All treasures, all delights that eye, ear,
Heart, soul, could seek, tongue ask."

But even thus soon, when only a little more than half a century has elapsed since the death of the great poet of pessimism and misanthropy, the ruined, papal, stand-still, weed-overgrown Rome, which he knew and used as an illustration to point his doctrine of despair and hopelessness, is no longer "the Niobe of nations," but has taken a new departure, as the civil and flourishing metropolis

of a united and liberalized Italy, being no longer merely the gloomy head-quarters of a close corporation of bigoted Italian priests. But, perhaps, in view of the current corruptions and venalities and frauds of our own politics and political parties, and the greed for lucre and the prostration of everything in the dust at the feet of Wealth, and the vast monopolies which Wealth creates here with its Caliban-like drudge, Labor, the observer may be inclined to adopt the pessimism of the Byronic verse, and say that the Great Western Republic, too, is to come finally to the same end and abyss which engulfed the primitive Roman republic. But the precedents furnished by primitive history are of little pertinence or significance in these days. We have reached too advanced a stage of development to refer to them as affording any reliable data whereby to cast our own horoscope as a nation. The primitive republics and kingdoms and hierarchies were realities which have forever passed away. The eye of the truly modern man no more reverts to the dead past for wisdom or knowledge to guide him. The world of to-day, or the modern part of it, has forever cut loose from the past, and is moving on a route of its own in its own way. All the live people of to-day are moderns in every sense of the word. Not but that the great American Republic may prove a failure. But humanity, with its future of uncountable years and centuries, will not prove a failure; nor will that freedom which is the birthright of organized spirit fail ultimately to be achieved and realized. Our popular government by universal suffrage or majority rule is only a step in advance of the old-fashioned, hereditary, personal governments. Our government is still personal, is still wielded by such persons as are shrewd enough to get themselves elected to be its administrators. It has all the cumbrous official machinery and expensiveness of the old systems of civil authority, and affords the means and temptations to all sorts of corrupt practices. The community is not yet in existence which is capable of real, rational self-government, which is a kind of government which will require little or no officialism or money to wield it. It is an ideal kind of government which the future is yet to realize. It will have arrived

"When the State House is the hearth,
And the Church is social worth."

Then politicians and party leaders and parties and all the social and political vermin which are engendered by contested elections will have disappeared; for the dreams and ideal politics of Plato and Christ and St. Augustine and Bacon and Campanella are yet to be realized on this planet, in spite of the seemingly ineradicable defects and basenesses of poor human nature. Meantime, the hopes and prospects of mankind are not staked on the fortunes and fate of any single community or any single cast of the dice of the Destinies, to borrow the personalities of mythology. The Eternal in the long run is found to have played always with loaded dice, and is always sure of winning. But we mortals, being short-lived, are impatient and anxious for grand results and accomplishments in our own brief day; and, not being gratified, we are inclined to give the game of human progress and development up as lost. The Creative Power, which is always in the present tense, and which pervades infinite time and space, is, unlike finite intelligences, patient, and can afford to be, because that Power is eternal. How shall we name that Power? One of the old Norman kings used to swear by "the splendor of God." Picton vaguely but sublimely calls it "the splendor of all things gathered into unity and expanded into infinite totality." At least, this is an all-inclusive formula. Meantime, the revelations of

modern science have produced a new kind of pessimism and despair. In the old, narrow, and limited nature of primitive knowledge and theology, with man and his earth central and a supernatural world, the abode of the Cosmoplast, or Creator described in Genesis, directly overhead, the situation was snug and comfortable for everybody who lived up to the requirements of the established articles of faith. Man was somewhat and somebody, and not as now a mere infinitesimal minnow in an infinitesimally little creek of a boundless universe.

The author of *Natural Religion* states the new pessimism, to which I allude, in the following terms, namely: "The more our thoughts widen and deepen, as the universe grows upon us, and we become accustomed to boundless space and time, the more petrifying is the contrast of our own insignificance, the more contemptible become the pettiness, shortness, fragility, of the individual life. A moral paralysis creeps upon us. For a while, we comfort ourselves with the notion of self-sacrifice: we say: What matter if I pass? Let me think of others. But the other has become contemptible no less than the self: all human griefs alike seem little worth assuaging, human happiness too paltry at the best to be worth increasing. The whole moral world is reduced to a point: the spiritual city, the goal of all the saints, dwindles to the least of little stars. Good and evil, right and wrong, become infinitesimal, ephemeral matters; while eternity and infinity remain attributes of that only which is outside the realm of morality. Life becomes more intolerable the more we know and discover, so long as everything widens and deepens except our own duration, and that remains as pitiful as ever. The affections die away in a world where everything great and enduring is cold. They die of their own conscious feebleness and bootlessness." Meantime, what if it is true, as Kant alleged, that space and time, boundless as they are, are nothing but modes of consciousness,—states of consciousness of ourselves, of us seemingly petty men? Is there any boundless universe in the absence of conscious spirit or organized intelligence? Is there any darkness or light, any sound or silence, any limitation or illimitation, without us, petty men, as factors? Let us, then, not be alarmed at the august revelations of science, but preserve our equanimity in the presence of the ever "widening and deepening" objective world, because the venerable dictum of philosophy is true,—that there is nothing great in the world but Man, and nothing great in Man but Mind. What are mere extension and bulk and distance, however great, to spiritual force or thought?

B. W. BALL.

WHAT IS EVIDENCE OF DESIGN?

"I cannot," a friend writes, "discover any flaw in the logic of your article on the Design Argument; but, if it be true that order, harmony, and adaptation are no evidence of design, why do we connect these qualities with intelligence, whenever we see them in works of art?"

This question, which is a fair and proper one, we will endeavor to answer. Works of art are evidence to us of intelligence, not, as is popularly supposed, because of their adaptations alone, but because we have learned by experience that they are the productions of intelligent beings. We trace the connection from design up to an intelligent being, because we have previously traced the connection down from the designer to the design. An artificial machine is proof of human agency, because we have learned man made the machine,

or because we know that other machines are constructed by man, and that the particular work referred to, while it is different from the productions of nature, has sufficient resemblance to other inventions known to be of human origin, to enable us to infer that it, too, was made by man. Had we not ascertained that men make machines, or, if the work in question did not resemble some of the productions known to be the result of intelligence, its existence would not be evidence to us of a human origin. We have seen a natural chair, formed of roots at the base of a tree, which was almost as convenient for use as though it had been constructed by man. But its fitness was no proof of design, because there was too little similarity between it and chairs made by man to allow the inference that it was the work of an intelligent being. Mere adaptation, however complex, is not necessarily evidence,—is not evidence *a priori* of design, of which it is a valid indication so long only as its authorship is known to be confined to human intelligence. So far, in answer to the above question.

It may be said, however, that when, for the first time, we see a work of art, we infer from its resemblance to other human productions that it was made by man; and, since there is some analogy between some of the productions of nature with whose cause we are unacquainted, may we not reasonably infer that the latter, like the former, have been produced by a conscious, intelligent, designing being? Thus, in its last resort, the design argument takes for granted what it aims to prove. The only point, as an able writer has observed, which the analogical argument in question is adduced to prove, is that "the relations subsisting between an Unknown Cause and certain physical forces are so far identical with the relations known to subsist between human intelligence and these same forces that similar intellectual processes are required in the two cases to account for the production of similar effects; and, hence, that the Unknown Cause is intelligent. But it is evident that the analogy itself can have no existence except upon the presupposition that these two sets of relations are thus identical." The point which the analogy is adduced to prove is therefore postulated by the fact of its being adduced at all, and the whole argument resolves itself into a case of *petitio principii*.

We do not wonder that F. W. Newman, himself a theist, says, "Design, represented as a search after final causes, until we come to a first cause and then stop, is an argument, I confess, which in itself brings me no satisfaction."

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

THOMAS DAVIDSON will lecture on "Giordano Bruno's Philosophy and Free Thought," in the German Masonic Hall, New York, October 30.

THE parlors of the Parker Memorial were filled and overflowing last Sunday at the opening session of the Science Class. President John C. Haynes congratulated the Class on the unexpectedly large attendance and the auspicious beginning of this season's work. "The Modern Method of Mind Cure" was the subject of an address by the writer of this paragraph, which was followed by an extremely animated and interesting discussion, in which Dr. E. J. Arens and Mrs. Arens, Dr. Dutton, Mr. D. H. Clark, Mr. William Mitchell, and others, participated. Next Sunday, Mr. Edward P. Adams will give a lecture before the Class on "Ventilation."

FRIENDS of Mr. M. D. Conway and of the Free Religious Association must not forget the literary and social festival in the lower hall of Tremont Temple, to-morrow, Friday evening. Doors open at 6 o'clock, supper at 6.30, Mr. Conway's address at 8. O. B. Frothingham has also announced his intention to be present, and will doubtless make a speech. Col. Higginson will preside. Tickets (50 cents each) for sale at *Index* office, 44 Boylston Street; and also by D. G. Craudon, 11 Hanover Street, and by Oliver Ditson & Co., 451 Washington Street.

"ORGANIC SCIENTIFIC PHILOSOPHY AND SCIENTIFIC THEISM" is the title of a work by Francis E. Abbot, Ph.D., in press, and soon to be issued by Little, Brown & Co., Boston. This volume, we understand, had its origin in two articles, published in 1864 in the *North American Review* on "The Philosophy of Space and Time" and "The Conditioned and Unconditioned," and in the lecture given last summer before the Concord School of Philosophy on the question, "Is Pantheism the Legitimate Outcome of Modern Science?" The object of the work is to show the revolutionary influence of modern science on modern philosophy and the logical results in the sphere of religious belief.

THE venerable Elizur Wright thus concludes a letter in the Boston *Sunday Herald*: "Free thought, free trade, self government, universal co-operation,—working inversely as the square of the distance, to be sure,—justice and human kindness are the destiny of the future, and, instead of destroying social organization and introducing universal brigandage, will finally make the cosmopolitan State itself better without a church than the Christian or any other church has ever been."

SAM JONES does not think much of unstudied sermons. "It takes just three things," he says, "to make up a good sermon,—thought, study, and prayer. Now, some preachers say that they don't have to study any. They say they open their mouths, and the Lord will fill them. Well, so he will fill them. Just as soon as you open it, he will fill it with air. That is all I know of that he will fill it with. There's many an old air-gun shooting round over this country."

ON his return from the Adirondacks to the White House, President Cleveland received this "message from the dead," which had been written by Mrs. Helen Jackson only four days before her death: "From my death-bed, I send you a message of heartfelt thanks for what you have already done for the Indians. I ask you to read my *Century of Dishonor*. I am dying happier for the belief I have that it is your hand that is destined to strike the first steady blow toward lifting this burden of infamy from our country, and righting the wrongs of the Indian race."

ON Sunday, September 27, there was in Montreal a procession of nine or ten thousand Catholics, the object of which was to induce God to take away the small-pox. The procession was headed by a beadle, in a felt hat and gold-braided coat, who carried a staff, like a drum-major. Behind him was a priest, carrying a crucifix, on each side of which was an acolyte, carrying a large candlestick and candle. Behind these came about thirty acolytes, each dressed in the white and black of his office, and bareheaded. Then followed three hundred little boys and, behind them, as many little girls, in charge of a dozen nuns. Next came six hundred young ladies, wearing blue ribbons, and about sixteen hundred matrons, of all ages, many of them leading little children.

Following them were some two thousand men, and then more boys and girls and women, "until," one account says, "the eye grew tired counting." The priests chanted prayers; and all in the procession, which wound in and out at different streets of the infected district, the people in the houses, meanwhile rushing to the doors to see it, carried rosaries, and said their prayers and chanted in turn. The procession finally closed by the return of the crucifix to the parish church where it had formed. "There could be no doubt," says the *Montreal Witness*, from which the above facts are taken, "of the fervency of those who took part." Of course not. And there is as little reason to doubt their deplorable ignorance in regard to the laws and conditions of health. While asking God to remove the small-pox, they were spreading it; and we are not surprised to learn that the number of deaths daily has largely increased since this procession moved through the streets. "What can science do for the people?" asked a clergyman of us, at the close of a lecture in Montreal a few years ago. What would it not do for the people, if priestcraft and superstition did not keep them in stupid ignorance, and make them believe and live contrary to its plainest teachings? We often hear of the good work the priests do. Who shall compute the evil they do in opposing science and the conditions of progress?

"POE NOT TO BE APOTHEOSIZED" is the title of a communication that fills the first columns of last week's *Critic*. It is a protest, supported by new testimony, against Prof. Minto's eulogy of the poet in the new volume of the *Encyclopædia Britannica*.

WE take the following from a Western paper: "Some years ago, a lady in Boston died. Her husband, being a strong Spiritualist, desiring to hold communication with his departed, inquired if she was happy. 'Oh, yes,' was the reply, 'I am happy here; yet, after all, it isn't Boston.'"

THE following beautiful and touching epitaph is from a churchyard in Massachusetts:—

"I came in the morning—it was spring,
And I smiled;
I walked out at noon—it was summer,
And I was glad;
I sat me down at night—it was winter,
And I slept."

VERITAS.

For The Index.

The rose thou gavest me,
O Truth, from thy full store,
Hath stolen a charm from thee,
And dropped it at my door!

I love the sweet behest
That urged the stranger in:
The flame of its unrest
Hath scotched the head of sin!

No more in aimless ways,
By shadows weird and dim,
Is life unmanned, through days
Transfixed in horror grim.

The wandering minstrel mine
Hath brought, with tongue and lyre,
A song of essence fine,
Transfused with godly fire.

My doubt no longer hies
To conjure with the Fates:
When now the stranger flies,
I leave the homestead gates.

The hours of youth were long,
To-day my bride hath come:
Well may my heart wax strong,
And Satan's lips be dumb!

HORACE L. TRAUDEL.

The Index.

BOSTON, OCTOBER 8, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

No WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

Misgovernment of Great Cities.

Read before the Liberal Union Club, Boston, May 23, 1885.

BY FRANK P. CRANDON.

Great cities are essential to the development of any important or influential national life. They gather into themselves the resources of the nation, and so organize its stores of wealth, its enterprise, and the results of its genius and culture as to render each efficient in promoting the common good. They are the centres of power. Without the facilities which through them are afforded for commerce and manufactures, without their aggregations of capital, their business systems and institutions, and their fostering care of art, science, and literature, it would seem impossible that there could be any civilization or progress.

These great municipalities are the exponents of the national advancement in material wealth, in commercial importance and influence, and in all forms of intellectual and moral culture. In times past, they have been the agencies through which civil and intellectual freedom have been conserved, even if they may not be credited with having been the nursery in which liberty was cradled. They constitute the medium through which we must study many of the most important and interesting phases of history, and are the sources of all the greatest enterprises of the world.

So thoroughly do cities become representative of national life and characteristics that it is frequently said that London is England, Rome is Italy, and Paris is France. In a less comprehensive but, nevertheless, very important sense, it might properly be said that New York represents America, Boston stands for New England, and Chicago for the great West. A thorough acquaintance with either of these great cities is equivalent to knowing well the people by whom they are surrounded.

Notwithstanding their important relation to all that is significant or influential in national history, it is nevertheless true that there has never been

developed anything which, even by courtesy, could be called a science of municipal government. Indeed, it is only within these latest years that the fact that there could be such a science has even been suggested. But the pressure has been constantly becoming more and more imperious. Monstrosities which are the legitimate fruit of the haphazard system, or rather lack of system, which characterizes the government of many cities, evils of administration and burdens of taxation that had become almost unendurable, the astounding frauds which have been brought to light within the last few years in New York and Philadelphia, and the usurpation of power by demagogues through the aid of the most degraded elements of society, have at last forced an inquiry as to what form of municipal government will most efficiently correct present abuses, and reduce to the minimum the opportunities for harm to the body politic.

Men begin to ask whether the municipal authority may not be so organized and administered that it shall promote and protect the interests of both the corporation and the individual; whether the evils which I have alluded to and others, equally apparent and subversive of the ends of good government, are inherent in our municipal system, or only incident thereto.

And some effort has been made to ascertain the principles which underlie a legitimate municipal authority, and the most efficient means of making the application of those principles practical. Not a very great deal has been accomplished by this study. The problem is complicated and many-sided. Its solution depends on the concurrent action of the wise and the patient and the self-sacrificing. But, whatever difficulties may embarrass the subject, we have good cause for congratulation in the fact that the problem is being studied, and not studied in vain.

The evils growing out of the misgovernment of cities may be grouped in two general divisions. First, those which are the legitimate fruit of systems which are in themselves vicious, and which can only be corrected by a radical change in the governmental machinery. And, second, those which result from the abuse and corrupt use of agencies which, in themselves, are proper and beneficent, but which in the hands of designing men come to be efficient aids of fraud, and the most obnoxious forms of wrong-doing. This class of evils can only be corrected by devising some means which shall keep the government in the control of its best citizens. Can this be done? And if yes, then how?

After first noting some of the difficulties of the problem, I shall endeavor to make a few suggestions as to the possibilities and methods of its solution. As a primary proposition, it may be stated that the lack of a general and comprehensive act of incorporation has been the cause of endless embarrassment and difficulty in the management of city affairs. In many States, the method of municipal incorporation has been by the granting of special charters. These charters possess no uniformity as to the powers conferred, but in each case represent such powers as the persons asking for them deemed it desirable to have, or such as the legislation could be induced to confer.

Frequently, it happened that neither the incorporators who were seeking charters, nor the legislators who granted them, were persons who had had such experience in municipal affairs as to guarantee that the corporations which were to be created would be possessed of needful powers and restrained by proper limitations. Ordinarily, almost as a matter of course, there would be found but little difficulty in starting off the new municipality, for its most obvious needs would have been

recognized and provided for; but, as little or no thought had been taken as to the future demands which would be made upon it, and no adequate provision had been made for the needs of a largely increased constituency, it would by and by be demonstrated that the powers and privileges which were amply sufficient for the small constituency were too limited when the growth of the city demanded increased facilities and improvements.

An attempt would then be made to meet these demands, not by abrogating the original act of incorporation and substituting for it such a system as should be comprehensive and sufficiently elastic to respond to all legitimate demands that should be made on the governing power, but by amendments and additions, and the substitution of boards and commissions, until the whole system became inextricably involved. We have, in this country, had an extensive and disastrous experience in this constant effort to meet new demands by supplemental legislation; but, so far as I can ascertain, we have not yet even approximated the achievements of our English cousins in this patchwork style of city government.

The English Municipal Reform Bill was passed, I think, in 1834. Since then there have been passed seventy additional acts, all of which are in force, and which are applicable to all boroughs. These are supplemented by nineteen further acts, which, to a greater or less extent, affect these municipal organizations.

In addition to these acts, I find it stated in a number of the *Contemporary Review* that there was, at least until recently, comprised within the limits of one Poor Law Union two municipal boroughs with town councils, eleven local board districts, three boards of guardians, twenty-four bodies of overseers, five burial boards, two school boards, and one highway board. In all, forty-eight local authorities, each acting independently, and having jurisdiction in the same territory,—a condition of things that would seem, in contrast, to render Babel a veritable haven of rest.

Our own experiments with this system of government by local boards and special commissions, whether these independent bodies have been created to meet some pressing need for which the organic act of incorporation did not make provision or whether organized in the hope of rescuing a part of the municipal machinery from the control of the Tweeds and McManeses and their disciples and imitators, have been alike disastrous: the first, because the *imperium in imperio* is necessarily self-destructive; and the second, because the vultures which prey upon the body politic will as certainly find the means to control these special organizations as they have hitherto found the means of dominating other governmental machinery; will man them with their own agents, and thus make them the subservient tools of a criminal regency.

Chicago struggled along under burdens of this sort for a good many years; but at last, in sheer desperation, it surrendered its original charter, together with all the ornaments with which subsequent legislation had decorated it, and organized under the general incorporation law of Illinois. So far as it has been tested, this law seems to have been wisely and intelligently framed; and, while it is adapted to the wants of small constituencies, it is sufficiently elastic to meet the demands of large cities. It, at least, possesses the important feature of making a single body responsible for the municipal government; and the executive becomes personally and directly responsible for the direction and administration of municipal affairs.

Under it, Chicago has thus far by no means attained to an ideal city government. Indeed, recent

events would indicate that it but illustrated how thoroughly a good agent may become prostituted to evil purposes. Nevertheless, the imperfections of our municipal government exist in spite of the character of its organic system rather than in consequence of it.

It is an important matter definitely to locate responsibility. When this responsibility can be subdivided among several independent bodies or is shared by the chiefs of various departments, it rests with no special weight upon any individual. But when it can be located, when the people can come to the derelict councilman or to the chief executive, and say, "Thou art the man," good men will always be more careful, and even bad men will become circumspect.

I am informed that Boston has recently made some changes in her municipal system, which, while they do not go so far in the direction of localizing responsibility in the person of the chief executive as is now true of the city governments of New York and Brooklyn, still largely increase the power of the mayor, and make him to a greater extent than ever before responsible for the conduct of municipal affairs.

I have very little doubt that you will find this change to have been in the right direction; and I shall be interested to note whether, after testing this principle, you will not be inclined to give it more emphatic application.

But no system, however good in itself, is self-executing. It is not enough that the government shall be founded on the right principle. Its administration must also be in the hands of trained and true men. This is a matter almost lost sight of in municipal affairs.

Men are selected for city officers for almost every other conceivable reason than that which should outweigh every other consideration; namely, their ability to discharge the duties that devolve upon them. They are selected because they are Republicans or Democrats or Mugwumps. Perhaps they are politicians, and must be paid for services rendered. It may be that they have influential friends who desire to provide for them in the public service, or for some equally insufficient reason they are placed in charge of interests for the care of which they are utterly incompetent.

A private enterprise, conducted on this plan, would soon come to a most disastrous result; and every intelligent man would declare that such a result was deserved and inevitable. But seldom is this rule applied in passing judgment on public affairs. There seems to be a kind of undefined belief that public interests can be cared for by almost any person, or that they can for the most part care for themselves; and, when disaster or evil overtakes us, we look for a remedy to some additional legislation or some new device rather than to the simple and common-sense plan of putting our affairs into the hands of skilled administrators. As to the methods of securing such officers, I shall have something to say farther on.

In the administration of city governments, we find misgovernment manifesting itself in so many forms that it would be impracticable to make note of all its phases. Nor would such an effort prove interesting, even if, perhaps, it might be instructive. To those pronounced and flagrant forms of misgovernment which arrest the attention of even the casual observer, I shall not at this time allude, except as I may suggest some method of correction. Permit me, however, to refer to some less obtrusive instances, which may not always be suggested to us in our examinations. And, first, let me note the liability to mistake, in connection with our public charities.

sentiment which pervades every rank and

condition of society, demanding that relief be given to the suffering and that the wants of the needy be supplied, is creditable to humanity. It has, too, most abundant opportunities for exercise. No proposition has been more fully confirmed by the experience of mankind than that "the poor ye have always with you." In many municipalities, the charge for poor relief is one of the heaviest items of expense. How to render this assistance so as to secure the greatest good and to do the least harm to those who are aided is a question very difficult of solution.

Public institutions, such as almshouses, hospitals, and infirmaries of various kinds, must of necessity be provided. In no other form can we meet the demands, which we have neither the right nor the disposition to ignore. These benevolences, however, are not always managed in the interests of either the inmates or of the municipality. Officers are appointed and dismissed according to their subservience to the appointing power. Employés who are utterly incompetent to discharge the duties devolving upon their positions, and others who are not expected to perform any duties, are carried on the pay-roll; and the semi-seclusion and retirement which seems to invest such institutions, to a certain extent, protects the details of their operations from public scrutiny. Complaints seldom receive attention, or are regarded as the querulous vagaries of an impaired intellect; and it is only in some of those spasmodic convulsions which occasionally rock to the very centre some city government that we obtain an inside view of these affairs. At such time, the public sensibility is apt to be shocked at the revelations which are made; and the people wonder that evils of such magnitude could have existed undiscovered in their very midst.

There is another form of public charity, which in the West we call "Outside Relief,"—i.e., temporary aid in necessitous cases,—which, in the aggregate, constitutes a very large expense, and the effect of which is not easily ascertained. Charitable aid in substantially this form seems to be a necessity in every community. Just how far it ought to be a gratuity is a matter deserving careful consideration. I am quite sure that this form of poor relief is frequently so administered as to encourage pauperism. It creates a class of dependants who become imbued with the idea that such support is an inalienable right. All stimulus to industry and thrift is lost, and "pauperism becomes a profession."

I have a friend who, at a time when there was great want and suffering among the poor of Chicago, established a free kindergarten, where, during the day, little children could be left by their mothers, who thus had freedom for any employment they could secure. This was continued until a change in business affairs seemed to obviate any further necessity for such a charity.

The school was then closed, and its patrons became indignant. There seemed to be no gratitude for favors received, but rather a sense of personal wrong in the withdrawal of what had come to be looked upon as a permanent arrangement for their benefit. It is a difficult thing to bestow a charity in such a way as not to do harm to the beneficiary. In so far as it is practicable, there ought to be some kind of *quid pro quo*. Aid granted should take the form of payment for some kind of service, even if the service be of no value to the donor.

Illustrative of another manner in which charities become perverted from their original beneficent purpose, I would refer briefly to a report as to the London Guilds, made by the City Companies' Commission, published not long since in the *Pall Mall Gazette*. These guilds or societies were originally benefit societies, or charitable associations,

and were under the care and protection of the city. In process of time, they became the trustees of various bequests made for securing an annual income to some charitable institution or purpose. The guilds were simply trustees of this property, never its owners. As years passed by, the operation of natural causes enormously increased the value of the properties under their care, so that they are now estimated to be worth from \$75,000,000 to \$100,000,000, and the annual profit about \$4,000,000. But the guilds, as trustees, only pay over to the charity fund the income on the original value of the bequests. As, for instance, where the rental of a certain realty was at the time the bequest was taken in charge of by the guilds \$100, it is now \$10,000. The guild, however, pays over to the charity the \$100, and pockets the \$9,900. Not a member of these guilds is entitled to a penny of this money. Yet, by a system of "payment of privileges," which is a polite way of saying the "purchase of a right to steal," these guilds, besides spending hundreds of thousands of dollars of these trust funds in banquetings and entertaining their friends in a sumptuous manner, pocket annually a handsome income for themselves.

The members of the guilds are, by virtue of said membership, invested with the municipal franchise, and are permitted to vote, either in person or by proxy, and thus are admitted to the very select number who control the affairs of the immense metropolis. Mr. Gladstone long ago characterized these guilds as associations for the cultivation of gastronomy, which occasionally gave a five-pound note to charity.

In a number of instances, like provision was made for the support of churches and schools in particular localities. The changes caused by the demands of trade long ago deprived both churches and schools of their constituency. But the farce of maintaining religious worship in one place and a form of instruction in the other is maintained, in order that the incomes appropriated to their support may not be sacrificed. The clergyman lives ten, fifteen, or twenty miles distant. He has no parish, and in some instances no congregation; but he comes to the church, and goes through a form of religious service once or twice on Sunday. In one instance, it was discovered that one man constituted the entire audience, and that he was paid a certain sum each week for playing congregation, while the clergyman conducted the service.

In the city of London there are several parishes whose limits do not extend beyond the walls of the church-building, but which are in receipt of very generous incomes. In an article on the Bank of England, by Henry May,—in the *Fortnightly Review*,—we are told that "this edifice [the bank] was greatly enlarged between the years 1770 and 1786, and was completed pretty much as it now stands in 1786, an act having been procured in 1780 to enable the directors to buy the adjoining church, land, and parsonage,—in fact, the whole parish of Christopher LeStock, to the rector of which non-existent parish the bank pays £400 per year to this day."

I am not aware of anything in America which parallels this condition of affairs. Our country is not as yet old enough for this, our conservatism is not of the right type, nor our veneration for such a class of "vested rights" sufficiently pronounced to afford favorable conditions for the existence of such abuses. I do not think it probable that they could maintain an assured footing among us. But we may be well warned against a system which tends in this direction, which is in itself vicious, and which must ultimately involve us in great embarrassments.

The efficiency and success of a municipal government depend in a great measure upon its police establishment. The protection of life and property, the security of peace and good order, the suppression of crime, and the arrest of criminals are the special care of this department. Failure in these particulars is a fatal defect. Success in this branch of the government would palliate and atone for many shortcomings elsewhere. So far as I am able to learn, our American cities have no well-organized and well-sustained police force. Perhaps Boston may be an exception to this statement. Almost everywhere, the police organization is used as a partisan political machine. The Republicans of Cincinnati and the Democrats of Chicago seem to vie with each other for an unenviable supremacy in this regard, and each seems likely enough in its turn to surpass the other. The difficulty is fundamental, and relates to the theory of organization. Appointments to the police force and promotion in the service are made at the dictation of professional politicians, and as a reward for partisan services. A failure to perform these services is equivalent to an application for discharge. Efficiency in the line of duty will not atone for a lack of zeal in elections, and skill in detecting crime is of less moment or value than skill in managing primaries and conventions. Thus, the *morale* of the force is constantly being depreciated. It is impracticable to appeal to its professional pride or its *esprit de corps*. And the members of the organization, instead of constituting a dignified and respectable department of the municipal government, degenerate into time-serving place-men. As a matter of experience, we have learned to expect at the end of a newspaper paragraph announcing the perpetration of a crime the assurance that no arrests have been made; and the comparative immunity of the criminal classes among us is a continual disgrace to our civilization.

The police system of some European cities is far more efficient than anything of the same sort in this country. Especially is this true of Paris. It may be objected that in the latter city the system is too efficient, and partakes too largely of a method of espionage and surveillance. I think that this objection would be valid. The Parisian police force would not be, and ought not to be, tolerated in Boston; but the reasons for this apply to some of the purposes for which the force is used, and do not apply to the plan on which it is organized.

I would make the police service a profession, in the same sense that the army is now a profession. Let its rank and file be composed of enlisted men, who should be subject to discipline and dishonorable dismissal for proper cause, in accordance with appropriate regulations adopted for the government of the force, but who could not be otherwise discharged. Let the officers be gentlemen trained to their profession,—men who hold a commission as honorable and desirable as that held by a military officer and subject to similar conditions. Let promotions be made for faithful and efficient service and in recognition of exceptional ability. Let the service be organized on the theory that it is a worthy profession for men of high character and ability, let it be lifted out of the domain of politics and take its proper position as a department of the city government,—which is in no way affected by the mutations which attend the annual elections,—and we would have, as a result, a police force which, either as to its *personnel* or the character of the work which it would perform, would be unexcelled.

The best method of raising the revenue necessary for carrying on the municipal government is

an intricate problem, and one which, at one time or another, has received a great deal of attention.

The systems in operation in different localities are widely different, and the proper discussion of any of them would not be practicable at this time. There are, however, two features of this subject which I am not willing to pass in silence:—

First, as to that class of *quasi* public corporations, such as street and elevated railways, ferries, gas companies, and the like, which derive all their privileges from the municipal government and are subject to its control. From modest beginnings, these organizations frequently grow to vast proportions, and their plant and franchise become a most valuable property.

When first introduced, the popular demand for this class of improvements ordinarily enables these companies to secure specially favorable terms from the municipality. As time passes, they become thoroughly established and wealthy, even if they do not become arrogant and defiant. Their contributions to the revenues of the city, however, continue to be based on the favorable conditions under which they were first brought into existence, and in no sense amount to a fair return for the privileges and immunities granted to them. In all such cases, the city might be protected by reserving to itself a fair proportion of the receipts of these companies, which should be in lieu of all other forms of taxation.

Under such an arrangement, the tax on the corporations would be determined by their own prosperity, being light when their earnings were small and larger with their increased ability to pay; and the city would receive a just return for the benefits it conferred.

Second, I would call attention to the exemption of certain properties from the payment of their share of the public burdens. I refer to the elaborate and costly church edifices which are so prominent a feature of every large city. Though I do not believe that the position is logically sound, nevertheless it is in accordance with the traditions of this people and in harmony with the principles on which our State and National governments are founded that buildings used for public worship should be exempted from taxation; and to this practice, as applied to modest structures of reasonable value, I do not offer any opposition. But it seems to me to be clear that the magnificent structures which abound in all our large cities cannot claim a place in this category.

It is scarcely a proper use of language to denominate them houses of *public* worship. Though they are nominally open to the public, still their appointments, their furnishings, the style of their services, their practically reserved seats, the restrictions as to the time of admission of any except pew-holders, and the accommodations provided for the public, all warrant the statement that they are really the private religious club-houses of wealthy parishioners, whose right to erect and maintain and enjoy them is unquestionable, but whose right to do all this at the public expense is by no means so apparent.

These institutions share in all the benefits of the city government, are protected by its fire department, are approached by streets lighted, cleaned, and paved at its expense, and, in the event of their unlawful destruction, the municipality would be liable to respond in damages for their full value. All this for the accommodation of a small fraction of the people! It seems to me that the value of these structures, at least so much of it as exceeds a certain reasonable limit, should be taxable. No principle is more firmly imbedded in our political system than that the support of religious worship and institutions shall be entirely

voluntary. The exemption of this class of property from taxation violates the principle, in that it is a forced contribution on the entire community to the extent of the exemption; and it is the less defensible in that the exemption is in favor of that portion of the community that could with the least difficulty meet its obligations.

If the matter was presented in the form of a direct tax for the support of the churches, it could not find any support in any quarter. Why it is the less objectionable because it takes the form of special exemption from a common liability, I am utterly unable to understand.

Another instance of the abuse of municipal authority (and the last to which I shall refer at this time) may be found in the legislation affecting railway corporations. The constantly increasing volume of railway traffic demands constantly increasing facilities for its accommodation. New railways are seeking entrance into, or a right of way through, all our large cities. The granting of new franchises as well as the regulation of the train service on all lines, the protection of those streets which are either crossed or traversed by railway tracks, and the construction of viaducts and bridges, are matters in which the municipality and the railway corporations are mutually interested, and which ought all to be considered and decided simply in accordance with their relation to the public interests.

As a matter of fact, the public interests have very little to do with such decisions. The railway companies have learned that any legislation which they may want, however necessary and proper it may be, and however much it may promote the general welfare, must be well paid for; that any privileges, however legitimate, which affect either their own interests or the interests of their patrons, can only be had by the payment of a price to the city government.

Within a few years, a certain railway corporation applied for a right of way into Chicago, on a route by which a great deal of the most valuable property of the city was seriously damaged. At first, no one seemed to think that the project could be *bona fide*; and, when it became apparent that the corporation was in earnest, it was still felt that it would be utterly impracticable for the company to secure from the city council such an ordinance as would enable it to carry out its plans. But the matter was in the hands of able attorneys and shrewd business managers. Step by step, it progressed, and finally became a consummated fact. It is freely charged and universally believed that the ordinance cost the railway company half a million of dollars. So far as I can learn, the charge has never been denied.

Within the last few months, another railway project was inaugurated. Application was made to the Chicago City Council in its behalf for an ordinance granting the right of way into the city, and for the right to lay its tracks in certain streets. The application was powerfully supported by one of the great railway organizations of the West, and as vigorously opposed by a rival company of equal wealth and influence. As the contest proceeded, it attracted very general attention and interest. In the discussions had in reference to the matter, it came to be openly asserted, both in private conversation and in the public press, that those members of the council who favored the proposed ordinance were in the pay of one corporation, while those who opposed it were classed as the paid agents of the rival company.

The idea that any members of the council advocated or opposed the ordinance on its merits, so far as these discussions were concerned, did not seem to present itself to any one.

I do not mean to affirm that the facts were in harmony with this theory. Indeed, it is very certain that the City Council of Chicago is, in part, composed of gentlemen of the highest integrity and character. But I notice these expressed opinions as indicating the standard of public sentiment. People have become so accustomed to venality on the part of municipal legislators that the first impulse is to interpret their official actions as the *quid pro quo* of money considerations, and experience proves that generally the theory is correct.

In support of my conclusions, let me quote a single paragraph from a pamphlet entitled "Problems of Municipal Government for Chicago," by Hon. D. L. Shorey, who has for many years been a member of the city council of that city, and who deservedly ranks among Chicago's best and ablest citizens. He says:—

"There is a wide-spread impression that a majority of the council is venal. Assuming that this is true, it certainly shows a very bad state of affairs, and that there is imperative need for reform in that body. The evil is even more dangerous than is generally supposed. The disease really exists elsewhere, and is only manifested in the council. There is an outside purchaser for every venal vote. In this case, the purchaser is the more dangerous man of the two. He is probably an officer in some moneyed corporation, he is sometimes a member of some fashionable church, stands high in financial and social circles, and is an influential factor in controlling public opinion. On the other hand, the council is largely composed of young and untried men, of moderate social distinction. Such men have neither the social nor intellectual fibre to resist a moneyed temptation,—and it is no marvel if three out of four of them are not able to resist such a temptation.

Mr. Shorey here admits judgment by confession, and his opportunities for knowing whereof he affirms are exceptionally favorable. Without waiting to determine whether, as Mr. Shorey says, the man who makes merchandise of a public trust is less culpable than the other man who purchases what the trustee offers for sale, we will, at least, agree that we have fallen upon evil times, if the public interests are to be subordinated to the office-holder's cupidity.

It is not strange if private corporations, finding that they can only obtain legitimate privileges and authority by the payment of a certain largess or bounty, attempt to secure, perhaps by the payment of an additional fee, perquisites and privileges which a proper regard for the public interests would deny them. The magnitude of this danger cannot be exaggerated. Private rights and interests are jeopardized, or, if maintained at all, are only so maintained at the price of an expensive litigation, which is a substantial denial of justice. Competition is prevented or crushed out by the potent agency of gold; and the public, bound hand and foot by its own trusted agents, is surrendered to the greed and avarice of private corporations.

(Concluded next week.)

CORRESPONDENCE.

WHAT IS FAITH?

Editors of The Index:—

I read with interest in your issue of August 27 an article by the senior editor, entitled "Faith."

While I have great respect for Mr. Potter and "faith" in his good intentions, I must protest against his use of the above word. "Faith," he says, "represents man's mental attitude when belief rests, beyond a question, on rational foundations."

Now, while I do not question Mr. Potter's right to

define the terms he uses, I do question the wisdom of his choice and the correctness of the definition itself.

Whatever else "belief resting on a rational foundation" may be, it most certainly is *not* faith, in the almost universally accepted meaning of that term.

"Faith," says Webster, is "belief, the assent of the mind to the truth of what is declared by another, resting solely and implicitly on his authority and veracity, reliance on testimony."

This is the first and most obvious meaning of the word, and of course does not necessarily include "evangelical or saving faith," which Mr. Potter says is the view usually accepted. This is the meaning the word has borne for ages, and is not in any sense the result of ratiocination, or "subject to and receiving the indorsement of science."

Faith and reason have always been regarded—and justly, too—as antithetical, as having nothing in common, the one ending where the other began.

Now, why Mr. Potter should take up this word,—worn out in the service of superstition,—burnish it up, transplant it from the age of miracles and moonshine into the broad light of the present day, and endeavor to make it do service in the cause of humanity, is not apparent, unless, perhaps, he imagines that some sort of theism is necessary; that humanity is not yet able to walk without crutches, and some kind of religion is an absolute *sine qua non*. If so, he is excusable, however positively I may differ from him in that conclusion.

Again, he says: "Faith is knowledge itself . . . become so familiar that it may be acted upon without thinking of the reason of the action."

If words have any meaning at all, to confound faith with knowledge is doing violence to language, is like confounding morality and religion. And no one ought to know this better than Mr. Potter himself. But he gives to faith a new meaning, thereby apparently hoping to make the word do service in a good cause,—the amelioration of man's social condition."

Why put the new wine of scientific sociology into the old bottles of ecclesiastical nomenclature? If "poetry is the grandest chariot in which king thoughts ride," why not permit Science to clothe herself in becoming garments, and ride in a chariot in which she can at least be recognized? What Mr. Potter misnames "faith" is simply confidence in the stability of Nature and the correctness of our interpretations of her, and cannot by any stretch of imagination or dialectical juggling be justly called faith. Under certain conditions, Mr. Potter says, "Truth and Righteousness are realities, and there is a Power in the universe ever working to give them the supremacy."

From this statement I must also dissent. Truth and righteousness are not "eternal verities," having a personality or even an objective existence. They are simply man's ideas of a correct and harmonious relation of things, man himself being the standard by which such relations are measured. Without the intelligent reasoning powers of man there would be neither truth nor righteousness. Man views the universe from his own stand-point, and—very properly, too—makes utility the criterion of morality. This he could not do, if truth and righteousness had an existence independent of him.

The theistic assumption that "there is a Power in the universe ever working to give them the supremacy" I regard as unproven. It contemplates a prearranged plan and an intelligent conscious Power working toward a definite end. If this power is said to be in the universe, then the statement is pantheistic. If outside,—supernatural,—then it is thinly veneered theism.

To my mind, "intuition, religion, conscience, and the wisdom of the prophets" may "give their assent to the proposition," but "experience, reason, science, and common sense" never.

"Doctrines once accepted as truth have been one after another announced to be superstitious, and have been discarded." Yes; and theism, too, bids fair to follow. The eye of Science is not dimmed in the glare of the great white throne, and the thunders of Sinai have no terrors for her.

Away in the dim recesses of antiquity, Isis and Osiris sat on the thrones of Egypt, and stamped their worship on the granite monuments of the Nile. Brahma, Vishnu, and Siva arose in India, and swayed the destinies of the human race. Majestic Jove and lovely Juno, from the summit of Mt. Olympus, flung the silver fetters that bound the intellect of polished Greece and martial Rome. For untold ages, the gods

have squatted like toads upon the world, and dwarfed the minds of men. But each in turn have joined "that innumerable caravan that marches to the silent halls of death." To-day, the Christian gods—Jehovah, Jesus, Mary, the Devil, and the Bible—are on trial. Shall they be an exception to all that have gone before? They are not without able advocates; but they are weighed in the balance, and found wanting. *Mene, mene, tekel, upharsin*, is written on the wall of fate; and they, too, must fold their tents like Arabs, and as silently steal away. And when the gods have all gone, have flitted away like birds of the night before the light of day, been banished to the Siberia of oblivion, what then? *Humanity will still be here*. Slowly struggling up from the mephitic atmosphere of ignorance, the slimy pool of superstition, and the bloody morass of religion, man will stand erect, and worship only the True, the Beautiful, and the Good,—the only trinity worthy of the name.

In that good time coming, man will no longer kneel in the dust before heavenly tyrants of his own creation, but, "emancipated, redeemed, and disenthralled," will stand firmly upon the apex of the world; woman, the queen of his heart, his equal, by his side; the banner of Reason unfurled to the breeze, kissed by the glad light of the sun of science; himself king of kings, lord of lords, and god of gods. There is much that might be said of modern attempts to galvanize the dry bones of "religion"; but, thinking that others may say it better, I refrain from trespassing further on your good nature.

Yours for human rights,

HARRY HOOVER.

PITTSBURGH, PA., Sept. 8.

[As stated in the article in question, it was our purpose to give to the word *faith* another meaning than that in common theological use. Words that have such a career in history as *faith*, *religion*, and the like, are not apt to pass out of existence; but they do take on new meanings suited to the progress of truth, and one method of progress is to give them new meanings. As to our friend's second criticism, his rhetoric, in the latter part of his letter, seems to deny his own logic. He protests against our statement that "Truth and Righteousness are realities,"—says that they have no eternal verity, but are only "man's ideas," etc., or creations of man's own intellectual faculty. But, in his picture of "the good time coming," he sees man worshipping, not any "tyrants of his own creation," but only "the True, the Beautiful, and the Good." It would appear, then, that "the True, the Beautiful, and the Good" represent something that is *not* of man's creation, but something, nevertheless, in which he cannot help believing. And this differs little from our own statement.—W. J. P.]

DID JOHN BROWN KISS A SLAVE-CHILD ON HIS WAY TO EXECUTION?

Editors of The Index:—

I am indebted to John Swinton for a copy of your journal of September 17, which contains an article by Mr. W. S. Kennedy on the origin of the story that John Brown kissed a little negro child when on his way to execution. Mr. Kennedy says that the original statement of this incident is quoted in my *Life of John Brown*,—a book that was published within a few days after the death of the hero of Harper's Ferry. I have not read and rarely seen that book for several years, but I remember that my sole authority for that statement was the correspondent of the *New York Tribune*. It should be remembered that the biography was completed on the day that John Brown was hanged. I had no time, therefore, to verify, by personal investigation, any of the statements in that book that were of recent date.

Mr. Kennedy quotes from a private letter from Mr. Sanborn the following words:—

"The child-kissing incident is a legitimate myth, but has no historical foundation, and, as I say, was physically impossible. Avis was a man whose word could be taken as to that. Moreover, Brown's first biographer, Redpath, who gave currency to the story, told me five years ago that it was not true. He depended on Ned House, the *Tribune* correspondent (as he said), and afterward he discovered that House had invented it. This agrees with what was otherwise known of House."

This is not a quite accurate statement of what I said to Mr. Sanborn. I never met Mr. House more

than once, and then he did not speak about that incident.

What I did say was that my sole authority for the incident was the *New York Tribune*, from whose correspondence that story was copied—if I remember rightly—word for word, and as a quotation. I first doubted the truth of the story some years after the death of John Brown, when I was informed that Captain Avis denied it. I never saw any public denial of it by Captain Avis, but trusted to the statement of a friend, who reported his repudiation. I was assured by some one of the Brown family, and I think also by Mr. Sanborn, that Captain Avis was a man of veracity, who sympathized deeply, not with John Brown, the Liberator, but with John Brown, the man, and that his word could be trusted. I never said that House had invented that story, but that Captain Avis' denial, as reported to me, with a rumor that I had heard confirming his denial, seemed to me a sufficient refutation of the story. As far as my testimony goes, therefore, the question of the authenticity of this story rests on Mr. House's statement, which was subsequently denied by Captain Avis. I did not give any other currency to the story than by quoting the most trustworthy journal in the country at that time.

Mr. House, I understand, will soon be back from Japan (or is already in this country); and, as soon as he arrives, I trust that some one will investigate the truth of this story.

I ought to add that I have not yet seen a copy of Mr. Sanborn's *Life of John Brown*. But there is no doubt in my mind that several stories told about John Brown, that were universally believed at the time, belong to the category of writings to which Colenso assigned the Books of Moses. They are "not historically correct." As soon as I can get the leisure, if I ever do get leisure again, to read Mr. Sanborn's work, I shall try to point out several other statements which may be termed legends of John Brown.

Very truly yours,

JAMES REDPATH.

[In regard to the incident in question, the *New York Sun* of September 27, after quoting from Mr. Kennedy's letter referred to by Mr. Redpath, says: "John Brown was hanged on Dec. 2, 1859. Mrs. Brown, accompanied by Mr. J. Miller McKim of Philadelphia, one of the early abolitionists of the Garrison-Phillips school, went as far as Harper's Ferry, whence, on the day preceding the execution, Mrs. Brown was permitted to go to Charlestown to see her husband, leaving Mr. McKim at Harper's Ferry. Mrs. Brown remained with her husband several hours in his cell, and then returned to Mr. McKim to await the arrival of her husband's remains. From her, Mr. McKim had learned the facts of her interview with her husband and many other events; and he had heard in conversation with others matters of interest in connection with the last hours of Brown. On the evening of December 4, Mr. McKim arrived with the widow at the *Tribune* office. Mr. Edward F. Underhill, who was then attached to the *Tribune*, was assigned to the duty of eliciting the occurrences which Mr. McKim had learned, and putting them into the form of correspondence,—as the more letters there were, the less could any individual in Virginia be suspected or detected as their writer. Mr. McKim told the story in question, not as an incident that he had himself seen,—for he had not been in Charlestown,—but one that he had heard from some person whom he could not name, and who, in his turn, had got it by hearsay. He distinctly declared that he could not vouch for its truth, but thought it might be true, and probably was true, as it would be characteristic of John Brown. The whole scene was intensely dramatic, and Underhill tried to maintain its quality in writing it out. How well he succeeded is evident from the deep impression it has made upon so many persons. But, in 1861, he had an opportunity at the jail in Charlestown of investigating the matter, and was informed by the jailer then in charge that there was no foundation whatever for the story; and he further said that, from his own knowledge of the surroundings at the time, it was impossible for the incident to have occurred. Many of the most dramatic events of history have probably originated in a similar manner, but the truth about them cannot always be established as clearly as in the present case." We are able to say, after corresponding with Mr. Underhill, that he indorses the *Sun's* statement as correct.—B. F. U.]

REFORM OF THE JAPANESE LANGUAGE.

Editors of The Index:—

It is rather a strange fact that the Japanese, while they speak a totally different language from the Chinese, and have the unexceptionable alphabet of their own, use the Chinese characters extensively in their writing. Although pure Chinese is used only in the highest style of the Japanese literature, yet the largest part of our literary works, which are intended for the general reader, are written in a mixture of Chinese and "Kana" (or the Japanese alphabet), called the "Kanamajiri" style. All our newspapers, for instance, are written in this style. In order to understand them thoroughly, therefore, we must be acquainted with many thousand different Chinese characters, each of them representing one whole word. The difficulty and inconvenience of the ideographic language need hardly be stated here. From the earliest age possible, our children are compelled to spend their time in enabling themselves to associate with each Chinese character its proper meaning. Oh, what a tedious and discouraging work it is! I sometimes hear that the American children are troubled with the irregularity in the spelling of the English words. But, if they be once informed of the labor of the Japanese children in struggling with the horrible literature of the Middle Kingdom, they will not, I think, complain any more of the difficulty of their spelling lesson.

Such being the case, comparatively few of our countrymen can get a thorough education in our (or rather Chinese) literature. Hence, the distribution of knowledge among the people cannot but be limited. Considering this state of things to be a great drawback in the progress of our country, some people in Tokio established last year a society called "Kana-no-Kai," whose object is to expel the Chinese characters entirely from our literary world, and substitute them by our own alphabet. The society issues, three times a month, a journal, in which everything is written with the Japanese letters. This journal is read and understood without difficulty by almost any of our countrymen, inasmuch as our alphabet consists of only forty-seven letters, and, moreover, our spelling is perfectly phonetic. The presidency of the "Kana-no-Kai" was offered to Prince Arisugawa, a nephew of the Emperor, and was accepted. The society has been so far a great success, the members being now counted by thousands.

There is another society, established only a few months ago, which is named "Rōmaji Kai" (or "Roman Letter Society"). The object of this society is also to abolish the Chinese characters; but, instead of replacing them by our own alphabet, it proposes to adopt the Roman letters. The chief organizers of this society are professors of the Tokio University. Since all Japanese sounds can be expressed by the Roman letters, and since anybody can be taught to understand the Roman letters in two or three months, the object of the society is far from being Utopian. Besides, as our intercourse with foreign nations becomes more and more intimate, it is very desirable that the majority of our countrymen should be able to understand the Western languages. The adoption of the Roman letters in our daily writing will be of great service for that purpose. At all events, the appearance of these societies almost at the same time clearly shows the fact that the Chinese ideography has had its day, at least in Japan; that it is inconsistent with the necessities of the modern civilization; and that, in spite of the desperate support which it receives from old customs and traditions, the time has come for its permanent departure from our literature.

Yours truly,

S. FUKUZAWA (a Japanese).

ITHACA, N. Y.

GEORGE ELIOT'S PRIVATE LIFE.

What some liberal critics would call the great mistake of her life, if not, as both English and American matronhood assert, the great blot on her character was her marriage to George H. Lewes. According to English law, the marriage was illegal. The wife of Mr. Lewes abandoned him after committing adultery. She felt, or pretended to feel, remorse for her conduct, and was received back into the household she had dishonored. Then some new seducer tempted

her to fly away from her husband and children. The home became homeless. By a technicality of English law, Lewes had forfeited his right to be divorced from his faithless partner, because, in a moment of compassion, he had received her back as his "lawfully" wedded wife. In this condition, as a twice-dishonored husband, he met with Miss Evans. He was fascinated by her, and she gradually became fascinated by him. There was no outward beauty on either side. Lewes was one of the homeliest men in Great Britain; and Miss Evans had no personal attraction, if we except the sweetness of her voice and the singular beauty of expression in her eyes. Each saw the visage of the other "in the mind." Miss Evans, repudiating the technicality of the English law, consented to be united to Mr. Lewes, went abroad with him, was married to him, we think, in some foreign city, and returned to England a kind of social rebel, frowned upon by all women except those intimate friends who knew her motives and never faltered in their friendship. As she never sought "society," and rather disliked it, she bore with exemplary patience all the social disadvantages of her illegal rather than immoral conduct. Seven years before her union, we find in one of her letters this remark about the novel of *Jane Eyre*, then the literary sensation of the season: "All self-sacrifice is good; but one would like it to be a somewhat nobler cause than that of a diabolical law which chains a man, soul and body, to a putrefying carcass." After her marriage, she wrote to her friend Mrs. Bray: "How any unworldly, un-superstitious woman, who is sufficiently acquainted with the realities of life, can pronounce my relations to Mr. Lewes immoral, I can only understand by remembering how subtle and complex are the influences which mould opinion." Whatever may be thought of the legality or morality of the connection, there can be no doubt it led to the happiest results to both parties. Lewes had been practically homeless for two years. There was danger that his children would grow up uneducated and uncared for. He was fast drifting into Bohemian habits. Four years after his new marriage, Mrs. Lewes states in her journal that their "double life is more and more blessed, more and more complete." A few weeks after, Lewes writes in his journal that he owes an intellectual debt of gratitude to Herbert Spencer. He says: "My acquaintance with him was the brightest ray in a very dreary, wasted period of my life. . . I owe him another and deeper debt. It was through him that I learned to know Marian. To know her was to love her, and since then my life has been a new birth. To her I owe all my prosperity and happiness. God bless her!"—*E. P. Whipple, in the North American Review.*

AN ELOQUENT PASSAGE.

In embryo, man lives all lives. The man of genius knows within himself the history of the human race. He knows the history of all religions. The man of imagination, of genius, having seen a leaf and a drop of water, can construct the forests, the rivers, and the seas. In his presence, all the cataracts fall and foam, the mists rise, and the clouds form and float. To really know one fact is to know its kindred and its neighbors. Shakspeare, looking at a coat of mail, instantly imagined the society, the conditions that produced it, and what it, in its turn, produced. He saw the castle, the moat, the drawbridge, the lady in the tower, and the knightly lover spurring over the plain. He saw the bold baron and the rude retainer, the trampled serfs, and all the glory and the grief of feudal life.

The man of imagination has lived the life of all people, of all races. He has been a citizen of Athens in the days of Pericles, listened to the eager eloquence of the great orator, and has sat upon the cliff, and with the tragic poet heard the "multitudinous laughter of the sea." He has seen Socrates thrust the spear of question through the shield and heart of falsehood, was present when the great man drank hemlock and met the night of death tranquil as a star meets morning. He has followed the Peripatetic philosophers, and has been puzzled by the Sophists. He has watched Phidias, as he chiselled shapeless stone to forms of love and awe. He has lived by the slow Nile, amid the vast and monstrous. He knows the very thought that wrought the form and features of the Sphinx. He has heard great Memnon's morning song, has lain him down with the embalmed dead,

and felt within their dust the expectation of another life, mingled with cold and suffocating doubts,—the children born of long delay. He has walked the ways of mighty Rome, has seen great Cæsar with his legions in the field, has stood with vast and motley throngs, and watched the triumphs given to victorious men, followed by uncrowned kings, the captured hosts, and all the spoils of ruthless war. He has heard the shout that shook the Coliseum's roofless walls when from the reeling gladiator's hand the short sword fell, while from his bosom gushed the stream of wasted life. He has lived the life of savage men, has trod the forest's silent depths, and in the desperate game of life or death has matched his thought against the instinct of the beast. He has sat beneath the bo tree's contemplative shade, rapt in Buddha's mighty thought; and he has dreamed all dreams that Light, the alchemist, hath wrought from dust and dew, and stored within the slumbrous poppy's subtle blood. He has knelt with awe and dread at every prayer; has felt the consolation and the shuddering fear; has seen all the devils; has mocked and worshipped all the gods; enjoyed all heavens, and felt the pangs of every hell. He has lived all lives, and through his blood and brain have crept the shadow and the chill of every death; and his soul, Mazeppa like, has been lashed naked to the wild horse of every fear and love and hate. The imagination hath a stage within the brain, whereon he sets all scenes that lie between the morn of laughter and the night of tears, and where his players body forth the false and true, the joys and griefs, the careless shallows and the tragic deeps of human life.—*From Ingersoll's Lecture on "Myth and Miracle."*

THE October number of the *Popular Science Monthly* is interesting and instructive. We can only give its "Contents": "New Chapters in the Warfare of Science, I. The Doctrine of Comets," by Andrew Dickson White; "The White Ant: A Theory," by Prof. Henry Drummond, F.R.S.E. (illustrated); "The Early Study of Plants," by Eliza A. Youmans; "On the Solar Corona," by William Huggins, F.R.S.; "The Relations of Railway Managers and Employes," by Dr. W. T. Barnard (concluded); "Tommasi-Crudeli on Malarious Countries, and their Reclamation"; "The Energy of Life Evolution, and How it has Acted," by Prof. Edward D. Cope (illustrated); "The Metaphysical Society," a reminiscence, by R. H. Hutten; "A Study of Recent Earthquakes," by M. A. Daubree; "The Trading-rat," by Mrs. E. D. W. Hatch; "Tissue Selection in the Genesis of Disease," by W. Henry Kesteven, M.R.C.S.; "Sketch of Prof. H. A. Newton" (with portrait); "Editor's Table: Official Science at Washington"; "Literary Notices," "Popular Miscellany," "Notes." New York: D. Appleton & Co.

HENRY JAMES' story, "The Princess Casamassima," is continued in the October number of the *Atlantic Monthly*. Mrs. Oliphant and Dr. Holmes each give additional chapters of their serials; and there is a pretty little Canadian story, "The Ogre of Ha Ha Bay," by Octave Thanet, author of "The Bishop's Vagabond." Mr. Warner continues his travels in the papers called "On Horseback," and Horace E. Scudder has a second scholarly essay on "Childhood in English Literature and Art." There is an entertaining paper, "The First Abbé Galant," narrating the life of an ecclesiastic of the seventh century, besides an essay on birds, and two poems, "Tacita," by James B. Kenyon, and "The First Guest," by Helen Gray Cone. Houghton, Mifflin & Co., Boston.

Among the articles of the *Sidereal Messenger* for September are: "Small and Large Telescopes," by S. W. Burnham; "Commensurability of Motion," by Asaph Hall; "Eclipses for Young Students," by H. A. Howe; "A Set of Tables for Computing Eclipses and Occultations," by George W. Coakley; and "Reports of European Observatories," besides interesting "Editorial Notes" on comets, meteors, eclipses, etc. (Carleton College Observatory, Northfield, Minn.)

THE leading articles in the bi-monthly *Christian Thought* for July and August are: "Is Prayer Reasonable?" by Dr. Noah Porter; "Capital and Labor," by Bishop Samuel S. Morris, of Michigan; and "The Vicarious Principle of the Universe," by A. H. Bradford, D.D.

Although this work has been eulogized by the secular press, it has been bitterly attacked by the greater part of the religious press, because the author, from the highest intellectual and moral grounds, denounces some of the superstitions which have crept into Christianity as essentially irreligious, and the men who, knowing better, teach those superstitions, as essentially dishonest.

The Religion of Philosophy; OR, THE UNIFICATION OF KNOWLEDGE:

A comparison of the chief philosophical and religious systems of the world, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By RAYMOND S. PERRIN. New York: G. P. Putnam's Sons, 27 and 29 West 23d Street. London: Williams & Norgate. 1885.

"A work which aims to teach a true conception of God, of life, and of morality."

"Mr. Perrin's able work offers a deep interest. . . It is a remarkable book."—*Morning Post, London, Eng.*

"There has not for a long time appeared any book in the English language which, from the purely intellectual and philosophic side of it, is deserving of a more careful study."—*Times, Philadelphia.*

"It is a work which appeals to the scholarship of the country."—*Prof. Youmans, in the Popular Science Monthly.*

"The author is no imitator. He has a well-defined theory of his own to advocate; and he advocates it with clearness and energy, and does not hesitate to give heavy blows at what he conceives to be the narrow views of most Christian theologians. 'The religion of philosophy,' as delineated, is not simply a scheme of thought; it is broadly and intensely practical."—*Wm. J. Potter, in the Mercury, of New Bedford, Mass.*

"The author makes a masterly analysis of Herbert Spencer's philosophy, and subjects his theory of the *Unknown* to a most close and searching criticism. It is an extraordinary work, one of the most important contributions from the press of recent times."—*F. S., in The Index, Boston.*

"Mr. Perrin writes with habitual good taste and unvarying decorum of the beliefs which he holds false in basis and spurious in sentiment. . . His sympathy is so frank and so thorough with the true sentiments of Christianity, his aim so high and his argument so modest and earnest, that even those who will repudiate his conclusions will find satisfaction and enjoyment in reading his pages."—*Sunday Herald, Chicago.*

*. Large octavo, extra cloth, 566 pages. Clear type. For sale by all bookstores. Price \$3.50. Also sent, postpaid, on receipt of price by

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

THE FREERELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to cooperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reelection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, Cambridge, Mass.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

F. M. HOLLAND, Concord, Mass.

ASSISTANT-SECRETARY.

MISS A. A. BRIGHAM, Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

The Secret of the East;

OR,
 The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

THE UNIVERSITY.

FOUNDED 1877.

A Literary and Critical Journal,
 published every Saturday,
 at Chicago.

The University is not the organ of any college; it is not distinctively an educational paper; but it aims to deal with living issues from the university standpoint,—to reflect the ripest American scholarship in its discussion of politics, religion, education, science, literature, and art in their various bearings. Its publishers solicit the subscription of all persons interested in the support of an independent exponent of liberal culture on a plan of superior excellence.

Price, per year, \$2.50; per copy, 5 cents. Special trial offer to those who see this advertisement. Send 25 two-cent stamps and receive The University three months on trial. Specimen copies—three different issues—will be mailed to any address for examination on receipt of 10 cents. Address

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
 " 13 " 25 " . . . 8c. " "
 " 26 " 51 " . . . 6c. " "
 " 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent., on the total as above calculated, will be made.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse.* Two Essays, by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address THE INDEX,
 44 Boylston Street, Boston, Mass.

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

NATURALISM vs. SUPERNATURALISM. By B. F. UNDERWOOD. 10 cts.

THE SCIENCE OF MORALITY AND THE APOSTLES TEACH? By F. M. HOLLAND. 5 cts.

GOD OR THE GALILEAN? By FELIX L. OSWALD. 5 cts.

THE SCIENTIFIC AND METAPHYSICAL METHODS IN PHILOSOPHY. By LEWIS G. JAMES. 5 cts.

THE RELIGION OF HUMANITY. By WILLIAM FREY. 15 cts.

AN AGNOSTIC VIEW OF THE DOCTRINE OF VICARIOUS ATONEMENT. By W. H. SPENCER. 5 cts.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

THE CHRISTIAN CHURCH AND WOMAN. By ELIZABETH CADY STANTON. 5 cts.

INAUGURATION OF LIBERAL LECTURES IN CANADA IN 1874. By ALLEN PRINGLE. 5 cts.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

Frothingham's Sermons.

The sermons are neatly printed in pamphlet form, and our friends who wish to do missionary work for the Liberal cause will find them admirably adapted to that purpose. To such as order them in lots of 25 or more, the price will be reduced to 3 cents. Single copies 5 cents.

BY B. F. U.

TWO PROMINENT men who died last week,—Thomas Talbot, ex-Governor of this State, and Cardinal McCloskey,—both men of intellectual ability and of unblemished character, were of Irish extraction, but natives of this country.

LAST Sunday, in Montreal there was another procession, "the procession of the holy rosary," designed to stay the plague. Between five thousand and six thousand persons were in the procession, in which was borne the same statue of the Virgin that was carried during the cholera year.

THE rivalry between St. Louis and Chicago finds expression often in the style of the following item from a paper of the former city: "Chicago girls never visit friends outside of their own city in winter: they don't like people of other places to see their tracks in the snow on the sidewalks."

AT St. Catharine's, Ontario, members of the Salvation Army nursed a victim of small-pox, and thereby spread the disease, and now insist on visiting patients. All the cases are those who have attended the meetings of the Army. A petition numerously signed has been circulated, praying the Salvation Army barracks be closed until the danger of infection is past.

SIR JOHN LUBBOCK's recent paper, read at the British Association, on the education of dogs, served to elicit some additions to the collection of dog stories, among which was one about a dog that growled at the bare mention of the late Conservative Opposition, and another of a dog that in three weeks learned to ring the door-bell, when he wished to enter the house.

THE New York World, in reply to a correspondent, says: "Thomas Paine died as he lived,—a devout and religious man. . . . Read his will (in which he bequeaths his soul to God, his Father, and his writings to his countrymen), and you will see that he was the founder of Unitarianism in this country, no more likely to change his views on his death-bed than his successor, the late Rev. Dr. Bellows."

THEODORE STANTON writes to the *Inter-Ocean*: "Albert Wolff said in the *Figaro* the other day that America was corrupting the artistic talent of Europe, that the applause of Paris was fast being outbalanced by the dollars of the Yankees. But, if the mature geniuses of Europe go to the United States simply to fill their depleted coffers, our budding ones come here for applause. The continent is, as I have often told you, covered with young Americans, often acting for nothing, sometimes even paying for a *debut*, who, loaded with the approbation of this very Paris, return home also."

SAYS the *Catholic Review*: "Our only safety is in Catholic schools, where our children will be free from the vassalage under which they have hitherto been laboring in our public schools; where our teachers shall be free, not only to give an occasional lesson in the catechism, but to give constant, positive instruction in their religion: they will not be afraid to introduce Catholic devotions and the beautiful Catholic practices and religious observances, which have such a powerful influence in moulding the character; in short, when the very atmosphere of the school-room shall be redolent of the sanctity, the beauty, and loveliness of their religion."

MR. GLADSTONE, who has assumed direction of the Liberal campaign in England, advises that no tests be imposed on the candidates, but to leave them as open a platform as possible. The question of female suffrage, among other questions, has taken quite a strong hold in some constituencies. In these both, the Liberal and the Conservative candidates are found committed to the bestowal of the franchise on women. In other constituencies there is a strong feeling in favor of triennial parliaments. Mr. Gladstone would have the Liberal candidates pledge themselves on such questions only when their rivals do the same. A canvass of the country will undoubtedly show, it is said, that a sufficient number of candidates is already pledged to the cause of female suffrage to raise that question to one of urgency in the next parliament.

IN the new French Chamber of Deputies, the Conservatives will number probably about two hundred and ten. Their gains are not due to any desire of the country for an imperial restoration. Those acquainted with the popular sentiment in France agree that but a small minority have any wish to see the Republic replaced by imperial or monarchical institutions. The check the Republicans have received is to be ascribed rather to widespread dissatisfaction with the Tonquin affair, the unwise management of the national finances, and M. Jules Ferry's generally unsuccessful administration. While the Conservatives will, as above stated, number about two hundred and ten, M. Clémenceau's party will number one hundred and twenty-four, and the Republicans of other shades two hundred and fifty, thus making M. Clémenceau's position somewhat like Mr. Parnell's in the English Parliament.

MR. J. ICK EVANS, formerly President of the Secular Union of Canada, and now President of

the Toronto Secular Association, informs us that "free thought in Canada is making much greater strides than is apparent in its associations. We cannot boast of as great things in either the local or national society as we could wish. The cultivation of free thought has not, so far, succeeded in producing close association. Strong individuality seems to lead free thinkers into isolation; and other causes, among which, I regret to say, cowardice may be mentioned, prevent co-operative work." It is in Canada as elsewhere: the growth of liberal thought is in the churches and outside of them. The modification of theological beliefs, and their replacement by more rational views, are continually going on. Liberalism may be advanced by wisely directed organized action of liberals; but, fortunately, it does not depend upon such action.

ABOUT three hundred ladies and gentlemen assembled last Friday evening at Chapel Hall to extend a welcome home to Mr. Moncure D. Conway after his residence abroad of more than twenty years. This reception was given under the auspices of the Free Religious Association. It was a delightful affair, long to be remembered by those present. Dinner was served at 6.30; and, about an hour later, Col. Higginson, who presided, introduced the honored guest in a speech full of wit and anecdote, in which he spoke of Mr. Conway, not only as a versatile writer and courageous advocate of intellectual freedom, but as the hospitable friend and entertainer of Americans in a foreign land. He expressed regret that the company was not able to welcome in person also Mrs. Conway, the only woman in England, he said, who was present to take the hand of Mrs. Besant when she came from the court-room where she had stood up to plead for the custody of her own child, refused her simply because she was an atheist. After a few words of thanks by Mr. Conway, Mr. O. B. Frothingham spoke in a pleasant vein of the guest of the evening. At eight o'clock, Mr. Conway proceeded to give an address on "Our Armageddon," a brief abstract of which is given on another page. The speaker was listened to with the closest attention, and his words elicited frequent applause. Miss Mildred Conway, a charming young lady,—scarce out of her teens, we should say,—accompanied her father, and was the recipient of many attentions. After Mr. Conway's address, the reception became informal; and this was not the least pleasant feature of the occasion. Among those present, in addition to the persons named, were the President of the Free Religious Association, Elizur Wright, Judge Holmes, Mrs. E. D. Cheney, William Lloyd Garrison, Prof. Dolbear, Louise M. Alcott, R. S. Perrin, author of *Religion of Philosophy*, Rev. W. G. Babcock, F. A. Hinckley, George W. Parke, John C. Haynes, J. L. Whiting, Cornelius Wellington, F. H. Henshaw, J. A. J. Wilcox, D. H. Clark, S. R. Urbino, W. H. Hamlen, D. H. Crandon, H. P. Hyde, Mr. Hurd of the *Transcript* and Mr. Tucker of the *Globe*, the Misses Todd, Cora Scott Pond, and many others known as friends of liberal thought and work.

THE SUNDAY QUESTION.

The Sunday question will not down at any ecclesiastical bidding. Religious journals like the *Christian Statesman* may labor to restore the old strictness of Sunday observance, Presbyterian and Methodist conferences may pass resolutions denouncing the increasing laxity of people with regard to their habits on Sunday, and timid legislators may be slow to amend the Sunday laws in the interest of liberal and rational ideas; but, none the less, the Sunday question will stay until it is settled aright. It will be settled, probably, by the process of evolution rather than by any sudden change. A new public sentiment is forming with regard to the keeping of the day; and, by and by, the statute books will be amended to suit the new ideas. Meantime, there is liability to gross abuses and injustices; and the statute books are setting lessons in insincerity and hypocrisy which are not edifying.

That the Sunday laws as they really exist in the different States are not observed is a matter of notoriety. It is public opinion that gives the Sunday laws which are kept, and not the statute books. Public opinion has arrived at that point that it allows travelling on Sunday for pleasure or convenience or recreation, though the laws still say that people shall not travel on that day except for necessity or charity. The horse-cars run on Sunday as on any other day, only perhaps, on most of the lines, having to make more trips to accommodate the increased patronage. On many railroads, steam cars are run. People of liberal religious views have long felt free to take a drive on Sunday; and people of orthodox views are now beginning to count this no great sin, and, in some instances, have been known to follow the example. Work of many kinds is performed on Sunday, not simply as charity or necessity may demand, but as public or private convenience may require. Sunday newspapers are printed in large numbers, and find a ready market. The milkman goes his rounds; and whenever, in New England at least, an effort is made to close the bakeries on Sunday mornings, it meets with such vigorous resistance from that large section of the community that depends on the bake-shops for the Sunday pot of baked beans that the endeavor soon ceases. Indeed, to many New Englanders, beans and pork for breakfast are as much a part of the sacred Sunday tradition as going to church.

It is evident that public opinion has undergone a great change as to what may be permitted and what may not be permitted on Sunday. Not very many persons would now be shocked by a walk for exercise on that day. To take the exercise on horseback or in a row-boat would be generally deemed very much more sinful. Recreation by a drive is judged even in evangelical circles quite leniently. A so-called "sacred concert" may be allowed on Sunday evening, but not a scientific lecture. People may now read quite miscellaneous at home or enjoy pictures and sculpture in a private house; but, to public libraries and art museums, the doors are yet generally closed in this country. People may talk freely on secular subjects and make social visits on Sunday, as once they could not; but a quiet game on one's own grounds is not yet permissible. A lady this past summer, at her seaside cottage, was begged one Sunday by her little daughter, weary of the day's monotony, to play croquet with her. The mother consented on condition that they should strike the balls as quietly as possible, so as not to disturb any one by the noise. While they were thus playing, a party of excursionists drove by in a wagon, some of whom openly exclaimed against such Sunday

desecration as croquet-playing. Their consciences allowed them to take their excursion to the beach or into the woods, but were shocked by the quiet game of the mother and child on their lawn. And, soon, a policeman actually stopped the mother and child at their play, saying apologetically that he was sorry to do it, but that his orders were to forbid all such games, they being contrary to law. This lady was no free thinker, but a member of the Episcopal Church; yet she could but feel indignant over a law which should stop this simple, harmless recreation of herself and daughter in their own yard, and permit the rather noisy excursionists to travel on the highway unmolested in their pleasure pursuit. It was not, however, the law that was thus partial: it was the unjust, crudely educated public opinion, which called for the enforcement of the law in part and permitted it to be defied in part.

No more effective method could probably be devised for getting the Sunday laws amended than to have them for a while rigidly and literally enforced. The shoe would then be found to pinch in places little suspected. Even the *Christian Statesman* party might find their comfort and personal liberty inconveniently invaded. Society has really outgrown the old Sunday dogma of Puritan days; and it would not now peacefully submit to the practical restraints which that dogma once enforced through the statute book, and which are still written in the law. The churches themselves would, probably, revolt to a great extent against such a literal interpretation and enforcement of the statute. And the reason they do not aid now in the attempt which liberal people have set on foot to bring the laws into closer harmony with the new public sentiment is their fear lest to amend the Sunday laws is but the entering wedge toward the entire destruction of the Sunday institution.

This fear, in our opinion, is groundless. An institution which runs back so far into human history, and is rooted so deep, is not easily destroyed. There is no demand that Sunday shall become like any other day of the week. There is something in the physical and mental needs of mankind that appears to have originated the day, and that may be trusted to preserve it. But the ways of using the day will inevitably change according to the changed conditions of human society and thought. The Puritan-Jewish observance of the day as specially sacred to God—as the "Lord's Day," *par excellence*—cannot survive much longer. Jesus' own text and practice may be quoted effectively against such observance. "The Sabbath was made for man, and not man for the Sabbath." Mankind need Sunday for their own good. Put to rational and moral uses, the day would yield inestimable benefits. Man needs the day, in the midst of his various labors, for physical recreation and for mental and moral upbuilding; for *spiritual* education, too, in the true sense of that word, as denoting that part of man which is above the mere propensities of animal life. An institution which, in the process of social evolution, man has thus created for his own good, man may be trusted to transform, so as to keep it useful.

WM. J. POTTER.

"THE TWILIGHT OF POETS."

As a thinker and a judge of poetry in the abstract, no one questions the ability of Edmund Clarence Stedman; but, were he even a Francis Jeffrey, the task he undertakes in the *September Century* would be a difficult one, if justice be dealt to all his contemporaries. In a magazine arti-

cle, so much of which is devoted to general remark and criticism, to attempt a fit mention or a just placing of a hundred authors is hazardous. Within so limited a space, it would be wiser, so it seems, not to individualize, but to treat of the elements and peculiarities which mark the poetry of our time. If, however, names must be mentioned, to place together those whose essential traits are similar and who are judged to be of the same rank, whether men or women, would render the matter less difficult.

Despite the large number of poetic writers of the day, there are many whose work could be justly characterized by the same two or three telling adjectives. With no very large amount of examination, most writers could be classified, and without great undervaluation of any,—the metaphysical, the artistic, the witty, and the humorous writers of *rondeaux* and society verses; those who utter from the heart, and reach it; the poets of nature; and the poets of life. Without regard to sex, were the authors of our country so ranked, justice to all would be more nearly attainable. The symmetric genius embraces, at times, the qualities of all classes in his work. Let such, if there are any, be singled out; and none, in the face of evidence, will refuse to acknowledge that he who compasses many elements with ease and elegance must, in a sense, be greater than he who compasses but one or two.

There is a distinction—not always noted—between the poet and the singer. The former may, and generally does, include song also in his gift; but it is quite possible for one who produces the most beautiful, popular, and enduring songs to be unequal to a high order of poem. His melodies, full of pathos and power, may long survive the poet's work in the universal heart; but, in the light of criticism, a discrimination seems demanded.

Referring to the women poets of America and of the time, Mr. Stedman says: "Their lyrics, sonnets, and ballads are feminine and spontaneous, and often highly artistic." Farther on, "The critic would be a renegade who, after paying his tribute to feminine genius in England, should not recognize, with satisfaction, what has been achieved by his own countrywomen." When the day of censors, as well as that of poets, dawns in England and America, we are sure that, on both sides of the ocean, the term *feminine* will be ignored, except as applied to the work of both men and women. The sexes, especially in literature, ought not longer to be divided as scrupulously as they once were in the old churches. The noblest, strongest, most famous of men, especially if poets, have a touch of the womanly somewhere,—in look, voice, manner, taste, or delicacy; while all notably great women, even if beautiful, graceful, gentle-mannered, have a certain masculinity in thought, word, or deed. So the true poet unites both elements in his work; but, in a man's poems, if he be not a true poet, the most weakly of feminine traits may prevail no less than in those of a woman lacking the divine gift. In the highest poetry, there is no sense of sex: the *he* and the *she* are lost sight of in the genius.

Its voice was such, a soul seemed next to mine,
Nearer than soul had ever come before;
My thought was sounded by a singer's line;
One lonely depth was fathomless no more.

Though searched as if by comprehending sight,
No sense of man or woman entered there;
I only felt with how divine a might
Genius asserts its presence everywhere.

It is not to be credited that the most faithful critic could, in a hasty production or one of moderate limits, give everybody just what he ought to have, or leave no one saying, "There is an

omission." Let any one do his best, it is impossible to avoid errors of omission and commission; and a just and noble nature is only temporarily annoyed, not permanently angered, at seeing strictures on his work, which, perhaps, his own maturer judgment had made before the manuscript was in the printer's hands. Such a man distinguishes between the outcome of malice, prejudice, or captiousness, and the sincere conviction and irrepressible feeling of an honest mind.

Both from the references in the September paper and from natural inference, we take it for granted that such writers as Mr. Cranch, Dr. Parsons, Mrs. Howe, and others, must have been referred to in a preceding article which has not met us. Mrs. Dorr's first volume was not issued till 1872, so that, without regard to age, her work would seem to belong to the period under consideration. Besides her name, we miss that of Mrs. Hopkins, author of the two signal poems, "Motherhood" and "Persephone," Mrs. Mace, Mrs. Whitney, Miss Spalding, Miss Kimball, and Messrs. Bessel, Collier, and Rich. Others may miss others.

We cannot feel that Mrs. Preston, with her clearness and simple strength, is a pupil of Browning's: far sooner should we think that Miss Perry might be a pupil of Tennyson's; but we do not recognize the pupilage of either.

No doubt, in Mr. Stedman's book, adequate space and praise will be given to Helen Jackson. The words of the paper are meagre for so large a genius. Since 1871, the writer of this article has seen no poem of H. H.'s superior or perhaps equal to the least memorable of the volume issued by Roberts that year; nor, since 1871, to our knowledge, has anything bearing her name been at all comparable to the masterpieces of her book. On this last, small as it is, an imperishable poetic fame is built; and more than one of its poems is, of its kind, unsurpassed and unsurpassable by any poet.

As to the present period of poetry, we are at a loss to understand why so much anxiety is expressed at the twilight. What harm would ensue, if no more mighty poets should arise, and our country produce nothing like the past? Have we not enough fine old music? Will it ever wear out? We do not believe that the ages will produce another Bach or Mozart or Beethoven or Mendelssohn; but who need mourn about music? Over and over and over again, their beauties are repeated in our ears, at home and abroad, alternating with the light and sweet measures of later and recent composers, some of whom hold their fame in their hand, and yet are happy, and can make us so. Why should it be otherwise, if our great poets of the past fail to be succeeded by great poets of the future?

On the other hand, let not the abundance and fertility of seemingly insignificant writers be a matter of too much moment; nor is it that with Mr. Stedman.

We wonder, however, that it does not occur to the reflective that this twilight of poets is largely due to the twilight of editors and reviewers, who are encouraging the false, the light, the weak, the meretricious, if it be elegant, and are repressing the true, the strong, the original, the permanent, if it be rugged or from inconspicuous sources. When those who judge of poets have the far-sightedness to look beyond their century, or, having that perspicacity, use it, and defend, with all the boldness of selection and criticism, whatever is excellent and of lasting elements, without respect to name, then may the dawn be looked for. Any person of clear, impartial judgment must perceive monthly and weekly some things of mediocre value

in our best periodicals; and no fact is more patent than that the *who* often, too often, makes the value of the *what*. A different order of things in our literature is not to be effected by incisive criticism alone. The frequent publication of things not worthy their place is just so much silent but active opposition to healthy critical influence; just so much substantial encouragement to flimsiness, imitations, trivialness of thought and style. Editors and critics have a hard time of it. As it was once said of the skillful surgeon's requisites, so may it be said of them, that "they need a lion's heart, an eagle's eye, and a woman's hand." To be in the highest sense successful, to be the means of ennobling a literature, they must work under the guidance of even-balanced justice. Equity and courage should equal sagacity and learning. The less they are controlled by fear and policy, the bolder they are in rejecting—if it be poor—what comes from friendly or influential quarters, the more they are doing to bring about the desired day.

Merit cannot always be the sole consideration: it is not human to expect that. But ought it so often to stand behind diplomacy?

Without a doubt, there are in all our large cities one-sided, prejudiced, incompetent reviewers, receiving, some of them, goodly salaries for—what? Helping indirectly, and perhaps inadvertently, to depress, if not crush out, real desert and power, and elevate that which is only gaudy and ephemeral. We are not personal. Clippings and opinions meet us from unknown sources; and, where we find no names, we can be suspected of no individual bias. Nor is the injustice ours to depreciate the large amount of excellent criticism and material for it, which current books and papers contain. What we decry is the tendency—despite all excellence—to foster and advance such work as attains only mediocrity, and to ignore what rises above it, and has the power to aid in regenerating contemporaneous literature.

With the critics and editors, again we assert,—nor merely through the criticism of the pen, but of selection,—it largely rests whether the day of poets shall dawn soon or late.

CHARLOTTE FISKE BATES.

EVOLUTION.

I.

To the popular mind, the theory of evolution is simply a theory that man descended from the ape; and it is the popular belief that a confirmation of the theory depends upon the possibility of finding the missing link,—in other words, the fossil remains of the ape-man of the later tertiary or early quaternary age. And there is an equal confidence and readiness shown by the generality of mankind in giving an opinion of the probable truth of this theory that there is shown in giving an opinion of the weather probabilities of the morrow, seeming wholly unconscious of the fact that a person's opinion relative to the theory of evolution, unsupported by some previous study of the subject, is entitled to just as much consideration as it would be entitled to, and no more, if it related to the differential calculus or the science of conic sections, with a similar lack of mental training in either of these sciences.

Uninformed minds are conscious of an inability to apprehend the latter subjects without study, they being purely intellectual ones; but feeling enters as one of the factors whenever the science of evolution is presented, and persuades them, in accordance with mediæval teachings reaching down to us, that she is a divinely commissioned guardian of the soul, and competent, unaided by

reason, in all questions involving the soul's welfare, to sift truth from error. To persons of this class, it will perhaps be a matter of surprise to learn that the genetic line of our race, as demonstrated by Darwin in his *Descent of Man*, is only one of the many converging lines whose common focus forms the basis of the doctrine of evolution. In the year 1842, the great English philosopher, Herbert Spencer, published his *Letters on the Proper Sphere of Government*, in which he pointed out the modifiability of human nature through adaptation to conditions,—conclusions reached, as he says, from the theory of Lamarck thus applied. In 1850, he published his *Social Statics*, in which the same general ideas are more elaborately worked out. In 1852, in an essay, he first pointed out the increase of heterogeneity as a trait of development, and recognized this principle as applying to other orders of phenomena than those displayed by individual organisms. In 1855, he published his *Principles of Psychology*, in which this principle takes an important position, joined with that of integration. In 1857, he first advances his theory of evolution though somewhat crude in form; but, in 1861, in his *First Principles*, it is presented by him in a form closely approximating in definiteness to the one reached in the later edition of 1867.

Evolution is a term he applies to a persistent and never varying method of change in operation throughout the whole universe, embracing matter and life in all of its forms, and, as resultants of life and its environments, civilization, language, art, religion, and law.

The following is his definition of this principle, which, unfortunately, the exactness required by science will not allow to be clothed in simpler and more familiar words:—

"Evolution is an integration of matter and concomitant dissipation of motion, during which the matter passes from an indefinite incoherent homogeneity to a definite coherent heterogeneity, and during which the retained motion undergoes a parallel transformation."

Conversely, dissolution is a disintegration of matter, a passing from the definite and coherent to the indefinite and incoherent, from the heterogeneous to the homogeneous, an absorption instead of a dissipation of motion. As man is composed of matter, it naturally follows that he and his development come within or under this law.

Now, this is the doctrine of evolution; and whoever can prove that matter and motion do not act in this manner can disprove the doctrine without depending upon the negative evidence of the missing link to disprove it. But, as the ablest minds opposed to Mr. Spencer have, during a period of twenty-four years, failed to disprove the truth of this formula, the outlook for its accomplishment by any one is not very promising.

In the year 1859, the great English naturalist, Charles Darwin, published his *Origin of Species*. The conclusion reached in this work, the result of twenty-eight years of study of animal and plant life, is that the different species of animals and plants, instead of being specially created and immutable, are constantly changing in the effort to adapt themselves to their changing environments; that, though animals and plants are, in the main, rigidly confined to ancestral forms, yet that there goes along with this a tendency to variation, which variation, in the struggle for existence, ever present through the excessive fecundity of nature, if useful would protect its possessor and enable it to survive and multiply at the expense of others, and those possessing variations the reverse of useful. So important and far-reaching is this principle that Darwin considered it capable of explaining

how all forms came from a few low forms of life. In 1871, he published his *Descent of Man*, in which he demonstrates that the origin of man and his development come under the same law as that governing all other forms of life. Breaks or gaps in the genetic line of the race are satisfactorily bridged over by the genetic line of the individual; for here embryology comes to our aid,—a fact that is fully dwelt upon by Darwin,—and shows us that every human being in his pre-natal life begins as a single cell of homogeneous protoplasm, structurally corresponding, after it has passed to the amoeba stage, to one of the lowest and most primitive forms of animal life known on the earth, belonging to the lowest sub-kingdom, Protozoa,—a sub-kingdom to which all life seems to have been restricted during the Laurentian period. Haeckel calls this simple, one-celled animal amoeba. The human amoeba, like its prototype within its parent matrix, the primeval seas, nourishes itself with nutritive fluid from the parent body,—to which it is simply attached, and which bears the same relation to it that the sea does to the latter,—reproduces its kind until it becomes an aggregate of homogeneous cell animals. Then, in accordance with Spencer's law, the process of integration continues; and the whole mass of individual organisms begins to act as one organism, with an increasing tendency to differentiation and coherency of parts and heterogeneity of structure. Thus, this aggregate of human amoebæ—giving, as it were, an epitome of the life history of the race—passes successively through the fish, reptilian, lower mammalian, and ape-like forms, before it reaches the present or human form.

This process of integration can be better apprehended by studying the structural relations of a worm of the sub-kingdom Annulosa, of which the centipede is one of its representatives. Here, we find an animal whose body is marked off into segments; and each segment, in individuals of the lower group, is furnished with a circulating system and with what corresponds to a heart, a nervous system and a nervous centre answering to a brain; and, with individuals of the higher group, each segment is furnished with limbs. Typically, each one of these segments is a distinct animal; but integration has gone so far that the group or colony of segments has become substantially an individual. The anterior segments, through their advantageous position, have usurped the functions of food-getting and ingestion. The exercise of these functions necessarily develops perceptive faculties, among the highest of the nervous system; and these powers, not being called into a similar activity by the middle or posterior segments, are gradually usurped by the anterior segments, or head.

This division of labor or function proceeds in exact proportion to the animal's rank or position in zoological classification. Thus, some of the segments, through some peculiar advantage of position, employ themselves with the more complete preparation and assimilation of ingested material furnished them by the anterior segments, and in time usurp the function of digestion; while others concern themselves with the functions of reproduction and the disposing of waste and unassimilative material. We have found that each segment is typically an individual; but, on a closer examination, we perceive that each segment is typically a compound animal also, composed of a mass of individual organisms or cell animals, which can be likened to soldiers that form a company; while the segments can be likened to the companies formed into a regiment, the whole forming a battalion; while the different functions of the whole organism can be likened to the dif-

ferent departments of an army,—the general or head that directs it, the commissary department that feeds it, the transportation department that moves it, and the recruiting department that replaces the wasted and spent units.

That the segments of the centipede are typically distinct animals can be shown by dividing through the middle the body of an earth worm, an organism in which integration has not advanced so far as in the centipede. If the earth worm were an individual, the animal would die under this ordeal; but, being an aggregate of segments or individuals, the segment next to the line of division on that portion of the worm bearing the head, instead of remaining a middle segment longer,—that is, one closely concerned with the function of digestion,—now closes up the wound, and assumes the activities of a caudal segment, while the corresponding segment on the other portion, or the one bearing the tail, closes up the wound, and assumes the activities of the anterior segment or head. Or, in other words, a head grows on the headless portion, and a tail on the tailless portion, and two perfect worms in the place of one the result. We therefore find that, instead of dividing an individual, we divide a community. In a future article, the endeavor will be made to illustrate more fully the truth of Spencer's formula by its application to certain phenomena familiar to all.

J. R. MORLEY.

"THE POWER NOT OURSELVES."

In *The Index* for September 24 there is an article entitled "The Power not Ourselves" an Intelligent Power," which interests me deeply. In it, Mr. Potter maintains—in my opinion, with excellent reason—that the energy which constitutes the universe is intelligible. In this, he runs directly counter to Mr. Spencer. He further thinks that "the question may be raised, with no little assurance, whether there is not a logical necessity that any arrangement of things which responds to human intelligence as an intelligible order must have had, in some way, a kindred purposive intelligence in the energizing and organizing power that has produced and still sustains them." Nothing could be fairer or more free from dogmatism than Mr. Potter's position. And yet it is by no means a position of indifference, for he says that "this may be considered as the pivotal question in modern philosophy." And he is right.

Now, I may perhaps contribute something to the solution of this "pivotal question," if I ask a few pointed questions with regard to it, and request the readers of *The Index* to consider and answer them.

(1) What reason have we for supposing that "the power not ourselves" is one and not many?

(2) Granting that this power could be shown to be one (either by logic or experiment), what is the ground of individuation; in other words, what intelligible principle is it that produces in the one power those differences which define what we call individuals?

(3) Why might not a multitude of *ultimate* individuals, more or less like ourselves,—individuals in different stages of development, but all capable of activity and passivity (*παρὶν καὶ πάσχειν*),—produce all the phenomena about which we know anything? Why is not the universe a manifold or complex of spiritual monads or souls, acting and reacting upon each other, as Petöcz thinks, or, in the words of Drossbach, a *Göttergemeinschaft*?

(4) Seeing that all evolution involves mutual involution of elements, would not this hypothesis

explain the facts of nature better than that of a single principle?

(5) Supposing the energy of the universe is shown to be multiplex, what, then, will constitute the unity of the universe? Is it other than unity of space and interaction?

(6) In what sense is the power or complex of powers behind the "intelligible order" of the universe intelligible? In its essence? In its action? In its purpose?

(7) In what sense is order more intelligible than disorder? Is disorder intelligible?

(8) Could anything *be*, and yet be unintelligible? If so, how should we know anything about it? Is not being synonymous with intelligibility, as the Schoolmen and Rosmini hold?*

(9) If, as Mr. Potter says, the intelligible order of the universe is only an "exhibition" of the power that is "behind or within" it, and that power is consequently intelligible, does it follow that it is also intelligent? This resolves itself into the question, Is the intelligible necessarily intelligent? If this question be answered in the affirmative, it will follow that there is nothing in the universe that is not intelligent, since there is nothing that is not intelligible.

(10) If the intelligible be necessarily intelligent, why is this so? Does not intelligibility simply imply the existence of a power *capable* of understanding rather than of one actually understanding? In other words, is not the correlate of intelligible intellective, not intelligent?

(11) Is not the necessary correlate of the intelligibility of the universe to be found in the indefinitely progressive intellectivity of man? And is this not what we imply, when we say that the universe is intelligible?

(12) If the intelligible be necessarily intelligent, since the intelligible is multiplex, must not the intelligent also be so?

(13) If all that is is intelligent (being intelligible), is everything that takes place in the world—*e.g.*, the fall of an avalanche which buries a village—an intelligent action? If so, are the actions of madmen also intelligent actions? And are reflex muscular actions also intelligent actions?

It seems to me that, if these questions were answered in accordance with our experience, we should be on a fair way to a solution of the pivotal problem of the universe.

THOMAS DAVIDSON.

THE *Art Amateur* for October gives a description which makes one covetous of the rich porcelains and bric-à-brac and the charming pictures belonging to the collection of the late Mrs. Mary J. Morgan, which are to be sold at auction in New York this winter. The collection is said to have cost at least a million of dollars for pictures, and at least as much more for other objects of taste. These treasures of beauty were the solace and entertainment of their owner, while waiting for death from an incurable disease. The list of paintings comprises good works of most of the modern French and English masters, such as Alma-Tadema, Bouguereau, Rosa Bonheur, Corot, De la Croix, Deau, Millet, Rousseau, etc. Many well-known names are omitted, however, as Turner and De la Roche. Church is the most noted American name; and there are a few Germans, as Graus, Greutznier, etc. We heartily wish our own Art Museum were in possession of funds to secure some of these treasures. Greta gives a very pleasant account of the summer exhibitions at this museum; but she does not mention the recent

* This is very different from asking whether the *esse* of things is the same as their *percepti*, as Berkeley held. It is almost equivalent to asking whether the *esse* of things is the same as their *percepti posse*.

gift to it of one of the late George Fuller's admirable heads, a portrait of one of his sons. "Art Hints and Notes" contains many excellent suggestions, and the technical instruction is clear and valuable. There is a sheet of pretty figure sketches, pleasing, but not quite correct in drawing, and some clever studies, besides the usual designs for fancy work. We are glad to note a steady improvement in the tone and quality of this favorite art magazine.

EDITORIAL NOTES.

BY B. F. U.

PROF. HUXLEY says that he would like to see a scientific Sunday-school in every town. "I cannot," he adds, "but think there is room for all of us to work in helping to bridge over the great abyss of ignorance which lies at our feet. If any object that it will dishonor God, on any special day, to awaken the mind of the young to the infinite wonder of the works called his, and to teach those laws which must be his laws, there must be something wrong in their logic."

It would be pleasant to believe that Victor Hugo's picture of the twentieth century will be realized: "In the twentieth century," he declares, "war will be dead, the scaffold will be dead, royalty will be dead, and dogmas will be dead; but man will live. For all there will be but one country, that country the whole earth; for all there will be but one hope, that hope the whole heaven. All hail then to the noble twentieth century, which shall own our children, and which our children shall inherit!"

A WRITER taking exception to much in Henry George's *Progress and Poverty* remarks: "The great success of his book proves one thing, however: namely, the prodigious rise in the common sympathy. I say proves this; for the advance came before the book, else no reception therefor. As early as 1853, George Eliot, that wondrous woman, wrote that the locomotive and the electric telegraph were rapidly demonstrating the interdependence of all human interests, and making self-interest the duct of sympathy."

MR. ALEXANDER WILDER writes: "The *Akademie* is not Western, but continental. We have some two hundred and forty members, one from Boston, two or three from Concord, one from New Hampshire, one from Vermont, one from Florida, one from Alabama, and a number from Texas, California, Colorado, etc. I was pleased to read the paragraph on D. A. Wasson. I copied a paper of his on 'Individuality,' and was not quite certain that he wrote it. I never saw him, but have admired about everything he has written."

EX-LIEUT. GOV. HINCKLEY of Vermont, at a recent legislative reunion which called together a large number of men prominent in political affairs, thus referred to the senators of that State: "I feel for those men a reverence like that of a devout clergyman I knew for the old prophets. The clergyman sometimes got the cart before the horse, and he said those prophets were wonderful men. They worked miracles, they could make the deaf see and the blind hear: they could do more, they could cast out the dead and raise the devil."

THERE is, after all, something tenderly appropriate in the serene death of the old. Nothing is more touching than the death of the young and beautiful. But when the duties of life have been nobly done, when the sun touches the horizon, when the purple twilight falls upon the present, the past, and the future, when memory with dim eyes can scarcely spell the records of the vanished days, then, surrounded by friends, death comes like a strain of music,—it is a welcome relief.

The day has been long, the road weary, and we gladly stop at the inn.—*R. G. Ingersoll.*

IN a letter expressing concurrence in our view of the design argument, an eminent lawyer writes: "It is not the design in the watch picked up by Paley's traveller that proves a man had been there: it is familiar experience, observed human behavior, that constitutes the proof; and a track of a naked human foot would prove human presence as conclusively as a bushel of watches. As well might it be argued from an accidental indentation in the sand that a supernatural foot had made it, on the ground of our familiar experience of foot-prints. Prove, first, the existence of such a foot and its habit of imprinting tracks, and the argument is good."

ARCHBISHOP LYNCH has been contrasting the unity of the Roman Catholic faith with the diversities of Protestantism; and the *Tu-Day* is moved to remark: "But how has the unity of Rome been preserved? It has been preserved by fettering conscience and stopping the mouth of free discussion. It has been preserved by the massacre of the Albigenses, by the butchery of a hundred thousand Reformers in the Low Countries, by the extermination of the Huguenots, by the atrocities, literally without a parallel in history, of the Spanish Inquisition, by launching upon Germany the devastating hordes of Tilly and Wallenstein, by a series of crimes which have steeped the robe of religion in innocent blood, and made her hateful in the eyes of mankind."

THINK of the two things—"education" and brutal, merciless vice—going hand in hand! Alas! it is not education: it is that wretched, sophistical veneering of accomplishments which usurps the name of education. It may embrace—in the case of medical men, must embrace—a certain amount of scientific instruction; but what it lacks is the true scientific grasp of life as a whole. We are no fanatical believers in the saving efficacy of a little smattering, nor even of much special knowledge, of physics and chemistry; but we are firm believers in the moralizing effects of a true philosophy of life, supported and illustrated by constant reference to veritable facts. All sciences are but parts of one great science, and the highest function of universal science is to teach us how to live.—*Popular Science Monthly.*

IN his lecture last Friday evening, Mr. Conway related the following amusing incident: "The other day, a relative in Virginia told me of a pious negro woman there who related to him a wonderful story. She declared that the day before, when she had gone to a spring for water, she heard the sound of Gabriel's trumpet. Her Baptist brethren could believe a good deal, but this was a little too much for them. Heads were shaken; and a brother expressed the general scepticism by saying there might be doubts whether the sister really 'scerned' the trumpet or only thought she 'scerned' it. The woman was in evident trouble at having her statement doubted; and, at length, an aged man arose, and said, 'Arter all, bruthren, maybe Gabriel *did* give the poor gal a toot or two.' What," exclaimed Mr. Conway, "could be more reasonable? Assuming that there is a Gabriel, and that he has a trumpet, and that he knew the poor creature was thinking about him, surely the least gentlemanly feeling would prompt Gabriel to give his humble friend 'a toot or two.'"

GRACE GREENWOOD says that, among its other admirable manufactures, New England produces the best educated girls, the truest wives, the noblest mothers, and the most glorious old maids in the world. This leads the *Inter-Ocean* to observe: "The *Inter-Ocean* has great confidence in Grace

Greenwood; but we suggest a change of adjectives, and let the sentence read,—New England produces well-educated girls, true wives, noble mothers, and the most old maids in the world. There was a time in the great West when our girls were not educated like our boys. But we have got away from that, and in no section of the world are the girls wider awake to secure a good education than in the West. We wish to add that, from the days of the pioneer mothers to the present, the homes of New England have not been blessed and honored with truer wives than have the cabins and homes of the woods and prairies of what a great New York daily sneeringly calls 'the rowdy West.'" The Boston *Herald* gracefully acknowledges the truth of this statement, and adds: "This is undoubtedly true. Female education has been made a specialty in many of the Western States, and co-education is much more common than at the East. The truth is that the two sections of the country are rapidly overcoming what have constituted the social and educational differences between them."

IN London, the cause of "Liberal Theology" has suffered a serious reverse. Mr. Voysey, formerly of the Church of England, and Mr. Conway, an American, have been its chief representatives. But both Mr. Voysey and Mr. Conway have publicly confessed in their pulpits the hopeless collapse of the theistic cause. Mr. Conway has been obliged to leave London, and Mr. Voysey's church is reduced to support its expenses by appropriating its building fund. About a dozen years ago, Mr. Conway wrote exultantly that the Theistic Church "is to be the next great home of human hearts and thoughts." Neither Mr. Conway's nor Mr. Voysey's church had spiritual energy enough to start a Sunday-school.—*Christian Thought.*

The truth in regard to Mr. Conway is that he gave up his trust in a "Theistic Church" many years ago, just as he had previously given up his trust in Methodism. It was for what he believed a larger hope,—certainly, one less orthodox; and the "collapse" of his theistic creed in favor of what he calls "perfectly free religion" was followed by an increase of his congregation and of his salary. Instead of being "obliged to leave London," he and his congregation were never before so harmonious and prosperous as when he left and returned to this country, that he might be nearer his aged and now widowed mother, and his sons, who had settled here. The prospects of the "Theistic Church" in London are poor; but the prospects of free thought there, Mr. Conway maintains, were never before so good as now.

A. V. WRITES: "A spiritual séance took place in Hartford the other evening, in which some extraordinary facts connected with the occult world were developed. A lady, called a medium, who enjoys a large acquaintance with the *élite* of the other world, agreed for twenty dollars in advance to materialize some of her spirit acquaintances. This was to be done by having a little girl spirit appear at the window of a cabinet in a darkened room, after which a lady spirit was to appear dressed in the most fashionable attire of heaven, which seems to be a phosphorescent sheen cut *en train*, low neck, short sleeves, with a diamond fastened on each toe of a very dainty pair of slippers. The heavenly head-dress is not mentioned. This beautiful spirit was to take a little walk around the room after leaving the cabinet. The audience, selected from some of the most intelligent people of Hartford, was to be separated from the spirit by a good, strong copper wire, within which precautionary circle they agreed to sit. Two very strong Irishmen were engaged to look after the interests of the audience, because, for some unaccountable reason, a suspicion had got into their heads that the distance

between heaven and Hartford was too great for these spirits to arrive on time; and they did not wish any attempt to be made, by any earthly beings, to personify them. The little girl spirit appeared all right. At least, in the opinion of the Irishmen, she had honestly come from heaven; and she was allowed to go back. But when the phosphorescent lady spirit stepped out of the cabinet, and began her little walk, the two Irishmen pounced upon her. This elicited a piercing shriek. The gas was turned on; and, lo! it was the medium. The copper wire devised to restrain the intelligent audience had been surreptitiously cut in two places, which allowed them to surround the poor medium; and, as there was no copper wire around their heads, by one supreme effort they discovered that she was a fraud. They derided her, took away her twenty dollars, and turned her out into the street in the middle of the night, after making her sign an affidavit to convince the rest of the world that she was a fraud. And all this because the train from heaven to Hartford was late; and, the lady spirit not arriving in time, the medium did her best to personify her. Verily, justice is at a low ebb in Hartford."

For *The Index*.

HUMANITY; OR, THE COLOSSAL MAN.

E'en the molety of it breathing,
Stirring in the cheerful light,
Passes third of life unconscious,
Sunk in slumbers of the night.
But the dead and gone, the vanished,—
Who can count the dim host o'er,
All the shadowy generations
Who have flourished heretofore?

All together, dead and living,
Since the human shape began,
Organ of self-conscious spirit,
Form one vast Colossal Man.
Cave-roofed, dwelt he in the twilight
Of the prehistoric time;
Beastlike first, he gradual lifted
From the earth a front sublime.
Growth diffused o'er countless ages
And the round of earthly space,
Still, o'er death and change triumphant,
Upward moves the human race.
Many-climbed and hued and tongued, it
Is the same at heart and core,
Wheresoe'er its tribes and races
Zones of earth are scattered o'er.

Vanguard of it, beauty, genius,
Make like fabled angels seem;
While its rearward, low-browed, bestial,
Scarce of reason shows a gleam.
O'er it toiling, sinning, warring,
Striving happiness to taste,
Shine the silent constellations
In the heavens' boundless waste.

Yawns the earth beneath it marching,
Hides its tired ones evermore;
While, to fill its thinned ranks, new-born,
Eager generations pour.
Still, need, greed, desire, and foresight,
And ideal longings vain,
Keep its myriads in motion,
Seeking pleasure, shunning pain.

'Tis a product, evolution
Of creative, nameless Power,—
Slowly, slowly 'tis unfolded
More and more to perfect flower.
First by sense with bright illusions
'Twas environed in its youth,
But, at length by Reason guided,
Bows it now to sway of Truth.

B. W. BALL.

The Index.

BOSTON, OCTOBER 15, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER,
BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

Misgovernment of Great Cities.

Read before the Liberal Union Club, Boston, May 23, 1885.

BY FRANK P. CRANDON.

(Concluded.)

The practice of purchasing municipal legislation is not peculiar to American cities. It may assume other forms, and be classed as the payment of costs or fees. Thomas Hare, in *Macmillan's Magazine*, says as to London: "The ascertained cost of legislation to the companies who are forced to seek it is enormous. Railway bills have cost from £650 to £1,000 per mile. Power to make twenty-nine miles of railroad cost the Herford Company £250,000, equal to \$1,250,000; and, before a spade was put in the ground, the Great Northern Railway had paid £420,000, or \$2,100,000, in parliamentary costs."

Is it not reasonable to expect that companies paying such enormous charges will attempt to obtain privileges and concessions somewhat commensurate with the outlay involved, and that they will endeavor to recoup from the public the money which was paid in the securing of their charter?

No opposition will be offered to the proposition that it should be practicable for any corporation to obtain a legitimate proper franchise, without the payment of fees, for legislative favors. It ought always to be understood that illegitimate privileges, or concessions prejudicial to the interests of the community, could not be obtained at any price. The security of the public in all these cases is in the *personnel* of the city government.

If it is practicable to put into that government men of character and integrity, and only such men, the problem is solved. If this be not practicable, it would seem as if the only alternative is to go on from bad to worse, until the whole municipal system breaks down under the weight of evils which are inseparably connected with its present organic form, and makes way for some new system of governmental control.

And this brings us to the consideration of ways and means of correcting and preventing the evils

which have been referred to, as well as the long, long list of other evils which from time to time force themselves upon the attention of the public.

Serious as are the evils under which municipal governments are laboring, great as are the embarrassments growing out of our conservatism, the opposition of vested rights, and the clamor of charlatans and demagogues to whom the establishment of a thoroughly honest and efficient government would be the loss of their entire stock in trade, and difficult of application as are the principles on which we must rest our plans, still I do not believe that the present situation is hopeless or remediless. I found my opinion on the conviction that a large majority of the people desire good government, and that, when the matter can be presented to them in an intelligible manner, they will give a cordial support to the measures by which it can be secured.

The first work, then, of those who are interested in the question of municipal reform is, after a thorough study of the subject, to formulate a system of city government which will secure all the legitimate results for which municipal governments are organized, while it reduces to the minimum the opportunities for official malfeasance.

I understand that in Boston there is an association for this purpose. I should be glad to know that similar associations were formed in each of our great cities. Through such organizations, the results of the most careful study might be generally disseminated, and the public interest thoroughly aroused. I would be glad to make some contribution to this general purpose, even if my offering be of insignificant value.

It is manifestly impracticable for me, in this paper, to treat of the details of the subject. Permit me, however, to suggest a few general principles which it seems to me must underlie any successful municipal structure, whatever be its form.

And, first, I would announce, not at all as a new idea, but as one which cannot be too often repeated or too thoroughly emphasized, that *there must be a radical and a perpetual divorce between partisan politics and the management of municipal affairs.*

There is no natural connection between these interests. A municipal corporation is purely a business institution. It has to do with matters of sanitation, with sewers, pavements, docks, police, and public buildings. It maintains parks, to some extent regulates railroad and gas companies, and provides the city with a supply of water. It collects and disburses the public revenue, establishes and maintains a fire brigade, lights and cleans the streets, regulates and inspects the public markets. These and all other duties, which are appropriately devolved upon the corporation, demand for their successful and efficient discharge business tact and skill, honesty, and a fair share of common sense. There is no legitimate duty which a municipal officer will perform either better or worse, because he is a Republican, a Democrat, or an Independent. There is no more reason for inquiring into the political sentiments of a mayor or any subordinate municipal officer than there is for asking as to the political preferences of a bank president, a railway president, or the members of the board of directors of either of such corporations.

The city government has no purely political functions. It cannot determine any questions of finance, or tariff, or domestic or foreign policy. It is merely a business agency for managing those specific affairs which have been placed in its care, and it will be most successful when it is administered by officers who are selected on account of their special adaptation to the work they are expected to perform.

In our country, political party preferences are frequently so strong as to control votes in favor of a candidate notoriously unfit for the position for which he has been named. The voter feels that he owes fealty to his party, irrespective of the merits or the demerits of that party's candidates; and this sentiment of the voter is utilized by the office seekers to secure a support which they could not otherwise obtain.

Not unfrequently the canvass which precedes a municipal election is simply an appeal to political preferences and party associations. The real issue—to wit, the honesty and capacity of the several candidates to discharge the duties of the offices to which they aspire—receives next to no consideration; and, in the end, the success of party candidates is esteemed a fitting occasion for congratulation and rejoicing, even when the effect is to displace efficient officers for those who are inefficient.

The elimination of partisan politics from municipal affairs would be an important and a significant reform. To the place-hunters and spoilsmen of politics, it would be an official "notice to quit"; and it would mean that the municipal constituency had determined that the administration of city affairs should be conducted on business principles. It would help to make it practicable to secure and retain good men in the public service.

It is not often that those gentlemen whose services either in the council or in the executive departments of the city government are most to be desired will undertake to secure a nomination and election through the use of the regular party machinery. The prerequisite manipulation demands more patriotism and self-sacrifice than even good men ordinarily possess. It is difficult to see why any man who ought to be elected should so earnestly desire the position of councilman or alderman in the city government as to be willing to pay for what it costs in time, money, and self-respect, when it comes to him as the result of a political party nomination.

If obtained, it only offers an opportunity for appropriating to the public interests a large amount of time and gratuitous service. Its only compensation must be that which comes from a sense of having faithfully and honestly discharged a duty. This is hardly sufficiently inspiring to attract the best men to the public service.

Mr. Shorey, in the pamphlet already referred to, in discussing another topic, says: "An instance will illustrate what I mean. Last spring, an educated gentleman in the First Ward had faithfully served the public interests in the city council for six years. He was not at all anxious to continue in the public service, and very properly refused to make any personal exertion to secure a renomination. The business men of that ward, in which there is probably two hundred million dollars worth of property, paid little or no attention to the matter; and the result was the loss of an excellent representative of the character and intelligence of the city in the council."

This is a case directly apposite to my argument. The successor to the councilman whose loss to the council Mr. Shorey deprecates was the proprietor of a miserable groggery, who secured the party nomination.

Experience in former discussions leads me to anticipate here an objection which may be formulated thus: "Admitting all that you urge as to the evils of party politics in municipal affairs, and also as to the desirability of such divorce as you suggest, there still remains the fact that they cannot be separated." The validity of this objection I am in no wise prepared to admit. It assumes that the mass of the people are indifferent to the matter of good government, that the voters of any municipi-

pality have more regard for an intangible, ineffectual, inoperative political success than they have for the correct and efficient management of city affairs. I do not believe that this is true. It will seem to be true so long as municipal elections are handed over to professional politicians and ward bummers for management. But let the prominent and influential gentlemen in all political parties unite in an effort to elect only the best men to municipal positions, let them present only candidates of recognized ability and character, let the people be made to realize that there is absolutely no political principle involved in the contest, and they cannot be controlled by professional political leaders.

We are not without illustrations of the truth of this theory. In New York, the good people of all political parties united for the overthrow of the Tweed dynasty, as they did in Philadelphia to depose McManes, and as they have since done in Cincinnati and Chicago. Under proper management, these occasional and spasmodic exhibitions of non-political elections may become the rule rather than the exception, as applied to municipal governments.

Looking to this end, municipal elections should be made to occur at dates as remote as possible from those fixed for National and State elections, so that there may be the least possible complications with outside issues, and the least temptation to quote these elections as indices of public sentiment.

But more than to anything else and, in my judgment, more than to all things else, the misgovernment of our great cities is chargeable to our *practically unrestricted suffrage*. I say unrestricted, because the facility with which all regulations as to naturalization and registration are evaded makes it a comparatively easy matter for any individual to vote at least once at any election. Those cities which are constantly receiving a large influx of foreign immigration, which is both ignorant and impoverished, are the greatest sufferers; but all municipalities are placed in jeopardy by this irresponsible and unintelligent suffrage.

I do not enter the lists as an opponent of what is termed "manhood suffrage," when applied to State and National elections; that is, when applied to the determination of political questions. But neither the same nor similar conditions can be predicated of municipal corporations.

I restate a proposition which has already been emphasized in this discussion; to wit, *that the municipality is a business corporation*. It may not be strictly analogous to a corporation operated for private interests, such as a great railway company or a manufacturing establishment; but that it is far more nearly allied to one of these than it is to any political institution will not, I think, be seriously disputed.

It is a joint stock affair, in which the tax-payers are the stockholders, and to them substantially should the management of its business be committed. I am aware that this proposition will be criticised as undemocratic and anti-American, but I am none the less convinced that it is logical and worthy of support.

Subtract from the body of the electors that element which would be eliminated by the application of this principle, and such a dynasty as that of Tweed and Sweeney in New York, McManes in Philadelphia, and Carter Harrison in Chicago, would be an absolute impossibility. The substratum of all ring rule in municipal affairs is that suffrage which is subject to manipulation and purchase by adroit and unprincipled managers, and which by artful appeals may be induced to regard all property owners as its natural enemies.

The present government of Chicago owes its existence, in a great measure, to the immunity that has been extended to gamblers, thieves, tramps, thugs, and communists, who, in consequence of this immunity, rally to the support of our present mayor at every election, and resort to every species of fraud in his behalf. In return, they are permitted to ply their nefarious avocations practically unmolested.

The votes of the tax-payers of Chicago would elect an entirely different class of city officers,—officers who would administer the government in the interests of good citizens rather than in the interests of the criminal classes. Is it possible that there can be any question as to which policy ought to prevail?

I do not want to be understood as including the entire non-tax-paying classes in one group, or as making any sweeping assertions which would apply to them indiscriminately. On the contrary, I know very well that many of them are among our best citizens, and entirely worthy of the public confidence and respect. I would willingly consent to any scheme which would put all good citizens into the voting class and all doubtful and unworthy citizens into the ranks of the non-voters. I am aware that the tax-paying suffrage is not an ideally perfect theory, nor free from many objections which may be strongly urged; but I am, however, unable to devise any system which will more nearly accomplish what is needed than the one which I have suggested, and I am unable to see how it works any hardships to any one.

None of the rights or liberties of the non-tax-paying citizen would be imperilled in consequence of his inability to vote at municipal elections. The powers of the corporation cannot be legitimately exercised to his damage. If they are so exercised illegitimately, then the courts are open for his protection, and will be found vastly more efficient for that purpose than would be the power to vote. And why is it not safe as well as equitable to commit the management of the business of the corporation to the stockholders,—the tax-payers? They are the parties most directly and positively interested. All kinds of public improvements—the maintenance of good order, the security and protection of life and property—affect them more vitally than they affect other citizens.

Would not a fire department which would be satisfactory to the owners of warehouses, banks, hotels, offices, commercial establishments, and costly private residences, be entirely adequate to the needs of those who own no buildings? Would not a police establishment which would serve to protect the public and private property of Boston be sufficient to meet all the necessities of the rest of the community?

In the matter of improving streets and the laying out and ornamenting of drives and parks, would not the improvements made by the owners of property as a means of enhancing its value, as well as for the purposes of personal enjoyment, be a satisfactory provision for the use and comfort of those citizens who were not asked to contribute toward the expense of making them?

In many cities, the cost of all such improvements as sewers, pavements, sidewalks, street-lamps, and watermains, is charged directly on the abutting property, and are only constructed when petitioned for by a majority of the property owners, who will be called upon to pay for them. In all such cases, the very existence of these improvements is a sufficient answer to the objection that public works would be impeded by an administration elected by the tax-payers.

Indeed, it is reasonable to expect that the very opposite would be true, and that, with the assur-

ance that public works would be managed with honesty and economy, the sentiment in favor of their construction would constantly increase.

There are two interests which I think it probable that non-tax-paying citizens would be unwilling should be left entirely in the hands of their tax-paying neighbors. I refer to the provisions to be made for general education and the proper and sufficient care of the poor.

I do not personally feel that even these interests would thus be in any degree jeopardized. They might, however, be so guarded and protected in the organic act of incorporation as to be placed absolutely beyond danger.

What would be the result, if, in our great railway corporations and large manufacturing companies, the boards of directors, instead of being chosen by the stockholders, were to be elected by the employés? What would be the relative probability of securing a competent and efficient management? There could be but one outcome to such a policy. Stockholders and employés would soon be involved in one common ruin. Query: Can the municipal corporation, acting on a similar policy, escape a like disaster?

But here, again, I expect to meet the objection once before noticed; namely, that the plan, whatever be its merits, is an impracticable one.

It will be said that, where the elective franchise has once been conceded, it cannot be recalled. I recognize the difficulties of the situation, but do not admit that they are insurmountable. Guards, limitations, and restrictions, such as iron-clad registration, increase in length of domicile, and proofs of residence, have been imposed on the elective franchise by legislative authority in subsequent enactments; and it is but taking another step in this direction to establish the principle which I have been advocating. I am informed by jurists whose opinion is conclusive of the question that it is entirely competent for the legislature, when organizing municipal corporations, to prescribe the conditions under which the elective franchise shall be exercised. If, then, the legislators should come to approve this method, it could readily be applied in erecting future municipalities.

In the case of cities like Boston, where there are two legislative bodies in the city government, we might, perhaps, make one of them elective by the popular vote, and the other by a vote of the tax-payers only. It might be required that appropriation bills and bills for raising the revenue should receive the approval of both bodies.

Then, by and by, when you shall have come to the conclusion that only one legislative body is needful, you might decide to retain the one elected by the tax-payers and abolish the other.

Or, without in any way interfering with the right of suffrage in the case of any one who is now a voter, it might be determined as to any one who is not now a voter that he should not hereafter be entitled to the municipal franchise, unless he be a tax-payer.

If this principle be correct, as I believe it to be, and if it be accepted by thoughtful men as one of the conditions of honest government, the method by which it may be incorporated into the municipal system will be devised.

I notice one other particular in which reform in municipal governments is imperatively demanded; that is, *the consideration which is given to the needs of the proletariat*. The truth of the aphorism, "No man liveth to himself," more and more imposes itself on the attention of thoughtful men. It is a truth which neither individuals nor aggregations of individuals can afford to ignore.

The first problem in social science ever submitted for consideration was, "Am I my brother's keeper?"

It would seem as if ever since that time the world had been endeavoring to find a negative answer to the question. No such answer has been found. No such answer can ever be found, because the law of reciprocal obligation is always operative in society.

Evade the subject as we may; put it on one side and refuse to consider it, as many do,—characterize it as Utopian, or sophistical, or chimerical,—nevertheless, it constantly reasserts itself with the declaration, "The voice of thy brother's blood crieth unto me from the ground."

We may wrap ourselves in a mantle of selfish exclusiveness, and refuse to recognize these obligations; but, ever and anon, the jostling of passing events will remind us of neglected duties.

Our responsibilities in this regard are not confined to legal formalities, nor bounded by them. They have to do with our relation as members of one common brotherhood. Our employés have claims upon us in addition to the stipulated compensation for services rendered, and our recognition of their technical rights: claims upon our sympathy with their sufferings and misfortunes; claims upon our moral support in their contests with temptation; claims to our encouragement in all their efforts for improvement, and to our helpful care in every time of need.

The claims of our neighbors who are not our employés are equally valid and imperious. Personal interest, as well as our obligations as good citizens and honest men, forbid us to ignore these claims. There is a tendency prevalent in society to limit these obligations by the narrowest possible lines.

Men look askance at the various manifestations of evil in the community; and, instead of working and planning for the correction of the evil, they expand their thoughts and efforts in devising better safeguards for their personal interests, in the vain hope that, when the storm does come, their defences will be found sufficient. When the ruin comes, however, the strong and the weak are involved in one common catastrophe.

The granger organizations which a few years ago wrought such disaster to the railway interests of the North-west, the strikes prevalent in connection with mining and manufacturing industries, and the riotous demonstrations and destructive agencies of the commune, serve as illustrations.

We deprecate these outbursts. They ought to receive the severest condemnation. Their effect can only be to aggravate the very difficulties by which they are inspired. But they have their origin, to a very considerable extent, in the indifference of society to its obligations to the laboring classes.

The municipality is charged with certain obligations to its proletariat. On the proper discharge of these obligations, the contentment, sobriety, and good citizenship of this part of the community will very largely depend. Among other things, it ought to be the care of the city that the houses built for the accommodation of this population are properly constructed, having a proper regard to the health and comfort of the inmates; that the streets where they live are properly lighted and sewered and cleaned; that they have an ample supply of pure water; that public baths are established for their use; that libraries and reading-rooms are provided for all who will use them; that public parks are established with some reference to the convenience and comfort of this part of the people; and that some simple entertainment, such as music in the parks, be furnished for them.

The expense both of time and money which might be involved in carrying out these and such other plans as should be instituted in behalf of this part of the city's population would afford the most ample returns, even when considered as an invest-

ment. It would lessen the amount of crime and disorder. It would cultivate a spirit of contentment and self-respect. It would reduce the demands made upon the hospital and poor relief funds, and it would increase the value of taxable property. There would be no quarter of the city which was practically assigned to the criminal and degraded classes, no localities which would have the reputation of the old Five Points of New York or the Levee of Chicago. I do not mean that we should in this way remove all destitution, degradation, or crime, but that we would reduce these evils to their smallest dimensions, that we would advance every material and social interest of the city, and would discharge a duty that is devolved upon us by the claims of humanity, the instincts of self-interest, and the principles of the wisest political economy.

I am aware that in this discussion I have treated the subject of municipal governments in the merest outline. I am confident that the committee, in response to whose courteous invitation I am with you to-night, did not expect me to do more: otherwise, not the general topic, but some special branch of it, would have been selected for consideration.

A friend who kindly looked over my manuscript said to me that I had written what might be considered a *preface* to the subject given us for discussion. If, in your judgment, I have done even as much as that, I shall feel that my work has not been a failure; for the preface ought to indicate the purpose and the scope of the work which is to follow. I shall anticipate with interest the appearance of the successive chapters of the work on municipal reform, as your organization, or some other, may from time to time send them forth to the world. And I want to assure the authors, whosoever they may be, that their contributions will find an earnest and interested student in the writer of the preface.

For *The Index*.

BREAKING THE BOY'S WILL.

BY HUDSON TUTTLE.

"I wish to talk with you, Morris," said his father, taking the boy by the hand, and leading him from the supper table to the parlor. Morris hung down his head, and doggedly followed. He was a strong boy of ten, overflowing with activity; and, as this was not always well directed, he was called mischievous and unmanageable. This day, the story had preceded him from school: that he had thrown water on the school-house steps, which, freezing, had made them so slippery that several scholars had fallen, and one had been severely injured. As he usually was chief in such misdemeanors, the teacher at once accused him of this one; and, as he did not deny the implication, a severe flogging was the punishment, and he went home with a blistered palm. Served him right! We shall see. If torture is the best method to give a child moral strength, the rod is of more value than the words of persuasion.

"Morris," said his father, sternly, "I am ashamed of you. You are constantly disgracing us all."

The boy glanced appealingly to his mother. She was kind to him, and loved him tenderly, but she did not understand him; and, instead of guiding his restless spirit, and seeing in it the promise of energetic manhood, she regarded it as depravity, to be subdued by punishment. She regarded it as a duty to overcome her sympathy for the culprit. To the appealing look of the boy, she replied: "A shame! He has had his head too long, and his will must be broken. Spare the rod, and spoil the child! I am afraid we have been too gentle with him, and that he will bring us enough of sorrow!" A hard expression came into the boy's face, and his breath came thick and fast. He glanced at his father to see if he meant as harshly as his words implied. It was dark and forbidding. "Such conduct," continued his father, "will soon bring you to crime. The scholars you have in-

jured are now suffering; and one of them, it is said, may die. Then you, Morris, will be a murderer!"

A thrill of horror shot through the boy's frame; but his will was strong, and he held back the tears. He suddenly felt that he was a fearfully wicked boy; and, with that thought, he lost his self-respect.

"Morris," said his father, "I hate to punish you, but I must. I love you, and, for that very reason, must do so."

"If you are not punished," said his mother, gravely, "you will go on and on, and, at last, you will get to the gallows. I shall have to see my little boy hung."

The tears were in his eyes now; and, had he received one kind word, he would have sobbed out his repentance. His parents would have thought a kind word out of place. Under the stairway was a dark closet into which his father placed him, and shut the door. He heard the bolt spring into place, and he was shut out from the world. He felt utterly deserted, friendless, and forsaken. He had set out for some sport, and had no intention of harming any one. He was ashamed and sorry for the deed. He had said to himself a hundred times, he never would be so reckless again. He felt that it was not because he was bad, but thoughtless; the teacher had punished him severely, and that ought to suffice. His parents were unjust, and their love was to him hate and vengeance. The tears dried, and his eyes gleamed with anger. He kicked at the door, and threw himself against it, crying: "Let me out! I hate you all! Let me out, I say!" His mother replied, "Morris, you are a bad boy; and, now, you know how you'll feel when they put you in a prison cell, and keep you for years and years."

This dreadful picture was too real to him: he sank down on the floor, and scarcely breathed. He heard them talking about him still. Sister Lou had come in, and was pleading for him.

"May I let Morris out, father?" she asked.

"Not yet, Lou. He is terribly wicked; and it is better he have this slight punishment than be a sinful man, and go to hell."

"Oh, don't say that, father! I can't bear to hear about that fearful place and the devil!"

"Better you hear than suffer unending wrath. Morris is led by the devil, who plans his mischief for him. I must deal heavily with him."

The boy almost held his breath, as he listened. He was losing his anger; and the darkness, combined with the ideas he had so often heard of hell and the devil, awoke his fears.

"Father, father, dear father, let me out!" he almost screamed.

"Not as long as you have that tone of voice," was the reply.

"Do, do, do, dear father. I shall die, if you don't. It's so dark!"

"It will not be dark in hell, where you will go unless you are a better boy," replied his father, who thought he must not yield, until his boy's "will was broken."

There was no reply, and they thought his silence meant anger. After a time, the father opened the door and led Morris out, pale and silent still.

"Lou will put you to bed," said his father; "and I hope you will think over how wicked you are, before it is too late."

There was no good-night or kiss of love; and, without a word, he followed Lou to his room, where she tucked the blankets around him, and, bending, kissed him, saying softly: "Never mind, Morris. Lou loves you, and don't think you are bad."

She went away, and it was dark. He thought of the prison, of hell, the devil, the gallows, and asked himself again and again, "Am I such a wicked boy?" Then the thoughts became pictures; and he saw the deep pit of fire, and the flames dancing high around groups of boys, and amid the flames the evil one, with horns and a spear heated red at the point. Then came fearful animals and hideous faces, grinning, staring at him, and dark cells of prisons, and tall gallows on which dangled wicked men. And the gallows cried, "I am for you!" and the cell said, "Come, let me shut you in with my iron bolts"; and out of the flames the evil one darted at him his spear. Tightly over his head he drew the coverlets, and, ready to scream with fright, listened to hear some one in the rooms below. The wind,—oh, how it shrieked and cried around the corner, and at the window! It was just like a ghost,—a dreadful ghost he had heard of, that came back from the grave to

tell people of death. Then before him came pictures of ghosts and beasts and dragons, and again the flames; and the moan of the wind was like theirs in torture, and such as he would give when he died. He began to feel the heat. He scarcely could breathe. He was burning hot, and so thirsty, and his head throbbed to bursting. He saw the evil one before him: he had thrust his red-hot spear into his brain, and was lifting him up to throw him off into the flaming pit. He sprang up, screaming for help.

Father, mother, and Lou were there in a moment. They found him wild with the delirium of fever. Tender words or soothing caress had little effect on him. He raved constantly of his wickedness and his doom, until, exhausted, he sank in the stupor which is nearer death than sleep. Even then, a faint muttering, a start, showed that the images of terror had not disappeared. Weeks passed while they watched, hoping against hope, at last to be rewarded by his return to consciousness, and to know the crisis passed, he was spared to them.

Years and years have passed since then; and the father and mother, who meant well, but fearfully erred in their ignorance, have been gathered by the reaper to their reward. The boy, now past the meridian, involuntarily shudders when he recalls those early days, when the attempt was made to break his proud will, and feels that his life has been shadowed thereby.

"WAS WASHINGTON A CHRISTIAN?"

Editors of *The Index* :—

I have learned that many persons were interested in Mr. Underwood's article published in *The Index* of June 4, 1885, under the above title, and also in Mr. A. B. Bradford's letter on the same subject, published in a subsequent number. Therefore, I have decided to publish them both together in the November *Freethinkers' Magazine*. As some of your readers may desire a copy for preservation, will you please give these lines a place in your columns?

Truly yours,

H. L. GREEN.

SALAMANCA, N. Y., Oct. 6, 1885.

C. W. STEWART writes from Liberal, Mo.: "I have always admired *The Index*, as it is the exponent, largely, of the constructive side of free thought. I have for some time advocated the idea that every movement, to be enduring, must have a real basis. I hold that the theory of evolution furnishes a *natural* basis for the Religion of Humanity, just as theology has furnished a *supernatural* basis for so-called Revealed Religion. I took that ground in my late debates with Mr. Braden, and I found the people eager to listen to the new thought. I am sure that a proper understanding of this question on the part of the people would weaken the influence of theology very much, and make our victory over superstition much easier. There is not one particle of evidence in favor of special creation, while there are volumes of demonstrative evidence in favor of evolution. Theology feels the force of this, hence its efforts to bring ridicule upon scientific investigation. You are doing a good work, and have my best wishes."

For *The Index*.

LINES IN MEMORY OF HON. SAMUEL CAMPBELL.

(Hon. Samuel Campbell, proprietor of York Mills, a man of sterling character, died suddenly about two weeks ago. He was a radical in theology, and a warm friend of *The Index*. Eighty years of age, he was one of the most busy men in Central New York. He died in his office. "Inevitably," he said, "all must drift to ritualism or to rationalism." He was made by nature magnificent in body and magnificent in mind. He was affable, noble in generosity, and pure in the fullest sense of the word. He was invaluable to all public enterprises that he approved, not only by his financial help, but his personal presence and activity. Evolution has carried few of the human race beyond the point at which Mr. Campbell was constructed. His hearty friendship was extended to Cornell University, of which he was a trustee; to the State Lunatic Asylum, where he was exceedingly active; to the Farmers' Club, of Utica, of which he was President; to hospitals innumerable, and all efforts to ameliorate suffering; to the Independent Religious Society of Utica.)

Swift Azrael cut the silken thread.

"What shall I write?" the angel said.

"Write," said the Lord, "a saint is dead."

Laborare est orare.

The angel said, "Do we not count

Those saints who face the holy Mount,
And oft their sins with tears recount?"

Laborare est orare.

"He prayed not on the bended knee.

Dear Lord, our Master, unto thee!"

"Who loves my poor best loveth me."

Laborare est orare.

"E'en to the last he worked; and they

Who turn from worldliness to pray,
Is he their equal, Lord, this day?"

Laborare est orare.

"Nay!" said the angel; "but this pen

Hath never written yet of men,

Who flings the shuttle prayeth then."

Laborare est orare.

Then, from the crowd of those redeemed,

Stood forth ten thousand, as it seemed,
Saved by his loving deeds esteemed.

Laborare est orare.

Each stooping to the golden sand,

Where winds Life's River through the land,
Wrote large these letters on the strand,—

"Laborare est orare."

The angel saw, and bowed his head:

"Men's deeds outweigh their prayers," he said;

"Write, Golden Pen, 'A saint is dead!'"

Laborare est orare.

Across the golden page flamed bright,

As o'er the morning flames the light,
"Tis all of saintship to do right."

Laborare est orare.

E. P. POWELL.

OUR ARMAGEDDON.

The following brief report of Mr. Conway's address, given at his reception in this city last Friday evening, is an outline of the leading thought presented:—

Mr. Conway said that, during a long study of demons, he had made the discovery that for a part of his life he had been theologically a devil-worshipper; and, after all his refinements, this being was still a giant, using his strength like a giant. He had tried to recover on the field of philosophy a deity lost on the field of theology, but found later that theistic controversy was engaged on a problem of dynamics. Then an old Adam of Methodism rose in him; and he felt that religion was not properly concerned with theories about the origin of nature and preternatural destiny of man, but with his salvation from evils that actually afflict and degrade him. In the depths of the universe, there may be a mind to which all disorder is order, and all discord musical; and, beyond this earthly life, it may be we shall meet the lost and loved. To views and hopes involving the happiness of any, and not claiming to be essential to religion, one was glad to offer the hand of a sympathetic agnosticism. But neither the theories nor the agnosticism have any necessary relation to the moral and religious sentiment. God is good, but that god is Humanity. We need a god only whom we can love. We can love that God only who loves man. No other conception can kindle the heart. What woman loves Jehovah as she loves her babe?

Religion, by the suffrage of all the world and of all ages, is essentially the love of good and the hatred of evil. There is really but one religion, the pursuit of good and the abhorrence of evil. Religion must have a God it can love, and it cannot love either the author or the source of all the phenomena of nature. Good men may extol with their lips a deity who says, "Shall there be evil in a city, and the Lord hath not done it?" but their real opinion of the evil in a city, and of its author, if they get hold of him, may be gathered from actions that speak louder than words. A god deduced from nature would only inspire a free and fearless mind to say with an

English poet, "I believe in God, but am against him." Progress is a perpetual war against nature. Religion has its historical manifestation in recurring revolutions against the gods of nature. It has not need of any almightiness: its enthusiasm is oftener for the weak,—not for omnipotence, but for its victim, Zoroaster, Prometheus, Jesus. Human worship began with man with adoring the elements, and ends with the elements adoring man. Gods begin with pronouncing the heart totally depraved, and end with citing the human heart to prove their existence. The stream of tendency that makes for righteousness is found to be the tendency that has made man. Nature's one great balance, outweighing her weeds and ferocities, is to have evolved the conscience of man.

The task of religion now is to convert Christianity, to convert the Church. The main thing is to bring the Church under conviction of its sins against the charity, the humanity, the justice which its members claim for their Christ. The negative task of free thought is about ended. Its duty was to convince the tribunal of reasoning minds, not the unreasoning; and the verdict is clear. The service most needed by truth is now rendered by those who associate it with the loveliness of life, with culture and refinement of manners, with the oil and wine which soothe and refresh the weary, wounded travellers on the world's highways. Science must become a subject of grace. The coming human religion must depend on a trinity of heart, head, and hand, of love, knowledge, and wealth, to introduce a power to control and apply natural forces to humane ends, to create by purposed selection, to be thus a providence to mankind. The order of nature is moral disorder. There is needed a religion which shall move men to substitute moral for natural selection, and steadily remake nature into the image and structure of a perfect man. To this end, religion must convert wealth. Golden icebergs must be converted into streams that shall make our waste places rejoice and blossom like the rose. Religion needs a heaven to animate it; but it must be a heaven unclouded by doubt, the vision of a purified world. And this will be realized when a generation is trained to serve no god but perfect man, to dread no hell but human corruption, to seek no paradise but an earth transformed by art and science, a society transfigured by truth and love.

BOOK NOTICES.

THE PROPHET OF THE GREAT SMOKY MOUNTAINS. By Charles Egbert Cradlock (Mary N. Murfree). Boston: Houghton, Mifflin & Co. 1885. Price \$1.25.

The most sated novel reader will find in this story new and entrancing elements of interest; for the people, their language and surroundings, are all new to romance writers. The most critical reader will find here a new field of conquest in its departures from recognized rule of plot, incident, outcome, and treatment; the most thoughtful will find subject for character study, and suggestive ideas in morals. Miss Murfree's style is dramatic, tense, vivid, and strong. When she essays to depict an emotion or a scene, she does so in words that burn in upon the reader's mind a sympathetic emotion, and bring the scene distinctly before his mental vision. Whether it is Dorinda, happy and coquettish, outlined in her healthy loveliness against "the dead, dumb finality" of the gray rock, "memorial of seas ebbed long ago, of forms of life extinct," in a grotto where she had fled to escape the coming storm of a hot day; the strange, weird scene in the fiery shadows of the "moonshiners'" cave, when Dorinda's rival suitors, one a fugitive from the law, meet, and, though filled with mutual hate and fury, show such heroic qualities; the religious meeting in the mountains, where Parson Kelsey so bravely owns his unbelief and his despair; the storm of varying emotions shown in Dorinda's soul as she sat awaiting the test of her lover's moral heroism, and her pathetic woe when she found he had failed her; or that last tragic scene, where "the prophet" sacrifices his own life for that of his direst enemy,—each and every picture and incident become, through Miss Murfree's magical pen, as real to the reader as they must have been to the writer. But it is in its revelation of the history of a struggling human soul, that of Parson Hi Kelsey, "the Prophet of the Great Smoky Mountains," that the interest of the book centres. A passionate-hearted, morbidly conscientious, pure-minded, de-

voutly earnest dreamer, whose sorrowful mistake in giving to his sick wife and babe the wrong medicines, and so caused the death of his child and the insanity and final death of his wife, drove him in early manhood to seek consolation in the crude form of religion known to the ignorant mountaineers, sincere, full of faith in and longing for a higher spiritual life, hampered by his companionship with coarser-grained natures and sordid surroundings, with only nature, the mountains, and his own dreams to inspire him, it is not strange that he becomes in the solitariness of his aims alternately an enthusiastic visionary, whose rhapsodic sayings and uplifting prayers are held to be direct inspirations from God by the rough men and women for whom he preaches, or a doubting, despairing human being who cannot satisfactorily adjust his religion to his sense of justice and mercy. At last, one memorable day, with agonizing honesty, he publicly declared his doubt; and thenceforth ruin came. His mental misery before that hour is thus described: "There was skulking into his mind all that grewsome company of doubts. In double file, they came,—fate and free agency, free will and foreordination, infinite mercy and infinite justice, God's loving kindness and man's intolerable misery, redemption and damnation. He had evolved them all from his own unconscious logical faculty; and they pursued him as if he had, in some spiritual necromancy, conjured up a devil,—nay, legions of devils. Perhaps if he had known how they have assaulted the heart of men in times gone past; how they have been combated and baffled, and yet have risen and pursued again; how, in the scrutiny of science and research, men have paused before their awful presence, analyzed them, philosophized about them, and found them interesting; how others, in the levity of the world, having heard of them, grudge the time to think upon them,—if he had known all this, he might have felt some courage in numbers."

Miss Murfree has been accused (since she stepped forth from the protecting shadow of her masculine *nom de plume*) of giving incorrectly the dialect of her Tennesseans. We do not know how this may be; but we feel that the people she depicts are real characters, whose prototypes she has known and interpreted to those of us who do not know. To the eyes of a cultured stranger sojourning temporarily among them, it might seem impossible for such rugged force of character and subtle phases of feeling to exist; but few can close the volume without feeling that these are not creations, but graphic reflections of a genuine humanity.

There is, perhaps, throughout the work, a redundancy of description; yet the varying moods of nature, in these details which escape the careless eye, are caught and exhibited in such strong lights that we have no mind to find fault, but only to wish that we all could look upon nature through the author's charmed eyes. S. A. U.

ALDEN'S CYCLOPEDIA OF UNIVERSAL LITERATURE. Presenting Biographical and Critical Notices, and Specimens from the Writings of Eminent Authors of all Ages and all Nations. Vol. I. pp. 478.

In the publisher's preface to this first volume, which treats of about seventy writers, seven of whom are women, a list which begins with Ezra Abbot and ends with Thomas Arnold, it is stated that "the literature of our own day and especially of our own country will occupy in this Cyclopædia a more prominent place than it holds in any other work of its class. The conductors have secured the co-operation of those who have made contemporary writers subjects of special thought and study, and the results of their best thought and study will be presented in these pages." The alphabetical classification of writers is the one to be pursued in this Cyclopædia, and no definite limit as to the number of volumes to be issued is yet determined upon. It will not, however, be expanded to a bulk or cost that will render it unavailable by the general reading public; nor will it be so curtailed, in respect of the authors embraced or the fulness with which they are treated, as to render it inadequate to the purpose designed.

MEN die, and are forgotten. The great work Goes on the same. Among the myriads Of men that live, or have lived, or shall live, What is a single life, or thine or mine, That we should think all nature would stand still If we are gone? We must make room for others. —Longfellow.

Although this work has been eulogized by the secular press, it has been bitterly attacked by the greater part of the religious press, because the author, from the highest intellectual and moral grounds, denounces some of the superstitions which have crept into Christianity as essentially irreligious, and the men who, knowing better, teach those superstitions, as essentially dishonest.

The Religion of Philosophy; OR, THE UNIFICATION OF KNOWLEDGE:

A comparison of the chief philosophical and religious systems of the world, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By RAYMOND S. PERRIN. New York: G. P. Putnam's Sons, 27 and 29 West 23d Street. London: Williams & Norgate. 1885.

"A work which aims to teach a true conception of God, of life, and of morality."

"Mr. Perrin's able work offers a deep interest. . . . It is a remarkable book."—*Morning Post, London, Eng.*

"There has not for a long time appeared any book in the English language which, from the purely intellectual and philosophic side of it, is deserving of a more careful study."—*Times, Philadelphia.*

"It is a work which appeals to the scholarship of the country."—*Prof. Youmans, in the Popular Science Monthly.*

"The author is no imitator. He has a well-defined theory of his own to advocate; and he advocates it with clearness and energy, and does not hesitate to give heavy blows at what he conceives to be the narrow views of most Christian theologians. 'The religion of philosophy,' as delineated, is not simply a scheme of thought: it is broadly and intensely practical."—*Wm. J. Potter, in the Mercury, of New Bedford, Mass.*

"The author makes a masterly analysis of Herbert Spencer's philosophy, and subjects his theory of the *Unknown* to a most close and searching criticism. It is an extraordinary work, one of the most important contributions from the press of recent times."—*F. S., in The Index, Boston.*

"Mr. Perrin writes with habitual good taste and unvarying decorum of the beliefs which he holds false in basis and spurious in sentiment. . . . His sympathy is so frank and so thorough with the true sentiments of Christianity, his aim so high and his argument so modest and earnest, that even those who will repudiate his conclusions will find satisfaction and enjoyment in reading his pages."—*Sunday Herald, Chicago.*

*. Large octavo, extra cloth, 566 pages. Clear type. For sale by all booksellers. Price \$3.50. Also sent, postpaid, on receipt of price by

THE INDEX, 44 BOYLSTON ST., BOSTON.

West Newton English and Classical School.

The 33d year of this Family and Day School for Boys and Girls begins September 16.

Address NATH'L T. ALLEN,
WEST NEWTON, MASS.

HOWARD COLLEGIATE INSTITUTE, WEST BRIDGEWATER, MASS.

A Boarding and Day School for Girls and Young Women, reopens Sept. 15, 1885. For catalogue, address the Principal, HELEN MAGILL, Ph.D., Graduate of Swarthmore College, Boston University, and Newnham College, Cambridge, England.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

THE INDEX,
BOYLSTON STREET, BOSTON.

The Encyclopædia Britannica.

The Secret of the East;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvelously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the **INDEX ASSOCIATION**, 44 Boylston Street, Boston, Mass.

THE UNIVERSITY.

FOUNDED 1877.

A Literary and Critical Journal, published every Saturday, at Chicago.

The University is not the organ of any college; it is not distinctively an educational paper, but it aims to deal with living issues from the university stand-point,—to reflect the ripest American scholarship in its discussion of politics, religion, education, science, literature, and art in their various bearings. Its publishers solicit the subscription of all persons interested in the support of an independent exponent of liberal culture on a plane of superior excellence.

Price, per year, \$2.50; per copy, 5 cents. Special trial offer to those who see this advertisement. Send 25 two-cent stamps and receive *The University* three months on trial. Specimen copies—three different issues—will be mailed to any address for examination on receipt of 10 cents. Address

THE UNIVERSITY COMPANY,
 185 Wabash Avenue, Chicago.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
 " 13 " 25 " . . . 8c. " "
 " 26 " 51 " . . . 6c. " "
 " 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent., on the total as above calculated, will be made.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impachment of Christianity*, by F. E. Abbot. Sixty Ten Thousand. Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Address **THE INDEX,**
 44 Boylston Street, Boston, Mass.

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

NATURALISM vs. SUPERNATURALISM. By B. F. UNDERWOOD. 10 cts.

WHAT KIND OF MORALITY DID JESUS AND THE APOSTLES TEACH? By F. M. HOLLAND. 5 cts.

GOD OR THE GALILEAN? By FELIX L. OSWALD. 5 cts.

THE SCIENTIFIC AND METAPHYSICAL METHODS IN PHILOSOPHY. By LEWIS G. JAMES. 5 cts.

THE RELIGION OF HUMANITY. By WILLIAM FREY. 15 cts.

AN AGNOSTIC VIEW OF THE DOCTRINE OF VICARIOUS ATONEMENT. By W. H. SPENCER. 5 cts.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

THE CHRISTIAN CHURCH AND WOMAN. By ELIZABETH CADY STANTON. 5 cts.

INAUGURATION OF LIBERAL LECTURES IN CANADA IN 1874. By ALLEN PRINGLE. 5 cts.

Address **THE INDEX**, 44 Boylston Street, Boston, Mass.

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnerbund.)

Editor, **C. Hermann Beppe.**

TERMS, PER ANNUM, IN ADVANCE:

UNITED STATES AND CANADA:

Freidenker.....\$2.50
 Turnersche Ausgabe des *Freidenker* (Amerikanische Turnzeitung)..... 3.00

EUROPE:

Freidenker.....\$3.00
 Turnersche Ausgabe des *Freidenker* (Amerikanische Turnzeitung)..... 3.50

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirteenth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing considerably more reading matter, while the price remains the same as before.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading, "Turnersche Ausgabe des *Freidenker*."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

A Liberal German Educational Monthly. (Organ of the German-American Teachers' Association.)

Editor:

MAXIMILIAN GROSSMANN, Milwaukee, Wis.

Associate Editors:

H. H. FICK, Chicago, Ill.

H. SCHURICH, Chicago, Ill.

16 large quarto pages, with four-page cover. Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

Orders for all kinds of books promptly filled. Radical and Freethought Publications a specialty.

Address all orders to

FREIDENKER PUBLISHING CO.,

470 East Water St.,

MILWAUKEE, WIS.

UNITY.

A LIBERAL RELIGIOUS NEWSPAPER.

16 pp. Weekly.

UNITY seeks to adjust religion and culture; to make thought worshipful, and worship thoughtful; to find a unity beneath conflicting dogmas; a community in all denominations; a sympathy between all religions. It seeks to represent and emphasize the abiding elements of religion, love, justice, truth, worship, practically applied among all men.

Subscriptions, \$1.50 per yr. Sample copies free.

SPECIAL offer to those who see this advertisement. Send 50 CENTS with your address within the next thirty days, and you will receive **UNITY SIX MONTHS ON TRIAL.** Ask also for free sample copy of **UNITY CHURCH-DOOR PULPIT**, a fortnightly pamphlet giving sermons by M. J. Savage, Felix Adler, Washington Gladden, Phillips Brooks, and other distinguished preachers. Address **UNITY**, 135 Wabash Avenue, Chicago.

BY B. F. U.

THE National Liberal League, at its late annual congress in Cleveland, changed its name to the American Secular Union. Its old officers were re-elected, and its methods of work will probably be the same as they have been the past year. Comment is reserved until we shall have read some authorized report of the proceedings.

THE new marriage law in Pennsylvania, which became operative last week, provides that no person in that State shall hereafter presume, under penalty of fine and imprisonment, to celebrate marriage between two persons, unless these persons have previously procured a license from a county official, who is authorized and required to ascertain that there is no lawful impediment to their union.

AN English exchange says: "An international congress of free thinkers, now sitting at Antwerp, has passed a resolution, declaring that 'moral responsibility does not exist; but society has a right to guard itself against criminals and madmen.'" It is doubtful whether a "congress of free thinkers" ever passed any such resolution; but, if it did, it only proves that erratic and foolish people, who call themselves free thinkers, are not confined to the New World.

THE *Free Press* (Ottawa, Ont.) mentions Queen Victoria's determination to ask the new parliament to pay the expense attached to the bestowal of the Order of the Garter upon Prince Henry of Battenberg in the following rather republican manner: "It will be nip and tuck whether parliament will vote the money or not; but the vote against it will be so large, and the speeches delivered so republican, that the Royal Family of England will receive an eye-opener as to the future of monarchy. If the Queen is wise, she will pay the expense of that garter out of her own private income, if Prince Henry is too poverty-stricken to pay for the honors he wears."

THE London *Daily News* of recent date says: "Mr. George Jacob Holyoake delivered an address in the Birmingham Town Hall to an audience of upwards of two thousand persons, on the 'Art

of making Things Plain in Daily Life.'" Mr. Daniel Baker, who presided, referring to the address, said that, "seeing the indecision shown by workmen in the choice of a candidate in one of their new boroughs, it would have been an advantage if Mr. Holyoake, who in former years had been a workman and a teacher among them, had been chosen. Not without a reputation in England and abroad, and being a townsman, many thought he had stronger claims than some candidates before them to nomination to one of the seven seats of the town."

CARDINAL NEWMAN advises Catholics to assist the Conservatives in maintaining the Established Church against the attacks of its enemies, declaring that it is one of the greatest bulwarks of England against atheism, by which he means, no doubt, all liberal thought which makes reason the highest authority, and attaches more value to the revelations of science than to the traditions and dogmas upon which are founded both the Roman Catholic Church and the Established Church of England. A despatch says: "Many affect to see in the cardinal's exhortation nothing more than a political adoption of the Roman Church's principle that any religion is better than no religion; but his words have attracted universal attention here, and will undoubtedly assist the Conservatives, who, as a party, stand by the Church, to secure an alliance with the Irish party."

In an article on the Progress of German Republicanism, the *Day Star* says: "We watch with great interest the struggles and successes of those men who, though now denounced as traitors, Communists and Socialists, will one day be recorded among the patriots and heroes and martyrs of liberty. They now hold in Germany the same relative position to the empire that Washington, Jefferson, and Franklin occupied toward the English government in the days of the American Revolution. Although known as Socialists in Germany, the people of that country, engaged in the present great struggle, are contending for the very same rights that our ancestors demanded when they revolted against British oppression. They demand the right of self-government as against an imperial government; and they insist upon the exercise of the rights of freemen, instead of the abject slavery of subjects."

THE *Religio Philosophical Journal* publishes letters which show that the editor, a year ago and more, regarded the Mrs. Beste, recently exposed in Hartford, as unworthy of confidence. He wished to subject her performances to test conditions, making an offer that her friend, to whom he wrote, admitted was "very fair"; but the medium declined, with an air of injured innocence, to accede to the proposition. The *Journal* of last week contained a full account of the Hartford *exposé*. Mrs. Beste admitted that, in her exhibitions not only in that city, but in Boston, Philadelphia, and Washington, the "materializations" were spurious; that the "representations were false in every nature; that the material used for said representations was a combination of thin white lawn,

or tulle, and luminous paint; and that the voices of said pretended spirits were simply representations of my own vocal power." She made this statement under oath, and promised to "desist from any further exhibitions." After all, what the medium admitted under the circumstances stated is of but little importance; but what was discovered leaves no room for doubt that her performances are of a very unspiritual, of a very mundane, character. A question with many intelligent and honest inquirers is whether "materializations" ever appear under conditions precluding the possibility of fraud.

THE Society for Ethical Culture of Philadelphia has begun its first year's work under the direction of Mr. S. B. Weston. Prof. Adler opened the lecture course last Sunday. Mr. Weston will deliver his inaugural discourse next Sunday morning at 11 o'clock, in Natatorium Hall, Broad Street, below Walnut. An Ethical Class will be formed for children of about twelve years of age; and it will meet in the hall at half-past four Sunday afternoons, and be in charge of Mr. Weston. A school will soon be established with an educational system similar to that of the Workingmen's School of New York, with a course of moral and religious instruction for children in harmony with the principles of the Society. Mr. Weston desires parents who wish to send children to this school to make early application. The publications of the Ethical Societies will be for sale at the door of the hall before and after the meetings, or may be had on application to Mr. Hugo L. Hund, 18 Hamilton Street. Mr. Weston's address is 3202 Race Street. There are, we trust, many Liberals who will join this Society,—a statement of the principles of which are given on another page,—and sustain Mr. Weston in the noble movement he has inaugurated in Philadelphia.

THREE circular letters come to us from John H. Graham, Richmond, Quebec, in which the writer declares that he is "in favor of the independence of Canada first, and an International Confederation, or Alliance of co-equals in status, rights, privileges, and prerogatives, afterwards." Mr. Graham would have the alliance "between Independent Canada and the United Kingdom or other sovereign nations" not political, but "defensive and commercial." An alliance with Great Britain would pave the way, he says, "for an International Alliance of all independent 'English-speaking' peoples; and, in due time, for a Caucasian Confederation, with all its immense possibilities." "The status, environment, and aspirations of Canada," he says, "unmistakably indicate her capability to become the model republic of the world." The third letter concludes thus: "A new nation is about to be born. Let the honored mother rightly interpret the favorable 'auspices,' and rejoice in the future promise of her offspring." These letters were evidently written in a very hopeful and optimistic mood, as well as in a spirit which many Canadians would regard as somewhat revolutionary. Whether Mr. Graham is in communication with the Canadian government we are not advised.

THE EDUCATIONAL PROBLEM IN THE SOUTH.

Among people equally interested in the promotion of education in the Southern States, both among the negroes and the poor whites, there is a difference of opinion as to the constitutional right of the national government to appropriate money for the object. Important as is an educated ballot to the national security, it is questioned whether this matter has not been left to the States, and whether the government at Washington can lawfully act upon it without a change in the national Constitution. There are persons, too, who have much wisdom in educational matters, who seriously doubt whether, in the long run, popular education would not be hindered rather than promoted by the granting of subsidies to the States from the national treasury. It is pretty well established that those States which have large reserve funds for the support of public schools do not show the best educational results. The people grow accustomed to depend upon the funds coming to them from the State treasury, and do not manifest that local interest in the schools which naturally accompanies local taxation for them. Of course, a Congressional bill (provided the question of its constitutionality were settled) for aiding education in the States from the national treasury might guard, at least in part, against this danger, by requiring the States to raise a certain sum, proportional to their population and wealth, in order to secure the national largess.

But it is not our purpose now to discuss these questions. While seeing the constitutional difficulty and recognizing also a force in the other objection just noted, we have been inclined to strain a point and run some risk, so all-important has it appeared to our judgment that, along with the grant of universal suffrage, should go the requirement of universal education. We have therefore been disposed to favor the national education measures which have been introduced into Congress. We should prefer, however, to see this matter put on clear ground by an amendment to the national Constitution. Popular education is an essential condition of a free State. And, as the national government is directed by its Constitution to guarantee a republican form of government to each of the States, so should it be directed to guarantee a certain amount of education to every child of sound mind within the whole domain of the Union,—the work to be accomplished by the joint action of the national and the State governments.

But this is a consummation far off,—possibly, never to be attained. Meantime, it is very encouraging to note any progress going on in the South itself toward overcoming the ignorance of the great mass of its population. There is clearly a pretty general awakening among thinking people there as to the great need. The State legislatures are making larger appropriations for public schools, and normal schools are springing up under State control for the education of colored as well as white teachers. There is, too, a broad idea manifest in respect to the kind of education required. It is seen that book knowledge is not all,—that industrial education is quite as important. Mr. Charles Dudley Warner, who has recently travelled extensively in several of the Southern States, gives some good testimony on this point in the September number of *Harper's Magazine*. He says: "The thoughtful and the leaders of opinion (in the South) are fully awake to the fact that the mass of the people must be educated, and that the only settlement of the negro

problem is in the education of the negro, intellectually and morally. They go further than this. They say that, for the South to hold its own,—since the negro is there, and will stay there, and is the majority of the laboring class,—it is necessary that the great agricultural mass of unskilled labor should be transformed, to a great extent, into a class of skilled labor,—skilled on the farm, in shops, in factories,—and that the South must have a highly diversified industry. To this end, they want industrial as well as ordinary schools for the colored people."

In connection with the above statement, notice may here be taken of an excellent institution in the western part of Virginia,—the "Miller Manual Labor School" for orphan children. This school is named for its founder, Samuel Miller, who, beginning life as a poor boy, died one of the wealthiest men in Virginia, and set an example for the use of his wealth which cannot have too many imitators. During his lifetime, he was a liberal giver to educational institutions; and, at his death, he bequeathed over a million dollars to establish and carry on this Manual Labor School, which has been in operation since 1878. It is open to both sexes, and has, at the present time, two hundred pupils. Its farm of one thousand acres affords facilities for practical instruction in agriculture, horticulture, and bee-culture. The course of studies corresponds with those pursued in a Technological Institute. There are also shops where training is given in the manufacture of iron, brass, and wood wares, and in the management of steam and electrical machinery. The school is thoroughly equipped in all its departments, and affords not only education, both literary and industrial, to the fortunate recipients of Mr. Miller's bounty, but also food and clothing. It is another Girard College, but, it is to be hoped, without that dishonest evasion of the founder's intentions which blots the management of its prototype in Philadelphia.

