THE ASTONISHING CAMERON CONES

The Cameron Cones are a momentous discovery since they have the unique faculty of accumulating a strange new force or wavelength of energy from the ether, these emanations being similar to the auric energy surrounding the human body and closely related to the extraordinary force attached to the Great Pyramid of Gizeh and its replicas. I believe this force is associated with the rays of energy reflected from underground water. These rays and forces can supplement or amplify — in some cases counteract each other.

The Cameron Cones are the result of many years of laboratory and in-the-field experimentation in quest of the origin and nature of rays similar to those of light which emanate or reflect from underground streams of water.

The energy I (Verne Cameron) have found in a series of tests comes in from outer space, probably saturating the ether which penetrates everything around us. This mysterious

ENERGY OF FORM EXPLAINED

We know the Pyramidal structure contains both inside and out the apparently self-generating "energy of form". Through sophisticated Dowsing techniques it is easy to measure these invisible waves: furthermore, by adding to, or altering the original structure, new emanations occur; for example:

The energy output is greatly enhanced by covering the open base of the pyramid replica. The addition of a metal maypole emerging from the base — up through the pyramid's center some few inches above the apex — or one mounted on a small platform atop, creates a change in the measurable waves at hand.

The addition of various types and sizes of capstones presents different dowsing reactions. Some experimenters have introduced the use of copper bands, wires, screens, and other metallic substances with striking results.

In future articles, we'll go into some detail covering the above-mentioned phenomena, also the results of stacking, cone-pyramid cyclatrons, and other tests conducted by Mr. Cameron over the past twenty-five years.

We find certain emanations issuing from globes, blessed water, religious objects, signatures, and other objects and substances tested, though they may be of different or similar origin. These waves from forms present a vast field for experimentation as will be shown also by Cameron's tests with carbon magnets, the ray-gun, and

PRESERVING

PERISHABLES

About nine years ago university biologists claimed the mummified skin-cells of the ancient Egyptian Princess "Mene" were capable of life, even though she had been dead for thousands of years!

Colonel Richard Howard-Vyse, nearly a century and a half ago, while exploring the Great Pyramid of Gizeh, came across a peculiar black powder covering the floor of Davidson's Chamber above the King's Chamber. The substance proved to be the mummified skins, shells, and exuviae of

RA WORSHIP AND THE PERFECT PYRAMID

Religious veneration to Ra, the Sun God, inspiration for building the great pyramids, had its origin about 7,000 to 6,000 B.C. when it was brought to Egypt by invaders from Arabia. In competition with existing Totem worship, Ra grew more and more mystical until the reign of Osiris, about 5,000 B.C.

At that time a new religion, based on the worship of Osiris and his queen, Isis, was born and spread to most of the people. Reverence to Ra became relegated, then, to a select few of the more enlightened nobles until about 3,000 B.C. when it experienced a renaissance during the reign of Zoser.

Zoser made Ra the compulsory worship for those in the Royal household, but its beliefs were never embraced by the superstitious masses. Nevertheless it is believed that its followers were responsible for the construction of the magnificent pyramids.

What tenets comprised Ra worship we may only imagine since great secrecy has always surrounded them. Texts plainly concerned with the mythology of Osiris and Isis are plentiful, but whatever comes through about Ra does so in the form of parables and vagaries.

Differing emphasis in the two beliefs is suggested by the contrast between their afterlife concepts with Osirians earthbound; with Ra worshippers soaring upward. This is dramatically illustrated by their obelisks as well as pyramidal structures.

The slanting sides of the pyramids, built as tombs for pharaohs and, or, their queens were supposed to provide a pathway for souls as they rose to the kingdom of Ra. And the slope could be explained, probably, by the fact

that the priesthood believed fifty-one degrees to be the best angle upon which a soul can soar to that realm.

The famous Egyptologist, Flinders Petrie, made intricate mathematical measurements of the Pyramid of Gizeh and was tremendously surprised at the exactitude he encountered. He is reported to have said such skill was employed that all the errors in length or angles in the pyramid could easily be covered by anyone's thumb. △

The Continuing Story of Verne L. Cameron's

G R E A T D I S C O V E R Y

△△△△△△△△△△△△△△△△ Verne answered the phone to hear an old Chiropractor, a neighbor, describing the erratic behaviour of three Helical coils mounted atop his treatment table. The huge spirals resembled king-sized watchsprings or the usual grids found on top of an ordinary electric stove.

"I don't understand it", said the old doctor, "the coils suddenly fail me. Usually they give off positive, beneficial rays..."

The aging chiropractor assured Cameron he'd had the equipment checked by a qualified electronic technician. "All circuits appear to be in order", he said, "there's no logical explanation. Do you think you can detect any malfunction with your dowsing instrument?"

"Why, yes! Yes, of course I can try", Cameron answered, catching the excitement of the challenge. And he was soon on his way to the chiropractor's office.

