POWER BY COLD

(A New and Important Scientific Concept)

by

Gaston Burrige, BSRA

Recently newspapers and magazines have been filled with word of a new and relatively "clean" source of atomic power for mankind's use - fusion power - and we need it! This power is to come, we are told, from the fusion of the hydrogen atom - or parts thereof known as "deuterium" and "tritium" - the seven seas to furnish more of the necessary natural resource or raw material than man can ever use!

Pictures of England's "gigantus" for accomplishing the fusion process have been reproduced widely. There is also word that Russia and Japan are working on similar researches. Information relative to our own "perhapseatron" at Los Alamos, New Mexico, points to this Country's interest in clean atomic power.

One of the sticky problems in this matter is the necessity of tremendous heat requirements being fulfilled, and a way to hold that heat "in place" while it does its work. These temperatures represent several million degrees Centigrade. At the moment it appears a method for holding and directing the heat as desired is to be accomplished by the action of almost staggeringly strong magnetic fields. Both the manufacture of the heat and the production of the magnetic fields to contain it portend use of vast quantities of electrical energy. The creation of this electrical energy must be deducted from the ultimate power generated by the fusion reaction before a "net" volume of power is possible. So far, there has been no net, but hopes are high. The laws of conservation of energy still apply. The day of "something for nothing" is as remote by this process as by others.

The reaction we call "fission" - that which makes the "A" and H-bombs pop, is in reality a "transmutation" of atoms; the atoms of one element into atoms, parts of atoms, and various atomic appendages of another. What happens, so to speak, is that we transmute an atom of one element into an atom "half as large" of another element and take the other half of the original element in energy! It may not work out in those proportions in reality, but the analogy seems fairly applicable.

The fusion reaction is something of the same as that of fission, except that it is not so "bangy," nor is it nearly as "dirty" in the production of deadly gamma rays or "fallout." The tremendous heat and power both of these reactions need for their completion attests to the force required to break the atom apart so the transmutation can take place. It is not just a something for nothing matter!

Having been very interested in Mr. C.F.Krafft's Supermatter, and the proposed "cold" method by which he outlines its manufacture - this involving temperatures at or below a minus 400 degrees Fahrenheit - I thought I had come upon an idea. At this low temperature it appears the interatomic movements, both of the electrons and the core items, slow down to near a suspended animation point, and thus can be manipulated much more easily. The idea which came to me was that if the cold allowed the atoms to be "worked over," or shorn to some extent, perhaps a little more cold would allow us to dismember them fully and thus bag at least some of the energy without all the fuss and furor of either the fission or fusion processes - and again, perhaps rid ourselves of all the gamma radiation!

With this in mind I wrote several scientists of BSRA and others outside, outlining my ideas of possible power production by the cold process. The various reactions to these proposals have been very interesting - both from the orthodox and the unorthodox sources. But the important thing I learned was that someone else - and an orthodox scientist, too - had thought of the idea before I did (darn it!), and had already done something about it, with more to come!

It is quite possible some of the negative opinion to flow from my inquiries along these lines - especially from those who are Supermatter adherents - was due to an original improper outline on my part. A misunderstanding of terms, also on my part, did not help much in one case. However, it does now appear that I was not misunderstood by all those to whom I wrote. And also, neither were my views without at least a vestige of foundation - as witness the process under research in this regard as mentioned.

Moreover, I believe it would be very helpful if the 26 "particles" now making up the atom under the nuclear theory could be listed with a corresponding name for each as a counterpart applied under the vortex atom theory. This, it seems to me, would not only bring much better understanding of the vortex atom as compared with the nuclear atom, but would also allow for better semantics all around.

Whether or not the process of making Supermatter - or a method like it - can be extended or revised in such a way as to produce usable power need not be taken farther here. It would appear to me that if such power were available under the nuclear theory of the atom, if probably is also available under the vortex atom theory. If a portion of the energy of fission and fusion comes directly from the ether itself, as some seem to believe, then if that energy becomes available to us under the nuclear theory and a super-cold process, it seems reasonable to assume it would be just as available under the vortex atom theory. So, let us continue on that assumption.