This admirable institution, presumably, is confined to white pupils, though we have seen no statement on this point. But it is balanced by the noble school in Eastern Virginia, the Hampton Normal and Agricultural Institute, of which Gen. S. C. Armstrong is the President, and which is doing even a more extensive educational work among the negroes, with the addition in late years of an Indian department. The usefulness of this institution cannot be overestimated. It presents a model for the whole South. It has been in existence long enough for its beneficial results to be distinctly traceable through the influence of the pupils it has sent out to be teachers and workers among their race. The Hampton School has been, from its foundation, one of the foremost agencies in pioneering that new and higher civilization which is now beginning to dawn in the South. Though recognized, we believe, as a regular beneficiary of one of the Evangelical Home Missionary Societies, it has been conducted in such a broad way as to win the good opinion and the constant financial help of people of the most liberal religious beliefs. Gen. Armstrong is not a man who can confine himself to any sectarian work, and to his breadth of view and aim and enthusiastic, humanitarian spirit must be attributed the fine success which has been achieved at Hampton. Of course, he has had able and zealous assistants; but he has been the working leader and administrator in the enterprise from the start.

In the mountain region of Eastern Kentucky is another educational institution, which is older than the Hampton School, and which is also doing an excellent work,—Berea College. Berea College

was in existence and was famous before the civil war. It was established by an anti-slavery colony, and its founder and his associates were driven in consequence from the State. Resuscitated after the war, it opened its doors alike to colored and to white students, and has thus, among all the educational institutions of the South, so far as we know, been doing a unique work,—educating the two races in the same building, in the same classes. The experiment has been a success. The numbers of the two races are not far from equal in the school, and color prejudice appears largely to have died out through all the surrounding region. Commencement Day at Berea is a holiday for several counties in Eastern Kentucky, when people of all classes and colors, who can afford the journey, flock to the college to attend the exercises.

It must be admitted, too, that some of the evangelical denominations have been doing not a little of good educational work in the South since the close of the war. Though their object may have been sectarian, and their methods somewhat ecclesiastical, it is yet impossible that they should have established schools anywhere with Northern money and teachers without carrying with them a good measure of the modern rational methods of education. The *Southern Workman*, the instructive journal printed at Hampton, by Hampton students, with Gen. Armstrong as its editor-in-chief, reports that the Baptists have established and are still supporting fifteen schools among the freedmen, which have a total of 2 858 students and 101 teachers. Ten of these schools have departments of industrial training in successful operation, and they all report very encouraging progress in the work done and in the quality of the students that graduate from them. The president of the Nashville school says: "It would surprise those who have never visited Southern institutions for colored people to see the proficiency which has been made in intellectual attainment during the twenty years since slavery was abolished. . . . The great majority of our students support themselves, and pay for their education with their own earnings." Similar reports are made from other institutions, and of the educational enterprises in other denominations.

There is a sprinkling, too, of individual effort, independent of any sect, in various sections of the South, to add to the too scanty educational appliances furnished by the public authorities,—as Miss Holley's school in Lottsburgh, Va., and Miss Bell's on Harker's Island, N.C. These efforts, which have had no sectarian ends in view, especially those which were started by the Freedmen's Aid Societies, have in many cases ripened into public institutions, adopted by the State or municipal authorities.

The seed which private Northern philanthropy has thus sowed here and there in the South is now bringing forth its fruit. The editorial article in the *Southern Workman*, from which we have already quoted, encouragingly adds, "Imperceptibly, even ultra Southerners are coming to look upon these schools and the power which they represent as their best safeguard against the political and social dangers which they feel to be imminent; and we venture to say with some assurance that the more intelligent and advanced among them are at last ready to lend a helping hand." Large, however, as is the number of schools which denominational and private philanthropy has sustained in the Southern States, and important as their work has been, and however encouraging may be the increased interest in popular education which is now manifest in the South itself, those who are most conversant with the Southern educational problem will be the least likely to under-

rate the magnitude or the difficulty of the task that is yet to be accomplished. They see that only a beginning has been made. They know both how vast is the field and how little of it is yet occupied. If national legislation cannot be constitutionally invoked to aid in the work, then ample room remains for private philanthropy, both North and South, not only to continue, but to increase its benefactions. Such a work cannot be regarded as sectional in whatever quarter it began or by whomever sustained: it vitally concerns the political health and safety of the whole country.

WM. J. POTTER.

EVOLUTION.

II.

The new chemistry, the chemistry of the present day, is based upon the supposition that all matter is composed of atoms; that atoms coming together form molecules; that a molecule is the smallest particle of a substance that can exist as such,—thus, a molecule of sugar is the smallest particle that can exist as sugar, any further division would break it up into its atomic elements of carbon, hydrogen, and oxygen; that the molecules composing a substance are in constant motion; and that the intensity of this motion is what constitutes its temperature. In entering the fields of physics, we must leave behind us the prevalent notion associated with the terms heat and cold. Heat is simply a mode of motion. A substance is warm to the human hand when its molecules are moving slightly faster than the molecules of the hand,—hot when moving much more rapidly, and cold when moving slower. The molecular vibrations of the human body are such that, when the body is brought in contact with a small column of mercury confined within a glass tube, and held in this position for a time sufficiently long for the molecular impulse of the body to be imparted to the molecules of the quicksilver, they cause the latter to swing farther and farther apart, thus increasing the height of the column of mercury until it reaches a point on the scale marked 98° or thereabouts. Thus, we say the temperature of the body, in round numbers, is 98°.

Throughout the whole universe, as Spencer teaches, there is an unceasing redistribution of matter and motion, either in the direction of evolution or of dissolution.

When this process is one of evolution, there is an integration of the molecules of matter, during which the motion or energy of the individual molecules undergoes a like process of integration or unification; and the result of this acting together as one is a motion of the whole mass in a common direction. Thus, the molecular motion of the ignited powder in a cannon, imparted to the molecules of the cannon-ball, causes its molecules as a whole (that is, the ball) to move in a common direction, thus converting heat or molecular motion into mass or molar motion. When the cannon-ball strikes an object offering resistance sufficient to arrest its flight, the sudden shock breaks up or redistributes this co-operative or corporate motion of the molecules of the ball; and each one moves, as it were, independently of the other, and the ball becomes hot,—just as when a regiment of soldiers, moving as a single living organism, throws itself upon an opposing regiment too strong for it to break, the recoil converts this unified body of men into a tumultuous mass of confused and excited individuals flying in every direction.

In the inorganic world of matter, the process of evolution apparently proceeds no further than the conversion of molecular motion into mass or molar

motion and crystallization. The movements of the planets through space, the great pulse throb of the sea, the currents in the vast aerial ocean that surrounds us, the upheaving of mountain ranges and all other terrestrial movements, come through the integration of the molecules of matter and the conversion of their individual energies into an energy acting as one, or mass motion. The process of crystallization approaches very closely the vital process, and indicates that the continuity between the inorganic and organic worlds is unbroken. With molecules of organic matter, the same tendency exists as with those of inorganic matter, but with a greater complexity of results. In the animal organism, the molecules of the body become integrated into cells, or cell animals, the cells by further integration become welded together, so to speak, forming the muscles and tissues of the body. These united cells also unite their individual energies, or a large portion, into a common or corporate energy; and the result is muscular motion and animal locomotion. The retained portion, or that withheld from this joint action, remains as molecular motion or heat, which, like a bank's reserve fund, must never fall below an energy indicated by the thermometer at 98°.

Dissolution, as said before, is a disintegration of matter, an absorption of motion. Now, to illustrate this, let us take a case of inflammation resulting from a wound. It is needless to state that inflammation is a step toward dissolution; for, if not arrested, it invariably terminates at that point.

The *English Medical Times and Gazette*, in a recent issue, in commenting on a suggestion thrown out by Dr. J. Hughlings Jackson, that inflammation should be regarded as a process of dissolution, very clearly demonstrates that the process fully corresponds to Mr. Spencer's definition of dissolution. The substance of this article I give, but not the words. Spencer's definition first asserts that dissolution is a disintegration of matter. Now, we find that the afflicted part is soft and swollen, showing that its component molecules are swinging farther and farther apart, and consequently occupying more space. These molecules that were formerly integrated into a solid, compact body, occupying but little space, now, like our regiment of soldiers mentioned above, are being converted into groups, so to speak, of excited unorganized units, muscular motion or mass motion is being dissipated or converted into molecular motion or heat. In other words, the afflicted part is hot; and muscular effort becomes difficult, if possible at all. To correct this, we bathe the afflicted part with water whose molecules are moving slower (i.e., colder) than those composing the inflamed tissue. From the water thus applied, the excited molecules can gain no accelerated motion; but, on the contrary, the slower moving molecules of the water absorb or take up the motion that would otherwise be taken up by the molecules composing the adjoining tissue. In other words, the inflammation is reduced.

Again, Spencer asserts that matter, during the process of dissolution, passes from a definite, coherent heterogeneity to an indefinite, incoherent, homogeneity. In corroboration of this, it is hardly necessary to state that, if the inflammation is not arrested, the definite, coherent, or closely co-ordinated and heterogeneous cells, such as skin, nerve, muscle, and bone cells, liquefy and pass into indefinite, incoherent, homogeneous pus cells, with a complete absorption of all motion that could be called organic or animal motion. As before stated, civilization, art, religion, and government, being the resultants of matter and life, are embraced within the same law, and proceed like them from

the simple and indefinite to the complex and definite with a constantly increasing complexity and definiteness until the point of equilibration is reached. From this point, the process is backward in the direction of dissolution.

The individual units of a savage community are strictly analogous to the units of a slightly integrated animal. Destroy one-half of such a community, and the injury is similar to that inflicted when we divided the earth worm, as far as it relates to the social organism; for the function of each individual unit in such a community, as it relates to the whole community, is identically that of another,—no social or corporate institutions are disturbed, but only an aggregate weakened; but inflict a like injury upon a civilized community possessing transportation, telegraphic, postal, and mercantile systems, analogous to the circulatory, nervous, and nutritive functions of a highly integrated organism, and the injury sustained is in exact proportion to the definiteness and complexity of such social organization. It is needless to remind the reader that a shock to any of our public or corporate organizations, particularly to our monetary system, means a wide-spread injury and suffering reaching the humblest units of the social body.

As in the terrestrial ocean, so there also goes through the ocean of infinity a great pulse throb,—the integration and disintegration of matter,—the culmination of such waves being the building, and their subsidence the unbuilding of worlds. And, to the man who first grasped and solved this great problem of the universe, more homage is due than to Pythagoras, Plato, or to any of the philosophers that have preceded him.

J. R. MORLEY.

CARLYLE AND GOETHE AND LITERARY VERACITY.

I.

To those who rightly comprehend the significance of his life, Carlyle's "reaching forth" to Goethe is not mysterious. Goethe was singularly gifted with literary veracity. Carlyle, whose nature was broadly developed on that side, was very early in life excited to sympathy and trust. To his Covenantish mind, Goethe's features were divulged with such light and force as will sometimes make the discoveries of great religious teachers startling. Here, in a world of shams, was one true man who could not have been seduced from his sphere! Carlyle rose to the revelation, and its results were evident in everything that subsequently came from his pen. Now, Carlyle was not an ideal man: he could growl much over trivial matters, and fire big shot at useless game; but the predominating truth of his life was plain in all his work, and made even the slight seasons portentous of important fruitage. Goethe, likewise, was not impeccable: we listen betimes to his songs, conscious of some want of harmony, while his private life was not all redolent of the virtues; yet the poet was primally faithful and nobly poised, attendant to all righteously conceived literary demands, and unwavering in obedience to the soul's message. However the relative minor merits and lapses of the men may shape themselves to different minds, their lives, in a general sense, uniquely stood for what was high in literature, and indicated certain lines of duty that never could be evaded by honest craftsmen. While not isolated in professional heroism, they were striking. With lesser individualities, illustration might fail of proportion. With them, certain transcendent facts stalk into the light in such guises as impose attention. When I con-

sider these, and reason forward, I can never forget that the contrasting life-forces of the men—the one rich in the world's goods, the other poor—are such as assure us, by insight deeper than is realized through some current philosophies, that in the right bosom honor is secure against the dangers of station, high or low. And this observation is vastly significant in its bearing upon the logical position of exemplary authorship.

Literary purity is not a figment. We talk volubly of "market honor" and "woman's honor" and the physical moralities, that, no doubt, have their place and weight. But, when we have done with this perishable side of life, there remain higher decisions that must govern the soul's concerns. This is peculiar ground, rarely well turned, yet profitable under examination. Whether the poets, like the merchants, might not on occasions cheat the public,—that raises an interesting question. The writer, for instance, whose words are bought, here directly, there by favor,—in him, what is the degree of offence? Carlyle had these penetrating claimants in mind more than once in hours of temptation, when the Basil Montagus and the journalists and the colleges invitingly opened their doors. One consequence of his eager honor that flouted all the devices of external pretension lies in his Goethean admiration, in an expanding love developed toward the personal force that did for literary Germany what he did for literary England. Mere reward was no proof to him of worth: even in his own case, he suspected to the last the ephemeral nature of his work; but, when reward followed uncalculating endeavor, he could, at least in himself, feel that the results did not bring in questions on the moral side of the problem. No firmer ground could have been built upon. Earth and habitation were by such choice rendered one. Carlyle, as is well known, very promptly in his career proved his adherence to the abstract as superior to the commercial view of his profession. A man who less firmly held to a saving theory would not so easily have comprehended the profound dignity and reach of Goethe's mind. What, now, have such characteristics to do with the accepted standard of literary justice?

When Miss Taylor and other brave people discuss "the obligations of veracity," they often enough lose themselves in the trivial suggestions of their search. It is not with escaping thieves or pursued murderers or priestly observances* that we find the deeper or only calls for justice and conscience. Away from the flimsier vestments, brought face to face with the soul, literature, for example, has an unwritten code, before which strong men must kneel in seemly abandonment. We pay tribute to this truth, when we say that smiles will not smooth out offence, nor the habitual indulgence of sophistry and partisan falsehood find excuse in passion and rhetoric. The man who lies to me in print steals from me more than the price of type and paper. He suspicions my purity, and appropriates credit that turns to thorns in his hands. Shakspeare, once for all, in majestic words, has rebuked those who imagine a heart emptied of honor to be more than atoned for by a purse filled with coin. Carlyle guarded his life so well that he was never forced to apologize for literary shortcomings. He was no book-maker. He wrote because he felt called. He said what he thought the times most needed. He spoke to his age, though holding aloof from it. He treated life rather as host than hostage. To Weimar, therefore, with its brother-man, he looked with that absolute confidence which begot response. It is in such incidents, rather than in those formally considered, that the "obligations

of veracity" find their best justification and finest exposition.

Literature is not to be regarded as an escape-pipe for human trifling. Its mission goes to other springs. It is good, if turned to good purposes, and bad, if turned to bad. Our distended professional wits do not comprise the whole or even an important part of the influence. There may be too many books: I hold that to be unquestionable. History proves it by narrowing its selections to ultimate particles. The literary "law" of veracity comprehends several features. It supposes necessity and sincerity. What is written without a subjective conviction that men need it, what fails to bubble unbidden from generous springs, and what is insincerely expressed though sincerely conceived, offend, all, against the interest of the community of readers. Books inspired by bank-notes may read their sentence at inception. Walt Whitman is nobler in seclusion than many an author is in forced prominence. Varnish never serves other than momentary purposes. When Hugo proved to the world that the Napoleonic dynasty could not buy his pen, he assured us of continued music. The polite poets, who revelled in splendor under Louis XIV., were buried long ago,—horse, foot, and dragoons,—poems, flings, and tales. "Veracity" presents its claim in many forms. Prescott recognized the obligation when he refused to write of the *second* conquest of Mexico, giving a decisive "nay" because he was not sufficiently distant in time and temper from the event. It must be admitted that "good men and true," in stress of poverty, have wrought upon motives of gain that do not become them. But, if I am pointed to Goldsmith's idyls, as has occurred here and there, I am lost to conceive how their spontaneity can be read through the financial argument. Necessitous circumstance may have forced labor upon certain men; but it does not follow that in such cases love of the work was wanting, or that the workers corrupted their faith in order to assure themselves of a good meal. No excellent writer known in history has been without some sense of what was owing by his pretensions to his achievements. But many sacrifice the future for the today, or shrink from an honorable obscurity into temporary positions of honor, that, while inherently degrading, do not require ostentatious surrender. Many, again, in mistaking noise for fame, have miserably resigned reason and conscience together. American history has furnished more than one attestation of this statement. We are not justified, however, in lamenting such seeming venality as always a calculation on the part of offenders. Often enough, the ideal is low, and the criminals know nothing of their invasion. To lighten the world's care and to touch its sympathy, to broaden wisdom and heighten knowledge, are guerdons little pressing upon the literary sense that has joined with the panderers to the market-places, and bargained its wares, as it would butter and cheese, for the fickle kindness of the moment.

Carlyle was less like himself when he helped secure Tennyson's pension than when he scorned the idea of assistance of that sort for his own exchequer. Literature is belittled whenever its conscience is subsidized. What we call the free press is most free when laws in no way touch it. And what is true of the craft impersonally is true of its individuals. We can easily recall many great writers who have, in one way or another, been put under official wings; but I doubt if one of these men ever found the public "protection" a cause of professional strength, while it was certainly, even in the fairest cases, one among enervating influences. Books dedicated to lords or monarchs, from whom reward is anticipated, always give a

half-contradiction to any moral purpose they may have been written to effect. A man in any special way beholden to a government is disarmed before its possible and likely corruption. Against whatever winds, he is helpless. Think of Tennyson's later poems addressed to the monarchy! Carlyle's "growl" was expected on every occasion of political moment in England. Men seemed to resent even while pleased to have it. Had he been under the surveillance of a State subsidy, would the wholesome criticism have been heard? Not once in all that long career; and, therefore, to England's eternal loss! Could there be a more crushing confutation of the whole theory of governmental patronage of authors? Though literature deserves an unlimited accretion of popular aid, that help, when it arises, must course through channels voluntary, man to man, individual appreciative to individual productive. What governments do for writers is always in some degree coercive: what is extended by individuals frees and inspires. Spencer argues that government is "born of aggression," and it is certain that only by a refined aggression can the arts secure sustenance from the State. The public purse cannot honestly be made susceptible to such influences. Legitimate duties are compromised when illegitimate duties are assumed. Literature needs only to be natural. Given free play, it always prospers and elevates. What are the "organs" of political cliques?—the pamphleteers employed to shed lustre upon administrations which would not bid for praise if they deserved it? "The liberal arts" can never inter-work with government: the assumption is self-destructive. Literature has nothing to do with laws in any sense that would interfere with the tendency of the stream. Force is a two-bladed weapon; and, in hands concrete or abstract, it is as keen to the flesh of friends as of foes. The appeal must be to constituencies that have the liberty of refusal. Mere cants, legal or social, are obnoxious to all uncurbed spirits.

HORACE L. TRAUBEL.

CORNELL AND CHRISTIANITY.

I have not seen any mention in *The Index* of the farewell report made by President White to the trustees of Cornell University. And yet it contains sentiments that should find a place in your columns, which is my excuse for referring here in Paris, France, to a pamphlet published in Ithaca, N.Y.

Toward the end of his report, President White says, "And now, at the close of twenty years' service here, and of this my last official report, allow me to speak regarding the general policy of the University, and to state certain principles, suggested by long thought upon the problems before us, as I have seen them dealt with at various institutions, American and foreign, and by a direct experience in dealing with them extending through nearly thirty years." Under the head of what should be the "external policy of the University," we find, among other things, these bits of wise counsel: "We should never waver from the letter and spirit of our charter, which forbids the University to be either sectarian or partisan, which abolishes all questions of political or religious creed from appointments of every sort, which asks regarding a candidate for any position, not in what creed he happened to be brought up or into what party have his circumstances thrown him, but simply whether he is, as to character and attainments, the best man who can be secured for the place. . . . When we were organized, this was considered our weakness: it was insisted that, without some sectarian connection, we would never feel be-

bind us any strong, supporting, protecting, and impelling power. The contrary has proved true. Our University has received larger gifts than any institution in this State, or perhaps in the entire country, has ever received in the same length of time; and they have come from men of both parties, and from men and women of all creeds. Sectarian attacks have helped rather than hurt us. Some of the most important gifts we have ever received have been directly stimulated by disgust at such attacks, and these gifts have been made by members of various sects in whose supposed interest the attacks have been made. So, too, these attacks have deepened and strengthened the attachment of both undergraduates and graduates to their Alma Mater. Nothing should ever be done which could afford just cause for such attacks, but nothing should be done to prevent them by yielding one jot or tittle of the unsectarian principle which is so firmly bedded in our charter.

"As regards dealing with religious questions, while the greatest respect should be shown to the general convictions of the country, and every just effort should be made to avoid giving offence, no scientific or other professor should be hindered from thinking or making any researches, or from stating in a legitimate way any results of research and thought. No greater mistake has ever been made in the interest of religion than to attempt to fetter scientific and historical research and statement on the ground of their supposed conflict with religious truth. All truth is one. Earnest efforts at seeking truth in different fields will finally be harmonized with each other. Even error honestly arrived at will do more for religion and for science than truth merely asserted dogmatically. It is an imputation against religion, rising to the height of blasphemy, to say that any quiet, thoughtful research, or statement of the results of research, can be anything but conducive to religion. No talk about the 'tendency' of any man's teaching should have any weight against him, if he be capable and honest. Religious truth, like all other truth, takes excellent care of itself. There is no danger that the human race will ever lose its religious instincts. Whenever it is said that any special teaching is irreligious in tendency, it should be borne in mind that this objection has been made in regard to almost every step in the progress of scientific truth; and, among these, the doctrines of the rotundity of the earth, of the existence of human beings on opposite surfaces of the earth, of the movement of the earth about the sun, of comets as heavenly bodies obedient to law, and not as fire-balls flung at a wicked world from the right hand of an avenging God, of geology, of chemistry, of political economy, of the practice of dissection, of vaccination, of the taking of interest for money, of eating potatoes, and a multitude of other things of the sort, have been bitterly opposed as contrary to divine revelation, and, in the interest of religion as well as of science, we may well be on our guard against adding anything to these saddest chapters of human history. . . .

"As regards religious teaching, no more happy arrangement, in my opinion, was ever made for an institution like ours than in the establishment of the Dean Sage Preachership. It has given us, probably, the most remarkable and valuable series of sermons ever preached in the United States from any one pulpit. Religious truth has been thus presented, with a breadth, freshness, and strength, such as could not otherwise have been given it. Nor has there been any clash between opinions or any real sacrifice of continuity of thought. Men have been called, who have, as a rule, presented, not sectarian views, but the great fundamental doctrines of religion. The very com-

prehensiveness of the system appeals to the instinct for fairness in students. This comprehensiveness should never be lost or even endangered. The broader the basis of choice can be honestly made, the better. Under the endowment, all shades of Christian opinion, thoughtfully held, are equal. The spirit of our charter and the gift itself forbid us to narrow its basis. . . . I would then urge that this system be steadily maintained, that no restrictions be ever imposed upon it within its present limits, that no clamor of any person shall ever lead the trustees to sanction the narrowing down of this instruction to men who are technically called 'evangelical' or even 'orthodox.' When this is done, the usefulness of the system, as regards its influence both on the faculty and students, will be gone. It would be simply sectarian preaching and nothing more. Maintained in its present form, I believe it will be more and more a blessing to the thousands who shall come here as time goes on, as well as a cause of confidence in the community at large."

These liberal, sensible words of the retiring President of Cornell are not without their necessity at Ithaca. I well remember how Prof. Felix Adler was frowned upon on the college campus, when he was a member of the Cornell Faculty; and I also recall very distinctly that, when Octavius B. Frothingham delivered two remarkable discourses in Sage Chapel, a few years ago, his honorary was not paid out of the Dean Sage Preachership Fund, but from voluntary subscriptions collected among students, professors, and the town's people. Furthermore, it was actually given out that Mr. Frothingham was not invited to the University as a Dean Sage preacher, because his religious beliefs were distasteful to a certain influential member of the board of trustees! It is only just to President White to say that he was not in Ithaca when these two events happened, but was in Europe on a leave of absence; and it is more than probable that he had them in mind, when he wrote the lines which have just been quoted. The future will show whether the wisdom and breadth of mind of the retiring President are to prevail at Ithaca, or whether young Cornell is to fall back into the humdrum religion of the generality of the old American universities.

THEODORE STANTON.

CONCEPTION OF CREATION.

In these days of unprecedented progress, men have discovered, not only new capacities, but new incapacities. The philosophical world is now particularly afflicted with a very general inability to conceive creation. It is said that a Newton approaches no nearer to the peculiar powers of a Creator than does the lowest savage, and that we should have to say the same, if Newton's powers were indefinitely exalted and augmented, because the power of creation is not among the powers possessed, and no higher degree of these could bring that in. He would be able far better to comprehend and expound and use the things that are, but he could not add an atom to their sum total, or detract an atom from it.

This confounds conception with achievement. It is cheerfully allowed that Newton has no more creative power than a flea. It is the essential element of the theory of creation that this power is peculiar to God, so that the lack of it, whether in Newton or Gabriel, is nothing to the question in debate. It is, however, exceedingly marvellous to see how men can exhibit the most exquisite operation of a faculty in the very act of denying its existence. How perfect a description of creation is this denial of it to Newton! He cannot add to (or detract from) the sum of being in the

slightest degree. That would be the power of creation. How perfectly distinct and clear! This power we deny to the finite, and ascribe it, as a peculiar property, to the Infinite. Whether or not there is any Being with such a power is another question, but the conception thereof is perfectly distinct and clear. That philosophers should universally disclaim any power of such conception is an extraordinary exhibition of an uncomprehending and depreciative modesty, which goes so far as to contradict itself. Philosophy has always shown this self-depressing infirmity just at this point. This has rendered it inconsistent in all its discussions of the question of creation, the conception of which it denies while defining it, as it must define, in order to have something to deny. After defining and denying this, it always proceeds, in accordance with the denial, to describe creation as if it were merely evolution. It is well that this issue has been distinctly raised, whether creation is, in thought and fact, only a name for evolution. For not till a thought becomes a definite mental fixture can it be effectually refuted. Evolution is only change in the existent. Creation is the beginning of an existence caused *ab extra*. Here are two thoughts perfectly distinct; and this must not be confounded with the question whether there are two facts corresponding to them, which is a separate inquiry.

WILLIAM I. GILL.

The Index.

BOSTON, OCTOBER 22, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion; to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

EDITORIAL NOTES.

BY B. F. U.

It is high time for the Chinese to begin sending missionaries to us; for we seem to need instruction in morals, not to say Christianity, as truly as they. —*Congregationalist*.

THE Boston Herald says: "Most ministers enunciate the views of Paul. What the world needs is more of Jesus Christ and less of Paul." "What the world needs" is more independent thought and less authority.

THE great-grandfather of Daniel Greenleaf Thompson, of New York, the author of *A System of Psychology*, which has gained for him a reputation among the philosophic thinkers of Eng-

land, was killed in the battle of Lexington. The author's father was born in Charlestown, Mass. Woburn is now the home of many of his family connections.

"A BELIEF is void of justification, unless its subject-matter lies within the boundaries of possible knowledge, and unless its evidence satisfies the conditions which experience imposes as the guarantee of credibility."—*Huxley*.

REFERRING to that newspaper report that Jumbo, when he realized the danger from the approaching freight train, made a rush for the baby elephant, "Tom Thumb," and threw him across the track, and then tried to get out of the way himself, but was too late, *Unity* remarks, "It would seem as if the universe could not afford to spare a soul that was willing to lose its earthly life in trying to save another, even though that soul belonged to an elephant."

A RECEPTION was given Mr. W. H. Spencer and his wife last week in the parlors of the Unitarian church at Troy. About two hundred were present, including several of the clergymen of that city. "Mr. Spencer," says a Troy paper, "is a man of high intelligence, and very acceptable to his charge." Although Mr. Spencer has returned to the Unitarian fold for reasons satisfactory to himself, we trust he will continue to keep in advance of the Unitarian denomination, help to divest it of its sectarian spirit and exclusiveness, —not so marked as among the orthodox, but still existing,—and to bring it in harmony with the bold and radical liberal thought which is compelling all the churches to become broader in their views and sympathies.

SAID Heber Newton, in a recent sermon: "The sufferings of earth form the ever fresh puzzle of man. Why is there so much pain upon the earth? Why have we to suffer so keenly in this brief life? Who does not know the anguish of this question? Who, that has ever walked the wards of a hospital, does not feel it ringing through his being, challenging his faith in a good and merciful God? No one can solve this problem as yet." When an Episcopalian clergyman feels compelled to make an admission like the above, our liberal preachers, whose radicalism is limited to fierce assaults upon orthodox Christianity, might afford to exercise a little more patience with, and show a little more courtesy to, the class of thinkers called agnostics. Why should they who believe less than their orthodox neighbors show the spirit of the Pharisee toward those who believe even less than they in regard to matters of which probably nobody knows anything, and as to which minds equally able and acute honestly differ?

A FRIEND sends us the following, clipped from some newspaper:—

Bishop Peck did not belong to Indiana, but he was so well known in the State that this story of him will not be out of place. Those who knew him will remember his ponderous frame and more than aldermanic proportions. While at Evanston, Ill., once, he was stopping at the house of a friend who was extremely long and thin. Among the habitual visitors to this house was a woman who had lost her mind. She was a kind of *protégée* of the host and his good wife, and was frequent in her visits to solicit aid. The morning after the bishop's arrival, she made one of these visits; and, as she entered the doorway, the bishop came into the hall. She gazed in consternation at his immense size, and then with a look of terror threw herself on her knees in front of him, and with clasped hands exclaimed, "Oh, sir! are you the Trinity?"

In the *Cleveland Leader* of the 11th appeared a letter from Mr. E. D. Stark of that city, from which we copy the following: "The Congress of Liberals now in session in this city, as indicated

by its 'nine demands,' stands for a movement which enlists the sympathy of many intelligent people of all shades of religious belief. Those demands mean complete separation of Church and State. But the platform utterances and the active propagandism of its zealous members seem to me a very different thing. These people would not only secularize the State: they would secularize the church, the family, and the very shrine of our private devotion; and there seems some incongruity between the professed aims and the real work of the organization. An understanding of that incongruity will make it clear why so many of the foremost Liberals of the country who approve of the 'demands' yet stand aloof and refuse to co-operate with the League. The secularization of the State is a movement manifestly in the line of true progress and enlightened government; while 'secularism,' as a cult, a philosophy of life and conduct that shall serve all the high character culture and supersede the current religions, is a very different matter."

On the last Sunday in September there was a meeting of the Free Congregational Society of Florence, Mass., called to consider criticisms of the society by its late resident speaker, Mr. W. H. Spencer, in his farewell address. The older members of the society were asked to contribute something suitable to the occasion. Mrs. Bond, the present resident speaker, opened the exercises with some appropriate and pleasant reminiscences. Mr. Seth Hunt gave an interesting sketch of the society, and stated its principles and purposes, remarking that, if they were synonymous with the aim of the devil, "all I have to say is, he has been most cruelly slandered; and, if he should ever come this way, I, for one, would be glad to have an introduction." Mr. A. T. Lilly followed in a more direct reply to Mr. Spencer's criticisms. He quoted from Mr. Spencer's first address as speaker of the society, given in 1881, and from his last address, in which approval of the general objects and work of the society was expressed, and thus replied to the late speaker: "He rebukes us for isolating ourselves from the churches and their conventions, but fails to show us how we can mingle with them. . . . In the judgment of our critic, the objects for which the Free Congregational Society of Florence was organized no longer exist. Let us look at it for a moment: notwithstanding churches are liberalized to-day, as compared with the past, show me, if you can, where the church exists to-day that is not bound by a creed? We do not have to practise any concealment of the thought within us, for fear of creating displeasure or unpopularity; while, on the other hand, we have no clogs to prevent our doing good and living up to our highest ideal of morality. I say, in all candor,—and I speak from a long experience and observation,—that at no time have I been made cognizant of so much hypocrisy existing in the Church as at the present time. The more enlightened ones have outgrown their belief in the Christian dogma, and still remain in the Church, subscribing its creed. . . . It seems to me that it is no time for us to give up the vantage ground we have gained, but go forward with boldness and energy, until all mankind are freed from the bonds of a religious thralldom. Then will our work be accomplished, and not till then." The concluding speech, by Mr. Arthur G. Hill, was broad and liberal; and we regret that we have space for only a brief sentence. He said: "Let us have no free-thinker bigots, keep ourselves out of ruts, live pure lives, continue to influence all around us to be better, grow freer in thought and reason, and remember that we can learn as much from our orthodox neighbors as they can

from us. Let us strive further to roll down the intervening sides to our ruts, so that thoughts from every source will find no barriers to free circulation. Be not contented with simply being a free thinker. Be a working free thinker; be a true Cosmian, adding the strength, life, vigor, enthusiasm that you possess to the common fund, which will thus be enabled to bring about results that a single individual would never see. Be encouraged to work with us, encourage us to work with you, keep the standard high; and the world will not be the worse, but the better, for the existence of our Free Congregational Society of Florence, for the maintenance of a Cosmian Hall."

REV. FATHER JAMES McCaffrey, of St. Patrick's Catholic Church, St. Louis, recently announced from the pulpit that the Catholic children of the parish,—one of the most wealthy and influential in the city,—who attend the public schools, would be barred from the celebration of the Holy Communion. The announcement, says the *New York Tribune*, "split the congregation in twain." Father Joice, a leading priest, was interviewed, and said: "We are all doing what we can to prevent our children from going to the public schools. This evil, you understand, is great. The evil is not confined to St. Louis. It is in Chicago, in New York, in Brooklyn,—in almost every large city of the country. The Catholic clergy must do everything they can to overcome it. We must educate our own children. They are educated in the public schools merely as an animal would be educated. Their souls are not attended to. They are taught so much arithmetic, so much geography, so much grammar, and so much history, but never a word about their souls, about God, or about the life after this. There are many of our children taken from the public schools who do not know how many persons there are in God. Now, we have built schools, and procured teachers of our own, in order that we may save the souls of these children; for it is when the child is young that the man must be taught."

THE following is an extract from a letter received lately from a friend across the sea: "In *The Index* of August 20 is a letter from H. R. S. which defines Christians to be, generally speaking, all those who live uprightly and do good, whether they accept or repudiate Jesus Christ. That amused me. I was rather glad to see you had noticed the matter in a leader in the same issue. But I allude to this only to tell you a joke. Next door to our place of business is a very pleasant, bald-headed Jew. He says he grew bald through his mother's patting him on the head, and saying, 'You are a dear, good little boy!' I have not heard the mother's report. He is a good, fair-dealing, obliging man, 'an Israelite indeed, in whom there is no guile.' Any little accommodation in the way of business we always do for each other when we can. One day recently, he had changed two bank-notes for me; and, as he counted out the sovereigns for the second one, I thought of H. R. S.'s letter, and said, 'You're a Christian.' 'Not a bit of it,' said Brother W., 'I'm a Jew.' I explained my reason à la H. R. S.; but he turned on me and said, 'My brother, you're a Jew.' I felt the full force of the remark, and I have concluded to try to be a good Jew. I felt keenly how presumptuous it is in our Christian friends to assume, under the name of their religious system, the possession of the virtue of all ages and climes. . . . I am reminded of what Beaconsfield said in his early days, when he was sneered at on account of his Jewish descent. 'One-half the Christian world,' he said, 'worships a Jewess, and the other half worships her son. Yet we are vainly trying to convert the Jews.'"

For The Index.

The Dual Aspect of our Nature.

BY EDWARD MONTGOMERY.

The Riddle of Body and Mind.

Each of us has a living organism, and each of us has consciousness. This no one really doubts. The simple statement of the fact seems beyond dispute to common sense. Yet, when we impartially survey the scientifically generalized bodies of knowledge, called physiology and psychology, we are forced to concede that these seemingly so unquestionable belongings of ours are, nevertheless, of uncertain reality. Whenever our understanding attempts firmly to grasp them, they are found on the one side to dissipate into minutest points of impalpable stuff; on the other side, to melt away into unsubstantial apparitions.

Analyzed under the microcosmic lens of prying thought, our solid body dissolves, like nebule of the starry heavens, into constellations within constellations of countless myriads of constituent elements; the whole floating, a mere dreamlike vision, in the illimitable expanse of conscious sight, and there—with all other figurations of that spectral realm—dwindling away from instant to instant, out of actual presence into the soundless wastes of the irrecoverable past. Nothing consciously extant of our world-deep existence, but a phenomenal body within a phenomenal mind; only an iridescent show on an ever-vanishing foil.

In moments of solemn reflection or exalted emotion, we distinctly feel this phantasmal semblance of all there is actually present, and the veritable grounding of our whole dual being in fathomless depths of unilluminated reality.

Thus awed and bewildered as to the genuine nature of our living selves, we, whose faith has become disentangled from the delusive charm of childlike trust, naturally appeal to the teachings of science for steady enlightenment. We expect, as the fruit of sober and exact inquiry, a consistent explanation of this twofold enigma of individual life,—its material embodiment and its mental comprehension. But science, such as we have, too helplessly juvenile as yet in the presence of so much perplexing intricacy, has hitherto signally failed in its endeavors to disclose the true constitution of either body or mind; failed, also, to ascertain the mutual relation of these two distinctive integrants of our actual personality.

Our philosophical inquisitiveness, as regards this problem of body and mind, is, however, nowise prompted by vain and unprofitable curiosity. On no account can it be safely hushed by a sop of shallow or ambiguous answers. Human history, as well as our personal experience, abundantly prove that the conviction arrived at concerning the nature and interdependence of those mysterious factors of our being exerts under all conditions of life a decisive influence on its practical guidance. Indeed, it may be fairly asserted that the destiny of nations, not less than that of individuals, gradually shapes itself in concordance with whatever view is taken of the respective parts played by materiality and mentality in this enigmatical world of ours.

If, as is the case in our leading creeds, the apparent dualism manifesting itself in the conflict between the material and mental occurrences of our existence be accepted as fundamentally subsistent, then the entire conception of nature, and in consequence our behavior therein, cannot possibly resist being fashioned more and more in agreement with such a view. Our living individuality and its mind are then necessarily looked

upon as two totally disparate entities. And in dead earnest, under the sway of this idea, we set about thinking and acting as if in all reality we possessed a duplex being, a material body and a spiritual soul; the former belonging and reverting altogether to the visible nature surrounding us, the latter having a completely different mode of subsistence in a hypersensible sphere, to which it finally escapes.

If, on the other hand, we attempt to transcend the apparent duality of our manifest nature, either by attributing to the body and its activities the power of producing mental phenomena, or, on the contrary, to mind the power of constituting bodily appearances, we are apt, in the first endeavor, to become thorough-going materialists; in the second, thorough-going idealists. As consistent materialists, we have then to place our trust in the blind mechanism of bodily occurrences; as consistent idealists, in the free causation of reality,—originating mind.

In every instance, our conscious striving receives its vent from the conception we have come to frame of our own being and its relations to the rest of existence. And, as we are all earnestly solicitous to bring our lives into more and more perfect harmony with our convictions, and as, moreover, our welfare, as individuals and as communities of individuals, is so largely dependent on the correctness of our interpretation of reality, we should seek above all, through strenuous application of our present resources of knowledge, to reach a well-grounded conclusion regarding our ambiguous nature.

Let us then, in preparation thereof, attentively follow up the principal trains of thought that furnish our leading thinkers with forcible reasons for resting their conviction on one or the other mode of conceiving human personality. Perhaps, amid the haze of conflicting conceptions, we may succeed in catching a trustful glimpse of the one immutable truth looming in the far distance.

The Non-causal Relation of Body and Mind.

Objective science strives to take account only of such data as it receives through the senses. It demonstrates with undeniable accuracy that after death our body disintegrates without remainder into elementary components, belonging altogether to the same substratum which furnishes the rest of things with their material. And it proves that the organic individual, when its vital activities are suspended, ceases to manifest any sign of consciousness.

All there is of verifiable substance in the living being continues to exist without diminution after death. It seems, therefore, clear that the entire organism, with all its vital manifestations, can have resulted from nothing but a peculiar combination of the elements of that self-same substance of which it is found to consist. Put these constituent elements together again, in exactly the same manner in which they were combined during life, and you have restored the living organism.

The reasoning of physical science, working thus on sense evidence which seems incontestable, maintains that things in general are composed of nothing but elementary particles peculiarly aggregated. These particles are taken to be themselves indestructible, and endowed with a definite amount of indestructible force. It follows that everything in nature results from the grouping of such elementary units and the combination of their elementary forces.

The units or atoms aggregate to various kinds of molecules. The molecules in inorganic nature aggregate to crystals; in organic nature, to elementary organisms, or so-called cells. And these latter

again make up by dint of peculiar arrangement what we behold as the complex organism. Parallel with this process of material grouping, the concomitant forces are compounded. The vital activities of even the most complex organism are thus the effect of a combination of the primitive forces of its component elements. And mental phenomena are themselves only the manifestation of the blended energies inherent in those peculiar complexes of elementary particles called brain-cells.

Not long ago, precisely this view was held by most students of natural science. By endowing the insensible elements of sensible nature with the germ of all desirable potentialities, they derived actual things and their manifest qualities by means of a vaguely conceived synthetical arrangement of such well-equipped units. And when afterward, to a more enlightened physiology, it seemed a rather questionable proceeding to make the mental properties of the organic individual grow out of a combination of mere physical forces, it was not difficult to fancy the vital molecules—the so-called plastidules of Prof. Haeckel—to be moreover endowed with a primitive soul, resulting from the still more primitive souls of the final atoms. The plastidules then, in those vast assemblages in which they compose first the organic cell, and through multiplication at last the entire organism, are believed by these psycho-physical atomists to constitute, by force of summation of their individual soul-powers, even such an immensely complex resultant as the sovereign soul of man. I purposely say, "summation,"—bare numerical summation, and not genuine synthesis; for this is the only sort of combination that can at all result from the co-operation of separate units. It is utterly impossible that a number of individuated elements, held together by mere aggregation, should blend their inherent forces to any kind of compound resultant, without a common medium in which the complex effects of such individual forces are realized. This I have explained at length in *Mind*, No. XVII. It follows irrevocably—involving on this account alone the overthrow of all purely atomistic and hylozoistic schemes—that our mental phenomena, necessarily presupposing a unitary medium of display, cannot possibly be the outcome of a mere summation or chiming of elementary faculties residing in a multiplicity of adjacent atoms, plastidules, or cells. The separate energies of two or more forces or motions may produce a joint effect, but only by combining in one and the same material medium. Two and two make four, but only when put together in one and the same consciousness. Bodies are scientifically conceived as formed by a mere aggregation of equal parts, and the synthetic effects of their forces as produced by mere simultaneous quivering, principally in order to facilitate mathematical operations which are carried on by numerical processes. For mathematical purposes, every existent whole has to be artificially broken up into numbers of constituent elements, and all synthesis of such fictitious mathematical units has thus to be mentally supplied.

But, to realize from its own stand-point the fundamental fallacy of the cosmology constructed by materialistic atomism, a cosmology still cherished as a correct interpretation of nature by many eminent scientists, we have, first of all, to ascertain what kind of force objective science is really justified in attributing to its ultimate units. And here there can be no doubt that, if we profess to build up a system of science from data objectively given, we can consistently know and assume no other forces than those actually experienced by us as so many different kinds of motion manifested by the substances of our objective world. Atoms

moving in space, and their distribution and redistribution through interchange or transfer of motion, are all that genuine objective science can be allowed to work with. Consequently, thoroughgoing physicists look upon the forces of nature as so many modes of motion, capable not only of mutual interaction, but of being actually transformed into each other. Under this aspect, mechanical impact is motion, heat is motion, electricity is motion, light and other radiant influences are motion, etc.; and all these different kinds of motion are held to be mutually convertible. The ultimate constituents of matter, the atoms—themselves perfectly inert, because of their intrinsic unchangeableness as strictly simple, uncompounded particles—can be in possession of no other force than a certain amount of motion. The logic of physical definitions forces this conclusion upon us. The physical world-material consists of intrinsically imperturbable elements of mass, conceived as vehicles of a more or less rapid motion of translation, which motion is capable of being imparted to other elements of mass, that become thus its mechanically moved but intrinsically unagitated recipients.

Coherent masses and their sensible properties come into existence, according to this view, through condensation and aggregation of groups of particles rendered less mobile by the transfer of part of their motion. Indeed, if the ultimate existents are really rigid particles moving about in space, then all occurrences in nature have to be explained rigorously as the outcome of a mechanics of atoms. They have, then, to be expressed in pure terms of mechanical exchange of motion and consequent spatial rearrangement of the moving particles. In physical science, the avowed aim of its consistent votaries is to seek an explanation for every kind of activity in nature in conformity with such kinetic principles. The nearer the approach to this final goal,—ever alluring investigators with the lucid perfection of mathematical form,—the greater is the triumph considered to be. The kinetic theory of gases, the numerous attempts at a kinetic theory of gravitation, of cohesion, and even of elasticity and chemical activity,—all this proves that every phenomenon in the universe, not yet explicable in mere terms of matter and motion, is regarded as an unsolved problem, awaiting its kinetic interpretation. And, as our body forms part of this scientifically surmised universe of atoms and motions, physiology has been, and is still, exerting itself most strenuously to explain the phenomena of life in accordance with the same principles which physical science applies to the rest of things.

Now, if we believe that the elucidation of physiological facts necessitates a more profound conception of physical occurrences, and if we are desirous to recognize the true constitution of our own physical nature, we cannot be spared the trouble of clearly pointing out the physical insufficiencies of our aggregational and kinematic science. Before, however, disclosing these shortcomings at their starting-point, in the atoms, molecules, and masses of matter, let us for a moment follow up the kinetic theory into the region of high-wrought vitality.

Sundry kinds of motion impinge on our recipient nerves, and are propagated along them to the central brain-cells, where they set up an intrinsic commotion, of which our conscious states are somehow an outcome. Here the unbroken continuity of transmitted motion seems suddenly to issue into something differing *toto genere* from moved matter. At this end-station of kinetic transfer, we are all at once confronted by one of Prof. Du Bois-Reymond's seven world-problems,

which he and many other scientists declare to be wholly insoluble. They maintain, namely, and very properly, that "consciousness cannot be explained as the result of any arrangement or motion of the physical atoms of matter." The final metamorphosis of motion into consciousness they allow to be utterly incomprehensible. But these same scientists hold that there exists, nevertheless, some inscrutable causal nexus between brain-motion and conscious states. With Prof. Huxley, they believe that, "so far as we know," "the sensation is the direct effect of the mode of motion in the sensorium"; or, with Mr. Herbert Spencer, "that no idea or feeling arises, save as the result of some physical force expended in producing it."

In view of the weighty consequences involved in such a kinetic generation of mental phenomena, we anxiously inquire whether this be indeed the true account of what actually happens. Is a sensation or thought or any sort of conscious state the effect of brain-motion, and is any physical force expended in producing it? If so, then the illustrious experientialists, who propound this doctrine, will find themselves logically compelled to recant most of the naturalistic teachings which have exerted so great a liberating influence on the thought of our time, and which they have so zealously helped to make current. A genuine causal connection between body and mind would inevitably involve the overthrow of all natural science.

Since modern research has justified the conclusion that to every mental occurrence there corresponds a definite molecular motion in the brain, the fatal error of inadvertently shifting from the objective to the subjective aspect in the course of our reasoning is not so saliently apparent as it used to be to the great philosophers of the seventeenth century. The central mystery of natural efficiency, to them as to us, lay in the "intercommunication of body and mind." But they fully comprehended that there occurs no break whatever in the mechanism of nature; that the concatenation of physical events suffers no interruption, no slightest increment of mechanical loss into channels that are not purely physical. The commotion in the brain-cells is used up without remainder to set going other motions, irradiating into various parts of the body, and most notably into the muscles, by whose contraction nothing but mechanical work is performed. Nowhere in the continuous chain of physical causation is there room for either the additional production of mental occurrences or the adventitious intervention of mental power. Each set of phenomena is discovered by consistent scientific conception to form a separate nexus, both sets running parallel courses without any possible causal interaction between them. In recognition of this strange non-causal parallelism obtaining between physical and mental phenomena, Descartes pronounced the intercommunication of body and mind to be effected by divine influence, which miraculous intercession was assumed by the so-called Occasionalists for every separate act in which body and mind seemed to operate on each other. And, in order to explain the same enigma, Leibnitz invented his famous pre-established harmony, or two-clock theory.

The truth is the veritable relation of body and mind is neither causal nor miraculous. But,—as I hope we shall plainly make out before we have ended,—within the immediate consciousness of each of us, it is the relation of a definite compulsory group of perceptions, called body, to our entire mental presence, called mind. Outside immediate consciousness, the actual existent, which extra-mentally corresponds to the compulsory

group of perceptions called body, has to be scientifically and philosophically hypostatized as a permanent entity, of whose variable functional activity the entire mental presence is, from moment to moment, the conscious outcome.

To gain a more intimate understanding of the different aspects which the relation of body and mind assumes, when, on the one side, body is viewed as a compulsory percept within our consciousness; on the other side, as the extra-mental existent having conscious functions,—the best way will, perhaps, be to expose some of the chief errors that have been committed by prominent thinkers in their search for the true link by which body and mind are connected.

In the first flush of triumph, the doctrine of the correlation of forces promised to become a universal law. Various attempts were made by eminent scientific philosophers to include within its scope, not only vital, but also mental phenomena. Mr. Herbert Spencer, for instance, fearlessly extended the newly generalized principle to its utmost logical stretch, making inadvertently short work of all science and philosophy. In his *First Principles*, he arrives at the following sweeping conclusion: "Various classes of facts thus unite to prove that the law of metamorphosis, which holds among the physical forces, holds equally between them and the mental forces." If this were really so, then no need any more for the scrupulous painstaking of physical research. "Mental force" of itself would be efficient to accomplish everything. If, in all reality, "those modes of the Unknowable which we distinguish as sensation, emotion, thought," can be transformed into equivalents of "those modes of the Unknowable which we call motion, heat, light, chemical affinity, etc.," then, surely, Nature may, after all, be wholly constituted by thought. Thought and other modes of being must thus be essentially identical; and we may as well at once forsake the laborious paths of Experientialism, and give ourselves up unreservedly to the conceptual creations of the Identity Philosophy.

Even the era of alchemy, with all its passionate and untiring search for the great Magisterial, by which baser metals might be converted into gold, never dreamt of such a riot of metamorphosis as is implied in the convertibility of every manifest mode of the Unknowable into every other mode of the same, which means, in fact, the convertibility of everything into everything else. Let no one think that this is an exaggerated statement. The reasoning is simple enough. Every phenomenon in nature is the manifestation of one and the same persistent force. Such force manifestations are mutually convertible. Therefore there is no phenomenon, material or mental, which is not convertible into any other phenomenon.

Mr. Spencer would, no doubt, contemptuously repudiate, as preposterously unscientific, this licentious use of his principle of phenomenal convertibility. He, of course, conceived the transmutation of physical into mental modes, and *vice versa*, with the full reserve that the "law of metamorphosis" is a law of strict equivalence, dependent on those actual modes of the Unknowable which we perceive as the peculiar collocations of material bodies; that, in consequence, only just so much impinging force is transformed into exactly so much brain motion, and this again into exactly so much "mental force"; and that, therefore, only a definite and conditioned amount of "mental force" is at our disposal for retransformation into physical modes of the Unknowable.

But Mr. Spencer, abstracting from present complications and contemplating with his wonted

far-sightedness primordial cosmical modes of the Unknowable, would he not have to concede that, according to the nebular hypothesis and the theory of the primitive chemical element, according, moreover, to his own evolutionary formula, one and the same homogeneous mode of the Unknowable has actually been transformed into every other mode of the Unknowable now extant?

The theory of convertibility assumes that, during the metamorphosis of one mode of the Unknowable into another, the special mode which is thus metamorphosed ceases itself to exist, while originating the other mode into which it is converted. If mental modes, then, can really originate physical modes, it surely must be admitted that, as all phenomena—mental as well as material—are modes of one and the same Unknowable, its physical modes may possibly be the product of its mental modes. And, as the mental modes are much more intimately and immediately known to us than the physical modes, it becomes a highly promising undertaking to attempt the explanation of the physical universe as the result of an expenditure of "mental force."

Moreover, we are all quite certain that the primordial, homogeneous mode of the Unknowable, scientifically inferred in the nebular hypothesis, can only be imagined as an object realized by a subject, or—expressed in terms of the supposed convertibility of forces—as an objective or physical mode of the Unknowable transformed into a subjective or mental mode of the Unknowable. Now, as, according to the view in question, a mode of the Unknowable ceases itself to exist in being transformed into another mode; and, as in the primitive state of things here figured, there are no material collocations to complicate the process of transmutation,—we have consistently arrived at Schelling's Absolute Subject-Object, which, in rhythmic oscillations, transmutes itself from subjectivity into objectivity, and back again from objectivity into subjectivity.

This, indeed, must ever be the outcome of any philosophy which reposes its full store of natural power in an Absolute. Transcend under any form whatever the limits of organic individuality, conceiving mental phenomena as modes of an all-comprising Unknowable, and no amount of evolutionary wheel-work interposed between the actual source of power and its peculiar modes of manifestation, will save you from the pantheistic idealism of the Identity Philosophy.

These remarks, though rather opportune in relation to the reviving religion of the Absolute, are of little value, scientifically considered. And this for the simple reason that no mental occurrence of any kind has, as such, the power of compelling a single atom to deviate ever so little from its given path, which is strictly a physical path, physically determined in every respect with rigorous and un-failing precision. If this were not so, then the alleged and approved mathematical accuracy of physical science would be an idle vaunt.

Mental phenomena, then, cannot possibly be the cause of the physical activity of brain molecules; nor can this physical activity be, in its turn, the cause of mental phenomena. Feeling and brain motion do not stand in any causal relation to each other: much less are these two modes of existence mutually convertible.

It is, indeed, a delusion to think that even physical forces are ever really "transformed" into each other. This sleight of hand performance on the part of nature, to which such ostentatious prominence was given in the early attempts to formulate the law of the conservation of energy, is being more and more veiled from sight in scientific treatises. But the actual feat of metamorphosis, the peculiar

energy of one substance passing over into another substance and becoming there the equivalent but quite different energy of its rare dwelling-place,—this marvellous feat is the indispensable though rather shifting foundation of the whole theory. Close examination proves it to be nothing but a "dynamical fiction."*

The manifold phenomena constituting our conscious world are not manifestations of one and the same ever identical Protean force of Absolute, but manifestations of specific complexes of extra-mental powers, themselves just as definite and conditioned as their mental realizations, and undergoing changes during their multifarious interactions accurately corresponding to the changes perceived in the mental representations which they compel. These changes, in their perceptual form, as modes of motion or moving energies, and not the powers themselves, are equivalently related to each other, but not convertibly. The change of one substance cannot become the change of another substance.

Existence, with all its phenomenal marvels of mental realization and all its extra-mental intricacies of organized potency, wells up from a creative fount so profound in its origin that our shallow, piercing insight wholly fails to fathom its ineffable mystery. We reverently refrain from reinstating the old, broken idols by giving—even in the innermost, imageless sanctuary of our ideal temple—local habitation and facile efficiency to what so incomprehensibly upholds this entire wondrous creation; persistently, painfully, patiently travelling in the glad birth of ever more exalted times toward far-off, inscrutable ends.

To us, the reconciliation of science and religion lies not in any intellectual penetration of the phenomenality of our world of sense, by which we recognize ourselves as mere changeable modes, though direct emanations of an absolute, unknowable power. It lies in humbly, exultingly, accepting our living selves as a high-wrought result of formative power, individually intrusted with a grandly effective share in the transcendent work of creation.

No frictionless flight of thought or exuberant outburst of emotional fancy shall allure us into forgetfulness of the supreme ethical truth that in its very essence our own being, with all we know and cherish, is resting from moment to moment on the slow and precarious achievement of unflagging toil.

CORRESPONDENCE.

FREE THOUGHT IN ENGLAND.

Editors of The Index:—

The workers in the mills at Oldham are out on a strike. The Master Spinners' Association had arranged a reduction of ten per cent. in the wages of the people, owing, as they said, to the bad times and poor markets. The people struck, and thousands have been out of employment for over two months. Who can tell how much that means to the poor people, to the people with large families, who never earn more than a bare living? The results of such a strike are disastrous in the extreme to employers and employed.

The masters, as well as the men, have a Union; and now it has come to a question of endurance. Alas for those who have only their labor for money rules.

Last Sunday, I lectured in Oldham, to the Secularists in Science Hall; and I learned much. I found a small but comfortable hall just off one of the main thoroughfares. It is owned by a limited liability company, most of whom are Secularists, and members of the society. They are almost all working-

*Under the above title, Mr. Franklin Smith, in a keen criticism of the phenomenal metamorphosis of force, which appeared in *The Index*, Dec. 21, 1882, did me the honor of quoting from the *Popular Science Monthly*, 1878, the more realistic view which I had opposed to such mere unsubstantial dynamism.

men, a strong, true, honest set of people. They are poor, but terribly earnest. The idle days of the weary strike have left them with more leisure than is pleasant, so they have employed it in making their hall comfortable. They have painted and ornamented it; got a piano, and put the entire place into most exquisite order. They are making committee-rooms and arranging for an active campaign during the coming winter. All this without money and without price; for this is not done out of their wealth, but out of their poverty. I felt ashamed of more high-toned societies, who can do nothing without money. I felt that in this movement among the poor, among the sons of toil, we have the real promise of the good time that is coming, of that time when there shall be a loyal recognition of the universal brotherhood of man.

To-day, men preach of the "fatherhood of God and the brotherhood of man"; but one man owns over a million acres of land (the Duke of Sutherland), while millions of men have not where to lay their heads. The "Father's" property has been badly divided!

As I walked through the streets of Oldham on the Sunday night, in the gloaming, with the kindly Secular folk who saw me off on my journey, I was surprised to see the great number of people on the streets. It seemed as if all the town were out of doors. I never before saw such crowds in the street in any city, unless drawn there by some special attraction. I saw many ignorant, evil faces in the crowd, but many more good ones; and when I saw the beautiful art gallery standing with closed doors and curtained windows, and the bonnie gardens attached to it locked while the crowd drifted idly by, I felt bitter against the cruel ignorance of the creed-makers who call themselves Christians. The liquor saloons were in full blast, the tobacco stores were doing a good business, the churches were thinly attended; but the streets were thronged with the idle, the vicious, and the careless. The Church has said, "Come unto me, or go to the devil." Every avenue to good, save through the Church, closed; every avenue to evil open. Verily, we live in evil times. The enthusiasm of the company with whom I had spent the day gave me hope and courage; for, as the gospel of Jesus was born amid the poor and lowly, so will it die. The strikes, the evil times, the bitter struggle for bread, are teaching the poor people that—

"Perchance the gods have need of help themselves,
Being so feeble that, when sad lips cry,
They cannot save!"

In the very bitterness of the day's strife lies the hope for the morrow. The days of calm inaction never develop heroes. Just as the greatest races of earth, the world conquerors, have come from the mountains, so the greatest men have ever been born of fiercest strife. The fit and the unfit alike survive in the easy, peaceful times, but these are days that try men's souls; and, though "weeping endureth for a night, joy cometh in the morning," and these cruel strikes are teaching the children of men to look to the only source of help for those in trouble. The toilers have sought help from Heaven through many a weary year; but help has never come, save when they helped themselves. Old creeds die hard, old customs linger long; but the afflictions of these present days are leading men to the light.

In England, the leading men are free thinkers. In this Tory town of Liverpool, the chief men have gone from the "faith delivered to the saints"; yet they hold their places from policy. The mill hands of Oldham, the working-men everywhere, are moving toward liberty; and all the land is throbbing with the new life. The extension of the franchise, which took place this year, brings a new force into action in our political life and our social system. The land "owners" have made the laws for centuries: the toilers are now going to take a part in that business, and great changes are imminent.

The day I spent with the Oldham Secularists was well spent, as it gave me a glimpse into the hearts and the lives of the men and the women who form the backbone of England. The sight of a well-organized and enthusiastic band of free thinkers in the heart of a busy, manufacturing town is one of the signs of the times which "whoso runs may read."

Yours faithfully,

PETER ANNET.

LIVERPOOL, Sept. 29, 1885.

FORMATION OF THE TRUE IDEAL.

A Criticism of Mr. B. W. Ball.

Editors of *The Index* :—

With much that Mr. Ball says in his article "Apotheosis," in *The Index* of September 21, I am in hearty accord; but with some assumptions, almost universally entertained, I am at issue.

Is it not an error, resulting in deplorable evil, to suppose that we live in and should care for a phenomenal world? I should like to ask Mr. Ball how we can manage to live in any but an actual world? Phenomena, semblances, do not, cannot, act. The noumenal affects us with a semblance of itself; namely, the phenomenal. Mr. Ball, indeed, admits that the noumenal would appease and satisfy the aspirations of the ideal faculty; but he straightway despairs of ever being able to enter such a world.

A further error, expressed by the undertone of his article, is that our ideals raise us above nature. What is nature but righteous action? And how can we rise above what such action signifies,—a life of response, a life of love? Let our ideal rather be to rise to nature. Imagination will fulfil its proper function in emancipating us from the "tyranny of the senses," and giving us the facility to see and say what nature is.

Evils are the subject-matter of ideals. Ideals are usually formed by a reaction against evils, but with a disregard of the spiritual relationship or significance of such evils to our lives. Is it not now possible to interpret the phenomena of evil by the use of our moral emotions, in the light of science? We unwittingly ignore the actual facts underlying the phenomenal evil, when we idealize a better condition of things. Such ideals cannot be realized with success. The true ideal is the polar opposite, the contrary, of the true evil, only to be found through facts of the actual.

A. L. LEUBUSCHER.

WATER MILLS, N. Y., Sept. 29, 1885.

PRINCIPLES OF THE SOCIETY FOR ETHICAL CULTURE OF PHILADELPHIA.

In forming ourselves into a Society for Ethical Culture, we accept the following principles as the basis of our union:—

1. We believe that morality is independent of theology. We hold that the moral law is imposed upon us by our own rational nature, and that its authority is absolute. We maintain that the moral life should be brought to the foreground in religion.

2. We affirm the need of a new statement of the ethical code of mankind. The formulations of duty which were given by the great religious teachers of the past are not sufficient for the changed conditions of modern society. We believe that moral problems have arisen in this industrial, democratic, scientific age, which require new and larger formulations of duty. Hence, a new interest in ethical problems and a profounder study and discussion of them are demanded.

3. We regard it as our duty as a Society for Ethical Culture to engage in works of philanthropy on as large a scale as our means will allow. The ultimate purpose of such philanthropy should be the advancement of morality. When we contemplate the low moral state of society and its indifference to moral aims, we feel called upon to do what we can to raise our fellow-men to a higher plane of life and to awaken within them a deeper moral purpose.

4. We hold that the task of self-reform should go hand in hand with efforts to reform society. The mere fact of membership in an Ethical Society must be regarded as a tacit avowal of the desire to lead a wholly upright life and to aid in developing a higher type of manhood and womanhood than has been known in the past.

5. We believe that organization is indispensable to carrying out the aims of ethical culture, and that this organization should be republican rather than monarchical. While we recognize the need of a public lecturer for the society, we believe that the work of ethical culture, in its broadest sense,—the study, the discussion, and the application of ethical principles,—should be carried on as far as possible by the members themselves; and, to this end, the society should be divided into sections, according to the respective callings and vocations of its members.

6. We agree that the greatest stress should be laid

on the moral instructions of the young, to the end that in the pure hearts of children may be sown the seeds of a higher moral order; that, early in life, they may be impressed with the worth and dignity of human existence; and that work for social and individual perfection may be carried on with larger and nobler results from generation to generation.

For *The Index*.

EVENING,—THE "ZYSKA" HILL.

A soft light rests upon the "Zyska" hill;
In solemn state, the sun sinks from all view,
But, in departing, leaves a ruddy hue
And deepening shadows; all the land is still.

The daisy, pure in its humility;
The weary bird, flown long since to its nest;
The reddish grass; the growing sense of rest
On every little thing in earth or sky;

The evening star, near the slow-setting sun,
Whose beauty in its calm infinity
Shines, lonely, through a wondrous, golden sea,—
All touch the heart with sense of duty done.

Nature obeys the universal law,
Which is God manifest; her triumph lies
In stern fulfilment of her prophecies,
Wherein is found no solitary flaw.

In every leaf and clump of waving grass,
She cries aloud to Man: "Arise! awake!
Obey thy being's law, and thou shalt make
Thyself my equal: it will come to pass."

Man does awake. Throughout his being flows
The solemn note of Duty. Sacred fires
Urge him to vaster heights, and he aspires.
The love of God and Nature in him glows.

M. L. B. O.

BOOK NOTICES.

A COMMON-SENSE VIEW OF THE BOOKS OF THE OLD TESTAMENT. By Rufus P. Stebbins, D.D., formerly President of the Meadville Theological School, and author of *A Study of the Pentateuch*. Boston: Unitarian Sunday School Society. 1885. pp. 328.

This work, the preface to which the author did not live to write, was prepared, in order to put within the reach of earnest minds that have little or no time for historical researches and critical studies such knowledge as is necessary to a just appreciation of the value of the Hebrew Scriptures. It is made up largely of lectures prepared originally by the author for his Bible classes and theological students, who had repeatedly requested him to publish the views he taught them at Meadville and Ithaca. It is needless to say that the work contains information for such as have given but little study to the Bible, or are but little acquainted with the best Biblical exposition and criticism, although, in the application of the method and spirit of science to the Old Testament, the author is in our opinion behind some nominally orthodox clergymen,—clergymen for instance, like Dr. R. Heber Newton. Dr. Stebbins, however, was widely known among Unitarians; and this his last legacy to his fellow-men, published a few weeks after his death, will doubtless possess a peculiar value, not only for those who knew him personally, but for the more conservative minds generally, whom he represented in his denomination.

B. F. U.

THE Unitarian Review for October opens with a paper by Rev. Samuel J. Barrows on "John Bellamy's Bible," a translation made in 1818 from the original Hebrew, to answer objections to the divine authority of the Bible urged by Paine in his *Age of Reason*. To this little work, a reply had been made by the Bishop of Landaff; but it seemed to Bellamy that the bishop had virtually conceded the human origin of the Scriptures, and determined to make what opposition he could "to the plausible objection of the infidels, which, like serpents, were creeping with their painful poison into every corner of religious society," Bellamy, after attempting to answer Paine's objections, resolved to begin "the gigantic labor of a new translation from the original Hebrew." Mr. Barrows quotes from this translation, to illustrate "how far men will go in twisting and distorting

the Bible to make it suit their preconceived notions of its contents, or to reconcile it with modern views of God, humanity, duty, and destiny." Rev. F. B. Hornbrooke, in an article on "Religion and Morality," endeavors to distinguish between the two; but he does not make the distinction very clear. The other articles are: "Hans Nilsen Hauge, the Lay Preacher," by Rev. Kristofer Janson; "Rev. Oliver Stearns, D.D.," by Rev. A. P. Peabody, D.D.; "Shakspeare's Ethics," by Isabel Francis Bellows; and "The Great Steps in Worship," by Rev. James T. Bixby. "Editor's Note-Book" and "Review of Current Literature" complete the number.

In the October *Century*, Gen. Horace Porter has a forcible anecdotal paper on "Lincoln and Grant," including stories which were told by one or the other in their intercourse. Gen. James H. Wilson gives "Reminiscences of Gen. Grant," relating chiefly to his Western career; and Gen. Adam Badeau writes of "The Last Days of Gen. Grant." There are other papers on the War and Gen. Grant, by Gen. D. C. Buell, Mrs. M. E. Seawell, Miss Heintzelman, and Charles W. Eldridge. "Riverside Park," the resting-place of Gen. Grant, is the subject of an illustrated paper by William A. Stiles. Other illustrated articles of the October number are Lieut. Schwatka's second and concluding paper on his explorations in Alaska, Mrs. Lizzie W. Champney's description of "The Haunts of American Artists," and Mr. Howells' "Tuscan Cities," illustrated with numerous etchings by Pennell. A portrait of the late Samuel Bowles, the famous editor of the *Springfield Republican*, is the frontispiece of the number. His career is described by George S. Merriam, in a paper entitled "A Study in Independent Journalism." Principal Grant of Queen's University, Canada, has a paper on "The Canada Pacific Railway." Brander Matthews contributes the short story of the number, which is called "Love at First Sight." The serial is the ninth part of Henry James' "Bostonians." The number has several good poems. Cupples, Upham & Co.

THE October number of *St. Nicholas*, among its many attractions, has short stories by Frank R. Stockton, Celia Thaxter, and J. F. Herriek. The serials, "Driven Back to Eden," by E. P. Roe, and "His One Fault," by J. T. Trowbridge, are concluded; "The Brownies at School" is another series of comical verses and pictures by Palmer Cox, descriptive of the doings of these imaginary elves; "Pulcheria of Constantinople" is the "historic girl" of whom E. S. Brooks writes in this number; a picture of Louis Kossuth is given in Edmund Alton's "Among the Law-makers"; and "How Science won the Game" is an exciting story of base-ball, by George B. M. Harvey. For sale by Cupples, Upham & Co.

AMONG the excellent reading for young folks in the October number of *Pansy*, published by D. Lothrop & Co., we note a sketch of the life of John Bunyan, accompanied by a portrait of the author of *Pilgrim's Progress*, an account of "The Discovery of Glass," some information about "Herat and its Inhabitants," "The Eider Fowl," "Oranges in Palestine," together with a number of papers on Japan. These instructive articles, in addition to the stories by those favorite writers, "Pansy" and Margaret Sidney and others, with the many pretty illustrations, make this an attractive magazine.

Miss E. M. MENDUM,
Teacher in Oil Painting, Flowers, and Still Life.

Studio: Room 8, Paine Memorial Building,
APPLETON STREET, BOSTON.

West Newton English and Classical School.

The 33d year of this Family and Day School for Boys and Girls begins September 16.

The Secret of the East;

OR,

The Origin of the Christian Religion
 and the Significance of its
 Rise and Decline.

By **FELIX L. OSWALD, M.D.**

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhistic analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of medievalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—*Boston Evening Transcript.*

Sent by mail, postpaid, on receipt of price by the INDEX ASSOCIATION, 44 Boylston Street, Boston, Mass.

THE UNIVERSITY.

FOUNDED 1877.

A Literary and Critical Journal,
 published every Saturday,
 at Chicago.

The University is not the organ of any college; it is not distinctively an educational paper; but it aims to deal with living issues from the university stand-point,—to reflect the ripest American scholarship in its discussion of politics, religion, education, science, literature, and art in their various bearings. Its publishers solicit the subscription of all persons interested in the support of an independent exponent of liberal culture on a plane of superior excellence.

Price, per year, \$2.50; per copy, 5 cents. Special trial offer to those who see this advertisement. Send 25 two-cent stamps and receive *The University* three months on trial. Specimen copies—three different issues—will be mailed to any address for examination on receipt of 10 cents. Address

THE UNIVERSITY COMPANY,
 136 Wabash Avenue, Chicago.

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion. A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. H. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

- I. *Taxation of Church Property,* by James Parton. 5 cts.; ten, 30 cts.; one hundred, \$1.50.
- II. *The Bible and Science,* by John Weiss.
- III. *The Sympathy of Religions,* by T. W. Higginson. Enlarged edition.
- IV. *Transcendentalism,* by Theodore Parker. Never before published.
- V. *The Public School Question,* as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).
- VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.
- VII. *Evolution and Religion,* by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00. Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

 THE INDEX. Tho
 held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
 " 13 " 25 " . . . 8c. " "
 " 26 " 51 " . . . 6c. " "
 " 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent., on the total as above calculated, will be made.

TRACTS.

No. 1.—*Truths for the Times,* by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 2.—*Fear of the Living God,* by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible,* by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism,* by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Pictures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven,* by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment,* by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents; 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity,* by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—*The God of Science,* by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*Is Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven,* by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—*A Study of Religion: The Name and the Thing,* by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse.* Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

CURRENT TOPICS.

BY B. F. U.

On Sunday last, sermons against disestablishment were preached by clergymen of the English Church throughout England. They evidently think the establishment really in danger.

The *Churchman* thinks that the strength of Mormonism lies in its condescension to one of the common infirmities of human nature, and that the problem it presents requires "statesmanship of a more transcendent quality and transcendental kind than has yet been applied to its solution."

The *Philadelphia Record*, mentioning the resignation of Dr. Townsend, a Methodist minister of Buffalo, because he does not believe in eternal punishment, says, "And a great number of clergymen, who don't believe in it any more than he does, but who lack his manliness, are stoning him from a safe distance."

The *University* is the name of a Chicago literary journal, which resulted from the consolidation last summer of the *Weekly Magazine* with the *Fortnightly Index*. In the quality of its articles as well as in its general appearance, this paper continues to improve. It is marked by breadth and independence of thought. It ought to be generously sustained.

MR. SAMUEL STOREY, the member of Parliament from Sunderland, in a recent speech favoring the abolition of hereditary privileges, said that there should be no created privileges for any man to which every other citizen could not aspire, and asked how could the people expect to get reforms while such a court of solemn humbugs as the House of Lords sat above them. After the address, a resolution of confidence in Mr. Storey was offered, and carried by a unanimous vote.

It is not safe to get drunk in Montreal at the present time, and there are some people there who apparently think that they run a risk in keeping sober. Recently, an intoxicated driver, who was sent

for a small-pox patient, drove to the wrong house, and took away one Peter Biggen, who was too much overcome by whiskey to offer any resistance. When he came to himself in the hospital, he tried to make the physicians understand the "joke," but succeeded only when he had been there five days.

In a paper read before the National Prison Association at Detroit last week, Charles Dudley Warner claimed that what was needed in the treatment of criminals was not merely imparting knowledge, but a discipline in conduct and work that will simultaneously reach the man's physical, intellectual, and moral nature. To this end, sentences should be indeterminate, for no fixed period, continuing till the man is fit to return to society. The incorrigible he would have shut up at labor to pay for their keeping, since they have no right to be at large, an expense to society.

Those laboring for disestablishment in Scotland express confidence in the speedy success of the movement. The large majority of dissenters over the Auld Kirk constituency is becoming year by year so strong that it appears to be impossible much longer to withstand their attacks. With Liberalism making the advances in Scotland which have been shown in late years, there can be no reasonable doubts respecting the near end of State religion in England as well as Scotland. The opposition to the English Church in England is very ominous, as shown by the solicitude of the supporters of the establishment, in their profuse use of their press to defend the Church against all real or fancied assaults.

On the 13th, the Catholic Church of St. Edward, London, observed the feast of St. Edward the Confessor. Cardinal Manning officiated at high mass, and the sermon was devoted mainly to a consideration of the probabilities that England will return to the Roman Catholic faith. A pilgrimage was made to the shrine of the historic saint and king in Westminster Abbey, to solicit his intercession for the conversion of the English nation. A despatch says that the band of devotees, indulging in adoration at the tomb of Edward, excited general curiosity; but there was no interference with the devotions. "More practical-minded, the police in attendance thought proper to inspect the bags and parcels carried by the inflowing crowd; but, as no connection could be established between beads and explosives, the emblems of intercessory prayer were allowed to pass."

A PRINTED circular from "the Committee of the Cincinnati Noon-day Prayer-meeting" asks us to state that the Christian people of that city "send forth to the Christian world a request for their prayers for Cincinnati, its ministers and people," and that "several evangelists will occupy the field, and supplement the work of the pastors during the coming fall and winter." The circular concludes thus: "Let every child of God breathe a prayer to heaven for divine favor upon this city and its special work." Does this circular imply that "Cincinnati, its ministers and people," are

exceptionally wicked; that their condition, morally and religiously, is so desperate that they can be aroused only by the united prayers of the whole Christian world? The pastors who have caused this circular to be issued, doubtless, expect that a distinction will be made in praying, between the two classes prayed for; that the prayers will be for the conversion of the *people* and for God's alliance and co-operation with the *pastors* in the work they have inaugurated, to accomplish this result,—not an unimportant distinction. While we are quite willing, in response to the request of "the Committee of the Cincinnati Noon-day Prayer-meeting," to mention the proposed ministerial praying crusade against sin and Satan, it seems to us more of an effort to start a religious "boom" and to revive a decaying faith than to effect that practical and permanent moral reform needed, not only in Cincinnati, but throughout the country.

On November 12, the National Woman Suffrage Association, of which Mrs. Elizabeth Cady Stanton is President, will celebrate the seventieth birthday of this distinguished woman by social reunions in various localities, when biographical sketches, toasts, music, and song will be in order. If all the suffrage societies Mrs. Stanton has helped to organize, from Maine to Texas, would notice this event in a fitting manner, there might be a simultaneous ovation adequately representing her long and valuable service in the elevation of her sex. She is one of the oldest advocates of that reform now living (both in years and active service), having, with Lucretia Mott, been early identified with the movement in America which claims political equality for woman. These two women met, for the first time, at the World's Anti-slavery Convention in London, in 1840, where, after a long and heated discussion, the women sent as delegates from the United States were refused seats in the Convention. Mrs. Mott and Mrs. Stanton listened with indignation to the discussion, and, walking arm in arm to their hotel, determined to call a woman-rights convention on their return to America. In that hour of deep humiliation, the young bride and the mature matron, whose souls were alike fired by the wrongs of woman, formed a warm and life-long friendship. Together, they held the first Woman's Rights Conventions in Seneca Falls and Rochester, N.Y., in July, 1848; together for long years they sat on the platform through many exciting scenes; together they celebrated the third decade of the movement, in the same church where they had met thirty years before; and together they celebrated the centennial of our national life in Philadelphia, in 1876. Mrs. Stanton is still in the enjoyment of excellent health; and, at her home in Tenafly, N.J., in company with Miss Anthony, she is, we are reliably informed, diligently working eight hours every day on Vol. III. of the History of Woman Suffrage. This valuable work, Mrs. Stanton recently remarked to a friend, would be her bequest to the coming generation of women, and the best monument she desired to her own steadfastness of purpose and unflinching loyalty to her sex.

DENYING THEIR CONFESSIONS.

One of the encouraging signs of progress in the religious world is, to use Emerson's phrase, that the sects "complain that they do not now hold the opinions they are charged with": only, it must be added, the *moral* as well as theological progress would be more marked if there was a frank expurgation of the old confessions of faith along with their denial. Our neighbor, the *Christian Register*, has been having a little sparring with the *Independent* concerning responsibility of Orthodox Christendom for the doctrine of the eternal perdition of the heathen. The *Register* had said that this doctrine "still holds the mind of Christendom in bondage and darkness." The *Independent* brings forward the name of a leading D.D. of each of the great sects,—the Presbyterian, the Methodist, and the Reformed Dutch,—who has stated a form of the doctrine that permits a hope of salvation for those individual heathen who have lived good lives. For such, it appears from these witnesses, "the expiating virtue of Christ's sacrifice" availed, even though they themselves professed no faith in Christ or even lived before he was born. This milder doctrine suits the *Independent*; and it boldly calls upon the *Register* to acknowledge that it has slandered "the mind of Christendom," and said what is not true. But the *Register* is not brought to its knees so easily. It maintains that it has told no lie, but only an "unwelcome truth"; that to single out individual utterances, even of distinguished orthodox theologians, is no proof of what the great mass of Christendom, Catholic and Protestant, has been taught and still holds; that the general confession of faith of the Presbyterian Church, not merely two or three centuries ago, but to-day, distinctly declares the hideous doctrine of the entire damnation of the heathen; and that even the great missionary body of the denomination to which the *Independent* adheres teaches this doctrine distinctly in one of its tracts, as the motive to missionary effort.

The truth is, a good many leading writers and preachers of evangelical Christendom have really outgrown this doctrine; and it probably does not rest upon the people in the pews with such weight as once it did. To these persons, whose minds are infused with more liberal ideas, it seems as if such a doctrine could only belong to a past age. And yet these same persons will, most likely, find the dogma, with all its old severity, in the confessions of their church faith; and, if they were to attack it, they would also find that their efforts would meet with formidable resistance, and that no dislodgement of the doctrine could yet be made. Logically, this dogma is, indeed, one of the corner-stones of Orthodoxy. But it is not often that people are convinced at once along the whole line of a logical argument. When such men as Keshub Chunder Sen and Sir Moses Montefiore die, there are not many thoughtful orthodox Christians, we take it, the logic of whose creeds is not a good deal wrenched. These men have shown in their lives all the fruits of what is called Christian salvation; and is it possible that they should be sent to perdition? The heart will answer this question rather than the head. And thus it is that so many religious people are to-day denying that they hold the opinions charged against them,—denying the confessions of the churches and denominations to which they are attached. Their hearts are better than their heads. But this is a sign that the head will also by and by be converted.

The *Christian at Work* in a late number, sum-

ming up some comments on the perils and crimes of the business world, said, "Only the man who preserves the whiteness of his soul in this world can be sure of not losing it in any other." This, according to old standards of Orthodoxy, is arch heresy. It is good liberal doctrine. It puts in the background the idea of the saving efficacy of faith, and directly antagonizes the opinion that uprightness of life is no security for salvation. Such teaching as this has not yet found its way into the orthodox creeds. Not many weeks ago, an article in the editorial columns of the *Independent* taught the direct contrary. Yet it is a kind of teaching that Orthodoxy begins to harbor. The more prudent and thoughtful among orthodox preachers do not now hold out the hope, as once they did, that the Holy Spirit will do all the work of moral reformation for mankind, if man will only put faith in it. This, and the dogma that works of morality are but "filthy rags," are opinions which many evangelical church members now resent being charged with. Even the Salvation Army, with all their crudities of theology and methods abhorrent to rational thinkers, emphasize the necessity of moral reform and of constant moral vigilance, in order to carry into practice the better impulse which may come in the excitement of the revival meeting. Not only rationalistic believers, but those of orthodox faith, may now be heard to express the opinion that the sudden conversion theory of salvation is a snare to the soul. Under this doctrine, people have been trained to wait for some convulsive trance of the body to seize them, when what is needed is a strong purpose of mind and heart to lead a new life. We have heard a Baptist preacher in good standing say that those persons in his church whose conduct he could least trust were those who were most fluent in describing in prayer-meetings their emotional religious experiences. Yet these persons were really more consistent than he with their denominational creed. He was a denier of the confessions of his own Church, and was actually ashamed of them.

Such cases, as we said at the outset, indicate progress in religious thought, and from that point of view have an encouraging side. But the progress might be more rapid, and command somewhat more of respect withal, if along with the changed convictions there should be more courage for overhauling and amending the old authoritative church creeds. Why leave them for liberal thinkers to attack, if they have really ceased to represent the mind of the denomination professing them?

WM. J. POTTER.

UNDER THE SHADOW OF A GHOST.

We walk in the light; but shadows from primeval ghosts, cast along the slope of centuries, lie athwart our path. The age is haunted by spectral things and men. The Japanese put the *sign* of water—a letter of their alphabet—on a house, in the belief that the sign is as efficacious against fire as the thing signified. On the house in Japan falls the most attenuated shadow of the most filmy ghost,—a figment of the child-thought of the race. In our own times, it is not uncommon in Nova Scotia to draw on a barn the form of a woman representing a witch, and shoot it, in the belief that hitting the sign hurts the woman signified.

Max Müller has called attention to the comparisons in the oldest of hymns, the Rig Veda:—

"He runs—not a river,
He roars—not thunder."

The fathers of our race, men who wrote these Vedic hymns, looked on the world where it is wrinkled into awful grandeur,—domes, spires, serrated ridges robed in eternal snow, and spanned by a heaven whose thunders shook the minds of men, and seemed to shake the very domes of granite. The listening mind called thunder the *roarer*; wind, the *howler*; a river, the *runner*; a mountain, the *breather*; and the all-investing heaven, the *enfolding*. All things lived and acted. The mind, uttering itself in prayers and hymns, did not personify objects. It tried to "dispersonate." The Vedic poet, if he had known a ship, would not have written as Byron wrote,—

"It walks the water like a thing of life."

He would have written,—

"It walks the water, *not* a thing of life."

The form of comparison would show that his ancestors had regarded the ship as a thing of life.

The American Indian calls the bear or the beaver his brother. The Fiji Islander calls man "long pig." The negro thinks the chimpanzee is a man, somewhat damaged in the creation. These phases of thought in arrested races are survivals of a primitive cult common to all races. The movement of the mind has been to separate animate from inanimate things, and then man from other animate forms. Separation in the mind of all but the lowest tribes would seem to be complete; but there lingers a vague feeling that, in some way, the qualities of an object inhere in its symbol or semblance. So Japan would protect against fire by building the symbol of water into her houses. How much wiser are we? We build our temples in Japan, and insure against the fires of sheol with the *sign* of water. I have heard of a man in the South (colored) who never thoroughly believed the story of the flood and the ark till he saw a little model of Noah and the ark and the animals. "*In sacris simulata pro veris accipi.*" In matters of religion, we accept the symbol for the reality.

Images of oxen sustained the brazen sea in the temple of Jerusalem, and horns of oxen were represented at the angles of the ark. In the wilderness, the Hebrews had worshipped a young ox, in gold. In Dan, they worshipped Jacob as an ox. In Jerusalem, the grossness of the old cult had faded into mere symbolism. The calf of the wilderness and the ox of Dan had all gone but the horns. To-day, when the suppliant prays that he may "seize the horns of the altar," his mind is in the penumbra of a shadow cast over the Church by ancient Judaism. We walk in the shadow cast by ancient beliefs, and we walk in the shadow of ancient ghosts.

Do we toll the bells while a funeral procession is passing? From time immemorial, the Chinese have fired crackers and pounded gongs to confuse and bewilder the ghost, so that it could not find its way back to the house of the living. The Romans rang bells at a funeral for the same purpose. Certain savages try to conceal from the ghost the course which led to the grave. In parts of Europe, the procession marches to the grave by a circuitous route. The reason is the attempt of the ancient man to bewilder the ancient ghost.

The ancient man believed that the ghost could not rise from the grave through a stone, and he piled on the grave such stones as he could handle. The tomb-stone has come to us through a long inheritance, and its function has changed from repression to commemoration. The ancient man thought, and many savages still think, that the ghost cannot jump over a fence. To this thought, we may owe the iron gratings and stone walls

which mar the cemeteries of Christendom. The ancient man determined that, if the ghost did escape his trammels and wander the earth, he should not disturb him, he should not *know* him. It is said that the Bohemians to this day mask themselves at a funeral. The Romans, at a funeral, assumed other manners and put on other attire than was their wont. We put on mourning; and—we shudder at the thought—the root of the custom may be found in ancient Rome and modern Bohemia,—the wish to disguise ourselves from our dear friend, the ghost.

The ancient man believed that the ghost could not walk over flinty shards. The most ancient graves in England, the barrows, are found to have been covered with sharp stones, to cut the feet of the poor ghost who would wander. Shakespeare makes the priest say that, but for the compulsion of royalty, he would cover the grave of Ophelia with sharp stones. Dr. Holmes, in his ode to Burns, says,—

"I fling my pebble on the cairn
Of him, though dead, undying."

If these lines had been written in Europe a few hundred years ago, they would have meant: "I conform to custom. When I pass the cemetery, I throw a pebble on the grave of the man whose name I sing. I do this to bruise his feet, if he attempts to wander forth."

The ancient man believed that a ghost could not pass through fire. He attempted to bar the spirit by encircling the grave with fire, cinders, ashes. The Romans, returning from a grave, walked over fire. It is said that the Ruthenian to-day, on returning from a funeral, *looks* at fire. This is the highest attenuation of a superstition.

The man of ancient times believed that a ghost could not cross sunlit water. A sunless river he could pass, and Hindu and Greek mythology had their Styx. The same river reappears in Norse mythology; and, in Christian hymnology, we have

"Death's cold stream."

Living water was a bar to the primitive ghost. The idea of barring the ghost by water still lives in the mind of the savage and in the folk-lore of the Christian:—

"Now do thy speedy utmost, Meg,
And win the key-stane o' the brig:
There at them thou thy tail may toss,
A running stream they dare na cross."

Alaric, the Goth, played havoc among men, and sent thousands prematurely over the Styx. The historian tells us that, when he died, his countrymen turned the course of the Busento, buried him in its bed, and then turned the river back into its channel. It is as if they had said: "The world has had enough of you. You are dead; and, by all the gods of Gothland, you shall stay dead." Pathetic was the effort of a nation to lay the ghost of a king. Equally pathetic is the effort of a Metamba woman to lay the ghost of a husband. The widow plunges into water to drown or drive away the ghost of the husband who may still be clinging to her.

The ancient man seems to have found that the ghost was often too much for him. Neither crackers nor gongs nor bells nor fire nor water nor shards of flint would always keep the ghost in the grave. Men resorted to bribery. Money was given to the ghost to keep him down. The very ancient Greek put a coin in the mouth of the dead to pay Charon for ferrage over the Styx. The Chinese still give money to the ghost; but—shame on these sons of the Sun!—it is counterfeit. The Greeks gave bread and wine and fruit to the ghost, to induce him to stay in the grave; but, in

time, the Greek, too, learned how to cheat. The poor ghost wanted bread, and they gave him a stone. Loaves and fruit in terra cotta have lately been found in Greek graves. What is very strange is that, in some of these graves, we find beautiful terra-cotta women with their heads broken off! Regnet's explanation is the only plausible one. As, in very early times, real bread and fruit were buried with the dead, so real women were killed and buried with a dead chief. In later times, when terra-cotta bread was imposed on the common dead, the mighty dead were cheated with terra-cotta women. The women were properly slain. They were decapitated. I know of nothing in the ancient man quite so mean as the attempt to cheat a ghost with a *stone woman*.

This is a dismal story,—this of the ancient man contending against the ancient ghost. It would have no place on any page of mine but for the lesson it teaches. How did man come by his belief in an after life? This belief, we have been saying, was born of hope. We were wrong. At the portals of the tomb sat, not the winged form of Hope, but the grim dragon of Dread. The earliest Greek did not dream of Elysian fields for the dead. He thought of the dead as doomed

"To wander 'mid shadows a shadow,
And wait by impassable streams."

As dismal as Erebus was sheol. We have gained nothing by taking sheol for hell. Better an eternity of nothingness than an hour of sheol or Erebus. So tristful to the ancient man seemed the dead that his chief thought was to bar them, and so prevent the gloom of the underworld from devouring this. So tristful was the life of the dead that the very thought of it quenched the light of love in the living. A mother who had followed a child to the grave would return and place before the door a blade or vessel of water, to cut the feet or drown the body of the returning "loved one." She believed that a dead child or husband might be standing at her door day and night, in summer heat or winter storm, and, with chilled limbs and bleeding feet, might be wailing and howling to get back once more into the house; but dread had killed pity, and the ghost might shiver and bleed and howl forever. In "Measure for Measure," Claudio says,—

"Death is a fearful thing,"

And Isabella,—

"And shamed life a hateful."

Then, Claudio, preferring a shameful life to death, expresses, save in the first line which is agnostic,—expresses the feeling of the ancient man:—

"Ay, but to die, and go we know not where;
To lie in cold obstruction, and to rot;
This sensible warm motion to become
A kneaded clod; and the delighted * spirit

To bathe in fiery floods, or to reside
In thrilling regions of thick-ribbed ice;
To be imprisoned in the viewless winds,
And blown with restless violence round about
The pendent world; or to be worse than worst
Of those that lawless and in certain thoughts
Imagine howling: 'tis too horrible.
The weariest and most loathed worldly life
That age, ache, penury, and imprisonment
Can lay on nature is a paradise
To what we fear of death."

Men believed in what they did not want. They believed in an after life of unspeakable horror,—the doom of all men, good as well as bad. The ancient man believed this because he was haunted by the ancient ghost.

W. D. GUNNING.

* Delighted; that is, the "lighted" man of the upper world is now de-lighted, the flame blown out.

CARLYLE AND GOETHE AND LITERARY VERACITY.

II.

Veracity, as thus conceived, is what I mean when I say Carlyle realized a lasting affinity to Goethe. Not but that Goethe formed alliances which could have only meant ruin to Carlyle. But Goethe, while permitted by birth and circumstance to make such friendships, was, furthermore, above all transitory seductions, concerned for the integrity of his word, and wrote as the soul dictated, anxious less to titillate the public sensibility than to satisfy his own ear. Carlyle found this a point of contact; for he, too, rose to great heights rather by creating a constituency than by catering to one already existing. The greatest minds always produce this proof of power. Storms may come to them; but they find their erectness necessary, just as it seems meet that lofty mountain-peaks should unbendingly reach toward the sun. To such spirits book-making is impossible. To them, the hour brings the work. So vigilantly pure was Carlyle that he shrank from the platform, even when it offered him success, because of his fear that in the heat of speech he might be driven to say what was unwise or distorted or "special," in the oratorical sense. His veracity went with him over every stream. What thou canst not on thy soul's honor say, say not at all! This heroic purity was practically reflected in his life, and was undoubtedly his key to the rule of ethics. The cants, whether social or religious, never found welcome at his doors. Not less than Goethe, who valued a scientific discovery as relatively more important than a Napoleonic victory, was he steadfast to his star.

There are too many books of the wrong stamp as long as there is one. But there is not and could not be a surfeit of good histories or good poems any more than of good men and women. The George Eliots and Ruskins, who are steeped in the heart's researches, are not plentiful, and require no explanation. It is the book-making fraternity—the "pot-boiling" majority—whose tide needs some ruffling. A book written without elevated purpose is in effect an appeal to the corrupt taste of the reader. The consciously perpetrated daubs are so many slaps in the face of the observer. Lack of confidence in an audience is shown by the want of pure intention on the part of the plaintiff for its favor. It is not palliative to say that the public taste is low, and we are forced to meet it on its own ground. Phillips at Harvard and Phillips on the stump are not different men, but different expressions of the same man. In order that we may convey to a constituency some melody which its untuned ear may grasp and hold and enjoy, it is not required of us that we should parade discord as harmony. Simplicity of style or topic may be demanded of a writer, but vulgarity of treatment is one of those reinforcements whose allegiance is of more danger than its enmity. Success is not necessarily resident in the amusement of an audience. Men laugh at and with fools as well as philosophers, and the line between their intentions is not always obvious to acrobats.

American literature is merely at some sort of formative stage. Its giants have been in the local sense numerous, but they have not been redundant of native flavor. As time proceeds and the type gets on two legs, there will be a recognizable cast to the new-comer. Meanwhile, much that is accepted as veracious and hopeful in the soil will have to be turned and turned again to more original purposes than heretofore. Who, then, will not read an American book? And even in the lowly valleys, where newspapers congregate in sublimest

confusion, there will prevail in time to come a more exacting standard,—“literature” still in dilution, perhaps, pursuant to the apparent journalistic doom, but measurably more responsible, definitely gauged by repression, and fitted, after long apprenticeship, to more ably abet the higher though kindred craft. Literature in essence is almost part and parcel of the human soul; and, when one is broad, the other fits to the proportions of its origin. Solicitude increases with the stake, and what is to measure much must have capacity. Journalism need not be *literature ostracized*: it is that to-day because of its conditional closeting; but, when once its work is all done in the light, the stories of the street that hurry before us as we sit up in bed and rub our eyes of early mornings will be as veracious as facts of science. It would be well for us not to contemplate our national literary future with journalism dropped from sight. An entirely possible development of the germ would make it such a co-operator in the *essential* work as would suffice to blot out immature attempts to prove it mere journey-skill without actual weight in long runs. American literature, whether journalistic or poetic or other, will grow by what it feeds upon,—veracious, if veracity; strong, if strength; imbued with native fire, if fed right at the hearth; broader than European, if nursed by our liberal life; higher than antiquarianism, if awake to its opportunity. But, before any result, to-day it is inceptive.

The age of campaign biographies, partisan histories, demoralizing novels, pretty poems, passionate pamphlets, theological apologetics, legal sophistries, must have its decadence. What is written primarily for material gain is no passport to the ambrosial feasts. With what disdain did Carlyle refuse the tender of work on the *Times*? I can never recall the incident without a thrill. The calamity that had pursued the prostitution of his pen can only be imagined in a remembrance of the volumes he wrote in after years. Yet there should be nothing in journalism that would predicate such an episode. A proper adjustment of the veracities would suppose quite other results. What an adjunct that flaming pen would have been to the every-day discussions of the time! Under presiding conditions, Carlyle was compelled to dread and scorn a fate that should implicate far different meanings. The profession that to-day is afraid of such power must in later seasons beg at its doors. All this noise of passion that sways the average literature must subside. I am not solicitous for the future, with any leaning toward despair. On the contrary, I look for the day when even political manuscripts will not be all scarred and worthless from accretion of humbuggery in feeling and sentiment.

Herbert Spencer's years are monumental from their devotion to a single purpose that has never counted time by the ordinary standard. Samuel Johnson—I mean him of *New England*—labored soberly, obscurely, and long, and died short of the completion of an ample task, merely that the world might know itself in *oneness* as it never had before. Shall we ever forget how serenely Emerson wrote on, till ignorance had come up to him? All such cases have their majesty and suggestion. In their exceptional nature, we realize Time's endeavor to produce the general type. The earth were not less lovely, should age have wrought in every inch of it for fertility. It shall be shown duly that profound lessons exist for us in the trials of our own early national literature. One fact it behooves us to contemplate aside from the common course,—a truth touching the relative offence of authorship against its own best being. It is undeniable that “the wrongs of authors” are

many, and that Cervantes died in poverty, while Lope, who was a panderer, was enriched by popular esteem and patronage. But it is true, additionally, that there are certain “wrongings of the public” to which we must, soon or late, give ear and credence,—certain unsought unveracities and careless emanations of literary lightness, which it would be foolish in us, when we are so insistent as to popular duties, to flout as unreal and as doing injustice, when produced in accusation, to the innocent excellence of the literary heart.

The obligations of literary veracity are mutual,—part from producers, part from consumers. I am unable to see how they could be separated, power from proof of power. Primarily, the author is at fault, if he offers his work to tastes he thinks impure. Then, again, it will be found that “flash” work is issued to supply a want. But the balance of iniquity is kept somewhere,—if not formally, no doubt in the warping effect it has on personal offenders. In the end, literary men have their fates in their own hands. If they minister to corrupt desires, and are slain by them, they have no ground for complaint. “Bargain and sale” is never virtuously the foundation-stone of literary endeavor. Whatever may be the morality of the market, literature has its general self-respect to uphold by noblest codes, whose loss were indeed tragedy. Had it simply the point of a joke to see to, I could not lament lapses. What it brings secondarily of honest treasure is welcome as guest, not ruler. It is impossible to conceive of highest poems, histories, tales, that owe their origin merely to financial inspiration. Who can estimate how much of the vitiation that has marked the pulpit in modern or older days is owing to the “push-and-pull” method of writing—movement whether the mind is on or not—that is enforced by it? Journalism owes much of its power to its multiple helpers. Give each pulpit four preachers instead of one, and your energy will be far more than quadrupled. Give each preacher veracity, and again multiply the strength fourfold. That is to say, get above the common rut, which decrees men to do so much work in so much time, without reference to honest power. Carlyle and Goethe were exemplars of the nobler order. They stood aside from idolatries, worked in happy hours when the mind was wrought up to its capacity, and refused to desert what they knew was their duty, to serve an objective conception of what was duteous for them to do. Literature is open to no finer service.

HORACE L. TRAUBEL.

FREE SPEECH.

A True Narrative.

Nestling quietly in the bosom of the great State of Pennsylvania are two villages. One bears the classic name of Athens; the other, the somewhat emotional cognomen of Ireland. In the former place, in happy consonance with its name, there were, some fifteen years ago, a few free thinkers,—men and women who had lifted their heads above the platitudes of Orthodoxy, and who at this time were holding out their hands in imploring attitude toward the truth. In response to their invitation, a free-thought lecturer visited them one winter evening, and regaled their souls with an appeal for religious liberty in the good old Pauline fashion.

The village of Ireland heard of this entertainment; and, as it was their wont never to allow any good thing to reach Athens without making an effort to share it themselves, a committee of two prominent citizens were despatched to secure the services of the lecturer. Upon making their wishes known, they were politely informed that a free-thought lecture would not be welcome in their

village; that their priest would oppose it, and the use of the church would be denied. At this, they seemed somewhat bewildered. They said they did not know what free thought was, but they guessed it was all right. At all events, they did not care for the priest: it was the lecture they wanted. To this was added the formidable argument that, if a free-thought lecture was good enough for Athens, it was certainly good enough for Ireland, and, besides, “the use of the school-house could be had instead of the church.”

To those ingenuous entreaties, the lecturer at last yielded, on the one condition that the members of the committee would engage to protect him, in case any violence was offered by the audience. To this, they readily agreed; and the three set out in a sleigh across country, to carry out the newly made engagement. The audience was entirely composed, as in fact was the village, of Irish Roman Catholics. Mothers were there with their babes; and the brawny sons of Erin, in their original Celtic simplicity, attended with earnestness upon the intellectual feast.

The lecturer began his discourse by praising the patriotism of Emmet and Curran, and naturally fell to painting in gaudy colors the beauties of the Irish character. For these sentiments, he was rapturously applauded. But there are times in our lives when we sit down in dangerous places, even when we feel the most confident and secure. And this the lecturer did by suddenly affirming that the freedom of Ireland was, of all things, the most interfered with by her priests; that those men opposed freedom of thought and freedom of speech; that they assailed the liberty of conscience, and thereby deprived the individual as well as the community of the highest ideals of duty. “The priesthood,” continued the confident speaker, “is directly responsible for the degradation of your country. You are not the slaves of England: you are enslaved by the Church of Rome.”

At this, the face of nature changed. “You are a liar!” rang from a dozen throats at once; and a huge red-headed patriot, brandishing his arms above the general confusion, loudly threatened the existence of the lecturer. At this juncture, the committee, true to their word, deftly opened a window, and launched the loud-mouthed defender of Rome into a snow-bank, which, prior to this rude interruption, had been quietly sleeping at the side of the school-house. But the confusion rose higher and higher, and the champion of religious liberty began to wish earnestly that he had taken more pains to explain to the committee the true nature of free thought. At last, a voice rose above all the rest with a request for permission to answer the lecturer. This was gladly acceded. The speaker said that he had been a school-teacher in old Ireland. “I can read Latin,” said he, “and I can prove that the lecturer is a liar. I believe,” he continued, “that this man is a Methodist minister. Is it free speech that he wants? Did not Luther want free speech? and didn't he die eaten with worms, a mass of corruption? Did not Calvin want free speech? and didn't he die cursing God, and isn't it in the books that he was blown up, besides? It is free speech that has deluged the world in blood, and has brought upon us all the troubles of history.” Those remarks were drowned from time to time with the wildest applause, and the demonstrations against the lecturer were growing so hostile that he began to look seriously for a chance of escape. At this moment, a very much excited Irishman arose, and asked to be allowed fifteen minutes in which to answer the lecturer. To this request, our hero replied that, to the remarks of his friend, the school-teacher, he had listened with deep interest, and that he gladly acceded to

the proposition of his friend, the other gentleman, to make a further reply; but he hoped that they would all remember that he had to catch a train, and would be prevented, much against his will, from remaining to listen to all of the eloquent remarks which were proposed. With this, he secured his coat and hat, and, without stopping to put on either, slipped out, and jumped into a sleigh which was awaiting him, and was soon whisked far beyond the dangerous precincts of Ireland.

A. V.

COSMIC UNITY AND INTELLIGIBILITY.

In *The Index* of October 15, Mr. Thomas Davidson, in response to some excellent thoughts of Mr. Potter, asks thirteen acute questions of a most recondite character. To these, I propose to make a brief, informal reply, which may elicit from himself a more satisfactory answer.

At the outset let it be observed that the interrogator proceeds throughout on the unaffirmed assumption of a pre-scientific notion which modern psychology almost universally disallows,—that the sensible world is “not ourselves.” It is the sensible world he speaks of, and this he describes in the title as “not ourselves,” following herein Mr. Potter and Mr. Arnold; and his first six questions have no pertinence except on this assumption. On this basis, I think, his first question, whether the cosmic power is one or many, ought to be answered in favor of plurality. Very numerous are the forces of the world, which exhibits no unity except that of counteraction and interaction of a plurality of forces, whose combinations form temporary complex individualities. We have atoms of different qualities, and these in an infinite variety of connections, and thence of changed conditions and actions; and of the sensible world we know no more. This is the *known* unity of the cosmos. It is the fact, not a mere theoretic explanation of facts; not an hypothesis, but a knowledge well verified. Whether there is anything back of this as its designing cause is another question, and calls for no answer in this connection. This covers the first five questions of our philosophical interrogator.

On the other hand, if we consider all phenomena as subjective states, then by logical necessity they have all a perfect unity in their conscious subject, which is the great power that evolves and revolves all the known forms in lexical order and ceaseless succession. This is the only consistent position for any thinker coming after Descartes, and here I stand.

The collective force of the world, be it one or many, ego or non-ego, is in its action intelligible, because it can be understood, which is the meaning of intelligible. A man is unintelligible to us when we cannot understand him, and the same of his actions; and nature's *actions* are intelligible so far as they are understandable.

Hence, order is more intelligible than disorder, because it can usually be better understood, its processes anticipated, and its issues predicted. The intelligible appeals to intelligence, informs and guides it; while the unintelligible does not. The same is true of order in contrast with disorder, except when disorder is only another name for a kind of order, as in a ruin or an earthquake. There is a lexical order in all disorder; and, in that light, all is equally intelligible to the proper intelligence.

It involves no direct contradiction to say that a plurality of phenomena might possibly be utterly unintelligible. If, for instance, they absolutely do nothing, there is nothing to understand; and so they are entirely unintelligible. They are unIntel-

ligible, if they are entirely irregular in their action; for, in that case, our reason and calculation are baffled and frustrated.

But, in point of fact, I claim that there are no such phenomena, none that are thus irregular or inactive. All things are undergoing relative changes; and all these changes occur according to law, and thus in fact all are intelligible.

Then, further, I hold that this is not only the fact, but a logical necessity from the necessary nature of things. All things are or have a nature of some kind,—that is, are forces of some kind; and, therefore, they must act according to their nature or the nature of their force, and, therefore, uniformly, so that there is always ultimately a logical necessity that whatever is is intelligible.

The intelligible is not necessarily the intelligent. They are two different ideas, and do not imply each other. Intelligence is, indeed, always intelligible; but the intelligible is not always intelligent. The unintelligent may be intelligible. We have no evidence that gases are conscious and intelligent, but their action is quite intelligible to the chemist, since he can so well understand and describe their processes and results.

Because the universe is thus intelligible, intelligence can make endless progress in the study of its forms and motions and significance, if they have any significance.

These remarks, I think, cover all the questions of Mr. Davidson from my stand-point. How far they fail to meet his wants, I shall be pleased to hear, as will, I think, many others.

I will add, what all will see, that cosmic intelligibility, according to the above exposition, is no proof of cosmic intelligence in it or “behind” it.

WM. I. GILL.

THE TYRANNY OF CUSTOM.

When one finds himself yielding an acceptance to novel doctrines quite at variance with the precepts of his early training, it sometimes happens that he throws a curious retrospect over the path of his mental advance; and, in doing this, he notes a place where the path suddenly broadens, and almost at the same time changes its direction. The point is marked by a trampling of ideas and a confusion of thought. This fact has such a prominent place in our consciousness that it is useless to dilate upon it; and the individual experience is of general interest and value, mainly as it serves to illustrate the tyranny of custom, infinitely greater in thought than in bodily doing.

Bred, to a certain and frequently advanced age, in the love and fear—principally fear—of the Lord, an orthodox catechism forming the basis of education, the upright mind of ordinary stuff will only be led to question his faith or the established order of things through a shock to his sense of truth and equity; and the more candid and sincere such a mind, the more painful the shock. Somewhat as the miser may feel who finds himself suddenly deprived of his long-hoarded gold,—if, indeed, there be a fit comparison,—we may imagine for him who realizes that the underpinning of his faith is forever swept away. But there is this great difference; and, in time, he comes to realize that, too. The miser's loss is a minus for which he has a just cause of resentment against society, or at least some of its members. He from whom faith has vanished can neither find nor feel an object of resentment. Not by impoverishment, but through enrichment, it is gone. The soul is fertilized, and faith dies out; but, if that soul be noble, there germinates a new faith of ever improving quality.

The child is the true liberal: he questions every-

thing, and, unless he receives a rational answer, is unsatisfied. He may accept as a fact that there are giants; but, if you attempt to satisfy his inquisitiveness, you will be compelled to construct a cosmos, until you come smack against the wall of highest ignorance, and end with, “Child, I don't know.”

This observant and inquiring disposition on the part of children is universally encouraged, as of the highest importance to their proper development in all directions save one, and that—strange enigma!—on the side of infinite relation. When a ray of this nature dawns on the consciousness, instead of being encouraged to go as far as it can, the young thought is checked and chilled by the hush and finger of awe; and so development goes on unevenly, and the most spiritual faculties are the weakest.

What wonder that our age presents so many moral wrecks! Where lies the evil? On a thousand topics, the child has learned to be satisfied with “I don't know”; but here the answer is quite different. He is mystified by being told that he must not talk or think concerning such things; and, in this way, his mind is made receptive of a doleful cosmology, which can in no way be correlated with the facts of the world about him. But, taught to regard this catechising as the inculcation of truth in its most absolute form, he views with a stolid indifference all things that appear inconsistent with it. As soon as they are sufficiently familiar with the printed vocabulary, children are set to the task of becoming familiar with placing on their tongue's end page after page containing the Bible cosmology and the Christian scheme of salvation, consisting, for the most part, of a jumble of inconsistencies, very like the *Srottriyas* are set to master the Vedas. But, while the latter have the Rig-Veda stamped upon their memories for life, this religious training of ours fades from memory after the years of probation are past, all but the little which is retained for conventional purposes. Although not universal experience, to be submitted to this system is the fate—the education (?)—of the larger number of our brightest children. On this account, we are, perhaps, the most irreligious people in the world; for the religion of the nineteenth century Christian is a thing apart, having no connection with or influence upon his of life action. It is a superstition which leaves those within its dominion without any moral ballast, without a rational incentive to righteous conduct. Yet our conventional religionist would take to himself, with peculiar satisfaction, Cicero's laudation of the Romans, in that they excelled all people in religion,* in reality the very matter in which they were most weak and contemptible, recognizing a multitude of gods and goddesses and being practical atheists, simply because their national intelligence had outgrown their rude theogony.

H. F. BERNARD.

EDITORIAL NOTES.

BY B. F. U.

THE tributes of divines of other faiths to the piety and the good works of the dead cardinal mark a perceptible advance in the catholicity of Christians within a generation.—*Boston Herald*.

THE address of Mr. S. B. Weston, lecturer of the Society for Ethical Culture of Philadelphia, is 3208 Race Street. That of the librarian, Mr. Hugo L. Hund, has been changed to 1029 South Tenth Street.

ONE of the speakers at the Carriage-makers' Convention, held in this city last week, said,

* Cic. de Har. Resp. 2.

"Boston was renowned for Webster, founder of the Constitution: now, it is famed for John L. Sullivan, pounder of the constitution."

"THE Love of Nature" was the subject of an admirable paper read before the Parker Memorial Science Class, last Sunday, by Prof. Fay of Tufts College. Next Sunday, Mr. Henry W. Holland will deliver an address before the class on "Hereditry."

MONROE's *Iron-clad Age* thus forcibly states one of the difficulties of organizations: "Organizations against priestly monopoly, by whatever name, are well enough; but we do not regard them as essential to the proper prosecution of the work. Organizations invariably fall under the control of rings, and soon degenerate into clubs for the promotion of selfish interests. It always happens that the people who are most demonstrative for organizations are those who want to ride them to their individual profit. This drawback is inseparable from organizations, no matter for what purpose."

THE papers state that, in London, on a recent Sunday morning, a young lady found a fellow in the breakfast-room asleep, with a bottle of gin by his side. A policeman was sent for, and soon arrived. He found the fellow's pockets full of forks and spoons, and outside the window was a ladder. The burglar recognized that appearances were decidedly against him, and simply remarked, "If the gin had not been so strong, I would not have been here now." This leads an exchange to moralize as follows: "The moral of the story for householders is, Put not your trust in bolts and bars, but see that your gin be strong. By the way, Miss Barbier might have addressed the captive burglar in Lady Macduff's words of warning to her son:—

'Poor bird! thou'dst never fear the net nor lime,
The pitfall nor the gin.'

THE *Public Good* is the name of a weekly paper published in this city, in the interest of prohibition, from which we take the following story:—

Abraham Lincoln was a total abstainer for fifty years. On his election to the presidency, a large number of citizens crowded to the White House, to congratulate him. When the audience chamber was full, he cleared it with one of his practical jokes, of which he was fond. "Gentlemen," said he, "I am sure you will agree with me that on this auspicious occasion we should drink each other's health." This proposition was greeted with applause. Soon, a servant appeared, carrying a tray with a number of glasses and a large decanter filled with water. Turning to his guests, the President then said, "Gentlemen, we will now drink each other's health in the best beverage given to man, pure cold water." Subsequently, the President added to one of his friends, "That water joke effected two purposes,—it cleared my room, and gave them a lesson in the disuse of strong drink."

"LIBERTY enlightening the World" is not the only creation of Bartholdi in the United States. Theodore Stanton writes from Paris: "The Lafayette statue in Union Square, New York, and one of the public fountains of Washington, are his work. But perhaps the most characteristic of his American productions, excepting, of course, the colossus of New York harbor, are the four bas-reliefs around the steeple of the Brattle Square Church in Boston. The series is entitled 'The Four Stages of Christian Life,' and is peculiarly remarkable from the fact that the sculptor has given to the figures the faces of his friends and well-known public men. In the first bas-relief, 'Baptism,' it is easy to recognize the strong features of Sumner; in the second, 'Communion,' Longfellow is officiating as priest, while the whole Laboulaye family are there as communicants; and

in the third, 'Marriage,' Garibaldi is performing the ceremony, with Lincoln and Bartholdi's mother, hand in hand, before him."

WRITES Lillian Whiting, in the *Inter-Ocean*: "The Ixions of society, who go about with what Mrs. Whitney calls a process-of-culture expression, evidently believe that all culture is an external acquirement rather than a result achieved by intellectual activity. To read many books does not necessarily imply an acquaintance with literature; to travel in foreign lands, if one fails to see all the glories of scenery, the wonders of art, and the resources of intellectual life,—if one misses all these, and only earns the peculiarities of national and individual costuming,—is not, it may be presumed, a tour that results in any real culture. The key of life, the secret of all true social progress, is to be able to separate the essential from the unessential, the permanent from the transient, and to carry away from the feast of the gods some impression of deeper import than the pattern of the tablecloth."

In "Notes from Norway," W. B. McTaggart, in the *London Secular Review*, says:—

It will be gathered from this that the Norwegian peasant is not a man of much volatility, originality, or energy. As a rule, the Norwegians are men of great—nay, enormous—stature, with huge breadth of frame and the greatest physical capacity; but they are lacking altogether in nerve-power, or dash. For quiet, steady endurance of hardship and fatigue, scanty food, and climatic buffetings, they are probably without parallel; but for effort, such as we understand it, they are incapable. And the most insignificant cockney, with a chest of thirty-three-inch circumference, would over-ride the whole of them, under the existing conditions of the struggle for existence. The fact is, the hardy Norseman, whose progenitors are also direct ancestors of most of us in these islands, and more especially of the lowland Scotch, is a man of gigantic frame and strength and physical groundwork, so to speak, but phlegmatic and lethargic in the extreme. Fair, often almost to whiteness, in him the sanguine temperament degenerates into the lymphatic. What he wants, as a race, is an infusion of Celtic blood, which would give him fire and dash, while retaining the substratum of physical powers and calmness of judgment. This mixture is found in this, our land; and in one form or other, in more or less unequal combination, is the groundwork or type of the whole British nation.

THE attendance at the Congress of the National Liberal League (the American Secular Union), held in Cleveland the 9th, 10th, and 11th, was not large, except when it was addressed by Col. Ingersoll, who arrived on the last day. The number of League delegates present was extremely small,—smaller even than last year, at Cassadaga. Out of the hundreds of leagues claimed to be still in existence, only four were represented,—the Pennsylvania State League (five delegates), the Pittsburgh League (four delegates), the Cleveland League (five delegates), and the Newark, N.J., League (one delegate, by proxy). The entire number of delegates reported present by the Committee on Credentials was thirty-five. We take these figures from the report given in the *Truth-Seeker*, the chief organ of the League, whose editor was present, and who, after giving the names of the thirty-five delegates, evidently impressed with the smallness of the number, adds: "We think this list must be incomplete; for we recognized several present who should have represented leagues, if they did not. But the above were all who reported to the Committee on Credentials." Yet there were in addition a few persons in attendance from some other States than those mentioned, but the audiences were composed mainly of Cleveland people. A friend writes that some of the speakers, among whom

he especially mentions Mr. Courtland Palmer and Mr. J. D. Shaw, delivered able addresses, which deserved a larger hearing than they received. Col. Ingersoll repeated his "Myth and Miracle," his latest and one of his best lectures, to an audience of about two thousand. The treasurer's report sustained statements we had received from members of the League, that it was run by two or three individuals, with the aid of Col. Ingersoll's name, for their own personal benefit. Of the \$3,684.58 raised by contributions, etc., \$3,456.71 went to pay the salaries and expenses of Messrs. Putnam and Watts for lecturing against Christianity and in defence of Secularism, from the time they took charge of the League, a year ago. If any specific work were done during the year to advance the cause of State secularization, no proof of it appears in the report of the proceedings. Next week, we shall express our views on this subject more fully in an open letter to Col. Ingersoll, a gentleman with whom our personal relations, from our first acquaintance with him before he was known to fame, until now, have never been otherwise than cordial, but whose recent course in connection with the Liberal League we in that spirit of independence for which he so eloquently pleads, must frankly criticise.

THE *Banner of Light* complains that, when a "medium falls from grace, the secular, the infidel, and the religious press set up an awful howl," but that "when an infidel commits suicide, or a minister or an elder goes astray, silence or whitewash through respectable influences closes the door of such skeleton closet." But our neighbor should consider, assuming that what it says is true, that, "when an infidel commits suicide," the act does not disprove his reasonings or his views as an "infidel," and that, when a minister or an elder becomes a criminal, the fact does not affect the soundness of the views he teaches as a Christian; while, on the other hand, when an individual, whose reputation is that of a medium for spiritual manifestations, is discovered to be a fraud, and his so-called spiritual manifestations are seen to be clever tricks performed by himself, his claims as a medium are invalidated; and when sceptics have "been confounded" and many honest Spiritualists deceived by the charlatan thus pretending to stand between the living and the dead, between bereaved and aching hearts and the loved ones of whom but a glimpse, from whom but a whisper, would give unspeakable joy, it is not strange that there are people who "set up an awful howl." We do not think that our esteemed contemporary means to intimate that, with respect to merely personal behavior or private life, the medium is more often or more severely criticised by "the secular, the infidel, or the religious press" than is the "infidel," the "minister," or the "elder."

VERSE SERMON.

Chilled by the frosts and frowns of many years
And wearied with the bitter storm of life,
Brother, perchance through thy thick mist of tears
Thou seest but the dark and angry strife.
Throw off thy fears,
And trust. Thy grief may for a night endure,
Joy cometh with the morning, swift and sure.
Brother, maybe a heavy hand hath crushed
From out thy heart the lightness of its youth,
And all its glad songs for aye seem hushed,
While thou art left alone to mourn its ruth.
Thou once hadst blushed
To own a conqueror. Forth now with thy shield!
He only conquers who can face the field.

WALTER CRANE.

The Index.

BOSTON, OCTOBER 29, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Famous Speeches of Wendell Phillips.

BY W. SLOANE KENNEDY.

There is no more fascinating reading in American literature than the speeches of the great master of invective, who has recently passed away. So loaded is every page with rich historic and anecdotal illustration, and so sparkling, fresh, and alive is every paragraph, that of them, almost alone among volumes of speeches, can it be said that they are as fascinating as a romance. And this is not due to the dithyrambic invective (the new Phillips) alone: it is due to the solid merit, the polished Ciceronian eloquence, the massy classicism of the style. But their piquancy is doubtless due largely to their cutting satire and sarcasm. The satire of Phillips' speeches is like those Amazonian blow-gun arrows which come silently and without warning, yet send their bitter acridity straight to the centres of the blood and brain. But the arrows of Mr. Phillips were all shot in noble causes; and, read by posterity, when all personal feelings have ceased to influence, his speeches will rank beside the ponderous Johnsonian orations of Webster and Sumner.

Undoubtedly, the best productions of Mr. Phillips are his anti-slavery war speeches. In his famous Sims speech, the orator gave Rev. Orville Dewey a rubbing down with his terrible crash-towel. Mr. Dewey had publicly stated his willingness to return his own mother into slavery, if such an act should be necessary to save the Union. Phillips says he attempted "to lie himself out of the delicate embarrassment which this statement brought him into" by explaining that he did not mean his venerable relative, but his son!

In his speech on the Garrison mob of 1835, delivered in Stacy Hall in 1855, Mr. Phillips rapped the newspapers over the knuckles; spoke of the *Daily Advertiser* as "of course on the wrong side, —respectable when its opponents are strong and numerous, and quite ready to be scurrilous when scurrility will pay,—behind whose editorials a keen ear can always catch the clink of the dollar,—en-

titled to be called the Rip Van Winkle of the press, should it ever wake up."

In his lecture on the Pilgrims (1855), he says: "Do you suppose that, if Elder Brewster could come up from his grave to-day, he would be contented with the Congregational Church and the five points of Calvin? No, sir: he would add to his creed the Maine liquor law, the underground railroad, and the thousand Sharpe's rifles addressed 'Kansas,' and labelled 'books.' [Enthusiastic and long-continued applause.]" In a speech of 1860, Mr. Phillips said that, although he had known Boston for thirty years, and seen many mobs, he had yet to see (with one exception) the first word of honest rebuke, from the daily press, of a well-dressed mob met to crush honest men: that exception was the Boston *Daily Advocate* of Mr. Hallett, in 1835 and 1837. In his Phi Beta Kappa address in 1881, he thus satirized the keeping of diaries: "Tremble, my good friend, if your sixpenny neighbor keeps a journal. It adds a new terror to death. Journals are excellent to record the depth of the last snow, and the date when the May-flower opens. But, when you come to men's motives and characters, journals are the magnets that get near the chronometers of history, and make all its records worthless." But journals are the source of history; and, therefore, it seemed to Mr. Phillips that "one-half of history is but loose conjecture, and the rest is the writer's opinion." In the address on the Pilgrims, alluded to above, the orator said (in the words of Douglas Jerrold) that "there are estimable people who can never fully relish the new moon, out of respect for that venerable institution, the old one."

In November, 1859, Mr. Phillips spoke in Beecher's church in Brooklyn, on "The Lesson of the Hour." "The lesson of the hour," said he,—“I think the lesson of the hour is insurrection.” And he proceeded to deliver an impassioned eulogy of heroic John Brown, then on trial in Virginia: "You see the great Commonwealth of Virginia fitly represented by a pyramid standing upon its apex. A Connecticut born man entered at one corner of her dominions, and fixed his cold gray eye upon the government of Virginia; and it almost vanished in his very gaze. For it seems that Virginia, for a week, asked leave to be of John Brown at Harper's Ferry. . . . Virginia, the Commonwealth of Virginia! She is only a chronic insurrection. I mean exactly what I say. I am weighing my words now. She is a pirate ship; and John Brown sails the sea a Lord High Admiral of the Almighty, with his commission to sink every pirate he meets on God's ocean of the nineteenth century. [Cheers and applause.] . . . John Brown has twice as much right to hang Governor Wise as Governor Wise has to hang him. [Cheers and hisses.] Harper's Ferry was the only government in that vicinity."

Beckford, in his *Hall of Eblis*, says Phillips, tells of a great crowd of men running round, each with an incurable wound in his bosom, and each agreeing not to speak of it, lest the building fall upon them. Such were the slaveholders; but Brown uttered the talismanic word, "cried: 'Slavery is sin! Come, all true men, help pull it down'; and the whole machinery trembled to its very base." He gave the South something to think of, as the blacksmith ties a cord around the nether lip of a restless horse, that he may fix his attention on that.

From his address at North Elba, in 1859, over the grave of John Brown, it appears that Mr. Phillips still hoped that the slavery struggle might be peacefully settled. "Ours is the age of thought," he said. "Hearts are stronger than swords." But, on April 21, 1861, he said in Music Hall: "Civil

war is a momentous evil. It needs the soundest, most solemn justification. I rejoice before God to-day for every word I have spoken counselling peace; but I rejoice also with a specially profound gratitude that now, the first time in my anti-slavery life, I speak under the stars and stripes [alluding to his withdrawal from the bar, owing to his unwillingness to take the constitutional oath under a corrupt government], and welcome the tread of Massachusetts men marshalled for war. The only mistake that I have made was in supposing Massachusetts wholly choked with cotton-dust and cankered with gold." This was spoken before Theodore Parker's congregation. It was to them that he once declared his dislike of the prevalent religious organizations: "Understand me, I would never join one of those petty despotisms which usurp, in our day, the name of a Christian Church. I would never put my neck into that yoke of ignorance and superstition led by a Yankee pope, and give my good name as a football for their spleen and bigotry. That lesson I learned of my father long before boyhood ceased. I could never see any essential difference between the one portentous Roman pope and the thousand petty ones who ape him in our pulpits."

It was on Parker's platform in Music Hall, too, that Mr. Phillips twice spoke in the face of angry mobs. On Sunday, Dec. 21, 1860, he spoke on "Mobs and Education"; and a living illustration of his theme in the shape of a mob waited outside of the hall. A large detachment of police was in attendance at the hall, and many of the officers were stationed in two small rooms adjoining the platform. Others were stationed in various parts of the building, and members of the detective police force were present. When the address was concluded, a strange and thrilling pageant (worthy of the days of Republican Rome or Colonial America) was seen in the streets of Boston. It was no less a sight than a procession consisting of twenty friends of the great orator, a detachment of police, and a vast and angry mob, all moving up Washington Street, as the arch-abolitionist was escorted to his home. When the party of Mr. Phillips' adherents first emerged on Winter Street, they found a large crowd collected there, who immediately set up a babel of cries: "There he is!" "Crush him out!" "Down with the abolitionists!" "Bite his head off!" "All up!" And, with this, they surged forward, trying to prevent the escape of the company. But they were balked by the energy of the police. We can imagine how that terrible glittering eye of Phillips must have burned into the very souls of those of the miscreants on whom he turned it in his scorn. The immense throng moved down Winter Street, up Washington to Essex, where Mr. Phillips entered his door with a few friends. The deputy chief then requested the crowd to disperse, which they reluctantly did.

The mob of which Mr. Phillips spoke on this occasion was one of the broadcloth mobs of those times, that had broken up an anti-slavery meeting a short time previous.

In his address on "Progress," given in February, 1861, in Boston, Mr. Phillips said, "Our Constitution is a mere clapboard house, so square and sharp it almost cuts you to look at it, staring with white paint and green blinds, as if dropped from the landscape or come out to spend an afternoon." When the men of Massachusetts, in the convention that framed the United States Constitution, said that a three-fifths slave basis was a small matter, and would conciliate the South, "that moment the devil hovered over Charleston [South Carolina] with a handful of cotton-seed. Dropped into sea-island soil, and touched by the magic of Massa-

chusetts brains, it poisoned the atmosphere of thirty States. That cotton-fibre was a rod of empire such as Cæsar never wielded." "He needs a long spoon who sups with the devil."

In the speech of 1861, called "Under the Flag," occur these powerful utterances: "When the South cannonaded Fort Sumter, the bones of Adams stirred in his coffin. [Cheers.] And you might have heard him from that granite grave at Quincy proclaim to the nation: 'The hour has struck! Seize the thunderbolt God has forged for you, and annihilate the system which has troubled your peace for fifty years!' . . . That hour has come to us. So stand we to-day. The abolitionist who will not cry, when the moment serves, 'Up, boys, and at them!' is false to liberty."

The famous lecture on "Toussaint L'Ouverture," as delivered during the early days of the war, excited great attention. It is a masterpiece of oratory. Mr. Phillips, with his peculiar exaggeration, ranks Toussaint above every other great statesman and general in history. He reminds his hearers that the St. Domingo black men are the only race in history that has achieved liberty by its own efforts, while our own Saxon ancestors were slaves for four hundred years; were sold with the land, like chattels, and yet never dared to break those chains of servitude. Napoleon starved his other *ego*, his black shadow, the great L'Ouverture, in the dungeon of St. Joux. "That imperial assassin was taken, twelve years after, to his prison at St. Helena, planned for a tomb, as he had planned that of Toussaint; and there he whined away his dying hours in pitiful complaints of curtains and titles, of dishes and rides. God grant that, when some future Plutarch shall weigh the great men of our epoch, the whites against the blacks, he do not put that whining child at St. Helena into one scale, and into the other the negro meeting death like a Roman, without a murmur, in the solitude of his icy dungeon!" Compression of thought by an orator was never carried further than in this lecture on Toussaint. Mark this Antony-like paragraph: "Rochambeau sent to Cuba for bloodhounds. When they arrived, the young girls went down to the wharfs, decked the hounds with ribbons and flowers, kissed their necks; and, seated in the amphitheatre, the women clapped their hands to see a negro thrown to these dogs, previously starved to rage. But the negroes besieged this very city so closely that these same girls, in their misery, ate the very hounds they had welcomed. . . . Some doubt the courage of the negro. Go to Hayti and stand on those fifty thousand graves of the best soldiers France ever had, and ask them what they think of the negro's sword. And, if that does not satisfy you, come home; and if it had been October, 1859 [John Brown at Harper's Ferry], you might have come by way of quaking Virginia, and asked her what she thought of negro courage."

In his noted lecture on "The Lost Arts," Mr. Phillips shows how there is little new in the arts or customs of people. There are, for example, only from two hundred and fifty to three hundred distinct stories in Europe, and two hundred of these may be traced back to Asia and to a period preceding Christianity. Many jokes and bulls are thousands of years old,—as that of the man who said he would have been a very handsome person, but they changed him in the cradle. Among the lost arts is a kind of glass-cup manufacture of the Chinese. They made a cup which looked colorless until a certain liquor was poured in, and then the glass seemed to be full of fishes. There is a story of a certain Roman who came home from some foreign country, bringing a cup which was made of malleable glass, which, when let

fall, only received dents on its surface. There is a celebrated vase—that of the Genoa Cathedral—which looks exactly like a solid emerald, but no one knows how it was made.

Pliny says that Nero had a ring with a gem in it, which he used to look at the gladiators with. So Nero had his opera-glass.

The signet of the ring of Cheops contains figures and lines so fine that you cannot see them without the aid of a microscope. Hence, the Egyptians must have had that instrument.

The Pompeians knew the secret of Tyrian purple (a red color), and Titian knew the secret of mixing his wonderful colors; but Reynolds did not know it.

English steel cannot bear the atmosphere of India; but a Damascus blade, exhibited at the London Exhibition, could be bent so that the point touched the hilt, and could be twisted every way without breaking, like an American politician.

The crowning effort of Mr. Phillips' life was his Phi Beta Kappa Address, delivered at Harvard College on occasion of the centennial anniversary of the Society in 1881. It was so long since he had stood in the lists opposed to college conservatives that this tardy act of justice on the part of his *Alma Mater* did not seem to them a very dangerous proceeding. But the college dignitaries were made to smart before he had done with them. He recognized his opportunity, and resolved to use it well. Years before, he had publicly rebuked, in words stern and severe, President Walker, of Harvard, for countenancing by his personal presence at a Revere House banquet the sale of intoxicating liquors in hotels, so that it was no wonder he had never been invited to speak at any college commencement or the like meeting. But he had the scholars all before him now, and he gave them *their* dose. He accused them of distrust of universal suffrage. During the whole anti-slavery contest, the scholarship of the country was dumb, until imminent and deadly peril convulsed it into action. He had seen in his life-time many mobs, but *never* one that was not well dressed and countenanced by respectability. College-bred men fail of their duty by leaving it to others to agitate the great questions of social reform. But, in all modern governments, agitation is the only peaceable method of progressing, as the life and work of Wilberforce, Clarkson, Rowland Hill, Romilly, Cobden, John Bright, Garrison, and O'Connell prove.

"Never again be ours the fastidious scholarship that shrinks from rude contact with the masses. Very pleasant it is to sit high up in the world's theatre, and criticise the ungraceful struggles of the gladiators, shrug one's shoulders at the actor's harsh cries, and let every one know that, but for 'this villainous saltpetre, you would yourself have been a soldier.' But Bacon says, 'In the theatre of man's life, God and his angels only should be lookers on.' Sin is not taken out of man, as Eve was out of Adam, by putting him to sleep. 'Very beautiful,' says Richter, 'is the eagle when he floats with outstretched wings aloft in the clear blue, but sublime when he plunges down through the tempest to his eyrie on the cliff, where his unfledged young ones are and are starving.'"

Speaking of the scholar's distrust of ideas of liberty, of popular government, he said: "In boyhood and early life, I was honored with the friendship of Lothrop Motley. He grew up in the thin air of Boston provincialism, and pined on such weak diet. I remember sitting with him once in the State House, when he was a member of our legislature. With biting words and a keen crayon, he sketched the ludicrous points in the minds and

persons of his fellow-members, and, tearing up the pictures, said scornfully, 'What can become of a country with such fellows as these making its laws; no safe investments; your good name lied away any hour, and not worth keeping, if it were not?' In vain, I combated the folly. He went to Europe, spent eight or ten years. I met him the day he landed on his return. As if our laughing talk in the State House had that moment ended, he took my hand, with the sudden exclamation: 'You were all right, I was all wrong! It is a country worth dying for; better still, worth living and working for, to make it all it can be!'"

Mr. Phillips next proceeded to discuss briefly, but cogently, the subjects of temperance, woman's rights, Ireland, and Nihilism. Imagine the astonishment of his conservative audience, when he asserted Nihilism to be "the honorable and righteous resistance of a people crushed under an iron rule," and continued as follows:—

"God means that unjust power shall be insecure; and every move of the giant, prostrate in chains, whether it be to lift a single dagger or stir a city's revolt, is a lesson in justice. I honor Nihilism, since it redeems human nature from the suspicion of being utterly vile, made up only of heartless oppressors and contented slaves. As Emerson says, 'What the tender and poetic youth dreams to-day, and conjures up with inarticulate speech, is to-morrow the vociferated result of public opinion, and the day after is the charter of nations.' Submit to risk your daily bread, expect social ostracism, count on a mob now and then, be in earnest, don't equivocate, don't excuse, don't retreat a single inch; and you will finally be heard."

"In Russia, the young girl whispers in her mother's ear, under a ceiled roof, her pity for a brother knouted and dragged half dead into exile for his opinions. The next week, she is stripped naked and flogged to death in the public square. In such a land, dynamite and the dagger are the necessary and only substitutes for Faneuil Hall and the *Daily Advertiser*."

"Of all the cant in this canting world, though the cant of piety may be the worst, the cant of Americans bemoaning Russian Nihilism is the most disgusting. I shall bow to any rebuke from those who hold Christianity to command entire non-resistance. But criticism from any other quarter is only that nauseous hypocrisy which, stung by threepenny tea-tax, piles Bunker Hill with granite and statues, prating the while of patriotism and broadswords; while, like another Pecksniff, it recommends a century of dumb submission and entire non-resistance to the Russians, who for a hundred years have seen their sons by thousands dragged to death or exile, no one knows which, in this worse than Venetian mystery of police, and their maidens flogged to death in the market-place, and who share the same fate, if they presume to ask the reason why."

"Born within sight of Bunker Hill, in a commonwealth which adopts the motto of Algernon Sydney, *sub libertate quietem* (accept no peace without liberty), son of Harvard, whose first pledge was *Truth*, citizen of a republic based on the claim that no government is rightful unless resting on the consent of the people, and which assumes to lead in asserting the rights of humanity, I, at least, can say nothing else and nothing less,—no, not if every tile on Cambridge roofs were a devil hooting my words."

Such is an abstract of this famous speech. It is a curious coincidence that, twenty-four years before, Mr. Phillips had delivered before the Phi Beta Kappa of Yale an oration on a similar theme,—"The Scholar as an Agitator."

CORRESPONDENCE.

THE BASIS OF RELIGION.

Editors of *The Index* :—

We hear from the liberal side much of "a new basis for religious unity," and are assured that religion has a scientific foundation, as if it were not itself an elemental factor in life. Does not this indicate that the liberal movement of to-day is taking a *backward* step, committing the very same mistake which has been the curse of Christianity, of making religion an intellectual system rather than a moral one, or of making it to consist of an intellectual assent to philosophical theories rather than of moral aspirations? And do we not see the same mistake which created orthodox theology repeated, when our liberal men strain their thinking faculties to invent or discover intellectual reasons for those moral obligations which we directly feel? Thus, nothing will be accomplished beyond changing the creed, setting Spencer in the place of Jesus, the philosophy of modern writers in the place of the Platonic philosophy of the early Fathers. Instead of mere intellectual systems, let us have one purely ethical movement in religion. The so-called ethical movements are mere intellectual movements around ethics as their motto, but unsuccessful in calling forth that ethical passion within us, about which they reason, and which is the one basis and life of religion. Religion is worthless whenever it ceases to be the life created and revelations obtained by our motives, ends, loves, and all faculties becoming ethical,—the immersion of our entire life in the moral passion; worthless, when it becomes mere intellectual speculations about ethics or about the origin and destiny of the world. Religion is spirit and life, and is never created by proving what it should be. If in us there is a moral nature, enough to speak forth till it wake; if not in us, arguments will never put it there. And we do have a moral nature, if we have an intellectual (though it might be more correct to say that human nature is ethical); and thereon must religion be based. We have a direct moral consciousness, and in it lies all our hope of the moral bettering of human life. Is not the great lack of all our modern movements in religion, faith in this moral nature of man, faith in the infinite might of moral truths, needing no propping of logic? Whether God created the world in six days or in six million years, or whether it grew up on the shore of infinitude through eternities, warmed and lighted by the Unknowable, holiness is beautiful, lovable, and blissful, love between men a beautifier and paradise-builder; and we may go on calling forth from each other ever new powers of love, truth, and righteousness, new heavens and earths,—for the "kingdom of heaven" is within us, ever there, be the world old or young, evolved or created. Intellect divides, and intellectual systems rapidly decay and change. The moral spirit is one through all ages and climes. Jesus, Buddha, and Confucius are one in it. The intellect must never pretend to form more than the ever-changing superstructure of religion.

Intellectually to interpret life is hard, while it is easy morally to do so. Every man, poor or rich, will respond to moral truth; while only the learned can respond to intellectual religious speculations. Base religion solely on the moral sentiment, make all preaching a direct appeal from the moral nature in one man to that in another, a mere presenting of the moral law and gospel (as definite and clear as the laws of light or heat, all these laws of conscience, and hopes and faiths of the hearts), and poor and rich, learned and ignorant, will once more unite in one spirit and one temple; and the intellect will be the servant of the heart, and science of conscience,—the end of all, character.

On this basis, we can unite, but not if assent to a scientific theory is the test of fellowship, or belief in or negation of a certain name or doctrine. When my assent to some theory about the fallibility of Christ or the mistakes of the Bible are made tests of fellowship, I am excluded.

On this ethical foundation, we have the religion of the spirit, the revealing of the law written on our inward parts, of the gospel in our hearts. It begins by lifting the veil to the truth that character is the end of existence, goodness a blessed necessity; that all life, all force, is "a power making for righteous-

ness"; truth and right, the fibres and nerves of this whole world, wherein no life can thrive nor vice prosper; that goodness possesses such renewing power that, when we sinful turn to it in love, resolving to do and live it, sin and all its effects flee away, and leave us pure and erect; if we turn to it, the universe turns to us. And it ends in the character which can say, "The Father and I are one, God in me and I in him."

And, as in character we rise, our horizon widens; as we live better, we see more perfectly the ethical truth of the universe, the origin, end, and way of it all.

If, on this one way, we, filled with a hungering love for perfect goodness and desire to help make triumphant the perfect will, should cry out of our souls to the Oversoul out of which we rose, and which on all sides surrounds us, for help; or if we, full of joy, should sing to it the praise and thanks with which our hearts are filled,—if thus we should pray and worship, call us not, therefore, superstitious. We agree with you that the end of all is character. We pray for it; we in prayer and spiritual communion draw into ourselves the good which beams from starry sky or truth-sown revelations. We worship, because we cannot help it: we must sing the praise of that Power which so has blessed us, even though he care not; must do so, as the lamb cannot but lick the shepherd's hand. To us there is the same pleasure in contemplating the ways of God all about us, his wondrous works and miracles without end, as in beholding the waving fields and whispering woods. It gives us joy to know that God lives, that our souls are but children of a larger Soul which fills all infinitude and all eternity wholly. And so, feeling within all nature the same moral life, perfected and almighty, which stirs beneath our sin and weakness, we cannot but break into songs and hymns and joy without end. Who can help it, who sees that the life of the world is ethical life, the end of the world a moral end, the origin of the world an ethical thought, the unity of the world the power of truth, the moving force of all a living Soul,—God, whose image and children we are? And shall we not at last have an ethical movement in religion?

H. TAMBS LYCHE.

THE DESIGN ARGUMENT.

Editors of *The Index* :—

In considering Mr. Underwood's remarks of the design arguments in *The Index* of October 1, as well as other writings on the same subject, it seemed to the writer that the chief failure to comprehend a design in life lies in its mode of consideration, presented always in a partial manner,—special pleadings, the watch argument of Paley, Huxley's teleology, Darwin's straying organisms, and the like. But looking at creation from the beginning, step by step, as a whole, no one conversant with the matter, it seems to the writer, can fail to see design. From a minute stomach to a perfect human mind (not yet attained), forethought, plan, and design are evident in every step of the still uncompleted chasm between the two. The contents of the earth give evidence of forethought in their utilities. The struggles of animals to produce the necessary ligaments, tendons, muscles, and other qualities, to compose a rude river-drift man on the line of a still higher being, give evidence of forethought and plan.

The final end to be attained could not be brought about in any other way than that adopted,—evolution and survival of the fittest among the lower organisms, experiences (civilize or die) among the higher. All the incongruities of life can be accounted for upon the ground of our still inexperienced state. No accident but what leads to final better conditions; and wars, strifes, and cruelties are only so many indications of our unwisdom and lack of experience, and are simply so many incentives and calls toward the final attainment. Looking at creation in its entirety gives no room for a "chance" theory.

I have not the time, necessary material, nor ability to fully elaborate this thought; but, to those as familiar with the gradual unfolding of life in its various phases as the average *Index* reader should be, the mere suggestions here given, "dumb mouths" though they appear, should plead "trumpet-tongued" for a designer.

Yours,

JOHN MILLS.

A FRIEND, who is a good literary critic, writes of Miss Cleveland's book: "It seems the work of a well-read, thoughtful, and high-minded and good woman, somewhat in the trammels of her early education, who writes not so much because she has something she *must* say as because she has cultivated the talent for saying things, and can make it swell her income of reputation and money. Her artificial attempts at brilliancy of style are the most conspicuous blemishes in the book to me. The *mazima ars celare artem* has not quite been attained by her. The several essays seem to me of very unequal merit. And her theory of the necessity of what she considers a religious faith in order to make a poet is open to some question,—at least, requires closer analysis. A poet may be without anything that can properly be called religion. But, to the poet of a certain order of thought and power, what I should regard as religious aspiration, or sentiment, is plainly essential. Keats, Shelley, and Byron, and many more, were poets in their range, surely. And what would Miss Cleveland say of Robert Burns?"

BARTHOLOI's affection for his mother is beautiful and touching. Theodore Stanton writes: "I well remember her presence last November in the court-yard of the foundry where stood the statue of Liberty, on the occasion when Victor Hugo visited it. She had never seen the great poet, and asked to be introduced to him. But the son feared lest the emotion produced by the presentation should be too great for her. But she pooh-poohed the idea, and insisted upon shaking hands with the literary king of France. Bartholdi yielded, and, leading her up to the poet, said, 'Permit me to present Mme. Bartholdi, my mother, who was born a year before you.' She made an old-fashioned courtesy. Victor Hugo bowed in his stately way; and, raising her hand to his lips, he kissed it. It was a touching sight to see these two more than octogenarians thus brought face to face. One has since passed away; but the other—whom I met a few weeks ago at table in Bartholdi's cosy dining-room—is still erect and strong. But Bartholdi has shown his filial regard in an original and extraordinary manner. At a banquet given to the sculptor a year ago, I heard M. Bozerian, of the French senate, speak as follows: 'Soon after I had met Bartholdi for the first time, he invited me one evening to accompany him to the opera. The head of the statue of Liberty had recently been completed, and I had been up to the foundry the day before to see it. As we entered the box at the opera, I noticed a lady seated in one of the chairs; and, turning to my companion, I exclaimed, 'Why, there's your model of the head of Liberty!' 'Yes,' was the reply, 'let me present you to my mother.' Bartholdi, therefore, has not only put his own soul into the work that is to stand forever on Bedloe's Island, but he has also breathed into it the features of her who gave him birth, so that the memory of mother and son will go down to the ages together.'

BOOK NOTICES.

MONISM AND MELIORISM. A Philosophical Essay on Causality and Ethics. By Paul Carus, Ph.D. (Tübingen). New York: F. W. Christern, 37 West 23d Street. 1885. pp. 83. Price 75 cts.

The author of this work means by Monism a conception of the world which ascribes all phenomena to one source, and explains all problems from one principle, and by Meliorism—a word which, if we mistake not, was first used in this sense by George Eliot,—a view of life which, accepting neither pessimism nor optimism, finds the highest duty and satisfaction in earnest labor for the improvement of the existing order of things.

The first part of the work is devoted to a consideration of the revolution Kant has produced in the empire of philosophy, and to a discussion of his method and the essential thought of his philosophy. Considering that the latter seems to consist of two souls, the one sceptical and radical and the other dogmatic and believing, it is not strange, the author says, that people are puzzled, and ask, "Which is now the real Kant?" and that Kantians are divided into two principal camps, the radicals and the dogmatists. "Both of them stand upon Kant; but the radicals (for instance, Schopenhauer) say that the real Kant is the critical philosopher, who was, as they pretend, so weak that he was afraid of losing his professor-

ship, and therefore stooped to hypocrisy. The orthodox party, however, to which belong the *élite* of Germany's philosophically trained clergymen, think that the Kant of the Practical Reason is the true Kant." The fact that Kant, when rebuked by the government, yielded to the pressure and promised obedience, and in his old age was weak enough to say that he "would do even more than was demanded of him, and abstain in future from all public lectures concerning religion, whether natural or revealed," does not, our author thinks, explain his dualism. Dr. Carus says that the great philosopher was "too thorough not to think his critical ideas to the end, and there he arrived at the abyss of atheism." But he could not stop there. "Pure reason is but half the soul of man: the other half, being the emotional part, has exactly the same right." "There is no doubt that Kant was scientifically a real atheist; but, on the other hand, he establishes simply on the basis of our emotional wants the idea of God." How this radical atheism and emotional theism can be combined into a unity, Kant leaves us to find out. This unmistakable dualism, our author holds, is not due to want of consistency, but to the fact that Kant is "standing on the tribunal of justice, and, being unable to decide, allows each party to say its mind."

There is, we believe, much truth in this explanation of Kant's dualism; but why characterize his ontology as atheism, considering the current connotation of this word? And why speak of Spencer as an atheist, when the word "agnostic" properly defines his position, recognizing as he does, with Kant, ultimate existence, the basis of all phenomena, while, with Kant, declaring that its nature is inscrutable.

The portion of this essay which treats of "Causality" and "First Cause and Final Cause" is thoughtful and interesting, but the discussion is too brief and fragmentary to be very satisfactory. It is argued that causality is a law of motion, and the ultimate principle inherent in the nature of things. Cause and effect mean not merely succession, as Hume and Mill claim, but the ensuing of one change from a previous one. The reasonings of these two profound thinkers on this subject, be they sound or fallacious, are certainly not refuted in this essay.

Dr. Carus rejects "the idea of a First Cause in the sense of Creator," but recognizes "the final principle of the world," "the most general law governing the whole universe, the fundamental basis, and, so to speak, the ground on which everything rests," which "an atheist like Herbert Spencer calls the 'Unknownable.'" By the three (3) principles of cognition,—matter, space, and movement,—we may comprehend anything in the world: "yes, anything except the world itself, and so really nothing." The principles of cognition, "simple and plain as they seem at first sight, are, by their very nature, incomprehensible." We cannot understand space; matter we shall never know; and, as for movement, it is a fact, but we cannot account for it, cannot understand the ground or last causation of movement.

The word "final cause" is rejected, and for it is substituted simply *finis*, answering to the Greek *τέλος*; and designating what Germans call *Zweck* and *Ziel*. Every line of motion has its *whence* and its *whither*. The *whence* is the *cause*, the *whither* the *finis*. The *finis*, by evolution, informs us as to the character of the final principle. Monism means unity of *finis*; that is, the same goal, as well as unity of the source of all phenomena and unity of principle animating the world.

Ethics can have no basis in the commands of a God who will reward and punish, and none in utility or happiness. There can be no moral actions without freedom of the will, and yet causation implies necessity. "The chief value of any moral deed rests on the fact that the man *could not*, under the condition, act otherwise than thus; that it was an act of free will and, at the same time, of inevitable necessity." The world were a failure, if its chief purpose were really happiness. We live, not to be happy, but to do something in the service of humanity; and "this must be done even at the sacrifice of comfort, ease, and happiness. And a successful performance of this duty is the highest—nay, the only—happiness of man,"—a statement which, after all, is in effect that happiness, the happiness of all, is the highest aim of life. A life worthy to be lived is one full of aspiration for something better; and this aspiration dwells in our souls as a categorical imperative, and is related to that ethical law governing the affairs

of the world. Here is the foundation of meliorism. The volume concludes thus: "And so meliorism completes and supplements the doctrine of monism in establishing the truth that the final principle of the world is ethical." Such is the leading thought of the volume.

We cannot say that Dr. Carus' work contains any thought which is new or novel; but it discusses some of the higher problems of philosophy in a style that has the merit of strength and clearness, and in a manner that fixes the mind on the subject, and makes it far from dry and uninteresting. B. F. U.

THE ESSAYS OF ELIA. By Charles Lamb. With Introduction by Alfred Angier. New York: John B. Alden. pp. 236. Cloth, price 50 cents.

It is a long time since these *Essays of Elia* first delighted the English-reading public, but the tender pathos and kindly humor which permeate them are just as appreciable to-day as when they were first written. Mr. Alden intends to supplement this volume (which contains twenty-eight of the best known of these essays, in the order they first appeared under the editorship of the author) by a companion volume, which will give some of the later miscellaneous writings of Lamb, to be entitled *Last Essays of Elia*. The following essays appear in this volume: "The South Sea House," "Oxford in the Vacation," "Christ's Hospital Five and Thirty Years Ago," "The Two Races of Men," "New Year's Eve," "Mrs. Battle's Opinions on Whist," "A Chapter on Ears," "All Fools' Day," "A Quakers' Meeting," "The Old and New Schoolmaster," "Imperfect Sympathies," "Witches, and Other Night Fears," "Valentine's Day," "My Relations," "Mackery End in Hertfordshire," "My First Play," "Modern Gallantry," "The Old Benchers of the Inner Temple," "Grace before Meat," "Dream-children, a Reverie," "Distant Correspondents," "The Praise of Chimney-sweepers," "A Complaint of the Decay of Beggars in the Metropolis," "A Dissertation upon Roast Pig," "A Bachelor's Complaint of the Behavior of Married People," "On Some of the Old Actors," "On the Artificial Comedy of the Last Century," and "On the Acting of Munden."

S. A. U.

BEADS FOR THE CHILDREN TO STRING. From St. Nicholas. Compiled by Mrs. E. W. Lane, Newton, Mass. Boston: J. F. Giles, 206 Washington Street.

"Santa Claus," through one of his corps of able assistants (Mrs. Lane), has devised a very unique and beautiful Christmas present for the entertainment and instruction of those of his young friends who are anxious to improve in their piano practice. It consists of a pretty box containing a lesson-book in shape suitable for use at the piano, with covers of cream and gold, and whose gilt-edge leaves are tied together with a golden cord. On each leaf is a scale exercise, with plain and simple directions as to the proper method of playing it. Each exercise thoroughly learned makes a "bead" of the "string." The box contains, in addition, a prettily designed envelope, in which is enclosed a printed letter from St. Nicholas himself; and in it he gives some excellent advice to young players, conveyed in a charming style, and accompanying that advice with a set of easily comprehended rules, which it is expected the learner will hang beside the piano for frequent consultation and reference. It is to be hoped that all the children who are piano pupils may be fortunate enough at the approaching Christmas time to receive from their patron saint this lovely and instructive token of his regard. S. A. U.

The opening paper in the October number of the *Andover Review* is "The 'Théodicée' of Leibnitz," by Prof. Torrey. Under the title of "The New England Company," Mr. Hamilton A. Hill traces the history of a London missionary organization which operated in this country until the Revolution, and which still continues its work in Canada. Dr. W. Barrows, in "Commerce, Civilization, and Christianity in their Relation to Each Other," considers the duties of civilized nations in dealing with those less advanced. Dr. Sheckenberg contributes a paper upon the "Present Religious Condition of Germany." Rev. C. C. Starbuck gives the results of Dr. Grundemann's compilation of statistics in regard to Protestant missions. In the "Religious Intelligence" department is an account by Rev. Julius Ward of the recent congress of churches held at Hartford. The series of editorial papers on Progressive Orthodoxy is continued. Other

articles, with book reviews and notices, help to make this number of the *Andover Review* a strong one. Houghton, Mifflin & Co.

"WIDE AWAKE" for October has a story from the pen of the late Helen Hunt Jackson, entitled "Poppy's Table-cloths." A companion story, "Poppy's Grand Journey," will appear in the November number. Margaret Sydney's "A New Departure for Girls" nears completion. "Pete's Printing Press" is a business story for boys, by Kate Gannett Wells. Mrs. Jessie Benton Fremont describes interestingly "A Queen's Drawing-room," at which she was presented to Queen Victoria. Among other writers are Yang Phou Lee, Kate Foote, Mrs. Lizzie Champney, Mary Treat, Oscar Fay Adams, and Amanda B. Harris, who writes of Washington Irving, a portrait of whom accompanies the sketch. One of the full page pictures is a charming one of Tennyson's "Enid."

"OUR LITTLE ONES AND THE NURSERY" for October keeps up to its high standard as an instructive storyteller for the younger children of our households. This number contains stories, poems, and pictures about dogs, alligators, horses, and birds. "A Sad Story" gives the history of the formation, sea-life, and gathering of sponges. *Our Little Ones* is used in various primary schools as a reader, with much profit. Russell Publishing Co., 36 Bromfield Street.

Just Published: TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS. By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

NEARLY READY:

SCIENTIFIC THEISM.

By FRANCIS ELLINGWOOD ABBOT, PH.D.

This work includes the substance of a lecture delivered last July at the Concord School of Philosophy. It is part of a new philosophy of Evolution, vitalized by the principle of UNIVERSAL ENDOGENIC TELEOLOGY and by the substitution of the ORGANIC THEORY OF EVOLUTION for the MECHANICAL THEORY advocated by Spencer and Haeckel. Its purpose is to philosophize the scientific method, and to show that modern science, interpreted by its philosophized method rather than by its non-philosophic special results, leads, not to Atheism, not to Agnosticism, not to Idealism, but to a REALISTIC SPIRITUAL THEISM which will satisfy both "the head" and "the heart."

1 vol., 12mo. Price \$2.00.

BOOKS—Twenty Million Dollars

public as a result of **THE LITERARY REVOLUTION** during the past six years. **THE REVOLUTION** moves **FORWARD**, not backward. It now presents a larger catalogue of better books at lower prices than ever before. To illustrate: the Boston edition of Tennyson's "Enoch Arden," price \$1.25, is reprinted in handsome style, for **2 CENTS**. The best edition ever made in America, and the **ONLY** uniform edition of the **WORKS OF JOHN RUSKIN**, is publishing for the price of **\$18** for the set—**\$600** was paid for the set from which it is reprinted. The following are **SOME** of the Authors now represented in the catalogue which is sent free, by mail, to any applicant, or may be had of enterprising **BOOK-SELLERS** who act as Agents.

Abbott, Jacob.	Bulwer-Lytton.	Dante.	Green, J. R.	Keats.	Ossian.	Rollin.	Thackeray.
Æschylus.	Bunyan.	Darwin.	Greenwood, Grace.	Kennedy.	Ovid.	Rossetti.	Thayer, W. M.
Æsop.	Burke.	D'Aubigne.	Grimm.	Kenrick.	Parton, James.	Ruskin.	Thompson, Maurice
Alden, E. T.	Burns.	De Foe.	Guizot.	Kerr, Orpheus C.	Payn, James.	Russell, W. Clarke	Thompson, Judge.
Allerton.	Byron.	Demosthenes.	Hamerton.	Kingsley, Rev. C.	Peabody, S. H.	Sale, George.	Thucydides.
Ancient Classics.	Cæsar.	De Quincey.	Haweis.	Lamartine.	Phelps, Gen. J. W.	Schiller.	Trench.
Andersen.	Calhoun.	De Stael.	Hemans.	Lamb, Charles.	Phillips, Wendell.	Schmucker.	Trevelyan.
Arabian Nights.	Campbell.	Dickens.	Herbert.	Linton, E. Lynn.	Pindar.	Scott, Sir Walter.	Trollope.
Argyll, Duke of.	Carlyle.	Doré.	Herodotus.	Locke.	Plato.	Seneca.	Trumbull.
Aristotle.	Cervantes.	Dryden.	Hervey, John C.	Longfellow.	Platt.	Shelley.	Tyndall.
Arnold, Edwin.	Chambers.	Durfee.	Hewitt, A. S.	Losing, B. J.	Pliny.	Smalley, E. V.	Virgil.
Arnold, Matthew.	Chaucer.	Ebers, George.	Homer.	Luther.	Plutarch.	Smiles, Samuel.	Washington.
Arthur, T. S.	Chinese Classics.	Eliot, George.	Hood, Thomas.	Lytton, Bulwer.	Pope.	Smith, Dr. Wm.	Weems.
Aytoun.	Chinese Gordon.	Emerson.	Horace.	Macaulay.	Porter, Jane.	Sophocles.	Wesley.
Bacon.	Cicero.	Euripides.	Houston, Sam.	Mackenzie.	Prescott.	Southey.	Whicher.
Bain, Alex.	Coleridge.	Farrar, Canon.	Hughes, Thos.	Martineau.	Procter, A.	Spencer, Herbert.	White, H. K.
Besant, Walter.	Collins, Wilkie.	Forbes, Arch'd.	Hume, David.	Mayo.	Proctor, R. A.	Spielhagen.	Whittier.
Bedott, (Widow.)	Confucius.	Fox, Rev. John.	Huxley.	Mencius.	Pryde, David.	Stewart, Balfour.	Willis, N. P.
Birrell, Augustine.	Conway, Hugh.	Frost, Rev. John.	Ingelow.	Mill, John Stuart.	Ramage, C. T.	Storrs, Rev. R. S.	Wilson.
Black, William.	Cooper, Peter.	Geikie, Archibald.	Irving.	Milman.	Rawlinson, George.	St. Pierre.	Wood, J. G.
Bonney, C. L.	Cowper.	Geikie, Cun'gham.	Jenkins.	Milton.	Reade, Charles.	Swift, Deaz.	Wood, Mrs.
Bronte.	Crabbe.	Gibbon.	Jevons, W. Stanley.	Moore.	Richardson, C. F.	Tacitus.	Wordsworth.
Browning, Mrs.	Creasy.	Goethe.	Johnson, Sam.	Müller.	Roche.	Taylor, Dr. G. H.	Wright, Mrs.
Bryant.	Cromwell.	Goldsmith.	Josephus.	Mulock-Craik.	Rogers.	Taylor, H.	Xenophon.
Buffon.	Curtis, Geo. Wm.	Gould, S. Baring.	Juvenal.	North, Christopher.	Roget.	Tennyson.	Yonge, C. M.