Upon Cameron's arrival the two men exchanged greetings, then went directly to the treatment table. There, in even formation with an approximate two-foot space separating each, lay three six-inch diameter spiral coils. An interconnecting wire between the girds ran down the side of the table into a polished one-foot-high metal cylinder on the floor. In turn, a second wire attached to the cylinder presumably ran to a nearby electric wall-plug outlet.

DOWSING THOUGHT FORMS

Dowsing has a great future in the psychic world. Its application in touching and defining the invisible spheres is infinite. Thanks to Verne Cameron's open, imaginative mind, Dowsing is not bound to the ordinary detection of people, things and the more concrete substances common to our three-dimensional world.

With refined Divining techniques and sophisticated Dowsing devices we can outline energy forms of a higher nature with relative ease. Mr. Cameron has proved the power of human and astral thought takes on measurable form.

In a letter of May 6, 1969, Dr. Robert Fondiller, Adjunct Associate Professor of Columbia University, New York, states:

I had heard that you had an instrument that would enable blind people to navigate without bumping into objects, and without a Seeing Eye dog. The instrument was your AURAMETER.

Your first act which created my faith in you, (which has never wavered since), was when I created a mental image of a pole running from the floor to the ceiling alongside my chair, in my unspoken imagination only, and you came back into the room, and not only determined its location exactly and immediately — but your AURAMETER bent in touching my mental image as if it were touching a real, visible-to-all object.

Verne Cameron has duplicated this and similar feats on a number of occasions. △

Astonishing Cones ...

energy is attracted to the cone-form, gliding along its outer surface and then thrown off from its apex or vertex. The ray or beam, if not confined, travels from the cone in a gradually increasing column to a great distance. In the case of a twenty-two inch aluminum cone, the beam projects out approximately one-half mile to where it comes to an abrupt end and there measures *nearly* three-hundred feet in diameter.

The beam behaves in the manner of an invisible searchlight striking a cloud. This energy resembles the characteristics of electricity, in fact is, a form of electricity. But it also follows many laws governing light. It seems, in some ways, to bridge the gap between the two. It therefore seems certain that it has an exceedingly short wave length.

I have determined that it lies between the upper end of the Cosmic ray spectrum embracing all the rays from the Alpha, (1,400,000,000th of a millimeter in wave length), and the Ultra-violet just below visible light. I'm fairly certain this energy operates in the gap of unknown rays just above X-ray, of which there are many variations. Alternating current, with a wave length of 400,000,000 millimeters, for example, is found at the top of this ray spectrum.

When a twenty-two inch cone is hung on a wall or post, a ten inch diameter conical beam is projected out at the start. Since it seemed to be meeting resistance in the ether which pervades all space, I became convinced years ago that if I could confine this beam to prevent its flaring — concentrating it into a high pressure beam — it might travel

to a great distance.

After months of laboratory experimentation, I found this beam, because of its terrific voltage, could be conducted through any wire, large or small. And when the energy followed a wire in a right hand spiral, wrapped around a two-foot-long glass tube with a one-quarter inch wire spacing between windings, it induced an electro-magnetic type force in an iron pipe placed inside the glass tube. This simple ray-gun ejected a powerful beam many miles long from the tip or forward end of the tube; that is, if the wire from the cone were attached to the rear end of the spiral. But if the wire were wound anti-clockwise, the cone-ray reversed its direction and projected toward the handle or attached end of the tube. This showed a distinct polarity, direct current rather than an alternating current. Δ

THE PYRAMID GUIDE

A bi-monthly newsletter issued Jan., March, May, July, Sept., Nov., of each year. Edited and published by Bill Cox and Georgiana Teeple of EL CARISO PUBLICATIONS, P.O. Box 176, Elsinore, Calif., 92330.

While the editors are interested in all information regarding the Great Pyramid and replicas, it should be understood the Pyramid Guide is not limited to the scientific aspects, Pyramidology, Egyptology, or other esoteric studies on the subject.

Energy of Form ...

radio equipment.

L. Turenne, an engineer and radio expert, believed that pyramids and certain other forms act as cosmic resonators. T. M. Tucker, of Portland, Oregon, suggests the Cameron Cones radiate blackbody microwaves, and possibly galactic fireball radiation is involved.

The energy of form behaves like light in some ways and has not been proven necessarily to be electric, magnetic, or electromagnetic in nature.

The Cone form, the geodesic dome and nature's system of triangles support the ancient Egyptian's belief that in some way the triangle forms the basic structure of the universe. When we construct a miniature replica, it collects and accumulates this energy. Now, we must find new and useful applications for this seemingly self-perpetuating power. Δ

Preserving Perishables ...

ancient insects. How, or when they got there is beyond reasonable conjecture.

It appears evident the self-contained energy within the pyramids contributed substantially to the remarkable mummification techniques developed by the ancient Egyptians — methods unsurpassed even in modern times.

Dairy farms in Yugoslavia and Italy provide milk stored in pyramidal-shaped cartons. Reports are that this unrefrigerated milk stays fresh for prolonged periods of time.

A commercial enterprise in France preserves yogurt in specially designed containers.

