each man is chiefly intent to secure his own share of the good things of life, let a particular individual, by his combined good luck, determination, and skill, achieve a great success, which secures the safety and welfare of a mighty nation, and he will be the subject of an apotheosis, or deification, much like that which was awarded to the heroes of primitive history and to the emperors of Rome. Altars may not be erected to the subject of a nineteenth-century apotheosis, nor sacrificial victims be slain in his honor, because such ritualistic doings are out of date; but, otherwise, the apotheosis of to-day does not much differ from that of twenty centuries ago. Still does the old instinct show itself active as ever, though modified by the altered circumstances of modern life. The gods are simply ideal or idealized men, the imaginations of the pure reason. But what is the pure reason or ideal faculty or deific principle in us but Deity? The Greek word for an exalted or ecstatic state of mind is *enthousiasmos*, which, being interpreted, means *God-in-us*. There is, of course, and can be no colossal, omnipotent, omnipresent personality such as the creeds inculcate under the name of God; for such a being would be a contradiction in terms, would be a monster like the centaur or mermaid of fable. It is the ideal faculty which makes

"the Judge in dusty frock
Spy behind the village clock
Retinues of airy kings,
Skirts of angels, starry wings,
His fathers shining in bright fables,
His children fed at heavenly tables."

The ideal faculty will, by the aid of science and invention, indefinitely improve, ameliorate, and humanize our little planet. But it can never make a paradise or Eden of it. Not in a phenomenal, but only in a noumenal world can its longings and aspirations be appeased and satisfied. But perhaps continued aspiration is of the very essence of this faculty, so that it will never know satisfaction.

B. W. BALL.

"WOMAN AND RIGHT."

Under this title, an article, remarkable in more than one respect, has recently appeared in the pages of a well-known French periodical. M. Charles Secrétan, in "La Femme et le Droit," published in the July number of the *Revue Philosophique*,* has contributed to the irrepressible Woman Question an essay that is, perhaps, second in importance only to John Stuart Mill's famous *Subjection of Women*.

The author of this article is not a nobody. M. Charles Secrétan is a native of Switzerland, where he was once widely known as a brilliant journalist. To day, at the age of threescore and ten, he is professor of philosophy in the University of Lausanne, corresponding member of the Institute of France, and a regular contributor to several able periodicals. Ripe in years, a well-read student, of a philosophic turn of mind and with broad liberal views on all the great questions of the century, M. Secrétan's opinions command respect and carry weight. When such a man comes forward to speak for the first time in his life on this subject

* Librairie Félix Alcan, 108 Boulevard Saint-Germain, Paris.

of women's rights, it is an event of more than ordinary interest. And when he chooses as the medium of communication to the public such a staid periodical as the *Revue Philosophique*, edited by so conservative a thinker as M. Th. Ribot, his essay is given increased significance.

It is difficult to convey a satisfactory idea of this long essay in the limited amount of space at my disposal. I shall therefore have to content myself by translating isolated passages here and there, which will show you the spirit in which the author has treated his subject. I refer your readers to the original article for a better and more complete knowledge of it.

"The economic and juridic position of woman," begins Prof. Secrétan, "is to-day an open question. . . . It is, without exception, the most important problem of the hour; for it really concerns the conception and constitution of humanity." John Bright once wrote to me, "If women are not safe under the charge and care of fathers, husbands, brothers, and sons, it is the fault of our non-civilization, and not of our laws." M. Secrétan looks at the matter in a much more philosophical manner. He says, "If men are to decide what shall be woman's sphere, in which they are deeply interested, women, in their turn, ought to have a voice in determining man's powers, which are of not less interest to them." M. Secrétan does not draw back at the consequences of his reasoning. "In whatever way this problem is resolved," he continues, "it is evident that the only effective rights are those that are guaranteed, and that political rights are the only guarantee of civil rights; that the liberty of a sex constrained to accept, without being able to modify the lot that the other sex forces upon it, does not deserve the name of liberty; that, on these conditions, what woman calls her own is in fact the property of another, while her position is one of servitude, and her legal personality only a fiction."

M. Secrétan recurs again and again to the importance of women's suffrage. "The question of the political rights of woman," he says, "dominates absolutely this whole subject. To refuse woman the franchise is to refuse her a right, to impede her personality from appearing; it is to maintain the principle that woman does not exist for herself, but uniquely as a means of continuing, enriching, and enlivening our own existence. . . . Women's suffrage ought to be established, and can be established practically nowhere else except among Anglo-Saxon peoples, which, by the extent of their domain, by the increase of their population, by the immensity of their riches, and by the powerful intellectual movement which characterizes them, stand to-day in the advance guard of humanity. . . . I look in vain for an example of the government of a class sincerely exercised in the interest of another class or in the equal interest of all. Here is to be found the explanation and perhaps the excuse of that strange measure, that unheard-of paradox, universal suffrage. But, so long as the feeble sex is kept away from public affairs, universal suffrage does not really exist. When men make laws to govern women, have they at heart the interest of women and the common interests of all members of society? A consideration of analogous cases authorizes a negative presumption. . . . So long as human nature is not transformed to its very foundations, laws made exclusively by one sex will have as their exclusive object the interest of that sex." Mr. John Bright would do well to ponder this extract.

In closing his able argument, Prof. Secrétan says: "We demand the ballot for woman, in order that she may at last obtain justice. She has already worked her way into some public posts: we wish

to see every position in the hierarchy thrown open to her. She will then combat the red-tapism of administration, will favor order and economy, and will bring to the management of public business a portion of her own good sense and worth. We firmly believe that, when justice regulates the relations between the sexes, every domain will thereby be benefited, without at the same time there being any convulsion. The change will be slow and almost imperceptible. It is not probable that the recognition of the rights of the other sex will be followed by the entrance of many women into Parliament, the judiciary, and the other callings. . . . We cannot believe that the presence of some ladies in the hall of the Chamber of Deputies would lessen the dignity of that body."

This logical, dispassionate, and broad-minded discussion of the whole subject of the enfranchisement of women is another sign, of which there have been so many during these latter years, that, just as the slavery question passed from the abolitionists to the politicians, from the domain of sentiment to that of practical politics, so, too, this woman question is no longer to be the exclusive care of agitating reformers, but is at last being taken up by outside statesmen, thinkers, and philosophers. The last name, but not the least, to be added to the long and distinguished list of the European advocates of women's suffrage is that of Prof. Charles Secrétan. And he need not be ashamed of the company that he keeps; for, among the dead and living, Mill, Victor Hugo, Laboulaye, Dumas, Tourguénief, and Condorcet form a galaxy with whom even the greatest would be glad to shine.

THEODORE STANTON.

PARIS, August, 1885.

RECEPTION TO MONCURE D. CONWAY.

All who love progress and reform rejoice to see that the author of *The Earthward Pilgrimage*, *Sacred Anthology*, *Idols and Ideals*, *Demonology*, and other brave, scholarly, powerful books, still keeps that vigor of thought, nobleness of purpose, and comprehension of what our age most deeply needs, which gave him a foremost place among the Abolitionists, and has since made him a mighty prophet of new truth. His work in London—first as a defender of liberty during our great war, and then as the leader of a large congregation of advanced thinkers—has closed with honor and success. He has returned to his native country, and resumed his place among our own pathfinders and pioneers. His friends wish to meet him in Boston, spend some social hours in his company, and hear him once more tell us what present burden of duty is laid upon us by the eternal laws of truth and justice. Such an opportunity will be given on Friday evening, October 9, in Chapel Hall, adjoining the Meionaon, Tremont Temple. The doors will be open at 6 P.M., and a substantial supper will be ready at 6.30. Col. T. W. Higginson will preside; and Mr. Conway will deliver, at 8 P.M., an address prepared for the occasion, and entitled "Our Armageddon." Thus, we shall be told what part we can take in "the battle of the great day," still going on against popular delusions and iniquities in high places. Before the close of the evening, sufficient opportunity will be given for social intercourse. All who are interested in the speaker and the objects of the meeting are invited cordially. Not only the members of the Free Religious Association, but all friends of social reform and advanced thought, are earnestly called upon to meet with us. The price of reserved seats is only fifty cents; and the more promptly the tickets are sold, the easier it will be to make the occasion what we

all wish to have it. Our friends will find it decidedly for their interest to secure seats as soon as possible after the opening of the sale on Monday, September 28, when tickets may be procured at the office of *The Index*, 44 Boylston Street, and of Mr. D. G. Crandon, 11 Hanover Street.

FREDERIC M. HOLLAND,
Sec'y F. R. A.

JENKIN LLOYD JONES is one of the *livest* ministers of the Unitarian denomination. He retains all the fervor and zeal of the Methodists,—among whom, we believe, he once preached,—yet is so liberal in his views that he chafes against the bars of the National Unitarian Conference, and is always a most welcome speaker on the platform of the Free Religious Association. He believes, however, in the future of Unitarianism, and finds his work mainly in that field, but is so genial in spirit, so widely humane in sympathy, so earnest and self-sacrificing in effort, that he holds the hearts of all who know him. He is now trying to build a church for a new society which he has gathered in Chicago, and which is not blessed nor cursed with large wealth. So that his friends, and the friends of what he stands for, wherever they live, may have a chance to help him in this enterprise. The design of what he calls a church looks more like a dwelling-house of the homelike Queen Anne style than a church, and is meant, in fact, to include family apartments for the minister's home, as well as a hall and other rooms for the use of the society. It is an interesting specimen of architectural art, and is one of the signs, perhaps, of a coming revolution in ecclesiastical building. This edifice is evidently to be for human uses; and yet it may be rightly consecrated as a temple, for such, in a true sense, should every home be. Possibly, some readers of *The Index* may like to "lend a hand," with dollars in it, to Mr. Jones and his model home-church.

W. J. P.

EDITORIAL NOTES.

BY B. F. U.

GEN. HORACE PORTER will contribute an anecdotal paper on "Lincoln and Grant" to the *October Century*. From personal knowledge, he describes the official relations of the two men and their private intercourse, and relates many new stories.

GEORGE W. CABLE, in reply to an inquiry as to his views on woman suffrage, writes thus to Col. Higginson:—

I have never thoroughly studied the subject of female suffrage, but I must say I have never seen an argument against it that was not flimsy. Men are much disposed to exaggerate the difficulties of voting intelligently, when they talk of women voting. By the time a public question is ready for the popular vote, it has become a very simple question, that requires little more than honesty and common sense to vote upon it. If our mothers are not fit to vote, they ought to stop bearing sons.

THE writer of an article in the *Critic* on Goldwin Smith, in the series "Authors at Home," says:—

As I am writing for an American audience, it may not be irrelevant to say, before concluding, that, while Goldwin Smith is an ardent believer in and friend of the American people, he has at the same time but a tepid esteem for the chief part of American literature. He rather decries all but the great humorists, for whom, indeed, his admiration is unbounded. He has a full and generous appreciation for the genius of Poe. But he misses entirely the greatness of Emerson, allows to Lowell no eminence save as a satirist, and is continually asking, privately, that America shall produce a book. As he

has not, however, made this exorbitant demand as yet in printer's ink, and over his sign and seal, perhaps we may be permitted to regard it as no more than a mild British joke.

THE following dialogue occurred recently in the Lord Mayor's court of London: A juryman, being called on to take the oath, told the presiding judge that he could neither take the oath nor affirm. *The Common Sergeant*: "How is that?" *The juryman*: "Because I am an agnostic and have conscientious objections to the taking of an oath." *Another juryman*: "If you are an agnostic, how can you have a conscience?" If the Common Sergeant had the least sense of humor, he would have asked the other juryman what he supposed an agnostic to be. But he missed his chance. In the end, after much confusion and fumbling among different formulas of swearing and affirming, the wicked agnostic was allowed to assent to the pledge that he would well and truly try the issues between the parties, and a true verdict give according to the evidence. The "so help you God" was omitted, and it does not appear that the interests of justice suffered. Whether the 'other juryman' had it out in the jury-room with the agnostic, we are not told.—*New York Tribune*.

THE Boston Sunday *Herald*, in an editorial suggested by the case of the young woman who recently drowned herself, leaving behind her a letter, in which she denounced God as a fraud in whom she had trusted, but who would not help her in trouble and distress, says:—

It is plain enough what ideal conception was still lingering in this poor crazed young woman's mind,—the conception of a Being merciful and tender, able to bless to the uttermost; and there was she, ever loyal to him, left to drink the last dregs of misery, to be engulfed in the blackness of despair. No good and all-powerful being could permit this. And so, in the wild and whirling delirium of her brain, she denounced the whole God-idea as a fraud and a lie, and plunged into the river, to get out of such a hideous world. People ought to be set to thinking by such a case as this. There is no end of teaching from the pulpit that is calculated to bring the mind to just such a state of possible heart-break and despair. It is born of a still lingering faith in the ideas of an age of miracle, that outward earthly deliverance and succor are the sole proof of a divine Providence, and will surely come to the righteous,—something tantamount to ravens, to feed them in times of famine, angels to unbar the gates of the dungeons into which they are thrown, material prosperity inevitably to crown their honest efforts. No wonder this belief is so rapturously embraced by ardent minds. . . . Any shape of religion that sends the young out into the world with the false idea that they are the children of a God too tender and merciful to suffer them to encounter the days and years, perhaps, of misery, desertion, gloom, and anguish the highest and noblest have had to go through with, is a wrong and a cruelty to them. The religious question is to be solved on no such luxurious terms as this; nor would the solution be worth much, at least to those who have to meet life's sterner trials, if it could be.

A QUESTION. For *The Index*.

—

If everything that happens is God's will,
Both good and ill,
Then say wherein
Rests man's responsibility? Though sin
Go hand in hand with him through ways of shame,
Is man to blame?

If everything that happens is God's will,
Both good and ill,
What credit hath
That man who ever shuns the evil path,
And treads with feet that do not hesitate
The true and straight?

GERTRUDE ALGER.

The Index.

BOSTON, SEPTEMBER 24, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrears is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

Cyril, the Saint, and Hypatia, the Martyr.

BY DYER D. LUM.

Nowhere in history do we find a greater contrast than that presented by the characters of Cyril and Hypatia: one, a Christian, a saint, a *doer* who met all the requirements of a Carlylean hero; the other, a Pagan, a woman, a thinker who, with eloquent words, sought to invigorate human intellect. Geniuses, Lavater has said, are nouns in the grammar of humanity. In each of the characters we propose to consider there existed the spark of genius, in that each lived not for the present, but sought to build the future on a lasting foundation. Both prized Truth above all things, and strove by far different methods to have Truth prevail over what they considered error and cant.

"Genius, Poet: do we know what these words mean?" asks Carlyle. "An inspired Soul once more vouchsafed us, direct from Nature's own great fire-heart, to see the Truth and speak it and do it; Nature's own sacred voice heard once more athwart the dreary boundless element of hearsaying and canting, of twaddle and poltroonery, in which the bewildered Earth, nigh perishing, has lost its way. Hear once more, ye bewildered benighted mortals; listen once again to a voice from the inner Light-sea and Flame-sea, Nature's and Truth's own heart; know the Fact of your Existence what it is, put away the Cant of it which it is *not*; and knowing, do, and let it be well with you!"

So thought Cyril. Had he not Truth? Had not his fiery, impetuous spirit drank deep at a spring fed by the divine hand? There was no hesitation in his mind as to what Truth was: he knew it, he possessed it, and, *knowing*, with ardor sought to *do*.

Let us endeavor to place before us the rival tendencies represented in Alexandria by Cyril and Hypatia at the opening of the fifth century. The conflict there waged was not one between two individuals: it had not its origin in the jealousy of the preacher of the philosopher, nor in the disdain of the philosopher for the puerilities of the rising

faith. It was a conflict of principles,—a struggle to the death between authority and freedom in thought.

Alexandria had been famous for centuries as the seat of learning. Here was the famous library, in the temple of Serapis, of three hundred thousand volumes. The Serapion, one of the noblest structures in the world, was adorned with matchless skill and art. Columns of sculptured marble supported the portico, which was approached by a vast flight of steps. Statues and paintings of the highest Greek art delighted the eye. Here were the brass instruments with which Eratosthenes had measured the size of the earth, and Timocharis had determined the motions of the planet Venus. Here, Euclid had prepared his great work, Archimedes invented the screw for raising the waters of the Nile, Hero placed the first steam-engine, Eratosthenes catalogued the stars and determined the periodicities of eclipses. Here, Aristarchus sought to determine the distance of the sun, Apollonius wrote on geometry, and Hipparchus discovered the procession of the equinoxes.

About the year 390, the bishopric of Alexandria was filled by a monk of Nitria, named Theophilus. To the believers in the new faith, the Serapion was an object of detestation. They regarded its instruments as aids to sorcery and magic. The very grandeur of its history and its discoveries were but proofs of its alliance with the devil. The contradictory forces,—the authority of the Father and the independence of the Son,—which the simple Galilean believed could be so easily yoked, had now revealed their true natures. The Christian, with upturned eyes, saw not his brother on earth. Revealed truth left no void for mental activity. St. Polycarp had said, on seeing a clepsydra, or water-clock, ornamented with the signs of the zodiac, and destroyed by the primitive Christians, "In all these monstrous demons is seen an art hostile to God!" In the same spirit, Eusebius had disdainfully turned from science, and said, "It is through contempt of such useless labor that we think so little of these matters: we turn our souls to the exercise of better things!"

The "better things" which exercised the souls of the savage monks of Nitria were Truth, one and indivisible, revealed for all time from its central fount, in which men's course through life and the attainment of heaven were definitely laid down in rules within the comprehension of all. The Gospels knew nothing of clepsydres or sextants, the believing Christian had no need of astronomical treatises or catalogues of the stars. Had he not Moses and the prophets? Then away with these relics of diabolical art, so dear to the pagan philosophers!

Theophilus triumphed. The emperor Theodosius ordered the destruction of the world-famed Museum, and its manuscripts were fed to the flames. The holy zeal of the bishop was not satisfied till the building itself had been demolished, and a church erected on its site.

During these eventful years, Cyril and Hypatia were quietly pursuing their studies in accordance with the respective methods of which they were so soon to become the distinctive champions.

Hypatia was the daughter of the first mathematician and geometer of his time, Theon of Alexandria, and had received from him a careful and thorough education. At an early age, her rare intelligence had been remarked, and the eagerness of her mind to grasp knowledge. Under her father's tuition, she mastered the most difficult problems in mathematics and astronomy, and was thoroughly versed in the writings of Apollonius and other geometers. At this period, the principal seat of the

new philosophy, the neo-Platonic school, was in Athens, whither she went to complete her studies. The school of Athens then embraced several illustrious professors, among others Plutarch, its head, and his daughter Asclepigenia.

On her return to her native city, she undertook the exposition of the philosophy she had so profoundly studied. Her lectures excited the enthusiasm of the cultivated. Young and beautiful, with a mind well stored with the fruit that Greece had so long bestowed upon the lovers of philosophy, and with a winning and persuasive eloquence that soared to the sublime, she gave expression to her thoughts, compared the doctrines of the various philosophers, and breathed new life into the eternal questions of Why? Whence? Whither? Now commenting on abstract geometrical problems, now expounding the views of Aristotle, then with loving zeal setting before her auditors the great problems of thought that had exercised the mind of her great teacher, Plato, and seeking in philosophy a foundation for Truth, with impressive words urging her hearers to conform their lives to the higher Ideal, she seemed to renew the ancient glory of her city. Young men flocked around her in adoration, intoxicated with her beauty and eloquence; but no breath of calumny has rested on her spotless character. Old men forgot their years in seeking instruction at her feet, but no whisper of blame for youthful imprudence came from their sedate lips.

Among her hearers was Synesius, afterward a Christian and a bishop. In his letters, still extant, he calls her his benefactor, his sister, his mother. "When even the dead shall forget hell, I will remember my dear Hypatia. For you alone, I could forget my country." Nor in after years did the bishop lose the respect and admiration that the student bore to the name of Hypatia.

About this epoch, 412 A.D., Cyril succeeded his uncle Theophilus as the incumbent of the bishopric of the city, next to Rome the most important in Christendom. He had been expressly prepared for the position by five years' residence among the monks of Nitria. Young and ardent, invested with power over a horde of monks and the consciences of Christian believers, gifted with a determined will, and forcible in pulpit oratory, he was not a man to falter in emergencies. Holding God's revealed will as unquestioned, and, logically, his authority as far transcending the "hearsaying and canting, the twaddle and poltroonery," of man's relations with his brother man, as the absolute transcends the relative, he was a man who dared "to speak it and do it."

And the rising Church had need of such a man at that time, or relinquish its claim. Under the disguise of city missionaries, he organized a militia who became the automatic executors of his will, and these, in connection with the monks of the surrounding country, constituted a resistless power in his hands; for, in their fanatical zeal in serving him, they deemed they were rendering more manifest the glory of God.

The great city had a mixed population,—Christian, Pagan, and Jew. Of the latter alone, forty thousand were residents within the walls, engaged in merchandise and traffic. Orestes, the governor, was a Christian, but not a fanatic. Placed in a position of importance and trust, he found himself continually appealed to by all parties. The increasing power of the crafty bishop forced him to take a middle course, and sometimes avail himself of the heathen populace to curb Christian turbulence. Not to bow beneath the rule of a bishop is to antagonize him: Cyril recognized no other course. The Jews, wealthy and respected, with numerous synagogues, awakened the fanaticism of the Christians. Had they not crucified the Lord?