ILLUSTRATED CATALOGUE. 116 pages, may be had for **4 CTS.** **THE BOOK-WORM**, Monthly, **25 CENTS** a year, gives a vast amount of choice reading, besides all the news of The Literary Revolution. Specimen **FREE**, including complete **CONDENSED CATALOGUE**, or one year free with books to amount of \$1.00, purchased this month.

JOHN B. ALDEN, Publisher, 393 Pearl St., New York. P. O. Box 1227.

JAMES G. BLAINE'S GREAT HISTORY
 Outtells all other books. Hon. J. S. Wise of Va., says: "Whoever takes it up, no matter whether he be Mr. Blaine's friend or enemy, will never put it down until he has read the whole." Hon. Allen G. Thurman, says: "A classic in our political history." Agents wanted on commission or salary. Address: The Henry Bill Pub. Co., Norwich, Conn.

TOKOLOGY
 A Book for every woman. Alice B. Stockham, M. D.
A COMPLETE LADIES' GUIDE.
 20,000 Sold in Little Over a Year. Agents find it the most popular work on the market. The very best book to put into the hands of a girl or woman. Price, postpaid, 25c., or will send free to any one who will place. Address, DAVID C. COOK Sanitary Pub. Co., 159 La Salle St., Chicago, Ill.

PIC-NI SUGGESTIONS.
 Book now in press. Suggestions for Sunday-school picnics, excursions, etc., from experienced Sunday-school workers from various sections, both city and country. Price, postpaid, 25c., or will send free to any one who will place. Address, DAVID C. COOK PUBL. CO., 15 Washington St., Chicago.

INVESTORS
 should confer with the
WESTERN FARM MORTGAGE CO.,
 LAWRENCE, KANSAS.
First Mortgage Real Estate Loans paid in New York. Absolute Satisfaction GUARANTEED. For reliability, consult Third Nat. Bank, N. Y. City, or Nat. Bank, Lawrence, Kan. Security large. Interest promptly paid. Send for pamphlet with testimonials, sample forms, etc. F. M. Perkins, Pres. } N. F. Hart, } L. H. Perkins, Sec. J. T. Warne, V. Pres. } Auditor. } C. W. Gillett, Treas.

THE PATRONAGE of the liberal advertising public is respectfully solicited for **THE INDEX**. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.
 For 1 to 12 Insertions, . . . 10c. per line.
 " 13 " 25 " . . . 8c. " "
 " 26 " 50 " . . . 6c. " "
 " 52 " " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent., on the total as above calculated, will be made.

J. HART & CO.,
BANKERS,
 Doylestown, Pa.

Draw Bills of Exchange on England, Ireland, and other points in Europe. Agency for the American Line of Steamers.

THE ABSENCE OF DESIGN IN NATURE. By Prof. H. D. GARRISON. A Lecture delivered before the Philosophical Society of Chicago. Price 10 cts. For sale at THE INDEX office.

"OLD THEOLOGY"
 FOR THE

Healing of the Sick.

BY

E. J. ARENS.

Explains the Healing and Teaching of Jesus, the Creation of the Soul, the Origin of Matter, and the Relation which the Soul holds to God.

THE UNIVERSITY.

FOUNDED 1877.

A Literary and Critical Journal, published every Saturday, at Chicago.

The University is not the organ of any college; it is not distinctively an educational paper; but it aims to deal with living issues from the university standpoint,—to reflect the ripest American scholarship in its discussion of politics, religion, education, science, literature, and art in their various bearings. Its publishers solicit the subscription of all persons interested in the support of an independent exponent of liberal culture on a plane of superior excellence.

Price, per year, \$2.50; per copy, 5 cts. Special trial offer to those who see this advertisement. Send 25 two-cent stamps and receive **The University** three months on trial. Specimen copies—three different issues—will be mailed to any address for examination on receipt of 10 cts. Address

THE UNIVERSITY COMPANY,
 135 Wabash Avenue, Chicago.

CURRENT TOPICS.

BY B. F. U.

THE Jewish Association for the Diffusion of Knowledge has adopted the revised version of the Old Testament as the basis for a new edition of the Scriptures, which is about to be issued for the use of English-speaking Jews.

GLADSTONE'S contribution to the English book, *Why I am a Liberal*, is this: "The principle of Liberalism is trust in the people qualified by prudence. The principle of Conservatism is mistrust in the people qualified by fear."

THE *Congregationalist* says that the recent inauguration of a series of popular Sunday evening concerts at Music Hall "marks a somewhat more decided advance in the direction of Sabbath desecration than anything else which we remember."

CANON FARRAR preached in Trinity Church, New York, on a recent Sunday, the papers state, to a "large and fashionable audience." His text "Little children, keep yourselves from idols," the *Boston Transcript* suggests, "was singularly appropriate, for there was some danger of the audience worshipping the preacher."

It is, as a rule, dishonorable and cowardly to make charges against a man after his death, when the alleged facts were known and withheld before his lips were forever mute in the grave; and, when such statements as some of those recently published concerning President Johnson years after his death appear, fair-minded and generous readers are very slow to believe them.

ACCORDING to a statement of M. Pasteur, made to the Academy of Science in Paris, he has, by means of vivisection, discovered that hydrophobia may be overcome by inoculation. M. Pasteur's experiments have been long continued and painstaking, and the positive statement of so cautious a scientist that by inoculation the effects of the bite of a mad animal can be averted will be received with confidence.

REV. SOLOMON SCHINDLER, the learned Jewish rabbi of Boston, is giving a series of lectures in this city, which, as the *Boston Herald* says, are "attracting the greatest attention, not only in his own church, but among Gentiles." Abstract re-

ports of these lectures, so far as given, have appeared in the daily papers, and awakened much interest. Rabbi Schindler has generously acceded to our request for permission to publish these lectures in full from the manuscripts, and the first will appear in *The Index* next week. They are remarkable discourses.

CANON FARRAR said to a Boston reporter last week: "I think there will be a strong attempt to disestablish the Scottish Church; and, when the English Church is surrounded by a cordon of disestablished churches, perhaps in five, six, seven, or even in ten, years there may be a strong attempt to disestablish the English Church. That, of course, may be successful, because a very large number of liberal members have expressed themselves in favor of disestablishment." Still, Canon Farrar thinks "it would be a very great evil to disestablish the English Church."

THE suggestion made in sarcasm by English papers, that on the frames of famous pictures in the national galleries be placed the prices paid for them, that they may attract the attention of the unintelligent public, would not be a bad suggestion, if made in all seriousness. The majority of those who go to public exhibitions are not competent to judge of works of art, and they do not pretend to be. A label inscribed with the price of a work would give them an idea of its rank, and be the means of directing closer attention to it by the mass of visitors, and of educating them to discriminate in the study of pictures.

THE *Nation* refers to the activity of the trades unions in the present political campaign in New York as a vigorous sign of political life. It says that "the movements of 'organized labor,' the questioning of candidates, and the holding of public meetings specially directed by laboring men to their special ends are signs that the persons or classes engaged in such endeavors have rightly apprehended their duties as members of a democratic republic, and are to be encouraged in all honorable efforts to promote their common interests through political agencies and the forms of law. It is for other persons or classes who may think that the trades-union programme is injurious to their interests or to the public interests to oppose them with the same weapons,—that is, by voting for different men, measures, and policies."

AMONG the subjects discussed at the Episcopal Congress recently held in New Haven, Conn., was "Ethics of the Tariff Question." Rev. Francis Anthony, of Ridgefield, Conn., said that protection was simply an iniquitous policy, by which a few become enriched at the expense of the many. Charles Heber Clark, of Philadelphia, arraigned the free-trade policy of England, saying that Ireland and India were the only countries where free trade had full sway, and these countries were periodically swept by famine. The superior condition of the working classes in this country was ascribed to protection. Rt. Rev. T. U. Dudley, D.D., said that free trade was the "law of worlds,—God's law." It was a question of morals; and, if the

Church had not looked upon it with sparing eye, the Church would have more influence in the thinking world to-day. Prof. W. G. Sumner, a volunteer speaker, said that the ethics of the tariff was based on the simple statement, "Thou shalt not steal." The papers said that he "received a perfect ovation" at the close of his speech. Rev. Dr. Courtney, of Boston, denied the statement of Mr. Clark, that the calamitous situations in Ireland and India were due to free trade, and intimated that the statement was a violation of the ninth commandment. This created quite a stir. Mr. Clark repelled the charge. His reputation, he affirmed, was as good as that of Dr. Courtney. A report says: "An attempt was made to quash the speaker by points of order and personal explanations. The audience took sides, and for a minute it looked as if a dark cloud hung over the hitherto harmonious proceedings. The presiding officer, however, was equal to the occasion, and imperatively closed the discussion."

PRAYING and Scripture readings, improper intimacies and suspicious relations between men and women, charges and counter-charges of gross immorality, talk about church covenants, reconciliations, weeping, sentimental twaddle and pious gush, renewed suspicions crimination and recrimination, backbiting, and all sorts of scandal,—these are shown by the testimony in the Downs-Taber divorce case, now being tried in this city, to have been so common and so mingled together in the Bowdoin Square Baptist Church that the deplorable social condition disclosed has shocked the common world's people, who have a decent, if not a high, code of ethics. The *Boston Sunday Courier* remarks: "The shamelessness of these professing Christians is as startling as it is outrageous. It seems to be time to institute an inquiry into the relation of religion and morals, which, in this set of people at least, appear to be regarded as incompatible." One of the witnesses, brought into court to testify as to what she had seen to sustain the charge of adultery, was a little girl, only twelve years old, daughter of Prof. Townsend, a preacher. After she had given her testimony, the opposing counsel, to his credit, said: "I hope you will go right home, little one. I advise Prof. Townsend to take his little daughter right home. I would not be guilty of cross-examining a little girl of twelve years." It is not strange that there was "a sensation in court." A day or two subsequently, a little boy, only nine years old, was brought in as a witness. The judge declared that a boy of that age was not old enough to give testimony in a divorce case, and he very properly declined to allow him to testify. While the trial is proceeding and the disgusting details are published in the daily papers which have the largest circulation, Rev. W. W. Downs, the most prominent figure in the affair, has his church crowded and overflowing with people attracted by prurient curiosity, to whom he talks in a style which alone shows the coarse nature of the man and his utter unfitness to be a moral or religious teacher.

THE TWO GREAT BELIEFS.

It was the philosopher Kant who said, "Two things command my reverence, the starry universe around me and the law of duty within me." And this saying may be said to embrace the two focal points of religion,—the perception of all-pervading power in the world of matter and the perception of an all-commanding law of right in the world of man. No great religious faith, no faith that has organized itself and had a history as one of the world's religions, has ever existed without a recognition of both of these perceptions. From these two focal points, according to the range of a people's intelligence, might be drawn all the peculiar doctrines, codes, precepts, and ceremonies which have marked any of the historical religions of mankind.

And many enlightened persons are coming to the conclusion that these two points represent to-day all that is *essential* to religious belief. With the general increase of knowledge, a disposition is manifest to abbreviate religious creeds. By reason of the very abundance of the information which science is bringing concerning the universe, people have become more modest both in respect to affirmation and denial about the attributes of infinite power. If they can keep a faith in a power in the universe that is not merely chance or fatality, but means order, law, and intelligible organism, and a faith in a law of right that has legitimate control over human life, they are entitled to be called persons of religious belief; and, if they assiduously strive to live in accordance with such faith and measurably succeed, they may justly be classified as people who practise religion. These two affirmations—belief in an intelligible power in the universe around, and belief in the law of duty within—are the only essential articles which sober wisdom, humble because of its larger outlook upon the world, will look for in a creed to-day. Other articles may be added to their creeds by individual believers, if they can gain rightful possession of them; but these additions are to be regarded as luxuries rather than necessities of faith,—luxuries for consolation, for hope and cheer, possibly for aid to life's nobler comforts and delights. But only these two are necessary; and, with these, human life may have a noble impulse and come to high achievements.

The first of these beliefs—the recognition of a Power in the universe above human power—is, doubtless, that which caused the first awakening of the religious consciousness in man, and marked the beginning of historical religion. Of course, the primitive human minds that first had this perception could only have had a very dim and inadequate idea of the nature and extent of the power whose existence they recognized. Nor will it be claimed that the most learned and acute scientists of modern times have an adequate and exhaustive conception of the infinite energy. But, because man's conceptions and theories about this power have always necessarily been imperfect, it does not follow that his perception of the power itself and of his own relation to it has no foundation. That perception is a fact of his consciousness and of his daily experience, which he can no more dispute than he can dispute the fact of his own existence. His own existence, derived, dependent, necessitates this prior and larger existence, this Power behind all finite powers, in order to explain itself. Nor, because, as man enlarges his knowledge, he becomes less inclined to claim that intimate acquaintance which the old theologians professed to have with the infinite energy of the universe, does it follow that his faith in it becomes diminished or his attitude toward it less truly reverent. Though

not claiming to know all its attributes, he knows that *It is*. Unable to lift the veil that conceals the innermost essence of its being, he yet stands in silent awe before its august activities, as the ancient Hebrew stood before the Holy of holies in the temple, behind which he believed to be represented the *Eternal I AM* that no mortal eye could gaze upon.

But it is not mere power that excites reverence. Power may excite fear, and this was a dominant feeling in primitive religion; but reverence is a sentiment of nobler mien. To win genuine reverence, the power must be seen or believed to work by intelligible, orderly methods to noble and beneficent results; or, in other words, to have a moral aim. Thus, all the great religions have sooner or later developed a morality. Mere exhibitions of power may have first aroused the religious sentiment; but, anon, man came to believe, and justly, that the power which brought him into existence should be the natural protector and sustainer of his existence; that existence itself is a good to be cherished and guarded, and everything hostile to it an evil to be resisted and shunned. And in due time followed the perception that what was good for one must be good for all, and that what one claimed as a natural right for himself he must accord to another. Thus came the knowledge of right and wrong, and the sense of justice between man and man, and the faculty of conscience with its commands, "Thou shalt" and "Thou shalt not." These attributes of his own developing intelligence man would naturally transfer to the powers which he believed to animate the objects of nature around him. They shared, as he conceived, his passions, and also his moral sensibilities and aims. But, in time, he came to believe in one Power supreme over all, to whom the moral law, or righteousness, was also the supreme motive for action.

The question has, however, been raised whether the power that is supreme in the natural universe exhibits any moral sensibility or purpose. This was the question in one of its aspects, which engaged the author of the Book of Job; and it has engaged many philosophical writers in our own day. John Stuart Mill indicted nature as a cruel monster, if judged by the moral standards of mankind. And, constantly, it is asked whether the doctrine of evolution has not taken away from nature all evidence of a moral intelligence and aim. Is not the world a mere struggle for existence among blindly competing forces, with the victory going to such forces as may by any chance be favored in the struggle?

Let it be admitted that nature, meaning material nature alone, does not disclose a moral order and purpose. But material nature alone is not the whole of the universe: it is but a fragment of it,—the foundation of a building without the superstructure. According to the doctrine of evolution, man is a part of nature, the culmination and crown of the long evolutionary process in that part of the universe which comes under human cognizance; and not until we come to him, and include his history, character, and capacities in the scope of our observation, can we justly tell what is nature's meaning and aim. But, if we find in man a moral law and purpose, as we do; if we find in him an intelligent principle of beneficence, as we do; if we find in him gentle sympathies and charities, as we do, and a perception of justice, combined with a sense of obligation to make these the rule of conduct,—then is the power which through nature has produced man to be credited with a moral purport. The long process, which has culminated in a being capable of discerning truth and right and of consciously and purposely impressing them upon the

subsequent destiny of things, is proved by its product to be morally organic, and not a mere fortuitous concourse and struggle of forces. That law of duty in the human consciousness which has commanded the reverence of philosopher and saint throws back its glory on the long travail of struggle and agony of which it has been born. What the infinite and eternal energy may have achieved in other parts of the boundless universe is beyond human knowledge; but here on this little planet, after ages of movement in the apparently blind forces and atoms of material nature, we know that, in the organism of man, the mysterious power arrived at the point where it broke into rational articulation, and consciously pronounced the words Right and Duty. Man hears that voice, and obeys; and in that action confesses his supremest belief, and worships.

WM. J. POTTER.

THE SPHERE OF ILLUSION.

I.

If the sphere of illusion were inclusive of no phenomena other than those of sleep and madness, it would not be small, and it would include much that is deplorable. The wise man will economize his dreams, for he will see in them reflections of the follies and the passions of his waking hours. The insane cannot economize their own insanity till they have been restored to health again. But the sphere of illusion is not exhausted by the phenomena of dreams and obvious madness. After a very real fashion, we are such stuff as dreams are made of through all our waking hours; and the line that separates the sane from the insane is one that cannot easily be drawn. Maudsley, than whom no one is wiser in these matters, declares that perfect sanity is an ideal conception which is never realized in actual experience. Between the idiot brain and that of Goethe (I take his for an example of the sanest possible) there is only a difference of degree. The lack of perfect sanity shows itself in a hundred different ways, here in absent-mindedness, there in a habit of punning, elsewhere in forgetfulness of people's names, and so on. And there are hundreds of illusions to which those are subject whose sanity is never questioned by their enemies, or even by their friends, as it might be in charity, but whose speech and conduct exhibit some deterioration of those cerebral structures and connections which, because they are the last result of evolution, are the least stable and the most liable to disintegration and mishap.

Even within the range of our most sound condition, the amount of illusion to which we are subjected is not insignificant. Upon the plane of their most normal action, our senses are a set of conjurers; and they never tire of fooling us. Epicurus was of quite a different opinion. All ideas not derived from the senses he regarded as illusions; and therefore, very naturally, he contended that the sun is about two feet in diameter,—it might be a little more and it might be a little less. If seeing were believing, his conclusion would be sufficiently correct. But so, too, would be the old astronomy. The sun *would* rise and set, and its seeming to do so would not be the most constant and inexpugnable of all our illusions. But seeing is *not* believing. Left to themselves, however it may be with men, the senses are "deceivers ever." Not till we see with the mind, not till we see with the understanding, do we see aright. "The eye sees objects inverted: the intellect sets them upright. The eye sees objects equally near: the intellect places them in the right perspective." The intellect, "the understanding, is the architect that builds the sensible world of our experience: the

senses only furnish the raw material." I read in Emerson: "Our conversation with nature is not just what it seems. The cloud-rack, the sunrise and sunset glories, rainbows and northern lights, are not quite so spherulic as our childhood thought them; and the part our organization plays in them is too large. The senses interfere everywhere, and mix their own structure everywhere with what they report of. In admiring the sunset, we do not yet deduct the rounding, co-ordinating powers of the eye." And why should we? When talking in this pleasant vein, does not Mr. Emerson forget his own idealism, and make his criticism from the stand-point of sensationalism pure and simple? If the senses and the intellect did not mix their own structure with everything we see or hear or in any way perceive, I fear that our idea of the world would be intolerably chaotic. May it be long before we do deduct the co-ordinating powers of both the senses and the intellect from our impression of the world! The "sifted sediment of a residuum" which would be left would not be worth the having.

Shall we say that the one great illusion is our assurance of an external world, and that our senses and our intellect conspire to palm off upon us something of their own creation for an objective reality? "Nay, is; I know not *seems*." The true reality is that appearance which the senses and the intellect have fashioned out of the objective something which has never been surprised in even semi-nudity, which never comes to us save in the garments which our senses and our intellects have first woven, and then made to clothe its nakedness. Of such illusion, it is impossible to have too much. "Whom God deceives is well deceived," wise Goethe said, and, meaning to or not, covered the case in hand. So long as we are all "drugged with the same frenzy," so long as your senses and your understanding, and mine and all men's, build up the same external world, what does it matter whether the *thing in itself* be such as we imagine it or not, or whether there be anything in itself? Idealism cannot state itself so strongly as to rob me of a moment's sleep by night or peace by day. If the external world is merely the projection of ourselves upon the void (which I do not believe), that should not trouble us. To cast so grand and clear a shadow, lofty must be our stature, and wonderful must be the light of God!

We shall do well, in speaking of illusions, to eliminate from the consideration those which are common to all men as men, and which really cease to be illusions by their commonness. "Deviation of representation from fact" is said to be illusion. But there are such deviations that are common,—the apparent motion of the sun around the earth. Corrected by the intellect, it remains as much an illusion as ever to the eye. For Newton or Herschel, this appearance is as unavoidable as for a primeval savage or a little child. Deviation of representation from the fact as commonly appreciated is the only real illusion. I could go to Carpenter and Sully and other mental physiologists, and return with many interesting illustrations of illusory sensations. Some of the most interesting are in the line of what is called illusory localization. Victims of the tooth-ache are often victims of this also: they do not know which tooth it is that aches, and have been known to make the dentist a partner to their ignorance. That, where there has been amputation of a limb, the sensations in its new extremity are referred to the amputated foot or hand, is a well-known form of illusory localization. "If," said one of Dr. Weir Mitchell's patients, "I should say I am more sure of the leg which *ain't* than of the one which *is*, I guess I should be about correct." Illusions of this sort (of which there are

many, and some of them very painful examples) are very different from those which are the common heritage of all, which merely attribute to an external organ—the eye or ear—what actually pertains to a nervous centre, or to a distant object what is an affection of a particular organ. Fred Vincy was a correct psychologist when he informed his sister Rosamond that the odor of the grilled bones, which was so disagreeable to her, was not in the bones, but in her little nose; but illusions of this sort are deprived by their persistency and their commonness of all disturbing power.

There are illusions of tactual sensibility which are sometimes of tragical importance. One's sensibility may be so exaggerated that a knock upon the door may be to him a clap of thunder, or it may be so defective that his body may appear to be of wood or lead. The attitude of expectant attention is a prolific source of illusory sensation. The external object is plastic to the besetting thought, emotion, or idea. We read words upon the page that are not there. We may not doubt that Dr. Johnson saw the Cock Lane ghost, even if it was not there for him to see. The deacon who had objected to a stove in the New England meeting-house,—that it was not a means of grace,—but whose objections were overruled, was obliged to take off his coat and sit in his shirt-sleeves the first morning after its introduction; and he afterward discovered that there had been no fire in it at all. Conversely, the poet Samuel Rogers, sitting near a window of plate glass, which he thought was open, took a dreadful cold from an imaginary draught. A French novelist, when writing a poisoning chapter in his novel, was near to die from the imaginary dose. It would be an easy matter to multiply such examples in connection with every province of sensation, and to add to them others corresponding to various internal impressions; as, when we imagine that we are enjoying ourselves, because we are acting up to some conventional standard of enjoyment, or declare that we have never been before so happy, simply because the moment's satisfaction has induced forgetfulness of former things. There is a common form of illusion, which consists in the attribution to a former state of the pleasure which belongs to our removal from it. But the "personal equation" is so considerable that it makes all situations beautiful to those who varnish them with the glittering exudation of their own self-satisfaction. "I never tire of this vista," said a gentleman to me, with an effusive gesture, standing at one end of his parlors and looking to the other,—a distance of some thirty feet. "Bare and grim to tears is the lot of the children in the hovel I saw yesterday," says Emerson; "yet not the less they hung it round with frippery romance, like the children of the happiest fortune, and talked of 'the dear cottage where so many joyful hours had flown.'"

JOHN W. CHADWICK.

THE CURSE OF IMMORTALITY CONSIDERED BY A BELIEVER.

The belief in a future life is among the most consoling the mind can conceive, and around it gather the fondest hopes and brightest dreams. By it, the seeming disparity and injustice of life here meet compensation, the tearful eye is dried, the broken heart finds balm; and, the burden of time and place cast aside, the possibilities of the aspiring spirit may be realized. It is an unfailing staff in the hands of those who mourn the loved and lost, offering the only adequate consolation

in the cruel hour, when we stand by the couch of death, feeling that, beyond, darkness gathers thick and brooding over a sea of eternal silence, from which only echo responds to our call of the name of the departed. Then it is that hope lifts our heart from despair, and a positive assurance of the continuity of life is worth all else in the world.

Yet this belief, so full of delight and rainbowed with anticipations, has been made, from the dawn of man's religious nature, the means of inflicting unspeakable tortures, both of mind and body. Selfishness thrust the priest between man and the invisible world of spirit, and made immortality the instrument wherewith it could rule with diabolical despotism over mankind. Even when the rain-maker shook his rattling calabash at the sky, and beseeched and imprecated the moisture-giving clouds, the priestly order had fast hold on the superstitious savage; and in all the transformations of history, surging with the coming and going of countless generations and the ebb and flow of empires, never for a moment has the grip been loosened. The power of the temporal ruler has been second to that of the class who held the keys of the life beyond the grave. What if the king could cast into a dungeon, condemn to the cross or the flames? That were pain for a moment, or, at most, for the few years of this life; and of what comparison these short years, or the most terrible tortures human ingenuity could invent, to the infinite tortures extended through an eternal existence? Pharaoh might command Egypt to-day, but, to night, his corpse would be summoned before the tribunal of the Dead; and those austere priestly judges would decide whether he be cast to the crocodiles of the Nile and become extinct, or again, clad with his mummified body, resurrected and purified, a companion of the gods.

Terrible position for ignorant man! Immortality is the Promethean curse, enabling the vultures to inflict ceaseless torment. The sweetest boon is oblivion, and that is denied. The sun may fade from the heavens and the stars cease to shine; but the spirit cannot escape its doom, and will only have experienced the first pangs of its sufferings. Is it strange men went wild with this dreadful belief? Ignorant men, who feared the unseen, intangible spirits of the air more than the accumulated tortures the human ruler might inflict, saw in the priest, who claimed the power to control this intangible world, who held the keys of the Great Unseen, the only hope of escape. How well that order has seized its vantage, and, fanning the flames of superstition, stifled reason and led poor Humanity over the quaking bog-lands and reeking marshes of myth-theology!

This life is nothing compared with that which is to come. Its most innocent pleasures are sins; for the body itself is sinful, and by sin man came into the world. Pressed down beneath the weight of universal disaster, the doctrine of Jesus was the wail of despair. Take no heed of the morrow. Live only for to-day. Give all to the poor. Resist not the tyrant wrong. This life is a vale of tears, and the eye that weeps most shall be the brightest in glory in the life which is to come. O Jesus, on thy cross, what infinite misery has come from this wretchedly false view of life! Men, believing that their immortal spirits were chained to sinful bodies, rushed in herds to the mountain cave or lonely desert, and, by fasting and thirst, by hair-cloth garments wearing through the flesh to the bone, by flagellation and daily crucifixion, sought to expiate the sins of the body, and enter the next life purified.

Believing in an immortal life, they sought to force their belief on others, and by sword and

torture succeeded in proselytism. Dogmatism grew rankly luxuriant in this hot-bed of ignorance and superstition. Humanity was bound to the wheel; and ingenuity exhausted its demoniacal skill in inventing new pangs, whereby the spirit might gain by the sufferings of the body. Poor humanity might well exclaim, "Blessed Oblivion to this curse of Immortality!"

Not to lead a happy and perfect life, but to avoid the pangs of hell, to escape the consequences of original sin, was the object to which all energies were directed. Not only for one's self, but there was obligation to propagate this belief until received by all the world. Out of this doctrine came centuries of persecution, such as the heathen world never dreamed. If your relative or friend accepted what you regarded erroneous dogmas, which would send him to eternal torment, would it not be plain duty for you to use all means to persuade and convince him, even, if necessary, to force? For should you, in last extremity, destroy his body, what fleeting consequence, if you saved thereby his soul!

The savage, having killed his enemy, trembles at the thought that the spirit has escaped, and may work untold mischief. He sits down at the cannibal feast, that, by eating the body, he may absorb the spirit, and thus be doubly avenged, by blotting out his foe, by making his body and spirit a part of himself. The Christian sits at the church feast, and partakes of the flesh and blood of a slaughtered God, in solemn imitation of the cannibal.

Noble and spotless lives have grown out of Christianity, as out of other systems of religion, as beautiful lilies grow out of the slime; but they grew in defiance of its teachings which make this life of no value compared with the next. As all religious rest on the foundation of belief in a future life, all the religious wars which have cursed mankind are referable to it; all persecutions; all the unutterable sufferings, physical and spiritual, which have made the centuries one long night of agony. It has blotted the star of hope from the heavens, and filled the vaulted darkness with wails of despair,—Lost! lost! lost!

Humanity rolling onward in a vast river, to plunge over the crags of death into a bottomless pit of eternal agony, and the best that Christianity has offered, or can offer, is eternal psalm-singing to golden harps, and that, too, whether the saved have any music in them or not. "Saving souls" has been the theme of the Christian world for near two thousand years, and various have been the means employed. Dungeon rock, the flames, social ostracism,—how shall I find space to catalogue the endless names of methods which curdle the blood at bare mention! The cannibal, feasting on his foe, is engaged in the honorable effort of saving a soul, and the priestly torturer is doing the same. The Brunos were chained amid the fagots' flames, to save their souls and the souls of others led astray by their doctrines. Go down into the dimly lighted tribunal hall, where God's vicegerents sit in judgment. Before them stands one gone astray in belief. There is no argument of words. On the table is a little thimble with a screw at one side. The heretic places his fingers therein, and the judges turn the screws down into the tender nails. The compressed lips grow white, the veins knot on the temples, beaded sweat gathers on the brow, as slowly down pierces the relentless steel, until, at last, human will yields, and the trembling lips gasp, "Dear Christ, I believe!" Then turn back the screws, ring the bells, and rejoice with great joy; for a soul is saved!

From that hall, go down a flight of stone

steps to another in the bowels of the earth, where the walls are reeking with mould, and the lamp darkens in the foul vapor. Tread with care on the slippery floors, for the slime of years has gathered; and now we have reached a great stone, which we can turn back like a trap-door, and reveal an opening. Lower your lamp, feebly burning in the fetid atmosphere. There are walls of stone: there is stone for a floor. It is like a jug without outlet, except at the top. At the bottom is something moving, living! Hush, it moans and has speech! An iron ring wears the bleeding ankle to the bone, to the ring is a chain, and the other end of the chain is fastened to the floor. What monstrous crime has this man committed that he should thus suffer? Nothing, except he has thought for himself, is lost; and his judges are making the desperate attempt to save his soul!

Saving souls, not the life here, but that which is to come, has been the blight and curse of mankind. The doctrine of "one world at a time," and this present supreme, is a reaction against this essentially vicious dogma. Neither extreme may be true; for the truth is the "golden mean," which makes the future life a continuity of this, carrying forward all its ideals to full realization, and making the spiritual realm held in abeyance to as fixed and unchangeable laws as the material world.

By knowledge, man has been led out of the fogs to the highlands of free thought, and aroused from the nightmare of theology, which for ages held him in thrall. Those were the ages when God and Christ were inwrought into the constitution of the State, and the Holy Bible was the foundation of the law. Those were the ages of St. Bartholomew massacres, of autos-da-fé, of the rack and the fagot. Those were the ages when the day was darkened by the smoke of burning cities, and the fair fields gleamed white with the bones of the slain. Those were the ages when the whole Christian world engaged itself in saving souls!

A Jesus may suffer on the cross; not only one, but ten thousands may die, admirable in self-sacrifice and examples of firm adhesion to their sense of duty: but, for saving souls, their sacrifice is lost; for they suffer for a misconception of the plan of the world. Man has never been lost, and cannot be lost, and hence cannot be saved by the blood of one or ten thousand sacrifices.

If the future life is a continuity of this, then the perfection of religion is the making of this life perfect. Not by crucifixion of the body, not by suffering or disappointment or eschewing legitimate pleasures, but by complete and harmonious culture is the most desirable result attained.

HUDSON TUTTLE.

THE DYAKS OF THE ISLAND OF BORNEO.

A book just published by Scribners, called *Two Years in the Jungle*, written by William T. Hornaday, gives an interesting account of the Dyaks, an aboriginal people who occupy the largest part of the great island of Borneo, where the writer, a collector for Ward's natural science establishment, made extensive and minute researches, both as a naturalist and an ethnologist. He found these heathen the most godless of all races, as they have repelled all attempts of Catholic, Protestant, or Mohammedan missionaries to enlighten them. It is true they have some faint notion of a Supreme Spirit, but not as inculcating any ethical rules or as requiring any kind of worship. They keep no Sabbaths, have no ministers, no gospel, build no temples, pray no prayers, and worship nothing and nobody. This lamentable state of spiritual darkness is coupled, according to Mr. Hornaday, with a state of morality quite unlike

that which prevails in Christian lands. He was astonished at the universal observance of the rights of property; for though they have no written language, and no civil or social laws except the customs and traditions handed down from their ancestors, yet these ignorant people are absolutely free from any transgression against property. And he had never heard of an instance of theft committed by a Dyak, though cart-loads of most desirable articles were left unwatched in their way. Though, in civilized countries, those who avoid illegal, criminal thefts yet will steal by wholesale through the contracting of debts which they are unable to pay, the inflexible probity of the Dyaks in the payment of debt is astounding. A foreign trader will give them his whole cargo, if he can get them to accept it, in exchange for a promise to pay at some future time; and, when the day arrives for settlement, the debt is sure to be paid. The Dyaks, too, as a rule, are temperate, never indulging in intoxicating drink, except upon some great occasions.

Monogamy is almost universal, except in rare instances a chief is allowed a second wife. They believe in strict chastity, both before and after marriage; and, to show how far removed they are from the influence of our Christian civilization, the author says, in any lapses from virtue, the disgrace and punishment are meted out equally to both participants in the offence. Consanguineous marriages are forbidden, and no daughter is compelled to marry against her will. Fœticide is a crime never practised by them. The author says, "From the cradle to the grave, woman is considered the equal of the man; and her advice is always asked in matters of importance." Divorce is allowed; but as in marriage the parties are equal, so in separation either one that leaves must pay a fine. He says, "Their moral laws are the product of their own indigenous evolution, for we see in them no reflection of the religious customs of any of the peoples that have thus far come in contact with them, either Hindus, Japanese, Chinese, or Europeans; yet in hospitality, human sympathy, and charity, the Dyaks are not out-ranked by any people living, so far as I know, and their morals are as much superior to ours as our intelligence is beyond theirs." Their wants are few and easily supplied; and, "if happiness be the goal of human existence, they are much nearer it than we." Mr. Hornaday says, "Borneo is no field for the missionary, for no religion will give the Dyak aught that will benefit him or increase the balance of his happiness in the least."

From the stand-point of popular theology, must we not dissent from Mr. Hornaday's view regarding missionary work in that island? Even if religion should not add to the present well-being of that benighted people, what is their temporary happiness compared to their spiritual salvation? But without reference to the welfare, either temporal or spiritual, of these reputed savages themselves, do not the interests of the orthodox Christian faith demand their speedy conversion? For this untaught people, without a ray of religion, practising all the cardinal virtues, are a standing contradiction to the theological dogmas of original sin and the total depravity of human nature, as, also, to the claims of our religious teachers that Christianity alone inspires and produces the purest type of morality and the highest good of society; and, at the same time, the moral goodness and integrity of these uncultured tribes corroborate the heretical ideas held by Spencer, the Ethical Society, and others, "that the moral law is imposed upon us by our own rational nature," and "is independent of theology."

EMILY P. COLLINS.

EDITORIAL NOTES.

BY B. F. U.

THIS is a good time for all who are in arrears in their subscriptions to *The Index* to send to this office the amount due.

WE are compelled by the great length of the essay in this number—a philosophical paper of rare merit, which fully sustains the reputation of its author as a profound and original thinker—to defer till next week some articles designed for this, and among them an open letter to Col. Ingersoll, to which reference was made last week. Another paper to appear in *The Index* soon will conclude the series by Dr. Montgomery on "The Dual Aspect of our Nature."

MR. H. W. HOLLAND's essay on "Heredity," which he read before the Parker Memorial Science Class last Sunday, proved to be a very able and interesting paper. It led to a lively discussion, in which several speakers took part. Next Sunday, the address will be by Dr. Mary J. Safford, on "Consumption." The exercises open at 12.15 P.M. The public is cordially invited.

I MAINTAIN that Jesus was not the founder of Christianity, that he never planned it nor laid its foundation, but that his personality has been brought into the Church, and used as its cornerstone. I claim, furthermore, that there are no historical sources from which we could derive authentic information concerning his life, his deeds, and his death.—*Rabbi Schindler.*

THIS whole country is very, *very* rich in all things but intelligence. Our law makers do not know enough to originate or enact wise laws, and we suffer and smart for this ignorance on every hand. In the midst of plenty, we are poor. With great strength, we are very weak. With large experience, we are short-sighted. Every day shows us how ignorance costs and intelligence pays.—*American Journal of Education.*

IN view of the disabilities which ignorance brings with it, Mr. Beecher holds that the means of education should be made as ample and convenient as possible. He protests against the reduction of the salaries of teachers. "Take care of the schools," he says, "and take care of the teachers. You never will have the best schools until you make it the interest of men and women to devote their lives to that business, just as professional men devote their lives to their occupations. Give the mayor less, give the aldermen less, if they have anything: if they have not, they will get it. Reduce salaries everywhere, but increase them in the schools."

TRINITY.

For *The Index*.

The King with sword of hate
Sought justice for the State;
The Priest with saintly sneer
Despoiled the Church of cheer;
The Changers with their gold
Drove virtue from the fold:
Thrice Nemesis came down
And stormed the fated town!

Beneath the hands of Jove
The ruins rose in love—
The State, the Church, the Home:
The earth, the air, the dome:
The three in one and three.
Far from the sacred sea
Apollo blessed with song
The union of the strong!

HORACE L. TRAUBEL.

The Index.

BOSTON, NOVEMBER 5, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER,
BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

IF PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.**The Dual Aspect of our Nature.**

BY EDWARD MONTGOMERY.

The Mechanical Fallacy.

Even when we, far too leniently, admit that the kinetic influences which stimulate vital activity within the sensory nerves and the sensorium are really kinetically continued in those vital structures,—continued as purely mechanical energy,—we reach, in the central regions of the organic individual, a sphere in which the molecular motion seems all at once to produce an effect totally incommensurable with anything mechanical. You stimulate in a healthy animal a definite sensory province, and a definite conscious state is invariably the outcome. If, in nature, invariable sequence indicates a causal nexus, surely this occurrence of stimulated sensorium and supervening conscious state seems a clear case in point. No wonder, then, that, in spite of the utter incongruity of antecedent and consequent here obtaining, so many thoughtful scientists are led to look upon their bond of union as one of genuine causation. In possession of the scrupulously verified results of physical science, to them physical causation is naturally, and quite rightly, the only type of precise and unflinching efficiency in nature,—an efficiency not discernible in any other kind of natural connection.

Yet we have seen that the link which, in each higher animal, so infallibly binds molecular brain motion to consciousness, is, for all that, not one of causation. The chain of causal interaction runs uninterruptedly its physical course, and leaves the corresponding occurrences of consciousness completely outstanding and unexplained. This singular character of the relation existing between the two synchronous and specifically corresponding sequences of phenomena—physical on the one side, and mental on the other—has formed the great central puzzle of modern philosophy,—“the metaphysical problem of problems,” as Prof. Huxley calls it. Yet, I think, we shall see in the

course of this discussion that its solution lies near at hand.

But, to reach a comprehensive view of our strange double-sided nature, after having found that in presupposing atoms in motion as sole primitive existents we do not succeed in making the slightest approach to an understanding of the phenomena of mind, we will now lay bare the inadequacy of the same kinetic conception to explain even the simplest physical phenomenon,—time and space being, moreover, generously granted as pre-existing media for the unimpeded display of the kinetic activity.

The mathematical genius of Laplace revelled in the idea of an astronomical world-formula, in which the atoms would figure as stars. Sensible things of all kinds, and their changes, consisting avowedly of nothing but atoms in motion; all events in the history of the universe, down to every action and expression of living bodies,—would then be as strictly predictable through mathematical calculation as astronomical facts now actually are. The philosophical propensities of the scientific era nurtured such mechanical dreams.

Long before Laplace, a similar aperçu had led Descartes to advance his startling theory of animal automatism, which declared the display on the part of animals of even the most subtle physical signs of animation to be unaccompanied by consciousness. Human beings were then consistently conceived as just such automata, only with the superaddition of concomitant consciousness. They were conscious automata; the animals, unconscious automata.

Descartes had been allured to advance this extravagant opinion by Harvey's demonstration of the circulation of the blood (1628),—a demonstration which, by dint of its mechanical facts, seemed at that time to divest vitality of most of its mysteries. He drew from it the conclusion that vital activity in general is set going by no “other principle of motion or of life than the blood and the spirits, agitated by the fire which burns continually in the heart, and which is nowise essentially different from all the fires which exist in inanimate bodies.” This clearly means the animal organism is a machine driven by combustion.

Pneuma, the ancient mysterious principle of vitality, the quickening heat of life, externally manifest in the warm breath of animated beings, was now believed to have been traced to its very source. Here, in the heart, the central seat of life, it seemed to be continually generated by processes “nowise essentially different” from those by which “all the fires which exist in inanimate bodies” are kindled. This vital heat, also called animal spirits, the discovered circulation of the blood, proved now to be mechanically distributed through the blood-vessels to the remotest parts of the body, causing evidently in each organ, according to its peculiar structure, the activity displayed by it. All organic motions are therefore purely mechanical effects. The animal, nothing but an automaton; and such automata, when inhabited by a thinking principle, are human beings. We have then, thus far, as the highest expression of the understanding of our dual nature, vitality, animated by common heat, and consciousness, standing in no natural relation to it.

There is nothing so powerful in our human world as the imperial stress of logical conclusions, drawn from such premises as have captured our faith.

Plato, opposing to the unconscious operations of life the synthetical efficiency of conscious realization, split up the organic unity of the living individual into a vital and a thinking principle.

This separation, reluctantly adopted by Aristotle, and further elaborated and inculcated under church auspices during the long ages of Scholasticism, reached now its consummation in the mechanico-spiritual dualism of Descartes. But here the ocular demonstration of the circulating vital heat had despoiled the animal organism of all its "animism."

With this vitally impoverished, antithetical equipment of body and mind, modern thought—venturing at last to liberate itself from despotic and dogmatic coercion—went out in free quest of nature's living truth. Instead of the original three rationalistic constituents of nature,—shapeless matter, a formative soul, and a thinking principle,—philosophy had now, in its unifying endeavors, to contend only with two disparate substances,—extended moving matter, an unextended thinking spirit. Descartes himself accepted the dualism as final,—intensive thought on the one side, extended mechanism on the other. The human body, an automaton miraculously connected with a rational soul.

Thus, summarily, did the new epoch in the interpretation of life, initiated through the discovery of the circulation of the blood, at once eliminate all essential peculiarities of animality. It conceived the living organism—so instinct with vital spontaneity and conscious feeling—as a mere material mechanism, devoid of anything which fundamentally distinguishes it from other moved matter. To Descartes, already, the organism presented itself only as a very complicated mechanical problem. And this, we must remember, solely on the strength of what we now perceive to have been a jumble of mystified and erroneous ideas. The vital heat is not generated in the heart. It is not distributed as motor power through the blood-vessels. It does not actuate the function of any organ whatever. It is a mere by-product of the veritable vital activity which every organ displays as an energy emanating from its own substance, as its inalienable *vis insita*. Not a single item in the original mechanical conception of life has any foundation in reality. Yet, in a slightly modified form, it still dominates our biological science.

It is astonishing to contemplate what pains science has taken, and still takes, to prove that life—all-comprehensive, all-revealing life—is, after all, nothing better than the other dead things of this world. Having first placed its conscious manifestations out of natural reach by the easy device of attributing them to a hyper-vital, wholly unknowable entity, the further simplifying task consists in getting rid, in the unconscious spheres of organization, of what had always appeared the specific characteristics of living bodies. The closely interdependent constitution of all organic parts, adapted to work in mutual concert and in interaction with the external world, for the attainment of definite ends, together with the inherent, spontaneous, self-moving energy of life,—all this had to be mechanically disposed of, in order thoroughly to assimilate the living body with dead matter, and to estrange from it, to the full, its own revealing consciousness.

It is true the old notion of a formative soul underlying the shaping of organic forms, and impelling their activity, lingered long in physiology under the name of vital force; but, ever since Descartes, it has been held the glory of science to make progress in a physical explanation of organic composition and function, strictly in keeping with mechanical principles derived from the study of inanimate bodies.

In pursuance of such an aim, is it not rather an ominous coincidence that Descartes' view,—based

on a crude and false notion of motor power and moved machinery, fashioned in exact analogy to the artificial water-works of French and Dutch pleasure-grounds,—that such a hollow, machinal view should find itself in close agreement with the now prevalent theory of vitality first enunciated by Julius Mayer, the real originator of the doctrine of the correlation and transmutation of forces? According to it, the motion of heat supplied from outside to the egg is transformed into the motion of molecular rearrangement which fashions the chick from homogeneous albumen. And food fuel supplied from outside, and burnt up by oxygen from outside, yields all the force which really actuates the performances of life. So, you see, there is nothing particular in it. All moving energy, all vital activity, is furnished from without.

English-speaking students have been made familiar with this heat-engine view of organization and life, chiefly through Prof. Frankland's experiments and Prof. Tyndall's eloquent advocacy. Under its influence, and under that of the theory of reflex action, Prof. Huxley, in his address before the British Association, 1874, startled the self-complacency of the respectable world—hardly yet reconciled to its animal origin—by boldly reviving the conscious automaton idea. To be the descendant of a live ape left still full scope for the pride and hope of vital exertion. But, to be the descendant of an automatic ape, that dispels completely the illusion of any kind of self-importance.

Now, it can avail us nothing simply to ridicule the idea or to ignore the cogency of the reasoning on which this mechanical notion of vital activity is at present founded. From a scientific point of view, we have either to accept it or to expose the fallacy of the very premises which it assumes. For it is undeniable that, if the animal organism as an objective existent is really a machine,—i.e., a peculiarly collocated congeries of parts acting mechanically upon each other, and set in motion by heat derived from the combustion of food particles,—then never anything but purely mechanical effects can be expected from the performance of such a contrivance. And the link between its motions and its conscious states must ever remain as profound a mystery as it was to Descartes and his followers.

In Mayer's own words, the vital structure, the muscle, for example, "is only a machine through whose instrumentality is brought about the transformation of force," by which is meant the transformation of heat derived from combustion of food particles into vital motion through muscular machinery. He emphatically adds, "The muscle is not itself the material by means of whose chemical metamorphosis the mechanical effect is produced."

This modern notion of the organism being a machine, set going by an extraneous, non-vital force, is, in spite of its scientific garb, just as preposterous as the ancient mystic notion of vital spirits. It is a thoroughly unphysiological and totally mistaken conception. My own studies of motility in protoplasmic individuals and in muscular fibres* have visibly demonstrated that the force by which vital movements are effected is not derived from any combustion whatever, but that these movements are in every one of their stages the mass-manifestation of a definite cycle of chemical activity, occurring in the very substance which exhibits the motions. Previous to these researches of mine, Prof. Hermann had already inferred from a series of very accurate experiments—never yet contested—that muscular activity is not an energy

* See "The Elementary Functions and the Primitive Organization of Protoplasm," St. Thomas' Hospital Reports for 1879.

"Zur Lehre von der Muskelcontraction," *Pflüger's Archiv*, vol. xxv., 1881.

derived from combustion, but that it proceeds from quite different chemical changes, taking place in the muscular substance itself. This view is now almost universally accepted, as fully demonstrated by German physiologists.

Indeed, muscular action, as well as all other vital function, is a display of specific forces, strictly inherent in the wondrous complexity of the slowly elaborated molecular structure which performs the function. This molecular complexity is the phylogenetic result of the vital interaction of countless generations of living individuals with their surrounding medium. Vital energy is thus in no instance the mere transfer of some other energy furnished from external sources; but, on the contrary, the display of most peculiar, spontaneous powers, inwrought and persistently maintaining themselves in the living structures. Or, more correctly, vital energy is the display of the very powers which constitute the living structures. For these so-called substrata of life are themselves but the visible manifestation of such vital powers. How, then, can a vital force manifestation, issuing from the astounding hereditary wealth of such a minutely organized and living sustained substratum, ever yield to any mechanical explanation? The efficiency of this sort of explanation lies precisely in the demonstrability of an immediate cause quantitatively equal to its effects, and entirely consumed in producing the same; such, for instance, as moving energy in the production of other mass-motion or of molecular vibration. But living structures and their organic disposition are, in their very essence, the expression of the same vital activity which—when heightened through stimulation—is called their function. The contraction of a muscular fibre is only an exaggeration of one of the phases of the chemical cycle of activities which composes and maintains the living muscular substance itself. Vital activity, in every one of its manifestations, is wholly an emanation from within. Any *deus ex machina* believed to be actuating from without the organism and its life, whether imported in the shape of miraculous intervention or an animal soul, or vital spirits or heat, or electrical fluids or combustion of food particles,—whatever the name of such extrinsic causative agency, it has to be utterly expelled from biology before we can hope to gain an understanding of the transcendent wealth and import of individual existence.

The mechanical ideal in its purely kinetic form, working with passive masses in motion, finds really nowhere application in nature. Granting even that the conception of atoms, such as defined by physical science,—namely, ultimate particles intrinsically unchangeable by the application of any kind of force, and this because intrinsic change would necessarily imply manifoldness of parts; presupposing a number of still more primitive elements; granting the conception of "eternal adamant atoms" to be physically realizable in imagination; and granting also that such atoms are the vehicles of any desirable amount of motion,—then the first task on hand would be the construction of physical masses or bodies from such given material. In order to succeed in this, atoms have to be, and always have been, hypothetically endowed with two additional, entirely new forces, nowise derivable from the kinetic building-material at first assumed. The enormous force of cohesion, which, in many substances, binds constituent particles together into physical masses, can surely not owe its origin to the yielding during aggregation of a large share of the kinetic energy of such constituent particles to the surrounding medium. The gain of a stupendous new force, inexhaustibly exerted through any length of time, cannot

possibly be due to a loss of energy incurred by the same particles to which the gain accrues. Now, as the attempts to account for the peculiar force of cohesion by evoking the aid of external pressure furnished *ad libitum* by some fictitious agency have proved utterly inadequate, we are driven to assume that the atoms themselves were all the while latently endowed with the marvellous faculty of inexhaustible attraction, ready to come into play whenever occasion presented itself.

And if this specific efficiency, unaffiliated in its law of action with any other known force, lay all the while dormant in the material elements, starting into activity only when called out by peculiar conditions, why should not the same elements be endowed with ever so many other modes of efficiency, always present as specific potentialities, and awaiting merely the proper conditions to issue into incalculable activity?

Indeed, many of the properties manifested by masses compel us at once to conceive their coherent particles as exerting in some incomprehensible manner, simultaneously with cohesive attraction, a force of repulsion which keeps them at a certain distance from each other, resisting with increasing might any attempted approach, and causing moreover, on release from displacing pressure, a rebound to the original position.

Give, furthermore, to these lurking forces of atomic aggregation but a favorable chance, and they will build up not irregular or merely rounded masses, but complex structures of truly stereometric regularity, varying with the kind of aggregated material, or even only with a change in the conditions of manifestation.

We usually forget with what limited suppositions we ostensibly set out in our corpuscular world-constructions, and what we are forced subsequently to add on our way. Take, for instance, the world-stuff now generally assumed in physical cosmologies, a gaseous material and the principle of the persistence of force. Obviously, the kinetic energy of gas particles presupposes already, as such, a medium in which the kinetic motions are realized; and, in order that condensation may at all take place, there is, moreover, demanded another contiguous substance, absorbing part of the kinetic energy. But, besides all this, to bring about any real differentiation within this twofold substratum of matter and ether, otherwise doomed to remain forever homogeneously mixed, there is needed the intervention of another force, possessing some principle of inequality. And we actually find at work, over and above matter and its kinetic motion, a mysterious power binding together the material particles of the universe by dint of its all-embracing efficiency, but effecting this with an intensity diminishing as the square of distance.

It is this potent addition of so-called gravitative force to the kinetic world-material which furnishes the nebular hypothesis with sufficient plausible means of construction. First advanced in its world-wide scope by Kant, and then independently for our own planetary system by Laplace, and adopted since by most students of natural science, this luminous hypothesis affords the possibility of deducing mechanically from a primordial substratum the present celestial mass-distributions and motions. And with this fund of persistent matter and persistent motion, assisted only by gravitation, it believes itself in possession of the eternal sum total of objective existence, never augmenting, never diminishing, subject only to rearrangements. Inspired by this quantitative faith, Laplace himself, as we have seen, and many other physicists, have imagined that the climax of science would be reached in the expression of a world-formula, by which the future motions of the atoms compos-

ing any kind of body might be as rigorously calculated as the motion of stars. The difficulty in this undertaking is thought to lie merely in the complexity of mechanical data, and not in the inadequacy of the conception itself.

This ideal of mechanical science, so imposing to mathematical imagination, rests, of course, solely on the assumption that atoms, or units of mass, in all their mutual relations, are actuated by no other influences than those operative in celestial mechanics. Under this fascinating illusion, physical physiology, with all its scrupulous painstaking, has made but little progress in the explanation of vital activity. Mechanical science, with its imparted motions, can never furnish a clew to the doings of living spontaneity; and no dynamical law can express the possibilities of vital reaction.

This notion of a definite fund of available and manifest force attached to matter, and giving rise through mere redistribution to all the varying phenomena of nature, is a doctrine involving, without escape, a fatalistic determination of all actions of animate as well as inanimate bodies. It is impossible, therefore, to make any headway in a monistic and non-necessitarian understanding of our own life and its doings, without clearly exposing the fallacy of such an interpretation. And this can be accomplished only by positively defining its inadequacy in the very sphere over which it pretends to hold sway.

Well, then. In our astronomical cosmology, we have had already to admit into the universe a strange coercing power, besides mere so-called matter and motion. This potent and all-pervading efficiency we find in full operation among the particles of the objective substratum. Of course, manifold have been the endeavors to reduce gravitation to kinetic principles, to make it simply result as a mechanical effect of external impulses or pressures. But the highest mathematical and physical talent has labored in vain in this hopeless undertaking. Gravitation, with its instantaneous, never-relaxing, inexhaustible, indivisible efficiency, cannot possibly be due to any energy transmitted from outside. All kinetic energy requires measurable time for transmission; and, if it has to exert its working power on two material units instead of one, it becomes quantitatively divided into two halves. Gravitation, on the contrary, extends its influence instantaneously to remotest regions; and its working-power, far from being divided by the imposition of new tasks, is doubled, trebled, quadrupled, and so *ad infinitum*, with each new material unit added to the one on which its force was first exerted. Nor can any portion of gravitative force be intercepted or deviated by any obstacle or device whatever. The moon coming between the sun and the earth makes no difference. The molecular condition of the attracting masses makes no difference. Its constancy and rate of power can be changed or diverted by no imaginable contrivance. Moreover, the relative velocity and direction of the moving masses have no influence on their reciprocal attraction, save through increase or diminution of distance.

How utterly incommensurable, then, is this force causing gravitation with the kinetic energy supposed to be attached to inert particles! May not many other mysterious forces be thus potentially dwelling in the substratum of objective existence? And may they not become newly manifest, when suitable opportunities are afforded?

The mechanical interpretation of nature necessarily failed to make gravitation arise from kinetic influences. It is, then, kinetic energy-gravitation which, in the nebular hypothesis, thus far com-

poses the sum total of working-power, declared to be a constant quantity, never augmented, never diminished, but only redistributed. But how, then, does cohesion originate from kinetic energy-gravitation? We have already found that it is out of question that cohesion should be due to kinetic energy, and it may be taken for granted that no one will insist that it can be explained as the result of gravitation. It is evident that material particles by gravitating and by losing part of their motion of translation suddenly fall within the grasp of an entirely new force, immensely more powerful within its own range of action than gravitation itself. Cohesion is evidently another irreducible force, in no way resulting from the operation of the forces previously at work. When, in celestial mechanics, we started with a gaseous state of matter, we had no means of foretelling that, under changing conditions, the material particles would all at once display another totally unaccountable and non-mechanical efficiency, adding thus a further and this time an ever-varying amount of specific force to the store originally, all too rashly, pronounced to be the constant sum total of acting power in the universe. When the objective substratum subsisted in a gaseous state, it did nowhere, under any mode of action, reveal its cohesive force, even less so than our incoherent air at present. Yet we all know that, under appropriate conditions, the force of cohesions, previously utterly impotent, will suddenly convert any air into a solid mass possessing properties altogether incalculable from kinetic data.

In this light, does it not become highly probable that, under conditions newly arising, the particles of the objective substratum in their changing relations to each other may come to manifest additional amounts of ever more prodigious specific energies,—energies wholly undreamt of in mechanical assumptions, and increasing the wealth of nature, who knows to what extent?

Indeed, we need only deeply contemplate chemical union, with its selective affinities and qualitative marvels, to become aware that we have here before us, not a mere transformation of forces previously employed under some other shape, but the starting into actuality of new and specific energies, which, in their interaction with other energies, may manifest phenomena that were altogether absent in pre-existent nature. It is safe to predict that the hopes of quantitative science, with regard to chemistry, will never be realized. It will never succeed in its attempt to explain the properties of chemical substances as the simple result of atomic grouping and a concomitant compounding of units of force previously manifest among the units of mass. Nor are the specific characteristics of the qualitative differences arising from chemical union at all effaced by our present chemical elements having themselves been gradually elaborated,—a fact recently recognized and demonstrated by the keen scientific insight of Mendelejeff and Lothar Meyer. The qualitative difference between two elements following each other closely in the natural system of composition may be ever so slight, yet it can in no imaginable way be the result of a mere summation of elementary forces. Granting that there may once have existed in the world a substratum consisting of primordial elements, from which our sixty-six substances still resisting chemical decomposition are multiples, it is nevertheless clear that, if the chemical union of two of the original atoms, perfectly equal in every respect, can produce by combination a molecule differing qualitatively ever so little from its constituent atoms, then this very occurrence is certainly the manifestation of a specific energy, not the mere result of the numeri-

cal addition of the atoms and their former activities, but the unexpected result of the new chemical influences now at work in their union. And, if all qualitative differences in nature have thus originated by a gradual chemical compounding of the primordial unit and its derivatives,—a process allowing these differences to slide only by slowest degrees into manifest existence,—still the qualitative effect is a new creation, and not a mere resultant from the same forces that had been already active among the primordial elements.

How gradual and yet how definite the genesis of our present material elements must have been, and how changed from formerly the cosmical conditions under which they now steadfastly maintain themselves, may be surmised by remembering that even the atom or, physically speaking, the molecule, of hydrogen, once believed by Prout to be itself the primordial element,—that this comparatively simplest of our chemical elements discloses on spectral analysis a very complex structure,—a structure, nevertheless, indissolubly maintained under every variation of existing conditions, not only on earth, but in burning suns and starry mists.

Chemical compounds are products of specific energies employed in maintaining the peculiar combination and its properties in interaction with surrounding influences. The structures displaying vital phenomena are, through and through, the visible expression of an ever-flowing cycle of such specific chemical activities, constituting most highly elaborated chemical compounds. Indeed, when we contemplate the astounding degree of such inherited elaboration, we cannot wonder that the manifest energies of organic beings are of so marvellous a character.

Mechanical effectuation can bring about only the displacement of inert particles and alterations in the rate and course of their motion of translation. It changes from without the position, path, and velocity of masses. The chemical nexus which composes the organism and its activities maintains, on the contrary, from within, against such mechanical interference, the whole inherited wealth of its world-responsive constitution. Here mechanical influences do not normally change the intrinsically determined concurrence of molecular motions, but merely stimulate the living form to functions, which are in essence self-preserving reactions.

Readers conversant with the present state of physical science may suspect that in this anyhow far too cursory impeachment of the mechanical interpretation there has been purposely ignored its most signal triumph, the kinetic theory of gases. On the contrary, just on account of its admirable lucidity and apparent explanatory power, this very theory was here reserved to emphasize the inadequacy of kinetic premises, and to show how, in every instance, the introduction of mechanically unaccountable energies into physical operations is pre-emptorily called for.

A physical atom is a material unit, by definition intrinsically unchangeable, a vehicle of motion and therewith of kinetic energy, but not exerting any influence by dint of intrinsically determined actions and reactions. Such inert physical atoms and their motion of translation are the sole elements rightly admissible into the kinetic world-construction. Now, the kinetic theory of gases, with its supreme success in mechanical explanation, is actually based on just the reverse supposition; namely, on a specific, non-mechanical action and reaction, emanating from hidden sources of energy inherent in the operating molecules. Two veritable physical atoms, encountering each other with equal velocity in a direction radial to their

centres of gravity, would simply annihilate each other's motion,—totally annihilate it without even the possibility of producing the slightest intrinsic effect, atoms having no parts to be in any manner displaced. Considering that the reduction of all natural phenomena to atomic mechanics, which means to a mere exchange of translatory motion between inert particles, has been for centuries the highest aim of physical science, it seems hardly credible that the utter absurdity of the scheme should be so patent as to reveal itself at a glance. Yet it is most obvious and altogether undeniable that the collision of rigid units of mass would very soon annihilate any amount of kinetic energy with which they might have been started on their cosmogenetic mission.

For this reason, Sir William Thomson and others have declared that nothing short of perfect elasticity in the ultimate particles can bring kinematic science into agreement with the theory of the Conservation of Energy. In keeping with this declaration, we find that the kinetic theory of gases actually endows its molecules to the full with the hypothetical desideratum. Its units of mass are made perfectly elastic; and thus, when two elementary particles of this kind meet with equal velocity, radial to their centres of gravity, instead of coming to a standstill, they bound off again after impact in an opposite direction, with all their previous energy of motion unimpaired.

The eminent physicists who believe that by this bold amplification of the elementary powers, made to serve as kinetic world-material, they have succeeded in establishing harmony between mechanical laws and the principle of the Conservation of Energy, have surely deceived themselves. Not only would the structural complexity of molecules necessitated by perfect elasticity, and, in fact, manifest in the gaseous spectrum, take up a large amount of kinetic energy to be yielded during atomic vibration to the ether, and thus lost to the equivalent rebound which is to conserve the kinetic energy of the gas, but two perfectly elastic particles, meeting in the manner above indicated, would exhaust their entire kinetic energy solely by compressing each other. At the moment of maximum compression, the kinetic energy would be completely consumed, the motion wholly arrested. The work done, constituting the equivalent of the expended energy, would be the changed state of the molecules. Now, if the molecules remained in this changed condition, the process would be at an end. If the molecules did not possess an intrinsic spring of action, causing the forcible rebound, the kinetic energy consumed in the act of compression would not be replaced by the new kinetic energy arising in the act of expansion.

The whole efficiency of physical power and interaction has here been assumed as pre-existent in the active elements, and yet not even then has there any conformity been gained between the fundamental laws upon which physical science professes to rest. Consider how unaccountable the power that thus restores to the material particles the kinetic energy which they would infallibly have lost on mere mechanical principles. An intrinsic force which is capable, within its range of activity, to reproduce destroyed motion to any amount *ad infinitum*, must be deemed from the mechanical standpoint to constitute a truly marvellous source of energy, rendering childish the conception of a constant sum total of efficiency in nature, which, merely by transmutation of its modes of manifestation, is producing quantitatively equivalent effects. As long as a gas-molecule lasts, no multiplication of the task imposed on its elastic force will in the least exhaust or weaken it. It is spent as little in doing its work as gravitative force, and

is quite as inexplicable as the result of any mechanical contrivance. The endeavor of Father Secchi and others to reduce the action of elasticity to kinetic principles has failed even more strikingly than the same endeavor with regard to gravitation. Nor are elasticity and gravitation correlated forces, convertible into each other, as our unifying propensities might desire them to be. Immutably lodged, each performs its own work, never interfering with the other. Besides, the temptation so great in the case of gravitation and cohesion—the temptation, namely, to refer the manifestations of those steadfast modes of activity to the influence of some external agent—finds no ready play in the attempt to discover a mechanical explanation for elasticity. Elastic resistance and elastic resiliency are too palpably forces inherent in the manifesting substance itself. This becomes most obvious in tensile elasticity. In elongating an india-rubber cord, for example, one unmistakably becomes aware that one's work is done against a permanent source of power. It is certainly not my pulling which produces the counterpull, or that is in any way converted into it. But, while scientists are believing that they have proved the mechanical origin of the vital force of the muscles which pull in one direction, they are completely at a loss to account for the origin of the non-vital force, which is pulling much more inexhaustibly in the other direction. The serious contemplation of this one single instance of physical interaction involves very plainly the overthrow of the entire mechanical view of nature. It cannot be rightly maintained that by my pulling no action is called forth in the elastic cord, but merely a new state of equilibrium given thereby to its molecular constitution, and that—on returning to the former state—as much energy will be given out as was required to place it into its present position of advantage. It is a demonstrated fact that my muscles, in order to keep the elastic cord extended, are spending energy in exact proportion to their exertion. Now, the counterpull of the elastic cord is exerted just as constantly and with just as much force. Yet kinetic imagination fails completely to conceive a manner in which the elastic cord can possibly expend energy in its counterpull. It is quite clear in this instance that the slight amount of heat parted with by the elastic substance during extension does not yield the energy employed in the counterpull. We have to concede that the cohesive force, the tensile stress keeping the molecules of the elastic cord together and resisting their separation by a continual active pull, is the veritable force here in operation,—a force not spending itself in the exertion, not at all diminished after having done the work of decomposing ever so much muscle.

A similar relation obtains between an electromagnet and a permanent magnet. The former, in producing its effects, spends a proportionate amount of energy. The latter produces like effects without spending energy. To bring about in the substance called iron the intrinsic state which constitutes magnetic force,—i.e., the power of producing certain effects in other substances,—a continual supply of extrinsically imported energy is required. The substance called steel, on the contrary, when once rendered magnetic, produces like effects for any length of time without any external supply of energy.

And here we may as well recollect that, in all endeavors to explain the interaction of material particles by means of a medium of intercommunication similar to the one which is conjectured as transmitting radiant energy, the hypothetical medium is invariably endowed with any desirable amount of the intrinsic, non-mechanical force

called elasticity. This means really that, in order to explain kinetically incomprehensible actions occurring between material masses, kinetically incomprehensible forces are invoked from outside, and a suitable medium invented as substratum for the same.

A certain influence is evidently transmitted to us as radiant energy from suns and other starry masses. But consider a moment what an all but inconceivable store of original force inherent in the surmised medium is required kinetically to account for such transmission. The medium of transfer, the so-called luminiferous ether filling all space in order to accomplish its mechanical task, must be infinitely harder and more elastic than any substance we know. Its elastic force has, in fact, to be more than a thousand billions times greater than that of air at the earth's surface, its pressure per square inch about seventeen billions pounds.

Where, then, we ask, has kinetic science itself placed the veritable repository of force in this universe? Not in anything sensible; not in moving matter with which it ostensibly pretended to construct the world; not in anything in the heavens actually gaseous, liquid, or solid, but in the super-adamantine firmness and enormous elastic power of a hypersensible, immaterial, infinitely outspread medium. Less than a cubic inch of such ether-firmament would be quantitatively worth a vast deal more than any organic being on earth. Indeed, what value, quantitatively, kinetically considered, can have this little speck of curdling or rather frothing force-excess, making up the whole sum and substance of our tiny globe, when compared with the infinite resources of an immensely denser force, filling what we, most ironically, then, are calling empty space? Here, evidently, as usual, we have shifted the burden of scientific explanation from the realm of the actually realizable to an arcanum of boundless power.

The mechanical world-conception has no doubt proved a wholesome restraint upon the inordinate, ghost-haunted fancy of mediæval man. But, having allayed the portentous strife carried on for so many centuries against phantasmal powers, it now holds our consciousness spell-bound in a scientific nightmare, rendering our volition utterly impotent to execute the needful movements by which to ward off the crushing doom. Never shall we liberate ourselves from the dismal sense of a dead constraint mechanically necessitating all occurrences before we have broken the magic circle of quantitative science, which makes everything appear as the mere result of a rigorously determined transfer from one material group to another of just so many elementary units of acting force, previously wholly occupied in sustaining the antecedent state of nature. Thus arises the perplexity in which our present science finds itself entangled. Under the mechanical sway, its all-absorbing question naturally must be: How can the complex wealth of qualitative distinctions and specific energies now manifest in nature have originated from a redistribution of the pre-existent elements of matter and motion making up the objective substratum? How, above all, have organization and vitality resulted from the grouping and combination of such primitive elements of existence and activity?

The demonstrable, anti-mechanical truth is,—with new conditions, new powers start into actuality. Each changed physical state manifests new energies, called forth by the changing conditions, but not derived from them. Each new chemical compound displays powers of action and reaction, which had not been at work under any other guise among its constituent elements. Each increment

of chemical elaboration occurring in the objective substratum of vitality, though strictly induced by interaction with surrounding influences, brings as its specific property along with it a completely new instalment of intrinsic and peculiar efficiency neither due to the forces previously active in its own elements nor derived from the energies of the environment. Given a certain chemical constitution of the protoplasm composing a living individual, and all its peculiar organization and specific vital faculties are the property of just this chemical constitution, and by no means the mechanical resultant of the original forces of its constituent elements, at present only differently grouped.

Whoever wishes to become visibly convinced of this need only attentively watch the metamorphoses of infusoria. You have a specially organized kind of animalcule before you, carrying on with apparent sufficiency its peculiar mode of life. After a while, within its transparent substance is discerned at some definite spot a molecular activity not ministering to its present vital functions. From this nucleus of change, a metamorphosing influence spreads and converts, in a few minutes, through complete chemical reconstitution, the previous animalcule into an entirely new form of being, in full possession of quite different vital powers. The different organization and vital endowments are here evidently specifically attached to the new chemical constitution. They are not the former organization and its vital energies converted. For these were themselves obviously the outcome of the previous chemical constitution. Nor are the vital efficiencies of both these chemical constitutions the product of the forces which were at play among their constituent atoms previous to their peculiar chemical composition. It is the most specific molecular organization and activity, as such, which is the bearer of the vital faculties, and which constitutes the permanent living form. You decompose the vital individual, the vital structure, the vital substance, into their chemical components, and—though working *secundum artem* in one of the palatial laboratories erected in honor of the mechanical science of life—he is but a poor, deluded alchemist, who, having caught up the full weight of disintegrated stuff in his vials, believes himself in possession of the very forces that had ministered to all-efficient life. Then, indeed,

"Imperial Cæsar, dead, and turned to clay,
Might stop a hole to keep the wind away."

But to reproduce from this same clay, from these same chemical constituents, Cæsar living, would involve the history of our planet over again.

Inert particles, knocking each other in and out of place, such is our mechanical world-material. Rich, in comparison, were those data from which Plato's inhabitants of the cave constructed their reality. They had moving shadows on a wall. We, only moving inertia in empty space. Exact science, ruling supreme with mathematical precision, will allow us no more. Units of dead mass with so much motion of translation, and the rest has to be made to follow through mere redistribution, according to strictest kinematic rules. All efficiency in nature, only the imparting and yielding of velocity through impact. The substratum of everything, mere forceless stuff, devoid of qualitative distinctions. All its energies and properties solely due to modes of motion,—motion just as indestructible in quantity as the inert masses it is now carrying along, and then leaving behind in its own Protean flight.

This, in a few words, is the quintessence of the physical insight into natural phenomena, gained by our mechanical science during centuries of strenuous investigation.

If it is at all wise at times to remind ourselves of the impotence and shallowness of our interpretative understanding, so recently emerged from mere subservience to daily wants, there could be no better opportunity than the one here afforded. Leaving, for the present, out of sight the deeper truth, that we can know matter only by dint of its effects on ourselves, and, therefore, only by dint of efficiencies not compatible with its supposed physical inertness or intrinsic unchangeability; leaving out of sight all direct relations to our own being,—this very property of unchangeability, involving as it does the incapacity of external powers to influence in any way the internal constitution of the units of mass, presupposes in each such unit a resisting power greater in amount than all the active forces of the universe put together. Instead, then, of being inert or forceless, atoms—"the eternal adamantine atoms" of mechanical science—could maintain their individuality only by means of an intrinsic resistance or reaction greater than any external energy that can be opposed to it. No wonder, then, that, in consequence of such absolute power of resistance, the material particles would, as we have already pointed out, very soon annihilate any amount of kinetic energy coming in conflict with them. Our kinetic world, the motion-woven universe of science, would speedily be brought to a dead standstill, its inert units of mass having completely destroyed its full store of "indestructible" energy, and laying ready to destroy ever so much more.

To obviate such a *reductio ad absurdum*, the mechanical interpretation is forced either to endow its so-called molecules or actual working units of mass with intrinsic springs of energy or to assume such springs of energy in a hypothetical medium. These suppositions are irreconcilable with mechanical principles. They both necessitate action at a distance, between the ultimate units at least,—a postulate altogether anti-mechanical. And they contradict, moreover, the law of the conservation and convertibility of energy; for intrinsic springs of energy, as here postulated, dwell inalienably in the masses, inexhaustible and inconvertible.

Thus, gravity, cohesion, elasticity, chemical affinity, etc., all turn out to be effective powers, not derivable from any mechanical action, but constituting so many kinds of specific energy steadily emanating from the manifesting masses. These specific energies are due to the peculiar consistency of the masses themselves, and to the relations of interaction in which they are standing to other masses, which are likewise sources of specific energies. Thus, new specific energies come into existence through new modes of material composition and interaction. And we have within the realm of being, not merely conservation, but creation everywhere,—new creation without end.

BOOK NOTICES.

STUDIES IN SHAKESPEARE. By Richard Grant White. Houghton, Mifflin & Co. 12mo. Price \$1.75.

The name of Richard Grant White on the title-page of a volume is sufficient to bespeak most "honorable mention." In the tempting collection of essays before us, not only the subject-matter is worthy of the best attention, but readers will feel a special interest in knowing that the author contracted his long and fatal illness while preparing the book for publication. The opening essay is "On Reading Shakespeare." The author does not consider fifteen or sixteen an unsuitable age at which to begin, though he would not have the taste forced.

He is not rigid in his advice as to which play shall be read first; though he praises the simple construction

CURRENT TOPICS.

BY B. F. U.

"Two Thousand Years Ago," the second of Rabbi Schindler's course of lectures on "Messianic Expectations," will be printed in *The Index* next week, from the author's manuscript.

In a letter of date November 4, Mr. E. H. Heywood writes, "Yesterday, Tuesday, in response to an article put in the warrant to test the issue, the town of Princeton voted to petition the legislature to repeal the law exempting church property from taxation."

Says the *Ottawa Free Press*: "The Salvation Army in England carries on an ordinary business, in which religion and groceries are mixed like pickles. From the *War Cry*, which advertises the goods, it is warned that the store has soap for sale with 'Come to Jesus' stamped upon it; and nice, new salvation towels, with 'Wash your sins in Emmanuel's blood' printed in the corner, are retailed at 'one and tuppence' each. Is it any wonder that many Christian churches look with disfavor upon some of the methods adopted by the army to preach the gospel?"

THE *Springfield Republican*, referring to the meetings which will be held to-day in celebration of Mrs. Stanton's seventieth birthday, remarks that "such meetings are eminently proper in honor of so distinguished an advocate of a righteous and advancing cause. The goal of her efforts has not been gained; but she can count mighty steps in the securing of rights of women before the law, in hundreds of callings, and in public life. Mrs. Stanton is now engaged, with Miss Anthony and Mrs. Gage, in finishing an elaborate history of the movement. Her personal character and achievements have been picturesque; and she is a particularly handsome old lady, besides."

MR. GEORGE JACOB HOLYOAKE writes: "The Rev. H. R. Haweis has left us to lecture or preach to the men and women of Boston. We know him in London as a liberal and alluring preacher. Dark and bright, as dark-haired persons usually are, he is unconventional in clerical things and wilful in his ideas. His speech is charmingly con-

fident and articulate, his words as clear and separate as shots, and follow each other with a celerity which will incline the hearer to think they proceed from an ecclesiastical Gatling. Of his life and authorship you will already know all things. Go and hear him, and send me some of the papers which give (with American vivacity unrivalled in England) opinions of him. Mrs. Haweis is also a clever authoress. If you see any of her works about, read them."

A CORPORATE society has been formed in England, the object of which is to do away with the extravagances practised at funerals. One of the useless expenses which it is proposed to abolish is that of "the corpse dresser," whose business it is to beautify the corpse by adding carnation to the lips, rouge to the cheeks, etc. Undertakers are opposing the reform, on the ground that the money expended at funerals helps the milliners, tailors, florists, and lumbermen. Among those identified with funeral reforms are clergymen. Against these, the undertakers are extremely bitter, declaring that they are responsible for the evils about which they complain. One undertaker declares that in 1879 \$75,000 and upwards was paid in London for burial fees, of which \$20,000 went to officiating clergymen, and \$45,000 to incumbents "for no reason whatever."

It is stated that over five hundred persons have been converted at Birmingham, Ala., under the recent preaching of the eccentric Rev. Sam. Jones. In one of his sermons, he said: "Every man and woman has to get every vestige of the hog element out of their characters before they can become Christians. I am here to assist in destroying that hog element." At this point, he exclaimed: "O Lord, come down and help us kill hogs! I want this to be a regular hog-killing meeting." While discoursing upon the injunction, "Love thine enemies," he said: "I verily believe I love every human being on the top side of this earth; and, if you will bring a man whom I don't love, and stand him up here on this platform, I'll hug him until he squeals; and, if you can find a woman in all this world whom I don't love, and bring her up here, why, I'll—I'll—send for my wife and make her hug her until she squeals!"

REFERRING to the proposition made to the board of estimate in New York City to cut off the appropriation of \$15,000 from the Museum of Natural History and the Metropolitan Museum of Art, because these institutions remain closed on Sunday, and, to the statement of one of the trustees, that the support has come largely from those who would withdraw their subscriptions, should the collection be shown on Sunday, the *Boston Transcript* remarks that New York should no longer speak contemptuously of Puritanical Boston. "Our Puritanism has not survived so long as to fail to see that, as a moral, preventive measure, the opening of art galleries and public libraries on Sunday is desirable. Experience has certainly shown that the opportunities for healthful mental enjoyment, thus offered here, have been properly appreciated by the people. It is remarkable that the worthy

people of New York, who couple with their gifts to art and anatomy museums an expressed or implied wish that the institutions be closed on Sunday, do not see that on no other day can working people gain any advantage from studies of the works of art or nature."

A DESPATCH from London states that Tyndall, the scientist, has declined to stand as a candidate for member of Parliament for Renfrew. "He thinks that the atmosphere of the Commons would not suit him. If the members were permitted to speak by virtue of special knowledge or when they had anything profitable to say, he would willingly accept the nomination. He censures the Gladstone cabinet, which, he declares, headed by an unstable ruler, caused five years of confusion at home and humiliation abroad. Recalling the events of the Transvaal and the Soudan, he says: "If there be a day of retribution for the misdeeds of man, I would not willingly accompany to the judgment seat the unpurged spirits of those who were responsible for the bloodshed in the Soudan. It was a damning and damnable business from beginning to end. Yet the man who is answerable beyond all others for this waste of blood, who sent Gordon to the wilds, and there abandoned him to death and mutilation, now dares to talk to the people of Midlothian as if no fleck rested upon his workmanship." The Conservatives are using Mr. Tyndall's letter as a campaign document.

A RELIABLE Liberal, who attended the last Congress of the National Liberal League, wrote us, "Of course, the convention is run offensively into *Truth-Seeker* commercialism." We were not surprised, therefore, to see a complaint in a late number of the paper named that we "took advantage of the gathering at Cleveland to circulate copies of *The Index*, which was, to say the least, a very cheeky performance." Further complaint is made that "at Albany the same was done." It is true that we sent to Mr. Stark, of Cleveland, some copies of *The Index* containing his articles on "Silver," with copies of some other numbers for such free distribution as he might choose to make. It is also true that we sent some copies to a friend in Albany, for free circulation. No copies were sold; and the object was, not to compete in business with our irate contemporary, but to diffuse liberal rational thought. Doubtless, our occasional word of criticism of the action of the National Liberal League is unacceptable to a paper which professes to seek the truth, but actually hides it in reporting the proceedings of a convention, when deemed expedient (as the editor of the *Truth-Seeker* confessed he did last year); but it is not easy to see how the free distribution of liberal literature at the Albany or Cleveland convention can be regarded as "a very cheeky performance." We promise to see that some good free-thought literature is gratuitously distributed at the next Congress of the National Liberal League. Liberals of the class the *Truth-Seeker* represents need to be educated and liberalized, and we are willing to make some sacrifice to assist in this missionary work.

VICIOUS READING.

The societies for the suppression of vice have been turning their attention of late to the evil of the "dime-novel" literature; and, if they can do anything toward eradicating this source of moral mischief in the community, they will do a most beneficent work. The character of this literature—if literature it can be called—is such that it is in itself evidence that it must do immense harm. But frequently there comes direct testimony to the fact that, in special cases, where boys and girls have been led to leave their homes and enter on careers of adventure, vice, and crime, they have been first tempted by this kind of reading. Their heads and hearts have been filled with sensational stories of immorality, until the worst passions and ambitions have been nourished within them, and they catch the fever for the same kind of life. To diminish, therefore, the stream of this vice-nourishing literature, and, above all, to foster a moral and mental taste in young people which shall tend to destroy the demand for it, is a most needed and useful work.

But the sensational "dime-novel" is not the only species of vicious reading that needs to be suppressed. This kind of literature is already under the suppression of the best public opinion. It does not come into reputable parlors, nor is it hawked about the streets. If boys and girls of respectable families read it,—as, it is to be feared, they sometimes do,—they must do it in secret. They know that it is under ban. It is not to be found in first-class bookstores nor at high-toned news-stands. It skulks through back alleys, and is purveyed by venders who have no reputation to lose. It belongs to the sewers, and instinctively keeps in the dark. All the time, however, the daily press is publishing stories of essentially the same sort, the only difference being that it draws its stories from actual life. They are "realistic" in the strictest sense. The daily newspapers of all stripes, large and small, with only here and there an honorable exception, appear to vie with each other as to which of them shall give the fullest and most detailed account of the current exposures of vice and crime that blotch the face of modern civilization. Thus, stories of criminal love, intrigue, and murder, the salacious details of a divorce suit, frenzied acts of passion and crime which are full of horror, are given daily to the world by publishers of good standing, who are presumed to be persons not only of business sagacity, but of conscience. These stories come into our houses and places of business openly by the front door. They may be purchased at reputable counters. They are served with our breakfasts and at our tea-tables. The boys and girls may read them without carrying them clandestinely to their chambers. The merchant finds his clerks poring over them, when he goes to his counting-room. They are spread broadcast through the land, in homes and shops, in the street, in cars and steamers, on Sundays and week days, and have hundreds of thousands of youthful readers where the so-called "dime-novel" literature has scores.

That this kind of reading is morally harmful, there can be no question among thoughtful people. Even though it be not written or published with any immoral purpose, the effect of describing crime and vice in the style of picturesque detail adopted by the newspaper reporter can but be detrimental to many youthful readers. Passions are stimulated which may already be too strong, and a knowledge of the artful ways of vice is imparted which cannot be too long kept concealed from youth. When public information of this sort

becomes necessary for the protection of society, as may have been the case in the recent *Pall Mall Gazette* exposures, it should be given in language the farthest removed from making a story in any way attractive to the imagination. But too often this department of the newspaper is put into hands that wield the most piquant pen, irrespective of any sense of moral responsibility; and the result is a descriptive narrative calculated to excite a prurient or depraved taste, and to make the responsible and morally serious editor uneasy, when he sees his own children reading the paper he has edited.

Nor is it easy to see what possible good accrues from filling the telegraphic columns of the daily journal with the accumulated diabolism of the country. Of what advantage is it to us here in Massachusetts to know to-day of a brutal outrage yesterday in Kentucky, or the incidents of a bloody crime in Texas, or the frenzied deeds of a murderer in Pennsylvania? There are shocking deeds enough near our own doors that we cannot help knowing. And there is little doubt that the publication of the details of these gross vices and crimes tends to beget rather than repress the passions that produce them. There are always persons so nearly off their mental or moral balance in the same direction that the portrayal of deeds of violence before them only increases their morbid aberration, and serves to impel them to do likewise. The spirit of violence is contagious. The very means of crime used by a ruffian in Mississippi, telegraphed across the country, may suggest to a villainous character in Maine a similar act. Even Freeman's religious murder of his child at Pocasset, a few years ago, soon had its copy in the Connecticut valley and in Missouri.

We would commend to the attention of the societies for the suppression of vice this kind of vicious reading furnished by the daily press. The reform demanded may seem a formidable one to attempt, so great is the power of the press. But there is one feature of the evil which it might not be so difficult to reach and abolish, and that is the publication of morally objectionable reports of criminal court trials. A simple statute authorizing a judge, at his own discretion (or with consent of counsel on both sides), to forbid the publication of such reports by the newspapers, and to prevent the sale of any publication containing them, except the official legal reports of the court itself, would accomplish the purpose. Such a statute, through the power given to a judge to punish for contempt of court, would be easy of execution, and would interfere, so far as we now see, with no person's reasonable or rational liberty. The suppression-of-vice societies would do an excellent work, if they were to secure the passage of such a law by the various legislatures. One great channel of the evil in question would then be closed up. For the rest of the reform there seems to be no other way than to rely upon appeals made to the reason and conscience of newspaper publishers and editors, and upon the education of a purer public sentiment. It cannot be the better class of the newspaper patrons that now desire this kind of reading. This is not the sort of "news" that business men want for themselves or their families; and, in the end, it is the vast populous sections of the business world whose patronage supports the daily press. Let these make their demand for a clean newspaper. Let them shun those journals that cater to the taste of bar-room morals. Nor are newspaper editors and publishers wholly given up to the worship of Mammon and incapable of moral convictions. There are conscientious men among them,—men at least who have the mental and moral acuteness to see that, when they rebuke the mor-

bid curiosity of the crowd that rushes on Sunday to hear a clergyman preach who is undergoing a scandalous trial in court, they ought not, in consistency, to open their columns to matter designed to draw the same crowd, and to satisfy the same low and indecent curiosity.

WM. J. POTTER.

RELATIVE VALUE OF METHODS AND RESULTS.

Within the year, the writer attended a famous school of philosophy; and, having criticised the logic of one of the lecturers, he was privately informed by one of the leaders of the school that the criticisms were just, but that he liked the conclusions of the lecturer, and cared not how he reached them. This struck me as a supreme exaltation of a creed, and unworthy of philosophy, which always seeks to understand itself. On telling this story to some clergymen, they laughed at the philosopher, till they were reminded that their ecclesiastical relations were dominated by the same principle. While it is true, I said, that your *confrères* esteem you well in proportion as you can reason effectively in favor of your creed, your ecclesiastical standing among them will be just as good, though you cannot reason at all, provided you can lustily asseverate with them. On the other hand, if your conclusions are not palatable, they will "cast you out," however well you reason in their favor, and in proportion to the force of your reasoning in their favor will be the ecclesiastical antagonism to you. This is fundamental to a school of religion and theology, as hitherto conceived, because it is a union on the base of a creed. Philosophy has no such bond, because it is not a faith or a creed, but an intelligence discerning or searching for truth and the evidences of it, or of the claims of certain ideas to be admitted as true.

Philosophy may not say, with Lessing, that all interest is in the pursuit, indifferent to results, or, with the old theology, Believe or be damned, indifferent to rational proofs. Both are paradoxes, and they are related to the truth as the poles to the equator and as the horizons to the zenith. Philosophy cannot be indifferent to results, else the alleged pursuit is only a pretence. Nor, on the other hand, can it be indifferent to the method of pursuit, whether it be rational and logical, else we can have no guarantee that the results are rational, as this can often be seen only in the light of its connections and supports, or the method by which the results are attained, so that we have no evidence whatever, unless this method is self-justified. A correct method is, therefore, essential in philosophy.

As the means are always subservient to the ends they seek, there is an aspect in which results are supreme, and the method of comparative insignificance. This is true in all purely practical matters. It is very important that a man finds out what diet and regimen are healthful for him, but of no consequence how he attains it. A good medicine is none the less valuable to those who know it, whether they can give a scientific account of it or not. Truth and virtue are of practical value, even though they are advocated by a false method.

In theoretic pursuits and in all pure science and philosophy, the case is entirely altered. Here the method is everything, because it includes and guarantees the end; and, if we fail to appreciate here the supremacy of the method, we shall be likely to fail in regard to the end. We shall be tempted impatiently and blindly to adopt agreeable results in opposition to rational evidences of their untruth. I regard this state of

mind as so very strong and prevalent even now as to constitute the great philosophical misery and degradation of our times. I regard this as the only, or chief, source of the monstrous inconsistencies everywhere manifest in speculative thought, the parent of "the riddle of body and mind," and the blind clashing and revolting of materialism, dualism, and half-fledged idealism against the results of a consistent procedure in psychological and metaphysical studies. Hence, the lofty though partial jealousy of Plato concerning the practical uses of geometry. He saw, as all ages have seen, men interested in geometry and in all intellectual pursuits only for certain practical, material, and social results which they may be made to yield; and he knew that the higher advances of the mind could not be made in that spirit. He, however, was, no doubt, a little narrow at the bottom, too little in sympathy with the necessities of inferior minds and with the idea now dominant, that scientific truth should be made to yield practical fruit,—a demand which was emphasized by Bacon, till he came near merging science into an art, as merely the mistress of artisans, as a large portion of moderns have done.

Philosophy cares for results, not as practical forces, which is only art, nor as beautiful combinations, which is only poetry, nor as promisingly helpful to the spiritual life, which is morals and religion, but simply as logical consequences of a rational and scientific method. It therefore cares supremely for correct processes, for rational methods, because these justify themselves, and they constitute the true guarantee of correct results. Philosophy has no thesis primarily to maintain, but only a rational course to pursue, confident that that, and that only, can assure us that we shall reach the right point all along the endless. Hence, philosophy acknowledges no other obligation than the honest prosecution of such a method.

WM. I. GILL.

THE SPHERE OF ILLUSION.

II.

The illusions of mankind are infinite in their variety and in the causes of their development. Harmless as those that haunt the region of our dreams are many of the motley crew. Not all the toymen do so much to please our children as these invisible servants of their fancy who assist at all their games, who hold the book and add a comment that is better than the text. Praise to the Hawthornes and the Laboulayes who lend themselves so graciously to the maintenance of the entrancing show! Praise to the hero-worshipping historians, too! I have no grudge against John S. C. Abbott because he made Napoleon Bonaparte the idol of my boyish fancy, and kept him so, in spite of Channing's damaging reflections, until Emerson smote him for me, and he fell. There are no such match-makers as these same illusions. Francesca, finding that she had not married him whose face and voice had conquered her imagination, was one of many thousands in her grief. But Nature sings, "Heigh-ho! young maids must marry"; and, to this end, she makes young manhood beautiful with an imaginary beauty, with all virtues and nobilities. Young womanhood as well, and the trick is not discovered till it is too late; say, rather, till it is discovered that we have something better for a wife or husband than any bundle of impossible perfections, "a creature not too bright or good" for the sweet habitudes of our domestic life. But, if we wake from one illusion, it is to lapse into another. A Boston clergyman is

said to have a neat, invariable formula of exclamation when the newly arrived infant is for the first time brought down for him to see,—*"Well, that is a baby!"* He is a bachelor, or he would know that the maternal heart craves a more definite admiration for that puff-ball of sweet flesh she carries in her arms. Are not all its ways remarkable? Was there ever such cooing, spluttering, gaping, stretching, kicking, in the world before? And, sometimes, the illusion grows with the growth and strengthens with the strength of the new comer; and, sometimes, it is so beneficent that we would not dispel it for the world, though we can see so little of that rare perfection that the mother sees in the great hulking boy or dull-eyed, witless girl.

Yea, verily, as Emerson has said, "the pageant marches at all hours." What a master of illusion is our bodily condition! If it is health, it makes all weather fine, all labor light. It seasons every dish. "Almost I fear to think how glad I am." If it is sickness, who will show us any good? The sunshine is a weariness; and the air, which else were an elixir, is chilling to the marrow of our bones. But here is only another illusion of localization. Our mood is real enough, only it is not caused by the external circumstance upon which we charge it, but by our organization, the abundance or defect of our vitality.

There are more serious aspects of the matter than we have yet considered. There are illusions of belief that have in them an immense potentiality of harm. "My judgment is just," said Jesus, "because I seek not mine own will," and at once disclosed the primal source of our illusory opinions. It is the bias of our will. How many of us approach any subject of great interest or importance with a mind prepared to listen with an equal fairness to the evidence upon either side? In the great majority of cases, we have some preconception, got we know not how; and, straightway, it becomes a principle of natural selection. It is magnetic to all facts and arguments that tend to make it good: it is repellent to all others. The passion for unity in our beliefs is another master of illusion. We do not like to qualify our admirations. We want to think wholly well of our political candidate and wholly ill of his opponent, and all is grist that comes to our mill until we have attained to this result. We have our reason for a certain course of action; and very soon we have a dozen, which the brooding of the first has warmed into a vigorous life. What a master of illusion is the self-interest of individuals! Men will give you forty reasons for supporting a certain line of public policy, and withhold from you the one reason which is more than all the rest: it is for their pecuniary advantage. Held pretty near the eye, a silver dollar will eclipse the sun, sometimes the sun of righteousness. "Paris is well worth a mass," said Henry of Navarre, and soon convinced himself that he was Romanist enough for the emergency. What a bias is the power of old associations on our political and theological opinions! What a bias the affections! Our mother's creed,—how can it but be true? How much more reasonable and attractive Unitarianism or Presbyterianism or any other *ism* is apt to seem, when it is no longer impersonal, but comes to us embodied, comes to us as our beloved William or Thomas, as our dear Elizabeth or Jane! Once upon a time, I received the confession of a maiden, that since her engagement she could only conceive of the Almighty as having the appearance of the young man to whom she was engaged. *Oh, sancta simplicitas!* you cry; but, the more I think of it, the more I am inclined to the persuasion that her confession was but a parable of what is as common

as the mystery and mastery of love. It is the song which Robert Browning sings:—

"That one face does not vanish; rather grows;
Or decomposes but to recompose;
Becomes my universe that feels and knows."

The way from thought to action is not long, and the illusions that exist for the intellect exist for the conscience and the will. Beauty and Love are weaving them each day anew. The argument of Phryne's advocate, "She cannot be an atheist, because she is so beautiful," is one that custom cannot stale. "The king can do no wrong,"—the king whose throne is in your heart of hearts. And this magic which can make another's wrong seem right makes steep for us and lubricates the downward way. And, once we have done wrong, what a miserable illusion is that which makes another wrong seem right, because it is the only practicable thing,—at least, without some serious self-abatement or some violent turning round! What a miserable illusion, too, is that which stretches the forgiveness of our confessor till it covers that which we have not confessed; and that whereby we use our friend's unjust suspicion as a sponge with which we wipe out all the secret score of our offence against him, and even find ourselves magnanimously forgiving him; and that whereby we plume ourselves upon the courage of a repentance that is soon repented of, and, for the sake of so much beautiful behavior, though as yet undone, grant ourselves absolution in advance for some fresh deviation from the straight and narrow way! And these illusions are not all. There are many others, and among them those which Mr. Spencer calls "The Educational Bias," "The Bias of Patriotism," "The Political Bias," "The Theological Bias." He only names them as so many obstacles to the successful study of Sociology at the present stage of our development. But they are equally obstacles to the successful prosecution of a just, considerate, and steadfast course of life.

Is there something infinitely discouraging in this illusory aspect of our life? The victims of so many painted shows, is there nothing left for us but to abandon ourselves to the maskers of this glittering revelry, and let them lead us as they will? That were a lame and impotent conclusion. A better is, that so much of our illusion as is merely the result of the co-operation of our organization with external things is so beneficent that we would not dispel it, if we could. We know that we are fooled, and like it well enough. Would we have the sun appear to us as large as it actually is? Would we have the scent seem anywhere but in the rose, the light seem anywhere but in the star? The illusions of our dreams are easily corrected by our waking hours; and those of our more wakeful seasons, so long as we are sound in mind and body, afford a curious entertainment for our leisure time. Certainly there are those which are the offspring of dementia and of other morbid states, which can be made to yield up nothing obviously pleasant. But even here there are some useful implications: a knowledge of such things should breed a larger charity, the limits of a perfect sanity are so hard to fix; it should incite to a more reverent care of that intelligence which, because it is the last result of evolution, is the most liable to harm; it should arouse in us a more active pity for that suffering which is of all suffering the most tragical. And, as for the illusions of our belief and moral sentiment, to be forewarned against them is to be forearmed. "Whatever games are played with us," the Master says, "we must play no games with ourselves, but deal in our privacy with the last honesty and truth.... Speak as you think, be

what you are, pay your debts of all kinds." If we could live according to this rule, I doubt if, when the masquerade was over, we should find that we had danced with any but our friends; and she that would not unmask for us till we had gone apart with her to the most secret place might be as friendly as the rest, might say to us, with smiling lips and eyes, "You thought that I was Death, and I am—Life."

If we could go right in upon the centre of this sphere of illusion, whose surface has detained us over-long, I wonder much if it would not be to find, not, as we are so often tempted to believe, that we have taken less things for greater, but that we have taken the greater and the greatest for the least. What if the great illusion be that our housekeeping and store-keeping, our ploughing and draining, our washing and mending, are the device of the Eternal for making us his own elect? So Emerson has guessed, assuring us that, though all be phantasm, "if we weave a yard of tape in all humility, and as well as we can, long hereafter we shall see it was no cotton tape at all, but a galaxy we braided, and that the threads were Time and Nature."

"Seek not beyond thy cottage wall
Redeemers that can yield thee all :
While thou sittest at thy door
On the desert's yellow floor,
Listening to the gray-haired crones,
Foolish gossips, ancient drones,
Saadi, see ! they rise in stature
To the height of mighty Nature,
And the secret stands revealed,
Fraudulent Time in vain concealed,—
That blessed gods in servile masks
Plied for thee thy household tasks."

Oh, better yet, to find that we in servile masks, not by ourselves discoverable unto ourselves, plying our homeliest tasks with brave fidelity, have done the housework of the gods !

JOHN W. CHADWICK.

THE NEW RELIGION.

That religion is undergoing a transformation, that a new conception and rendering of it are destined to prevail in intellectual circles, must be admitted. Even now, in progressive orthodox pulpits, it is not taught as the unnatural, irrational, mysterious gift of sovereign grace it once was, but is treated as a natural, practical, growing form of moral life, purpose, conduct,—an adjustment, so to speak, of human thought, feelings, and activities to the unsolved, mysterious powers of earth and the surrounding heavens. Philanthropy and morality seem to define it better than piety. And yet religion, in any real sense, cannot omit the recognition and practice of reverence, of gratitude for good received, and of those qualities of gentleness and self-renunciation which comport with a right relation of the ego and non-ego of man, with the mysterious powers of life and nature. It is not the purpose of radicalism to root out any of the needful, noble, saintly virtues of manly, true life. So far as religion represents or embodies the higher and truer and real humanity,—qualities which make for peace, purity, love, and goodness in human life,—it certainly is not antagonized by knowledge, and scientific progress cannot dispense with it.

But the question is inevitable, and is proper. What philosophical or theological basis has even the new religion or any religion? What faith of the intellect must it carry with it, or imply, concerning the cosmos? Will it be materialistic or transcendental? Will it rest on creation or evolution, retain the old conception of gods outside of nature, willing and designing whatsoever is, or the other equally old idea of the "ceaseless becoming," involution and evolution?

Theism is rapidly resolving itself into a scientific pantheism, conformable to the growing doctrine of evolution; but the ideas of men are vague and misty, as they cannot but continue to be, concerning a subject about which so little is or can be clearly known.

Mr. William Graham, an able English writer, who contends for "an inner Power at work behind natural selection, that manifests both unwearied purpose and all-comprehending executive skill," allows that "natural selection is a *vera causa*, which we can now see, actually at work in the organic world as well as in human societies and nations. . . . In such ways as natural selection indicates, Nature *must* have travelled. By such a law as natural selection, she undoubtedly did do some, at least, of her work. . . . The only question of importance is, Did natural selection, which did some, or even much, of the work, really accomplish all?" He says: "We are asked to believe that natural selection made, not only the tree, but the bird that sings in it; not only the flower, but the bees that suck it; not only the man himself, but also, in great measure or altogether, his art, science, invention, language, institutions, civilization, and all his special higher associations. Besides the species, natural selection made the music of the bird, the beauty of the flower, the thought of the man; and all these different effects, when we view them in their totality, are so prodigious in comparison with the cause assigned that the hypothesis seems wholly incredible."

Yet he admits that, "if the perfection of organs and their exquisite adaptations to their several ends and to each other were achieved by a slow natural process, and only after many abortive and unskilful attempts had been made,—the blunders and failures being necessarily dropped and hidden away from sight,—it is futile to argue from adaptations that have been slowly made, and necessarily left to a designing mind that conceived and constructed them all at once"; and he asks, "If all adaptations can be accounted for as *results* that came simply by natural process, why suppose *preconceptions* and special construction of them?"

To a thoughtful mind, studying the history of only human life, collective and singular, as the great struggle it has been, and imperfect and weak as it still is, the question irresistibly presses, If there be a purpose in the ups and downs of Nature,—the purpose of a designing mind,—separate from and greater than the universe, how is it that this mind is so bound in by the rigid necessity of fate that it cannot do perfect work at once, instinctively, but must yield such gigantic sway to misery, vice, and crime? It is easy to assume and assert that diseases and monstrosities are purposed, and that the innocent child is providentially removed from loving parents for some ulterior, wise design; but the physician knows that there is an intelligible reason for the child's death in the material conditions of life, which conditions of life may be controlled by the *intelligence* of parents, but will not be in any way helped by the piety or religion of the parents.

If there be a God who causes earthquakes, cyclones, pestilences, shipwrecks, hereditary vice, innocent suffering, and premature death, no matter though they be alleged to be punishments for sin, either in our first parents or ourselves, it does not appear reasonable or right that we should be required to adore and praise and love such a God. The nobler sentiments of manhood ought to save us from such degradation.

If the order of nature can be better and more satisfactorily accounted for on the hypothesis of evolution, as Mr. Graham admits a part of it must

be, then, manifestly, no ancient traditional faith in a miracle-working demiurgos or creating divinity ought to impede or bar the progress of scientific thought and knowledge. That knowledge which is the exemplification of the truth, and which saves mankind from error and wrong and remorse, ought to be dearer than any blind faith or devotion, which is simply weakness and consecrated ignorance. Preserve and perpetuate all that is good in human life and its relationships, but do not let the ghost of ancient superstition and darkness frighten us out of loyalty to light and truth into servility to authority and established falsehood. If the new religion will bear the light, and will help, not harm, mankind, then let us accept and cherish it. As yet, the question is on trial. Discussion is not closed. The verdict is not rendered. Humanity awaits the issue in hope and fear.

A. N. ADAMS.

CHARLES VOYSEY'S REPLY TO F. W. NEWMAN.

I am a careful reader of *The Index*; and, therefore, sometimes I get in arrears with them. So it happens that I have only just seen Prof. F. W. Newman's letter to you, in *The Index* of September 24.

It is not surprising that independent thinkers should differ from each other, and that Prof. Newman should object to some of my teaching. But it is very surprising to find that grand old thinker and teacher so inaccurate in his language as to do me a great injustice. He directly accuses me of "making a dogma of the duty of church attendance and public prayer," and indirectly charges me with "making a dogma" of life after death.

The phrase, "making a dogma," here, is wholly inaccurate and misleading. I have often dwelt on the difference between doctrine and dogma, showing that doctrine is mere opinion, formulated opinion it may be, but held by living and wise men as liable to modification, correction, and even removal: whereas, "dogma" is petrified opinion of the past, enforced by authority or taught in such terms as to terrify people into believing it. I hold *doctrines* tenaciously as long as they seem to me to be reasonable and true. I have no *dogmas* at all on any point, not even the existence of God, whom I, nevertheless, deeply love and reverence.

I have urged the duty of church attendance and public prayer only by fair argument and persuasion, because experience has taught me how helpful these are in maintaining both a virtuous and religious life. But I have nowhere taught this as a dogma.

In reference to the life after death, I have taught it only as a *doctrine* corollary to our belief in God's love to us; never as a *dogma* essential to be believed in order to be a theist. If, every time our dear old friend becomes energetic in urging upon us his theories and crotchets, we should accuse him of dogmatizing or "making dogmas," it would not be more unfair than his present charge against myself.

I am sorry this reply to him is somewhat behind time, but I trust you will kindly print it.

CHARLES VOYSEY.

DULWICH, Oct. 22, 1885.

AN OPEN LETTER TO COL. INGERSOLL.

My dear Sir,—Last summer, you were kind enough to address me a letter, stating that there was much in common between us, referring to our views of the liberal movement, and expressing a desire for an interview, which would afford an opportunity to consider the situation together and to compare notes, before the next Congress of the

National Liberal League should convene. Since circumstances did not permit the proposed interview, which was mutually desired, I wish, in a communication, to state in part what I should have been pleased to say to you verbally; and, as what I shall write will relate entirely to matters of interest to the liberal public, I deem it proper to present what I have to communicate in the form of an open letter.

At the first Congress of the National Liberal League, held in Philadelphia in 1876, there were present one hundred and seventy delegates, or members to whom certificates of membership had been issued by the committee of arrangements. About forty leagues had been organized, and were active, fifteen of which were represented by delegates. In the Congress were represented twenty-four States and two Territories. Besides, applications for membership had been signed by six hundred and twenty persons who were not in attendance. Letters of sympathy and encouragement were read from William Lloyd Garrison, Wendell Phillips, Judge Hurlburt, Hon. Nathaniel Holmes, Hon. Samuel E. Sewell, Hon. Geo. W. Julian, Rabbi Wise, Robert Collyer, M. J. Savage, and other well-known men, whose names are never thought of now in connection with the National Liberal League. At the second Congress, held in Rochester the following year, there was an increased attendance; and the work done was quite satisfactory.

At the third Congress, as is well known, the control of the League passed into the hands of a faction, who subordinated the original object of the organization—the secularization of the State—to an agitation for the repeal of the postal laws of 1873, against the transmission of indecent literature through the mails. Mr. F. E. Abbot, the President, who had initiated the Liberal League movement as a definite organized effort to accomplish the separation of Church and State, and who had done more than any other man to make the League so far a success, was turned out of office, because he was opposed to repeal; and Mr. Elizer Wright was elected to fill his place, because he was in favor of repeal. The League, in its administration, was thus committed to a policy which drove from it Mr. Abbot, Judge Hurlburt, and many others, who had been identified with it from the beginning, and which, at the same time, attracted to it certain strange sort of men and women, who had manifested no interest in its declared purpose when it was simply the separation of Church and State. That policy checked the movement for State secularization, and brought discredit upon the liberal cause. On account of persistent opposition to it, from its inauguration at Syracuse till it collapsed at Cassadaga, *The Index* has received every species of abuse, especially in the paper which started the "repeal" agitation, and which continues to be the main organ of the League.

Some months before the Congress convened at Cassadaga, Mr. A. B. Bradford proposed an independent convention of Radicals for consultation. There were, he said, "men in the land who are not identified with either the Liberal League or its opponents, and who, if they would invite a national convention of free thinkers to meet, might, from their high character, close up our ranks, and, if nothing more, ascertain approximately our numerical strength, so that the public might know the fact." This proposal was "seconded and accepted by the president and secretary of the National Liberal League for a new deal and a new organization of the Liberals of this country." In reply to inquiries by the officers of the National Liberal League, I signified my approval of Mr.

Bradford's proposition and the assurance of my cordial support, if it were carried out in good faith. I said in *The Index*, "If there is to be a national liberal organization, let the call be made without reference to the National Liberal League or any other existing organization, and let the convention called to effect a union of Liberals on a broad and comprehensive basis be unhampered by the past."

The next Congress convened; and forty-eight delegates, several of them proxies, were present. The entire attendance was, of course, much larger. There was no reorganization of the League, no attempt to "revise the basis of the League" which the "call" had announced as a part of the programme; and there was no rescission of the repeal resolutions, the adoption of which at Chicago caused you to resign your position and leave the organization. Two or three persons prominently identified with opposition to the repeal folly were, without their knowledge or consent, proposed for vice-presidents. "Jesus Christ and the Almighty" were derisively proposed, when the names of the offensive anti-repealers, including that of Mr. Abbot, were dropped.

At this Congress, you were elected President of the National Liberal League. There were several circumstances that made it easy for those present to forgive your protest and withdrawal from the League at Chicago; while your talents and wide reputation as a popular advocate of free thought made your election as president extremely desirable, indeed, absolutely necessary, to save the League from speedy dissolution, and to enable Messrs. Putnam and Watts to carry out their scheme designed to give them certain advantages. The former had attempted the work of a liberal lecturer, failed and returned to the pulpit, and remained in it as long as circumstances would permit. The latter had failed in his contest with Bradlaugh, and in his effort to organize a Secular Union in England. Although he had been in full sympathy with *The Index* in its opposition to the action of the National Liberal League, he was ready at the first opportunity to profit by the division among American Liberals, and to stultify himself by active work for the League a year before the Cassadaga convention, when it had no thought of abandoning the policy which he had professed to hold in abhorrence.

There was nothing surprising in your election; but many of your friends, who admire your genius and your generous impulses, were surprised when you, after some months of silence following the announcement of your election, authorized the present leaders to declare your acceptance. Certainly, it would have been better if the League had been allowed to become extinct, as it certainly would long ere now, had not the magic of your name been used to revive it and to continue it, for a while, under a leadership which makes it serve personal interest, and is quite devoid even of the consistency and spirit of sacrifice shown by its late leaders. If a national organization of Liberals in this country is desirable, it should be one in fact, and not in name only; and it should be conducted in a way to command the respect and approval of all classes of true Liberals. The present leaders of the League the past year have called upon all, Christian and non-Christian,—all who believe in the separation of Church and State,—to support the League by contributions; and, at the same time, they have been chiefly engaged as officers of the League in lecturing against the Bible and Christianity, and in defence of the system or cult called "Secularism." In one of the League circulars, the secretary announces that he and his colleague "will be ready at any time to serve those who, in the

shadow of death, require the noble consolations of our secular faith." Such an announcement by an individual secularist or by a society of secularists would be proper enough; but how can an organization justly or honorably declare that the "nine demands" are its platform, solicit aid from all who subscribe to those demands, from all who believe that the Church and the State should be separated, and be at the same time directing all its energies against the religious faith of the majority of those upon whom it thus calls, and in propagating views which many who favor divorce of Church and State utterly reject?

It is not strange that intelligent Liberals generally still feel no interest in the National Liberal League. They understand that you, whose genius they admire and whose work they appreciate, are only nominally President of the League, your name being simply used to fly the kite of interested parties. The little interest felt in the organization is sufficiently shown by the fact that only four leagues, out of the hundreds claimed to be in existence, were represented at the Cleveland Congress last month. The entire number of delegates reported present by the Committee on Credentials, according to the chief organ of the League and of the repeal movement, the *Truth-Seeker*, was thirty-five. Considering that the League through its secretary a year ago proposed an "aggressive campaign," in which there should be for "the enemy no resting spell," and which was to effect "a change of front of the universe," if \$5,000 should be raised, the results of the year's work do not seem to be very encouraging.

The free use of your name enabled the actual managers of the League to raise by contributions the past year \$3,684.58, and of this sum \$3,456.71 went to pay the "first vice-president" and secretary for lecturing against Christianity,—certainly not a large amount, but which should have been expended in the cause of State secularization, when that is declared to be the object of the League, and when, on that pretence, requests for contributions are made.

A friend suggests as the most charitable explanation that neither of the gentlemen above referred to comprehends fully the difference between the system called "Secularism" and the secularization of the State. This is possibly true; but, if so, they should have been duly instructed before being authorized to represent a liberal organization at the head of whose list of officers stands the name of America's most brilliant, eloquent, and widely known advocate of free thought. I do not doubt that you have permitted your name to stand as President of the National Liberal League from generous motives; but please consider whether, in so doing, you are not giving a new lease of life—very feeble life, though it be—to an organization that is controlled in the interest of a faction, that is doing nothing for State secularization, that only serves to perpetuate ill-will and dissension among Liberals, and to prevent or delay a national organization with the numerical strength, character, and consistency of action necessary to command the general respect and support of intelligent and independent Liberals.

I have no personal interest in the League. As a public lecturer, I have never depended upon it nor upon any other organization, but, like yourself, have worked upon an independent basis, and aimed to represent on the platform my own positions, not those of a society, although ready always to work with any organization, when I have been able to do so without sacrifice of principle.

I write you in entire frankness, but with great

respect and with high appreciation of your courageous and effective warfare against superstition.

Sincerely yours,

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

DR. W. T. HARRIS writes: "Dr. Montgomery's articles are wonderful. I look upon him as one of the greatest lights in true science."

"SCIENCE," which has removed its publication office to New York, will, in future, aim to be a paper for educated readers generally rather than for the specialist.

REV. E. C. TOWNE informs us that he will lecture November 19, at Tremont Temple, on "The Real Life of George Eliot: Her Relation to Literature, to Society, and to Religion."

HEATHEN idols have become articles of traffic by missionaries in India. A Methodist paper out West advertises an invoice at \$1.10 each. "These idols," it remarks by way of commendation, "are curious and instructive, and are intended to aid in awakening an interest in missionary affairs, especially in Sunday-schools. Superintendents will find that they add greatly to the interest of the monthly missionary Sunday."—*Springfield Republican*.

THE *Boston Record* says, "Mr. Howells is now staying at Auburndale, with his family; and it is an open secret that he will remain there during the winter for the good of his daughter's health." This sort of flunkeyism leads the *Springfield Republican* to ask: "Why, pray, is it an open secret; and, if a secret, why open? Are we to infer that Mr. Howells is watching the human animals on the sly, to catch specimens, and pin them up in his contributions to magazines?"

HUDSON TUTTLE, of Berlin Heights, Ohio, writes: "I am so often written to by free thinkers to know, in case a friend die, if I will give the funeral discourse, that I have thought of asking you to state for the benefit of the Western readers that I will do so. I am called on nearly every week by Spiritualists; and it is really a great tax at times, yet I feel it a duty to take such occasions to extend more correct views than the preachers, who otherwise would seize the occasion, are accustomed to. I have often wondered why the friends employ, as they often do, orthodox preachers for out and out 'infidels,' whom said preachers, if these speak out honestly, must consign to perdition. In many cases, they can engage none other."

A CONTRIBUTOR to the *Presbyterian* does not understand how "any minister of the gospel who professes to be educated, and to believe in the Bible as the supreme rule of faith and practice, can deny the existence of a personal devil"; and, after quoting several passages from the Bible to show the folly of substituting "evil influences" for the devil, "for the real, genuine one clearly and indisputably presented in the Bible," submits "to those whose eclectic creed will permit neither Satan nor his angels to have any personal existence" the following conundrum: "Will they please inform us how our blessed Lord could cast out a whole legion of 'evil influences' from the man among the tombs, and how it was that the same set of 'evil influences' entered into the swine, and drove them into the sea?"

SAYS the *Congregationalist* of September 17, deploring the sad mistake "of the Prohibitory party of Massachusetts in committing itself to the move-

ment of what is called 'woman's rights': "We are as solidly convinced as we can be of anything that woman suffrage opposes the plainest teachings of common sense; but, more than this, that it is squarely against not only the explicit teachings, but against the general drift of the Bible. As we minutely demonstrated but a few months ago, in a series of articles which we happen to know received the unqualified indorsement of many able New Testament scholars as well as sagacious publicists, the notion of woman suffrage stands so obstinately and destructively across the plain teachings of the word of God as to make it simply impossible for those who reverently accept the inspired authority of the Bible to favor it."

IN reference to a remark in a contemporary that "Jews never can by any possibility be converted to Trinitarian Christianity, but they may one day be converted to Unitarian Christianity," the *Jewish Chronicle* remarks: "We have always thought that Unitarians, like sensible people, allowed their Trinitarian brethren a monopoly of the conversion business. We regret to find that we are mistaken. Since Unitarians and Jews are agreed on the one main point as to the oneness of the Deity, would it not be well to let them agree to differ on the remaining points? If Unitarians imagine that Jews will ever be induced to place Jesus higher than Moses, and to regard the Gospels as teaching a loftier and more practical religion than the Pentateuch, the sooner they are undeceived, the better. Judaism, moreover, has its historical factors, which the Israelite is not likely to ignore at the bidding of the Unitarian, charm he never so wisely."—*London Inquirer*.

BISHOP COXE recently in Buffalo preached against cremation on theological grounds. His text was the burial of Jesus as narrated in John's Gospel, and he claimed that the prevailing method of disposing of human bodies was a Christian inheritance from the Jews, that has come down to us with divine sanction. But his only argument against cremation was an appeal to prejudice: "Think," he said, "of taking the corpse of a loved one, the hand that you have so lovingly pressed these many years, placing the body on a cruel iron car, and pushing it into a fiery furnace. I confess my soul shrinks in horror from it. Brethren, I beseech you, retain the Christian customs of eighteen centuries, and see that our dead are quietly laid in the tomb." To this, the *Springfield Republican* sensibly replies as follows: "Well, think of taking the corpse of a loved one, and thrusting it beneath the ground, 'to lie in cold obstruction, and to rot'; to become a loathsome mass of putrescent corruption, poisoning the springs of living water, sending foul gases into the air and germs of disease into the life of those who dwell around,—which is the more repulsive, which the more horrible to think of? The true Christian idea is to rise above the penthouse of the flesh, and to consider that the loved one has no longer any property in the deserted tenement, but, released from 'this muddy vesture of decay,' is now a spirit. We all have felt the force of custom and prejudice. Bishop Coxe does not argue with unfeeling clods, who have no reverence for their dead; but those who advocate cremation have a higher thought of death and life, and have escaped from what is really a gross materialism, repugnant to the civilization that is dawning on the world, and which will find in reverence for the living a better motive than outworn custom."

SOME have thought that beyond our solar system and the galaxy, or system of solar systems to which it belongs, are other systems of solar systems,—a whole galaxy of such systems and sys-

tems of such galaxies. Kant thought there might be systems of systems, and systems of such systems, and so on, to higher and higher orders without end. But Proctor tells us that the discovery of the new star in the Andromeda nebula confirms what one or two reasoners had already shown to be all but certain,—that we have no evidence of galaxies external to our own. Referring, in the *London Times*, to "the transcendently beautiful queen of the nebula," as the old astronomers called Andromeda, Mr. Proctor says: "The sudden appearance of the new star is decidedly the most interesting astronomical discovery—or, rather, event, for the discovery was not inevitable—since Adams and Leverrier calculated the place of the as yet unknown Neptune. It disposes finally of the theory that the nebulae are, or may some of them be, external galaxies. Mr. Herbert Spencer, in 1859, gave three or four convincing reasons showing that the nebulae cannot be external to our galaxy; and, ten years later (not knowing of this work), I repeated those, and supplemented them with many others and with maps of nebular distribution, demonstrating to the eye that the nebulae belong to our system. Some of these reasons and illustrative statistics I presented at a Friday evening lecture at the Royal Institute, in May, 1870. The views I then urged were precisely those which the new star, regarded as physically connected with the Andromeda nebula, has made certain, and, what is more, obvious and clear to all."

A WOMAN'S ANNIVERSARY.

TO ELIZABETH CADY STANTON ON HER SEVENTIETH BIRTHDAY, NOV. 12, 1885.

The "threescore years and ten" are thine;
That high-tide mark of our existence
Thou see'st with eyes whose dauntless shine
Age cannot dim; nor Time's insistence
On waning years make thee repine
The strength spent in a firm resistance

To every form injustice took
'Gainst men, or slaves, or weaker woman,
Thou fear'st not demon, man, nor book:
Thy faith was in the purely human,—
A faith which cannot overlook
The honest dues of e'en a foeman.

To thee the years so marked have sped
The swifter for thy earnest doing.
Each day, each hour, some subtle thread
Of cause, too fine-spun for our viewing,
Hath drawn thee into ways that led
Beyond lines marked for thy pursuing,

Beyond the boundaries man imposed
On woman's free, untrammelled action;
The bars gave way which thee enclosed,
Equality was thy exaction,
Thy rights were asked where'er disclosed,
In spite of frowns, sneers, or detraction.

In all the events of thy career
As daughter, housewife, loving mother,
As friend, reformer, pioneer,
As author, preacher, and in other
Ways, thou'st shown true "woman's sphere,"
Broad for her as for her brother.

Because of this, throughout our nation
To-day in many a home and hall
Freedom's friends of every station,
Alone or grouped, with love recall
Thy work for woman's elevation:
Thank-offerings greet thee from us all.

SARA A. UNDERWOOD.

The Index.

BOSTON, NOVEMBER 12, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher morality and an improved Social Welfare.

WILLIAM J. POTTER.
JENAMIN F. UNDERWOOD, : : : : : } Editors.

No WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

MESSIANIC EXPECTATIONS.

LECTURE I.

Introductory, delivered at the Temple Adath Israel, Boston, Oct. 9, 1885, by Rabbi Solomon Schindler.

Ideas are as mortal as men, who are their exponents; their origin and life are similar to that of any human being; they are limited, as is mankind by time and space. Ideas are first conceived by the human mind, and pass a period of embryonic existence before they become fit and strong enough to bear the light and the changing temperature of the world. Then they pass a term of childhood, during which they are subject to all kinds of diseases, and the weak among them die fast, like infants in a crowded city. Those only which are endowed with sufficient vitality survive: they grow up to manhood, fight their battles, and not seldom conquer the world. After their mission is fulfilled and their vitality exhausted, they enter into a period of decrepit old age. Though they are now of little, if any, usefulness, they still command the respect and the reverence of the world on account of their age and their former renown. But every day brings them nearer to the grave, until their last hour strikes; and, after a few last convulsions, they pass away, sometimes as unnoticed as they appeared upon the stage of life.

Before, however, their contemporaries are ready to bury them, a dispute frequently arises as to the reality of their death. Some can hardly believe that an idea which has lived and worked among them for such a length of time, which has performed such great and marvellous deeds, and which has commanded their reverence during all their lifetime, has indeed passed away. They cling to it with filial love and devotion, and deceive themselves with the hope that the departed idea is only asleep for a while, or in a trance from which it will surely awaken after a few hours. Others, who have always been depending on the departed idea for their sustenance, are fearing the

loss of their support, and are unwilling to give up their privileges. They, too, claim that death has not yet occurred, that they still observe some tokens of life, and they, too, are opposed to a speedy interment. On the other hand, the health officers, reason and common sense, insist upon the necessity of the burial. They claim that the process of dissolution will be accompanied by poisonous exhalation, which will infect the neighborhood with the germs of disease. Thus, the defunct idea is finally buried, in spite of all remonstrances; and posterity either passes by its grave indifferently or places a wreath of evergreen upon it, as the case may be.

As there occur cases of death among men every day which, though unnoticed by the multitude, cast their gloom over the circles in which the departed had moved, thus ideas are dying away in and with almost every generation, the death of which affects only those who stood in near relationship to them. And thus, ladies and gentlemen, have we, the Israelites of the present generation, been the witnesses of the death of an idea which was conceived more than two thousand years ago by our nation, which passed its childhood, manhood, and old age under its protection, and which now has expired after a long and marvellous career, never to be revived again.

The idea to which I refer is no other than the hope of our nation in the advent of a personal Messiah who would collect the scattered remnants of Israel under one banner, re-establish them in Palestine, rebuild Jerusalem in its former glory, and make Zion the capital, not only of the Holy Land, but that of the whole world.

In a course of lectures to be delivered in this place at our Friday evening meetings, I shall eulogize this idea, and trace its history from its very conception to the hour of its death. May it suffice, however, to-night, if I explain the reasons first why I selected such a topic, and then why I maintain that the idea of the advent of a Messiah has died of late, is stone dead now, and ought to be buried by the side of similar defunct ideas, in spite of all opposition which may be raised against its final interment.

Although our nation is one of the oldest, if not the oldest, on earth; although it has lived on every continent, in every zone, in every climate; although we have a history, a literature of our own, excelled by no other,—it has been our misfortune that we have never been understood by our neighbors. At best, we have been looked at with distrust; and though we have always thrown in our lot with our fellow-citizens in happiness and adversity, though we have been born and raised among them for generations, we have always been denounced by them as a foreign element, as a sect, the aspirations and hopes of which differed widely from those of the majority. This misunderstanding, this distrust, has not been removed even in our time and in this our country. You meet with it wherever you turn in political, social, mercantile life. One of the causes why we were and are distrusted is, as it appears to me, that we were and are still supposed to consider our country as only a temporary domicile, or, in other words, that we are suspected of indifference toward our country and its inhabitants, because we are said to yearn for a return to the land of our forefathers, and are impatiently awaiting the time when a Messiah shall appear among us, and not only restore our political independence, but make us the masters of the world. If this were the case, if these were indeed our hopes and aspirations, I must say that our neighbors would be perfectly justified in distrusting us; for I agree with them that a man cannot love two countries at the same time, that he can be attached

with sincerity to only one country. He will never be a good American citizen, who always dreams of a return to the country from which he came, and who delights only in the customs and usages of the fatherland.

But, in this regard, our neighbors were and are entirely mistaken. Not one of us cares to leave this country except on a visit; not one of us harbors in his heart any love for Palestine, unless it is that esteem in which classical ground is held by every man of culture; there is not one among us who expects the advent of a Messiah.

I always took it for granted that, with the exception of the ignorant, our fellow-citizens were aware of the fact that modern Judaism has long since discarded the hope in the advent of a Messiah, and that the modern Israelite is a citizen of the country in which he lives, and where he is granted human rights, with all his heart and soul; but how great was my surprise when in conversation with persons of high culture, of eminent scholarship, and of rare intelligence, I found that they still believe us yearning for Palestine and praying for the advent of a Messiah, that they still think it a distinguishing feature between Jews and Christians that we believe the Messiah will come, and they that he has come! Open the geographical text-books which your children use at school, and you will find therein, in cold print, the statement that the Jews are a sect which is expecting a Messiah, who, as the Christians claim, has already come; and thousands of children memorize this erroneous statement year after year, and hear it repeated Sunday after Sunday at church, and we do absolutely nothing to contradict it and to rectify the error. It is, therefore, time, high time, that we make an attempt to enlighten our fellow-citizens in regard to our hopes, that we show to them the tomb in which the Messianic expectations of our nation are buried.

But, ladies and gentlemen, although the misunderstanding may be partly laid before our door, although we may have neglected to notify the Christian world promptly of the demise of the Messianic idea, we shall find that our Christian friends are not entirely faultless; for they have never been ready to accept our information: they have reasons for not believing in the death of that idea, and they remonstrate against its interment. The same people who distrust our patriotism on the ground that we are expecting a Messiah and wishing to return to Palestine,—these same people are shocked and horrified when we tell them that we do not any longer expect a Messiah, and have not the faintest desire for a political restoration of our people. Now, why? Because such intelligence strikes at the root of their own religious belief. The whole structure of their religion rests upon the belief of the Jewish nation in the advent of a Messiah. As long as this idea has been strong and vigorous among us, their building stood firm; but from the moment the idea expired, from the moment its fallacy was demonstrated, their structure could not be saved from its downfall. They are actually placed between the two horns of a dilemma, and do not know which to choose. They do not know at present whether they should prefer us to be indifferent citizens or to be indifferent to Messianic expectations. For this very reason, it becomes doubly our duty to spread that intelligence as far as our circles reach, and to show to the Gentile world that Messianic expectations are not essential to Judaism; that Judaism can exist without them; that the Jewish mission is not chained to Palestine, but embraces the whole world; that, metaphorically speaking, Israel itself is the Messiah

whom God has destined to enlighten the nations of the earth.

In the course of my subsequent lectures, I shall therefore show that the Messianic idea had originally a political, and by no means a religious or spiritual tendency; that it never appeared as a manifestation of a healthy condition of the body-politic of the Jewish people, but rather as a mental disease, as a mania, as an epidemic, which would break out at times of great national calamity. I shall show that these epidemics repeatedly occurred with greater or less force up to the eighteenth century. I shall show how the originally political Messiah was transformed by degrees into a divine messenger, directly descending from heaven, who should reassemble, in a miraculous manner, the Israelites from all the corners of the earth, bring them to Palestine, raise the dead, judge the whole world, past and present, punish the wicked and reward the faithful, and establish a universal government and a universal religion. I shall show how the Messianic fancy finally pined away when the new era shed its full light upon its absurdities, until it died out entirely.

The word "Messiah" itself deserves a close scrutiny. The Hebrew word "*mashach*" means to spread an oily or greasy substance over a person or an article; but, right from the start, it implied a sanctimonious ceremony. Jacob poured oil upon the stone upon which he had rested and enjoyed that wonderful dream. Moses is ordered to prepare oil for the special purpose of anointing his brother Aaron as high priest, and also to anoint the different articles of furniture which were to be used in the tabernacle, in order to give him and them a certain sanctity in the eyes of the people. The narrative and command are given in such a matter-of-fact way that there cannot be the least doubt that, among ancient nations, especially those with whom the Israelites had come in contact, there must have been in use a similar ceremony of installing the highest officials, kings or priests, into their exalted position. Why oil was poured over their heads, in what connection oil stood with the dignity of the office, what the meaning of the custom was originally, when and where it originated, is more than I can tell, and, I think, more than anybody else can tell. The fact, however, remains that the ceremony of pouring oil upon the head of a person meant to consecrate him for a high political position. The Mosaic constitution had provided for a hierarchical government. The high priest alone was, therefore, to be anointed. After the decline of the primitive priesthood, we find that Samuel anointed Saul, and afterward David, as kings over Israel, and that from that time it became necessary for a king to be anointed in order to be acknowledged by the people as their legitimate sovereign. *Mashiach*, or the anointed, is, therefore, synonymous with the word "king." Whenever, in political language, that word has been made use of, it had no other meaning, and could have had no other, than that of legitimate king. None, however, of all the so-called Messiahs which have appeared in the course of history, has undergone or has found it necessary to undergo the ceremony of having oil poured over his head, which evidently shows that, the original meaning having been forgotten or obliterated by that time, the word "*Mashiach*," or, in the Latin version, "*Messias*," denoted simply a king, but not a divine messenger.

The illustrious reign of David, the independence which the united kingdom of Israel enjoyed during his government, appeared in the next centuries the more glorious, the more the weakness and dependence of Israel were then felt. At a time

when royalty was hereditary and people not seldom waged war to install an infant upon a throne for no other cause than that it was the lineal descendant of a king, it was quite natural that, when, for the first time, the hope of a regeneration of the Israelitish kingdom was expressed, a Messiah, or king, was expected, who, descending from David, would also be heir to his courage, power, and success, and would bring back the glory of the past.

All Messianic expectations centred, therefore, in the requirement of a lineal descent of the Messiah from the Davidian house. None of them, however, has ever proved his descent; and, to-day, such a proof has become entirely impossible, as all traces have been lost.

The absurdity of upholding the hope in the advent of a Messiah in our or any future time will furthermore appear in a still more glaring light, if we take away its theoretical fanciful garment, and translate it into practical reality.

Supposing a person should appear among us who should be equipped with all the necessary testimonials of his divine mission, even of his lineal descent from David, if this could improve his title; supposing he should by some means gather the Israelites from all parts of the world, and settle them again in Palestine,—would this enhance our happiness? Supposing, even, he should find for us room and employment in the new country, supposing all impossibilities should be made possible by him, let me ask the one question, What kind of a government do you think the Messiah would establish? The republican form would be entirely out of question. Just imagine a Messiah elected for a term of one, four, or seven years; just imagine a Messiah passing through the ordeal of a political campaign in which not only his own record, but that of his ancestors upward to David, should be exposed and laid bare to ridicule. No, those who expect a Messiah must give up forever the hope that he would establish a republican government. Would it be a constitutional monarchy? Equally absurd. Imagine a Messiah quarrelling with his parliament, and the latter refusing to vote the necessary appropriations. The only imaginable form of government under a Messiah would be despotism. Under his rule there would be no free thought, no free speech, and surely no free press. No opinion differing from that of the Messiah either in politics or religion would be tolerated, and this we should call happiness? This condition of slavery should be the *ne plus ultra* of our hopes and aspirations? For this state of mental stagnation we should be supposed to pray? Absurd, thrice absurd.

At the time when the Jews were crowded into the Ghetto, at the time when our ancestors were denied the most fundamental of all human rights,—namely, the right to live,—at the time when they were chased from country to country, and had to purchase at heavy expense the privilege of breathing the foul air of their secluded quarters at the time when ignorance ruled supreme among them, and still more among their oppressors,—at such a time, all fanciful hopes and fantastic expectations were permissible, at such a time no picture of Messianic happiness could be overdrawn. Did they care what kind of government a Messiah would institute? Did they care for liberty of speech and freedom of the press? They would have kissed the feet of the most selfish despot, provided he would have granted them recognition, and placed them on an equal footing with their fellow-citizens.

But we, the children of the nineteenth century; we, the free citizens of a free republican country; we, the graduates of the best schools the world

has seen; we, whose hands have learned to fold and cast a ballot,—we do care under what kind of government we are placed; we do love the privileges of a republic, and would not change it for the world with any other form; we do value free thought, free speech, and free press as the highest attainments of humanity, and shall never renounce them. How could we, therefore, be expected to yearn after Messianic despotism, how could we be suspected of infidelity to a country which grants us these boons, and of favoring Palestine, where all these glorious privileges would have no room?

The hope in the advent of a Messiah and in the restoration of Israel is surely dead. It has died out in the heart of every intelligent American Israelite. As, with the increase of knowledge, the horizon of the human mind has been widened, as the universe has grown larger for us than it ever was for by-gone generations, as God even has grown infinitely larger, mightier, and holier than ever, thus our hopes have grown in proportion. They have lost their national character, and have become universal. We have given up all those fanciful notions of a political restoration of Israel by the instrumentality of a Messiah, and have adopted in their place the hope that all humanity will some time reach by steady evolution a degree of happiness far beyond the present and far beyond description,—a state in which the evils still adhering to mankind will be removed and its virtues increased and developed. United and hand in hand with all our human brethren, we shall strive to advance toward this goal; and, if there must be a distinction between us, let it be that of a generous competition as to who shall reach the mark first.

CORRESPONDENCE.

WILLIAM D. KELLEY AND FREE TRADE.

Editors of The Index:—

In the report which the Boston papers gave of Mr. Kelley's address before the Liberal Union Club, I was surprised at his denunciation of the "Italians, Poles, Hungarians, and Bohemians" he found "huddled together" here, on his return from Europe; but I was more than surprised to read "that, whenever a vote of mine shall restrain the importation of these classes, such a measure shall go into effect." I need hardly say the thought suggested itself that only the political sagacity of Mr. Kelley prevented him from including with the above nationalities the Irish and the Germans, as well as the Swedes; and, in truth, the whole theory of protection, if it means anything, means a restriction upon all immigration. If protection is a benefit, to make it a universal benefit, and not a monopoly, a nation must build a Chinese wall about its borders. It can in no other way deal equably with all its citizens; for there are other things besides money, labor, and manufactures which should be protected. There is wit and genius, the product of the brain. Bar out the foreign historians and essayists, and all the foreign scientific men and their productions, the great story-tellers of Europe, and her marvellous painters, and give the poor fellows in America a chance. Who will read —'s histories, when Froude, Green, and Carlyle can be had? Who will read —'s choice English, when Cardinal Newman is on our shelves? What chance for a first-class story-teller here, when Scott and Eliot and Thackeray are so freely allowed us? Doesn't our friend, the protectionist, see how debasing it is to our literature and our science to allow every foreign writer to enter our domain? Just now, all Boston is crowding to hear Canon Farrar. Is it fair to the arch-deacons of the United States to allow this English Churchman to empty their pews and the purses of their parishioners? Or is the growth of literature, science, and art, stimulated by a free interchange of ideas? But, if brain labor is thus bettered, why will not the same

free interchange benefit manual labor? It seems to me we are apt to look at the question of protection just as the hand-loom weavers looked upon the invention of the power loom. It was a severe blow to their special industry, and yet the general welfare of the laboring man was vastly bettered. John Ruskin deplors the building of factories and of railroads, because they deface so much the rural districts of England, and tend so much to destroy the old-time customs; yet every factory and railroad increase the material wealth of the laboring classes, although they may sadly interfere with Ruskin's ideas of beauty and of character. But the paramount objection to the protective theory is rarely touched upon, and that is the moral objection. Now, all trade restrictions, all restrictions upon legitimate commerce, are immoral in their nature and in their practice. Leaving out of consideration the abuses which they always engender, their very creation and existence are contrary to that principle of justice which is the basis of all religions, whether they be heathen or Christian. The Golden Rule is as profitable a guide in commerce as in any other department of life; and to prevent a man from the use of any faculty or talent, because it is more than a match for mine, is one of the worst of tyrannies. As Herbert Spencer says, "Morality knows nothing of geographical boundaries or distinctions of race." I am bound by all the considerations of justice to deal as fairly with my English as with my American brother. To restrict the trade of the Englishman and to allow the trade of the American is to enslave the one and to free the other, and the sin differs from what we call actual slavery only in degree. It is fortunate, however, that, in these mistakes or misdeeds, the punisher suffers as much, if not more, than does the one punished.

CHAS. F. FITZ.

WATERTOWN, Nov. 2, 1885.

"THE POWER NOT OURSELVES."

Editors of *The Index* :—

Will you kindly allow space for the following answers to Mr. Thomas Davidson's questions in *The Index* of Oct. 15, 1885.

Ans. 1. If "the power not ourselves" be many, it must be limited, and therefore imperfect. Perfection is oneness. Manifolddness signifies limits and imperfection. Harmony is one, discord is many. The manifestation of "the power not ourselves" is harmonious; and, therefore, the power must be one.

Ans. 2. There is a limitless force—"power not ourselves"—which, for the want of a better word, I shall call an uncreated life or power; and there is a limited force—the power that is ourselves—which I shall call a created life or power. Those differences which define what we call individuals are not in or of that uncreated power, but are effects or attributes of the limited, created life.

Ans. 3. The created life produces all the phenomena about which we know anything, hence the variety of phenomena. The created life or power is manifold, being the manifestation or reflection of the different parts of the design included in the uncreated life or power. It is spiritual and invisible. Being created and sustained by the uncreated life, it acts and reacts; and we see in matter (its coarser fabric) the manifestation of that action, or the motion produced by it.

Ans. 4. Certainly, this is the only hypothesis that can explain the facts of nature, if by *facts* the writer means the *visible* things in nature; but the limitless force, uncreated life, or "power not ourselves," lies back of these invisible created spiritual lives, is their cause and sustainer.

Ans. 5. Supposing the energy of the universe to be the uncreated life or force and to be multiplex, only a unity of space and interaction would be possible, if that. The writer's meaning by the phrase "unity of space and interaction" is not quite clear to us. Unity of action in space would imply a oneness in wisdom or design. The wisdom or design would really be the force or power itself that produced action; and, if it be multiplex, there could be no unity in the action. For instance, we might call a house a harmonious whole. Many hands unite in its construction, but one mind designed it; and that one mind or that unity of wisdom is the controlling force that produced it, or is the primary cause of it.

If, by the energy of the universe, the writer means the direct cause of the motion of matter, it is not the uncreated life or power, but is the invisible, created,

spiritual life. And the unity of its manifestation—motion in matter—consists in the action of that created life as governed or directed by the uncreated life,—one power.

Ans. 6. The power behind the "intelligible order" of the universe is intelligible in its quality, in its purpose, and in its action.

Ans. 7. Order is more intelligible than disorder, in the same sense that harmony is more intelligible than discord. Harmony is the agreement between parts which together form a connected, therefore intelligible whole; while discord is the absence of that agreement, and its result is not a fact or being. Harmony is the true, and discord is the false. Order is the true, and disorder is the false. That which is must be intelligible; while that which is a false appearance is not, and it is unintelligible because it is not.

Ans. 8. All that is, is intelligible. We could not know (using the word in its true sense,—i.e., to be aware of as true or actual) anything about that which is unknowable, any more than we could know an illusion or dream as a fact or reality.

Ans. 9. That which produces an intelligible order must be intelligent. An intelligible order must be the result of a wisdom or design, or, in other words, the fulfilment of a design or purpose. If that design be not an intelligent design, the fulfilment of it would be disorder, and consequently unintelligible. The intelligible is not necessarily intelligent.

Ans. 10. When we say that a thing is intelligible, we mean that it can be comprehended: that, of course, implies the existence of a power capable of understanding.

Ans. 11. We should say that the necessary correlate of the intelligibility of the universe is to be found in the indefinitely progressive intellectivity of man. When we say that the universe is intelligible, we mean that there exists an ability to understand it,—not necessarily that it is understood.

Ans. 12. If the intelligible were necessarily intelligent, the intelligible being multiplex, the intelligent must also be multiplex; for the intelligent must necessarily be intelligible.

Ans. 13. If all that is intelligible be necessarily intelligent, every action in the world would be an intelligent action: that would, of course, include the "fall of an avalanche," the "actions of madmen," and "reflex muscular actions."

E. J. ARENS.

SOCIETY.

Editors of *The Index* :—

Many words in the English language lose their broad significance by means of a toleration not justified by philology, and this is peculiarly true of the word "society."

Wealth usually tries to place itself at the front, and demands recognition as the exponent of society; but, unfortunately, there are many who have the good fortune to possess large means who are not entitled by education nor any other claim to be looked upon as distinctly deserving of prominence in the community.

Those who have grown up in a locality are almost sure to claim a sort of birthright to be considered the favored ones, and they ask all new-comers to look upon them as the centre of attraction. But, very often, these are more vulgar and ignorant than ancestors who had no leisure for culture, owing to the necessities of their early condition taxing every moment of time to obtain a livelihood. This class is so prejudiced against innovations that they are simply a set by themselves, living on a sort of mutual admiration for each other, because they are the first families.

John G. Saxe happily illustrates this class in "Proud Miss MacBride." He says:—

"Of all the notable things on earth,
The queerest one is pride of birth,
Among our 'fierce democrats'!
A bridge across a hundred years,
Without a prop to save it from sneers,—
Not even a couple of rotten Peers,—
A thing for laughter, sneers, and jeers,
Is American Aristocracy!"

"Depend upon it, my snobbish friend,
Your family thread you can't ascend,
Without good reason to apprehend
You may find it waxed at the farther end."

By some plebeian vocation!
Or, worse than that, your boasted Line
May end in a loop of stronger twine,
That plagued some worthy relation!"

It will not do to say that wealth nor the accident of birth creates that standard expressed by the word "society." In some instances, where colleges and schools abound, the teachers try to make themselves the charmed centres of a circle known as society; and government officials, when they largely predominate, set up the claim; and, while education is inseparable from well-regulated society, those who give their attention to study or teaching have little time to devote to anything else; and government officials are usually the result of association with all these classes, and even those of lower degree, depriving them of the ability to be distinctive in any assertion.

Then there are always a set of upstarts of fortune, fame, or learning, who pretend to an excellence beyond those with whom they had early association, too arrogant and self-conceited to deserve respectful toleration.

The word "society" was not intended to apply to any set in a community; but the true application is to the condition created by all the inhabitants in regard to education, sanitary regulations, protection to each individual, and all that which makes up the true amenities of life, and the standard asserted is regulated according to the higher or lower respect given to these attainments.

J. F. WETMORE.

ALBANY, N.Y.

For *The Index*.

THE LIGHT WITHIN.

Traveller, as thou passest by
Where the roads diverging lie,
Which one chooseth thou, and why?

Right or left or straight ahead,
Which the path thy steps shall tread?
By what motive art thou led?

As I look upon thy face,
In its features can I trace
Aught of comfort to thy race?

Findest thou in church and creed
All the help that thou dost need,
Guidance sure thy steps to lead?

Creeds by mortals were designed,
In them, thou shalt never find
Trace of an Almighty mind.

Dost thou find in human love
Joy all other joys above,
Stay where'er thy steps may rove?

Human love its course may run,
Death may take thy dearest one,
Turning into night thy sun.

Seek within thyself thy stay!
True unto thy soul, thy way
Shall be lit with some bright ray.

But thou sayest, Age will chill;
Slowly on, with footsteps still,
Comes the messenger of ill.

Then, where findest thou the light,
When the soul's enclouded sight
Falters in the coming night?

Then, the banquet o'er, thy place
Thou must learn to leave with grace:
Thou hast had thy life's brief space.

But, when tenement of clay
Falls and falters day by day,
Yet shows fair the spirit's sway,—

Softly falling evening's shade,
Yet thy soul in light arrayed,
In thyself shalt thou be stayed!

ANNA OLCOTT COMMELIN.

HAVE charity, have patience, have mercy. Never bring a human being, however silly, ignorant, or weak, above all, any little child, to shame and confusion of face. Never by petulance, by suspicion, by

ridicule, even by selfish and silly haste, never, above all, by indulging in the devilish pleasure of a sneer, crush what is finest and rouse up what is coarsest in the heart of any fellow-creature."—*Charles Kingsley*.

WHEN a true genius appeareth in the world, you may know him by this infallible sign, that the dunces are all in confederacy against him.—*Swift*.

WE judge ourselves by what we feel capable of doing, while others judge us by what we have already done.—*Longfellow*.

BOOK NOTICES.

THE OLD SOUTH LEAFLETS. Third Series. 1885. Boston: Old South Meeting House.

These leaflets, now bound together in covers, convenient for preservation and reference, originally appeared in leaflet form for free circulation among the attendants upon the Old South Lectures for young people; and the subjects of the leaflets are immediately related to the subjects of the lectures at which they were distributed. Bound together in this form, they make a valuable collection of stirring standard historical documents. This series contains the following leaflets: J. R. Lowell's thrilling poem, "The Present Crisis"; William Lloyd Garrison's memorable "Salutatory" in the *Liberator* of Jan. 1, 1831; part of H. W. Beecher's address at the raising of the flag over the ruins of Fort Sumter in 1865; a description of the battle between the "Monitor" and the "Merrimac" from the *New York Tribune* of March 10, 1862; a portion of the address of Edward Everett at the consecration of the National Cemetery at Gettysburg, Nov. 10, 1863, and the address of President Lincoln on the same occasion; a description of "Sherman's March to the Sea," from his own report; J. R. Lowell's "Ode," recited at the Harvard Commemoration, July 21, 1865; extracts from the Inaugural Addresses and Emancipation Proclamation of President Lincoln and the "Memorial Service over General Grant in Westminster Abbey," from the *London Times* of Aug. 5, 1885.

HISTORIC BOYS: Their Endeavors, their Achievements, and their Times. By E. S. Brooks. New York and London: G. P. Putnam's Sons. 1885. pp. 259.

A very fascinating inducement and introduction to the study of general history are offered to boys in this handsomely bound, quaintly illustrated, and clearly printed volume of stories. Sufficiently lengthy sketches are given of the youthful achievements and daring deeds of twelve historical personages, representing as many different nationalities. Among these are Marcus Aurelius, of Rome; "Brian the Brave," of Ireland; "William the Conqueror," of Normandy; Frederick II., of Germany; Henry V., of England; Louis XIV., of France; and Charles XII., of Sweden. These stories, though told in a lively and interestingly dramatic style, are, as the author states in his preface, "based upon historic facts, and prepared with a due regard to historic and chronologic accuracy." About thirty beautiful engravings illustrate some of the most thrilling events in the lives of these boy heroes.

In the *Art Amateur* for November is the usual variety of criticism on the artistic exhibitions in New York and Boston. The very interesting collection of pictures made in Japan by Allan Lay, formerly so highly esteemed for his court views, is justly praised. Stephen Fiske makes the usual review of theatrical events. We are glad of his condemnation of the character of Madame Judic's acting, and that it can be truly said that "Manager Grau should have known that, in this country, an entertainment which ladies cannot attend is a certain failure." How it clears the atmosphere to raise a standard of moral excellence alike for both sexes, where women must be brave and true and men pure and kind! The sketch of the young painter, Henry Mosler, is very interesting, and is well illustrated by some of his pen sketches, which show a good knowledge of anatomy and vigor of expression. These sketches of the lives of living artists, showing the difficulties in their path and the means of overcoming them, are very helpful to young students. It is interesting to see how often what dilettants call the drudgery of the profession is the stepping-stone to real artistic success. While speaking of American artists, I would like to call the attention of readers of *The Index* to a portrait of

Margaret Foley, the gifted sculptor, whose death was so deeply lamented by a large circle of friends, both in Rome and in Boston. It is a crayon drawing by her sister, and may be seen in the window of Palmer & Bachelder on Tremont Street. Miss Foley has also some works of her sister Margaret which she would like to sell.

The Decorative Art Department offers abundant suggestions to lovers of novelty, even if they wish to put a "blue jay and yellow-headed parrot" on their panels.

THE September number of the *Revue de Belgique* contains articles on living English painters, Egypt and the Mahdi, Tilly and his Walloons, etc., also a curious story of heroism in battle, displayed by a fool who does not know what he is fighting for, and an elaborate review by Count Goblet d'Alviella of Holland's *Rise of Intellectual Liberty*.

Although this work has been eulogized by the secular press, it has been bitterly attacked by the greater part of the religious press, because the author, from the highest intellectual and moral grounds, denounces some of the superstitions which have crept into Christianity as essentially irreligious, and the men who, knowing better, teach those superstitions, as essentially dishonest.

The Religion of Philosophy; OR, THE UNIFICATION OF KNOWLEDGE:

A comparison of the chief philosophical and religious systems of the world, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By RAYMOND S. PERRIN. New York: G. P. Putnam's Sons, 27 and 29 West 23d Street. London: Williams & Norgate. 1885.

"A work which aims to teach a true conception of God, of life, and of morality."

"Mr. Perrin's able work offers a deep interest. . . . It is a remarkable book."—*Morning Post, London, Eng.*

"There has not for a long time appeared any book in the English language which, from the purely intellectual and philosophic side of it, is deserving of a more careful study."—*Times, Philadelphia.*

"It is a work which appeals to the scholarship of the country."—*Prof. Youmans, in the Popular Science Monthly.*

"The author is no imitator. He has a well-defined theory of his own to advocate; and he advocates it with clearness and energy, and does not hesitate to give heavy blows at what he conceives to be the narrow views of most Christian theologians. 'The religion of philosophy,' as delineated, is not simply a scheme of thought: it is broadly and intensely practical."—*Wm. J. Potter, in the Mercury, of New Bedford, Mass.*

"The author makes a masterly analysis of Herbert Spencer's philosophy, and subjects his theory of the *Unknown* to a most close and searching criticism. It is an extraordinary work, one of the most important contributions from the press of recent times."—*F. S., in The Index, Boston.*

"Mr. Perrin writes with habitual good taste and unvarying decorum of the beliefs which he holds false in basis and spurious in sentiment. . . . His sympathy is so frank and so thorough with the true sentiments of Christianity, his aim so high and his argument so modest and earnest, that even those who will repudiate his conclusions will find satisfaction and enjoyment in reading his pages."—*Sunday Herald, Chicago.*

. Large octavo, extra cloth, 566 pages. Clear type. For sale by all book-sellers. Price \$3.50. Also sent, postpaid, on receipt of price by

THE INDEX, 44 Boylston St., Boston.

NEARLY READY:

SCIENTIFIC THEISM.

By FRANCIS ELLINGWOOD ABBOT, PH.D.]

This work includes the substance of a lecture delivered last July at the Concord School of Philosophy. It is part of a new philosophy of Evolution, vitalized by the principle of UNIVERSAL ENDOGENIC TELEOLOGY and by the substitution of the ORGANIC THEORY OF EVOLUTION for the MECHANICAL THEORY advocated by Spencer and Haeckel. Its purpose is to philosophize the scientific method, and to show that modern science, interpreted by its philosophized method rather than by its non-philosophic special results, leads, not to Atheism, not to Agnosticism, not to Idealism, but to a REALISTIC SPIRITUAL THEISM which will satisfy both "the head" and "the heart."

1 vol., 12mo. Price \$2.00.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counter-forces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammeled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly.*

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript.*

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

BOOKS—Twenty Million Dollars

IS PERHAPS AN UNDERESTIMATE of the amount **SAVED** by the American book-buying public as a result of **THE LITERARY REVOLUTION** during the past six years. **THE REVOLUTION** moves **FORWARD**, not backward. It now presents a larger catalogue of better books at lower prices than ever before. To illustrate: the Boston edition of Tennyson's "Enoch Arden," price \$1.25, is reprinted in handsome style, for **2 CENTS**. The best edition ever made in America, and the **ONLY** uniform edition of the **WORKS OF JOHN RUSKIN**, is publishing for the price of **\$18** for the set—**\$600** was paid for the set from which it is reprinted. The following are **SOME** of the Authors now represented in the catalogue which is sent free, by mail, to any applicant, or may be had of enterprising **BOOK-SELLERS** who act as Agents.

Abbott, Jacob.	Bulwer-Lytton.	Dante.	Green, J. R.	Keats.	Ossian.	Rollin.	Thackeray.
Æschylus.	Bunyan.	Darwin.	Greenwood, Grace.	Kennedy.	Ovid.	Rossetti.	Thayer, W. M.
Æsop.	Burke.	D'Aubigne.	Grimm.	Kerrick.	Parion, James.	Ruskin.	Thompson, Maurice.

**Travels in Faith from
Tradition to Reason.**
By **ROBERT C. ADAMS.**

For sale at THE INDEX office. Price \$1.25.

THE PATRONAGE of the liberal advertising public is respectfully solicited for **THE INDEX**. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent. On all advertisements for which cash is paid in advance, a further discount of 25 per cent., on the total as above calculated, will be made.

THE FREETHINKERS' MAGAZINE.

H. L. GREEN, Editor and Publisher.

SALAMANCA, N.Y.

Published bi-monthly. Single copies, 25 cents. \$1.50 per year. The last number out is a very valuable one. Send 25 cents in postage stamps, and it will be forwarded to you.

THE FREETHOUGHT DIRECTORY.

Mr. GREEN is preparing a **FREETHOUGHT DIRECTORY** in which he desires to publish the name and address of every outspoken Freethinker in the United States and Canada. Send your name and address and five two-cent postage stamps, and they will appear in the **DIRECTORY**. Address
H. L. GREEN, Salamanca, N.Y.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The **JOURNAL**, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general approval and higher commendation than any other Spiritist publication.

Cornell Univ Lib

21 270 P

The **JOURNAL** is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The **JOURNAL** is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

THE UNIVERSITY.

FOUNDED 1877.

A Literary and Critical Journal, published every Saturday, at Chicago.

The **University** is not the organ of any college; it is not distinctively an educational paper; but it aims to deal with living topics from the university standpoint,—to reflect the ripest American scholarship in its discussion of politics, religion, education, science, literature, and art in their various bearings. Its publishers solicit the subscription of all persons interested in the support of an independent exponent of liberal culture on a plane of superior excellence.

Price, per year, \$2.50; per copy, 5 cents. Special trial offer to those who see this advertisement. Send 25 two-cent stamps and receive **The University** three months on trial. Specimen copies—three different issues—will be mailed to any address for examination on receipt of 10 cents. Address

THE UNIVERSITY COMPANY,
135 Wabash Avenue, Chicago.

BY B. F. U.

THE President of Dartmouth College, says an exchange, vetoes the opening of the library reading room to students on Sunday afternoons. How much better use of their time will the young men make elsewhere?

In the death of Dr. William B. Carpenter, the eminent English physiologist, which occurred at London last week, the world has lost one of the brightest lights in modern science. He died in his seventy-second year.

MR. GLADSTONE regards the success of his party and the defeat of the Tories, involving of course the disposal of questions which are unavoidable as issues in the present campaign, as of such vast importance that he is quite willing that the question of disestablishment shall be relegated to the remote future.

In referring to the death of Gen. McClellan, the first love and idol of the great army of the Union, the Philadelphia Record says: "Posterity—whose justices, if slow, are sure—will give McClellan his due place among the respectable but unlucky commanders whose fortunes were not commensurate with their merit. It will clear his figure from the confusing mists of extravagant detraction and unmeasured praise, do justice to his motives, and record the purity and unselfishness of his professional character."

MRS. ELIZABETH OAKES SMITH, in a letter to a Long Island paper, thus writes from North Carolina: "The negro no more marries here than does his black brother on the island of Hayti; nor, if he does marry, does he any more respect his vows. Hence, the support and caring for the children devolve almost entirely upon the women. Just within my own area of knowledge are five or six colored girls, with two or three, or even six,

children apiece to support, and neither of them with a husband. The utmost licentiousness prevails among them all."

MRS. ELIZABETH CADY STANTON will pardon us, we know, for giving the following extract from a letter not written for publication: "Well, this has really been the happiest birthday of my life; rich in loving tributes, beautiful presents of books, silver, mosaics, fruits, and flowers, and good words of encouragement in prose and verse. Words of affection and approval, after being so long under the ban of disapproval, are full of consolation, and will gild the sunset of my life. Next to the approbation of our own conscience and judgment, there is nothing we prize more highly than the praise of our friends. To celebrate a birthday, and find out your cardinal virtues while still in the flesh, is better than to die, and have them rehearsed in obituaries, when you are not supposed to hear anything about them."

THE absurdity of having churches dedicated to the service of God and open only one day in the week strikes a writer in the *Christian Advocate* very forcibly. Speaking of New York, he says: "Are not these three hundred locked up churches preaching more effectually during those six days than their pulpits can unpreach on one day the idea that religion is a matter of set times and set circumstances, and not a primal necessity in the last detail of complex human activities? Are they not saying that man is to pay his respects to God on one out of seven days as a matter of course and duty; as for the other six, it is not so very important if any thought be given him." This writer would have Protestant churches, like the Roman Catholic, open every day of the week.

MR. LANGTRY, husband of the professional beauty who bears that name, must be a remarkably good-natured creature. The "beauty," having been summoned into court to pay certain bills, claimed that they were contracted when she was living with her husband, and that therefore he was the responsible party. The said husband states that he is unable to pay the bills, because he is entirely dependent upon an annuity paid him by his wife on condition that he does not "molest" her. It is suggested that this explains why he does not enter proceedings for a divorce. He would have to do so on the money paid him by his wife, who would probably regard herself as "molested" and stop supplies. This is a clear case of female tyranny. Mr. Langtry's position is most embarrassing, and the poor fellow is entitled to the pity of the entire male creation. Men as well as women have "rights."