In a clipping sent to me by a fellow BSR Associate, taken from the "Electronic Industries Magazine" for February 1958, we read as follows: "While scientists the world over have been concentrating their efforts on a method of attaining the millions of degrees required to sustain the fusion reaction, a small group under Professor Luis Alvarez at the University of California has stumbled upon the discovery that the same reaction can be made to take place at 400 degrees below Zero Fahrenheit. The process depends on the generation of "mu-mesons" which are, unfortunately, not plentiful in a free state except in cosmic radiation. However, a prominent Russian scientist reported several years ago discovering in the cosmic radiation a particle similar to the mu-meson but having a mass about 500 times that of the electron. Four separate projects of the Office of Naval Research are now pressing the search for these particles."

Basically this discovery indicates an atomic particle called a negative mu-meson has the ability to pull together the nuclei or core of a heavy hydrogen atom, or deuterium, and a light, or regular hydrogen atom, then fuse these two into a helium atom. In this process it is thought that a little of the weight of the two hydrogen cores is converted into a tremendous amount of energy following the $E=Mc^2$ formula. Also, we have a transmutation development. Strangely, this time it is from a "lighter" element toward a heavier one, rather than in the general opposite direction.

Whether the negative mu-meson could accomplish such transmutation at ordinary temperatures is not definitely known at present. There seems little doubt it does take place at around minus 400 degrees Fahrenheit. This temperature is much more easily obtained, maintained, and dealt with than several million degrees Centigrade.

The problem of obtaining a supply of negative mu-mesons is the difficulty now. It is one of the 26 particles mentioned above. It appears to be a "core particle" emitted when an atom's core is under bombardment in a cyclotron or similar machine.

If the mu-meson of the nuclear theory atom has a counterpart in the vortex theory atom, it would seem to me the possibilities of Supermatter will have widened considerably.

While neither hydrogen nor helium are on the original list of Supermatter elements, perhaps we should not exclude them from our thinking too soon - at least as a power possibility!

Power from cold! It is a most intriguing set of thoughts. The reverse, if one stops to think of it, of any power concept that man has ever had!

POWER BY COLD

Thanks for that article by Mr. Burrige on "Power by Cold". As Mr. Burrige has pointed out, a liberation of atomic energy always requires the transmutation of one element into another, and to do so we must first split the atoms, and then produce new atoms from the fragments. In order to split the atoms, we must first overcome the forces that hold the atoms intact, and that cannot be done by merely cooling them to very low temperatures, otherwise the atoms would disintegrate of their own accord when cooled down to the neighborhood of absolute zero.

There are two theories about such forces. One theory says that mesons form a bonding cement which holds the parts of an atom together, while the other theory points to supergravitation -- the force of attraction between protons at close range. In my opinion the meson theory is untenable because positive ray analysis has shown that the individual isotopes of the various elements have atomic weights very close to whole numbers, and if any mesons were present in the cores of the atoms, then their atomic weights would not be whole numbers.

Supergravitation is the only force we know of which could possibly serve that purpose, and gravitation does not depend on temperature. It is true that in my "supermatter" process the use of low temperature was prescribed, but only in conjunction with other conditions, and besides the supermatter process would not involve any atomic transmutation. It would not be a source of atomic energy, but rather a source of a new kind of energy -- a procedure for producing ionized particles rather than hot particles as in chemical combustion.

In view of my personal and very friendly relations with Assoc. Gaston Burrige I cannot offer much for publication at this time. Via my use of equimatics the concept has been familiar to me, and seems sound and inevitable -- especially in view of the fact that orthodox nuclear science has now caught up with the idea and also backs it. To this I will add that, in time it will be discovered that something like a nuclear reaction,

triggered by cold, is constantly taking place in outer space. I could say still more, except for the fact that I have, for some time, been preparing a special file on some special implications of "Fusion By Cold"; a still more advanced and original idea of mine, which I have to nurse for future release, The idea is a "bombshell" par excellence; opening an entirely new vista of nuclear technology and of priceless value to mankind.

Thank you for a look at Mr. Burrigge's forthcoming article on "Power By Cold". I hope that he will not be too disappointed as to the scientific difficulty of getting power from super-cooled atoms.

