PYRAMID - CONE DIFFERENTIAL

The Pyramid replica and cone models act in substantially different ways in accumulating and dispersing their energies of form. The Pyramid prototype:

- (1) Measures as an infinite shaft of energy behaving in the manner of alternating current - rising above and entering into the apex.
- (2) Emanations also travel on Pyramid's outside surface, with concentrated fields building up along ridges.
- (3) Pyramid replica generates force-field below to an undetermined distance; penetrating material substances - indeed the earth itself. Visualize your pyramid as being the capstone of a greater, invisible pyramid projecting downward into infinity.

CONIC ENERGY BEHAVIOR

The direct Cone-ray effect develops on the outside skin, with the force-field intensifying at the apex. The cone itself doesn't generate energy, but its shape causes or conditions a magnetic or etheric type flow while acting as an accumulator. $\Delta\Delta\Delta$

[In the next issue of Pyramid Guide we'll show some of Mr. Cameron's discoveries on what's happening inside the Pyramid replica] $\Delta\Delta\Delta$

THE MERRIGAN CLOCK MYSTERY

We've heard about time-warps, the altered space-time continuum believed to exist within the Great Pyramid and replicas. Consider this very interesting report: On August 24, 1972, Maurice R. Merrigan of Rowland Heights, California, writes:

Curiosity compelled me to make a cardboard pyramid, and I put it on my desk on top of a small folding clock that I intended to take to the jeweler as it had been wound up tight and had not run for seven or eight years. A couple of days later I moved the pyramid to get at the clock and when I opened the case I was astonished to find that the hands were at an entirely different place and the watch was completely run down. Neither my wife nor my granddaughter who lives with us had touched it, so I re-wound it and put the pyramid over it again. The following morning the clock was run down again and the hands had moved one and one-half hours from the former location which means it could have run a little over twenty-four hours, but it would not start running when I re-wound it. I tried a third time and it again ran down and moved the hands.

Then we wrote to Mr. Merrigan to ask these questions: Was the clock completely enclosed within the pyramid? What is the approximate height of your pyramid and the age, size, make of your clock? Does the clock now function satisfactorily and keep accurate time without the pyramid's help? Has the winding mechanism corrected itself? Have you tested the timepiece from hour to hour while under the pyramid?

On September 6, 1972, Mr. Merrigan replies:

Dear Mr. Cox:

I am in receipt of your letter of September 2, 1972, in which you express your interest in my clock adventure and the pyramid.

The clock was covered by the pyramid completely with the top of my desk acting as its bottom. The clock was folded shut in its metal and leather-covered case. The size of the closed case is approximately 3x3x1½". I have had it about ten years. It was made in Germany and stopped at six-thirty some seven years ago - presumably because it was wound up too tight. It has not run or been used since. The clock still does not run nor will it run when I wind it up. The problem with the winding mechanism was apparently not solved when it ran down completely while under the pyramid.

Before going to Minnesota in June I tried during one day to see if it was running but at no time during the day did the hands move nor the spring release. Whatever happened came about during the night. In the morning the hands had changed from six-thirty to two-thirty at which time it had run down and had not changed otherwise. It still would not run when I wound it up. Continued on page 4

Pyramidia

by Georgiana

"THE THIRD THEORY"

Religious historians have placed prophetic importance on elements of the Great Pyramid's structure, and engineers have long sought to solve the mysteries of its construction techniques. No solution is so far apparent which does not involve incredibly large labor forces plus a technological knowledge far surpassing generally accepted conceptions of the sophisticated understanding of that period. We are expected to believe, therefore, either that there was great knowledge suddenly and inexplicably available to architects and engineers at that time, since lost, or that the monumental feats of precision cutting, transporting, and placing the enormous stone blocks was accomplished by some extra-terrestrial means.

The first explanation is difficult to accept in an age of the giant "747's" and a man on the moon. The second finds credence among U.F.O. buffs and among those who've read such books as Erich von Daniken's Chariot Of The Gods. But what if there is a third explanation — one utilizing natural forces in a manner so simple that it is a wonder no one has come up with it before?

The great scientist, Albert Einstein, saw everything reduced to a simplicity; and the pre-cognitive writer, Jules Verne, suggested that "outside the common ram or turbine, the ancients can teach us a thing or two." Continued on page 3

THE PYRAMID GUIDE

A bi-monthly newsletter issued Jan., March, May, July, Sept., Nov., of each year. Edited and published by Bill Cox and Georgiana Teepie of EL CARISO PUBLICATIONS, P.O. Box 176, Elsinore, Calif., 92330.