REV. ROBERT FULTON, a Jesuit, delivered a lecture in this city last week, entitled "Review of Ingersoll." In opening, he stated that he had been "engaged on matters foreign to literary and scientific pursuits,"—a statement fully verified by the lecture. In concluding, he said: "I was at Wakefield a few years ago, lecturing; and, in speaking of Charles Sumner, I mentioned that it would have been better had he died with a recom-

mendation of his sinful soul to God than as he did, saying, 'Take care of the civil rights bill.' I was hissed, but that did not crush me. So it would have been well for these poets [Goethe, Schiller, and Burns] to have thought of their souls. Tom Paine will be in hell, too, and Voltaire. Where else would you suppose them to go? And Spinoza and Hume, Beethoven and Wagner, who, I think, well deserves it for all the torture he has inflicted on us. Hell, Mr. Ingersoll asserts, is heartless. Whatever is heartless, so he thinks, does not exist. Therefore, hell does not exist. Now, as to what Mr. Ingersoll does believe. There is no God, and, therefore, there is no hell; for, since there is no Providence, there can be no law, which always presupposes a higher authority. There is no good or evil, or the two are confounded. This man, worse than a murderer, goes around the country, taking away from every man every reason for doing right, depriving us of a God, making unsafe our lives, our property, and our religion." The lecture was loudly applauded,—a circumstance which sufficiently indicated the calibre and culture of the audience.

THE tragedy in the North-west has ended in the execution of Riel, who met his fate with courage and with the glow of the religious devotee on his face. His crime was unsuccessful armed resistance to constituted authority. He was, no doubt, a fanatic, and much that is said in regard to his cruelty and unscrupulousness may be true; but the fact that the revolt which he headed had its origin in acknowledged injustice in the treatment of the half-breeds, and could have been averted by prompt recognition and redress by the government of half-breed grievances, should have mitigated the severity of Louis Riel's sentence, which, it must be said, was due as much to the folly of his friends and sympathizers as to the frightened condition of those who clamored for his death. Riel dead may be more powerful than Riel living, and we expect to see soon both political parties in Canada demanding land reform for the half-breeds.

THERE is no doubt, as Mr. Chamberlain lately said, that the time is fast approaching when Parliament will disestablish the English Church. That Mr. Gladstone clearly sees this is evident from his Edinburgh speech of the 11th inst. But the question will not receive its final settlement, and it is doubtful whether it will even be introduced in the next Parliament. There is still considerable opposition to be overcome, in the form of prejudice, religious bigotry, church livings, church and party affiliations, general conservatism, etc., before the problem can be solved; and leaders like Lord Salisbury are sure to avail themselves of this opposition as long as possible, to secure the extension of Tory influence. But the Tories are being forced by political exigencies into concession after concession, as seen in their admission of the right of Ireland to some kind of local self-government; and they may yet be compelled to support disestablishment, which they are now using as a scare to weaken the Liberal party.

WILLIAM LLOYD GARRISON.

The Century Company of New York has issued two elegant volumes entitled *William Lloyd Garrison: The Story of his Life told by his Children*. Each of these volumes contains about five hundred pages, and yet the story is brought down only to the year 1840. It covers, therefore, but a little more than ten years of the anti-slavery struggle after Garrison enlisted in it. Evidently, the completed work is intended to be an exhaustive history of Garrison's life and times. There could be, indeed, no true "Life" of the man without taking in also all the important reformatory and humane interests of the time in which he lived. And, if these two volumes may be taken for a sample, the work is to be not merely a filial tribute to the moral greatness of the man, but a conscientious and painstaking record of that greatest moral contest, with its various ramifications, which this or any nation has known in modern times, and of which the subject of this "Story" was the centre,—the contest against slavery. This institution was so rooted in the social and industrial system of the Southern States, and had such strong guarantees in the national Constitution, that the whole nation was shaken in the struggle to throw it off, and all the great interests of society—political, social, commercial, philanthropic, religious—were involved in the struggle. The Civil War was only the culmination of the moral contest that preceded. Of this long and terrible conflict, William Lloyd Garrison represented pre-eminently the moral forces. As Wendell Phillips said of him, he was the "one man north of Mason and Dixon's line who was able to confront the logic of John C. Calhoun and South Carolina with an assertion direct and broad enough to make an issue and necessitate a conflict of two civilizations."

This, of course, is not to say that there were not many others who rendered most important service, and were in the front rank of the moral host that went into the battle against slavery. There were those in the ranks more eloquent and learned than he, those who had more various intellectual ability, and those, too, who stood no whit behind him in earnestness of moral purpose and readiness for self-sacrifice. Yet it was his voice, with its direct, trumpet-toned appeal to conscience, which first rallied and organized those who were like-minded and like-hearted on the moral principle of immediate emancipation as a duty; and it was his clear moral vision, never dimmed nor wavering, and his intrepid moral will, that, through all the vicissitudes of the struggle, kept that goal in view, and steadied the march toward it. He had the prophet's vision and the prophet's power. In many of his characteristics, he closely resembled the old Hebrew prophets, whose words were mighty weapons in his hands. It was through the inspiration of his exceptional moral genius that he became the natural and acknowledged leader of the anti-slavery army. By this moral genius, all his faculties of mind and heart were focalized on one object. Not the first to enunciate the doctrine of immediate abolition, he was the first to make it the rallying-cry for an organized effort which made itself heard through the land. The now oft-quoted words from the first number of the *Liberator* marked the prophetic character of the man. They would have been mere bombast, had they not been inspired by a moral conviction as genuine and deep as it was intense. Two years later, when the first anti-slavery society was organized in New England, by some dozen persons who met in a school-room under an African church in Boston, Garrison

said, on leaving the room: "We have met to-night in this obscure school-house; our members are few and our influence limited; but, mark my prediction, Faneuil Hall shall ere long echo with the principles we have set forth. We shall shake the nation by their mighty power." And this prophecy he uttered, notwithstanding that some of the best educated and most wealthy among his friends up to that time had hesitated about making a declaration of the doctrine of immediate emancipation a condition of membership in the society, and had not yet signed the statement of principles. He planted himself uncompromisingly on moral ground, and took no account of questions of expediency or policy; and so firm was his belief in the victory of the right that he could never doubt the final success of his cause.

It is reason for rejoicing that the career of such a man is to be so fully and worthily given to the world. A chapter is devoted to his ancestry, with vivid glimpses of his father and mother; and then comes a description of his boyhood, which was all too short,—for, on account of a keen struggle with poverty, he was doing man's work while yet in his teens. He was early apprenticed to type-setting in a newspaper office, and began writing anonymously for the paper on which he worked, when only sixteen years old. At twenty years, he was editor and publisher of a paper of his own! Then follow two or three chapters on editorial experiments and enterprises in various places, including the experience in prison at Baltimore for too plainly printing his thoughts on the slave system, during which the boy was intellectually and morally ripening into the man who, at twenty-five, launched the *Liberator* in Boston. Then the great public story really begins. Before a year passed, the young man, as he had prophesied, had been effectually heard. Demands came up from the South that he and his "incendiary" paper be suppressed. But, though Boston could mob him, there was no legal power in the city nor State to stop him. Irresistibly, the tragic drama went on; and these books faithfully unfold it from the files of the *Liberator* itself, from Garrison's extensive correspondence, and from other contemporaneous public and private records.

The early conflict with the old Colonization Society; the episode of the persecution of Prudence Crandall in Connecticut for admitting a colored pupil to her school; the organization at Philadelphia of the famous American Anti-slavery Society; Garrison's missions to England; the work of George Thompson in this country; the two Boston mobs; the mobocratic burning of Pennsylvania Hall, which had been dedicated to free speech; Garrison's growing interest in other reforms, as peace, non resistance, the elevation of woman, a rational use of "the Sabbath," a more rational and humane religion; his disappointment in the churches because of their lukewarmness or opposition to the abolition movement; the suspicious and machinations of the clerical party against him; the growth of contentions in the anti-slavery ranks, the schism which finally separated the "Liberty Party" from the Garrisonian Abolitionists; the "World's Convention" in London, to which Lucretia Mott, because a woman, was refused admittance, and from which, in consequence, Garrison also withdrew as a delegate,—these topics mark the steps of the story up to the important year of 1840. And every chapter gives evidence of careful research and labor.

The publishers have done their part well. Portraits of Garrison at different ages, and of several of his co-laborers, adorn and add value to the volumes, which are in every way worthy of their eminent subject. The volumes which are to come

will doubtless tell more of the personal and private life of the man; and, indeed, this is promised by the sons who sign the preface to the work. They also intimate that, while the "fundamental characteristics" of their father are given in these volumes, a final judgment upon his career must be reserved till the history is completed. He grew after the time that these volumes end; and he lived to see his life's mission accomplished, as it is given to few reformers to do.

WM. J. POTTER.

METHUSELAH AND METHUSELAH.

In the Calaveras grove of Sequoias, I saw a colossal tree which Californians had called Methuselah. It was prostrate. We do not know how long it lived or when it fell. It was very old. Its span of life, perchance, was two thousand years. It may have been a sapling when Alexander the Great went to the conquest of Asia. Through what events it has lived! What events has it recorded? We pass inward through the rings of growth, and read. Under five hundred rings, we find traces of fire. Digger Indians were in this grove five hundred years ago, and their camp-fire singed the tree. We pass inward through other rings, and find that eight hundred years ago a squirrel nested in a scar left by a fallen branch. Grisly bears were scratching the great bole a thousand years ago. We pass inward to the heart, and find in the gnarled wood a record of storms that beat against the sapling.

This is all. The pelting of storms, the scratching of bears, the nesting of a squirrel, the singeing of fire,—this is all of world-history which the great Methuselah through a life of two thousand years has recorded.

There was another Methuselah. What was his life-record? Here it is: "And Methuselah lived an hundred eighty and seven years, and begat Lamech. And Methuselah lived after he begat Lamech seven hundred eighty and two years, and begat sons and daughters. And all the days of Methuselah were nine hundred sixty and nine years; and he died." This is all. "And he died." This was the end of all. Gulliver found in the land of Luggnag a class of men called Struldbrugs. They were doomed to an immortality in the flesh. The Gulliver who wrote the Book of Genesis found this Struldbrug Methuselah; and all that he has to record is that he begat sons and daughters, and endured nine hundred and sixty-nine years.

There was another Struldbrug in Greece. His name was Tithonus. He lived through the allotted span of mortals, and began to wither. The gods at last were moved to pity, and they changed him into a grasshopper. The change was slight, natural, and not miraculous. The Greek Methuselah simply glided down along the slope of age into a grasshopper. Our Methuselah glided along through nine hundred and sixty-nine years, and his Gulliver records of him not even a Tithonic chirp. Whether he went to pieces at last like the deacon's one-horse shay, or whether he became

"A high-elbowed grig"

and chirped over the grass, his biographer tells us not.

"Little of all we value here
Wakes on the morn of its hundredth year,
Without both feeling and looking queer."

When Tithonus was a hundred, his wife shut him up in a pantry. When a Struldbrug attained the age of two hundred, the Luggnags enclosed it in a pen. I use the neuter pronoun advisedly. Swedenborg saw in Hades a certain old ghost who had sunk so low that other ghosts called him "it." It lived—Methuselah, we mean—in the gray morning

of our race. We place it with Methuselah, the tree, as a text to this lay sermon for the science it may teach.

In the gray morning of life itself there lived in the oceans a mollusk, whose nearest of kin in our own seas is the chambered Nautilus. We know it under the name of Goniatite. It housed itself in a chambered shell. The partition walls were slightly flexed. The surface of the shell was smooth. As time passed, the descendants of Goniatite were flexing more and more their shell-walls, and Goniatite passed into Ceretite. The septa, or partitions, were now bent into pectinated lobes, and the shell surface was striated. Time passed,—such æons as the rocks alone record,—and the curvatures of the septa were growing more and more complex. At last, they were crumpled into a labyrinth of curves; and the Ceretite passed into an Ammonite. The surface of the first Ammonite shell was striated. As time passed, the striæ were rising into ridges. The ridges broke up into tubercles, and the tubercles rose at last into spines.

Goniatite recorded no history save the simple life history of the individual. The septa from infancy to age were the same. The Ceretite began life as a Goniatite. Its septa at first were slightly flexed. As the shell grew, the septa became pectinated. When the Ammonite came, it began life as a Goniatite. Throwing off this historic form, its septa became pectinated, and its life was that of a Ceretite. Passing this stage, its septa became a labyrinth of curves. In youth, this race of chambered shells lived as if there were no history behind. The shell knew nothing or remembered nothing of a past. In the Jurassic age, when the race had reached its culmination, the Ammonite lived as if conscious of the æons behind it. Its infancy was in the carboniferous age, with the Goniatite. In youth, it lived in Devonian seas with the Ceretite. In early prime, it lived again the life of the first Ammonite of its line; and the shell it wrought was faintly ornamented with striæ. The next stage of its life was in recollection of the spired and embossed Ammonite which adorned the seas of the early Jurassic. Having epitomized in its own life the cyclic life of its race, it died, leaving its shell a rich legacy to the mind of forthcoming man. Analogous to the life history of the order of chambered shells is the life history of the race of man. The wealth of individual life increases with the increasing age of the race.

Our Goniatite was the primeval man. Let Methuselah have his years unchallenged. What were they? Each new whorl in the chambered house of Goniatite was in the same plane with the last, each new chamber in the same pattern as the last, each new partition flexed in the same curve as the last. A thousand years of Goniatite would have been as a day.

Methuselah's life moved on, twisting itself around in the same plane. He had no history to learn, and he made no history. "Day unto day uttereth speech,"—the same speech. A word about the bite of an adder, the spring of a tiger, the night roar of a lion; kine, camels, tents,—these were boundaries to the horizon of his mind-life. "The lilies of the field" he did not consider. He had no theory about the origin of species. The stars, if he considered them at all, he believed, as his biographer believed, that they were lights placed in a vault, hammered out of something by the Elohim, or powerful ones. He never heard of a nebular theory. Nor did the Milky Way ever suggest to him the semblance of

"A swarm of fire-flies tangled in a silver braid."

His thought was no more Tennysonian than Newtonic. His imagination was bounded by the

world-roof which held the stars. Or, if his fancy pierced the roof, it pictured above only water and gods. Perchance he began to feel the dread which, in after years, created the flood myth,—dread that the firmament might spring a-leak, and the waters above fall in a deluge on the earth.

As Goniatite's shell was a repetition of identical flexures and chambers, so Methuselah's life was an idle repetition of days and months and centuries. Methuselah, the tree, lived on, adding the same fibre to its bole and repeating the same cone on its boughs. An inventory at the age of a thousand years would have been the same as an inventory at the age of a hundred,—only a few bear scratches the more, and a few more singes of fire. An inventory of Methuselah at nine hundred would have been the same as at fifty,—the same fibre in his thought and the same scanty leafage of sentiment, only a few more cones—sons and daughters—on his bough.

No poet could have picked up on the shores of a carboniferous sea a Goniatite which built more spacious chambers as the seasons passed, and made it the text of a song to this Goniatite of men:—

"Build thee more stately mansions, O my soul,
As the swift seasons roll!
Leave thy low-vaulted past!
Let each new temple, nobler than the last,
Shut thee from heaven by a dome more vast,
Till thou at length art free,
Leaving thine outgrown shell by life's unresting sea."

The last chamber was as the first, and the shell of that longest of human lives lies stranded as rubbish on the shore of our palæozoic sea.

You are, or should be, the Ammonite of man, your mind-life cycling through the vast æons behind you. You explore the lost continent of Lemuria, and live with troglodytes of the prime. You build again the circular hut over Lake Leman and the stone pueblo on the cliffs of Arizona. You follow again the wandering herds over the steppes of Asia, and sing again the nature hymns which, under the domes of Himalaya, broke from the lips of a shepherd race, when man was waking from the slumber of animalism. You stand with Abraham at the door of his tent in Mamre, and whisper to his dawning thought that the angels, who eat his kid and cake, are men with like passions as himself. You join the throng which listens to the blind Homer, and see that, like the Jurassic Ammonite, so the mind of man has cycled up into an era of ornamentation. You watch the marble under the hand of Phidias. You walk through Athenian groves with Plato, and see the human mind strike its wing against the highest azure in the heaven of thought. The Cæsars are your countrymen and contemporaries. Lemuria, Atlantis, Asia, Europe,—you live in every land that was and in all lands that are. You

"Watch, like God, the rolling hours";

and your mind-life is an arch which spans the abysses of time, from the morning of creation till now. You forerun your times, and plant your feet

"In midst of knowledge dreamed not yet";

and your thoughts converse with men who hold dominion over nature and the passions of their own nature. "Thought is life"; and, in you, time, space, star, mountain, ocean,—all things,—minister to a life intense. If Methuselah ever saw the sea, it gave no more wing to his thoughts than it had given to his prototype, the Goniatite. "Atrugetos," the unfruitful; "Thalassa," the laughing; "Polyphloisboios," the many-voiced,—these are all the words which the ocean spoke, even to the Greek. What does Polyphloisboios,

the many-voiced preacher, say to you, the heir of all that men have felt, thought, said, and been? I, who embosomed the simple life of Goniatite and the life of historic lore, lived by the Ammonite. I, who record the mutations of life, am myself mutable. Every drop has laved the body of a Saurian, whose race is entombed in rocks formed on my floor. Every drop has thrilled under beams of an equatorial sun. Every drop has been locked in fetters of polar ice. Every drop has risen volitant, and sailed in argosies of cloud over mountain and plain. Every drop has been pencilled by the sun into burnished glories of sunset and dawn. Every drop has broken beams of light into color, and arched the earth with an iris of beauty. Every drop has fallen in crystalline rosettes of snow. Every drop has distilled in life-giving rain. Every drop has babbled in stony brooks, has plunged over the rim of Niagara and Yosemite, has joined a brimming river, and flowed back into the bosom of the deep, whence it rose.

So does Polyphloisboios, silent to Methuselah, speak to you. And so mountains, suns, all things which science has voiced, minister to the mind-life in you who span with a day the nine hundred sixty and nine years of Methuselah, as the Ammonite spanned, with its first infantile whorl, the entire shell-life of the Goniatite.

W. D. GUNNING.

CAUSES RETARDING OUR RELIGIOUS PROGRESS.

In *The Index* of October 8, we dwelt on the influences on Protestantism in this country, accelerating progress in religious belief. It is the province of the present writing to adduce what appears to be the more important causes retarding that progress. In noting these, however, we pass by any consideration of the Anglo-Saxon veneration for precedent, which characteristic French and German critics of our civilization seldom fail to touch upon.

The first reason naturally arising is, that the passion for material gratification has been so controlling, while the conditions of equality and opportunity have so greatly ministered to it, that the spur of "noble discontent," which pricks the mind to interrogate religious or political dogmas, lacked the requisite sharpness. The democratic character of Calvinism, respecting church government and worship, has constituted a binding link between it and the American people. The organization, and the clergy themselves, being so largely under the control of the laymen, the desire for autonomy, marking a free and self-reliant people, was satisfied, and a variable standard of ethics secured, sufficiently conforming to the prevailing influences in the practical world. As to the drift of Anglo-Saxon energy, the pulpit permitted it such free course that the unideal pew-holders, absorbed and unrestrained in the pursuit of money-getting, were hardly disposed to question ecclesiastical authority in matters of theological belief. The transcendent importance of securing salvation in the next world might be the central idea of every Sunday's homily, but the preacher manifested due sympathy with his hearers' overmastering love of the good things of earth. In temporal affairs, the American clergy have shown somewhat remarkable facility of conformity to the uncontrollable tendencies of our mutable and material democracy. By reason of their discreet maintenance of a non-interference attitude toward politics and the business life of the community and of the separation of Church and State, they have escaped much jealous hostility. Their tenure of power has been more

enduring, less subject to those changing and disturbing agencies at work in the secular world. No such antagonism between the Church and the friends of political liberty has been experienced as marks the history of France during more than a century past.

But while the clergy, except in the days of the Puritan theocracy of New England, have not encroached upon those dangerous fields of passionate energy and fluctuation, politics and business, they have wielded enormous power over the two fundamental forces in our civilization, the home and the school-house. Woman—by reason, especially in the past, of little opportunity; by reason of a narrow public opinion respecting rights and privileges, the exercise of which sharpens the faculty of common sense; by reason, indeed, of the naturally more limited and petty sphere of her activities—clings with greater tenacity to religious traditions than man. She is, therefore, the more fixed ally of the Orthodox Church, to whom is due the possibility of sustaining life in many a community. It has been the writer's observation in these days of religious disintegration that division in the household is a common state, in the sense that the husband is fastening or has fastened to the new order of thought, while the wife adheres steadfastly to the old. In many homes the pastor has prejudiced the female mind—rendering it stationary—against all clergymen, books, or periodicals expounding progressive ideas in religion. If it be true that "who rocks the cradle rules the world," is not here a centre of great retarding influence?

As to the other social force, that of education, it has been until within a few years, and very largely is yet, under the domination of the Church. From its intolerant bosom have come the professors and faculties in our colleges, and teachers generally, from the highest institution of learning to the lowest primary school. Being shackled by the dogma of an infallible Bible and by an idolatrous reverence of authority and of the past, the clergy naturally cherished paternal ideas about education, and exalted learning exhaling conservatism above science, whose spirit is innovating and progressive. Therefore, under their ascendancy, the range of studies was narrow and classical, and little heed given to differences in inclination and purpose, which, happily, are beginning to obtain recognition in the extending application (notably by Michigan University) of the principle permitting the student to form his own curriculum. The text-books in our schools and the volumes in our public libraries were generally selected with a jealous exclusion of all knowledge contravening the theology of the Church. Every avenue to healthful scepticism and untrammelled thought was guarded with anxious precaution. This crippling supremacy in matters of education may still be witnessed in the Southern States, where the theological training is given to a much larger number of students in the higher institutions of learning than the scientific or practical; where not only are the instructors in the sectarian colleges and seminaries required to be communicants, but even in the State universities the faculties bear the orthodox stamp. The same sort of conservatism characterizing ecclesiasticism, whenever in full control of the forces of society, obstructs to this day the growth of liberal ideas at the South, in almost every sphere of human interest.

Another influence retarding religious progress takes its source in cowardly fear of or unself-reliant deference to the opinion of the majority. The real strength of the majority is much magnified, because of this very feeling constraining many, in outward appearances at least, to help constitute that majority. The process of change

in belief, therefore, works in secret longer before giving vent in open expression. De Tocqueville, in his *Democracy in America*, discerningly observed that religion held sway among us "less as a doctrine of revelation than as a commonly received opinion," and because of faith in and fear of that opinion "hypocrisy is common." Since, in the composition of public sentiment, the cerebellum, so to speak, of our democracy, or ignorance massed, weighs down the cerebrum, there could not be such boldness and freedom of speculation on religious subjects as have distinguished for about a century the civilization of Germany, where literature is produced almost wholly with reference to the cultivated classes.

How many clergymen, from sheer moral cowardice, are but intellectual slaves in the pulpit, time-serving mouth-pieces of a dead or dying theology, giving forth no inspiration, no holy aspiration, in life! The religion of tradition is thus expounded from Sunday to Sunday until, through the current literature of the day, or a chance book, or, mayhap, hearing or reading the discourse of some contemporary minister of manly and progressive mind, the new thought finds ingress to the souls of the pew-holders; and they at last are pushed into some half-declaration of it. Doubtless, many a clergyman, accepting more or less in his private heart the new truth, voices in his pulpit the old, under a mistaken apprehension that the congregation are hopelessly wedded to it. Since religious change is nearly always a process of evolution rather than revolution, if the clergyman of this class will reflect in his sermons (exercising due tact in doing so) his own gradual expansion of belief, he may likely realize that a transition from the old to the new thought can be made with no serious breach between himself and congregation.

If yet another reason for the slow growth of liberal ideas in religion be desired, it may be found in an attitude of mind altogether too common among every civilized people. It was an observation of Cicero that there is a religion for the cultivated and one for the vulgar,—an observation having more significance for his day than ours, or for an aristocracy than a democracy, owing to the great difference in the diffusion of knowledge. Now there are many of the former class who, on the supposition that they are serving the common weal, sustain to religion the relation of professed believers in what they do not believe. They assume that the inculcation of more or less dead belief ministers to the happiness and virtue of the other class they deem not prepared for something better. This is the patronizing feeling which maintains a State Church long after its creed has become a mummy in the temple of the living God. As, for political reasons, the Roman Stoic, and even the Epicurean, performed the rites of a State religion they secretly despised, as many cultivated Englishmen, for like reasons, render perfunctory service in their established Church, so, also, in our American democracy the State policy view holds many in the Orthodox Church who no more cherish certain of its dogmas as true than the Stoics did the Greek myths, whose inward attitude toward those dogmas we fancy little better than the insincerity of the Roman augurs, concerning whom the sham-hating Cato wondered how two of them could look each other in the face without smiling. Of what hollowness, corruption, and irreverent scepticism have not the cant and hypocrisy herein involved been the parent? This is the true infidelity. Considering that a large proportion of the very class for whose benefit, chiefly, this make-belief is kept up have become themselves non-believers, and, partly for this reason, non-church-goers, does

it not appear that hereby is rendered exceeding poor service to society?

GEORGE W. BUCKLEY.

"PREPARATION FOR DEATH."

A "tract" was handed me on the train, headed "Are you prepared to die?" And a weapon was presented,—the sword of the gospel." But I did not care to die in that way, and so urged the tract-distributor on, to a good orthodox brother some seats ahead, whom I knew to be so happy in his expectation of a spacial heaven by and by as often to sigh to depart. But the tract set me thinking; and I recalled Emerson's word, "The universe was made at one cast,"—a word formulated also by philosophers centuries ago.

The universe made at one cast! Its laws, then, throughout, are one. And man is of a piece with it all. Man is not an anomaly in the universe, thrust in by creative fiat a few thousands of years since. But rather, he has been in process of becoming since first the nebulous mass swept to and fro millions on millions of years back, when as yet there was no single star or planet condensed throughout all the chaos, much less a habitable earth. Man was potential in the primeval fire-mist, and is a product of the ever-on-going, evolving laws of the universe, which have been in operation through countless periods. The continued life of man to-day is still the ongoing of these same laws; of the laws which, hundreds of thousands of years back, first started him onward upon his way, and which, through higher and ever higher forms, have developed him from the lower organizations which went before. A product of the universe's forces, man's highest life to-day is in implicit obedience to and co-operation with the forces which have made him what he is. His best life cannot be something different from this.

Man in his origin sprang from the universe's heart; and, in his present and his future, he is linked forever, in some way, with the universe's highest life. This is "life eternal,"—this is the beginning and end of all religion,—this is "salvation" complete and thorough: to know the highest ways and means of existence; to know the beauty of the world around about, and take it into one's life; to know the bliss of earnest, continual co-operation with all life's upward-tending energies, and to live in hearty labor with, and faith in, these.

This, and this alone, is true "salvation" and true "preparation for death,"—so to live, day by day, in truth and love and honesty and temperance and upward-striving as to make the most of one's self here and now on earth, in every possible direction, following with careful search and obedient heart every helpful energy and idea. For this is to be in true and complete communion with the God-power throbbing through all, whose life is the life that has formed us, and that still makes our existence, and will always make it. Moreover, to be thus in true and helpful accord with the universe's good forces now is to be so in accord with those forces always, is to be ready for any life or any future that death or time may ever bring. All the universe is natural. There is nothing about human life here, there will be nothing about it ever, that is not of a piece with and like the forces that have developed it. The future, whatever it shall prove, will not be, cannot be, something entirely new and different from the present.

Let me live now, then. The universe was made at one cast. The power that throbs through it is one, and will always be the same. Then let me truly live now. For would we, any of us, be

truly saved, we must face the universe and human life and all the forces of good and evil about us, bravely and honestly, and by true communion—that is, co-operation—with the powers of right and of love, help build ourselves up now and for all time.

"Each man, in this world, has his lampful of oil:
He may dull its glimmer with sorrow and toil,
He may leave it unlit, and let it dry,
Or wave it aloft, and hold it high.
For mine, it shall burn with a fearless flame,
In the front of the darkness that has no name."

But there is my "gospel-distributor," two cars ahead, just passing through to check the remainder of his tracts as "baggage"; and, as the train whirls along, I look out of the window again to enjoy the autumn foliage and be glad in a beautiful world.

JAMES H. WEST.

EDITORIAL NOTES.

BY B. F. U.

THE publication office of the *Rundschau*, Mr. Fritz Schültz, editor, has been removed from Carver to New Ulm, Minn.

"THE CARPENTER'S SON," by Rabbi Schindler, the third of his series of lectures on "Messianic Expectations," will be printed in *The Index* next week.

A WRITER in the Boston Sunday *Herald* asks: "Why does it not occur to the Boston parsons, when discussing the ethics of Sunday newspapers, to treat of Monday morning newspapers, which, as they must know, are largely written, set up, and 'made up' on the 'holy Sabbath'? I wonder if any of them forego the luxury of their Monday morning journals on this score, or the comfort of a hot muffin because the yeast in it was 'working' on Sunday?"

THE *Spiritual Offering*, referring to Mrs. Elizabeth Cady Stanton's seventieth birthday, says: "The first time we heard her speak, more than twenty years ago, and listened to her logical, unanswerable arguments, noticed her dignified, statesman-like appearance before the vast assembly, we were reminded of Charles Sumner's demeanor in the United States Senate, which more nearly resembled our conception of an ancient Roman Senator than any other we had ever seen. After the close of Mrs. Stanton's address on the occasion referred to, our remark to a friend was, 'I hope to live to see Mrs. Stanton in the United States Senate.' That we shall probably not see; but she has done more than any one else ever did to open the way for some other women to occupy that place. Mrs. Stanton would not be specially honored, were she to occupy the position. The Senate would be."

SCARCELY a decade ago there died a well-known citizen of our metropolis, who, in the utmost stretch of charity, could not but have been assumed to have some grave financial sins to confess before God and to atone for to man. As he lay upon his dying-bed, he reiterated with solemn assurance to his pastor the fact that he had never doubted the Bible, and evidently took infinite comfort to his soul therefrom. A little manly restitution to the public would seem to the average human eye to have been a much better shrift for his soul than such a confession of unquestioning belief in any book whatever. To have been able to say, "I have tried to live by the Bible," ought, to reasonable beings, to have been something nobler for a dying man to say than to affirm, as the security of the soul, "I have believed in the Bible." Yet such was the fatuous folly of religion but a few years ago throughout

our Christian Churches; and such is it to-day among hosts of men who call themselves reasonable beings that this confession of faith counted for more than a Zacchæus-like confession of restitution.—*R. Heber Newton.*

SAYS the *Graphic*:—

A very common belief is that women, even when studious, are rather literary than scientific. Statistics prove either that they are changing in this regard or that the notion is erroneous. The great majority of the women at the universities of Zürich and Geneva study, not letters, but science and medicine. M. Ernest Legouvé reported in a recent competition for fellowships in the University of France: "The papers of the scientific candidates were greatly superior to those of letters. The result contradicts a very general opinion, which I myself have strongly supported, that scientific studies, the abstract sciences and mathematics, must hold a subordinate place in women's education, because they are incompatible with the nature of the female intellect. We have been mistaken." In England, Miss Ormerod has distinguished herself by her observations on insect life. Very recently, a paper was read before the Mathematical Society of London, by Mrs. Bryant, Sc.D., on the geometrical form of perfectly regular cell structure, illustrated by models of cube and rhombic dedecahedron. In another section, Mme. Traube Meugarini studies the function of the brain in fishes; while, in our own country, Mrs. Treat and others have made valuable progress in scientific research.

DR. MONROE, in his *Iron-clad Age*,—which, he says, is the only atheistic paper published in America,—is emphatic in his rejection of the claims of spiritualism. "When," he says, "we see a ghost without the aid of a medium, and where human agency is impossible, we shall begin to take treatment for optical delusion or softening of the brain. And, if the spirit keeps on appearing, we shall apply for admission in an asylum for the insane. When we see one by the aid of a medium, we shall set it down as a deception and fraud, and shall so continue to set it down till we pass to spirit life. We have beloved ones dead who would be materializing here every day, were such a thing a possibility in nature. However we may long for a reunion with loved ones in another life,—however we may long for immortality,—the melancholy fact remains that the dead are dead. They are dead here and dead everywhere. They are dead from head to heel. They are dead clear through and all over. They are entirely dead, and we warrant them to stay dead. We will go any dead man's security for a million, the conditions being that he shall stay dead and stay away."

SAYS the *Montreal Star*: "We call upon the poor to be honest, prudent, temperate, industrious, and humble. Well, who is showing them an example? We really ask them to live a kind of ideal life, to have unbounded faith in principles, to struggle, under disadvantageous circumstances, with temptations that are too much for many in higher station. It is asking a great deal. Does it not seem as if the more favored classes should move first in this matter of moral reform? If the poor could see that the rich, or those whom they regard as the rich, were living earnest lives, earning honest money, and spending it in a reasonable way, without undue ostentation, and with a manifest sense of social responsibility, they would be encouraged to fight their own battles more strenuously. What is wanted on the part of the so-called 'upper classes' is, not a certain quota of benevolence by the way of redeeming their lives from the appearance of complete selfishness, but a serious study of their responsibilities, and the government of their lives in general upon right and reasonable principles. There are duties for all, for rich as well as for poor; and if the rich will only find out what their duties are, and do them, some social problems will perhaps begin to look more hopeful."

OUR venerable friend, Prof. J. B. Turner, of Jacksonville, Ill., writes: "—has gone, I trust, to the better world. I trust, I say: I do not say I know; for, in that severe scientific sense in which you philosophers use the term 'know,' no man knows what will be five minutes hence, outside of demonstrable physical truths, and not strictly even there. Still, we all have to act continually on ideals of the future not at all demonstrable; and we say in general terms that we know this and that will be, when, strictly speaking, we really, in the rigorous sense, know nothing at all about it,—that is, our realm of absolute knowledge is exceedingly narrow and shallow, our realm of practical 'trustful' knowledge far wider and deeper. But this realm is liable to the greatest abuses private and public, so that I entirely sympathize with you in striving to hold a *very taut* rein over it, far more taut than is usually done, especially by the ecclesiastics of all ages and sects. Still, we must not rein this wild colt of humanity in so taut as to break down his finest spirit and hopes, even if their basis is not perfectly demonstrable to all alike. The devil of all bigotries lies in the attempt to force all on earth to march *exactly* in line of some imposed belief or unbelief. Let the colts prance a little, where it does no serious mischief. Even if nothing comes of it but the 'fever of prancing,' it helps to increase their real strength and speed."

For *The Index*.

THROUGH DOUBT TO LIGHT.

I stood alone, the creeds to which
My soul had always clung gave way,
And round me surged a sea of doubt
Whose restless waves I could not stay.

Life lost its meaning, and the grave
Seemed unto me the end of all.
Goodness was nothing, and from heaven
I feared that God himself must fall.

Friends turned from me, and counsellors
Upon my doubts could only frown.
Was it the glare of hell I caught,
Or light from heaven cast down?

I could not tell, but soon I saw
Old landmarks rise in that dark sea.
If heaven must pass like some burnt scroll,
This earth, at least, was left to me.

If all religious truth was dead,
Yet moral truth untouched might live;
If there should be no other life,
I'd have the best that this could give.

"Better," I said, "is truth than lies,
Better the generous than the mean,
Better the brave than coward act,
Better the chaste than the unclean."

My feet upon this rock I stayed,
And slowly sank the waves of doubt:
With fear and trembling, thus it was
I wrought my own salvation out.

Creeds grew to me but empty husks
On which I could not feed my soul,
While moral and religious truth
Blended in one harmonious whole.

New faith in human nature rose
From the broad, open sea of thought,
As statues in the marble hid
Are by the stroke of genius wrought.

'Twas always there,—this glorious faith,—
But cramped and hidden from my sight,
Till, stroke by stroke, Doubt set it free,
And suffering gave my soul new light.

NEW BERNE, N.C.

MARY BAYARD CLARKE.

The Index.

BOSTON, NOVEMBER 19, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

MESSIANIC EXPECTATIONS.

LECTURE II.

"TWO THOUSAND YEARS AGO."

Delivered at the Temple Adath Israel, Boston, Oct. 18, 1885, by Rabbi Solomon Schindler.

Upon what does the earth rest? This question greatly agitated the minds of people before the time of Newton and Copernicus. The answer was that it rests upon the back of an enormous elephant. But the inquisitiveness of human nature could not be set at rest so easily. Another question was raised: Upon what does the elephant rest? Answer: The elephant stands on top of an immense turtle. Yet this answer even did not give the desired satisfaction. The new question turned up: Upon what does the turtle rest? Instead of answering this time, the scientist of that age grumblingly complained in rather strong language that one fool would be likely to ask more questions than ten wise men could answer, and thus the conundrum was never solved.

Whenever we turn to an historical research, we are in a similar quandary. We lack a basis which could safely carry our argumentation. We brag a great deal about historical knowledge and historical facts; but, whenever we are called upon to bring them to light, we find that our knowledge is very limited,—that there are comparatively very few real historical facts, and that our so-called history, with all our argumentation on top of it, floats like that gigantic turtle—upon nothing.

Ancient history, especially, has mixed up a few grains of truth with such a bulk of fiction that it is now well-nigh impossible to sift the wheat from the chaff. Some few scraps of statements made by some writer as the facts appeared to him individually, mostly not even corroborated by a contemporary, have been handed down to us and palmed off on us as history. But, even if we were ready and willing to accept the statements of a Herodotus, Tacitus, a Livy, or Josephus as plain and absolute truth, with our best intentions we

could not supply another deficiency,—namely, that, by the tardy and fictitious process of copying and recopying the manuscript by hand, in course of time so much of the original must have been changed, so many interpolations and additions must have been added to it, that, if the original writer should be confronted to-day with his works, he would probably deny his authorship. And, after all, how did these writers know? History was never written at the time when the facts occurred. The current of the present is so swift and rapid, the multitude of facts taking place at every moment is so overwhelming, that the quickest camera could not take a correct negative of them. It is furthermore impossible for men to be both actors and spectators: we cannot be at the same time upon the stage and in front of it. History, therefore, has always been written by posterity. Now, ladies and gentlemen, you will acknowledge that it would be a difficult task to-day to write a correct history of—let me say—the life of George Washington, although we are in possession of the archives containing all the official documents written or signed by him, although we have the files of the newspapers published at his time at our disposal, and many other advantages which the historian of former ages never had at his command. Tacitus, for example, had never seen Germany or Judea, still he wrote extensively about these countries. All his information was obtained from soldiers who had been there, and he took their yarns for facts; and we, too, have become accustomed to take them for facts. And this very Tacitus lived and wrote at a time when the Romans stood at the summit of civilization, and poets and writers grew up among them like mushrooms.

In regard to Jewish history and subsequently to that of the origin of Christianity, the entanglement is not less bewildering, although past generations have attempted to solve the difficulty and to find a desirable historical basis by cutting the Gordian knot in a somewhat peculiar way. They picked out a certain number of literary works relating their own history and that of their nearest neighbors, and attributed them to a divine authorship. They claimed that God himself had dictated, word for word, both the Old and the New Testament. From such divine statements there was of course no appeal. God, who knows the past as well as the future, could not err: he stood above all human criticism; and it was a long time before the Bible was submitted to a close historical scrutiny. For centuries, it has been a heresy, almost a crime, to doubt one iota of this sacred literature; to doubt that Moses wrote all the books attributed to him; to doubt that the Psalms were all written by David or the Ecclesiastes by Solomon; to ask in what way and by what means the first correct copy of the orations of the prophets was obtained, or to consider these speeches as pertaining to their time only, or to the immediate future, and so on *ad infinitum*. For the so-called believer there was and is no appeal from the letter of Scripture.

In my research after the origin of the Messianic idea, I shall, therefore, not argue with the believers. Modern Judaism does not believe blindly: it reasons. Although I take a just pride in the grand literature which our nation has brought forth and accumulated; although I maintain that all literature is inspired, that no man can write one single sentence unless he is divinely inspired,—the books of the Bible are to me—as they are to every intelligent man to day—products of human, and not of divine authorship.

All the imperfections which adhere to human productions adhere also to the Bible. The men named as the authors of the different books were

not their authors in reality. The real authors lived and wrote much later than the facts occurred which they describe. They collected their knowledge from tradition and hearsay; but they wrote in good faith, according to their best understanding, without the least desire to impose. Their views, however, were limited. Neither are they responsible for the changes in the text made by copyist and revisers during the hundreds of years which passed between them and the first authentic edition which is in the possession of our time. I shall, therefore, touch them but slightly; and I wish it understood, from the start, that the renowned eleventh chapter of Isaiah is nothing more to me than a beautiful picture—painted in Eastern colors—of that time of peace which the orator hoped humanity would sooner or later reach. If we were to picture that time to-day, we should probably give it a different coloring and a less picturesque perspective; but we should surely omit the fourteenth and fifteenth verses as in contradiction to the letter and the spirit of the whole previous oration, and as unbecoming to a true lover of peace. With no other or better material at hand than Scripture offers, I am, however, compelled to rest some of my arguments upon the turtle, and to let the turtle float wherever it pleases you.

The first traces of a hope in the advent of such a person as a Messiah are to be found not earlier than in the time shortly before, during, and shortly after the Babylonian exile. The calamities which had befallen first the house of Israel, and then the house of Judah, had so discouraged the Israelites that they despaired of their own ability to help themselves; and, therefore, they hoped for a miraculous interference of God in their behalf.

They yearned for the independence of the Davidian time, of which tradition must have brought to them the most glorious reports. A descendant of David was, therefore, to appear and win for them again the respect of their neighbors, and make their voice heard again in the council of the nations.

There is nothing whatever that is unnatural or absurd in such a hope. Up to the last two decades, the Germans, too, were hoping for a restoration of the German Empire to its former mediæval glory. Hundreds of beautiful myths and legends predicted the return of the Kaiser Frederick I., or, as he was popularly nicknamed, Friederich Barbarossa, "der Rothbart," who, as the legend ran, had never died, but was sleeping in the caves of the Kyffhaeuser Mountain. With him, a large army of valiant knights was said to be concealed in the subterranean abode, who would awake and break forth under his leadership to liberate Germany and to restore its union, at the proper season. It was told that, after every lapse of a hundred years, the old emperor, whose beard had grown all around the marble table upon which his head was resting, would call a shepherd to his cave, and would ask him whether the ravens were still flying around the mountain-top, and that, upon his affirming the fact, he would sadly exclaim,—

"Und wenn die schwarzen Raben
Noch fliegen immer dar,
So muss ich nochmals schlafen
Verzaubert hundert Jahr."

One of the first and signal deeds with which Barbarossa was expected to astonish the world was to wage a successful war against France. What should you think of it, if, a thousand years hence, an historian should prove by these myths that the Germans had been expecting a Messiah, and that he actually appeared in the year 1862, but was called, not Barbarossa, but Bismarck?

The scraps of literature which we possess relating to the time before and after the Babylonian exile, and which seem to speak of a Messiah, are of about the same character and the same value as the legends of Barbarossa. They express the hope of a down-trodden nation in a restoration to former glory.

However, after the second Commonwealth had been firmly established, though by far different means than expected, after the second temple had been built, the Jews enjoyed a period of unprecedented prosperity. The yoke of the Persian Empire rested lightly upon them. They paid a small tribute; and, as long as they paid it promptly, they remained unmolested. All Messianic expectations were therefore forgotten.

During this long season of prosperity, the original Mosaic doctrine maintaining the belief in one God came to full bloom, and idolatry, formerly flourishing among them, died away entirely. The laws collected and compiled by Ezra, and firmly planted by Nehemiah, fitted admirably to their condition. They were excellent laws, such as no other nation could boast of. The belief consequently grew up that they were of divine origin, and that, as long as the nation should strictly adhere to them, it would be successful and prosperous, but that the slightest deviation from them would again bring the wrath of God upon them, and that they would be exiled again, as their ancestors had been before.

When the Persian Empire fell a prey to Alexander the Great, the condition of the Jews was not materially changed. It was of little importance to them to whom they paid their taxes, whether to the Persians, Egyptians, or Syrians. The closer intercourse with the Greeks tended in the beginning rather to broaden their own philosophy; and the Greeks, who had been accustomed to call all other nations barbarians, were, in their turn, greatly astonished to find such just laws, such deep philosophy, such high culture in a nation of which they had scarcely heard before.

But, by degrees, some of the Jewish youth became attracted by Greek culture and customs. At that time, the cultured classes of the Greeks were by no means gross idolaters. Socrates had not died in vain, nor had Plato and Aristotle lived in vain. The practices of Greek idolatry were at that period a mere consequence of indolence. Idolatry had become too absurd for the educated classes to attempt to wean the rest of the people from it. Their philosophers claimed that the lower classes were in need of some superstition, and advised to leave well enough alone. When Hellenism and Judaism finally clashed against each other, the forcible introduction of Greek idols into Palestine was more a matter of policy with Antiochus than of sincerity. Though a few young men sided with the Greeks, the mass of the Jewish people were sincere in their attachment to God. By no means would they suffer the least idolatrous rite practised in their country; and the few who had been influenced by the Greeks, and had adopted with their customs also the indolence and indifference of that age toward religion, were decidedly in the minority. While the Hasmonæan wars may appear as a religious warfare, well-informed historians claim that they were a political contest. Antiochus wished to form one large and well-cemented empire of all the small nations which were tributary to him, that he might be able to withstand the power of the Roman Republic, which, since the fall of Carthage and Corinth, had already spread its threatening shadows in an eastern direction. He thought it good policy to tie Judea to his domain by the bonds of the same superstition,

as all religion was called by the philosophers of that age. But his policy was a mistaken one. Just here, the Jews drew the line. He would have found them willing to pay any tribute whatsoever and to render military services, but they would not permit their religious autonomy to be touched. They flew to arms; and, under the leadership of the noble Hasmonæan family, a contest raging for several generations followed, which was carried on with changing luck on both sides. At the close of these wars, they found to their greatest surprise that they had gained more than they had ever expected. They had originally fought for home rule only: now, they found themselves independent, their country enlarged, with a king, a descendant, not of David, but of the Hasmonæan house, at their head. They did not know how to account for their good luck.

The people who had taken up arms for their God and their religion, and who had been called Chasidim, the pious, to distinguish them from the frivolous Hellenistic element, now split into two factions on account of it.

The greater part believed that their success was the result of their obedience to the laws of God; that God had, in fact, interfered in their behalf; and that, therefore, their mission was plain and self-evident. They must enforce the law most rigorously, and refrain from all intercourse with other nations, especially with the Greek. They were called Pharisees, Perushim, interpreters of the law; but they were conscientious, and by no means hypocrites. The other class had seen more of the world. It was composed of all those who not only had been the leaders in previous battles, but who had obtained as statesmen, by shrewd political wire-pulling, more than their sword could ever have won for them. They knew the secret of their success. Their good luck had been the result of Roman influence. That great and insatiable republic had stretched its hand nearer and nearer toward its prey. Divide and rule had been its motto. It had taken up quite disinterestedly, as it then appeared, the Jewish cause as well as that of the other tributaries of which the Syrian kingdom was composed, and had assumed the rôle of a protector over them. Little did these small nations dream at that time that, after the fall of Syria and Egypt, their turn would come to be annexed to the Roman Empire.

The Sadducees, as they were called, who had been prominent in all the political manoeuvrings, knew, therefore, too well that rigor and a blind belief in the help of God would not do, that they must yield to a compromise; or, in other words, that they must not totally ignore the present. This split in the formerly compact party accelerated, though it did not cause, the doom of the Jewish nation.

Indeed, their dream of independence and the lustre of the Hasmonæan dynasty were of a short duration only. Judea became a Roman province before the inhabitants became aware of it; and, while the Roman Senate left to them some shadow of self-government, it had already fastened the shackles to the victim. When the Jews came to themselves, they found themselves tied, hand and foot, in the power of an almighty foe. Their condition, indeed, was then most pitiable. Their independence was crushed, their king a mere puppet in the hands of the Roman Cæsars, their high priest without authority, their laws set at naught by the whims of the Roman proconsul. Roman legions fattened at the public expense, rapacious Roman procurators drained the resources of the land by heavy taxation. Jerusalem had then three separate courts, which rivalled one another in luxury. There was the

high priest and his household, and with him all the temple functionaries, who were supported in grand style by the reverence of the people and from fear that God would withdraw his protection from them, unless every tax which was due to the temple was scrupulously paid. Next came the royal household, the dignity of which was to be upheld at a heavy expense. Finally, there was the Roman governor, who knew perfectly well how to make a public office pay, and who imitated the extravagance of Rome. No wonder that times were hard for the tax-payer, no wonder that the peaceful real-estate owner grew riotous, no wonder that the burden became unbearable, and that the nation despaired of itself. At this period of national calamity, at the time when the days of the Jewish commonwealth were already numbered, the hope broke forth with new vigor that, as human efforts were of no avail, God himself would, must, interfere and set matters aright. The first commonwealth had fallen on account of the sins of their forefathers; but, this time, they were innocent, they had strictly obeyed the law, and God, if he were just, was in honor bound to come to their rescue. Neither was there any cause to doubt the ability of God to save them. Had he not returned the captives to the land of their forefathers? Had he not assisted their very parents and grandparents in their struggle against the power of Syria? There was not the least doubt in their minds that the present time was only a time of trial, and that God would soon rectify matters. During the Hasmonæan era, the prophetic books had become quite popular. They were now read and reread with eagerness, and were naturally interpreted to fit the present needs and hopes. The idea spread that, as the descendants of the Hasmonæan house had not the courage to oppose the greed of rapacious Rome, they had forfeited their right to the throne, and that a scion of the house of David would therefore be sent by God, who should drive the Romans out of the country, and bring back the former independence and glory.

The maltreated, overtaxed farmer, the unemployed artisan, the bankrupt merchant, the demoralized soldier, the aristocrat who had to bend his head before the haughty Roman magistrate,—they all drank eagerly the hope of the advent of a Messiah, and awaited impatiently the favorable moment when, sword in hand, they would shake off the yoke of the oppressor; and they had not the least doubt that, at that auspicious moment, God would send the right man to lead them to success.

But there were also people who were not half so sanguine as their more zealous neighbors. They knew that a revolt against Rome would be useless. Rome could only take of him who owned property, and it was only for the improvement of the condition of the property holder that war was to be undertaken. They sought, therefore, safety in a change of the whole social system. Nihilistic and communistic tendencies began to develop. These classes, too, were expecting the man who should have the power of establishing an ideal society after their heart, and who would—according to the peculiar language which they used—save the world.

The hope in the advent of a king duly anointed for his office, who would improve the state of affairs, grew stronger and mightier every day, the more unbearable the national misery grew. It was again the natural outgrowth of the unhealthy condition of the time; and the sicker the national body grew, the wider spread and the more intense grew the mania.

The Roman authorities on their part wished for

nothing better than that a crisis should be reached as soon as possible; and they rather stimulated a revolt of the people, in order to obtain a pretext for crushing the nation at once. They, too, were wishing that the Messiah, with whose appearance they were threatened day by day, would come. They had nothing to lose, and all to win. And thus day by day added to the fuel, which, if fired by an over-zealous or incautious hand, would spread its conflagration over the land.

In vain did the cautious among the people raise their voice of warning: they could not undo what generations had prepared. Such was the condition of the time shortly before the destruction of the second temple, and the first flash of lightning which appeared and disappeared in the political sky of the second commonwealth, the appearance of Jesus of Nazareth predicted the coming hurricane which swept the Jewish nation forever politically from the face of the earth.

EXPERIMENTAL PATHOLOGY.—ON HYDROPHOBIA.*

BY M. S. PASTEUR,

ASSISTED BY M. M. CHAMBERLAND AND ROUX.

[Translated for *The Index*.]

The great fact of the variable intensity of certain virus, and the preservation from one virulence by another of less intensity, is to-day not only known to science, but has even entered into the domain of practice. In such a direction of study, one understands all the interest which the research into appropriate methods of attenuation of new virus offers.

I have the honor to report to-day to the Academy a progress in this direction relative to hydrophobia.

I. If hydrophobic virus is passed from dog to monkey, and afterward from monkey to monkey, its virulence becomes weaker at each transition. If the virus is then carried back into the dog, the rabbit, or the guinea-pig, after its force has been diminished by these transitions from monkey to monkey, it remains attenuated. In other words, the virulence does not return in the first instance to the intensity of the virus of a mad dog. The attenuation, under these conditions, can be easily produced by a few transitions from monkey to monkey, until hydrophobia can never be given to the dog, even by hypodermic inoculation. Even inoculation by trepanning, a method so infallible for the communication of hydrophobia, can produce no result; creating, nevertheless, for the animal a state refractory to hydrophobia.

II. The virulence of hydrophobic virus is raised to a higher degree when it is passed from rabbit to rabbit, from guinea-pig to guinea-pig. When the virulence is intensified and fixed at the maximum in the rabbit, it passes in the same degree into the dog, and shows itself much more intense than the virulence of the virus from a mad dog. This virulence is such, under these conditions, that the virus which possesses it, inoculated into the blood of the dog, invariably produces a deadly madness.

III. Although the virulence of hydrophobia is intensified in its transition from rabbit to rabbit or from guinea-pig to guinea-pig, several transitions through the bodies of these animals are necessary, in order to recover its condition of maximum virulence after it has been diminished in the body of the monkey.

Likewise, the virulence of hydrophobia, which, as I have just said, is not nearly of the maximum

virulence, requires, when it is carried into the rabbit, several transitions through individuals of this species, before attaining its maximum.

A rational application of the results which I have given easily enables us to render dogs refractory to hydrophobia. The experimentalist should have at his disposal attenuated hydrophobic virus of different degrees. Some, not mortal, preserves the system from the effects of the stronger virus, and the latter from the mortal virus.

For example: The hydrophobic virus of a dead rabbit is extracted by trepanning, after an incubation period, which exceeds by several days the shortest incubation of the rabbit. This is invariably comprised between seven and eight days after inoculation, by trepanning, with the most virulent virus. The virus of the rabbit in a longer incubation is always inoculated, by trepanning, into a second rabbit; the virus of the latter, into a third. Each time, these poisons, which become stronger and stronger, are inoculated into a dog. Finally, the dog is found to be capable of resisting a mortal poison. He becomes wholly refractory to hydrophobia, either by inoculation into the veins or by trepanning from the virus of a mad dog.

By inoculations from the blood of rabid animals, I am enabled to simplify very much the operation of vaccination, and to produce in the dog a most decided refractory condition. I will shortly make known to the Academy the whole result of the experiments on this point.

There should be considerable interest now, and even to the distant period of the extinction of hydrophobia by vaccination, in being able to suppress the development of this affection, resulting from the bites of mad dogs. Upon this point, the first experiments which I have undertaken give me the greatest hopes of success. Thanks to the duration of the incubation of hydrophobia resulting from bites, I have every reason to believe that the refractory condition of subjects can be determined with certainty before the deadly malady, caused by the bite, breaks out.

The first experiments are very favorable to this view, but the proofs must be infinitely multiplied on various species of animals before the therapeutic would have the boldness to try this prophylactic on man.

The Academy will understand that, in spite of the confidence with which my numerous experiments, continued for four years, inspire me, it is not without some apprehension that I publish to-day these facts, which tend to nothing less than a possible preventive of hydrophobia. If I had had sufficient pecuniary means at my disposal, I should have been glad not to make this communication until I had requested some of my colleagues of this Academy, and the Academy of Medicine, to verify the conclusions which I have just made known.

It is in obedience to these scruples and these motives that I have lately taken the liberty to write to M. Fallières, Minister of Public Instruction, requesting him to appoint a commission to which I will submit my dogs refractory to hydrophobia.

The principal experiment, which I would first try, would consist in selecting from my kennels twenty dogs refractory to hydrophobia, which should be placed in comparison with twenty other dogs before being used for the experiment. These forty dogs should be bitten successively by mad dogs. If the facts which I have announced are correct, the twenty dogs considered refractory by me will resist wholly, while the twenty others will become mad.

A second experiment, no less decisive, would

have for its subject forty dogs,—twenty vaccinated before the commission, and twenty not. The forty dogs shall then be trepanned with the virus of a mad dog. The twenty vaccinated dogs will resist. The twenty others will all either die of hydrophobia, become paralytic or rabid.

CORRESPONDENCE.

DID MR. EMERSON SYMPATHIZE WITH THE ABOLITIONISTS?

Editors of The Index:—

Criticisms are made* on Dr. Holmes' estimate of Mr. Emerson as a non-sympathizer with the abolitionists. I think Dr. Holmes is right, and that Mr. Emerson never really sympathized with abolitionists, such as Garrison, Phillips, Parker, and the like. The queer idea of quoting Caleb Cushing to decide this question seems to me as laughter-creating as Holmes' "Height of the Ridiculous," or his "September Gale." It is true that Holmes' undertaking to write a life of Emerson seems in itself almost equally funny. I laughed heartily when I first heard of the fact, because, save in the way of being both of them literary men, I could not conceive of two men more diametrically opposed in their natural traits. But, on this matter of Emerson's abolition position, Dr. Holmes is much more correct than his critics.

To sustain this position, allow me to refer to facts within my own knowledge or obtained from old and "tried-in-the-fire" abolitionists, and to Mr. Emerson's own work. In 1835, when Garrison was pulled through Boston streets and his life saved by his being thrown into the city jail, as a disturber of the public peace, I became an abolitionist. From that time till Lincoln's Proclamation of Emancipation during the Civil War, I knew well most of the public and not a few of the private acts of abolitionists; and I am sure that Emerson never publicly showed the least interest in our proceedings. He never spoke any ringing words in our behalf until long after the battle was half won; namely, until 1854 (nineteen years after the mob), when, in a lecture on the Fugitive Slave Bill,† he thoroughly scathed Daniel Webster, and denounced the "godlike" as thoroughly immoral and the bill as most infamous. But, even in this grand and manly address, Mr. Emerson defines his position on the anti-slavery platform by these memorable words, unfortunate though they may be to his memory as a "sympathizer with the abolitionists":—

"I have lived all my life without suffering any known inconvenience from American slavery. I never saw it; I never heard the whip; I never felt the check on my free speech and action until the other day, when Mr. Webster by his personal influence brought the Fugitive Slave Law on the country."‡

Again, Mr. Emerson declares: "I have said I had never in my life up to this time [1850] suffered from the slave institution. Slavery in Virginia or Carolina was like slavery in Africa or the Fegées, for me."§

Do these words show that he had "sympathized with the abolitionists"? Before the above words were uttered, Mr. Emerson had proclaimed in 1847, his actual abhorrence of abolition methods, in his "Ode to William H. Channing." I find it in a volume of poems published and copyrighted by Mr. Emerson, in England, in 1847. It is not reprinted in the "Selected Poems," published since his death. That ode, I have reason to believe, connects itself with an event which took place in 1845, and in which I was myself, as an abolitionist, interested. The Rev. Charles T. Torrey died in Baltimore jail, where he had been confined for helping slaves to escape. His body, at my request,—and for the purpose of having a public funeral,—had been embalmed; and it lay open to the public in front of the large platform from which anti-slavery speakers had addressed the excited crowd. Among the speakers was the warm-hearted, sweet-tongued Rev. William Henry Channing. While he was speaking, I saw with astonishment Mr. Emerson standing and look-

* A paper read before the Academy of Science in Paris, June, 1884.

ing down, in his calm manner, upon us,—aloof, it was true, from all the excitement prevailing below. As during the previous ten years of anti-slavery battle, I had never seen him among us, I was delighted at the sight of him, even as looker-on. I had learned to love and reverence him for the great thoughts he had given me in his lectures, and by his serene and apparently philosophic life at Concord. I said to myself: "How I would like to know what you think of this most damnable result of Southern slavery, and of this gathering of the anti-slavery enthusiasts with whom you have never been seen before? Is it possible that this vile deed has so drawn you to us, that hereafter we shall have your great name and moral influence on our side?" But he disappeared from the hall, and neither by voice nor subsequently by pen or active sympathy for the escaping slave did he give any reply until two years afterward. Then I read, in the above-named "Ode," the following chilling apostrophe to Channing. I add, also, other quotations from the same ode, which could have been easily adopted by the most violent slave-trader in the South:—

"Funeral eloquence
Rattles the coffin lid."

"What boots thy zeal?
A glowing friend!
That would indignant rend
The Northland from the South?
Wherefore? To what good end?

"'Tis the day of the chattel,
Web to weave, and corn to grind.

"Foolish hands may mix and mar,
Wise and sure the issues are.

"The Over God
Who marries Right to Might,
Who peoples and unpeoples,
He who exterminates
Races by stronger races,
Black by white faces."

This, then, is the answer which the Philosopher of Concord gave to the mute appeal from the martyr's dead body, then lying before him, and to all abolitionists, wherever they might be. This, then, was his "sympathy" for them.

I have lately conversed with some of the old abolitionists, and I find all agree with me that Emerson was never known to be in our ranks, or to show any active sympathy for the slave, or in our work for the bondman. At a later date, when the labors of the earlier fighters were assumed by the politicians, and the martyrdom of John Brown called out an indignant protest from thousands in the North,—when Sumner was felled in the United States Senate and Webster bowed his mighty head under the foot of the Southern slave-master, and told the North that it must ignore the promptings of its own conscience;—while he declared before high Heaven that he "knew no Higher Law than the American Constitution,"—in those dreadful days, Emerson spoke bravely and well. Let us thank him for that, but do not let us claim that the early anti-slavery workers had his sympathy. No! Holmes is right, and his critics are wrong.

HENRY I. BOWDITCH.

UNITARIAN CHRISTIANITY.

Editors of The Index:—

It is unfortunate that most Unitarian Conferences sacrifice some measure of their dignity in the presence of the Christian name. While I have no objection to that name of itself, in the right hands, I can never take it from Unitarian lips as representative of a legitimate power. A recent experience at Vineland, N.J., where Unitarians of the Philadelphia district came together for purposes of fellowship, brought back to me with unpleasant force the bounds of a sect with which I have a great deal of inborn or inbred sympathy. The line which takes Unitarianism so near a gracious haven, and yet sharply cuts it off at the last stage, is one which proves peculiarly forbidding, even to friendly critics. I have never attended a conference of its followers without an instinctive wish to make myself at home there; and yet, with each visit, I have been driven off by some reassertion of an illogical and compromising position. This, of course, is always a more or less personal drift, of which one could not justly accuse all participants. But the most approved sentiments are such as have

the sectarian tendency, and no unpledged observer is apt to be placated by them. Nor is it satisfying to see the obviously nervous desire among those who still insist upon the Christian name to prove some fine moral difference between the Christian and all other actual or probable faiths.

Such differences as these investigations discover are always too infinitesimally small to give warrant for clinging to the old word. Now, this Vineland experience only puts renewed emphasis upon my conviction that Christian Unitarians have brought about a hopeless confusion of language. While I am ready to acknowledge Mr. Ames' broad, fundamental principle, as amplified in an attempt to make Christianity represent (in some sense invoked by his imagination) the summit of human excellence, I feel that an acceptance of his terms involves a total surrender of consistency in thought, and robs English speech of its meaning. Moreover, when Mr. May, Mr. Haskell, Mr. Galvin, and others, strain every point in order to put a Christian interpretation upon nature, and by every act betray unnecessary anxiety to hold to the Christian name after all simple Christian formulas have been discarded, they are unjust to themselves, and throw what is essential in Unitarianism to the mercy of a rather unmerciful logic. I have an honest and abounding reverence for Christianity. In its developments through the prevailing sects, I can understand and appreciate its importance. Besides, when I am met by a bold avowal of theological points on the part of orthodox teachers, I can know how and where to direct my antagonism. But, with men who on this point might as well trade on Buddhist as on Christian paper, since neither is theirs primarily, I am at a loss what to do. In the exigency created, I could not offer congratulation, for that would imply an approval of foggerly,—veritable joy in a landscape known merely by promise,—which I avoid wherever possible; nor could I make any show of antagonism, for that, again, would indicate that I knew where to strike, which is not true.

Though Clifford, who took the more generous view at this conference, may resent what he may attribute to my too indulgent affection, it would be unpardonable in me to take my personal love as reason for silence touching his part in the joyous gathering. I must, even if I offend the modesties of the occasion, record here my unbroken pleasure in his beautiful discourse on "The Human Priesthood." In an attempt to bring the religious sense back at last to the single soul, and in his absolute refusal to make Humanity the mere plaything of Christian theology, he displayed the vital faculty which modern discovery finds at the base of its best work. Such thoughts as he disbursts prove that Unitarianism has its strong elements. Mr. Ames, in his own fruitful personality, represents some of its most excellent possibilities. But, if the leaders of its mission turn their backs on its greater for the sake of its lesser forces, there can be no question of its eventual shame. There is something that savors of strength in the common Methodistic insistence upon the Christian arguments. I often enjoy it from the pew, and love Methodism for all its evidence of intense belief. Furthermore, I confess that, when I turn from a magnetic Orthodoxy, false as I consider some of its assumptions, to a frigid Unitarianism that insists more upon property than it has no claim to than upon that which comes fairly to its heritage, I am disappointed and repulsed. I had always understood that Liberals, however thankful for their pedigree or however grieved over its ramifications, were not at all worried when the backward look disclosed a necessary antagonism. Nor is this the criticism of one who sours over oppositions, or is naturally at enmity with the Unitarian Church. Wholly, I disagree with no church. I have yet to see the religious body with which, after all, I do not find the line of union deeper than the line of difference. Particularly is it apparent to me that, with Unitarians, I have had the freest intercourse and the nearest intellectual friendship. But, if character is to be the test of the hour in Unitarian churches, as is so unremittingly stated, why is it that one who can accept the invitation scarcely starts forward ere some protesting hand brings Christianity into view to cool all his ardor, and drive him again beyond the confines? The same lips that thank Spencer for his unmatched presentations of the evolution theory reject him from among those who consider his labors the assurance of their latest faith. What sort of a

dance is this? Mangasarian, most recent among heretics, has been pointing to the evolution platform as an apt illustration of what freedom may do for thought; and Mr. May informed us at Vineland that Unitarianism furnishes an evolution pulpit. If the steps be granted, what becomes of the Christian name which so many who ascend carry with them as warrant to higher realms? In deference to morality, we owe specific tribute to its terms. What is universal to all faiths is not Christian simply, and we have no philosophic right to its exclusive adoption under that name. So far as Mr. Ames is a virtuous man, I claim he is Buddhist, Jew, Confucian, and Christian, after the conditions of the several teachings. And yet the very diversity of possible titles for such a person makes a higher phrase or classification necessary. Therefore, when Clifford spoke for Humanity as the vaster force, he grasped the final truth.

HORACE L. TRAUBEL.

BOOK NOTICES.

A LARGER HISTORY OF THE UNITED STATES OF AMERICA to the Close of President Jackson's Administration. By Thomas Wentworth Higginson, author of *Young Folks' History of the United States*. Illustrated by maps, plans, portraits, and other engraving. New York: Harper & Brothers. 1886.

Mr. Higginson tells us in his preface that he has been repeatedly urged by readers, and even by parents and teachers,—why he says "even" we cannot conceive,—to tell the story of the nation over again upon a much larger scale than that of his *Young Folks' History*. He has now done this "after waiting long enough to make sure of a wholly fresh treatment instead of a mere amplification." He further tells us that, if this book is destined to excite any such interest as his other on the same subject, it will be mainly because the theme appears to him, and has always appeared, "more important, more varied, more picturesque, and more absorbingly interesting than any historical subject offered by the world beside." These are brave words, to which we heartily respond, but with a difference. Mr. Higginson does not say that the success of his book depends upon the essential importance, variety, and picturesqueness of his theme, but on his apprehension of these things, which is much nearer to the truth. The essential importance, variety, and picturesqueness of our history have confronted many others who have endeavored to interpret it. But they have not had Mr. Higginson's eyes to see these things, or, if they have been generally convinced of them, they have not had the wit to seize upon those elements which must convince the reader of their reality. The word "mainly," as used by Mr. Higginson in the sentence above quoted, is, however, significant of much. For the success his book will certainly achieve will not be owing altogether to his faith in his theme and his perception of the relative merits of its various parts, but in no small degree to the very exceptional beauty of his style, its perfect clearness and its subtle charm.

There is need of men like Freeman and our second Bancroft, who select a special period and exhaust it so completely that their work is final in its chosen range. But it may be questioned whether "the greatest good of the greatest number" is not more obviously effected by those who take the *memoires pour servir* which these specialists furnish, and condense them into a much smaller shape, and give to it that touch of formal beauty without which no history is literature in the higher sense. Mr. Higginson's work is of this secondary sort. It stands to reason that he has been no such delver as Parkman, for example. But he has no such help as Parkman's for many sections of his history, and in these must frequently have been compelled to undertake the labor of original research. Moreover, he has the keenest possible appreciation of the value of original impressions. The journals of the old discoverers and explorers have, for him, a great attraction; and he enriches his pages with many apt quotations. The same is true of his relation to contemporary political discussion. Nothing that he could write would be so convincing of the bitterness of partisan feeling in 1797 as the passage which he quotes at the end of his thirteenth chapter.

Mr. Higginson's is "a larger history of the United States" in comparison with his earlier volume, but it is still so brief that we should like to be assured that he will some day write a *largest* history. But first,

of course, the promise must be kept of the last sentence of the present work, where, speaking of the anti-slavery conflict, he says, "These pages may well close, for the present, with the dawn of that great revolution." "For the present"! So we may hope for another volume, of which the principal burden will be the anti-slavery conflict, all of which Mr. Higginson saw and a very noble part of which he was. Whether the space allotted to the different sections of the work is relatively well-proportioned is easier to doubt than to decide. The complaint is constant that our peculiarly national history is neglected for its antecedent stages. Whether, in view of this complaint, a fuller treatment of the time from Washington's presidency to Jackson's would not have been better, is at least an open question. But, everywhere, Mr. Higginson has been obliged to practise self-denial. The conspiracy of Pontiac, to which Mr. Parkman has accorded two volumes, which Mr. John Fiske considers the most interesting since Herodotus, Mr. Higginson has disposed of in a single sentence. His reason for this brevity is excellent. The conspiracy of Pontiac was a tremendous after-clap: the storm had really ended with the victory of Wolfe upon the Heights of Abraham.

Mr. Higginson has written not merely a history of wars and politics, but a history of the American people, of their various and complex development. He has not disdained to treat of their dress and manners. Some of his most interesting pages dwell with affection on these lighter themes. While he treats the Federalists fairly, and indignantly denies that Hamilton would have set up a monarchy in America, if he could have done so, his sympathies are more enlisted by their Democratic opponents than those of the majority of the writers who have written for the current series of "American Statesmen." He has Jefferson's faith in the people, not Hamilton's distrust of them; and the phrase "cowardice of culture" is significant from one whose culture is not excelled by that of any living American.

Of the many illustrations in the book, the most valuable are the full-page portraits of the Presidents and of a few distinguished statesmen. The art of wood-engraving is at its best in these portraits. The least successful is that of Henry Clay. In this dull and sodden face there is not a suggestion of the brilliant politician who was for twenty years a candidate for the presidency. Webster is represented in his glorious prime. Many of the other illustrations are calculated to attract younger readers, for whom the text is made inviting by its absolute clearness and the multiplicity of its picturesque details. Take it for all in all, here is a book that we would have in every household of our land. We would have parents read it to their children by the evening lamp, at once correcting the intolerable heresy that ours is not a fascinating history, and presenting an ideal of literary form that cannot fail to purify and exalt the taste of all who come within the circle of its perfect charm.

J. W. C.

POETS OF AMERICA. By Edmund Clarence Stedman. Boston and New York: Houghton, Mifflin & Co. 1885. pp. 516. Price \$2.25.

This is one of the most notable among recent contributions to American literature, and is destined to become a standard work, marking as it does a definite era in the history of American poetry. Some ten years ago, Mr. Stedman gave evidence of his fine critical ability in his volume entitled *Victorian Poets*, which was intended to be a sort of prelude to this elaborate later work. "The earlier treatise," says the author, in his introduction, "was essential to it, and, in fact, the most expedient preliminary task that could be chosen. The modern conditions [of poetry], as far as they relate to both countries, could be observed more directly in England than in America, their stress being there of earlier origin and less diffused. My previous synopsis of them now has only to be condensed and supplemented by discussion of those other conditions that are peculiar to this country alone."

The present volume is a masterly and exhaustive critical review of American poetry from its first crude offerings until the present time, dwelling, however, principally "upon the careers and productions of leading poets whose reputations are long established, and who, on the whole, fairly represent the various tendencies of American song." These "leading poets" he treats of in the following order,—Bryant, Whit-

tier, Emerson, Longfellow, Poe, Holmes, Lowell, Whitman, and Bayard Taylor. In the chapters entitled "Early and Recent Conditions," "Growth of the American School," and "The Outlook," he considers the lesser poets singly or in groups, giving them more or less prominence according as he ranks them as distinguished in their art. The omission, as is partly necessitated by his being the author, of his own name from the list, is a loss to the future reader, since Mr. Stedman has a definite rank in poetry, which, in a work of this kind, should have been acknowledged.

Some may be surprised that among the leading poets the name of Walt Whitman should be included; but Mr. Stedman gives good reasons for including him, and, while he deals relentlessly with the manifold faults and shortcomings of Whitman, he yet says, "As to my conclusion on this point, I may as well say now that both instinct and judgment, with our Greek choruses in mind, and Pindar and the Hebrew bards, long since led me to number him among the foremost lyric and idyllic poets"; and, also, "Of our living poets, I should think him most sure of an intermittent remembrance hereafter, if not of a general reading. Of all, he is the one most sure—waiving the question of his popular fame—to be now and then examined; for, in any event, his verse will be revived from time to time by dilettants on the hunt for curious treasures in the literature of the past, by men who will reprint and elucidate him, to join their names with his, or to do for this singer what their prototypes have done for François Villon, for the author of 'Joseph and his Brethren,' and for William Blake."

While Mr. Stedman has many kind words to say, in a general way, of the women poets of America, he yet evidently has not found any one pre-eminent among them, and a few pages only of this volume are devoted to a consideration of their claims; but he dashes off flattering sketches of quite a number of women poets in those few pages, saying of some of the earlier of these: "The female voices early added softness and, at times, strength to the general song. The names of Maria Lowell, Mrs. Osgood, Mrs. Whitman, the Cary sisters, Mrs. Judson, Mrs. Sewall, Elizabeth Lloyd Howell, Mrs. Oakes Smith, Mrs. E. C. Kinney, and Mrs. Botta, some of whom have passed away, are cherished by not a few." Of Celia Thaxter, he writes thus: "The zest, the enchanting glamour of Northern coast-life, are known to Celia Thaxter, our daughter of the isles. Her 'sprayey stanzas' give us the dip of the sea-bird's wing, the foam and tangle of ocean, varied interpretations of clambering sunrise mists and evening's fiery cloud above the main." In another of these sketches, he describes Elizabeth Stuart Phelps as possessing "a deeply religious nature" which, "warring with its own doubts, leads her on adventurous paths. That she is essentially a poet was evident from her prose long before she made a collection of verse. She is the modern vine from a Puritan stock, subject to inherited tendencies, but yielding blossoms of feminine grace and aspiration." Mr. Stedman believes that the present marks the close of an era in American poetry. He says on page 457: "The belief scarcely can be resisted that there is, if not a decadence, at least a poetic interregnum, as compared with the past, and measuring our advance in sundry fields of activity. As I have said, the first influence is ended: there is a pause before the start and triumph of another." It may be that the fact of "our advance" in other "fields of activity," such, for instance, as those of science and philosophy, may be the cause of this decadence in poetic imagination. No one who knows Mr. Stedman as poet or author needs to be told that this his latest offering is delightful as well as instructive reading. All would-be poets should read this work before essaying any further verse-making, as part of their education in their vocation, and to learn how much it means to be a poet in the best sense of the word.

An ample and careful index adds much to the value of this work, making instant reference easy. It is clearly printed, with wide margins and helpful marginal notes.

S. A. U.

ULYSSES PANHELLEN. Julius Ferrette. Leipzig: Heinrich Matthes. 1886.

Rev. Julius Ferrette, who attracted much attention some years ago as a liberal writer and lecturer, and who has apparently left this country for

Europe, has just sent out, in a handsomely printed pamphlet of ninety-two pages, a Greek poem of 617 hexameters, in which are contained all the roots in the language, to the number of about 3,150. The work was originally written by Girardeau, a French scholar of the last century. The present editor has improved the versification, inserted an interlinear translation, given the gender and nominative case of every noun, and first person, present tense, indicative mood, of every verb, prefixed a table of contents, and added an alphabetical index. Thus, he has furnished what will probably prove a very valuable text-book. Any one familiar with Latin might thus teach himself Greek, with no other aid than that of some simple grammar. The work deserves to be widely known, and will undoubtedly be made so by the influential publisher.

HOUGHTON, MIFFLIN & Co. are early in the field with new calendars for 1886. The popular Emerson Calendar is reissued, with selections from America's leading poet entirely new, with fresh designs on the calendar faces. These consist of a portrait of Emerson, one of the best and strongest we have ever seen. The symbolic pine-tree, combined with lilies and pansies, is among the prominent illustrations. The Whitney Calendar will, we are sure, be very popular among our girls, for whose benefit Mrs. Whitney mainly writes; and extracts from her teachings will be gladly welcomed as a daily reminder of her by many girl-readers. The design is unique, tasteful, and appropriate. These calendars are nine by twelve inches in size. Price \$1.00 each.

THERE is now in press, at the establishment of L. Prang & Co., the enterprising art publishers, a large souvenir tableau of Gen. Grant by Mr. T. de Thulstrup, whose battle pictures in the war articles of the *Century* magazine were so much admired by old veterans for their lifelike truthfulness. The work shows in the centre a portrait of Gen. Grant as he was known to his army in 1865, surrounded by vignettes representing his military career from West Point to Appomattox. Messrs. Prang have also in contemplation the publication of a series of war pictures by the same artist, which will be welcome to all, now that the animosities of the strife are forgotten, and the war has passed into history.

A SERIAL story entitled "Ireland," begun in the last issue of *Liberty*, is translated from the French of the novelist Georges Santon; and the work is now running as a *feuilleton* in Henri Rochefort's daily journal, *L'Intransigeant*. The author's purpose is to give a faithful picture, in a romantic frame, of one phase of Ireland's struggle for independence.

Mr. MILLS' LECTURES.

SEASON OF 1885-86.

1. Upon Leading Points in the *Development and Growth of Civilization*, down to Modern Time. A series.
2. Upon *Mythology* and its *Fruits*. A series.
3. The Lesson of To-day; or, Some *Characteristics* and the *Special Problems* of the Present Age.

Other Lectures, also, will be given when desired.

Travels in Faith from
Tradition to Reason.
By ROBERT C. ADAMS.

For sale at THE INDEX office. Price \$1.25.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " . . . 5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent., on the total as above calculated, will be made.

TRACTS.

No. 1.—*Truths for the Times*, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00

No. 2.—*Fear of the Living God*, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—*Lecture on the Bible*, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 4.—*Christian Propagandism*, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, \$1.00.

No. 5.—*"God in the Constitution,"* by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.

No. 6.—*"The Sabbath,"* by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.

No. 7.—*"Compulsory Education,"* by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—*The Present Heaven*, by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 9.—*The Christian Amendment*, by F. E. Abbot, shows the dangerous character of the attempt to interpolate the Evangelical Christian Creed in the U. S. Constitution. Price 5 cents, 12 copies, 50 cents.

No. 10.—*The Impeachment of Christianity*, by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—*The God of Science*, by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, \$1.00.

No. 12.—*In Romanism Real Christianity?* Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, \$1.00.

No. 13.—*On the Vision of Heaven*, by Prof. F. W. Newman, the Christian concept. Price 5 cents; 12 copies, 50 c

No. 14.—*A Study of Religion—Name and the Thing*, by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, \$1.00.

No. 15.—*The Battle of Syracuse*. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.**Freedom and Fellowship in Religion.**

A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

II. *The Bible and Science*, by John Weiss.

III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.

IV. *Transcendentalism*, by Theodore Parker. Never before published.

V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).

VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.

VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00.

Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnerbund.)

Editor, C. Hermann Beppe.

TERMS, PER ANNUM, IN ADVANCE:
UNITED STATES AND CANADA:

Freidenker..... \$2.50
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)..... 3.00

EUROPE:

Freidenker..... \$3.00
Turnerische Ausgabe des Freidenker
(Amerikanische Turnzeitung)..... 3.50

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirteenth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing CONSIDERABLY MORE READING MATTER, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading "Turnerische Ausgabe des Freidenker."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense, and we therefore solicit the hearty cooperation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.
(Organ of the German-American Teachers Association.)

Editor:

MAXIMILIAN GROSSMANN, Milwaukee, Wis.

Associate Editors:

H. H. FICK, Chicago, Ill.

H. SCHURICHT, Chicago, Ill.

16 large quarto pages, with four-page cover.

Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

CURRENT TOPICS.

BY B. F. U.

SAYS the *Ottawa Free Press*: "In accordance with the decision arrived at by the courts in Toronto, barbers are allowed to shave on Sunday mornings as a work of necessity, but not to cut hair."

THE Bishop of Peterborough, in defending the establishment, says that there are one hundred and seventy-four different religious sects in London alone, and asks whether "the Church" is to be reduced to a level with them.

THE *Boston Transcript* justly remarks that "to condense all the news bearing on politics, trade, commerce, art, and literature, to make room for elaborate reports of disgusting divorce trials, or for the details of a murder in which only a morbid mind can find satisfaction, is doing an injustice to respectable readers, and a positive harm to those of natures capable of being influenced by such reading."

MR. ANGELL, of the Massachusetts Society for the Prevention of Cruelty to Animals, has delivered several addresses before the Boston public schools, on the treatment of animals; and he will, by the permission of the school committee, given by unanimous vote, continue these addresses on nearly every school day for the next three months, taking one school a day and devoting to each one hour. The work of Mr. Angell and of the Society of which he is President is a most humane one, and deserves encouragement and support.

LAST Sunday, Mr. Horace Seaver, of the *Investigator*, who succeeded Abner Kneeland as editor of that paper nearly half a century ago, gave a lecture at the Paine Memorial Hall on "Fifty Years' Experience in Liberalism," which abounded in reminiscences of a very interesting character.

The lecture was before the Ingersoll Secular Society, the name of which, in honor of the long and unrewarded services of the veteran editor of the *Investigator*, ought to be called the Seaver Secular Society. That would be both alliterative and appropriate.

THE Irish leaders have issued a manifesto to the Irish voters of Great Britain, advising them to support the Conservative candidates in all districts where Nationalist sympathizers are not represented in the nominations. It is believed that they foresee Gladstone will have a majority and take this method of reducing it to as low a figure as possible, so as to enable them to hold the balance of power in the next House.

If we can rely on the abstracts which have been given the public of the papal decrees soon to be sent to the Catholic clergy, the sale and use of intoxicating liquor will be forbidden at all entertainments held under the auspices of the Roman Catholic Church, and refusal at all times to deal in intoxicating liquors will be made obligatory on the part of Catholics. If the Catholic Church takes this decided ground on the temperance question, its moral influence will be greatly augmented.

AT the National Rabbinical Convention of the Reformed Hebrew Church, lately held at Allegheny City, Pa., Dr. Kohler, of New York, said that their movement contemplated the doing away with some of the traditional features of Judaism, such as the belief in a return to Palestine, and the elimination of all that gives Judaism an Oriental or a merely national character. He recommended that those parts of the Pentateuch referring to certain subjects which make them unfit to be read in public or placed in the hands of children be expunged, and the rite of circumcision be denounced as a relic of barbarism which had come down from savage Africa. The platform adopted was in most respects fully abreast of the most advanced Hebrew thought; but the question of the admission of proselytes without the rite of circumcision was gravely taken up, and a committee of five, consisting of Rabbis Wise, Hirsch, Sale, and Sonneschein, were appointed, with instructions to report at the next meeting. Dr. Kohler's remarks on this subject have aroused a good deal of bitter feeling among the orthodox, and even among some of the reformed Hebrews.

THE Bowdoin Square Baptist Society, having found their pastor guilty of "grossly immoral conduct," voted last week to dismiss him "from the office of minister and from the employ of the society." On the same evening, the adherents of the minister gave him a surprise party at his home. There were about a hundred present, many of them women, and not a few of them young girls. The exercises were opened with singing, which was followed by prayer, after which a purse containing \$70 was presented to the pastor, who made a speech, in which he said: "There is only one thing I would do differently, and that is to go armed. That is all I would do

differently; and, with the knowledge I have now, those who should attack me would get the consequence in the honor of God." The announcement that he would preach in Music Hall was sufficient to secure him an audience last Sunday of some three thousand people, evidently attracted by the unsavory reputation of the preacher, whose witty and suggestive allusions to the circumstances of his recent arrest and the offence with which he is charged have proved quite effective in drawing a crowd whenever he has of late been announced to speak. One of the reports states that "several people seemed to obtain much quiet satisfaction from contemplating the parson through opera-glasses, and trying to decide which among the crowd of bonnet-wearers seated on the stage was Mrs. Taber,"—the woman whose husband recently obtained a divorce from her on account of her relations with Mr. Downs. The sermon was in the usual style of this preacher, but less offensive to decency than some that have been reported of late.

ELIZUR WRIGHT, widely known as an early abolitionist, as a radical free thinker, an insurance actuary,—the most notable in the country,—and as a philanthropic and public-spirited citizen, died suddenly last Saturday of paralysis at his home in Medford, Mass., aged eighty-one years and nine months. We were in conversation with Mr. Wright but a few days before his death, when he seemed to be in excellent health and spirits, and, considering his years, remarkably vigorous in mind and body. He was, we are informed, active up to the day of his death. Mr. Wright was born in South Canaan, Conn., was graduated at Yale College, was four years professor of mathematics and natural philosophy in Western Reserve College, Hudson, Ohio, five years secretary of the American Anti-slavery Society, and subsequently editor of anti-slavery papers, among which was the *Chronotype*,—an outcome of the difference between him and Mr. Garrison as to the best method of opposing slavery. From 1858 to 1866, he was insurance commissioner of Massachusetts. Mr. Wright was interested in literature, and in 1841 published a translation, in two volumes, of La Fontaine's *Fables*, and a few years later edited a London edition of Whittier's "Poems and Ballads," and wrote several pamphlets which attracted attention at the time. For some years, he was a contributor to *The Index*, whose position in the controversy in regard to postal laws and indecent literature he opposed. On that issue, he was elected president of the National Liberal League in 1878, in place of Mr. Abbot. Mr. Wright had profound respect for the rights of his fellow-men, but the judicial spirit he did not possess in a large degree; and he was not always wise in his defence of measures or of men. His sincerity and the purity of his motives were beyond question. He was an atheist, and had the courage of his convictions. His independent spirit, philanthropic disposition, and upright and honorable life commanded the respect of all who knew him.

THE CHURCH QUESTION IN ENGLAND.

In the election campaign now progressing in Great Britain, the question of disestablishing the English Church has come suddenly to the front, and appears to excite more interest and to call forth more popular feeling than any other issue. This question, at first sight, seems to have been projected into the campaign by accident. It was not in debate during the last Parliament; it formed no part of the matters which so sorely troubled the last administration of Gladstone, and on account of which the Gladstone ministry finally gave way to Lord Salisbury's. But Lord Salisbury's administration adhered so closely to the practical policy of the Liberal ministry which it had displaced that no very distinct issue was left on which the battle of the new elections was to be fought. In this confused state of affairs, the party leaders, in their first speeches of the campaign, appear to have thrown out their individual ideas almost at random, leaving them to crystallize by some law of natural selection into a platform. Thus, Mr. Chamberlain, along with other things equally prominent, mentioned the disestablishment of the English Church as a work to which the Liberal party might set its hand; and Mr. Gladstone, in his more formal enunciation of the principles of his party, spoke of disestablishment as one of the political necessities of the future which the nation must prepare for, though it would come after his time and could hardly be considered a present issue.

But, to the surprise, probably, of these leaders themselves, this point was the one most immediately seized upon for an issue in the pending contest. The Tories immediately took advantage of it, because it gave them just the opportunity they coveted for rousing the entire conservative spirit of the country against the revolutionary tendencies of the Liberal party; and, on the other hand, no statement in the Liberal manifesto called forth so much approving enthusiasm from the heart of the people as this. Here was something which the large class of voters, whom the extended franchise will take to the polls this year for the first time, could readily understand,—something which immediately touched their daily interests and affairs, as did not the English policy in Egypt or Afghanistan. The consequence is that the campaign is being actually fought on this issue of "the dim and distant future," as Mr. Gladstone called it. As many as four hundred Liberal candidates for Parliament are said to have pledged themselves to the principle of disestablishment of the English Church. Whatever may be the result of the contest, so far as the next Parliament is concerned,—and it looks now as if English conservatism, which is greatly roused, would prevail,—it would not be strange if the question of disestablishment should be forced directly into prominence for marking the line of separation between the Liberal and Tory parties in the immediate future,—perhaps, to a considerable extent, reorganizing the parties for this special conflict.

Yet, though this question has come so unexpectedly into the arena of English politics, it comes really by no accident. It is there because of the logical march of history. Its appearance only marks the advance of liberty and justice to claim their own. That, at so slight a summons from party leaders, so strong a feeling for ecclesiastical disestablishment should manifest itself, only shows what a force had been spontaneously gathering in the popular heart. It required but a touch to open the sluice-way, behind which the pent-up flood of popular dissatisfaction with the Church was ready to burst into utterance. If

it be true, as stated, that the response to what the leaders threw out, as if tentatively, about disestablishment, has come especially from the new voters,—the farmers and others of the laboring class, who are now first admitted to the polls,—this fact is a condemnation of the English Church, which tells volumes in respect to its attitude and methods toward this large class of population. Mr. Miall, the writer of a strong article in the *London Times*, setting forth the reasons for putting all churches on a level so far as the State is concerned, says that it ought not to excite surprise that the agricultural population on receiving the franchise should not only vote for the Liberal party, but should make disestablishment "the first article of their creed." These laborers, he says, have always seen the clergy, for the most part, strenuously opposing "every measure for civil and religious freedom which is now inscribed on the statute-book." Twelve thousand of the clergy vehemently protested only seven years ago against permitting nonconformist services in parochial burying-grounds. These clergy are generally charitable and kind. They have sent coal and blankets to the poor, soup to the hungry, castor-oil as well as tracts to the sick. But what, Mr. Miall asks,—quoting both question and answer from one of their own number,—"What has been the net result?" "You clergy of the Established Church," says Joseph Arch, "have had the agricultural laborers in hand at any rate for three hundred years, to do pretty much what you liked with; and what have you made of them?" Until quite lately, could the answer be anything but this,—a class of men the stolid helplessness of whose ignorance has become proverbial?"

The *New York Nation*, from whose columns we have taken these extracts from Mr. Miall's article, adds: "The worst of this terrible indictment is that it is every word true. The connection of the Church with the State in England has produced a body of clergy who have never been equalled in any country, taken as a whole, for culture, learning, and social gifts and graces. But, as the agents for the diffusion of religion and morality among the poor, or for the reconciliation of religion with social and political progress, they have succeeded no better than, if so well as, the Catholic clergy of the continent." In other words, while the clergy have been kindly and cultivated, they have been distinguished as a class by themselves, with little effective sympathy for the elevation and general enlightenment of those below them, and with no appreciation whatever of the doctrine of equal political privilege. They have become a caste separated from the body of their parishioners, and allied to the aristocracy. Let them rise high enough in the regular line of promotion, and they become *ex-officio* members of the House of Lords. They have come to be regarded, therefore, as worldly and self-indulgent; as representing a religion of luxury and wealth and fine houses, but offering to the poor, if remembering them at all, charity instead of justice.

Not all liberal and rationalistic thinkers, however, take the side of disestablishment of the English Church. It is understood that our friend and contributor, Mr. Conway, does not. If we have interpreted aright the occasional intimations of his views on this topic, he takes the ground that the English Church is so rapidly becoming liberalized, and, under the leadership of the broad-minded and true-hearted men who are already getting recognition as foremost in its affairs, will be in a position, through its wealth, culture, and prestige, to do such an immense work for truth and humanity that the opportunity for such a ser-

vice should not be lost by now robbing the Church of that power which it derives from alliance with the State. The prospect may be tempting; but how can Liberalism yield to the temptation without denying one of its most fundamental principles,—namely, that the State should treat the religious beliefs of all its citizens with impartiality? Perhaps Mr. Conway will take occasion to give the readers of *The Index* his real views on the question. A statement from him will be most welcome.

WM. J. POTTER.

VICTOR HUGO AND THE UNKNOWN.

An interesting volume of Victor Hugo's *Table Talk*, collected by M. Richard Lesclide, has just been published here.* M. Lesclide was for many years the poet's friend, secretary, and guest; and every night he noted with the fidelity of a Boswell the acts and sayings of "the master." The last chapter of the collection is entitled "Religion," and throws much new light on the mysticism of Victor Hugo. I propose to limit my notice of the book to this single chapter.

In his youth, Victor Hugo was a devout Catholic, and frequently confessed. But, when he had attained his full mental powers, doubts began to take possession of him; and he confided his troubles to his spiritual director. "Wait a year before you come to any decision," was the request made by the latter; and the young man agreed to do so. At the expiration of the term, Victor Hugo called on the priest; but it was not now the latter who asked, "Well, my son?" but the former, who, taking in his own the two hands of the ecclesiastic, exclaimed ardently, "Well, my father?" For this spiritual director was named Lamennais, and he had just broken with the Church!

Spiritualists have often claimed Victor Hugo as one of their own. Such a letter as the following gives them some ground for the assertion. It was written to a mother heart-broken at the death of her child. "Be comforted," wrote the poet: "it is only a separation,—a separation for us. The dead are not even absent: they are simply invisible. Every time you think of your baby-boy, he will be near you." M. Lesclide confesses, in his comments on this letter, that Victor Hugo had a leaning toward Spiritualism; but he adds, "This is certain, that he found fault with the exaggeration of the doctrine, and considered it very dangerous for weak-minded people." It will be remembered that Horace Greeley held exactly these same views concerning modern Spiritualism.

Washington Irving has said that we are all more or less superstitious, and Victor Hugo offers another proof of the correctness of the assertion. On this point, M. Lesclide writes: "The only superstition that Victor Hugo would admit himself guilty of was that of sitting down thirteen, himself included, at the table. He would not discuss the question, but would simply relate a multitude of cases and circumstances in which the number thirteen had proved fatal to himself and his sons. At his dinner parties, therefore, you never saw thirteen covers. If by any chance the contrary happened, the children were put at a side-table, which, by the way, did not always please them. We were twelve yesterday (January, 1879), when a gentleman from Russia came expressly to see Victor Hugo. I took my hat, and gave him my place. But this did not avert the evil. Little Jeanne, going too near the grate, set her dress on fire, which created a consternation in the house. The accident was hidden from the grandfather, who supposed that the little girl was kept in bed

* *Propos de Table de Victor Hugo*. Paris: E. Dentu, Palais-Royal.

by a cold. He went to see her several times a day. 'But you don't cough,' he remarked. 'Oh, no,' answered very cleverly the child, who was in the secret, 'because you are there; but, when you go away, I will begin.'

While Victor Hugo admired the Bible as a literary and historical work, he saw nothing sacred in it, and was always ready to poke fun at its absurdities. M. Lesclide, for instance, was telling one evening how his learned friend, M. Félix de Sauley, in his voyage around the Dead Sea, had discovered the stone on which Joshua stood when he commanded the sun to stand still. "What is the importance attached to this stone, that the text should mention it with such precision?" asked somebody who was present. "Why," replied Victor Hugo, laughing, "it enabled the Hebrew general to get nearer the sun when he spoke to it!"

Although Victor Hugo was a pronounced free thinker, he was not a bigot. M. Lesclide gives us a pretty scene where the poet is sitting on a sofa, of an evening, teaching Jeanne, kneeling in her night-dress at his side, to say her prayers. "In this supplication," writes M. Lesclide, "which differed from all known liturgies, Jeanne asked God for wisdom and the virtue of obedience; she commended to his care her dead father, her uncle François Hugo, who was then ill, and all those with whom she lived, and who loved her. I begged her not to forget me; and she forthwith gave me a place in her prayer, which was often interrupted by naïve reflections. She did not want to say a good word for her brother, who had struck her during the day; but her better nature finally got the upper hand, and Georges was forgiven."

One day, when he was up for election, a delegate from one of the revolutionary societies of Paris called, and in the name of his fellow-members complained rather rudely of Victor Hugo's theistical ideas. "I would like to know," said the delegate, "whether you stand by us or the priests." "I stand by my conscience," answered the poet. "Is that your final answer?" began again the exasperated visitor: "if so, it is very probable that you will not be elected." "That will not be my fault," said the candidate, calmly. "Come, now," continued his self-appointed catechiser, "there is no middle course: you must choose between us and God." "Well," was the response, "I'll take God!"

Victor Hugo always treated the clergy with respect, and consequently had more than one friend among them. An admirer happened to send him two magnificent large sea-shells on the very day that his daughter Adèle, who is now, by the way, an inmate of a private insane asylum near Paris, partook of her first communion. The beautiful presents were placed in the dining-room of his house in the Place Royale, where the poet then lived. The Abbé Levée, who sometimes sat down at the family table, was charmed with these shells. "What beautiful holy-water basins they would make!" he exclaimed one day. "Do me the honor, Monsieur le Curé, to accept them for your parish church," said the host. The prelate returned many thanks; and a short time afterward the shells might have been seen fastened to one of the pillars of St. Paul's, in the Rue St. Antoine, with this inscription on a brass tablet under them: "Presented by the Viscount Hugo, peer of France, on the occasion of the first communion of his daughter Adèle." The tablet was removed in 1851, because the Empire saw in it a commendation of "the Exile of Guernsey."

I shall close this series of extracts from this interesting volume, which affords so many fresh glimpses into the home-life and inner man of the noble poet, with this description of the priesthood: "The priests are my enemies, simply because they

know that my belief is juster and sincerer than theirs. Some of them are honest in their opinions, and I only pity them. For I understand the struggle they have with doubt, *à propos* of a dogma which imposes on them ridiculous tenets. They are forced, in consequence, to debase their reason before what they call mysteries, and to justify their conduct by this terrible confession: I believe because it is absurd! They imagine that they are pleasing God by sacrificing to him their noblest faculties and the right of examination, which is inseparable from the human conscience."

THEODORE STANTON.

CHANCE OR DESIGN.

Neither alternative need be accepted by the agnostic. Both theories may be rejected together as not sufficiently proved. I am no worshipper of Chance, but I must say that the objections to admitting its agency have been overstated. Dr. Peabody told the Concord School of Philosophy, last summer, that there are millions of millions of chances to one against the probability of the requisite number of letters having been so arranged by chance as to form *Paradise Lost*, and that the burden of improbability is far greater—in fact, inconceivably great—against the supposition that the elements of the universe could have come without some guiding plan into their present form. This is perfectly true, and it is also true that the probabilities are greatly against my throwing double-six three times in succession at backgammon. But I have done just this, and it was as easy as making any other three throws. Double-six was just as probable each time as anything else. There is exactly as great a probability of the requisite number of letters coming into the form of *Paradise Lost* by chance as there is of their falling into any other arrangement. There is one chance out of millions of millions in favor of any conceivable disposition; and thus Milton's is just as probable as any other, according to the doctrine of chances. That the elements of our universe should have assumed their present form is, at least, as likely to be the result of chance as their taking any other form would have been. According to the probabilities, any one form was just as likely as any other; and it is conceivable that the present form may have proved more capable of continuance than did other forms which preceded it. Suppose again that, in playing a series of games of backgammon, I always put down the double-sixes, but no other throw. In time, I make out a long list of these lucky hits. Now, if this memorandum were picked up by a stranger, he might say: "Here's a man who has thrown nothing but double-sixes. He has used loaded dice." It is only such ignorance that has led to the saying that the dice of Nature are always loaded. If a wild cat has among her kittens one peculiarly fit and another peculiarly unfit to take care of itself, it is easy to see which will probably survive long enough to leave a large progeny like itself. Thus, the lucky hits of the law of spontaneous variation are recorded under the law of the survival of the fittest. It looks as if Nature threw only double-sixes; but the fact is that these throws make an enduring impression, and others do not. It should also be remembered that mere fitness for survival does not necessarily imply moral excellence. I plant flowers where Nature plants weeds. If both are left to themselves, only the weeds survive. Is the superior fitness of weeds for survival the result of their intrinsic excellence? Is it any more a part of the divine plan than my throwing double-six instead of deuce-ace?

And there are much more serious objections to

the argument from design. Our character is largely moulded by the pressure of natural rewards and punishments. These encourage us to be prudent and cautious. They do not tell us to be generous. Their great commandment is, "Look out for number one." They punish us far more severely for losing our footing than for losing our temper. They make it much more unsafe to fill the mouth with malaria than with falsehood. They threaten us for exposing our own lives, with however high a motive, but not for taking the life of our neighbor. They do put a heavy penalty on seduction; but it falls on the victim, not the seducer. In many cases of unchastity, the natural penalty is slight compared with that of dwelling in marshy locations or drinking impure water. No wonder that men and women grow selfish as they grow old. These natural rewards and punishments are not, of course, designed to teach selfishness. It is for the believer in design to say what is their intention. He owes it to himself, also, to explain why it is that so much immorality is caused by insanity, which, in most cases, comes by inheritance or from accidents or mistakes, involving no deficiency of virtue. "The primary symptom in all insanities is perversion of the moral sense," says the *Encyclopædia Britannica*. Kleptomania, dipsomania, erotomania, and insane tendencies to commit suicide and homicide are so often inflicted on innocent victims that it is very hard to see how such a spontaneous growth of vice can be designed or even permitted by God. A righteous will must, as such, work against all natural forces tending to make virtuous men, women, and children vicious. Who would say that Mary Lamb's killing her mother was a mark of design? Might not its absence be supposed with greater reverence? And why pass over another fact which Emerson admits, in spite of his optimism? We all know that the passion on which depends the perpetuation of our race has much longer duration and greater strength than is needed for this purpose. Who can measure the amount of vice and suffering thus inflicted on mankind? Who dares say that it is all designed and intended? There is much more irreligion in supposing so than in believing this evil—like those produced by insanity and by the working of natural rewards and punishments—to be simply the inevitable results of the fixed properties of mind and matter. We shrink from admitting design, when it would be less like Ormuzd than Ahriman. But, after all, we know so little about the character and the purposes of an Infinite and Incomprehensible God that we have no right to say, "This is worthy of him, and must be a mark of design; but that is unworthy of his special purposes, and must be merely an incidental result of general providence." It is a poor rule that will not work both ways. If any natural phenomenon shows marks of design, all phenomena do, without exception; and all their indications must be accepted, however inconsistent with received theology. The earthquake is as divine as the sunrise. There is as much revelation in the cancer as in the rose. The workings of insanity are guided by the same hand as those of true religion or free institutions. If we find we cannot extend the theory of design to all natural occurrences, we should not take its activity for granted anywhere. We have no right to say: "God is not here, but only there. His will reaches so far as to cause this, but not so far as to bring about that." Wiser far to admit that a design framed by infinite wisdom would necessarily be too vast for us to be able to detect any of its marks.

F. M. HOLLAND.

REJOINDER TO ORTHODOX CRITICISM.

I have lately re-read, with intense interest, the early reports of the Free Religious Association. Occasionally, at that time, some representative of the popular religion would use the freedom offered by the Association to criticise its ideas and movements. As one of the objections thus made accurately expresses the feeling still existing in many members of the orthodox church, a reply to it, even now, may not be untimely.

In the afternoon session of the second annual meeting of the Free Religious Association, 1869, Mr. Gustave Watson rose in the audience, and made some comments by way of criticism upon the Association and its speakers. Among other things, he said:—

"Show us your fruits, when you come round again next year. You do not allude, in your annual report, to a single one whom you have turned from the error of his ways,—from a careless life of indulgence to a life of purpose and consecration. I do not know how many minds you have brought round, but you have not shown us one; while many a minister of Christ will show you a long roll of those whom he has turned from darkness to light."

The test which our friend proposed is a just one. We hold, not less than he does, to the doctrine that "by their fruits ye shall know them." We ought, certainly, to accomplish something in the way of turning men from error, and leading them from darkness to light; and we see some evidence of such accomplishment. True, we do not advertise a list of converts; and, if we did, it would be small, as such lists were in the early years of every foreign mission sent out by the American board with the long name. For, it must be remembered, our work in New England encounters from the clergy and churches of the popular religion an opposition as intense and inveterate and unscrupulous as any foreign missionary meets in any heathen country. Moreover, our success in proselytism could never be expressed in lists of names, because, our object being to lead men to accept and put in practice all truth, however, whenever, and wherever it may be made known, we cannot, as the churches do, make an exhaustive list of the things essential for belief and practice, and require of our members perpetual fidelity to that, without addition, diminution, or change of any sort. Our work must necessarily be a slowly progressive one; and its beginnings in any mind must often be unconscious of the subject of it, since much of the truth we publish is part of the progress of civilization, and may be absorbed unawares from the environment. Witness Mr. Gustave Watson, who, while demanding evidence of our "fruits," was blissfully unconscious that he himself was one of them. It was from our influence that he had gained freedom enough to attend our meeting, listen to what was said there, and speak his mind there in reply, contrary to the systematic habit of his church and clergy. Moreover, he told us in the beginning of his speech, "I am not opposed to the woman's rights movement."

Not to be opposed to one of the greatest reformatory movements of our age is no great merit; but, even of this small measure of improvement, it must be said that Mr. Watson did not get it from his church, which was then, as it always had been, bitterly opposed to that movement. The orthodox clergy of Boston published a "Pastoral Letter" expressly against it, and a "Clerical Appeal" assailed it as one of the great evils and dangers of the time. Mr. Watson must have imbibed the amount of liberality in question from

the influence of Lucretia Mott, or Lucy Stone, or some others of our members who taught so much of the doctrine of the Free Religious Association long before that Association was formed, and who, by the force of truth, have now so compelled public attention to that subject as to attract and enlighten a small proportion even of the members and ministers of orthodox churches.

The inveterate and unscrupulous opposition of the orthodox ministry to the ideas of the Free Religious Association, and their calumnies against the founders of it, both before and after its beginning, are of themselves sufficient to account for the slow diffusion of those ideas. The churches and congregations of those men, comprising much of the "respectability" of the community, having for years been told by the pulpit and the "religious" press that Emerson, Weiss, Frothingham, and their associates, were dangerous men, corrupters of the community, "infidels," etc., naturally echoed those calumnies, avoided the persons so characterized, and looked with suspicion and disapproval upon the Association afterward founded by them. Under such contumely and obstruction, the progress of a new society, small in numbers and poor in purse, was necessarily slow.

It is true, as Mr. Gustave Watson boasts, that many orthodox ministers can show long rolls of members led out of (what they call) darkness into (what they call) light. But the advantage of that transformation must depend on the genuineness of that "light" and the reality of that "darkness." Let us look at a few specimens of each.

Here are some of the things which the orthodox minister calls "darkness":—

1. Natural religion: such true ideas, high aspirations, good purposes, and conscientious action as may appear in any man or woman, irrespective of Biblical precepts or of church doctrines or customs.

2. The doctrines taught by Frothingham, Emerson, Higginson, and Weiss, of which the following are specimens, uttered in the very meeting which Mr. Watson characterized as one of denial, and not of affirmation.

The president of the Free Religious Association, Octavius B. Frothingham, declared the following to be one of its purposes: "The study of God's word and nature and operations and spirit in the whole world of organized fact,—fact brought to us by history, by science, by physics and metaphysics,—knowledge obtained with the whole apparatus and the whole power of reason."

Ralph Waldo Emerson, in the same meeting, described the foundations of his belief as follows: "That the Author of Nature has not left himself without a witness in any sane mind; that the moral sentiment speaks to every man the law after which the universe was made; that we find parity, identity of design, through nature, and benefit, to be the uniform aim; that there is a force always at work to make the best better and the worst good."

T. W. Higginson in the same meeting stated his belief that "natural religion recognizes every voice of God that ever spoke through the soul of man." And "it is the personal communion of every soul with God that sustains spiritual life."

In the same meeting, John Weiss affirmed that "this is life eternal: to be so trained in soul and body that, wherever the spot may be, we shall find ourselves capable of doing God some service."

Mr. Watson's minister calls these teachers "infidels"; and Mr. Watson describes the meeting in which they uttered these sentiments as consisting chiefly of denial and wanting in affirmation.

Natural religion and the defence of it by the four men above named being stigmatized as "darkness" by the orthodox pulpit and press, let us look at some of the things which they claim as "light."

One of the specimens of light which the convert must assent to before the Church will receive him is the belief that, while there is but one God, at the same time the Father is God, the Son is God, and the Holy Ghost is God.

Another specimen of light is the doctrine that two books, containing the precepts of two religions so different that the devotee of the former has to be converted before he can accept the latter, are the one authoritative and sufficient rule of faith and practice.

Another specimen of light is the doctrine that Sunday must be kept holy by public worship, in obedience to a command that Saturday shall be kept holy by rest; and this in spite of repeated declarations in book No. 2, which appoints no Sabbath of its own, that the Sabbatical law in book No. 1 is abrogated.

Another specimen of light is the theory and practice of the orthodox that God must be worshipped by weekly public prayer, in spite of the fact that their "Lord and Master" not only denounced public prayer, but expressly enjoined that prayer should be private.

These are but a few specimens of the false doctrines taught by the Orthodox Church, which Mr. Watson extols in contrast with the Free Religious Association. While that Church and its clergy so manifestly "put darkness for light and light for darkness," while they supply us with so many things of which truth and honesty require the denial, we cannot gratify them by abstaining from denial. We must needs remove the obstructions raised by their false doctrine, to make room for the affirmations of natural religion, which we teach.

C. K. WHIPPLE.

EDITORIAL NOTES.

BY B. F. U.

"A GLOWING friend," in the lines quoted from Emerson by Dr. Bowditch last week, should have been printed, "Ah! glowing friend."

A SERIES of sermons "in the interest of a religion of this world" on theoretical or practical questions of the day, including some of the great social problems, will be an important feature of Rev. M. J. Savage's winter's work.

THE three lectures by Rabbi Schindler, printed in *The Index* of November 12, 19, and 26, are being put in pamphlet form, and will be for sale at this office in a few days. Price 10 cents each; for the three, 25 cents; fifteen for \$1.00.

MR. GEORGE SCHUMM, whose present address is Watertown, Wis., informs us that he will enter the lecture field about the beginning of next year, and speak on some of the great issues of the day. Mr. Schumm is favorably known to the liberal public as the editor of the late *Radical Review*.

JAPAN has made education compulsory on all children between the ages of six and fourteen, "unless there be unavoidable circumstances preventing them from attending school." There must be thirty-two weeks of tuition, and the hours of instruction must be neither more nor less than six daily. The expenses are to be defrayed from the local taxes.

It is to be hoped that the series of discourses relating to the Jewish faith which are being delivered by the Rev. Solomon Schindler may ulti-

mately be published in permanent form. Their ability, clearness of thought, and their intimate relation to the present state of religious ideas combine to render them well worth preservation.—*Boston Sunday Courier.*

DR. PAUL CARUS, the German scholar, whose paper on "The Principles of Art," read before the Boston Metaphysical Club last week, elicited much praise from those who heard it, proposes to give Ten Readings, in German, of Goethe's *Faust*, Part I, with explanation and conversation in English, twice each week, on Tuesdays and Thursdays, at 11 A.M., at his residence, No. 4 Boylston Place, beginning Tuesday, December 1.

THE *American Railroader* is the name of a new semi-monthly journal, edited by B. F. Henley, and published at 12 Vesey Street, New York. Although devoted especially to the interests of railroad employes, it is a journal of general value, dealing as it does very intelligently and in an independent spirit with the industrial and social questions of the day. Its low price, \$1.00 per year, brings it within the reach of thousands who would be instructed and greatly benefited by reading such a paper.

It would be difficult to compress into the same space more mean distortion of the truth and cowardly defamation of the dead than is contained in the following, clipped from the *New York Mail and Express*, in regard to one to whom every American owes a debt of gratitude: "For three-quarters of a century there has stood on the highway leading into New Rochelle a conspicuous monument inscribed to 'Thomas Paine, author of *Common Sense*.' It is an offence to every decent man that passes it. It is an attempt to honor a thoroughly dishonorable man, who was repeatedly dismissed from positions of confidence for breaches of trust, who uttered a most scandalous and virulent assault on George Washington, and who was one of the most blasphemous infidels that ever lived in trouble and died in dishonor."

SIXTY-EIGHT of the students of the Ohio Wesleyan University at Delaware, Ohio, have been suspended for attending a Shakspearean play. This leads the *Cincinnati Graphic* to say: "It may be against the rules of the Methodist Church for a member to attend theatres; but the students are from all denominations, and many of them make no profession of religion at all, and why should these be subjected to the Methodist discipline? . . . It is well enough to have rules against hazing, gambling, drunkenness, profanity, and such practices as are recognized by all laws as cruel or immoral; but, further than that, an institution of learning cannot well go. Character and studiousness should determine the fitness of a pupil, not his opinion or practice in the matter of religion or worldly amusements."

COMMENTING on the edict of the *Presbyterian Church* denouncing the Sunday paper, the *Banner of Light* observes: "In olden time, but a very few of the human race could read, and old theology consequently ruled them with an iron sceptre. Time has changed all this. The people, or a very large majority of them, are now educated; and they feel that they have just as much right to read a newspaper on Sunday as on any other day, notwithstanding the seventh is called holy. This 'bull' is an exceedingly pathetic appeal to 'our Christian households,' but it won't avail. The people of the world are wide awake to-day,—they have been slumbering long enough!—and they are bound to know what is going on in it. This they can do by reading the daily papers, including those published on Sundays."

THIS paragraph is from the *Boston Herald* :—

In Greece, when philosophical and scientific speculation was at its highest point, and when education was conducted in its own vernacular, and not through dead languages, science, industry, and commerce were actively prosperous. Corinth carried on the manufactures of Birmingham and Sheffield, while Athens combined those of Leeds, Staffordshire, and London; for it had woollen manufactures, potteries, gold and silver work, as well as ship-building. Their philosophers were the sons of burghers, and sometimes carried on the trades of their fathers. Thales was a travelling oil merchant, who brought back science as well as oil from Egypt. Solon and his great descendant Plato, as well as Zeno, were men of commerce. Socrates was a stone mason, Thucydides a gold miner, Aristotle kept a druggist's shop until Alexander endowed him with the wealth of Asia. All but Socrates had a superfluity of wealth, and he was supported by that of others. Now, if our universities and schools created that love of science which a broad education would surely inspire, our men of riches and leisure who advance the boundaries of scientific knowledge could not be counted on the fingers as they now are, when we think of Boyle, Cavendish, Napier, Lyell, Murchison, and Darwin, but would be as numerous as our statesmen and orators.

MONROE'S *Ironclad Age*, after pointing out that one of the declared objects of the American Secular Union (National Liberal League) is "the distribution of free-thought literature," says: "The *Index* people, the original movers of the effort to 'secularize the State,' had the temerity to send a few copies of *The Index* to this Congress [at Cleveland], whose object was to unite all shades of sceptics, under the fascinating British title of the American Secular Union, in one grand, harmonious whole. But *The Index*, not being a free-thought paper, according to the new interpretation, was regarded as an intruder, and severely rebuked." The *Age* quotes what we said on the subject in *The Index* of November 12, and adds: "We were better posted than *The Index* people, and knew what kind of papers would be regarded as cheeky intruders by the worthy managers of the Congress. So 'nary' *Ironclad* was sent, for free or other distribution, there." We were sufficiently "posted" in the matter, but were less regardless than our esteemed Western friend of the wishes of the "leaders" to whom he refers; and we took care to send the paper to a gentleman whose sound judgment as to what constitutes free-thought literature obviated the necessity of his waiting for an "interpretation" by the leaders before proceeding to distribute copies of *The Index*, which, we have been pleased to learn, were thankfully received and read with evident interest and appreciation by many, including some whose names have since been added to our subscription list. The illiberality and littleness of a few individuals should not deter us from supplying liberal gatherings as far as possible, with good free-thought literature, especially when one of the declared objects is "the distribution of free-thought literature."

THE Chicago Society for Ethical Culture numbers at present about one hundred active members. Lectures are given at Haverly's Minstrel Theatre (formerly Hershey Music Hall), Sundays, at eleven A.M. The Ethical School has two divisions, meeting on alternate Tuesday afternoons at Judge Booth's, 505 West Lake Street, on the west side, and at Mr. Salter's place of residence, 323 Wells Street, on the north side. Each division includes two classes, one of children between the ages of twelve to fifteen, the other of older members. The Relief Work, inaugurated by the society, is yet separately organized, so that those who may not otherwise agree with the society may join in helping the sick and poor, to whom two nurses, gradu-

ates of the Illinois Training School for Nurses, devote their entire time. Auxiliary to the Relief Work is The Ladies' Union, which aims to furnish clothing, bedding, and other articles required by the nurses for their patients. The Young People's Union, to membership in which any one who belongs to the Ethical Society or the Relief Work is eligible, meets monthly for social and intellectual improvement. The publication of the society may be had by applying to C. J. Errant, 586 Wells Street. The officers of the society are Judge Henry Booth, president; Ernst Prussing, vice-president; Dr. A. B. Hosmer, secretary; and H. W. Palmer, treasurer. The lecturer, Mr. W. M. Salter, may be found at 6 Wabash Avenue, Mondays, from twelve to one; and at his place of residence, 323 Wells Street, Tuesday evenings. The officers of the society, in a printed circular, say: "It is felt that the society deserves a larger following, and should become an important factor in the religious life of the community. While the present members are willing to carry on the society alone, they feel they ought to have the assistance of other liberal-minded and earnest people here in Chicago. An appeal is made to all who believe in the religion of the deed rather than that of the creed to join its rank. No creed subscription is required; and, in case of pecuniary inability, the annual fee is willingly remitted. Those wishing to join may find application blanks at the Sunday lectures, or receive them by addressing the secretary, Dr. A. B. Hosmer, 70 Monroe Street."

TEDIUM VITAE. For The Index.

"The thing that has been, it is that which shall be; and that which is done is that which shall be done; and there is no new thing under the sun."—*Ecclesiastes.*

On earth's surface, Mother Nature,
We have dwelt for many a year.
Weary of thy repetitions,
Yearn we for another sphere,
Travelling same unvarying circuit,
Blooming only to decay,
Constantly thyself renewing,
Tir'st thou guests too long who stay.

Come and go thy wonted seasons
In a swift-revolving round.
Death and birth and light and darkness
Alternating still are found.
Leafage of the jocund springtime
Autumn quickly turneth sere,
Fruitage of the tawny summer
Tides us over winter drear.

What is all this iteration
But a tale told o'er and o'er?
Still it ends in dull renewal
Of the same things evermore.
Blue sky, stars, and far-off mountains
Grand emotions in us stir;
But, to humble us, low instincts
And low daily wants recur.

What if after many aeons
Reachest thou a higher plane?
We shall, then, unsightly fossils
In some dark crypt long have lain.
Say, beyond the grave's dim portal
Us does higher life await?
To a changeless, grand hereafter,
Art thou vestibule and gate?

Useless 'tis for us, mute Mother,
Thee to question or arraign:
Busy with thy countless function,
Thou wilt answer never deign.
Inn for fleeting generations,
Rolleth earth about the sun:
Never-ending, still-beginning,
'Tis a race that ne'er is run.

B. W. BALL.

The Index.

BOSTON, NOVEMBER 26, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, } Editors

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

MESSIANIC EXPECTATIONS.

LECTURE III.

"THE CARPENTER'S SON."

Delivered at the Temple Adath Israel, Boston, Oct. 16, 1885, by Rabbi Solomon Schindler.

It is not without some hesitation nor without some embarrassment that I step before you to-night to discuss the life and mission of a man who, though he sprang from Jewish parentage, and is said to have lived the life of a conscientious Jew, has been placed between our race and the rest of civilized humanity as a barrier to exclude us from a more intimate intercourse with our fellow-men; whose very name still alienates from us to-day the affection of our fellow-citizens, though nineteen centuries have almost passed since its bearer walked the ground of Palestine. Neither must I lose sight of the veneration in which he is held by our Christian friends, many of whom love in him the ideal of a magnanimous, high-minded, and noble man; while millions of others still confide in him in life and in death, and adore and worship him as a God. It is, therefore, not more than simple courtesy on our part, if we respect their feelings, as we wish our own respected, and if we discuss our subject with as much careful delicacy and tenderness as we can possibly grant to an historical research, which is intended not to obtain notoriety, but to instruct, to weed out existing prejudices, and to establish a better understanding between us. I beg you, therefore, to distinguish well between the ideal Jesus, who has been a creation of Christianity, and the historical Jesus of Nazareth as he lived and died.

You can imagine at any time, if you so choose, a human body in such giantlike proportions that its head should reach the zenith while its feet should touch the nadir. In the very same way, you may imagine all the qualities of the human soul raised to their highest degree of perfection. We Israelites are accustomed to attribute these qualities of the spirit in their highest perfection to an invisible

God,—to the One God who has created the universe, and supports and governs it in wisdom and kindness; while our Christian friends have become accustomed to affix these very same attributes to a human form, to that of Jesus of Nazareth. Herein we differ; and, therefore, I shall have nothing to say concerning the ideal structure which has been built up during the last nineteen centuries, which is in the process of building yet, and which will not be finished before humanity has reached the highest round on the ladder of civilization.

I beg also to differ historically in two other points with our Christian friends, and I hope that they will not consider my utterances as disrespectful. I maintain that Jesus was not the founder of Christianity, that he never planned it nor laid its foundation, but that his personality has been brought into the Church, and used as its cornerstone. I claim, furthermore, that there are no historical sources whatsoever from which we could derive authentic information concerning his life, his deeds, and his death. This point is of such grave importance that I must dwell on it, with your permission, a minute or two before I proceed one step further.

There are only three sources from which it has become customary to quote in regard to Jesus of Nazareth. The first and foremost of them is the New Testament. Again, I must caution my hearers that I do not believe in a divine authorship of any book whatsoever, be it called the Old or the New Testament, and that I shall always refrain from arguing an historical point with a so-called believer. If one wishes to believe that Homer was divinely inspired, and that the Iliad and Odyssey were dictated to him by God himself, and that, therefore, these books must be true, word for word, I shall not object. Let him believe, then, that Cyclops Polyphemus had but one eye in his forehead, and that Ulysses blinded him; let him believe that the hero visited hades, and conversed with his former friends; let him believe whatever he pleases. But, when we come to discuss historical facts, we must be unhampered by belief. Now, ladies and gentlemen, bibliographers have long since proved that the Four Gospels, which, after all, contradict one another in principal points, were written more than a century later than the death of Jesus,—not by eye-witnesses, but by people who collected their material from tradition, and who had already a principle, a tendency, to affirm by their story. I do not question at all their veracity or sincerity; but they lacked for their narrative the authentic material, and could not help being biassed in their judgment. These literary products lose still more in the eye of the critic by the fact that the original text has been tampered with afterward. Only of late, a scrap of parchment has been discovered, which contains a passage from one of the Gospels. Scientists place its age as far back as the third and fourth century. In it, an important passage, relating to the promised return of Jesus, is entirely omitted, which would prove, if it proves anything, that still later than the fourth century interpolations, if we shall not call them falsifications, of the original text, must have taken place. A jury which finds the testimony of a witness unreliable in one point generally throws out his testimony entirely, and so does the historian. To him, the Gospels are only of little historical value.

The second source is the historian Josephus, who lived at the time of Jesus, and, consequently, must have known of him, if the latter had, indeed, been a distinguished person or of any prominence. Though he gave considerable space to the narrative of minor events, Josephus originally never

mentioned him. The celebrated and frequently quoted passage in his *Antiquities*, chapter eighteen, has been condemned even by church authorities, such as Bishop Lardner, as an interpolation; and Origen, the great Christian writer of the third century, shows by his writings *contra Celsum* that he did not know of that passage, which, consequently, must have been inserted much later and for a certain purpose. Another historian, Justus of Tiberias, lived at the same time; but not a word did he mention about the man, who, according to the Gospels, must have created quite a stir.

The third source is the Talmud; but here, again, we find an ominous silence concerning him. Not before the time that our ancestors were called upon to contest the religious structure which began to grow up upon him as its corner-stone, and to defend themselves against calumnious charges, is he mentioned, and then only slightly.

Besides these three sources, another argument is frequently brought into use, in order to prove not only his existence, but his greatness. Behold, say our Christian friends, the marvellous growth of Christianity! See how it revolutionized the world, how it civilized the most barbarous nations! Could such a success have been achieved, if its founder had not been a man of great prominence, if he had not been able to impress his contemporaries with his mission to such an extent as was needed for the future success? Granted, they say, that there are no authentic literary evidences to be found concerning his life and deeds, is the mere existence of the Church not evidence enough for his greatness? Do not facts prove more than words?

This argument, however rational and reasonable it may appear, stands upon weak and tender feet. Indeed, if the plans for the Christian Church had emanated from him, if its doctrines had been promulgated by him, if its system had been suggested by him, then we could conclude from the work about its creator. But, even according to Christian sources, nobody dreamed less of such a structure than its supposed originator. Christianity was not his work: it was the product of peculiar circumstances, which all worked together in such a marvellous manner that we cannot fail to see the finger of God in its origin and development. The downfall of Hellenistic idolatry, which had been prepared by Greek philosophy long before; the extinction of the Roman Republic and the decline of the Roman Empire; the great migration of nations, which, issuing from the north, took a southward course, and changed the geography of the world; the death of antique civilization in the waves of barbarism, which, like a second flood, burst upon it, and covered the whole world for a considerable length of time,—all these circumstances together produced what to-day is called Christianity. Nothing can live in this sublunary world unless it is marked for life by God Almighty. Nothing succeeds, unless God has destined it for success; and thus has Christianity a place on this earth and a mission to fulfil as well as Judaism. And, in the course of my lectures, I shall, with pleasure, give due acknowledgment to the great work which Christianity has indeed performed.

Taking it all in all, what do we really know about Jesus of Nazareth, the so called Messiah? Although volumes have been written concerning his life and deeds, his whole history could be inscribed almost upon the nail of a thumb.

Jeshu, an abbreviation of Joshua, and Latinized into Jesus, was born of humble parentage. He was the son of Joseph, a poor carpenter, and Miriam, his wife, who both were also the parents of several other children. It matters little to the historian that millions of people still ascribe to

him a divine origin, and believe him the offspring of an immaculate conception. There are many more millions of people who believe to-day the very same story, but apply it to another man, to Buddha. Not only are such statements unhistorical, but I dare say that the passages in the Gospels relating to them were never written by a Jewish author: they were the products of a Grecian pen. The Greeks believed in the intercourse of their gods with mortal women, and saw no disgrace in such an adultery. All their heroes were demi-gods. Even Alexander the Great attempted to insinuate that Philip was not his real father, and that he was the son of a god. Greek vanity cared little that the chastity of their women was questioned, whenever the customary compliment was rendered to a man by calling him the son of a god. The Greek and Roman populace would have never believed in Jesus the man, the reformer, the martyr, or the Messiah; but it was easy for them to accept him as the son of the Jewish God, Jehova. The Jews, on the contrary, held the chastity of their women in so high a respect that they would not permit even a god to violate it.

About his childhood and early education, nothing is known. He is said to have learned the trade of his father, that of a carpenter. Grown up to the age of manhood, he joined the sect of the Essenes, which was mostly composed of artisans, and represented the socialistic and nihilistic element of which I have spoken in my last lecture. They despised all earthly possessions, would not hold property, lived together in small bands, sharing everything in common. They would not marry; and they believed that a change for the better could be effected only by an ascetic life, and that the Messiah—whom every Jew was expecting at that time—would transform the whole world into one large communistic brotherhood, in which there should be neither rich nor poor, and from which all the passions adhering to mankind should be removed. He soon grew into prominence in the rural districts where he sojourned. He must have spoken of the change which he expected to come over the world with such a sincerity that, as it is quite natural, his friends expected him to produce it, and may have looked at him as the Messiah. Let me state right here that the name Messiah, or, as it is in Hebrew, Mashiach, is a misnomer, if applied to him; for he never was anointed for his mission by any authority whatsoever, real or fictitious. How can, therefore, a man be called Mashiach, the Anointed, if he never was anointed? Even Christian sources do not claim that the act of anointment was ever performed on him.

Finally, perhaps he learned to believe in himself. A great many people do believe in themselves without being conceited. There would be no heroism, if the hero did not believe in his own ability to perform the heroic deed. Young men, especially, are apt to carry such a belief to an extreme; and he was a young man. At the time of his death, he was not older than thirty-three years,—the most dangerous period of life, in which the young man attempts to transform his airy ideals into tangible facts.

The most critical season of the year was, at that time, the Passover Festival,—a festival celebrated in remembrance of the liberation of Israel from Egyptian bondage. Every male person was bound to be present in Jerusalem during the seven days of this festival, and the spirit of liberty ran higher than usual. The Roman procurator found it, therefore, always necessary to be present in person in the city, in order to quell any disturbance which was likely to arise, and to nip every revolt in the bud. You will perhaps understand the danger much better which the return

of every Passover Festival brought to the front, if you place yourselves for one moment in the condition of that time.

Supposing our cherished Republic should have been changed into a despotic government; supposing some other nation stronger than we should defeat us in battle, and should keep us in a state of servitude; supposing that the indignation of the American people should watch for an opportune moment to break the chains of such a slavery,—would not the Fourth of July then become the most critical and the most dangerous of all the days of the year? The remembrance of the glorious day when the heroic fathers of the country declared their independence would invite emulation. Any orator of mediocrity even could on that day stir up the people to riot and bloodshed.

The representative of the government then in power would, as a matter of course, be watchful of every movement, and have his soldiers in readiness to quell any disturbance. He would be at his post of duty on that day from morning till night, and feel relieved only when the last hour of that dangerous day had passed and the last firecracker had been set off.

In a similar plight was the Roman governor during the feast of Passover. His troops were stationed with great skill at the most important posts, the garrison of Jerusalem re-enforced, police in uniform and detectives in disguise probably patrolled the streets, and reported promptly at headquarters. It may easily have happened when Jesus entered Jerusalem a few days before the festival that he was recognized and cheered by his rural friends; it is probable that the rumor spread among the people, which was ready for a revolt, that a Messiah had appeared, and would give the signal at the opportune moment; it is more than probable that this rumor reached the Roman authorities, after it had been magnified to a large extent. The natural consequence was that Jesus was watched with suspicion, that every one of his steps was carefully guarded, and that just before the festival he was taken captive. Pontius Pilatus risked a *coup de main*. If Jesus was the Messiah indeed, his prompt imprisonment and execution would either intimidate the people and suppress the outbreak of a riot for years or it would make the people rise in arms at once, and hasten the crisis. Either way pleased the haughty Roman much better than the suspense in which he now was kept all the time.

His calculation was as correct as it was shrewd; but he was mistaken, nevertheless. The people would have risen in revolt, if the great mass had considered the Galilean the right man to liberate them. But they expected a warrior, not a man of peaceful disposition; they expected a man of arms, and not a theorist. Neither was he an offspring of the house of David. The masses remained cold and indifferent when they heard of his arrest, and even the few friends of the unhappy Messiah deserted him in the hour of trial.

There is no evidence that he ever was tried before a Jewish tribunal, for the right of capital punishment had been usurped by the Romans long before; and, even if there had been such a trial, he must have been acquitted, because the sympathies of his fellow-citizens must have been with him. But he was not tried nor convicted by a regular Jewish court, as, on account of the holy day, there was no session. He was simply judged and convicted by the Roman authorities on the charge of conspiring against the Roman government; and he was executed in great haste the very next day, at a time when the assembled people witnessed the grand passover ceremonial in the temple. The mode of crucifixion was a

Roman mode of execution; and the inscription *Jesus Nazaraeus, Rex Judeorum*, Jesus of Nazareth, King of the Jews, which is said to have been affixed to his cross, was to show the charge which had been made against him.

Now, ladies and gentlemen, this is a point upon which I must dwell a few moments longer. The malicious charge that the Jewish people, nineteen hundred years ago, tried, convicted, and executed an innocent man, has brought upon us indescribable misery, and bears even to-day its bitter fruit. This charge has been the cause of wholesale murder, and for nineteen centuries have our nation been persecuted for no other offence than that their ancestors had crucified Jesus. We were, and are still, called deicides, or, as vulgar language expresses it, Christ-killers. Absurd as it is to hold us responsible for an act committed by our ancestors nineteen hundred years ago, as ridiculous would it be for us to try to find an excuse for it. Granted that our ancestors were, in fact, the cause of his premature death, there is no excuse needed; for, as long as capital punishment is not abolished and circumstantial evidence is used to convict a criminal, or as long as political offences are punished with death, so long will cases of judicial murder never be avoided.

But the charge is as false as it is malicious. If you scan the Jewish law from its beginning to its end, you will find that no such trial as related in the Gospels could ever have taken place. The whole form of the proceeding as told in the Gospels is illegal according to the forms minutely described by the Jewish law. It shows, again, that the writers of the Gospels were not Jews, but must have been Greeks or Romans, who were ignorant of the Jewish law. And so it was; and, with this fact, the whole charge collapses. The whole charge was a fabrication of the early Church. At the time when the Gospels were written, most of the members of the Church were Gentiles; and it was at that time already evident that the Gentile world, and not the limited Jewish circle, was to be the future field for the missionary efforts of the Church.

How could a missionary approach a Roman, and tell him that his people had put to death the Son of God, their Saviour? Such a statement would have alienated the whole world from them; for the Roman Empire comprised almost the whole of the known world, and every individual took a certain pride in being a Roman citizen. The Jews, on the other hand, were only a small nation. They were then living in small communities scattered over all the provinces of the Roman Empire. They were furthermore disliked on account of their rigorous laws, which would not allow their amalgamation with their neighbors. They were hated at the imperial court on account of their obstinacy and the riotous character which they showed in frequent revolts. The charge was, therefore, laid before their door; and the Roman was told that the Jews had killed his Saviour, that the Roman authorities even had endeavored to save him from the violence of the populace, but had been unsuccessful. Such a story was pleasing to the Gentile world, and to a Roman seemed both probable and plausible. The masses, which gained by it a pretext for venting their anger on a class which they hated, did not investigate the matter any further; and thus the unfounded and malicious charge was handed down from generation to generation to this very day. Is it not high time that our advanced age and our enlightened fellow-citizens should finally drop that malicious charge which, even if it were not a fabrication, could not reflect upon us? Is it not high time that bigotry and fanaticism should be

silenced, and that the rising generations should be instructed to take those legends for what they are worth? It is not the Jew who is disgraced when the epithet of deicide, or Christ-killer, is hurled at him: it is the one who uses it, because this very expression gives unmistakable evidence, not only of his bigotry, his intolerance, and of his bad breeding, but of his ignorance; and, not for our own sake, but for his sake, I stand here and appeal to you to spread enlightenment wherever you can in regard to such an important matter.

My topic of to-day has been too unwieldy to be pressed into the mould of a lecture of thirty minutes' duration. I shall therefore continue the same subject on Friday next, when I shall compare the relative position of both Judaism and Christianity in regard to Messianic expectations.

CORRESPONDENCE.

THE APPENDIX TO MARK.

Editors of The Index:—

The last twelve verses in the last chapter in the Gospel "after Mark" is attached in the new version as an appendix, with a foot-note, thus: "The two oldest Greek manuscripts, and some other authorities, omit from verse nine to the end." Of this fact, students of the New Testament have been very familiar, as Jerome, 410 A.D., and other Fathers declared that Mark ended abruptly with the words, "for they were afraid." And Edwin A. Abbott, D.D., of Cambridge, in a most remarkable little book, entitled *The Common Tradition of the Synoptic Gospels*, calls attention to the fact that that codex L, ascribed by scholars to the eighth century, has another appendix which he gives in his book. The appendix, as it now stands, came in first in Latin versions of the New Testament, and was unquestionably placed there for controversial reasons. It was not used, says Prof. Abbott, before the fourth century: "Neither Cyril of Jerusalem (A.D. 350), in his exhaustive quotations of passages concerning the sitting at the right hand of God, nor Tertullian (A.D. 200), nor Cyprian (A.D. 250), in their controversies concerning the necessity of baptism, makes any reference to any passage in the longer appendix."

One author speaks of this being done by those who were styled "the holy luminaries and masters of the Church," and speaks of a Father of the Church who "frankly sets forth another criterion of truth, by no means uncommon even in these days; viz., it is 'necessary.'" I would commend Prof. Abbott's book to the attention of the readers of *The Index*. He is a fair-minded man as well as an eminent scholar of the Church of England, and is in favor of telling instead of the suppression of the truth in regard to the history of the New Testament.

It is beyond all doubt that verse sixteen in the appendix—namely, "He that believeth and is baptized shall be saved, and he that believeth not shall be damned"—was placed there as a saying of Jesus, some time from the fourth to the fifth century, for the purpose of having authority to put down by force such heretics as the Manichæans and the Paulicians.* The latter sect agreed with the former in many respects. They each

* In Mosheim's *Church History*, vol. II., p. 582, it is demonstrated most clearly that the various sects of "Mystics," which had an open or clandestine existence either before or after the ninth century, resembled, in some particulars, the ancient Manichæans, in that they, as Mosheim says, "rejected all rites and ceremonies, and even the Christian sacraments, as destitute of any, even the least, spiritual efficacy or virtue, placing the whole of religion in the internal contemplation of God and the elevation of the soul to divine and celestial things." They all rejected baptism, and more especially the baptism of infants.

They were called by many names, says Mosheim, in different countries. The title of Palerini was given to them in Italy. In France, that of Albigenes. Our historian cites the *Codex Inquisitionis Tolosanæ* to prove the distinctions between the sect last mentioned and the Waldenses, though afterward the title Albigenes gradually extended to all heretics. The appellation of *Boni Homines*, or *Los bos Homes*, as the Southern French spoke at the time, was a title which the Paulicians attributed to themselves. Various were the devices they used to escape from the terrible eye and zeal of the Inquisition. If they refused to listen to the voice of "Reason," but one fate was meted out to them, says our historian, summarily, they were "condemned to be burnt alive."

Imagination sickens in the consideration of the details of the persecutions to which these different sects were subjected. Suffice it to say that the hardships and penalties to which the Church was subjected pale away into utter insignificance in comparison therewith, as Gibbon has abundantly shown.

had no temples, neither did they baptize with water, and did not recognize a visible head to their Church. Worship consisted, with them, in a dedication of the heart to God; and faith without works was dead. Both Photius and Gibbon, as does the writer of the article "Paulicians," in the *American Cyclopædia*, also, favor the theory that the latter sect derived the name from the Apostle Paul.

Mosheim says they obstinately rejected the institution of baptism, the Lord's Supper, and the divine authority of the Old Testament. Photius, in his first book against the Manichæans, p. 29, expressly asserts that the Paulicians treated baptism as a mere allegorical ceremony. They seem to have been rationalists, and treated the ceremonies of the Church with, says Mosheim, "contempt and reproach." They denied that Christ was really nailed to the cross, or that he expired, in effect, upon that ignominious tree; and hence naturally arose that treatment of the cross of which the Greeks accused them. They were evidently not Manichæans, though they held many views in common with them.

Like George Fox, they looked upon the use of church bells as an intolerable superstition, as likewise did they the use of incense and consecrated oil in religious services, and condemned the use of instrumental music in religious worship. They refused all acts of adoration to the images of Christ and of the saints, and were shocked at the subordination and distinctions established among the clergy. All these things, and especially their rejection of baptism, and more especially the baptism of infants, were enough to cause the most violent persecution against them and their successors; and in one crusade, in the reign of the Empress Theodora alone, one hundred thousand of them were destroyed.

That there were violent controversies on the subject of baptism in the second century is beyond all doubt. It was denied that Jesus ever submitted to the baptism of John, and the Gospel according to the Hebrews was adduced to support this view. It was written in that Gospel, according to Jerome: "Behold the mother of the Lord, and his brethren said to him, John the Baptist is baptizing for the remission of sins: let us go and be baptized by him. But he said to them, What have I sinned, that I should go and be baptized by him?"

We know that Paul rejoiced in the fact that he had baptized so few, and expressly says that he was sent, not to baptize, but to preach the gospel, and speaks of being "baptized into Christ," as the saving baptism. There is no doubt that the authorities which I have adduced are right; that the Paulicians derived their name from the apostle Paul; and that the text in the appendix, Mark xvi., 16, was devised and inserted by the Church, for the wicked purpose of persecuting those who rejected the rite of baptism. Thus, in the New Testament is to be found one of the most disgraceful and impious pieces of deception in the whole history of mankind. And, in view of this fact, what shall we say of those who were parties in the late revision of the New Testament, who, knowing all these facts, have allowed the record to remain with simply a blank space between the 15th and 16th verses? But is not this on a par with the explanation given in the preface, page xx, note (e), in respect to "titles"? They state that "the titles found in the most ancient manuscripts are of too short a form to be convenient for use," thus falsifying the record. The titles in ancient manuscripts being "after," and not "according to," Matthew, Mark, Luke, and John; that is, after the apostolic time and era is all these books profess to be. It is in relation to such things that Prof. Abbott well says, "Another criterion of truth is set forth, by no means uncommon even in these days; viz., that it is 'necessary,'—i.e., it is convenient to deceive the people; and, sorrowful is the fact, many of them still love to have it so!

DAVID NEWFORT.

ABINGTON, PENN.

THE NEW EDUCATION.*

Editors of The Index:—

The two first editions of this work went out with the title of *Moral Education*; but this third edition has a more comprehensive title, giving better idea of its scope. It has more chapters than the preceding

* *The New Education*. Moral, Industrial, Hygienic, Intellectual. By Joseph Rhodes Buchanan, M.D. No. 29 Fort Avenue, Boston. 416 pp. Price \$1.50.

issues, the last being an essay on the management of children by that wise woman and kindly philanthropist, Mrs. Elizabeth Thompson, of New York, who has bought many of these books for her friends. He does not accept the idea of a university, as defined by President Eliot of Harvard, as "a place for the most extensive acquisition of knowledge," but would displace that fragmentary conception of education in school or college by the better definition given by Rev. Horatio Stebbins, at the Exeter Academy Centennial,—"the discipline of man, putting him in the widest relations with humanity, as a general preparation for life in whatever sphere he may act."

Moral education, ethical culture, recognition of man's spiritual faculties, and industrial and scientific training must go on with the intellectual education, which now ignores all the rest, and so fails to fit scholars for manly and womanly work and for large and harmonious life. In his clear and vigorous way, the antiquated collegiate methods are keenly criticised, and the faults of our schools pointed out. He says: "The whole system is wrong from top to bottom; for it is not education, but schooling. Intellectual training, however perfect, is not liberal education, but only a fragment of it, as an arm is part of a man."

Better bodily health, moral and ethical development, and practical training in art and scientific industry, must be inspiring guides and aims, as well as gaining intellectual knowledge in schools. Addresses by the author before the National Educational Association at Minneapolis, the University Convocation of New York, and at Louisville and Boston, on like occasions, are quoted and enlarged on. Evolution of genius, ethical culture and its relations to religious and intellectual life, the sphere and education of woman, ventilation and hygiene and kindred topics, are embraced in a wide range of fruitful suggestion and valuable research, making the volume practical and full of interest. The chapter on "Woman's Sphere and Education" is especially good. The pessimism of Dr. Clarke's *Sex in Education* is keenly criticised; and Dr. Buchanan gives, as "one of the most pleasing recollections" of his life, the fact that he asked and gained the opening of a medical college in Cincinnati to the first woman in the world, so far as he knows, that ever had such a privilege granted to her.

G. B. S.

A LETTER FROM A CHRISTIAN.

UNIVERSITY S. CALA., NOV. 3, 1885.

Editors of The Index:—

I have been receiving copies of your paper gratis. I thank you for your solicitous kindness, but wish here to disclaim all part, lot, or sympathy with its blasphemous and deceiving teachings. May the Lord have mercy on your erring souls, and lead you from the highway of everlasting death into the way that leads to God. Please do not send me any more indexes to hell. The way is plain enough already.

FRANK BARTON.

[*The Index* has been sent to Mr. Barton by the request of a gentleman, who thought he might profit by reading it.

B. F. U.]

WHEN we think of man's origin and note the wonderful progress he has made, we are full of hope for the future. We do not believe in the failure of the race. The old story of Adam and Eve we have discarded for the doctrine of evolution. We no longer believe that man was created a perfect being, and that he fell in disgrace from this divine condition. We believe that man has steadily risen from an inferior condition; that his cradle was not an Eden, but a jungle; that his primitive state was not wisdom, but ignorance; that his heart was not at the first pure, but full of evil desires and savage passions; that he was not made upright, but has become so through centuries of growth. Primitive man found no tree of knowledge offering him its fruit. He learned by long experience, and the grain of wisdom was slowly gleaned from among the tares of ignorance. With painful and stumbling steps, he climbed the mount of knowledge; and to-day we stand above the clouds. Believing as we do that the path of humanity has been upward from the start, we have no tears to shed over the failure of the race. We find imperfections to deplore, traits of character that evince the savage origin of the race, but we know that in the great school of time these will be left behind. Man is not

totally depraved. He still retains traces of his lowly origin, but he is growing toward perfection.—From discourse on "The Duty of the Hour," by Solon Lauer.

BOOK NOTICES.

MIND CURE ON A MATERIAL BASIS. By Sarah Elizabeth Titcomb. Boston: Cupples, Upham & Co. 1885. pp. 288. Price \$1.50.

Miss Titcomb, who will be remembered by some of our readers as the author of *Early New England People*, has, in the present work, undertaken an elaborate exposition of what she considers to be the facts in regard to the so-called "mind cure," and begins by stating in the opening paragraph that "the writer, having acquired the method of curing disease which is practised by the 'Christian Scientists' or 'Metaphysicians,' commonly called mind-curers, came to the conclusion that the success attending that method is due to concentration of thought, and not to the theology underlying the method." We give the titles of the chapters into which the work is divided, as an indication of the trend of her argument: "The Cure of Disease by the Concentration of Thought," "The Theology of the Christian Scientists," "The Single Substance Theory," "Mind in Animals and the Lower Races of Men," "The Origin of the Doctrine of the Immortal Soul," "Bible Proof of the Single Substance Theory." Miss Titcomb's theory, which is opposed to that of the Christian scientists, who believe that there is but one substance, and that is mind, is that of a Christian materialist; and the purpose of her book is "to make it evident that the Bible and modern science coincide perfectly in demonstrating that mind and body are one instead of two separate entities, and, consequently, that there is no possibility of a future life save by the resurrection of the dead, as taught in the New Testament." "Facts," she declares, "demonstrate that mind, or spirit, is simply the product of a combination of particles of matter." Therefore, the position taken by the Christian scientists, that there is no substance to matter or the material part of man, and, consequently, that pain and disease are not realities, but simply beliefs of mortal man, cannot be true. In support of her theory of the cure of disease in one's self and others by the concentration of thought and thought-transference, she quotes copiously from such writers as Dr. W. B. Carpenter, Maudsley, Sir William Hamilton, Sir Henry Holland, Dr. Hack Tuke, Sergeant Cox, Dr. Haygurt, etc. She also brings forward her own experience in mind-curing. She has evidently made her theory the subject of much research, and quotes pertinently in other portions of her work, not only from the writers mentioned, but also from Berkeley, Priestley, Spurzheim, Max Müller, Mivart, Spinoza, D'Holbach, Lewes, Darwin, Tyndall, Spencer, Huxley, Bain, Bastian, Tylor, Mill, Lubbock, Laycock, Rawlinson, Büchner, O. W. Holmes, W. D. Gunning, Dr. Morton Prince, and many others; and, in the chapter on "Bible Proof of the Single Substance Theory," she brings forward an exhaustive array of Scripture texts in proof of her position that the Bible does not teach immortality. S. A. U.

ITALIAN POPULAR TALES. By Thomas Frederick Crane, A.M. Boston and New York: Houghton, Mifflin & Co. 1885. pp. 389. Price \$2.50.

Here is a new book of stories, fairy tales, etc.—the "folk-lore" of Italy,—translated from recent Italian collections, "exactly as they were taken down from the mouths of the people, which, combining instruction for students with amusement for younger people, will make an admirable contribution to the gifts of the coming holidays. Max Müller, in an essay on "Folk Lore," in his second volume of *Chips from a German Workshop*, arguing for a common origin of language, says: "Not only have the radical and formal elements of language been proved to be the same in India, Greece, Italy, but among the Celtic, Teutonic, and Slavonic nations, not only have the names of many of their gods, the forms of their worship, and the mainspring of their religious sentiment been traced back to one common Aryan source, but a further advance has been made. A myth, it was argued, dwindles down to a legend, a legend to the tale; and, if the myths were originally identical in India, Greece, Italy, and Germany, why should not the tales also of these countries show some similarity? . . . Jacob Grimm, as Mr. Kelly tells us in his work on *Indo-European Tradition and Folk*

Lore, was the first scholar who pointed out the importance of collecting all that could be saved of popular stories, customs, sayings, superstitions, and beliefs. His *German Mythology* is a storehouse of such curiosities; and, together with his collection of *Märchen*, it shows how much there is still floating about of the most ancient language, thought, fancy, and belief, that might be, and ought to be, collected in every part of the world. . . . Sufficient material has been collected to enable scholars to see that these tales and translations are not arbitrary inventions or modern fictions, but that their fibres cling, in many instances, to the very germs of ancient language and ancient thought." Prof. Crane, who is one of the senior instructors of Cornell University, where he teaches Italian and other languages, has been for many years engaged in the compilation and translation of these tales, and is especially fitted for such work as is here given. In his preface, he modestly says: "My object has been simply to present to the reader and student, unacquainted with the Italian dialects, a tolerably complete collection of Italian popular tales. With theories as to the origin and diffusion of popular tales in general, I have nothing to do at present, either in the text or notes. It is for others to draw such inferences as this collection seems to warrant." Sixty-seven pages of "Notes" to these tales are given, very instructive to students in philology. Old nursery friends, like "Blue Beard," "Dick Whittington and his Cat," "Beauty and the Beast," "Cinderella," and others, reappear here in Italianized form. S. A. U.

PRINCIPLES OF POLITICAL ECONOMY. By Simon Newcomb, Ph.D., LL.D., Professor of Mathematics, U.S. Navy; Professor in the Johns Hopkins University. New York: Harper & Brothers. 1886.

This is precisely such a work upon political economy as we should expect a man to write whose dominant genius is for the mathematics. It is blocked out with mathematical severity. It is a profoundly able work, but it is not engaging in its method. "The author takes a more hopeful view of the future development of economics than that commonly found in current discussion. He holds that nothing is needed to give the subject a recognized place among the sciences, except to treat and develop it as a science. . . . If the same amount and kind of research which have been applied to the development of the laws of electricity were applied to this subject, there is every reason to suppose that it would either settle many questions now in dispute or would at least show how they were to be settled." The practical bearings of the subject are reserved for the concluding chapter. While it is not without apology that Prof. Newcomb introduces these, it is probable that the average reader will be more attracted to this portion of the book than to the preceding. The matters discussed in this book, which is made up of seven chapters, are "The Let Alone Principle," "The Policy of a Protective Tariff," "On Taxation," "Monometallism and Bimetallism," "Refutation of the Currency," "Of Socialistic Ideas," "Of Charitable Effort." The method of these chapters is anything but dogmatic. It is extremely tentative, and better calculated to make the reader think for himself than to furnish him with ready-made opinions. The concluding chapter—on Charitable Effort—is plain enough, however, in its repudiation of conventional methods.

A WOMAN'S INHERITANCE. By Amanda M. Douglas. Boston: Lee & Shepard. pp. 345. Price \$1.50.

This is a story with a purpose, and containing a moral. It is also charmingly written, and fulfils all the standard requirements of the orthodox novel, having plenty of love scenes, passionate and otherwise, a dignified hero, a handsome and fascinating villain, a delightful little flirt, a scheming mother, with various other interesting characters, in addition to the individualized young woman, who figures as the heroine under the unique name of Christmas Ormiston. Her "inheritance" was the manufacturing business, which her father, during his life, had owned, and which was left, at his death, in a very precarious condition, but through the loyalty of the hero was kept afloat until she came of age and able to gratify her long-cherished desire to become a "business woman," and take charge, understandingly, of her own affairs. To show that a woman can be capable of taking a genuine interest in a

business which has, by common public sentiment, been considered essentially masculine in its requirements, and may achieve success therein, without detriment to her true womanliness, is the evident purpose of the novel; and that such a life, with its incentive to endeavor, its broadening, stimulating, and strengthening influences, is far preferable to the demoralizing tendencies engendered by yielding to the demands of a merely fashionable and conventional womanhood, is the apparent and timely moral. The contrast between the pretty, selfish, unprincipled, yet kind-hearted doll baby of fashion, Dolly Allaire, and the proud-spirited, pure-hearted, high-principled, generous "woman of business" is very finely conceived and well drawn.

NOTES OF TRAVEL IN NORTHERN EUROPE. By Charles A. Sumner. pp. 385, 12mo. New York: Andrew J. Graham, 744 Broadway.

This is an interesting volume, because the author, trained as a reporter, and standing at the head of the list, travels with quickened senses, and describes at large events, customs, etc., which most tourists pass over in silence. The dedication is to the author's wife and daughter, and their portraits adorn the page. It is a pleasing tribute to them as companions of his voyage. The numerous engravings are of real value in illustrating the text. He takes the reader from London through the heart of Sweden, thence through Denmark to Berlin, Dresden, and Paris. The interest never flags, whether the conversation is with the titled nobility or the most abject peasant. In every case, something is added to the store of knowledge of the customs, habits, and thoughts of the people. One may read many other books of travel in Scandinavia, and yet find this volume fresh; for it treats especially of things overlooked by those who have preceded. The wages of wage-workers, the condition of the laborer, the sphere allotted to woman, the political and religious status of the people, are all forcibly presented. One thing strikes the reader forcibly, and that is the power of educational prejudice in respect to church-going among a people as liberal-minded as the Swedes. The churches are very commodious, and are always filled with worshippers. There seems to be no complaint of vacant pews. Perhaps one circumstance contributes to this result. The ample salaries give the pulpit a fair order of talent; while in this country, as a rule, the pulpit is a last resort of professional aspiration.

FIVE-MINUTE DECLAMATIONS. Selected and adapted by Walter K. Forbes, Elocutionist and Public Reader. Boston: Lee & Shepard. Price 50 cents.

Says the author in his preface, "As five minutes is the allotted time nowadays in the schools and colleges and at the prize declamations, . . . this book should meet with favor from the declaimers of America. . . . Each selection in this book has been subjected to the test of reading aloud, and is a declamation in the proper sense of that term." Some of the sources of this excellent collection are the speeches of Webster, Story, Everett, Phillips, Choate, G. W. Curtis, Robert Winthrop, Gough, Seward, Charles Francis Adams, Schurz, Beecher, and like orators.

SEED THOUGHTS FOR THE GROWING LIFE. From Robert Browning and Others. Selected for the Use of Teachers and the Help of Children and Parents. By Mary E. Burt. Chicago: The College Book Co., 135 Wabash Ave. 1885. Price 20 cents.

These selections on different topics, such as "Truth and Purity," "Seeing Broadly," "Growth," "Work," "Beauty," "Simplicity," "Hope," and kindred subjects, are made with good taste and judgment, although the compiler states that many of the selections were made by her young pupils at her suggestion.

Among the new calendars for 1886 is that compiled by Mrs. H. R. Olin, in aid of the cause of temperance. Each day has its leaflet with clear strong words, taken sometimes from the writings of Gerrit Smith, Wendell Phillips, Farrar, Carlyle, Horace Mann, George Eliot, Florence Nightingale, Youmans, Liebig, Milton, Plutarch, and Marcus Aurelius, and sometimes from the reports of prison officials and the resolutions of legislative committees or ecclesiastical conventions. The daily supply of information and encouragement must be very welcome to every worker against the terrible curse of drunkenness.

Most readers of *The Index* would find too much in favor of Sabbatarianism, and the favor shown to prohibition is too marked for some. Many passages, however, show a thoroughly liberal spirit. That for Sunday, February 28, appeals in behalf of the weaker members of the Church against the use of alcohol in the communion. This Calendar is published by Charles G. S. Fielden, 161 La Salle Street, Chicago, and may be obtained for \$1.00 at the sale-rooms of the Women's Temperance Union and kindred organizations.

PROF. PALMER, of Harvard, opens the November number of the *Andover Review* with a forcible statement of the principles which have commended to the Harvard authorities the new system of education which they have adopted. Prof. Torrey continues his analysis of Leibnitz's *Theodicee*. Mr. Hamilton W. Mabie contributes, under the title "A Typical Novel," a thorough critique of *The Rise of Silas Lapham*. Prof. Hunt, of Princeton College, reviews some of the leading methods of literary study as applied to English literature. Rev. D. L. Leonard, of Salt Lake City, presents the results of six months' personal investigation, on the ground of the legal and political situation in Utah. The leading editorial, continuing the series on "Progressive Orthodoxy," discusses "The Scriptures." The recent meeting of the American Board is noticed in a second editorial. Rev. Selah Merrill, D.D., American Consul at Jerusalem, has a paper upon "The Site of Calvary." Houghton, Mifflin & Co., Boston.

THE breezy account of "The Hare and Hounds Club," by W. J. Ballard, in the November *Treasure-Trove and Pupils' Companion*, gives a refreshing idea on the subject of physical exercise. All who would be glad of a suggestion for "A New Thanksgiving" can find it in the bright story under that caption by Mrs. Elizabeth P. Allan. There is a charming short story by Sally Campbell; and among articles curious, timely, and to the point are "The Story of Some Favorite Poems"; "Some Traits of Lincoln"; and "Mind your own Business," by Wolstan Dixey. *Treasure-Trove* is especially useful to teachers in their school work. They will be particularly grateful for "Stories from History"; "Lives of Great Men"; "The Doctor's Letter"; "The Capital of Egypt"; "The Living World"; "The Man who caught Gold and Silver Fish," by Prof. John Monteith; and "Something to Speak." Price \$1.00 a Year. E. L. Kellogg & Co., 25 Clinton Place, New York.