Monsieur Bovis, a Frenchman, working inside the Great Pyramid, found waste cans containing the mummified bodies of small animals apparently trapped inside at some time. A dehydrated corpse of a dead cat showed no evidence of putrefication although Bovis noted there was sufficient humidity within the chambers to have caused natural decay.

The Frenchman's discovery led to further experimentation, and wooden replicas, later built in Europe, established the preserving quality of Pyramidal forms when placed over organic material. Δ

*Make your own
Pyramid Replica*

1. Scribe a 4-3/4" radius circle by placing your compass point at Apex A, 5" down from top, and 5-1/2" in from right side of 14-1/2" x 8-1/2" cardboard, aluminum or copper sheet.

2. LAYING OUT THE PYRAMID BASE - Adjust compass to 5" span. Place point at B and intersect circle with line at C. Repeat process from C to D, D to E and E to H. Now draw lines B-C, C-D, D-E, & E to H as shown.

3. RIDGE LINES - Scribe lines A-B, A-C, A-D, A-E, & A to H.

4. ADDING THE LAP - Lap L 3/8" wide is made by drawing lines I-K, & I to H, per diagram.

5. THE BOTTOM COVER - Project lines H-G & E to F perpendicular, and line G to F parallel to line H-E respectively, with each of first three aforementioned lines 4-3/4" long. Now add lines S-T & T-R & Q to R to form 3/8" Laps P V & O.

6. FORMING YOUR REPLICA - Cut on lines where indicated. Discard panel "X" (left). Slice on scored lines - so marked - into about 1/3 depth of material used. Then bend down to form the pyramid and laps.

7. FINAL ASSEMBLY FOR USE -

Glue only top of lap L and fasten under edge of panel M. Don't glue laps P V & O. They are formed by taping bent corners to create box-like under-covering of your pyramid.

El Cariso Publications:

Thanks for your letter of May 24th. I am sorry to hear about the passing of Mr. Cameron. I will be pleased to help in any way possible with the work. I'm trying to retire; since I served the majority of Radio stations in this area, they won't let me quit. I headquarter at KUNO where I'm Chief Engineer and employee, and I am also the landlord. I sold the station a few years back.

I'm particularly interested in your work though I'm not too well versed in it. I know about psychic things; my wife and I have a large library and keep up with new developments. Having been a radio engineer since 1927, I have valuable and actual radio electronics. I make Impedance measurements for radio stations - matching antennae, etc., mostly tuning up new A M and F M stations.

There should be some way to convert the pyramid energy or other generators to magnetic currents, relays, and go from there to a brand new communication spectrum. I have a large pyramid. I'm familiar with every electronic device ever used to locate metal and have built many of them.

Put me down for a subscription to the newsletter and let me know how much the books are.

I know Hugh Lynn Cayce and have had him in our home many times and also Elsie Sechrist. Have talked to them since they were in Russia; they saw the generators. I'd like to have enough information so I could try making one out of various materials, use for experiments along the line mentioned above.

As to the "flea power" radio, I can send you information on it along with circuits suitable for transmitter. I will use a self-excited oscillator with a large, horizontal tank coil about 8' square on the roof. Since we are limited to antennae length and feeder, we can get by this way without any feeder or antennae, using the coil itself for the radiator. I can use it vertically although it would be directional. The modulator beam downstairs and modulating the 12 volt supply.

I bought a surplus low-band receiver and wired it for AC and put small condensers across for tuning to bring it down to the KC to 190 KC band. Should work about 50 - 60 miles. Haven't located anyone to work with me on it yet. You have a very strong ground-wave at those frequencies which compensates for the lack of a long antennae for that frequency. I have test equipment for that frequency, and I get maximum efficiency out of it. Would be glad to hear from you at any time.

With kindest regards,
J.H. (Johnny) Mayberry
Corpus Christi, Texas

Excerpts from a tape-recorded interview, Jan. 1972, with Verne L. Cameron, (continued)

- Q. You say cardboard cones produce practically no energy field. Will they operate if lined inside and out with aluminum foil?
- A. Yes. Even if the foil only covers the outside surface. This covering, if brought up to the vertex, can then be joined with an electric connection and attached to the Ray-gun or other testing device.
- Q. Do the cones and Pyramid replicas work with the Eeman and Seanor screens?
- A. Yes. (more on that later)
- Q. Does the cone or Pyramid beam follow any type conductor?
- A. When attached to the apex (or tip) of either, I believe the energy will flow even through, or along, a wet string, though I haven't tried this experiment yet.
- Q. Is "pyrconic energy" electric in nature, then?
- A. I'm not sure it behaves like electro-magnetism. It is similar, also to the energy field detected in the body aura.
- Q. If the cone-rays are electromagnetic, can one find a variation in energy output by altering the metal alloys or material substances comprising the cone form?
- A. In several tests, I've noticed a little hair-sized wire will carry as much energy as a large diametered wire. This seems to indicate the voltage is exceedingly high - perhaps just below X-ray in the electromagnetic scale.