Let me itemize and reply to some points raised by Mr. Burrigge on his second page of text (RR XIV - 1). (1) At minus 400 degrees Fahrenheit or below, the movements of electrons and atom-core constituents could be slowed down to their suspended animation state, so as to lend themselves to easier manipulation. (2) Perhaps more extreme cold may render inner portions of an atom capable of disassembly for power purposes. (3) The cold method would have greater efficiency of preliminary processing and less atomic ferocity and less irradiational hazard.

Reply to point (1): If by minus 400 degrees Fahrenheit, he means 432 degrees below the freezing point of water on that scale, then my figuring (with conventional formulae and standard conditions) gives for this temperature the equivalent point on the Kelvin scale: 33.18 degrees Kelvin above Absolute Zero. (It is true that) the motions within the atom would be slowed down, but at Absolute Zero the motions of space-fluid within their closed circuits within the atom core will persist, as youthfully vigorous as ever. Cold implies reduction of the average molecular motions, due to "spending abroad" some of their total energy (kinetic plus potential). But in the flow-circuits of an atom we have ~~no~~ molecules as such, but only discrete units of rotary flow, which I call "vorticitons". Einstein's viewpoint notwithstanding, there is no portion of space that could possibly be energyless and entirely empty. Depending on a particular point of location at a particular instant of time, the motion of the space-fluid's restlessness may be either irrotational or rotational, but never quiescent. There is no place that is not saturated with incessant work, both kinetic and potential; there is everywhere only motion, but only rotational motion can give rise to form-elasticity and gyrostatic mass, and these are the ultimate foundation for all palpability in both energy and matter.

As to the energy-density of the space-fluid, estimates of the number of gram-calories of energy per cubic centimeter of volumetric space were made by Nernst, Wiechert, and Lodge, ranging in powers of 10 between 16 and 29, that is, ranging in value from 10 quadrillion

to 100 octillion. Wiechert's estimate was the 23rd power of 10, or 100 sextillion gram-calories per cubic centimeter. When any known metric volume of either matter or "empty" space is multiplied by one of these energy-density estimates, the resulting quantity of energy is enormous. (One gram-calorie is equivalent to 0.0011628 watt-hour or 41,860,000 ergs.) H. Fricke wrote: "The atom's energy is therefore in reality Ether energy."

Naturally the incompressibility of the inviscid primary fluid would enable the irrotational motion to keep the spinning droplets of rotational motion in translatory motion in random directions, just like the motion of monatomic molecules in a chemically-inert gas. But the freedom of path would be very restricted, the consequent grain-density of the space-fluid in its atomistic aspect being exceedingly great. The ether is therefore like an exceedingly hot, highly compressed gas which is so compact that its liquid state approximates a solid, at times electro-magnetically viscid and at other times almost imponderably slippery in flow. There are no macroscopic material fluids in a laboratory which could be compared with it. Not even the interior of a blue star, a la Gamow, could be likened to it. However, although in intergalactic space the etheric temperature is very high, the etheric temperature of a vortex-ring of matter is negligible, being at the space-fluid's own Absolute Zero on an etheric temperature scale. This etheric temperature cannot respond to any known practical process of ordinary applied thermodynamics, so far as I am aware.

Reply to point (2): In order to disassemble an atom without bombarding it, it would be necessary to cause the pressure of the surrounding space to drop as low or lower than the pressure that exists inside the binding-force fields within the atom core. This would surely be a miracle. Commensurate with the etheric temperature in the space-fluid itself, is its entropy and its ratio of isotropy to anisotropy. "Entropy" is the degree of disorder in the random motion of particles. "Isotropy" means that the statistics of the motions or other properties are the same regardless to what direction from which we probe the region of space under consideration. And "anisotropy" means a departure from this condition of isotropy, that is, in the case of a jet of air the statistics of motion are different in a direction along the axis of the jet-stream from what they are in all other directions oblique or normal to this axis, so that the jet-stream of air is anisotropic so far as the molecular dynamics is concerned. It is for this very reason that an air jet can cause a book to open up and separate its pages if the air between the pages has the higher pressure of stationary air. The stream of water from a hose whose nozzle can retain a ping-pong ball just in front of it, is also anisotropic with respect to the dynamics of its molecules, and it is the Bernoulli pressure-drop effect of the rapidly flowing water which enables the atmospheric pressure to push the ball toward the nozzle of the hose in spite of the thrust of the water. A similar law of hydrodynamic pressure prevails within an atom to bind the particles

of its core together, and especially so in the case of the rolling, flowing inter-surfaces of adjacent ring-vortices within each sub-atomic particle.