Did they not reject him? Nor, on the other hand, need we search for causes of Jewish animosity. Riots were of frequent occurrence between them. On one occasion in a riot, some Christians had been killed. Although the guilty parties were in custody, Cyril determined to act for himself. He would stop the ceaseless strife by extirpating the antagonists. Placing himself at the head of his followers, he attacked and sacked the synagogues, ordered the pillage of the Jewish quarter, and sought to expel them from the city. He was sustained by the emperor; and, friendless and stripped of their wealth, the Jews were driven forth. The hateful synagogues were closed, and the churches resounded with hymns of praise.

Naturally, the Pagans sympathized with the Jews in their persecution. Orestes had tried to stop the riot. In the eyes of the citizen, it would seem to have been his duty: in the eyes of the Christian, it constituted his crime. He had endeavored to save the objects of God's hatred! Five hundred of Cyril's old associates, the Nitrian monks, had been summoned from the desert to defend their chief. Half-clad, with sheepskins cast over their naked shoulders, scorning personal cleanliness for the "better things" of monastic life, and with their rough, shaggy locks matted over their heads, they filled the streets, eager for vengeance.

Meeting the prefect, Orestes, in the street, being carried in his chair, they surrounded him, and covered him with opprobrious taunts and vile epithets. In vain he protested that he was a Christian, and had received baptism. His words were drowned in a howl of injuries. Had he not tried to save the Jews? Did he not visit Hypatia, and take counsel with her? Prefer a pagan sorceress to a Christian bishop? Ammonius, a monk, a humble "doer" of the Cyril stripe, hurled a stone at the prefect, and wounded him in the head. At the sight of his bleeding visage, the citizens interfered. Orestes was rescued, and Ammonius secured.

Ammonius was brought to judgment, and suffered death. What did Cyril? He prepared elaborate obsequies for the body of the dead rioter, had it displayed in state in the great church, and buried with great pomp. Cyril pronounced his eulogy, and canonized him as a martyr who had lost his life in defence of religion.

The Jews were expelled, Orestes had escaped assassination, but Hypatia remained.

The magistrates of the city respected Hypatia for her wisdom. They showed her much deference, and willingly consulted her on public affairs. Orestes had even sought her advice in his perplexities. Here was enough to cost her downfall. But other reasons existed. The rich and intelligent, the aristocracy of Alexandria, were to be found at her feet, leaving the common people to listen to Cyril's disquisitions on the mysteries of the Trinity. In ages of faith, when signs and portents are deemed sufficient demonstrations of a dogma, when the logic prevails that one thing is true because another thing has happened, mental exactness in reasoning does not occur. Hypatia was young and beautiful: she was lewd. She was learned and eloquent: she was a sorceress. She was kind and gentle: she was a Pagan. She was refined and modest: she was possessed by a devil. Where lewdness passed unheeded, her very virtue marked her out a shining mark.

Cyril was human. Whatever his genius as a ruler, as a defender of the faith, as an establisher of Christian order, he was still a rival preacher. It is related that one day, in passing her door, he was stopped by the throng through which passage for the time was impossible. Long trains of chariots filled the street. The wealth and fashion of Alexandria were pouring into her lecture room,

and with the gaping populace blockaded his passage. With the instincts of a priest, he knew that one or the other must fall. Whispers rose to murmurs. The angry monks, not yet dismissed to their beads and orisons, still remained in the city. Calumny fell from her spotless character, but—she was pagan. Her womanly soul had sought and found in the Platonic philosophy God, peace, religion; and, with true fervor, she sought to diffuse her acquisitions. But, alas! the gospel field was stony soil for the growth of philosophy. Had Jesus studied philosophy? Knew he one school from another? Could the apostles distinguish between Plato and Pyrrhus? Could a Pagan add aught to Revealed Truth? To ask such questions was to answer them.

The division between Cyril and Orestes was ascribed to Hypatia's counsels. She was the fatal cause of the turbulence it had engendered. Her incantations had cast a spell over the soul of the prefect and the magistrates: order could not be restored while she remained. With her baneful influence removed, the civil authorities might awake to their enormities, and seek absolution at Cyril's hand. God's Truth was in danger from her wiles. The progress of Christ's Church was arrested by the words of a Pagan and a woman! On one side was a priest with a horde of fanatical adherents ready to do anything he wished; a priest who honestly believed he held God's cause in his keeping; a priest who trembled for the souls of those who thronged Hypatia's lecture room; a priest whose mind had been trained in obedience, and filled with the dogma of God's paternal authority. All this he believed because he was a priest. On the other side was a philosopher, a Pagan and a woman.

What direct action Cyril had in the outbreak is unknown. He fomented the storm: he may have waited for the lightning stroke to follow. It was not his character, however, to wait: he was a "doer," and posterity will ever hold him guilty of the result. He had stirred up the passions of the mob, and it was not in his power to stop their excess of zeal.

One day, she came forth as usual from her house, to repair to her academy to continue her discourses on philosophy. Cyril's monks flocked around her with yells of passionate rage. These bare-legged and howling ministers of the gospel had the pagan maiden at their mercy. They wrenched her from her chariot. With exultant shouts, they crowd around her, as in terror she falls to the ground. Strong arms seize her frail form, her hair falls around her, her garments are torn from her in pieces. Naked and bleeding, she is dragged along by men, from whose waists the crucifix is suspended, to the great church. There, in that sacred place, erected in glory of the Christ, she, the Pagan, shall answer for her free thought. Her soul lacerated by vile indignities, her modesty outraged, her person exposed to the gibes of fiends, her naked form is thrown before the altar, where, by a stroke of his club, Peter, the reader, at last ends her sufferings.

Are not these ministers of Christ yet satisfied? Must still further indignities be heaped upon her quivering form? Her corpse is brutally outraged, the body is torn limb from limb, the disfigured trunk is hacked with stones and knives, the flesh is scraped from the bones with oyster shells, and the horrible fragments are borne through the streets as trophies; and, finally, all that remains of Hypatia—philosopher, teacher, virgin-martyr—is cast into the fire, and the ashes scattered.

Again, the Galilean had triumphed! What did the Christian world? Cyril did nothing. He contentedly reaped the fruit of the victory, and the

guilty went unpunished. But the emperor? He issued a decree closing all schools of philosophy in Athens and elsewhere, and to enter a pagan temple became a crime. And the Church, the custodian of Christian charity and dogma? It canonized Cyril, and made him a saint! "The leaden mace of bigotry had struck and shivered the exquisitely tempered steel of Greek philosophy."

Pagan Greece and Rome had never persecuted belief. They demanded participation by the citizen in the consecrated rites as a civil duty. Religion was an integral part of the State. Philosophical unbelief was tolerated, provided it did not result in the overt act of refusing compliance with existing customs. For the overt act, Socrates received punishment, and Diagoras of Melos fled to save his life. In Rome, all gods were welcome.

But the God of the Christians tolerated no rival: all others were false, were demons. They rejected with scorn the rights the State deemed civic duties. The followers of Christ alone possessed Truth: all else must be founded on error and untruth. The fatherhood of God in its logical development carried with it the organization of the Church,—an external authority,—the submission of the individual will to the divine. Christianity does not consist simply in gospel texts: it is the words of Christ as logically developed by the changing conditions of social growth. The stream from which Christian Cyril drank had its source in the plains of the Jordan. In the first century, he would have met with cheerfulness the martyr's crown: in the year 415, for the same Truth he brought about the martyrdom of Hypatia. The intolerance was in the germ of Revealed Truth, and had simply reached maturity.

Cyril and Hypatia were both thinkers of recognized ability. To Cyril, the source of thought was external, hence divine; in Hypatia, in the intellect, hence human. That is, the one led to the exaltation of the external and the submission of the internal; while the other, by exalting the internal, had the inevitable tendency to exalt humanity.

Hypatia was the last of her race. Science and Philosophy disappeared, and Faith ruled supreme. Humanity entered into the Dark Ages of history, where thought was stifled and mental indolence exalted. Revealed Truth had supplanted Reason. In the rays of the Fatherhood of the Absolute, the brotherhood of man dwindled into insignificance. Christ's dogma of the inseparability of belief and salvation had attained its ultimate triumph.

Nor are these conclusions forced ones. Guizot, in his *History of Civilization in Europe*, says of the Church at this epoch:—

Two evil principles met in it: the one avowed and, as it were, incorporated in the doctrines of the Church; the other introduced into it by human weakness, and not as a legitimate consequence of doctrine. The first was the denial of the right of individual reason, the pretension to transmit creeds down through the whole religious system, without any one having the right to judge for himself. . . . The second evil principle is the right of constraint which the Church arrogates to itself,—a right contrary to the very nature of religious society, to the very origin of the Church, and her primitive maxims,—a right which has been disputed by many of the most illustrious Fathers, St. Ambrose, St. Hilary, St. Martin, but which has, notwithstanding, prevailed and become a dominant fact. The pretension of forcing to believe, if two such words can stand in juxtaposition, or of physically punishing belief, the persecution of heresy, contempt for the legitimate liberty of human thought,—this is an error which was introduced into the Church even before the fifth century; and dearly has it cost her.

Because the second was opposed by distinguished Fathers by no means proves that it is not a legitimate conclusion from the first. In all ages of

Christian history there have been men who believed that religion was an individual rather than a social relation; that the human soul stood self-poised, independent of its environment, and dependent only on the occult principle called God. Modern thought, however, has thoroughly exploded this fallacy. Man, as a human being, exists only in society, receives from it his human characteristics, breathes only in his social environment.

The moment Christ's words fell on human ears and were accepted by human hearts, there was already the germ of Christian society, and, as a legitimate consequence, organization. As well assert that a seed can maintain its individuality as a seed when placed within the soil and fed with moisture as that an idea placed within the minds of social beings and developed through their social intercourse can retain its original form. Community of thought involves society, and society cannot avoid instant disintegration without administration. It follows and forms itself. Whatever may be the nature of the seed sown, favorable environment will evolve from it an organization which will be determined mainly by the life in the seed, and secondarily by the nature of the environment.

In proclaiming the Fatherhood of the Absolute, Christ sowed seed which could never produce the flower of brotherhood of man. The life principle—the germ—of his thought, authority, truth, external to man, revealed from above, necessarily grew into an organization that canonized such men as Cyril. I am not denying Christ's manifest love for man; but it was not love for man as such, but for God's wayward children.

The greater excluded the lesser: its darksome shade withered the tender shoots, and dwarfed its growth; for, "when the blade was sprung up, and brought forth fruit, then appeared the tares also," whose deeper roots absorbed the nourishment. Let us have done with the sickly sentimentality of what Christ meant. It is no matter what he meant.

The plant of humanity is fed from social springs. In its growth there are incorporated human sympathies and feelings, its blossoms are deeds of human kindness and love, and its perfume heroic deeds. It has arisen from a lowly condition, worked up through the dark soil, and displayed its vitality by withstanding the fierce heat of the Christian sun, whose rays have only blasted its buds, and given us that eternal characteristic of piety,—selfishness,—under its varied forms of personal salvation, personal immortality, and a personal God. *In te, Domine, speravi*, is not a human cry: it betrays its anti-social nature both in its germ and in its fruit.

CORRESPONDENCE.

A MORMON ELDER'S ADDRESS.

Editors of *The Index*:—

THE CHURCH OF JESUS CHRIST, OF LATTER-DAY SAINTS.—Worship every Sunday at 3 P.M., at corner Broadway and Ferry Avenue, Kaighn's Point, N.J. Subject, "The Real Cause of the Persecution of the Mormons." The public invited.

The above advertisement in a Philadelphia newspaper attracted my attention, and I determined to accept the invitation extended in the last three words. In a small upstairs room of the "Flat-iron Hotel," a very small congregation of men and women had assembled. Service not having commenced, an opportunity was afforded for a few minutes' conversation with the presiding elder, Mr. S. Harrison, who appeared to be an earnest, straightforward man, of the industrial class, and possessing considerable natural ability, preaching what he believes to be the truth without pay or profit; for the small voluntary contributions dropped into the box by the few people present would not more than pay the rent of the room

and for the tracts which were given away at the conclusion.

The worship consisted of singing, prayer, the reading of a chapter from John's Gospel, the sacrament in bread and water, and the address by Mr. Harrison on the subject announced, which was in substance as follows:—

In all ages, the promulgation of a new doctrine, whether scientific or religious, has been received with disfavor; but an intenser hatred seems to have been visited on a religious doctrine than on any other. Old ideas, deeply rooted in men's minds, rendered sacred by memory and by association, even when shown to be false, die hard. And, when Truth herself comes and knocks for admission at the heart, she is treated as an alien and an intruder,—"I know you not." Error, if only respectable and established, is more acceptable to most men than is impetuous, troublesome truth. You, brothers and sisters, not being of the world, the world hates you. If you were of the world, the world would treat you as its own. When Jesus introduced his doctrines of reform at the inception of Christianity, the men of old ideas persecuted him. Said they, in effect: Do as we do, and we will treat you well. Give up, says the world to us, your distinctive tenets, your pet notions, and we will take you to ourselves. Of course, "the world loveth its own." But where would truth have been now, had it given up every point at the first temptation spread in its way by error? Not thus are great victories won.

They persecuted the disciples of Wiclif and of Luther, and they mobbed the followers of Wesley; and one would think that those who had so lately suffered for conscience' sake would be the last to be intolerant with others. But a religion, once established, once wealthy and influential, soon forgets the stony and sinuous path by which it has reached its present altitude; and, when a purer spirit, a nobler ideal, though of the same brotherhood of belief, aims to regenerate the old body, instead of the hand of welcome and the cheering word come jeers, hisses, innuendoes, misrepresentation, falsehood, and every meanness of which angry bigotry is capable. Let us beware of this, if ever we surmount these trials. We are a persecuted people; but we shall bear it, for it has been foretold that tribulation shall come upon us. But we have also the opposite and comfortable assurance that these tribulations, which are but for a moment, shall work out for us a more exceeding glory. Why are we oppressed? The pretext is now that we encourage plural marriage, but we must go deeper for the cause. A pretext merely; for why did they persecute us in Ohio, from 1830 to 1846, before we practised plural marriage? It was not until 1852 that Orson Pratt received the revelation concerning this method of our polity. There was no difference then between our domestic relations and those of our neighbors; and, therefore, according to their present plea, we should have been unmolested. They could not call us polygamists. So they called us thieves, mobbed us, destroyed our property, and finally drove us away at the point of the bayonet. We had purchased our land, and paid its price: we had made a garden out of a desert; but, when we appealed to the President of the United States for redress, the reply was that no existing law would touch our case. Therefore, I say, polygamy is only a pretext. We then settled in Missouri. Industry and thrift did their usual work; and we should have become prosperous, had we been left alone. We were not polygamists then. So they called us robbers and traitors, mobbed us, destroyed our property; and there was no redress. They managed to drive us from there, as they had from Ohio. Therefore, I say, polygamy is only a pretext, not the cause; for, when they had not that, they trumped up another. Any charge would be believed. We have been unable to obtain justice; and, in a country where all are humorously supposed to be equal, we have found that there is a law for oppression, but no law for protection.

We then settled in Utah; and, in 1852, the revelation commending plural marriage came. Here was an excellent pretext. Thieves before, then vicious and traitors, and now polygamists. They cannot mob us now; but they would, if they could. The day for that has passed for us. Nevertheless, ingenuity could devise some other engine of oppression; and it was found in special legislation. When is special legislation a form of persecution? Let me try a

definition, in order that there may be a clearer understanding. When a special law is enacted, making a crime of what has not been a crime previous to that enactment, and solely for the purpose, not of applying it equally to all, but of aiming a blow at a particular individual or community, I hold that that is persecution. You all know the story of the three Hebrew children. Jealousy and hatred caused the courtiers of Nebuchadnezzar to wheedle him into making a decree; and the decree was intended—for all alike? oh, no!—to strike Shadrach, Meshach, and Abednego. The three continued to do as had been right to them to do before, knowing they were injuring no man. The special decree, the fiery furnace, and the triumphant escape make a lesson which every nation ought to engrave on its heart. Freedom cometh only by much tribulation.

Another instance: Daniel, at the court of Belshazzar, was forbidden by a special decree to pray for thirty days. It was obtained from a facile king to strike him, and him only. No fault was found in him: he was virtuous and upright. But special decrees are not made to regulate bad conduct: they are generally intended to gratify vengeance or malice. Daniel went to the den of lions, and came out without harm. These are illustrations where laws were designed, not for the correction of the whole people, but aimed at a particular few, and therefore an injustice and a scandal. We, as a people, are the victims of special legislation. The Edmunds Act made a crime of what had been allowed to pass almost without censure before; and it was made, not to press with even hand on Gentile and Mormon alike, but to strike one while the other went free. We have no objection to this law; but we demand, in the name of justice, which has been so long miserably parodied, that it shall be applied to all. We demand that any man, be he Gentile or be he Mormon, who shall "unlawfully cohabit," etc. (as the Act reads), be punished with the penalties imposed. Let the man not a Mormon who infringes its provisions be disfranchised, fined, imprisoned, equally with the Mormon, and we shall not complain. We may say such a law is severe, but the element of injustice would be gone. I tell you that, if that Act were to be applied impartially, it would be repealed within six months or even less. Impartiality was not the intention of its framers.

And yet I might ask, pertinently, why, if it be a crime for a Mormon to cohabit with more than one woman, it is not so for another. All over the United States, society knows that its men and women do what we are oppressed for doing. In the eye of the law, our wives are concubines; although to ourselves, wedded in the church, they are true and honorable marriages,—not for lust, to be cast off at pleasure unprovided for, but for better or for worse. Nevertheless, it being in the law's estimation "unlawful cohabitation," how can they punish us and let others doing the same go free? Equal justice is all we ask.

Judges are sent to Utah for the purpose of administering this Act. Spies stop our children on the streets, and ask them questions; and their answers are brought out in court. Sneaks peep through keyholes, and listen behind doors. The merest hearsay is noted. This is the kind of "evidence" that these judges give to a jury instructing them on their verdict. Even a suspect working round a house chopping wood for the wife inside is taken as "circumstantial evidence" of cohabitation. Is this the boasted quality of justice? After this Act was passed, Mr. Edmunds remarked that "it was straining the Constitution" (see *Harper's Weekly*, March 22, 1883). And is this the equality before the law of all the people! This plural marriage is not the real cause of our persecution.

We are a peace-loving people. We have made a barren land to bloom like a garden. We are industrious, temperate, and moral. No such things could happen in Utah among us as the *Pall Mall Gazette* has been setting forth: we are not a filthy people. We read that all grades of men, clergymen as well as others, have been practising the grossest of habits. Thank God, the Mormon community is clear of such charges! We have, in proportion to the humble origin and defective education of most of our people, a higher civilization than that of our detractors. Our crime is less than in boasted New England. The Constitution of the United States has no firmer defenders; and, when others who have boasted their

loyalty have tried to tear down its flag, we have been true to it through many provocations. I myself love of all others that clause, "an establishment of religion or prohibiting the free exercise thereof." I honor, I love, that clause. From pulpit and from press, calumny and abuse have been poured upon us, and a free and fair answer of ours to each falsehood has been refused; but we shall triumph. It is not our want of virtue nor our views on marriage that have made us the objects of persecution. The real cause is that God has restored through us his everlasting gospel. He has sent us to renew the true faith of Christ and his apostles, and the devil is driving men to hound us down and exterminate us. The faith that we hold fast is God-given; those who oppose it are votaries of a man-given faith. And, in conclusion, let me exhort you all to be faithful to your high calling. Our numbers do not notably increase, because many pass on West to live among the brethren, not for the purpose our detractors charge, but to be among those of the same household. Be faithful; and, as of old, the victory shall be yours.

Such, in substance, was the address. I have incorporated, for the sake of symmetry, a remark on the wording of the Edmunds Act, which was made to me in the short conversation above alluded to. No further comment of mine is necessary.

JOHN SKIRROW PEART.

PHILADELPHIA.

THE SPIRIT AND THE NAME.

Editors of The Index:—

I think there can be no difference of opinion in regard to the *essentials* of "universal ethics, and the usually recognized standard of morality," among those who regard Christianity as a creed which has caused such a vast amount of misery in the world and those who define Christianity to be the *spirit* which regards all mankind as brethren.

Why should the moral and spiritual truths proclaimed by "the Christ" be considered as belonging especially to Christianity? Before the advent of Christ, they were enunciated by Moses, Confucius, Buddha, Zoroaster, and others.

Many, like the Quakers, believe in the "inner light which lighteth every man who cometh into the world." Why are many so-called heathen nations superior to those who proudly designate theirs a Christian country? Indian tribes are often found to be far ahead of their neighbors, "with skins not colored like their own," in the strict observance of the rule, "Do unto others as you would have them do unto you." These, and many other facts which might be adduced, prove that the gradual evolution of moral and spiritual conceptions did not depend on any Christ. They had their genesis so far back that even by the oldest nations, whose history is preserved, they were recognized, taught, and practised. Where can we find a more beautiful conception of a Supreme Being than in these lines from the Upanishad, or mystical doctrine of the Vedas?