THE December *Atlantic* contains very interesting instalments of Mrs. Oliphant's serial, "A Country Gentleman," and Henry James' new story, "The Princess Casamassima." Dr. Holmes concludes "The New Portfolio," which has been so very acceptable to the readers of the *Atlantic*, with some "After Glances." Horace E. Scudder completes an excellent series of papers with one on "Childhood in Modern Literature and Art." Prof. Charles F. Smith, of Vanderbilt University, contributes an important article on "Southern Colleges and Schools." John Fiske concludes his very significant essay on "The Idea of God as affected by Modern Knowledge." Edmund Noble, author of "The Russian Revolt," writes of "Life in St. Petersburg." There are poems by William H. Hayne, Edith M. Thomas, Charlotte Fiske Bates, and others. Houghton, Mifflin & Co.

THE *Freidenker Almanach* for 1886 is fully worthy of its motto: "Freedom, Culture, and Prosperity for all,"—*Freiheit, Bildung, und Wohlstand für Alle*. The calendar of remarkable historical events is singularly full and interesting. The reading matter is bright and bold throughout. The extracts from Heinzen are especially valuable for their deep wisdom and originality. The articles on "The New Pharisees," "Causality and Superstition," "The Twilight of the Gods," and "England's Baneful Influence over Republicanism," are also especially worthy of attention. Any one who wishes to know more about advanced thought, or improve his knowledge of German, will find this almanac amply worth the twenty-five cents for which it is published by the Freidenker Company, 470 East Water Street, Milwaukee, Wis.

In the December *Century* will appear opinions on the subject of "What shall be done with our ex-

Presidents?"—commenting on the Open Letter in the August number of the same magazine, written, at the request of the editor, by Senator Edmunds, Judge Cooley, and the Hon. Francis Wharton. Mr. Wharton favors the pension plan. Senator Edmunds thinks it worthy of some consideration. Judge Cooley and Mr. Wharton consider the senatorship suggestion as related to former Presidents, and show its disadvantages with interesting detail.

THE NEW YORK MONTHLY FASHION BAZAR, issued by Munro's Publishing House, 17 to 27 Vandewater Street, New York City, gives illustrations of latest styles in ladies' and children's dress, hints in making and buying goods, colored fashion plates, embroidery patterns, and household miscellany, in addition to numerous short and continued stories, and literary chit-chat. \$2.50 per year, or 25 cents for single number.

THE October number of the *Revue de Belgique* opens with an account of communal ownership of land, as once practised in Scotland and Nantucket. Count Goblet d'Alviella begins a series of articles showing how prominent a part has been played by fire-worship in the development of all religions. Other writers speak of modern architecture and Egyptian Thebes.

Mr. MILLS' LECTURES.

SEASON OF 1885-86.

1. Upon Leading Points in the Development and Growth of Civilization, down to Modern Time. A series.
2. Upon Mythology and its Fruits. A series.
3. The Lesson of To-day; or, Some Characteristics and the Special Problems of the Present Age.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counterforces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammeled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.

For sale at THE INDEX office, 44 Boylston Street, Boston, Mass.

Although this work has been eulogized by the secular press, it has been bitterly attacked by the greater part of the religious press, because the author, from the highest intellectual and moral grounds, denounces some of the superstitions which have crept into Christianity as essentially irreligious, and the men who, knowing better, teach those superstitions, as essentially dishonest.

The Religion of Philosophy; OR, THE UNIFICATION OF KNOWLEDGE:

A comparison of the chief philosophical and religious systems of the world, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By RAYMOND S. PERRIN. New York: G. P. Putnam's Sons, 27 and 29 West 23d Street. London: Williams & Norgate. 1885.

"A work which aims to teach a true conception of God, of life, and of morality."

"Mr. Perrin's able work offers a deep interest. . . . It is a remarkable book."—*Morning Post, London, Eng.*
"There has not for a long time appeared any book in the English language which, from the purely intellectual and philosophical side of it, is deserving of a more careful study."—*Times, Philadelphia*.

"It is a work which appeals to the scholarship of the country."—*Prof. Youmans, in the Popular Science Monthly*.

"The author is no imitator. He has a well-defined theory of his own to advocate; and he advocates it with clearness and energy, and does not hesitate to give heavy blows at what he conceives to be the narrow views of most Christian theologians. 'The religion of philosophy,' as delineated, is not simply a scheme of thought; it is broadly and intensely practical."—*Wm. J. Potter, in the Mercury, of New Bedford, Mass.*

"The author makes a masterly analysis of Herbert Spencer's philosophy, and subjects his theory of the *Unknown* to a most close and searching criticism. It is an extraordinary work, one of the most important contributions from the press of recent times."—*F. S., in The Index, Boston*.

"Mr. Perrin writes with habitual good taste and unvarying decorum of the beliefs which he holds false in basis and spurious in sentiment. . . . His sympathy is so frank and so thorough with the true sentiments of Christianity, his aim so high and his argument so modest and earnest, that even those who will repudiate his conclusions will find satisfaction and enjoyment in reading his pages."—*Sunday Herald, Chicago*.

*. Large octavo, extra cloth, 566 pages. Clear type. For sale by all booksellers. Price \$3.50. Also sent, postpaid, on receipt of price by
THE INDEX, 44 Boylston St., Boston.

Just Published: TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

BOOKS—Twenty Million Dollars

IS PERHAPS AN UNDERESTIMATE of the amount **SAVED** by the American book-buying public as a result of **THE LITERARY REVOLUTION** during the past six years. **THE REVOLUTION** moves **FORWARD**, not backward. It now presents a larger catalogue of better books at lower prices than ever before. To illustrate: the Boston edition of Tennyson's "Enoch Arden," price \$1.25, is reprinted in handsome style, for **2 CENTS**. The best edition ever made in America, and the **ONLY** uniform edition of the **WORKS OF JOHN RUSKIN**, is publishing for the price of **\$18** for the set—**\$600** was paid for the set from which it is reprinted. The following are **SOME** of the Authors now represented in the catalogue which is sent free, by mail, to any applicant, or may be had of enterprising **BOOK-SELLERS** who act as Agents.

Abbott, Jacob.	Bulwer-Lytton.	Dante.	Green, J. R.	Keats.	Ossian.	Rollin.	Thackeray.

THE UNIVERSITY.

FOUNDED 1877.

A Literary and Critical Journal, published every Saturday, at Chicago.

The University is not the organ of any college; it is not distinctively an educational paper; but it aims to deal with living issues from the university standpoint,—to reflect the ripest American scholarship in its discussion of politics, religion, education, science, literature, and art in their various bearings. Its publishers solicit the subscription of all persons interested in the support of an independent exponent of liberal culture on a plane of superior excellence.

Price, per year, \$2.50; per copy, 5 cents. Special trial offer to those who see this advertisement. Send 25 two-cent stamps and receive **The University** three months on trial. Specimen copies—three different issues—will be mailed to any address for examination on receipt of 10 cents. Address

THE UNIVERSITY COMPANY,
135 Wabash Avenue, Chicago.

"OLD THEOLOGY"

FOR THE

Healing of the Sick.

BY Cornell Univ Lib
E. J. AR

Explains the Healing and Teaching of Jesus, the Creation of the Soul, the Origin of Matter, and the Relation which the Soul holds to God.

For Sale by **THE AUTHOR**,
33 Union Park, Boston, Mass.;

Dr. GEO. E. WHIPPLE,
36 Chest. Av., Jersey City Hts, N.J.;

Dr. GEO. B. CHARLES,
Central Music Hall, Chicago, Ill.

Man --- Whence and Whither?

By **RICHARD B. WESTBROOK, D.D., LL.B.**
Price \$1.00.

For sale at **THE INDEX** office.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and Intelligently Seek Truth without regard to Sect or Party.

The **JOURNAL**, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judiciously fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The **JOURNAL** is uncompromisingly committed to the *Scientific Method* in its treatment of the Phenomena of Spiritualism, being fully assured that this is the *only safe ground* on which to stand.

The **JOURNAL** is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

CURRENT TOPICS.

BY B. F. U.

FREDERICK W. FARRAR's lectures in this country have been marked by manly, generous sentiments and a catholic spirit; and his visit to us, like that of Dean Stanley, has contributed somewhat to strengthen the friendship between his country and our own.

DR. PAUL CARUS read a very instructive paper before the Parker Memorial Science Class last Sunday on "German Universities." The essayist appeared to great advantage in the discussion which followed,—not only as a scholar and thinker, but as a ready debater in a language not his vernacular.

MR. HENDRICKS was not a great statesman, nor was he a man of progressive views; but he was an adroit and successful politician and a man of an amiable, generous disposition, a patriotic spirit, and of a clean personal character, in which there was much to cause him to be held in kindly remembrance, not only by his own party, but by men who differed from him and opposed him politically.

THE Boston *Herald* says that in New York there are all sorts of opportunities to spend Sundays in evil ways; "but a narrow religious sentiment, so called, keeps the art museums and libraries closed. It seems strange that such a relic of barbarism should survive in cosmopolitan New York, though we have done away with it in the city built by the Puritans. The Sabbath was made for man was the teaching of Him in whose name this bigotry is maintained."

PREACHER DOWNS had an immense audience to hear his vulgar and vituperative harangue in this city last Sunday evening. He said that "Almighty God saw fit to fill that church with the net called scandal." After the sermon, two or three women and one man were baptized. Says the Boston *Herald*, "A more shocking travesty of religion has not been seen in this city than the baptism of candidates for sainthood after the blackguard address in the guise of a sermon that preceded it."

A "SOCIETY of Mechanics and Tradesmen" in New York City celebrated its one hundredth anniversary with a banquet at Delmonico's one even-

ing last week. An exchange says it was "a queer place for such a society." But the society seems in no way to have dishonored "the place." The report mentions Gen. Hawley, Robert Collyer, Ex-Gov. Hoffman, Charles A. Dana, Whitelaw Reid, and Gen. Horace Porter as among those present. "There were, moreover," says the report, "women at the table, and there was no smoking."

It would be ungenerous and unjust not to recognize the good which the churches in certain directions are doing; but the *Pittsburg Despatch* is correct in declaring that "a large share of the churches do not attack the iniquities that are powerful among their membership. If a man has made a great fortune by speculations which impoverished thousands, or by monopolistic combinations which oppress consumers and producers, or by political manipulations which debauch the virtue of our republican institutions, or any other of a dozen demoralizing and dangerous ways, the church to which he gives a small percentage of his wealth is very likely to look the other way as far as his questionable practice is concerned."

THE Tories have made large gains in the recent elections in England, and it looks now as though they would continue in power for a while; but the logic and spirit of the age are against them, and it is probable that the Liberals will soon resume control. Mr. Parnell by his influence has contributed largely to the success of the Tories, with the full knowledge that they have opposed every measure that has been carried for the relief and benefit of the Irish people, but evidently with the expectation of holding the balance of power in the Commons, and of making combinations which will enable him to secure additional measures of justice to Ireland. Although the first part of the game of the Irish party has been well played, the part which will begin when Parliament assembles may be less satisfactory to Mr. Parnell and his supporters.

KING ALFONSO was accepted as Executive by the Spanish nation in 1874, as a sort of compromise between Monarchists and Republicans; and, since his accession, the country has enjoyed comparative tranquillity. The young king acted as a peace-maker between the factions. He was the subject of the ministry, against whose opinion he but rarely set up his own. What changes will be made during the regency of Queen Christina of Austria, or how long this regency will last, it is not easy to foresee. When we remember that in 1873, on the abdication of Amadeo, the son of Victor Emanuel, the republic was declared, and would probably have been maintained but for the attitude of other European nations, and consider the strength of the Republicans under Castelar and other leaders, we may well doubt the stability of the present government.

At a meeting held in Worcester, Mass., recently, under the auspices of the Worcester Indian Association, Senator Dawes said that the extension of civilization is gradually hemming the Indians in, and the cattle kings are depriving

them of their heritage, and that in a few years, unless they can be self-supporting, they will become a band of paupers and vagabonds, three hundred thousand strong, as costly for the government to support as an army of that size. The Indian, he said, should be made a man, given land in severalty, and made self-supporting, and to this end must be supplied with money, seed, houses, and cattle. The efforts of Miss Alice Fletcher were referred to in terms of praise. The work of civilizing the Indian, the speaker said, should enlist the sympathy and co-operation of good people all over the country, which might atone in part for the great wrong done the race.

Four hundred hungry newsboys were on hand to eat turkey on Thanksgiving day, in the basement of Tremont Temple, with the directors of the Newsboys' Reading-room. The dinner was half an hour later than the time set. Three times the boys charged on the officer stationed at the door, and the third time this hungry brigade carried the officer off his feet, and came very near taking the stairs with them. The ladies managed to keep the eager urchins standing behind the chairs until they were all supplied with places, when the President of the institution gave them signal to be seated. This was received with a cheer. "That's their method of saying grace," said Phillips Brooks. Hundreds of people were present to see the little fellows enjoy their dinner. Every Thanksgiving day, the newsboys are treated to a dinner at this place. The owner of Tremont Temple gives the use of the hall, proprietors of the large hotels contribute the viands, and young ladies act as waitresses.

THE papers state that every Roman Catholic physician in New York City recently received a circular containing a declaration by the pope that the killing of an unborn infant is never right, even when the life of the mother can be saved in no other way. Bishop Carrigan, in reply to inquiries, stated that the letter to the doctors is not official, and did not emanate from his office. It was probably sent out, it is said, by some person who was deeply interested in the subject. The bishop said that the statement of the pope's ruling, however, was correct. But the paragraph from which we take the above facts fails to state that it has long been the teaching of the Catholic Church that the child born and dying without baptism cannot be saved, and that Catholic theologians have long taught that it is the duty of the mother, when either she or the unborn child must die, to receive the sacraments and submit to the Cæsarian operation, in order that the offspring may be baptized alive. This is a serious subject for women who may have the misfortune to be at the mercy of zealous Catholic priests, doctors, and midwives. Nothing but theological superstition could so distort the judgment and outrage all the highest sentiments of the heart as Catholicism does in requiring that a wife and mother shall give up her life, in order that the offspring may be baptized alive, to save it from future torment.

EMERSON AND THE ABOLITIONISTS.

In *The Index* of November 19, our good friend Dr. Bowditch came to the defence of Oliver Wendell Holmes against the criticism that has been made, in *The Index* and elsewhere, of the representation given by Dr. Holmes in his biography of Emerson, concerning the relations of the latter to the abolitionists. Dr. Bowditch, we are satisfied, wants to be entirely faithful to history. His sole motive is the desire that the truth of history should be preserved. Gladly would he reckon Emerson as one of the earliest group of New England anti-slavery men, if he thought that the facts would let him. But the facts, he thinks, are against such a conclusion; and, in his zeal to be true, his article appears even to go beyond Dr. Holmes' statements in denying to Emerson the right to be called a sympathizer with the abolitionists. Dr. Bowditch, too, writes as a witness from the old abolition ranks, as Dr. Holmes could not; and, therefore, his testimony deserves special consideration, and might be considered by some persons as even authoritatively settling the question. Hence, it is very important to note, first, just what it is that Dr. Bowditch says,—for some of his assertions might be quoted apart from their context, so as to make him say much more than he means; and, secondly, whether he has himself considered all the historical facts that come into the question.

As to the first point: When Dr. Bowditch says that he thinks "Mr. Emerson never really sympathized with abolitionists, such as Garrison, Phillips, Parker, and the like"; that he manifested "actual abhorrence of abolition methods"; that old abolitionists (with whom Dr. Bowditch has conversed) "agree that Emerson was never known to be in our ranks, or to show any active sympathy for the slave, or with our work for the bondman,"—absolute and sweeping as these sentences seem, they are to be interpreted as referring to the earlier years of the anti-slavery struggle. Dr. Bowditch admits that, after the contest had got into politics, and the Fugitive Slave Law was passed, and Sumner was assaulted in the Senate, and John Brown was hung, "in those dreadful days, Emerson spoke bravely and well." He certainly did; and long would be the record of his services, public and private, to the abolition cause, could they be counted during this period. Dr. Bowditch adds, "Let us thank him for that, but do not let us claim that the early anti-slavery workers had his sympathy."

Now, as to this second point,—whether the actual facts must compel a denial of the claim that the early anti-slavery workers had Emerson's sympathy,—Dr. Bowditch says that he himself became an abolitionist in 1835, when Garrison was dragged by a mob through the streets of Boston, and that from that time he was well acquainted with the doings of the abolition party and with the proceedings on its platform. But he avers that until 1854 Emerson "never spoke any ringing words in our behalf," and "never publicly showed the least interest in our proceedings." The great address which Emerson gave in New York, on the 7th of March, 1854, on the effects of the Fugitive Slave Law, "long after the battle was half won," Dr. Bowditch appears to regard as the first manifesto of Emerson's sympathy with the abolitionists. Surely, the good doctor's memory must be at fault. We remember ourselves to have seen Mr. Emerson facing a mobocratic audience two years before this date, when we were left in no doubt as to his anti-slavery position; and, before that, we had heard him several times in lyceum lectures, when

he seldom failed to put in some "ringing words" in behalf of the slave. But, more to the purpose as evidence, there is a noble lecture in Emerson's published works, which was given at Concord, Aug. 1, 1844, the anniversary of Emancipation in the British West Indies. The meeting at which it was delivered was held under the auspices of the Garrisonian abolitionists. Frederick Douglass and Samuel J. May were also speakers. No church in Concord would open its doors to the meeting, and it was consequently held in the Town Hall. Emerson's address is an eloquent portrayal of the history of the British Emancipation Act, and of its results. It gives no sign of his being a recent convert to the doctrine of immediate abolition, for this doctrine is the underlying moral principle that runs through it. And in it is a passage of wonderful power against certain outrages which had been recently committed by Southern slaveholders in our own country, whereby free colored seamen from the North had been kidnapped from their vessels and imprisoned, and in some instances sold into slavery. No more "ringing words" than these, we venture to say, were ever uttered on the anti-slavery platform. They were full to bursting with the sentiment of moral indignation against an institution that could commit such crimes and against a government that could timidly acquiesce in them. The abolitionists were delighted with this address. Garrison eulogized it in the next *Liberator* as "most satisfactory." In the *Herald of Freedom* (N. P. Rogers' paper), it was described in the most enthusiastic terms of approbation. The Anti-slavery Society published it in pamphlet form, and Wendell Phillips especially was wont for years to keep it on hand for distribution. And this was ten years before the time when Dr. Bowditch thinks that Mr. Emerson first appeared on the anti-slavery platform.

It is likely that this address of 1844 was the first special speech that he made for the abolition cause. But in various lectures and addresses previous to this there is ample evidence that he had taken a keen interest in the proceedings of the anti-slavery body, and that with their main object he was in close sympathy. In a lecture on "Heroism," soon after the murder of Lovejoy, he interjected a passage which plainly showed on which side he stood in that crisis; and it was with Dr. Channing and Phillips. But not even did it require that outrage to convert him. Already, in 1835, he had invited Harriet Martineau to his house, when Boston respectability had almost mobbed her and few persons dared to show her hospitality, because of her abolition sentiments; and, as far back as 1831 and 1832, while still a preacher in Boston and abolition was yet in its cradle, he had invited abolitionists to lecture on slavery in his pulpit. These acts, surely, which were tests of moral bravery for the time, must be regarded, at least, as showing in him an "interest" in the abolitionists, if nothing more. But, in our view, they also show the natural "sympathy" of his heart. Such acts and his public speeches, which naturally increased in frequency as the conflict developed and the crises came which summoned him from his regular pursuits, furnish adequate proof that he was a sympathizer with the abolitionists from an early date, and that the popular judgment which "identified" him with their cause was correct.

Yet this is not to say that Emerson was a frequenter of abolition conventions or a practical worker in abolition societies. It was not his wont to join any reformatory organizations. His connection with the Free Religious Association was perhaps the one exception in this respect after his retirement from the pastorate of the

Boston church. Still, he was a reformer. There was no reform of this reforming century which did not interest him; none on which he has not touched, more or less, in his writings. He was, however, a reformer on so large a scale, a reformer so profound and thorough, that he accepted it as his vocation to proclaim the general principles of all reform rather than ally himself, officially and closely, to the specific objects of any one. His work was that of a scholar and philosopher. To speak to and influence the thinking and scholarly class was his aim; and from this work, to which his genius adapted him, he did not turn wholly aside, to give all his time and strength to the abolition cause or to any other reform platform. But, when the great occasions called him, he was ready: his sympathies were always alert to such calls. It is true, also, that he sometimes criticised the special reforms and their advocates. He was himself so many-sided, and his temperament and philosophy were of so serene a cast, that he might not always throw himself easily into the mood of the special reformer, but was compelled to see the larger movement of education and social development which would carry the special reform, and was requisite to hold it. It was these characteristics of Emerson which must have thrown doubt upon his right to be classed with the abolitionists. But he manifested precisely the same traits toward the Transcendentalists. He did not join their organizations, except a conversational club; and he criticised with keen satire their foibles. Yet it is not on this account questioned that he was "identified" with them, for he was their head.

Dr. Bowditch quotes two passages from Emerson as proof of his lack of sympathy with the abolitionists,—the first from his speech on the Fugitive Slave Law, wherein he says that, until that law was enacted, he had himself "never suffered from the slave institution," etc. Dr. Bowditch thinks no one who had been an abolitionist could have said this. But the context shows that the passage was a rhetorical argument to exhibit the undeniable fact that that law did bring slavery close home, in a way not felt before, to every Northern door and hearth. The other quotation consists of fragmentary lines from the ode to W. H. Channing. This mystical poem must be read together to give its full meaning. We cannot see in it such "abhorrence of abolition methods" as our friend Dr. Bowditch does. It is no Union-saver that sings in it. It rebukes the war on Mexico in the interest of slavery, yet blames the North for it as much as the South. "The jackals of the negro-holder" are to be found in New Hampshire, and even the virtue of "Boston Bay and Bunker Hill" is not to be trusted. What boots it, then, to rend "the northland from the South"? It is the era of material prosperity, of wealth worship. Cotton is king. "Things are in the saddle, and ride mankind," so that the very ideas of humanity and brotherhood are obliterated. The poem, as it seems to us, is thus a severe indictment of the sins of the time, and by no means an approval of the condition of things. The sins are so deep that the poet despairs, indeed, of a remedy until as philosopher he catches a glimpse of the law of evolution in its social aspects, and sees a power which finally "marries Right to Might," and contrives "to bring honey out of the lion," and civilizes "pirate and Turk." Is not this the meaning of this "singular ode," as Dr. Holmes calls it? It must always be remembered that, whatever else Mr. Emerson was, he was a philosopher and poet; and, hence, his expressions of sentiment are not always to be judged by the conventional standard of the resolutions

adopted at reform meetings, though his sympathies may be wholly with the objects of them.

WM. J. POTTER.

THE SOCIAL EVOLUTION OF WOMAN.

The humiliating position of women to-day, under a government republican in form, is only what we might expect, when we reflect upon the tenacity of the theological superstitions. For it can hardly be doubted that the social condition of woman was fixed thousands of years ago by religious beliefs, which, though greatly modified by later civilization, are yet operative in their effects upon modern habits of thought. When we add to the power of custom, which is an iron hand to the unthinking, the force inherent in unconscious selfishness of the governing class, we cannot wonder that the social development of women has not advanced at a greater rate of speed. In fact, the slower may perhaps be the safer way, since it admits of better preparation on the part of the restricted class; and the slow progress of social conditions challenges all the energy and capacity of the proscribed.

It took more than ten centuries of churchly contest to make communicants feel that they were bound by moral obligations to their slaves. How much longer will it be before women are acknowledged as having equal opportunities and rights before the laws of Christendom?

We must go back to the East for that religion which fixed the status of woman. Max Müller says: "We know now that in language, and all that language implies, India and Europe are one. . . Two worlds, separated by thousands of years, have been reunited as by a magic spell. We say no longer 'Ex Oriente Lux'; but we know that, in all the most vital elements of our knowledge and civilization, our language, our alphabets, our arts and figures, our weights and measures, our religions, our traditions, our very nursery stories, come to us from the East."

It seems to me that research proves this to be the case in regard to our condition. Many of the laws daily enforced in our courts of justice had their origin in the laws of Manu, which were adopted in India a thousand years before the Christian era. "Westward the course of empire takes its way"; and the Aryans, in following the sun around the globe, carried in their journeyings the seeds of that curious tree of civilization whose shadow is thrown over all the land.

Max Müller illustrates this tenacity of thought, in his *Migration of the Fables*, by the tale of the milkmaid who carried her pail upon her head, and counted her chickens before she owned the hens that were to lay the eggs. This apt tale, originating in Sanskrit, has been translated into Greek, Latin, German, Italian, French, Spanish, and English. The philologist gives us the passport of these stories "visited at every place through which they have journeyed." When children's fables, however wise, attain a longevity of near three thousand years, shall we not believe in the survival of far more important influences?

Something more interior than man's superior strength alone, must have caused the positive masculine nature to maintain its supremacy, certainly after some degree of refinement had been established in the community. If the institutions of law and religion grew out of the diverse necessities of man's needs and ambitions, they were rendered adamant and unchangeable by unenlightened religious beliefs.

In Maine's *Ancient Law*, it is asserted that "the family, as held together by Paternal authority, is the source out of which the entire law of

Persons has germinated." The author continues, "Of all the chapters of that law, the most important is that concerned about the status of woman." Now, if we go back to the first systems of worship, originating in the mysteries of generation and of death, we find a belief in a continuous existence. The soul was still associated with the body it formerly inhabited; but it could not be confined to the underworld, unless that body had received proper rites of sepulture. Without that, the soul remained a wandering, restless shade, "malevolent and tormenting."

Accordingly, a sacred fire burned upon each household altar, dedicated to its ancestral divinity, who was worshipped by special forms and ceremonies. This family religion, devoted to ancestors' worship, jealously guarded those rites in which the stranger and alien had no part. That which ministered to the peace of the departed, and served to shield the ministrants themselves from calamity, could not be left to any uninterested person.

Nor could it be left to a female. The wife and the daughter were totally effaced in the sanctuary of the home. Believing that the father alone possessed the reproductive power, their religious rites were transmitted only from male to male. The eldest son handed down his sacred office, in turn, to his male offspring, thus establishing an unbroken chain between his "ghostly predecessors" and his successors. If a link was wanting, it was supplied by adoption or by divorce and a second marriage. This acceptance of the father over the mother in parentage was found not only among the Aryans, but also among the Chinese, the Scythians, and tribes of Africa, Mexico, and Peru. The laws of Manu call the eldest son "one who is begotten for the accomplishment of a duty." In a later period, an Athenian orator exclaimed, regarding one who had left no descendants, "There is no one to render him that worship that is due to the dead."

Nor was this all. The daughter, by marriage, was cut off from participating in the family rites. Du Coulanges explains her condition at length and with great clearness. Handed over like an "infant or idiot" to the Lares and Penates of another fireside, she was alienated from her own family, and forever disqualified from engaging in its worship. The transplanted maiden, when she became a mother, could not be regarded as an ancestor. Placed in the tomb, she could not herself receive special worship, like her husband. In death as in life, she counted only as an unimportant portion of her lord and master.

In consequence of this belief and its practices, the laws of India, Greece, and Rome, which are the foundations of our own, agree in considering the wife in the light of a minor. In Rome, she lost even her title of *materfamilias* upon the death of her husband. She was never mistress of herself; or, if she broke away from ordinary restraints of custom, she was called "courtesan," like that splendid Aspasia who threw a charm over the most brilliant period of Grecian history.

The laws of Manu say, "Woman, during infancy, depends upon her father; during youth, upon her husband; when her husband is dead, upon her sons; when she has no son, upon the nearest male relative of her husband, for a woman ought never to govern herself according to her own will."

The laws of Greece and Rome were to the same effect. So complete was masculine authority dominant that the husband could designate a guardian for his wife, should she survive him, or even choose for her a second husband. Plutarch tells us that at Rome women could not even

appear in a court of justice: the father alone could represent the family before the tribunal. "The family was a little municipality, of which the father was the governor, protector, priest, and lawgiver." When we regard the all-compelling power of religions, we cannot wonder at the origin of the caste systems of India and Egypt, at the laws of primogeniture, and, in all countries, at the subservience of woman.

What we may marvel at is, considering woman's hereditary influences and her environments from the beginnings of history, that any person should feel like criticising woman's shortcomings or her follies. Do we expect wisdom from children not yet trained to walk alone? Do we cast aside as worthless the plant that, kept secluded in a dim twilight, without sufficient nutriment or warmth, fails to give perfect blossoms? Rather let us be thankful that it has dared to put forth a single bud amid such uncongenial environments. Let us, instead, reverence that divine indwelling power, which, unhindered, shall be able, in due time, under better conditions, to fashion its own petals, and transmute its own life into fragrance and beauty.

But to return a moment to ancestor worship. Relics of it are found among the Chinese and Turks at the East, and among those western Turks, the Mormons at the West. In one of Mr. Higginson's admirable papers in *Harper's Bazar* on Woman, that writer expresses his wonder that woman has contributed anything to science, art, and literature, "for the plain reason that the shadow of repression, which is the bequest of the Oriental religion, still hangs over her." He regards the real disadvantage of women "has lain in being systematically taught from childhood up that it is their highest duty to efface themselves, or, at least, to keep out of sight." We have all seen many of our sisters whose every act seems to beg pardon for existing at all. "We would not, if we could help it, you know," they appear to say; "but we really cannot. Pray forgive us." There are a few extremists on the other hand, as in everything else, who take the opposite position; but they poorly represent the class about whom they prate.

In Miss Fielde's book, *Pagoda Shadows*, that returned missionary states that one cause for the prevalence of girl infanticide in China is the continuance of ancestor worship by male descendants. Extreme poverty, of course, is the other cause; but it is difficult to say just how far the latter motive prevails to destroy the sense of obligation toward the unfortunate female child.

It would take volumes to trace the evolution of woman's social position from remote ages to our own, and would be a delicate task to undertake. It is one continuous ascent, sometimes sharp and steep, always slow and painful. It takes many a wild winter storm to prepare the atmosphere for the smiling skies of May. It seems to be according to law that the feminine or religious temperament shall be a later development than the materialistic, virile, or masculine, and with evident reason. The one deals with rude physical conditions in the domain of force: the other enters into the spiritual realm, where all real power inheres. The highly developed man may possess that temperament to a great degree: such are the true poets, artists, and, above all, teachers of ethics.

For the distinguishing traits of the best and latest development in womanhood must surely be in the realm of morals. All her intuitions point in that direction. Her great and tender heart broods over the miserable and unfortunate with more than a maternal love. With opportu-

nities will come lives devoted to earnest and helpful activities; and "the world shall be the better for it," when her ethical sense is left free to guide her into right methods, as the compass guides the mariner.

It seems to me that the chief aids to such an unfoldment are: the evolution of science, the growing recognition of the rights of the individual, and the decay of theological superstitions. These closing lines of Bayard Taylor in *Faust* have significance in the direction of woman's influence: "Love is the all-uplifting and all-redeeming power on earth and in heaven, and is revealed in its most pure and perfect form through woman,—as Margaret drew Faust in the great poem."

HESTER M. POOLE.

THE EVOLUTIONIST AND THE AGNOSTIC.

I.

It is unhappily true that there are men of a wide range of reading, and men also of a good deal of intelligence, who still labor under the grossest misapprehensions as to the attitude toward the world of the evolutionist and the agnostic. The all-embracing philosophy of evolution is often confounded with the one branch of it so carefully worked out by Darwin, and not rarely with the still more special and restricted theory of the descent of man—from a monkey—as it is usually stated. And, even among the most scholarly,—and this is especially true of the theologians,—a common criticism of the evolutionist is that he is so arrogant as to think that he can explain everything, and by the introduction of natural laws can dispense with a God, and even with a first cause, in his explanations.

As for the evolutionist who also avows himself an agnostic, the mildest thing commonly said of him is that he is, by his own confession, an *ignoramus*. Even the theologians,—referring to them again as among intelligent men the most often at fault in such matters,—even the theologians, while they declare triumphantly that the most patient investigations of the wisest scientists always leave the investigators, at the last, face to face with insoluble mysteries, do not hesitate to proclaim the scientist an arrogant dogmatist when he frankly, yet humbly, admits his ignorance, and confesses that beyond a certain point, in whatever line of investigation, the human mind cannot go. And that an agnostic is an atheist, that in saying he knows not God he means to declare, also, that there is no God,—this is a charge which one who ventures to confess a leaning toward agnosticism may surely count upon.

To remove these and like misapprehensions will require much time. The new theory, with the entire change of the point of view which it involves, filters but slowly into the whole mass of society, through the strata of the educated, the half-educated, and the ignorant. The following illustration and statement, slight and inadequate as they are, may give to some a better understanding of the extent to which the evolutionist hopes to "explain" the universe, and of the humble manner in which the agnostic regards its mysteries.

II.

When the botanist describes to us the growth of a plant, he tells us of the nature and structure of the seed, of the effect upon it of darkness, warmth, and moisture, of the gradual changes which it undergoes in accordance with certain laws which he has formulated from many observations, and of its growth and development in further accordance with those laws, through leaf, stalk, and bud, to flower and seed again. Now, as the power behind the constant succession of changes which consti-

tute this growth is unknown to him, and as each of those changes is, to his scientific eye, as anomalous and as beautiful as is the final bursting into flower, it does not enter into his thoughts to tell us, in the course of his explanation, of a power outside of the seed and its natural surroundings, giving the right direction to its root and stalk, shaping its first leaf, or coloring its petals. He does not say, he would think it quite foolish to say, that up to this certain point the development has been uninterrupted; but, here, God interferes with the regular uniform course of nature, and introduces a new force or a new element. He does not ask, and would not think of asking, how from the seemingly lifeless seed can come the wondrously complex living organism, the plant, and its beauteous culmination, the flower, without the interposition of some power outside of it and above it. Being able to see, and in a certain sense to comprehend, the sequences of its development, and finding nowhere any suspension of those sequences, he naturally considers every process in its growth to be equally natural with every other, and thinks no one step in it more than another calls for outside help to produce it.

And thus the evolutionist would regard the life of our solar system from star-mist to the human mind. He thinks each step most wonderful, but not one more wonderful than another. He finds in the continuity of the process of development no break which he does not hope and believe new knowledge will fill. He explains or hopes to explain every phenomenon in terms of the known; and he discovers, or hopes to discover, the conditions of every change, and so the process by which every form of life has come to be what it is.

Of the ultimate reality behind all things and of the "why" of its manifestations, he knows only what the botanist knows of the guiding principle of the developing plant. But, as that ignorance in the botanist does not forbid his studying the manifestations of that principle,—which manifestations he can know,—so the ignorance of the evolutionist as to the nature of the somewhat which underlies all phenomena does not forbid his studying those phenomena, nor hinder his formulating the laws of their changes. And, as the botanist is not charged with atheism or even with irreverence in not invoking a power without nature to account for one more than another of the changes in the life of a plant, so the evolutionist should not be open to those charges in failing to invoke any power above nature to account for any of her phenomena. For guidance in what he has not seen, he trusts that which he has seen. Without arrogance and without atheism, he proclaims the perfect continuity of the life of the world, as the botanist frankly assumes the unbroken chain of sequences in the life of the plant.

III.

To the uneducated, to the dull and to the savage mind, there is little of mystery in the universe. By such minds, the most startling phenomenon is looked at, not as matter for inquiry, but simply as the act of some being like himself. All the evidence tends to show that primitive man could hardly have begun to think at all before he began to people nature, either with the spiritual doubles of his dead ancestors or with spirits like his own, but independent of those of men. His view of nature was deep-dyed with animism, with the belief that every strange object and every striking phenomenon had behind them a power and a consciousness like his own. This made all nature simple to him. Gods or demi-gods, imps or gnomes, spirits either good or evil, or of high or low degree,—these brought the thunder and the rain, the earthquake and the eclipse, the famine

and the pestilence, disease and death, as well as the good and ill of daily life. The terror shown by the savage at the more striking of nature's phenomena is not because of their mystery, but because of the wrathful being whom he believes to be behind them and to be the cause of them. With advancing knowledge, the feeling of mystery appears and grows. The daily sunshine and the noisome pestilence, instead of being considered as the results of the love or anger of some spirit, are found to be parts of an enduring and continuous nature. They are found to be explicable back to a certain point, but there to baffle all inquiry. At that point are found, in the cases cited of sunshine and pestilence, the mysteries of star-mist and of the vital principles of disease germs.

Further knowledge widens this circle of mystery. At length, the thoughtful mind no longer says God has here or there introduced a new element or a new force into this world, or has brought about this or that event for his own pleasure, at the dictate of his arbitrary will, to confound the wise, to exalt the righteous, or to bring down the wicked from their high places. The thoughtful mind, brought face to face with the world of phenomena, would speak thus: There is much which I can and do know of the movements of nature; and, from what I do know, I can formulate certain statements as to how nature acts. I see that, within the experience of all mankind, under the same circumstances, events follow one another with no variation. Trusting in the continuance of this experience of the uniformity of nature's sequences about these sequences or succession of phenomena themselves, I hope some time to be able to answer all reasonable questions. But, of the reality which underlies them, I find that both the nature of the phenomena and of my own mind tell me I can know nothing. Whichever way I turn, I am confronted at last by a mystery, before which the only proper attitude is wonder and awe. Every attempt at an explanation of the primal cause of the universe, of its final purpose, or of the aim and end of life on this planet, but involves me in contradictions and meaningless statements, and compels me to confess my inability to comprehend more than the phenomena themselves. Thus, then, the agnostic—for this confession is the fundamental principle in agnosticism—is content with ignorance; but he is content with ignorance only when it is of the kind which man's nature, or the nature of the universe as he knows it, forces upon him. Nor is it a contented ignorance: rather, it is of a kind which inspires to the noblest activity. Laying aside those questions whose solution he sees is impossible, the agnostic addresses himself all the more eagerly to those problems which promise rich results to the patient inquirer. Calmly accepting the fact that the nature of the ultimate reality and the existence or the character of another life are matters beyond the ken of the human mind, he turns to the investigation of the affairs of this life. Trusting in Nature never to deceive him by any departure from her uniformity, he enters boldly on new fields of observation and inquiry. He hopes, not to wrest the final secret from the universe, but to gain such an insight into its nature and its tendency that he can live a life in harmony with it, and can teach others so to do. Bowing reverently before the ultimate mystery, he is religious. Striving to find for himself and the fallen the true path, and striving to point it out to others, he is moral. Founding his religion and his morality on all the observations and all the thoughts of all men,—on the facts of nature,—he believes his religion and his morality rest on things unshakable.

JOHN COTTON DANA.

EDITORIAL NOTES.

BY B. F. U.

B. F. UNDERWOOD will speak for the East Dennis, Mass., Lecture Association next Sunday afternoon and evening.

"JUDAISM the Mother and Christianity the Daughter," by Rabbi Schindler, will be printed in *The Index* next week.

DR. CARUS' first reading from *Faust* in this city was a delightful entertainment, highly appreciated by the many present.

THE English translation of Count. Goblet d'Alviella's work, *The Contemporary Evolution of Religious Thought*, published by G. P. Putnam's Sons, is for sale at *The Index* office, at \$3 per copy.

MR. W. G. BABCOCK, whose society holds its meetings in the Parker Fraternity Rooms, solicits contributions to enable him, with his "staff of workers" experienced in his methods of teaching, to make the society as successful in its third year as it has been the past two years.

MR. HOLYOAKE, in his paper, the *Present Day*, in referring to the article on "Hotel-keeping: Present and Future," in the *August Century*, says of its author, Mr. George Iles, of Montreal, "He has personal knowledge of the best hotels in Europe and America, and is the only hotel-keeper we know with literary genius."

Nor a few of our subscribers are in arrears. The small sums due make, in the aggregate, quite a large amount; and it is needed to enable us to meet current expenses. A glance at the mail-tag will show every subscriber how he stands with this office. If he is delinquent, he will do justice both to himself and to *The Index*, which visits him weekly, by sending a remittance without further delay.

CANADA has a new sect, "whose doctrine is that women have no souls, because the Bible nowhere mentions women as angels." The leader of this sect is said to be a Frenchman, who, without the imagination and spirit of gallantry characteristic of his countrymen, fails to see what the *Boston Herald* regards as a fair supposition, "that the Lord did not send women angels because of the difficulty that would have been experienced in distinguishing them from their lovely sisters who were still in the flesh. No live man would ever be taken for an angel."

THE *Iron-clad Age* (Indianapolis), of November 28, reprints our open letter to Col. Ingersoll, with the following characteristic reference to it: "Brother Benjamin, of Boston, has written an open letter to Brother Robert, of New York. We give the document elsewhere. Brother Robert being a good lawyer, having an active mind, and being skilful in the use of his native language, will be able to frame an appropriate answer to this open letter, if he deems it answerable. But Brother Benjamin is always handy in the handling of facts, and these be stubborn things."

PRESIDENT BARTLETT, of Dartmouth College, says that the petitions which the students are constantly presenting that the reading-room of that institution may be opened on Sundays will not be granted while he is president: to which the only answer ought to be: "If you are so bigoted an old fossil as that, the sooner you resign the better." "Open the reading-room," he says, "and an open library will be wanted, and next an open gymnasium." The prospect is appalling! It is incredible that in this age a man so mediæval should be still in a position of influence.—*Boston Sunday Courier*.

PROCTOR, who has freely criticised some of the positions taken by Herbert Spencer, expresses this estimate of his philosophy, which is as high as that of Fiske or of any of Spencer's disciples: "As a philosophy, I hold it worthier of the dignity of reasoning man,—at once clearer and profounder, kinder and more considerate, braver in upholding right and resisting injustice, and better calculated, if steadily followed, to make men happier and better than any which hitherto has been propounded to the world." He speaks of Herbert Spencer as "the philosopher whose doctrine has been worth more to me and to many others than that of any teacher who has drawn the breath of life."

AFTER quoting from the *Observer* and the *Independent*, from Dr. James Freeman Clarke and Prof. Seeley, author of *Ecce Homo*, as to what Christianity is, Mr. James H. West, in *Unity*, says:—

If Christianity, which now does not seem at all to know exactly what it is itself, shall indeed survive the shock of modern research and progress, and of modern ethical demand, it will survive after the manner of Dr. Clarke and Prof. Seeley,—that is positive. If it survive, it will survive not as a scheme of doctrine, or any approach to the same, but as a mutual, world-wide, uplifting power, embracing the good forces of all times and all lands. But, then, it will be no longer "Christianity"! It will be the federation of the world,—toward which, through all past ages, thought and love and hope and beauty and good will, in all the nations of the earth, have been tending. It will be the commonwealth of man.

REV. HOWARD CROSBY has addressed a letter to his flock, exhorting them not to read Sunday newspapers. In commenting on the letter of the reverend gentleman, the *New York Sun* says: "During the hours of service, a line of carriages stands in front of Dr. Crosby's Fourth Avenue Church; and the coachmen amuse each other as best they can while the doctor is preaching his sermon. They are the carriages and servants of elders and other members of the church who are inside listening to the pulpit eloquence; and work is required of them on Sunday, when, in reality, there is no occasion for it. Yet this letter attacks the Sunday newspaper, because it necessitates Sunday labor,—because it 'employs a large number of persons for its sale upon God's holy day!'"

THE *London Inquirer*, while admitting that Mr. Stead made deplorable mistakes in exposing London vice, says that it cannot "help respecting the evident sincerity and earnestness of the man," and characterizes the tone of the greater part of the London press in regard to his trial and conviction for a technical violation of the law against abduction as "simply detestable." The *Inquirer* adds: "The movement for social purity which Mr. Stead initiated with unquestionable earnestness, but with more than doubtful wisdom, will probably receive a new impulse from his imprisonment, and, we hope, will be continued with a calm, serious, and resolute purpose to stamp out the worst crimes against humanity. The writers for the London press, who affect to believe that Mr. Stead's revelations are now disproved, are living in a fools' paradise. There is, we fear, not the slightest doubt that every word of his fearful impeachment of the sin of great cities is more than justified by the terrible facts of the case."

A CORRESPONDENT of *London Light*, a journal of "psychical occult and mystical research," in describing a birthday greeting which he and his wife received from spirit friends, states that one of the spirits—a child—wrote: "We love you very dearly, and should like to give you kisses so you could feel them; but, as we may not do that yet, we will give you a nice cup of tea." "And," the

correspondent says, "when Mary and my daughter came downstairs this morning, they found the kitchen fire *alight*, although it had not even been laid over night, also the gas stove *alight*, with kettles which were left empty over night, now filled, and sweetly singing. Shortly after, the tea was made by this child spirit, and the cup of tea promised to mamma was ready. Very human characteristics! and very acceptable help, for which we have been grateful *daily* now for over two years." Help like this under many circumstances would be invaluable, especially if the fuel, water, and tea could be brought from a distance or could be "materialized" by the spirits.

THEODORE STANTON, in a recent letter to an American paper, says: "But it was not only for his own little ones that Victor Hugo had a tender heart. When he was busy on his famous novel, *Notre Dame de Paris*, he used to spend hours every day writing on the top of the towers of the old cathedral. Some children of the quarter had fastened a swing to a beam in the belfry, and their joyous voices were a continual source of delight to the busy author. The priests, however, thought this innocent amusement a sacrilege, and had the rope cut down. About this time, the name of the Archbishop of Paris, Monseigneur Affre, came up for election in the French Academy. Victor Hugo was asked by a friend to vote for the archbishop. 'Say to monseigneur,' was the poet's answer, 'that I will support him, if he give orders to have the swing put back on the tower of Notre Dame.' We are not informed whether the children ever saw their rope again, but the list of the members of the Academy reveals the fact that Archbishop Affre was never made an 'Immortal.'"

THE malicious charge that the Jewish people, nineteen hundred years ago, had tried, convicted, and executed an innocent man, has brought upon them indescribable misery, and bears every day its bitter fruit. This charge has been the cause of wholesale murder, and for nineteen centuries has our nation been persecuted for no other offence than that their ancestors had crucified Jesus. We were, and are still called, Daicides, or, as vulgar language expresses it, Christ-killers. But the charge is as false as it is malicious. If you scan the Jewish law from its beginning to its end, you will find that no such trial as related in the Gospels could ever have taken place. The whole form of the proceeding, as told in the Gospels, is illegal, according to the form minutely described by the Jewish law. It shows again that the writers of the Gospels have not been Jews, but must have been Greeks or Romans, who were ignorant of the Jewish law. And so it was; and, with this fact, the whole charge explodes. The whole charge was a fabrication of the early Church.—*Rabbi Schindler*.

For *The Index*.

SEEK AND FIND.

No poison flower but beareth
Some honey in its cup,
And to the love that dareth
Will yield its sweetness up.

No bitter fruit that groweth
But changeth into sweet,
When all about it gloweth
The summer's gentle heat.

No life all evil bringeth;
Good hath its secret place;
Still, truth's soft echo ringeth;
Love findeth heart of grace.

The giver aye receiveth;
The seeker findeth due;
Love getteth all it giveth;
To truth, all things are true.

C. APLIN.

The Index.

BOSTON, DECEMBER 3, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Dual Aspect of our Nature.

BY EDWARD MONTGOMERY.

The Essential Identity of all Conscious Realization.

It is of the essence of the conception of the conservation of energy and the correlation of its modes to assume that antecedent modes cause or produce consequent modes by being altogether converted into them. Mayer distinctly says: "Since c becomes e , and e becomes f , etc., we must consider these magnitudes as different phenomenal forms of one and the same object. The first property of causes being indestructibility, the second property is convertibility, or capability of assuming various forms."

We have seen that Mr. Herbert Spencer, giving full play to the comprehensive sweep of his mind, applied this property of convertibility of the various modes of the one cause, force, or unknowable, to mental as well as to physical phenomena. And thus, on the strength of the newest and most approved scientific generalization, was unexpectedly revived the ancient, all-identifying, all-mystifying religion of the absolute: the world and our lives therein nothing but a phenomenal emanation from an inscrutable reality; nothing but a flowing metamorphosis of appearances having their origin in one and the same absolute, all-efficient, incomprehensible cause.

What bootless, phantasmagorical strife, what wholly unprofitable flurry of life and religious zeal, would be this surmised subsistence of ours as mere shadowy semblances, whose real actuating power was dwelling in sublime security, beyond the tumult and passion of the phantasmal play of which our being and its doings were forming part! No: assuredly not of such dream-like stuff are we and the other things truly made; not in the least phenomenal this our present existence and its fervid doings, but utmost reality of life brought to bear with enduring efficiency on veritable reality of being.

This deepest truth, relied and acted upon in the glow and press of human exertion, is the genuine foundation of all other truths. Let us not dissipate it into vacuous impotency. The indiscerptible substantiality of our actual existence, let us not volatilize it through thought or belief into a mere transient confluence of foreign motions, passing away into new modes of unsubstantial mutability. On an irrefragable groundwork of science and philosophy let us establish the essential and lasting worth of our personality. We, here in existence, are truly persistent powers, cosmically and significantly wrought, widely and subtly responsive, modifiable still for better or worse by surrounding influences, and transcendently moved to shape with self-devotion the random course of events in strict harmony with the unitary ideal of living purpose.

This notion of equivalence in nature, meaning the indestructibility of energy through complete transformation into new modes, is the expression of an entirely mistaken interpretation of sense phenomena; and we cannot hope to make any decided headway in the understanding of our nature without thoroughly penetrating the fallacy.

The persistence of force, or conservation of energy, is now almost universally adopted as the foundation of all science. Natural phenomena of all kinds being thus, at last, only the varying manifestation of an ever identically abiding power, this leading principle of modern science inevitably lands us into the idealistic pantheism of the identity philosophy. In the first instance, however, it aims to oppose to the material constant "mass" a complementary constant of force, to be looked upon as the only effect-producing cause in nature; a cause wholly indestructible, on account of its ever converting itself without diminution into its own effects. Thus, a force is only apparently consumed in the act of metamorphosis. It really reappears unscathed in its new mode of being. The effect is itself the cause metamorphosed. Mayer calls this conception, reminding one very much of some antique speculations, "the heliocentric stand-point, constituting a natural basis for physics, chemistry, physiology, and philosophy."

Because of the vast import and the noxious consequences of this eccentric view of nature, the war declared against it in the *Popular Science Monthly*, 1878, is here continued in the name of consistent observation and sober thought.

Mayer unambiguously asserts that not the pull or push exerted by masses, as formerly believed, but "the *vis viva* of motion, must be called a force." In fact, this kind of moving activity in the form of kinetic energy is the very type of a force, in the sense of the modern dynamics. It is obvious—so it maintains—that the "falling force," or potential energy of position, becomes wholly transformed into kinetic energy, or force of motion. Consequently, "force is a transformable, indestructible, imponderable object"; matter, or mass, on the contrary, an indestructible, ponderable object. Energy, or moving force, the one active, efficacious agent in the world; matter, or inert mass, a mere passive, ineffective *caput mortuum*.

But we may be allowed at once to ask whether it is true or not that *vis viva*, the acknowledged type of force, is itself a product into which "mass" enters as an essential factor. If this is undeniable, —and who will have the courage to deny it?—how, then, can energy be imponderable, masses being measured by weight? How transformable, masses being by no means changed into each other during interaction? How indestructible, the motion of *vis viva* being liable to cease altogether during interaction in the very mass which constitutes it? If energy, kinetic energy, were constituted only by

motion,—and how happy would Sir William Thomson, Prof. Helmholtz, and other great physicists, be, if they could impart, not only motion, but with it, also, genuine energy to their vortex atoms!—if kinetic energy were only velocity made up of nothing but time and space, we might possibly be tempted to give way to the fanciful conceit that a definite quantity of such spectral activity was flitting about the world, diving indestructibly in and out of masses, and assuming all manner of modes. But what energy could mere velocity possess without its moving mass? And how, then, could energy, the product of mass and motion, leave its best part behind on taking possession of a new body, and nevertheless remain identical and equal in its new habitation, the very same entity, only metamorphosed? Schelling, in his wildest conceptual dreams, never conceived anything so fantastic and anti-axiomatic as this notion of convertibility and indestructibility of energy underlying our present interpretation of nature. Surely there is a good deal more "mysticism and *Naturphilosophie*" involved in the new conception than in the old assumption of an inherent capability of producing effects indicated in the terms "gravity," "cohesion," "elasticity," "chemical affinity," etc.

To escape the very obvious difficulties involved in the supposition of an actual metamorphosis of one force manifestation into another, the clever device of "falling force," "tension," "static or potential energy," was resorted to. Thus, whenever any amount of actual energy seems to disappear, it is said to be potentially subsistent in the changed state of things. And whenever, under changing conditions, some new amount of actual energy seems to come into existence, it is declared to have been potentially subsistent in what constituted the antecedent state of things. So, of course, the total amount of energy in nature can never be diminished nor augmented. For we set out with the assumption that what is not actual is potential, and *vice versa*. Therefore, the sum total of actual energy, potential energy, both kinds of energy being convertible into each other, must, under all changing conditions, ever remain the same.

Accordingly, when material particles or masses begin to move, they are said to do so, not only—as one would kinetically suppose—by dint of energy just imparted to them, but, likewise, by dint of energy mysteriously pent up in their own colloocations or in their peculiar spatial relation to other matter. And, when such particles or masses cease to move, they need not necessarily—as one would kinetically suppose—have imparted their motion to other particles or masses, but may, it is asserted, retain within their own colloocations, or through the spatial position to which their motion has carried them, the energy apparently lost through cessation of motion.

Faraday, whose keen-sighted penetration and divination of physical interaction were truly prodigious, could not bring himself, like Mayer, to look upon falling distance as the measure of gravitative force. Mayer says, "Falling or gravitative force is a distance in space between two ponderable bodies." Now, as by merely changing the distance, gravitative force may either be augmented to a maximum or diminished to a minimum, it is clear that this amounts to a creation or annihilation of force, by merely altering the position of the attracting bodies. Besides, one particle attracting another particle with a certain force at a certain distance will attract a million such particles at the same distance, each with the same force. Whence this million-fold increase of force? Faraday held that, if the principle of conservation is paramount truth, there must

exist a source of power drawn upon, when gravitative force thus increases, and some recipient of power taking up the force, when gravitative attraction diminishes with mere increase of distance or mere removal of attracted particles. He believed that some mode of equivalent exchange would ultimately be discovered, and the principle of conservation thus vindicated.

He did not realize that a change in the mutual relation of masses or power-complexes is capable of annihilating energy manifest under the former conditions, and of creating other energy through the newly established relations; and that it is only natural that, on re-entering into the old relations, on returning to the former state, the old quantity and mode of energy come again into existence.

A favorite illustration of this mutual and quantitative convertibility of both kinds of energy, actual and potential, is afforded by the pendulum. It is maintained that, when in its oscillation the pendulum has gained the point most remote from the earth, it has therewith accumulated its fill of potential energy, all its moving energy having then been converted into energy of position, which energy of position is ready to be again reconverted into its exact equivalent of energy of motion, and so on *ad infinitum*, provided there were no obstacles in the way. Now, this alleged transformation of one kind of energy into another is evidently a scientific fiction. The steady powers here at work are the two masses: the pendulum and the earth seem to change their relative positions toward each other. The actuating forces are the moving energy of the pendulum and its attraction by the earth. The pendulum starts with a so-called advantage of position, given to it by some external force. Then it begins to fall toward the earth, and in so doing is attracted with accelerated motion. It thus *gains* the moving energy, with which it reaches the nearest point of approach to the earth. The physicists tell us that it is the potential energy of position which has here been converted into the actual energy of motion, and that the energy gained on the one side has been lost on the other. The obvious truth, however, is that the accumulating energy is due to no loss of any kind, but, on the contrary, to a growing gain, to an actual *generation* of mass motion, imparted to the pendulum by its gravitative relation to the earth. The moving energy thus acquired by the pendulum, elevates it again to the same height from which it had fallen. Physicists tell us that the actual energy of the moving mass has been here reconverted into the potential energy of position. The truth, however, is that the force of gravitation has counteracted the moving energy, till it has completely *annihilated* it, and this without spending itself in the least degree. In contradiction to the fundamental assumption of modern science, nature gives us here a very transparent example of the alternate creation and annihilation of moving energy.

We may generalize, and assert that, whenever any kind of moving energy is said to have become potential, it has, in verity, been annihilated; and, when any kind of moving energy issues from potential latency, it has been newly created. For instance, when it is said that coal contains stored-up sunbeams, that the energy locked up in coal is derived from the energy of the sun's rays, this is really nothing but a figure of speech. For the energy irradiating from the sun was spent and annihilated in disoxidizing carbonic acid, and was in no way left latent or potential, either in the carbon or the oxygen. The energy of combustion, potentially subsistent in the carbon, is alto-

gether due to its own specific and original chemical affinity to oxygen, and starts quite *de novo* into actuality or existence under appropriate conditions.

The kinetic energy spent in overcoming the effective power of such permanent forces as gravitation, cohesion, chemical affinity, elasticity, etc., may serve as a measure for the amount of power by which it is opposed from within the substances upon which it is acting. But, in accomplishing its task of separation, this kinetic energy does not become in any way potential in the substances. It is simply annihilated.

The theory of the Conservation of Energy has, of course, to maintain the contrary. The kinetic energy employed in the work of physical separation, called "disgregation," and in the work of chemical separation, called "disassociation," is evidently consumed in counteracting the permanent, persistent forces of cohesion, or chemical affinity. But the present leading theory of science, when consistent, has the audacity to assert that the kinetic energy spent in performing such work has been actually metamorphosed into the potential energy of the now disengaged original forces; that the now unsatisfied tendency of cohesion or chemical affinity is itself, in all reality, that same kinetic energy potentially metamorphosed. Thus, the energy spent in separating the particles of a material system, held together by forces inherent in that system, is said to be by no means exhausted in antagonizing the energy of the forces against which it is pitted, but to slip over into the resisting substance, and become there the very force by which, from the first, it was opposed, and *against* which all its energy was spent. You ask, Where is now the kinetic energy which accomplished the physical or chemical separation? and you are told that it exists as an equivalent amount of potential energy in the disgregated or disassociated particles. And when, at some future time, such particles come to reassert their cohesive power or chemical affinity, it is said that the old kinetic energy which effected the separation and had been potentially locked up in the severed particles is now being remetamorphosed into its former actual state. Now, if the kinetic energy which has effected the separation has really, through metamorphosis, become in some manner potential in the separated particles, then *withdrawal* of this potential energy, through retransformation into motions of the medium, would be the veritable cause of the molecular combination. Cohesion and chemical affinity would be binding material particles together,—not by dint of any energy or power, but, on the contrary, through deprivation or loss of energy or power. One has, indeed, to be a fanatical kinematist to believe in such an absurd state of things.

But take the least extreme view that can here be adopted by the mechanical interpretation, and the incompetency of the great doctrine of the conservation of energy remains still obvious enough. Assume, in analogy to gravitation, that through the work of disgregation or disassociation the consumed kinetic energy has placed the particles in a position of advantage, from which the cohesive force or chemical affinity inherent in them is enabled to exert its influence. Now, the question is, Do the particles gain the actual energy with which, on clashing together, they agitate the medium, simply by reversion, into actual energy, of the potential energy of their position? Or do they not rather gain such actual energy through being attracted by the cohesive or chemical forces in coming within range of their permanent efficiency? If we admit cohesion and chemical affin-

ity to be at all forces inherent in the particles,—and we have seen in another section that we are compelled to do so,—then there can be no doubt which is the correct answer. In carrying the particles out of the range of mutual attraction, the applied kinetic energy was really consumed,—not only rendered latent to our senses for the time being, but truly annihilated. Whenever the original forces inherent in the particles get a chance of reasserting their influence, then the particles, being thus made to fall together, gain thereby quite *de novo* the kinetic energy with which they agitate the medium. This kinetic energy of approach, created by the attracting forces, is naturally equal to the kinetic energy required for again separating the particles beyond the effective range of such cohesive or chemical attraction. And there it is where the principle of numerical equivalence finds its justified application in nature.

Another kind of attempt is sometimes made to balance the two sides of the kinetic account where gravitation is involved. It is assumed that the tensile force of gravitation, opposing the energy which carries a moving mass away from the earth, becomes somehow accumulated in its position of advantage as potential energy. As if an invisible elastic band were stretched more and more tightly between the earth and the ascending body, the motion of the latter is thought to be gradually consumed in the pull, and then its mass forcibly fetched back with accelerated velocity by the accumulated tension. The fallacy of this subterfuge is obvious. First of all, the tension of gravity, unlike that of tensile elasticity, *diminishes* with the distance of the attracting bodies. The farther apart, the less the tension. Weight is the measure of gravitative tension, and a body weighs less and less in proportion as it is removed from the earth. It is of the essence of gravitation that its influence decreases with the distance. How, then, dare anyone maintain that a body demonstrably losing tension by being distanced from the earth owes, nevertheless, its position of advantage or potential energy to a gain of tension accruing to it through separation from the same?

But, even if there were really something like tensile elasticity at work between the earth and a body removed from it, it would certainly not be the pulling force of gravitation, still immutably active as tension,—it would not be this wholly unspent energy which had become in some unknown way converted into the potential energy of position. When I raise a weight from the ground, my muscular energy is playing the part of the moving energy of the pendulum or other ascending body; and it is surely not the tension of gravitation, which has been converted into the position of advantage, which the weight is thus made to occupy. My pull, being stronger than the counter-pull of gravitation, has succeeded in overcoming it. As soon as my pulling exertion ceases, the unremitting force of gravitation regains at once the ascendancy; and the weight, in falling, spends not only no previously accumulated energy, but, on the contrary, gains quite *de novo* all the energy with which it reaches the ground.

The assertion that the actual energy of an ascending body has, in all reality, been converted into potential energy of position, can be disproved in various ways. For instance, let us consider a moment what has become of the same amount of moving energy when a body, instead of being thrown up vertically into the air, is thrown out horizontally. In both cases, the motion will be antagonized by the same forces, chiefly by gravitative attraction. But, in the former instance, the body is said to have gained in energy of position what it has lost in energy of motion; while, in the

latter instance, the entire actual energy has disappeared without being converted into any kind of potential energy. The same forces are at work in both cases: yet, in the one case, the body will reach the ground with the same energy with which it left it; in the other, it will reach the ground with hardly any energy at all. The difference is here merely due to the accidental direction of the moving mass, giving it in the one case, *without any additional application of force*, an advantage of position, from which the gravitative influence is able to act through double the space and double the time, the last half being exerted, not in opposition, but in aid of the moving energy of the attracted mass.

The *modus operandi* by which distance produces its effects on the efficiency of forces is, as yet, wholly inscrutable. Gravitation as well as the molecular efficiencies manifested by ponderable and imponderable vehicles of kinetic energy, such efficiencies as cohesion, elasticity, chemical affinity, magnetism, radiant emanation, etc., are, in most varying proportions, essentially influenced by distance. Yet our scientific imagination fails to realize any possible manner by which mere forceless expanse could at all condition activity. Action at a distance is mechanically unintelligible. But so, on the other side, just as unintelligible is the interaction of parts of a *plenum*. Here, again, we find the mechanical interpretation driven to an extremity in which it is compelled to confess its utter inability to explain the mode of action by which forces exert their efficiency; in fact, the mode of action by which any kind of physical change is wrought in nature. That this general difficulty is most apparent with regard to space-influences lies in the circumstance that, while the so-called physical forces correspond to actual compulsory sensations in us, there corresponds to our consciousness of unoccupied or empty space no such compelling influence. The objective correlate of mere conscious expanse, unoccupied by forces, we are at a loss to figure, because we can objectify nothing that does not sensibly affect us. Some extra-mental state of existence necessarily corresponds to our bare space-consciousness. But what in the world can that be besides and in addition to the sense-compelling forces occupying it? Nevertheless, objective influences constituting the compelled space relations of perceptual objects must be somehow existent: otherwise there could have resulted no corresponding organization in us, and therewith no correspondence of the mental with the extra-mental order of co-existence.

There is no occasion here to refute in detail the assumption of the convertibility into various phenomenal forms of a definite amount of force underlying natural appearances. It suffices to have pointed out its complete inability to account for some very common examples of interaction, to which its most eminent advocates have sought to apply it.

Nature does not consist in the Protean metamorphosis of one and the same existent, itself ever hidden under a continual flux of unsubstantial appearances. This way of looking at force manifestations is a "dynamical fiction," as fantastic as that of Heraclitus. Here, also, it is heat—as a mode of motion—which transforms itself into the other force phenomena of our ever-changing world. The nature we all know consists obviously in the manifestation of complexes of permanent powers, definitely constituted and endowed with definite efficiencies, which complexes, by dint of strictly conditioned interaction with each other, are undergoing mostly very gradual changes in their own constitution, and by no means sudden transmutations into something else, with entire loss of their

own being. These substantial power-complexes act physically upon each other,—not by anything passing out of one complex into another, but by calling forth within each other reactions, which tends to restore the balance of forces that actually constitutes them the substances they are,—a balance being now disturbed by the introduction of a foreign presence into their sphere of action.

If the introduction of a power-complex into the sphere of action of another power-complex possesses potency enough to overthrow its intrinsic balance instead of merely agitating it, then breaking up into parts is the consequence, or entire dissolution into more elementary powers. If, furthermore, the foreign complex possesses the capacity under existing conditions to combine or to coalesce with the other complex on which it is acting and by which it is acted upon, then the formation of a larger or of a higher complex results.

How a power-complex can be set in motion by another power-complex, and how through degrees of velocity—that is, through mere quicker translation through space—it can become the vehicle of proportionately increasing kinetic energy, is an occurrence as unintelligible as any other space-influence, with the additional just as insurmountable unintelligibility of time-influence. Indeed, it might be argued with great cogency that, of all force-manifestations, kinetic energy, generally believed to be the most intelligible, is actually the most incomprehensible.

How it happens that there are at all such interacting powers in existence, and how it comes that they possess peculiar efficiencies by which they are enabled to act upon each other in definite ways, forming through synthetical processes of elaboration and organization ever higher complexes, with more and more specific modes of action and reaction,—how all this comes about is a mystery as yet far beyond our ken.

But, if philosophy is able to correct our present kinetic and aggregational science by pointing to the substances themselves as the veritable source of the incalculable amount and variety of energy manifesting itself in the progressive elaboration of nature, the all-important lesson taught by science and commonly overlooked by philosophy is that, so far back as we can reach in the history of the world, the objective substratum reveals itself as having been gradually elaborated from most definite constituents, disclosing more and more primitive elements of composition, as we proceed with our investigation. Spectral analysis leaves no doubt that, whatever kind of existents are indicated by the elementary vibrations, each of these existents—far more primitive than our so-called chemical elements—maintains with marvellous tenacity its peculiarity and identity of nature. Surveying the results of exact science, we can come to no other conclusion than that, long before we ourselves and any of the complex modes of being came into existence, there was a substratum consisting of exceedingly primitive, but nevertheless quite definite and discrete elements,—elements having, whatever primordial nature, an objective existent, as such may extra-mentally possess. It is, therefore, altogether unscientific to conceive the objective substratum as forming, to start with, an all-powerful, all-containing, undifferentiated unity, of which the things of our present nature are special particularizations or even mere modes of phenomenal appearance. It is, however, not difficult to account for this philosophical misconception so persistently adhered to, not only in transcendental dreams, but also in serious speculations on a

scientific basis. The all-identifying unity of consciousness mirrors itself with delusive continuity on the ever-whirling spray which underlies objective existence.

In the above discussion, we have spoken of an "objective substratum" and of "power-complexes," instead of using the terms "matter" and "things," because every thoughtful reader is nowadays aware that we realize the objective world only in so far as it makes itself perceptually known to us. It is with the understanding of this truth that our mind receives its initiation into philosophical insight. Each of us is in possession of individual consciousness which constitutes, all in all, our mentality. We can realize nothing whatever which does not become conscious to us: therefore, everything we realize is necessarily, as such, a fact of our own individual mind. When, for instance, I speak of "mass," I am objectifying—projecting into space as something distinct from myself—a definite complex of my individual feelings. This is readily intelligible. "Mass" is something which has power to resist attempts at intrusion with a definite amount of counteraction. How do I know this? Simply by feeling this effect upon myself, by experiencing a definite sensation of resistance whenever I endeavor to occupy through any exertion of mine the space filled by that which, chiefly in virtue of this resisting power, is called "mass." Such mass is found to have also gravitating power or weight in its present relation to the earth. This I know—provided it be movable—by certain feelings of pressure or tension. The movableness I discern by means of another set of feelings. And the extent of the space-occupancy of the mass I make out again only by peculiar feelings of mine. In short, no property or quality of such mass, whether tangible, visible, audible, tastable, or scented, can be realized by me save as feeling of my own.

As a general truth, this mental consistency of realized facts is usually admitted by scientists and philosophers. But some of its most momentous bearings are not yet fully recognized. Chiefly through the study of the physiology of the senses, scientists were led to discern that a sensation aroused by an external stimulus applied to the organ of sense must necessarily be a subjective state of consciousness, which intrinsic mental state cannot possibly bear any resemblance to the external non-mental stimulus. Thus, it is generally pointed out that a sound, for example, differs *toto genere* from the air-vibrations which arouse it, the former being a sensation, the latter its objective cause. Now, this very statement, plausible as it may seem to many, is fundamentally erroneous. The air-vibrations are not really the awakening stimulus, much less the cause of the sound. We need only inquire what is meant by "air-vibrations" to discover that it is, in truth, a group of visual feelings which we thus denominate. This once distinctly recognized, it becomes evident that it cannot have been these, my visual feelings, which have caused or aroused my auditory feelings. It is certain, then, once forever, that air-vibrations, which as such are my visual feelings, have not been the real stimulus of my auditory organ. If there is here anything at all active outside myself, then it must be something extra-mentally subsistent, something which has power to arouse in me visual as well as auditory sensations.

In order firmly to grasp the most important of all philosophical distinctions, the distinction obtaining between mental and extra-mental reality, we have to recognize that perceptions of all kind belong to one and the same purely mental order,

and that one kind of perception cannot possibly be an efficient or awakening cause of another kind,—cannot, as perception or mental existent, be the real operating power in sense-manifestation. Air-vibrations are realized through sight, by means, it is said, of ether-vibrations and the sensory organ. But ether-vibrations, as such, are not the real cause or stimulus of visual sensations; nor is the sensory organ, as such, a cause of them. Ether-vibrations are, like air-vibrations, perceptions of mine, imagined on sufficient scientific grounds. My sensory organ is, also, only a perception of mine, though actually and vigorously compelled. This, my organ of sight, now present to me as actual or imagined perception,—and this is the only manner in which I can at all realize it,—will any one doubt that, as such a conscious existent, it is utterly powerless to produce any effect whatever in me or any one else? Is it not true that you yourself can realize this same organ of mine much more readily than I can? And will any one maintain that this realization of yours, this percept of my organ of sight in your consciousness, however vivid and actual it may be, is in any way efficient to help me in the least in my own sight-perception? And, if the mental existent in you, which so distinctly represents my visual organ, is impotent to influence my sight in the least degree, why should the same kind of mental existent, representing in me the same thing under the same conditions, be at all more efficient? If there is anything at all vitally and organically effective in bringing about my sight-realizations and in arousing in you the percept of a sensory organ belonging to me, it must surely be something extra-mentally subsistent. But if my sensory organs, as they are realized in your mind as well as in my own, are nothing but mental states, solely existent as special groups of feelings in the individual consciousness of whoever may be just having the perception, then it is clear that, in the same way, my whole body, in all its parts, as known to myself and others, through sensory channels,—and this is the only manner in which it is known,—is likewise only a perceptive realization, a special group of feelings, in whoever is just perceiving it. And, being thus constituted, it cannot possibly be the actual agent causing the system of mental realizations, of which, when itself perceived or imagined, it forms only a part. What we sensibly know as our body is, in all verity, a definite configuration of compulsory percepts. Thus, its thorough mental consistency has to be clearly comprehended before any progress can be made in the solution of the problem of body and mind. For it teaches us, on the one hand, that mind cannot in any manner be the function of this mere perceptual body; and, on the other hand, it renders evident that mind—your mind, for instance—is not actually bringing into existence my body, when you happen to perceive it.

The difficulty of fully recognizing the purely mental consistency of what one knows as one's own body lies in the fact that each of us realizes the existence and sundry specifications of his own organism through channels additional to those by which it is also realized by other perceivers. We have, namely, an immediate and very constant feeling of most parts of our sensory surface, without being obliged to call in the aid of outside stimulation. This immediate self-feeling furnishes us with an accurately shaped realization of the spatial disposition of our corporeal belongings, carrying along with it a specific discrimination of its sundry parts. We know, without having recourse to the so-called objective senses by mere immediate

self-feeling, that it is this or that part of our body which at present is occupying this or that part of space. And you, who may be perceiving my body at the same time, will corroborate through objective inspection the strangely congruent correctness of this purely subjective realization of mine. The import of these specific feelings to philosophy has been hitherto almost completely overlooked. Yet inalienable and aroused within us independently of outside interference, it is they which give us more especially the sense of a body personally our own, and the ever ready sense also of its varying postures; a plastic sense moulded each instant to fit our body and its movements.*

Now, one need only consider that feelings of every kind, whether aroused from outside or altogether intrinsically awakened, whether extensive or intensive, are one and all mere states of our individual mind, and it cannot fail to become a settled philosophical tenet that, whatever consciousness we possess regarding our own body and by whatever means that consciousness may be aroused, it can be only of mental consistency.

It is but a traditional prejudice to take for granted, as is usually done, that feelings can have, as such, no extension, shape, or motion, that all mental states possess only intensive qualities. A visual percept—a flying bird, for instance, with all its extension, shape, and motion—is realized in my consciousness, and is, therefore, out and out of mental consistency.

And now we are in a position to understand what has so sorely puzzled most modern thinkers,—why, namely, our brain and its molecular motions cannot possibly be causally connected with our mental phenomena. The brain and its molecular motion are perceptive realizations, mere mental existents in the consciousness of whoever perceives them. It is, therefore, quite out of question that as such mental existents they could have any influence, and much less be the actual cause of the mental phenomena experienced by the subject to whom the organ is seen to belong. If anything at all causes these mental phenomena, it must evidently be some extra-mental existent having power to arouse in an observer the perceptual realization of a brain in functional activity, a brain apparently belonging to a definite outside subject, and power also to arouse simultaneously in the subject to whom the brain seems to belong mental states found on investigation to correspond with the molecular changes which take place in his, the observer's, perception.

The relation of an objectively perceived brain function in the consciousness of an observer to the feelings experienced concomitantly by the subject to whom the organ actually belongs—a relation, after all, not so exceptionally mysterious as has hitherto appeared—was obscured, above all, by the physical generalization, confidently asserting that all forces in nature, when disentangled from the subjective qualifications of observers, are in their own real nature so many modes of motion. This seemed plausible enough even to advanced scientific thought; for not only is every physical change or effectuation perceived or conceived as a mode of motion, but all influences which affect our senses and our sensorium are apparently mere modes of motion, vibrations, and mechanical impacts of all sorts impinging on our sensory surface. Then, furthermore, such motion is propagated from the sensory surface along the nerves to the central organs, where the molecular stir—apparently producing consciousness as a mere by-play, or being somehow mysteriously accompanied by it—is transmitted to the motor tracts, and thence out again into the inorganic world. Thus, motion,

everywhere the apparent bearer and instigator of physical activity, came to stand in the scientific mind for the very essence of objective efficiency; while sensation, which seems to emerge all at once so incomprehensibly from the brain in connection with it, was held to compose, in full contrast to all physical facts, the subjective side of nature.

The relation of brain motion and mind was still more obscured by the physiological generalization which looked upon *contractility* as the vital function of the muscular system, and upon *sensibility* as the corresponding vital function of the nervous system. Nothing could be philosophically more confusing than this readily exposed physiological misconception, which has induced so many materialistic thinkers to look upon mental phenomena as brain-secretions. In observing a functioning muscular fibre, you perceive in it a molecular stir, resulting in an alternate contraction and expansion of the muscular fibre. In observing in the same manner a functioning piece of brain, you would likewise see nothing but a molecular stir, only here the molecular motion does not result in a perceptible contraction of the functioning parts. The difference in the kind of *motion* is the only difference which an observer can possibly perceive between functioning muscular substance and functioning brain substance. The vital performance or physiological function is in both instances essentially identical,—a peculiar kind of motion, and nothing but motion. Or does the observer of muscle and brain,—as usually presupposed in scientific reasoning,—does he in any way perceive the sensation which the subject, to whom the perceptively represented muscle and brain actually belong, has been himself meanwhile experiencing? If you were capable of perceiving every slightest molecular stir in my brain, you would not share in the very least degree in my consciousness, would not be aware of my feelings and thoughts. My sensations, feelings, thoughts, are as such absolutely and unsharably my own subjective property, impalpable, invisible, inaudible, in all ways insensible to any one else.

You perceive a brain and its molecular stir, and these peculiar realizations form part of your consciousness. The subject to whom the brain actually belongs experiences at the same time certain sensations, found on inquiry to correspond with these realizations of yours; but such sensations form part of his consciousness, not of yours. Your conscious states, in which he has no part, and his conscious states, in which you have no part, cannot possibly as such affect each other, cannot stand in any relation of mutual coercion. I am utterly impotent to feel what mental states you are experiencing, unless you let me know by dint of sensible and comprehensible signs. You, in the same way, are impotent to know without appropriate physical signs what is present in my mind.

It is of the utmost consequence to recognize that these objective expressions of our subjective mental states, which the observer perceives as physical signs emanating from our individuality, as they are not mental, must necessarily be extra-mental activities,—activities of extra-mental belongings of ours, which we ourselves somehow control, and which have power to impress observers, by awakening in them the feelings which constitute the perceived physical signs.

To motion perceived by an observer in muscles corresponds motion perceived by an observer in brains. To sensation experienced in one's own central organ would correspond sensation experienced in one's own muscular organs. And these organs, which an observer perceives as muscular substance and brain substance, are, evidently, as one's own belongings, extra-mental

* See *Mind*, 1885, "Space and Touch."

existents, carrying on their vital business independently of being realized in the perception of any observer whatever.

In order to assist in penetrating the erroneous antithesis established by science between motion and sensation, it is, perhaps, advisable to give special expression to what is already obviously implied in every part of the above discussion; namely, that the motion you or I may be perceiving, of whatever kind it may be, physical or physiological, is a fact in your or my consciousness, and, therefore, itself a mode of feeling. Motion is definite sensation shifting in space: voluntarily, when one brings about the shifting one's self; compulsory, when it is imposed from outside. In any case, it is of mental consistency through and through, and, as such, never a cause, force, energy, or efficient agent of any kind, but only a sign of effectuation. Hence, the perplexity of mechanics.

From the evidence before us, it seems positively proved that the outer world we know, and also our own body, are perceptual realizations within our individual consciousness, and, as such, purely mental existents. It follows that the distinction we make within the realm of our consciousness, between its objective and its subjective modes, does not designate a radical difference of nature. There exists no deep-going contrast between what we know as matter and what we know as mind, no real duality of material body and immaterial soul. All we individually and directly are aware of concerning this world and ourselves is indiscriminately of genuine mental consistency. Therefore, every distinction we draw between various groups of our mental possessions and whatever name we give to such distinctive groups of conscious existents, the all-comprising unity and ideality of individual consciousness is including them all in one and the same monistic system of mental manifestations.

The further all-important questions are, What do these mental realizations actually signify? How are they caused? What power have they over existence? and, above all, What relation do they bear to that which so steadfastly compels the peculiar group of perceptions which we call our body?

BOOK NOTICES.

THE FALL OF CONSTANTINOPLE. Being the Story of the Fourth Crusade. By Edwin Pears, LL.B., Late President of the European Bar at Constantinople. New York: Harper & Brothers. 1886.

Drawn to the subject of this volume during a protracted residence in Constantinople, the author brings to it not only an enthusiastic interest, but ample learning, diligence, and discrimination. His acknowledgments to those who have preceded him are generous, but he claims for himself a different object from any of them. It is his opinion that the diversion of the Fourth Crusade from its legitimate purpose—if it had one—to Constantinople was the prime cause of the ultimate conquest of the city by the Turks in 1453. Up to the time of the onslaught of the crusaders on the city, in 1204, it had for a century and a half been doing valiant service in keeping the Ottomans at bay. It was only when attacked by Christians in the rear that it fell; and, though it was recaptured by the Greeks in 1261, it never recovered its prestige nor the power of resistance that it had before the treachery of those whose wisdom was to strengthen it for their own safety. The author argues his opinion with an ability that will certainly be convincing to the general reader, however it may seem to one who knows as much about the matter as Freeman, for example. But the value and interest of his book do not depend entirely upon its central proposition and the bearing of his facts upon it. Here are six very interesting chapters on the later fortunes of the Eastern Empire before 1200 A.D., then a seventh on the condition of Constanti-

nople at this time, then nine upon the Crusade, and one of summary and conclusion. The whole is calculated to convince unprejudiced minds that the Christianity of the thirteenth century, whether of the East or West, was a most melancholy and abominable thing.

OUR FATHER IN HEAVEN. The Lord's Prayer in a Series of Sonnets. By William C. Richards. Boston: Lee & Shepard. Price \$1.50.

This is a beautifully illustrated devotional book for the holidays. The sonnets are thirteen in number, with fourteen full-page illustrations of great merit and loveliness. Even to those who, like most readers of *The Index*, have outgrown belief in orthodox traditions and faith in the virtue of prayer, the so-called "Lord's Prayer" keeps still a charm in its simplicity, directness, and early reminiscent associations. The sonnets which elaborate each separate petition of this prayer are graceful in wording and devotional in spirit. Many of the engravings cannot fail to please by their artistic beauty those who do not accept the teachings they are intended to strengthen and enforce.

In *Wide Awake* for November, Margaret Sidney's pleasing story, "A New Departure for Girls," and E. S. Brooks' story of colonial times, "The Governor's Daughter," are brought to satisfactory conclusions. Harriet Pinckney Huse contributes "Some School-girl Recollections of Fenimore Cooper," Mrs. Jessie Benton Frémont gives a sketch of Queen Marie-Amelie, the wife of Louis Philippe. Other writers for the number are Yan Phou Lee, Mrs. Lizzie Champney, Mrs. Mary Treat, Amanda B. Harris, and Oscar Fay Adams. Prominent among the illustrations are full-page pictures idealizing Mrs. Browning's "Aurora Leigh" and Robert Browning's "Balaustion."

Messrs. L. PRANG & Co. publish a fine reproduction in chromo of Mr. W. F. Halsall's notable picture, "The Finish," representing the victory of the "Puritan" over the "Genesta" in the final race for the America's cup. It is acknowledged by all who saw the yachts at that memorable moment to be a rarely accurate representation of the scene. Mr. Burgess, the designer of the "Puritan," says of it that "the appearance of the yachts on that occasion has been rendered as accurately and as spiritedly as it is possible for a brush to do." Independent of the interest attached to the race itself, this beautiful chromo will delight every lover of marine scenery.

THE November *St. Nicholas* gives the opening chapters of what promises to be a charming international story for children, by Frances H. Burnett, entitled "Little Lord Fauntleroy"; Helen H. Jackson, "being dead, yet speaketh" in the first of a series of papers prepared a year before her death for this magazine, entitled "New Bits of Talk for Young Folks." Other distinguished contributors to this number are Celia Thaxter, Louisa M. Alcott, Dora Read Goodale, Susan Coolidge, Frank R. Stockton, W. D. Howells, Edmund Alton, and Palmer Cox.

THE *Library Magazine*, published by the enterprising John B. Alden, 393 Pearl Street, New York City, is enriched by the reproduction of the best thought of the day gleaned from home and foreign sources. The November number has articles by the Bishop of Carlisle, the Earl of Ducie, Richard A. Proctor, William Henry Hurlbert, Mary Howitt, T. H. S. Escott, Vernon Lee, V. L. Cameron, T. K. Cree, Alfred H. Guernsey, Philip Schaff, Rev. William Booth, C. H. Lepper, and William Sloane Kennedy. \$1.50 per year.

HOUGHTON, MIFFLIN & Co. have just issued a new edition of the Portrait Catalogue of their publications. In addition to the thirty-six excellent portraits of distinguished authors whose works they publish, given in previous editions, those of Charles Egbert Craddock and Richard Grant White appear in this number. This attractive catalogue is sent free to any one requesting it.

"PANSY" for November, among its variety of good reading for young folks, has interesting stories by "Pansy," "Margaret Sidney," and others. A bright article on "Flowers and Birds"; biographical sketches of Adoniram Judson and Mrs. Frances

Dana Gage; an article on Egypt; with several pretty poems, etc., and many pertinent illustrations.

OUR LITTLE ONES for November is in no wise behind its predecessors in beauty of illustration and instructive stories and poems. This juvenile magazine, with its many stories of animal sagacity, ought to be in high favor with the members of the society for the prevention of cruelty to animals.

THE *Unitarian Review* for November contains articles on "Religion and Political Economy," by Rev. Howard N. Brown; "Final Causes, IV.," by Rev. Thomas Hill; "Rufus P. Stebbins," by Rev. Rush R. Shippen; and "Oriental Religions," by William M. Bryant.

THE interesting topic of "Faith-cures" will be treated "without gloves" in the December *Century*, by the Rev. Mr. Schaffner, who has paid particular attention to the subject.

MRS. HARRIET PRESCOTT SPOFFORD has been engaged as a permanent contributor to *Wide Awake*. She has written a White Mountain Romance, "A Girl and a Jewel," for 1886, and is busy on an important undertaking for the magazine of 1887.

"Is Boston losing its Literary Prestige?" is the interesting question to be discussed in the December number of the *Brooklyn Magazine*, by Julian Hawthorne, Thomas Wentworth Higginson, R. W. Gilder, O. B. Frothingham, George Parsons Lathrop, Frederic Henry Hedge, Dr. C. A. Bartol, and others.

A NEW novel of Chicago life is promised for publication next week, by Charles H. Kerr, 135 Wabash Avenue, Chicago. The title is announced as *Foiled: By a Lawyer*, the qualifying phrase being used in a somewhat ingenious way to hint at the subject-matter of the story and the personality of the author at the same time.

History of the Arguments for the Existence of God.

By AARON HAHN, Rabbi, Cleveland, Ohio.

NEARLY READY:

SCIENTIFIC THEISM.

By FRANCIS ELLINGWOOD ABBOT, PH.D.

This work includes the substance of a lecture delivered last July at the Concord School of Philosophy. It is part of a new philosophy of Evolution, vitalized by the principle of UNIVERSAL ENDOGENIC TELEOLOGY and by the substitution of the ORGANIC THEORY OF EVOLUTION for the MECHANICAL THEORY advocated by Spencer and Haeckel. Its purpose is to philosophize the scientific method, and to show that modern science, interpreted by its philosophized method rather than by its non-philosophic special results, leads, not to Atheism, not to Agnosticism, not to Idealism, but to a REALISTIC SPIRITUAL THEISM which will satisfy both "the head" and "the heart."
1 vol., 12mo. Price \$2.00.

"CHURCH-DOOR PULPIT"
TRACTS.

Price 5 cents per copy; 10 copies, 25 cents.

Why God's Chosen are a Minority of the Minority. By Rev. C. Van Norden, of the North Congregational Church, Springfield, Mass. "Many are the wand-bearers, but few are the mystics; many called, few chosen."

This World as a Temple. By Rev. Charles G. Ames, minister of Spring Garden Unitarian Society, Philadelphia. "The creeds are too short. We must not stop with believing in the Divine Sonship of one man who lived and died long ago; we must take up and bear onward the triumphal song of those who first caught his spirit: 'Beloved, now are we the children of God,' and 'The Father himself loveth us.' Then it will be easy for us to accept this world as our school, our home, and our temple."

The Gospel of To-morrow. By Rev. Edward Everett Hale. "The business of the Unitarian Church is to unite. It is to unite the rich and the poor; to unite the native and the foreigner; to unite the master and his workman; to unite the teacher and his scholar; to unite old enemies and make them fast friends; to unite jealous rivals and make them help each other; to unite the different sects, which are and must be, in the great heritage of God, so that the voices of their song shall rise to Him in harmony."

What Religion may Do for a Man. A Sermon for the New Year. By Theodore Parker. "The Infinite Providence bends over the cradle, or the play-ground, or the school-room, or the workshop of her children, and wishes us all a Happy New Year. But the wise Mother leaves us somewhat to ourselves, to work our weal or woe; and though she holds the tether, and never lets us stray beyond recall, she holds it something loose, and lets us run and choose our way. Which will you,—the meaner or the nobler life? You may have the worst thing or the best thing, and call either your 'Religion.'"

Humanity uplifted through Suffering. By Rev. David Uter, minister of the Church of the Messiah, Chicago. "They imperfectly know God who think only of His tender goodness, forgetting the travail and pain in which wisdom is forever born,—the infinite sweep of this law, whose severity falls like fate, touching with agony those who dare to disobey."

Earthly Immortality. By Rev. R. Heber Newton. "Every life of sweet-souled sunny goodness, of patient service, of honest, faithful toil for truth, counts for its full weight in the momentum of humanity's progress. . . . The little leaf drops from the stem; but behind it, in the veins, the sap flows somewhat faster, fresher, fuller, for that dead leaflet's life."

Any of the above mailed, postpaid, on receipt of price.

RELIGIO - PHILOSOPHICAL
JOURNAL.

Established in 1865.

A Paper for all who Sincerely and
Intelligently Seek Truth with-
out regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judicially fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

EUROPE:

Freidenker..... \$3.00
Turnerische Ausgabe des Freidenker (Amerikanische Turnzeitung)..... 3.50

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirteenth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing CONSIDERABLY MORE READING MATTER, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading "Turnerische Ausgabe des Freidenker."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fu'er Schule und Haus.

A Liberal German Educational Monthly.
(Organ of the German-American Teachers' Association.)

Editor:

MAXIMILIAN GROSSMANN, Milwaukee, Wis.

Associate Editors:

H. H. FICK, Chicago, Ill.

H. SCHURICH, Chicago, Ill.

16 large quarto pages, with four-page cover.
Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

BY B. F. U.

COMMENTING on the proposal to send children bitten by a mad dog in Newark, N.J., to Pasteur, in Paris, for inoculation with "cultivated and mitigated" virus, and to Pasteur's reply to Dr. O. Gormon's cable despatch, "*Si croyez danger, envoyez enfants immédiatement*," the Springfield Republican observes: "It marks progress to note that, if a century ago, a French doctor had offered to cure children of hydrophobia by pouring virus into their blood, he would have been considered a subject rather for a mad-house than a seat of honor. As it is, the world rather expects a wonderful discovery in medical science about once a month."

THE first cremation at the Mt. Olivet Crematory, recently built at Bushwick, L.I., took place on Friday, December 4. The body incinerated was that of Eugene Lièvre, a German, who died November 1, at Hoboken, N.J., and one of whose last requests was that his should be the first body burned in the new crematory. As the cremation took place about 10 A.M., few people were present; but the process was an entire success. Lièvre was a man of advanced ideas and an enthusiastic advocate of cremation. No religious ceremonies were performed. Several other bodies are awaiting cremation at this crematory, one of them being that of a lovely young lady who desired that her body undergo this summary process of decomposition.

A NEW YORK paper which publishes an account of the Cutting estate scandal, which involves the charge of misappropriation of more than a million dollars of trust funds by Gen. Cutting, speaks of the man accused as "always wearing loose trousers, and giving a grand ball and supper once a season at Delmonico's, on which occasion he is wont to hire the house and entertain his friends like a king. He is personally exceedingly popular in and

out of society; and, no matter what the outcome of his present trouble may be, he will retain a host of friends." This writer seems to regard the robbery of a family of their funds by one intrusted with them, as executor of their inheritance, a trifling peccadillo, which, if proven, would scarcely affect his standing among his friends. It is gratifying to know that throughout the country, generally, felony is still regarded with decided disfavor.

THE *Christian Leader* thinks the time spent in trying to reconcile science and theology worse than wasted: "It is time," it says, "that this vocation of harmonizing religion and science came to an abrupt end. They who engage in it are tinkers, even when they are not charlatans. The very enterprise is that of meddling with things in respect of which man has no rightful option other than to accept and obey. Let science have free course, run, and be glorified. Let religion, let all thought of religion, have free course, run, and be glorified. Parallel lines need no guiding lest they conflict. When matured, science, if true, will stand; and theology, if true, will stand. If either be untrue, it will fall. If both are untrue, both will fall. And error cannot go to the wall a moment too soon. Meantime, out upon the whole set of quacks who attempt to adjust what at the outset God hath adjusted in the nature of things! A truce to this theological quackery!"

PROF. D. C. EASTON, of Yale College, thinks Eve may have been tempted by the quince or the pear. This is what he said in a recent address on apples before the Scientific Society of Bridgeport, Conn.: "The first positive scientific demonstration of the existence of apple-trees was in the disclosure, made through a very low condition of the water, that apple-tree trunks formed part of foundations of the habitations of the lake-dwellers of Switzerland. This period, as nearly as could be judged, was from twelve hundred to two thousand years before Christ. That the apple with which Eve was tempted in the Garden of Eden, according to the Scriptures, is the apple of to-day, is uncertain, inasmuch as the word anciently applied to the apple included the quince and the pear. Consequently, Eve might have been tempted by either of these latter fruits. The present apple was due to the cultivation and development of the crab-apple; and the peculiarity of the apple in its evolution is that the part now valuable was simply the calyx, thickened and become fleshy, which had formed around the fruit or seeds. There are now nine hundred varieties of apples, classified under not less than three thousand names."

AMONG the new letters of Carlyle to Emerson, soon to be published, occurs this characteristic paragraph in regard to Margaret Fuller and the Transcendentalists: "Miss Fuller came duly as you announced; was welcomed for your sake and her own. A high-soaring, clear, enthusiast soul; in whose speech there is much of all that one wants to find in speech. A sharp, subtle intellect, too; and less of that shoreless Asiatic dream-

iness than I have sometimes met with in her writings. We liked one another very well, I think. But, on the whole, it could not be concealed, least of all from the sharp female intellect, that this Carlyle was dreadfully heterodox, not to say a dreadfully savage fellow at heart; believing no syllable of all that gospel of fraternity, benevolence, and new heaven-on-earth, preached forth by all manner of 'advanced' creatures, from George Sand to Elihu Burritt in these days; that, in fact, the said Carlyle not only disbelieved all that, but treated it as poisonous cant,—sweetness of sugar-of-lead, a detestable phosphorescence from the dead body of a Christianity, that would not admit itself to be dead, and lie buried with all its unspeakable picturesqueness, as a venerable dead one ought! Surely detestable enough. . . . If she do not gravitate too irresistibly toward that class of New Era people (which includes whatever we have of prurient, esurient, morbid, flimsy, and, in fact, pitiable and unprofitable, and is at a sad discount among men of sense), she may get into good tracks of inquiry and connection here, and be very useful to herself and others."

IN a letter published in the New York *Tribune*, Edward Atkinson says that, through the past three years, only about three per cent. of wage-workers in this country have been thrown out of work, and they not necessarily for a great length of time. Of the twenty million people employed for gain, Mr. Atkinson estimates that from eighty to ninety per cent. are wage-earners, salaried persons, or small farmers, and that the incomes of only about ten per cent. of these have been reduced during the "period of depression," which began in 1882, and which, it is affirmed, has been real to the few only and imaginary as to the many. Mr. Atkinson's figures may not, probably do not, fully indicate the depression that has actually existed; but they unquestionably convey an impression more correct than the one which generally prevails.

IT is not certain at this date whether in England the Liberals will have a majority over the Tories and Nationalists. Mr. Parnell says that the policy of the party of which he is the leader will be guided by circumstances. He evidently awaits the declarations of the leader on the Irish question. His latest utterance is to this effect: "I expect the settlement will come from the Liberals; for, assuming that they would be about equal to the Tories and Nationalists combined, we could give them a majority of one hundred and seventy, which would be quite sufficient to enable them to deal with the Irish and every other question, even making allowance for possible defections from their ranks: whereas, the Tories cannot, even with our aid, get more than a bare majority, and would be hampered in the whole business by their eighteen or nineteen followers from Ireland." Mr. Parnell has been nominally acting as the ally of the Conservative leaders, evidently with a very definite purpose, and probably with little or no hope of voluntary assistance from the Tories in the settlement of the Irish question.

RELIGION IN THE PUBLIC SCHOOLS.

The Index, we believe, has had no reference to the reported remark of President Eliot, of Harvard, made at a teachers' meeting a few weeks since, to the effect that the Catholics are right in their opinion that the religious education of the young should go hand in hand with secular education; and that they are right, too, in their demand that, in our public schools, the State should provide religious instruction in accordance with the wishes of the parents whose children attend the schools, and whose property is taxed to maintain them. At first, we were inclined much to doubt whether Mr. Eliot had been correctly reported. But as the report of his remarks has been widely quoted in the press, and variously commented upon, and no correction, so far as we have seen, has appeared from him, it must be assumed that he said substantially what was attributed to him.

Assuming, then, that he spoke as reported, it does not seem to us that President Eliot spoke on this matter with that consideration with which his words are wont to be weighted. The utterance, if it had come from any ordinary public speaker, we should have regarded as a random expression of opinion, without either a large or a practical view of the subject in hand. It is not the custom of Harvard's thoughtful President so to speak. But was he not, for once, off guard?

We should agree with President Eliot that the Catholics are right in the claim that religious education should proceed at the same time—that is, in the same years—with secular education; though our view of religious education would differ greatly from theirs, as his, too, probably would. But, when it is claimed that this religious education should be given in the public schools, at the public expense, we should have to enter our protest. Would not the same argument require that the churches, which continue religious education for adults, should also be supported at the public expense, as formerly they were in New England? Indeed, the view might be very strongly presented that it is not until young persons are approaching manhood and womanhood that they are capable of receiving much doctrinal religious instruction, and that the religious culture of men and women engaged in the active duties of life is so all-important to the welfare of a people that the churches, which attend to this culture, should be pecuniarily maintained by the State,—care being taken to guard freedom of conscience by distributing the public money among the different sects. But such a dependence of the churches upon the State, though still existing in some of the countries of Europe, was deliberately abandoned in this country; and religion, in its various organizations, was left to the voluntary support of the people. This, at least in the main, has become the law and the practice of the United States, though one feature of the old custom still survives in the exemption of churches from taxation. And this voluntary system for sustaining religious institutions and instruction has proved entirely successful. The churches have held their ground, increased rather than lost their zeal, and found little difficulty in raising the needed funds for their work. Now, why may not the religious education of children be left just as safely to the voluntary system? Why should the State be asked to provide for it more than for the religious wants of adults? The way, certainly, is freely open for the churches to do much more in this direction than they now think of undertaking.

President Eliot is right in the statement that, if religious instruction is to be given in the public schools, the opportunity to give it should be ac-

corded impartially to teachers (clergymen or others) of different religious beliefs, according to the preferences of the pupils' parents. That is, other teachers should come into the schools at regular hours, for this special duty, the children being then separated by denominational or religious lines, and the different groups going respectively to instructors of their own or parents' faith. Here would be a Catholic group, with their priest or sister of charity; there a circle of Presbyterian children learning the catechism of their church; in another room, or possibly in a corner of the same room, a Baptist would instruct in the tenets of his sect; in a second corner, a Universalist would bring forth the reasons for his belief; in a third, an old-fashioned Calvinist would give lessons to the little Calvinists on "the five points"; and the New Orthodoxy would be close by with its amended creed; the Methodist, the Episcopalian, the Unitarian, the Quaker, and we know not how many more, would also claim room, in order that their views might have a fair chance; and even Agnostics might think it too good an opportunity to lose, and send a representative to gather their little ones in the porch for expounding to them Herbert Spencer, and explaining to them how little they can know of the Unknowable. There would be, in fact, so many different classes for religious instruction, were President Eliot's plan of solving the problem adopted, that there are few school-houses that could accommodate them all without the classes interfering with each other: there would be constant liability of the Baptist children overhearing the Catholic lessons, and *vice versa*; and the Methodist children might catch who knows what dreadful heresies from the Unitarian and Agnostic groups. These evils would be so great that we are quite sure a short trial of this plan would demonstrate its impracticability, and that then the very natural suggestion would occur to the religious teachers that they could do this work to much better advantage by repairing to their respective churches or vestries or halls.

And these practical evils are so obvious that, if President Eliot were a satirical man, we should incline to believe that he meant to inculcate, by the use of the *reductio ad absurdum* argument, the principle that, under our form of government, no specific religious instruction at all can justly have a place in our public schools. If the school children need more of such instruction than they now get at home and through the Sunday-schools and churches,—and we do not here say that they do not,—then let the hour for it be taken from the hours of the public school, but let them go outside for the purpose, to such places as their parents or religious denominations may provide and at their own expense. The American theory of the public school is that there is a certain amount of knowledge which is necessary to good citizenship and to the safety of the republic, irrespective of religious beliefs; and, for this amount of learning, it guarantees to all children an opportunity as their right, and provides for it by public taxation. But it does not undertake to say that this or that religious belief is necessary to the safety of the State, or to discriminate between religious beliefs in its plans of education. All this it leaves freely to the choice and conscience of each citizen, giving free opportunity to all to tax themselves, according to their own pleasure, for religious purposes and privileges.

But, while doctrinal religious instruction cannot advantageously nor justly be given in the public schools, there is a way in which religion may be taught there; and that is, in the form of character. The upright, just, pure, unselfish,

devoted, consecrated character, with whatever religious opinions it may be associated, whether Protestant, Catholic, Hebrew, or free thinker's, cannot fail to impress itself on young minds, and is a kind of embodied religious instruction that no statute can or should keep out of the schools. Would that teachers were more sought because of this qualification! What the public schools specially need is not more instruction in the catechism, but better instruction in character.

WM. J. POTTER.

THE RELIGIOUS SIGNIFICANCE OF GEORGE ELIOT'S AGNOSTICISM.

I.

Re-reading the memoir and works of George Eliot now that the mere sentiment of curiosity about her views and life has been in a measure satisfied, the impression made at first is renewed and deepened of their profound religious significance, agnostic though she was, and of their value, perennially fresh, as a study in the great religious forces and drift of our time; and this not so much because of her direct discussion of the subject—for that is very meagre—as on account of her own wonderful personality, and of the way in which she came to her position.

Agnosticism, in her case, was evidently not a mere superficial matter, a rejection of religion from ignorance of its teachings, or because of prejudice against its adherents, or without examination of its claims, or through lack of spiritual faculties to apprehend its divineness, but the deliberate and thoughtful action of the brightest woman of the nineteenth century, taken after pressing to her lips the cup of faith, and in full view of all its evidence and all its worth.

She knew experimentally, a most important fact, at least one phase of Christianity,—not only grew up under its teachings, but was herself an acceptor of them for a while in their most pronounced and evangelical form. Her favorite books as a young girl, *The Christian Year*, *The Great Teacher*, *The Infidel Reclaimed*, *The History of the Devil*, and the like; the recommendations she received on leaving her early home as "a leader of prayer-meetings among the girls," and as "sure very soon to get up a clothing club or some other charitable undertaking," and her letters written in youth, sighing over those who, "by marrying and giving in marriage, are multiplying ties which detach their hearts from heaven," condemning novel-reading as "pernicious to the soul," speaking of herself as "a cumberer of the ground," expressing her desire of "living for eternity," all else being "vain, vain, vain," and preferring the Epistle to the Colossians for reading, because it "portrays the divine fullness contained in the Saviour as contrasted with the beggarly elements a spirit of self-righteousness would mingle with the light of life,"—all have, almost ludicrously, the ring of the standard pietistic coin. And though from these evidences alone the depth of her experience might well be doubted, as it has been, yet who beyond these can read the genuine emotions, the earnest prayers, and the passionate utterances of faith and trust which come so naturally from some of her characters in *Adam Bede*, *Romola*, and *Scenes of Clerical Life*, or, better still, read the characters themselves, and not feel, dramatic though she was, that somehow and at some time she had sounded the utmost depths of the evangelical faith, and that she knew as thoroughly as any believer in it ever did all its genuine wonders of ecstasy, comfort, inspiration, hope, and life?

There can be no question, either, that her change out of this faith into agnosticism brought her great relief of mind and heart, and opened

for her new vistas of life and thought. She could speak from experience of the unhappiness of a childhood which was "afflicted with colic and whooping-cough, and a dread of ghosts, to say nothing of hell and Satan and an offended Deity in the sky, who was angry when she wanted too much plum-cake," and of "the exultation and strong hope which the soul feels when it is just liberated from the wretched giant's bed of dogmas on which it has been racked ever since it began to think." With her, the usual order was exactly reversed. She found her peace, not in the acceptance of religion, as it is commonly taught the soul does, but in giving it up. Nor was it a mere temporary reaction. "The highest calling and election," she said years afterward, in her full maturity, "is to live without opium,"—that is, without the drugs of religious consolation,—and to live through all our pains with a conscious, clear-eyed endurance." And, though something was evidently wanting in her life, a food, if not a drug, nevertheless it is impossible not to see that she was happier, more normal, more true to her real nature as an agnostic than she ever was, or ever could be, as an evangelical Christian.

Equally evident is it that she gave up her religion in the spirit of honest truth-seeking, that her attitude to it then and afterward was that of perfect fairness and good will, and that she always to the end recognized its grandeur, and kept her soul open for more of its light. Writing to a friend who was anxious for her salvation yet doubtful whether she would bear having its consideration broached, she said, "The subject is more interesting to me than all else." I do "not mean to be my own echo, reading the yea, yea, of my side, but comfortably deaf to the nay, nay," of the other. "My wish is to be among the ranks of that glorious crusade which is seeking to set Truth's Holy Sepulchre free from a usurped domination." She had not a particle of sympathy with the old unbelief represented formerly by Voltaire and Paine, and now by Ingersoll and his *confrères*,—the kind which takes delight in assailing the Church, is filled with bitterness and hate against its adherents, and can see in it no truth or goodness at all; a kind which, in its way, is as narrow, intolerant, and bigoted as any form of Orthodoxy. She belonged wholly to the new school of unbelievers represented by Hennell, Mill, Spencer, Comte, and the Dutch theologians,—the kind which recognizes that religion, whether true or not, has its own legitimate place in the world's affairs, and that like all other phenomena it is to be studied in the broad scientific spirit to find out exactly what it is as a genuine natural product. She had a growing conviction, to use her own words, that "we may measure true moral and intellectual culture by the comprehension and veneration it gives to all forms of thought and feeling which have influenced large masses of mankind." She declared to one of her friends that she "had very little sympathy with free thinkers as a class," that she "had lost all interest in mere antagonism to religious doctrines," and that she "only cared to know the lasting meaning which lies in them all from the beginning till now." "All the great religions of the earth," she said, "historically considered, are rightly the objects of deep reverence and sympathy. This is true pre-eminently of Hebraism and Christianity; and, in this sense, I have no antagonism toward any, but a strong outflow of sympathy." And, in her novels, she is so conscientious and faithful in portraying religious people, as, for instance, Dinah Morris in *Adam Bede* and the Jews in *Daniel Deronda*,—does such justice to their motives, and catches so clearly their inmost spirit, that, when her pseudonym first

appeared, many ministers and church people felt absolutely sure its owner must be one of their own number.

Neither is her agnosticism to be explained away by anything which is eccentric and one-sided in her own personality. She was not simply a great creative brain, with no heart, no warm human affections and cravings, and no common sense. The emotional side of her nature was richly and normally developed. Nothing can be more beautiful in itself, whatever may be said of it conventionally, than her attachment to George Lewes, her dependence upon him for sympathy, counsel, and communion, and her motherly concern for his children. She believed in the home and the fireside, in all those sweet domestic virtues and attachments which are thought to be the natural companions of Christianity,—knew how to create and nourish them, not only in fancy, but in fact. And, with all her courage and strength of character, she had her full share of those feminine weaknesses, wants, and tastes which ordinarily lead her sex to devoutness and the church.

Then, most striking of all, her nature at the core, in spite of its agnosticism, was profoundly religious. Deeper than any thought about God she had within her that unthought consciousness of the Divine, which is really the foundation of all genuine faith. "The mystery which underlies the processes of the universe," as she herself said, "was to her more impressive than any explanation of what those processes were"; and it was her recognition of the greatness of this mystery—that is, her very religiousness—which made her so much a sceptic toward all efforts to place it within the bounds of name and form. Her despair, moreover, of reaching the Divine in Deity only made her turn all the more eagerly to lay hold of the Divine in man. No one ever had a higher conception of the moral and philanthropic side of religion than she did. At the very time when she was giving up her old faith, she wrote: "I begin to feel other people's wants and sorrows a little more than I used to. Heaven help us, said the old religions: the new ones from the very lack of that faith will teach us all the more to help ourselves." Referring once in conversation to those three grand words which have been used so often as the trumpet calls of religion,—God, Immortality, and Duty,—she exclaimed with terrible emphasis, "How inconceivable is the first! how unbelievable the second! and yet how peremptory and absolute the third!"—a single incident, by the way, narrated by Mr. R. H. Hutton in an English review, which lets one into the real George Eliot far deeper than is done by all the skimmed letters from her pen so conscientiously given us by Mr. Cross. Nothing can exceed the fine scorn with which she rejects the words she once heard from a famous London evangelical preacher,—"We feel no love to God because he hears the prayers of others: it is because he hears *my* prayer that I love him,"—words that are a fair specimen of the supreme selfishness and consequent irreligion of much of the world's Christianity. She wrote as the motto of her own life:—

"Give me no light, great heaven, but such as turns
To energy of human fellowship;
No powers save the growing heritage
That marks completer manhood."

The true explanation, perhaps, of why she failed to believe in a personal immortality was that she identified herself so completely with the immortality of goodness in the race as to make any lower, private kind seem hardly worth her faith. The atmosphere which pervades all her

books, whatever their wit, gayety, love, poetry, or crime may be, inspiring as the mountain air, is that of Duty,—not morality, or right, or virtue, or character, but simply Duty. And, in nearly every one of them, the plot turns on the obstacles and difficulties in the way of its performance,—a noble soul filled with a grand ideal of what it will do for the world, and starting out bravely for its accomplishment, but beset with meaner natures and lower calls, tending continually to keep it back; in only one case, that of Dinah Morris, triumphing over them; in all the others demoralized and dragged down to their own level,—a kind of tragedy, alas! which has marked how much of Duty's course on earth: this, mingled with a sense of the awful mystery there is in it all, religion's greatest problem in human life and the one on which the Book of Job and so many of the old Greek and Hindu poems turn, this which gives her novels their tremendous power and their fascination beyond that of sermons for the truly religious mind, this which only a great religious nature—great enough to recognize the tremendous reality of a divine element in human affairs, and at the same time too great to attempt its solution—could ever so wonderfully have dealt with and used.

JOHN C. KIMBALL.

DEVELOPED WOMANHOOD.

When women have arrived at a certain age, have married, and have borne children who have taken their places in the world as men and women, they are generally supposed to have accomplished their life-work, and are considered of importance only as useful working machines,—cement to hold the family together, household "genii" to keep the rooms, the pantry, and store-closets well supplied with proper food for the sustenance of the permanent or transient inmates or guests of the home. Of course, this applies only to the average woman, not to those endowed with genius or possessing peculiar faculties. Such seem always to be exempted from the general condition of their sex. In regard to the majority of women of the middle and lower classes of society, this statement is true, and is one of the most painful facts regarding our sex.

This is owing, in a great degree, to their own want of a self-asserting individuality. It is an inherited feeling that has become crystallized in the sex, as, through ignorance and superstition, it has been reincarnated in successive generations, till it almost amounts to a differentiation of species. When a woman marries, this idea, latent it may be, combined with that subordination to the love of power in man, or, as many think, to his superior wisdom, compels her to think that her duty as a wife requires her to sacrifice her own ideas and wishes to those of her husband,—not the noble forgetfulness of self for the good of others, but a weak yielding to the selfish requirements of an exacting nature.

There are many noble exceptions to these traits. All men are not selfish nor exacting. There are those who would scorn to take advantage of this mistaken sense of duty, and would never accept of any act of renunciation, except it was inspired by that love which blesses the giver as well as the recipient.

When children come, the blind love of such a woman gives her the feeling that the more she gives up her life to them, the better mother she is; but, instead of that, by this mistaken idea, she cultivates the spirit of selfishness in those in whom her love, rightly directed, would have had the opposite effect. We boast of our superior religious and ethical systems, but, in the duties

of reverence and respect for parents and all older people, the "heathen Chinese," as we term them, are far above us; and they can teach the missionaries we send to them lessons of truth and morality in these as well as in many other virtues. In all the animal kingdom, with the exception of mankind, superiors in age are treated as worthy of that respect which looks "up to, and not down on, those older than themselves." What does the vegetable world teach in regard to this subject? When the tree arrives at maturity, it blossoms, bears fruit, and its seeds are scattered, producing the young trees which rise around it. Still, it retains its individuality,—still grows and puts forth new branches to protect the nests of the birds that gratefully carol their matin songs from their leafy covert. With poetic license, we may suppose that she rejoices in the knowledge that she is the mother of the young family about her, and, also, that she is a stately tree, still growing higher and broader.

Too long has a clinging, self-depreciating nature been regarded as the greatest ornament of woman. From her alone can arise the influence and firm resolve which will, in time, uproot this deep-planted weed, the offspring of ignorance and superstition. Let her no longer think that age renders her incapable of progress and culture or of the enjoyment of life as reflected in society or nature. She must demand and take what rightfully belongs to her,—a position to command the respect of her own family and of society. To fit herself for this, she must, for her intellectual and spiritual growth, assert her right to a good portion of her time, neglecting for it, if necessary, some so-called duties.

There are duties and self-sacrifices clearly and intelligently defined, the demands of which no men or women can disobey without injury to their own souls. These are not what the selfish requirements of society and family ask of the meek, long-suffering wife and mother. The heroic performance of the former elevates, ennobles, and dignifies all character; while these, which consume a woman's time and strength, instead, have a depressing, narrowing influence. When women see what they need, they will not weakly succumb to the depressing influences with which a false social law has so long weighted them down. Quietly, with a strong invincible will, they will resolve to "conquer or die" in the conflict with these old prejudices and superstitions inherited from long-past ages. Then will "the shackles fall" from their minds and bodies; and then there will be noble mothers worthy of the name, and sons and daughters to appreciate their worth, and also to recognize the justice and truth of this change in private and public opinion.

There are many indications to prove that the agitation of the subject of women's true position in the world has had effect. One is that, in large centres, as in cities and their suburbs, we see a great change in this respect in the estimation in which women who have acquired an advanced position in literary and artistic work are regarded. An author is now judged by merit, not sex. Genius and talent receive recognition wherever found. But there is danger to be apprehended here. In the admission of women of talent and culture to an equality with men there will be evolved, in the course of years, a spirit of caste and aristocracy among women. This exists now, when wealth alone, in fashionable society, gives distinction. We should not forget that there are multitudes of women in the world who have neither great genius nor exceptional culture, but who have sweet and capable natures, and who need the help, sympathy, and encouragement of

those who have, by their own exertions, aided by favorable circumstances, taken a higher stand in the ascending slope of human evolution. The right word, the suggestive thought, may here so arouse the dormant will that it will no longer hesitate to assert its individuality, and become a *fact*,—not merely a cipher in a world of active forces for either good or evil.

There are needed the women who, added to progressive culture, possess the broad and varied experience which comes from their lives as wives, mothers, and housekeepers. It is not the flowers, beautiful and sweet as they are, but the tonic juices of the mature fruit of life, which will supply the vitalizing forces which society is most in need of.

This theme of the personal subjectivity of women, no longer young or beautiful, broadens out so widely, as I think of the many instances of its narrowing, discouraging effect which have come under my notice, and of the small attention it has received in the discussions in regard to woman and her disabilities, that I can but hope that these thoughts, which are merely suggestive, will arouse some of our thinking women to write and speak on this subject with an eloquence and force that will carry conviction, and induce some of our sex, at least, to throw off this incubus of habit which has so long buried them beneath its crushing weight.

R. F. BAXTER.

THE POEMS OF TWO WESTERN UNITARIANS.

I.

By their poetry ye shall know them, is something that is to be said of movements and of men almost as seriously as By their fruits ye shall know them. A true and beautiful poetic feeling is one of the best and surest fruits and tests of a good religion. In the really vital and fertile soul, the flower of poetry almost inevitably finds root; while the soul or the system that is not moved to poetry or by poetry is almost certainly barren and sandy. Times of stress come when the great poet and prophet souls are moved too fiercely to have opportunity for the beautiful word,—the Puritan times, Carlyle's time. But, when a Carlyle inveighs against poetry, we find that it is as a poet that he does it, that only the true poet can do it aright, and that it is not against poetry that he really does inveigh. A great new truth may be "at first cold and naked, a babe in a manger again, without shawms or psaltery"; but "it will fast enough gather beauty, music, picture, poetry," if it be indeed a great new truth, if it be wholesome and harmonious and good; and he who has eyes to see will see its potential poetry, will see the halo above it, even in its coldness and nakedness. Poetry is life and health and truth and promise; but irreligion cannot sing, and convention cannot sing. "There was never poet who had not the heart in the right place," Emerson said. "Show me," he said again, adopting the word of another, "one wicked man who has written poetry, and I will show you where his poetry is not poetry." Show us, we might add, one formalist or one saltless soul who has written poetry, and we will show you that his poetry is prosiest rectangle and empty sound, hasting to break its promise. Show us men moved ever, in simplicity, to the genuine poetic word, and we divine life and truth in their midst.

These thoughts occur on taking up the little volume *The Thought of God, in Hymns and Poems*, by Frederick L. Hosmer and William C. Gannett; just published by Messrs. Roberts Brothers. This collection of beautiful religious poetry by these

two friends, dedicated "To J. L. J. and our fellow-workers in the West," is one of the best expressions which we have of the spirit of Western Unitarianism. Western Unitarianism is a term which has come to have a meaning almost more qualitative than geographical. As qualitative, it means simply Emersonianism. The thought of Emerson, as contrasted with the thought of the Unitarianism which he came out of and left behind, has indeed kept winning its way in Unitarian churches everywhere. And many men in Eastern pulpits could be named, who think just as this little group of Western preachers thinks. But this little group in the West, constituting the majority, perhaps, of the Unitarian preachers of the West, including the most interesting personalities,—the men of influence, the organizing, directing men, the men who set the tone of conferences and publications,—these men have all chanced to be so dominated or inspired alike by the thought of Emerson as to give a considerably different general tendency and temper to Western Unitarianism from that of the average church in the East. The distinction of course grows ever less and less; for thought has been very active in the Eastern churches in the last ten years, and all Unitarianism must become Emersonianism or nothing. But, meantime, this little group of men has occupied a very distinct position and performed a very distinct service. And one of the most notable things about the little group is that so many of its members are poets. We have in this little volume some of the best, perhaps the very best, of their poetry. But Mr. Hosmer and Mr. Gannett are not the only poets. The recent little volume of *Unity Songs* represented many more. Mr. Blake is always singing. Whoever has read Mr. Simmons' *Unending Genesis* does not need to wait for verses—though verses there may be—to prove that he has the poet's mind as truly as the author of *The Year of Miracle*. Mr. Jones' sermons are full of poetry; and he is one of the best American expounders of one of the greatest of poets,—of Browning. And does not Mr. Chadwick belong in the list? Is he not simply a non-resident "Western Unitarian," a member of the same family with Mr. Hosmer and Mr. Gannett? Mr. Gannett's graceful verses addressed to Mr. Chadwick, included in the volume before us, might almost as well have been addressed to any one of several of his Western brethren:—

"He has voyaged with the Captains
Who sail the seas of thought,
Daring with them the tempest,
Hailing with them the port.

"In lands men deemed unholy
He gleaned from every clod
Some treasure-trove, revealing
Horizons new of God.

"Till Heathenness grew homelike;
While the traveller's tale was still
Of a Ceaseless Care, whose presence
Outworketh good from ill."

It is, perhaps, worth noting here that the number of hymns drawn from Mr. Chadwick for *Unity Hymns*, the native Western Unitarian hymn-book, is larger than the contributions of either Mr. Gannett, Mr. Hosmer, or Mr. Blake.

Of the "hymns and poems" which make up this little new volume, one might say roughly that Mr. Hosmer contributed the hymns and Mr. Gannett the poems. Of what seem to the writer the two finest poems in the collection,—*"Recognition"* and *"The New Year,"*—the one is Mr. Gannett's and the other Mr. Hosmer's. This poem on "The New Year," which comes as an old friend to many,—as, indeed, does almost every page in the volume,—has a rare strength

and freedom in its movement; and there is a noble sweep and lift in some of its lines almost like Emerson. But almost all of Mr. Hosmer's contributions consist of hymns, hymns that may be sung, that have been sung, that were written vicariously,—not, indeed, save in a few special instances, with any image of the congregation in the mind, for they are ever the immediate and simple expression of personal religion, but the simple expression of religious feelings sure to be shared by those to whom the words would come, and so the expression at once of their prayer and worship also. Mr. Gannett's poems are seldom best sung: they are best read. They seldom have that kind of simplicity, that singleness of ethical direction, which makes the best hymns: they are usually too full of suggestion, of surprise, of wonderings, and of pictures for that. This of those poems which are hymns: most of Mr. Gannett's poems here were not meant for hymns at all. These qualities in the hymn-like poems do not at all detract from them as poems, but rather constitute much of their very interest and charm. And "The Stream of Faith" is a genuine hymn; and so is "The Secret Place of the Most High," from which, when incorporated in *Unity Hymns*, the last verse, most hymnic of all, was wrongly omitted. All of the hymns contributed, both by Mr. Gannett and Mr. Hosmer, to *Unity Hymns*, appear in this little new volume; Mr. Gannett's almost always in a fuller form, Mr. Hosmer's under some new name.

The half-dozen hymns of Mr. Hosmer's which appeared in *Unity Hymns*, including that which gives its name to the new volume, are as good as any which he has written, and illustrate very well the character of his thought and feeling. But they are no better than some others which appear in this little collection, such as "A Psalm of Trust," "On the Mount," and "Loyalty." The following closing stanzas from "A Psalm of Trust" have all the religious simplicity and sweetness which we find in the best English hymns of a hundred years ago:—

"I know not what beyond may lie,
But look, in humble faith,
Into a larger life to die,
And find new birth in death.

"He will not leave my soul forlorn;
I still must find him true,
Whose mercies have been new each morn
And every evening new.

"And so my onward way I fare
With happy heart and calm,
And mingle with my daily care
The music of my psalm."

"On the Mount" is much less a hymn: it is better read than sung; but it is one of the most beautiful of Mr. Hosmer's pieces, touching the thought how difficult it is to keep heights which the soul is able to attain, and that other, so strongly shaped by Mr. Arnold, that tasks in hours of insight willed may be in hours of gloom fulfilled.

"Loyalty" is as good a hymn as Mr. Hosmer has written, and deserves to live, if only for this stanza:—

"And more than thou canst do for Truth
Can she on thee confer,
If thou, O heart, but give thy youth
And manhood unto her."

The stanza, as well as the whole hymn, and, indeed, several of Mr. Hosmer's hymns, remind one very much of Faber. There is the same quality of sententiousness without hardness which made Faber so good a hymn-writer, and which so frequently characterizes Whittier, who, on the whole, has written more than any other American that we can make good hymns of.

Mr. Hosmer, although so good a religious poet,

would probably never have been a poet, if he had not been moved to poetry by religion,—like Faber and Keble and Charles Wesley. Mr. Gannett, whose poetry is, in fact, almost entirely poetry of religion, because the religious sentiment is so dominant and absorbing with him, is, we feel, a poet by constitution, bound to sing, whether in the field of religion or another; and, while we do not want any less religious poetry from him, it were a thing much to be desired that he might now and then become a "pagan," and sing of the sun and the hill-top and the brook in the woods, with no thought of divinities more serious than dryads and naiads, become purely of the chimney-corner and the street, and tell a little tragedy or comedy of life, with no ultimate reference at all.

EDWIN D. MEAD.

EDITORIAL NOTES.

BY B. F. U.

FRIENDS who have kindly procured signatures to the petition against permission of Sunday fraud are requested to send them before the end of this month to F. M. Holland, Box 61, Concord, Mass.

C. W. STEWART, of Liberal, Mo., informs us that he is prepared to give a course of lectures on evolution, "in which he adapts the scientific thought of the age to the popular comprehension." Several Western papers speak of him as a lecturer in commendatory terms.

MR. CHARLES D. B. MILLS, of Syracuse, N.Y., is prepared the present season to deliver a series of lectures giving a succinct view of the development and history of civilization, commencing from the dim beginnings in the primal arts of life, touching the migration of races, the early settlement of Europe, the rise and growth there of civilization,—especially the industrial and economic,—down to the present time. Among the other lectures, he will give, if desired, are "The Lessons of the Day" and "Old and New."

A LADY writes: "Does not Col. Ingersoll's melting period on the death of the aged, quoted in *The Index* of October 15, contain more poetry than truth? Is death generally welcome to the aged, unless some exceptional physical torture attends? Do not the aged who have found rest this side, by the tender watch of those on whom they are dependent, love to linger here during the twilight of their evening? My experience from association with those of ripe age is perhaps the average, and it has to give the affirmative to the last question."

THE *Woman's Journal* says: "Three-quarters of what the early woman's rights conventions demanded for women, in the way of education, equal property rights, and admission to trades and professions, has been conceded. These things in the beginning called out more uproar and abuse than the demand for suffrage itself. They were opposed by the same arguments and by the same kind of people. It is the regular habit of the conservatives to fight every inch of progress fiercely, but, as soon as an inch is gained, to turn around and cry: 'Oh, yes, we always believed in that. To go so far is all right, but we have now reached the limit: an inch further will be destruction. And so of the next inch, and the next.' And this is as true of other reforms as of woman's suffrage."

A DESPATCH to the *Boston Herald* says:—

The sixth part of Herbert Spencer's *Science of Sociology* is announced for publication. It is entitled "Ecclesiastical Institutions." In his preface, Mr. Spencer explains that the delay in completing this volume, it being three and a half years since the fifth volume was published, has been caused by his occupation with other subjects, and principally by ill

health, which, he says, often has prevented him from doing even the small amount of daily work which he had been accustomed previously to perform. The seventh and eighth parts, to be entitled respectively "Professional Institutions" and "Industrial Institutions," remain unfinished; but Mr. Spencer says he hopes that there will be less delay in giving them to the public.

THE following from a letter received from an eminent scientific and philosophic writer was suggested by an article in a recent number of *The Index* on the Design Argument: "Your way of disposing of cosmical design is much more simple and telling than that of Kant, who showed that the teleological argument includes the causal as well as the ontological assumption, and is, therefore, inadmissible. Scientists, it seems to me, have not yet quite understood that the constitution and order of things are due to their specific modes of interaction. Change anything in the established interdependence of such existents,—withdraw, for instance, the pressure of air from water, and it becomes something possessing wholly different properties, having entirely changed functions in its relation to the rest of things. Place, then, this water gas in a sufficiently heated medium, and it splits up into two totally disparate substances, manifesting completely new modes of interaction. So always and everywhere. How completely an organism, the most individuated form of being, is dependent for its existence on interaction with its manifold medium, must be evident even to superficial observers. Indeed, its specific modes of interaction constitute its life; and organization itself has been gradually evolved through such interaction. The endowments of specifically acting and being specifically acted upon are the veritable powers binding things together into a cosmos, which means in truth a more or less static equilibrium of interacting existents. Intelligence—the peculiarly organic and human faculty known to us under that name—is utterly impotent to bring forth any powers of interaction whatever. It can only so dispose pre-existent powers as to elicit from them new results, which may, perchance, be better suited to its ends than those previously found in existence. Intelligence merely utilizes forces already inherent in something not itself. Is theology, then, inclined to maintain that the order of interacting forces called cosmos is due to the intelligent but creatively impotent interference of a demiurge utilizing the powers of a pre-existent nature to suit his own special purposes? Such an extraneous demiurge would be as completely dependent on actual reality and its intrinsic efficiencies as we ourselves. How can intelligence, a superficial, fitful, partial agent, itself only a special product of nature,—how can it be made accountable for the creation and endowment of the never-flagging, all-efficient powers of interaction which, by dint of being such, are constituting the present world? Surely, the mystery of existence lies deeper, far deeper. Teleology, causation, substantiality, do not reveal it."

LISSAU.* For *The Index*.

On Lissau shone the rising sun,
The lark his carol had begun,
Far-soaring from his night's repose.
The dew was in the opening rose.
But singing lark nor morning rays
Awoke to life the Lissau ways,
And in her streets there was no tread
To break the unwonted silence dead;

* Lissau was a village on the Elbe. The events narrated in the poem occurred among the frightful persecutions instigated and conducted by the Jesuits, during the Thirty Years' War.

Yet morning twilight there would soon
Burst forth into unwonted noon.

In Lissau hamlet, life had run
From father on to stalwart son,
Calm gliding on, from age to age,
Without a mark on history's page;
Yet many a life of sturdy worth
Had passed beside the hamlet-hearth,
And after quiet life's surcease
Had vanished there in death and peace.

But southward far, with deepening awe
Astound, the men of Lissau saw
A sign of fear. 'Twas not the rain,—
The tempest deluging the plain
With mighty flood.

As one in haste,
The reeling whirlwind leaves a waste
Behind, and on, with heavy tread,
A thing of wonder and of dread,
Whereat the cheeks of men grow pale,
Armed with the lightning and the hail,
O'er harvest fields of blasted corn,
And lordly forest oaks upturned,
O'er wreck of homes, and houseless men,
Nor turning on its path again,
It stalks upon its fearful way,
With none its blind career to stay.

But this was not the formless form
Of fear,—the blind and blinding storm.
The darkening cloud, with deepening awe
The silent men of Lissau saw,
Was of a vast and moving horde,
Whose symbols were the cross and sword.

With couriers robed in sable stole,
With ominous plain-song, and the toll,
The warning toll of sullen bell,
They came with steady purpose fell.

Before that league of power and hate
That lowered afar,—a coming Fate,—
The dwellers of the hamlet knew
Nor justice fair, nor courage true,
Could aught avail. With dauntless heart,
They bravely chose the nobler part,
Gathered their little all in haste,
And left of Lissau but a waste.

Upon the mount, above the flood,
The dwellers sad of Lissau stood,—
The maiden in her youthful charms,
The mother, with her child in arms,
The stalwart son, with heart of ire,
And with toil-hardened palm, the sire,
Woe, 'mid the hurrying tumult wild,
Led by the hand his little child.

As faithful friends, they left behind,
In deadly leagues, the flame and wind,—
Made of their homes one mighty pyre,
That 'mid the all-destroying fire,
Vanished in mingled smoke and flame,
And left of Lissau but a name.

They banished, as they could, their fears,
Brushed from their eyes the blinding tears,
Then, turning to the way they must,
They from their garments shook the dust,
With last embrace and severing hands
Departed into sundered lands.

To me 'tis honor to rehearse
The tale of these poor villagers
Who gave, 'mid persecution dire,
Their homes to the consuming fire,
And, with the will that never yields,
Forever left their native fields,
Then the sad road of banishment,
Into the endless exile went,
And gave, with mien of lofty grace,
Ensample to the human race.

HOWARD WORCESTER GILBERT.

PHILADELPHIA, November, 1885.

The Index.

BOSTON, DECEMBER 10, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }
No WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

MESSIANIC EXPECTATIONS.

LECTURE IV.

JUDAISM THE MOTHER, AND CHRISTIANITY THE DAUGHTER.

Delivered at the Temple Adath Israel, Boston, Oct. 30, 1885,
by Rabbi Solomon Schindler.

Presuming that you have heard or read my last lecture, I shall take up the thread of my research to-day just there where I dropped it last week, and proceed without any further introduction.

The time when Christianity was born was as peculiar and as remarkable in regard to religious matters as is perhaps our own present age. Then, as to-day, the educated classes, the pioneers of civilization, were ready for a change of front. Old ideas had outlived their usefulness, and the new ones had not yet developed so far as to take their places. The minds of the best and most conscientious of men were, therefore, kept in a constant tension. The old pagan gods had lost their reputation, and the world was yearning for a God who should fill the void in the human heart. Though the most magnificent temples were erected at that period, there was an utter lack of true religious sentiment, and hypocrisy ran high. The splendor of the temples, and the very attractions which the priests were compelled to offer, were unmistakable evidence that rites and ceremonies had lost their meaning, and with it their influence upon the worshipper. At that time, the eye of the pagan world instinctively turned toward the Jews. Their theology was pure, their doctrines founded upon philosophy, their laws were just and comprehensive, their rites elevating and soul-inspiring, their ethics unsurpassed. Their intercourse with Greeks and Romans had introduced our ancestors to the world. They had multiplied, and were to be found everywhere. There were at that time more Israelites outside of Palestine than within. Large colonies of Jews were to be found in Persia and along the whole coast of Asia Minor: they had settlements in Greece, in Spain, in Gaul, in Italy,

especially in Rome. In Egypt, they were almost the masters. They were the leading statesmen, they commanded the armies, they were the magnates of commerce and the owners of factories. In Leontopolis, they owned a temple which rivalled in beauty and elegance that of Jerusalem. In Alexandria, they had a number of synagogues, the most prominent of which is reported to have been of such dimensions that the loudest voice could not be heard from end to end, and that, therefore, a flag was waved from an elevated stand whenever the congregation was requested to rise and to join in the Amen. But what is of still greater importance, the Pentateuch had been translated into the Greek language. The Septuaginta, as this translation was called, had become a standard work; and all men of intelligence and learning had become familiar with it. No wonder, therefore, that Gentiles in large numbers embraced Judaism. From the interior of Asia, a princess came with all her family to be initiated into the Jewish religion.

It is said—and it is well said—that every man has once in his life an opportune moment when he can make his fortune, but that very few only take hold of it, while the rest let it slip from their grasp. The same holds good for nations. That very period was the time when Judaism could have conquered the world. It would be an idle play of imagination for us to conjecture what our present condition would have been, if our ancestors had made proper and prompt use of their opportunity. Alas! they did not. Perhaps an all-wise Providence had destined it so, for good reasons, that they should not. There were two obstacles which then hindered the spreading of Judaism. In the first place, its customs were too rigorous. The Gentiles, though they acknowledged the correctness of Jewish theology and the purity of its ethics, were unwilling to submit to the Abrahamitic rite, to the table laws, and to the minute prescriptions concerning cleanliness. Judaism, on its part, was not ready to compromise with them, because—and this was the second obstacle—it was too aristocratic. Its doctrines maintained that the Israelites were a people chosen by God, that the much admired laws were given to them for their own welfare, and that it was obligatory for them to guard, but not to spread them. Judaism, of course, would not reject the stranger who would knock at its doors: it would accept him cheerfully, provided he would take upon himself the whole burden of the law without any haggling; but it would not proselyte, it would not go and coax or force the stranger to come in. If these two obstacles could have been removed, the mastery of the world would have fallen as a consequence into the lap of Judaism.

There was one man living at that time who saw the golden apple hanging within such easy reach: he stretched forth his arm and broke it, but, alas! not for his own nation. It was Saul of Tarsus, better known as Paul. To him owes Christianity its life. Paul was no rabbi. He was no scholar whatsoever, nor was he versed in Jewish literature. He knew the Bible in its Greek version only: he would misquote, in his letters to the Corinthians, a passage in Isaiah as occurring in the Pentateuch; but, for all his ignorance in letters, he was zealous and practical. Observing that Judaism could not and would not allow one letter of the law to be changed, he embraced with eagerness the legends of the crucified Jesus, which must have reached him in an exaggerated form; and, without having ever known him, he made him the corner-stone of the building which he proposed to erect. There was an old saying, that the Messiah would do away with the law, as he would naturally

usurp the power of issuing new orders. Paul made use of it, and accepted Jesus as the Messiah, no matter whether he had fulfilled what was expected of a Messiah or not. It was sufficient for him that a Messiah had appeared; for this gave him a handle to change or to abolish so much of the law as he, Paul, saw fit. With one stroke of the pen, as we would say, he removed one of the obstacles: he admitted Gentiles into Judaism without the performance of the Abrahamic rite, and allowed them to eat whatever they pleased. Denounced by his Jewish brethren as a law-breaker, and distrusted even by the personal friends of the unfortunate Galilean, who were shocked to hear the words of their master interpreted by a stranger in such a peculiar way, Paul sought and found his friends among Gentiles. Supplying a long-felt want, his career became a success in spite of all the obstacles which beset his way. He was the first missionary whom the world has seen. Christian congregations grew up under the very print which his foot left upon the ground.

With him, the Messianic idea, formerly local, took a universal turn. The Messiah now ceased to be an anointed king, expected to remove the political misery of the Jewish nation. He grew into a divine messenger, a son of God, sent from heaven to earth to save all mankind from the effect of sin. Though having been put to death, he would soon return, and hold stern judgment over the world. His friends would be royally rewarded, his enemies unmercifully punished. Thus, the Messianic idea became a necessity for the Paulinian Church. Without it, it lacked all authority for the inroads made upon the law, the grandeur of which still remained the centre of attraction to the pagan world.

It would take years, should I attempt to trace in weekly lectures the rise and growth of Christianity. May it suffice that I show to you its source, and that I establish the fact that it was built by Paul from sheer necessity upon a mistaken interpretation of the Messianic idea, with which it stands and falls.

In the mean time, the Jews witnessed the appearance of another Messiah. His name was Theudas. He shared the fate of Jesus. Fadus, the Roman governor, caught him and his band, and beheaded him. Pilate did exactly the same which Fadus did a few years later; but nobody would claim to-day that the Jews tried and sentenced Theudas, nobody would hold them responsible for his death. Theudas, however, must have gained more notoriety than Jesus ever did at his time; for Josephus granted him a considerable space in his history.

When, finally, the cup of misery was full to the brim, and no help came from outside, the people arose in arms. A short but fierce struggle followed. Titus and his legions stormed Jerusalem, laid the temple in ashes; and, with the destruction of Jerusalem, Israel was stricken forever from the list of nations.

The seed planted by Paul had, in the mean time, grown up, and kept on growing. Christianity spread from day to day, and the daughter soon severed all connections with her mother. She went her own way; for she had a mission of her own to fulfil,—a mission which neither Judaism nor Hellenism could have fulfilled with success: she had to civilize a world of barbarians. Judaism would have failed on account of its rigor; Hellenism, on account of its selfishness. Greek philosophy cared little for the welfare of mankind as a species, its attempts were directed toward individual happiness. But it forgot that individual happiness and national happiness stand in a mutual relation to each other, and that the one

is impossible without the other. Whenever it failed to secure individual happiness, it was at a loss to account for it, and advised to escape the miseries of life by suicide. This was its last and only remedy. Nature, however, abhors destruction; neither the Epicurean nor the Stoic schools could ever win the favor of the masses. A Greek philosopher would have ridiculed it as absurd to stoop down to a slave or a barbarian, in order to educate him to higher and better principles. Not so Christianity. From her mother, she had inherited the principles of freedom and equality, the principle of one God and one human brotherhood. From her, she had learned the maxim: Love thy neighbor as thyself. Equipped with these gems from her mother's treasury, adorned with the ten sparkling diamonds of the Sinaitic law, she entered upon her path. What we would call elevate or civilize was called by her to save; and to save the world she was bound. Let us give honor where honor is due. With unexcelled heroism, the disciple of the early Church would seek strange countries, savage nations, always carrying his life in his hands. He would fearlessly enter the cabin of barbarians, suffer their scorn, their anger, even death from their hands. He would never flinch nor shirk his duty. And such heroism overawed the barbarian: he submitted, and bowed before the new God.

There is a steel engraving, to be found in almost every large picture store, representing the following scene: Two savage-looking gladiators are seen fighting in the Circus Maximus of Rome, for the amusement of the masses. One has succeeded in throwing the net over his opponent, and in forcing him to the ground. His eyes beam with passion, he craves the blood of his victim. Uplifted in his sinewy arm, he holds the trident, a fearful weapon, wherewith to deal the deadly blow, when, lo! and behold! a disciple of the early Church fearlessly places himself between the victor and his victim, with the cry, "Thou shalt not kill!" I do not know whether it is the skill of the artist or the subject chosen by him which produces the effect, but I can never pass this picture without emotion. Though the artist only imagined that scene, he took it, nevertheless, from life. Such scenes have occurred,—not once, but a thousand times, until the brute in man was tamed, and the barbarian had learned, not only the lesson, "Thou shalt not kill," but the still greater one, Love thy neighbor as thyself.

Christianity at the same time was accommodating to the pagan world. It did not ask for more than it could possibly get at a time. It granted indulgences, provided some of its lessons were accepted in exchange; and thus, step by step, it went further and further, until it had subdued the world, until it had civilized Germans, Goths, Celts, Huns, Mongols, and all, until princes would yield to the frown of a bishop and warriors sheathe or unsheathe their swords at the command of the ecclesiastical head. Every unprejudiced man must acknowledge it, and I acknowledge it with pleasure, that Christianity has performed some remarkable deeds. It has abolished slavery; it has established monogamy; it has mitigated the evils of war, and by all means raised the standard of civilization.

But there is nothing obtained in this world without compensation. What is won on the one side is generally lost on the other. Christianity had stooped down to the pagan world to save it, it had yielded to its whims; but, in its embraces, it had lost its identity, and had become paganized in its turn. Step by step, it was dragged—let me say involuntarily—from its path. The Messiah

was changed into a son of God, and the son soon unthroned the father; a mysterious trinity replaced monotheism; superstitious idolatry raised again its head. Upon the pedestals from which the early Church had thrown the jolly crowd of Greek gods and goddesses, the later Church erected the images of their saints. A St. Martin took the place of Mars, the god of war; a Madonna, the place of a Minerva; a Magdalene, the place of a Venus. The churches were again desecrated into wonder-working institutions; the Christian priest assumed the splendor of his predecessor, and dressed in gorgeous style; the bishop of Rome became the heir of the late Pontifex Maximus. Reason was banished, and unbridled imagination was permitted to run riot. Paganism, it is true, had been Christianized; but, during the process, Christianity had become Paganized. The world would surely have fallen back into its former barbarism,—as the dreary Middle Ages indicated it,—if it had not been for Judaism. Yes, indeed, if it had not been for Judaism; and this is a fact which only few seem to know. Though bleeding from many a wound, though despised and maltreated by her haughty daughter, Judaism, the mother, still lived; and, as long as she lived, she was a living protest against the frivolous conduct of her daughter. Her rigorism, which had made her lose the command over a world, had protected her, on the other hand, from the dangerous embraces of Paganism. She had preserved the purity of her doctrines, and still clung to reason in preference to blind belief. At this juncture, it appears necessary to me to say a few words about "belief." We hear so much about believers and unbelievers, or infidels. Belief is always resorted to, to offset reason; and a great many maintain that religion cannot be severed from belief. There are perhaps many Israelites who do not know it, and therefore will be scared when I tell them that Judaism is not built upon belief, but that it stands upon the firm rock of reason. You will never find in Jewish literature the command, "Thou shalt believe." This word was introduced into the religious vocabulary by Christianity. The mere belief in the Saviour was to save from eternal domination. Standing upon a basis which could not withstand the pressure of reason, it was to be supported by beliefs. To believe did not mean to accept a statement as true, because it could reasonably be expected to be true,—no: to believe meant to accept a statement as true, although reason revolted against it. Only then the saving qualities of belief would come into play. There was, for instance, no merit in the belief in a God whose existence, though not perceivable by human senses, still stands to reason; but the belief that three are one and one three, a doctrine against which reason revolts, such a belief was soul-saving and meritorious. Let me give you another example. To believe that the sacred Scriptures were written in the same way as all other books, which they may surpass in diction and beauty, by human writers inspired for their work, or to believe that the soul of every writer, inventor, or discoverer, stands in a certain relation to the source from which all talent and genius spring and our spirits flow,—such a belief, which stands to reason, was of no merit: it was, and is still, called unbelief; but to believe that God selected a certain man, and dictated him, word for word, an oration which he was to hold or a narrative which he was to write, assuming the responsible editorship himself, and using the man only as an amanuensis,—such a belief, against which reason reasonably rebels,—such a belief is still to-day demanded. The passage in which a Church Father

says, "*Credo, quia absurdum est*,"—"I believe, because it is absurd,"—was by no means intended as a sarcasm: it was the only stand-point of the Church. Whatever is reasonable needs not to be believed: it is convictive; and the great God who has granted us the heavenly light of reason cannot, does not, want us to exchange it for the dim lamp of blind belief. A religion which cannot stand the test of reason can never endure: belief is a weak prop only, which sooner or later must break.

Christianity, because it could never prove its premises, was forced to cling to belief. Judaism, on the contrary, was not and is not under such a pressure. It accepts facts which have occurred in the past as true, as long as they are not unreasonable or proven to be unhistorical by new developments; and no merit is claimed for it nor any reward expected for it. This grants us full liberty of conscience.

At every critical period in the development of the Christian Church, Judaism, the mother, raised her voice of warning; and this voice was not to be silenced. Neither the sword of persecution nor the pyre and torture of the inquisition, not even ridicule, could chase away the maternal ghost which would step between the daughter and her seducer at the critical moment. And, thus, the tide turned. Slowly, but surely, the daughter retraced her steps. Protestantism was the first step toward home. Judaism had so long protested against image worship, that the very best Christians began to listen, then to think, finally to join in the protest. Christian scholars secretly visited in disguise the learned men of Judah. They visited their miserable abodes, to be introduced by them to the mysteries of the Talmud, and to read with them the Bible in the original. Here they drank in full draughts from the waters of life; and, when Luther nailed his theses to the church-door of Wittenberg, his hammer sounded the death knell to idolatry. Four hundred years of retracing her steps are not a long time in comparison with the fifteen hundred years during which the Church was built, and considerable work has been done already. We have arrived at that stage where the dogma of a trinity has been abandoned, and a Unitarian platform is erected in its place. Jesus of Nazareth, five hundred years ago the principal and foremost feature of the trinity, is now to our enlightened Unitarian friends not more than the ideal of a man; and I doubt whether the remaining eleven hundred will be consumed before he will be not more and not less than the carpenter's son. Hereditary sin, atonement through Christ, heaven and purgatory, eternal bliss and eternal damnation,—all these superstitious doctrines have already fallen; and the sun of reason breaks through the clouds, and sheds its bright rays to-day over a world happier and better than ever before. Has Judaism remained unchanged during all these centuries? In its principles, yes; in its forms, no. The principle that there is but one God, and none besides him, and the ten commandments, which are the necessary consequence of it, have remained unchanged, and will remain unchanged forever, until the whole human race shall have adopted them, not in theory as yet, but in practice. But, in regard to forms, we have changed. Thank God, we have advanced. The Jew of to-day is not any more the Jew of nineteen hundred years ago. We are no mummies: we are alive and wide awake to the demands of our time. We have learned a good many things; and I praise God for it that we have also forgotten a good many. The advancing Israelite and the advanced or, as I shall name

him more properly, the returning Christian stand to-day almost upon the same level. There are only two slight difficulties to be overcome,—one on the part of our Unitarian friends, the other on both sides. The first is, they must subtract all the ideal embellishments with which Jesus of Nazareth is glorified, and reduce him to that place which he may have really filled,—the place of an honest, respectable man, of little importance to the world. I know it: it will take some time before they shall overcome this difficulty; for it is not so easy as you may think to give up ideals to which you have become attached from your earliest childhood, nor must we forget that then they would lose their claim to the Christian name, so highly cherished by them. The other difficulty, to be overcome by both sides, is race prejudice. With the spread of intelligence, with a better understanding between both races, and with good will on both sides, I am almost certain that, in course of time, this difficulty, too, will be removed.

Mother and daughter, who even then will touch one another with the tips of their fingers only, will feel the magnetic current of love pass through their bodies. Nearer and nearer they will be drawn to each other, until at last, after a thousand years, they will be reunited in one loving embrace.

CORRESPONDENCE.

PLAN AND DESIGN.

Editors of The Index :—

A number of *The Index* has come under my notice; and my attention has been attracted by an article from Mr. B. F. Underwood, headed "The Design Argument." If it be not too late, will he kindly allow me a few words in reply?

Let me preface by saying that I deem it almost as impossible for limited human intelligence to reason with regard to God as for the steam-engine to comprehend the brain which originated it; but, even from our narrow stand-point, it seems to me that Mr. Underwood has not quite established his theory.

He says: "If God is an infinite Being, his plans must be eternal; without beginning, and therefore uncaused. . . . If his plans had no beginning; if, like himself, they are eternal,—they must like him be independent of design. Since the plans of Deity are no proof of a designing intelligence that produced them (for they are supposed to be eternal), the plan of this universe, of course, was no evidence of a designing intelligence that produced it."

It is certainly true that the great cause must be as the circle, without beginning and without end. But I cannot agree with Mr. Underwood in his further conclusion that there need be no God.

"Cause is a substance exerting its power into act, to make one thing begin to be": therefore, as soon as you deal with "embodied plans," or, in other words, with effects, you are dealing with that which is not eternal, because it must have a beginning. An all-wise, eternal cause must always have held a perfect plan of this world; but cause must precede effect, and the "order, harmony, and adaptation" which we see in this world are an effect, and not a cause, and hence cannot be eternal, as is the cause which produced it. Therefore, "order, harmony, and adaptation" as seen by us may contain evidence of an Executor.

If eternal cause were one with effect, then effects must be eternal,—that is, without beginning and without end; but we know that effect must "begin to be." Therefore, though the plans of an infinite and all-wise Being must have been eternally conceived, they could not have been eternally executed; hence, that from which the design theorist draws his conclusion—namely, the "order, harmony, and adaptation" in this world—is a constant emanation. Is there not, therefore, a further link necessary before the chain of Mr. Underwood's argument is complete? We must prove that no Executor is needed; we must prove that a dead cause, an impersonal law, may produce living effects, ever varying combinations, intricate results, subtly difficult beginnings.

So far as human experience goes, we know that, though principles or causes may be eternal, the combining of these into effects requires an intelligent agent. The laws through which the steam-engine moves may always have existed; but a Stephenson was required to conceive a combination which would produce a desired result, and practically to embody the conception. May we not therefore conclude, reasoning from the known to the unknown, that a guiding, an ever-acting intellect is required to embody the magnificent plan of the universe?

Sincerely yours,

ROSAMOND DALE OWEN.

NEW HARMONY, IND.

[The only aim of the article mentioned above was to point out some of the fallacies of the Design argument. "Embodied plans" are, of course, evidence of design. So are all plans of which we can have any conception, for they imply calculation, and formation in the mind. To speak of an "eternal plan" is like speaking of a square circle. We used the words to meet the sophisms of those who assume that Infinite Intelligence "contrives" and "plans." We cannot see that the adaptations in what are called "effects" must necessarily be designed. It may be that the order, harmony, and adaptation that we observe in nature belong to an order that is eternal; that, for instance, when water results as an effect from the union of two elements which are adapted to unite in the proportions necessary to produce this compound, the phenomenon occurs in accordance with a principle of adaptation which is inherent in the ultimate nature of things. That the ultimate cause of all phenomena can be defined and described in terms of human feeling and thought, we seriously doubt.—B. F. U.]

The following is an extract from a private letter: "At present, the social problem is nearest and uppermost with me. It seizes me, now with profound compassion, now with high hopes for the great repressed mass of struggling, groping humanity. Shall we in this new land of unbounded promise, in this bright era of all-scrutinizing knowledge,—shall we fruitfully profit by the sad experience of so many older nations? The social problem embodies the ethical problem. The establishment and preservation of social equity in the pursuit of industrial well-being and civilization is, in truth, ethical fulfilment. The adjustment of the promptings and activities of individual life to a rational and comprehensive scheme of national prosperity and culture is the true desideratum of moral existence. This alone; not self-beatification, not cosmopolitan gush. Here before us lies our given sphere,—the land we dwell on with all its natural resources. Within its boundaries, we should be devoutly striving to evolve as perfect a national organization as creatures of our kind can possibly attain. As regards our industry, it should by no means aim at competing in open market with the productions of the system of industrial slavery maintained in European countries. Cheapness in relation to such foreign goods as can be produced at home would be a mistaken motive of American policy. The value of a free laborer's work has to be weighed against the yield of free agricultural labor in his own country, not against starvation wages fixed by capital in places where overpopulation has been artificially fostered. The reason why industrial protection should be here maintained is not the old one urged by Henry Clay and his supporters; namely, to enable home industries so to develop as to become fit at some future time to compete in open market. We need protection here, because we wish to organize our industry on principles of equity, by which workmen may themselves come to enjoy the full fruit of their labor. A nation cannot organize itself on new principles, and yet maintain unimpeded relations with all the old influences abroad. No amount of philanthropy can here avail. Even within its own internal compass, it cannot assimilate essentially heterogeneous elements. In spite of Christianity and humanitarian sentiments of brotherhood, the Indian is being exterminated, the Chinese executed, the negro eschewed, and even European immigration restricted. All this has to be, and gets itself done, in order that national homogeneity may be established. But is it not time to be courageously acting on clearly professed principles of specifically Aryan, specifically American policy? Why enunciate high-flown theoretical precepts, and then find one's self compelled

practically to act contrary to them? Ought we not to govern ourselves steadfastly according to wisely determined rules, and not allow our national bark to drift as motives of momentary expediency may suggest? The task is lucidly to expound and thoroughly to inculcate the essential principles of national democratic industrialism. This evidently is the order of the day."

BOOK NOTICES.

A CAPTIVE OF LOVE. Founded upon Bakin's Japanese Romance, *Kumono Tayema Ama No Tsuki*. By Edward Greey. With twenty-six illustrations from the original work. Boston: Lee & Shepard. pp. 280. Price \$1.50.

Mr. Greey, who has made a special study of Japan and the Japanese, and who has already published several books relating to that country, says of his present venture that, "while not a translation," it, however, "follows Bakin's charming romance as closely as possible in his own quaint style, and contains many details that author would have given, had he written for foreign readers. Bakin, who was one of the famous novelists of Japan, was a prolific writer; and his books, which are historically correct, are regarded as classics." The story from which this English work is adapted was selected "on account of its affording an excellent insight into the thoughts and methods of the Japanese about five hundred years ago, and for its interesting descriptions of superstitions not unknown to our ancestors." In this delightfully told story, the Buddhistic belief of the masses is ingeniously interwoven into the plot, which deals with the wicked doings of a fallen Buddhist priest, who, despite his vows, had allowed himself to fall in love with a beautiful but unprincipled woman. To the cloyed story-reader, this unique romance, which is thrillingly interesting from the first page to the last, full of dramatic situations, with tragedy, mystery, and humor intermingled, will be welcomed as a decidedly new and novel work. To the student, it will afford a lively picture of the domestic manners and customs of a comparatively unknown people, and to the philosopher will reveal strong evidence of the universal likeness of motive, passions, and principle, which, in spite of differences of faith and environment, makes all humanity practically one.

The domestic life of the Japanese, as unfolded in this tale, appears to be generally founded upon affection and respect, especially in the relation of children to their parents. Filial love is constantly enforced in the examples commended by the Japanese author. Wifely obedience is also steadily inculcated, though women appear to have more liberty of discussion and freedom in public than among most of the Oriental races. Still, their limitations seem to have been recognized by the Japanese writer, who makes his heroine declare: "Ah! this is a very hard world for women. Although men can do as they please, we must do exactly as they will." And again: "I hope I shall be a man in my next state. It is most trying to be a woman! I have no rest day or night, fetching this and preparing that. ... If the gods were all of my sex, our happiness would be more evenly divided!"

The belief in a succession of transitions from one state of existence to another appears in much of the conversation among the characters of the story; and some of their idiomatic phrases in regard thereto seem very expressive, as when the dying are made to say, "I feel that I am about to travel the lonely road," "I am about to start upon a long journey," "I am about to change my world." Death is almost invariably spoken of as a "change of worlds," and messages to those gone before are given in all seriousness to the dying. The laws of heredity are recognized, and an importance given to them which is sometimes very unfortunate for the innocent descendants of guilty men. When unmerited misfortunes occur to well-doers, they are represented as consoling themselves with the idea that they are sent as punishment for evil deeds done in some former state of existence of which they have no remembrance. If it were not for this belief, one would be disposed to find fault with the writer for allowing so many of his characters to die or be killed while doing no harm. The quaintly serious notes by Bakin, given at the close of each chapter in explanation of some incidents or allusions made in that chapter, are interesting from their apparent sincerity and charming

ingenuousness. The full-page illustrations "from the original work" look very grotesque to English readers.

As several Japanese gentlemen have given Mr. Greey the aid of their knowledge of ancient Japanese customs and traits, we may be sure that this volume gives us a pretty reliable picture of life in Japan at the time of which it treats. The book is handsomely bound and clearly printed. S. A. U.

MYRTILLA MINER: A Memoir. Boston and New York: Houghton, Mifflin & Co. 1885. Price \$1.00.

This book awakens reminiscences of pro-slavery and ante-bellum times. It is the record of the life of a brave, enthusiastic woman who, by dint of indomitable courage and pure faith in the right, born of a conviction of the injustice done a servile race, conquered the most hardened prejudice and achieved a most noble work. In 1851, the subject of this "memoir," a school-teacher of fragile physique, but strong will, having been brought face to face with the evils of slavery in the course of two years of teaching in the South, determined to "beard the lion" of public opinion in regard to slavery by establishing in Washington, D.C., a normal school for colored girls, with the intention of encouraging education among the colored people by supplying them competent teachers from their own ranks. It must seem strange to the young readers of this generation, who know of the bitterness of the anti-slavery struggle only by occasional references to it, to read of the genuine dangers which encompassed this woman in carrying out so laudable a purpose. Her wonderful faith and courage are shown in the fact that, without money (save one hundred dollars supplied by a sympathetic friend), without influence, without health, without experience, and in the face of discouragement of all sorts, she dared start her enterprise. When, after almost superhuman exertions, she gained her point and established her school, "what she had most to fear," says the writer of these memoirs, "was rowdism and incendiaryism. She prepared to meet the former by practising with a pistol, and training herself to take good aim by shooting at a mark." "One night, some rowdies came to the school-house [which was also her home]. She stood bravely at the window with a revolver, and declared she would shoot the first man who came to the door. They retreated at once. Once her house was set on fire; but a passer-by awoke her, and helped to put it out. Stones were frequently thrown at her windows in the night time, and she was otherwise annoyed." Friends at the North replied generously to her appeals for mutual aid; and it is with pleasure we find it recorded that, among others, Mrs. Stowe sent one thousand dollars of the *Uncle Tom's Cabin* money, and gave, besides, "heartily sympathy and support to the work." Several of the Beechers—Henry Ward and W. H. Beecher, conspicuously—aided in her project. Senator Henry Wilson refers to her in his *Rise and Fall of the Slave Power in America* as "one of the heroines of the irrepressible conflict,—not because she figured largely upon the theatre of popular discussion or entered her public protest against the evils of slavery, but because in the humble walks of the lowly she quietly sought out, and with patient and protracted effort educated, the children of the proscribed and prostrate race." Although she did not live to reap the full fruition of the noble work she began, that work still goes on, and speaks of her in the school she founded, which, under the name of the "Miner Normal School," has grown to an importance far beyond her most sanguine hopes in educating women of their own race as teachers for the colored youth of to-day. S. A. U.