According to the laws of thermodynamics, a system cannot be cooled to lower than the temperature of its surroundings without heat being returned to that system for temperature equalization, upon removal of the cooling process. The same should be true of thermodynamics of the space-fluid itself. Because of anisotropy in the motions of eddies in the flow-circuits of matter according to the ether-vortex theory of C. F. Krafft, the sub-atomic particles and their electric fields are indeed much colder on the etheric temperature scale than is the isotropic space-fluid between galaxies, and are also colder than inter-atomic space but with a slightly less difference. By the same token, they also are more alive, because of far less entropy. The sub-atomic particles, which are "alive" to the degree that they lack entropy, according to Schoedinger's interpretation of living matter, are also their own "refrigerators" with respect to etheric-type temperature. These properties apply as well to the atomic particles within the deuterium plasmas of the fusion-power apparatus, quite independently of their very high temperatures in terms of ordinary thermodynamics. The ratio of speed between the space-fluid and the motion of a molecule amounts to an enormous figure. Also the difference in sizes is very great, in inverse proportion.

By chilling a rubber ball in liquid air, it can be rendered brittle enough to shatter against a wall, breaking into many small fragments very cold to the touch. The stringlike molecules have been grouped more tightly together, so that the slightest distortion of the ball could break the chemical bonds as well as the spaces between the molecules. This picture cannot apply at all to the circulating fluid within the core of an atom, even in terms of the thermodynamics of the ether or space-fluid. "Nuclear glue" is merely a news editor's metaphor, and a rather "talk-down-ish" one at that, but it is a useful metaphor if it saves the trouble of expounding the actual concepts involved in sub-atomic physics. Since there is no such thing as a "glue" of the chemical sort within the core of an atom, there is nothing therein which can be rendered brittle by freezing.

Reply to point (3): Since the atom core cannot be frozen into fragments, such fragments are not available as an electrical power source. It is a rather shrewd guess on Krafft's part that a super-cooled atom will not have much "oomph" of electrostatic repulsion after it has been totally ionized, so that the joining of two argon cores to form a krypton core, and so on to larger cores and even the chainlike atoms of supermatter, may be a practical possibility. Little or no gamma radiation whatever could result from this cold process, because there are no high-energy bombardments involved. This much would be true of point (3). But I doubt that the cores could be dis-assembled beyond the point of separating argon cores from one

another. Each argon core would remain intact, upon evaporation of supermatter to the ionized argon vapor from which it had been formed. It would also be atomically "clean" -- free of fallout radioactivity. As to the power to be expected from this cold process, the existence of argon ions alone would be sufficient, but here we would be getting out of the supermatter process the equivalent of the electric energy necessary to make the argon ions in the first place. There would be no getting "something for less" any more than "something for nothing".

On the other hand, a supercooled atom could be far more easily penetrated by sub-atomic particles than in the case of bombardments at room temperature. This consideration may be of some practical importance.

The Link Between the Old Age and the New

By Alice Winston, BSRA

Twenty years ago there was keen interest in the symbology of the Great Pyramid* in relation to prophecy. Astrological and Biblical students sought to interpret man's state of evolution by "Pyramid inches" and other measurements involved in various channels leading to the Queen's and King's Chambers, hoping to find some assurance that humanity had almost reached the open Sarcophagus in the King's Chamber - and hence Liberation from bondage. How fortunate these students were not to have been able to look into the immediate future and see the weary steps, the suffering and devastation of the war years so soon to follow, as well as the perilous present humanity now faces. Indeed, it is well, at our present stage of evolution, that the average person does not have clear sight and that he needs take but one step at a time, one day or even one moment at a time. The problem which faces humanity now is far more serious, far more vital, for it involves the very food he eats, the air he breathes (due to radioactivity from nuclear experiments) - as well as the threat of atomic warfare, which could turn this planet into a cinder. As this writer sees it, there is but one answer, one way out.