"There is one only Being who exists;
Unmoved, yet moving swifter than the wind,
Who far outstrips the senses, though as Gods
They strive to reach him; who, himself at rest,
Transcends the fleetest flight of other beings;
Who, like the air, supports all vital action.
He moves, yet moves not; he is far, yet near;
He is within this universe, and yet
Outside this universe. Whoe'er beholds
All living creatures as in him, and him,
The Universal Spirit, as in all,
Henceforth regards no creature with contempt."

What is the meaning conveyed in these lines but that which lies at the foundation of all religions, all reforms,—"Love ye one another"?

In all discussions on moral or spiritual subjects, we should always bear in mind that we are as differently constituted mentally as physically, and that what appears as truth to one does not to another. This want of charity to the differing ideas of others, and the wish to compel all to see with *our eyes*, have always been the source of the bitter antagonisms which, in the name of Christianity, have fostered the worst passions of human nature, selfishness, and hatred. "He who, because something is truth to him, thinks it must be truth for everybody else, and labors for the conversion of his neighbors, is simply engaged in the unholy work of breeding and raising future Cains."

If our ideals are pure and high, and we strive to rise to their level, it does not matter by what names they are known. When, however, the most atrocious crimes have been committed under the name and for the propagation of Christianity, or what is called by that name, is it any wonder that men and women loving humanity more than sectarianism, and knowing that the latter has always stood in the path of reform, stop not in their work to ask, Is it the spirit of Christ or antichrist which has done these wicked deeds? They know it is in the name, and by it the unholy tree which has brought forth such fruit is known, and must no longer "cumber the ground."

Instead of a seemingly useless controversy in regard to the name or the spirit of Christianity, would it not be better to try to dispel the fearful ignorance everywhere found in regard to the physiological and hygienic laws of life, by the light of scientific knowledge? Very close to each other lie the spiritual and physical natures, and what conduces to the growth and development of one also contributes to that of the other. I was surprised and gratified in finding in a number of the *Theosophist*, published by the Theosophical Society in Madras, India, a statement of the platform of the society, it being so similar to that of the Free Religious Association, and have copied it, thinking that it may be interesting to other readers of your paper:—

"In our humble opinion, the only essentials in the Religion of Humanity are virtue, morality, brotherly love, and kind sympathy with every living creature, whether human or animal. This is the common platform our society offers to all to stand upon; the most fundamental differences between religions and sects sinking into insignificance before the mighty problems of reconciling humanity, of gathering all the various races into one family, and of bringing them all to a conviction of the utmost necessity, in this world of sorrow, to cultivate feelings of brotherly sympathy and tolerance, if not actually love.

"Having taken for our motto in these fundamentals unity, in non-essentials full liberty, in all things charity, we say to all collectively, and to every one individually: Keep to your forefathers' religion, whatever it may be, if you feel attached to it. Brother, think with your own brains, if you have any. Be by all means yourself, whatever you are, unless you are really a bad man. And remember, above all, that 'a wolf in his own skin is immeasurably more honest than the same animal under a sheep's clothing.'"

R. F. BAXTER.

INGERSOLL TO A BEREAVED MOTHER.

Editors of The Index:—

With all your skill and industry in picking out the wheat from the mass of published chaff, it is still possible that the subjoined letter from Ingersoll may have escaped you. It seems to me worthy of reproduction in your paper, embodying, as it does, the unwritten creed of thousands who, recognizing the great impenetrable, can yet believe that beneficence and justice, beyond human comprehension, await them on the other side, when this mortal shall have put on immortality.

R. E. WHITMAN, U.S.A.

CLIFTON SPRINGS, Sept. 14, 1885.

It is not long since a lady of this city was suddenly overwhelmed by a great affliction that, coming like a thunderbolt upon her, for a time threatened her life. Her son, and only child, had gone on a short business journey, expecting soon to return. Sudden and fatal illness overtook him, and a brief telegram announced the dreadful tidings to his heart-broken mother. The terrors of the Calvinistic creed, in which she had been brought up, and according to which, as she well knew, there was no hope of future happiness for the unconverted young man, added greatly to her agonizing grief over his death, until her friends feared that her reason, if not her life, would be destroyed. A lady friend, who had sympathized deeply with and vainly sought to console her, informed Col. Ingersoll, and begged him, if possible, to write something which might at least relieve in a measure the terrible apprehension as to the fate of her son, under which she was suffering. The following is his letter, which was in a good measure effective:—

My dear Madam,—Mrs. C. has told me the sad story of your almost infinite sorrow. I am not foolish enough to suppose that I can say or do anything

to lessen your great grief, your anguish for his loss; but maybe I can say something to drive from your heart the fiend of fear,—fear for him. If there is a God, let us believe that he is good; and, if he is good, the good have nothing to fear. I have been told that your son was kind and generous, that he was filled with charity and sympathy. Now, we know that in this world like begets like, kindness produces kindness, and all good bears the fruit of joy. Belief is nothing, deeds are everything; and, if your son was kind, he will naturally find kindness wherever he may be.

You would not inflict endless pain upon your worst enemy. Is God worse than you? You could not bear to see a viper suffer forever. Is it possible that God will doom a kind and generous boy to everlasting pain? Nothing can be more monstrously absurd and cruel. The truth is that no human being knows anything of what is beyond the grave. If nothing is known, then it is not honest for any one to pretend that he does know. If nothing is known, then we can hope only for the good. If there be a God, your boy is no more in his power than he was before his death,—no more than you are at this moment. Why should we fear more after death than before? Does the feeling of God toward his children change the moment they die? While we are alive, they say God loves us. When will he cease to love us? True love never changes. I beg of you to throw away all fear. Take counsel of your own heart. If God exists, your heart is the best revelation of him; and your heart could never send your boy to endless pain.

After all, no one knows. The ministers know nothing. All the churches in the world know no more on this subject than the ants upon the ant-hills. Creeds are good for nothing except to break the hearts of the loving. Let us have courage. Under the seven-hued arch of hope, let the dead sleep. I do not pretend to know, but I do know that others do not know. I wish I could say something that would put a star in your night of grief,—a little flower in your lonely path; and, if an unbeliever has such a wish, surely an infinitely good being has never made a soul to be the food of pain through countless years.

Sincerely yours,

R. G. INGERSOLL.

—San Francisco Post.

D. A. WASSON.

Editors of The Index:—

Personally, I should be pleased to know something of the literary history of our optimist of optimists, Mr. D. A. Wasson. If you think that an editorial or other note on this subject would interest such of your readers as have had their attention called to him by Mr. Iles, I shall be glad if you see fit to enlighten us.

Very truly yours,

F. O. DORR.

TROY, N.Y., Sept. 4, 1885.

[Mr. Wasson, who was born in Maine in 1823, studied at Andover and North Yarmouth, and entered Bowdoin, where he remained but a year and a half. Began the study of law, which he soon abandoned in disgust, and in 1848 entered the Bangor Theological Seminary. About this time, he became interested in the writings of Carlyle, Emerson, Thoreau. An unsuccessful effort was made by a number of students to have him expelled as a heretic. In the last year, the students made up their creed without consulting him; and he refused to sign it. Still, in 1851 he was settled in Groveland, Mass., as a minister of the orthodox church. At the end of a year, he withdrew, and in the same village formed an independent society, for which he spoke six years, when he broke down with an incurable spinal disorder. His first essay, "The New World and the New Man," appeared in the *Atlantic Monthly* in 1858, as did the poem "All's Well." Subsequently, his other poems, "Seen and Unseen" and "Joy Month," with a series of essays entitled "Rest and Motion," "Communication," "Mr. Buckle as a Thinker," "Individuality," "Hindrance," "Ease in Work," "Light Literature," and "Originality," appeared in the same publication. In the *Christian Examiner* were printed from his pen papers on "Buckle on History," "The Sword in Ethics," "Theodore Parker," "Wendell Phillips," etc. In the *Radical* appeared his poems entitled "Ideals," "The Plover," and "The Confession," also essays on "Doubt," and other subjects; in the *North American Review*, "Epic Philosophy" and "The Modern

Type of Oppression"; in the *Old and New*, a paper on "Jesus"; and a second one on "Theodore Parker," in the *Radical Review*; and an article on "Rights," in the *International Review*. His contributions to *The Index* have been numerous. Some years ago, he projected a work on the political history of our country from 1775 to 1801, but, after elaborating some chapters, lost his sight and could no longer read his own notes; and it is not likely that the work will ever be completed. He has also had in hand another work on the fundamental principles of "The Political Life," one chapter of which was the paper printed in the *International Review*, under the title of "Rights." Other chapters have been written, and the work would long since have been completed but for his loss of sight. Mr. Wasson was an earnest anti-slavery man, but his physical condition did not permit him to take a very active part in the movement. His great interest is and has long been to bring about a reform of political ideas, and to some extent of political methods. He has had to work against very great obstructions. For the past thirteen years, he has not been able to write at a table or desk; and at no time for more than twenty-five years has he been able to walk a mile without suffering.—B. F. U.]

THIS is the view that the *Woman's Journal* takes of the movement to interest Catholic women in the election of school committee men in this city: "The facts are simply these: the majority of women voters have shown a determination to discriminate against any candidate for school committee who is suspected of conniving at the closing of school-houses to accommodate liquor-shops. The city is so evenly divided between Republicans and Democrats that a few thousand votes might very likely turn the scale. The number of women voters in Boston has increased so largely during the past two years that the liquor-dealers and their friends have become alarmed. Certain Democratic politicians have accordingly exerted themselves to get up a scare among Catholic women, by representing to them that the Protestant women were making a crusade against the Catholic members of the school committee, and that they must vote to defend their own side. From twelve to fifteen hundred Catholic women have registered in consequence. Nearly three hundred of these are from Ward 6, where no woman has ever before voted. . . . It is a pity that sectarian and partisan issues should have been raised in regard to the schools, and doubly a pity that they should have been so brought up as to mask the real issue raised last year, which was a temperance one. Upon the true point in dispute, if understood, the majority of Catholic women would be in hearty accord with Protestant ones; but, of course, if the question is represented to them as one of Catholic vs. Protestant, or Democrat vs. Republican, they will be likely to go with their own church or party. Nevertheless, it is better that the gospel of school suffrage should be preached of contention than not preached at all; and we are thoroughly glad of anything which arouses the mothers of the Commonwealth, both Protestant and Catholic, to take a greater practical interest in their children's schools. The mothers and the schools will both be the better for it."

BOOK NOTICES.

IDEOLOGY: Mental Anaesthesia self-induced, Miraculous Cures self-made, Involution and Evolution in the Human Mind as in the Whole of Things. By Dr. La Roy Sunderland, Foundation Fellow of the Society of Science, Literature, and Art. London. Two volumes in one. Published by J. P. Mendum, Boston, 1885. pp. 338. Price \$1.50.

Forty years ago, La Roy Sunderland gave experimental lectures on mental phenomena, which excited the wonder, not only of the crowds that flocked to hear him and to witness the performances of his subjects, but of physicians and scientific men generally. He had been a successful revivalist, and was led, by observing how a certain class of minds were affected, to make those experiments and investigations the results of which are given in this work on *Ideology*. Dr. Sunderland (whose death occurred a few months ago) was familiar with the nervous and psychological phenomena now known under various names, such as "faith cure," "mind cure," "Christian science," "metaphysical cure," "magnetism," "staturvolence," etc. He held that all these phenomena,

including religious "conversions," the "trance," and other so-called spiritual manifestations, and all mental epidemics, are to be accounted for by elements that inhere in human nature. They are produced by something in the mind, and not by something external to it. They are induced "by faith, by ideas, by expecting them, by the force of habit, and by sympathetic imitation." "We need not," says the author, "go to another world, nor leave the confines of the living organism, to find the conditions and forms of force by which all these phenomena are induced. They cannot be said to be produced at all, only as they have been previously suggested by external occurrences; that is, some ideas suggested with which certain phenomena are associated, and whenever they occur they are by what I called self-induction many years ago." "Miraculous cures," mediumship, witchcraft, clairvoyance, religious revivals, gullibility, fascination, etc., are treated at length; and, incidentally, the author gives his views in regard to the Bible and Christian theology in very plain and forcible language. The claims made by Dr. Buchanan in regard to psychometry he discredits, and he finds much to criticise in the theories and claims of not a few of his contemporaries. The work is, in some respects, open to criticism; but it contains considerable information, and is worth reading.

B. F. U.

THE LIFE AND LETTERS OF JOHN BROWN, Liberator of Kansas and Martyr of Virginia. Edited by F. B. Sanborn. Boston: Roberts Brothers. 1885. pp. 645.

Mr. Sanborn was intimately acquainted with John Brown, was to some extent associated with him, knew all his plans, has had access to all correspondence and papers preserved by his surviving children, and is therefore better qualified, probably, than any other man to write an accurate memoir of the fearless leader of a forlorn hope at Harper's Ferry, who died on a Virginia gallows twenty-six years ago. The record embraces the entire period of his life,—his boyhood, his early manhood, and those later years during which his career in Kansas and the event at Harper's Ferry and its results forever associated his name with the struggle in this country which gave freedom to the slaves. "What the South slew last December," wrote Victor Hugo, March 30, 1860, "was not John Brown, but slavery." Brown's letters reveal, as no mere description can, his rugged strength, his devotion to what he conceived to be duty, his hatred of slavery, and his strong religious feelings. The entire narrative is extremely interesting, and the work is a valuable contribution to the history of the memorable period with which the name and fame of John Brown are identified. On page 626, Mr. Sanborn thus sums up the character of the grim old hero: "I knew John Brown well. He was what all his speeches, letters, and actions avouch him,—a simple, brave, heroic person, incapable of anything selfish or base. But, above and beyond these personal qualities, he was what we may best term a *historic* character; that is, he had, like Cromwell, a certain predestined relation to the political crises of his time, for which his character fitted him, and which, had he striven against it, he could not avoid. Like Cromwell and all the great Calvinists, he was an unquestioning believer in God's foreordination and the divine guidance of human affairs. Of course, he could not rank with Cromwell, or with many inferior men, in leadership. But, in this God-appointed, inflexible devotion to his object in life, he was inferior to no man; and he was in fame far above more gifted persons, because of this very fixedness and simplicity of character. His renown is secure."

B. F. U.

BRICKS FROM BABEL. A Brief View of the Myth, Traditions, and Religious Beliefs of Races, with Concise Studies in Ethnography. By Julia McNair Wright. New York: John B. Alden. pp. 181. Price 60 cts.

The short studies in ethnography which appear in this handsome volume were written, the author says, "to throw light on many important passages in Holy Writ, and to show that the finest learning and most recent discoveries have not antagonized the Mosaic author, but have followed the path he traced." The work, which is founded on the statements in Genesis, gives an account of the "dispersion at Babel" and the wanderings of Noah's descendants, quoting from Rawlinson, Prichard, Taylor Lewis, and others, to sustain the views advanced. Those even who dissent from some of the conclusions of the author will admit that she has given considerable

attention to the subject, and has presented the popular view in a very attractive manner.

THE September number of the *Freethinkers' Magazine* contains the following articles and notes: "The New Consolation," by T. B. Wakeman; "Food and Drink," by J. M. Peebles, M.D.; "Religion means Bondage," by Mary E. Tillotson; "History of Conservatism," by Rev. E. P. Powell; "Truth, Original Poem," by Eva Barnes; "Extracts from Letters," "National Liberal League," "Milton Woolley, M.D.," and "The Bruno Statue," Editorial; Book Reviews, All Sorts, Freethought Directory, The Freethought Press. After this year, this magazine will appear monthly, and will be somewhat enlarged, and the price raised from \$1.50 to \$2. [Salamanca, N.Y. H. L. Green, editor and publisher.]

THE *North American Review* for October is a strong number. Its opening article, "Inhuman Crime in England," by Cardinal Manning, is followed by "Abraham Lincoln in Illinois," by E. B. Washburne; "George Eliot's Private Life," by E. P. Whipple; "Vice-President's Politics in '64," by Gen. B. F. Butler; "America and the Vatican," by W. W. Astor; "How to quell Mobs," by Gen. Fitz John Porter; "Letters and Recollections of Grant," by Admiral Ammen; "The President's Policy" (a symposium), by J. B. Eustes, Wm. R. Grace, and Theodore Roosevelt; "A Letter from Milliken Bend," by Gen. Grant; and "Notes and Comments," by several distinguished writers.

West Newton English and Classical School.

The Religion OF PHILOSOPHY;

OR,
The Unification of Knowledge.

A COMPARISON

of the Chief Philosophical and Religious Systems of the World, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God.

By RAYMOND S. PERRIN.
Octavo, cloth. \$4.00.

C. P. Putnam's Sons,

27 and 29 West 23d Street, New York.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

The Secret of the East;

OR,

The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.
 Volume Fifty-second.

Price \$3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR's basis of action, and the best exertions of its manage will always be used to render it a free and independent journal devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

"OLD THEOLOGY"

FOR THE

Healing of the Sick.

BY

E. J. ARENS.

Explains the Healing and Teaching of Jesus, the Creation of the Soul, the Origin of Matter, and the Relation which the Soul holds to God.

For Sale by THE AUTHOR,
 33 Union Park, Boston, Mass.;
 Dr. GEO. E. WHIPPLE,
 26 Chest. Av., Jersey City H'ts, N.J.;
 Dr. GEO. B. CHARLES,
 Central Music Hall, Chicago, Ill.
 318 Pages. Price \$1.15.

THE ABSENCE OF DESIGN IN NATURE. By Prof. H. D. GARRISON. A Lecture delivered before the Philosophical Society of Chicago. Price 10 cts. For sale at THE INDEX office.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion.

A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

- I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts.; one hundred, \$1.50.
- II. *The Bible and Science*, by John Weiss.
- III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.
- IV. *Transcendentalism*, by Theodore Parker. Never before published.
- V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).
- VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.
- VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00. Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
 " 13 " 25 " . . . 8c. " "
 " 26 " 51 " . . . 6c. " "
 " 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent., on the total as above calculated, will be made.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address THE INDEX,
 44 Boylston Street, Boston, Mass.

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHAPBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

NATURALISM vs. SUPERNATURALISM. By B. F. UNDERWOOD. 10 cts.

AT KIND OF MORALITY DID JESUS AND THE APOSTLES TEACH? By F. M. HOLLAND. 5 cts.

GOD OR THE GALILEAN? By FELIX L. OSWALD. 5 cts.

THE SCIENTIFIC AND METAPHYSICAL METHODS IN PHILOSOPHY. By LEWIS G. JAMES. 5 cts.

THE RELIGION OF HUMANITY. By WILLIAM FREY. 15 cts.

AN AGNOSTIC VIEW OF THE DOCTRINE OF VICARIOUS ATONEMENT. By W. H. SPENCER. 5 cts.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

THE CHRISTIAN CHURCH AND WOMAN. By ELIZABETH CADY STANTON. 5 cts.

INAUGURATION OF LIBERAL LECTURES IN CANADA IN 1874. By ALLEN PRINGLE. 5 cts.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

Frothingham's Sermons.

The sermons are neatly printed in pamphlet form, and our friends who wish to do missionary work for the Liberal cause will find them admirably adapted to that purpose. To such as order them in lots of 25 or more, the price will be reduced to 3 cents. Single copies 5 cents.

CURRENT TOPICS.

BY B. F. U.

THE Parker Memorial Science Class will resume its Sunday sessions next Sunday at the usual hour, 12.15 P.M., in the parlors of the Parker Memorial. At this opening session, the address will be by B. F. Underwood.

NEXT Sunday evening, Col. Ingersoll will lecture on "Myths and Miracles" in the Boston Theatre. Charles Ellery Davis will give an illustrated lecture on the same evening, at Paine Hall, on "The Origin of Man."

JOHN B. ALDEN has brought out a *Manual of Co-operation*, which contains an epitome of George Jacob Holyoake's *History of Co-operation*, arranged by the American Sociologic Society, with an introduction by Mr. Holyoake. This little volume of seventy-eight pages, which will be welcomed by those interested in social and economic problems, is very cheap, being but thirty cents in cloth, and in paper covers ten cents.

In his work on *Ideology*, La Roy Sunderland says: "My own definition of religion would be that it is that sense of *obligation* which controls the human mind in the fulfilment of all the relations of life. This sense of what ought to be done or left undone is older than all creeds, older than all Bibles, and does not depend upon prayer or faith or revivals." According to this definition, religion is identical with morals, or with moral intuitions."

SAYS the Springfield *Republican*: "The Athenæum Club of London, the chief centre of literature and science, has admitted three Americans to membership this season,—Manton Marble, Cyrus F. Field, and Daniel G. Thompson, the last named formerly of this city and author of the *System of Psychology* which has attracted much more attention in Great Britain than here. . . . The English reviewers have been generally favorable to the character of Mr. Thompson's work as a genuine contribution to psychological thought."

SAYS the *Woman's Journal*: "Dr. Stirling's motion for the enfranchisement of women has been carried without division in the Assembly at Adelaide, Australia. So says the *Sydney Daily Telegraph*, a copy of which has been forwarded to us from that far-off land by Mrs. M. G. C. Leavitt. The irrepressible question of woman suffrage crops up at the ends of the earth, and it seems as if the antipodes were further advanced in some respects than we are."