While the editors are interested in all information regarding the Great Pyramid and replicas, it should be understood the Pyramid Guide is not limited to the scientific aspects, Pyramidology, Egyptology, or other esoteric studies on the subject.

The views or opinions of contributors do not necessarily reflect those of El Cariso Publications, Publishers of the Pyramid Guide.

A HAUNTING PARADOX

Frank M. Woolley

Was there a highly advanced race of homo sapiens on our planet 10,000 years ago? A substantial quantity of valid evidence supports this theory, but twentieth century knowledgeable have a way of coping with such anomalies. They bury them in museum basements filed under miscellaneous erratics.

It was under this indexed caption in the archives of the staid Library of Congress that captain Arlington H. Malleray, a cartographer, discovered the remarkable Peri Reis maps in the dawn of the 1950's. Named after a Turkish Navy Admiral who collected strange artifacts, the maps had been exhibited in the Topkapi Sarayi Palace at Constantinople early in the 1700's. The Topkapi Palace of Mohammed the Second was converted into a museum in 1924. Strangely enough, it was from this historical edifice that the controversial maps found their way into the musty cubicle in Washington, D.C. where they remained untouched and forgotten until Malleray came along.

At first glance the maps dated 1513 A.D. appeared to be slightly different from modern world charts, the continents being distorted by elongation, but unquestionably they were renditions of the Mediterranean, the Dead Sea, Antarctica, and North and South America. They included not just the outlines of these areas, but the detailed topography of the interiors as well. Islands, mountains, rivers, and plateaus were all in critical focus, except that certain locations didn't quite match.

Malleray, after satisfying his initial curiosity, contacted a Mr. Walters, a fellow cartographer attached to the U.S. Navy Hydrographic Bureau. As these two experts studied the astonishing maps, their excitement mounted. The big question was: What grid system had the ancient map makers used? There was no correlation with the Mercator grid system, developed in 1559. Undaunted, Malleray and Walters tackled the mystery in search of the key. They found it. Instantly, the aged maps gave up their hidden reference points. When transferred to a modern globe of the world, the astounding accuracy of the Peri Reis maps was irrefutably confirmed.

The information compiled by Malleray and Walters was verified in 1957 by another U.S. Navy cartographer, Father Lineman, who was also the Director of the Weston Observatory in Boston, Massachusetts. Lineman marveled at the exactitude of the Peri Reis maps. Antarctica was precisely mapped though it was not discovered until 1773, and not explored until the early 1950's. Mountain ranges, still beneath glacier ice, were meticulously defined, yet they were undiscovered by modern man until 1952.

Land masses as they existed prior to the fourth Ice Age when the last great shift of the earth's crust occurred, were unerringly delineated. Scientists estimate that the fourth and most recent Ice Age was ten to fifteen thousand years ago! Are the Peri Reis maps a hoax? Malleray has given us his unequivocal "no". Much of the information shown on the maps was unknown to modern man before 1952. This fact alone rules out any possibility of a perpetrated hoax in 1513 or in the early 1700's, but the maps are a haunting paradox.

Many peoples of the world saw the Peri Reis maps before they were discovered by Malleray, but no one in the established scientific circle had paid them any heed. To have done so would have upset the school-book history of man in which there is no recorded

FOURTH DIMENSION REACHOUT

Brainwave patterns show us what happens when a Dowser locks-in on the object of his search.

Preliminary tests with Diviners wired to the E.E.G. (electroencephalograph), clearly mirror the active Locator's altering modes of consciousness.

Though inconclusive, recent experiments with Dowzers of proven ability reveal they open channels of free-flow thought and impartation between the objective and subjective states of awareness.

If the corridor connecting one's conscious and deeper levels of mind is closed — or nearly so, I seriously doubt if the psyche operates to any degree in the dowsing effort. Here we have a plausible explanation for the dowsing failure. Without this conscious-superconscious, inter-level attunement, the Diviner resorts to the less reliable physical and deductive means to find answers.

At its highest point of brain-mind-functioning, I believe the Divining activity enters the realm of super or astral consciousness. Knowledge beyond intellectuality unerringly guides the Locator, whether the person, place, or thing sought is locally on-site, or lying at a distance.

I had the good fortune to be wired to the E.E.G. last week. The results confirmed the physicist-operator's earlier belief that: Dowzers working in their superconscious state produce substantial wave-trains of Beta and flashes of Theta brainwaves. Theta is associated with the psychic and intuitive levels of consciousness — free of space and time limitations — whereas Beta brainwaves denote a conscious state, limited by space and time and the sensory impressions of sight, sound, touch, taste and smell.