THE WIT OF WOMEN. By Kate Sanborn. New York: Funk & Wagnalls. Price \$1.50.

Miss Sanborn, in her introduction to this work (an introduction which, probably, she makes purposely brief, remembering that "brevity is the soul of wit"), says: "I feel a cheerful and Colonel Sellers-y confidence in the success of the book; for every woman will want to own it as a matter of pride and interest, and many men will buy it just to see what they can do in this line. In fact, I expect a second call for this volume!" She gives as the cause of her writing this book a desire to disprove Richard Grant White's dogmatic statement, that humor is one of the "rarest of qualities in woman." The book is divided into ten chapters, the titles of which will convey an idea of the scope of woman's wit: "The

Melancholy Tone of Women's Poetry," "Puns, Good and Bad," "Epigrams and Laconics," "Cynicism of French Women," "Sentences, Crisp and Sparkling," "Humor of Literary English Women." This is scarcely a proper title to a chapter which treats of the Scotch writer, Mary Ferrier, two Irish women, Lady Morgan and her sister, Lily Clarke and Fredrika Bremer, the Swedish novelist, in addition to the English women, Fanny Burney, Hannah More, Mary Russell Mitford, George Eliot, and others. "From Anne Bradstreet to Mrs. Stowe" gives specimens of the humor of Mercy Warren, Mrs. Sigourney, Catherine Sedgwick, Mrs. Caroline Gilman, "Fanny Forester," "Fanny Fern," and Mrs. Stowe. "Samples Here and There" are chosen from the writings of C. M. Kirkland, Rose Terry Cooke, "Samanthy Allen," and Metta V. Victor. "A Brace of Witty Women" is devoted mainly to extracts from the writings of "Sherwood Bonner" (Mrs. McDowell), to whom Miss Sanborn credits the satirical poem entitled "The Radical Club," which appeared in *The Index* some years ago, and which is familiar to most of our readers. A page or two in this chapter is given to Phoebe Cary, as the second one of the "brace." In "Ginger Snaps," quotations are made from Louisa Hall, "Grace Greenwood," Amanda T. Jones, Julia Pickering, Mary Kyle Dallas, and "Eleanor Kirk." Chapter seventh is devoted to bits of prose humor from various sources, and the eighth to humorous poetry. "Good-natured Satire" is the subject of the next chapter; and the last is composed of an *olla podrida*, comprising "parodies, reviews, children's poems, comedies by women, a dramatic trifle, a string of fire-crackers." Although Miss Sanborn has given only one summer's work to this collection of the *Wit of Women*, she has formed here quite a storehouse, from which, when needed "to point a moral or adorn a tale," specimens of feminine fun can be sought for and found, though it is rather "too much of a good thing" to be read continuously, or at one sitting. The design on the cover is unique and handsome, though we fail to see its particular appropriateness. The fine heavy paper on which the book is printed gives weight to the volume, if not to the author's argument, and may tempt some would-be wit of the masculine gender to intimate that *The Wit of Women* is, on the whole, rather heavy. S. A. U.

THE BOY'S BOOK OF BATTLE LYRICS. By Thomas Dunn English, M.D., LL.D. New York: Harper & Brothers, Franklin Square. 1885.

It is almost forty years since Edgar Allan Poe made Thomas Dunn English the subject of one of his most scurrilous attacks in the series of criticisms called "The Literati." Mr. English answered him according to his folly, and has since been "named and known by that hour's feat" almost exclusively. It is very pleasant, therefore, to meet one with whom our associations have not been particularly agreeable on the cordial footing which is afforded by his present work. The original intention of the author was to take up every notable event in our annals, so as to make a complete metrical history. This purpose was abandoned, as he found the volume would be inconveniently large. And, in truth, his style is so expansive that "the world would not contain the books" he would have written, had he gone on as he began. The "ballads" are, as he warns us in the preface, rather "metrical narratives" than poems. But the verse throughout is good, with much variety in the measures. Each ballad is recited in the first person, and with some attempt to give dramatic character to the narrator. To every ballad is prefixed an historical sketch, and there are many wood-cuts that are actually "illustrations" of the text. Some of the experiments in rhyming are extremely happy. Take, for example, "The Sack of Deerfield." The author has the true ballad feeling, and the indifference of the old-fashioned balladists to the length of the narration. The subjects are well chosen; and the book is one that cannot fail to be not only "the delight of generous boys," but a means of instruction, and, better still, of patriotic inspiration. J. W. C.

CIVIL SERVICE REFORM vs. THE SPOILS SYSTEM. By George S. Bernard. New York: John B. Alden. pp. 128. Price 10 cts.

This work originally appeared in the form of letters addressed to a Virginian newspaper, with the hope of directing the minds of Southern voters to the importance as a political movement of the civil ser-

vice reform. They discuss in a calm and impartial manner the merits of that reform, and give much helpful information bearing on the subject. In the Appendix, the Civil Service Act is given in full, with a list of journals published and publications issued in support of the cause.

THE PETTIBONE NAME. A New England Story. By Margaret Sidney. Boston: D. Lothrop & Co.

This is No. 1 of Lothrop's *Household Library*, to be issued monthly at \$5.00 per year, or 50 cents per number. The holidays are an appropriate season at which to reissue this realistic tale of New England life, which brings out in strong relief the differing phases of character to be found in the farming towns of the Eastern States. It is principally a story of the self-sacrifice—self-imposed—of a quiet "old-maid," for the sake of "the Pettibone name,"—a name which, however, when she has achieved her purpose, she exchanges in a satisfactory but unexpected manner for that of her ministerial lover. The moral tone of the story is pure, and the style interesting.

THE ILLUSTRATED CATHOLIC FAMILY ANNUAL, 1886. New York: Catholic Publishing Society Co., 9 Barclay Street.

Twelve portraits of distinguished Catholic dignitaries, with sketches of their lives, several pictures of noted architectural structures, with an engraving of the monument to Margaret Haughey, of New Orleans, and a portrait of Lady Georgiana Fullerton, accompanied by sketches of the life and work of these women, are among the contents of this annual.

HOW TO ENTERTAIN A SOCIAL PARTY. A Collection of Tableaux, Games, Parlor Magic, Philosophical Recreation, etc. New York: J. G. Ogilvie & Co., 31 Rose Street. pp. 128. Price 25 cents.

A very handy book for young people to consult when at a loss for some variation of an evening's amusement at social gatherings or in the home circle.

METAPHYSICS is the title of a little paper-covered work of sixteen pages, without imprint of author or publisher, which deals with questions in theology and mental science. Its principal aim seems to be to give words of caution and advice to those disposed to dabble in mind-cure, faith-cure, and other branches of so-called metaphysical healing. The work contains some sensible thought on these and kindred subjects, but it is presented in such vague transcendental as well as theological phraseology that it is likely to fail of appreciation except by those in sympathy with the peculiar speculative views of the author.

THE Catholic World for November has the following table of contents: "The Legend of St. Alexis," by Aubrey de Vere; "The Divine Authority of the Church," by Rev. A. F. Hewit; "A French Reformatory," by Louis B. Binns; "St. Winifred's Well," by Agnes Repplier; "Solitary Island, Part IV., Chaps. II.-IV.," by Rev. J. T. Smith; "Much Ado about Sonnets," by Appleton Morgan; "The American Catholic University," by Rev. A. F. Hewit; "The Twins: A War Story," by T. F. Galwey; "To-morrow," a poem, by "T."; "The Irish Schoolmaster before Emancipation," by C. M. O'Keefe; "The Death of Francis of Guise," by J. C. B.; "A Chat by the Way," by Condé B. Pallen; "Novel Writing as a Science," by R. P. Among the books reviewed are *The Daemon of Darwin*, *The Life and Letters of John Brown*, *The Age of Lead*, and *Narratives of Scottish Catholics under Mary Stuart and James VI.*

A VERY interesting engraving is that just issued by the Travellers' Insurance Company of Hartford, from the publishing house of Root & Tinker, New York. It is a representation in reduced form of the first page of fifteen of the leading Parisian journals, such as *Le XIX. Siècle*, *Le Temps*, *Journal des Débats*, *Le Moniteur Universel*, *Le Pays*, *L'Intransigeant*, *Le Petit Journal*, *Le Figaro*, *La Lanterne*, etc., with the portrait of its editor in the centre of each paper. A more noble-looking group of characteristic faces would be difficult to find. Indeed, knowing that the list includes such well-known names as those of Henri Rochefort, Paul de Cassagnac, Emile de Girardin, and Edmond About, with other French journalists worthy to be their *confrères*, an engraving like this could not fail of being a strikingly remarkable one. In addition, the artistic grouping and finish of the picture are excellent.

THE November number of the *Revue de Belgique* contains articles on the recent French election, on the Revocation of the Edict of Nantes, two hundred years ago, on the holding of the soil as common property in various parts of Europe, and on the attempt to gain peace of mind by giving up liberty of thought. Only such peace as reigns in a cemetery can be purchased thus. To keep the intellect alive, we must let it work freely, owning no authority but that of truth. Those who do this duty faithfully can enjoy the purest and firmest kind of inward peace, that which a good conscience gives.

The Poet as a Craftsman.

By WM. SLOANE KENNEDY.

A bird at rhyme and metres, with a glance ahead in prophecy and outline of a more spontaneous poetical style.

Letterpress, paper covers. Price 25 cents. By mail, postpaid, on receipt of price.

For sale at *The Index* office, and sent by mail or express to any address.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND.

Author of *The Reign of the Stoics*. Price \$3.50.

The author of this book has chosen a magnificent subject; and, although it is formidable in extent and much of it involved in obscurity, and all of it complicated with great questions of history and human progress, he has yet been able to throw much new light upon that liberalization of thought which went very unsteadily forward during twenty-two hundred years, before the great modern movement of the development for intellectual liberty. The work is a delineation of tendencies, a series of sketches of the great minds who at different times and under varied circumstances, and with unequal effect, have struck for independence of thought, a presentation of the counterforces that have antagonized intellectual liberty, and an account of the working of all those larger agencies which have in different degrees hindered or promoted freedom and independence of thought. Without having subjected the work to critical scrutiny, we are much impressed by the evidence it shows of extensive and conscientious labor, the freshness and interest of its chief subject-matter, the untrammelled treatment of the subject, and the vigor of the portrayal of that long and agonizing conflict with bigotry and intolerance, religious and political, public and private, which is the price of our modern liberty of thinking.—*Popular Science Monthly*.

The volume shows remarkable research, keen powers of analysis and comparison, close reasoning, and fairness of judgment. It will be found an invaluable help to the student, who will be glad to learn that the author contemplates a second volume, which will bring the subject down to the time of the French Revolution.—*Boston Transcript*.

NEARLY READY:

SCIENTIFIC THEISM.

By FRANCIS ELLINGWOOD ABBOT, PH.D.

This work includes the substance of a lecture delivered last July at the Concord School of Philosophy. It is part of a new philosophy of Evolution, vitalized by the principle of UNIVERSAL ENDOGENIC TELEOLOGY and by the substitution of the ORGANIC THEORY OF EVOLUTION for the MECHANICAL THEORY advocated by Spencer and Haeckel. Its purpose is to philosophize the scientific method, and to show that modern science, interpreted by its philosophized method rather than by its non-philosophic special results, leads, not to Atheism, not to Agnosticism, not to Idealism, but to a REALISTIC SPIRITUAL THEISM which will satisfy both "the head" and "the heart."

1 vol., 12mo. Price \$2.00.

LITTLE, BROWN & CO., PUBLISHERS,
254 WASHINGTON STREET, BOSTON.

Although this work has been eulogized by the secular press, it has been bitterly attacked by the greater part of the religious press, because the author, from the highest intellectual and moral grounds, denounces some of the superstitions which have crept into Christianity as essentially irreligious, and the men who, knowing better, teach those superstitions, as essentially dishonest.

The Religion of Philosophy;

OR, THE UNIFICATION OF KNOWLEDGE:

A comparison of the chief philosophical and religious systems of the world, made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God. By RAYMOND S. PERRIN. New York: G. P. Putnam's Sons, 27 and 29 West 23d Street. London: Williams & Norgate. 1885.

"A work which aims to teach a true conception of God, of life, and of morality."

"Mr. Perrin's able work offers a deep interest. . . . It is a remarkable book."—*Morning Post*, London, Eng.

"There has not for a long time appeared any book in the English language which, from the purely intellectual and philosophic side of it, is deserving of a more careful study."—*Times*, Philadelphia.

"It is a work which appeals to the scholarship of the country."—*Prof. Youmans, in the Popular Science Monthly*.

"The author is no imitator. He has a well-defined theory of his own to advocate; and he advocates it with clearness and energy, and does not hesitate to give heavy blows at what he conceives to be the narrow views of most Christian theologians. 'The religion of philosophy,' as delineated, is not simply a scheme of thought; it is broadly and intensely practical."—*Wm. J. Potter, in the Mercury, of New Bedford, Mass.*

"The author makes a masterly analysis of Herbert Spencer's philosophy, and subjects his theory of the *Unknown* to a most close and searching criticism. It is an extraordinary work, one of the most important contributions from the press of recent times."—*F. S., in The Index, Boston*.

"Mr. Perrin writes with habitual good taste and unvarying decorum of the beliefs which he holds false in basis and spurious in sentiment. . . . His sympathy is so frank and so thorough with the true sentiments of Christianity, his aim so high and his argument so modest and earnest, that even those who will repudiate his conclusions will find satisfaction and enjoyment in reading his pages."—*Sunday Herald, Chicago*.

*. Large octavo, extra cloth, 566 pages. Clear type. For sale by all book-sellers. Price \$3.50. Also sent, postpaid, on receipt of price by

THE INDEX, 44 Boylston St., Boston.

Just Published:

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crago.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

THE UNIVERSITY. FOUNDED 1877.

A Literary and Critical Journal,
 published every Saturday,
 at Chicago.

The University is not the organ of any college; it is not distinctively an educational paper; but it aims to deal with living issues from the university standpoint,—to reflect the ripest American scholarship in its discussion of politics, religion, education, science, literature, and art in their various bearings. Its publishers solicit the subscription of all persons interested in the support of an independent exponent of liberal culture on a plane of superior excellence.

Price, per year, \$2.50; per copy, 5 cents. Special trial offer to those who see this advertisement. Send 25 two-cent stamps and receive *The University* three months on trial. Specimen copies—three different issues—will be mailed to any address for examination on receipt of 10 cents. Address

THE UNIVERSITY COMPANY,
 135 Wabash Avenue, Chicago.

PUBLICATIONS

OF THE

FREE RELIGIOUS ASSOCIATION.

Freedom and Fellowship in Religion.
 A volume of ten essays upon speculative and practical problems of religion, by D. A. Wasson, Samuel Longfellow, Samuel Johnson, John Weiss, W. J. Potter, F. E. Abbot, O. B. Frothingham, J. W. Chadwick, T. W. Higginson, and Mrs. E. D. Cheney, and extracts from Addresses by Ralph Waldo Emerson, Lucretia Mott, Robert Dale Owen, Dr. Bartol, Wendell Phillips, Rabbi Wise, Horace Seaver, A. B. Alcott, Lucy Stone, Charles H. Malcom, Julia Ward Howe, and others,—all given on the platform of the Free Religious Association. Price (reduced) \$1.50.

Reports of Annual Conventions of Free Religious Association, from 1872 to 1879 inclusive. These contain essays and addresses by the various distinguished men and women who have spoken on the Free Religious platform, together with yearly reports of the Executive Committee. 10 cts. each.

TRACTS.

I. *Taxation of Church Property*, by James Parton. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

II. *The Bible and Science*, by John Weiss.

III. *The Sympathy of Religions*, by T. W. Higginson. Enlarged edition.

IV. *Transcendentalism*, by Theodore Parker. Never before published.

V. *The Public School Question*, as understood by a Catholic American citizen (Bishop McQuaid) and by a Liberal American citizen (F. E. Abbot).

VI. *How Shall We Keep Sunday?* An Answer in Four Parts: 1. Sunday in the Bible. 2. Sunday in Church History. 3. Sunday in the Massachusetts Laws. 4. The Workingman's Sunday. By Charles K. Whipple, Minot J. Savage, Charles E. Pratt, and Wm. C. Gannett.

VII. *Evolution and Religion*, by John Fiske. 5 cts.; ten, 35 cts.; one hundred, \$2.00. Nos. II., III., IV., V., VI., 10 cts. each; ten, 60 cts.; one hundred, \$3.00.

Reason and Revelation, by W. J. Potter. 5 cts.; ten, 30 cts.; one hundred, \$1.50.

RELIGIO - PHILOSOPHICAL JOURNAL.

Established in 1865.

A Paper for all who Sincerely and
 Intelligently Seek Truth with-
 out regard to Sect or Party.

The JOURNAL, in the estimation of a large proportion of the leading authorities on Spiritualism, stands pre-eminent as a fearless, independent, judicially fair advocate of Spiritualism. It has received more general notice, and more frequent and higher commendations from intelligent sources, regardless of sect or party, than any other Spiritualist or liberal paper ever published: the records will confirm this.

The JOURNAL is uncompromisingly committed to the Scientific Method in its treatment of the Phenomena of Spiritualism, being fully assured that this is the only safe ground on which to stand.

The JOURNAL is unsectarian, non-partisan, thoroughly independent, never neutral, wholly free from cliques and clans.

"CHURCH-DOOR PULPIT" TRACTS.

Price 5 cents per copy; 10 copies, 25 cents.

Why God's Chosen are a Minority of the Minority. By Rev. C. Van Norden, of the North Congregational Church, Springfield, Mass. "Many are the wand-bearers, but few are the mystics; many called, few chosen."

This World as a Temple. By Rev. Charles G. Ames, minister of Spring Garden Unitarian Society, Philadelphia. "The creeds are too short. We must not stop with believing in the Divine Sonship of one man who lived and died long ago; we must take up and bear onward the triumphal song of those who first caught his spirit: 'Beloved, now are we the children of God,' and 'The Father himself loveth us.' Then it will be easy for us to accept this world as our school, our home, and our temple."

The Gospel of To-morrow. By Rev. Edward Everett Hale. "The business of the Unitarian Church is to unite. It is to unite the rich and the poor; to unite the native and the foreigner; to unite the master and his workman; to unite the teacher and his scholar; to unite old enemies and make them fast friends; to unite jealous rivals and make them help each other; to unite the different sects, which are and must be, in the great heritage of God, so that the voices of their song shall rise to Him in harmony."

What Religion may Do for a Man. A Sermon for the New Year. By Theodore Parker. "The Infinite Providence bends over the cradle, or the play-ground, or the school-room, or the workshop of her children, and wishes us all a Happy New Year. But the wise Mother leaves us somewhat to ourselves, to work our weal or woe; and though she holds the tether, and never lets us stray beyond recall, she holds it something loose, and lets us run and choose our way. Which will you,—the meaner or the nobler life? You may have the worst thing or the best thing, and call either your 'Religion.'"

Humanity uplifted through Suffering. By Rev. David Usher, minister of the Church of the Messiah, Chicago. "They imperfectly know God who think only of His tender goodness, forgetting the travail and pain in which wisdom is forever born,—the infinite sweep of this law, whose severity falls like fate, touching with agony those who dare to disobey."

Earthly Immortality. By Rev. R. Heber Newton. "Every life of sweet-souled sunny goodness, of patient service, of honest, faithful toil for truth, counts for its full weight in the momentum of humanity's progress. . . . The little leaf drops from the stem; but behind it, in the veins, the sap flows somewhat faster, fresher, fuller, for that dead leaflet's life."

BY B. F. U.

ALTHOUGH Mr. Vanderbilt's bequests were but one-half of one per cent. of his property, they amounted in the aggregate to over \$1,000,000.

THE President's message has been pretty generally read; and leading journals of all parties unite in speaking of it as a State paper entitled to high rank,—strong, straightforward, comprehensive, and unpartisan.

DAKOTA asks for admission as a State, with her coat-of-arms bearing the motto, "By God the People rule." The *Boston Post* thinks there is too much of the cow-boy about that motto, and asks, "Why couldn't they have been satisfied with the simple motto, 'The People rule,' without the profanity?"

It is stated that "a whole town in China has adopted Christianity as a result of deliverance from cholera in answer to special prayer." Some such display of supernatural power in the most enlightened portions of Christendom might do something to restore belief in Christianity where it has long prevailed, and where the people are losing faith in it.

REFERRING to the offer of the inhabitants of Quitman to donate to the American Missionary Society a site for a colored school, to take the place of the building lately burned there, the *Springfield Republican* remarks: "We infer that it is located more to the taste of the persons whose hostility caused the former school to be destroyed,—in other words, is outside of the town,—because the *Atlanta Constitution* observes that the society 'will certainly not attempt to rebuild the school on the old site, and will, doubtless, accept the town land donated by the citizens.' Unless the society has a larger share of the missionary spirit than is given to most people, it will not attempt to rebuild the school at all, unless its teachers can be assured

of more Christian, not to say decent, treatment than they received there before."

THE following, from a letter printed in a Boston daily paper, is sensible: "Archbishop Gibbons, in his address at the funeral of Cardinal McCloskey, makes the singular assertion that, 'to the eye of faith, the bishop is exalted above angels, because he exercises power not given to angels.' It may be that this excellent ecclesiastic has sources of information on matters of this sort inaccessible to the laity; but, to the average mind, an assumption like this seems supremely absurd. In the absence of any definite knowledge as to the precise functions exercised by the angelic host, in the presence of doubts in the minds of certain sceptical souls as to the existence of an order of superior intelligence with the attributes commonly ascribed to angels, the ground taken by the reverend orator is somewhat amazing. . . . It strikes me that it would have been quite possible to give the deceased prelate credit for 'every virtue under heaven,' without introducing any question of precedence, at least so far as concerns the celestial hierarchy."

WHEN so much is said and written of mad dogs, says *Science*, "it may be well to recognize that, as the *Lancet* says, fear or nervous apprehension can induce a fatal disease having nearly, if not all, the characters of hydrophobia. It is not necessarily true that hydrophobia is always brought on by the mental anxiety that a dog-bite not infrequently occasions. Hydrophobia is a nervous disease; but it has probably a material cause, a poison, which is most likely a "germ" or micro-organism. It is a curious fact that birds, even when inoculated with the poison of rabies, do not suffer from the disease; and some individuals appear to enjoy, with birds, the same kind of immunity. The *Lancet* further points out that, whether it is those persons who are not given to fear or nervous apprehension who always escape hydrophobia, even though bitten by a rabid dog, we are not in a position to state. But nothing can be more detrimental to a bitten individual than to brood over his misfortune, or make himself miserable by learning all the symptoms of hydrophobia."

THE name of Louis Prang must ever remain identified with the birth of the popular interest in art in America. More than any other man, he has worked in the right way to popularize the artistic taste among the people of this continent. His cheap chromo reproductions of the works of the best artists, his Christmas, New Year's, St. Valentine's Day, and birthday cards, and his encouragement of native genius by prizes offered for the best art designs for these cards have made the name of the firm of L. Prang & Co. a household word in every home in the land as a universal benefactor. The Christmas and New Year's cards sent out by the Company this year are in no respect behind their predecessors in beauty and artistic merit. More than this it is not necessary to say; yet we cannot help calling

particular attention to one of the new ones, called "the Boston card," which is illustrative of the modern Christmas. There are three figures, a young lady, a boy, and a little girl of two or three years of age, a quaint little darling in a cap and Mother Hubbard gown, who gravely tries to imitate the elaborate bow of her seniors. The childish pose has been admirably caught by the artist.

F. M. H. WRITES thus in regard to exempting churches from taxation: "During the year ending in September, 1885, the untaxed real estate in the city of Worcester, nearly nine-tenths of which property belongs to sectarian organizations, increased in value from \$2,000,000 to \$2,347,200, or over 17 per cent.,—a gain largely due to the erection of three expensive churches. The increase of the rest of the real estate in the city meantime was from \$35,684,400 to \$36,960,350, or only 3½ per cent. In other words, the property of the Worcester churches increases in value about five times as fast as that of the individual citizens. It certainly looks as if the religious societies were, at least, as able as the rest of the community to pay their own taxes. If the churches in Worcester keep up this rate of growth, it will not be many years before they come to own half the city, as was the case in many places in Europe during the Dark Ages."

THE newsdealers of Worcester have signed a pledge that they will discourage the sale of such publications as are referred to in the law enacted by the Massachusetts legislature at its last session, forbidding the sale to minors, or the exposition in their presence of "any book, pamphlet, magazine, newspaper, or other printed paper devoted to the publication or principally made up of criminal news, police reports, or accounts of criminal deeds, or pictures and stories of crime." The Worcester newsdealers deserve the thanks of the public for the example they have set to those in the business. Youthful criminality is on the increase; and it seems to be due in part, and in numerous cases can be traced directly, to reading sensational stories of crime. Let the fact be well understood, and respectable newsdealers will not cater to the class that demand this sort of literature.

GERMANS in Chicago have inaugurated a movement for the erection of a monument to Goethe, and they will invite the co-operation of people of all nationalities. "This," says the *Cincinnati Graphic*, "is eminently proper. If the world has ever produced a great man who towered in his intellect as in his sentiments above all national bias, such a man was Goethe. As one evidence, and the best, that could be cited of this fact, at the time when France was making her most serious encroachments upon his country, he utterly refused to join in the almost universal outcry against French literature, French art, French influence generally in æsthetics, considering these elements in civilization as properly of no race or country. In this respect, he showed himself superior to Victor Hugo, whose sublime intellect was marred, or at least cramped, by the intensity of his patriotism."

LIBERAL CATHOLICISM.

There is a liberal Catholicism, as there is a liberal Orthodoxy. No church can quite escape the reforming influences of the nineteenth century. Yet it is the nature of reform within church lines to give the credit, not to the rationalistic thought of the present age, but to a retroversion to some phase of philosophy in an earlier period of Christendom. Thus, the New Orthodoxy is claimed by its adherents to be even an older form of Christianity than is Calvinism. Calvinism, it is said, has its roots in the teachings of Augustine. But the new school of orthodox thought finds its prototype in the Greek Christian theology, and more particularly in the views of Athanasius. And there is no doubt that Greek Christianity was much more liberal in its philosophy than the Latin. Athanasius was a disciple of Origen and of Clement of Alexandria. Origen and Clement, though distinguished "Fathers" of the Christian Church, were under suspicion for heresy. They were both learned in Greek philosophy and culture, and their view of Christianity was largely influenced by that learning. They both believed the Hellenic philosophy was a direct and divinely ordered preparation for Christianity. It was Clement who said, "God was the giver of Greek philosophy to the Greeks, by which the Almighty is glorified among the Greeks." How different is this teaching from that which is heard, even to-day, in circles of popular Orthodoxy,—that the whole world, for instance, was sunk in darkness and dead in trespasses and sins, with not a ray of saving truth, awaiting the advent of Jesus! The larger ancient teaching was the reflected light of pagan Greece, which really saved Christianity from becoming a mere sect of Judaism.

The Roman Catholic Church naturally holds in high regard St. Augustine, who turned the tide of theological thought into stricter channels, and impressed himself powerfully on papal Christianity. Yet these older "Fathers" are held as belonging to that Church also; and liberally inclined Catholics, like the liberal Orthodox of the Protestant ranks, may revert to them for authority, when they incline to concede to modern thought something of the stricter doctrine of the later centuries of their Church. Thus, Bishop Keane, of Richmond, Va., has recently delivered a lecture in St. Louis, under the auspices of the Catholic Lecture Bureau of that city, in which certain liberal passages concerning the religions anterior to Christianity clearly restate the position of the Greek Fathers, almost in their own words, though they are not referred to by name. The subject of the lecture is "The Light of the World." Christ, of course, is regarded as that light in all its fulness. But Bishop Keane does not contrast Jesus with other great religious teachers, as if they taught only error and he only truth. On the contrary, he even admits that the great teachers before Jesus—Socrates, Plato, Gautama Buddha, Confucius, Zoroaster—were "men of Divine Providence," commissioned by Almighty Power to reveal truth so far as the world could receive it, and thus to prepare the way for Christianity. Bishop Keane's theory is that the fall of man—he accepts apparently the legend of the Garden of Eden literally—did not utterly incapacitate man for the understanding of genuine religious truth nor cut the human race entirely off from communication with the Supreme Being. Adam and Eve, though driven from the Garden, in shame and darkness, went from it with a promise and hope that their darkness would at some time be dispersed by the Light of divine truth; and upon that promise and hope, which all the

scattered races of primitive mankind retained, and which Bishop Keane concedes to be a veritable message from the Almighty, they all, he thinks, built their respective religious creeds,—creeds incomplete and mistaken in many things, and yet having real truth in them. Then the providential men were raised up who were to develop this truth and lead the nations onward toward the full day of revelation which should surely dawn.

On this theory, Bishop Keane spoke most sympathetically and appreciatingly of the ancient religious teachers of pagan faiths. Instead of declaiming against them as false guides, he regarded them as forerunners of Jesus, teaching the same kind of truth as Jesus taught, though only in part. Of Buddha, he said: "Disgusted with the degradation and tyranny resulting among his countrymen from a system of castes, he sought for the truth that would undo the evil. In the light of the natural law of the old tradition from which his people had wandered, he found the equality and brotherhood of men; and this doctrine so welcome to the down-trodden he proclaimed with all the energy of his soul." Of the Persian prophet: "God gave Persia its man of providence in Zoroaster. He, too, amid the darkness, caught the gleam of the old forgotten truth; and he proclaimed that there is but one God, essentially good, who makes morality both possible and obligatory." Of Confucius: "With a delicacy of heart that shrank from the gross materialism around him, he [Confucius] recognized and proclaimed the beauty and necessity of morality, of unselfishness, of truthfulness, gentleness, and kindness." Of the great Greek teachers: "God gave Greece her men of providence. These were Socrates and his great disciple, Plato. Spurning the materialism and sensuality which were making the life of their countrymen as foul and deformed inwardly as it was clothed in shapes of artistic beauty outwardly, their lofty souls aspired after the ideal and the infinite. In language whose beauty has rendered his teachings immortal, Plato told his country of spirituality and immortality, of religion and moral duty, and the one God."

Along with these views, which are so nearly akin to the truths concerning the ethnic religions that are now taught by such historical investigators as Max Müller and Renan, this Roman Catholic bishop, as might naturally be expected, teaches also the common orthodox doctrine that the plan of divine revelation and redemption was completed by the perfect incarnation of deity in Jesus, beyond all need of further addition or amendment. And this doctrine no scientific study of history will sustain. But it were well if that class of orthodox preachers who are in the habit of declaring that the heathen nations, before the advent of Jesus, knew nothing of the doctrine of one God, nor of a paternal deity, nor of a pure morality, nor of the idea of human brotherhood, nor had any hope of immortality, should take note of what this bishop of the Catholic Church says of these ancient heathen teachers of ethics and religion.

WM. J. POTTER.

TEACHING CHILDREN.

I have lately been reading O. B. Frothingham's *Child's Book of Religion*. I bought the work in the expectation that I should find some aid in what is confessedly a difficult task,—that of teaching children such religious ideas as will harmonize with a rational or scientific view of the universe. There are many reasons why liberal parents should endeavor to instruct their little ones in this matter. When children grow up to

youth and maidenhood, and go out into the world, they are very apt to have their senses captivated by the allurements of the fashionable religions round about them. The fine architecture and the gorgeous interiors of the churches, the stained glass, the organ and the choir, the millinery of the priest, and other social attractions, tend to lull them into forgetfulness of the irrationality of the doctrines taught,—forgetfulness of the constantly implied superiority in importance of beliefs over conduct.

Then, again, if they should have the misfortune of being led away to the old branch of the Church, they may become accustomed to the grossly immoral idea that the penalties due to their misdeeds may be wiped away by the word of a man; that, if they do not succeed in the all-important work of bringing their passions under the control of the higher faculties of their nature, they have only to submit themselves to the Church, pay the priest for absolution, and all will be well. Should they, on the other hand, be drawn toward any of the evangelical Protestant churches, they will there learn that faith is the one thing needful; that all earnest efforts after a better life, all striving to overcome the dominion of the animal propensities, are but as filthy rags in the sight of God; that, in the words of the hymn, such doing "is a deadly thing." Unless their minds have been fortified by the inculcation of sound principles in childhood, they will fall an easy prey to the common superstition, will rest contented with the salvation of their souls in a problematical future life rather than strive after the harmonious development of all their faculties in this real life.

It appears to me that the only kind of religion that can be taught with profit to children is that which is founded on the universal prevalence of law, alike in inorganic and organic nature, in the soul of man, and in the structure of human communities. The child should be taught that there is no place for chaos or chance in nature; that every department of it which has been investigated displays the same orderly succession of cause and effect; that every organ of his body has, in its relationship to the whole organism, a sphere of use; that all indulgence beyond that is abuse, and leads to mischief; and that health and long life and happiness and fitness for the discharge of his duties to others depend on conformity to the organic laws. It need not be said that it is impossible to impart a knowledge of such subjects to children. An intelligent teacher can illustrate the existence and operation of the natural laws by thousands of instances drawn from science, from history and experience. Neither does it matter much whether the child is taught that these laws have been implanted in nature by an infinite Power, or that they are inherent in the nature of things. It is in the existence of law and order, instead of chaos and disorder, that the great mystery lies; and the child who is taught that there is something continually present with him, always ready to co-operate and to aid him in every attempt he makes to improve his life, has got religion in its purest and most practical form.

In examining Mr. Frothingham's book with the view of getting some assistance in inculcating such views to children, there is little else than disappointment. The work consists of a collection of poems or hymns, lessons in prose on the good life and on truth, a series of stories called "Legends of Virtue," and some more hymns for such occasions as Christmas, Easter, and Whit Sunday. The lessons on the good life contain some slight references to this world, and may be considered the least objectionable part of the book. The hymns are nearly all devoted to the supernatural, and

can serve but the one purpose, that of preparing children for heaven. They are full of the peculiar beings which swarm in the pages of evangelical tracts,—angels, heavenly doves, and spirits of many kinds,—which set distance and the law of gravity at defiance. Children are told that “the brightest of the angels fell”; but they are not told that they went straight to hell, and became devils. The stupid and preposterous Romish doctrine of guardian angels is clearly expressed. Some of the worst parts of the New Testament are given at length, such as: Take no thought for your life. Consider the fowls of the air and the lilies of the field: they toil not, neither do they spin. Your heavenly Father knoweth that you have need of food and raiment; but seek ye first the kingdom of God, and all these things shall be added to you, etc. In the stories called the “Legends of Virtue,” the devil is for the first time introduced in the character of a poltroon, as he is usually depicted by the Romish writers of the Middle Ages. He makes the common bargain for the services and soul of a man, but, coming face to face with a crucifix at a cross-road, immediately flies in terror, leaving his property behind him. Some other legends of virtue relate the travels and adventures of monks and nuns, but the greater part of them are taken up with an account of the miracles and wonderful works wrought by the child Jesus, which, it is needless to say, are not mentioned in any of the Gospels. The reading of these “Legends of Virtue” makes one turn with astonishment to the title-page, to see if no mistake has been made with the name of the compiler.

It is a singular phenomenon,—a liberal-thinking man like Mr. Frothingham, for whom the Unitarian Church was not liberal enough, hankering after the old figments of popish Christianity. How is it possible that he can think it good for children to sing an Easter hymn the burden of which is Christ is risen, when he knows it is not true, that he is not risen? How can he imagine that a child will be made more truthful and honest to himself and to others by singing hymns dedicated to Whit Sunday? It is not by such exercises as these that children will be fitted to take their place worthily as citizens of the future generation. It is not by filling their minds with such ideas as these that they will be able to help on the new era of truth and righteousness, which, alas! we can only see afar off.

J. G. WHYTE.

THE RELIGIOUS SIGNIFICANCE OF GEORGE ELIOT'S AGNOSTICISM.

II.

What is the significance of an unbelief reached as George Eliot's was,—the unbelief of a clear-headed, warm-hearted, dispassionate woman earnestly seeking after the truth, who, after testing religion and measuring it with the facts of the universe, deliberately falls back into agnosticism as practically the better thing of the two,—what the lessons of her experience?

First, the danger of what is commonly called the way of safety. No one can look at the mechanism, the unnaturalness, “the grocer's back parlor view,” as she calls it, of the faith in which she was brought up, and not be struck with its utter inadequateness for a nature like that of George Eliot. Reared in any of our denominational flower-pots, she would doubtless, in the end, have outgrown it; but it is impossible to avoid thinking that, had she been placed in one with a little more of our common earth for its soil, especially of its reason, cheerfulness, every-day truth, and recogni-

tion at the outstart of the unknown, the recoil, when its walls gave way, would have been less violent, and have thrown her less far beyond all enclosures. She is only one of a great number of persons who, in our time, are going through the same process. The dogmas taught them as Christianity, though starting them honestly and earnestly in the religious life, and really nursing them in it for a while, do not have the deepness of earth needed for their larger growing wants, and hence the church, entered as their ark of safety, proves to be to them only a half-way house from childhood's unthinking trust to maturity's thoughtful unbelief.

Equally significant is her experience as showing the possible moral character of unbelief, not its consistency with morals merely, but the actual morality of the thing itself, and what consequently should be its treatment;—showing how far it is from being necessarily the result of a wicked heart, of wilful blindness, or of a love for error, and how certainly it may sometimes be arrived at as the direct outcome of goodness, intelligence, honesty, and an earnest seeking after truth. Religion is like a game of checkers. With its men badly arranged to start with, or its opponent given the first move, the more honestly and accurately it is played, the surer will its end be defeat. Exactly the same process which has made some inquirers Christians made her, and has made others like her, agnostics. And, however reprehensible the unbelief of indifference, prejudice, and sin may be, who shall say that the men and women who have tried to be Christians and Theists, and failed,—made their best moves, but, through their very data to start with, have been defeated, are any more to be blamed than those who have tried, without success, to be poets, novelists, merchants, or mechanics,—who say they are not worthy of the profoundest sympathy from those who, with the same moves, but a better start, have been crowned with success?

Then, paradoxical though it be, her agnosticism is significant of the greatness, not the falsity, of religion. She was very far from being a disbeliever, one who has examined the claims of faith and found nothing in them at all, gone over its whole field and discovered only empty space beyond. She was simply a non-believer, an agnostic, a person denying not the truth itself, but only her ability to take it in. She rejected all existing formulas about it, not because they were too religious, but because they were not religious enough, that is, were not adequate to express the awful mystery which to her mind unwrapped all earthly things. She was an unbeliever with the upward, not the downward look; was more reverent in her scepticism than most in their faith; made her doubt a piety, and her life, ending at the tomb, infinite beyond many, reaching on forever. And who shall say that such an attitude of a great soul like hers toward religion is not inexpressibly more significant than that of a little soul which professes to have taken it all in? It leaves room for hope; gives new confidence in what other great souls, like that of Jesus, profess to have seen; shows there is something to it which is worth struggling for; is a challenge forevermore, as only the unknown can be, to man's loftiest efforts; suggests that some time, if not yet, in some life, if not in this, its mystic threshold may be crossed by all human feet, and religion for all souls be religious.

There is one other most important lesson that her unbelief is helping to teach, and that is what ought to be recognized by religion as the true ground of hope for a person's future. The old doctrine, still professed in many of our churches, that the only ground for it is a personal faith in

Jesus Christ and acceptance of his atoning blood, is receiving a terrible shock from the number of those, the very saints of earth, that it would inevitably leave out of heaven. Men are compelled to ask with each great soul that dies “unwashed in the atoning blood,” Can a doctrine be true that could thus rob the celestial world of the larger part of the very flower and fruit of the human race? It is in vain for theologians to make special exceptions in their case, claiming that they are Christians without knowing it, that they have accepted the essential Christ, or that, in some unseen way, the atonement has been applied for their benefit,—a jugglery with ideas which serves only to bring all religion into contempt. There is only one honest ground to be taken, that salvation with all souls, great or small, depends, not on belief, but on character. And, possibly, one of the reasons why the God of all goodness is allowing so many persons of the George Eliot stamp—Dickens, Emerson, Longfellow, Harriet Martineau, Darwin, Montefiore, and the like—to grow up models of excellence in the very midst of agnosticism, heresy, and natural religion, at any rate, one of the results being accomplished by it, is to drive the world away from its old harsh dogma of a blood salvation into the larger and diviner truth of a saving character.

But, whatever may be said or thought about the future of a soul like hers in the spirit world, there can be no question, agnostic as she was, about her future in the world which is now and here,—the most significant thing of all, perhaps, about her career. She has shown that unbelief is not necessarily a lost element in man's affairs; shown all honest unbelievers that, failing to catch on to the car of individual immortality, there is another vaster train ready to take them up. Her name is written on the world's “Book of Life” with the angel pen of genius and of service, her spirit a part of its kingdom of heaven, her impress upon earth as indestructible as its atoms or its stars. And, realizing the wish expressed in her own noblest poem, she will inspire millions of others to work for its realization,—

“Oh, may I join the choir invisible
Of those immortal dead who live again
In minds made better by their presence; live
In pulses stirred to generosity,
In deeds of daring rectitude, in scorn
For miserable aims that end in self;
... Be to other souls
The cup of strength in some great agony,
Enkindle generous ardor, feed pure love,
Beget the smiles that have no cruelty,—
Be the sweet presence of a good diffused,
And in diffusion ever more intense.”

JOHN C. KIMBALL.

THE POEMS OF TWO WESTERN UNITARIANS.

II.

Three qualities impress us especially in Mr. Gannett's poetry, as we have it here (in the little book noticed last week),—the keen sympathy with nature, the constant thought of the immanence of God in nature and in men and women, and the tendency to seize and fashion a curious idea.

“Their wonder plays on questions great,
All vision and surprise,”

he says of the children; and he is himself such a child. He is quick to catch the fortunate meaning of a name, as in the beautiful poem “Theodore,” written for the Parker Memorial dedication in 1873,—in connection with which should be read Mr. Hosmer's tribute to Channing. He loves a strange analogy, and he is full of surprises. He gives us very many verses which make us say at first, How singular!—to add

immediately, How beautiful! and lay away a thought which cannot be forgotten. Perhaps the most striking illustration of what is here meant is the poem "Jesus Who?" It is impossible to quote from the poem, since the meaning only appears from the whole; but it works out a singularly fine and religious conception. The beautiful poem, "The Hills of the Lord," beginning with the bold Emersonian lines,—

"God ploughed one day with an earthquake,
And drove his furrows deep,"—

is a less surprising poem of this surprising class. "The Negro Burying-ground" is the touching story of a tattered troop of newly freed negro children chanting their newly learned alphabet over a little grave:—

"The A, B, C, that the lips below
Had learned with them in the school to shout,
Over and over they sung it slow,
Crooning a mystic meaning out.

"The A, B, C, D, E, F, G,—
Down solemn alphabets they swept:
The oaks leaned close, the moss swung low,—
What strange new sound among them crept?

"The holiest hymn that the children knew!
'Twas dreams come real, and heaven come near;
'Twas light and liberty and joy,
And 'white folks' sense,' and God right here!

"Over and over; they dimly felt
This was the charm could make black white,
This was the secret of 'Massa's' pride,
And this, unknown, made the negro's night.

"What could they sing of braver cheer
To speed on her unseen way the friend?
Th' children were facing the mystery Death
With the deepest prayer that their hearts could send."

And then, in two characteristic closing verses, Mr. Gannett shows us how the story is a parable, and relates it to our common human life:—

"Children, too, and the mysteries last!
We are but comrades with them there,
Stammering over a meaning vast,
Crooning out guesses of how and where.

"But the children were right with their A, B, C;
In our stammering guess so much we say!
The singers were happy, and so are we:
Deep as our wants are the prayers we pray."

Mr. Gannett's warm and delicate sympathy with child-life constantly appears. The truly poetic heart must, indeed, have warm sympathy with the child, as Whittier has so beautifully told us. Mr. Hosmer herein is not behind Mr. Gannett. A very sweet and Whittier-like hymn is his for Children's Sunday, with the lines,—

"To us beneath the noon-day heat,
Dust-stained and travel-worn,
How beautiful their robes of white,
The freshness of their morn!

"O little ones, ye cannot know
The power with which ye plead,
Nor why, as on through life we go,
The little child doth lead."

Mr. Hosmer also gives us a beautiful translation of a beautiful German poem of Karl Gerok's, "The Children's Service."

Mr. Gannett's quick sensibility to nature is manifest in almost everything which he writes. His *Year of Miracle* was, perhaps, the finest illustration of it which we have had. There is no hymn of his into which the stars, the lilies, the snowflakes, the dewdrops, green pastures and still waters, or the "niches of the hill" do not somehow come. It is some experience or effect in nature which is again and again his point of departure or text for his poem. "The Sunny Side," "Sunday on the Hill-top," "The Cathedral," "Summer Chemistry," "Where did it go?" are poems born in this way. He loves to remember their birthplaces,—Blue Hill, Bald Cap, Crow Nest, Ossipee. But his thought is almost always of the nature of nature, of the power behind

within,—of the chemistry of nature. There is always a questioning and wondering.

"What does it take
A day to make,—
A day at the Bear Camp Ossipee?"

The sky and pasture and crag and sunshine and sunset and the varied human factors are beautifully analyzed and synthetized.

"Add this to that, and thou shalt see
What goes to summer chemistry,—
What the God takes
Each time he makes
One summer day at Ossipee."

The hills are ever "dreaming of their past" to him; and he reverently waits, if, perchance, they may dream aloud.

"Eternities past and future
Seem clinging to all I see,
And things immortal cluster
Around my bended knee.

"That pebble is older than Adam!
Secrets it hath to tell;
These rocks,—they cry out history,
Could I but listen well.

"That pool knows the ocean-feeling
Of storm and moon-led tide;
The sun finds its East and West therein,
And the stars find room to glide.

"That lichen's crinkled circle
Creeps with the Life Divine,
Where the Holy Spirit loitered
On its way to this face of mine."

These last two are very striking lines, and strongly remind us of the famous lines prefixed by Emerson to "Nature." Nature, the world, is to our poet one vast cathedral. His poem, "The Cathedral," expresses it all:—

"Nighed in the mighty minster, we,
Beneath the dome of radiant blue:
Cathedral hush on every side,
And worship breathing through!"

These lines, written for a special place and hour, are true for him everywhere and always. It is the spirit of Wordsworth and Emerson that speaks through all his poems of nature,—the thought of nature as the vestment of God.

The divine immanence,—the over-soul, the upper, deeper self, so beautifully hinted at in "Recognition," the "spirit-sky" that opens with the voices of surprise, "the peace at the heart of Nature," the "Strength eternal, by whose will the hills their steadfast places keep,"—

"The Silence, awful Living Word
Behind all sound, behind all thought,
Whose speech is Nature-yet-to-be,
The Poem yet unwrought!"—

this thought of the divine immanence, this thought of God, is the dominant, pervasive thought in all of Mr. Gannett's poetry, as in Mr. Hosmer's, and in his view of nature and of human life. The thought, with reference both to nature and the soul, is nowhere perhaps put more simply than in the little hymn entitled "The Secret Place of the Most High":—

"The Lord is in his Holy Place
In all things near and far!
Shekinah of the snowflake, he,
And glory of the star;
And secret of the April land
That stirs the field to flowers,
Whose little tabernacles rise
To hold him through the hours.

"He hides himself within the love
Of those whom we love best;
The smiles and tones that make our homes
Are shrines by him possessed;
He tents within the lonely heart
And shepherds every thought;
We find him not by seeking long,—
We lose him not, unsought."

These lines, like all of Mr. Gannett's and Mr. Hosmer's poetry, and like all the sermons and every-day words of all these typical Western Uni-

tarians, show how thoroughly the thought of Emerson has become domesticated among us. We have not lately had in America an offering of religious poetry intrinsically better than this modest little volume. It is especially to be commended for its good fibre, for the strength of its seriousness, for its reserves, and for that true feeling which keeps tenderness from ever degenerating into the sentimentality which has characterized too much "liberal" poetry. But more, almost, than the intrinsic interest of these hymns and poems is their representative interest; and this it is which leads us to notice them at so great length. It is not fifty years since Emerson stood to Boston Unitarianism and to Harvard College for irreligion and every dangerous tendency. Now there can be no thinker, Boston Unitarian or other, who does not see that it is Emerson above all other Americans of the century who must be called the "God-intoxicated man." There are great sections of American Unitarianism to-day in which one constantly detects the suspicion that these leading Western men, in their freedom, in their readiness to welcome all good thought and fellowship all good men, in their "trust in humanity, heathen or Jew," in their emphasis on ethics and the commonwealth, are on questionable ground, tending in dangerous ways, tending especially—this is the definite form the suspicious oftenest takes—whether the doctrine of the divine immanence, the thought of God, shall become unreal or inoperative. Where this thought decays, where it fails to speak, to imply itself, to make itself somehow valid and a force, there most sober men feel—and we think rightly—that religion, or what attempts to do religious work in the world, fast becomes thin and arid, spasmodic and galvanic, uninspiring and unsustaining. But men are forever failing to see where the thought is speaking truly in the circle of to-day, where it is speaking poorly in the circle of yesterday. To-day, however it may be in other provinces of our liberalism, it is surely true in our Unitarianism, broadly speaking, that what is most radical is most religious. Among these Emersonians of the West, it would be impossible to name two men more entirely identified with the larger faith—with the new departure in Unitarianism, if it may be spoken of so sharply—than the two friends who sing to us together here. Mr. Gannett has been the most instant and untiring pleader for the integrity of the congregation and for a simply ethical basis of fellowship. Mr. Hosmer was the preacher of the sermon before the Chicago Conference, in which this basis was urged, perhaps, most distinctly and formally. It is these men who demand that the burden of no speculative belief at all, not the belief in God, shall be laid upon any who would be of the congregation, who show us, when they open their souls to us, as here, that they cannot think at all without thinking of God, and that this thought of God has no dry husk of dogma left about it, but is a vital, throbbing, omnipresent thing, transfiguring the world, sanctifying beauty, giving omnipotence to conscience, and induing all life and all science with depth and definition, with promise, grace, and joy. We think that there is a connection between these two things.

EDWIN D. MEAD.

MIND AND FAITH CURE.

The number of intelligent people who believe in "mind cure," "faith cure," "Christian science cure," "metaphysical healing," etc., is large and apparently increasing. These terms are used to distinguish methods of treating disease in which there is evidently an essential truth and a common principle. As to the benefit received from such

treatment, much of the testimony is of a character that entitles it to consideration. True, claims are made by the practitioners, who are interested parties, and by the patients, who are persons generally unaccustomed to regard exactitude of thought or precision of statement as of much importance, which fail the moment careful examination is made; and the wonderful cures proclaimed, when the truth is known, are at once divested of all that made them appear miraculous, or exceptional even. Yet, after making allowance for exaggeration and misrepresentation, wilful or unintentional, there remains a residuum of truth sufficient to prove that, underlying all the methods which give prominence to the power of the mind in the alleviation and cure of disease, is an undeniable and important principle, a better understanding of which may yet lead to most beneficent results.

Many of the theories and speculations of the mind curers are wild and crude, and belong to primitive rather than to modern thought. Others have connected with their method in a way, in some cases to make most incongruous and grotesque theories, portions of the great philosophical systems which have long been discussed by thinkers. They are so contradictory and often so superficial and undigested as to give rise to the presumption at once that between them and the essential principle observed in producing the practical results there is only an assumed and imaginary connection.

For instance, Dr. W. F. Evans, author of *Healing by Faith*, adopting the theory of pure idealism, says: "The world and all the things it contains, including the body of man, having no thought in themselves, do not exist in and for themselves, but exist only in us, and, as Schopenhauer has truly said, are to us only what we *think* and believe them to be. As thoughts and existence are identical, a change of thought must necessarily modify our existence. . . . Disease, having existence only in the mind on a sensuous plane, is so far, like all our sense-perceptions, a fallacious appearance, and not the *reality* we suppose it to be. . . . But you will ask me if the corn on your toe is not as real as the toe itself. To this, the answer is that neither of them has any real existence, except as a *thought* on the lower range of the mind, and a false belief; and neither of them is any part of the real Ego, or self. . . . When I raise my arm, the reality of the movement is a modification of the mind." Scripture is freely quoted by Mr. Evans, to sustain this theory. On the other hand, Sarah Elizabeth Titcomb, who has given much attention to the subject, is satisfied that there is but one substance, and that this is not primordially mind, but matter; and she cites numerous passages from the Hebrew and Christian Scriptures, to prove the materiality of the mind. Dr. Arens, author of *Old Theology in its Application to the Healing of the Sick*, has another theory. "The soul," he says, "is the reflection of the highest thought of God, and is similar to it in outline, although opposite to it in quality. . . . Matter is the visible appearance or coarser fabric of the soul, and is not known or recognized by God." The soul sprung from God. In the soul arose "mental or material thought"; and, "through this changeable material thought, the soul produced a changeable material fruit, which is the absence of Spirit, and which the soul realized as matter-substance, and thus it became a living creature,—soul and body,—and called itself Adam." All these theories are supported by appeals to the Scriptures.

Others claim that we are surrounded by invisible intelligences, by spirits, and that it is by their intervention and aid that are effected most of the

cures ascribed to faith and prayer and to other influences by Christian scientists and metaphysical healers.

Laroy Sunderland, for several years a Methodist preacher, famous for his powers as a revivalist, who, after leaving the ministry, attracted still wider attention by his lectures and experiments, who was honored by election to membership in the London Society of Science, Literature, and Art, wrote: "When I experimented upon my 'converts,' I found that, ignoring Christianity and using my own idea, the same phenomena appeared; and never since have I for one moment doubted that the human mind is always controlled by ideas,—true or false, it is the same. . . . It was during my twenty years in Methodist revivals that I became convinced of what all will find true by and by, and it was this; namely, that no God, no Jesus, no Holy Ghost, no miracle worker, ancient or modern, has or can have any power over the sick, save and excepting that power by which the miracle worker is invested by the faith and confidence of the patient (Matt. ix., 21, 22)."

Dr. Sunderland, whose recorded cures are as remarkable as any we hear of to-day by the mind or faith curers, laid the greatest stress on the feelings and ideas induced in the minds of the patients, either directly by the operator or by any influence that attracts the attention and awakens an idea in the mind of the susceptible subject.

The common fact is, whether the patient bows at the tomb of a saint, or sits with a mind-curer, or takes "bread pills" from a regular physician, that the mind is impressed with an idea, has more or less faith in the means employed, and that the mental condition of the patient exercises marked influence over the body,—a fact which has not been sufficiently regarded by physicians generally, who attribute to poisonous drugs a curative value which they do not possess while undervaluing too often the importance of bringing to bear upon certain classes of disease real or imaginary mental influences, instead of relying so much on the efficacy of pills and powders.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

Of the Thanksgiving proclamation of Gov. Currier, of New Hampshire, issued November 11, the *Dover Daily Republican* says that it "is one of the most remarkable that was ever issued in New Hampshire. . . . No wonder many clergymen refused to read it in their pulpits, and some who did read it did so under protest. It recommends every one to do as they please, and says not a word about holding religious worship. A genuine agnostic, or Bob Ingersoll himself, as governor, would be perfectly reconciled to sign such a document."

THIS terribly wicked document, which was so offensive to "many clergymen" and to journals like the one named above, reads as follows:—

With the advice and consent of the Council, I hereby appoint Thursday, the 26th day of November instant, as a day of thanksgiving, recreation, and rejoicing. In this, we are following in the footsteps of our fathers, who were accustomed to celebrate the in-gathering of the annual harvest with festivities, amusements, and religious ceremonies. I recommend to the people of this State to observe the day in such a manner as shall be for the best good of themselves and of the community in which they live: to rejoice in the peace, plenty, and happiness that everywhere surround them; to give thanks for all the gifts which they are daily receiving from the Giver of all good; and so to conform their lives and actions to the laws of their being that they may re-

ceive the blessings that naturally follow in the footsteps of obedience.

THE following, with other questions and answers, appeared in the *Christian Union*, under the heading of "Inquiring Friends":—

What book from an unfriendly stand-point states the objections to the Bible on scientific grounds? Name two or three books, written by men who know both science and the Bible, which answer such objections.

J. A. F.

SCRANTON, PA.

We do not know of any book which gathers together the scientific objections to the Bible. Among the best scientific defences of the Bible may be mentioned *The Origin of the World*, by J. W. Dawson, *Sketches of Creation*, by Alexander Winchell, both published by Harper & Brothers; and *Testimony of the Rocks*, by Hugh Miller, published by Robert Carter & Brothers.

Is this a sample of the information the "friends" get, when they inquire of the *Christian Union*? If so, they had better save their postage-stamps. Of the numerous works, some of them by Christian writers, which state the objections to the Bible on scientific grounds, this editor does not know of even one. After reading this "answer," we are not surprised at the recommendation of Hugh Miller's old work, *Testimony of the Rocks*, to one who wishes to see science and the Bible reconciled, and, in the same paragraph, Dawson's *Origin of the World* and Winchell's *Sketches of Creation*.

THE BOOK OF LIFE.

[Suggested by a crystal enclosing a drop of water.]

O generous Mother, kind and wise,
Whom men do Nature call,
You mean not that the Book of Life
Be read alike by all.

In some on creamy vellum leaves
A gentle tale is told;
While others shine in gorgeous hues,
With clasps of solid gold.

In russet leather some are bound,
With pictures dark or fair;
Some are romances strange and wild,
And some are books of prayer.

Some, by your handmaid Art illumed,
Like missals quaint and old,
To generations yet unborn
Their story shall unfold.

In some a stately poem's found,
In rhythmic measure grand;
While others seem but written on
The ever shifting sand.

And, when we think the Mother wise
A story old tells o'er,
If we the pages closely scan,
There's always something more.

Heredity may stamp them all,
But still there'll intervene
Leaves upon which surroundings print
Pictures before unseen.

These mighty powers confine the Will,
Though to all seeming free,
As drops of water prisoned in
A crystal's heart may be.

So far it goes, but cannot pass
That adamant wall
Of pre-arranged restrictions which
"A Providence" some call.

MARY BAYARD CLARKE.

NEW BERNE, N.C.

The Index.

BOSTON, DECEMBER 17, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

"What Social Classes Owe to Each Other."

A paper read before the Young Men's Union of the Society for Ethical Culture. New York, Oct. 8, 1885.

BY ALFRED JARETZKI, ESQ.

It is so much easier to let things work out their natural course, to wait for the interposition of Providence to correct existing abuses, or, if you are not of the Church, to rely upon the underlying tendency of things to evolve what is right,—it is so much easier, I say, to lie back and wait than actively to interfere and reform that an easy-going, let-alone policy, borrowed from the English school of political economy, is very much favored in matters of social duties by what is termed the "solid element" of our people; while the social reformer, with his day-dream of a not distant millennium and his plans for alleviating human misery and lessening vice, and his other many projects of reform,—all requiring some spirited action to be taken by our citizens,—is looked upon askance, and classed with sentimentalists, poets, radicals, and other annoying personages.

Our "solid men" point with satisfaction to the high state of civilization of this the nineteenth century, to the immense superiority of the present over all past times, and, with an air of contentment, say to the reformer, "Let us alone." It is a great policy,—this let-alone policy,—much commended by statesmen, lawyers, and philosophers. It is often called Conservatism; and its advocates are dubbed the wise and prudent men of the community,—the men whose weighty counsels save the State from rushing headlong into anarchy and revolution.

But, in this eulogy, they forget that it was these same prudent and conservative men who put Galileo to the rack and who scoffed at Columbus, who stoned Garrison in Boston and fought

Gladstone in England, and who have always opposed, with tooth and nail, every humane and beneficent reform that the fertile mind of man has devised for the welfare of his suffering fellow-man.

It were not necessary now to recur to the narrow-mindedness of these so-called Conservatives nor to pay a well-deserved tribute to the reform spirit of this age and of past ages, were it not that prominent men of our time—often, too, men whose own words and acts are a glowing refutation of their charges—most unjustly denounce all social reformers, and fail to see how anything may be accomplished for the welfare of man, except in the particular way they indicate. If the social reformer is at all abashed by the vehement opposition of men otherwise very liberal, and is thereby inclined to doubt the correctness of his reasoning and to disparage the testimony of his moral sense, let him remember that distinction in one department of knowledge does not necessarily imply distinction or even soundness in another, and that history fairly teems with examples of men whose broadness in one sphere of human activity has only been equalled by their utter bigotry and opposition to all reforms in some other branch.

Some such reminder as this I found necessary to fortify myself with, when I began to read and to question the doctrines of that excellent little treatise of Prof. Sumner, entitled *What Social Classes owe to Each Other*.

Prof. William G. Sumner is very properly considered one of the foremost political economists of our country, if not of the world. His clean cut and carefully considered arguments on the tariff and on the silver question have given him a prominent place among the reformers of our time; and his recent political utterances have shown—if, indeed, any further proof were necessary—that he is as fearless and independent as he is a sound thinker. Yet, when the learned Professor leaves the field of political economy, which is peculiarly his own, and enters upon the discussion of some of our vexed social problems, in which ethics must be accounted an important factor, he loses that authority which he exercises in political economy, and, in a measure, *because* he is prominent as an economist.

It is true that sociology and political economy are much alike, or, more correctly speaking, that political economy is but a branch of sociology, and that the fundamental principles of political economy are but the maxims of the other and broader science. Both are, in a measure, exact sciences; both are and should be based upon certain discoverable facts and laws; and both,—and this is what annoys Prof. Sumner, and leads him into the use of extravagant language and broad statements that he cannot justify,—both suffer much from the wild vagaries of visionaries and revolutionary demagogues.

Yet, in spite of their many points of similarity, the difference between the two sciences is very great. Political economy deals merely with the circumstances attendant upon and the laws that govern the production of wealth, and the relations of man to man in the interchange of commodities or values. Sociology, however, deals with *all* the relations of man to man in society, with the laws in subordination to which society assumes its different aspects. In the former, the broad general principles or laws that are found to underlie the science may be looked to for the solution of all problems, and for that purpose these principles may be arbitrarily applied: the moral sense should not affect the settlement of the currency question, and sentiment is wholly out of place in determining whether industries should be fostered to enrich

A at the expense of the rest of the community. But, in the other science, situations often present themselves where to allow these unrelenting and inflexible laws to work out their natural results would be cruel in the extreme, would be against the strong dictates of conscience and of our innate sense of justice. In such cases, Prof. Sumner would have us leave the matter to the inexorable laws of competition, of struggle for existence. I cannot admit that the loud and not-to-be-mistaken voice of conscience is to be disregarded, that the long-cherished belief of man's duty to man is a sad delusion. This may seem to some sentimentalism, but it is a sentimentalism so deeply implanted in our natures that it is bound to prove a force at such moments.

The arguments of the learned Professor against man's interference with the laws of Nature, and his reasons for maintaining that the best interests of society will be served by allowing these laws of competition, of struggle for existence, and of survival of the fittest to work out their legitimate results, are very ingenious: aye, they are more than ingenious. They breathe the spirit of manly independence, and preach the lesson of self-reliance in a way that commands our respect. But see the legitimate outcome of the policy of non-interference. Even in the fairest race—and in the race of life many are very sadly handicapped—there are the weak and the unfortunate. These your *laissez-faire* philosophers would have you leave, as they drop off by the wayside. They do not say this in so many words, but they fail to recognize any duty that we owe to the weak and the unfortunate. They have nothing to say against voluntary charity by individuals, when properly administered; but they dispute the doctrine that we owe anything of our store to the less fortunate in life's struggle, and most sweepingly condemn any legislation that forces one man to aid another.*

God and Nature, so Prof. Sumner argues,† have ordained the chances and conditions of life on earth once for all; and we cannot get a revision of these laws. If we would learn to live happily, we must investigate the laws of Nature, and deduce therefrom the rules of right living in the world as it is. This means repeated labor and self-denial. Men have a right to *pursue* happiness, not to get it. And, if they fail to get it, they cannot claim the aid of other men; that is, the labor and self-denial of other men to get it for them. A man who can command another man's labor and self-denial for the support of his own existence is a privileged person of the highest species conceivable on earth.

And the Professor concludes with the following,—a neat bit of epigram and irony: "Poverty is the best policy. If you get wealth, you will have to support other people; if you do not get wealth, it will be the duty of other people to support you."

Epigram is a pretty figure of rhetoric, though it sacrifices truth to force; and irony is a very powerful weapon. But both epigram and irony will not save the above kind of argument. It is not only grossly utilitarian,—of which I will say more anon,—but it is opposed to the plain tendency of our time and civilization. An application of the "let alone" principle followed out to its legitimate results will illustrate this very well.

A few weeks ago, a young boy, but nineteen years old, was arrested in this city, charged with committing highway robbery. The young scamp, with several companions of his own age, had stopped, at the point of a pistol, a brewery man on his delivery route, and had stolen a keg of beer

* Sumner's *What Social Classes owe to Each Other*, p. 19.

† Ibid., p. 14.

and a few dollars in change. For this—the judge was lenient because of his extreme youth, and as it was his first offence—he was sentenced to ten and one-half years' imprisonment in the State prison. If he lives, he will be thirty years old when he comes out of prison,—a young man in the prime of life, with immense power for right or for wrong, and well worth, in either case, the attention of his fellow-men. What will become of him?

Under the ordinary conditions of prison life, he will come out at the end of his term with a deeply rooted feeling of resentment against society. For ten long years, he has been held at bay, confined behind iron bars, made to work for the State that has deprived him of his freedom, reminded at every step of his degradation, with plenty of time to brood over his fancied grievances against society, and with little opportunity to become a better man; and then he is set free. Is it a wonder, then, if he goes out into the world smarting under his long suffering and eager for revenge? His hand will be against his fellow-man, and that of his fellow-man will be against him. But let them alone, says Prof. Sumner,—let them alone to the laws of Nature, the immutable laws of Nature. And we let them alone, and the released prisoner will probably continue his career of crime. Society may suffer at his hands for some time before he is caught and convicted; but, eventually, he will be overcome by society, and safely lodged in jail again. Now, all this is very silly. Society is losing time and encouraging crime. If there is to be war between society and the criminal, let it be war to the knife; and the sooner finished, the better. They managed things better a hundred years ago. Then they would have hanged the fellow in the first instance, and thus got rid of him forever. Our forefathers evidently believed in the law of the survival of the fittest,—and with a vengeance; for, in the one hundred and sixty years ending with the death of George III., they added *one hundred and eighty-seven capital offences* to the criminal code, and between the years 1810 and 1845, in Great Britain alone, put to death upwards of fourteen hundred persons for crimes which have since ceased to be capital. If its own protection is all that society is seeking, and if the criminal does not care to investigate the laws of Nature in order to learn how to live happily, if he is unwilling to exercise self-denial and to labor, and if he is not entitled to the aid—i.e., the self-denial and labor—of others, why, then, our forefathers were right, and capital punishment is the best and only effective remedy for crime. Then, too, Romilly was a mere sentimentalist; and his boasted reforms were but impertinent interferences with the much vaunted "laws of Nature." But if, perchance, Romilly were right, and his reforms of the criminal law were not merely measures of expediency, but were demanded by the growing moral sense of the community; if there is a prevailing feeling—advancing with the spread of knowledge and the awakening of the moral faculties—that the criminal is not to be choked off, but is to be reformed, that the low and the vile, the outcasts and pests of society, are entitled to society's best efforts to reclaim them, and there is that within us which recognizes this duty of man to aid his fellow-man, and its voice is too loud to be disregarded,—then Prof. Sumner is wrong; and the poet, orator, and sentimentalist, whom he so often ridicules, is right. And he is right. Of course, the laws of Nature, spoken of by Prof. Sumner, exist, and are far-reaching and controlling in their effects; but these are not the only laws of Nature. There is a higher and nobler and more commanding law—the higher moral law—that, with the others, works in harmony toward the perfection of

mankind; and of this the learned Professor says nothing.

The doctrine of Prof. Sumner, already discussed, is further developed in the following line of argument: In the Middle Ages, he says, men were united by custom into associations, ranks, guilds, and communities of various kinds. These ties endured as long as life lasted. Consequently, society was dependent throughout all its details on *status*; and the tie or bond was sentimental. In our modern state, and in the United States more than anywhere else, the social structure is based upon contract. Contract, however, is rational: it is also realistic, cold, and matter-of-fact. In a state based on contract, sentiment is out of place in any public or common affairs. And, further, a society based on contract is a society of free and independent men who form ties without favor or obligation, and co-operate without cringing or intrigue. A society based on contract, therefore, gives the utmost room and chance for individual development, and for all the self-reliance and dignity of a free man. A society of free men, co-operating under contract, is by far the strongest society which has ever yet existed.

And, as a natural conclusion from all this, Prof. Sumner adds: "The only social improvements which are now conceivable lie in the direction of more complete realization of a society of free men united by contract. A free man is a sovereign, but a sovereign cannot take 'tips.'"

It is but justice to Prof. Sumner to say that his argument presupposes the absence of all fraud and violence in the making of contracts between man and man. No court of equity would be found more ready to deny the validity of any contract obtained by fraud, actual or constructive, than Prof. Sumner is; nor is there any one who is a more zealous advocate than he of proper legislation in that direction. So, too, we must admit that this idea that each man is a sovereign and should contract with his fellow-man as high contracting powers do, asking only that which they can extort and expecting no favors, is noble and inspiring. But it is as visionary and sentimental as the ideas Prof. Sumner ridicules. The idea of a society based strictly on contract, with a rigid enforcement of the contracts and with a complete abolition of "tips," so called, has two objections: First, society is so constituted that all of its members take "tips" to a more or less degree. I mean that few men are strong-minded enough to renounce the advantages that birth, fortune, an extensive family acquaintance or alliance, or any other circumstance entirely beyond their control, gives them in the way of a start in the world, and enables them to fight its battles better—to make more favorable contracts, if you will, than those who have not these advantages. And we do not expect that they should give up these advantages, nor do the best interests of society require such renunciation. We all bow before a man whose steadfast devotion to purpose rises superior to all adverse circumstances, a Lincoln

"Whose life in low estate began,
And on a simple village green;

"Who breaks his birth's invidious bar,
And grasps the skirts of happy chance,
And breathes the blows of circumstance,
And grapples with his evil star;

"Who makes by force his merit known,
And lives to clutch the golden keys,
To mould a mighty state's decrees,
And shape the whisper of the throne;

"And, moving up from high to higher,
Becomes on Fortune's crowning slope
The pillar of a people's hope,
The centre of a world's desire."

Him, the noblest type of manhood, we admire;

but none the less the man who is favored by birth, by fortune, by any other circumstance, and who turns these advantages to proper account. He is none the less a free man because he accepts these good turns of fortune; and so he is none the less a free man who is given an education by his fellow-men, and an opportunity to play a part in the struggle of man toward perfection, and who uses these opportunities, and is himself ready in turn to extend the same advantages to those who come after him.

I fail to see any difference between the help given to man through the prudence, economy, and wisdom of parents and friends, and the opportunities presented by the prudent, wise, and beneficent measures of the State. In both cases, the recipient takes "tips"; and, in both cases, his proper use of them is a test of his manhood.

In the second place, Prof. Sumner is wrong, because the higher life is not a question of living up to one's contract obligations, using these words in their ordinary meaning. If life were a question of contract, and of contract solely, why, then, every man were justified in extorting terms of most pecuniary value to himself in all his contracts, provided only he commits no actual fraud,—no matter what the consequences may be on the other contracting party. This is, indeed, as Prof. Sumner calls it, "realistic, cold, and matter-of-fact." Aye more: a single practical illustration of the effects of applying such a doctrine will show that it is repugnant to that infallible criterion, our moral instinct.

My illustration is from the customary sanitary regulations and requirements as to the plumbing, light, etc., in large tenements occupied by many families. If the letting and hiring of tenements be solely a question of contract, and sentiment be out of place in all such contracts, why, then, all these sanitary regulations are tyrannical: they force a man to part with some of his labor for the benefit of his fellow-man, they put a restraint on the precious right of man to make the best contract he can, and they are arbitrary interferences with the great law of competition. You should not interfere, say the *laissez-faire* philosophers: these things should be and will be regulated by the law of supply and demand. If a man can pay only \$8 a month for rooms, he must select out of the rooms offered for that price those that are most healthful. And, if none of those offered have sanitary improvements, why he must wait until—in the competition of landlords vying with each other to secure tenants—such sanitary advantages are offered for that price. It is true that in the long interim, until competition forces the landlord to make repairs, the tenants must live in an atmosphere that breeds every form of disease, and many will die; but then, in this struggle for existence, which is our life, the weak—in this case, the \$8 per month men—must go to the wall. Besides, as Prof. Sumner says, "we must have few men, if we want strong men."

In this age of reason and of mercy, of the Geneva Cross and the Peace Society, it is hardly necessary to say that such doctrines cannot be tolerated; that man has other obligations than those of contract; that "cash payment is not the sole nexus of man to man."

If the aim of man were merely the welfare of the individual, and life were but a struggle for existence, with a sharp competition among the struggling, and those who came out first in the competition were deemed to have lived the most successful lives,—the competition being, of course, governed by laws passed by the majority,—then Jay Gould's transactions in Wabash should be recounted as the great exploits of a great man,

and Bismarck with his standing army of a million to enforce his demands, and Vanderbilt with his purse of many millions to pay for his demands, should be deemed the proudest achievements of our century's civilization. But these are not its proudest achievements. The goal of the human race is perfection, not individual aggrandizement,—the elevation not of one man, but of all men. The forces of nature, the higher moral law that curbs our passions and prompts our nobler acts, and the intelligence of man that brings the forces of Nature into subjection to do his bidding,—all work in harmony and unison to the accomplishment of this grand purpose. Any act that is in harmony with them is right; any act that tends to disturb this harmonious action is wrong. And duty is merely a question of doing right.

If this be true,—and it is true,—then the correct interpretation of the law of the survival of the fittest is, not that the weak perish and the strong alone survive, but that the weak should be strengthened, and that, thus made strong, they may survive. It is on this principle that we reform our criminals, whereas our forefathers hanged them; and that mothers no longer kill their weak or deformed offspring, but with careful training and attention, and the aid of science, bring them up to be sturdy members of society.

In conclusion, I might say that I have probably not done justice to Prof. Sumner's book, which is full of wise suggestions and wholesome truths. In his zeal to expose the fallacies and evils of that socialistic twaddle about the rights of men who do nothing for themselves, except put out "claims" against society, he has allowed himself at times to fall into the error of asserting, or seeming to assert, that social classes owe no duty to each other. In this, he is at fault. Nor is it yet sufficient to say, as he does, that "we owe it each to the other to guarantee rights," when you mean by "rights" contract rights.

There are many and pronounced duties that classes in society owe to each other. The limits of this paper do not permit any enumeration of them; nor is it my purpose to state, any further than I have done, what broad principle, if any, includes them all. I might say, however, that Prof. Sumner very nearly reaches the solution of the question when he says that "our aim should be to increase, multiply, and extend the chances"; in other words, to give a man every opportunity to better himself.

CORRESPONDENCE.

PRACTICAL EDUCATION.

Editors of The Index:—

As the friendly notice of "The New Education" in your last issue makes no distinct mention of two of its conspicuous and important features in moral and industrial education to which I wish to attract the attention of all who have faith in human progress and interest in its practicable methods, I beg leave briefly to present these two ideas. Whether they are new or old is of no importance. Experience shows that the essential novelty of an idea is the greatest hindrance to its recognition and just appreciation.

The first of these ideas embraces a psychological philosophy of education, based on the principle that, as intellectual culture is not character culture, and does not contribute very much to manly and womanly development, because it does not develop the emotions and the will, the eye, which is the avenue of intellectual culture, has been too much depended upon, to the neglect of all that cultivates the emotions and the desirable elements of character.

Intellect is based on perception, emotion on feeling, and will or energy upon action.

Education (as we have had it), by cultivating mere perception,—especially perception, not of interesting objects, but of uninteresting symbols, which we

find in books,—is an enfeebling and tiresome process, which requires to be enforced by authority or tyranny, and has but meagre results; while the methods that give symmetrical development by rousing the emotions and energies are attended with pleasure and delight to the pupil, which is the invariable characteristic of true education, and justifies the proposition that *no child should ever be sent to school*. A school that is not sufficiently interesting to make the pupils eager to attend is a decided failure, whether the fault be in the teacher or in the erroneous methods and limited facilities.

The emotions, which education generally neglects, are the sources of nearly all that is lovely or makes life worth living; and, hence, their cultivation is far more important than any intellectual education could possibly be, even if it were a true philosophic culture, strengthening the power of independent thought, *which it never is*.

Emotions are based upon feeling, and are themselves a higher species of feeling, combined with impulses to admirable acts. That which is to stimulate or cultivate the emotions must have in itself a sensational or feeling element. The sense of hearing happily combines feeling with perception; and, hence, it is the channel through which our emotions are most effectually reached. Every tone of the voice possesses emotional influences, and rouses human feeling with irresistible power in song or in passionate and eloquent utterance, in which the subtle power of the speaker's voice is far more effective than the words that he utters.

Music, apart from words and ideas, has supreme control over human feelings. The harmonies of sound are irresistibly charming. But the same mathematical, harmonific relations exist between the vibrations of colors as between the vibrations of sound. Yet the music of light, constructed like the music of sound,—on mathematical principles,—has never been more than a scientific curiosity, because light appeals to the intellect only, and has very little effect upon any feeling.

Hence, I have endeavored to enforce the doctrine that we should rely far more upon the ear as the channel of education, and that music, which is capable of rousing every human faculty, should be so used as to cultivate the amiable emotions, and keep the pupil habitually under the influence of his better nature,—not only by instrumental music, but chiefly by his own voice in song, which has ever been the most potent agent for maintaining religion in the popular mind, notwithstanding the embarrassing and gloomy influence of the theology with which it has been associated. A brief song every hour, of one or two verses, with such words and such tunes as produce the best effects, would do away with all necessity for disciplinary punishment or unpleasant exercise of authority. Appropriate or eloquent declamation will add much to our character culture, but nothing can compare with song as an ethical influence.

The will and the practical energies, upon which depends the question whether life shall be a success or a failure, have little systematic culture in schools at present. They are to be cultivated by action; and, at present, they get their cultivation mainly on the playground, in which they are associated with no elevated motives. They are to be properly cultivated into a controlling power only by incessant performance of duty. The duty to be performed is the main duty of life,—the production of something useful,—useful work,—by which we cease to be a burden to others, as we become capable, not only of sustaining ourselves, but of sustaining those who depend upon us, and contributing to the public welfare.

He who has not learned this is necessarily a pauper, or dependent on others for his subsistence, is of no use to society; and it were better for the world that he had never been born. But in what system of education that is fashionable is this prime duty, and necessity attended to? How often does education (as it has been) simply unfit the pupil for all usefulness, impairing alike the stamina of body and mind, and, while aiming exclusively at intellectual culture, succeeding only in cramming, without developing the capacity for original thought?

All education, no matter what may be the destination or the wealth of the pupil, should be largely industrial, should train the pupil in skilful industry and in a variety of useful arts, by which he will not only gain a vigorous mental discipline, which

literature alone cannot give, but will be fully prepared to begin life as an honorable, self-sustaining citizen. I say *honorable*; for industrial training gives the backbone of moral character, without which it is too limp and sentimental to be of much utility in the trials of life.

When industrial education is combined with the moral culture through the ear and voice just mentioned, the result to be expected is the development of a more honorable and virtuous manhood than the world has ever seen; and of this I think I have given sufficient proof in "The New Education." For these are not speculative hypotheses, but philosophic truths that have been already illustrated in the moral and industrial culture and reformation of countless thousands, many of whom have been rescued from a life of crime.

I have referred to the institutions in which this moral regeneration has been and is in progress; and I have asked why are our legislators and our educational conventions so torpid on this subject, when it is so clear that we are ourselves responsible for every criminal that is reared hereafter. The responsibility rests upon teachers, upon college presidents, upon educational journals, and upon our legislators. It rests upon the entire press, which is the leader of public opinion.

The reform is beginning, and is in healthful progress all over the civilized world; but its progress is slow, and perhaps slower in this country than in England and on the continent. It requires the burning eloquence of some devoted apostle to bring home these truths to the leaders of society.

The first objection will, of course, be the cost, which, according to old methods, would be considerable. But the objection is fallacious, for it has been shown that the *best possible education* may be so obtained as to cost far less than the existing failure. I have called the attention of the National Educational Association at Saratoga to the most remarkable educational experiment ever made,—that of the Rev. Ezekiel Rich, of New Hampshire, which was reported by him forty-seven years ago to the American Institute of Instruction, when meeting at Lowell. This experiment, which ought to crown the name of Mr. Rich with a higher honor even than belongs to the memory of Pestalozzi and Fellenberg, demonstrated that it is practicable by methods never before thought of, and not in use at present, so to combine intellectual, moral, and industrial education, that a school of youths between the ages of six and sixteen years may support themselves, and at the same time acquire a moral and intellectual education as well as useful industries *without expense to their parents*, all expense being defrayed by their own labor.

This would seem, of course, Utopian to those who know nothing of the true system. But it is no mere plan or theory: it is a *successful experiment*, which might be repeated upon a national scale, if we had the proper teachers, and which promises to a rational mind the speedy redemption of humanity, as being within our reach.

Laying aside the financial question,—the wonderful cheapness of this method,—it has been demonstrated in many thousand instances that a combined moral and industrial education will put an end to pauperism and crime. To which I would add that it will put an end to the dangerous struggle between ignorant unskilled labor and organized capital, by developing a diversified skill among the people which will enable the artisan to attain independence by more skilful and profitable labor,—will thereby increase the number of employers while diminishing the amount of unskilled labor, and will make the closing of manufactories a matter of less importance to the skilled and thoroughly cultured artisan, who can readily turn to other employments when any department is overcrowded; for no man should be considered practically educated who was not the master of at least five profitable occupations.

The political party which shall champion this reform will be sustained by the people. But I have no time for its diffusion beyond the publication of its facts and principles.

Will not *The Index* show its zeal in practical religion, of which this is the best embodiment, by taking up this question, which, in its magnitude and its interest, surpasses all other themes that have interested the press?

JOS. RODES BUCHANAN.

BOSTON, 29 FORT AVENUE.

"EMERSON AND THE ABOLITIONISTS."

Editors of The Index:—

I have just been reading *The Index*, and am moved to speak of two articles in it; and you may make what use you please of what I say.

First, in relation to what Mr. Potter says of Emerson and the abolitionists. That Mr. Emerson was not a *professed* abolitionist is no more proof that he did not "sympathize" with abolitionists "in spirit and truth" than that he was not a *professed* Transcendentalist (as you rightly say) or even, after 1838, a *professed* Christian, which was because he gave himself no nicknames whatever; and, as he said to me, that, if any one at that time "would preach Christ, he must say nothing about him personally." But I can aver from personal knowledge that, as far back as the publication of Lydia Maria Child's awakening book, before he knew the present Mrs. Emerson (who was always an ardent professor of the doctrines afterward published by Garrison in the *Liberator*), Mr. Emerson was uncompromisingly an abolitionist. I used at that time to go to Concord whenever his Aunt Mary Emerson came up from her home in Maine, and took rooms in the little town, so as to be near him; and her intense interest in Mrs. Child's book made the subject a constant topic of conversation. But at that time, and, indeed, up to the time of the Rebellion, he persisted also in the attitude of critic and philosopher of life. Yet in one of his lectures, given a night or two before the first meeting called in Faneuil Hall on occasion of the murder of Lovejoy, when it was "bad form" in Boston society even to name Lovejoy or that for which he was the first living sacrifice, I remember what a thrill went through the audience, because Emerson named him as such, in a tone that seemed to preclude contradiction. But it is true that his first public activity was just after Webster's 7th of March speech, 1850; and when he joined other inhabitants of Middlesex County to electioneer for Mr. Palfrey to go to Congress, because he had just emancipated the slaves of his father's estate at his own cost. I myself heard the remarkable lecture he gave at that time in several towns. It began with a lament over Boston, which was showing itself so recreant on the subject of equal rights of man; for, as he said, he had thought Boston was the last as well as the first stronghold of liberty. It had become a necessity, he said, that the scholar should leave his books, and make a special duty of enacting first principles by coming down into the arena of practical politics for their application. This was in the time of his first manner; and I never shall forget the musical cadences of that lament, and his arraignment of the slavocracy that had spread its paralyzing power over the sacred places we had supposed to be invulnerable. I depend on memory, and wish I could do justice to the splendid passage in which, apostrophizing this malignant power, he asked why it had even stolen from us our Webster, whom he pictured as being harnessed as a draft-horse to draw the car of slavery. He depicted the scene as Spenser depicted the car of Lucifer, straining his magnificent figure to the uttermost. It was the only passage of rhetoric I remember in all his utterances; but it had not the thinness of ordinary rhetoric, rather the fulness of poetry, reminding one of Burke's outburst upon Marie Antoinette, abandoned by the chivalry of France. Practically, I think Mr. Emerson *never* showed himself the least backward in utterance respecting slavery. He always spoke of it as if "it went without saying" that it was "the sum of all villainies."

When the Sisters Grimké first came on from the South, I met them as most honored guests in his house, where I, too, was visiting at the time they spoke in Concord.

But Mr. Emerson respected the law of the division of labor in his actual life; and, while he respected and most cordially recognized the legitimacy of the action of Mr. William H. Channing, Mr. Garrison, Wendell Phillips, John Brown, etc., he felt it wisest to keep in the traces of his own temperament himself, and availed by act, as well as by expressed thought, that "he serves all who dares be true." To be "true" was with him to be transparent of the intuitions proper to one's own intellectual constitution.

Yet Mr. Emerson's sensibility of heart was as great

as the clearness of his intellect. He prized the dry light of reason, but he was not chilled in heart by it. At the time of the enforced removal of the Cherokees, he published in the newspapers a letter to President Van Buren, which he afterward characterized as "nothing but a shriek," and again lamented that the politicians of the hour were so outrageous as to compel the poet to such discordant shrieking. The last thing I should ever have expected from one of the faithful was the charge made by Dr. Bowditch of any lack of sympathetic humanity in Mr. Emerson. There was nothing that gave me such profound confidence in Mr. Emerson's mind as the equal life of his heart, which he always unconsciously manifested. I say unconsciously, for he used to say he had only a cold eye for truth. Mrs. Emerson remarked to me once, after one of these disclaimers: "Mr. Emerson's heart is attuned so high that it reminds me of those who cannot hear the voice of the locust, which is said to be inaudible to some high-pitched ears. He has too much real sentiment to be sentimental in words."

ELIZABETH P. PEABODY.

DR. BOWDITCH'S THEORY.

Editors of The Index:—

Absence from home had caused me to lose *The Index* of December 3, containing Mr. Potter's admirable reply to the view taken by my friend Dr. Bowditch in regard to Emerson's attitude toward anti-slavery and the early abolitionists. I had just taken my pen to reply to Dr. Bowditch when Mr. Potter's article reached me; and, although that article so well covers the ground, I think it not useless to show, by larger extracts than Dr. Bowditch has made from the Ode to W. H. Channing, that the strongest passage which he quotes from it not only admits, but requires, quite a different interpretation. After hearing William Henry Channing's eloquent disunion speech, Mr. Emerson wrote:—

"But who is he that prates
Of the culture of mankind,
Of better arts and life?
(Go, blind worm, go,
Behold the famous States
Harrying Mexico
With rifle and with knife.

"Or who, with accent bolder,
Dare praise the freedom-loving mountaineer?
I found by thee, O rushing Contocook,
And in thy valleys, Agiochhook,
The jackals of the negro-holder.
The God who made New Hampshire
Taunted the lofty land with little men."

These things being so, he proceeds,—

"What boots thy zeal, O glowing friend,
That would indignant rend
The northland from the south?
Wherefore? to what good end?
Boston Bay and Bunker Hill
Would serve things still.
Things are of the snake!

"The horseman serves the horse,
The neat-herd serves the neat,
The merchant serves the purse,
The eater serves his meat.
'Tis the day of the chattel,
Web to weave and corn to grind,
Things are in the saddle,
And ride mankind."

Nothing can be plainer than that, in these lines, Emerson is chastising, not the abolitionists, but the North. His disapproval of disunion proceeds from the conviction that it would do no good while the mass of the Northern people remained so nearly akin in spirit to the South.

Mr. Emerson was always a temperate man, but he joined no temperance society. That he joined no anti-slavery society, then, implied no alienation of spirit from Garrison and Phillips, while his constant upholding of justice and righteousness gave full assurance that his heart and his influence were with them; a conclusion justified by the fact that, in 1835, he invited Harriet Martineau to his house after she had lost caste with the Church, the press, the commerce, and the respectability of the North by joining the abolitionists.

Then, finally, in the noble "Boston Hymn," he declared his assent to the very most unpopular of the anti-slavery doctrines; namely, that the slave-

holder had no title to be compensated for freedom given to the slaves. He said:—

"Pay recompense to the owner,
Fill up the bag to the brim.
Who is the owner? The slave is owner,
And ever was. Pay HIM!"

Garrison, Phillips, and Parker always honored Emerson, and never complained of him. I think we may safely acquiesce in their judgment.

C. K. W.

BOOK NOTICES.

THE IDEA OF GOD AS AFFECTED BY MODERN KNOWLEDGE. By John Fiske. Boston and New York: Houghton, Mifflin & Co. 1886. pp. 173. Price \$1.00.

The little volume which contains, with a preface. Mr. Fiske's paper on "Theism and Pantheism," read before the Concord School of Philosophy last summer, is a sequel to the *Destiny of Man*, the two forming an outline, the author states, of a theory of religion which he hopes at some future time to present "elaborately in a work on the true nature of Christianity." Mr. Fiske endeavors to show that the world of phenomena is intelligible only when regarded as the multiform manifestation of a Power that is in some way inconceivable to us,—anthropomorphic, or "quasi-psychical" and "quasi-personal,"—"though it is impossible to ascribe to Him any of the limited psychical attributes which we know, or to argue from the ways of man to the ways of God." "It is in this sense," he says, "that I accept Mr. Spencer's doctrine of the Unknowable." He is careful to add, "How far my interpretation agrees with his own, I do not undertake to say." On another page, our author says, "That deity *per se* is not only unknown, but unknowable, is a truth which Mr. Spencer has illustrated with all the resources of that psychologic analysis of which he is incomparably the greatest master that the world has ever seen; but it is not a truth which originated with him or the demonstration of which is tantamount, as Mr. Harrison would have us believe, to the destruction of all religion." Mr. Fiske declares that to every form of theism "an anthropomorphic element is indispensable," and that, on the other hand, "to ascribe what we know as human personality to the infinite Deity straightway lands us in a contradiction, since personality without limits is inconceivable. But, on the other hand, it is no less true that the total elimination of anthropomorphism from the idea of God abolishes the idea itself." We are not justified, he thinks, in using "such an expression as 'infinite personality' in a philosophical inquiry, where clearness of thought and speech is above all things desirable. But I do hold most emphatically that we are not debarred from ascribing a quasi-psychical nature to the Deity, simply because we can frame no proper conception of such a nature as absolute and infinite." Mr. Fiske rejects the design argument, and would not "inquire minutely into the character of the divine decrees and purposes"; yet he sees in the universe an orderly sequence of events, with a meaning which appeals to human intelligence and indicates a purpose. Jesus is referred to as "the Great Teacher who first brought men to the knowledge of the true God." The work is marked by Mr. Fiske's usual breadth of thought and strength and elegance of expression; and if, as a piece of reasoning, it is defective, as we think, at several points, its merits are sufficient to entitle it to the careful perusal of those interested in the subject discussed.

B. F. U.

THE POET AS A CRAFTSMAN. By William Sloane Kennedy. Philadelphia: David McKay. Price 25 cents.

In this brochure, Mr. Kennedy, who is an ardent admirer of Walt Whitman's erraticisms in the poetic line or lines, sets out, à la Don Quixote, fearlessly to demolish the threatening poetic windmills. He makes war particularly on the old petty rules of poesy which condemn "artists like Longfellow and Browning and Whittier to set the poetical palette with such scanty pigments, breathing the soul through the embouchures of so barbarous an instrument, so heavily handicapped by the old greaves and cuisses of rhyme and metre." He further remarks: "Poetry has outgrown her time-honored singing-robes. The old heroics are heroic no longer. The pentameter cracks under the weight of the nebular hypothesis, and even the Greek hexameter

would not bear the burden of Hegel's thought." We should judge that Mr. Kennedy wishes "poetic license" to be indefinitely extended, when he says, "Henceforth, the greatest poetry can never be cramped by petty lines of monotonous length, and by see-saw rhymes." Much of the so-called poetry of Shakspeare and Milton, he affirms; would be more acceptable, if "run smoothly on in the prose form instead of being hacked up into lines." He rather admires Whitman's long lines. "The world," he says, "has grown longer breath'd and greater thoughted, and asks, for the expression of its deeper epic and dramatic emotion, a line longer, weightier, more plastic, and admitting more of picturesque irregularity." We are glad Mr. Kennedy has come to our aid in explaining where the poetry in many of Whitman's long untrammelled lines lies. Such, for instance, as the following, which occurs on page 216 of his *Leaves of Grass* :—

"Iron-works, forge-fires in the mountains or by the river-banks—men around feeling the melt with huge crow-bars—lumps of ore, the due combining of ore, limestone, coal—the blast-furnace, and the puddling-furnace, the loup-lump at the bottom of the melt at last—the rolling-mill, the stumpy bars of pig-iron, the strong, clean-shaped T-rail for railroads."

Now, that line, with many another similar one, sounds to our uncultured poetic taste like the prosiest of prose writing; but we acknowledge it is long, weighty, plastic, and picturesquely irregular, but not inspiring, as we expect all true poetry to be. Alexander Smith, himself a poet of no mean ability, defined poetry in his "Life-drama" as "the grandest chariot wherein king-thoughts ride"; and we confess our inability to detect the "king-thoughts" in much of Mr. Whitman's lines. Mr. Kennedy's arraignment of the poets of to-day is very readable, full of original thought, bristling with quaint similes, and independent in its conclusions. S. A. U.

THE BOY TRAVELLERS OF SOUTH AMERICA. By Thomas W. Knox, author of *Boy Travellers in the Far East*, etc. Illustrated. New York: Harper & Brothers. 1885.

Mr. Knox's previous volumes have been so widely circulated and have met with so much favor that the best possible recommendation of the present volume is to say that its method is the same as that of *Boy Travellers in the Far East*. The author has not relied exclusively upon his own knowledge of South America, but has had recourse to the writings of many others who have been there before or after him, and to works of history and archaeology which have added greatly to the fulness and the interest of his work, especially in such a field as that afforded by the land of the Incas. But a basis of personal acquaintance gives to his work a livelier sense of reality than was possible in his *Voyage of the Vivian*, where he made frank confession that he had got all his knowledge from the writings of actual explorers. South America has the advantage over some other countries that Mr. Knox has written about of being a less hackneyed subject. Of intrinsic interest it has certainly no lack. The device of "two youths" is one that makes the volume more attractive, and Dr. Brownson is an excellent vehicle for conveying historical and archaeological information. The illustrations are an immense addition to the beauty and the value of the book. The colored illustration which serves for a frontispiece would be considered very charming, if it were not the fashion of the time to speak of chromos with contempt. This one is certainly very far from being contemptible. Perhaps it is worth while to mention that the ascent of Chimborazo has been twice made by Whymper. It is a little strange that this fact should have been missed by Mr. Knox, who asserts the inviolable seclusion of the mountain's top. J. W. C.

MEN, WOMEN, AND GODS, and Other Lectures. By Helen T. Gardner. With an Introduction by Col. R. G. Ingersoll. New York: Truth-seeker Company. pp. 159. Price \$1.00.

So long as large numbers of people continue to regard the Bible as a divinely revealed and authoritative standard of truth and an infallible rule of faith and practice, books will be written opposing this belief by exposing the errors and immoralities in this so-called revelation and the absurdities of the claims based upon it. Miss Gardner's work is one of this kind. It consists of three lectures,—the one from which the volume takes its title, "Men Women, and

Gods," "Vicarious Atonement," and "Historical Facts and Theological Fictions," to which is added an appendix containing quotations from Buckle, Lecky, Mrs. Matilda Joslyn Gage, and other writers. The work, written in a style that is sprightly and sarcastic, contains some interesting facts, and meets some of the popular claims of orthodox Christians quite effectively. The author is a young woman who has the capacity for intellectual growth and culture; and, in a few years, we have no doubt she will take a more calm and judicial view of the subject, will see that the Hebrew Scriptures considered as the literature of an ancient people possess great excellences and a unique interest for us to-day; that, in a just estimate of their value, the blemishes such as she points out would have no such prominence as is generally given them when they are cited, and justly, too, in opposing the preposterous claims of theologians; and that Judaism and Christianity, with all their defects, have been like the other religious systems which are praised in this book,—necessary expressions of thought in the intellectual and moral evolution of the race. B. F. U.

ECHOES OF MANY VOICES. Fragments of Song and Sentiment, Wit and Wisdom. Edited by Elizabeth A. Thurston. Boston: D. Lothrop & Co. pp. 162. Price \$1.00.

This is the eighth in the "Spare Minute Series" of D. Lothrop & Co. It is, as the compiler says, "a medley of sense and sentiment, fun and philosophy"; and it has been collected with the hope that its readers may find something within these pages "to amuse, to cheer, to soothe, to bless, and to uplift." The writings of over two hundred well-known authors, old and recent, have been ransacked, to bring forth to light these nuggets of wisdom, wit, etc. Among the recent writers quoted from, we find the names of F. E. Abbot, Matthew Arnold, Dr. Bartol, Charles Brooks, Geo. W. Cable, J. W. Chadwick, Lydia Maria Child, Emerson, Higginson, Holmes, Charles Kingsley, Longfellow, Lowell, Theodore Parker, Ruskin, M. J. Savage, Tennyson, Thackeray, Dickens, Walt Whitman, and others. The selections are in prose and verse, and are all brief. It would have been an improvement if the editor had ranged each subject treated of under an appropriate heading, instead of scattering sayings in regard to "Immortality," "Love," "Truth," etc., through the whole volume.

THE CHURCH AS IT IS: or, The Forlorn Hope of Slavery. By Parker Pillsbury. 1885. For sale by Parker Pillsbury, Concord, N.H. Single copy, 25 cents; five copies, \$1.00.

In the preface to this, the third edition of a little pamphlet, the first edition of which appeared nearly forty years ago, "when the anti-slavery conflict was at its intensest heat," Mr. Pillsbury says: "This is the third of the former anti-slavery tracts lately reproduced in the interest of true and reliable history, now endangered by the strange mendacity or ignorance of our unscrupulous clergy, who insist that they, or their predecessors, were the main instruments in the abolition of slavery, some of them going so far as to declare that Garrison and his faithful and valiant discipleship actually did more harm than good to the sublime achievement." The other "anti-slavery tracts" referred to are: "The American Churches the Bulwarks of American Slavery," by Hon. James G. Birney; and "The Brotherhood of Thieves, or a True Picture of the American Church and Clergy," by Stephen S. Foster.

THE remains of a remarkable "missing link" between birds and reptiles have been discovered by the scientists. A photograph of one of these strange creatures has recently been made especially for the *Century* from the slab preserved in the British Museum; and a careful engraving therefrom, with other curious illustrations, will appear in an article in the January *Century*, entitled "Feathered Forms of Other Days." The author of the article has made a pictured "restoration" of the missing link.

The Poet as a Craftsman.

By WM. SLOANE KENNEDY.

A gird at rhyme and metres, with a glance ahead in prophecy and outline of a more spontaneous poetical style.

Letterpress, paper covers. Price 25 cents. By mail, postpaid, on receipt of price.

For sale at THE INDEX office, 44 Boylston Street, Boston.

THE PANSY.

For both week-day and Sunday reading. THE PANSY, edited by "Pansy" herself, holds the first place in the hearts of the children and in the approval of earnest-minded parents. Among the more interesting features for 1886 will be Pansy's serial story,

REACHING OUT,

being a further account of "Little Fishers; and their Nets." The Golden Text Stories, under the title "Six O'clock in the Evening," will be told by a dear old Grandma, who knows many interesting things about what happened to herself when she was a little girl. Margaret Sidney will furnish a charming story,

ST. GEORGE AND THE DRAGON,

to run through the year. Rev. C. M. Livingston will tell stories of discoveries, inventions, books, people, places. Faye Huntington will be a regular contributor during the year. Pansy will take the readers with her wherever she goes, in papers under the title of

WHERE I WENT AND WHAT I SAW.

There will be, in each number, a selection from our best standard poets suitable for recitation in school or circle. From time to time, colloquies for Mission Bands, or for general school exercises, will appear. There will be new and interesting books for the members of the Pansy Society, and, as before, a generous space will be devoted to answers to correspondents in the P. S. Corner.

Fully Illustrated. Only \$1.00 a year.

By AARON HAHN, RABBI, Cleveland, Ohio.

BLOCK & CO., Cincinnati, Ohio, Publishers.

Sent by mail, prepaid, for \$1.50.

The Contemporary Evolution of Religious Thought in England, America, and India.

By Count GOULET D'ALVIELLA. Translated by J. MODEN.
Price \$3.00. For sale at The Index office.

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

NEARLY READY:

SCIENTIFIC THEISM.

By FRANCIS ELLINGWOOD ABBOT, PH.D.

This work includes the substance of a lecture delivered last July at the Concord School of Philosophy. It is part of a new philosophy of Evolution, vitalized by the principle of UNIVERSAL ENDOGENIC TELEOLOGY and by the substitution of the ORGANIC THEORY of Evolution for the MECHANICAL THEORY advocated by Spencer and Haeckel. Its purpose is to philosophize the scientific method, and to show that modern science, interpreted by its philosophized method rather than by its non-philosophic special results, leads, not to Atheism, not to Agnosticism, not to Idealism, but to a REALISTIC SPIRITUAL THEISM which will satisfy both "the head" and "the heart." 1 vol., 12mo. Price \$2.00.

LITTLE, BROWN & CO., PUBLISHERS,

BE SURE to include in your list of **PERIODICALS FOR 1886** some, if not all, of the following, for they are the very best and are found in the homes of all cultured people.

Nineteenth Century.

No other journal numbers among its contributors so many brilliant thinkers and profound scholars. The most important changes in the thought of the times are submitted to searching criticism and review.

Contemporary Review.

The monthly contributions, by eminent writers, describing the contemporary life and thought of the leading nations of the world, give it an unique position among other Journals, presenting an epitome of all that best deserves attention in the world of thought and action.

Fortnightly Review.

The greatest exponent of radicalism in England. Its Editors and Contributors have ever been noted as leaders of progress, and have formed a school of advanced thinkers, which may justly be cited as the most powerful factor of reform in the British Empire and elsewhere.

British Quarterly.

While discussing all branches of modern thought, is particularly devoted to the consideration of the more recent theories in Theology and Philosophy. Its articles are characterized by a keenly critical spirit, and for fulness of treatment and justness of criticism it stands alone, in its special field, among the periodicals of the world.

Edinburgh Review.

Numbers among its contributors the greatest names that have moulded English thought for the past eighty years. While its policy admits the discussion of all questions, its conservatism is tempered with a liberalism that marks it as the INDEPENDENT REVIEW of the world.

Quarterly Review.

Its reviews cover all the leading issues of the day, and embrace the latest discoveries in science, in history, and in Archaeology. Much space is devoted to ecclesiastical history and matters connected with the Church, thus making the Review invaluable to the clerical student, as well as of great interest to the general reader.

Westminster Review.

Is notable for the latitude of its theological views, many of the most advanced of modern theories in theology having received in its pages their first authoritative support. A distinctive feature of this Review is its "INDEPENDENT SECTION," containing articles advocating views at variance with those of its editors.

Blackwood's Magazine.

Is the leading and most popular magazine of Great Britain. The tone of its articles, be they fiction, incidents of travel, critical or political essays, is unexceptionable, rendering it most desirable for the Home Circle.

All of above are printed line for line—page for page—with English Editions, but in handier form.

Shakespeariana.

While aiming to furnish a recognized medium for the interchange of views among Shakespearian scholars, and to afford the student the fullest information relative to Shakespear's art, life and writings, SHAKESPEARIANA is specially designed to extend the influence of Shakespeare as a popular educator, and to stimulate the study of his works in our colleges and institutions of learning.

Full Index Circulars furnished upon application.

LEONARD SCOTT PUBLICATION CO.,

1104 Walnut Street, Philadelphia.

TRACTS.

- No. 1.—**Truths for the Times**, by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, \$1.00
- No. 2.—**Fear of the Living God**, by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.
- No. 3.—**Lecture on the Bible**, by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 4.—**Christian Propagandism**, by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. Full of Figures, Facts, and Interesting Extracts. Price 10 cents; 12 copies, \$1.00.
- No. 5.—**"God in the Constitution"**, by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, \$1.00.
- No. 6.—**"The Sabbath"**, by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, \$1.00.
- No. 7.—**"Compulsory Education"**, by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.
- No. 15.—**The Battle of Syracuse**. Two Essays by Rev. James Freeman Clarke, D.D., and F. E. Abbot discussing the Authority of Christianity. Price 10 cents; 12 copies for \$1.00.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

Travels in Faith from Tradition to Reason.
By ROBERT C. ADAMS.

For sale at THE INDEX office. Price \$1.25.

THE PRESENT DAY.

A JOURNAL DISCUSSING THE PRINCIPLES AND METHODS OF MOVEMENTS.

Edited by GEORGE JACOB HOLYOAKE.

"CROWN PUBLISHING CO.,"
267 Strand, London W.C., England.

BOOKS—Twenty Million Dollars

IS PERHAPS AN UNDERESTIMATE of the amount **SAVED** by the American book-buying public as a result of **THE LITERARY REVOLUTION** during the past six years. **THE REVOLUTION** moves **FORWARD**, not backward. It now presents a larger catalogue of better books at lower prices than ever before. To illustrate: the Boston edition of Tennyson's "Enoch Arden," price \$1.25, is reprinted in handsome style, for **2 CENTS**. The best edition ever made in America, and the **ONLY** uniform edition of the **WORKS OF JOHN KEATS**, is publishing for the price of **\$18** for the set—\$600 was paid for the set from which it is reprinted. The following are **SOME** of the Authors now represented in the catalogue which is sent free, by mail, to any applicant, or may be had of enterprising **BOOK-SELLERS** who act as Agents.

Abbott, Jacob.	Bulwer-Lytton.	Dante.	Green, J. R.	Keats.	Ossian.	Rollin.	Thackeray.
Æschylus.	Bunyan.	Darwin.	Greenwood, Grace.	Kennedy.	Ovid.	Rossetti.	Thayer, W. M.
Æsop.	Burke.	D'Aubigne.	Grimm.	Kenrick.	Parion, James.	Ruskin.	Thompson, Maurice
Alden, E. T.	Burns.	De Foe.	Guizot.	Kerr, Orpheus C.	Payn, James.	Russell, W. Clarke	Thompson, Judge.
Allerton.	Byron.	Demosthenes.	Hamerton.	Kingsley, Rev. C.	Peabody, S. H.	Sale, George.	Thucydides.
Ancient Classics.	Cæsar.	De Quincey.	Haweis.	Lamartine.	Phelps, Gen. J. W.	Schiller.	Trench.
Andersen.	Calhoun.	De Stael.	Hemans.	Lamb, Charles.	Phillips, Wendell.	Schmucker.	Trevelyan.
Arabian Nights.	Campbell.	Dickens.	Herbert.	Linton, E. Lynn.	Pindar.	Scott, Sir Walter.	Trollope.
Argyll, Duke of.	Carlyle.	Doré.	Herodotus.	Locke.	Plato.	Seneca.	Trumbull.
Aristotle.	Cervantes.	Dryden.	Hervey, John C.	Longfellow.	Platt.	Shelley.	Tyndall.
Arnold, Edwin.	Chambers.	Durfee.	Hewitt, A. S.	Lossing, B. J.	Pliny.	Smalley, E. V.	Virgil.
Arnold, Matthew.	Chaucer.	Ebers, George.	Homer.	Luther.	Plutarch.	Smiles, Samuel.	Washington.
Arthur, T. S.	Chinese Classics.	Eliot, George.	Hood, Thomas.	Lytton, Bulwer.	Pope.	Smith, Dr. Wm.	Weems.
Aytoun.	Chinese Gordon.	Emerson.	Horace.	Macaulay.	Porter, Jane.	Sophocles.	Wesley.
Bacon.	Cicero.	Euripides.	Houston, Sam.	Mackenzie.	Prescott.	Southey.	Whicher.
Bain, Alex.	Coleridge.	Farrar, Canon.	Hughes, Thos.	Martineau.	Procter, A.	Spencer, Herbert.	White, H. K.
Besant, Walter.	Collins, Wilkie.	Forbes, Arch'd.	Hume, David.	Mayo.	Proctor, R. A.	Spiegelhagen.	Whittier.
Bedott, (Widow.)	Confucius.	Fox, Rev. John.	Huxley.	Mencius.	Pryde, David.	Stewart, Balfour.	Willis, N. P.
Birrell, Augustine.	Conway, Hugh.	Frost, Rev. John.	Ingelow.	Mill, John Stuart.	Ramage, C. T.	Storrs, Rev. R. S.	Wilson.

UNITY.

A LIBERAL RELIGIOUS NEWSPAPER.
16 pp. Weekly.

UNITY seeks to adjust religion and culture; to make thought worshipful, and worship thoughtful; to find a unity beneath conflicting dogmas, a community in all denominations, a sympathy between all religions. It seeks to represent and emphasize the abiding elements of religion, love, justice, truth, worship, practically applied among all men.

Subscriptions, \$1.50 per yr. Sample copies free.

SPECIAL offer to those who see this advertisement. Send 50 CENTS with your address within the next thirty days, and you will receive UNITY SIX MONTHS ON TRIAL. Ask also for free sample copy of UNITY CHURCH-DOOR PULPIT, a fortnightly pamphlet giving sermons by M. J. Savage, Felix Adler, Washington Gladden, Phillips Brooks, and other distinguished preachers. Address UNITY, 135 Wabash Avenue, Chicago.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions, . . . 10c. per line.
" 13 " 25 " . . . 8c. " "
" 26 " 51 " . . . 6c. " "
" 52 " " " . . . 5c. " "

On half-column advertisements, a discount of 5 per cent. will be made; on full-column advertisements, a discount of 10 per cent.

USEFUL GIFTS For the Holidays.

A very large, fresh, and elegant stock just from our factory, consisting in part of Parlor and Library Desks, of which we make 25 different patterns; Wall Cabinets, Shaving Stands, Music Racks, Brackets, Escabels, Slipper Cases, Foot Rests, Blacking Cases, Glove-leaf and Push-top Tables in great variety; and all the NOVELTIES IN FURNITURE, specially manufactured FOR THE HOLIDAYS. Most goods can be furnished Walnut, Mahogany, Ash, or Ebonized. First-class Goods. Moderate Prices.

F. M. HOLMES FURNITURE CO.,
116 Tremont St. (Studio Building.)

The Secret of the East;

OR,
The Origin of the Christian Religion and the Significance of its Rise and Decline.

By FELIX L. OSWALD, M.D.

Handsomely bound in cloth. Price \$1.00.

"The work covers a great amount of critical and historical ground independently of the Buddhist analogies; it is in fact a vigorous, uncompromising outline of Christian history, with all the weakness and wickedness mercilessly dragged into daylight. . . . The case against the Christian Church is a marvellously strong one. The superstitions and miseries of mediævalism, the woes, tortures, burnings, rackings, and brutalities accomplished in the name of Christianity, are set in blackest array. The Nature-worship of the pagan Greeks and Romans is set in contrast. Nor is Dr. Oswald very generous in admission of improvement in contemporary Christianity. To him, it is a hurtful supernaturalism, impeding science, diffusing pessimism, promoting hypocrisy, and repressing the physical nature. His book is remarkably well written, brilliantly concise in style, and, aside from its special theories, of considerable scientific and historic value."—Boston Evening Transcript.

CURRENT TOPICS.

BY B. F. U.

MR. ROWLAND CONNOR'S "Open Letter to All Unitarian Ministers," an abstract of which may be found in another column, is lively reading. We have seen no allusion to it in any of the Unitarian papers.

THE *Critic* of December 19 contains letters from a large number of well-known artists and art teachers, protesting against the tariff imposed upon works of art imported into the United States, to protect them, against their wishes, from foreign competition.

A YOUNG lady, wishing a letter from Ruskin, wrote him, requesting his opinion as to the best theological works to read, and received this reply: "I have no time to write you at any length, and I take no interest in any young ladies who study theology."

HERBERT GLADSTONE, son of the ex-premier, has written a letter in which he says: "Nothing could induce me to countenance a separation of Ireland from Great Britain. But, if five-sixths of the Irish people desire a Parliament in Dublin, to manage local affairs, in the name of justice and wisdom, let them have it."

THE statement of an investigator into the mysteries of animal life, that "a bee's working tools comprise a variety of equal to that of the average mechanic," is thus supplemented by the *Boston Herald*: "We should say that the effects produced by the operations of this little customer surpass those of an ideal combination auger, centrebit, and bradawl, with lightning perforation attachment."

A FRIEND writes: "I notice in the last *Index* an extract from the *Boston Courier* relative to answer of President Bartlett's (of Dartmouth College) to the students' request for the opening of the reading-room on Sundays. Knowing him well, I will say the reported answer does not sound like him; and I have seen it stated on good authority that, instead of refusing the request, he told the students the matter should be referred to the faculty for their action."

A WRITER in *London Truth*, referring to Canon Farrar's strange assertion that Æschylus, Dante, and Milton are the greatest poets the world has seen, says: "I wonder whether anybody seriously pretending to instruct an audience of educated people ever before put Æschylus before Homer or (more amazing still) Milton above Shakspeare. . . . It may be hoped that the cultured Americans will not suppose that Dr. Farrar's fantastical notions are shared by his countrymen."

MR. MOORE, an Englishman, during a residence in China married a native woman, by whom he became the father of three children. About six weeks ago, the whole family landed at Victoria, B.C.; and, under the Chinese restriction act, Moore, although a British subject, was required to pay \$350 for the privilege of landing his wife and children on British soil. The customs authorities have since refunded \$300 in accordance with instructions from Ottawa. The remaining \$50, paid for his wife's admission to the country, has not been returned; and Mr. Moore has taken legal steps to recover it. What barbarism still remains in civilized countries!

MR. F. B. PERKINS, librarian of the free Public Library of San Francisco, in a pamphlet on "Free Libraries and Unclean Books," says: "A free public library is an educational institution; a member in fact, if not in form, of the system of public schools. Its first requisite is, therefore, that it should be useful,—should do good: its office as to amusement is of very minor importance. The business of teaching immorality it ought not to practise at all. It is no more right that this library should circulate dirty books than that the Lincoln School or the Girls' High School should instruct in criminal practices, profane swearing, obscene language, and vulgar habits."

A COMMITTEE of two clergymen and one layman, appointed some time ago by the Connecticut Congregational Club to consider the matter of Sunday newspapers, made a report last week, stating that Sunday newspapers, being published for gain in defiance of statute law and in violation of the fourth commandment, are an unmixed evil, and that their publication, sale, and reading should be prevented by the use of all proper means. The committee specify among the means to be employed refusal to buy, application of the law, arousing public opinion against the sale of Sunday papers, the use of the pulpit, press, and personal influence to show their demoralizing tendency, especially as a powerful agency operating toward the complete secularization of "the Lord's day."

SAYS the *Commonwealth*: "It must be somewhat discouraging to the good men and women in New York, who have spent so much time and labor for the conversion of the Chinamen of the metropolis to Christianity, to see their handful of converts bowing before the god Joss, whose shrine has been newly erected in Chinatown. It is certainly not particularly gratifying that a heathen idol should be set up for adoration in New York

City; yet the failure of Christian influences to effect the conversion of the Chinese can scarcely be wondered at, in view of the fruit which, to Chinese minds at least, Christianity has borne at Rock Springs and on the Pacific coast. A Chinaman can hardly be expected to take kindly to a religion whose votaries, without the least aggression on his part, burn his house over his head, and shoot him in cold blood."

REV. DR. CHAMBERLAIN relates, among other anecdotes of his missionary life in India, that, when he was holding religious service in a large village, a troop of monkeys appeared, and seated themselves in a semi-circle. There were old monkeys, gray-whiskered and bald-headed, and mischievous youngsters, including baby monkeys with their mothers. All, he says, paid the strictest attention to the prayer. Whenever a young one began his monkey-shines, one of the old men monkeys, of patriarchal appearance and severe manners, would twist the ear of the irreverent little rascal until he ceased his pranks, and, if one of the babies began to make a fuss, the mother would pat him until he was quiet. Mr. Chamberlain says that he could hardly restrain himself at the comical sight, and it was a great relief to him when the assembly broke up. As the people arose to go, so did the monkeys, and silently disappeared in the branches of the trees, deeply impressed, apparently, with the service.

THE *Woman's Journal* says: "Various papers express their suspicion that Miss Cleveland wrote that part of the President's message which deals with the Mormon question. Perhaps she did. Those glowing sentences in praise of social purity would certainly come with a better grace from Miss Cleveland than from her distinguished brother." It is not improbable that Miss Cleveland did write that part of the message. The style is hers, not the President's. But, by whomever written, it contains a sentence which, we regret to say, is the least discriminating and the most objectionable part of the message. It is this: "Since the people upholding polygamy in our Territories are re-enforced by immigration from other lands, I recommend that a law be passed to prevent the importation of Mormons into the country." In the first place, the word "imports" does not, as an exchange remarks, apply to persons, as the United States Supreme Court has expressly decided. In the second place, the proposition to forbid immigrants coming here is unjust, and contrary to the principle of religious liberty. Mormons have as much right as Catholics or Methodists to come to this country. If immigrants or natives practise polygamy, let them be dealt with according to law. Many Mormons are not polygamists, do not believe in polygamy, are opposed to polygamy. The proposition to exclude people because of their religious beliefs, or for their social beliefs, is opposed to the principles and practice of our government. Let all come who wish, regardless of their religious or other views, and then require of them allegiance to the Constitution, and obedience to the laws of the land.

THE PAPAL PRONUNCIAMENTO.

This is the third time we have essayed to write on the Pope's recent encyclical. The first time, the attempt was deferred by the suspicion that the cabled report of it to the *New York Herald* was too brief an abstract to be wholly trustworthy; and this suspicion proved to be correct. The second time, the Catholic publication on which we relied for an accurate transcript of the document had only a portion of it, and caution suggested another week's waiting. And now that we have the whole of the encyclical, as translated for the *London Tablet*, before us, and have carefully read the long document through, the paper seems a much less important manifesto than it did in the *Herald's* preliminary abstract. It is, in fact, a much less aggressive statement of the claims of the Roman Catholic Church than it there appeared to be. Not that the writer who reported it for the *Herald* intentionally misrepresented, but because his succinct presentation of the main points of the address was deprived, by its very conciseness, of those prolix modifications which the pope himself made of all his primary propositions.

In truth, the encyclical is a painfully labored attempt to reconcile the old traditional claims of the Catholic Church with its modern necessities. The subject is the relation of the Church to the State. The old Catholic theory, of course, is that the Church and the State should be one, and the Church that one. Pius IX. had no difficulty in stating this doctrine clearly and concisely. He made no effort in his ecclesiastical manifestos to reconcile himself to the modern world. He declared plainly and bluntly that popular governments, and the current ideas of the age concerning popular liberty, progress, and education, were the Church's direst foes; and the world knew where to find him. These foes he would not conciliate nor compromise with: he would fight them. And, when he could do nothing more, he continued to the last to fulminate his bulls from his self-imprisonment in the Vatican against them. He had the advantage of a clean-cut, logical system of thought concerning the Church and its relation to the world; and, hence, he always made his position intelligible, even if, judged by the light of modern reason, it was often ludicrous. But Leo XIII., though *ex officio* the infallible head of an infallible Church, is personally more open to the currents of modern thought and life, and from the first has manifested a purpose to impress upon the Church a more liberal policy. He is learned, affects philosophy, professes to respect science, and has the sagacity to see that, if the Roman Church is to continue to hold its power, it must somehow be brought into harmonious relation with the mental movement and fresh discoveries of the present age. Yet how to accomplish this and still preserve the old ecclesiastical claims and doctrines is the problem. And it is a problem which it will require even more sagacity than Pope Leo possesses successfully to solve. He may be very wise, very learned, a lover of philosophy, sympathetic toward the science and the humanities of the age; but he can never succeed in the impossible task of building up with one hand what the other hand is as busy in tearing down. Yet it is laboring at such a task as this that he presents himself in this encyclical. It is said that he revised and re-revised it twenty times, so careful was he to make just the needed adjustment and shade of adjustment of genuine Catholic doctrine to the demands of the time. But the work was all in vain. The very painstaking betokens, it may be, the sagacious states-

man, the wise man, but the uninspired man, and not the infallible oracle. Pope Pius was hampered by no such adaptations to the world. He spoke only from the stand-point of the Church itself; and his encyclicals had a directness and snap which at least attracted attention, though the world at large cared little for them. But this encyclical of Pope Leo is such an elaborate specimen of logical circumlocution that the world at large will not even stop to read it.

For those, however, who do read it, this last encyclical will have special significance as coming from a pope of liberal proclivities. He is heavily handicapped from the start with the dogma of papal infallibility. On account of this doctrine, he is in duty bound to uphold the decrees with regard to the relation between Church and State issued by his predecessors in the pontifical chair. He refers to these decrees, including by special allusion the famous syllabus of Pius IX., wherein the papal disapprobation was expressed against free thought and free speech and the free and progressive tendencies generally of the nineteenth century. All these decrees, he says, must stand as the voice of the Church. But, then, they are to be interpreted in the light of a distinction between true and false freedom. The Church teaches and has always taught the true doctrine of liberty; and all liberty inconsistent therewith, of course, is false liberty,—mere license and libertinism. Thus lucid is the interpretation! So, too, with regard to the doctrine (as, for instance, in this country) of religious equality, and the right of every individual to form his own judgment as to religious beliefs: this he declares, in accordance with the syllabus of Pope Pius, to be a most pernicious error. But, then, he soon adds that "the Church does not condemn those governors of States who, for the sake of acquiring some great good or preventing some great ill, patiently bear with manners and customs, so that each kind of religion has its place in the State"; and that "no form of government is, *per se*, condemned, so long as it has nothing repugnant to Catholic doctrine, and is able, if wisely and justly managed, to preserve the State in the best condition." And Catholics are urged to take part in political affairs under whatever kind of government they live,—provided they are compelled by law to do nothing contrary to their religious faith,—"holding this purpose in their minds, to infuse into all the veins of the commonwealth the wisdom and virtue of the Catholic religion." And there is another paragraph which, in like manner, plays fast and loose with the tendencies of the age to mental investigation and research.

In short, the encyclical presents, by reason of its attempt to combine the new and the old, a curious and strange mosaic. Not without a measure of dialectical skill, judged by the standard of ecclesiastical diplomacy, to the eye of the outsider it seems little more than an elaborate bundle of contradictions. What is solemnly affirmed in one paragraph, and buttressed with authorities, is carefully denied in the next. That is, the key-thought of the manifesto is that the doctrine of State and Church, as laid down by Pius IX. and previous popes, is an ideal one, or what ought to be and would be in a perfect world; but, meantime, in the imperfections of the world as it is, the Church must adapt itself to existing conditions, and do the best it can to amend them and establish its supremacy. In spite of its many absurd doctrines and claims, like that of the pope's infallibility, the Catholic Church is in practical matters very shrewd. A condition of things which it cannot change it resolves to accept and make the best of. It is on this theory that Pope Leo has written his

encyclical. It is an effort to adapt the Catholic Church to the free institutions which modern society has won. Time will show whether this can be done without overturning the fundamental principles of the Church itself.

WM. J. POTTER.

ANCIENT WOMAN.

I wish to say a few words, suggested by Mrs. Poole's article in *The Index*, December 3, on "The Social Evolution of Woman." Though Mrs. Poole is perfectly correct in her historic quotations showing the antiquity of laws on the Eastern Continent unjust and oppressive to woman, yet I think she is mistaken in supposing the false doctrine of woman's inferiority to have been the earliest doctrine. She does not go back of the Hindus in what she says of the Aryans. But, in the Rig-Veda, which was not committed to writing until after that movement of the Aryans which resulted in the establishment of Persia and India, we have quite another revelation upon the subject. There is nothing more striking in the Rig-Veda than the status of woman revealed at that early age. Then the departed mothers were served as faithfully as the departed fathers by younger members of the family, or by adopted ones. Then mothers quite as often, if not more so, than fathers conducted the services to the dead ancestry, which took place three times a day, but more especially in the morning, and which consisted of improvised poetry that was as often the composition of the women as of the men. These hymns of the Rig-Veda that were handed down were, it is certain, the latest productions of the original Aryan muse; and many of them owe their preservation to the fact that they were so beautiful as to be learned and repeated by some of the worshippers who were not conscious of so much original genius as others.

The name of the mother of the family in Sanskrit is rather more than less respectful than that of the father, according to its etymology. The name of the father, from which comes our own, through the Latin and Greek, signifies the producer of the materials for living. That of the mother signifies their distributor and administrator, implying more rather than less mental development. So far as we can infer from the facts of their social life, in which the service to the departed ancestors constituted the most important part, we see no inferiority of functions in the woman. It is the women who go out to gather the soma, from which is distilled the wine of life, that constitutes the most important part of what is offered to the dead, carried up by Agni, the chariot of fire, for the food and clothing of the disembodied spirits.

There is a book on the Aryans in the Boston Athenæum, in French, by Renouf, the great authority with respect to the antiquities of the Aryan race. In this is given, among many other interesting things, all the songs and ceremonies of a wedding; and it is very striking to see that the woman, when she gives herself, or is given, to the man, descends, as it were, from association with divine beings, in whose custody she is, and who give her up with reluctance. And the wedding is enveloped, as it were, in what is called the marriage of Soma and Surya (the sun),—the splendid Surya symbolizing the feminine in Sanskrit mythology, Soma representing the masculine principle.

In the Hebrew apologue of Human Life (whose dialect betrays it to be among the most ancient traditions of Genesis), we seem to have the sexes represented as equal in dignity, the woman as helpmeet, necessary to the man, as well as bone of

his bone and flesh of his flesh, potent to make him forget his own individual responsibility to the God of both of them, when she has so forgotten hers in snatching at the one thing forbidden by the love that had surrounded them with a world of gifts. But the object of this apologue was, after all, not to settle any question about the relative dignity of the sexes, which was taken for granted as equal, but to symbolize the play of the negative and positive poles orbiting human life,—the fall on the individual plane, which is not to be retrieved except on the social plane, as is intimated in the prophecy that the victorious *finale* shall be the crushing of the head of the serpent by the seed of the woman, that was, by her abuse of free agency, to be brought forth in sorrow and pain.

Whatever might be the status of woman in Greece and Rome in historic times, their mythology, which is largely "ill-remembered history," gives feminine form to its greatest divinities, symbolizing beauty in Venus, the conservative principle in Juno, and practical wisdom in Minerva, who is begotten of the brain of Jupiter. The fall of the individual man was the first epoch of history. "The corruption of the best is the worst." The fall is only to be retrieved by society, which shall restore the original wholeness (holiness). In short, the redemption will be the equal poise of the sexes; and the "ever womanly" is the first principle in progressive action, as Goethe said. Evolution implies an original involution, which, I think, history has not quite forgotten.

ELIZABETH P. PEABODY.

WHAT CHRISTIANITY HAS NOT DONE FOR CHINA.

It is a generally held opinion that all the best elements of Western civilization are attributable to the influence of Christianity; and, as a corollary, we find the pious sending out missionaries to "heathen lands," with the gospel in their hands, for the purpose of engrafting on Eastern civilizations the grand benefits which we are told are due to the advent of Jesus Christ. It is not my purpose here to oppose or combat this doctrine. I wish simply to call attention to certain phases of the social condition of a people that has never known Christianity and never will,—notwithstanding the army of missionaries at work there,—in order that it may be seen that there is something good outside of Christendom.

Mr. G. Eugène Simon, who was French consul in China during many years, and has studied that country as few foreigners have, has just published here a volume that is full of food for thought.* A few months ago, I had the pleasure of sitting beside M. Simon at a socialistic banquet; and I found the author not less interesting than his book. M. Simon is one of those men that abound in France, and especially at Paris,—men whose minds are completely emancipated from all those religious, political, and social narrownesses that render the average American and English next to intolerable. M. Simon writes as he talks. But I intend to call your attention to only one feature of this many-sided book,—the respects in which Chinese civilization is superior, or at least not inferior, to our own.

L. Aimé Martin has said, "If you would know the political and moral status of a people, demand what place its women occupy." And Herder, in the same order of ideas, says, "There is nothing, I think, which marks more decidedly the character of men or of nations than the manner

in which they treat women." Let us measure China by this standard, and see the result. I know that it is a commonly received opinion that, of all unfortunate classes, Chinese women are the worst. But, if M. Simon's reiterated testimony is to be accepted, even the United States might, in some particulars, imitate China in its treatment of women.

Referring to the important part which the family council plays in the organization of Chinese civilization, M. Simon says: "The father alone may not pronounce a judgment nor celebrate the ancestral rites. The mother, in the absence of her husband, assumes all his duties, except those of a religious nature. She must, however, assist him at the altar. She hands him the offerings that are accorded to the ancestors. In early times, her presence on such occasions was indispensable; but, to-day, a relative often takes her place. But, like her husband, she may preside at the family council, trials, etc. If empress, she may act as regent; and the emperor, even when of age, continues to show her the respect that every Chinaman is bound to show his mother. In most families, the wife has charge of the purse. Not a penny is paid out unbeknown to her. If the husband is to spend the day away from home, she gives him the money necessary to meet his expenses. . . . If women do not inherit, they enjoy certain compensations that are not known elsewhere. Before marriage, girls are treated like boys; and, if they lose their rights in their own family on taking a husband, they regain them in the new family circle. . . . And, when it is borne in mind that the ancestral religion of the Chinese teaches every young man that one of his first duties is to take a wife, it will be seen that the lot of woman is not so bad in China as in other countries. . . . 'Once married,' said a Chinaman to M. Simon, 'we become attached to our wives and our wives to us, and I assure you we are happy. Among every ten thou-and Chinamen, you will not find a hundred, perhaps, who will not tell you the same thing.' " Nor do Chinese women lose their name on marrying. As in Spain, so in China, the family name of the wife is joined to that of her husband. If Mrs. Lucy Stone had been born in China, she would never have had to suffer the social persecution which she has experienced in the United States.

Some of the women's rights advocates of America have tried to convince Christians that both the male and female elements are represented in the Godhead. The Chinese have always held this idea. Their personification of universal humanity is called Fou-Mou,—that is, Father-Mother; and when the emperor, as high priest, performs certain religious rites, he is called the Father-Mother of the People.

The Chinese woman is not ignored politically. In the family council, the male and female members discuss on equal terms the political interests of the family. "It would be more correct to say," writes M. Simon, "that, in China, the family, acting through its natural representative, is the political unit. This representative may be a woman." The only body in China that can be said to correspond to our law-making assemblies is the Academy of Sciences and Letters, of Peking; and women are not excluded from this learned conclave.

The Chinese conception of civil liberty does not compare unfavorably with our much-vaunted Western ideas on this subject. "Many Europeans think," says M. Simon, "that China is, *par excellence*, the land of despotism. Now, I ask what sort of a despotism this is which employs but from twenty-five to thirty thousand functionaries

in a population of over five hundred million souls, and which is defended by a regular army of a hundred thousand Tartars, almost lost to view in the midst of such a mass of human beings?" Let the United States, with its legion of office-holders,—State and federal,—and the great European Powers, with their vast military establishments, respond to this question.

In China, the people are not crushed under taxes; nor does the State run into debt, in order to keep up an unproductive army. These blessings of Western civilization are not found in the Celestial Empire. "It is well known," says M. Simon on this head, "that the revenues of the State amount to about fourteen or fifteen million francs; and they cannot be increased. If the public expenses exceed receipts, the deficit can be made up only by voluntary subscriptions." M. Simon estimates the annual average tax paid by each Chinaman to be only three francs. One of the political maxims of the Chinese runs as follows: "The best government is one that is not seen." The people of more than one Continental nation would shout Amen to this all-wise principle of statecraft.

From what has just been said, we should be led to expect great material well-being among the people of China. And M. Simon informs us that such is indeed the case. He says: "As for myself, I consider the most civilized State to be that where, on a given surface of territory, the greatest possible number of men enjoy in the fairest and cheapest manner the largest amount of well-being, liberty, justice, and security." China, according to M. Simon, meets these conditions. The land teems with people. The cultivation of the soil is practised with an art which would astonish even the president of an agricultural society, and the humble farmer sits down to a table that the European peasant would scarcely dare to dream of. "Nowhere are the people so rich."

The religious liberty of the Chinese is not less remarkable than their civil liberty, their material well-being, and the good treatment of their women. There is no Established Church, so that the grave question of the separation of Church and State, that threatens to divide the Liberal party in England and to destroy the Republic in France, does not trouble the peace of the Chinese people. The religious situation in China is much the same as in the United States: the State remains neutral, and the different beliefs flourish side by side in perfect harmony.

"In no other country," declares M. Simon, "does man profess, I will not say *so much* religion for fear of being equivocal, but so many religions. . . . The government does not interfere in religious questions, except when the latter become mixed up with civil matters or when they encroach upon the secular domain. You read from time to time in the circular letters that the emperor, the viceroys, and the governors are accustomed to address to the people this piece of advice that strikes Europeans as very singular,—'Distrust religions.' On this account, the Chinese nation has often been charged with atheism. But there is no truth in this assertion." The Chinese rulers, doubtless, look upon ecclesiastical matters very much as did Louis Philippe, who once said, "Never put your finger in Church affairs, for you can't get it out again: it is sure to stick there."

The prevalent form of Chinese religion is the worship of one's ancestors. M. Simon grows quite enthusiastic over this national custom. He says of it: "This ancestral creed, far from tying the living to the dead, as it is often accused of doing, is, on the contrary, the very source of progress and the strongest spur thereto; for its most immediate

* *La Cité Chinoise*. Paris: La Nouvelle Revue, 23 Boulevard Poissonnière.

obligation is preparation for the future." But this future is not the future of the Christian Church. In one of the Chinese canonical books occur these words: "The object of worshipping heaven is to spiritualize the earth." The Chinaman believes that, by cultivating his fields and making them produce all that they are capable of producing, he is pleasing God more than by dreaming of an imaginary life beyond the grave. But, at the same time, he does not neglect his spiritual nature. "What do you think of us?" M. Simon used to ask of educated Chinamen. "You don't cultivate your soul," was the reply. "In China," M. Simon goes on to say, "the thing that is worshipped is humanity itself, the spiritual and immortal part,—the soul of those ancestors that our own souls will join in the future. In other religions, the thing worshipped is outside of the conscience: in the Chinese religion, it is the conscience itself. . . . On account of the absence of all supernaturalness in its religious beliefs, Chinese civilization, founded on natural principles, has not only never been afflicted by castes and other causes of dissolution that mark the civilizations of the rest of the world, but it has become so powerful that all the religious, commercial, and military efforts of foreign civilizations to modify it have always resulted in failure. . . . In certain respects, Buddhism was well adapted to the antique Chinese civilization. It prescribes castes, teaches equality, and its morality is very pure. But it required a priesthood. Now, up to the time when this new faith was introduced into the country, China had never had special ministers of religion. Nobody would consent to act as such; and the government was actually forced to release from the prisons a certain number of convicts, to whom were confided the spiritual and temporal duties of the new temples. And, in fact, the Buddhist priests have never ceased to call themselves 'the condemned to death,' nor to wear the yellow hood and robe of the State prisons. . . . If there be a drought, for instance, where do you think the Chinese place the blame? Do they find fault with heaven or earth? No, with themselves. Everybody goes home and fasts. Private persons and public functionaries examine their own conduct and confess their shortcomings." They see that, if they had provided for dry weather when there was plenty of rain by filling their reservoirs, by constructing new ones, by preparing their plants for the evil day, and by improving their wonderful system of irrigation and canalization, their fields would not have suffered.

From what has been said, the reader will not be surprised to learn that there is a great deal of free-thinking done in China, and that the religious observances are looked upon much in the same way as in the latter days of Rome. M. Simon is very implicit on this point. "Do you believe in the efficacy of your religious practices?" I often asked Chinamen, whom I knew well," writes M. Simon. "You embarrass us very much by this question," they would answer. "Sometimes we believe, and sometimes we do not. Often, we laugh at those who go on pilgrimages; and yet it may happen that we will go ourselves. All this is governed by circumstances." . . . Buddhism is still the free and easy religion that its introducers into China intended it to be, and its shrines are little else than exoterics for carrying off the moral impurities that may clog the soul of the individual who, quite independent of his neighbors, seeks relief in this way." M. Simon presents several instances of the free-thinking character of the Chinese, large numbers of whom, it appears, are as pronounced in unbelief as thousands of so-called Christians.

M. Simon, in this eulogy of his favorite people, gives us many other proofs of the fact that all the

best work of man, whether in the form of social customs, legislation, or religion, is not confined to Europe and America; and we are thus able to understand the motive that actuated that Chinese missionary who—if I remember rightly—went to Boston, a few years ago, in order to convince you that the civilization of Confucius is superior to that of Jesus Christ.

THEODORE STANTON.

PAU, November, 1885.

THE PRESS: ITS POWER AND DEBASEMENT.

There is no end of prating of the power of the press, and no one can truthfully deny its incalculable influence; but that it approximates even to the degree of greatest usefulness would be an unfounded claim. In its eagerness for news, in catering to an unrefined and vulgar taste, the press has become prostituted and debased; and, with the facilities of telephone and telegraph, is a sewer into which is poured the effeteness, rottenness, degradation, imbecility, villany, moral disease, profligacy, and corruption of the whole world, in a seething mass of unutterable abomination.

The great metropolitan journals, with world-wide facilities, take the lead in the gossip of villany and prurient rascality; and the smaller fry of town and village closely imitate, like hounds in a well-trained pack. Special correspondents are sent, regardless of distance or expense, to report murders, robberies, debaucheries, hangings, and nameless crimes.

The taste of the public is not only catered to, but cultivated in this direction; and the evil intensifies with the morbid craving it creates for moral and social carrion, and, when the actual fails in supply, the ready pen and debased fancy of the reporter pour forth the reeking column.

Take at random a number of a leading newspaper, and this is the morning's repast it spreads before its readers,—made attractive by heavy headlines: "The Big Hole left in Buffalo's Finance—Virginia's Man—Woman—Attempt to break Jail—A Tennessee Mystery—A Young Woman found Dead—Killed the Wrong Man—The Boston Poisoning—Murder of a Betrothed Wife—Bloodless Duel over a Young Woman—A Young Michigan Desperado terrifies a Community and shoots Two Men—A St. Louis Songstress deserts her Aged Spouse—Rivals in Love fight a Duel—A Mexican Bull Fight—Strangles his Daughter—Sold his Wife—Lynched for Rape—A Regular Mill," etc.

The reporters vie with each other in making their writings sensational, and indulge in wit over the most solemn subjects. Instead of saying a man was hung, they say he was "placed where he could not step on tacks"; and love itself is scoffed. The "able writers" have in short become "end men," harlequins playing the court fool for the pittance of a salary. The "mill" is a prize fight, and the slang account fills two columns of brutal horrors flippantly narrated, with high encomiums on the successful bruiser.

Turning to the advertisements, to say nothing of the "personals," which ought to damn to eternal infamy any publisher whose greed admits them, there are columns of quack medicines and of quack doctors, the inevitable "Friend of Youth," "retired clergymen," and the numberless rascally concerns that are willing to give ten dollars for one. The prestige of a great journal has been paid for, and in its shadow villany and debauchery await their credulous victims.

Through the sixteen crowded pages, one looks in vain for one item of self-sacrificed honor, integrity, or a single moral action. The "mirror of the times" has no surface for the reflection of good deeds or kind acts. It is sensitive only to the

reverse. Its face is red with crime and foul with corruption.

The literary taste of the people is degraded and vulgarized instead of being improved and elevated. The glowing narratives of robberies, murders, prize-fights, assignations, elopements, and nameless deviltry, instead of preventing by example stimulate to imitation, and engender a thirst for crime.

The leading news journals are too unclean to enter the family circle and be read by children of pure and noble taste. The *Police Gazette* exceeds them only by its illustrations. We would say to them: Cast out the "end man," your "court fool," who makes jest of human degradation and misery. Your "funny man" has become worn to threads; and his oft repeated jokes are stale, flat, and unprofitable. Bad spelling and slang dialect will not retrieve his fortunes. If there be a good deed in the world, report it; and, if there is nobility in human nature, give it place and precedence. The power now for evil may then be exerted for good, and the press become all that it claims as the chief instrument in the enlightenment of the people on the great issues of the day, and a leader to a higher civilization.

HUDSON TUTTLE.

COMPETITION, CAPITAL, AND LABOR.

With the increase of intelligence, physical strength yields in importance to mental qualities. When natural selection took hold of the mind, the survival of the fittest meant, not so much the survival of those with the most prognathous jaws as of those with the sagacity and alertness to guard against danger and provide means of safety. The influence of natural selection on man has become less in proportion as he has consciously exercised his powers for definite ends. In uniting for a common object, men have been able to accomplish in a day what might not in a century, if ever, have been brought about by natural selection, preventing, too, incalculable suffering and loss unavoidable in a merciless "struggle for existence."

And yet the competitive principle, which has ever been the essential fact in the struggle for existence, prevails and must ever prevail in the highest intellectual and social conditions. Men now compete in useful arts and industries. Educational institutions compete in methods and efficiency of instruction. Institutions of charity compete with one another in relieving want and distress. The doctors, divided into various schools, compete in the art of overcoming disease, each school trying to prove the superiority of its own method. The churches compete in the attractions and inducements offered to increase membership, attendance, and influence, to Christianize the heathen, and to save souls from hell. Very different these and other similar forms of competition, where the manifest object is to contribute to individual and social well-being, from that heartless and cruel struggle in which those only can survive that seize every advantage of strength and position to crush and destroy their less fortunate competitors.

At the same time there are deplorable evils,—the natural outcome of competition as it exists among us to-day,—as seen in the contrasts presented by the extremes of wealth and poverty, and the present strained relations between capital and labor. Great wealth gives great power; and they who possess it are very liable to employ it to their own advantage and in the interests of the class to which they belong, with but little consideration for the rights or the welfare of the poor. Intemperance, extravagance, waste, idleness, no

doubt, account for much of the extreme poverty that exists; but, when we observe sober and industrious men working for wages on which they cannot live in comfort or decency, and their employers becoming millionnaires in a few years, it requires no large knowledge of economics to see that the reason the products of labor are not more equitably distributed is that capital takes too much and that labor receives too little of the value of the products; in other words, that capital, having the power, takes advantage of it to enlarge its profits by depriving the workman of a part of his just dues. This leads to strikes and suspensions of business and enforced idleness, distress, and loss of independence and self-respect among workmen. It is not strange, under the circumstances, that intelligent wage-workers organize for self-protection, as they clearly have the right to do.

Steam and machinery have enormously augmented the power of production; but there is a strong feeling that capital profits too much, and that labor does not receive the advantages and benefits to which it is fairly entitled from the inventions and improvements of the age. The tendency of modern industrialism is to a division of labor and its employment by large firms and corporations, which, by owning the machinery and paying the smallest possible wages, get all the immediate advantage of the vast productive power that invention has put into their hands. Intelligent workingmen see this, and, contrasting their small wages with the large profits of the companies that are adding millions to their property every year, naturally feel discontented, and often ask why, if the talk they hear about justice is not mere cant, does not a just public sentiment lead to a demand for a more equitable distribution of the products of labor?

For the evils here alluded to we have offered numerous panaceas. One wants a high protective tariff, when the only consistent protective tariff would be a tariff on every foreigner who comes to America. Co-operation is another hobby with some; and it contains, without doubt, a principle that must be brought more and more into prominence, but only in co-existence with the opposite principle of competition. They are the attractive and repellent forces of social life. A condition in which excellence should not be stimulated by incentives and rewarded by advantages would, were it possible, destroy all originality and enterprise. And the incentives and the advantages must be such as appeal to human nature as it is. Whether the condition of the workingmen would be improved if the government should enlarge its functions and assume new responsibilities, as the socialists propose, may fairly be questioned. The government, through the influence of wealth and the love of power and rank, is liable to become despotic, as it is in those European countries where labor organizations are suppressed, and the meetings of socialists are broken up by the police, and where military power, although derived from the people, awes the people into silence,—countries from which come the class of foreigners who indulge in unreasoning tirades against wealth, and advocate a resort to violence to solve the problem of capital and labor,—the problem of the ages,—which American workingmen are intelligent enough to see must be solved by thought, not by explosions of dynamite. And this should be done while the country is young and the social conditions are flexible and modifiable. With age come the hedges of caste and the hard "cake of custom," which make progress impossible, and can be broken up only by revolution.

In a country whose government derives its powers from the consent of the governed, and where every citizen is a voter, the remedy for all evils

that can be reached by legislation is in the hands of the people, if, indeed, they have the intelligence to see what is needed, to subordinate minor issues to a common purpose, to disregard the petty schemes of narrow-minded zealots and the professions and promises of political demagogues, and to unite on sensible and practical measures. Here, where the right to acquire wealth, and to its undisturbed possession when acquired, is recognized by all; where the property is held largely by men who started in life poor,—intelligent men, even of the poorest classes, are not likely to confound the rights and interests of wage-earners with chimerical schemes for putting indolence on a par with industry, and rewarding wastefulness and improvidence equally with economy and forethought.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

ALL our subscribers who are in arrears will confer a favor by sending to this office the amount due, before the end of the present year.

ARE there gods or men who, if they had the power, would not use it to release the poor miners imprisoned in the earth at Nanticoke, Pa.?

A CHRISTIAN minister, having failed in an attempt to change the religious views of George Eliot in her early life, said afterward: "That young lady must have had the devil at her elbow to suggest her doubts, for there was not a book that I recommended to her in support of Christian evidences that she had not read."

MANY readers of *The Index* will be glad to learn that Mr. F. E. Abbot's promised book, *Scientific Theism*, has appeared. It is published by Little, Brown & Co. of this city, and also simultaneously by Macmillan & Co., London. It may be obtained through the office of *The Index*. We have already several orders for it. The price is \$2.00.

DURING one of the Belfast riots, a man was asked by a mob what his religion was. He did not know whether his excited questioners were Catholics or Protestants; but he looked at their weapons, their bludgeons, fowling-pieces, etc., and, after surveying them carefully, answered, "Gentlemen, I am of the same opinion as that gentleman there with the big axe."

THE Industrial Art Teachers' Association of Massachusetts will meet Tuesday, December 29, in the Art Club Gallery. There are three papers to be read, namely: by Mr. Henry T. Bailey, 10 A.M.; by Mr. Walter S. Perry, 11.15 A.M.; and by Dr. Paul Carus, 2.30 P.M. Dr. Carus will also speak before the Modern Language Association of America that is to meet this year at the Boston University, December 29 and 30.

MR. J. P. MENDUM, of the *Investigator*, writes in regard to the third edition of *The Church as it is; or, the Forlorn Hope of Slavery*, by Parker Pillsbury, which he has for sale: "It is an old anti-slavery document which did good service; and it was thought by some of the few remaining workers in that righteous cause that it ought to be republished, that the present generation might read its pages, and understand what the anti-slavery people of thirty years ago had to say of the Church. This pamphlet had passed out of print; but, at the suggestion of our friend Photius Fiske, it has been reissued, he paying \$200 to its republication."

THE Class for the Study of Politics, recently organized by the National Woman Suffrage Associa-

tion, Massachusetts, meets on Wednesday, December 30, at 2.15 P.M., at Mrs. D. B. Smith's, 117 Appleton Street. Members of the Association admitted free. All others, gentlemen or ladies, are admitted on payment of ten cents at the door. The class held in the afternoon has been so successful, and so many who cannot attend at the hour designated have expressed a desire for an evening class, that it has been decided to form one as soon as fifteen persons shall have signified their wish to become members. All such are requested to send their names and addresses to Mrs. H. R. Shattuck, Malden, Mass.

EVEN our most conservative theologians are beginning to realize the sandy character of the foundation upon which the ecclesiastical house has been built, and to tremble for its stability when the winds of reason and the waters of scientific truth shall threaten it more fiercely. It is doomed to fall, and wise men are already beginning to prepare a foundation upon the rock of science for the grander temple of the coming religion. Not upon the foolish myths of an ignorant people shall the ideal church be founded; but science shall be its corner-stone, reason shall cement its blocks of truth, and over all shall rise the vaulted dome of a faith not blind and doting, but resting upon experience, trusting in the future, because believing in the past.—*From the Ideal Church, by Solon Lauer.*

SOME Tory wit makes fun of Mr. Chamberlain's scheme to make every man in England his own landlord by using the government credit to secure for him three acres of land and a cow:—

O Acres three, O happy Acres three!
Promised to me!

(I wonder where exactly you will be,
My acres three.)

When Church is disendowed, of course you'll be
Tithe three, my three.

Rich loam I choose, nigh to my house and handy
(Let Smith's be sandy).

Then you will be, as I am well assured,
Richly manured.

Then why are you but three? Oh! why not four,
Or five, or more?

O Cow! O Cow! that promised art to all
By orators that every district stump,
To free the rustics from the landlord's thrall:
Art thou the same old cow that once did jump
Over the moon? for much I fear, somehow,
That thou mayst prove all moonshine,
O my Cow!

THE *Christian Register* thinks that it was Paul who gave an impulse to millinery, when he said it was a shame for a woman to go to church with her head uncovered. The *Boston Transcript* mentions Paul as an unbeliever in matrimony, and suggests that he "probably understood how much millinery cost, and, while he liked to look at it, he knew too much to put himself in a position which would make him pay for it." The *Christian at Work* is of the opinion that the young tent-maker of Tarsus took him a wife, after the fashion of his people. In proof of this, it is stated that he was an officer of the Sanhedrim. "And, to be such, he had to be a married man, did he not?" Possibly, Paul was a widower when he wrote the words referred to by the *Christian Register*, and had learned by experience the cost of millinery, and wanted to make men thoroughly disgusted with this world, in order to direct more successfully their attention to the world to come.

EVERY reader of *The Index* is respectfully requested to send to this office the names of ten writers whom he or she regards as having contributed most largely to freedom of thought. In a few weeks, a statement will be made giving a list of the writers, with figures showing the results of this effort to obtain the opinion of our readers.

The Index.

BOSTON, DECEMBER 24, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, } Editors.

NO WRITERS IN THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Dual Aspect of our Nature.

BY EDWARD MONTGOMERY.

The Supermental Consistency of our Being.

Correct reasoning resolves everything revealed in nature into mental states experienced by the realizing individual. It is only by becoming conscious to each of us that anything in nature is felt and recognized. And it cannot be denied that our consciousness is altogether composed of mental states and of nothing else. We unhesitatingly name everything which arises in consciousness a "mental state," as soon as we recognize its purely conscious nature. The first cardinal conclusion of philosophy, then, is that the multitudinous and divers contents of consciousness, which make up everything we find ourselves at all capable of realizing, are one and all of genuine mental consistency. And these ever-varying and shifting mental states experienced by us are all we possess of mentality, all in all we have of conscious existence.

This clearly discerned, the moment has arrived when a glimpse may be caught of the transcendent marvel of conscious being. This vast world we are moving in, and we ourselves with our rich life so full of momentous happenings, all this affluence of seemingly steadfast existence is, so far as our individual apperception is concerned, nothing but momentary mental realization. It is nothing real to our consciousness, save only when being thus actually realized by us. You shut your eyes, and the visible world is gone; you go to sleep, and all your feelings, all your mentality, including the consciousness of yourself and everything else, is completely extinguished for the time being. And where are you meanwhile, when thus gone out of consciousness, body and mind? Of what stuff are you made, when no longer, as usual, existent in sensation, perception, imagination, or thought? Has your being completely vanished out of existence, as it assuredly must, if it actually consisted

of those mental realizations which are at present no more, and which to you were your only awareness of yourself? Or are you, with all your efficiencies and potentialities, still somehow extramentally subsistent? Is, perchance, your veritable existence safely, silently, steadily rooted in the dark profundity of a creative soil, far beyond the resplendent but fitful gleams of conscious realization?

The thorough phenomenality of mental states, their mere representative character and unsubstantial, inefficacious consistency, becomes very salient, when we candidly contemplate how, in the healing forgetfulness of sleep, we securely yield our whole store of living power to the influences which extramentally sustain our being. And do not these very same extra-mental influences continue to keep up in all its integrity the wondrous vortex of activities composing individual existence then, also, when the spell of oblivious sleep is broken, and in the interaction with outside powers the time-arching halo of revealing consciousness gathers form, mirroring in its iridescent and intensive play the deep-grounded reality of the world and our life therein?

Just once let it be recognized to what an all but unlimited extent we have to rest our trust on the unwearied stability and prepotency of extra-mental powers, and nevermore will our too pretentious imagination deem that in its most daring flight it ever can outsoar the element in which it livingly floats; nevermore will it vain-gloriously strive to loosen its reliance on the quickening source whence from fathomless depths it issue all its effulgent gifts into the vivid presence of actual life.

Where this morning is the feeling, the thought, you had last night, before your whole being had sunk away into the dreamless void of unconscious subsistence? You must admit that as the self-same existent, which then was present, it has utterly, irrecoverably, vanished into nothingness. A mental state exists only so far and so long as it is conscious. For what we know as a mental state, and rightly designate as such, is something having actual conscious existence, and not anything whatever outside consciousness. When a sensation, perception, or thought drops out of awareness, when out of the ever-lapsing present it slips away into the all-consuming past, it has lost for good its being as that particular and identical existent. If, ever after, what we call the same feeling or the same thought is re-experienced, it has to be newly issued from its extra-mental source of emanation. It has to be out and out reproduced by the same powers which gave conscious being to the previous feeling or thought. The same efficient powers which then raised the peculiar feeling or thought into the felt actuality of mental presence have accurately to repeat their specific activity, in order to accomplish the same result now or at any other time.

It means hopelessly darkening our philosophical insight with figurative speech, when we talk of yesterday's mental states as if they were still subsisting as the self-same existents which then were making up our consciousness. Thus it comes that our present psychology is almost completely a fabrication of perspective illusions. It lavishly applies to the erection of its visionary structure the bygone material of lapsed feelings and thoughts. It scientifically installs the wholly departed consciousness of yesterday, or of any past time, as an abiding power, making it bring forth and influence in all sorts of ways the real consciousness of the present moment, our veritable here and now. Not before it is adequately understood—what seems a very obvious truth, when once pointed out—that

mentality means nothing more nor less than the all-revealing mental presence, from instant to instant produced and sustained by extra-mental powers,—not before we plainly recognize this utter dependence of mind on non-mental being, will a consistent monistic world-conception be framed. And then, in order to ground on a solid and unitary basis the science of human existence in its dual aspect, we shall have furthermore to become convinced that it is our own permanent individuality and its medium of life which constitute the veritable extra-mental powers that keep up the phenomenal play of our mental presence.

It is quite certain the present mental state possesses in itself no potency to create the following mental state. The present mental state, in its widely comprehensive, far-recollecting moment of actual consciousness, is all in all we realize of our selves and the world. Whence, then, does this ever-replenished fulness of momentary realization emanate? Where is its veritable matrix? Of what nature are the extra-mental powers, of whose doings it seems the faithfully revealing effluence? We have before us nothing but the mental presence, a significantly luminous crest on the brow of onward pressing time. And, like time's own incessantly passing yet safely abiding Now, this clear emergence into conscious splendor of all the bloom of living exertion is being lifted into actual and persistent presence on a mysterious tide of ever-arising, ever-dwindling moments. In which depths of sense-hidden reality lies the quickening source of this exhaustless influx of mental realization?

It is at this juncture that all philosophical as well as scientific interpretation is forced to venture a transcendental conjecture, to reach out from the wavering confines of the ever-dissolving mental presence into a steadfast realm of enduring potency. In order to gain any insight into the connection of the present with the past and the future, we have to pierce beyond the actually given moment of consciousness, and have to link it with bonds of efficiency to some extra-mental source of emanation. Where shall we seek for such a source?

By recognizing that a mental state is not something retaining, as such, its existence when once gone out of consciousness, Hume's artifice and that of the entire association-philosophy become transparent. For how can a present mental state have power over a past mental state which, as such, has utterly vanished out of existence? How can the ever-disintegrated mental presence be reintegrated from a chaos of perished feelings, passed away into bodiless, soulless inanity? If it is efficiently connected with anything at all, if it is associated with aught beyond itself, it must necessarily be with something extra-mentally subsistent. Indeed, it can be conjoined only with the very matrix, whence it itself issued into conscious reality. In every instance of mental manifestation, the mind-producing power must necessarily reside in those extra-mental influences which lift up such mental phenomena from unconscious latency into conscious being.

Now, the most momentous of all philosophical questions is precisely the one here pending. It demands unambiguous information concerning the true nature of the all-efficient matrix, which brings forth the phenomena of the mental presence. On the answer given to this solemn and transcendent inquiry depends now, as ever before, our entire bearing toward life.

Philosophically speaking, there are only two possible answers. Either our mental presence, in all its changeful modes and moods, including the conscious realization of ourselves, our fellow-

creatures, and the rest of the world, emanates directly from a supernatural source of efficiency, whose entirely incomprehensible nature remains unrevealed in such mental creations, and which—to give it a name—is designated as spiritual, or our mental presence constitutes in itself the symbolical though practically reliable representation of the very powers of nature by which it is produced, and whose specific presence and mutations it faithfully signalizes. Thus, we have pure spiritualistic Transcendentalism on the one side, genuine Naturalism on the other. And, if we are to live according to our convictions, as we most assuredly ought, then it is clear that these two world-conceptions have to be considered thoroughly antagonistic to each other in their vital aims. The one conviction seeks, through a deepening recognition of spiritual unity, to extricate our thought-constituted personality from the turbulent world of sense, which, it thinks, we are apt to mistake for veritable reality. The other, on the contrary, seeks to recognize the true significance and import of the perceptual figurations making up the universe and our own individuality as actually revealed to us. And this it does that, by dint of the world-constituted, world-efficient powers incorporated in us, we may worthily represent the gloriously progressive triumph of widely sympathetic sensitiveness and beautifully befitting form—the consensual thrill of attuned harmony, laboriously wrought from a once all-involving chaos of unfeeling strife.

These, in verity, are the two supreme tendencies of human striving, the negative and the positive drift of ideal aspiration; the one drawing away from the alluring engagement with perceptual realizations, the other devoted to the further harmonization of the powers underlying them. All current creeds are symbolical expressions of these paramount strivings. They are their intuitive adumbrations, with crude doctrinal mixtures of their opposite tendencies.