MR. EDWIN D. MEAD informs us that he will lecture only in New England during the coming season. He will repeat his courses upon "America in the American Poets," "The Pilgrim Fathers," and "Emerson," and will give the following single lectures: "Carlyle and Emerson," "Emerson the American," "Whittier's Poetry of America," "Lowell's Poetry of America," "Puritanism," "New England in England," "Our Debt to Holland," "The British Parliament," "Lessing's *Nathan the Wise*, or the Gospel of Toleration." His address is 73 Pinckney Street, Boston.

In an article on Harriet Martineau in the *Christian Register*, Mrs. Anna Garlin Spencer remarks: "As for the religious opinions of her later life, it is sufficient to say that they were the outgrowth of her earnest research, were held with no loss of devotion to duty or clouding of human affection, and that they seemed suited to her temperamental and intellectual needs. Whether they were the wisest and fullest or not, they afforded her the solace and cheer which her earlier faith did not, and enabled her to call herself 'probably the happiest single woman in England.' If the life beyond had more for her than she thought, and, according to the confident belief of the devout Florence Nightingale, her loving and beloved friend, she was 'so wonderfully surprised' at death, she had taken excellent measures betimes to make it useful to her fellows as well as agreeable to herself 'that Harriet Martineau be perpetuated.'"

SAYS the New York *Christian Advocate*: "One of the most perplexing of the mysteries of human nature is the way in which some ministers will allow themselves to be used as stool-pigeons for all sorts of schemes to defraud the public or to undermine the principles which they are set to defend. They do this sometimes by giving certificates to unworthy persons, letters of introduction to individuals whom they do not know, testimonials of ability to lecturers of whose moral character they know nothing, and recommendations of patent medicines. One of these lecturing villains, armed with letters from our ministers, has blighted the lives of three reputable young ladies in as many places. Kindness of heart accounts for some of these errors; the fear that the applicant or some of his friends will be offended, for more; and doubtless a *quid pro quo* in popularity or presents or dinners, for some."

UNITARIAN ministers and papers often remark that the great mass of Liberals outside of the churches are deficient in reverence and the religious spirit. The same complaint is frequently

made by orthodox people against the Unitarians; and, in the *Philadelphia Times*, it finds expression in the following paragraph: "Mr. Hale's notion has been the pet theme of some advanced liberal preachers for the last fifteen or twenty years. The secret of it is simply that there is not in their so-called liberal churches religious enthusiasm or worshipful spirit enough to keep them from utter dullness; and, having no religion in their churches and seeing no ground or use for such things, they are out on a hunt for a substitute. The favorite substitute, long broached, has been that now made prominent by Mr. Hale,—social herding and harmless amusements. It is very difficult to reason with people who do not know the difference between the uses of a ball-room, a billiard-room, or theatre and a church. There is a difference, however."

MOST deplorable is the condition of day laborers in Italy. Not many months ago, the authorities thought it necessary to order that dead animals be buried in quicklime to prevent the peasants digging them up and eating them, as it is said often, happens. Mr. Beauchamp's description of the agricultural laborers in Italy reminds one of the condition of the French peasants before the Revolution or of the slave-field laborers in pagan Rome. He writes: "Those who have seen these unhappy persons moving in gangs at early dawn toward the fields where they are to work, conducted by an overseer on horseback, can scarcely have avoided a mental comparison between them and the slave droves of ancient times. Whilst they work in line from sunrise to sunset, the horseman continually passes up and down to watch that there may be no shirking or neglect of the task set by the employer. Men and women bending to the ground, shivering in the chill mists of morning, toiling in mournful silence, they might be but a herd of human cattle, resembling their fellows, but belonging to a different and degraded race of captive helots."

SAYS Richard A. Proctor, in *Knowledge*: "The great philosopher of our age is not anxious to be followed by a train of disciples: he would preach no new religion. But he knows, what others have felt, that the purifying of old religions from the dross of ages is no destructive process. Through the infinite azure depths of the cleared sky, the real glory of the universe is beginning to be seen. Purified,—even it may be to perfect transparency,—religion will remain religion still. It will have its temples, but temples not made with hands; its worship, but a worship cleansed from all that is unworthy; its code of morals, but a code based on reason and on justice. One characteristic alone, which has been associated with religion, the religion taught by pure science will not possess. Its very essence will be freedom from all intolerance. Because it recognizes in all true forms of religion a yearning after good, a desire to feel the presence and power of something outside of us that makes for right, science can be intolerant only of intolerance. The religion of science is indeed in harmony with all true-aiming religions, discordant only with what is self-discordant, the jarring voice of cruelty and hatred."

THE CRIME AGAINST THE CHINESE.

The country is to be congratulated that the national administration has moved so promptly to protect the Chinese at Rock Springs, Wyoming. A greater outrage than was committed against these unoffending people can hardly be conceived. The government Directors of the Union Pacific Railway Company, on whose mining property the Chinese were at work, have been investigating the matter in connection with three Chinese consuls, appointed for the purpose by their government. It is clear that the perpetrators of the outrage had no excuse except that the Chinamen were working for less pay than seemed to these ruffians good. They wanted the places for themselves and their friends and at higher wages. They accordingly warned the Chinese to leave within a certain time. And this entirely illegal and unjust decree the poor Chinamen were preparing unresistingly to obey, thinking from experience that they would find no friends in this country to protect their rights or themselves from personal harm. But their villainous enemies did not even await the execution of the decree they themselves had made. Before the appointed time had expired, the Chinese colony was fiercely attacked; and men, women, and children were indiscriminately and brutally massacred.

There is no doubt that the Chinese government will demand reparation for this dastardly offence. But no apology that may be asked for, no sum of money that can be demanded, however readily the American government might meet these conditions, will save the honor of this country or answer the demands of justice. Nothing can atone for such a wrong, nothing clear the skirts of this nation for complicity in it, but the legal trial and punishment of the ringleaders in the massacre for the crime of murder. The prompt action of the government at Washington in ordering an investigation, and, still more, in placing troops at Rock Springs to protect the recalled Chinese miners at their work, induces the hope that this kind of reparation will be offered by our government, whatever else the Chinese government may ask for.

The American government owes it to itself no less than to the Chinese to take the most efficient action to this end. There can be little question that the recent Congressional statute abrogating the treaty that had previously existed between this country and China, and prohibiting the further coming hither of Chinese laborers, has tended directly to foster just that spirit of contempt and persecution toward the Chinese as a class which has broken out in this act of atrocious barbarism and cruelty. Congress, it is well understood, enacted that law,—against the judgment of the President and his cabinet, and against, too, the best ethical and political sense of the country,—simply because two or three of the States of the Pacific Coast called for it; and, in the close contest between the two great political parties, the Congressional politicians on neither side dared to risk offending those States. The law, in fact, was a bid for the Presidential vote of the Pacific Coast, as were also the resolutions passed by the national conventions of the two parties. The statute is a dark blot on our national legislation. It is opposed to all the traditions and professions of the country in behalf of equal freedom to the people of all nations who may voluntarily come to its shores. It singles out one nation from all others on the globe, and says that no poor immigrant seeking to better his condition shall be received therefrom. The negro among us has been emancipated, and is working in peace; the nation is beginning even to do justice to the native In-

dian; the country welcomes the Irish, the Scandinavian, the Pole, the Italian, no matter how poor or squalid they are. The Chinese alone, through this statute, are branded as a Pariah race, unfit to live on these shores. This is an indignity and an injustice which this nation has committed against the Chinese people; and it need be no wonder if marauders like those who figured in the Rock Springs massacre should take it for granted that any outrage against a people thus branded was only following the national bent, and might be ventured with impunity.

This is a position which the United States cannot afford to take before the civilized world. Whatever may have been the weaknesses of political parties in forming their platforms, or of Congress in meeting partisan exigencies, the executive power of the nation has a very different responsibility, and must face the public judgment of the most enlightened nations of the world upon its actions. These unhappy Chinese at Rock Springs were living in this country before the new legislation, and had a perfect right, even by the new law and treaty, to remain and pursue their vocations. Their rights to domicile and protection were thus guaranteed to them in the most solemn manner. The honor of the nation was even more concerned in protecting them, so long as they were law-abiding and peaceable, than if they had been native citizens. Is this nation to admit before the court of international public opinion that it has no moral concern whether it observes or not an obligation of this nature, or no physical power to punish and prevent such crimes as were perpetrated by some of its own citizens against a colony of helpless Chinamen who were under its special protection? The question in this case is not even the broad one of justice and equal rights which was involved in the recent statute; but it is simply whether this country is a land of civilization and law, whether the United States government can keep the commonest obligation of international honor, and guarantee the commonest international security to life and liberty. It so happens, too, in this case that there is no question of State rights concerned, no divided authority between an individual State and the national government. The massacre took place in a Territory, and the power to deal with it is in the national administration at Washington.

Nor can this outrage upon the Chinamen at Rock Springs be dignified into a battle of the great social conflict that is going on between capital and labor. In that conflict there is an honorable struggle on the part of labor to secure withheld rights and privileges. But no wrongs which labor may suffer can justify or excuse such a cowardly atrocity as the murder of inoffending men, women, and children belonging to a weaker laboring class, in order that their opportunity for work may be seized by men who have greater brute strength. Labor reformers and protectors, even if looking merely to the interests of their cause, and not considering the questions of justice and mercy involved, cannot afford to take the Rock Springs murderers upon their shoulders any more than the United States government can pass over the crime in silence. The labor cause will be only subjected to the condemnation of all humane and fair-minded people, if its organizations ally themselves with or attempt to palliate deeds of such savage fury.

The newspapers, both secular and religious, so far as we have seen, have discussed this matter from a high stand-point, and have demanded that the national government shall meet the case so as not only to give prompt satisfaction to China, but to make also the offenders understand that

such barbarian violation of the common laws of civilization and humanity, not to speak of treaties and statutes, cannot be repeated with safety. To the orthodox religious journals, this unprovoked massacre of Chinese laborers has, indeed, a religious bearing of no small importance. This is called a Christian land. Its religious faith is almost exclusively Christian. Its churches are largely engaged in the support of missionaries, in China and other Asiatic countries, for the conversion to Christianity of the benighted heathen populations of those lands. But what must these so-called benighted heathen think of a country's religion as illustrated by this massacre of their countrymen? Acts tell more than words. The Chinese government might well say to the Christian Churches of the United States, "Recall all your missionaries: they are evidently more needed at home than in China." And, judged by the moral precepts of Jesus, which party at Rock Springs were nearest to him in discipleship,—the forbearing, unresisting, heathen Chinamen or their Christian assailants?

WM. J. POTTER.

"WOULD YOU LIKE YOUR SISTER TO MARRY A NIGGER?"

We have been accustomed to many peculiar forms of sex arrogance, but to none that could be more strikingly instructive than that now urged in objection to woman's betting on horse-races. If this indulgence is moral, whose is the quarrel for her share of it? If it is not, who is wisely man's apologist for his own perversion? The "inferior" sex has long participated as spectator in this sport, and evidently has grown impatient over the exclusiveness of its cogener. Either one thing or the other, it evidently sees, should be established. The old split-judgment will not serve nobler notions of right. Shall we in future subject our souls to sex-virtue or to virtue in its simplicity? It is encouraging when women thus question against antique barriers. The sex that frequents brothels and saloons with impunity, and sows its wild oats in early life under the wink of a generous, too indulgent society, has no prior claim to the immoralities any more than to the moralities of life.

Once, we were gravely asked the question, "Would you like your sister to marry a nigger?" and dull heads thought they found in it an answer to the anti-slavery case. Now, the traditionalists knock again: "Would you like your sister betting at horse-races?" But the imposing solicitude comes to-day, as it did before, from an opaque, moral impulse. Surely, if brother, why not sister? Society is the friend of inequality. When it "gives" woman in marriage, it really takes for granted a certain resignation of personality. And it has a remarkable way of pursuing this train of imperious wrong. It throws women to the street for sins their husbands transact without formal discredit. The young man who indulges an appetite is regarded as one who has the Lord on his side working for some future blessedness of the soul. The girl who offends goes the way of Satan. God, we are informed, gave to animate nature a one-sidedness which it is our duty to emphasize. What horrible injustice is emitted through such theories! Let us suppose a higher ideal. Let us put decency upon self-sustenance. Shall we, with consistent souls back of our words, say to woman that we owe her less than this? Shall we particularly apologize for her appearance upon the field of male dishonor? Shall we look with horror when she swears or smokes or drinks or chews or gambles or carouses or fights? Until man recog-

nizes the sin to be rated by the act, and not by the actor, we should sit with still tongues. There's no use raising a big noise, and endeavoring to frighten us by bringing a supposititious case into the bosom of one's family. What are we prepared to do,—to go unequivocally the length of virtue, or to give privilege on the side of vice to favored individuals? Shall all men wed justice, or shall they be spared who disdain to be just where justice does not predicate sufficient pleasure? Perhaps I go a step too far for the pulpit-humor that is lily-fingered with the brokers and hard-knuckled with the petty vices that disfigure society. But, in view of woman's need and man's candor, I should think no hard word too hard for the case.

I have a quite reasonable grief ready for the day when my own sisters go into frenzies over the endurance of an animal. I feel sure the editor of whose narrowness I complain is not the only person capable of proper feeling and discrimination in presence of such an occasion. To-day and here, this matter is not at all personal. I do more than exercise a weak regret over facts thus divulged. I hate as much to see men in such petty circumstances as I do to see women ruled by them. And, if men *must* enter so absurd a claim as they do to the employment of a partial virtue, I say, with every serious instinct alive within me, and from regard for an ideal that is not split and torn by easy consciences, that woman should glory in sharing the dissipation. The obvious truth, that men see the ugliness of the sport—the dire moral effects of it—when demonstrated in woman, gives me some hope that they may duly come to know the intrinsic wrong of the whole diversion. To-day, they think the error is in the sex. Later, they must realize that it is in the gambling itself. In the mean time, the phantoms of ruined sisters should not deter us from a rational interpretation of the facts at hand.

HORACE L. TRAUBEL.

THE WARNER SILVER SCHEME.

The plan proposed by Mr. Warner will, at the first blush, offend bimetalists, in that it adopts and adheres, at all hazards, to the gold level of money. In seeming, this is an abandonment of the bimetallic theory of money. It will, furthermore, disappoint a certain retaliatory sentiment against what is felt to be a great wrong by a powerful creditor interest, effectuated by surreptitious legislation. It seems to leave to these manipulators the undisputed enjoyment of their spoil. This is no exaggerated statement of the feeling of many thoughtful students of the animus, methods, and results of the monometallic propaganda.

Fully appreciating and largely sympathizing with that sentiment, I am yet convinced that statesmanship demands this concession to a monetary status, so firmly intrenched in the general business thinking and practice, even though that status may have been achieved by cunning and fraud, and its toleration may be a continuous spoliation of debtors and strangulation of productive industries. We must build in the present and on the present, and be content, in remedial legislation, to simply liberate the natural forces and allow them to work a gradual cure of past wrongs.

The great end is to arrest the downward movement of prices, and recover to the market an upward or, at least, a stable and healthy tone. Statesmanship in monetary legislation is chiefly concerned to render money terms fixed, certain, and definite in meaning, and so to organize its mode of supply as that it will have uniformity and stability of value or purchasing power. That

stability can be maintained only in one way; namely, by such a constitution of it as that increase of volume will go on *pari passu* with increase of the commodities to be transferred by it. Value in economics being in the nature of a ratio between two quantities, stability of value is secured by stability of the quantitative relation between those two terms. Until very recent years, the believed sufficient and only available guarantee of that permanence and uniformity in the volume and consequent value of money lay in the fact that the combined supply of the two metals would increase approximately as commodities and commerce increased. Indeed, all contracts for the payment of money were made virtually on the assumption of the right of the money volume to be increased as the metals increased, without any legislative restriction; i.e., free coinage. That right is now denied all over the western world by limiting ultimate or definition money to gold alone. True, on any standard, the actual money volume (which determines the prices of all things, even the value of the standard metal itself) is much greater than the quantity in sight of the metal denominated "standard." It has always been held to be legitimate and beneficent to supplement standard coin by a token coinage and various forms of paper currency, and by that means to increase the volume of money to an indefinite amount, so long as it could all be kept at the metallic par. The liability of that departure is believed to be amply provided against by the quality of convertibility on demand. But there is one principle in such a constitution of the money volume which is not open to superficial observation, and which is yet of vital importance to be understood. That principle is that the value of the money metal itself, like every other value, fluctuates, and is lowered, not merely by accessions of money metal and metallic money, but as well, and to the same extent, by accessions of paper money. No matter in what part of the inter-communicating commercial world the accession to the money volume is made, whether by metal or paper, the metallic level is affected proportionately all over the world by the addition. That lowering in the value of the metallic money is manifested by the enhanced price of commodities at the particular place, and then everywhere. That diminution in the value (purchasing power) of money, metallic or other, is not merely manifested by enhanced prices, but is the same fact. Price, being the money equivalent of commodities, is also, of necessity, the index and register of the commodity equivalent of money. Any other meaning of value than what is called "value in exchange" is value-less in this discussion.

Now, although in civilized communities the money value is made up of standard coin, supplemented by paper, yet, since there is a safety limit to the paper portion, no matter whether that limit is one of coin to one, three, ten, or a thousand of paper, still, if it is to be kept within that limit of assured parity with gold, the quantity of paper must be definitely proportioned to and limited by the amount of gold. Another important principle right here is that, so long as our silver coins, though legally "standard dollars," are kept at par, as at present they are, by limitation of quantity, they cannot be used as a basis for paper issues without jeopardy to the gold standard, but must continue to hold in the currency a place that can be just as well and safely filled by paper, without the silver at all. Under the present policy, the silver constitutes no enlargement of the metallic base; but, as before stated, the money volume is strictly limited in some definite proportion (i.e., the safety limit) to the quantity of gold alone,

and the problem is how to enlarge the metallic base without departure from the gold standard.

Mr. Warner's plan does enlarge it by the whole amount of silver offered to the mint on the terms proposed; namely, the market value in gold. This restores to us, not indeed unlimited coinage of silver, but the enlargement of the metallic basis indefinitely up to the whole production of the mines. The certificates for dollars issued for bullion thus deposited are guaranteed redemption in lawful money, to be kept at par with gold or its value equivalent in bullion. These certificates, which will be money, will be held in check of excessive issue by convertibility on demand into "world's money, a hundred cents to the dollar."

The test and regulator of proper money volume is prices. That is the universal regulator in commerce. Money in excess raises prices, checks export, makes "balance of trade" against us, drives paper in for redemption, bullion goes abroad, money volume is reduced, prices fall in consequence to the international level again. This incessant rise and fall of prices constitutes the beautiful automatism of international equilibrium.

If it is asked, Which metal under the plan will, in going abroad, thus check excessive issues of paper? the answer is, The alternating variations of relative demand in different countries will determine. It suffices to say there will be absolute freedom from statutory constraint, and there will be no obstruction or uncertainty in converting on demand certificates into "world's money." Bullion, constituting the legal basis, going out and coming in to the country according as prices are high or low here, has always constituted the automatism of money distribution. These three things—prices (as modified, of course, by tariff laws), money volume, and money value—are correlated and reciprocally regulative facts, and under free conditions can never depart from their normal international level any farther than the slight alternations of surface current, which are but the vibrations of the scale-beam alert to equilibrate the ever-varying and countervailing pressures of supply and demand,—those imperious forces whose unchecked interplay is the harmony, is the imperial law, of economic science.

If the fall of silver was caused, as all competent economists now believe, by demonetization, then this restoration of it to unlimited monetary use must restore it to at least the market ratio of sixteen to one, unless the United States are too inconsiderable a force in the commercial world. No one who has any competence of thinking on the subject will deny the tendency of the measure toward that end. I am convinced that a careful estimate of the quantities involved in the question will compel the conclusion that the measure will, within the period of a few months, make the "silver dollar worth a hundred cents," or, as bimetalists prefer to put it, will squeeze out the abnormal, oppressive, inequitable, monopolistic *twenty-five per centum too much* value of the gold dollar, and bring it down to the silver value, where it of right ought to be, and surely would have remained under conditions of free competition of both metals for money uses.

The great shrewdness of the scheme lies in its power to bring about this change without shock or breach of continuity, so that bankers and "able financiers," whose narrow range of intellectual habit forbids their going outside of the closed circle of money terms in discussing value-change of money, will never know how it was done, since they will not have to "open a new set of books." There will be no hoarding of gold, but rather eager unloading, since it must fall in value. The

direct profit on the silver monetized will accrue to the public treasury. The only legislative fixity or constraint, contemplated by the scheme, is the fixing of the dollar definition to $23\frac{1}{4}$ grains gold, or $\frac{1}{100}$ pounds; and, per consequence, the "dollar of account" at its market equivalence in bullion and the automatic operation of domestic and foreign prices will do the rest.