A direct interplay of brainwave activity between Beta and Theta demonstrates the Dowser's ability to call to conscious awareness those impartations of a higher nature flashing through when the Theta realm is reached. The oscilloscope showed I was producing abundant Theta with my eyes open. Short bursts of Theta registered on the oscilloscope — just prior to dowsing questions from the operator — attested to some form of precognitive action taking place during the experiment. Δ

MAKING YOUR OWN 22 INCH METAL CONE
BY THE LATE VERNE CAMERON

Clock Mystery

The height of the pyramid was about six inches at the peak. I plan to make another pyramid with more accuracy and conduct some more experiments to see if I can detect any movement while it is under the pyramid.

Researchers all over the world are carrying on experiments with the cones. I regularly receive requests for more information about them. A wonderful field of discovery awaits the researchers. My writer-friend, Gaston Burrige, and our mutual friend, Ray Carse, have confirmed many of my experiments in their own independent research. More pages of information follow, including a description of the function of small replicas of the PYRAMID OF GIZEH, its strange properties, and their seeming relationship to rays emanating from the Cameron Cones.

After receiving Mr. Merrigan's second letter, I placed a small wind-up clock (upright) inside one of our 5 3/4" high, cardboard, foil-covered pyramids and left it inside for twenty-four hours. Nothing unusual happened.

Then, realizing most of the upright clock occupied too much space above the lower one-third level, I re-wound the clock and placed it on its back (face up) with the 12 and one side of the replica directed in a northerly direction.

Twenty-four hours later the clock hands conformed to regular time, but the clock-spring behaved just the opposite to the one in Mr. Merrigan's test! The winding mechanism in my clock required only two turns to tighten. Normally, after twenty-four hours running, it requires several turns to re-wind tight.

I asked the members of my family if they wound the little clock. All said "No", declaring they knew nothing of the experiment. So . . . I'll be making more tests — this time with the clock and pyramid safely hidden away in the garage . . . Bill Cox. △

THE CAMERON CONES

During these experiments I learned that cone-rays obey laws governing *light*. These laws also govern rays by means of which underground water is found as well as certain rays emitted by a heat source — Infra-red, Ultra-violet, and the Pyramid rays.

Webster's unabridged says, in effect, "When a ray of light strikes a reflecting surface, such as 'water or glass', it becomes 'POLARIZED'." This accounts for the actions of these rays. For instance, the returning rays from underground water reflect as from a mirror at exactly ninety, and forty-five-degree angles from the underground stream surface. The energy operates without polarity until it strikes the water; then it is polarized and is repelled by the water at the "angle of incidence".

The cone must be formed in an exact right angle so the apex will fit into the corner of a carpenter's square with the sides of the cone snug with the inside of the square; this angle is critical. △△△△△△△△△△△△

PLEASE NOTE:

THE LARGER 22" CAMERON CONE CAN BE MADE BY INCREASING THE DIAMETER TO 44" WITH 22" RADIUS.

Have a tinsmith cut a disc thirty inches in diameter from 28 gauge aluminum. Slit it to center, then curl it close at center — less and less as you approach the outer edge. A machine produces a smooth curve, though the material can be bent by hand over a piece of pipe extending out about twelve inches from a vise. Allow one-half inch on one edge for lap. Cut away any excess material. The cone should measure about twenty-four inches around the bottom edge. Now, spot-weld or rivet the lap, or use metal screws, making sure the cone is uniformly bent.

Then roll one-quarter inch of the bottom edge out until it makes a flat rim. Next, drill and flatten the apex slightly to receive the female part of a banana-type, electrical plug-in, easily obtained at most radio shops. The male part of the plug-in is attached to any flexible insulated wire, such as one strand or side of an ordinary rubber-covered drop cord. This cord splits easily lengthwise and is very flexible. Be sure the receptacle is firmly locked in as it is extremely difficult to replace once it comes out.

Now cut another disc one-half inch or so larger in diameter than the base of the cone. This round plate provides a firm, enclosed base. Drill or punch a hole in the edge of the cone so it may be hung on a nail and suspended five or six feet above the ground where it functions best.

The cones may be made of cardboard and covered with aluminum foil. They seem to work just as well, but I prefer metal cones, especially aluminum, because of its lightness and durability.

The opposite end of the six-foot long lead-off wire may be attached to a copper kitchen scouring pad for testing the ray's effect on the body aura, or attach it to the ray-gun for projection experiments. The cone may be used without the wire to test its effect when dowsing underground streams, etc. . .