Sympathetically appreciating the noble sentiments by which the religion of Transcendental Spiritualism is kindled in the breast of its sincere votaries, we have, nevertheless, relentlessly to oppose all serious attempts at realization of its anti-vital aims. We naturalistic thinkers are, above all, convinced that the powers which compel our perceptive realizations are themselves veritable and fundamental reality,—a reality whose nature and activities the perceptions clearly signalize. Our method of truth-seeking—the method of all natural science—consists, therefore, in the verification, by actual compulsory presence, of the representative contents of our consciousness. And our method of realizing our ideals consists in the elaboration, by dint of our natural faculties, of the actual sense-compelling powers, in conformity with our ideal purpose.

Surveying the sphere of compulsory perceptions, we find ourselves in possession of an inalienable body, manifest as a subtly organized and steadfastly enduring complex of powers, to whose specific activities is evidently due the sustained and varying flow of conscious phenomena making up our mental presence. This body is discerned as forming part of a boundless system of extra-mental powers, whose perceptive realization we call the world. With this outside world, our body is found to stand in manifold relations of interaction. Furthermore, its organization is discovered to have been minutely moulded in keeping with these relational interactions. Indeed, individual organization and all its activities are the expression of a vitally pre-established harmony between the living being and its surroundings. And the all-containing mental presence reveals,

with self-sounding reverberation from coetaneous depths, the grand centralized sense of this world-wide concordance.

To become quite convinced of the vastly important truth that mentality is the product of organized vital activity and that, consequently, vital organization must ever form the veritable fulcrum for every fruitful attempt at human progress, let us examine the strenuous but vain endeavor to discover mind also in inorganic nature. Such hylozoic tendencies are very prevalent among thinkers of our age, and are as detrimental to personal self-determination and moral responsibility as material automatism. They rest on the false conception that life, and therewith mind, is not the manifestation of a specific activity displayed by a highly complex confluence of non-mental powers, organized and sustained through interaction with other power complexes, but simply the original property of the elements composing the substratum of existence, from whose varied configurations all things are believed to be formed. In fact, for the old atoms of the physicists, this so-called “mind-stuff” theory merely substitutes as world-material atoms of mental consistency.

Clifford has done good service to philosophy by placing in a glaring light (*Mind*, No. IX.), with algebraical indifference to real values, the unconscionable sophism on which he himself and others have to rely, in order plausibly to establish an identity of nature between our mental presence and the powers affecting it, between what we feel and think and what we and other things are made of. To simplify the problem of mental and material connection, and to reach by a short cut the monistic substance, Clifford, in the coolest manner imaginable, takes for granted that we naturally infer as existing out of our consciousness only the feelings of other minds, to which feelings he consequently gives the name of “ejects.” Thus, our individual impression of the external subsistence of such objects as tables and chairs depends, according to this eminently novel view, solely on our knowledge that other minds are likewise experiencing as their perception similar objects.

The untruth of this bold assertion is so patent that we might safely reject without further examination any doctrine based on it. But as Clifford's exposition of mental atomism has, by many thoughtful persons, been considered an all but mathematical demonstration of this doctrine, so highly fascinating at present to the scientific mind, it cannot but prove instructive and relevant to our present inquiry attentively to listen to his argument, and then to expose its fallacies.

Clifford reasons thus: Everything called an object is really a conscious phenomenon within our own individual mind,—a definite percept realized by ourselves. The only existents *outside* ourselves are phenomena within the mind of other beings. By inferring that another mind has also feelings, that some one besides myself is experiencing, for example, a certain percept, we therewith throw such inferred existence out of ourselves, as not forming part of our own being. These “ejects,” consisting of feelings subjective and objective in other minds, are the only kind of reality we have a right to place outside ourselves. And the reason why we come to believe in the outside existence of our own perceptive objects lies solely in the inference that corresponding perceptive objects are existent also in other minds, and are therefore, as such, ejects to us. Thus is formed the impression of the outness of things as not wholly dependent on one's own perception. This externalizing process constitutes the “social ob-

ject.” A chair, for instance, is immediately nothing but a perceptive object within our individual mind; but it becomes an eject and a social object by being inferred as existing also in the mind of our fellow-creatures.

When I perceive a brain in functional activity, all this is my individual perception. But it has been scientifically established that definite changes in this perception of mine correspond to definite changes of feeling within another mind, consequently to definite ejects. In correspondence with every feeling—however complex or elementary—in the other mind, there takes place a change in the perceptive brain within my mind. The complex consciousness, corresponding to the complex activity in a perceptual brain, is built up of elementary feelings. An elementary feeling in you may be concluded to correspond to the action of an elementary brain-molecule in my perception. The cardinal question is, Can such an elementary feeling exist independently of the complex consciousness which it helps to compose?

We can perceptively realize an entire series of graduated existents, culminating in the highest organism, and sliding down the scale through lower and lower forms of life into inorganic nature. Now, if we believe in evolution, holding that the higher forms have by insensible degrees been evolved from lower forms, the whole train of evolution having started from inorganic molecules, we can find no reason for assuming that ejects, or the feelings which we know to correspond to our perception of higher forms of existence, come suddenly into being at some particular point in the line of evolution. On the contrary, we have consistently to conclude that ejects correspond to whatever perceptual activity we behold; that, if a moving atom were realizable to our perception, to such a perceptive atom would correspond an elementary eject, or feeling. Consequently, all existence outside our own perception consists of more or less complex combinations of elementary ejects, or feelings. And, our consciousness being likewise built up of such elementary feelings, there can exist nothing in the world but “mind-stuff.” Everything is composed of mental atoms.

Our aggregational science, which makes everything inorganic and organic result from the mere grouping of atoms and the combination of their elementary forces, strongly inclines philosophical scientists to adopt the above specious reasoning, so lucidly presented by Clifford. We are, therefore, not wasting time in trying to find whether there are any fatal flaws in it, which can be rendered sufficiently apparent to permit mind-stuff henceforth to drop altogether out of philosophical existence.

To get at once into the heart of the problem, let us imagine that we are watching a man's brain *not* at present in functional activity. In conformity with Clifford's fundamental assumption, we have to conclude that this man and his brain have no existence whatever outside our own consciousness; for it is only by means of the feelings in another mind that we are entitled to infer existences besides our own, and here there are at present no feelings stirring in the other mind. Therefore there is no outside existent corresponding to my perception of the man and his brain. Without functional activity, no ejects. And, if no ejects, then nothing.

But, suddenly, the scene changes. Perceptible to our scientific gaze, the observed brain begins to display functional activity. What now, according to Clifford's premises, have we a right to conclude from the change of perception with regard to any corresponding outside existence? Evidently, nothing at all. For the theory does not allow us to

infer outside existence from our own perceptions, and these are the only existences at present in any way conscious to us. We thus fail to reach the very foundation of all outside existence, "the mind of other men," and this not only by questioning the perception of a functionally quiescent brain, but also by questioning the perception of a functionally active brain. If, then, through no means in our possession, we are competent to reach the existence of "other men's minds," how are we to establish a theory of the nature of outside existence in general, solely grounded on the pre-supposed knowledge of such ejective existence? But, if somehow, nevertheless,—how, the theory from a prudent instinct of self-preservation leaves in the dark,—if, in our usual way, we make out that there are feelings in another mind corresponding in their composition to the composition of the motions perceptible in brain function, then we may confidently conclude—what? Evidently, contrary to the expectations of the theory, again nothing at all. For not only the man's gestures and words, by which he expresses his feelings, but also the meaning of these gestures and words,—in fact, all occurrences here extant,—are solely realized as different phenomena within our own individual consciousness, the set of our feelings constituting the gesticulatory motions and the word-sounds being indeed much less inferential, much more immediately externalized by us, than the other set of our feelings constituting their meaning. Here, as everywhere, we have nothing directly before us but our own feelings; and the theory maintains that from our own feelings we can infer no outside existence. Accordingly, the gesticulating and talking man, with all the feelings seemingly expressed by those actions, does not really exist as anything outside our own mind. Indeed, if we were most favorably situated with regard to immediate recognition of what takes place in another being while he is conscious, if we could observe most minutely the brain activity exactly corresponding to his feelings,—feelings, however, which he was not choosing just then to express by any word or sign,—such intimate knowledge could never lead us to infer feelings in any other man's mind, unless, indeed, the definite changes in the brain had been experientially learned to mean definite feelings in the other man's mind, just as his spoken or written words have been learned to mean such feelings.

If, then, according to Clifford's own premises, feelings in other minds cannot be inferred from perceptive occurrences in our own mind, then there can be no ejects, no social objects of any kind, and therewith no mind stuff. Or, in other words, there can be no mentality, nor anything else outside our own complex consciousness.

Clifford set out with only two existents; namely, "my consciousness" and the "mind of other men." It was his purpose to demonstrate, on the strength of this assumption, that mental existence of a more elementary kind than that found in complex organisms can be rightly inferred; in fact, that all existence is made up of mental elements. He wished to prove that external reality, accurately corresponding to our perceptive representations, consists of mind-stuff, this mind-stuff being the actual thing-in-itself. We have just seen how completely he has failed in this attempt.

As it is of paramount import to know positively whether our being is of mental consistency or not, we must not grudge the effort needed to dispel once, forever, the uncertainty. This in view, let us then finally cast a glance at the *quasi-mathematical* formula by which Clifford sought to express the relation as conceived by him.

If I could see what was happening in a man's brain while he was looking at a candlestick, I

should discover a definite brain-motion, which, in a certain manner, strictly corresponds to the candlestick. Now, this visibly realized brain-motion, as well as the candlestick I am seeing, are my own perceptions, and are what we call material phenomena. But in the man's mind there exists a "mental image," his image of the candlestick; "and this corresponds to some external reality." Clifford maintains that this inferred "external reality" bears the same relation to the "mental image" that the candlestick in my consciousness bears to the brain-motion in my consciousness. Now, these two percepts of mine are material phenomena, and are made of one and the same stuff. Therefore, the "external reality" corresponding to the "mental image" in the man's mind is made of the same stuff as his mental image; namely, of mind-stuff.

The hollow mathematical sophistry of this "rule of three" argument is easily exposed. This can be done most strikingly by letting the man, instead of looking only at the candlestick, observe at the same time my brain, just as I am supposed to be observing his brain. Under these conditions, it is quite evident that, if his "mental image," his perceptive candlestick, bears the same relation to the "external reality" as my perceptive candlestick bears to the brain-motion in my perception, it follows inevitably that this "external reality" to which his mental candlestick corresponds must necessarily be his own perception of my cerebral activity; i.e., his own *intrinsic* mental state is itself the "external reality" to which his "mental image" corresponds,—which assertion is unmitigated nonsense.

For The Index.

ROBBED: FOR CONSCIENCE' SAKE.

I had a dove whose cooing soft fell sweet
Upon my ear; who clasped with cold, pink feet
My finger close, and leaned his fearless head
Against my cheek;—now, bleeding,
My poor dove dying lies.

I had a babe who six sweet months had blessed
My heart, who knew my voice, and smiled at me,
Who lay upon my bosom day and night,
Who fed from my own life, for whose sweet sake
All life was good. He's gone! They've taken him
Away! My babe! my babe! My flower of joy!
And he will turn and stretch out helpless hands,
And open eyes of blue bewilderment,
And not know in his baby mind what's wrong,
But feel all lost and strange. Ah! pitiful.
My babe! My babe!

Oh, all you lost ones, would that I could gather you!
Oh, all you left ones, would that I could comfort you!
And breathe on you, and warm you with my love.

I had a friend, a tender friend,
My dove and babe in one,—a spirit,
Too, of loftiest lineament.
A fire of holy passion for
The right burnt in her; tender ruth
For sorrow; and, for sin, divine
Compassion; that deep love she had
That makes the gentlest strong to bear,
To do and help. Like some sweet fawn
She moved and looked: when sorrow left
Her free, she grew as gay as spring
Bird's song, nor bird nor song more full
Of grace and beauty; for the soul
Within found fitting outward sign.
In movement, look, and tone, of her
Most lovely presence. But sorrow
Made his home with her, and laid his
Chill hand on her heart, blighting her
Joyous life till all its wheels dragged
Slow. Then weary, and with drooping
Wing, she lay upon my breast.
She lay within my arms, propt by
My beating heart, and resting in
My love. O sweet, rest full and deep,
That love will never fail.

But now
I stretch out empty arms that find
You not, yet know you miss their clasp.
Now they would keep you far, forbid
To me, the heretic, your love.

And I must long to have, and you
Must long to come? Yet have not? Come not?
Who then dares stand between? Our love
Remains the same; our common bond
Of service to all goodness, love,
And truth, doth bind our loves in one.
And shall the ungenerous thought,
The feeble heart, that fails to know
The servant of one king, save when
They wear one livery, bid us part?
Under power? Never! By all that's true,
'Gainst all that's false and feeble, we will
Meet! You know I love the truth
And search for it, and try to serve
Through twilights dim, with stumblings oft,
The far-off shining good. And you
Will still be true to truthfulness
In me. For what is left to us,
Poor seeking souls, if liberty
For soul's growth be denied? The age
For popes is past. Who grants us privilege?
Who dares withhold? Who lifts from us
Responsibility? Who points
The path? Who dictates our ideal?
Save in appeal to our own heart
And brain,—which, being nature's own,
Will surely some time give response
To nature's truth,—I can see none
Who dares claim such authority.
I feel the throb of nature's pulse
Alone, and to her laws I bow
Without me and within.

So, sweet,
My friend, be comforted! (Thou gentlest
Follower of the gentle Christ!) I must
To liberty of Conscience first
Be true; but on her altar I
Can hear no voice that bids me lay
Your love, nor yet the privilege
And dear delight of meeting you.
Rather, I seem to hear her bugle call:
"Be true! And show my beauty and my power
By faithfulness to love and to a full
Respect, betwixt such sundered poles of thought."

M. S. GILLILAND.

ROWLAND CONNOR TO ALL UNITARIAN MINISTERS.

Mr. Rowland Connor, of East Saginaw, Mich., is out with "An Open Letter to All Unitarian Ministers," the occasion of which is an article printed in a Western Unitarian monthly, together with letters from Rev. J. T. Sunderland to Mr. Connor, denying the right of the latter, with his views, to call himself a Unitarian. In this "Open Letter," in which are copied the article referred to,—written by Mrs. J. T. Sunderland,—and Mr. Sunderland's letters, in one of which he says: "Unitarianism has always been Christian; certainly, it has always been theistic; most certainly, it has always stood for prayer, and prayer to One who hears, and in some true sense answers prayer. Of course, without such Christian or even theistic belief, you can do a Free Religious or an Ethical work; and, in doing such a work, I, for one, should bid you or any one else God-speed. I very earnestly hope, however, you will be able to show that you are doing more than a Free Religious or Ethical work. I shall very sincerely rejoice, and many others will rejoice with me, in any assurance you may offer that your position and work are those of Christian theism."

To this, Mr. Connor replies with spirit: "The outrageous presumption," he says, "of the man who coolly invites me to step down and out of Unitarianism, and bids me a God-speed into the regions of Free Religion and Ethical Culture unless I can precisely repeat his theological shibboleth, astonishes me beyond measure." He writes in the form of an open letter, because he wishes "to appeal from Mr. Sunderland to the Unitarian denomination." He has, he declares, for a number of years regarded himself and been cordially supported by his co-laborers as an acceptable Unitarian, though fully aware that his philosophy and theology were not those of Mr. Sunderland, whose opinions about God, prayer, immortality, worship, and the Church, he has regarded as superficial and narrow. He wants to know who gave Mr. Sunderland a right to define Unitarianism for him, and claims, however heterodox his views, an equal right with the conservative Unitarian to represent this system and in accordance with the established principle of the denomination. "I wish," he says, "to protest, once only, as vigorously as I know how, against Mr. Sunderland's assumptive methods

and purposes, and then I will quietly abide by the verdict of my peers." He refuses to take an apologizing attitude for any theological opinion he holds, for to do so would be an admission of intellectual dishonesty. It is sufficient that he proclaims no opinion which he is not obliged to hold. "I know full well the Unitarian policy of silence; but I believe that this policy, if longer continued, will degenerate into a cowardliness which will earn the deserved contempt of the very men who ought to be working most earnestly with us." He abhors theological controversy, and wishes to help end it in Unitarianism. "But this end can come only if the denomination will firmly and truthfully avow allegiance to those principles which already commit it to absolute freedom of inquiry and expression. It will never come if one man or any number of men have authority or assume authority, without rebuke, to call another to account for theological opinions which may not happen to fit a prescribed formula." "I will loyally sustain Mr. Sunderland, or any other man, in his right to his own beliefs as a Unitarian, *provided* he shall not attempt to interfere with my equal right. . . . This is the Rubicon which Unitarians must or must not cross; and, as they do the one or the other, may they expect to inherit the kingdom or wilfully throw it away and give the inheritance to others." The policy Mr. Sunderland would have the denomination pursue, if continued, will give Unitarians a set-back, and prevent its occupying the field which it has the opportunity to enter. This policy fastens "intellectual hypocrisy and moral cowardice on the churches of all nations and ages. It makes hypocrites of our young men, and is sapping the moral principles upon which civilization must rest. But this deteriorating influence is inseparable, as I believe, from any denomination which shall attempt, however honestly, to tie up its members to a belief in any dogmatic creed of the past or any theological formula which any man can write at the present day." Mr. Sunderland, the letter says, is making the acceptance by Unitarian churches and conferences of a creed of vague words the one aim of his official ministrations. His sincerity is not doubted; but Mr. Connor says, "I have no doubt, whatever, that a dismal wreck of Unitarian possibilities will be the result, unless he is kindly but firmly bidden to halt." He hopes that Unitarianism will be faithful to its earlier promises. "But, if Mr. Sunderland's meddlesome activity really represents the wish and spirit of the denomination, let the unwelcome fact be established quickly." Such is the substance of Mr. Connor's "Open Letter to All Unitarian Ministers."

A WELL-KNOWN gentleman of ability and learning, for several years a prominent orthodox minister, writes: "I have been delighted with the Rabbi Schindler's essays on the Messiahship of Jesus, as they have appeared in *The Index*. I have seen nothing in all our radical literature to be compared to them in their adaptedness to open the eyes of a large class of church people, whose minds are impervious to the truth as uttered by such men as yourself and Ingersoll. The most orthodox Christian, if he have a reasonable amount of intelligence, would feel curious to know what a scholarly, nineteenth century, American Jew would think, and say, in regard to the *origin* of his religion, and the *doctrines* it teaches. There is not a sentence in all the essays that could give the least offence to the most thin-skinned theologian who accepts the Jewish Scriptures as a part of his Bible, and the God of Abraham, of Isaac, and of Jacob as his God, and the God and Father of our Lord Jesus Christ. How could a few thousand dollars be more wisely spent than in printing a large edition of these essays in handsome style, and sending a copy to each of the thousands of clergymen in this country, to the most of whom it would be a new revelation? Such is the inherent force of the truth they contain that, if a reader's prejudices do not rise like a cloud between himself and them, and thus hinder his vision, he would be led along quietly till he came to the conclusion that the rabbi's view is the correct one. Not that I indorse all the ideas and sentiments of the essays, especially what is said of Unitarianism. To me there is nothing deadlier than Unitarianism. It is a century plant. It began its existence early in this century, and the next will see the grass growing over its grave. It is held together simply by its organization, it having repudiated every one of the cardinal

doctrines which would give it a claim to be called a Christian church; and, after this betrayal, like a distinguished member of the Apostolical College, it hails Jesus, and calls him 'Master'! Will not the Boston wing of the liberal party embrace the tempting opportunity to do a great amount of good by circulating Mr. Schindler's essays over the country?"

BOOK NOTICES.

THE CONTEMPORARY EVOLUTION OF RELIGIOUS THOUGHT IN ENGLAND, AMERICA, AND INDIA. By Count Goblet d'Alviella, Professor of Comparative Theology in the University of Brussels, and formerly member of the Belgian House of Representatives. Translated by J. Moden. New York: G. P. Putnam's Sons.

The Messrs. Putnam have placed all the disciples of liberal thought under lasting obligations by the early republication of Count d'Alviella's most suggestive and interesting survey of the religious tendencies of the present age. Certain phases of this discussion have already been noticed in *The Index*, when the original articles which constitute the substance of some of the chapters of this book appeared in the *Revue des Deux Mondes*; but even these chapters have, the author assures us, undergone "considerable modifications," while those relating to England and India have been completely rewritten.

It is evident at once to the reader that the writer, like his companions in the field of Comparative Religion,—Prof. Max Müller, of Oxford, and Prof. Tiele, of Leyden,—is a man of the most generous culture and the broadest intellectual and religious sympathies. He defines his own position admirably in the Introduction: "Unattached to any church, but in moral and intellectual sympathy with all who, either as representatives of a religious organization or otherwise, are seeking to reconcile religion and reason. . . . I was," he says, "little short of feeling myself a Unitarian when with Dr. Martineau in England, or with Mr. Savage in the United States; a Theist with Mr. Voysey; a Transcendentalist, at Boston with Theodore Parker; a believer in the Divinity of the Cosmos, at New Bedford with Mr. Potter; a Humanitarian, at New York with Mr. Adler; and even a Brahmoist, at Calcutta with the leaders of the Brahmo-Somaj."

Tracing the beginnings of modern rationalism to the Protestant Reformation, he, nevertheless, recognizes the fact that the early reformers were quite blind to the character of the new spirit which they were introducing into the thought of Christendom. "In point of fact," he says of the reformation in England, "the human conscience had merely exchanged tyrants by this shifting of supremacy." Nevertheless, the heaven had been introduced, which would at last result in the recognition of reason as the final arbiter upon all questions of dogmatic belief. "The Reformation could not escape in England, any more than elsewhere, the application of its central principle, which consisted of setting up the authority of the individual conscience." It came to pass, therefore, that, in the development of the latitudinarian tendencies of the State Church, and in those controversies which were continually arising in and among the various dissenting sects, there was a constantly growing appeal to the conscience and rational nature of the individual.

One of the most interesting chapters in the book is the one entitled "The Philosophy of Evolution and the Crisis of Theism." The tendency of modern literature and philosophy to introduce the principle of development into everything is traced back of Darwin to its source in Germany; and, by its final elimination of the old notion of special creation from the order of Nature, it is seen to come in conflict with conceptions which had long been held as fundamental to the principle of theism. In Spencer's doctrine of the Unknowable, or Absolute, as the "inner or essential nature of force, matter, and motion, of time and space, and even of consciousness itself,"—a conception to which, though "rigidly refusing to define," but treating it as "*Being* and as *Power*," he ascribes "immanence, unity, omnipresence, and unlimited persistence in time and space,"—Count d'Alviella sees the saving feature which harmonizes the philosophy of evolution with the God-Idea.

Following an interesting chapter on "The Progress of Thought in Orthodox Protestantism," in which special stress is laid upon the decline of the belief in

the miraculous in all Christian denominations, and upon the liberal and rationalistic tendencies of the scholars of the Broad Church, we have a clear and able *résumé* of the origin and progress of English Unitarianism, the history of which "is closely connected in England with the progress of free inquiry." Treating Priestley as the leading figure in the earlier period of the Unitarian movement, he outlines its rational advance from his unquestioning acceptance of the validity of revelation, and of the miracles of the New Testament as a supernatural proof of the divine mission of Jesus, to the present time.

Our author evidently does not look for the culmination or concentration of the rational movement in religion in any existing sect or body of the Christian Church. More than half of his book is devoted to an interesting study of movements outside of avowedly Christian limitations; in England, to the work of such men as the Rev. Charles Voysey, Mr. Moncure D. Conway, Richard Congreve, and Frederic Harrison. A generous notice is given of the secular movement, of which George Jacob Holyoake and Charles Bradlaugh are named as the most distinguished representatives. The genesis of Unitarianism in the United States is traced to New England Puritanism, as modified by the principle of religious liberty, first introduced into the Colony of Rhode Island by Roger Williams. The influence of Kant, Jacobi, and the German Transcendentalists on the development of New England Transcendentalism is recognized and noted, and generous tributes are paid to Emerson and Parker as the leading representatives of this movement. Count d'Alviella's discussion of the Free Religious movement, and his numerous and always appreciative allusions to *The Index*, have already been fairly treated in these columns. He gives an interesting account of Prof. Adler's Ethical Culture Society, and notes the tendency of the advanced wing of the Unitarians to coalesce with the Free Religionists, and to adopt their platform of "Freedom, Fellowship, and Character in Religion." The constructive work of Mr. Savage in its relation to the philosophy of Herbert Spencer is particularly described and commended, as also the Cosmian tendencies of Mr. Potter.

In the chapters on "Theism in Contemporary India," "The Social Reforms of the Brahmo-Somaj," "The Eclecticism of the Brahma Dharma in its Struggle with Hindu Mysticism," and "The Syncretism of the New Dispensation," we have the most complete and accurate history of Brahmoism that can be found anywhere outside of Miss Collet's *Year-Book*. Respecting the unfortunate divisions of the Brahmo-Somaj, Count d'Alviella evidently sympathizes rather with the liberal Sādhārān Somaj, which represents, as he says, "the genuine idea of Brahmoism in its integrity," than with the followers of Chunder Sen. He criticises the later eccentricities of the leader of the "New Dispensation" as "full of equivocal positions and dangers," and thinks it possible that he "may yet be raised to the dignity of an Avatar, and his Church become a simple variety of the Vishnu sects." Still, he credits him with sincerity, devotion, and marked ability. His final conclusion appears to be that the reform in Hinduism will come from within rather than from without, and that the liberal Brahmoism "seems most closely to correspond with the present direction of Hindu thought."

In his final summary, our author presents the hopeful view that we are now at the beginning of a constructive period of religious development. The old philosophies appear to be converging "toward a common stand-point, possibly with a view to making a permanent compromise by the adoption of some system which, while it admits that positive knowledge is limited to the phenomenal world, shall proclaim the absolute existence of a transcendent Reality." The eclecticism produced by the universal extension of modern knowledge forbids us to expect the triumph, either actually or nominally, of any religion which has heretofore been dominant in the world's history. Among the lower classes, in such religious conceptions as the belief in spiritism, or the eccentricities of the Salvation Army, we see evidence of a rising "hunger for spiritual food" which existing forms of religion fail to supply. What may appear superficially as the last gasp of a dying religion is rather, to the thoughtful mind, the sign and promise of a rising faith. Yet we cannot hastily conclude in what form this faith will finally express itself.

"With all deference to human pride, be it said, everything in nature is of humble origin, and no one can say to-day whether the unconscious mission of the publicans and fishermen, who grouped themselves around a sweet and mystic idealist on the shores of Lake Tiberius eighteen centuries ago, will not be renewed to-morrow by some band of Spiritualists holding their séances in a recess of the Rocky Mountains; by some gathering of enthusiasts discussing socialism in a back parlor in London; or by some confraternity of ascetics meditating, like the Essenes of old, on the miseries of the world in a jungle of Hindustan."

But, powerless as we are to determine the form of the coming universal religion, we may at least predict that it will centre around those aspects of the Divine which appear to us as Science, Law, Harmony, and consequently Justice. "The faith of the future will have to take note of the movement which has prevailed in the realm of science; it will have to adapt its theology to the ideas of immanence, continuity, and uniformity in the order of the universe. . . . It will have to relegate the contemplation of supersensible things to the second rank, in order to concentrate the activity of society upon the amelioration of the present world." It will have to "react against the apotheosis of force, and to establish on a religious foundation the rights of the individual. It must not only present us with its solution of the problem of evil, but it must likewise provide us with a remedy, so that more justice may be brought into the relations of men."

"If, in developing these indispensable elements of a progressive and harmonious culture," our author says in conclusion, "this faith succeeds in retaining the principles of sincerity, spirituality, and fidelity to duty, together with the devotedness and enthusiasm which have constituted the glory and led to the success of its predecessor, why need we concern ourselves about the name and symbol under which it may be manifested, in order to secure the peace of the human soul and the regeneration of the world!"

L. G. J.

A MORTAL ANTIPATHY: First Opening of the New Portfolio. By Oliver Wendell Holmes. Boston: Houghton, Mifflin & Co. Price \$1.50.

Those who read the first chapter of "The New Portfolio" when it appeared in the pages of the *Atlantic Monthly* could not have guessed from its charmingly reminiscent style, which has a curiously "Spectator"-like tone, that it was to be the prologue to a psychological love story, which now appears, with prologue and epilogue attached, in this handsome volume under the title of *A Mortal Antipathy*. And none who did not previously know the age of the author would guess or believe, especially after reading the exciting chapters descriptive of a boat-race and of a fire, that he was in need of the warnings thus humorously referred to in the closing chapter. "I am reminded, from time to time, by the correspondents who ask a certain small favor of me, that, as I can only expect to be with my surviving contemporaries a very little while longer, they would be much obliged if I would hurry up my answer before it is too late. They are right, these delicious unknown friends of mine, in reminding me of a fact which I cannot gainsay, and might suffer to pass from my recollection. I thank them for recalling my attention to a truth which I shall be wiser, if not more hilarious, for remembering." But, in spite of Dr. Holmes' seventy-six years, he has written a very charming, if somewhat scientific novel, which deals mainly with the hopes, ambitions, possibilities, joys, fears, friendships, and loves which belong to youth and health, and has drawn his portraits with the hand of a master limner. The "Mortal Antipathy" which overshadows the life of one of his chief characters, an antipathy which is overcome by a somewhat "heroic" treatment, is one of those psychological studies (founded probably on his personal experience and observation as a physician) to which Dr. Holmes seems partial in his stories, as instanced in *Elsie Venner* and other of his writings, and will prove very interesting reading to those who care more for the scientific than the romantic side of such investigations; while the vital charm of the recital will enchain the attention of the mass of readers who care only for the plot and dénouement of a story, regardless of its evidences of scholarship, thoughtful treatment, or scientific accuracy.

S. A. U.

TEN BOYS WHO LIVED ON THE ROAD FROM LONG AGO TO NOW. By Jane Andrews. Boston: Lee & Shepard. pp. 240. Price \$1.00.

There is a wide field of study made very enticing in this book, which is calculated not only to be interesting as a story-book containing only "true" stories, but as an incentive to future investigations in history and science by the child readers of to-day. Before telling who the "boys who lived on the road from long ago to now" were, let us allow the bright narrator of their stories to tell us, as she does in the introduction, what were the way stations on that road, and what was its length. First, the list of stations: "From Now to the Old Revolutionary Days; From the Revolution to the Time of the Puritans, both in England and America; From Puritans to the Reign of Queen Elizabeth; From Queen Elizabeth to the Age of Chivalry; From the Age of Chivalry to the Early Saxons; From Saxons to Romans; From Romans to Greeks; From Greeks to Persians; From Persians to Hindus and Aryans." The length of the journey "from now to long ago" included in this description was between three and four thousand years. In her preface, the author states that, "as it has been my intention to trace our own race from its Aryan source to its present type, I have not turned aside to consider other races, perhaps not less interesting." The "boys" are the following: "Kablū, the Aryan Boy"; "Darius, the Persian Boy"; "Cleon, the Greek Boy"; "Horatius, the Roman Boy"; "Wulf, the Saxon Boy"; "Gilbert, the Page," an English boy; "Roger, the English Lad, who longed to sail the Spanish Main"; "Ezekiel Fuller, the Puritan Boy"; "Jonathan Dawson, the Yankee Boy"; and "Frank Wilson, the Boy of 1885," for the benefit of whose comrades this book is written. There is not a dull page in this book. In describing each character, the manners, customs, and fashions of the day in which he lived are vividly depicted. The child life or, rather, boy life, of each period and nation, is explained in a lively and realistic style. As an inducement to the studies of history and ethnology among young people, nothing better could be devised.

S. A. U.

FOILED. By a Lawyer. A Story of Chicago. Chicago: Clark & Longley. 1885.

This anonymous novel seems to contain in its title a *double entendre*; i. e., that the chief villain or villainess of the story was "foiled by a lawyer," and also that a lawyer wrote the story,—a fact that is quite patent throughout the work. The story, which is naturally told, is one dealing mainly with the technicalities of law; and the moral—if there is one—seems to be, "Hear all sides, then decide." The earnest tone of the writer, in conjunction with the particularity with which details are dwelt upon, impresses the reader with a sense that it is a transcript of actual occurrences, or at least an approach to the realistic school of romance writing. Although the tale is exceedingly well told, and the reader's attention held close to the dénouement, yet the case is so exceptional in occurrence that it is felt that only strong personal feeling could have prompted the writing of it; but whoever wrote it, from whatever purpose, is capable of even better work in the future.

THE *Art Amateur* for January is a very practical number, and is full of excellent suggestions to students and amateurs in almost every branch of plastic art. This is good: "The best draughtsmen among our painters are those who practise modelling as well as drawing. Sculpture must ever be the backbone in the graphic arts; and, where it is neglected, the work will be weaker in consequence." And from Inness this: "If I had a pupil in my studio, I would say to him, 'Sit down and paint.' Now and then, I would talk to him and criticise him, and suggest to him what to do; but he would have to work out his own salvation, if he had it in him. If he hadn't, he would simply not be saved." There are lively sketches of the drama and of art exhibitions, and new material for the discussion in regard to the Cesnola collection. Two very telling sketches are taken from Frank Beard's *Humor in Animals*, a title which sounds very attractive. The designs for ornament include some for church decorations, which will be popular at the festive season. Some instructions for "photographing the baby" may be useful in almost every household. We hope the series of biographical sketches of living artists, which have proved so interesting, dare not come to an end. We heartily

wish the *Art Amateur* a new year of continued success. It has the admirable characteristic of steady improvement.

THE almanac for 1886 of the American Turners, just published in German by the Freidenker Company, 470 East Water Street, Milwaukee, contains a number of spirited poems and several essays of great value,—for instance, the memorial tribute, headed "*Ein Gedenkblatt*," to the German patriots of 1848; a collection of popular witticisms on parsons, doctors, lawyers, tradesmen, mechanics, etc., much in the style of our comic valentines; and an account, by the editor of the *Freidenker*, of the service rendered by Karl Heinzen to the anti-slavery cause.

Lectures by Rabbi Solomon Schindler.

1. INTRODUCTORY.
2. TWO THOUSAND YEARS AGO.
3. THE CARPENTER'S SON.
4. JUDAISM THE MOTHER, AND CHRISTIANITY THE DAUGHTER.

As a special inducement to Liberals to distribute these lectures, which are full of radical thought presented in the plainest language, they are now offered at 5 cts. a copy; 10 copies for 40 cts.; 30 copies for \$1.00.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

The Poet as a Craftsman.

By WM. SLOANE KENNEDY.

A gird at rhyme and metres, with a glance ahead in prophecy and outline of a more spontaneous poetical style.

Letterpress, paper covers. Price 25 cents. By mail, postpaid, on receipt of price.

For sale at THE INDEX office, 44 Boylston Street, Boston.

By AARON HAHN, Rabbi, Cleveland, Ohio.

BLOOK & CO., Cincinnati, Ohio, Publishers.

Sent by mail, prepaid, for \$1.50.

The Contemporary Evolution of Religious Thought in England, America, and India.

By Count GORLET D'ALVIELLA. Translated by J. MODEN. Price \$3.00. For sale at The Index office.

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crago.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

THE INDEX,
44 BOYLSTON STREET, BOSTON.

SCIENTIFIC THEISM.

By FRANCIS ELLINGWOOD ABBOT, PH.D.

This work includes the substance of a lecture delivered last July at the Concord School of Philosophy. It is part of a new philosophy of Evolution, vitalized by the principle of UNIVERSAL ENDOGENIC TELEOLOGY and by the substitution of the ORGANIC THEORY OF EVOLUTION for the MECHANICAL THEORY advocated by Spencer and Haeckel. Its purpose is to philosophize the scientific method, and to show that modern science, interpreted by its philosophized method rather than by its non-philosophic special results, leads, not to Atheism, not to Agnosticism, not to Idealism, but to a REALISTIC SPIRITUAL THEISM which will satisfy both "the head" and "the heart."

1 vol., 12mo. Price \$2.00.

LITTLE, BROWN & CO., PUBLISHERS,
254 WASHINGTON STREET, BOSTON.

BESURE to include in your list of **PERIODICALS FOR 1886** some, if not all, of the following, for they are the very best and are found in the homes of all cultured people.

Nineteenth Century.

No other journal numbers among its contributors so many brilliant thinkers and profound scholars. The most important changes in the thought of the times are submitted to searching criticism and review.

Contemporary Review.

The monthly contributions, by eminent writers, describing the contemporary life and thought of the leading nations of the world, give it an unique position among other Journals, presenting an epitome of all that best deserves attention in the world of thought and action.

Fortnightly Review.

The greatest exponent of radicalism in England. Its Editors and Contributors have ever been noted as leaders of progress, and have formed a school of advanced thinkers, which may justly be cited as the most powerful factor of reform in the British Empire and elsewhere.

British Quarterly.

While discussing all branches of modern thought, is particularly devoted to the consideration of the more recent theories in Theology and Philosophy. Its articles are characterized by a keenly critical spirit, and for fulness of treatment and justness of criticism it stands alone, in its special field, among the periodicals of the world.

Edinburgh Review.

Numbers among its contributors the greatest names that have moulded English thought for the past eighty years. While its policy admits the discussion of all questions, its conservatism is tempered with a liberalism that marks it as the INDEPENDENT REVIEW of the world.

Quarterly Review.

Its reviews cover all the leading issues of the day, and embrace the latest discoveries in Science, in History, and in Archaeology. Much space is devoted to ecclesiastical history and matters connected with the Church, thus making the Review invaluable to the clerical student, as well as of great interest to the general reader.

Westminster Review.

Is notable for the latitude of its theological views, many of the most advanced of modern theories in theology having received in its pages their first authoritative support. A distinctive feature of this Review is its "INDEPENDENT SECTION," containing articles advocating views at variance with those of its editors.

Blackwood's Magazine.

Is the leading and most popular magazine of Great Britain. The tone of its articles, be they fiction, incidents of travel, critical or political essays, is unexceptionable, rendering it most desirable for the Home Circle.

All of above are printed line for line—page for page—with English Editions, but in handier form.

Shakespeariana.

While aiming to furnish a recognized medium for the interchange of views among Shakespearian scholars, and to afford the student the fullest information relative to Shakespear's art, life and writings, SHAKESPEARIANA is specially designed to extend the influence of Shakespeare as a popular educator, and to stimulate the study of his works in our colleges and institutions of learning.

THE UNIVERSITY.

FOUNDED 1877.

A Literary and Critical Journal, published every Saturday, at Chicago.

The University is not the organ of any college; it is not distinctively an educational paper; but it aims to deal with living issues from the university standpoint,—to reflect the ripest American scholarship in its discussion of politics, religion, education, science, literature, and art in their various bearings. Its publishers solicit the subscription of all persons interested in the support of an independent exponent of liberal culture on a plane of superior excellence.

Price, per year, \$2.50; per copy, 5 cents. Special trial offer to those who see this advertisement. Send 25 two-cent stamps and receive **The University** three months on trial. Specimen copies—three different issues—will be mailed to any address for examination on receipt of 10 cents. Address

THE

"FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnzeitung.)

Editor, C. Hermann Beppe.

TERMS, PER ANNUM, IN ADVANCE:
UNITED STATES AND CANADA:

Freidenker..... \$2.50
Turnerische Ausgabe des Freidenker (Amerikanische Turnzeitung)..... 3.00

EUROPE:
Freidenker..... \$3.00
Turnerische Ausgabe des Freidenker (Amerikanische Turnzeitung)..... 3.50

Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirteenth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The Amerikanische Turnzeitung is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastical art.

Since Jan. 1, 1885, the Freidenker has been enlarged, thus furnishing considerably more reading matter, while the PRICE REMAINS THE SAME AS BEFORE.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the Freidenker and its former supplement, the Turnzeitung, have been consolidated into one paper, called Amerikanische Turnzeitung, with the sub-heading "Turnerische Ausgabe des Freidenker."

This paper contains more reading matter than furnished by both the Freidenker and Turnzeitung heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the Freidenker and the Amerikanische Turnzeitung a wider circulation.

We also publish

"Erziehungsblaetter,"

fuer Schule und Haus.

A Liberal German Educational Monthly.
(Organ of the German-American Teachers' Association.)

Editor:
MAXIMILIAN GROSSMANN, Milwaukee, Wis.

Associate Editors:
H. H. FICK, Chicago, Ill.
H. SCHURICHT, Chicago, Ill.

16 large quarto pages, with four-page cover.
Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

CURRENT TOPICS.

BY B. F. U.

GREVY, who was re-elected, last Monday, President of the French Republic for seven years, is in his seventy-third year.

It is now stated that the sentiment in England against an independent Irish Parliament is strong, and that the Tories and Liberals have come nearer together, and will agree in rejecting the proposal of Parnell.

REV. M. K. SCHERMERHORN, the former Unitarian minister, who failed in his attempt to found a theistic church awhile ago, was on a recent Sunday ordained a deacon in the Protestant Episcopal ministry in St. Thomas Church, New York.

In an extremely interesting lecture before the Parker Memorial Science Class last Sunday, on "A Family of Norwegian Lapps and their Herd of Reindeer," Dr. Samuel Kneeland adduced strong evidence in support of the claim that the Lapplanders are of Asiatic origin.

ONE of the headings in the Boston *Herald* of last Monday morning was: "Occult Science. A Boston theosophist teaches the Art of Immortality, Mesmerism, Mind Cure, Science and Astrology. The Doctrine of Planetary Influence Revived." On the same page is a report of the Sunday evening service of Downs, the preacher, who is using the notoriety into which his conduct has brought him to attract the crowd to hear him. "Downs and Coffey services in the Boston Theatre last evening. Three thousand persons for an audience. The pastor sermonizes, and so does the lawyer." Evidently, religion is "booming" in Boston, but Science has been compelled to remove to New York.

Six separate Sunday-schools for the Christianization of the Chinese have been established in New York City; and the leaders of these schools, until recently, supposed their work quite successful. But investigation shows that all, or nearly all,

the supposed converts joined in the late glorification of Joss in the new temple provided for him. The attendants at the Sunday-school seem to have had no other object than getting an education in the English language. "The consul declares, positively, that there is not a single sincere Christian among them, and they do not dream of turning from Joss as their great divinity. A few may mix a little of Christian doctrine with their native religion, but they invariably give supremacy to Joss."

REFERRING to the Brockton strike, the Haverhill *Laborer* remarks that "by far the most important moral of the contest is that which may be drawn from the triumph of arbitration. If a difficulty of the magnitude of that just ended may be successfully settled,—a difficulty where millions of dollars were involved,—it would seem almost final to say that the minor troubles arising between employes and employers elsewhere may not be easily adjusted. We say now, as we have said before, that, if a rational and reasonable spirit of toleration exists between hirer and hired, ninety-nine troubles out of every hundred springing up in the working world may be settled without a strike. We therefore hail the Brockton *finale* as of inestimable benefit in advancing this fundamental principle of the Knights of Labor."

THE New England Cremation Society, incorporated for the purpose of providing the necessary appliances and facilities for the cremation of the bodies of the dead, has a capital stock of \$25,000, distributed into twenty-five hundred shares. The names of subscribers will be received at 61 Court Street, Boston (Room 6). Ten per cent. of the value of each share is to be paid at the time of subscribing; and the balance, when called for, by the council of the society, after the whole of the capital stock has been subscribed. The members of the council are John Storer Cobb, president; Nathan Appleton, Emily J. F. Newhall, Rev. Frederick Frothingham, vice-presidents; John Ritche, treasurer; Sidney P. Brown, recording and financial secretary; Lois R. Frothingham, corresponding secretary; Carl Zerrahn, Frederick S. Cabot, Mary J. Safford, M.D., and Lyman S. Hapgood. The post-office address of the society is Post-office Box 1207, Boston, Mass.

A COURSE of six lectures on the "Development of Poetry" will be given by Virginia Vaughn at 5 Park Street, on Tuesday and Thursday afternoons, beginning on Tuesday of next week (January 5). In these lectures, the great poets and principal poetic epochs will be discussed in accordance with a philosophical principle which, it is hoped, will cast light upon the whole subject of literature and art, and rectify the present uncertain, contradictory, and false standards of criticism. Virginia Vaughn, the lecturer, although an American, has been for some years a resident in England, where she has made a special study of the subject of these lectures; and, if we may judge from a preliminary discourse recently given by her at the Women's Educational and Industrial Union

Rooms, they will be of great interest from their large inclusiveness and catholicity of spirit. Tickets for the course, \$3.00; single lecture, 75 cents each.

A WITNESS for the government in the trial of Robert Hertel, charged with fraud and conspiracy in Chicago, when about to be sworn, said that he believed neither in God nor the immortality of the soul, doctrines he could not honestly affirm or deny. Counsel for the defendant immediately interposed an objection to the admission of the witness' testimony. The latter cited the clause of the Constitution of Illinois, adopted in 1870: "And no person shall be denied any civil or political right, privilege, or capacity on account of his religious opinions." The judge thought "the Constitution of 1870 stepped in to aid this class of persons," meaning agnostics, and directed the witness to be sworn. The defence noted an exception. The question will go up to the Supreme Court, the court remarking that, if the position taken by counsel was correct, a very large number of persons must be prevented from testifying. "Perhaps," remarks the *Boston Transcript*, "the judge queried in his own mind whether there was much difference between the opinion secretly held by the defendant's counsel and that conscientiously avowed by the agnostic witness. These old inhibitions have lingered too long into the light of the nineteenth century."

At a labor convention composed of delegates from the various labor leagues of the State, recently held in San Francisco, Cal., a resolution was adopted giving the Chinese residents of California sixty days in which to leave. The Knights of Labor, at whose call the convention assembled, being unable to control the proceedings, withdrew in a body. The *Golden Gate* comments thus on the folly enacted: "Now, having given the Chinaman sixty days in which to dispose of his traps and take himself out of the country, suppose the aforesaid heathen should refuse to obey the mandate of the labor convention, then what might be expected to happen? Surely, it will take something more than a resolution to dispose of a hundred thousand Chinamen. There are not ships enough in our port, nor is there likely to be for the next year, to carry all of them back to China. It will hardly do to kill them; and, then, they might prove obstinate, and insist that they had a right to live, which would make it unpleasant for those who thought otherwise. And then, again, Uncle Sam might have a few words to say about it. He invited these Chinese here in the first place, under stipulations for their protection; and he is bound to see that they are not unduly abused. He is willing that we should call them hard names, and get the best of them (if we can), in all sorts of business ways; but, when Coroner O'Donnell and his cohorts shall move down upon them *vi et armis*, he will be quite likely to object. And that would place the wild Sand-lotter in an uncomfortable predicament. Let us hope that the honest and intelligent laborers of this country will be guided by wiser councils than those which prevailed at their recent convention."

RELIGIOUS REVIVALISM.

The attempt in New York, within the lines of the staid and eminently decorous Episcopal Church, to introduce a religious revival, has led to the question whether there is soon to be in this country a wide-spread and intense religious excitement, akin to the times of ferment in the churches which elderly people remember in the generations that are past. One thing, however, is noticeable about this Episcopal effort in New York. It lacks the popular excitement which accompanies a revival season led by denominations like the Methodist or the Baptist. The meetings are undoubtedly large, churches are said to be crowded; but the work appears to be done mainly by clergymen. We do not hear of congregations getting excited, and of the "slaying power" prostrating the sinners in convulsive trances. It would be hard to conceive, indeed, of Episcopalians, though they may repeat with æsthetic intonation every Sunday the liturgical confession, "Have mercy upon us miserable sinners," expressing a sense of their undone and desperate condition by rolling upon their church floors.

It is also noteworthy that the discourses—at least, those which have been reported as given in Trinity Church and intended for the business men of Wall Street and vicinity—have been comparatively free from theological dogma. Doubtless, appeals of a different sort were made in other localities to less enlightened audiences; but, to the thousands of business men that have crowded Trinity Church at noon, the sermons, especially those by Rev. Mr. Aitken, of England, have been mainly of a practical character. They have dealt well-aimed blows at vices which infest the business and fashionable circles of all great cities. Excepting an incidental phrase here and there, and possibly an underlying assumption, not brought into prominence, that the Church alone holds the remedy, a liberal thinker would not find much to object to in these sermons. Such preaching is, certainly, greatly needed, and may do great good. But it is doubtful whether it has the elements of what has popularly been regarded as a religious revival. The Episcopalians call their work, not a revival, but a "church mission," following in this the example of the Catholics; and, like the Catholics, they are able, through their ecclesiastical machinery and usages, to keep the emotional excitement of their congregations in check.

The time, indeed, is probably almost past when a religious revival of the old-fashioned sort can seize upon the feelings of any very large and overwhelming number of the American people. It is nearly thirty years since such a religious excitement swept through the United States. The last revival of historical note was just subsequent to the great financial collapse and panic of 1857. So generally was it participated in by the churches of all denominations that even liberal Unitarian societies were, in not a few cases, so far moved from the sober and even tenor of their ways as to hold special conference and prayer meetings on weekday evenings. It was not difficult, nor was it unphilosophical, to trace a logical connection between the wide-spread religious excitement of that time and the general business disaster and peculiar severity of its consequences. A religious revival, more or less marked, has quite commonly followed or attended such a period of financial catastrophe.

The collapse of material interests, the apparent failure of this world's hopes and the vanishing of its goods, has quite naturally set people to thinking, according to their theological training, about their future spiritual welfare; and—a point of no small importance—it has also given time for such think-

ing. The majority of the American population seventy-five and a hundred years ago had but two resources for occupation; namely, to get a living (and to lay up as much of this world's wealth beyond that point as Heaven might grant) and to save their souls. Ordinarily, the former was much the more pressing occupation; but when, for any cause, this pressure was abated or made of no avail, then they directed their released faculties with the same zeal to getting religion and laying up treasure in heaven.

So much of the nature of law had this conjunction become between a dull or collapsed business and an awakened interest in religion that it was predicted by many persons that the extensive financial disaster of 1873 would be followed by another general religious revival. But, for some reason, this prediction was not fulfilled,—at least, not at all to the extent expected. There were local excitements, where there were leaders to promote them, but no general spontaneous outburst of popular emotion. The crowded Moody and Sankey meetings came in certain cities; but they were designed, arranged, and promoted by very well-calculated machinery. There was no spontaneity about them. They served, in fact, to draw off and discharge through the mechanical apparatus of Mr. Moody's contrivance whatever emotional electricity might have been lurking in separate churches and communities, ready to break forth in a local revival. People went from their own churches and towns to the Moody and Sankey meetings instead of "reviving" at home.

And hence, for this and other reasons, since the great revival of '57 and '58, there has been no such general and spontaneous religious commotion as then agitated the country, but only local, spasmodic, and somewhat mechanical ebullitions of religious excitement. These local revivalistic exhibitions come with more or less regularity in certain denominations every year. Given an emotional, impulsive speaker, an excitable temperament in the hearers, lagging social interests, a rather dull season in business, a theological belief that requires one to know just the moment when his religion began and the feelings that attended the process, and given withal a narrow and unenlightened mental concentration on the one problem of soul-saving, and you have the conditions for starting an ordinary religious revival. For an extraordinary one, something more is needed,—something to arouse that contagious magnetism of a common sympathy which spreads from person to person, from neighborhood to neighborhood, from town to town, until a whole people (so far as their theological education will admit) seem to be melted together with one emotion and one purpose. Sometimes, the cause of the sympathy is obvious. Again, it is more hidden and difficult to explain. The revivalists themselves attempt no other explanation than by calling it the miraculous outpouring of the Holy Spirit. Such a revival was that which was produced under the preaching of Whitefield in the last century. And that which followed the financial catastrophe of '57 had similar characteristics, in respect to the extent it absorbed popular sympathy.

But such an exhibition of wide-spread common sympathy is not necessarily confined to the phenomena of religious revivals, nor is any miracle required to explain it. People who are old enough to remember that sudden and wonderful "uprising" of the North, when the secession-rebellion fired on Fort Sumter, know how the heart of a community may be changed from a condition of apathy and quiet to a most intense and active enthusiasm. In a day, a wave of patriotic emotion swept through the country, which, through

the unselfish purposes it begot and the noble spirit of devotion it summoned into existence, might not unworthily be called a revival of genuine religion. It was a veritable Pentecost in this rational nineteenth century, and in the unromantic American Republic. Of a different type of emotion, but similar in its contagious spread through great multitudes of population, was the common national sympathy which was evoked by the murder and long prostration of President Garfield, and, in this present year, by the sickness and death of Gen. Grant. In such historic events, it is easy to trace the cause of a powerful national emotion which may have profound and lasting effects.

The most efficient cause, doubtless, why a religious revival of the old-fashioned sort is not easily aroused to-day is the growing doubt and disbelief in respect to the old system of evangelical theology. The fear of hell is vanishing. Sheol is not nearly so good a word for the revival preacher to conjure with. The doctrines of the fall of man and the atonement on Calvary have had much of the old force taken out of them. Common-sense men and women, of all sects, are coming to see that this world is one of life-long struggle and education, and not a scene for sudden conversions in the trance of a prayer-meeting. Yet there is nothing irrational in the belief that there may yet come some fresh awakening of religious thought, suffused with emotion, which will be so presented to mankind as to call forth a new and common devotion, on the part of great multitudes of people, to the higher interests of human life. The humanitarian side of religion furnishes a field for the most heroic enthusiasms and activities, and in unselfish devotion to truth and human welfare there is that nobility of action which always attracts what is noblest in the human heart.

WM. J. POTTER.

FIRST PRINCIPLES IN BELIEF.

I.

Since man has been man, he has questioned himself and his surroundings. The half-clad wanderer in buried forests had a catechism for the spheres as holy and earnest as any philosophy that originates with modern culture. What is that gracious fount back of endeavor which makes man one with trees and rivers and the grave planets that spin overhead? What is that influence manifest in conscience, in muscle, in heart, in hope,—that sign, as it must be, of some satisfying justice pervading the universe? There has been no age exempt from such appeals. Existence leads inevitably to them. Except where life could have been all brutal or without sight and hearing, we know the travelling spirit to have thus spoken with eternal persistence. Behind every act is the actor. Beneath every pretence is the pretender. The poems that exalt, the orations that impassion, the homilies that give importance to humble effort, would be unintelligible if human life was not their inspiration. Whatsoever men do can be traced deeper than the simple doing. For ill or good, the steps of career cast their shadows. Nothing can escape the analysis. We cannot pause when we have witnessed expression. Whence the waters? To what do we owe the sweet songs of poets? Where arose the impulse that led the soldier to the parapet? In newest childhood, intelligence begins to see that life is more than lip and eye. Hence, the never-satisfied questions. Hence, savagery's resort to murder, and civilization's refinements.

Though all men vaguely understand that something contains us that we cannot comprehend, few men are free to unexpected invitations. If we

endeavor to give riper than common explanation to human existence, we are met by objections whose reason we might disdain, but whose restraints we must respect. Fatherhood confronts us with tradition, and reads us a lesson from revered books. Motherhood appeals against our intellectuality. Life, we are told, is sacred only in one aspect. Therefore, it means much to my neighbor and nothing to me. The springs of action flow for the favored, and leave the strangers to their thirst. Nature is not in the service of all, but acknowledges only a partial duty. Being, in short, has a credal enthronement. Act expresses everything as expository of ritual, and impeaches simple justice that insists upon the sufficiency of its own credentials. Honor misnamed is no longer honor at all. Thus, Buddha, despite the interpretations of generous thought, was less the medium of righteousness than the humblest Christian who walks our streets. Homer, brought to the same court, was inevitably parted from truth, while Milton was necessarily its partner; and, over stream and mountain, words of seership and moral power have in the past borne but one name and been fed by but one motive. Jesus, introduced to this train of reason, was isolated in history. As a great orthodox oracle has informed us, Nazareth gives us the only instruction that goes back of life to its inspiration. Christians, touched to divine power by a certain charm, are alone in their gift of conscience and knowledge of unseen substance. From much noble thought and treasured sentiment, the conclusion of the Caucasian race, so far as we may mass it, has been that the universe is narrow, and that the great inspirer stopped far short of broadest measure in his labor of love. At the outset, no one can avoid these assumptions of instituted thought. We meet them even in our own latent prejudices; and, when we shudder in the dark, we bear witness to their active presence.

I wish, with such touches as seem needful to me, to describe my grounds for not sympathizing with the current view of man's position among men. I feel that whatever reason lies fathomless behind the show of phenomena is *single* and rational. I know nothing that suggests the divisibility of material and spiritual things. No power amenable to probability exists that could parcel out Nature and produce life of merest inanity. The law that breathes in the perfume of the rose trembles in the songs of Burns, and dwells where science holds converse with the mysteries. Had we nerves to scale the hills or vault over Mars, the gift would come of a complot of the elements, never of an insanity or partiality of natural energy. The miracles of our Bibles, the phantasms of ascetics, the fables of the mythological eras, the ghosts of imagination, the visions of starved women, the wonders of Lourdes, hold no secrets, when light peers deep with its thousand eyes. True, men who dwell in perpetual thought of a violation of reason, as the single assurance that sanity rules the spheres, can accept all incoherences as proper food. But, against the blunted theory that so shocks our reverence for the universe, another, that ascribes both the moral and material life to the spirit of order, gains credence, and lures even the unwilling. While science has opened one book, men have closed another. The universe is seen to grow vastly, when viewed as all-embracing. We need no longer have a German or a French or a Chinese hypothesis of love. We feel these to be inefficient, and lose our differences in the infinite seas. As society is greater than the individual, so is the cosmos vaster than one of its forces; and, as the individual stands in stronger light when much is known of his fellows, so do the parts that form the worlds more truly reflect the grandeur of

their law when viewed in the broadest sweep. Because I see this evident unity, I find the ancient belief repugnant to truth. We handle the remains of departed faiths much as souls who are at a loss over discovered antiquities. Wise men in such predicaments distinguish between the active and cabinet values of their possessions. The past had its meaning: the absurd claims of Bourbons cannot hide that; and, in the fulness of its fine confidence, the present, borne on a tide that has known no interruption, insists upon its right of succession.

Men, to-day, are troubled by what they conceive to be the threatenings of religious license. They show much concern lest the new order should build without foundation. But they are not so anxious to prove the basis of their own claims. From antagonists they demand reason. When retorted upon, they presume "custom" and "establishment" to answer for the faith they defend. Bred in grooves, they see no possible paths that have not had their personal espousal. Had they never discovered America, America never would have been. Had India not risen above the obstructions of fanaticism, the land of the Buddha would to this day have remained a waste. This, of course, is passion and sect-hate. I do men the credit of supposing such fallacy to be a veritable planting of the worst foot forward. To the thinkers, whom nature accosts in a known language, there is no existing thing that can be detached from its partnership. Nor is this all. Let us reflect that the same springs that explain Jesus explain Confucius. The muscles and emotions that make up the highest are not unrelated to the lowest. Can men confer other conditions than prevail in nature? Is gravity a factor inactive upon Japanese hills? If virtue can only come through one source, what name will you give to the same effects produced elsewhere? It is a reproach to *derived* honor that *chance* honor partakes of identical qualities. While the conception of individuality robs an old system of thought of borrowed plumage, it bestows upon humanity, as a whole, credit which it has heretofore missed. The fear to surrender these obviously infirm sentiments is less owing to the idea of loss than to the idea of loss without recompense. Men are loath to resign their hitching-posts. What may not become of the steeds that are trusted to the wilderness?

We may read the story of physical and mental development to some profit. The earth conveys but a single note. We know the uniformity of experience. Certain conditions father certain results. It is not the code that makes the man, but the personality that produces the code. Law is unalterable, whether operating upon the trees of the forest or the hearts that beat in human fellowship. Science has shown how certain people in remote regions have pursued identical courses of development when separated from any possible intercourse. More than this, science dares to say that this rule must always obtain under like conditions. It is left to the philosophers of disjointure to dissent. In certain practical lines, the wiser notion is taking effect. For example, when men consult over politics, and notice unsuspected fruition, they turn back, and say wisely that this thing was natural or might have been foreseen. When they mention Theodore Parker, they feel that they discover the promise of the giant American in Bruno or Spinoza or Luther. It is, we can grant, impossible to surprise them in certain commonly trod roads. Cause and effect have at last made the tongue captive, and taken their slow course to heart and brain. Yet the impression remains vague. While partly penetrated, we find that the finer operations of the inclusive truth

evade many who suppose they do it highest reverence. Aside from broken paths, in the entanglements of the abstruser thought, prejudice still has its part, and puts up its barrier.

HORACE L. TRAUBEL.

M. RENAN ON DEMOCRACY.

For a writer who knows nothing of this country from his own observation, and who is in general so amiable and liberal, M. Renan has allowed himself to dogmatize about us in a very harsh manner. Among other things, he has said that the United States have created a considerable popular instruction, and will long have to expiate this fault by their intellectual mediocrity, their vulgarity of manners, their superficial spirit, and their lack of general intelligence. It is somewhat queer that a system of popular instruction should have resulted in a marked lack of general intelligence. But M. Renan presents in himself the curious contrast of a philosophic liberal and a political and social aristocrat united in one and the same person. Shakspeare's Caliban is for him popular sovereignty or democracy incarnated. In his autobiography, or *souvenirs* of his infancy and youth, he says that European society, in tending toward freedom and equality, is at the same time tending toward mediocrity and vulgarity, or, in other words, to what he calls "an American condition of society." "The era of mediocrity in everything is beginning," he says. "Equality begets uniformity; and it is by the sacrifice of the excellent, the remarkable, the extraordinary, that we relieve ourselves of the bad. There is less of coarseness everywhere, but more of vulgarity." Some of our Europeanized Americans also find our republican society mediocre, flat, insipid, and unprofitable, because of the absence here of tall or grand social figures, such as kings, emperors, and arrogant statesmen, we suppose, who concentrate or represent in their own august persons the power and grandeur of entire nations. Europeanized or de-Americanized Americans complain that everybody is middle-sized here, and that even our greatest personages are too much inclined in speech and action to the bourgeois, or grocer, type, affording no satisfaction to that sense of tallness which is so agreeable in Europe. Curiously enough, the august social demi-gods of Europe are apt to be very ordinary, and even homely,—indeed, anything but august in their personal appearance, not at all up to the ideals of what Olympians should be. If we turn from their exterior persons to their minds, they are apt to be as destitute of genius and ability as they are of corporeal beauty and majesty. The occupants of the British throne have been for a century and a half, or rather for two centuries, intellectually considered, the merest mediocrities and figure-heads of state. Kaiser Wilhelm of Germany is a stalwart old drill-sergeant, the merest *meus rex* to Bismarck's *ego*. The late King of Spain was a well-meaning young man, but of no more than ordinary capacity. The King of Italy is a liberal-minded sovereign. He is very well, intellectually, for a king.

Such are the tall or grand figures of European society. Looked at *per se*, they are found to owe their tallness to their positions rather than to any greatness of their own. As long as the nations of Europe will consent that their soils shall be appropriated by the few, and as long as they shall allow their collective power and grandeur to be embodied in a few hereditary personal rulers and domineering statesmen, there will be a glamour about such persons, essentially mediocre though they may be in and of themselves, which will awe the millions of small people who play the part of

born subjects and drudges. Of course, caste imparts to society picturesqueness, and irresponsible authority gives to those who wield it an air of god-like superiority to the men and things beneath them. Privileged classes do not even make a pretence of cultivating the good opinion of their social inferiors. The kindness, good nature, mutual forbearance, and patience under annoyances, characteristic of Americans, have been cited as weak traits of national character. But, in a community where even the humblest citizen has a voice or a vote in moulding public affairs, everybody naturally treats everybody else with some degree of consideration at least, recognizing the fact that the man is the gold, and his social position or rank only the guinea stamp. In its collective capacity, this nation has again and again shown an overwhelming might of character, determination, and indignant energy, before which no obstacle could stand.

Meantime, to return to M. Renan, it is somewhat remarkable that a writer who is a thorough-going liberal in all matters of thought and opinion should contemplate with such disfavor and hostility the tendency of European society toward freedom and equality, as if such a state of society must inevitably be mentally dull and mediocre. Because the people of this country have been thus far, from the very necessities of the case, immersed for the most part in the preliminary business of reclaiming a wild continent and organizing States over its entire length and breadth, and developing its resources internal and external, and thus have been devoted to objective matters rather than to thought, M. Renan jumps to the conclusion that popular freedom and social equality necessarily mean mental ordinariness. It is true that our material grandeur has surpassed our purely intellectual achievements in literature, art, and science; but our achievements in these latter directions have been sufficient to prove that we, too, are

"Of the same stuff, and so allayed,
As that whereof the sun is made,
And of that fibre, quick and strong,
Whose throbs are love, whose thrills are song."

A time will surely come when material interests in this country will cease to be as exacting and all-absorbing as they are now, when the American mind will be at liberty to demonstrate that it is a complex of the minds of the leading races of the world, and therefore a spiritual force, capable of the highest intellectual feats. It is very true that the aristocracy of intellect is the least numerous of aristocracies (and always has been, under all social and political systems). *Per contra*, the aristocracy of wealth is getting to be a rabble in numbers in this country. But there surely must come a time when even the multitude will be lifted to the plane of what are now called the better classes in intelligence, when ignorance and unintelligence will be no longer the rule, even with the masses, but the exception. The civilization of to-day, with its mighty engineers, is democratic to the core. It means well-being of both mind and body for all. M. Renan has been delving all his life in the obscure archives of extinct civilizations, which became extinct because they were exclusive, and left the great masses of mankind in a state of barbarism. The democratic civilization of to-day includes all in its scope, and has the elevation of all at heart. Renan has been so much taken up with the study of the hierarchic, pseudo-democratic, and imperial civilizations of Southern Europe and Western Asia in the far past that he fails to appreciate living communities, whose institutions are thoroughly modern and popular. Instead of recognizing in popular liberty and popular enlightenment the

most advanced steps of civilization and the most hopeful as well as latest aspect of the Time-spirit, he sees in them only portents of mental and moral decline and of a reign of universal intellectual mediocrity and dulness.

As if the universal prevalence of the light of knowledge illumining the minds of all as the minds of only the few have been illumined in the past was a presage of general stupidity and vulgarity! We can already see in this country that the average of popular intelligence has risen so high that men of exceptional ability do not stand out so prominently as they used to do. There is a general intellectual activity and alertness which render leadership, political and other, no longer the necessity it once was. The data for forming correct opinions on all current topics and subjects are now scattered broadcast to the winds, as it were. Let the diffusion of knowledge go on for a century as it has gone on for a few years back, and the *general mind* will throw all individual minds into permanent eclipse, and all men will then, indeed, be wiser than the most highly gifted few have ever been. So that, sooner or later, the fervid visions and dreams of the possibilities of an enlightened, enfranchised humanity, which were indulged by a Shelley and Mazzini, will be realized. Aristocracies do not like ideas. Hence, under all aristocratic systems, ideas and idealists have been subject to repression, as of a revolutionary, explosive tendency. Had it not been for the great French democratic groundswell of 1793, such a revolutionary writer and thinker as Renan himself, with his anti-supernaturalism and heterodoxies of all sorts,—such as the reduction of the so-called Saviour to the mere human dimensions of a communistic dreamer, enthusiast, and reformer,—would have been an impossibility. If he had appeared a century or two earlier with his *Vie de Jésus*, he would have trod the fiery pathway of martyrdom which an omnipotent and infallible Church kindled for the final passage out of life of all idealists in advance of their day and generation. He would not then have been at liberty to admire and eulogize priests and priesthoods in the most fulsome manner, and at the same time utterly to reject their creeds and dogmas.

It is only in these latter days of political liberty, tolerance, and mental enfranchisement that the human mind has shone forth full-orbed, and dared to pursue the clew of reason to its utmost results and consequences, irrespective of orthodoxies and principalities and powers, whether civil or ecclesiastical. It is a species of ingratitude in M. Renan to have enjoyed the perfect freedom of investigation and publicity on what are still regarded as "sacred" subjects, which a period of liberty and equality has vouchsafed to him, and then to turn upon a democratic civilization, and say that, when it shall have been fully established in the leading nations, it will mean mediocrity and vulgarity. Never was there uttered a more palpable and gross *non sequitur*. The age of popular enlightenment and popular freedom and instruction is precisely the age of the greatest advance in science and knowledge. Freedom is the one indispensable condition of the full development of mind,—such a freedom as the civilized world has only just begun to enjoy. Instead of meaning mental mediocrity, it means the human intellect in the fullest enjoyment of all its powers; it means genius at liberty to go to any lengths in the pursuit of truth.

But, after all, M. Renan, with all his merits, is largely an intellectual trifter, dilettante, and epicure. He has no earnest love of or desire for truth. His proper vocation was to have been a priest. He confesses that morality and ethics

are, in his estimation, synonymous with old-fashioned Christian Orthodoxy. His best ideas and theories he found formulated for him by the robust intellects of a more robust race than that to which he belongs. He finds nothing really serious, in life or the world, which is still, according to him, a delightful place for dreamers, theorists, and mental epicures, whose passions and appetites are so well under control as not to bring them to grief. He is ridiculously self-deluded when he asserts that, as a physicist, he could have anticipated the discoveries of Darwin: whereas, his mind was diverted from its original mathematic and inductive bent to philological and historical studies.

Now instead of the era of liberty and equality being the era of mediocrity in everything, such an era, when it shall have become fully established over the civilized world, will mean an era of excellence in everything; will mean an era when the average man will be capable of forming sounder opinions, and of thinking more correctly than the profoundest philosopher was capable of doing in the days of caste and popular ignorance; it will mean an era when the average man will live in better style than ever did or could the king and noble of the vanished days of despotism and social inequality; it will mean an era which will be constantly signalized by ever new and more wonderful revelations of truth; it will mean, in fine, an ultimate and glorious civilization, which will embrace all humanity and the entire earth in its mighty clasp, and will exhibit all men and women so renewed and regenerated, both physically and mentally, both corporeally and spiritually, in the light of reason as to surpass in beauty and majesty of person and acuteness and grasp of intellect the noblest and most renowned specimens of the human race in the days of the partial and exclusive civilizations of the age preceding it.

B. W. BALL.

GEORGE SAND AND RELIGIOUS THOUGHT.

George Sand might have said, "I am a woman; but by my love, which once had the strength of a man's, I feel as a man." "Genius has no sex," is true, if understood metaphysically. By her strangely sympathetic nature, she had entered into the very brain-centres of those who had loved her. We have not yet come to the time when we are so strong in female literature that we may not rate the works of a woman of genius higher from the fact of her having been a woman. The marvelous in many of her writings certainly consists partly in the fact that she was a woman, and consists more than a little in the fact that she felt as a man.

There is a religion of the affections adopted by a few people, based on some natural beliefs held by the ancients, well suited to those of strong feelings, either intellectual or physical, which, in its slow developments, has a tendency to make a man acquainted with himself and his necessities; and, the most necessary of it all, to make him content.

This religion or philosophy is not an outgrowth of the many ideas that have been lately current in Boston, although it has a "Divine Law of Cure," for which human souls stand in greatest need.

This belief was almost, if not quite, attained to by George Sand. She believed, undoubtedly, that the crucifixion of Christ was such an atrocity that, for centuries, the nations had to explain and condone this fact to themselves by the explanation that "he died of his own accord, that we might be forgiven." Our conception of God being no longer such that an unforgiving nature (to carry out the idea of a personal deity) would explain the neces-

sity of a human mediator, the act of the crucifixion stands out boldly as an example of the cruel insanity of men in the presence of a great and, to them, unintelligible spirit; and our only satisfaction in looking at the symbol of Christ upon the Cross will be the words he uttered,—“Father, forgive them: they know not what they do.” So that in moments of weakness following any misunderstanding of others of our better natures, and consequent acts which vex us, we can repeat those words, meaning by “Father” the God which is as much within us as without. In what relation does night stand to day? To prove a submission of our senses to temporary, unconscious self-annihilation. Every one who sleeps undergoes at night, without the thought of it, a process similar to that of Christ, when he bowed in submission to St. John to receive a symbol of purification upon his head. His submission was unconscious, as all his god-like acts were; and, when we sleep,—whether knowingly or otherwise,—we renounce the splendors and hopes of “garish” day. George Sand’s early life may be compared to a drowsy person who cannot find repose. She, a woman, trying to lead the independent life of a man, was certainly not happy. It was not in consequence of her independence, however: it was because she did not know how to be consistent. It was not in her blood. For that, her ancestors, as much as she, were answerable. Therefore, she can never be cited as an example, personally, altogether; while many of her pages offer ideals worthy to be cherished by the rarest souls.

If the *Divina Commedia* had been written last year instead of in the year 1300, we would not admire it as we do. It was the times that made it ideally true, showing us a history of the soul-felt aspirations of a groaning people. If a mountain had recently reared its crest, we could not revere it until the hemlocks had come to cover it with sublime grandeur, and soften its lights and shadows; the sunshine making horizontal lines leading from the earthly to the infinite. If Dante had written many novels for self-sustainment, appealing to the lower natures of his contemporaries, they would have been long before this swallowed up in the gulf of time. The inferior writings of George Sand will doubtless meet with this fate before many years, as the demand for unworthy literature is not increasing. In her writings are to be found bright suggestions of a trinity of the future,—religion, science, and philosophy. Among a large bouquet of roses of various colors and names, kept for many days in the open air with frequent showers washing them as with dew, were once two frail and lovely white ones. One by one the petals of the others fell, while the white roses remained, to look a symbol of that spiritual beauty which can be tainted by no earthly dross. So may it be in our future with the fame of one of the greatest of French women.

C. A. OLCOTT.

INCIDENTS OF THE RELIGIOUS TRANSITION.

The papers state that the English writer, Mr. A. P. Sinnett, author of *Esoteric Buddhism*, is soon to visit this city, “when we may have for a while,” writes the Boston correspondent of the *Springfield Republican*, “a little Buddhist revival in social Boston.” “He and his wife, who accompanies him, are to be lionized by the theosophists here, who, though the movement is yet young, are already represented to be an ‘intellectual force.’ Indeed, occultism is apparently the newest Bostonism; and, Boston-like, those who are delving into it are delving with fervor. There are several

occult societies here, and they embrace some leading people.”

One has but to announce a new system or claim to have discovered an esoteric meaning in some old one, or to make claim to extraordinary powers of looking into the future, or of getting into exceptionally intimate relation with the Infinite, in order to become an object of special interest to a certain class in “social Boston.” It is necessary, however, that the system taught or the claim made shall admit of neither elucidation nor proof, that it shall rest alone upon the authority of its expounder (?), science, philosophy, and intellectual effort being thus dispensed with, and the arcana of Nature being mastered by a “short and easy method.” The mind, kindly relieved by this method of the drudgery of collecting facts and of the strain of reflective thought, is free to expend its energies in other directions. Marvelous usurps control, and finds satisfaction in whatever is incapable of proof and incredible to reason. Almost any obscure expression, if it have reference to the Infinite, and is flavored with a little weak sentiment, may be accepted as a proposition expressing the very essence of true philosophy, different from other philosophy, it is believed, if, indeed, there is the faintest conception of any philosophy at all, because of its “esoteric” character.

This is a period of transition; and those outgrowing one form of superstition or mysticism are naturally attracted to others of essentially the same nature, presented to them under other names. There are multitudes, having renounced the orthodox theology wholly or in part, who are now as naturally attracted to “Occultism,” “Esoteric Buddhism,” “Theosophism,” “Mind Curism,” or any other ism that promises or suggests a short-cut solution of the great problems of being, as young ducks taken from their mother and their native pond are attracted to any other body of water that is within sight. The religious emotions which, through countless generations, have been fed and stimulated by religious faith, if deprived, through change of belief, of the forms to which they have been accustomed, are sure to find expression through other forms; and the less reflective and enlightened the individual, and the less his change has been a growth, the more his need of a form of faith, by whatever name it is called, essentially like that he has cast aside. Fortunate it may be regarded, if these transitions, when due less to the process that produces its results from within than to the direct agency of external forces, are accompanied by no irregular and abnormal manifestation of religious feeling, and lead not to the adoption, under alluring names, of ideas and methods which imply reaction rather than progress.

B. F. UNDERWOOD.

EDITORIAL NOTES.

BY B. F. U.

A YOUNG lady, as pretty as she is conscientious, trying to inculcate the lesson of charity to all upon the mind of a Chinaman in a Brooklyn school, said: “God loves every one. We should love every one.” The Chinaman looked meekly up into her face, and quietly asked, “Does God love me?” “Yes,” the young lady replied. “Do you love every one?” was the next pointed inquiry. “Yes,” she answered. “Do you love me?” “Y-y-yes.” “Will you marry me?” The teacher, it is said, made no reply, but has since exchanged her pupil for a Chinaman of a less logical turn of mind.

FREDERICK THE GREAT was fond of controversy; but it is said that he sometimes lost his temper, and was known to collar and kick his opponent,—an argument that was more vigorous than logical or convincing. One day, being in a disputatious mood, he asked one of his suite why he declined to give his opinion on some subject, to which reply was made as follows: “It is impossible, your Majesty, to express an opinion before a sovereign who has such strong convictions and who wears such very thick boots.”

E. D. C. WRITES: “I want to call the attention of readers of *The Index* to a new book for children, *Ten Boys who lived on the Road from Long Ago to Now*, by Jane Andrews, published by Lee & Shepard. This book gives a very interesting story of the development of races and religions from the Aryan to the American nations, in a simple, pleasant style. Every child can understand it, and will get from it a truthful idea of past history as a basis for future reading. I regret to say that Miss Andrews is now a great sufferer from pecuniary need and from illness, and her friends earnestly hope that the rapid sale of the book will give her substantial help.”

If the following were from one of Mr. Bradlaugh’s or Holyoake’s speeches, it would generally be regarded, doubtless, as decidedly anti-religious and secularistic; but it is from one of the sermons of Rev. M. J. Savage, who probably regards it as sound Unitarianism: “Business has done more to make the world truthful than all the instituted religions of the past put together. It is feared that religion has not been very potent in this direction. The one thing that was needed to give mankind a sense of brotherhood was that races should know each other; and the one thing that has helped on this mutual acquaintance more than all else is commerce. . . . The world’s business, then, has done more for philanthropy, for justice, for deliverance from oppression, than all other agencies combined. . . . Through a large part of human history, the intensely religious ages have not been distinguished for social purity, for truth-telling, for honesty, for kindness, or for justice. And, lamentable though it be, in no great commercial city of Europe or America is a business man trusted any sooner to-day because he is a church member or is prominent in any religious movement; and this has come about because religion has so generally been other-worldly, or has been put off into dreamland, among the antiquities or the emotions, and has not been regarded as dealing with the real vital laws of God in the world about us and in practical human life.”

THE students of Harvard are again making efforts to obtain the consent of the overseers to allow attendance upon the morning chapel exercises to be voluntary instead of making it compulsory. The committee at large of the undergraduates, in an address to the governing bodies of the University, say that “compulsory attendance upon prayers should be abolished for the following, among other reasons”:—

1. That voluntary attendance upon prayers would necessarily betoken genuine interest in the religious exercises.
2. That the sense of compulsion accompanying the present attendance upon prayers is not conducive to the development of sincere religious feeling, but, on the contrary, produces indifference, if not hostility, to the observance.
3. That the already recognized propriety and justice of not enforcing attendance upon prayers in the case of some whose religious faith is not in harmony with the particular observance tend to show the impropriety and injustice of making such attendance compulsory at all.
4. That the abolition of compulsory attendance

upon Sunday services at church, and the remission of compulsory attendance upon prayers twice a week, already conceded, leave no logical ground for the retention of further compulsion in religious matters.

5. That such compulsion of undergraduates is inconsistent with the entire freedom conceded to students in the Scientific School, and in all other departments of Harvard University.

6. That a large majority of the undergraduates of Harvard College earnestly desire the abolition of compulsory attendance upon prayers.

DENNIS MURPHY, a merchant of Jeffersonville, Ind., died, December 15, at the age of forty-five, from the effects of a wound, thought at the time to be mortal, received at the battle of Balls Bluff. We knew intimately Mr. Murphy, a fellow soldier and comrade early in the War of the Rebellion; was near him when, on the memorable morning of Oct. 21, 1861, he received the wound which, more than twenty-four years later, caused his death; shared with him the discomforts and deprivations of prison and prison hospital life in Richmond; and corresponded and had many delightful conversations with him in recent years. He was a man of sterling worth. His intelligence, his integrity, his moral courage, commanded the respect of all who knew him; while his generous nature, his unassuming manners, his patriotic spirit, made him many friends. Born in Ireland, he was an enthusiastic admirer of America, its government and its people. He was strong in his attachments, and he greeted his friends with the ardor for which his race is proverbial. One of the bravest of soldiers himself, he could forgive almost anything in a comrade easier than cowardice. Although brought up a Catholic, and a stout defender of his faith in many a discussion on the banks of the Potomac, with wider reading and thought, his views changed; and, during the last twenty years or more of his life, he was a radical free thinker. Mr. J. K. Jones, of Louisville, a Unitarian minister, spoke at his funeral, reading extracts from Seneca, Emerson, Marcus Aurelius, Herder, and others. A Jeffersonville paper states that "Mr. Jones added a brief address on the life and traits of the deceased, in which he highly eulogized his character, and bore particularly on the courage which Mr. Murphy displayed in his recent trials. The deceased, he said, had no fears of death." He leaves a wife to whom he was devotedly attached, and for whose sake, especially, he would have been glad to live longer.

OLD AND NEW. For The Index.

Heap high the wassail bowl!
Pile up the logs, let the fire burn cheerily!
Soon the bells with solemn roll
For the dying year will toll,—
For the old year whose feet press wearily
On toward the final goal
Where the old years lie buried drearily.

On with the merry rout!
Pile up the logs! and fill high the glasses!
Let us with glad song and shout
Wassail the gray old year out,
Drink to the health of his soul as it passes.

Peace to thee! Peace and rest,
Old year, grown cold, grievous, and fretful:
Thou hast given of thy best
In unlimited bequest;
We would be true to thee, yet not regretful.

Hail to thee, glad New Year!
All in the flush of thy primal power.
Take thou for thy throne the bier
Of the wight who lieth here,
Take his sceptre and crown for thy dower.

ABBIE F. JUDD.

The Index.

BOSTON, DECEMBER 31, 1885.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

IF PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For The Index.

The Dual Aspect of our Nature.

BY EDWARD MONTGOMERY.

The Supermental Consistency of our Being.

Mind-stuff refuses to be exteriorized out of complex consciousness, as obstinately, at least, as matter-stuff. Every actually realized fact in nature is a phenomenon within some complex consciousness. Everything beyond such mental subsistence is inferential only. But we all feel justified in assuming that the complex consciousness is borne by beings who perceptually appear to us as complex organic individuals. In the course of our inquiry, it has become obvious that perceptual appearances of this, as well as any other kind, neither signify extra-conscious material existents nor extra-conscious mental existents, neither matter-stuff nor mind-stuff. For the complex of qualities which we call material is a special group of our own feelings, aroused by powers unknown to us, independently of this mental effect of theirs. And of mental consistency, on the other side, are all feelings whatever of which consciousness is composed; and nothing outside consciousness, nothing unconscious, can possibly be mental.

In this juncture, again, the true relation of body and mind clearly evinces itself. What we call our body is a definite group of percepts, awakened in our consciousness with irresistible force by a specific complex of non-mental powers. What we call our mind is our one all-comprising moment of actual consciousness, in which facts of nature are signalized more or less directly or remotely by representative signs, collected and recollected by an extra-mental activity. Common experience, corroborated by scientific investigation, teaches us furthermore that the activity underlying the all-revealing mental presence is a function of that most specific power complex which appears to us as our body, and more especially as that part of it perceptively realized as our nerve-system. Mind is an outcome of organization.

The most telling argument in favor of extending the continuity of life and mind also to the forms of inorganic nature rests on the gradual chemical elaboration of compounds from the lowest inorganic to the highest organic molecule. It is held that complex molecules,—the "physiological units" of Herbert Spencer or "plastidules" of Haeckel,—composing, as is surmised, the material of living protoplasm, have by insensible degrees been evolved from inorganic molecules, and that neither life nor consciousness could possibly have suddenly started into existence at some point or other of this unbroken line of development.

The fallacy of this reasoning lies in the conception of life as a property inherent in circumscribed or chemically occluded molecules. Life is not attached to any static state of matter, but is essentially the expression of a dynamical process. The lowest form of life, the least complex living molecule, consists through and through of a definite cycle of chemical activity. All parts of a living form are held together by chemical bonds, and are thus chemically interdependent. The vital movement, with its rhythmical ebb and flow, is uninterruptedly maintained by disintegration from without, alternating more or less rapidly with reintegration from within. This whole cycle of activity, in which life itself consists, can be witnessed without difficulty. The statement here advanced is therefore no mere hypothesis or scientific inference, but a scientific fact verifiable at any moment by attentively watching the entirely transparent and fluent form of amoeboid individuals.

Usually, in order to assimilate organic forms to those of inorganic nature, the aid of crystalline shapes is brought to bear. A crystal, however, does not consist of a single molecule, whose constituent parts are all chemically concatenated, but of a vast number of separate and equal molecules. And these are not held together by bonds of chemical activity, but form merely a peculiar physical aggregate whose parts maintain a fixed position toward each other, without chemical flow, without intra-molecular disintegration and reintegration. In fact, all essential characteristics of life are wanting in a crystal. Life only begins when a chemical unit comes to reintegrate itself habitually, after having undergone chemical disruption through outside influences. And this specific occurrence gives rise, at an exact point in the scale of development, to a new departure in the nature of the products of evolution.

To determine as accurately the moment when consciousness first makes its appearance, when the chemical throb of disintegration and reintegration is accompanied by a dawn of intrinsic feeling, is a more difficult task. The primitive vital movement, the thrusting out and drawing in of protoplasmic projections by monera and amoeba, is certainly not an event determined by choice, not a voluntary performance. Whether a vague sensibility goes nevertheless along with this automatic activity is not easy to ascertain. The closest observation, continued for years, has yielded me no indication that obstacles are feelingly avoided or contact with anything, however desirable, voluntarily solicited. It all seems the blind play of complex chemical activity. I am inclined to think that, so long as every part of a protoplasmic individual is liable to be shifted out of position to any extent, and apt to be called upon to perform any function incumbent on the position in the chemical cycle which it happens just then to occupy,—that, under such conditions, sensibility, so exclusively the property of a special tissue occupying a special position in higher forms of life, cannot be inferred as already illu-

minating with feeling the morphologically unorganized activity of amœboid individuals. The behavior of such individuals with regard to heat, light, and electricity, can be readily explained without having recourse to volitional direction, and consequently without the intervention of sensibility.

In the course of organic development, the outer surface, which is the chemically highest layer of a protoplasmic individual, culminating in the foremost and molecularly supreme substance of the head, becomes a stable structure, instead of being made up of continually drifting material. This is brought about by prompt intrinsic reintegration, at once and on the spot, repairing the disintegrating effect of outside influences. Such fully equilibrated outermost region of a living individual, its incipient sensory surface, composes a functionally *resisting* structure in comparison with lower layers of protoplasm, which remain functionally *yielding* or motor structures. The chief function of the resisting structure is to respond accurately with its chemical beats to the dynamical beats of the medium. And this accord of intrinsic and extrinsic action, of the vital and the cosmical thrills, must surely constitute the elementary sensation, the first inkling of something felt. In ciliated infusoria, we find surface-equilibration fully established, while the interior protoplasm remains fluent throughout. And, in the movements of these very lively animalcules, discriminative volitional reaction on external stimulation is clearly manifest.

The uniform sensation of primitive life becomes gradually more and more variously specified, through differentiations wrought within the sensory surface in strict correspondence to existing specifications among the dynamical powers affecting it. Thus, through constant interaction with the outer world, its diversely stimulating characteristics—by means of more and more minutely differentiated sensory elements—are inwoven into the general sensibility of the living individual with growing precision of outline and increasing wealth of qualitative distinctions.

From out the brooding gloom and lifeless commotion of insentient nature, living activity slowly arose. Under unremitting travail, with fittest adjustment, it shaped its vital mould, locking up within its structural intricacies all the transcendent significance of creative exertion. And now, as with ever-renewed onset the gaining tide of life breaks against the shore of eventful time, in self-luminous splendor the fulness of its gathered wealth unfurls itself into our one exuberant moment of conscious realization.

Another mistaken notion of the relation of our extra-mental being to its mental functions is entertained by a number of scientific philosophers under the name of psycho-physical monism, or the two-sided aspect. Here the subjective aspect of an objective fact—for instance, the definite feeling accompanying a definite brain-motion—is considered to be only another view of the same natural existent, related to it as the concave side of a curve is related to its convex side. I experience a definite feeling, and this is my subjective aspect of a certain fact of nature. The definite brain-motion corresponding to it is said to be the same fact of nature objectively realized.

This modern attempt at identification of the material and the mental presupposes not only a realizing personality with its unity of apperception, but leaves also unintelligible how this personality comes to regard the same natural fact at one time from its subjective, at another time from its objective side. Moreover, both facts, the subjective feeling and the objective brain-motion, are found to occur, not one after the other, but simul-

taneously. How, then, could one and the same person actually realize at one and the same time both occurrences, the immediate subjective feeling and also the concomitant brain-motion realizable only through sensory channels? When, however, it is *I* who am experiencing the feeling, and *you* who are perceiving the corresponding brain-motion, it becomes quite obvious that the fact in my consciousness and the fact in your consciousness cannot possibly be one and the same natural existent. Nay, these two entirely different facts cannot even be two different mental representations of one and the same objective existent. My feeling of pain and your perception of the concomitant motion in my brain are neither themselves two different aspects of the same existent, nor are they two different mental representations of the same existent. My feeling of pain is a representation of nothing beyond itself, but your concomitant perception is naturally believed by us all to be the representation of an activity taking place in my brain. And it is this represented activity, extra-mentally subsisting in me independently of your perception of it, that is the real cause, the genuine *efficient* or *productive* cause, of my pain. The same extra-mental activity is, however, by no means the efficient or productive cause of your simultaneous perception of the corresponding brain-motion arising in your consciousness. Foreign media, as well as your whole organic being with all its vital sensibilities, are here intervening; and thus the activity only *awakens* in you from outside, through specific stimulation, your own definite and wholly intrinsic perceptive function. The extra-mental activity of a certain part of my individuality, which is the immediate efficient cause of my feelings, is only a remote but definite stimulus to quite different but synchronously corresponding feelings in you.

If we, however, insist in crowding, for confusion's sake, the two aspects into one and the same individual mind, it becomes somewhat puzzling to fix upon a thorough-going distinction between them. Prof. Bain, for example, struggling otherwise into recognition of non-mental reality, but here still swayed by the subjective idealism of the association-philosophy, elevates the distinction between the two different sets of feelings, subjective and objective, as arising within the mental presence of one and the same individual, to the supreme contrast in nature. Within this purely subjective medium of individual consciousness, the subjective aspect, or mind proper, is discovered by Prof. Bain strangely to dwindle away into almost nothing; to dissipate, namely, into those rare moments of extensionless reverie in which we lose the sense of outspread reality, and dwell in feelings of mere intensive subsistence.

Overcoming, however, the ancient prejudice of spaceless mind, and *extending* our mental view somewhat beyond its very centre of apperceptive sensitiveness, it is still only perceptual brain motion, only *functional activity* of the brain, which objectively corresponds to subjective feelings. Psycho-physical monism is at a loss to find a place for the brain itself. The quiescent brain does not enter into its monistic scheme. Is it not clear, then, that it has likewise sought to establish natural unity between subject and object by vainly chasing identity among fleeting phenomena, leaving quite out of account their underlying matrix? What are we to think of a philosophy of mere functional motions, neglecting entirely the functioning substratum? and such a substratum! The truth is, to the *physical* fact, consisting in the perception of a functionally quiescent brain, there corresponds no *psychical* fact, consisting in subjec-

tive feelings. When you perceive my brain without functional activity, I have myself no feelings corresponding to your perception of my brain. I have only feelings corresponding to your perception of the functional activity of my brain. My consciousness, or mind, corresponds to brain activity, not to statical or functionally unmoved brain.

Now, can I rationally believe that my feelings, which make up my consciousness, or mind, and which are found to correspond to mere functional activity, to a mere transiently compelled perception of brain-motion,—that these lapsing conscious moments constitute my veritable being, while the functioning organ itself, compelling its perceptive realization with steadfast and identical power, is forming only an inferior part of my individuality? Must not the functioning substratum, perceptively realized as an enduring existent, be of necessity incommensurably more real than its transient functional manifestations? Contemplated in the light of the present discussion, can there be a doubt left in the mind of candid thinkers who are not confirmed idealists, denying as such altogether the existence of their fellow-beings and everything else outside their own mind,—can there be the slightest doubt left that our veritable nature is a permanent, non-mental entity, of which our mental phenomena are an ever renewed efflux? The brain-motion, the transient functional activity which you are perceiving, corresponds no doubt to my mental presence. But the brain itself, together with my whole corporeal being, which, under exactly the same conditions, you are simultaneously realizing as the very existent which performs the functions or undergoes the motions, is certainly not corresponding to anything mental in me. It obviously corresponds to my non-mental individuality, which is perduringly forming part of the great sense-compelling and interacting order of extra-mental powers.

It is not my own proud, inmost possession, making up for me alone the realizing feeling, the revealing consciousness of myself and the world,—not the self-luminous expanse and ideal fervor of my mental presence,—which has compelling power over you. From mystic depths of consciousness existence, the ever-welling vital and organic source of all my mentality awakens in you, with an imperious potency far transcending volitional control, the overpowering sense of its presence; a revealing flash marvellously fraught with the vivid, perceptual representation of its characteristic features. And if, among these perceptual features, expressive gestures and sounds convey to you a direct knowledge of the feelings I am just then experiencing, it is because you have learned to understand the true meaning of those mere signs, substantiating them in the veritable medium of our common human brotherhood, by dint of the general similitude connaturally obtaining between your being and mine.

So much as any permanent source of emanation surpasses in import its transient outcomes, so much does our extra-mental being surpass the conscious manifestations composing our mentality.

Mind an Organic Function.

It can be scientifically proved with rigorous precision that mind is an organic product, that the mental presence is a function of what we perceive as the brain of an organic individual.

You are watching my organism. If you are not a thorough-going idealist, lost to the realities of this world, you have to assume, as all science actually does assume, that an extra-mental existent is compelling this perception of yours, that an organism is existing independently of your perceiving it. If I were happening to be unconscious

just now, and you could observe the molecular process going on in my brain, you would discover no functional stir there at present. By holding your hand before my eyes, you arouse functional activity. A mental image, a perceptive hand, arises at once in my consciousness, or rather arises to form my consciousness; and, simultaneously, you detect a definite functional stir in the brain you are watching. Every time you hold your hand before my eyes, I perceive the same mental image, and you perceive the same molecular change in the brain. Now, if the perceptive brain in your consciousness is in reality compelled by extra-mental powers, constituting a part of my organism, the definite functional stir in that perceptive brain must, in reality, be compelled by a specific activity occurring in that same extra-mental part of my organism. Each time this activity occurs, each time you bring it about by holding your hand before my eyes, I have a definite mental image. Each time the activity ceases on withdrawal of your hand, the mental image vanishes. We are, therefore, scientifically justified in concluding that the mental image is the effect of the activity occurring in that extra-mental existent which you perceive as my brain.

The same reasoning extended to all mental phenomena forces us consistently to admit that the entire mental presence is a function of our extra-mental organism; that the mutations in the mental presence are due to changes in the organic function; and that, when there is no function, there is no mental presence, no mentality of any kind.

False psychology is erected chiefly on the assumption that mental states continue to exist as mental when they have vanished out of consciousness. To evade being confronted on every turn by so drastic a *contradictio in adjecto* as involved in "unconscious mind," psychology felt induced fancifully to create a special realm, where mental phenomena that had slipped out of consciousness might be allowed to retain their being and identity, and to flow in and out of conscious existence as explanatory circumstances required. It is, however, almost self-evident that, whenever a particular group of feelings passes out of our moment of conscious realization, it has therewith lost its mentality, has lapsed into the vacancy of unconsciousness, and is no more. And, whenever a particular group of feelings issues into conscious presence, it emerges from unconscious depths, from some non-mental matrix.

Consciousness is, therefore, no continuous thread or stream, as maintained by some psychological schools, but rather a lake whose waters flow out of presence into invisibility, and are ever replenished from an inexhaustible source, whose origin lies hidden away in utter darkness. Or it may be likened to a kaleidoscopic display, whose complex figuration is being continually disintegrated and reintegrated. Only the shifting elements of the mental presence, unlike those of the kaleidoscope, dwindle away into nothingness, new ones arising to fall into the succeeding formation.

The mental presence is really, and not only figuratively, the ever-varying sensible agitation of an identically abiding sensitive medium. This sensitive medium, on account of the steady maintenance of its identity amid all the changeable modes of its felt commotions, constitutes a genuine substance. It is, therefore, quite true that a substantial existent is underlying our conscious states, that the phenomena of mind are manifestations of a mysterious entity. Our mental presence is actually the affection and outcome of a transcendental substance of one that even now, this moment, incorporates the result of all times.

And it is the spontaneous vital flow of this matrix of all consciousness, in interaction with its compelled vital stir or function, which yields us our mental states.

The vortex of vital activities, embodying the accumulated acquisitions of former existence and constituting the living individual, maintains itself in ever regenerated completeness. From within the inmost springs of life there arises—not hypothetically assumed, but *visibly* manifest—a spontaneous current of activity, ever reconstituting in its wholeness the full wealth of vital results; a genuine generical current, flowing out with indiscernible might to meet the momentary and transient happenings of individual existence. It is this spontaneous current of transcendent efficiency incorporated in us which on intrinsic and extrinsic commotion becomes self-luminous, revealing in incandescent flashes the endowments of our own nature and their relation to the world at large.

The power to direct the current of life and to shape external nature in accordance with our intrinsic determinations accrues to the organic individual by force of the voluntary control he gradually gains over the entire range of his resources. And this is accomplished by a system of articulate motor signs or, rather, actions, through which he becomes able to summon at will into mental presence a wide sweep of conscious representation. Instead, then, of having to yield to immediate impulses or to more or less accidental stimulations, he thus utilizes in simultaneous mental presence the determining influence of all possible impulses and stimulations, or of such a part of them as he voluntarily keeps in mind. To his consciousness, the impulses and stimulations arising involuntarily are but groups of feelings. And those arising with the help of voluntary signs are likewise groups of feelings. The specific organic activity underlying both groups is essentially the same, and has, on the rest of our organism, the same influence, varying merely in intensity proportionately to the vividness of the process.

The functional activity especially connected with our sentience is limited to that part of our organization which appears to observers as our nerve system. This special system, besides producing during functional activity our own mental presence, possesses, together with the rest of our organism, the power of affecting through stimulation the sensibility of observers, so as to awaken in them the consciousness of that steadfast group of percepts called our body. It is through study of these perceptual compulsions that we acquire an objective knowledge of the being who is the bearer of the mental presence, and are led to recognize the complexity and phylogenetic origin of its nature.

The unitary organism reveals itself as differentiated into two principal parts, an ectoderm and an entoderm. The entoderm furnishes the ectoderm with complementary material wherewith to reintegrate its functionally disintegrated material. The ectoderm itself is found to consist of a contracting and a non-contracting or resisting substance. The organs of contraction are seen objectively to execute movements which have influence over the surrounding world. The resisting substance is objectively seen to undergo only molecular motions, having no essential influence over the surrounding world. We cannot objectively recognize that the functional stir we are perceiving in the central parts of the nerve system is simultaneously yielding conscious states to the subject to whom these organic parts really belong. On the other hand, the subject who experiences

these conscious states is not subjectively aware of the perceptual appearance of the functioning organ; indeed, scarcely at all aware of the very existence of the organ.

In a similar way, the subject who executes voluntary movements is not subjectively aware of the perceptual appearance of the organs which perform these movements. To him, the entire process takes place within his mental presence. And, forming part of this mental presence, a subjective representation of his sensory surface gives him immediate information of the shape and position of his bodily belongings. It is in this central and representative sphere, in the matrix of the mental presence, that volitional activity occurs; that the centripetally propagated or spontaneously arising activities, issuing into the various modes of feeling, stimulate the further activity, which descends unconsciously to the executive organs, whereby is excited the activity perceived as movements in the world of objectively perceptible reality. And these externally visible movements turn out to be very accurately congruous with the central inward predetermination which gave rise to them. This truly marvellous congruity of the subjective forecast and the objective realization is a result of the strict organic interdependence subsisting between all parts of the ectoderm,—an interdependence established by the same influences by which the ectoderm itself was gradually constituted.

Thus is brought about the coincidence of actions only mentally figured by me with those you actually see executed; the exact coincidence of what I subjectively, centrally, feelingly determine, with that which an observer is enabled to witness, as objectively realized. And this he does by dint of sense-stimulating influences emanating from the very organs, from the actual extra-mental existents, which were merely mentally represented by me.

This difference between the sensori motor process, fulfilling itself centrally, and being immediately felt by the subject in whom it occurs, and the objectively perceptible movements, executed in consequence by other parts of the organism,—this essential difference has to be clearly recognized by whoever wishes to gain an insight into the all-important problem of volition. Our central organ is not only a focus of mental realization into which world-revealing beams converge, but also a focus of formative power from which world-coercing influences irradiate.

We are, indeed, fearfully and wonderfully made. Whoever comes to understand the transcendent profundity and creative power of his veritable being will lose all desire to have his mental presence, even in its most exalted moods, irresponsibly detached from the generating potency in which it sentiently dwells and which it symbolically signifies.

THE UNCONSCIOUS.*

BY PAUL CARUS, Ph.D.

The unconscious is an idea of universal significance, which in its full importance has not been understood until lately. Eduard von Hartmann is generally supposed to have for the first time propounded the problem. This, however, is erroneous. The originator of and chief authority on the question is Karl Gustav Carus, the same who is known as a correspondent with and friend of Goethe's. The fact is known to every one familiar with the subject; and Dr. Volkelt, in his essay, "Das Unbewusste und der Pessimismus," p. 79, says: "Fast Alles was Hartmann als

*The substance of remarks by Dr. Carus at a recent meeting of the Metaphysical Club of this city, in a discussion which followed the reading of an interesting paper by Mr. C. P. Cranch, on "A Philosophy of the Unconscious."

Charakteristische Unterschiede des Bewussten vom Unbewussten anführt, findet sich bereits bei Carus."

It may seem as if I were speaking *pro domo*, as Carus is not only a namesake, but also a great-uncle of mine. Nevertheless, it is a matter of justice to state the facts as they are, the more so as the works of Carus are not so much known in America as they ought to be; and even many scientists become acquainted with his ideas second or third hand.

To old philosophers, thinking and being conscious of a thing was identical. Thus, Descartes and Spinoza define thought; and, on this ground, Locke refutes the doctrine of innate ideas. He simply states that they do not exist in consciousness and fancies, having therewith proved their impossibility. It is plain that he, *sub silentio*, supposes the identity of thinking and consciousness.

To Berkeley, nothing existed but the conscious, so the unconscious was excluded from the beginning.

Leibnitz was the first to allow the idea of unconscious thought a place in his philosophy. His monads are endowed with unconscious perception. Accordingly, he did not reject innate ideas: they were to him *la connaissance virtuelle*. Yet Wolff and his school deprived the monads of their quality, and changed them to lifeless mechanical atoms.

Kant nowhere mentions the unconscious, and yet it is of great consequence in his philosophy. If time and space are the empty forms of our perceptivity, which, in our minds, are ready to receive and arrange all the different sensations; then time and space are unconscious ideas, exactly as a *connaissance virtuelle*.

The first who firmly grasped and plainly stated the problem of the Unconscious was Karl Gustav Carus. His chief work on this topic is his *Psyche*; or, *Life of the Conscious and Unconscious Soul* (second edition, Stuttgart, 1851). He commences with the sentence, "The key to the cognizance of the vital questions of the mind's conscious life must be sought for in the province of the Unconscious." Accordingly, he proposes in his book to trace the divine of our soul in its development from the unconscious to the conscious. Consciousness and unconsciousness are rays of one and the same Divine; but the unconscious radiance of the Deity is the inexhaustible well, forming the interminable resources of the conscious. Consciousness is the reflection of the unconscious idea. There is a promethean and an epimethean moment in unconsciousness; a promethean, or unconsciously presaging and foreseeing, and an epimethean, or unconsciously remembering power of the mind. With wonderful exactness, the unconscious idea forms the botanic, the animal, and the human organisms, for the purposes of a distant future; and, if these purposes are attained, the organic formation is completed; and in it, *vice versa*, the original germ may be recognized in its perfection.

The unconscious obeys the mute law of necessity, while the conscious moves in the sunny empire of freedom. Accordingly, the unconscious works, with surety, wisdom, and beauty, in such a way as will never be possible to the free consciousness, not even on its highest summits. Art imitates Nature, yet the artificial cannot be compared with the natural. When conscious thought is doubtful, wavering, now and then erring, the unconscious idea in its *dénouement* never lacks unflinching decisions and deep wisdom. And, as the unconscious has nothing in common with wavering doubts, errors, and failures, so it does not know of any fatigue, and at the same time is free of disease. The conscious life of the soul needs constantly a periodical interruption for refreshment in sleep or death; not so the unconscious, which works incessantly, without coming a moment to a stand-still. The unconscious is not in want of a tedious and painstaking learning, of practice or exercise, in order to attain dexterity and readiness. Easily and immediately, everything is performed and done.

Further, Carus mentions a remarkable quality of the unconscious, which he calls its Embodiment into the Universal. He means the close and immediate connection with which the unconscious is related to Nature at large; and, thus, it appears to be immersed, as it were, into the currents of natural life. Somnambulism and the influence of a mother on her unborn child serve as examples. One may also observe that when, in the minds of artists and poets, ideas for some time are seemingly lost, if they sink into the region of the unconscious, they generally return

to the surface of consciousness clearer, maturer, richer in their relations, and more complete in articulation and accuracy. As long as an artist creates with consciousness, his work fails to bear the stamp of perfection. The weird zest of genius is missing. It appears studied and stiff. "*Redolet oleum*," says the Roman: that means, one perceives the labor and trouble spent in its production. The intention of the artist to produce this or that effect, if noticed, is taken offence at. Germans would quote Goethe's dictum from *Torquato Tasso*, "Man merkt die Absicht, und man wird verstimmt."

You cannot play a sonata to perfection as long as you have to think of the fingering or of the expression in this or that passage. All mechanical requirements must have sunk into unconsciousness, as if they were forgotten: then the effect will be natural, like that of a present inspiration. Nor can you speak a language with fluency as long as you have to think of its grammar.

The influence of the unconscious on the human life is greatest in emotions. All our feelings, passions, desires, and aspirations would be without color and lack the animating springs of their rich and brisk spontaneity, if they were deprived of their unconscious element.

What Carus says concerning love belongs, as Dr. Volkelt expresses it, to the most beautiful and profound of all that has ever been said about this mysterious subject. The powerful charm of love, its doleful bliss, its affection and self-sacrifice, bordering on self-humiliation, result from an intimate amalgamation of the conscious and unconscious. Love necessarily presupposes that also the unconscious of our souls is strongly taken hold of. It is a mystery which in love is felt, by true poets understood and represented, yet very seldom appreciated or thought of by the scientific inquirer. The passion of love rests on a desire which is deeply rooted in the unconscious region of our soul. It longs for finding and possessing the individual, which completes, psychically amplifies, and perfects one's self.

Finally, concerning the relation of the soul to God, Carus declares the duty of a thinking mind and the highest boon that conscious spirit may partake of is to return to the profound depth of something that is to us unconscious. According to him, all attempts at reducing and correlating the absolute mystery of the Deity into the concrete, the attenuated, and corrugated idea of a personification are so many examples of the human mind's errors, from which spring the discords and crimes of fanaticism, religious wars, and persecutions. Wherever men worship the omnipresence of the unconsciously ruling divine Spirit, there is clemency and religious tolerance. The more personal, concentrated, pointed, and egotistic the idea of the Deity and its relation to the world is conceived, the more rigid and zealous the devotees of this God will prove toward people of another faith, and the more egotistic will be their claim to owning the sole truth, and the steadier their confidence in the infallibility of their personal convictions.

These statements are, to the greatest extent, quotations from Carus' chief work, the *Psyche*. I do not intend to animadvert here either upon his views or the way in which he presented them. The latter, there is no doubt, is open to criticism, as he treats his subject rather too poetically, although it gives a great charm to his ideas.

The power of the Unconscious in Nature—the growth of the idea in the development of plants, animals, and the human body—has been pointed out in another book of Carus, in his *Physis*.

Of special interest is a smaller essay of his, "The Symbolic of the Human Form," in which Carus gives a fine application of his philosophy, showing the power of the idea unconsciously working at the formation of the human body. The structure of every limb answers the purpose of its existence, and is the expression and symbol of an idea.

Carus' works are a mine from which philosophers and scientists of second degree have largely purloined treasures without telling whence they were taken. One of them is Eduard von Hartmann, who is generally called the Philosopher of the Unconscious, as if he had invented or discovered the unconscious. Another philosopher, if he is a philosopher at all, is Delzarte, who drew upon these vast resources. Let us rather call Delzarte a teacher of oratory and acting, for such he was; and, to be just, as far as I know, he was

one of the most excellent that ever existed. His pupils call his method Delzartean philosophy; but Delzarte, I suppose, never did so himself. If we take him as a philosopher, he is certainly a poor one.

And, with regard to our subject, we have to add that neither Hartmann nor Delzarte escaped the curse which almost always accompanies the borrowing of ideas of others; for plagiarism is also an art, and only a few, if any, are masters of it. Both corrupted the original beauty of the ideas thus appropriated. Hartmann mixed the Philosophy of the Unconscious with his dreary pessimism, and even that bears a distracted and disfigured shape. I do not think that Schopenhauer would have liked it. And Delzarte confounded the judicious explanation of Carus' "Symbolic of the Human Body" with a kind of cabalistic mysticism, in which the number three seems to take the place of natural causation.

CORRESPONDENCE.

RELIGION IN THE PUBLIC SCHOOLS.

Editors of The Index :—

In *The Index* of the 10th instant, I have read with much interest Mr. W. J. Potter's remarks bearing the above title, and referring to a reputed utterance of President Eliot, to the effect that "the religious education of the young should go hand in hand with secular education," and that "the State should provide religious instruction in accordance with the wishes of the parents." Mr. Potter, as I understand, dissents from both of these claims.

Now, it seems to me absolutely right and proper that our system of public instruction should neglect no legitimate branch of education, and that the training of our religious feelings constitutes such a branch, and should go hand in hand with secular education. The development of every part of human nature reacts upon that of every other part. And the religious faculty, by which I understand that phase of emotional life which is excited by the action, upon the individual, of the undivided unity of the universe, certainly appears to me to constitute as essential a part of human nature as the faculties of reasoning and of action.

On the other hand, nothing appears to me so preposterous as the demand that the State should regulate religious education in accordance with the wishes of the parents. The so-called religious teaching which parents and churches usually insist upon is not, in fact, religious at all, but metaphysical in character and dogmatic in spirit. Against metaphysical instruction, I can see no objection. Indeed, it should most decidedly form a part of every system of education, provided only that it be brought forward under its own proper colors. Dogmatism, however, has no rights which the teacher should respect, and is as improper—nay, even immoral—in the teaching of mathematics or botany as in that of religion. Nor are parents ever consulted as to how they wish either mathematics or botany to be taught to their children. There is no Presbyterian geometry or Catholic algebra.

As it seems to me, the most important aspect of the question has failed to attract either Mr. Potter's or President Eliot's attention. This is the consideration of the method of education. The State, in its public school system, should not only be at liberty, it should be in duty bound, to teach anything and everything which may be of importance to the harmonious development of the child's faculties, and fitted for its years. But it should be rigidly limited as to its choice of educational methods. The use of the authoritative (dogmatic) method, no matter to what branch it be applied, tends to destroy all powers of thought, and should be as strictly interdicted in grammar as in religion and metaphysics.

Some years ago, during my last visit to Europe, a German journalist and author of note, who had had considerable personal acquaintance with some of the leaders of the Jesuit order, called my attention to the fact that the schools of this society had no objection to the inculcation of scientific facts, provided the teachers were scrupulously careful to base all instruction upon the great name of some authority, and never upon the personal investigation and reasoning of the pupil. The pupil might follow Newton, provided he accepted the law of gravitation because the great Newton said so,—provided he believed it, and did not think it out for himself!

But is not this the enslavement of the mind conducted as a fine art? And, if it is, why should not Liberals make a fine art of the mind's liberation? Let them say boldly: "We not only concede—nay, we even insist—that religious instruction be given in our public schools; we will permit that Catholicism, Methodism, or Pantheism may be taught, provided all their doctrines be inductively and deductively felt and thought out by the child, and not forced upon it, upon the authority of any dead or living teacher whatsoever!"

CHARLES FROEBEL.

BOOK NOTICES.

THE GRAY MASQUE, AND OTHER POEMS. By Mary Barker Dodge. Second Edition. Cardinal cloth, in gilt 12mo. Price \$1.25. Boston: D. Lothrop & Co.

The opening poem, of which the disguises of love are the theme, and which gives its title to this volume certainly, is neither the longest nor the best contained in the author's modest collection. Her range of subjects is wide, and her style varied; and she sings sweetly, harmoniously, and clearly in many keys. The grand and sublime mysteries of life and death seem to have taken strong hold of her thought; and she recurs again and again in such poems as "Best," "Life," "Unsolved," etc., to the various phases of the queries which such subjects invariably suggest to thinkers. But, though these questions haunt, they do not distress her; for she prefers to take the easiest solution possible, as when she says, after some of these questionings,—

"Sweet faith! Happy faith that upbears
The soul through each questioning stress
Till Wisdom all question forswears,—
The problem unsolved, answerless."

And in another place,—

"Whate'er inures, fools only fight with fate:
Philosophy propounds an easier way,—
Be still, my soul, and wait,
A better day
Will come, or soon or late."

Mrs. Dodge is exceptionally pleasing in her ballads, such as "The Curse of Calgarth," "A Frozen Crew," "A Legend of Freitenberg," "Loco," "The Mirror of Steel," and "General Gordon." None of these poems are of great length, as is evidenced by the fact that nearly one hundred and fifty poems are contained within this volume of two hundred and eighty-five pages. Although the tone of most of her poems are decidedly devotional, yet they are not circumscribed by any sectarianism, but are always broad in view, uplifting, and morally healthful. S. A. U.

THE POPULAR SPEAKER. Comprising Fresh Selections in Poetry and Prose, Humorous, Pathetic, Patriotic. For Reading Clubs, School Declamation, Home and Public Entertainments. Containing the Selections published in "The Reading Club," Nos. 13, 14, 15, 16. By George M. Baker. Boston: Lee & Shepard. Price \$1.00.

While a number of these selections are from well-known standard writers like Shakspeare, Macaulay, Bryant, Moore, Whittier, Mrs. Sigourney, Wendell Phillips, Ruskin, Holmes, Lowell, etc., the majority are selected from very recent writers, waifs of wit and wisdom drawn from the floating literature of the hour, and so generally appropriate as the expression of the pathos as well as bathos of emotional speech and expression of to-day, such as are found in the writings of Joel Chandler Harris, George Peck, Robert J. Burdette, James W. Riley, W. S. Gilbert, T. B. Read, Marion Harland, and Edgar Fawcett.

REPORT AND CATALOGUE OF THE WOMEN'S DEPARTMENT OF THE WORLD'S EXPOSITION. Held at New Orleans, 1884-1885. Boston: Rand, Avery & Co.

This very full report and catalogue is edited by Julia Ward Howe; and its two hundred and thirty-five large, closely printed pages by their very bulk give strong evidence of a new recognition of women as workers in many differing departments of necessary work. It is a book which every thinking woman should possess, as an incentive to herself and a reference conclusively to settle many disputed questions in regard to the capacities of the sex.

For the benefit of the owners of the *Carlyle-Emerson Correspondence*, Ticknor & Co., Boston, have just published a thin supplementary volume containing

some twenty letters that were missing when the first volumes were put forth. They also publish for new buyers an enlarged edition of the complete correspondence. Perhaps the best account of the new letters can be given by transferring to the columns of *The Index* a few of the characteristic passages of Carlyle:—

"Great inquiry [writes Carlyle from London] is made for the *Miscellanies*, Frazer says; though he suspects it may perhaps be but one or two men inquiring often,—the dog!" (p. 4.)

"Popular Sumner is off to Italy, the most popular of men,—inoffensive, like a worn sixpence that has no physiognomy left" (p. 6).

"My horse Yankee is never yet purchased, but it shall be; for I cannot live, except in great pain, without a horse. It was sweet beyond measure to escape out of the dust-whirlpool here, and fly, in solitude, through the ocean of verdure and splendor, as far as Harrow and back again; and one's nerves were clear next day, and words lying in one like water in a well." (p. 13.)

[Writing to Emerson from Newby, Annan, on the Atlantic Coast.] "You, too, have been at Nantasket; my Friend, this great, rough, purple sea-flood that roars under my little garret window here, this, too, comes from Nantasket and farther,—swung hitherward by the moon and the sun" (p. 30).

"I have often thought what W. Shakspeare would say, were he to sit one night in a 'Shakspeare Society,' and listen to the empty twaddle and other long-eared melody about him there!" (p. 51.)

[After a journey to Ireland.] "Daniel O'Connell stood boldly before me, in his green Mullaghmart Cap; haranguing his retinue of Dupables: certainly the most sordid Humbug I have ever seen in this world" (p. 60).

"They tell me you are about collecting your poems. Well, though I do not approve of rhyme at all, yet it is impossible Emerson, in rhyme or prose, can put down any thought that was in his heart but I should wish to get into mine. So let me have the book as fast as may be." (p. 63.) W. S. K.

WE are in receipt of the December and January numbers of Mrs. Martha J. Lamb's *Magazine of American History*. Among the more interesting topics discussed in the December number are: "The Convention of Massachusetts," by A. W. Chason, accompanied by portraits of Fisher Ames, John Hancock, and Samuel Adams; "A Tribute to Gen. George B. McClellan," by Mrs. Martha J. Lamb, with a frontispiece portrait; "Thanksgiving Day, Past and Present," by Col. Charles Ledyard Norton; "A Chapter of the Mexican War," by Gen. E. P. Scammon; and "How we ran the Vicksburg Batteries," by W. S. Ward. The January number gives an excellent portrait of Gen. John A. Logan; an interesting article on "Paul Revere," by E. H. Goss, with numerous illustrations; "A Tribute to Vice-President Hendricks," by Hon. James W. Gerard; an article by Gen. Logan on "Slavery in America: Its Origin and Consequences," with other excellent historic papers.

The signs of promise of this popular magazine were never so conspicuously observable as at present. Each month marks an advance, and shows an increasing interest among the people of America in history and its literature. Among its contributors are such writers as Hon. George Bancroft, Theodore F. Dwight, Col. Higginson, Gen. Charles P. Stone, Chief Justice Charles P. Daly, Rev. George E. Ellis, John Esten Cooke, and many others.

THE December or Christmas number of *Wide Awake* equals one's high expectations of this model magazine for young folks. This year, two "plastic sketches," in three color-tones, modelled for the magazine by the Messrs. Low, of the Chelsea Art Tile Works, make the Christmas number an art treasure; and, to accompany these unique illustrations, there is much instructive gossip about "tiles" in Miss Harris' article, "Fire-place Stories," which has eighteen pictures. Among the many writers who contribute to this excellent number, exclusive of the names of the first-class artists whose efforts enrich nearly every page, are E. S. Phelps, Nora Perry, Mary E. Wilkins, Harriet Prescott Spofford, Mrs. A. D. T. Whitney, Margaret Sidney, Mrs. Treat, Mrs. Frémont, Elizabeth Robins Pennell, and others.

LECTURES.

MR. CHARLES FROEBEL, whose articles in *The Index* ("The Religious Confession of an Evolutionist," "The Moral Function of Socialism," "The Perpetuity of Life," etc.) have attracted considerable attention, is open for engagements to lecture upon the following subjects:—

The Spirit of the Kindergarten.

2. The A, B, C of Life: An Alphabet of Philosophy for Grown Children.

3. How can we breathe the Spirit of the Kindergarten into our Public Schools?

4. What is "Our Civilization," and whither does it tend?

For terms, etc., address

CHARLES FROEBEL,
225 EAST 19TH STREET, NEW YORK.

Lectures by Rabbi Solomon Schindler.

1. INTRODUCTORY.

2. TWO THOUSAND YEARS AGO.

3. THE CARPENTER'S SON.

4. JUDAISM THE MOTHER, AND CHRISTIANITY THE DAUGHTER.

As a special inducement to Liberals to distribute these lectures, which are full of radical thought presented in the plainest language, they are now offered at 5 cts. a copy; 10 copies for 40 cts.; 30 copies for \$1.00.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

The Poet as a Craftsman.

By WM. SLOANE KENNEDY.

A bird at rhyme and metres, with a glance ahead in prophecy and outline of a more spontaneous poetical style.

Letterpress, paper covers. Price 25 cents. By mail, postpaid, on receipt of price.

For sale at THE INDEX office, 44 Boylston Street, Boston.

HISTORY OF THE ARGUMENTS FOR THE EXISTENCE OF GOD.

By AARON HAHN, RABBI, Cleveland, Ohio.

BLOOM & CO., Cincinnati, Ohio, Publishers.

Sent by mail, prepaid, for \$1.50.

The Contemporary Evolution of Religious Thought in England, America, and India.

By Count GOBLET D'ALVIELLA. Translated by J. MODER.

Price \$3.00. For sale at *The Index* office.

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Cropo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

THE INDEX,
44 BOYLSTON STREET, BOSTON.

SCIENTIFIC THEISM.

By FRANCIS ELLINGWOOD ABBOT, Ph.D.

This work includes the substance of a lecture delivered last July at the Concord School of Philosophy. It is part of a new philosophy of Evolution, vitalized by the principle of UNIVERSAL ENDOGENIC TELEOLOGY and by the substitution of the ORGANIC THEORY OF EVOLUTION for the MECHANICAL THEORY advocated by Spencer and Haeckel. Its purpose is to philosophize the scientific method, and to show that modern science, interpreted by its philosophized method rather than by its non-philosophic special results, leads, not to Atheism, not to Agnosticism, not to Idealism, but to a REALISTIC SPIRITUAL THEISM which will satisfy both "the head" and "the heart."

1 vol., 12mo. Price \$2.00.

LITTLE, BROWN & CO., PUBLISHERS,
254 WASHINGTON STREET, BOSTON.

POPULAR BOOKS

Sent by Mail Postpaid at
PUBLISHERS' PRICES.

ANY BOOK in the subjoined List, or any other OBTAINABLE BOOK, that may be desired, will be forwarded as promptly as possible, on receipt of orders accompanied with the cash.

SPECIAL RATES will be made with persons or libraries desiring any large number of books.

Orders are respectfully solicited from all friends of THE INDEX.

BESURE to include in your list of **PERIODICALS FOR 1886** some, if not all, of the following, for they are the very best and are found in the homes of all cultured people.

Nineteenth Century.

No other journal numbers among its contributors so many brilliant thinkers and profound scholars. The most important changes in the thought of the times are submitted to searching criticism and review.

Contemporary Review.

The monthly contributions, by eminent writers, describing the contemporary life and thought of the leading nations of the world, give it an unique position among other Journals, presenting an epitome of all that best deserves attention in the world of thought and action.

Fortnightly Review.

The greatest exponent of radicalism in England. Its Editors and Contributors have ever been noted as leaders of progress, and have formed a school of advanced thinkers, which may justly be cited as the most powerful factor of reform in the British Empire and elsewhere.

British Quarterly.

While discussing all branches of modern thought, is particularly devoted to the consideration of the more recent theories in Theology and Philosophy. Its articles are characterized by a keenly critical spirit, and for fulness of treatment and justness of criticism it stands alone, in its special field, among the periodicals of the world.

Edinburgh Review.

Numbers among its contributors the greatest names that have moulded English thought for the past eighty years. While its policy admits the discussion of all questions, its conservatism is tempered with a liberalism that marks it as the **INDEPENDENT REVIEW** of the world.

Quarterly Review.

Its reviews cover all the leading issues of the day, and embrace the latest discoveries in Science, in History, and in Archaeology. Much space is devoted to ecclesiastical history and matters connected with the Church, thus making the Review invaluable to the clerical student, as well as of great interest to the general reader.

Westminster Review.

Is notable for the latitude of its theological views, many of the most advanced of modern theories in theology having received in its pages their first authoritative support. A distinctive feature of this Review is its **"INDEPENDENT SECTION,"** containing articles advocating views at variance with those of its editors.

Blackwood's Magazine.

Is the leading and most popular magazine of Great Britain. The tone of its articles, be they fiction, incidents of travel, critical or political essays, is unexceptionable, rendering it most desirable for the Home Circle.

All of above are printed line for line—page for page—with English Editions, but in handier form.

Shakespeariana.

While aiming to furnish a recognized medium for the interchange of views among Shakespearian scholars, and to afford the student the fullest information relative to Shakespear's art, life and writings, **SHAKESPEARIANA** is specially designed to extend the influence of Shakespeare as a popular educator, and to stimulate the study of his works in our colleges and institutions of learning.

Full Index Circulars furnished upon application.

LEONARD SCOTT PUBLICATION CO.,

1104 Walnut Street, Philadelphia.

UNITY.

A LIBERAL RELIGIOUS NEWSPAPER.
16 pp. Weekly.

UNITY seeks to adjust religion and culture; to make thought worshipful, and worship thoughtful; to find a unity beneath conflicting dogmas, a community in all denominations, a sympathy between all religions. It seeks to represent and emphasize the abiding elements of religion, love, justice, truth, worship, practically applied among all men.

CURRENT TOPICS.

BY B. F. U.

An elderly couple at Indianapolis, a few days ago, died from suffocation by coal-gas, because they religiously declined to do any work on the Sabbath, so much even as was necessary to adjust a fallen stovepipe.

PROPERTY questions are likely to prove the greatest obstacle to Irish reforms. The English papers are not backward in reminding their readers that \$1,000,000,000 of Irish property and \$500,000,000 of Irish mortgages are substantially owned by Englishmen.

C. F. ELLIOTT, in an article in *Unity* entitled "Must a Unitarian be a Christian?" says, "To our philosophy, it appears that Unitarianism is not distinctly Christian; and, however much policy would dictate that we should claim the name, we believe we should not yield to any idea of policy, but be honest with ourselves."

AMONG the names of Americans which fill the death-roll of 1885 are those of Gens. Grant, McClellan, and McDowell, Vice-Presidents Colfax and Hendricks, Senator Frelinghuysen, Gov. Talbot, Charles W. Slack, Elizur Wright, Robert Treat Paine, Maria Weston Chapman, Helen Hunt Jackson, Richard Grant White, B. Gratz Brown, Emory A. Storrs, Prof. Benjamin Silliman, Prof. John C. Draper, John McCullough, Dr. Rufus Ellis, Cardinal McCloskey, Rev. Irenæus Prime, Rev. Stephen H. Tyng. Among the distinguished dead of other lands may be mentioned Victor Hugo, Sir Moses Montefiore, El Mahdi, "the false prophet," Gen. Gordon, Col. Burnaby, Dr. Leopold Damrosch, and Alfonso, the late King of Spain.

BUT few, perhaps, who served in the Union Army during the War of the Rebellion have been forgotten by the pension agents, who, in the kindness of their hearts, without any solicitation whatever, write the soldiers that, having examined the army records, they are of the opinion that pensions can be obtained for them, etc. The word "pension" during the next few years is likely to cover no small amount of fraud. This is a

subject toward which our legislators could direct their attention, to the advantage of the people whom they represent. The country's disabled veterans should be generously and gratefully cared for, but the government should protect the people from robbery carried on in the name of patriotism and duty to the soldier.

At the annual meeting of the Modern Language Association of America, held in this city last week, valuable papers were read on different subjects. The most interesting session was, perhaps, that of the first evening when methods of teaching foreign languages were discussed. Prof. Jageman, of Richmond, Ind., was in favor of dispensing as far as possible with English in teaching. Dr. Paul Carus was of the opinion that it is unnatural for the student to forget that he knows one language in order to learn others. He would have the knowledge of the one tongue utilized and made a help, and not allowed to be a hindrance in acquiring other languages. He was opposed to teaching in the merely "natural way," which would, he said, make an American student in German speak German-English like the Pennsylvanian Dutch.

THE *Nation*, commenting on Senator Edmunds' bill providing for the seizure of the property of the Mormon Church because of the practice of polygamy by its members, and the advocacy of polygamy by the Mormon clergy, justly observes: "Apart from polygamy there seems to be no more objection to the Mormon Church than there is to any church in which the clergy are very powerful and the people very ignorant. Polygamy is now a legal offence; and it has been the practice of the United States hitherto, and a very wholesome practice it is, when legal offences are committed, to search out and punish those, and those only, who commit them, by due process of law. The prevention of offences by the seizure of property, whether belonging to corporations or individuals, such as the Edmunds bill contemplates, is, we believe, something hitherto unknown in our jurisprudence or politics, and might prove a most unfortunate precedent. If the Mormon Church as a corporation has no legal or proper standing, it ought to be wound up in the usual way, and its property distributed among the parties in interest. Its seizure and administration by government trustees would be a proceeding which we trust Congress will never sanction for any purpose whatever."

MR. VANDERBILT, it is said, once made a present of \$100,000 to the New York Central employes for refusing to join in a strike. A better security against strikes seems to be that of the Baltimore & Ohio Railroad, which in 1880 gave \$100,000 as the foundation of a life insurance fund for its employes. Members pay from one to four dollars per month, and receive from fifty cents to \$2.50 per day during temporary and from twenty-five cents to \$1.25 per day during permanent disability from accident. At death, if from accident, the legal heirs receive from \$500 to \$2,500; if from natural causes, from \$200 to \$1,000. Free surgical and medical attendance is furnished the

members. The association numbers twenty thousand. Since its organization, it has disbursed over \$1,000,000. In 1882, a saving and building fund was added, which places within the reach of all employes the benefits of the most liberal saving banks and the best conducted building associations. Wherever practical, material for the building of houses is furnished at the lowest rate, and transportation is put at one-half the regular rates. During the past year, a "pension fund branch" has been added to the association, by which the unexpected interest of the original endowment of \$100,000, augmented by an annual donation of \$25,000 from the company, is used for those who, "having served the company for ten consecutive years, and having reached the age of sixty, are relieved from service, or who, having reached the age of sixty-five, choose to retire from the service." The Baltimore & Ohio Railroad Company evidently has some regard for the social and moral as well as physical well-being of its employes.

"UNITY" asks whether Prof. Adler's recent criticisms of Unitarianism and of Reformed Judaism are "indications of the uneasiness that characterizes the unsuccessful, or shall we say that this is some of the old leaven of Judaism that has not yet disappeared from Mr. Adler's mind?" Prof. Adler's exercise of the right, in his work as an ethical teacher, to point out what he regards as defects in Unitarianism and Reformed Judaism, as well as in Materialism, which he recently criticised, is to us an indication of his independence and of fidelity to convictions. Were he less independent and conscientious, he might seek to gain adherents from the ranks of Unitarians, the Reformed Jews, and Materialists, by abstaining from criticism of their views, and by reserving his critical powers for the doctrines to which they all, in common with himself, are opposed. But Prof. Adler, after rising above the prejudices and limitations of sect and race, after discarding the authority of Moses and the prophets, is not the man to stifle his convictions in regard to errors, even when they are supported by the authority, real or supposed, of Christ and his apostles, or to withhold his honest opinion in regard to any system or movement which affects his fellow-men. For this he should be honored, not censured. There is no reason, that we can see, why Unitarianism should be exempt from discussion, unless the uncertainty as to what it is and what it teaches be a valid objection. Having now among its supporters and representatives a great diversity of religious belief, from mild Orthodoxy to Agnosticism, it is natural that there should be some disinclination on the part of the Unitarian press and pulpit to define Unitarianism, and to heed the objections of radical thinkers like Adler. But the disinclination has generally been shown by silence. We are glad to see that a broad man like Mr. Chadwick has considered, in a recent discourse, some of Prof. Adler's objections to Unitarianism. Captious controversy is undesirable; but fair and candid discussion is now, as it always has been, of great advantage to the cause of truth.

A WEEK OF PRAYER.

Evangelical Christendom is in the habit of spending the first week of each year in prayer,—that is, the congregations are urged to gather in their respective churches every day in the week, and, if possible, at more than one service, for this purpose; and it is to be presumed that the more zealous members follow the injunction. For each day, a special topic for the prayers is assigned by a committee of the Evangelical Alliance, so that all the congregations may be praying at the same time for the same thing. The theory of the practice appears to be that, by thus combining the supplicatory energy of the churches upon the same point at the same moment, the object of desire is more likely to be gained; or, in other words, that the ear of Almighty Power will be importuned into favorable listening, because of the much speaking. The method is evidently borrowed in part from that species of military tactics by which the whole active force of an army is massed for successive attacks upon one point after another, and may thus be more successful in carrying them than if the same force were divided. The Orthodox idea of prayer, as popularly interpreted, rests on the conception of Heaven as a power to be besieged, and both military and diplomatic methods come into the process.

Now, it is very possible that some quickened zeal and activity do come into the churches through these meetings, especially if they are well attended and vigorously conducted. The effect is essentially the same as that which comes from public meetings for the advocacy of any cause. There is only this difference: that the people, instead of being addressed directly, are appealed to indirectly through their overhearing what is assumed to be spoken for the ears of Deity, and that this kind of appeal moves them emotionally rather than through the understanding. The fervor of one kindles fervor in another. Conviction begets conviction. Any sincere expression of devotedness or of the need of it has magnetic power, and goes from heart to heart. And thus it might naturally be expected that people would go from such meetings with a deeper and stronger impulse for doing those things which, according to their religious belief, seem to them desirable, or, in other words, for *answering* in their own acts the prayers which they have made or heard.

But it is evident that not nearly so much is accomplished by the "week of prayer" as the believers in the instrumentality hope for,—not even so much as might rationally be expected on the ground of the natural excitation of human sentiments just noted. The believers attribute the meagre results to a deficiency of faith on the part of church members themselves. The churches, it is complained, do not avail themselves of the method as they ought. The meetings are not attended so numerous as they might be. Many ministers, even, do not manifest the personal interest in them that is befitting their office. And thus, from lack of vital faith in the real efficacy of the meetings, as the pious devotee laments, the effect of them is lost. "If you only had the faith as of old," he exclaims, "you could remove mountains!"

And this lament of the pious devotee hits the real point of the difficulty, though he fails to draw the right inference from it. "If we only had the faith as of old," he cries; but that is impossible. It is not the old faith that is needed, but a new faith. The appeal should be for a more rational adaptation of religious instrumentalities to mod-

ern thought. The actual results obtained from the "week of prayer" come, as we have said, from the quickening of human impulse leading to enlargement of human action. But the programmes and methods of the meetings are all arranged on the old view that it is God who is first to be affected. He is asked to do for man the things which man desires, and which he is endowed with capacities to do for himself, if they are proper things for him to attain. The supplications are put in the old form, as if there were a Deity in the skies who would change his purposes at man's entreaties; as if the very laws of the universe could be suspended, and its forces set aside by human petitions. In thus adhering to the method of supplicatory petition, the "week of prayer" is a survival of superstition which is entirely out of harmony with both the scientific philosophy and the practical sense of the present age. And, without knowing exactly how or why, a good many people, even within the limits of evangelical churches, have lost their faith in such prayers. Their minds have been so permeated by the spirit of the age that it is impossible for them to have the old kind of faith in the efficacy of prayer. It is as vain to appeal to them to recover that faith again as to urge them to repossess the vanished months of the past year. They know of a human power that can and does remove mountains, but it is not "prayer." It is the knowledge, scientific skill, perseverance, labor, courage, which have succeeded in tunneling the Alps and piercing the Rocky backbone of the American Continent, to make highways for human intercourse and bonds of amity between States. And these people begin to see that it is by a somewhat similar exercise of human capacities that man is to remove the mountains of ignorance, error, and vice that now stand so obstinately across the way of human advancement and happiness; that is, that the greater and nobler objects of human desire are not to be attained by supplicating Heaven or any Deity believed to dwell there, to send them down as gifts to mankind, but are to be won by the zealous and faithful putting forth of human effort for just that purpose. They are to be earned by that kind of "prayer" which is both desire and labor, and will not come in response to any other kind of entreaty.

Yet this is not to say that the modern mind may not find it both natural and elevating to give some expression to its rational desire for a deeper and more active unity between itself and the upward aim and moral import of the universe. The modern mind believes in a universe controlled by law, and not by arbitrary personal will that may be moved hither or thither by the importunity of human supplications. "Prayer," therefore, to the modern mind, if it use the word at all, will mean *aspiration*. It is the natural desire of the human soul for its highest good. It is humanity's longing and yearning for its own ideal perfection. This desire and yearning may clothe itself in words or it may breathe itself out in silence. It may sing a song of gratitude for life and life's joys. It may sigh in sadness and sorrow because of past frailties; it may hope and resolve for something better in the future. It may be a cry for right, and for a higher rectitude and purity of life; an impassioned longing for inward peace, or for harmony of impulse and conduct with that mighty and all-pervading Power in the universe, unknown and yet known, that makes for truth and righteousness. All these "prayer" may be to the modern mind, and the test of its genuineness will be resolute effort to realize its own objects; but *begging* for gifts or favors, supplicating for a change or suspension of any natural law, it cannot be.

If the idea of prayer were thus modernized, and people felt themselves under an obligation to answer their own prayers, the "week of prayer" might be made a very useful instrumentality for promoting human welfare. It would then become an incitement to deeper truth-searching and to more courageous work for the right. It would stimulate the impulses of beneficence, charity, and neighborly good will, and send people out into the world more devoted to justice, temperance, and honesty. Its topics would lose the ecclesiastical and theological flavor they now have, and would be such as immediately concern the every-day interests of human society. Instead of "The Christian Missions in Asia" or "the power of the Spirit to sanctify believers," the meetings of the "prayer-week" would be stirred by such questions as: How can we best promote temperance? How create a higher standard of chastity, and the same for man as for woman? How more effectually meet the problem of dealing with crime? How help each other to lift the burdens of ignorance, vice, poverty, and misery which now crush to earth so large a portion of the human race? And, above all, how shall each individual strengthen and increase his own higher life, and nourish and keep those qualities of character which will make him a beneficent providence to the world?

Faith, indeed, will be an element in the successful solution of such questions as these; but it will be faith that has not so much concern with theological dogmas as with the practical objects sought. It will be faith in virtue and morality as representing the highest import of the universe,—a faith that rises into a passionate love of the right. Such a faith as this lays hold of the very powers of life, and wields them in new creative action. The most effectual faith in God is not that which takes the form of the intellectual proposition that he is a supreme and eternal Person who rules the universe from an invisible throne at its centre; but it is faith in the truth and goodness which declare the highest law for man's conduct, and obligate him to obedience thereto.

WM. J. POTTER.

THE SPRINGS OF PURPOSE AND PURSUIT.

Back of all the progress made by humanity so far in the world's history has been the impetus given by individual purpose and steadfast pursuit. These are the forces which have made progress in any direction possible. Various have been the directing springs which have awakened in men a strong purpose, and started them in certain lines of thought and labor, from which they have rarely diverged until the aim in view has been achieved. Some of these springs are so deeply hidden in the consciousness of occasional individuals that we can never correctly guess, or even if we do guess correctly, can never *know* with certainty the impelling impulse.

But, on the other hand, in the majority of cases, the kind of pursuit chosen and the method of going to work to carry out the purpose reveal the springs which animate these workers. We recognize by indubitable signs the men and women whose labors are impelled by sympathy for suffering humanity, by a passionate devotion to truth, by a craving for exact knowledge, by a fervid religious faith, by a rigid sense of duty, by a far-seeing selfishness, or by a burning desire for fame.

Whichever of these motives may be the impelling force, the results to the world at large are apparently about the same. So much impetus has been given in a progressive direction, and in so far the worker has been, whether intentionally or otherwise, a benefactor of his race.

But it does make a great difference, whether he knows it or not, to the man himself what the mainspring of his action is, whether selfish or unselfish; for simple ambition and desire to be talked about by his fellows, to be in a word famous, is a fever of the mind which undermines the moral constitution, and is apt to leave the sufferer from it destitute of mental poise and deficient in intellectual strength.

Yet it seems strange, to one who thinks of it as a mere spectator in a philosophizing mood, to observe the preponderance of this one motive. No other spring of action is so common as this, in whatever direction the thinker looks. Men's longing desire to be in some way distinguished from those around them, to become a point of observation and praise, is seen as surely in the exultation of the savage when enabled to add one more scalp to his trophied belt, in the brutal bully whose tell-tale bruises make him the object of admiring comment by street gamins and his prowess the subject of betting by the patrons of liquor saloons, in the humblest member of a victorious ball club, the sorest-footed pedestrian that ever outwalked his competitors, or the owner of a cup won by boat or bicycle race, as in the actor who has won distinction as a "star," the author whose books are quoted, the artist whose paintings are bought, the inventor whose patents are renewed, and the scientist who is referred to as an "authority." On life's lowest levels as well as on its top-most heights, the desire for fame exercises its subtle, strong force on all human action. And it is good that it does so; for it thus reaches, stirs, and impels where the higher motives are powerless in the lower moral strata. It finds responsive chords in intellects insensitive to finer motives, and so prepares for impulses from the finer springs of purpose and of pursuit.

But it is when it is allowed in cultivated minds to become the master passion, when at its demands the higher faculties of the moral and intellectual nature are subsidized and levied upon for help to perfect its schemes, that we feel constrained to show its low moral standard and its inadequacy as a ruling motive.

The popular longing for fame (a temporary immortality) has sometimes been urged as an argument in favor of the immortality of the soul. But the thinker will see in it, more probably, an argument against immortality, since nothing seems more ephemeral than earthly fame. We talk of Shakspeare's fame as being immortal, yet he died twenty-one years less than three hundred years ago. The span of three human lives could easily reach to his age and time. That is certainly not immortality, as we reckon it. How about the undeniable fame of lesser lights? Who were the best known leaders in thought and literature one hundred years ago? Rousseau, Voltaire, Diderot, Condorcet, in France; Dr. Samuel Johnson, Oliver Goldsmith, Hannah More, Frances Burney, in England; Benjamin Franklin, Thomas Paine, John Adams, Aaron Burr, and Thomas Jefferson, in America. These are the names that are still famous; but how many whose names were, perhaps, even better known then have dropped into oblivion in that short space of time? And how many of these even are as well known to the children of this generation as the names of Dickens, Thackeray, Bulwer, Howells, James, Mrs. Stowe, Louisa Alcott, and others presently famous, many of whom will be forgotten in less than one hundred years!

Nay, more, is there any reader of *The Index* who has lived to forty years of age, who cannot recall the time when the names of many men and women still living, but now rarely mentioned, were

in all the papers of the land; whose fame seemed to be guaranteed for at least several generations, and their good work generally acknowledged, but whose names, now appearing at rare intervals and on special occasions in one or two journals, strike us with a strange feeling, as if brought face to face with ghostly visions of the past? Jenny Lind, the divine singer; Eugénie, formerly Empress of France, and leader of fashions; Kossuth, the Hungarian hero, whom America went wild over; Fanny Kemble, the lovely girl, who thrilled the English and American public with her acting fifty years ago; Mary Howitt, whose pure, natural stories were the delight of our childhood; Martin F. Tupper, whose *Proverbial Philosophy* was once the rage; John C. Fremont, whose thrilling explorations read like charming romances, and whose fame as a daring adventurer and high-souled man made him, thirty years ago, a candidate for the presidency of the United States; John G. Saxe, popular poet and gubernatorial candidate; William Sprague, War Governor and Senator from Rhode Island, the husband of one of the most brilliant women of Washington; and, last and perhaps least, Dennis Kearney, the sand-lot orator of San Francisco,—these are all still living, with many others, like George Francis Train, who won temporary notoriety in the newspapers, though to-day their names are almost forgotten through the forgetfulness of the public. Yet, in the face of these facts, thousands of men and women of less decided characteristics are desperately struggling to-day, in many different departments of life, with the one poor, inadequate, unsatisfactory aim to become temporarily, in however small a fashion, famous; to gain a niche in the columns of some ephemeral newspaper, or to have their names embalmed in the doings of some society whose existence will be forgotten ere they are dead.

To many who have single-heartedly sought, not fame, but the good of their fellows, truth,—new light,—it is true that fame has come as well; but these workers have not particularly cared for it, have not been dependent on it, would have pursued their studies just as serenely and undauntedly if the whole civilized world had turned against them. The theories of Darwin, Spencer, Haeckel, Huxley, Tyndall, Galton, and Pasteur, have been remorselessly assailed; but these thinkers, not working for fame merely, could afford to keep their tempers, to wait, and to go on with their experiments to ultimate triumph. Contrast with the calm deportment of these the feverish impatience of such fame-seekers as Chatterton, Keats, and Byron, who, with all their wondrous genius, cared more for the fame that genius brought than for the genuine worth of its work; and that passionate demand for an immediate public recognition commensurate with the greatness of their gifts resulted in the death of two of these and the misanthropy of the third.

SARA A. UNDERWOOD.

LATTER-DAY INSTINCTS.

The new science which Carl Vogt calls "Geographical History" teaches us that within the few centuries of our chronological era the hand of man has produced greater changes in the physical conditions of our globe than all the elemental forces combined have effected during the last fifty thousand years. Rivers have shrunk to brooks; vast forests have disappeared; a climate once confined to the inland plains of the tropics has invaded the coastlands of the temperate zones; new plants, new trees, new nations, have superseded the autochthones. Throughout a territory as large as that of the North American Continent,

the aspect of nature has been so wholly transformed that its former inhabitants might fail to recognize the sight of their birthlands. The vice-regent of the Creator has used his power unsparingly, but at his peril; for the self-avenging laws of nature have occasionally balanced the account by perpetuating some of his innovations. The cloudless sky remains deaf to the prayers for rain. The silent desert refuses to revive. The survivors of our slain fellow-creatures avoid man with an incurable mistrust.

Man himself has undergone a retributive metamorphosis. The indigence of the worn-out soil stunts the development of its inhabitants as well as of its herbs and trees. Some of their higher faculties have been lost by long disuse. Nay, more than one abnormal habit has become an abnormal instinct. Our artificial modes of life have begot hereditary vices, asserting themselves with all the vigor of normal propensities, though partly offset by artificial virtues, or virtues artificially awakened from a thousand years' trance. Millions of our contemporaries are swayed by passions as unknown to the first sons of Adam as the motive power of a steam-engine.

The most persistent of those factitious instincts is the *Stimulant Habit*,—the *penchant* for convulsing the system with more or less virulent drugs. The origin of the poison passion is as obscure as the exegesis of sin, but the period of authentic history certainly antedates the time of its introduction in various European countries. The Greeks and Romans of the early republican era contented themselves with sweet wine (half-fermented must), and generally reserved even that mild stimulant for public festivals. In Latium, viticulture did not begin till a century after the time of Cincinnatus. Greek historians mention the time when the worship of Bacchus—i.e., the use of vinous stimulants—first crossed the Hellespont. Among the peasants of Saxon England, beer-drinking and carousing were still synonyms. "At Ember-eves and Holy Ales," the good man broached his hoarded kegs of home-brew, but was content to wash down his every-day meal with whey. At present, the twelve Caucasian nations number about a hundred million persons, who think a daily stimulant of some sort or other as indispensable as their daily bread. The poison fiend defies all exorcism, though the convenience or necessity of disguise has now and then induced it to change its form. Under the sway of Islam, alcohol has yielded to opium. In France, it has been partly superseded by *absinthe*; in North America, here and there, by tobacco and strong coffee. Through all the great social reforms of the last two centuries, the poison habit has held its own so persistently as to suggest the suspicion of itself being the *metastasis* of an elder instinct.

That prototype was probably the suppressed *love of excitement*. The enforced quietism of our peculiar ethics drove pleasure-seekers from the village green to the beer-shops. The whole history of asceticism shows sadly how often the suppression of harmless amusement has been followed by an increase of intemperance. But the genesis of the poison disease also suggests its possible cure. We cannot hope to fight alcohol with Salvation Armies; but we may divert the influence of its motive principle by guiding it back into its original channels; we may redeem the victims of the stimulant vice by healthier forms of amusement. A gymnastic arena in every township, a free museum or zoological garden in every larger city, would far excel our conventional remedies in curing intemperance by the removal of the cause.

Another instinct which would hardly be recog-

nized in its original form is our modern *Thaumaturgism*,—the thirst for supernatural revelations which, in the latter days of this age of reason, has asserted itself by such astonishing methods. Supernaturalism, as distinct from the promiscuous credulity of ignorance, is a specific product of the Middle Ages, the thousand years' interregnum of reason, when science was almost wholly superseded by thaumaturgic pursuits,—miracle-mongery, mysticism, and the compilation of ghost legends. Soon after the introduction of monachism, a universal ghost craze spread over Europe, like a contagious moral disease, till, as Lecky says, "not truth only, but the very love of truth, seemed obliterated from the human heart,"—to a degree unknown to the darkest ages of pagan antiquity. The science of the ancients was limited by their circumscribed sphere of experience. Columella, Xenophon, and even the elder Pliny retailed scientific superstitions which could nowadays be refuted by the graduates of a village school; but from a *penchant* for miraculism they were as free as from the vice of religious intolerance. The freethinker Diagoras propagated his views, unhindered, from city to city. Lucretius alluded to the myths of the popular creed in terms that would cost Charles Bradlaugh his standing as well as his seat. Xenophanes openly lectured on the suspicious circumstance that each nation attributed to the gods its own passions and physical characteristics. Stilpo attacked the system of public sacrifices with all the *persiflage* of the French encyclopædists. In the second century of our chronological era, the liberal theism of Epicurus had become so popular in Rome that few intelligent magistrates could have been induced to enforce the statute laws against dissenters. Nay, Cicero (*De Divinatione*, II., 50) mentions that a large audience applauded an actor who quoted a passage from Ennius to the effect that the gods were not in the habit of troubling themselves about the concerns of mankind! Plautus wrote a special play to ridicule the belief in ghosts. There were large cities where a Katie King could not have made half a dozen dupes; and there is no doubt that the writings of Jean Bodin, a French "philosopher" of the sixteenth century, contain a larger and more stupendously absurd collection of *supernaturalia* than the whole antechristian literature of Greece and Rome, taken together.

But, after the conversion of Europe, the shadow on the dial of reason moved backward. The triumph of faith was enforced by the cremation of some eight hundred thousand sceptics. The children of thirty following generations were systematically fuddled with mysticism, and when education was at last wrested from the hands of the miracle-mongers, the after-effects of their prescriptions remained. A thirst for miracles had become a hereditary instinct. That instinct has strangely survived the sunrise of civilization. Persistent, yet withal pliant, it masquerades in ever more ingenious disguises,—nay, even in the garb of science. Tauler, the Rosicrucians, Swedenborg, Boehm, Mesmer and his oracular followers, catered to the same appetite, though their methods improved with the growing fastidiousness of their patrons. Our latter-day spooks own the influence of culture. From the Bavarian *Pelzmärten*, who used to astonish the natives by defiling unguarded out-houses and frightening country maidens with his obscene whoops, to the familiar of a perfumed medium, delighting a Boston audience with the posthumous efforts of eminent poets and essayists, there is a wide step in the right direction. The ghosts themselves must congratulate each other on the progressive refinement of their mundane sphere,

though their Protean versatility may alarm many honest rationalists. "Does our civilization, then, afford no safeguards against such revivals of superstition?"

The truth is that, against the influence of a moral poison habit, culture is but an indifferent specific. As Schopenhauer reminds us, even among the schoolmen of the Middle Ages there were shrewd enough reasoners. The trouble was that they contented themselves with drawing their inferences after the rules of logic, without venturing to question the validity of their premises."

That explanation is, indeed, the only key to an otherwise inexplicable riddle: The phenomenon of the frequent and apparently harmonious concomitance of learning and ultra-childish credulity; of men with all the erudition of the four faculties, and often with more than average experience in the affairs of practical life, being taken in by tricks that could be exposed by an unbiassed school-boy, and defending extravagant absurdities with a skill that would baffle the tactics of a veteran barrister. For the thaumaturgists, who seem to have entered the service of science, often wear but the badge of her livery, while they continue to ride their hobby-horse in the roundabout of the enchanted circle. Dismounted, though, such philosophers of the whirligig may prove surprisingly able to follow the straight path of reason; and to make their monomania the criterion of their mental capacities would often be as unjust as to judge the prowess of a bibulous wrestler from his gait under the staggering influence of his tipple. Like the stimulant habit, the ghost mania cannot be subdued by diatribes; but we may modify it by reclaiming its motive principle,—originally the *instinct of wonder*, akin to legitimate inquisitiveness. The suppression of that instinct has driven its votaries from nature to ghostland, but their bias may yield to a stronger attraction; for, in the market of miracles, the revelations of science already begin to outbid the temptations of mysticism.

Our age of co-operation has been accused of stunting the spirit of self-reliance, but has made amends by developing the *instinct of publicity*. The germ of that instinct has for ages existed in the desire of communication, which manifests itself even in the lower animals, but which, up to the latter centuries of the Middle Ages, contented itself with a limited audience,—nay, even avoided the confidence of the masses. Instead of proclaiming their wrongs from the housetops, the political malcontents of former centuries met in secret conclave. Sceptics whispered their doubts from ear to ear. *Procul profani!* was the cry of the Eleusinian priests, preferring to conduct their camp-meetings on a limited scale. In several south European monarchies, the mere mention of court scandals was an indictable offence. We feel moved to drag all such things to the forum of public opinion, after all, in token of our growing confidence in the equity of that tribunal. The frequent complaint that the censorship of public morals is passing from the clergy to the press means, in fact, nothing but that the public is proving itself competent to be its own guardian of moral interests. Thus far, the plan has proved the advantages of giving all parts a hearing, though the motive principle of the instinct is perhaps a reaction against the enforced silence of the intolerant ages. Considering its present rate of progress, it seems not easy to say where the movement will end, nor what the righteous could risk if it should go to all lengths. What harm if the twentieth century should witness mass meetings of Moslems discussing the moral character of Mohammed Ben Abdallah, especially if the practice should teach them to trim the plenipotence of their many-tailed Pashas?

The *instinct of protest* is no longer confined to the Germanic nations. The Mediterranean races, too, have rediscovered the truth that submission to injustice is a sin against society as well as against nature; and the growing intolerance of shams is, next to the reawakened thirst for knowledge, perhaps the most hopeful sign of the times.

Among the west Caucasian nations, the reaction against the tyranny of dogmas has culminated in the development of a daring *instinct of scepticism*. The modern "spirit of denial," which Carlyle bewails as a symptom of disintegration, is, nevertheless, the best safeguard of truth, since its action is self-regulative, and every abuse of its mission tends to call forth a counter-denial. The instinct of doubt has likewise served as a moral antidote of the miracle habit, and is much akin to that vigilance which is the price of knowledge as well as of freedom. And, since reason naturally directs its keenest weapons against dogmas,—more hateful by being both hideous and untrue,—who shall say that scepticism tends to lessen the moral sunshine of our lives? For one consoling hope, it has probably exploded a hundred distressing fears. Any one who has an opportunity to visit the cottages of our farmers and mechanics, and will take the trouble to ascertain—not by Sabbath-school methods, but by private conversation—how much of the belief in the demonism of the Middle Ages still lingers, even among the more *gnostic* members of the representative generation, may satisfy himself that a delusion which once almost crazed the nations of Christian Europe has silently but irrevocably passed away.

It must be admitted that here and there the Spirit of Denial has begun to forfeit the alliance of Liberalism by emulating the intolerance of its adversaries, but a student of ecclesiastical polemics can understand the satisfaction which an agnostic may feel in the ultra-scepticism of his party. When Napoleon the Great was banished to Elba, a wag proposed to give him only half the island and a chance to gratify his ambition by the conquest of the other half. For similar reasons, free thinkers may deem it safer to push their outworks rather beyond the limits of tenable ground. They feel sure that their opponents will avail themselves of the earliest opportunity to recommence encroachments.

But history also teaches that an age of doubt has generally been the harbinger of great social transformations, and even that the omen has often betrayed the tendency of the coming change. The discovery of shams leads to their abolition; and, by pointing out the more grievous discrepancies of semblance and fact, scepticism has more than once indicated the chief needs of the times: a fasting cure for the vice-riots of surfeited Rome; emancipation for the victims of mediæval absolutism.

What consummation of most exigent reforms will accompany the prospective reconstruction of our own age? The "Ascendency of Reason over Arms," predicted by the utilitarian optimists, peace conventions, and abolition of standing armies? Educational Reform? Physical Regeneration? The Triumph of Temperance? Harmonized Interests of Labor and Capital? Women's Rights? Prof. Goldwin Smith's "Blessing of a Credible Creed"?

Scepticism enters a *caveat* against details of augury, and the history of civilization warns us that the seed of reform is of slow growth; but we may at least predict that its germs will not perish from want of sunshine, for the steady advance of science warrants the hope that the development of those germs will be aided by a progress from dawn to the light of a new day.

FELIX L. OSWALD.

SILURIAN THEOLOGY.

We are taught that the evolution of animated beings from lower forms to higher is a slow process,—so slow, in fact, that historic time is not long enough to measure the shortest step in its march. The evolution of Christian doctrine is not so slow. We can mark its progress from barbarism to civilization, from darkness to light. Even in this generation, learning has improved and refined it so much that old preachers can hardly recognize the theology of their own sermons preached in their earlier ministry. At the same time, we find certain popular "divines" who are paid high salaries to act as theological brakemen, and hold humanity back, lest it arrive too soon at the millennium. Geologists tell us that the different and successive ages of evolution are marked by the extinction of some species of animals and the beginning of others. At the same time, they say that some creatures, in every age, have escaped the general catastrophe, and survived into the succeeding epoch. Indeed there are some animals living with us yet, survivors of races which have not advanced a step in the scale of improvement from the days of the lower Silurian even until now. So there are species of Christians, sects they call them, like the Roman Church, for instance, which have successfully resisted the process of mental and moral evolution from the Silurian age of Christendom down to the present day. There are, also, preachers in the Protestant pulpit, survivors from primeval religious chaos, who are trying to reverse the process of the suns, and who hope some day to sing praises to the Lord that chaos is come again.

One of the most popular and best paid brakemen on Humanity's road is the Rev. Mr. Talmage, of Brooklyn. His theology is considered of so much importance that his Sunday discourses are telegraphed to various parts of the country for publication in the Monday morning edition of the newspapers. This telegraphing is done by sinful operators who violate the Sabbath for that purpose. In different papers of Monday, December 28, is printed Mr. Talmage's sermon of Sunday, the 27th. It is called a "Discourse on the Closing Year," and will serve as a fair specimen of the kind of brake which Mr. Talmage is working in a religious effort to stop the cars of human progress. It is a burst of inflammatory rhetoric frightening the soul; an unpleasant reminder of where we shall go to when we die, unless we believe a lot of unbelievable things, which we must believe or perish.