True, silver is handicapped at the start, since the amount which would go to the making of one hundred and twenty legal dollars must count for only \$100. Silver deposited is effective in proportion to the number of dollar units it is taken for; and the economic effect is, therefore, impaired one-fifth. This is the necessary consequence of starting at a non-competitive gold ratio, but that ratio cannot remain the same under the competitive conditions the plan establishes. The essential and paramount feature of bimetalism is not any particular ratio, but the unrestricted use of both metals as a basis for paper issues. This method will graduate the market change, so as not to shock or disturb vested rights, real or imaginary. It ameliorates the situation by taking gold out of its monopolistic intrenchments, and putting it again in open competition with its world-old rival and ally; and, when the market ratio of sixteen shall have been achieved, every last shred of pretext or plausible objection on ethical grounds to the unlimited coinage of silver at brassage will be gone. There will be no danger that any popular government will ever try the experiment of monometallism again. An easy way to universal bimetalism will thus be opened, and a more rational one than the envious method of "driving Europe into it" by total suspension of coinage, and so intensifying her industrial distress. That plan is very much like the man's freezing his dog into compliance by holding him out-doors in his shirt-tail of a cold night. It is a strange objection to our taking the initiative in this silver business, that by so doing we shall help England out of her Indian difficulty.

Like every measure of justice and beneficence, this benefits all concerned, ourselves first and chiefly, and then Europe and the world. Only parasites and wreckers will be disturbed by it.

If it shall have the good fortune to get itself enacted (and I believe it will at the next session of Congress), it will come speedily to be accounted the greatest piece of remedial, ameliorating, financial legislation the world has ever seen.

It only remains for me to add to this already too protracted paper one suggestion of extrinsic effect, politically. The chief pressure of popular demand for a restoration of unlimited coinage comes from the West and South, while the opposition is from the great money centres. For it is arrayed the party of hope and enterprise,—young America; against it, that of privilege and intrenched possession. It is productive adventure against manipulatory financiering, industry against security-mongering, boldness and energy against parasitism and cunning, competitive equal-chance-for-all against monopoly and competence.

In short, the movement is in the ancient spirit and traditions of Democracy before its alliances with slavery. The inauguration of this movement as a party measure, and the business revival that will surely come of it, will make the Democratic party again the foe to privilege, restriction, monopoly, and centralization, and recover to it its ancient renown for championship of freedom and equal rights to all.

E. D. STARK.

CLEVELAND, Aug. 15, 1885.

THE DESIGN ARGUMENT.

Among the recent publications is a volume of sermons by Dr. R. Heber Newton.* Although these sermons, the author informs us in the preface, were called forth by "certain onslaughts upon Christianity which are notorious for their telling expression of the crude and coarse scepticism which many circumstances combine to make popular at present," referring to lectures given in New York City by Col. Ingersoll, they are in part directed against the positions of thinkers of acknowledged ability, to whose thought, should they be named, Dr. Newton would never think of applying the words "crude and coarse."

One of these sermons is devoted to an exposition and defence of the famous "Design Argument." "When," says the author, "the pert little atheist, Aristodemus, talked big in the street of Athens, Socrates easily refuted him by this very argument." "Every one knows how Paley used a watch to prove design, and how he turned this reasoning to establish design in the more wonderful mechanism of nature." "The argument from design has ever commended itself most strongly to the human mind. It is the argument by which most men satisfy themselves of the being of a God. The adaptations and contrivances of nature seem to prove, beyond question, a planning mind. In each of them, men see a thought realized, and thus recognize a forethought." Dr. Newton is confident that "marks of adaptation and tokens of contrivance are still found on every hand"; that nature abounds in "astonishing tokens of adaptation," "striking illustrations of design," and "purposed contrivance." He takes up some of the scientific objections to the design argument, based upon evolution; and, although what he presents in reply is familiar to readers of modern discussion, it is well worth reading for its vigorous and earnest eloquence.

But, when this design argument is repeated, with so much confidence in its soundness, to counteract the influence of Col. Ingersoll's lectures, it should be remembered that the argument has long ceased to give satisfaction to many of the ablest theistic philosophers, whose view of it is expressed by Prof. Royce, instructor in philosophy in Harvard College, who says in his recently published work, *The Religion of Philosophy*, "Wrangle upon wrangle, ceaseless balancing of probabilities this way and that, and opinions and ridicule and abuse forever and no result,—such is this empirical teleology that seeks a world-manufacturer, and cannot discover him." "One and all," says Mr. Fiske, in *Cosmic Philosophy*, "they [Xenophon and Cicero, Voltaire, Paley, and the authors of the Bridgewater Treatises] challenge us to explain on any other hypothesis than that of creative design these manifold harmonies, these exquisite adaptations of means to ends, whereof the world is admitted to be full, and which are especially conspicuous among the phenomena of life. . . . It was Mr. Darwin who first, by his discovery of natural selection, supplied the champions of science with the resistless weapon by which to vanquish, in this their chief stronghold, the champions of theology." Many of the eminent thinkers who do not deny, even if they do not admit, teleology in a large sense maintain, as Romanes expresses it, "that natural theologians can no longer adhere to the arguments of such writers as Paley, Bell, and Chalmers, without deliberately violating the only logical principle which separates science from fetishism." Viewed in the light of modern science, adaptations which to Paley and the authors of the Bridgewater Treatises

* *Philistinism*. Plain Words concerning Certain Forms of Modern Scepticism. By R. Heber Newton. G. P. Putnam's Sons. 1885.

seemed unmistakably to exhibit intention and contrivance prove to be the adjustment of objects to their environment in a manner which, if it does not exclude the possibility of design, at least fails to reveal any trace of it.

"According to teleology," says Huxley, "each organism is like a rifle-bullet fired straight at the mark; according to Darwin, organisms are like grape-shot, of which one hits something and the rest fall wide. For the teleologist, an organism exists, because it was made for the conditions in which it was found; for the Darwinian, an organism exists, because, out of many of its kind, it is the only one which has been able to persist in the conditions in which it is found."

"These successful adaptations which are so much admired in nature," says Felix Adler, "do not resemble the purposeful action of intelligence working directly and deliberately toward its ends, but appear to be the final fortunate outcome after countless tentative efforts, after countless miserable failures."

Dr. Newton seems to have no doubt that order, harmony, and adaptation are necessarily proof of a designing intelligence that produced them. But supposing a personal, intelligent, designing Being who created or manufactured the universe, must there not (reasoning from what we know) be order, harmony, and adaptation (or fitness) in his divine nature, to enable him to perceive, reflect, design, and to execute his designs? If this Being does not cogitate or reason, but perceives truth without the labor of investigation, he must still possess an adaptation or fitness thus to perceive as well as to execute his designs. To say he is *without* order, harmony, and adaptation, is to say he is a mere chaos. If a Being or substance without order, harmony, and adaptation, or a divine chaos, can create an orderly universe, there is no consistency in saying unintelligent substance could not have worked itself into the forms we behold. If order, harmony, and adaptation *do* exist in the divine mind, they must be eternal. If the order, harmony, and adaptation in God are eternal, they must be *independent of design*; for that which never began to exist could not have been produced, and does not therefore admit of design. *If order, harmony, and adaptation are independent of design in the divine mind, it is certain that order, harmony, and adaptation exist, which are no evidence of a pre-existent, designing intelligence.* If order, harmony, and adaptation exist which were not produced by design, which are, therefore, no evidence of design, it is unreasonable and illogical to infer designing intelligence from the fact alone that order, harmony, and adaptation exist in the Cosmos.

If it be said that the order, harmony, and adaptation in Deity to produce his thoughts and to execute his plans are eternal, why may it not be affirmed that the formation of matter into worlds, and the evolution of the various forms of vegetable and animal life, are the result of an eternal and inherent principle of order and adaptation? Is it more reasonable to suppose that the Cosmos was created or constructed by a Being in whom exist the most wonderful order and harmony, and the most admirable adaptation (which order, harmony, and adaptation had no beginning), than to hold that the Cosmos in its entirety is eternal, and the self-producing cause of all the manifestations we observe in the world?

The plan of a work is as much evidence of designing intelligence as the work which embodies the plan. For instance, the plan of a locomotive in the mind of Stephenson was as much evidence of design as the piece of machinery after its mechanical construction. If God is an infinite Being, his plans must be eternal, without beginning, and

therefore uncaused. If God's plans are not eternal, if from time to time new plans originate in his mind, there must be an addition to his knowledge and purposes; and, if these admit of addition, he must be finite. But if his plans had no beginning, if like himself they are eternal, they must, like him, be *independent of design*. Now, the plan of a thing, we have already seen, is as much evidence of design as the object which embodies the plan.

Since the plans of Deity are no proof of a designing intelligence that produced them (for they are supposed to be eternal), the plan of this universe, of course, was no evidence of a designing intelligence that produced it. But since the plan of the Cosmos is as much evidence of design as the Cosmos itself, and since the former is no evidence of design, it follows that design cannot be inferred from the existence of the Cosmos.

The absurdity of the *a posteriori* argument for a God consists in the assumption that what we call order, harmony, and adaptation are evidence of design, when it is evident that, *whether the universe was created or not, order, harmony, and adaptation must have existed from eternity, and are not therefore necessary proof of a designing cause.*

The Hindu, in accounting for the position of the earth, said: Whatever exists must have some support. The earth he imagined resting upon the back of an elephant, and the elephant upon a huge tortoise. He forgot that his own premise, that whatever exists must have some support, required that the tortoise should rest upon something. The inconclusiveness of his reasoning is apparent to a child. He who uses the design argument says:

Order, harmony, and adaptation are evidence of a designing intelligence.

The earth and its productions show order, harmony, and adaptation.

Therefore, the earth and its productions are the result of designing intelligence.

As the Hindu stopped reasoning when he fancied the earth upon an elephant and the elephant upon a tortoise, so the theologian stops reasoning when he says God made the world. But as surely as from the premise that whatever exists must have some support follows the conclusion that the tortoise rests upon something, as it rests upon the elephant, does it follow from the proposition that order, harmony, and adaptation are proof of an intelligent designer, that the order, harmony, and adaptation in a supposed designer are evidence of an intelligent designer who made him, as the various parts of Nature, adapted or fitted to one another, are evidence of an intelligent designer who produced them. If we grant the premise, we are led to the conclusion that there has been a succession of creative and created gods in the beginningless past.

Men who attempt to explain the mysteries of the universe by the theory of an intelligent designer, and who argue from the order and fitness in the world, remind us of the ostrich that, having buried its head in the sand, so as to render itself invisible to its pursuers, fancies there is no further need of exertion to escape from the dangers and difficulties that surround it.

That the Ultimate Reality of which all phenomena are manifestations is, in some way inconceivable to us, psychical in its nature, we are far from denying; at the same time, as Prof. Adler says, "the terms 'consciousness,' 'intelligence,' and 'will' have a meaning only when used with reference to the discursive minds of men or of other sense-bound creatures like ourselves. Carried beyond that sphere, they are mere ideas, of whose corresponding reality we know nothing." Our only object in this article has been to point out

what we conceive to be some of the fallacies of an argument which, as Mr. Fiske says, belongs to "the primitive fetichistic habit of thought."

B. F. UNDERWOOD.

RECEPTION TO MONCURE D. CONWAY.

All who love progress and reform rejoice to see that the author of *The Earthward Pilgrimage*, *Sacred Anthology*, *Idols and Ideals*, *Demonology*, and other brave, scholarly, powerful books, still keeps that vigor of thought, nobleness of purpose, and comprehension of what our age most deeply needs, which gave him a foremost place among the Abolitionists, and has since made him a mighty prophet of new truth. His work in London—first as a defender of liberty during our great war, and then as the leader of a large congregation of advanced thinkers—has closed with honor and success. He has returned to his native country, and resumed his place among our own pathfinders and pioneers. His friends wish to meet him in Boston, spend some social hours in his company, and hear him once more tell us what present burden of duty is laid upon us by the eternal laws of truth and justice. Such an opportunity will be given on Friday evening, October 9, in Chapel Hall, adjoining the Meionaon, Tremont Temple. The doors will be open at 6 P.M., and a substantial supper will be ready at 6.30. Col. T. W. Higginson will preside; and Mr. Conway will deliver, at 8 P.M., an address prepared for the occasion, and entitled "Our Armageddon." Thus, we shall be told what part we can take in "the battle of the great day," still going on against popular delusions and iniquities in high places. Before the close of the evening, sufficient opportunity will be given for social intercourse. All who are interested in the speaker and the objects of the meeting are invited cordially. Not only the members of the Free Religious Association, but all friends of social reform and advanced thought, are earnestly called upon to meet with us. The price of reserved seats is only fifty cents; and the more promptly the tickets are sold, the easier it will be to make the occasion what we all wish to have it. Our friends will find it decidedly for their interest to secure seats as soon as possible after the opening of the sale on Monday, September 28, when tickets may be procured at the office of *The Index*, 44 Boylston Street, and of Mr. D. G. Craudon, 11 Hanover Street; also at Oliver Ditson & Co., 449. 451 Washington Street.

FREDERIC M. HOLLAND,

Sec'y F. R. A.

EDITORIAL NOTES.

BY B. F. U.

"For my own part," says Richard A. Proctor, in *Knowledge*, "I regard even the doctrine of a future life as open to scientific discussion, and not necessarily a religious doctrine at all."

WHEN people are afraid to come in contact with others not of their religion, party, or nationality, or "social standing," and manifest indifference or aversion toward them through impoliteness or rudeness, it shows that they have not yet attained to that disposition and spirit which leads to brotherhood and sisterhood.—*Christian Socialist*.

MR. T. B. WAKEMAN informs us that contributions received for the Bruno statue at Rome amounted, September 15, to \$339.20. He desires to raise it by subscriptions to \$600, when the proceeds of a lecture to be donated by Col. Ingersoll will, it is expected, increase the amount to \$1,000. Mr. Wakeman's address is 93 Nassau Street, New York.

PIRON, the French author, having been taken up by the watchman of the night in the streets of Paris, was carried the following morning before the lieutenant of police, who haughtily interrogated him concerning his business or profession. "I am a poet, sir," said Piron. "Oh, oh, a poet, are you?" said the magistrate: "I have a brother who is a poet." "Then we are even," said Piron; "for I have a brother who is a fool."

EVEN the most modified and modernized forms of Christianity, as sects, having an historic connection and a kinship with the old theology, cannot escape its influence, which is shown in various ways, among others in unscientific methods of thought and a slowness to welcome or value truth till it has been theologically christened and consecrated, so that it can be designated and described in the terms of the old faith. In this stage of thought, the heart often clings to the old; while the intellect distrusts it, and begins to make excursions in quest of new truth, somewhat timidly at first, trying to make science seem friendly by endearing it with pet theological names.

A WOMAN'S Congress is to be held at Des Moines, Iowa, October 7, 8, and 9. The following are among the topics to be discussed:—

"Is the Law of Progress one of Harmony or Discord?" Rev. Antoinette Brown Blackwell, New Jersey; "Comparative Effects on Health of Professional, Fashionable, and Industrial Life," Anna D. French, M.D., New York; "The Production and Distribution of Wealth," Rev. Augusta C. Bristol, New Jersey; "The Work of the World's Women," Mrs. H. L. T. Wolcott, Massachusetts; "Justice, and not Charity, the Need of the Day," Mrs. Mary E. Bagge, New York; "Organized Work, as illustrated by the Methods of the W. C. T. U.," Miss Frances E. Willard, Illinois; "The Ministry of Labor," Miss Ada C. Sweet, Illinois; "The Need of Adjustment between Business and Social Life," Julia Holmes Smith, M.D., Illinois; "The Advantage of the Spoken over the Written Word," Miss Frances F. Fisher, Ohio; "The Religion of the Future," Mrs. Imogene C. Fales, New York; "Women Physicians in the Hospitals for the Insane," Jennie McCowan, M.D., Iowa; "Human Parasites," Leila G. Bedell, M.D., Illinois.

For *The Index*.

THE WAY OF LIFE.

With our fancy blindly leading,
We are speeding
Through the mazy path of life,
Where in waiting all-devouring
Death is glowering
Over all our wretched strife.
Stepping, stepping down the ladder,
Growing sadder,
Every year's another round
Nearer to a fearful spasm,
And a chasm,
Deep within the silent ground.
Tossing, tossing on the ocean
Of emotion,
We steer our ships for harbors there,
By the stars that guide our dreaming
By their beaming,
O'er the billows of despair.
Doubting, doubting, not perceiving
Or believing
Mystic forces o'er us roll,
Which our instinct half discerning
Turns to yearning
Aspirations of the soul.
Thus we live our life, declaring
We are bearing
Silent burdens inward pressed
By a hand whose phantom fingers
Ever lingers
Round each sorrow, unconfessed.

A. D. MARCKES.

The Index.

BOSTON, OCTOBER 1, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

THE TRUE CONQUEROR OF DEATH.

An Address on Passion-tide, delivered in New York the Sunday before Easter, 1885.

BY W. L. SHELTON.

There is always something strange and mysterious about great religious festivals. They deal with the great mysteries of nature. The annual celebration of the greatest of all the festivals of Christendom takes place at the close of the season of Lent. On Wednesday before Easter, in the afternoon as the day draws to its close, in the Vatican at Rome, the great church dignitaries assemble in the Sistine Chapel. The pontifical robes will be put off, the regal splendors of the papacy will be laid aside, and while the whole assembly remains kneeling before the crucifix of the Saviour, and "The Last Judgment" of Michel Angelo looks down upon them from the walls, there will arise within a hidden enclosure the slow, solemn, mournful strains of the *Miserere*. Then, as the evening hour comes on, in one country and in one continent after another, the strain will be taken up by the various churches; throughout Europe, from the shores of the Atlantic across the plains of America to the coast of the Pacific, on, even into Asia. Yes, Japan, China, India, and Arabia will take up the strain; and thus the chorus of wailing and sorrow and lamentation will sweep around the earth. Again on Thursday and again on Friday, all Christendom will give utterance to this chorus of lamentation. Then, a day or two later, the strain will change. On Sunday, the music will rise into a pean of joy, the mournful tones of the *Miserere* will have changed into the exultant strain of the *Gloria in Excelsis*, Easter will close the festival of Passion Week.

You know what mystery this festival celebrates. It is the mystery of death. What is death, and what does it mean? No experience in nature has puzzled the mind so much as this. Philosophy and religion have always been speculating about it. The world has come to think of it as a grim,

unearthly fiend reaching out with skeleton hands to devour all living creatures as its victims. How shall we deal with that skeleton hand? Shall we put it out of our thought, as though it were a chimera? Shall we go to meet it with a manly indifference, or shall we cower before it with an unspeakable terror? Have we no way of conquering that unearthly power? Can we not rise up in the majesty of our spirit, and say that we will defy it? The Christians would say: We can: we have a Conqueror of death. Behold the picture of the death of Jesus! It is their conception of the victory over death which they celebrate in the festival of Passion Week and Easter.

What is this wondrous story of the death of Jesus? I tell this story, not as it actually took place, but as an ideal picture which arises in the minds of men. We have to remember that religious pictures are never pictures of reality: they are the constructions of the aspirations of men, and not the relations of actual history. The story of the death of the God-Jesus falls into a group of four several pictures,—the institution of the Sacrament, Gethsemane, the Trial, and Calvary. Jesus knew that he was about to die: he assembles the little group of chosen disciples in a small room by themselves to celebrate the passover. To a great teacher, it was the most momentous hour of his life: the prophet must lay down his mission; he must put his gospel into the hands of another, and he knew the danger. Would they retain it pure? Would they hand it down as he had taught it? Could he make them appreciate it? One only way and hope was possible,—to bind them to his own personality: if only his figure could continue a reality to them, the gospel he had to preach might still continue genuine as he had taught it. They gather around the table to eat the passover: he tells them of his death; he is to die, die for them, die for the race of men; they must appreciate the significance of that death. He must give them a memorial. He takes the bread upon the table, breaks it, and hands it around among them, and says, "This shall stand for my body, which dies for you." He takes the cup of wine, and hands it to them, and says: "Drink ye all of it: this is my blood which shall be shed for the remission of sins. I drink and I eat no more. But ye henceforth, when ye eat of this bread and drink of this wine, remember that it shall be a symbol of my sacrifice. This do in remembrance of me." But the symbol and the memory are not enough: he must bind them to himself by a promise which he gives of the future; he must establish in them an unspeakable trust and an undying faith. He tells them that he will continue with them. Peace I leave with you, my peace I give unto you; not as the world giveth, give I unto you. Let not your heart be troubled, neither let it be afraid. Behold, I go away, but I come again. In my Father's house are many mansions: I go to prepare a place for you, that where I am there may ye be also. Abide in me, I am the vine, ye are the branches: as the branches cannot bear fruit without the vine, so ye cannot bear fruit unless ye abide in me. Thus, he had done all that he could: he had consigned his mission into the hands of his disciples. And so we come to the second picture.