THE BODY AURA

Cameron believes the cone energy is somehow related to the human aura and to electro-magnetic energy. The body aura, he feels, is absolutely essential to the phenomenon of dowsing.

El Cariso Publications:

What is your method of locating fixed, true north (as separate and distinct from ever-changing magnetic north) which can be located with an accurate compass? Miss Valerie Ann Olin, Park Ridge, Illinois

[We have the comments of Norman Gambling, a Sacramento mathematician, who writes:]

"There are three approaches, plus an extra possibility in locating true north."

1. A large scale map with visible and recognizable land marks from the site. Topographic (U.S. Geological) survey maps will give these, I believe.
2. Magnetic Compass. The same maps - on any scale - will give the magnetic variation - that is, the variation of earth's magnetic field from true north (about 18° at Sacramento, California). At that latitude and longitude together with annual change from date of map. "Magnetic reading variation gives north except for the deviation of the compass itself, as affected by local conditions such as terrain, structures, a jackknife in your pocket, etc....These can all be compensated for; but that is a complex process. Leaving out the deviation may produce a residual error of several degrees.
3. Azimuth of Polaris. If Polaris (North Star) is visible, a true north line can be established simply by picking a spot, sighting on Polaris, and drawing a line toward the star.

"Polaris wobbles around the true pole slightly, and the correction in terms of local latitude and time of sight can be found in the Nautical Almanac, available in libraries. However, the maximum error in Polaris' position is only about 1.4° at mid-latitude, such as California and Illinois. That would be within the accuracy the Pyramid could be placed practically without very precise instrumentation.

"Now another possibility for refinement. Mrs Olin has a 'norm' changing time for Pyramid energy. She also has a stop watch, so she could, by measuring the time, then shift the Pyramid replica 1° at a time from a marked line and determine the deviation which gives her the minimum 'norm' time which would be the maximum power-position, I think. Or maybe I haven't learned enough."

There's another way to orient your pyramid due north: Adjust your replica in a level position outside. At noon the triangular shadow will be evenly distributed. The line running from the center through the point of the shadow will be directed true north. eds.

Gentlemen:

Thank you for my complimentary copy of "The Pyramid Guide #1. Please find \$2.75 enclosed as payment for a year's subscription.

Currently I am busy constructing an improved working model of Lakhousky's "Multiple wave oscillator" (original U.S. Patent # 1,962, 565). If you are interested, I'll let you know how it comes out. I have read many claims of "cured" cancer, etc. from its use, so the results should be of some interest.

My next project does concern pyramids. I want to see if the findings of Wilhelm Reich can be adapted for pyramids with any benefit. Reich claimed to accumulate "orgone" (energy) in any shaped box by the alteration of organic and metal layers which followed definite rules.

I postulate that constructing pyramids by the rules for Orgone energy accumulators will have a synergistic effect of some kind. We'll have to wait and see.

Good luck with your publication and all of your endeavors.

Greg Mitchell, West Los Angeles, Calif.

Your literature is indeed interesting, and my husband, a research scientist and jack-of-all-trades, and I, are doing some experimenting with your Aurameter on our own. Mr. Hulstrunk is very open minded and now in the process of building a replica of the Great Pyramid of Gizeh and the Cameron Cone. We will keep you posted on our success

It is unfortunate we live so far apart - your work is so exciting, and we have so many questions.

Sincerely,
Mrs. Alfred Hulstrunk II

In the old days, the Church Bishops did most of the well locating by using a peach, olive, or witchhazel fork. They estimated the subsurface stream's depth by triangulation, just as easily as we measure the height of a tall tree or the distance to the moon.

This makes possible the measurement of the water's depth by an ancient method known as the "Bishop's Rule".

RARE PHOTO OF THE HIERONYMUS BOX

An electronic, symbolic, sending and receiving-dowsing device with no visible power source. When functioning with the attuned mind of an operator, a psionic contact is established.

The astounding device modulates an energy-pattern when dials are turned to proper frequency levels. The molecular emanations from a person or thing previously photographed are somehow recorded on the negative - turning the emulsion into a tuned transmitter.

The box can immediately detect the differences between various minerals and ores and exterminate insects at a distance. It moves forward and backwards in time on photographic film and receives information of a telepathic nature with relative ease. The Hieronymus Box operates on the principle that a psionic connect-up between the operator's mind and the affinity of similar matter can - at a non-physical level - stimulate the etheric energy pattern of a given substance or condition. The instrument, first patented in 1946, has produced seemingly magical feats using "wit-ness" or "samples" of insects, human blood samples, and other substances related to the object of search. Δ