Mr. Talmage tries to stimulate religion by giving pain. He goads his flock like the cruel herdsman, who uses an iron rod. His exaggerated comparisons and strained metaphors worry the nerves of his congregation; and, when he threatens his hearers with that superlative degree of punishment "prepared for the devil and his angels," they surrender and believe, like that Oxford student who was willing to subscribe, not only to the Thirty-nine Articles, but to forty of them, if required. Mr. Talmage compares the pilgrim who has reached the end of another year to the tired horseman who, having made a long journey to the top of a hill, reins in his steed, takes his feet out of the stirrups, and looks back. This is picturesque, and easy enough to understand; but, when he says, "So to-day we come up to the Sabbatic Mount of Privilege," he talks in that meaningless and inflated style which sensational theologians consider necessary when they tell about the "mysteries" of the atonement and the incarnation.

Mr. Talmage took his text from Paul to the

Romans,—“Knowing the time, that now it is high time to awake out of sleep.” This is a good enough text for the closing of the old year, although better for the opening of the new. Contrary to the doctrine of most preachers of his order, who maintain that it is easy to become a Christian, Mr. Talmage declared that it was very difficult, because “there are so many obstacles in the way of our salvation.” “My yoke is easy, and my burden is light,” said Christ; but Mr. Talmage thinks the other way. According to him, the yoke is hard, and the burden heavy. “Every man,” he says, “who has tried in earnestness to become a child of God has found difficulties.” One of the chief obstacles, said Mr. Talmage, is “the worldliness that surrounds you.” As explained by the preacher in detail, this “worldliness” was that reprehensible activity which consists in earning a living for wife and children. “You rise in the morning,” said he, “you hurry through the morning meal, you go to your office, you open the letters, you answer them, you examine the money market. Your life is a toil and a turmoil. It is very rare that, from eight o'clock in the morning until four or five in the afternoon, save the fifteen or twenty minutes in which you lunch, you have a single thought about the great future. Oh, this tide of worldliness! It sets away from God and away from heaven.”

What is all the “worldliness” just described but the ordinary duty of human life, which, when honestly done, is itself worship, if such a thing can be? Why should a man impair either his “lunch” or his digestion by gloomy forebodings about the “great future”? Are not the cares of the great present enough? The “worldliness” of honest industry in any business does not “set a man away from God”; and it will surely help him to heaven, whether that heaven be in this world or in the world to come.

The “obstacles” just mentioned are of man's own making, and he might avoid them by his own conduct. Instead of rising in the morning, he might lie in bed; instead of going to his office, he might stay at home, dream of the “great future,” and let the great present take care of itself. This is intelligible enough; but why should he be held responsible for “Satan,” and the obstacles which that conspirator places in the way of salvation? Man should not be held accountable for them; and yet Mr. Talmage said to his people, “There are obstacles in the way of your getting to heaven in Satanic and infernal assault.” “The air,” he said, “is full of evil spirits”; and then, with redundant martial metaphor, he explained their mode of action. “They accost you,” he said. “They meet you at the cross-roads. They tell you the wrong road. They try to unhorse your good resolutions, to spike your guns, and to outflank you in every Christian movement.” Now, Satans who accost people at the cross-roads, who direct them wrong, who unhorse them, spike their guns, and outflank them, ought to be punished for inflicting such annoyance; but, surely, the victims of the persecution deserve pity rather than blame. Such mischievous pranks as those ought not to have any effect in keeping people out of heaven.

The importance of religion, and especially of Mr. Talmage's religion, is estimated by the value of a human soul; and the value of the soul is found by weighing it in a pair of scales against the world. The soul goes down with a ten thousand million pounds weight, while the “ponderous world” kicks the beam. “This soul,” said Mr. Talmage, “with the image of God upon it, has been debased, and has become a counterfeit. We have all sinned; and we are all lost, unless divine

grace rescue and redeem us.” He likened a sound soul to a sound currency, and made the parallel plain by an anecdote which is very appropriate now. “Theodoric forbade the debasing of the national coin. They said to him, ‘We can mix something else with it, and it will be just as good.’ ‘No,’ he said, ‘I will not have my face imprinted on a debased coin.’” There is an honest pride in this remark; and the principle of it might be imitated by some Christian nations which are in the habit of stamping the face of the Goddess of Liberty on a debased coin, and giving a religious character to the counterfeit by engraving on it the sanctimonious advertisement, “In God we trust.”

Another obstacle to salvation is “the brevity of time in which we have to prepare for the next world.” Man should not be held accountable for this “brevity,” for he does not appoint the duration of human life. Short as it is, this life is long enough for all the work and all the duties required of it. To maintain the contrary is to reproach the Creator. When men lived to be nine hundred and sixty-nine years old, they were no better than they are now. In fact, they were worse; for it became absolutely necessary to drown the whole race, with the exception of one family. Considering that it required three hundred years to build St. Peter's Church at Rome, Mr. Talmage thinks that the average length of life is hardly sufficient to build “a temple of holiness in the soul.” Imitating the fluent auctioneer who says: “Now, here's a full-jewelled, solid gold, hunter-case watch, eighteen carats fine: how much are you going to give me for it? Shall I have ten dollars for it? Nine? Eight? Seven? Six? Will you give me five dollars for the watch?” so the verbose preacher rattles on about the human soul. He says: “Now, here is a temple of holiness to be built in every man's soul. How long are you going to give us to build the temple? A thousand years? No. Seven hundred? Six hundred? Five hundred? Three hundred? Two hundred? One hundred? No.” In this way, he stumbles along to the bottom, like a man falling downstairs. “Some of us,” he continues,—“some of us will not have sixty years, some of us will not have fifty, and some of us will not have thirty, and some of us will not have twenty years to build this great temple. Oh, how vast is the work, and how short a time there is to do it!” All this repetition is artfully contrived to rasp the spiritual nerves of timid people, and drive them to join the church without any more delay. It is a fault of those vain and eloquent exhorters that they will not search the Scriptures. They prefer the wisdom of their own hearts to the wisdom of the Word. Had Mr. Talmage read his Bible diligently, he would have learned from Solomon, the wise, that “to everything there is a season, and a time to every purpose under the heaven.”

In all this rhapsody, we look in vain for any hint of the sublime and practical religion of human love and honesty. Duties done to man are rather an “obstacle” to salvation than a help. There is no appeal to the congregation to take an interest in one another, but there is a dark suggestion that the man who does not take an interest in Jesus Christ is lost. Woe to the man who is careless in regard to his immortal destiny! His mortal destiny, and the mortal destiny of his neighbors, are matters of no concern at all. It is a mischievous thing to set up the interests of Jesus Christ against the interests of all mankind, to teach congregations that to serve and glorify him is all-sufficient for eternal salvation. It is a solemn thing to scare mankind by spiritual terrors away from human duties, and compel them to transfer those duties to the idols of a church.

This is the tendency, if not the declared purpose, of preaching like that of Mr. Talmage. It is injurious to the moral well-being of the world.

With sacrilegious presumption, Mr. Talmage exhibits a lost soul to the congregation as an example and a warning. This lost soul belonged to the partner of a business man then present in the congregation. His crime, in the exact language of the preacher, was this: "That man lived on without any concern about the future world; and, suddenly, he died." There is no insinuation that the man was not a good man in this world, just, loving, kind, and true; but he had no concern about the future world. "Where do you suppose he is?" inquired Mr. Talmage. The congregation started at the awful inference drawn and presented by the question. Seeing their surprise, he said: "Well, you don't like to take the responsibility. I want your opinion as to where he is." It is creditable to the congregation that there was not a person in it who had self-righteousness enough to pass judgment on that poor soul, either by word or look or sign. This did not deter the preacher from making the application of the question and its inference to the present company. "Oh!" he cried, "I wonder if, when we are dead, there will be any awful guessing about where we have gone." No doubt there will be plenty of it; but, so far as Mr. Talmage is concerned, let him be consoled by the reflection that those who shall do this "awful guessing" about him will be people of ill nature and extreme bad manners.

Having made his hearers uncomfortable, Mr. Talmage now mixes God's wrath with his gospel, to give it strength and pungency. That very disagreeable old death-bed, that every one must come to, is lifted up in scarecrow fashion once again; and, pointing to it, the exhorter said: "Oh, if, in the hour of death, you hear the up-braidings of conscience and the reverberations of a broken law and the thunders of God's anathemas, you will wish you had never been born."

This morbid religion, which forges "God's anathemas" and pelts poor mortals with them, until they join the church, has its market value in the temple. Mr. Talmage does not disdain to use it to heighten the value of the indulgence which, like a Protestant pope, he carries in his pocket. He has, in his theological stock, pardons as well as penalties. How shall man escape God's anathemas? By leading a good life? No. By deeds of love and charity? No. By scattering blessings round about him? No. By great service to humanity? No: these all count for little. Service to Christ, in church form, is enough; and Mr. Talmage is trustee of the absolution. "Why not come out to-night," he exclaimed, "and have this matter gloriously settled?"—settled right there in Mr. Talmage's tabernacle. "If there be anything in Christ," he said, "and a bright hope of heaven, why not come and get it?" Get it of him, to be sure. "In the name of my Lord Jesus Christ," he continued, "I plainly offer it,—pardon for all your sin, comfort for all your trouble, help for all your burdens."

This is the false gospel that is leading men astray from the real purposes and the genuine obligations of life, which presents to them an erroneous and an unnatural theory of virtue and religion, which substitutes faith for morals, and weakens the supreme law of the universe by cheap and counterfeit pardons for sin. It enfeebles the mind, and fills the heart with fear of God, until there is no room left in it for the love of men. It perverts the education of the young, and thus hinders the progress of the race to a higher and better civilization. No doubt, many of the preachers of this gospel are honest victims of religious

enthusiasm. They "know not what they do." It is not likely that Mr. Talmage himself has the least idea of the injurious character of his work, for he seems to be totally unconscious of the meaning of his own sermon. After showing the obstacles in the way of salvation, after suggesting over and over again the awful condition of the lost soul, after invoking the "thunders of God's anathemas," he had the coolness to say, "The gospel that I preach is not one of destruction, but a gospel of salvation." The innocence of this is delightful; and what a treat it will be for his congregation some Sunday, when he actually preaches the gospel of destruction!

M. M. TRUMBULL.

SAYS the *Springfield Republican*: "The Baltimore & Ohio Railroad is very ingenious and wise in promoting skill and manhood among its employés, and has now established manual training for the five hundred boys employed in its machine shops. Prof. Scribner, of the Stevens' Institute of Technology, is employed to give them instruction in the shops, to change them about from one class of work to another, and to look after their technical education. Instruction in drawing is given after school hours, a library of text-books is furnished, and everything is done to encourage the youth to become skilled workmen. That is what we need in Springfield, not as part of the public school system, but in addition to it, as an education in practical mechanics."

FRANKLIN TYLER, a young man thirty-two years of age, died at his home in Charlestown, on the 26th of December, ultimo. Mr. Tyler, from his earliest childhood, evinced a singularly mild and gentle disposition, which continued to be his chief characteristic to the close of his life, united with which were a strict morality, an indomitable integrity and purity of life in every position which he occupied in relation to his fellow-citizens. Though descended from a long line of Puritan ancestry, he early extricated himself from the trammels of creeds, and became a pronounced Agnostic, as well from observation of the religious life in the community about him as from the natural bias of his mental constitution. Dogmas and *ex-cathedra dicta* had no influence on his mind, and never controlled his judgment. But, though always tolerant of the religious views of others, he firmly held to and maintained his own right to decide upon all such matters for himself. As a consequence of his genial nature, his moral qualities, and intellectual endowments, he invariably won the esteem and affectionate regard of all with whom he was brought into contact; and his sudden death (though he had never been of robust health) has caused his numerous relatives, friends, and acquaintances the sharpest pangs of sorrow, as creating a void which cannot easily and perhaps can never be filled. At the funeral, the discourse was delivered by B. F. Underwood.

THE IDEAL.—A SONNET.

Be not afraid lest in this world the Ideal
Should disappear, or like a flower fade;
For she is not mere fancy's flimsy shade.
She is a glowing presence, true and real.
Still firmly an alliance hymeneal
Joins her to Human Progress, as a maid
Is wedded to a hero, whom his blade
Protects; thus faithfully he shields the Ideal.
Wondrously from this bridal union springs
The life which, breathing through the human race,
In ardent youth shines forth from every face;
It lends to the inventor fancy's wings,
And stirs the poet's heart, who gayly sings
The Ideal's beauty and the Ideal's grace.

PAUL CARUS.

MOUNTAIN—VALE. For The Index.

MOUNTAIN.
The eagles on my crags their eyries build.
VALE.
With orchard carols all my bounds are filled.
MOUNTAIN.
A blast relentless o'er me ever blows.
VALE.
My dwellers zephyr lulled to repose.
MOUNTAIN.
In summer, e'en my peak is white with rime.
VALE.
Late spares my bloom an ever gentle clime.
MOUNTAIN.
Adown my sides, the wintry torrents roar.
VALE.
My streams smooth-sliding lave a reedy shore.
MOUNTAIN.
The sunset tints my heights with golden hue.
VALE.
My sword is longest-pearled with morning's dew.
MOUNTAIN.
Bare to the bolt I lift my granite brow.
VALE.
My green breast scars alone the vernal plough.
MOUNTAIN.
High up above the floral zone I soar.
VALE.
Green blade and leaf I cherish evermore.
MOUNTAIN.
My granite cliffs to purpose high inspire.
VALE.
Plenty and peace my tillers most desire.
MOUNTAIN.
Above my crags, the constellations wheel.
VALE.
Into my hollows, dews of evening steal.
MOUNTAIN.
My blue heights hail the misty sea afar.
VALE.
To light my vistas shineth twilight's star.
MOUNTAIN.
I was the homestead of the gods of yore.
VALE.
Bards ever love to pace my verdurous floor.
MOUNTAIN.
Late on my ridges, rays of sunset shine.
VALE.
My sounds are hum of bees and low of kine.
MOUNTAIN.
The mightiest rivers in my caves have birth.
VALE.
And for their largess thanks to lowland earth.
MOUNTAIN.
Condense I ocean's vapors as they rise.
VALE.
And thus in showers descend the vernal skies.
MOUNTAIN.
My bounty, then, your thrifty yeomen taste.
VALE.
Without that bounty, lowland earth were waste.
MOUNTAIN.
O'er men towers mountain-like some mighty brain.
VALE.
While lies the common mind like boundless plain.
MOUNTAIN.
Which from my summit catches morning's glow.
VALE.
As truth from heights of genius shines below.

B. W. BALL.

The Index.

BOSTON, JANUARY 7, 1886.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, } Editors.
BENJAMIN F. UNDERWOOD, }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

THE IRISH QUESTION.

BY FREDERIC A. HINCKLEY.

A Discourse before the Free Religious Society, Providence, R.I., Nov. 29, 1885.

"The sacred cause of liberty and the rights of mankind" is one and the same everywhere. It under-runs all lines of race and nationality. No people can secure a patent on it or build a Chinese wall about it. It is not the American's cause, the Englishman's cause, or the Irishman's cause: it is Humanity's cause.

Such is the faith in which, such the point of view from which, I approach my theme to-day. And I emphasize this thought at once, because it seems to me to be usually neglected, if not entirely forgotten. By no possibility can you separate the movement of our Revolutionary fathers from similar movements the world over. Emptying the tea into Boston Harbor, tearing down the Bastille at Paris, resisting the tyranny of the Czar at St. Petersburg, and seeking redress of the wrongs of Ireland are deeds which belong to the same family, and bear unmistakable marks of their common kindred. It is nothing less than cant and hypocrisy to celebrate Bunker Hill and build statues to Samuel Adams and his compeers, while refusing even our sympathies to the patriots who, under other names and surrounded by other and less favorable conditions, are contending for precisely the same principles. Whatever others may do, I shall not

"From the tombs of the old prophets
Steal the funeral lamps away,
To light up the martyr fagots
Round the prophets of to-day."

There is another preliminary word which is necessary to a clear understanding of the equities of the case. If the American must not isolate his struggle from the general and universal welfare, neither must the Irishman. If the Englishman

must be made to think of somebody besides himself, so must the Irishman. I attended the recent public meeting of the Land League and its friends, held in this city, and heartily sympathized with most that was said and done there. The principal speaker of the evening, however, marred the effect of his otherwise able and reasonable address by saying some things about England and English leaders which were untrue, and, it seemed to me, calculated to do great harm. Perhaps it is too much to expect that fine distinctions shall be made at a mass-meeting for off-hand speaking; but, certainly, here such distinctions must be recognized and stated. I can well understand that one who has been the victim of the wretched colonial policy of Great Britain, or who has only known her as identified with oppressive circumstances against which he has struggled in vain, should feel only as the subject always justly feels toward his master. But when we take a broader view, as we must to get at the perfect truth, we find that all nations, like all individuals, are mixtures of good and evil, none to be unqualifiedly approved, none to be unqualifiedly condemned. It is true, I am sure, that Irishmen as well as Englishmen have faults to answer for. It is true that England, spite of her faults, has contributed influences to the cause of human rights which should command—and, when we understand them, do command—our unstinted respect and admiration. I do not expect any really intelligent Irishman to dissent from this statement. It is out of the most genuine sympathy for him and belief in his cause that I make it. Another thing. I should be especially sorry to have anything I may say to-day interpreted as any reflection upon, or as giving any encouragement to bitterness of feeling toward, Mr. Gladstone. The complexity of good and bad inheritance which has come to that man politically is something which it is almost impossible to appreciate. He did not make the conditions of modern English politics, and he cannot wholly unmake them; but I honestly believe he has done as much as any man could do, more than most men could do, to ameliorate them. I think he has been high and pure-minded; I think he has had the good of the people at heart; I think that, all the circumstances considered, he stands at this moment pre-eminent for a statesmanship as instinctively honest and progressive as it is intellectually marvellous and enduring. Nevertheless, I find every conviction of my mind and every feeling of my heart on the side of Ireland in its aspirations for freedom. And it is because I would do justice to her that I would also do justice to the great nation which she has naturally come to regard as her enemy. We must rise above the bias of nativity, of section, of race, and remember only that "our country is the world, and our countrymen are all mankind," if we wish to get at the truth. So far, then, as is possible, I am to speak now of the Irish Question,—not from the Irishman's point of view, not from the Englishman's point of view, but rather from the human point of view.

What is the Irish Question?

Up to Jan. 1, 1871, I think we must say it was threefold in its nature. Ireland was then, as she had long been, suffering from the evils which grow out of a State Church, a bad condition of land tenure, and the absence of local self-government. Several years before this time, Mr. Gladstone had arisen from his seat in the House of Commons, and declared "that the time has come when the Irish Church establishment must fall." This declaration had been immediately followed by the introduction of his famous resolutions

looking to this end. A vote had been reached, and Mr. Disraeli's government defeated, and an appeal to the country had been taken. As Prof. King puts it, Mr. Gladstone and the Liberals had taken up the Irish cause in earnest, and the people had ratified the sentence that "the Irish Church establishment must fall." The necessary legislation had followed on the 26th of July, 1869. The Irish Church Bill had received the royal assent, and with the advent of the year 1871 went into actual operation. Word had come to the four millions of Roman Catholics and the one million of Protestants that henceforth on Irish soil all creeds are equal in the eye of the law. This was a revolution for which patriots had labored and the masses had yearned, but whose far-reaching significance, it is safe to say, was at first realized by no man. Mr. Justin McCarthy says that, by disestablishing the Irish Church, Mr. Gladstone proclaimed that the policy of religious ascendancy was banished forever from Ireland, and the reign of religious equality begun; and Mr. A. M. Sullivan claims, in his book on New Ireland, that not only was this much to be desired result accomplished, but for the first time in history the English people were set a thinking, inquiring, reading, investigating, and reasoning upon the general Irish question.

Of course, with the removal by statute of the invidious distinctions which had existed, it could not be expected that immediate abolition of all the evil effects of these distinctions would come. The simple fact was that, from that time on, the church question was eliminated from the problem, and what had been a threefold became a twofold subject of inquiry, as I think it remains to-day. The Irish Question now means the Land Question and the Home Rule Question. There is, however, a distinction to be made concerning these, which will become apparent as we proceed. First, let us try to deal with

The Land Question.

This, in my judgment, is not peculiar in kind: it is only peculiar in time and degree to Ireland. England itself is suffering under the same difficulty, and the time may come when the United States will be. We will, if you please, look first at some of the aggravating circumstances which mark the land problem in Ireland, and then give our attention briefly to some more fundamental considerations which attend it as a universal and human problem.

The little island is chiefly occupied by an agricultural population. The majority of its people, as has been often said, live on the land and by the land. They do not own their farms, however, or any portion of them, being simply tenants-at-will. Tenants of whom? Of landlords, who, in many cases, are absentees from the island, and have no interests in common, if, indeed, any acquaintance with it. These landlords, in all essentials foreigners, represent a title acquired by conquest,—a fact which, while changing in no way their legal standing, does have a sentimental effect upon the minds of Irishmen, as it would upon the minds of any race under like circumstances. Add to this a course of legislation which has always seemed to weaken the tenant and strengthen the landlord, accompanied by forms of misery as abject as, and more general than, any you or I can imagine,—evictions with and without what the world calls just cause,—and it is easy to see how the land has become such a subject of agitation with Irishmen. Imagine, says Mr. James Godkin, by way of making the condition of Irish feeling clear to Englishmen,—imagine that, in consequence of rebellions against

the Normans, the land of England had been confiscated three or four times, after desolating wars and famines, so that all the native proprietors were expelled, and the land was parcelled out to French soldiers and adventurers, on condition that the foreign planters should assist in keeping down the "mere English" by force of arms. Imagine that the English, being crushed by a cruel penal code for a century, were allowed to reoccupy the soil as mere tenants-at-will, under the absolute power of the French landlords. Possibly, one who can realize how Englishmen would feel under such circumstances can see that Irish misery and disorder are due to something besides the unruly and barbarous nature of Irishmen.

Mr. Godkin thus suggests that we only need to make the case our own, to realize its aggravating character. It is safe to say that the race does not exist which, under the same circumstances, would have retained that interest in the cultivation of the soil which, in an agricultural community, is absolutely necessary to contentment and prosperity. The sense of proprietorship in something,—that has been wanting in the lives of the Irish peasantry. And students of civilizing processes know well what that means. I say proprietorship in something. For not only has the Irish peasant found himself on land belonging to another, but he has obtained the use of that land in such a way that all his labor in improving it has been absorbed by that other. Until within fifteen or twenty years, it has been held that the landlord's rights were subject to no qualification whatsoever. To improve the soil came to mean to increase the rent; and if the occupant declined to pay increased rent, however exorbitant, he was likely to be turned out at any moment, for the benefit of a competitor. So, in course of time, the demand grew for some form of fixity or security of tenure. What is called tenant right was more and more talked about,—the idea being that a man should be allowed to remain in possession as long as he paid his rent, and should have some interest in the improvements which his own thought and labor had created. That proposition struck English Conservatism, as I suppose it would strike American Conservatism, as preposterous and fanatical. "Tenant right," said Lord Palmerston, "is landlord's wrong"; and the saying was taken up, and echoed throughout the realm. Nevertheless, under the powerful leadership of Mr. Gladstone, the Irish Land Bill, introduced by him in the early part of 1870, voiced the growing sentiment that tenants had some rights and landlords some duties. The effect of this legislation, as stated by McCarthy, was to overthrow, once for all, the doctrine of the landlord's absolute and unlimited right, and to recognize a certain property or partnership of the tenant in the land which he tilled. Here, again, we have convincing proof, were any needed, of the real animus of the great Liberal leader. I believe he did all that was politically possible under the circumstances to weaken the landlord in his assumptions and strengthen the tenant in his rights.

But, in all these considerations, we do not reach the root of the difficulty. That is deeper than the evil of excessive absenteeism. It is not touched by the establishment of tenant right. And this brings us to a consideration of the world-wide fundamental thought of land tenure. For I hold that the Land Question is bigger than Ireland, and that the world's philosophy on the subject of land is all wrong. The truth is, says Henry George, that the Irish land system is simply the general system of modern civilization, in no essential feature differing from the system which prevails in our own country. You may ask,—I

have heard it asked frequently,—If the landlord can obtain a higher rent of somebody else, why should he not evict his present tenant? If he thinks he will be better off if a change is made, the property is his, why should he not make it? That is practically what may be done in this part of the world, without much regard to your comfort or mine, if we are tenants. The real question, friends, is, How far can that process in equity go? There are people in our own city who refuse to let houses to families with small children. Suppose all the landlords in the city should take that ground: what then? The right of one to do so implies the right of all. And the exercise of the right by all would mean the expulsion from Providence of every such family. No city could long survive such a blow at its prosperity. Are all cities, then, at the mercy of the landlords? Thus, you see, we are brought face to face with a knotty question. What is the nature of the right you or I may acquire to land? May a handful of men own a whole island, and, if they choose drive all the rest of the inhabitants into the sea as trespassers? May the Vanderbilts and Goulds of this nation acquire in time ownership of all our territory, and convert the rest of us into intruders and nuisances? May all the rich men in the world monopolize the entire surface of the earth, and, since they cannot throw all the poor men off into space, take control of their persons and personal property, as the only way of collecting such rent as they see fit to charge for standing-room on this planet? Let us face the logic of our argument. "If one portion of the earth's surface," says Mr. Herbert Spencer, "may justly become the possession of an individual, and may be held by him for his sole use and benefit, as a thing to which he has an exclusive right, then other portions of the earth's surface may be so held; and our planet may thus lapse altogether into private hands. Supposing the entire habitable globe to be so enclosed, it follows that, if the land-owners have a valid right to its surface, all who are not land-owners have no right at all to its surface. Hence, such can exist on the earth by sufferance only. Save by the permission of the lords of the soil, they can have no room for the soles of their feet."

Again, I ask, what is the nature of the right to property in land? What are its limitations, if it have any? What shall we say of these disastrous consequences of the spirit of our present land system? Ah, you reply, the difficulties you have raised are purely speculative ones, which we are never likely to reach. The Irish people have already reached them. There is nothing speculative about them in Ireland. They are intensely practical, as every English and every Irish statesman knows. The nature of land tenure becomes a practical question,—a question felt in every-day practical affairs the moment the proportion of population to the acre becomes sufficiently great to make it such. We, in the United States, do not realize what a safety-valve to us our large, unoccupied Western lands are. We do not feel here as yet, as Ireland feels, the pressure of a large population, whose occupancy of land and, therefore, whose right to life under the circumstances, are based on sufferance, and sufferance only. Let me give you some figures. The total area of Ireland is 20,327,764 acres. Her population is about 5,412,000. This gives an average of something less than four acres of land per head. The total area of the United States is 2,306,460,000 acres. Supposing our population to be 50,000,000, that gives us an average of something over forty-six acres per head. Four acres in one case against forty-six in the other. It is true that the average land

per head is even less in England than in Ireland, being, if my figures are correct, only about one and one-half acres; but there are other factors of the problem there which have to be considered. If England were as exclusively an agricultural country as Ireland is, or, in other words, if her people were brought face to face with the necessity of land as a means of daily subsistence as the Irish people are, I think it would be seen at once that this proportion of population to area would make trouble. We can realize this by contemplating for a moment our own State. Our total area is about 836,000 acres. Our population by the census of 1870 was 217,353. This makes our average amount of land per head very nearly the same as that of Ireland, something less than four acres. Now suppose that Rhode Island, instead of being a manufacturing State, were an agricultural State. Suppose that our population of over 200,000 were, for the most part, trying to obtain its subsistence from the soil. We should have the land question here at once in all its significance. Our water-courses, our fisheries, and our position as a manufacturing centre, combine to save us in degree from the land difficulties which beset the Irish people. So I say again that, underlying the question of land tenure in Ireland, is the larger question of land tenure everywhere.

Before leaving this branch of our subject, there are some deductions to be drawn which follow inevitably from the line of thought we have been pursuing. Land, like air and water, is a natural element,—furnished, that is, like them, by nature; and, like them, essential to life. Property in land, in the sense of exclusive control and monopoly of it, is no more consistent with equity than such property in the air or water, were this possible, would be. The whole territory of Ireland at this moment belongs rightfully to all the people who are making their homes on Irish soil. The whole territory of England belongs rightfully to all the people who are making their homes on English soil. And the whole territory of the United States belongs rightfully to all the people who are making their homes on United States soil,—belongs to them, not to speculate with, keep from productive use, and finally bequeath to another generation, but to employ for purposes of health, recreation, and happiness, each in such proportion and in such a way as not to infringe upon the benefits of like employment, somewhere and somehow, by every other human being. There is, in my opinion, no ultimate settlement of the land question possible, save upon some such fundamental principle of equity as this. How so great a revolution in our ideas of property in the soil is to come about, I do not know. How the details are to be managed, and just what the details will be, I do not know. It is a question for time and civilization to settle. The world will have to roll on a long while yet, before its inhabitants will believe enough in the religions they have professed even to care to settle it. In the mean time, relief for Ireland must come from some other quarter. England, under the lead of Gladstone, has done about all she can at present do in the way of ameliorating the evils of bad land tenure without thoroughly reforming them. She has done enough to make it true, I think, that, strictly speaking, the land question is no longer an Irish question, but a human question; already world-wide in its significance, if not already world-wide in its necessities. I agree, therefore, with Mr. George that it is the very madness of folly to permit in the land agitation that indiscriminate denunciation of England and everything English which is so common at Land League meetings and in the newspapers which voice Irish sentiment. It is not with the English people, so far as

the land is concerned, that the Irish people have a quarrel. It is with the system which oppresses both, and will, in all human probability, in time uncomfortably oppress us.

But there is still a question of immediate and vital import between England and Ireland,—the question of

Local Self-government.

That is practically the issue in the present parliamentary elections. That it is which gives weight to the movements and intense interest to the personality of Mr. Parnell. We hardly need in this country—at least, we ought not to need—to be taught the value of bringing all affairs of general concern as near home to the individual citizen as possible. The theory on which our national government was framed was that of surrendering to the general authority as little, and reserving to the State or local authority as much, as circumstances would permit. Again, within the State, the thought has been to emphasize the town governments, thus still more localizing the conduct of affairs. So it has come about that Providence conducts its own school system, and Newport its; that Pawtucket decides for itself whether or not it will become a city; and that New Shoreham elects its own senator and representative. So it has come about that Rhode Island has nothing to say concerning the internal affairs of South Carolina, and South Carolina has nothing to say concerning the internal affairs of Rhode Island. Absolute self-government, first; the form which makes it possible for a few to come together and act directly, next; the combination of these latter gatherings into one larger gathering, next; and so on, until we reach the national government; in every case such prerogatives, and such only conceded to the larger body as cannot be exercised by the smaller,—that is our plan. Not always wisely applied perhaps, but always a very wise plan. Under it, the administration of affairs in each locality reflects most nearly the public opinion of that locality. Providence is governed by Providence ideas administered by Providence men. Rhode Island is governed by Rhode Island ideas administered by Rhode Island men. Even the appointees of the general government are usually identified with the immediate interests of the locality for which they are appointed. So much a matter of course has this become with us that it has ceased to be a question for consideration. The great problem for our fathers in framing the United States Constitution—the problem always up as well in the formation of State compacts—was to secure a central government of the required strength, with the least possible sacrifice of local government in its various forms.

Now, Ireland has had an altogether different experience. She has been ruled by executive, legislative, and judicial power, largely alien to herself; and she has experienced all the evils which grow out of such rule. Away back in 1797, Fox declared that Ireland ought to be governed by Irish ideas. And Mr. Gladstone, on his accession to power, seventy years later, undertook that task. But that was not enough, as events have plainly proved. In order to get at Irish ideas and apply them successfully, government needed to come nearer the people, and to be so framed as to be susceptible to the people's pulse-beat. This was seen and squarely announced, forty odd years ago, by Thomas O'Hagan, then Lord Chancellor of Ireland. He said: "I believe that the system of centralization, as it is developed in these islands, has been partial in its action and mischievous in its results; and that local legislature, for local purposes, conducted by men of the country who know its people, understand their wants,

respect their opinions, sympathize with their feelings, and are identified with their interests, would be of great practical utility to Ireland."

That is good testimony, the outgrowth of practical experience and observation. But England was not ready for the realization of such an idea then. Perhaps I may say Ireland itself was not ready. I think the time has now come when both are ready for it.

What is called the Irish Home Rule Movement is only about fifteen years old. The idea, as we have seen, is older; but the movement was born on the 19th of May, 1870. Let me abridge Mr. Sullivan's description of it.

On the evening of Thursday, the 19th of May, 1870, a strange assemblage was gathered in the great room of the Bilton Hotel, Dublin. There were men of the most opposite parties, men who never before met in politics save as irreconcilable foes. The Orangeman and the Ultramontane, the staunch Conservative and the sturdy Liberal, the Nationalist Repealer and the Imperial Unionist, the Fenian sympathizer and the devoted loyalist, sat in free and friendly counsel. The question was, What can we do for Ireland? The Protestant Conservatives spoke up. In the main, said they, the aspiration for national autonomy is one which has sound reason and justice, as well as historical right, behind it. We will have no part in disloyal plans. We will have no separation from England. But we feel that the scheme of one parliament for all purposes, imperial and local, has been a failure; that the attempt to force consolidation on the Irish people, to destroy their national individuality, has been simply disastrous. We want peace, we want security, we want loyalty to the throne, we want connection with England; but we will no longer have our domestic affairs committed to a London parliament. After long and careful discussion, the members of the conference, forgetting their differences,—yes, even sinking their sectarian in their national character,—resolved unanimously and with enthusiasm "That it is the opinion of this meeting that the true remedy for the evils of Ireland is the establishment of an Irish parliament, with full control over our domestic affairs."

This, as I have said, was the birth of the Irish Home Rule Movement; and it has gone on growing in power ever since. It seems to me an eminently wise and patriotic movement. I admire the skill and moderation with which it has been led. I rejoice to think that Mr. Parnell and his associates, in all human probability, hold in their hands the balance of power in the English Parliament to-day. I know not what may be Parnell's place in history; but this I know,—he has led in the creation of that state of things wherein both the great English parties see that everything which can be conceded to Ireland of Home Rule, which does not involve the destruction of the Empire, must be conceded. That is an inestimable service to his own countrymen and to the cause of justice everywhere. The relation of Ireland to England in the future is to be, I believe, analogous to the relation of the States of our Union to the Government at Washington. To substitute such a political relation as that for one of political dependency and serfdom is the commanding and thoroughly practical Irish question of this hour. I see no reason why American citizens, in their private and notwithstanding their public capacity, may not say so, and rejoice in the fact without improperly interfering in "the internal dissensions of foreign States." No American, thoroughly appreciative of the cause of self-government, and with the fire of 1776 in his heart, can look at this struggle in Ireland with icy indifference. Especially will he

not condemn our adopted fellow-citizens, who, having tasted the sweets of free government here, want to help their brothers left behind to attain it at home. I have not a shadow of sympathy for all the high-sounding talk in this country against the Irishman and his methods. He is often identified with the unruly element in our large cities. Unfortunately, some of our own people are, too. He is frequently regarded as a danger and a curse to us. We have been glad to have him work on our great lines of railroad. We have been glad to have him fight for us. We have celebrated his heroic deeds in song. We have made him general of our army. We could not have dispensed with him in any of these avocations without grievous loss. And when we go across the sea and back only a little way in human history,—when we remember Burke and Grattan and Sheridan and Curran and O'Connell and Moore,—who but feels that we are richer, that England is richer, that humanity is richer, because of these sons of the Emerald Isle? "Our country is the world, and our countrymen are all mankind." We have sainted the man who uttered that thought. The world includes Ireland. All mankind includes Irishmen. That is a truth which under-runs and ultimately overcomes all the "internal dissensions of foreign States." "Gentlemen," said Curran, "it is easier to govern a province by a faction than to govern a co-ordinate country by co-ordinate means. It will be always thought easiest by the managers of the day to govern the Irish nation by the agency of such a faction, as long as this country shall be found willing to let her connection with Great Britain be preserved only by her own degradation." After years of submission and years of struggle, the glory of this hour in Irish history is the prospect of realizing in the British Empire the government of a co-ordinate country by co-ordinate means.

If I were an Irishman, I am sure I should wish to help on the movement. And, being something more than an American, I can but exclaim in the name of "the Irresistible Genius of Universal Emancipation," which breaks all chains and dis-inthralls all minds, Thrice hail to the coming day when, in all her domestic concerns, Ireland shall be governed by Irish ideas administered by Irish men!

BOOK NOTICES.

ORGANIC SCIENTIFIC PHILOSOPHY SCIENTIFIC THEISM. By Francis Ellingwood Abbot, Ph.D. Boston: Little, Brown & Co. 1885. pp. 219. Price \$2.00.

"The foundation and immediate occasion of this little book," its author informs the reader in the preface, was his lecture given last summer before the Concord School of Philosophy, a synopsis of which appeared in *The Index*; but its real origin "was two articles published in 1864 in the *North American Review*," one on "The Philosophy of Space and Time" and the other on "The Conditioned and the Unconditioned." An article which appeared in *Mind* in 1882 on "Scientific Philosophy: A Theory of Human Knowledge" forms the Introduction.

The aim of the work is to show that what we know is not simply states of consciousness, as philosophic thinkers generally hold, but "the objective relations of things" that the mind cognizes, not only its own conscious states, but also the outer world, and that human knowledge is twofold, consisting of "individual knowledge, or the mind's cognition of its own conscious states plus cognition of the Cosmos of which it is a part, and universal knowledge, or the sum of all human cognition of the Cosmos which has been substantiated and certified by the unanimous consensus of the competent." Cognition conforms itself to things, not things to cognition; and the mind knows, not only its own modifications, but the objective things revealed by these modifications. There is an external universe *per se*; and its actual relations,

which exist objectively, are known and are formulated in the propositions of science.

The theory that phenomena only are known is rejected; and it is affirmed that science is the actual knowledge of the Thing-in-itself, the *Ding-an-sich*, the noumenon. "The friendship which phenomenism professes for science is a false and treacherous friendship." "Unwilling to attempt openly, however, so formidable a task [as the destruction of the scientific method], phenomenism prefers to assume the guise of friendship, to concede the validity of the scientific method and its results, and then to undermine it secretly by interpreting these results as 'the discovery of new relations between phenomena within the sphere of consciousness.'" The schools of Greek philosophy were founded upon the assumed principle of the objectivity of relations and the intelligibility of noumena no less than of phenomena. While modern philosophy, following in the footsteps of Kant, "has abandoned the old Greek foundation of the objectivity of relations and adopted the mediæval foundation of scholastic nominalism or the subjectivity of relations, modern science still stubbornly occupies the old Greek ground of realism, and by her amazing ever multiplying discoveries has already rendered it an absolutely impregnable fortress for the philosophy of the future." There exists no Unknowable; it is a mere figment of the imagination. Noumenon and phenomenon are inseparable: the universe is both the one and the other. It is a noumenon, because it is independent of, yet knowable by, the mind; and a phenomenon, because it is apparent and actually known, not wholly, but in part. The knowableness of the universe consists in its relational constitution *per se*, which has been to some extent discovered by the "perceptive understanding," whose activity is included in the concepts of experience.

The second part of the work is an ingenious effort to prove "scientific theism," the corner-stone of which is affirmed to be the "Infinite Intelligibility of the Universe," which is "the objectivity and discoverability of all natural truth." An "infinitely intelligible universe must be likewise infinitely intelligent"; and from the two truths, that the universe *per se* is infinitely intelligible and that the universe *per se* is infinitely intelligent, "follows with irresistible certainty that the universe *per se* is an Infinite Self-consciousness." This "Infinite Self-consciousness," it is argued, is an "Infinite Self-conscious Intellect." The system of nature is an "infinite organism." The Evolution of the Universe as "Divine Object" is the work of the universe itself as "Divine Subject"; that is, as the Infinite Life of God in Time and Space, that manifests itself as a Moral Being,—as a Being whose foundation is moral law."

Such is the main thought of this work, which is marked by Mr. Abbot's usual vigor of thought and language and independence in presenting his views, whether he is sustained by "the consensus of the competent" or not, as he certainly is not in the fundamental positions of the philosophy he defends. Much in his criticism of the philosophy that reduces everything to pure subjectivity seems to us just; but we do not see the force of his reasoning against that realism from which he distinguishes his own, which is essentially old, by calling it "scientific"; nor do we see the force of his impeachment of idealism or of realism, as held by nearly all the great scientific as well as philosophic thinkers, as practically opposed to science. Huxley is no less a man of science because his philosophy is idealistic.

The fallacy of this, with a number of the positions and of a portion of the reasoning repeated in this volume, was, we think, clearly indicated by Chauncy Wright, when, several years ago, Mr. Abbot called his attention to them. Our author aims, of course, to be accurate and fair in his criticisms; but sometimes, as in speaking of the "relativity of knowledge," on pages 51, 52, his repugnance to certain theories betrays him into a most unjudicial spirit and misleading statements. Agnostic thought our author treats rather contemptuously, but his main position must prove unsatisfactory to theistic thinkers generally. At another time, we may, since Mr. Abbot desires criticism, examine some of his reasoning. Our purpose now is simply to give some idea of the leading thought of the work.

B. F. U.

WHAT WE REALLY KNOW ABOUT SHAKESPEARE. By Caroline Healy Dall. Boston: Roberts Brothers. Price \$1.25.

Within the limits of these two hundred and four

pages, Mrs. Dall has succeeded admirably in condensing and simplifying the Baconian-Shakespeare controversy in terms so clear and statements so precise as to be easily understood by the most obtuse reader. In the preface, it is stated that one purpose of the book was authoritatively to disprove several current misconceptions in regard to Shakespeare,—such as the obscurity of his family, his lack of education, his bad character and vulgar tastes, the ignorance of his writings ascribed to his contemporaries, and his personal standing in society during his lifetime. All these points, with other correlative ones, are met and answered by Mrs. Dall very fully, and, we think, conclusively, from the data gathered by Shakespearean students from all possible sources since the controversy first began. In the course of her investigation of the subject, several new and reasonable suggestions clearing or clinching former doubtful points are brought forward by the author, in support of the Shakespeare side of the argument. Not the least interesting part of Mrs. Dall's work is the brief account given of the personal character of Delia Bacon, the enthusiastic expounder and defender of the Baconian origin of the so-called Shakespeare Plays. "I knew and loved Delia Bacon," writes Mrs. Dall. "She was a woman of the rarest personal gifts. . . . To obtain means to pursue her Shakespearean researches, she gave lectures on history in several American cities, among others in Boston, where men like Ralph Waldo Emerson, William Henry Channing, and many of their compeers, found delight in listening to her. Even now, it is only necessary to close my eyes, to see once more that graceful form which always suggested the priestess of Apollo, to hear again the vibrant voice which penetrated to one's inmost soul. After she had perfected her theory, she never communicated it fully to any one. She seemed to fear that her laurels would be stolen, if she did so. . . . After her most unhappy death,—a death precipitated by sorrow, loneliness, privation, and consequent despair,—I wrote to her brother, and asked permission to examine her papers, with a view to preparing some memorial of a life which, in spite of some mistakes, had been exceptionally noble. Permission was refused; and, as her family had not the slightest sympathy with her later pursuits, it is possible that all her papers have been destroyed. They would, undoubtedly, have been very valuable to literary people; for she was an indefatigable and zealous copyist. Mr. Emerson wished very much to review her *Philosophy of the Plays*. He held the very highest estimate of the critical ability and wonderful insight which her book displayed."

S. A. U.

LIFE OF SALADIN (W. Stewart Ross), Freethinker and Journalist. By Richard B. Hilarsay and George Ernest. London: W. Stewart & Co., 41 Farringdon Street, E.C. pp. 62.

Saladin is the editor of the *London Secular Review*, "a journal of agnosticism and neo-secularism," of which he was formerly junior editor, Charles Watts being the senior editor. This sketch says that "the fiery zeal and soaring talents of the junior editor outstripped the more mediocre endowments and plodding energies of the senior colleague"; and "scarcely eighteen months had elapsed before the partnership was dissolved by mutual consent, and Saladin stood alone at the helm of the good ship *Secular Review*." Saladin is an erratic but extremely vigorous writer and the author of some poems; that are marked by not only strength of expression, but poetic picturesqueness and power. We learn from this little pamphlet that he "made his first entry into a world, whose path he has often trodden with weary, wounded feet, and from whose miry fields he has often risen on the wings of his unbridled Pegasus, in the village of Kirkbean, Galloway, on the 20th of March, 1844." We hope that there are before our brother journalist, across the ocean, many years of useful work, at the end of which a sketch of his life will be of more interest than now, when he has but just entered upon his career.

B. F. U.

THE RELIGIOUS LIFE. By M. J. Savage. Boston: Geo. H. Ellis, 141 Franklin Street. 1885. pp. 212.

Mr. Savage's latest collection of sermons contains, like former ones, a large amount of good thought plainly and clearly expressed. He has read carefully the works of the advanced thinkers of to-day, and is able, therefore, to give his hearers something more than is ordinarily heard from the pulpit, even the Unitarian pulpit. Mr. Savage has studied Herbert Spencer especially, and assimilated much of his thought, in presenting which, however, he gives it a mild theological coloring, thus making it acceptable to many who would not otherwise receive it, although rendering his sermons less valuable for those acquainted with Spencer's own writings. Still there is no other Unitarian minister in the East who gives his hearers so little theology and so much of the thought of Spencer, Darwin, Huxley, and other exponents of scientific and philosophic thought as does Mr. Savage. He is not in any proper sense of the word a Christian, and the thought he utters is mainly anti-Christian and extra-Christian thought. He is, however, more positively theistic than most of the great thinkers whose views he is helping to popularize. The sermons are marked by clearness of style and a good spirit as well as by breadth of thought; and, although they would be greatly improved by revision and condensation, they are well worth reading.

B. F. U.

OUTLINE OF HISTORY, A.D. 50-1880. By Joseph Henry Allen. Boston: Roberts Brothers. 1886. pp. 151. Price 75 cents.

This *Outline* is designed as a manual for class instruction. It is an epitome of the *Christian History in its Three Great Periods* (three volumes), to which it constantly refers; and, as such, it will be found valuable, not only to classes in history, but to intelligent students of history generally, who will appreciate a compact summary from an author whose works fairly entitle him to his reputation as a learned and reliable writer on historical subjects.

We are in receipt of the Swedenborg Calendar for 1886. It is ornamented by a fine portrait of Swedenborg, a picture of his study in his garden at Stockholm, and of the Swedish Church in London, within whose precincts the great visionary was buried. This calendar is published by the Massachusetts New Church Union, 169 Tremont Street.

THE January number of *Lippincott's Magazine* appears in an entirely new dress,—a white parchment-like surface printed in red and black. Two new serials are begun, "A Bachelor's Blunder," by W. E. Norris, and "Taken by Siege," by an anonymous writer. Gail Hamilton contributes one of her vigorous political articles on "Civil Service Reform." Mary Agnes Tinckner on a weird story, with the appalling title of "Palingenesis." Among other contributors to this number are Brander Matthews, Louise Chandler Moulton, Philip Bourke Marston, and Grant Allen; also a collection of George Eliot's criticisms of contemporary writers, selected from the *Westminster Review*.

LECTURES.

MR. CHARLES FROEBEL, whose articles in *The Index* ("The Religious Confession of an Evolutionist," "The Moral Function of Socialism," "The Perpetuity of Life," etc.) have attracted considerable attention, is open for engagements to lecture upon the following subjects:—

1. The Spirit of the Kindergarten.
2. The A, B, C of Life: An Alphabet of Philosophy for Grown Children.
3. How can we breathe the Spirit of the Kindergarten into our Public Schools?
4. What is "Our Civilization," and whither does it tend?

For terms, etc., address
CHARLES FROEBEL,
225 EAST 19TH STREET, NEW YORK.

Lectures by Rabbi Solomon Schindler.

1. INTRODUCTORY.
2. TWO THOUSAND YEARS AGO.
3. THE CARPENTER'S SON.
4. JUDAISM THE MOTHER, AND CHRISTIANITY THE DAUGHTER.

As a special inducement to Liberals to distribute these lectures, which are full of radical thought presented in the plainest language, they are now offered at 5 cts. a copy; 10 copies for 40 cts.; 30 copies for \$1.01.

Address THE INDEX, 44 Boylston Street, Boston, Mass.

BY B. F. U.

THE Massachusetts Society for the Prevention of Cruelty to Animals received lately, from an invalid lady, a letter enclosing a check, which read as follows: "Enclosed find a check for \$1,000, which sum, through you, I offer to the acceptance of the Massachusetts Society for the Prevention of Cruelty to Animals, as a grateful memorial of my dog, who, through fourteen years of seclusion and pain, has been my constant, faithful, devoted friend and companion."

WHEN Mr. Edmunds, in the United States Senate, on the 5th inst., called up the Utah Bill, reported by him from the Judiciary, Mr. Hoar, of Massachusetts, moved to strike out section seven, and in some very judicious remarks said that, while he approved the purpose of the bill, he thought that "to deprive such of the women of Utah as were not plural wives of the right which they already had to exercise the suffrage was undertaking to place them in the same category with what the law regarded as criminals, and was in violation of sound principle." His motion was defeated.

THE *Herald of Health* thinks that kissing the Bible by jurors and witnesses, when they are sworn, is a very wrong use of the book. It is kissed by all sorts of people, clean and unclean, and soon becomes sodden with grease and foul with filth, and dangerous to the health of those who put their lips to it. "Such a use of it, it seems to us, is unwarrantable. The Bible says, 'Swear not at all; neither by the heaven, for it is the throne of God; nor by the earth, for it is the footstool of his feet; nor by Jerusalem, for it is the city of the great King. Neither shalt thou swear by thy head, for thou canst not make one hair white or black. But let your speech be, Yea, yea; Nay, nay; and whatsoever is more than these cometh of the evil one.'"

SENATOR WILSON, of Iowa, last week, reported favorably, from the Committee on Post-offices and

Post-roads, the bill introduced by him to prohibit the mailing of publications containing lottery advertisements. The report states that the postal system "ought not to be degraded to the condition of an instrument for the promotion of crime." The purpose of the bill is to aid the States in their efforts to suppress an evil which they have denounced with almost entire unanimity. "Without some law," says the report, "the insidious temptations contained in the cunningly devised lottery advertisements will continue to invade State, family, shop, office, or other place of business, or of pleasure or public and private resorts, in spite of the efforts which the States have made to prevent it." The committee declare that the bill is constitutional, and quote a decision of the Supreme Court, to show that Congress clearly has the right to pass such a law.

A DESPATCH from New York City to the Boston *Herald* states that "two dozen gentlemen," including "some representatives of the first families in the city," took an early boat for Stapleton, L.I., last Sunday morning, to "witness a cock fight between fowls representing New York and Boston, for stakes of nearly \$10,000." The rendezvous was an old church near the ferry landing. "The chapel door was locked; and, after that, entrance and egress were made through a window which opened on the grounds of a gentleman who had provided a repast for his guests." After breakfast, "the pit was arranged, the handlers took their positions, and the time-keeper called time." The *Herald* despatch, giving a detailed account of this mean and cruel sport, at which no man with the instinct of a gentleman could have been present, whatever his family connections, is headed: "A Cock Fight in a Church. Boston Fowls whip New Yorkers, and \$20,000 changes hands."

BELIEVERS in Evangelical Christianity like to dwell on the consolations afforded them by their faith. To such, "nothing but Christians,"—the words of Mr. John Wetherbee in the *Golden Gate*, on the sad death of his son,—must sound strange. "I am," Mr. Wetherbee writes, "greatly indebted to modern Spiritualism for my resignation, even to cheerfulness; and my wife is also. If we had been nothing but Christians, resting on the 'glittering generalities' of a divine revelation, and not in possession of the actual knowledge by sensuous proof of another life, so sudden an extinguishment, and so melancholy a one,—it being his own act,—and to hear the sad words by a messenger, 'Eliot is dead,' within twenty-four hours of his departure to his daily duties, I do not know what the consequences would have been. Something like a presence said to me, 'It is well.' I owe to my experience in spiritual matters the strengthening support that sustained me, or, rather, I should say us."

THE subject of *Church Door Pulpit* for January 1 is "Criminals and Prison Discipline," an able and timely paper by Rowland Connor, in which the author, after discussing the subject at length,

sums up as follows the reforms demanded: "1. Indeterminate sentences; 2. Abolition of the contract system of labor; 3. The establishment of a discipline analogous to that now in operation in Great Britain and at Elmira. To these three may be added as certainly desirable, if not of chief importance: (4) The abolition of the pardoning power; (5) Provision for the prisoner after discharge; (6) Release on probation; and (7) Divorce between prison management and party politics." Were such a system of reform adopted, there would still be a few criminals, Mr. Connor says, who should be condemned to remain in prison for the term of their natural lives,—those who lack the will, moral sense, or intelligence to keep them from crime. This class, the victims of bad ancestral influences, should be kept under wholesome restraints during life, and be prevented perpetuating and multiplying the ills of a tainted race, as well as preying directly upon society.

PROF. FRANCIS L. PATTEN, in the *Christian at Work*, says that the difference between Mr. Fiske's *Cosmic Philosophy* and his *Idea of God*, so far as these books respectively represent his attitude toward theism, "is positive and measurable"; and he thinks it is a "noteworthy fact that one of the most pronounced advocates of the doctrine of evolution, one of the most ardent admirers of Mr. Spencer, has, while still advocating the doctrine of evolution, avowed his belief in personal immortality and the living God." He is thankful, he says, that Mr. Fiske has taken such a step in advance of his previously published beliefs; and, even though what he now advances has been said again and again by theistic writers, Prof. Patten hopes the words of Mr. Fiske, who is without theological bias, will have unusual weight with the atheist and the agnostic. But Prof. Patten does not like Mr. Fiske's treatment of final causes. He does not see how the belief in God can be defended on teleological grounds, when the argument from design is pronounced worthless. If, as Mr. Fiske says, there is "a dramatic tendency" in the universe, and "it is the objective aspect of that which, when regarded from its subjective side, we call Purpose," his attack upon the design argument, it is affirmed, involves him in the inconsistency of defending and attacking theology at the same time. Mr. Fiske's statement, that he stands by all he has ever said against the teleological method as "a means of investigation," amounts to nothing, Prof. Patten thinks; "for neither scientist nor theologian pretends teleology is a method of investigation." "What the anti-teleological scientist says is that science does not read final causes in nature, that teleology does not result from scientific inquiry. The theologian says that it does result, and resulting points unmistakably to God. The theologian says nothing more than this. Mr. Fiske says as much as this. Mr. Fiske is wrong if he thinks he occupies some peculiar place of umpirage between science and theology." Perhaps Mr. Fiske will in some future work notice these and other criticisms of his latest volume.

REFORMATION OF CRIMINALS.

In his address at the opening of the Massachusetts Legislature last week, Gov. Robinson referred encouragingly to the experiment which has been in operation the past year at the State prison in Concord for the reformation of the inmates. Somewhat more than a year ago, the policy was adopted of classifying the criminals. The more hardened offenders and those condemned for the greatest crimes were taken to the old prison at Charlestown, and the new institution at Concord was set apart for the younger and less guilty criminals as a State reformatory as well as prison. The number of prisoners in this latter institution is now six hundred and twenty. Of course, it is too early to predict the success of this particular experiment. But it may be safely said that success is only conditioned by the wise and judicious conduct of the experiment. The plan of classifying criminals, with a view to separating the younger and more susceptible among them from the deleterious influence of old transgressors, is one that at once presents such obvious advantages and rests on so rational a basis that the wonder is that it has not been generally adopted in civilized countries long before now. But the experiment is not an untried one. Massachusetts has only been a little late in adopting it. As to the good results of the plan in other places, there is no uncertainty.

While reading the Governor's address and reflecting particularly upon this part of it concerning the criminals of the State, there came to our table a chance number of a newspaper called the *Summary*, which is published at the State Reformatory in Elmira, N.Y. It is a weekly publication, of eight pages, and has reached its fourth volume. It is issued on Sunday morning. The good work of the Elmira Reformatory is already a matter of public record. But a copy of this paper, published by the managers of the institution specially for the use of its inmates and their friends, gives one a vivid idea of the practical methods by which the good results are accomplished. In the first place, it is evident that the regular discipline and systematic routine of the place are much relied on for establishing regularity of good habits in the prisoners. A paragraph quoted from a writer in an exchange paper states that "professional criminals" actually dread the Reformatory more than they do the State prisons, because of the "stern discipline" to which the Reformatory subjects them. This discipline consists in imposing upon the inmates a daily routine of duties, and in requiring all to participate in such departments of labor and such educational classes as are adapted to their physical and mental capacity. The programme for the lecture room on the Sunday when this particular paper was issued was as follows: "Half-past ten o'clock A.M., Lecture to the class in Practical Morality. Two o'clock P.M., Choir Rehearsal. Three o'clock P.M., Regular Services (religious). Six o'clock P.M., Lecture to the House." In a column of "Reminders," it is also stated that "To-day is Writing Sunday for all, save members of the third grade."

The educational work is various, and some of it of high grade. The Practical Morality class, above mentioned, was soon to have an examination; and it was hinted to them among the "Reminders" that, if they would "use their brains, all would be well"; that "an answer showing personal thought on the part of the pupil is more to be desired than a rehearsal of memorized phrases." English Literature, Geology, Astronomy, Political Economy, are also among the sub-

jects of classes named; and a "second Primary man, just learning to spell," is reminded, in a note on the library, that he is not yet qualified to read such books as John Fiske's *Essays* or Janet's *Theory of Morals*, for which he seems to have sent in an application. A brief stenographic report of certain of the class exercises, in which the pupils took part by intelligent discussion of the topics, shows that some of them, at least, already make a good "use of their brains." The "ethics of buying and selling votes" was the subject under consideration by the class in Practical Morality. One of the class said: "I understand a vote to be a trust, and quite a sacred one. When a man sells a trust, he does a very mean and low thing. He sells integrity; and, if you sell this, what have you left?" Another said: "When a man has got into such a state of morals that he will sell his vote, let him go ahead; but the time will come when neither that man nor his children will be able to vote. He breaks the civil law; and, in breaking that, he breaks the moral law, and he will eventually suffer for it." These precepts from a prison might profitably be hung up on election days in many voting precincts, where the ethics of the ballot does not appear to be so clearly understood.

The *Summary* states that from the library of the institution, in the preceding week, five hundred and eighteen books had been taken by the inmates for general reading, thirty-two volumes for reference, and one hundred and eight periodicals. The number of inmates that week was six hundred and ninety-six. It is also stated that during the same week "the superintendent held one hundred and thirty-three private interviews with inmates."

There are religious services in the Elmira Reformatory, and an editorial paragraph in the *Summary* alludes to an awakening of the religious nature as one of the essential means in the reform of criminals; but we judge from two or three hints that the religious instruction given is practical rather than doctrinal, and that by the awakening of the religious nature the writer means the incitement of the higher elements of character rather than that demonstration of emotional excitement which is popularly called "getting religion." The sermon on the previous Sunday had for subject the "Use and Abuse of the Tongue," and the following sensible ideas from the *Journal of Prison Discipline* are printed in a column of editorial clippings:—

The surest evidence of reform of prisoners will be found, not merely in profession of religion and the performance of its ceremonies, but in the fact of their willingly and habitually doing right, and in their respect to those in authority over them. The manifestations of respect for all who come in contact with them is a sign of their belief in their own right to respect, and the surest road to that self-respect which is the companion of an honest purpose. Our corrective system should keep the hope bright for the acquisition of excellence of character and development of righteous powers, which shall make every other hope of our common life spring into activity.

Gov. Robinson says that the question of labor in the prisons of Massachusetts is now the most serious one that calls for settlement. The popular outcry that has been raised against convict labor has practically destroyed, for the present, all the resources of labor for the prisoners; and this deprives the prison managers of the most efficient means both for disciplining and reforming the men. But this outcry should not be interpreted as if directed against all labor on the part of prisoners, but only as against the contract system of labor which has been in vogue, and which has undoubtedly given the contractors an advantage in competition with the free labor of the mar-

ket in producing the same kinds of goods. There are two propositions on this subject which no legislation can afford to ignore in this day of enlightenment, and which every rational legislator and even voter could be induced to see, it would seem, without much argument. These propositions are: first, no reformation of imprisoned criminals is possible without their having steady employment; second, no government can be expected to support in idleness able-bodied men and women who are convicts, thus unjustly taxing honest citizens for the maintenance of the dishonest and dissolute. The *Summary* has some wise editorial remarks on this problem, which are intended for the legislature at Albany, but are equally applicable to the longitude of Boston. The writer says:—

The labor of the Contract System is not reformatory. The State Account plan, with its petty participation by the prisoner, may be somewhat better; but, to utilize prison labor for the reformation of prisoners, we must rise to the natural occupation of citizens at diversified industries, suited to capacity, if not to choice, pursued for subsistence and profit until the prisoner is carried beyond the condition of a dependent to that of the independent wage-worker. There is no serious difficulty in the way of organizing the industries of a reformatory prison so that the prisoners shall labor under similar liabilities of privation and hope of reward to those of citizens, with the difference that within the prison a disposition to earn well may be imparted as could not be outside. Such sustained industry, under a natural and healthful motive, forms a new habit; the profit and pleasure of earnings honestly obtained, and the manliness that almost always accompanies the possession of accumulations, the product of one's own powers, if not of themselves constituents of reformation, do beyond question put the prisoner in favorable frame for salutary moral impression.

The open secret of the success of such institutions as that at Elmira is that both the educational and industrial methods, which are brought to bear for the reformation of the criminal inmates, are calculated, not, like the old penal methods, to keep the minds of the prisoners fatally intent upon their unhappy past, but to draw their thoughts, as much as possible, away from their past by the arousal of mental and moral activities which can assure them a better future.

WM. J. POTTER.

NOTES ON THE WOMAN QUESTION IN EUROPE.

Mrs. Rosalie Olivecrona, one of the leading friends of the emancipation of woman in Sweden, and wife of the distinguished juriconsult, writes me: "I have already told you that a movement has been set on foot in Stockholm to induce women to make use, to a greater extent, of the political rights already conferred on them. This resulted in bringing a number of women to the polls at the last election, for members of the municipal council. During last winter's session of the Diet, a bill was brought in to raise the State grant to girls' schools from seventy thousand to one hundred thousand crowns, and to open the boys' high schools to both sexes. Although nothing definite was accomplished in regard to these two matters, a committee was appointed to inquire into the whole question of education in girls' schools. The work of the Fredrika Bremer Association is progressing slowly, but, we hope, steadily. Hitherto, its activity has been limited chiefly to the procuring of employment for educated women and to the directing of home studies; but applications for advice on educational and economical questions are increasing. I am sorry to say that the *Home Review* will close with this year, after having been, during a period of twenty-seven years, a zealous and intelligent promoter of the

woman movement. The number of female students at the universities is increasing yearly, though not at a great rate."

Miss Marie Zerbikoff, the soul of the St. Petersburg Society for the Higher Education of Women, says, in a recent letter to me: "In September, our society celebrated the opening of the new building devoted to the higher education of women. The students and a large audience completely filled the spacious main hall. I send you the plan of the edifice. It is four stories high, and cost us 200,000 rubles. Nearly one-quarter of this amount was money saved by the society during past years. We secured a loan of forty thousand, while about fifty-eight thousand more were subscriptions. The balance was met by a mortgage. The structure is as perfect as our limited means would permit. The lecture-rooms and laboratories are admirable, and the system of heating and ventilating could not be better. The studies for the year have begun. In history and literature, we have many able students; but it is particularly in the natural sciences that our women show marked ability. Some of their work has been even published in the journal of the Russian Society of Chemistry. Here is another new and important fact. Two women have just founded a political, scientific, and literary journal, *The Northern Herald*. Miss Iobachnikoff is the publisher, and Miss Evreyinava the editor, of this latest journalistic venture. This is the first instance of a woman being allowed by our laws to fill the post of editor-in-chief of a political newspaper. Our women are doing something in the fine arts. You have heard of Miss Bashkirtzeff, who died a few years ago in Paris, and who gave promise of being a great painter. Our female artists prefer landscape painting. In the department of sculpture, they have not accomplished very much. But Miss Maikoff exposed some years ago a very able bust of the poet Maikoff; and, recently, Mrs. Polonsky produced an excellent bust of Tourguéneff. In Charkaff there is a school of fine arts founded by a woman, and the St. Petersburg school is now open to both sexes. But most Russian girls of talent prefer science to art, which explains why our women have made more reputation in university studies than in painting and sculpture. The present tendency is to widen the intellectual sphere of women. When that is accomplished, they will turn more attention to purely æsthetical pursuits. I have no good news to send you about our women's medical courses. You remember that they were supported by the War Department in order to educate women surgeons for the army, and the forced curtailment of expenditures in that branch of the government necessitated their suppression. But the principle of the medical instruction of women still lives in Russia. All we need is the money with which to found a women's medical college like the one for higher education, mentioned at the beginning of this letter. But the field of practice for female physicians is so narrowed by restrictive laws that we could not hope to have many students, in the present state of things, even if we had a medical school."

Writing me concerning the situation in Austria, Mrs. Johanna Leitenberger says, quoting from a recent letter to her from Prof. Heinrich Gross, the author of several valuable works on the German female poets and authors, and a strong friend of the emancipation of women: "I do not see any immediate hope," writes the professor, "of intellectual and material progress for our women, so long as ultramontaniam finds in them its chief support."

Curiously enough, M. Paul Bert, the celebrated physiologist and free thinker, used almost these same words at the recent women's rights banquet

held at the Grand Hotel, Paris, when, referring to woman suffrage, he said: "If France were not a Catholic country, I should make no objection to this reform. But, on account of the influence of Rome, our women are the slaves of the priest. Protestant nations have nothing to fear from the confessor. But we are not so fortunate. Let us begin by disarming the priest, by combating clericalism, by destroying the confessional, then I shall be only too ready to give women the ballot."

M. Guyot, M. de Lacretelle, and M. Frederic Passy, all three deputies and authors of note in different departments of literature, expressed themselves in favor of woman suffrage; while M. Laisant, one of the prominent leaders of the Extreme Left in the Chamber, and M. Paul Bert, who, to his many other honors, adds that of being an influential deputy, promised to organize an extra-parliamentary committee, whose duty it will be to study the question of ameliorating the legal position of French women and to bring a bill in this sense before the Chamber of Deputies.

To M. Léon Richer, the indefatigable advocate of women's rights in France, belongs the honor of organizing this successful and significant banquet, to which my brief notice does such scant justice. But a full account of the festival, with the letters of regret and the speeches, may be found in M. Richer's journal, *Le Droit des Femmes*, for December 20.*

Miss Isala Van Diest, M.D., the first woman to take a medical degree in Belgium, has been struggling for several years to obtain the necessary authorization to practise. Some two years ago, she wrote me: "I fear that I shall soon be obliged to give up the fight, and go to France, England, or Holland. Otherwise, I shall lose the fruit of all my studies." But I am happy to state that this brave woman has not been driven into exile, in order to follow the bent of her scientific mind. In a recent note to me, she says: "I am delighted to be able to inform you that I have passed the examination imposed upon me, and have surmounted all the obstacles thrown in the way of women who would exercise the profession of physician. I am at last established, and enjoy all the privileges of a Belgian doctor. Many young women are now in our universities, and one of them has just succeeded in becoming a pharmacist."

I shall close these notes with the following extract from a letter written by Miss F. Henrietta Muller, a prominent member of the London School Board: "Our prospects in England just now, as regards women's suffrage, are not at all bright. In proportion as Chamberlain succeeds in his egotistical schemes for self-aggrandizement, the chances of women's suffrage grow smaller. But the last elections appear to have acted rather against him, for which I am truly thankful."

THEODORE STANTON.

COSMOLOGICAL AND COSMOGENETIC SPECULATIONS.

I notice with pleasure the appearance in *The Index* of what is called "a philosophical paper of rare merit" by a "profound and original thinker," Dr. E. Montgomery, in which he manifests a strenuous opposition to the nebular hypothesis and the theory of evolution founded upon it. My surprise is excited that it has not been deemed worthy to call the attention of the readers of *The Index* to an equally meritorious work by Judge Stallo, of Cincinnati, now minister to Rome, although *The Concepts and Theories of Modern*

*The office of this paper, the ablest women's rights periodical on the Continent, is 4 Rue des Deux Gares, Paris.

Physics is kept in *The Index* list of books for sale. He says, in the preface, 1881, that it is the opinion of contemporary physicists that there was a total break of continuity in the progress of human knowledge at the time of Galileo and Bacon, and that the old metaphysical method of reasoning was discarded in physical science. But Newton's admonition to "beware of metaphysics" has been only partially complied with. Men's thoughts have not been effectually turned from the Middle Age traditions respecting the phenomena of nature to the order and sequence of phenomena as disclosed by their own observations and experiments. The endeavor of scientific research to gain a sure foothold on solid empirical ground is continually thwarted by the insidious intrusion into the meditations of the man of science of the old metaphysical elements. He says that all cosmological and cosmogenetic speculations are metaphysical attempts to deduce the universe and its phenomena from the primordial elements of *mass* and *motion* by the application of mechanical principles, and that the enthusiasm for the nebular hypothesis is an ontological survival, or recreation, of ancient traditions about the origin of the world from nothing. It conformed to the assumption that the mode of the world's formation must, in the beginning, have been without form and void; and it, at the same time, satisfied the mystic yearning after the ethereal and the spiritualistic, which is the special distinction of that large class of philosophers whose philosophy begins where clear thinking ends. Hence, for the last fifteen years, I have ceased to take any interest in this theory of evolution, from a conviction that it has been taken up to support the needs of the Church and continue Bible sectarianism and superstition. I am glad that Dr. Montgomery says that the mechanical conception of nature (which is the scientific ideal of an influential school of thinkers) is a "MECHANICAL FALLACY." He tells us that, in 1874, Prof. Huxley "startled the self-complacency of the respectable world" by reviving Descartes' idea that human beings were conscious and animals unconscious automata. "To be the descendant of a live ape" leaves "scope for the pride and hope of vital exertion. But to be the descendant of an automatic ape" dispels all illusion of self-importance. Now, it is useless to ridicule or "to ignore the cogency of the reasoning on which this mechanical notion of vital activity is founded." Montgomery says the notion must be accepted, or the fallacy of the assumed premises must be exposed. If the animal organism is a machine, and its parts are "set in motion by heat derived from the combustion of food particles," then only purely mechanical effects can be expected from such a contrivance; and the links between the *motions* of the organism and its *conscious states* must ever remain as profound a mystery as it was to Descartes and his followers. This modern notion, "in spite of its scientific garb, is just as preposterous as the ancient mystic notion of vital spirits. It is a thoroughly unphysiological and totally mistaken conception." "Vital activity is wholly an emanation from within. Any *deus ex machina* actuating without the organism," animal soul, electrical fluids, or *heat* from combustion from food particles, must be expelled from biology before an understanding can be gained of the import of individual existence. The nebular hypothesis, he says, was first advanced in its world-wide scope by Kant, but he afterward abandoned it; and then it was adopted by Laplace for our planetary system. Since then, it has furnished most students of natural science with a plausible means of constructing "mechanically from a primordial sub-

stratum the existing celestial mass distributions and motions." Consider now, he says, with what limited suppositions these students set out with in their corpuscular world constructions, and what new suppositions they are forced to add as they proceed on their way.

Dr. Montgomery says: "The world-stuff now generally assumed in physical cosmologies is a gaseous material, persistent force, and a power of gravitation." This ideal of mechanical science, so imposing to the mathematical imagination, rests solely on the assumption that atoms or units of mass are actuated by no other influences than those operative in celestial mechanics." Under this fascinating illusion, "it is impossible to make any headway in a monistic and non-necessarian understanding of our life and doings." I do not know whether he is a monist. All that I know of his philosophy was derived, fifteen years ago, from Mr. Darwin's *Variations in Animals and Plants*. In a note in the *Hypothesis of Pangenesis*, Darwin says that Montgomery "denies that cells are derived from other cells by a process of growth, but believes that they originate through certain chemical changes."* A similar thought runs through the "Dual Aspect of our Nature." If, according to Spencer, growth means evolution, and cells are not derived from other cells by a process of growth, evolution is an unmeaning phrase.

Montgomery dwells at greater length on the hypothesis of Descartes, who regarded the universe as composed of two distinct substances; namely, mass and motion, or matter and thought. These were so heterogeneous in their nature that they could not interact on each other without the concurrence of the Deity, or of a soul. It was of more importance to pay attention to the atomo-mechanical theory of Newton, who regarded mass as composed of myriads of primordial units or atoms, and so far differs from Descartes. The latter is the real foundation of the "Mechanical Fallacy."

I am a sciolist, and bring these excerpts together from Judge Stallo and Dr. Montgomery, because I imagine that there may be readers of *The Index*, like myself, who desire to see the opposition which is made to the nebular hypothesis, and to Spencer's theory of evolution, from the scientific as well as from the theological side. The editor of *Nature* recently said, in relation to the character of witnesses in chemical science, that a well-known lawyer, now a judge, thus classes them: liars, diabolical liars, and experts, or skilled witnesses. An expert was defined as one who had a well-cultivated faculty of evasion, which produced a worse effect than if the witness said things which he knew were not true. I am sure it is so in regard to some of the witnesses who testify as to the truth of the science of evolution, whether they are lay or clerical.

I do not think that Dr. Montgomery has any just ground for supposing that the solution of what Prof. Huxley calls "the metaphysical problem of problems" is near at hand. That the reduction of all natural phenomena (including the mystery of mysteries, the origin of life) to atomic mechanics has been the highest aim of physical science for centuries seems hardly credible, from the utter absurdity of the scheme, and from its revealing the absurdity at a glance. Then, as regards the idea of heat, from the combustion of food particles, being expelled from biology before an understanding can be gained of individual existence, the latest authority in the science of physiology, Dr. Michael Foster, in the

new volume of the *Encyclopædia Britannica*, says, in opposition to Dr. Montgomery, that it is only by means of the heat derived from the combustion of food particles that the energy of chemical action is transmuted into the supply of that energy which appears as life, feeling, and thought.

Stallo says that Prof. Tyndall is one of the most persistent sticklers for the dominant features of the atomic mechanics. I do not know how the above remarks may be received. I know that in 1870 Mr. Abbot, I suppose in relation to the address on the "Scientific Use of the Imagination," deprecated Tyndall's deluding the people with such "gibberish," and that Rowland Connor took him to task for it. It seems that the "return of the curve" has arrived, and the propriety of Mr. Abbot's remark is shown to be reasonable. Stallo says it is claimed that the mechanical theory rests on the foundation of sensible experience as contradistinguished from metaphysical speculation, and that, when Tyndall speaks of matter, he means real atoms or molecules, and postulates mass and motion as the indestructible elements of physical existence. Stallo says mass and motion are not realities, they are concepts or abstractions; we have experience of moving bodies, but not of pure motion. Now, the solid tangible reality, the atom or particle of matter craved by Tyndall's "scientific imagination," is "sheer delusion." In advance of motion, the atom is without color, is neither light nor dark; it is without temperature, is neither hot nor cold; it is without electric, chemical, or magnetic properties, since all these, according to Tyndall, are simply modes of motion. Thus, the atoms or molecules have neither substance nor quantity nor quality, and wholly vanish in the "focus" of Tyndall's "seeking intellect," when it attempts to seize the atom, "apart from the motion which is said to presuppose it as its necessary substratum."

Stallo says that forty years ago the creed of an ordinary physicist was something like this: Primordially, as Newton thought probable, there existed myriads of hard, inert, and unchangeable atoms or matter and certain unchangeable forces. Matter in itself is passive motion, or life is caused by force. The tendency of atomism is to derive all the qualitative properties of matter from forms of motion.

Spencer, in 1872, said, "The properties of the different elements arise from differences of arrangement, arising from the compounding and recombining of ultimate homogeneous units." Since then, modern theoretical chemistry is in utter irreconcilable conflict with the atomo-mechanical theory; as Dr. Montgomery says, it is apparent at a glance. The absurdity of the scheme for deriving life, emotion, and thought out of groups of inert atoms by means of force was made evident in 1873, by George Henry Lewes, in Vol. I. of *Problems of Life and Mind*, where he described force as something hypothetical which is passed from one group to another, like so much milk poured from one jug to another. The answer to the Lucretian, which Tyndall puts into the mouth of Bishop Butler in the Belfast Address, is very forcible. What was called force is called motion or kinetic energy now. The bishop asks the materialist to try his hand upon this problem. He says: First, your difficulty as to where the soul is under certain physiological and pathological conditions. Now take your dead hydrogen atoms, dead oxygen, dead carbon, dead nitrogen, dead phosphorus, and all the other atoms—dead as grains of shot—of which the brain is formed. Imagine them separate and sensationless, running together and forming all imaginable combinations. This is *seeable* by the mind as a purely mechanical

process. But how can you in any way imagine that, out of that mechanical act, sensation, emotion, and thought are to rise from dead atoms? I can see in idea the molecules of the brain thrown into tremors. This does not baffle my insight. What baffles me is the notion that out of these physical tremors things so incongruous as sensation and thought can be derived. This is the rock on which materialism must split, when it pretends to be a complete philosophy of life.

Tyndall holds the bishop's reasoning to be unanswerable, and so do I. It is not creditable to the "foremost thinkers" of the nineteenth century in its third quarter to have raised such denunciations against Virchow's lecture at Munich on Evolution. Tyndall is not quite so cock-sure about what Max Müller calls evolutionary materialism. He says for the moment that he is on the side of Virchow; that he never advocated the introduction of the theory of evolution into schools, and should be disposed to resist it before its meaning was better understood and its utility recognized by the mass of the community. This ought to be done; and the proper way is to let the opponents of evolution from the domain of science have their say,—I mean those who are eminently qualified (Prof. Max Müller, Sir Richard Owen, George Henry Lewes, and others). The concluding remark in Owen's *Anatomy of Vertebrates* deserves special notice: "The physiologist and the pathologist have benefited mankind by freeing them from the necessity of speculating where the soul wanders when thought and self-consciousness are suspended. In demonstrating the universal law of our being, they have cut away the foundations of purgatory and other limbo from the feet of those who trade thereon."

JOHN CHAPPELLSMITH.

FIRST PRINCIPLES IN BELIEF.

II.

What is religion? What is creed? How does endeavor bear upon life? Is there a soul to explain the growth of the grasses and none to unravel the building of man? Was Nature reasonable when she piled up her mountains that lock power with the sun, and insane or impotent when she approached the question of animate life? And, when the word came from Eastern seers and Western prophets, were only the later and nearer believers blest of truth and won to safety? When came the slow unfolding of righteousness, was it given Persia alone to read? Was human condition ineffective in one land and irresistible in another? You who see only by one light, what know you of the infinite prisms of the spheres? You to whom nature drew everything in one color, is life not a hopeless variegation? How dare you venture into the night with so diminutive a flame? In sorrow, in tears, in remorse, in rack of muscle and tension of brain, is it to you alone sweet comfort speaks? If there is good reason why you are as you are, built in strength and with no halting arm for good causes, is there less wise provision for another's reaching forth elsewhere, to confer other benefits, and secure other responses?

When we accept theories, we must do so contingently. A reservation of doubt large enough to include possible error has its claim upon rational minds. We are supposed to cleave to such conclusions as best account to us for our personal position in the universe. What harmonizes with our lives, and becomes of its bone and sinew, need in no sense express a like importance to our neighbors. As there are many sets of conditions, there are many needs. In fact, if the many conditions are forced to the one need, we know what

*"On the Formation of So-called Cells in Animal Bodies."

proceeds in dismembered minds. There is a need covering our relations to the race,—that of sincerity and adaptation. Then there is a particular need that bursts from the instincts of the individual. To violate the bounds of either renders abortive all that a mismanaged virtue may attempt. For instance, the papal idea wipes out the existence of the person. It calculates for a wholly corporate, as opposed to an individual, existence. It recognizes no unity in nature: it simply scouts the notion of generality, and rests all faith upon its provincial Catholic union. This shoots wide of freedom, and trenches upon the sanctity of the primal need. The ordinary Protestant ideal, again, while broader than that avowed by Catholicism, still fails of universality. It credits a circle of impossibilities. It shrinks from contact with the outer sphere. It, too, having drawn a line, though with bounds notoriously loose and sometimes inviting, has ostracised a great portion of the earth, and offended against the acknowledged rights of the race. Nor are these characteristics peculiar to Caucasian sectarianism. You may take your pick of theologies the world over, and only now and then come upon a body not open to the reproach. In warfare, in blood too grievous to measure, not more with Jesus among the Jews than with John Brown upon Virginia's scaffold, this mistaken blessedness has sought expression and knelt to its countless gods.

When at last it becomes plain to men that for every condition there is a report in spirituality, that in each influence thus at work there is a natural virtue which we disturb only at untold hazard, we have reached the free stage of the higher life. All stoppages preceding this are temporary. To this point, we are in the drift. Heretofore, we had worked isolatedly. We were first Buddhists or Christians or Red Republicans or Prohibitionists and only at the last men. Now, we have joined energies. The light has confused our secondary distinctions. Primarily, we became brothers, to whom the minor questions that afterward arise to us as sectarians appear in a juster guise. The universe finally finds us joint questioners. Science has clasped hands with art; while literature, joined with the moral and spiritual promptings, rises to the fellowship. Before life and death, we stand with equal courage. Once, we were proud of dissolution: to-day, we glory in unity. It is as though we had chosen eternity, and turned backs upon the doctrine of moral annihilation. Once, Nature was centred in Jesus or some special teacher, and we saw only a portion of her inevitable beauty. Then came the hour of wider knowledge, and with it a vision that included all lovers of good, and refused to think of Time as pledged against its own developments.

When souls previously in perturbation find answers smiling at them in their very fears, man is on the high road to improvement. No longer may there be quarrels with science. No longer have we a lesson in displeasure read us from the lips of dissent. We come, as it were, near the day, and are just to the instruments of progress by being trustful of its general spirit. We have better reasons to give why men dig and plant and reap, and why poets sing, and why Jesus fasted in the wilderness and Buddha resigned his principality. We more profoundly reach into sorrow, and know in what it is dissent finds solace, when something mysterious shatters hope and takes objects of love from physical sight. Here and everywhere is meaning: nothing is without significance; being, in fact, is all representative of something that transcends impeachment, and prevails against disunion and despair. It is not in our pains or joys that Nature manifests sole interest.

It is not in our babes alone that light brings its far-off hints and dreams. We have tears to shed, remorse to experience, the moral crises to endure, the physical twists to encounter, through seasons that furnish their own staff. And the fact of condition that weighs upon us as Christians or as political partisans of one or another stripe is equally in the service of the Hindu, the Ashantee, the agnostic, and the politician who questions our conclusions. The divers philosophies that are repugnant to our private consideration prove in good terms that the assistance that comes to us in our hours of dismay is not exceptional, but common. Though it enters them in another form, it is in essence one thing, pulsating in every atom of the worlds. For this, or perhaps some even sublimer, end of human love, savage man first planted his dictum in the wilderness. What is an exclusive Christianity or Buddhism in its presence save a spectre of remaining doubt? Chemistry is science in the same sense that some special faith is religion: neither are principals, though both are factors; and, as long as humanity fails to make so essential a distinction, we can hardly expect it to comprehend its ultimate duties. Yet the race is to hew its own way out; and, in the special grandeur, we read the assurance of the general majesty.

I do not wonder that faiths are many. I wonder only that there is as much conformity as seems. Nature shapes nothing at random. Her shots always tell. Whether the egg culminates as lion or hyena or man, the intent is at work and the energy puissant. Let us not be deceived. We who are not philosophers have no need to pride ourselves that we have escaped the toils of thought. Nature may as virtuously lead one man to Darwin and one to Jesus as persuade one to follow the sea and another the arts of life. We who reckon nothing of alien faiths, and put no value on diversity, have only a largess of poverty for our reward. Whenever truth speaks through honest men, she speaks with effect; for she chooses divers instruments, and glistens in coal and iron as fairly as in gold. The precious metals, the precious men and women, are such as faithfully measure their capacity, and serve to the edge of promise.

HORACE L. TRAUBEL.

EDITORIAL NOTES.

BY B. F. U.

SAYS the *Sunday School Times*: "Faith is not only better than doubt: it is better even than reason and sight. It is safer to trust than to know; and it is surer, also." How can faith be surer than knowledge, than which we had supposed nothing could be more certain?

WHAT we are usually pleased to call religion nowadays is, for the most part, Hellenized Judaism; and, not unfrequently, the Hellenic element carries with it a mighty remnant of old-world Paganism and a great infusion of the worst and weakest products of Greek scientific speculation, while fragments of Persian and Babylonian, or rather Accadian, mythology burden the Judaic contribution to the common stock.—*Huxley*.

It is sometimes asserted that those most pressed for time accomplish the most varied work. "Shirley Dare," one of our brightest and busiest authors, living in a peaceful corner of Dedham, twenty minutes' ride from Boston (where her ancestry have lived for two hundred years), not only writes practical and entertaining books on household and sanitary topics, but also keeps her own house unaided, gardens enthusiastically,

writes pungent editorials for the Boston *Saturday Evening Gazette*, the New York *Mail and Express*, and *Outing*; and this winter, as an avocation from regular journalistic work, is translating an Italian epic, a French work on art, and a Hungarian novel!

THE Universalist organ, the *Christian Leader*, thinks it sees indications in the Unitarian body that the battle which raged between the right and left wings fifteen or twenty years ago is to be renewed. "At that time, the Conservatives appeared to be in the majority, but disposed to make a compromise with the Radicals. Now, we judge, from the tenor of Unitarian literature and the prominence of representatives of the left wing, the Radicals are in the majority." A little brush between "the right and left wings" of Unitarianism could do it no harm. It might contribute to the development of that robustness which it greatly needs to enable it to resist the absorbing influence of the orthodox sects, and to digest and assimilate more of that radical thought which refuses to be stamped or labelled with any sectarian name.

SUBSCRIBERS who are in arrears in their subscriptions (and, if they are in doubt on this point, they need only to look at the mail-tag on their paper) will confer a favor by remitting without waiting for a reminder, in the form of a bill, from this office. The thoughtfulness of those who renew promptly is thoroughly appreciated, when every week we settle our bills; but we look over the list of delinquents with regret and, knowing the ability of some of them to pay, with surprise. Will not every delinquent subscriber be just to himself, as well as to *The Index* which visits him weekly, by paying without further delay the amount he owes, and thus strengthen our hands in the difficult work of publishing an independent radical journal which refuses, on the one hand, to pander to the superstition of theology, and, on the other, to a liberalism that, in its spirit and antiquated character, resembles the creeds from the adherents of which it easily gains converts?

A LADY (1871) submitted to Chauncey Wright a number of questions, and received what she called his "mental photograph." The questions and answers were as follows: 1. Your favorite color? The complementary. 2. Your favorite flower? The red, red rose. 3. Your favorite tree? The great elm. 4. Your favorite object in nature? Vistas of mountains. 5. Your favorite hour of the day? 11 to 12 P.M. 6. Your favorite season of the year? Days in June. 7. Your favorite perfume? Incense of Havana. 8. Your favorite style of beauty? The animated. 9. Your favorite poets? Shakspeare and Tennyson. 10. Your favorite prose authors? Stuart Mill and Charles Darwin. 11. Your favorite character in romance? Plato's Socrates. 12. In history? The real Socrates. 13. Book to take up for an hour? The one one feels inclined to read. 14. What book (not religious) would you part with last? The one no one would care to borrow. 15. What epoch would you choose to have lived in? The most modern. 16. Where would you like to live? In the most familiar place. 17. What is your favorite amusement? Metaphysics. 18. What is your favorite occupation? Mathematical problems. 19. What trait of character do you most admire in man? The disposition to be just. 20. What trait of character do you most admire in woman? Thoughtful sympathy. 21. What trait of character do you most detest in each? Brutality and vanity. 22. If not yourself, who would you rather be? Nobody. 23. What is your idea of happiness? Undisturbed easy

occupation. 24. What is your idea of misery? Distracted *ennui*. 25. What is your dream? Of flying. 26. What is your favorite game? Solitaire. 27. What do you believe to be your distinguishing characteristics? Ignorance and modesty. 28. If married, what do you believe to be the distinguishing characteristic of your better half? To wish to be married to another, and therefore unhappy. 29. What are the saddest words in the world? Those beginning with D,—as death, debt, disease, dishonor, and all the d—d *dises*. 30. What is your aim in life? To secure the most trustworthy means of happiness. 31. What is your motto? The greatest good of the greatest number.

A PREACHER opened an address at the funeral of a child, at Athens, Ill., recently as follows: "I have been requested to attend here to-day, and say something. I have also been requested not to read the Bible nor to offer a prayer, the father of the dead child now before me informing me he was not a believer in the Bible or religion, and that he would rather I would read Ingersoll's speech at the burial of a little child than anything else. I will now attempt a short address on the death and burial of a little child, which, I hope, will take the place of the one delivered by Ingersoll." Among the closing remarks were the following: "Father or mother, you may be shipwrecked; but you cannot be delayed. Soon, the roar of death will be in your ears, and the dark waters and waves will be beneath your feet. What will you then do? Yes: this is the question. Will you want no Bible read then? Will you want no prayer then? Will you want Ingersoll's vilifications of Jesus read over your dying and sleeping dust? No: methinks not. A heart that sees nothing but a refined animalism in a happy home, a loving wife, and singing children, must be an iceberg indeed." The reading of selections from the Bible, and a formal prayer, would probably have been less offensive to the parents than these personal and, considering the occasion, rude and impertinent remarks.

AH KANG recently came into Boston Harbor as a vessel's cook, and yielded to his curiosity to see our city. Before he was able to do much damage in lowering the dignity of labor and corrupting society, this Mongolian invader was arrested by a United States marshal, and locked up. The Boston Transcript comments as follows: "While he languishes in a federal dungeon, pending his forced departure from the land of the free, he may turn his benighted mind to the study of our institutions, and draw from them wisdom. He will perceive that the increasing wisdom of the nation has placed expository parentheses in the immortal declaration handed down by our fathers, and will read clearly that all men (except Chinamen) are born free and equal, having (with the exception of Chinamen) certain inalienable rights (those of Chinamen being alienable by Act of Congress), among which are life (except where an American mob decides otherwise), liberty (to stay at home), and the pursuit of happiness (unless said happiness consists in setting up a laundry or following other humble occupations which may endanger the dignity of labor)." Ah Kang probably does not see much of the spirit of brotherhood in the treatment he has received here, and he is not likely to become enamoured of our Christian civilization.

IN *The Index* of March 4, we shall print a tabulated statement showing the responses to our request that subscribers send to this office the names of ten writers whom they regard as having contributed most largely to freedom of thought.

We give now a few of the lists already received: (1) Bacon, Bruno, Darwin, Emerson, Goethe, Hugo, Plato, Spinoza, Rousseau, Voltaire; (2) Dante, Luther, Carlyle, Emerson, Voltaire, Bruno, Spinoza, Turgueneff, George Eliot, Theodore Parker; (3) Voltaire, Paine, Kant, Spencer, Goethe, Garrison, Parker, Emerson, Mill (J. S.), Renan; (4) Lessing, Max Müller, Carlyle, Buckle, Emerson, Parker, Paine, J. F. Clarke, F. W. Robertson, George MacDonald; (5) Plato, Montaigne, Voltaire, Paine, Goethe, Mill (J. S.), Hugo, Emerson, Darwin, Ingersoll; (6) Aristophanes, Darwin, Erasmus, Lucian, Lucretius, Kant, Paine, Rabelais, Strauss, Voltaire; (7) Bacon, Luther, Mill (J. S.), Emerson, Maudsley, Spencer, Darwin, Paine, Voltaire, Lewes; (8) Paine, Frances Wright, D'Holbach, Voltaire, Bruno, Harriet Martineau, Comte, Spencer, Emerson, Parker; (9) (by a Swede) Parker, Paine, Ingersoll, Darwin, Lyell, Buckle, Mill (J. S.), Voltaire, Strauss, and Dr. Nils Lilza, "whose popular books," writes the gentleman who sends the list, "are to be found in the three Scandinavian countries, Finland, and, I suppose, in large numbers in the United States."

DONN PIATT objects to "the name the women take to themselves, that of 'sales-lady.' There is no sense in the term. It is a silly shame the poor girls suffer from in the supposed degradation of their labor." He further complains that "put a woman in a store or in a department at Washington, and she immediately preceeds in dress and manner to rise, as she supposes, above her employment." And, worse still, "at all the restaurants and hotels where female waiters prevail there is a lofty manner that adds insult to the served-up indigestion." To this rule, Donn found an exception at Hornellsville, where the girls "actually smiled on one, and anticipated wants like a real gentleman." He adds: "I complimented the proprietor, as I paid my bill, on the amazingly polite conduct of his waiters. The man laughed as he told me of the training and trouble he had in fetching about this result, or, as he said, 'bringing 'em down to it.'" It would seem that Donn has a morbid desire to be continually "smiled on" by girls who wait upon him in shops, hotels, and restaurants. This smiling part of the business may be very gratifying to him, but it must be disgustingly monotonous to the girl who waits upon fifty or a hundred or more customers a day. Donn continues: "As for female friendship, it is a myth"; and the fact that women are not always as considerate toward the unfortunate of their own sex as they should be is stated in the following style: "Had our Saviour addressed a female crowd instead of men, calling for that 'first stone,' he would have found the dear creatures with aprons full of geological specimens; and the way the stones would have gone whizzing would have forced Christ himself to gather up his robes and flee a wrath that is as active as the devil and vindictive as hell." Whether Donn has been "smiled on" by woman too much or too little is not easy to determine from the above; but it is certain that he is not in a mood to write discriminatingly and justly in regard to lady employes in shops and restaurants, who, as a class, treat customers respectfully and politely, and that is enough, even if they do not "smile on" every man who purchases a necktie or orders a lunch.

IN the fact that a street urchin of Newark, bitten by a mad dog, can by charity come under the treatment of the foremost specialist of the world, a religious exchange sees nothing but evidence of the development of Christianity and of the divinity of its author. It says: "Differences of country, language, national manners and ideas

are all bridged by the manger of Bethlehem; and the beautiful ideal of human brotherhood is realized. And this mankind owes, it may be affirmed without fear of contradiction, to the example and teaching of Jesus." With no disposition to undervalue "the example and teaching of Jesus" in promoting human brotherhood, we cannot forget that, when Egypt was afflicted by famine, Trajan fed the people from the granaries of the empire; that, when Lyons was nearly destroyed by fire, Rome supplied the wants of the people in grateful return for assistance received from Lyons when, a little earlier, a similar calamity had befallen Rome; that, when Antioch was half destroyed by an earthquake, the other Asiatic Greeks—as one who then lived wrote—"sent from all sides provisions by land and sea to the unfortunates who clung to their ruined homes." Expanded ideas of universal brotherhood increased rapidly in practical influence from the time of the conquests of Alexander, which brought into relationship nations previously unknown to one another. This influence showed itself in the commingling of different peoples and races and in the general drift of the age. "Independently of revelation," says Merivale, "the heathen world was gravitating through natural causes toward the acknowledgment of the cardinal doctrines of humanity." There is another fact of which our religious contemporaries need to be reminded. The discoveries of Pasteur, and his successful treatment of those bitten by mad dogs, have resulted not from adopting the New Testament theory of such diseases, that they are caused by demons, not from employing the New Testament method of curing disease, by faith and prayer, but from years of patient research and careful experiment; in a word, from pursuing the scientific method, to which the world is indebted for a multitude of discoveries and inventions that have contributed to the result which our contemporary ascribes "to the example and teaching of Jesus."

THE MAGIC RING.

[From the German of LESSING.]

Among the treasures of an Eastern King
Was, long ago, a magic opal ring,
Which, rightly worn, the wondrous gift conferred
To be by God beloved, by man preferred.
Father to son the jewel handed down,
The eldest always had it with the crown.
At length, a father three sons loved so well
Which one the best himself he could not tell;
And so he promised each of them, apart,
That he should have this treasure of his heart.
And, then, a craftsman calling to his aid,
Two other rings in secret he had made.
So like each other did the opals glow
Which was the first no mortal man could know.
In secret then to each he gave a ring,
Just as he felt the flutter of Death's wing.
He died, and each one of the brothers three
Claimed that his ring the real gem must be.
In fierce contention long did they dispute,
Then took them to a judge of great repute,
Before whom each one pleads the ring that's his
Of all the three the only true one is.
He heard them all, then calmly did pronounce
To magic charm each must all claim renounce.
"For see," he said, "not one imparts
The love of God or man unto your hearts,
Else would you not contend *your* ring alone
Contains the *only* true and magic stone.
So now your claim to God's exclusive love
By your life's walk and conduct strive to prove.
If lives of LOVE and CHARITY ye live,
A wiser one than I shall judgment give."
Thus wrangles Christian, Turk, and Jew,
Each claims his creed, and only his, is true.
He is the favored Son of God Most High.
Why not by lives of self-denial try
To prove that claim, nor ever wrangling stand?
Each holds a gem of TRUTH within his hand;
And, if he rightly wears his wondrous ring,
To him the love of God and man 'twill bring.

MARY BAYARD CLARK.

The Index.

BOSTON, JANUARY 14, 1886.

THE INDEX is published every Thursday, at No. 44 Boylston Street, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, BENJAMIN F. UNDERWOOD, : : : : : } Editors.

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 44 Boylston Street, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

MESSIANIC EXPECTATIONS.

LECTURE V.

A GENUINE MESSIAH.

Delivered at the Temple Adath Israel, Boston, Nov. 6, 1885, by Rabbi Solomon Schindler.

Men and events are seldom weighed by us in the scales of justice. It is the successful who generally carries off the admiration and appreciation of the world; and the popular adage says, therefore, correctly, Nothing succeeds like success. Success, however, is a product composed of two factors, the one of which is our own ability and ambition, the other an indescribable something, commonly called "luck." The one is within ourselves, the other outside of us. We have full control over the first one, but no command whatsoever over the second. Neither are these two factors equal in value. The product "success" is obtained in some cases by the multiplication of great ability with a small quantity of luck; in others, by the multiplication of little ability with a great amount of luck. No success whatsoever can be reached, if one of these two factors is lacking. The most talented, the most enthusiastic, will fail in his enterprise, if luck does not favor him; and the choicest luck cannot tower up to the goal of success, if not supported by some intelligence.

But, sad as the fact is, mankind never goes behind the returns. It never takes the time to examine the factors: it looks at the product only. If a man is successful, it bows before him in admiration; if his undertaking has been unsuccessful, it turns from him with disgust, at best with pity. A people arising to break the fetters which either a foreign nation or the party in power has tied around its limbs has always been a grand sight, and the attention of the world has always been directed toward the place where such an uprising

has occurred; but it has always been the final success which has influenced the verdict. Whenever a nation has succeeded in liberating itself, the preceding struggle has been called a revolution; if it has failed in its enterprise, it has been called a rebellion. In the first case, the national leaders have been worshipped as heroes, and their praises have been sung by the poets of their time: in the other, they have been stigmatized as traitors, as ringleaders, as rebels; and, though they may have sealed their love for their country with their blood,—either gloriously on the battle-field, or ignominiously upon the scaffold,—not a word has been said in their favor, not a pen has been stirred to transmit their name to posterity. At best, they have been defended; at best, some friendly hand has attempted to wipe away the stains with which their misfortune or ill luck has bespattered them.

My argument will appear with greater distinctness by the following comparison. Supposing the United States of America had been unsuccessful in their struggle against Great Britain, do you think we should look at the event as we do now? You may rest assured that the glorious time of a hundred years ago would be branded to-day as a rebellion, that the children at school would be instructed to detest the rebels, Washington and Franklin, and to glory in the patriotism of Arnold. They would not be told to memorize Longfellow's beautiful poem of the midnight ride of Paul Revere, and "God save the Queen" would fill the place of the "Star-spangled Banner" in the singing-books of our schools. Who of us would take the trouble to examine the motives, the heroism, and the enthusiasm of the noble men of '76? Nobody; for we all should silently acquiesce in the verdict of the world, or, as you may call it, in the verdict of history, which, after all, would have been influenced, not by the merit, but by the success of the cause.

Will humanity ever outgrow such injustice? I have good reason to believe that the historians of the future will adopt a more just measurement of men and events, that they will overhaul the whole building which history so far has erected, and that they will mete out justice unbiassed by the success with which an event had been accompanied; and I should advise you, my friends, whenever you go into an historical research, to leave a wide margin in favor of the unsuccessful party.

I shall acquaint you to-night with such a party, and with a man who, if he had been successful, would have filled the world with his renown. He possessed the one factor of success,—genius, talent, enthusiasm; but, alas! he lacked the other. Luck went against him. I shall conjure up before you the spirit of a man whom nobody to-day seems to know, but who, nevertheless, at his time had made a Roman emperor tremble upon his throne, whose very name has spread terror upon Roman soil similar to that which, hundreds of years before, the name of Brennus and Hannibal had caused. Would that I could show you the last Jewish warrior in his full glory! Would that I could sing in loud strains the praise of the last Jewish hero, who, if ever a man has deserved the title Messiah, has been worthy of it! If ever Messianic expectations have been realized, they were realized in Bar Kochba. He was a Messiah who tallied, every inch of him, with the hopes which his nation harbored concerning such a man.

The Jewish nation has been, and is still, blamed for rejecting Jesus of Nazareth as a Messiah. They have been called a stubborn people, which would always maltreat its benefactors and best friends. False, thrice false. The Jews were, as they are still, wide-awake, and knew well how to distinguish a chimera from a reality. While they remained in-

different to idealistic dreamers, as Jesus and Theudas may have been, they arose as one man when the person appeared who had all the qualifications of a Messiah. They placed at Bar Kochba's disposal an army of not less than half a million of well-equipped soldiers. They heeded strictly his orders. There was not the least discord in their ranks; and, during five years, more than two millions of Jews sacrificed their lives for him and his cause. Does such devotion indicate blindness or stubbornness? Alas! Bar Kochba was not successful, his cause did not triumph. The hero was therefore degraded to a rebel, and the glorious last struggle of our nation was stigmatized as a rebellion.

Jerusalem had fallen in the year 70 of the new era, and Judea had been made a Roman province. Years of misery followed, and the hope that finally a Messiah must appear to restore their former independence grew stronger every day. Even the early Christians believed that the time was near when their Messiah would return. Sixty years had passed since; and, as the first exile had lasted only seventy years, the conclusion was near at hand that again, after seventy years, a restoration would take place. An excellent proof that the hope in the advent of a Messiah was rooted in political, and not in religious ground, that the Jews did not expect a supernatural Messiah, but simply a man who would be their leader in the struggle for liberty, is that they prepared for the emergency. They were practical enough to observe that arms, ammunition, drilled men, and especially money, must be prepared and in readiness, so that the Messiah should have the sinews of war at his command. They did by no means believe that he was to work wonders, and do the fighting all by himself. They expected in him a leader, and nothing else.

The acknowledged head of the Jewish community at that time was Rabbi Akiba, whom I cannot help mentioning, as he has played a principal part in the tragedy of the Bar Kochbean war. His history is wonderful, and reads like a novel. Up to his fortieth year, he is said to have been ignorant of letters, unable to read or write. His occupation was that of a porter in the house of Calba Sabua, the Vanderbilt of his time. At this advanced age, he fell in love with Rachel, his master's daughter. His affection was returned; but, as Rachel knew well that her proud father would never consent to her marriage with a porter, and elopements were not fashionable at that time, she advised him, strange to say, to study law. Akiba heeded her advice, and began at the bottom of the ladder. He entered a primary school. During the many years of his studies, Rachel is said to have faithfully preserved her love for him, although her father, hearing of it, disowned her. She is said to have lived in such misery that once she was compelled to cut off and sell the braids of her hair, in order to obtain money for food. Finally, Akiba, who had risen step by step, gained renown; and, when he returned to Jerusalem, accompanied by a host of disciples and the acknowledged head of the Jewish community, Calba Sabua laid aside his prejudice, and gave him his daughter for a wife, bestowing upon her a rich dowry, so that from that time they could live in abundance.

Do you suppose that a man of the stamp of Rabbi Akiba, who not only believed in the divine origin of the Bible, but even maintained that every letter in it had a secret meaning,—do you suppose for a moment that such a man did not understand the meaning of the prophets in regard to a Messiah, at least as well as Christian clergymen of to-day, who do not tire of quoting the

Old Testament in support of their theories? If Akiba could have made one passage—yea, even one word—of Scripture tally with the appearance of Jesus as a Messiah, he would surely and willingly have accepted him. Or do you suppose that a man of such an iron will and as practical as Rabbi Akiba must have been, would have accepted the very first adventurer as a Messiah, that he would have sacrificed his influence, his time, his money, his life, for an impostor? This very Akiba, a second Samuel, pointed out Bar Kochba, and introduced him to the people as the long-expected Messiah. This very Akiba travelled for years, visiting all Jewish colonies, levying money and men for the Messiah. From one of his trips, he is said to have returned with thirty thousand disciples, probably young men whom he had enlisted for his cause.

Bar Kochba, or Bar Kosiba, which name he derived from the small town of Kosiba or Kesib, was the embodiment of all the qualities expected to appertain to a Messiah. He was of powerful, Herculean build, tall, muscular, strong. He was the model of a soldier. He would sleep on the bare ground, and share the coarse food of his soldiers. In battle, he would be seen at the most dangerous points, whirling his battle-axe with undaunted courage. He was a skilful leader, who outgeneraled the most experienced soldiers of Rome. Deep as was his hatred for Rome was his love for his country. He was modest and willing to listen; and, for all this, his followers worshipped him. How he had passed his youth, where he had obtained his military knowledge, nobody knew. There he was at the time when all was prepared, and people were only waiting for the leader; and the impression which he must have made upon the people was such that, without examining his past record, all—the rich and the poor, the learned and the simple—flocked to his banner, and obeyed implicitly his commands. Within the space of one year, he stormed fifty fortified places, and freed nine hundred and eighty-five towns held by the Romans; and when the year 133 dawned not a single Roman was to be seen in Palestine.

At first, the Emperor Hadrian, occupied with other schemes, gave little attention to the revolt; but when the most renowned legions had lost their prestige on Jewish battle grounds, when his best generals returned defeated by a foe unknown before, when the Orient, observing that the Romans were not invincible, began to awaken from its slumber and to rally around the victorious Messiah, he tremblingly acknowledged the great danger which threatened the empire, and took immediate steps to suppress the rebellion, at whatever cost. He ordered his best general, Julius Severus, the Moltke of his time, from England, where his presence had been needed, to proceed at once to Palestine. He gave him a large army of picked soldiers and all the supplies he wanted. Bar Kochba, on his part, remained not idle during the two years which Severus needed to organize his forces for the task. He made an attempt to rebuild Jerusalem and the temple. He made use of the prerogatives of a king, and issued coins stamped with the inscription "Cheruth Jerusalem,"—Freedom of Jerusalem,—a few of which are still to be seen. He fortified a number of cities, and was so confident of his final success that he is reported to have uttered the almost blasphemous words, "O God, if it does not please thee to assist us, withhold, at least, thy aid from our enemies, we shall then stand our own, and be victorious." Severus did not dare to meet his adversary in open battle. He adopted the same stratagem which Fabius, the Cunctator, had

used against Hannibal. He refused to fight a battle; but he drew a large circle of fortified camps around the whole of Palestine, from which he sent his cavalry to tire the enemy in small encounters, and to cut off supplies. Bar Kochba had no horsemen to check the ravages of the Romans, and, in spite of all heroism, was not able to break the circle which Severus now contracted, inch by inch. One Jewish fort after the other had to surrender, for want of supplies; and soon the iron band closed around the fortress of Betar, into which Bar Kochba had been forced with the flower of his army. Betar must have been a city of the size of Metz, and the siege and defence of that city must have been a wonder of military skill. The two greatest generals of their time exhausted their genius in moves and counter-moves. Every inch of land was contested with bravery and skill, such as never had been witnessed before.

The Roman general finally despaired of capturing the city. Epidemics had decimated his legions; and, though he had fought for a whole year before Betar, he had not gained the least advantage over his foe. He was about to raise the siege, when two Samaritan traitors showed him a secreted aqueduct which supplied the city with water. He shut the water off at once, but even the most excruciating pains of thirst could not make the noble garrison of Betar surrender the place. Not before the Romans had found a way into the city, by enlarging the same aqueduct, was the fate of Betar and that of Judea sealed. On a Sabbath day, Severus stormed the city. Bar Kochba, a second Leonidas, fell, sword in hand, covered with honorable wounds. He would not survive the final doom of his nation. A legend says that, when a man brought the head of Bar Kochba to Severus, and claimed that he had slain him, the latter said, "If this man has not been killed by God himself, the power of a mortal could never have harmed him." Another legend reports that his body, when found, was encircled by a snake, which would allow nobody to harm it. Thus died Bar Kochba, a hero and a patriot, who would have sacrificed ten more lives upon the altar of his country, if such had been possible. Although he has been almost forgotten, although the masses have never heard of him, although our Christian friends are not aware of it,—that the Jews once accepted a Messiah, and cheerfully spilled their blood in his service, because he was the type of that Messiah of which they had dreamed,—although no poet has sung his praise, Bar Kochba is no myth. His history is written in the heart-blood of the nation upon the soil of Palestine. The Talmud contains numerous passages referring to him. Even the Gospels allude to him,—another indication of the time in which they were written. A Greek historian, Dion Cassius, speaks with reverence of him. There are the coins still to be seen, which he had caused to be minted; and even the minutes kept by the Roman Senate bore evidence to his greatness. When Severus reported to the august body his final victory over the enemy, he omitted the customary introduction, "I and the army are well." Indeed, neither he nor his army was well. His victory had the semblance of a defeat. Neither did the Senate grant him the honor of a triumph.

Here we have a Messiah recognized by the people, recognized by its representative Rabbi Akiba,—a Messiah who laid down his life upon the altar of his country; but did Judaism make a God of him? Did it allow him to change one of its laws? Did he or his followers ever attempt to change a law, on the ground of his Messianic authority? Has ever a cult or a ceremony been instituted to

commemorate his life and death? Though the Jewish nation has mourned him with bitter tears, his ill luck has made him share the fate of all unsuccessful; it is due to modern research that the marvellous career of Bar Kochba is brought to acknowledgment, and his heroic patriotism is duly appreciated.

Although Rabbi Akiba had introduced Bar Kochba as the expected Messiah, he never attempted to make a tool of him. The confidence of the people rested in the qualities of the Messiah, and the recommendation of a man who had been the interpreter of the law for so many years only strengthened it. Rabbi Akiba survived the fall of Betar. It is said that he miraculously escaped before its capture, and for some time he was the eye-witness of the sufferings through which his nation had to pass.

It has been claimed that the misery which had followed the Jewish nation was a punishment of God for their rejecting Jesus of Nazareth as a Messiah, and that it is a proof that they must have crucified him. How can such a claim be reconciled with the justice of God? How could our ancestors have acknowledged an unknown man, whose name afterward was used to change, if not to abolish, the law? Or have the sad consequences of the Bar Kochba war also been a punishment of a just God? Had they not had all cause to believe in the Messiahship of Bar Kochba, better cause than they had to believe in the Nazarene? Had Bar Kochba not led the life of a conscientious Jew? Had he ever attempted to lead them from the path of virtue? Had he not been successful in the first years of the revolt? And, as he showed all the qualities of a true Messiah, could they help believing in him? Was their devotion to him and his cause of no merit in the eyes of God? Was their heroism deserving of the cruel punishment which followed? The argument that the Jews must have crucified Jesus, because they have been persecuted afterward, is simply absurd. Turn it around, and you will come nearer to the truth. Our history would have run quite smoothly, if ignorant bigotry had not considered it an act of piety to make it fit with some alleged predictions, if our oppressors and persecutors had not considered it a high distinction to serve as the instruments of punishment. The cast answered the die, because it was forcibly made to fit it.

But let me return to Rabbi Akiba. He was finally imprisoned on the charge that he had been an instigator of the revolt, and he suffered martyrdom from the hands of the Romans. The agonies of Jesus of Nazareth, even if the narrative of the Gospels is admitted, are less than the sufferings of Rabbi Akiba, who was flayed alive. But, in the hour of death, he did not despairingly exclaim, "My God, why hast thou forsaken me?" He died with the words on his lips, "Hear, O Israel, the Lord our God is one God."

Israel has never forgotten its noble heroes nor its martyrs. It has paid them their tribute of tears, and mourns them still; but it never made saints of them, it never worshipped them, it never preserved their relics and worked miracles with them.

The revolt of Bar Kochba was the last military enterprise of our nation. After it, it ceased to be a political body; and its future history is that of a religious sect. We do not claim to-day to be a nation. The enlightened Israelite of to-day does not feel in the least chagrined that he has no country of his own or a king to rule over him. We are sincere and patriotic citizens of the country in which we live. We are good Germans in Germany, good Frenchmen in France, law-abiding Englishmen in England; and, in this our glorious

republic,—which better than any other country in the world protects our liberties and our rights,—we are true and faithful Americans, ready to prove it with our blood, if an emergency for such a proof should arise. We wish for no other country and for no other form of government; and all our efforts are directed toward the one great aim cherished by all true Americans, without distinction of race, color, or creed,—the aim to make our beloved country respected and honored all over the world.

CORRESPONDENCE.

A CATHOLIC'S REPLY TO RABBI SCHINDLER.

Editors of The Index:—

I was shown quite recently a copy of *The Index* of 26th last month. I had never seen the paper before, although I had heard of it. My attention was invited to the third sermon of Rabbi Solomon Schindler on "Messianic Expectations"; and I infer that you have published it, because its object, to disprove the divine origin of Christianity, falls in with the purpose and scope of your paper. I trust that you will afford me, a Catholic layman, opportunity to make, from the stand-point of my convictions, a short reply to the Rabbi's utterances. He gives no authorities for the string of assertions which he so complacently makes; and, if we are to judge of his accuracy by the sense in which he applies the term "immaculate conception," then he is altogether unreliable. He erroneously applies it to our blessed Redeemer instead of to his mother; for it signifies that the blessed Virgin was conceived without the stain of original sin in which all the descendants of Adam are born. He says that Christ "never was anointed for his mission by any authority whatsoever, real or fictitious," meaning, of course, a human one. Was there no other way? Do we not read in Psalm xlv., 17, 18 (Douay version): "Thy throne, O God, is forever and ever: the sceptre of thy kingdom is a sceptre of uprightness. Thou hast loved justice and hatest iniquity, therefore God, thy God, hath anointed thee with the oil of gladness above thy fellows"? The Rabbi assumes that the passage relating to Christ, not in chapter 18, but in book 18, chapter 3, of Josephus' *Antiquities of the Jews*, is an interpolation, "condemned even by church authorities, such as Bishop Lardner"; but he fails to state any other authority, or how and where. Nor does he state whether the authorities are Catholic or Protestant, which certainly appears careless and unlearned, in view of the great difference between the two.* An argument might be valid against the latter stand-point, and of no account against the former one. If he meant Nathaniel Lardner, a nonconformist preacher of the eighteenth century, I cannot find that he ever became even an Anglican bishop; and, if he did, and has been quoted correctly, his opinion is by no means conclusive.

I might go on this way taking well-founded exceptions to the Rabbi's many inaccurate statements, assertions, and the arguments which he has attempted to build on them; but it would take up more of your space than I can reasonably expect you to give me. I shall content myself with the following single point, in answer to what he says on the alleged "marvellous growth of Christianity." I assume that he believes in the existence of EL SHADDAI, the Almighty God, the God of Abraham, Isaac, and Jacob, and that one of his infinite divine attributes is to be "infinitely true and faithful." This the Catholic Church teaches. Although the human race has not been left by God without some knowledge of himself, derived from patriarchal tradition, but mixed with idolatry and error, to the Jews alone, his chosen people, did he reveal himself as he wished to be known, adored, and obeyed in his commandments. "God said to Moses: I AM WHO I AM. He said: Thus shalt thou say to the children of Israel: HE WHO IS hath sent me to you" (Exodus iii., 14, Douay version). Even the mind of an enlightened

*I have noticed that rabbis in their sermons frequently make the mistake of overlooking this proper distinction. For instance, the argument which I have known one of them to use against the existence of any authority for the change in religious observance from the last day of the week to the first is unanswerable on Protestant grounds, but reasonably accounted for on Catholic ones.

Pagan could apprehend the distinguishing character of the Jewish belief; for Tacitus, in his *Annals*, Book V., has described it in these forcible words: "... *Judaei, mente solâ, unumque numen intelligent. ... Summum illud et aeternum, neque mutabile neque interitum.*"

Before the Christian Church there was no way, other than through Jewish teaching, for the Gentile world to attain to the knowledge of the one true God; and it is a well-known historical fact that the Jews were at all times zealous and active and measurably successful in making proselytes, though the work was attended with great obstacles. This state of things continued in greater or less degree until the advent of the personage known as Jesus Christ, and his death on the cross. During his mission to the Jews, he, on many occasions related in the New Testament, announced to them his divine nature. I shall cite only one instance as sufficient. Jesus said to them: "Abraham, your father, rejoiced that he might see my day: he saw it and was glad. The Jews therefore said to him: Thou art not yet fifty years old, and hast thou seen Abraham? Jesus said to them, Amen, amen, I say to you, before Abraham was made, I AM" (John viii., 56-58, Douay version). Now, if he was not the God he thus emphatically declared himself to be, he must then have been (and I say it with the deepest reverence), as Rabbi Schindler and his co-religionists believe, an impostor; and his resurrection from the dead must have been a fraud! What followed? The work of spreading among the Gentiles the knowledge of the true God, of the ten commandments which he gave on Mount Sinai, and of other greatly increased means of salvation, passed from the hands of the Jewish Church into those of the Catholic Church, founded by Christ and teachers with authority, and has been carried on for eighteen centuries with a prodigious success, infinitely surpassing all that the Jewish Church was ever able to accomplish. Through whom, in our day, is the knowledge of the true God borne into the interior of China and Japan? Now, if Christ was not the Messiah, how does it accord with the above mentioned attribute of God, who is truth itself, to permit the knowledge of himself and of his commandments to be successfully and authoritatively spread through teachers commissioned by an impostor! Nor does the coming of Mohammed, six and a half centuries after the Christian Church had begun its work and made great progress in it, at all invalidate the force of the above argument. The creed of Islam was taught, not by truthful argument, the power of a sublime teaching, the force of heroic virtuous example, of accepted martyrdom and confirmed by miracles, but was enforced by the sword and the besom of destruction, mostly on populations already in possession of the knowledge of the true God. Wherever it has become established, it has brought about the social degradation of woman, whose elevation, begun under the Jewish Church, has reached its highest point under the teachings of Christianity.

I have only to add that the motives which Rabbi Schindler assigns for the spread of the Christian belief among the "Greek and Roman populace," as he terms them, are against reason and historical facts, and are of easy refutation.

CATHOLIC.

New York, Dec. 28, 1885.

QUESTIONS REGARDING RELIGION.

Editors of The Index:—

1. Do not all human beings naturally possess a part of religion?
2. Is it possible for any person to be entirely without religion, or to discard it?
3. Are not reason, talent, and education the best guides toward a universal and lasting religion, comprehended and enjoyed by all beings?
4. Is it not a convincing evidence that the efforts and, in some cases, pretensions, even of the most noted theologians, to teach and inculcate their conceptions of religion, are inadequate, when we find that some of their own and best educated children are compelled, by the development of their reason, to oppose the doctrines and dogmas of their good fathers and mothers?
5. Can religion be defined satisfactorily to all, and improved by stamping it with an extra name? and do not the false claims of superiority over other forms or sects narrow religion?
6. Is it not an essence of religion, when men, whether believers or sceptics, atheists or materialists,

etc., manifest by speech, writings, or actions, that they appropriate and love what is rational and lovely in the finite and infinite, or in facts and theories, bestow charity upon the less developed mind, kindly and diligently strive for others and their own welfare and progression toward the better and the all good?

CARL H. HORSCH.

DOVER, N.H., Jan. 3, 1886.

SOCIOLOGIC SOCIETY OF AMERICA.

Editors of The Index:—

Mrs. Imogene C. Fales, President of the Sociologic Society of America, is holding parlor meetings in New York City every Friday afternoon for the instruction of women in Social Science.

With the advent of the new year, public meetings in continuation of the labor conferences of last spring will be held at Spencer Hall, New York, on the second and fourth Wednesdays of every month, where industrial questions will be considered in the light of the principles held by the Sociologic Society. Mrs. Fales will preside at these meetings, and speak of the laws of social growth in relation to the present condition of social and industrial life.

LITA BARNEY SAYLES,

KILLINGLY, CONN.

General Secretary.

WHILE we do not want to destroy those spiritual realities which sweeten the life of man, while we do not wish to crush one single flower of religious sentiment, we must show that the life of to-day is holy; that the rising and setting of the sun include as many hymns of praise and earnest prayers as can be found between the lids of any book. The life of man is sacred, and its every care and joy are fit for prayer and song. The deeds of man are holy, and they merit every rite that worshippers perform on bended knee before the altars of the church. The joys and sorrows of the human soul are fit to be embalmed in sacred verse, and every sigh that rises from the human breast is prayer for help as eloquent as any chanted words of priest. The blood that pulses in the veins of man is holy, too, and in its flow sings praises to the God that makes the heart to beat. Man is divine,—in every physical part, in thought and feeling, movement of the spirit, throb of brain, when in that thought-gemmed dome the light of inspiration comes, filling the chambers of the soul with rays truth laden. In every act of life, in love and hate, in hope and fear, in God-like action or divine repose, man is a theme for song; and, when the heavenly muse descends to earth, she sings most sweetly of that earth-god, Man. Religion, too, must own his worth, and in her temple celebrate his praise. His daily life must be her highest care. Her hands must labor for his good. The God above needs not our help or praise. The ocean needs no fountain's tiny stream to fill its shores. The atmosphere needs not the breath of man to swell its volume. The sun has need of no ignoble taper to increase his light. Our God is infinite and self-complete. He fills the universe's vast extent. From him we draw our life, not he from us. Before we were, he was. But, in our worldly state, we need each other. The love of friends, the help of strong ones in the hour of need, the warm heart beating for our woes, the kind hand wiping from our eyes the tear of grief,—these do we need; and sweet Religion is worth most when in this garb she comes to us. Balm for the wounded spirit, strength for the weary soul, clothes for our nakedness, for hunger, food,—with these the spirit of Religion comes, and by these gifts we know her. Our highest duty, then, is to each other; and our religion must be one of helpfulness, or it is naught.—*From The Duty of the Hour, a discourse by Solon Lauer.*

BOOK NOTICES.

HEALING BY FAITH; or, Primitive Mind Cure. Elementary Lessons in Christian Philosophy and Transcendental Medicine. By W. F. Evans, author of *Celestial Dawn, Mental Cure*, etc. London: Reeves & Turner, 196 Strand, W.C. 1885. pp. 214.

Mr. Evans holds that all disease is of mental origin and nature, and that we possess spiritual energies and potencies sufficient for the cure of all maladies; that disease in us must have had an existence, as an idea, before it had a "bodily expression," and that to expunge this idea from the mind is to destroy both the disease and its cause. "All matter, including the

human body, exists only in mind, which is the only substance. . . . Hence, the body is to me and for me what I think it to be." The real "immortal ego" is not subject to disease, and "may always affirm *I am* well and happy. To come to an intuitive perception of this, and to hold to it with a divine stubbornness in spite of the senses, and even reason, is to reach the summit of faith,—a faith that makes us whole." Plato, the Bible, Berkeley, Hegel, Chunder Sen, Mozoomdar, *The Occult World*, and *Isis Unveiled* are drawn from to sustain the author's idealistic speculations, which he intimately connects with his method of curing disease,—that of Jesus revived, he claims. The prayer of faith is "the most intense form of the action or influence of one mind upon another." The name of Jesus is the name in which to ask, because, "according to a law of correspondence, it signifies and expresses an inward essence, principle, and quality."

Mr. Evans gives a formula of faith in the form of a prayer or invocation, in which there is, he says he sincerely believes, "the saving, healing virtue of the name of Jesus Christ, the Nazarene, and of the principle his name represents." They who repeat this prayer must assume that they are "now well, and already saved in Christ," must "affirm by faith in opposition to blind sense that we are now freed from our infirmity." When the prayer, two and one half pages long, is repeated understandingly, the prayer is "put in possession of the power of the inner Word and the Spirit through which Jesus healed disease and cast out demons." The practical idea of the work, common to all the so-called "mind cure," "faith cure," and "metaphysical cure" methods, is thus expressed near the end of the volume: "The cure of mental and bodily maladies by the influence (that is, as the word means, the *inflowing*) of one mind upon or into another is no new thing in the world. . . . It is based on laws of mind as fixed as, and more certain than, any of the principles of chemistry,—the naturally and essentially diffusive tendency of our mental states, and the absorptive and receptive nature of the soul of a patient in a passive state and actuated by a sincere desire of recovery." The book contains a great deal of what seems to us wild speculation and many very extravagant claims.

B. F. V.

THE DAWNING. A Novel. Boston: Lee & Shepard. pp. 382. Price \$1.50.

This anonymous novel will not take rank among the great works of this century; but, though it does not bear evidence of being the work of a thoroughly original thinker, it is yet extremely readable, being unique in plan and plot, its aim noble, and its morality of a high type. While it is very evidently the work of one who is capable of better work with more experience, it is yet too evidently the work of a crude thinker, but well intentioned, who has been studying from a radical point of view the unsettled social problems of to-day, and who has come to some optimistic yet hasty solutions of the questions which have been puzzling the world for some centuries, and which are yet conceded to be unanswered, if not unanswerable.

Among the questions considered in this volume are the various phases of the woman question, society caste in New England, the right and wrong methods of dispensing charity, marriage and divorce, freedom of thought and expression in religion, the inadequacy of law or custom to right wrongs; and, above all other questions, the story-teller is interested in the respective rights of capital and labor. On all these subjects, the author takes somewhat radical ground; and the story closes with the heroine's declaration, on the part of herself and lover, that "Langdon and I have but one purpose,—to seek justice for the creators of wealth. The night of oppression shall not always shroud the world!" "No: it is **THE DAWNING!**" exclaimed King." An explanation which explains the reason for the title of the book.

The story ought to interest Bostonians, since the scene is laid in their city, whose localities are frequently carefully described. The actors are truly Bostonese, even their names being familiar to all citizens of the plot. The style is somewhat jerky, but never tiresome, though a little too epigrammatic.

S. A. V.

BATTLE OF THE BUSH. Boston. Published by the author.

Mr. Robert B. Caverly, of Lowell, has made a study

for years of New England colonial history of the Puritan colonies, and of the Indian tribes and their famous sachems, and of the wars of the Puritans with the aborigines. He has also made the Indian legends of New England the subjects of a volume of poems. In the present volume, following the example of Shakspeare in his English-historic plays, Mr. Caverly has dramatized early New England history, introducing among his *dramatis personae* such characters as King Phillip, Roger Williams, the regicides Goffe and Whalley, Captain Miles Standish, Bradford, Brewster, Leverett, Elliot, the apostle of the Indians, Winthrop, etc. Each dramatic sketch has an introduction full of Indian lore. Mr. Caverly was the first mover in the enterprise of erecting a statue on an island in the Merrimack River to the memory of the famous heroine Hannah Dustin, on the spot (Haverhill) where she tomahawked a dozen sleeping savages, her captors, who had dashed out the brains of her infant, and were dragging her through the wilderness to Canada. This happened in the closing years of the seventeenth century. So recently was New England a wilderness.

THE Popular Science Monthly for January opens with M. Pasteur's communication to the French Academy of Science, on his discovery and successful application of "Inoculation against Hydrophobia." In "The Origin of Primitive Money," Mr. Horatio Hale describes wampum and its uses, and traces the existence of similar currencies in other parts of the world. In "Progress in Tornado-Prediction," Mr. William A. Eddy shows that it is now possible to render cases where a tornado may overtake a settled neighborhood unawares of rare occurrence. In "Communal Societies," Mr. Charles Morris compares the social organization of "communal animals" (beavers, bees, ants, etc.) with the primitive social organizations of men. In "The Flower or the Leaf" and "The Study of the Relation of Things," Dr. Mary Putnam-Jacobi and Miss Eliza A. Youmans discuss fundamental principles of primary instruction. Mr. George F. Kuiz has an interesting paper, beautifully illustrated, on the "Agatized and Jasperized Wood of Arizona." There are other papers by Herbert Spencer, Grant Allen, Dr. William Odling, Rev. Henry Kendall, and the editor, who rejoices over "The Decline of Ghost." D. Appleton & Co.

THE Library Magazine for January (John B. Alden, publisher) has the following interesting selection of current articles: "The Dawn of Creation and of Worship," by W. E. Gladstone; "Free Cities in the Middle Ages," by L. R. Klemm; "Some Habits of Ants, Bees, and Wasps," by Sir John Lubbock; "The Wesleys at Epworth," Rev. J. H. Overton; "The General Election in France, October, 1885," Jules Simon; "An Anglo-Saxon Alliance," John R. Dougall; "With the Hungarian Gypsies," *Temple Bar*; "Macaulay and Sir Elijah Impey," *Macmillan's Magazine*; "A Greek View of the Present Crisis," by a Greek statesman; "Human Personality," Fred. W. H. Myers; "The Eastern Question as viewed in Persia," S. G. W. Benjamin; "The Future of the Fellah," Lieut.-Col. H. H. Kitchener; "Provincialism in Literature," *Christian Union*; "Culture and Science," *Macmillan's Magazine*; "Yankee Doodle," G. H. Moore; and "Our Latest British Critic," from *Macmillan's Magazine*. \$1.50 per year.

CALENDARS are not designed to be "a joy forever," since they are intended only for use during the current year; but many of the new designs in these useful reminders of time's flight ought to be "a joy forever," if Keats' opinion goes for anything, as they are most decidedly "things of beauty." This is especially true of "A Calendar of the Year, with Verses by Austin Dobson," issued by H. B. Nims & Co., Troy, N.Y., which consists of a book of twelve leaves, each leaf containing a dainty calendar for the month, underneath which, in quaint characters, is an appropriate original verse by Austin Dobson, both calendar and verse being enclosed in a framework of pictured flower or scenery illustrative of the month whose name heads the page. These leaves are enclosed within two handsomely illustrated covers, and tied together with a silken cord. The combination is very unique, æsthetic, and charming. Price \$1.25.

THE ever bright *Babyland* promises some new attractions for 1886, among these being entertain-

ments each month in dainty jugglery and sleight of hand for nursery pencils; twelve tiny lessons in counting, through verse and picture; and a story in every issue for mamma to tell at baby's bedtime. D. Lothrop & Co.

LADIES desiring fine fur-lined circulars at the lowest prices ever made for first-class goods should read the announcement of Edward Kakas, the well-known furrier, in another column.

The Contemporary Evolution of Religious Thought in England, America, and India.

By Count GOBLET D'ALVIELLA. Translated by J. MODER. Price \$3.00. For sale at *The Index* office.

THE RISE OF INTELLECTUAL LIBERTY FROM THALES TO COPERNICUS.

By FREDERICK MAY HOLLAND,

Author of *The Reign of the Stoics*. Price \$3.50.

For sale at *THE INDEX* office, 44 Boylston Street, Boston, Mass.

SCIENTIFIC THEISM.

By FRANCIS ELLINGWOOD ABBOT, Ph.D.

This work includes the substance of a lecture delivered last July at the Concord School of Philosophy. It is part of a new philosophy of Evolution, vitalized by the principle of UNIVERSAL ENDOGENIC TELEOLOGY and by the substitution of the ORGANIC THEORY OF EVOLUTION for the MECHANICAL THEORY advocated by Spencer and Haeckel. Its purpose is to philosophize the scientific method, and to show that modern science, interpreted by its philosophized method rather than by its non-philosophic special results, leads, not to Atheism, not to Agnosticism, not to Idealism, but to a REALISTIC SPIRITUAL THEISM which will satisfy both "the head" and "the heart." 1 vol., 12mo. Price \$2.00.

For sale at *THE INDEX* office, 44 Boylston Street, Boston.

TWENTY-FIVE SERMONS OF TWENTY-FIVE YEARS.

By WM. J. POTTER.

This volume, published by request of Mr. Potter's Society at New Bedford, serves as a memorial record of his twenty-five years' ministry. It contains the first discourse and the last of the quarter-century, and one from each of the years between. In respect to subjects, the selection is miscellaneous; but, in general, the discourses are such as concern the permanent problems of moral and religious life and the special problems of modern religious thought. An Appendix contains an account of the Parish celebration of the Twenty-fifth Anniversary of Mr. Potter's settlement, with the addresses on that occasion by Thomas M. Stetson, Esq., and Hon. William W. Crapo.

PRICE \$2.00.

For sale at the bookstores. Also sent, postpaid, on receipt of price by

THE INDEX,
44 BOYLSTON STREET, BOSTON.

LECTURES.

MR. CHARLES FROEBEL, whose articles in *The Index* ("The Religious Confession of an Evolutionist," "The Moral Function of Socialism," "The Perpetuity of Life," etc.) have attracted considerable attention, is open for engagements to lecture upon the following subjects:—

- The Spirit of the Kindergarten.
- The A, B, C of Life: An Alphabet of Philosophy for Grown Children.
- How can we breathe the Spirit of the Kindergarten into our Public Schools?
- What is "Our Civilization," and whither does it tend?

For terms, etc., address
CHARLES FROEBEL,
225 EAST 19TH STREET, NEW YORK.

Lectures by Rabbi Solomon Schindler.

- INTRODUCTORY.
- TWO THOUSAND YEARS AGO.
- THE CARPENTER'S SON.
- JUDAISM THE MOTHER, AND CHRISTIANITY THE DAUGHTER.

As a special inducement to Liberals to distribute these lectures, which are full of radical thought presented in the plainest language, they are now offered at 5 cts. a copy; 10 copies for 40 cts.; 30 copies for \$1.00.

Address *THE INDEX*, 44 Boylston Street, Boston, Mass.

BESURE to include in your list of **PERIODICALS FOR 1886** some, if not all, of the following, for they are the very best and are found in the homes of all cultured people.

Nineteenth Century.

No other journal numbers among its contributors so many brilliant thinkers and profound scholars. The most important changes in the thought of the times are submitted to searching criticism and review.

Contemporary Review.

The monthly contributions, by eminent writers, describing the contemporary life and thought of the leading nations of the world, give it an unique position among other journals, presenting an epitome of all that best deserves attention in the world of thought and action.

Fortnightly Review.

The greatest exponent of radicalism in England. Its Editors and Contributors have ever been noted as leaders of progress, and have formed a school of advanced thinkers, which may justly be cited as the most powerful factor of reform in the British Empire and elsewhere.

British Quarterly.

While discussing all branches of modern thought, is particularly devoted to the consideration of the more recent theories in Theology and Philosophy. Its articles are characterized by a keenly critical spirit, and for fulness of treatment and justness of criticism it stands alone, in its special field, among the periodicals of the world.

Edinburgh Review.

Numbers among its contributors the greatest names that have moulded English thought for the past eighty years. While its policy admits the discussion of all questions, its conservatism is tempered with a liberalism that marks it as the **INDEPENDENT REVIEW** of the world.

Quarterly Review.

Its reviews cover all the leading issues of the day, and embrace the latest discoveries in Science, in History, and in Archaeology. Much space is devoted to ecclesiastical history and matters connected with the Church, thus making the Review invaluable to the clerical student, as well as of great interest to the general reader.

Westminster Review.

Is notable for the latitude of its theological views, many of the most advanced of modern theories in theology having received in its pages their first authoritative support. A distinctive feature of this Review is its **"INDEPENDENT SECTION,"** containing articles advocating views at variance with those of its editors.

Blackwood's Magazine.

Is the leading and most popular magazine of Great Britain. The tone of its articles, be they fiction, incidents of travel, critical or political essays, is unexceptionable, rendering it most desirable for the Home Circle.

All of above are printed line for line—page for page—with English Editions, but in handier form.

Shakespeariana.

While aiming to furnish a recognized medium for the interchange of views among Shakespearian scholars, and to afford the student the fullest information relative to Shakespear's art, life and writings, **SHAKESPEARIANA** is specially designed to extend the influence of Shakespeare as a popular educator, and to stimulate the study of his works in our colleges and institutions of learning.

Full Index Circulars furnished upon application.

THE "FREIDENKER."

Freedom, Culture, and Prosperity for all!

(Organ of the Freethinkers of North America, of the Union of Radicals, and the North American Turnerbund.)

Editor, C. Hermann Beppe.

TERMS, PER ANNUM, IN ADVANCE:
UNITED STATES AND CANADA:
Freidenker. \$2.50
Turnerische Ausgabe des Freidenker (Amerikanische Turnzeitung). 3.00
EUROPE:
Freidenker. \$3.00
Turnerische Ausgabe des Freidenker (Amerikanische Turnzeitung). 3.50
Sample copies sent, on application, free of charge.

In this weekly, which is now in the thirtieth year of its existence, political, social, and religious matters are discussed with a view to general enlightenment and progress. The *Amerikanische Turnzeitung* is especially devoted to the discussion of topics pertaining to physical culture and matters of interest to lovers of the gymnastic art.

Since Jan. 1, 1885, the *Freidenker* has been enlarged, thus furnishing considerably more reading matter, while the price remains the same as before.

For the convenience of those of our readers who are chiefly interested in matters relating to gymnastics, the *Freidenker* and its former supplement, the *Turnzeitung*, have been consolidated into one paper, called *Amerikanische Turnzeitung*, with the sub-heading "Turnerische Ausgabe des Freidenker."

This paper contains more reading matter than furnished by both the *Freidenker* and *Turnzeitung* heretofore. In making these changes, the publishers have incurred great expense; and we therefore solicit the hearty co-operation of all friends of the cause in securing for the *Freidenker* and the *Amerikanische Turnzeitung* a wider circulation.

We also publish

"Erziehungsblaetter,"

fuhr Schule und Haus.

A Liberal German Educational Monthly. (Organ of the German-American Teachers' Association.)

Editor: **MAXIMILIAN GROSSMANN**, Milwaukee, Wis.
Associate Editors: **H. H. FICK**, Chicago, Ill.
H. SCHURICHT, Chicago, Ill.

16 large quarto pages, with four-page cover. Terms: \$2.12 per annum, in advance.

"Freidenker-Almanach"

FOR THE YEAR 1885.

The almanac, which is now in the eighth year of its existence, is devoted to the propagation of free-thought principles. Price 25 cents.

"Amerikanischer Turnerkalender"

FOR THE YEAR 1885.

This annual, which is now published for the sixth time, is principally intended to promote the culture of gymnastics, and is pervaded by a thoroughly liberal spirit. Price 25 cents.

Orders for all kinds of books promptly filled. Radical and Freethought Publications a specialty.

CURRENT TOPICS.

BY B. F. U.

M. PASTEUR's laboratory is crowded with patients every morning. The total number of all nationalities he has thus far treated is two hundred.

PROF. HUXLEY has written for the February number of the *Nineteenth Century* a rejoinder to Mr. Gladstone's January article, on the order of creation as described in Genesis.

On the evening of the 16th, a banquet was given in London in honor of Mr. Joseph Arch, the agricultural laborer, who has been elected to Parliament. Mr. Chamberlain, who presided, spoke of the importance of agrarian reform, and emphasized the fact that Mr. Arch was a dissenter, and that the English Church had never given help to great popular movements.

THERE is evidently a growing sentiment in Germany in favor of cremation. A petition for its introduction was recently laid before the Reichstag, containing 23,365 signatures. The petition was signed by 1,942 physicians, 1,046 lawyers and professors, 1,015 government officials, 849 school-masters, 10 Protestant clergymen, 3 rabbis, 361 women, and 6,000 working-men. The remaining names were those of merchants, manufacturers, tradesmen, and others.

THE Boston correspondent of the *Springfield Republican* says that many of the most prominent Boston ministers preach now without manuscript, and adds: "This is significant. It means not a decline of scholarship or of faithful preparation. The pressure of preaching an unwritten sermon effectively must be greater than to read from manuscript. The mind must be alert, and the whole subject thoroughly arranged. It means, evidently, a vital contact with the subject, the occasion, and the people; a desire to send the truth, as the preacher sees it, home; to hold the attention of busy men."

SOME of the tax-payers at Long Island City have complained to the school commissioners that the priests of St. Mary's Church, Hunter's Point, on certain days of the week, go to the first ward school, march the children from the class-rooms, and lead them across the street to the church to hear mass. This, it is claimed, is a most sectarian proceeding, and is in violation of the law under which the city schools exist. About seventy-five per cent. of the children of the first ward school are Catholics; and, when they are marched out of the school-house, some of the class-rooms have but few, if any, pupils left. There is considerable agitation in relation to the matter, and it is increasing.

A PETITION is being circulated for signatures, which states that "the right of a citizen of Massachusetts to obtain justice ought not to be impaired on account of the theological opinions of his witnesses," and asks that the clause of the Public Statutes of this Commonwealth, which says that the evidence of a person's "disbelief in the existence of God may be received to affect his credibility as a witness," be repealed. This clause is unjust, not to atheists only, but to all suitors in our courts; for their interests are liable to be injured by allowing the religious opinions of witnesses to affect the credibility of their testimony. Such a remnant of religious proscription and intolerance is a disgrace to this Commonwealth, and ought to be speedily removed. A copy of the petition is at *The Index* office for signatures.

ON the issue of opening public museums in New York that are supported jointly by the city and private contributors, the secular press, generally speaking, is on one side and the clergy on the other. The influential journals come out strongly in favor of admitting the public on Sundays, while the orthodox pastors denounce the movement "to turn the Sabbath into a day of diversion." Petitions are receiving signatures by thousands; and, in most of the mechanics' unions, votes for opening have been passed unanimously. The trustees are divided and rather conservative. Mayor Grace has declared that he will not sign another appropriation for the Museum of Natural History until the change is made. On the other hand, some of the donors of money and exhibits say that, if the institution is opened on Sunday, they will withdraw their help. It looks now as though the movement would soon succeed, as did that which, in spite of all opposition, resulted in establishing Sunday free concerts in the New York parks.

MR. BRADLAUGH, having been duly sworn, will take his seat in the House of Commons and vote, regardless of possible penalties. The Tories, having made all the capital they could out of his case, "are," it is stated, "inclined to leave him alone in the future." A London despatch says: "The secular British press almost unanimously expressed relief that Mr. Bradlaugh had been permitted to take the oath, and will now be allowed to die a natural death. The church organs, however, viciously attack the policy which has

allowed his admission to Parliament. They point out, with some bitterness, that, in the event of Church of England reforms, Mr. Bradlaugh will have a voice in church affairs and church reforms." Mr. Bradlaugh is likely to be heard from before he dies "a natural death." It is to be regretted, however, that a principle has been evaded and not settled in his case. We hope yet to see affirmation sanctioned, and the claim that religious belief may afford grounds for denying to a member his seat in the House of Commons unequivocally renounced.

THE quarterly meeting of the Twenty-eighth Congregational Society of Boston, at the Parker Memorial, last Monday evening, was a very pleasant affair. After a substantial repast had been enjoyed, Mr. F. H. Henshaw, who presided, read from the records of the society from its formation, including letters from Theodore Parker, Robert Collyer, J. V. Blake, and others, and related numerous incidents in its history. We have never seen an audience at Parker Memorial more interested than those present were apparently in these readings. The remarks that followed, by Messrs. John C. Haynes, Dr. H. B. Storer, J. L. Whiting, G. W. Stevens, J. A. J. Wilcox, Mrs. Sarah B. Otis, Mrs. Judith Smith, and others, added much to the interest and pleasure of the occasion. The Twenty-eighth Congregational Society, formed to secure for Theodore Parker a hearing in this city when the Unitarians frowned upon him, has a history that is creditable to those who have sustained it; and it has exerted an influence which must always identify it prominently with the history of liberal religious thought in this country.

THE Edmunds bill for the correction of the Mormons, in the form in which it has passed the Senate, is, in our opinion, creditable neither to its author nor to the thirty-eight senators who voted for it. What right has the government of the United States to administer the property of a religious corporation by means of trustees appointed by the President and not responsible to the beneficiaries of the trust? What right has the government to punish all the members of a religious organization, because some of them are guilty of indictable offences? "We trust," says the *Nation*, "the House will deal with this remarkable measure as it deserves. In a country in which all forms of religious belief and worship are free, the punishment of whole sects for holding obnoxious opinions by seizing their property is, or ought to be, a monstrous thing. The only American way of dealing with a corporation offensive to the public interests is by winding it up. Government trustees for the management of its affairs would be a monstrous excrescence, which ought not to be permitted for any purpose, however good. The Edmunds plan is one of those things which would never be dreamed of as against a considerable body of voters. It is the numerical weakness of the Mormons far more than their polygamy which causes it to be thought of."

COMPULSORY PRAYERS.

The students of the undergraduate department in Harvard University have sent another petition to the college authorities asking for the abolition of compulsory attendance at daily prayers. They do not ask that the custom of college prayers be abolished, but that the rule be rescinded which requires that undergraduates shall attend them; and they state their reasons for this request in the following propositions:—

1. That voluntary attendance upon prayers would necessarily betoken genuine interest in the religious exercises.
2. That the sense of compulsion accompanying the present attendance upon prayers is not conducive to the development of sincere religious feeling, but, on the contrary, produces indifference, if not hostility, to the observance.
3. That the already recognized propriety and justice of not enforcing attendance upon prayers in the case of some whose religious faith is not in harmony with the particular observance tend to show the impropriety and injustice of making such attendance compulsory at all.
4. That the abolition of compulsory attendance upon Sunday services at church, and the remission of compulsory attendance upon prayers twice a week, already conceded, leave no logical ground for the retention of further compulsion in religious matters.
5. That such compulsion of undergraduates is inconsistent with the entire freedom conceded to students in the Scientific School, and in all other departments of Harvard University.
6. That a large majority of the undergraduates of Harvard College earnestly desire the abolition of compulsory attendance upon prayers.

In our opinion, these reasons are all good, and the petition should be granted. Possibly, it may be objected that a good many of the signers only desire to get rid of a morning duty that is irksome to their self-indulgence, and that they have no such serious convictions in the case as the petition represents. But, if we are not greatly mistaken, it is a class of earnest and thoughtful students—though perhaps not members of the "Christian Brethren" society—who are the prime movers in this matter, and that, in drawing this petition, they mean just what they say. We are sure that in our own time at Harvard a good many of this sort of students would have gladly worked for such an object, had there then been the slightest chance of attaining it; while not a few, perhaps a majority, of the more reckless and self-indulgent students, though receiving frequent admonition for absence from prayers beyond their allowed quota, would have refused to put themselves on record as against the system. This latter class of young men had a merely traditional belief that they ought to respect religion; and the routine of daily prayers was, for them, the way to do it. On the other hand, those who had a genuine, thoughtful regard for religion were apt to be led to question whether the perfunctory routine of daily prayers was a well-calculated method for making young men sincerely religious.

We were four years at Harvard, when there were prayers twice a day. We recall vividly the early morning bell,—it was rung very much earlier than now,—the hurried toilet, the rush of students through the yard converging from all quarters, the leap of the final belated crowd up the chapel steps in eager, noisy rivalry to get within the door before the bell should stop, under penalty of receiving a black mark for tardiness, a worse offence than absence; we recall the monitors rising in the midst of each of the four classes at the same time that the minister rose in the pulpit, and registering in their books the absences while the Scripture reading went on, and not always finishing before the prayer began; we recall the cadences of

the faithful clergymen and some of their oft-repeated sentences and their innocent mannerisms, such as the opening of the eyes of one of them prudently to keep run of the clock, as the students believed; all this is very vivid to our recollection; but we do not recall in our own experience or observation, during the whole four years of college prayers, a single distinct religious impression being made by them. Of course, such impression may have been made. We did not see into the secret places of other hearts, nor would we say that we never personally gained any good whatever from the service. But what we do mean to say is that we recall no time when the service specially aroused religious impulses. Uppermost in our recollection the college prayers stand, not for their religious or moral significance, but as a roll-call of the students.

Now, a daily roll-call of the undergraduates may be very well. We incline to think that it would be a good discipline for the young men to have them regularly called at a reasonable hour from their beds by something corresponding to the *reveille* in military life. But let it be a purely physical ceremony, and not a roll-call under the guise of a religious service. The American theory of worship is that it is free and voluntary. Anything like compulsion in it is contrary to the genius of our institutions. The young men can be forced into the place of prayer and compelled to hear the words of prayer, but they cannot be forced into the mental attitude of prayer. The petitioners are right in the declaration that the custom of compulsory worship, so far from developing genuine religion, is much more likely to produce insincerity and indifference, if not hostility to religion. Nor does it follow, as has been averred, that to abolish compulsory attendance upon the prayers is in effect to abolish the prayers altogether. If so, let them be abolished. The religion that cannot sustain itself by its own truth, but must depend on compulsion and arbitrary penalties, may as well go. But, if religion has a vital meaning for this age, as we believe it has, it should not be impossible to arrange a religious service for young men in college which large numbers of them would attend of their own free choice, because of its appealing to their minds and hearts.

To those who object to the students' petition that to grant it would be to violate the purpose for which the college was founded, as expressed in the motto on its seal, *Christo et Ecclesiae*, the petitioners might reply that the oldest college seal, the one nearest the foundation of the college, had the simple but comprehensive motto, *Veritas*; and, in the name of *Truth*, they make their petition. Or, if the incongruous present seal be still held across their request, it would be in order for them to remind the objectors that he for whose glory they claim the college was founded said, "When thou prayest, enter into thy closet, and, when thou hast shut thy door, pray to thy Father which is in secret."

WM. J. POTTER.

THE ETHICAL MOVEMENT.

I read lately, with a deep and delighted interest, the essay by Mr. Gannett on "The Religion of the Ethical Movement," published in *Unity*. It is beautiful, for the most part crystal-clear, and very inspiring. Happy the denomination, called by Unitarian or any other name, that shall heed and obey its high commanding monition! The ethical movement has justification, will have returned all it has cost to inaugurate it, and more in calling forth one such paper as this. All may read and be instructed not only, but quickened as with the breath of a new life.

But it is of one point I wish to speak here,—a point where his words seem to me not so clear and conclusive as in other parts of his admirable discourse; and that is, where he treats of the question of the "personality." In this regard, Mr. Gannett thinks the attitude of the ethical societies quite seriously defective, and needing thorough revision and careful correction. Otherwise, the effect must be harmful upon the mind.

That Supreme One, reality so transcendent, out-reaching beyond all bound, that for it thought has no conception and language no description, for which Prof. Adler and his friends forbear to utter the expression God, believing, as I presume, that that involves something liminary and unworthy ascribed to the Divine,—for that, Mr. Gannett prefers the name "God," and, as he says, "because of the 'personality' which it implies." "But we say 'God': we worship. They do neither." Conceptions of goodness and justice, he declares, "cannot be depersonalized"; and so, I suppose, he would maintain that any faith that affirms a moral ordering of the world—rule of a supreme beneficence—carries in implication the personal concept. The points that lie at issue in this thing may be largely verbal ones,—questions of definition, the sense in which certain terms are to be received and used,—but, I think, not wholly so.

The history of the development of the God-idea—or, more properly, we might say idea of the *spiritual*—is very interesting, and has its practical instruction for us. I can only cast briefest glance at it here: it is a theme that would fill more than volumes.

The savage, we find universally, must have a God he can know, a something objective, very determinate, and always personal. His thought rests in the concrete,—the individual; and it is hard, often impossible, for him to rise to any generic conception at all. The Tasmanians have no word for tree, though every particular kind of tree—gum-tree, wattle-tree, etc.—is carefully named. Hence, such abstract conceptions as are implied in numbering are with many exceedingly difficult, with some impossible.

It is so with the savage and also the barbaric mind, in dealing with the facts of the spiritual world. The realities in his conception are thoroughly concrete and intensely personal. The soul with him is but another body,—the Supreme One a great and a greater man. He must be made visible to the imagination, and often, for the sake of closer apprehension, to the physical eye. The rude mind personalizes everything: the universe is all peopled, above, below, within, with personalities. A Bushman of more than ordinary intelligence informed his white friend that he had once seen the *personal wind*. He shot at it with his arrow; but it retired to a cleft in the mountain, and escaped him. To speak to a savage of a reality that is not very determinately concrete, palpably objective and personal, would be to commend to him a nameless, inaccessible abstraction,—to bereave him of God. He would feel as did Laban. What could he when his teraphim were gone?

The whole course of civilization has been succinctly this: the rising of the mind from this intense sensism to inner perception, from determinate and concrete to invisible and spiritual, from worship of persons—the fictions of the uncultured mind—to recognition of principle, of pervading universal law. Where the savage saw personalities besetting, overshadowing everywhere, most of them of sinister and malign quality, the intelligence sees powers and forces. Science follows and takes the place of dream and fantasy, and

the religion of reason supplants mythology,—that central unity, the reality whence all laws proceed and in which they are one, recognized as infinite beneficence as well as boundless power, and so held the home in which the soul may rest in perfect peace and growing strength forever. Then, in my judgment, it rises to the heights of purest spiritual perception and ethereal worship. There is no religion of which I can conceive so elevated and perfect as this.

It was a great thing once for the thought to ascend to the simplest or most elemental generalization, hard to attain a single generic idea, to conceive of tree as in any sense other or different from the determinate or individual tree before the eye, to conceive of gravitation as distinguished from the expression observed by the sense. It must have seemed to the mind like giving up the "personality," like surrendering all, to leave the concrete, visible, tangible fact, and attempt to "catch on" to some subtle, nameless, and shadowless abstraction. But the leap was made; and the conception of law, of substance, of power, of ideal verities to the soul, was reached. As Liebig says, speaking for chemistry, In thinking of carbon to-day, one does not send thought either to coal or to lamp-black or to diamond.

Coleridge is somewhere quoted as saying that it is the office of philosophy without separating yet to distinguish. It is difficult to conceive of the infinite reality, what we call God, without some concrete determination, especially the determination of *person*. But this must be transcended, we must distinguish even here, or we fall inevitably under hamper. "In my conception of *person* there are limitations," says Fichte: "How can I clothe thee with it [*Persönlichkeit*] without these?"

Nature has been deanthropomorphised; and, albeit language here carries, as it always must, something of the personal concept, still the word with us never awakens a thought of nature as a person. That toil of mythology has been left behind. We should find it different in New Zealand or in the Tonga Islands. But, with us, a like emancipation has not come with reference to the word "God." Universally, almost, it bears to the mind the personal implication; and, probably, it will for ages to come. We have not learned here, as in the case of nature, to distinguish while we do not separate.

It is a good rule to select terms that carry least refraction. Max Müller, speaking of the various names for deity which were devised by the ancient Hindus, says there was one, one only, Atman, that "remained like a pure crystal, too transparent for poetry." Terms such as Prof. Adler and Mr. Salter use, as quoted by Mr. Gannett,—not the most felicitous, perhaps, always, but very expressive,—have been redeemed from the taint of mythology, and are, therefore, I think, much less open to objection than the word which they reject, and which Mr. Gannett so strenuously defends. That word has become a sort of fetish. It will be very hard to recover it to a just and safe sense, even with the best endeavor of the most clear-seeing. Certainly, the most constant and sleepless care must be taken to guard the mind in its employment. Otherwise, it will inevitably be a word of jugglery, of incantation. Probably, we of this generation can never outgrow the power of the early impressions received with it, and see it as we are able to do in the case of some others,—see it transparent.

"Words," says Lord Bacon, "as a Tartar's bow, shoot back upon the understanding of the wisest, and mightily entangle and pervert the judgment." The word "God," in my view, is one of those entangling words, and may best be disused as far as

possible, at least for a considerable time. Redeem it, if you can; but, above all things, keep the mind up and free from the anthropomorphism. That, in all the range of history, has led but one way, and that downward, not upward,—toward sensism and idolatry, not to the ideal.

Let us seek ever to rise more and more toward that reality, transcendent, unconceived, which for us is *presence* rather than *person*,—*presence*, we may say, *more than person*,—whose radiance is truth, so supreme and inaccessible that thought even cannot behold it, and of which reason, while the beam, is but the shadow. And, as language must speak, the tongue must, however tremblingly, stammer forth names to hint what it can never articulate, let the choice be of words that hit nearest to the white, and are least liable to misapprehension or any limitary construction.

For one, I welcome warmly the new movement, and can accept all the words our brother utters in its praise, and more. It embodies a most valuable and vital protest for our own age and time; and its merit lies, as I believe, pre-eminently at that point where Mr. Gannett excepts and criticises. If, in any degree in its symbol or its worship, it is too bare and prosaic, too little regardful of the æsthetic and poetical as an element that must have recognition, that defect will be quickly seen and promptly met by these ardent, enraptured lovers and followers of the pure and perfect truth.

CHARLES D. B. MILLS.

THE ETHICAL ELEMENT IN RELIGION.

In his religious nature, man is a progress from polytheism to monotheism, from dualism to unity, from theology to ethics. In time, if a civilization be not arrested, religion comes to signify to the cultivated little more than a philosophy of life. Dogmas about the unknowable and ritual observances are esteemed of less and less moment than righteousness or the perfection of character and conduct. All enlargement of the stock of human knowledge tends to this end. The transition from theology to a philosophy of moral culture of course will be made earlier in some communities than others, according to disparities in certain great influences conducive to advancement and cosmopolitanism.

Man is sensual before spiritual. He sees double before single, diversity and discord in the universe before unity and harmony. He seeks to square himself with the outward and visible sooner than with the inward and invisible. Therefore will he be the slave of fear and hate before the freeman of hope and love, superstitious before religious, clannish before national, national before cosmopolitan, sectarian before catholic. The Jews lived through centuries of theological dogmatism and national intolerance, and had been wrought upon by the speculative genius of the Greeks and the administrative talent of the Romans, before the universal soul of Jesus could come to teach the brotherhood of man and the fatherhood of God as revealed by the moral sentiment. It is a long and tortuous journey from Moses, giving laws to that "stiff-necked and perverse people" running after "strange gods," to the Son of man preaching the Sermon on the Mount. So Socrates and Plato, Epictetus and Marcus Aurelius, came, after much spiritual pruning had been done in the religious province of man's mind. The rational intellect was rising, or had risen, out of the conception of the divine energy, divided and discordant, into the conception of it as a oneness and harmony; out of that youthful condition, when supreme importance is attached to theological dogma, to the higher condition, when ethical

culture is perceived to be synonymous with true religion. In consequence of the wide chasm between the masses and the cultivated in Greco-Roman civilization,—there being no such diffusion of knowledge as in these days,—the philosopher became the religious teacher. He it was who furnished the inspiration in life to make better thought and action, while the priest dispensed dogma and rite to the ignorant. It will be remembered that Socrates excited prejudice against himself especially on account of the fact that the many who attached themselves to him were mostly from the upper classes.