Now, for a few hours he must be alone. The consciousness of the death agony which he must endure has come upon him: he must steady his soul to an unshaken and undying faith. He takes three of his disciples, and goes out alone into the city, down through the narrow streets, out through the gate, down across the brook Kedron, up on the side of the Mount of Olives. It was now late in the evening. There was a little secluded garden there which was called Gethsemane. He enters

alone with his disciples, stations them by the gate, goes forward a few paces alone, and kneels down to pray. The spirit had not yet conquered. The God-Jesus was not yet triumphant. It was the awful solitude of the situation which appalled him,—to die and to die alone! For a time, he cannot lift up his soul to a stand-point of willingness and faith. Yes, for a moment, for an hour, he thought of escaping, he could not submit. He tried to pray. He calls out to the very Jehovah that was to crucify him, "O my Father, if it be possible, let this cup pass from me." He is not yet ready. He rises up, he cannot be alone, he must have companionship for a moment, even if it be an earthly one. He goes to speak with the three friends waiting at the gate; but, alas! he finds them asleep. He goes back and tries to pray, and again cries out, "O my Father, if it be possible, let this cup pass from me." The struggle was growing intense. The God-Jesus and the man-Jesus stood locked together in their final conflict. In that great agony, it is said that he sweat, as it were, great drops of blood. Jehovah, looking down on his agonizing Son, sent an angel to comfort him; but still the spirit could not conquer. Again he rises for a moment from the awful struggle, and again he finds his companions asleep. Once more, he goes forward alone, and begins to pray; and then the spirit conquers, the man-Jesus was subdued, the God-Jesus stood up complete and at one with himself. He bows his head in submission,—"Not my will, but thine be done." From that hour, he needs no companionship: he stood up in his godlike majesty, ready to meet his fate.

And so we come to the Trial. He goes out through the garden, he descends the side of the mountain, calm and serene and undisturbed. He knows the fate that is approaching. He meets a group of his enemies. They have come out by night to capture him, and to take him to his death. He has no fear. He announces himself boldly to them, he is Jesus whom they seek. They take him before the Jewish Sanhedrim and try him, and endeavor to get him to convict himself. (The accounts of these trials are very contradictory, but I give them as best I can.) But he has nothing to say, he knows that he must die. They take him before Pontius Pilate, the Roman governor. Again, he has nothing to say, he knows that he must die. Pontius Pilate sends him to Herod, but he has nothing to say. Again, they bring him back before Pilate, and exact at last a reluctant sentence of condemnation. In silence, Jesus awaits his doom. Through all the agonizing scenes of those trials, he had maintained his supreme godlike equanimity. Last comes the fourth picture: it is Calvary. They take him and lay the cross upon his shoulders, and lead him outside of the city to the place of crucifixion. The cross is raised, and he is nailed upon it. Then comes for the last time a new struggle between earth and spirit. Gethsemane must repeat itself upon Calvary. For an hour, it looked as if the spirit would succumb, the man would lose his godlike divinity. It was at the dying hour, that hour when the nature of man is breaking up, the vital spirit appears to be losing its control, and man succumbs to the power of nature. He had at first in this hour of weakness to conquer all human animosity. The man-Jesus had been wronged, he was being crucified, wantonly, wilfully crucified by the very men whom he had loved and lived for. And was not the man-Jesus to have one stray thought of anger against those who had wronged him? No: the God-Jesus could have no anger. He conquers, as he cries out in sublimest burst of universal love that ever fell from the lips of man, "Father, forgive them, they know not what they do." But the struggle was

only half over. The God-Jesus must maintain his faith, and physical strength could not sustain him. At that hour of deathly weakness, an agonizing doubt breaks into his mind: What if Jehovah himself would desert him? What if he had been mistaken? Might he not have been all wrong? Then, in a tone of unutterable anguish, he cries, "My God, my God, why hast thou forsaken me?" Was the spirit to succumb? By no means. At the last hour of life, when the soul seems flickering like a candle just about to go out, there comes sometimes a sudden, reviving gleam of light, a new strength. That moment came to Jesus. There swept over his mind a sudden consciousness of what he was accomplishing, the act of infinite atonement he was making, the complete, the universal cause of humanity for which he was making the sacrifice. The doubt falls away, the God-Jesus assumes the supremacy. With an expiring aspiration, "The work is finished. Into thy hands, O Father, I commit my spirit," the head falls. Jesus was dead.

Such is the story of the death of Jesus which the Christian Passion Week celebrates. I would not depreciate its power as a picture. I do not believe any other literature has anything like it. If we may take it by itself as a dramatic sketch, it is a masterpiece; as an example of faith, supreme faith even unto death, it is sublime; as an example of the complete supremacy of soul in nature, it is godlike. As we read, we feel ourselves lifted into an atmosphere of soul-life which is altogether different from the life of nature round about us. We become conscious that, like Jesus, we, too, can become as gods by making the soul-power within us supreme. The will can become master of itself even unto death. The man-soul within us has been taught its power, it has learned its supremacy.

This, however, is not the significance of the death of Jesus to the genuine Christian. To him, Passion Week exists only for Easter. He points to an entirely new group of pictures which tell of the resurrection and ascension of Jesus. The story of the resurrection changes entirely the aspect of the Passion. Death had given up its power: Jesus had risen from the grave. To the Christian, he becomes the type of the conqueror of death. We conquer death only by dying: that is the lesson of Passion Week and Easter to the Christian. But, to the rationalist, the picture of the resurrection utterly destroys the meaning of the passion and death of Jesus. Easter annihilates the significance of Passion Week. The death of Jesus had been only an illusion. Jesus knew all the while that he was to arise again. The story of his passion no longer gives us the lesson of the godlike soul that will maintain its supremacy even unto death. The lesson now becomes one of submission to death for the sake of another life. We conquer death only by dying: that grim power has become so terrible to our thought that it has destroyed the satisfaction of existence. This life has become a failure: death is the only reality. We can only conquer death by annihilating life. We will sacrifice this earthly existence, we will go to meet that spectre, we will cast ourselves into its power, we will succumb. When once we have succumbed, by our very submission we shall escape out of its clutches, we shall rise into a new existence where death itself shall have no power: then we shall be free to live. What a different aspect this gives to the passion of Jesus! Is this a brave, true conception of life? Shall the man-soul within us, that would lift itself into a God, be cowed and succumb, and give up its glorious possibilities of life through cowardly fear of death? No: this is not a brave conception of life. We must repudiate this type of the conqueror of death. To the true,

genuine, complete life of our age, it has no meaning. Easter is an anachronism in the nineteenth century. Would you see a conception of life for which this has a meaning? Look at the wan, emaciated figures on the canvas of a Ribera. They are the monastics of the Middle Ages. To them, indeed, life was a Passion Week, death a Good Friday, and eternity an Easter. We must look for the origin of the festival of Passion Week in an entirely different age from the present. It is the antique type of the conqueror of death which Passion Week would celebrate.

We shall be interested, then, in tracing the origin of this picture, because it will explain to us the complete change which the theory of life has undergone. The two ages of the world will stand posed antagonistically to one another, and with them the two conceptions of life. This type of the conqueror of death of course did not come from Jesus himself: we know nothing about the death of Jesus save his crucifixion. Whole centuries of cosmopolitan thought wrought itself into this picture. As the civilization of antiquity was coming to its close, the thoughts of the various nationalities fused together; and it was really out of such a fusion that the story of the death of Jesus has come down to us. Judaism, Platonism, Magianism, have all drawn their lines into the picture. As the culminating thought of antiquity, I would like to give you a sketch of their conception of what they called the "City of God." The most graphic account of it comes from the pen of St. Augustine.

One distinctive feature in the theory of life of antiquity was their faith in the guiding hand of Providence. All that took place took place by divine will and consent: Pagan as well as Christian acknowledged this fact. The whole plan of creation and the future of the world had been arranged and established by divine authority. Nature was nothing, God was everything. At the same time, at the close of antiquity, to the philosophic observer one fact was very plain,—the civilization of the world was on the decline. Everything wore an aspect of decay. Two great cities had stood for two great types of civilization,—Jerusalem and Rome. Jerusalem was now a mound of ruins: Rome itself had fallen beneath an attack of barbarians. Society was in a state of dissolution. Christianity looked on calmly and indifferently. The religions of the various nationalities had fallen into ruin; philosophy itself was on the decline; all the great forces which had been at work in nature for the development of earthly civilization now appeared to have exhausted themselves; everything wore an aspect of decay. What, then, could be the explanation of it? The Christian teacher was ready with his reply. Death was the explanation of it. The world was dying; it had been dying from eternity; earth was undergoing the penalty of original sin. Away back at the beginning of creation, a principle of evil had entered into life, when the will of the creature had broken the will of the Creator. The doom of death had been pronounced upon creation. The very angels of heaven had been the first to call this doom down upon themselves: heaven itself had been divided. Again, on earth, this experience had been repeated. Man had sinned, Adam had broken the divine command, and with him all the race of man was doomed to die. Not only was the whole future of earthly creation vitiated by this act, all life from the lowest protoplasm to the man who was made in the image of his Creator must suffer this penalty: suffering woe and sorrow was the penalty for the entire creation. The very stones and substance of earth must perish. Yes, the world must die. Earth itself and all its glory must be annihilated because

of this crime of man. From the hour of Adam's sin in the garden, the whole earth became a degenerate and dying world. Earthly life was in decay; the whole world was dying; earth itself was a failure.

And still there was a hope: Deity was just, but it was merciful. A principle of good had been left in the world. From the hour when the sentence of doom had been pronounced, these two principles of good and evil had stood in mortal conflict with each other. They are represented by the Christian writer in the figure of two cities in conflict,—the city of God and the city of man, the city of heaven and the city of earth. By the will and mercy of the Creator, the city of God shall ultimately triumph, and atonement shall be made. Deity himself would send a conqueror of death. All history previous to the coming of this conqueror thus became a prophecy of his coming. The cities in conflict must have their symbols and representatives on earth. The Hebrew race and the religion of Judaism stood for the type of the city of God: Assyria and Rome and the pagan religion stood for the type of the city of man. All Judaism was reconstructed into an allegory. The events of their history and their entire literature become a prophecy of the coming of that conqueror, and of the final triumph of the city of God. The ark of Noah itself symbolizes the Christian Church, even unto all the details of its structure. The history of the Hebrews from the time of Adam down to the birth of Jesus stands for a repetition of the six days of creation. From Adam to Noah was one day; from Noah to Abraham and the Patriarchs, the second day; from the Patriarchs to the Judges, the third day; from the Judges to the reign of David, the fourth day; from David to the Captivity, the fifth day; from the Captivity to the time of Jesus, the sixth day. But the Hebrew race was a reality as well as a symbol. The two cities existed within that city: they, too, were of earth; and death was upon them as well. The division of the people into the two kingdoms of Judah and Israel signifies their spiritual conflict. But, at the close of these second six epochs of creation, the conqueror comes. Jesus makes the terrible sacrifice; the power of death was broken; the prophecy of death had been completed. Judaism ceases then to be the heavenly city. Their nationality had done its work as a prophecy for the world: it was no longer needed. Jerusalem was allowed to fall at the hands of the Romans, lest the world should still treat it as a great symbol. From that time, the Christian Church in conflict with the world becomes the true symbol of the city of God and the city of man. But, though the power of death had been broken, it had not been annihilated: the penalty must be executed. There were two deaths, the first of the body and the second of the soul. The death of the body must be endured, but from the death of the soul there was a possibility of escape. The doom was still upon the earth, the death-fiend still had its power. But the aspirations of man were now lifted to another sphere of invisible existence. The world was dying: let it die. We must hate this earthly life, and everything connected with it. It is not a genuine life, it is only a scene of trial and temptation. To be even sensible of joy in this earthly existence betokens a degenerate nature, perhaps beyond all hope of salvation. Earthly love itself is a crime. All our life is but a race to the grave. As soon as we begin to live, we begin to die: life has no reality, think nothing of it, let it alone. We accept the atonement of Jesus, we give up this life, we surrender ourselves into the hands of death; and then death itself shall be annihilated, the triumph of the city of God will be complete, new heavens and a new earth will

arise, and death itself shall be swallowed up in victory!

Such was the antique conception of the city of God and the Dying World. Such is the conception which Passion Week and Easter would celebrate. But the world did not die, the civilization of the nineteenth century has given the lie to the prophecy of antiquity. Out of the ashes of antiquity has arisen an entirely new civilization. The future beckons us with its promises: the past is only a graveyard. No philosopher, no religious enthusiast of antiquity, could have anticipated this extraordinary palingenesis. Yes, a new age has arisen; and we have a new conception of life, a new conception of future, a new conception of religion. Our whole civilization stands upon a different basis.

And, now, against the antique conception of the conqueror of death, I would like to pose a rationalistic life of this new civilization. I would like in a very brief way to give you a picture of one man whose life to me as a rationalist has been the inspiration that the death of Jesus was to me as a Christian. I reverence John Stuart Mill. I look upon him as the greatest and purest mind that has arisen in our century. He represents our new civilization. This man began life as a rationalist. He never knew what it was to have a faith in supernaturalism. For him, God had been struck out of the constitution of things, providential dispensation had no meaning, eternity was an illusion. Two things, however, were real and genuine to him,—humanity and natural law. Natural law was the basis of his philosophy: the cause of humanity was the ground of his religion. To establish a faith in this philosophy, and to live up to and spread this conception of religion, was the aim of his life. He was one of those rare natures which makes a unity of its life. No upheaval and downfall of the efforts of his youth had to take place before he began the mature life of man. He was one of those "happy warriors" whom Wordsworth has described as realizing their maturity, the pure plan of life which their childhood and youth had laid out for themselves. No waste was necessary: all his youth could be a glorious preparation for his manhood.

One crisis, however, did come to him. It was just as he was beginning to enter public life. He had completed the preparation of his youth: the enthusiastic life of the man was about to begin. But, strange to say, the enthusiasm did not come. Almost the very hour when he was beginning to live, all his enthusiasm appeared to be on the decline. He had set up one ideal for himself,—to become the reformer of the world: that was his aim. But now he asked himself, Suppose I could accomplish all that I wish, suppose I could reconstruct society as I aspire to do, would that give me complete joy and satisfaction of life? And, to his own astonishment and despair, his self-consciousness responded, No. Then would have been the time for the Christian to have made his appeal. St. Augustine should have arisen out of the grave, and stepped into this age of the nineteenth century, and addressed him in the language of antiquity: It is true, John Stuart Mill, this work will not give you satisfaction. Earth and all earth's possibilities are a failure. Out of the past, I can prophesy of the future. I bid you come to Jesus, accept this Conqueror of death. You cannot take any satisfaction in this earthly existence, because death awaits you. Annihilate this life, give up the cause of the happiness of humanity, make eternity and God your aspiration. But St. Augustine would have made his appeal in vain. This man knew well enough that the trouble lay, not with the possibilities of earthly existence, but, on the contrary, somewhere with

himself. He discovered that he had made one mistake. There was still something in his mind as well, something of that antique doctrine of the annihilation of one's own personality. He had adopted humanity as the object of his devotion: the good of an aggregate humanity was the aim of his life. But humanity, after all, was a thought, an abstraction. That aim could appeal to only half his nature. There was something else in him that was hungering and thirsting for activity: the man must feel, the man must love, he must have personal relations. He could not work for the race of men as an ideal, unless he could have a personal feeling for men as individuals. The right and the demand of the feelings have their cultivation and satisfaction: that was the discovery that saved him. He turned to music, he turned to poetry, he turned to friendship. The man learned to love: he made friends and he loved them. But there was one friendship that moves one almost to tears by its tenderness, its pathos, and its power. I do not know of any other such great thinker in all history that could think so deeply and yet love so profoundly. The glory of the man was not in his thought, but in the personality back of it, which created that thought.

It would be difficult to give any idea of the extent and diversity of his work. He was a great thinker and a great writer. He wrote a great work on Economics, another great work on State and Ceremonial Institutions, one great work on Logic, one on Metaphysics, and another striking work on Religion; but he did not write them simply as a thinker. He wrote them all really as a teacher of religion. The dull details of economics are very dry to me; but, when I read his great work on Political Economy, I felt myself actually stirred by it to religious enthusiasm. To him, the science of economics might become the study of the reconstruction of society on a principle of justice. I know of nothing quite so dry and abstract as the study of logic, but I found his great work on this subject to be a study of life. Even when he writes on metaphysics, he breathes the same tone of a writer of religion. Man, what he can accomplish, what he can make of himself,—that is always his theme. I read his *Essays on Religion*: I saw him reason God out of the universe; but it was only to raise up the real substance of religion,—humanity. Everything that he said and did had a religious character and significance about it. What a world of religious tenderness he expresses, when he looks out upon the suffering world, and exclaims to himself, "They who have had their happiness can bear to part with life; but, oh! it is very hard to die without ever having lived!" He loved humanity; and, with the spirit of a great religious teacher, above all he loved the weak and the suffering and the wronged. Justice, universal justice, was his ideal, that the world might have complete happiness. We are awed by the strength of his religious devotion, by the spirit of complete self-abnegation with which he sets up a new immortality,—the immortality of our work for humanity. That was satisfaction enough as a religious stimulus to him, without any thought of a personal resurrection. Such was his religion. Such a humanity was a religious stimulus to him. He had no other religion, and yet he had enough.

But he was not only a thinker and a writer. The religious spirit within him could not stop with that. He must go out and act. He must endeavor to see the thought of his life executed in the life of society. Wherever he could put his hand into activity, he wrought. It is almost painful to witness the intensity with which he labored, the unwavering enthusiasm which he

displayed; but it is sublime to witness at the same time the complete serenity of his mind. He went into Parliament. He took up there the cause of the suffering and the oppressed. Justice to woman, the enfranchisement of the laboring class, a genuine equivalence in all the actions of the State,—they were his plea. At the close of his life, twelve of his friends published a little memorial volume. One told of the work he had done as a moralist; another told of the work he had done as an economist; another described what he had accomplished as a teacher of religion; still another told what he had affected as a literary critic; and then another told of his work as a philosopher; then of his practical life, what he had accomplished for the cause of labor in Parliament; another described his career in the India House. These all told of his public life and work, but they do not tell so much of the personal man. The real memorial volume must be the man himself. It is doubtful whether any other man of this century has left such a stamp of his life and thought upon society. Oh, it is soul-stirring to read what he thought and to read what he did! It was a whole, complete life. When we survey it, we become conscious that at least one man has made a religion of this earthly life. We become conscious that this earthly life can become to us a religion.

At the close of his life, he went down to the grave. He, too, met death face to face. He went down to the Land of Silence, where there is "no work and no knowledge and no wisdom." But he went down calmly, serenely, with folded hands of submission. He awaited that immortality of the work which he had accomplished for humanity. For himself, I do not suppose he anticipated any personal resurrection. The hero of life's struggle and of life's religion fell into the slumber of death. He had his peace. Was this a brave death? Far better: it was a brave life. As we stand at the entrance of the celebration of Passion Week and Easter, I venture to say that John Stuart Mill as truly conquered death, as truly lived and died for a religious ideal, as did Jesus of Nazareth. Understand me. I do not set up this man as a God, like Jesus, before whom we are to bow down, though I would bow down in reverence before the glory of such a life: I simply set him up as a type of a possible rationalistic religious life, which our new civilization has given us.

And what, then, are the characteristics of this new civilization, that lead us to reject the entire thought of antiquity? First and foremost, we have learned to look upon nature not as a creation, but as a process. We know that we have to deal, not with the will of a deity, but with natural law. A new psychic force has come into existence,—a capacity for calculating natural causes. That psychic force is man. By means of this psychic force, we ourselves become creators. To create is not to bring the material substance of nature into existence out of nothing, but to shape that existence when made. We know nothing as to its origin. It has even been disputed among theological writers as to whether Deity itself created it. We create by constructing our pictures of thought into the substance of material reality. We ourselves can shape existence. We can make nature. That is the new discovery of philosophy. The hand of fate is lifted from our shoulders. What a load of enthrallment the ages had to endure, when they thought of all this vast expanse of nature and of life as only executing the pre-arranged design of a creative will! That was the burden which antiquity had to carry. One only lesson of life was possible. That was to submit. The chain of design, with its inflexible links, held

us, too, in its meshes. The doctrine of predestination was a doctrine of doom, whatever it might promise. What wonder that the thought of antiquity gave up in despair, and that all civilization should collapse! What centuries of thought has it taken to lift the minds of men out of that conception, to place the creature in the position of a creator! But that hour has come. The will of a creative deity was only a myth. The plan of predestination was only a black shadow cast upon nature by the reflection of man's own thought. We ourselves become the predestinators. Hence, we deal not with the plan of the past, but with the infinite possibilities of the future. That future, at least to some extent, we can create.

Secondly, we have discovered that the process of nature is not a movement downward, but an evolution upward. Antiquity had only two great theories as to the process of the universe,—the philosophic doctrine of rotation and the Christian doctrine of predestination. The philosopher had said that nature is only a repeated rotation. History was always repeating itself. But even this hope had been taken away when philosophy succumbed to Christianity. Then came a theory of doom. It was bad enough to be predestined, whatever we might be predestined to; but to be predestined downward, to feel that the whole nature of things—back, yes, from eternity itself—was moving always down, ever down. Yes, that was a deathly picture. The world was in a process of slow dying and slow decomposition. The burden of woe upon antiquity became stupendous. But this, too, was only that grim shadow cast upon the world by speculative thought. Instead of the theological theories of nature spun out of the minds of men, we have to-day the scientific investigation of the universe; and that has revealed an entirely different state of things. From the lowest form of life up to man, nature has been always an evolution upward, ever upward, toward something higher. We can even trace the process itself. Step by step, we become assured of this evolution. Faith becomes knowledge, and we know it. The rotation movement of the philosopher becomes the spiral movement of the scientist. The downward-pointing spiral of antiquity has become the upward-pointing spiral of the nineteenth century.

Thirdly, this process of evolution must affect man as well. Instead of our earthly civilization being in its old age and decline, we learn that it is just now approaching its maturity. Maturity comes when knowledge comes. We have to estimate the maturity of a society, not by its upward conditions, but by the state of its thought, by its capacity for knowledge, by its appreciation of its own environment. We know of men, physically full-grown men, who continue as children, because they cannot, will not, think for themselves. They cannot act as mature individuals, because they cannot place themselves in the life round about them. Not until there could be a definite understanding as to the processes of nature, and as to the relation of man to outward law, could there be any actual maturity of society. Until then, the world continues in a state of tutelage to its ancestral traditions. The science of the nineteenth century now begins to give us this knowledge. For the first time, civilization actually approaches its maturity. Nature, then, is not a creation, but a process. The process of nature is not a movement downward, but an evolution upward. These three aspects of the thought of our new civilization entirely change the meaning of life and the significance of death.

I come, then, to the one single thought of my discourse. We conquer death by living, and not

by dying. The true conqueror of death is he who lives truly, and not he who dies truly. We repudiate the antique type of the conqueror of death, because that type comes from a wrong conception of life. A new conception of life gives a new conception of religion and a new conception of death. There may be, after all, no death to conquer. When the Christian, out of his antique pictures of thought, asks us, with awe and fear, Dare we die? we reply: On the contrary, we dare live. Our concern is not with death, but with life. This earthly life is what we have to deal with. It is to this earthly life that we have to give a religious significance. We have to live truly, to live justly, to live completely, to live up to the full extent of our existence. The drama of life is of deeper significance than the tragedy of death. Life is the conqueror of death. This is the new type of that conqueror we would set up,—not a moral death, but a moral life. Thus, existence becomes a reality to us. The Gorgon head will be annihilated.

We would deal tenderly and truly with the religious pictures of antiquity. We repudiate them as airy speculations about an unknown land of the future, only, on the contrary, to make of them a substantial reality now. The thought of antiquity was in the childhood of the world's religious aspirations. The aspirations were pure, but they were only dreams. You know how the thought of the child pictures all its expectations of the future. All its anticipations of real life as it is taught it by its elders become transplanted into an unreal fairyland,—the land of princes and gold and cities and fairies, where the child can have all that it wishes and be all that it wants to be. Thus it was with our antique Christianity. While the thought sinks, desponds, and despairs, the heart dreams and hopes. The world was to die; but a new Jerusalem was to arise,—an invisible land of pure and complete delight, where earth's failures could be obliterated, the efforts of life could be taken up again, the aspirations of the soul could be complete, the glory of the highest could be realized, the heart of man would find its own. But the glory of maturity is to make a reality out of the pure aspirations of childhood. Our civilization now stands at its maturity. We take up this picture of the New Jerusalem. The religious effort of the future shall be to put an earthly substance and reality into it. The aspiration of the heart now becomes the thought of the mind. The thought of the mind shall henceforth become a material reality.

They have told us, if in this earthly life we have our only existence, "we are of all men most miserable," that the thought of death would annihilate the ambition of life. But I reply: On the contrary, just because we may have only this life to live, we feel bound to live it truly, to live it completely, to make all of it that we religiously can. We can put eternity into a single lifetime, if we only will. They tell us that earthly society itself cannot live forever. They look back for a few ages to the cradle of our race, when the glaciers of the geological times were melting away and reconstructing the outward surface of the earth for the possible existence of man; they look forward to the future, and as the tides of the ocean lash the shores of the continents, and slowly but gradually lessen the speed of the earth's rotation, they point to the time when the day of our earth shall have lengthened itself into a year, the whole outward surface of nature will be changed, the earth shall die, and, like the moon, spin its course around the sun, an arid, lifeless mass of clay. From its cradle, society will have gone down to its grave. And, be-

cause of this limitation of our race-existence, they would tell us that it was not worth while for the effort of man to waste itself to create a city of righteousness that must die. But I reply, On the contrary, just because the life of our race does not extend into eternity, but may come to its close at an hour that we know not of,—just for that reason we must make society now, we must create society, we must realize our religious ideals on earth, we must transpose eternity into time.

This new Jerusalem shall arise. Antiquity mistook the birth-throes for the death-pangs of history. A dying world? Oh, no! the world has just begun to live. Man now begins to feel his godlike capacity as a creator. The sculptor of eternity must carry out his ideals into materials of earthly reality: not until then can they become a religion. The race of man is that sculptor. Weak though we may be, we propose to carve out in time that new Jerusalem, the kingdom of righteousness, the kingdom of the good, and the kingdom of love. This was the kingdom and the city that Jeremiah wept for, that Jesus died for; this was the city that John Stuart Mill and George Eliot lived for. And the time shall come when Jesus and St. Augustine, Immanuel Kant and Auguste Comte, John Stuart Mill and George Eliot, shall be grouped together as a coterie of great souls who have lived and died, not as conquerors of death,—for death itself will have lost its significance,—but for this glorious moral kingdom of righteousness. When, on Easter Sunday, the chimes shall send out from the churches their peals of jubilation throughout Christendom, we, too, can respond in spirit to those chimes. It will not be their Easter, but our Easter,—our Easter of promise for this moral kingdom of the good on earth. No single walls shall bound that city, no one continent shall contain it. Lift up thine eyes round about, and see. All have gathered themselves together, they come to it. Its sons shall come from afar, and its daughters shall be nursed at its side. The nation and the kingdom that will not serve it shall perish,—yea, those nations shall be utterly wasted. This earthly city, too, shall have its river of the water of life, though there be no throne of God from whence it may come. The aspiring soul of man, and man's divinity, shall be its well-springs. Though God and the Lamb of God be not there as its sun, the glory of virtue shall lighten it, the majesty of the moral law shall be the light thereof. Thus, death itself shall be swallowed up in victory. We shall dare to live; for we shall know that we conquer death by living and not by dying. Life shall be our Easter offering.

CORRESPONDENCE.

THE CARDINAL DOCTRINES OF CHRISTIANITY.

Editors of The Index :—

However much Roman and Greek Catholics and orthodox Protestants may differ from each other and among themselves on minor points of the Christian system, they are all agreed upon what they deem its cardinal doctrines. They believe in man's fallen condition, and in the necessity of his redemption through faith in the vicarious sufferings and death of Jesus; in the plenary inspiration, infallibility, and divine authority of the Hebrew and Christian Scriptures, and that all righteousness other than that resulting from a belief or "saving faith" in these fundamental dogmas is but as "filthy rags." It is true a small minority of professed Christians have rejected all, or nearly all, the distinctively so-called evangelical doctrines; but the question arises just here, Can it be possible that the overwhelming majority of Christians have, notwithstanding all the learning, scholarship, profound thought, and "genius for religion" arrayed upon their side, been entirely mistaken as to the nature, character, and teachings of Christianity? It seems to me that those bearing the Christian name,

who make war upon the doctrines of grace, redemption through shedding of blood, etc., are unwittingly doing greater damage to Christianity than it is possible for Col. Ingersoll and all his allies to do; that Christianity, without its fundamental doctrines, might indeed have a name to live, but to all practical intents and purposes would be as dead a thing as Spiritualism would be minus its phenomena.

Yours very respectfully,

W. C. BOWEN.

A WARNING.

For *The Index*.

I.

I stepped on the shadow
Of Death as he passed,
And verily counted
That moment my last.

No fear of a Future
Took part in the play
Of thoughts that were losing
The sweet light of day.

A shock and a tumult,
A crash and a strife,
And all that relates to
The aim of my life

Swept o'er me and through me,
As if to remind
I had housed with the sluggard,
And loitered behind.

If this penance hath hinted
The value of time,
Hath taught me to reckon
Delay as a crime,

The days yet uncounted
Shall balance the cost
Of all I have suffered,
Of more than I've lost.

II.

When the Demon of Torture
Overtakes and assails,
And the skill of Cotylous
Little avails,

What is it that sheddeth
The balm of relief?
What anodyne softens
The pain and the grief?

'Tis the presence of friendship,
The touch of a hand,
'Tis the kindness that speaketh
In tones to command

The Demon to loosen
His hold and depart,
That Hope may return to
Her nest in the heart.

This much have I pondered
While couched in my room;
And fair as the rainbow
That spanneth the gloom

Shall be the remembrance
Of faces that shed
A magic that blunted
The thorns of my bed,
That wrought on the Demon
Of pain till he fled.

GEORGE MARTIN.

BOOK NOTICES.

JUIFS ET CHRÉTIENS. By Isidore van Cleef. Second edition, with a Letter from Renan. Paris: Anguste Ghio, Palais Royal.

This pamphlet is a vigorous protest against the oppression of the Jews, still pushed to shameful extremes in Europe, and perpetuated even in Massachusetts by a law which forces the tradesman who has closed his shop on Saturday, in reverence for his own religion, to keep it shut on Sunday also, in submission to the demands of Christianity. Such facts are supposed by the author to be sufficiently familiar to his readers; for he seldom goes into details, except when he insists on the superior capacity of the Hebrews for accommodating themselves to all climates and social conditions. Some of his characteristic sentences may be translated thus: "Intolerance has been an institution in every Church, as much among the Jews as the Christians." "Toleration does not mark the progress of a religion. It is the fatal signal of its decline." "The moderation and tolerance of the priests of any sect are in an

inverse ratio to its authority and power." "Let the creed fall: lift up the race,"—"Abaissez le dogme: relevez la race."

F. M. H.

Of greatest public interest among the contents of the September *Century* are Gen. Grant's article on "The Siege of Vicksburg." "A Woman's Diary of the Siege of Vicksburg" gives an inside view of the hardships and anxieties suffered by the besieged. The "Memoranda on the Civil War," besides a communication from Gen. Grant, embrace: "Who projected the Canal at Island No. 10?" by Gen. Schuyler Hamilton; "The Charge of Cooke's Cavalry at Gaines' Mill," by Gen. Philip St. George Cooke; with "Recollections of a Participant in the Charge," by Rev. W. H. Hitchcock; and a continuation of the discussion in regard to "Gen. Beauregard's Courier at Bull Run," by Major Campbell Brown. Wendell Phillips Garrison describes the Prudence Crandall persecution of 1833, and the encouragement given by his father to the brave schoolmistress who wished to educate "young ladies of color." The article is entitled "Connecticut in the Middle Ages." Lieut. Schwatka has a paper on "The Great River of Alaska." Mr. Howells continues his illustrated Italian papers. Miss Alice Maud Fenn describes the pastoral attractions of England in "Among the Red Roofs of Sussex." Edmund C. Stedman completes his series of papers with an article entitled "The Twilight of the Poets." George W. Cable writes on "The Silent South." Among the short essays are "Huddling in the Town and Living in the Country," "Some Causes of the Present Depression," and "The Sensitiveness of Cities." Among the "Open Letters" are: "Family Religion," by Washington Gladden; "Political Education," by J. B. Peterson; "Women and Finance," by Miss Emily F. Wheeler; "A New Solution of the Indian Question," by Eugene V. Smalley. This number contains the eighth part of "The Bostonians," by Henry James. Poems are contributed by Owen Innsly, Dora Read Goodale, Amanda T. Jones, and others.

The *St. Nicholas* for September, a charming number, has a long and varied table of contents, attractive features of which are a fanciful tale by Frank R. Stockton, entitled "The Battle of the Third Cousins"; "A Great Financial Scheme," by Sophie Swett, a funny story with a good moral; "Spiders of the Sea," by C. F. Holder; an entertaining article on "Nicknames." The number is well supplied with poems and verses. Of the serials, "Sheep or Silver?" is concluded; while both "Driven Back to Eden," by E. P. Roe, and "His One Fault," by J. T. Trowbridge, are evidently working to satisfactory conclusions. Schubert is the subject of the "From Bach to Wagner" paper, and Edmund Alton tells about Congressional Investigations and Republican Simplicity in "Among the Law-makers." The illustrations this month include a full-page engraving direct from nature, by Elbridge Kingsley, and a full-page drawing, by Alfred E. Sterner, called "By the Sea." W. H. Drake contributes two full-page illustrations to "Driven Back to Eden"; and there are drawings by Monks, Birch, L. Hopkins, Francis, Rogers, Taber, and others.

The *Catholic World* for October is an unusually readable number. Its contents are, "The Light of Asia and the Light of the World," Rev. John Gmeiner; "What Earth's Traveller said to his Heart," Edith W. Cook; "In the Adirondacks with Rod and Rifle," Martin Burke; "Rose of the Sacred Heart," Mary C. Crowley; "Hawthorne's Attitude toward Catholicism," Rev. A. F. Hewit, D.D.; "The Baron of Cherubusco," Rev. J. Talbot Smith; "Some Recent Italian Novels," Maurice F. Egan; "Sonnets," J. B. K.; "Solitary Island," Part III., Chap. XIII. Part IV., Chap. I., Rev. J. Talbot Smith; "The Negro: How can we help him?" Rev. C. A. Oliver; "American Philosophy," R. M. Johnston; "Katharine" (concluded), E. G. Martin; "English Voices on the French Revolution," Agnes Repplier; "Relations between the English and Scotch Pirates and the Reformation Movement," Sarsfield Hubert Burke; "The French Radicals and the Concordat."

The *Unitarian Review* for September is up to the high standard of this magazine, which always contains essays, reviews, etc., by scholarly representatives of "Unitarian Christianity." In the number for this month is continued "The Infinite Knowable"

(part three), by Rev. Thomas Hill, D.D.; "A Justification of Judaism," by Claude G. Montefiore; "Jacqueline Pascal," by Mary Bartol; "Biblical Exegesis and Historical Criticism," by Prof. E. P. Evans; "The Elimination of Warfare," by Rev. Edward F. Hayward; "Editor's Note-Book," which includes "Theological and Literary Intelligence," and "Things at Home and Abroad," and "Review of Current Literature."

Although this work has been eulogized by the secular press, it has been bitterly attacked by the greater part of the religious press, because the author, from the highest intellectual and moral grounds, denounces some of the superstitions which have crept into Christianity as essentially irreligious, and the men who, knowing better, teach those superstitions, as essentially dishonest.

The Religion of Philosophy; OR, THE UNIFICATION OF KNOWLEDGE:

A comparison of the chief philosophical and religious systems of the world, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By RAYMOND S. PERRIN. New York: G. P. Putnam's Sons, 27 and 29 West 23d Street. London: Williams & Norgate. 1885.

"A work which aims to teach a true conception of God, of life, and of morality."

"Mr. Perrin's able work offers a deep interest. . . . It is a remarkable book."—*Morning Post, London, Eng.*

"There has not for a long time appeared any book in the English language which, from the purely intellectual and philosophic side of it, is deserving of a more careful study."—*Times, Philadelphia.*

"It is a work which appeals to the scholarship of the country."—*Prof. Youmans, in the Popular Science Monthly.*

"The author is no imitator. He has a well-defined theory of his own to advocate; and he advocates it with clearness and energy, and does not hesitate to give heavy blows at what he conceives to be the narrow views of most Christian theologians. 'The religion of philosophy,' as delineated, is not simply a scheme of thought; it is broadly and intensely practical."—*Wm. J. Potter, in the Mercury, of New Bedford, Mass.*

"The author makes a masterly analysis of Herbert Spencer's philosophy, and subjects his theory of the *Unknown* to a most close and searching criticism. It is an extraordinary work, one of the most important contributions from the press of recent times."—*F. S., in The Index, Boston.*

"Mr. Perrin writes with habitual good taste and unvarying decorum of the beliefs which he holds false in basis and spurious in sentiment. . . . His sympathy is so frank and so thorough with the true sentiments of Christianity, his aim so high and his argument so modest and earnest, that even those who will repudiate his conclusions will find satisfaction and enjoyment in reading his pages."—*Sunday Herald, Chicago.*

* Large octavo, extra cloth, 566 pages. Clear type. For sale by all booksellers. Price \$3.50. Also sent, postpaid, on receipt of price by

THE INDEX, 44 Boylston St., Boston.

West Newton English and Classical School.

Address NATH'L T. ALLEN,
WEST NEWTON, MASS.

HOWARD COLLEGIATE INSTITUTE, WEST BRIDGEWATER, MASS.

A Boarding and Day School for Girls and Young Women, reopens Sept. 15, 1885. For catalogue, address the Principal, HELEN MAGILL, Ph.D., Graduate of Swarthmore College, Boston University, and Newnham College, Cambridge, England.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

The Secret of the East;

OR,
 The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quick advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . . 10c. per line.
 " 13 to 25 " . . . 8c. " "
 " 26 to 51 " . . . 5c. " "
 " 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent., on the total as above calculated, will be made.

TRACTS.

No. 1.—*Truths for the Times,* by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God,* by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible,* by the Rev. Charles Voysey, of England, is an over-whelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism,* by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. Full of Figures, Facts, and Interesting Extracts. Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven,* by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment,* by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity,* by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science,* by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven,* by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing,* by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Myraene.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address **THE INDEX,**
 44 Boylston Street, Boston, Mass.

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

NATURALISM VS. SUPERNATURALISM. By B. F. UNDERWOOD. 10 cts.

WHAT KIND OF MORALITY DID JESUS AND THE APOSTLES TEACH? By F. M. HOLAND. 5 cts.

GOD OR THE GALILEAN? By FELIX L. OSWALD. 5 cts.

THE SCIENTIFIC AND METAPHYSICAL METHODS IN PHILOSOPHY. By LEWIS G. JAMES. 5 cts.

THE RELIGION OF HUMANITY. By WILLIAM FREY. 15 cts.

CURRENT TOPICS.

BY B. F. U.

COL. INGERSOLL'S lecture in the Boston Theatre last Sunday evening on "Myth and Miracle" was in thought as well as in rhetoric and diction one of the best he has given in recent years.

DR. ANNA KINGSFORD, of London, is author of a work entitled *The Perfect Way*, in which, with much grace of style, it is said, she argues that life "is a series of reincarnations, by which the soul acquires its experiences; that the deeds and aspirations of our life predetermine entirely the quality of the next incarnation." This is a very old theory.

AMONG the numerous models submitted for the statue of J. J. Rousseau to be erected in Paris is one by M. Carrier Belleuse, which represents the philosopher in the fields, studying a flower which he holds in his hand. Rousseau was the author of a dictionary on botany, a fact which is not generally known; and his love of the country exercised an influence on his speculations.

IN consequence of the inauguration of compulsory vaccination in Montreal, one evening last week a mob surrounded the East Branch Health Office, and completely wrecked the building and broke the windows of the Central Police Station. "The constables then charged the mob, clubbing right and left, and succeeded in dispersing them, but not before they had wrecked the greater portion of the court-house windows, which are opposite the City Hall. The mob broke up into different bodies, and proceeded to wreck the windows of the *Herald* office and of the offices of the medical health officer, chairman of the finance committee, and public vaccinators."

AN educated Chinaman, Wong Chin Foo, who has lived in this country the past twenty years, asks: "Did all your Sumners, Lincolns, Phillipses, and Beechers,—did all such spirits die in freeing the negro, or have they also been blinded by race prejudice to think the torturing of Chinamen no inhumanity?" He affirms that "in no place in China or any other heathen nation would the in-

habitants be allowed by popular consent of law-abiding citizens to butcher gangs of defenceless men, no matter who or what they were." Courtesy prevents his suggesting that China send missionaries to the United States. The Chinese are noted for their politeness.

THE *Golden Gate*, one of the best Spiritualist papers published in this country, does not approve the use of the words "free thinker" in a way implying that Spiritualists are not free thinkers. It says: "Spiritualists are natural free thinkers, with the difference that they have attained to a positive knowledge of a future life. Given the necessary amount of proof, and all free thinkers must necessarily become Spiritualists." That Spiritualists have "attained to a positive knowledge of a future life" may fairly be questioned; but we do not doubt that many of them better deserve to be called free thinkers than some of those who regard themselves as free thinkers *par excellence*. Another class of Spiritualists there is who can in justice hardly be called free thinkers or any other kind of thinkers.

REFERRING to Francis W. Newman, the *Presbyterian* says, "Standing on the verge of the grave, he sees nothing but its darkness, and professes no hope of anything but 'to lie in cold obstruction, and to rot.'" This is the usual theological way of defining the position of those who, not satisfied with the proofs for the popular belief in immortality, have the honesty and frankness to say so. Prof. Newman's words are: "Especially, I never could make a dogma of life after death. For ten or fifteen years, I thought this to be a weakness on my part; and I diligently amassed all reasonable pleas on the side of the dogma. I barely account it, now for about nine years, to be unproved, but not disproved, and not to deserve inculcation as a truth until it has been accepted after such a free discussion of both sides as the religious (among us) never allow or dream of." These words show candor and love of truth, with a predisposition in favor of the doctrine of immortality, but inability to accept and unwillingness to teach it as proved,—a position quite different from that of one—if such a one there be, which we doubt—who "professes no hope of anything but 'to lie in cold obstruction, and to rot.'"

THE National Liberal League will hold its next annual meeting at Cleveland, on the 9th, 10th, and 11th of this month. Col. Ingersoll will be the chief attraction. Last year, he was elected president; and, although for months he made no response, neither accepting nor declining, his name was used with no protest from him, and, finally, he was persuaded to allow his acceptance to be announced. At the last annual meeting, it was evident that the movement for "repeal" had collapsed, and that only a new departure could save the League from the same fate. Although the "repeal" resolutions which had a few years previous driven Col. Ingersoll from the League were left unrescinded, and some bitterness shown toward those whose persistent opposition to the policy of the League was the cause of its defeat, it was well understood that

the talk about the repeal of postal laws was to be stopped, as was sufficiently indicated by the election of Col. Ingersoll. Indeed, the new leaders were not interested in continuing a policy that would bring neither members nor money. They, it is now freely stated by prominent members of the organization, East and West, have the past year been "running" the League with the use of Col. Ingersoll's name, for the money it has enabled them to raise for themselves. Some months ago, we made mention of the fact that their circulars declared that the object of the League was State secularization, and called upon all Christians and non-Christians, who believed that the State and religion should be separated, to render financial aid; and that at the same time the League, through its officers, was engaged in the work of combating Christianity, and advocating Agnosticism and "Secularism," thus professing to have one object and working for another, and soliciting money for one purpose and using it to accomplish a very different one. We now repeat what we then said: that, if the work of the League is to consist in a crusade against religion in general and Christianity in particular, or in the system known in England as "Secularism," the leaders should have the consistency and honesty so to state to the public, and cease asking Christians or others for money, on the pretence of wishing it only for the cause of State secularization. Furthermore, if Col. Ingersoll accepts the presidency for a second term, he ought, in justice to himself and to the liberal movement with which his name is prominently identified, to become the actual head of the organization, raise it above the enmities of the past and the selfish interests of a few individuals, make its work correspond with its platform and its official announcements, and the organization itself worthy of the support of the Liberals of the country.

THE German government has expelled thousands of Russians from its frontier provinces. Fifteen hundred people living in Königsberg alone, whose only offence is that they are of Russian birth, have been compelled to cross the German border. Large numbers of those expelled were merchants, who had, by years of hard work and honest dealing, established themselves in business. The amount of loss and suffering caused by this high-handed proceeding is enormous. The fact that no protest has been made by the Czar against this action, which has aroused intense indignation among many of the Russian people, and interfered seriously with the trade arrangements of Germans living in the frontier towns and cities of the empire, seems to indicate that the measure was known to him, and had his concurrence in advance, and originated in and has been carried out for political reasons. The object of government is to protect the people in the exercise of their rights, and to promote their well-being. When it orders outrages like that above mentioned, it is nothing short of a cruel despotism, sadly out of keeping with the high intellectual and moral character of the German people.

RELIGION AND THE MORAL FACULTY.

It is a common averment among theologians that the religious sentiment is man's highest prerogative, because it lifts man into vital communion and union with Supreme Being. But this is a fallacious proposition, unless it be understood that the religious sentiment is necessarily inclusive of the moral sense, and, still more, that the essential core, the *sine qua non* of vital religion, is practical morality. The proposition is untrue of religion and the religious sentiment in any sense as separated from ethics. If the religious sentiment and the moral sentiment are to be spoken of as representing distinct functions of the human mind, as commonly they are, and are thus to be compared together, then must the moral sentiment be placed the higher. It is, in fact, the saving power of religion, keeping it from its own ruinous degradations and abuses. The religious sentiment by itself, considered merely as a sense of relation to an overruling Power, is liable to fall into the grossest errors and excesses. History is full of its aberrations and wrong-doings. The pathway of religion in the world is paved with monstrous superstitions and immoralities. It is the moral sentiment that has lifted religion to its own possible heights. Only by the restraints of the moral law has religion been trained for its athletic tasks in the civilization of mankind. The moral faculty must be placed highest, because it brings the law to all the other human faculties and sentiments for their best use and service. Morality is not capable of any excess; but devoutness, in the ordinary sense of the word, may be superabundant and need control.

If only it were true that the religious sentiment actually lifted man into vital organic union with Supreme Being, the case might be different. That, in our view, is the real significance of genuine religion,—organic, vital relationship of the finite human life with the eternal, universal power. But, in this relationship, moral life is the chief factor. Too often, however, the religious sentiment, though its legitimate function may lie in this direction, has only served to lift man to commune with his own puny conceptions of Supreme Being. Only a few rare souls have felt the influx of a mental and moral life undefined and unnamed. For the most part, it has been man's habit to make his gods in his own image. Male and female created he them. They have been subject to human infirmities. He made them corruptible, temptable, false, licentious, ferocious, after the manner of men. Nor can it be truly said that all this belongs only to the mythology of the heathen religions, and is not to be found in the so-called revealed religions. Look at the character of Jehovah in the Old Testament. It is a magnificent conception in some of its features, but still a very human one,—a mighty monarch, arbitrary, resorting to stratagem and falsehood to accomplish his purposes, and capable of revenge, senseless wrath, and cruelty. And this conception of Supreme Being, though much softened in the progress of history, was reflected over into the New Testament, and, yet more, has cast its shadow down the pages of Christian theology.

Now, what has saved religion from those deleterious effects of its own misdirected development of sentiment and of creed-mongering? What has purified religion from its own historical corruptions? What but the steady growth in the human heart of the moral sentiment, and the increasing authority of the moral law as a supreme and all essential factor in religion? Religious reformers and prophets the foremost religious

teachers of all faiths, have made it, indeed, a chief part of their mission to recall the mass of the people around them from dependence on sentiment and ceremony to practical works of justice and mercy. Isaiah, Amos, Jesus, Buddha, Confucius, Socrates,—they all laid the highest emphasis on *right conduct* in the religious life. Faith, trust, belief, worship, were, to such teachers, good in their place; but they regarded the moral vision and the righteous deed as the highest evidence and crown of vital religion.

From the records of religion herself, therefore, and out of the mouths of her greatest teachers, may be drawn the proofs that the most priceless jewel in her diadem is the perception of moral law, and that she has nothing higher nor better to offer than rectitude of life. The moral faculty it is that judges and discards unjust schemes of theology, and emancipates the religious sentiment from a debasing thralldom to immoral deities. Whatever, in the light of increasing intelligence, the human mind may retain of the beliefs or institutions of the past, or whatever it may have to let go, one thing is becoming more and more clear,—that it must hold on to rectitude as the one pearl beyond price. Whatever conceptions may be entertained about the Infinite Eternal Power, this must come nearest to its essential life. Boldly, but truly, did Emerson say, "The safety of God, the immortality of God, the majesty of God, do enter into a man with justice." However wide and high the realm of religion, ethics is sovereign therein.

WM. J. POTTER.

WOMEN VOTERS AND OUR PUBLIC SCHOOLS.

I cannot let the occasion pass without expressing my heartfelt satisfaction at the tone which *The Index* has taken in heartily welcoming the new additions to the women voters on school matters in our city. Whatever the motives which have prompted this movement, the fact itself is to be accepted with joy, as a sign of increased interest in the welfare of the schools, and of a determination on the part of some, at least, of our fellow-citizens to take their share of labor and responsibility in trying to secure good management for them.

It is, perhaps, true that the large number of women who have asked for assessment lately, especially in the Sixth Ward, where there has been no voter before, represent the Catholic population; and many timid people have at once raised a cry of danger to the schools from sectarian influence. On the contrary, I hold it to be the best safeguard against division and sectarianism that men and women of differing faiths should interest themselves in the schools. It is those who stand aloof from them, and try to withdraw children from them, that we are to fear; not those who will come into convention with us, and help us to elect the best persons of any church or party to take care of the schools. Every intelligent Catholic, and there is a large class brought up in that faith who are liberal and intelligent, knows that the public school is more important to the foreigner and the workingman than it is to the wealthy American. It is the chance for his children to gain an education, which will give them a fair chance with any others in the battle of life.

We have already welcomed these children to the school bench, we gather them into our high and Latin and normal schools, we fit them to be teachers, and employ them in our schools. All this is right; and it is also right and most desirable that they should enter into the councils of the

school committee and in the discussion of principles and of interests that should there take place, should learn to defend their own rights, and respect the rights of others. If we demand of them, as we rightfully do, that they should come upon the board, not as Catholics, but as patriotic citizens seeking the good of all, not the ascendancy of a part of the community, we must apply the same rule to Protestants, and give no favor to any attempt to enforce doctrines or practices of any sect or church.

I see no danger from Catholic influence in the schools but what is called out by the claim of superiority on the part of Protestants. It is too late to say that this State was founded by and for Protestants. If they wished to found a theocracy, they should have laid their walls less broadly, and shut out the foreigner and the heretic from participation in the State. The true basis of our government is the entire freedom of the State from the Church and the Church from the State; and it is on this basis only that public schools can be maintained in a country where Jew and Christian, Mohammedan and Buddhist, Catholic, Protestant, Methodist, and Quaker have equal rights before the law. The Catholic Church is doing many good things, especially in the promotion of temperance and chastity. If it is now taking hold of the great movement of woman suffrage, and giving its sanction even to the present limited form of it, it is an ally to be welcomed.

I fear, however, that we must believe the disclaiming of the priests, who deny their sanction to the movement. They are not yet ready to come into it. I think it is an independent movement, partly political and partly prompted by interest in education, which has brought forward so many women at this time. I trust that the number will be raised to two thousand women voters this year, which, Judge Russell once said, was necessary to secure the safety of our schools.

I agree fully with Col. Higginson in considering the action of the majority of the women voters last year as unwise and unfortunate; but I do not think they acted from direct hostility to the Catholics, although one reason why I consider their action so injudicious was that I was sure it would lead to this charge.

I think we are indebted to another class of women for this large accession to our ranks this year,—to the remonstrants. They have helped on the agitation of the subject; and, by their assertions that the ignorant women would vote while the educated women would not, they have led both classes to consider the question. And the one class have rightfully asked, "Why should not I vote as well as another?" and the others have asked, "If I am better fitted to judge in this matter, is it not my duty to vote, and throw all the influence I can in favor of the best care of the schools?" I know of instances where this has been the direct effect of the action of the remonstrants. And, now, I want to say one word to these same remonstrants. I will not ask you to vote until your own judgment and feeling prompt you to do so, but I do ask you to take an interest in the public schools. You claim that women, without suffrage, possess a great power of influence. Will you not exert it to help in elevating the character of pupils, teachers, and school committee? I understand that you have organized societies, and meet to discuss these great questions. In our school suffrage societies, we urge our members to visit the schools, to become well acquainted with their spirit and methods, to give to the teachers encouragement and sympathy, to help to create a public opinion which shall demand the highest

moral character in our school committee. Will not you discuss these questions in your societies, and throw your influence in favor of liberal and upright management? If you do not approve of our way of working, I ask you to work in your own way. While you number in your ranks such women as Clara T. Leonard and Phoebe Adam and Kate Gannett Wells, you can wield a great power for good. And I am sure that you can contribute, even when not voting, as I believe we do only more directly by voting, to the purification and elevation of our school system, which is the great end we have in view.

So I hope we shall all work together in the coming election, and return to the board the able women and the admirable man who were lost last year, with the best representatives our city can furnish of the broadest and truest interest in education.

EDNAH D. CHENEY.

INFLUENCES ON OUR PROTESTANT RELIGION.

Calvinism, which has struck such deep roots into our democracy, was the product of a condition of society characterized by grievous inequalities and the fierce play of passions of hate and revenge. Its comparative inexpensiveness in making salvation depend on faith rather than on the performance of rites and works; its principle of equality in humbling, irrespective of station, all men before a divine potentate; its extension of the hope that, while the rich and noble held the kingdom of earth, the poorer classes, compelled to carry its heavy burdens, might possess exclusively, as elect, the kingdom of heaven in eternal glory and happiness,—these inducements constituted it essentially a religion to attract the common people. In settling the American colonies, this class transplanted the strong feelings which sustained Calvinism; but that its harsh features have remained unsoftened so long in the theology of the Church is striking evidence of how men, generally rational in other spheres of life, will continue formally to assent to religious tenets which exercise little or no practical influence on their conduct. The several reasons underlying the phenomenon in this country it is not within the province of the present article to give. It is with accelerating, not retarding influences we desire at this time to deal.

Potent and many have been the former evolved by the wonderful material changes of the past quarter of a century. Think of the sweeping revolution the civil war caused in the economic and social affairs of the Southern people, and, to a large extent also, of the people of the North! Think of the advancement made in improved facilities and methods for production, transportation, and communication; of the growth in trade, commerce, and manufactures, in wealth and culture! Think of the vast infusions into our population of foreign elements, with their more or less peculiar ideas, customs, and manners! These movements constitute a prodigious combination of causes effecting change in the conditions and beliefs of American society.

Moreover, scientific investigation has been throwing up from nature's fathomless mine fact after fact pregnant with mighty import to human power and thought. The expansion of every segment of knowledge has diffused a flood of light upon man, his nature, origin, and destiny. No marvel is it, therefore, that the decomposition of old religious beliefs and the composition of new ones, always at work in society, is more than usually rapid. For what is religion but one of the streams flowing out of man's consciousness? And what is his

consciousness but the product of the action on one another of internal and external energies? The perpetual revelation of facts and forces, the on-rushing stream of improvements, the new fast becoming old in the succession of something better, the feverish fluctuation, the constructing and destroying on every hand, emphasize the imperfection and mutability of things present, and impress the mind with a profound confidence in the self-sufficiency of man. These influences, with the sweeping play of the principle of equality, have weakened his veneration for authority, and perhaps unduly exalted him in his own measurement. The disappearance, therefore, of the virtues of humility and trust has been apparent; and a marked decline of reverence for the clergy, and of faith in a theology representing man devoid of self-lifting goodness, is naturally to be expected. An inquisitive, sceptical, self-assertive spirit has undermined the dogma of infallibility, applied anyhow short of the Unseen. The position to which the clergy are being driven by the forces of increased knowledge and cosmopolitanism is to subject the infallible Bible, which Protestantism substituted for an infallible pope, to the same test of individual conscience and reason as any other book. That literalism of ecclesiastical interpretation which killeth is dissolving in the sunlight of a spiritual, life-giving symbolism. The cosmogony of Genesis becomes a hymn to creation, and Biblical accounts, generally, of supernatural events legends fraught with allegorical significance or poetic beauty. Jesus takes his proper place as a symbol of what ought to be, an ideal son of humanity.

Calvinism rendered invaluable service in inculcating the principle anew that religion is an inward condition of grace. To belittle the externals of religion, and teach men the duty of self-examination, was the way of progress. And Goethe—incongruous though may seem the mention of that oecumenical genius in this connection—contributed vastly in the same direction, when, in *Faust*, he located the devil in the carnality of man. Notwithstanding the unprecedented interest in experimental science, the growth of the introspective element in the thought of this century is emphatic. The exhumed facts of scientific investigation are turned in a multitude of ways to the account of enhancing man's power to know himself, and, therefore, his power of realization. In the growth of this, the supreme end of knowledge, lies the grand resultant of the agencies contributing toward the perfection of the religious character of society. The method of comparative research, applied in all directions, has yielded an abundant harvest of spiritual as well as physical truth. The revelations in philology, literature, and ethnology, in chemistry, geology, physical geography, biology, medicine, political economy, emphasize the uniformity of cause and effect in all the movements both of mind and matter,—the unity of nature, of man, of God. They draw closer the relations between man and man, and between man and the lower animal and vegetable kingdoms. Great service have they done in hastening the reconciliation of apparently opposing interests and forces, in expanding the sentiment of brotherhood, and causing the human soul to feel akin to all the universe, from star to glow-worm.

What does all this advancement in knowledge, what do the increased power of locomotion and communication, and all the vast material changes wrought these later years in the conditions of American society,—what do they signify for the Protestant Churches so numerous distributed in its midst? To our seeing, the modification of religious belief and feeling, even within the orthodox

pale, is working rapidly toward the end which may be briefly expressed as follows:—

First. Full extension of the right of private judgment.

Second. Complete renunciation of the dogma of infallibility applied to the Hebrew Bible.

Third. Elimination of the polytheistic element, as embodied in the "mystic triangle" of church theology. There shall be one God, sending many sons to earth as saviors of man.

Fourth. Promotion of the pantheistic sentiment, accompanied with a proportional waning of the anthropomorphic conception of Deity.

Fifth. Disappearance, as a doctrine, of the notion of special providence, or divine interference in the course of events,—a notion which still lingers respecting apparently irregular phenomena whose laws of operation have not yet been definitely ascertained.

Sixth. As corollary to the above, disbelief in miracles as part of the Christian dispensation.

Seventh. Growth of the supreme attribute of love, manifesting itself in larger veracity, justice, charity, self-renunciation, faith,—faith in God, in man, in the constitution and drift of things.

GEORGE W. BUCKLEY.

HUMAN PROSPECTS.

The old theological or Oriental notion, which was diligently inculcated for so many centuries, that what is called the world, or creation, had an abrupt beginning at the dictation or fiat of some arbitrary, creative will a few thousand years ago, vitiated all thought, as long as it was prevalent. It narrowed and belittled the human or Christian mind in every way. It made of cosmos a cheap, temporary affair, a manufacture out of nothing, into which it was finally to relapse, when a certain scheme of salvation had been worked out. According to the chronological figures on the margins of the pages of old-fashioned Bibles, the world had been in existence exactly four thousand and four years, when the advent of the so-called Saviour took place. Taking a new departure from that event, it was to run on a certain number of centuries till the second advent of the Saviour aforesaid in the clouds, to gather the elect, a comparatively small and intellectually cheap crowd, when it was to collapse in a final catastrophe. The primitive Greeks, with their scientific intellects, knew better than to entertain the idea that something could be summoned into existence out of nothing, at the fiat of an arbitrary will. Standing on our little Delos-like isle of a planet, we now look out into the immeasurable star-depths, conscious that creation is the ceaseless play and activity of eternal forces, having infinite space and infinite time to deploy in, to use a military term. Onward and on flows the stream of creative might and power. Generation after generation of conscious beings arise and vanish on its current; but, still, the stream rolls on with undiminished might, with ever new generations appearing on it. Ten thousand years hence, on the surface of this planet, the verdure of spring will be as fresh as it is now. Down to a quite recent date, human progress was a blind groping in the dark, so to speak. Now, we can intelligently co-operate with the divinity that shapes our ends. Looking forth into outer space, our minds are expanded and dilated by the feeling infinite of eternal duration and limitless room. The history of our own planet and of all modes of life on its surface is a history of gradual and orderly evolution and development. We now see that human progress has but just commenced in earnest, that henceforth it is likely to be a grand triumphal march.

We now have a correct historic sense or feeling of orderly continuity and coherence. The theological haze has been dispersed, so that we see clearly, as from some mount of vision. We now know that there is no finality; that a gradual process of transformation is the lot of all things and institutions; that "naught may endure but mutability." To be sure, a given state of things may last for centuries, for many centuries; but, at last, it undergoes transformation. Where are the foremost historic races about which we read in the pages of such a primitive historian as the Father of History, Herodotus? They have become contemptible in every way. In the Persian of to-day, who would recognize the imperial race of the time of Herodotus, whose sway extended from the Indus to the Danube,—in fact, covering the entire area of primitive civilization? And, before Persian supremacy, the dynasties and priesthoods of the valleys of the Euphrates and Nile were in the foreground for century after century. Yet, long as was their control of human affairs, long as they represented the high-water mark of primitive civilization, they vanished utterly, and became the merest traditions; and their annals, recorded on baked clay (*terra-cotta*), are now interesting solely to the archaeologist. Yet the conservative Babylonian, Ninevite, and Memphite undoubtedly supposed that the institutions, priesthoods, and royalties of his day, in their environment of colossal architecture, were to be as enduring as man himself on the face of the earth, were to be *ne plus ultras*. No matter how tough-fibred and inveterate an institution, custom, usage, or belief may be, the time arrives at last when it becomes utterly obsolete, and must "go," when the *Zeitgeist* will disown and repudiate it. For all things are in a state of evolution and gradual change. But the human mind was not fully aware of this fact until recently. For instance, the great poet of liberalism and revolution in the early part of this century—namely, Byron—supposed that human affairs revolved in a vicious circle; that they were dominated by an inevitable fatalism and necessity, as by some omnipotent spell of enchantment, from which there was no possible extrication or escape; in other words, that there was no hope for human kind, because the future would only be a repetition of the past in *saecula saeculorum*. Byron had seen the tremendous spasm of oppressed humanity known as the French Revolution to disincumber itself of the incubus of priests, kings, and nobilities, and attain to an enjoyment of its inherent rights, end in a brutal and mindless militarism; to wit, that of Napoleon Bonaparte, which was finally crushed out by the reactionary triumph of the Holy Alliance. In view of this apparent failure of the Revolution in his day, and with his ignorance of the fact that radical changes are only evolved gradually, Byron, with his eye fixed on the ruins of Rome, the standstill Rome of the popes, wrote or sung:—

"There is the moral of all human tales:
'Tis but the same rehearsal of the past,
First freedom and then glory; when that fails,
Wealth, vice, corruption, barbarism at last.
And history, with all her volumes vast,
Hath but one page: 'tis better written here,
Where gorgeous tyranny had thus amassed