Doubtless, all who believe in a Supreme Being will admit this Universe, as well as all others, was created according to Laws of Harmony and Balance. Our earth is based upon immutable mathematical laws and rhythms. Only the mind of man could conceive of breaking these Laws and introduce destruction and imbalance into an otherwise beautiful world of harmony and beauty. It is the belief of many that cataclysms and weather conditions are but reflections of the turbulent state of man's thought and emotions.

Through the ages agos have incarnated over and over again to learn the lessons this plane of action has to teach, finally to gain their liberation from the planet through at-one-ment with the Source of all. There have been Golden Ages when the teaching of great Avatars freed many from the Wheel of Rebirth, but for centuries the greater part of humanity has whirled upon this Wheel of Necessity, sinking ever deeper into selfishness, greed and thirst for personal power. Now humanity has reached the point where the only hope for living in a world of harmony and order is to do an "about face" and return to the Divine Harmony it knew in the beginning, before the Logos sent man forth on the long, long Journey of the Soul through matter. The answer to the world problem, as many see it, is to practice what the Hindu calls Yoga, of which there are many forms, suited to the individual needs of the many who inhabit this planet. However, the greatest need

* "Apollonius of Tyana", by Alice Winston, Vantage Press 1954

at present is for what is known as Bhakti Yoga, or the Path of Love - which is pure Harmony and perfect Balance. If every individual set about to practice this Love (which is of God) there would be no world problem for this planet would soon reach a heavenly state. Through the Great Love all greed, lust, cruelty and the like could be transmuted into harmony and peace. I believe this to be our one hope of salvation for centuries to come. Were it not for the many devoted groups of disciples which stretch as a golden chain around the planet, the state of humanity would have long since become hopeless.

However, the Logos has a Plan for this earth and that Plan will be fulfilled, even though humanity may retard its progress for a time - perhaps years, perhaps centuries. At present there is a merging of two Great Cycles, as an old age passes and a new one is ushered in. At such times all the debris of the old age is stirred up and rises to the surface, to be transmuted or dissipated. What cannot be transmuted must be worked out through suffering, though that is not a part of the Plan of the Logos, only the effect of man's misuse of the Law of Love. The Will of the Logos for His humanity is only for Good, for it is His beloved.

The New Age is one of Brotherly Love and as man becomes awakened - through suffering or through the practice of Yoga - it will bring in the New Age more quickly. Man must be awakened if the Pyramid prophecy is to be fulfilled, for the prophecy is of an illumined mankind coming into his "kingship". While it may take time to establish his "kingdom" it is a great privilege for those who have the vision to help usher in the new regime and assist man to enter the King's Chamber. For, as he does so, he becomes aware of his kingship, which is a form of illumination. Though it may not be complete for some time, for some it is already a piercing of the veil of illusion. Man has much to accomplish before his kingdom is established, when Love and Harmony will again rule the earth. At present he is at the outer wall, storming the gates as he seeks entrance, and many are utterly blind to the real issue of this time. But their eyes shall be opened, for the saving Grace of the Logos Himself penetrates all His manifestations, great and small. There are no favored ones in the final analysis. The Hour has struck and already the dawn is apparent, though the planet itself appears to be covered with war clouds. The disciples of Love must stand steady, keeping themselves firmly entrenched in faith and understanding of the Ultimate Good, if it is not to be a "false dawn." All who have the understanding of inner forces should keep their minds focussed upon Reality, the Truth of Life, rather than the appearances, for the planet is passing through its most difficult period.

The Law of Good is working through the appearances, as the old age gives way to the New and the old ways of thinking and living must be cleared. So much of what appears as destruction is really the clearing out of old conditions, which could not be transmuted into usefulness for the New Age. It is far better to work through Transmutation

than destruction, yet when man will not conform to the way of Transmutation, he sets in motion a Law which will clear out all obstacles to the incoming Good. Since the New Age is on a much higher Round than that of the old, one can readily see how all the old conditions must be purified and transmuted in order to meet the requirements of the incoming Age and the incoming ego.

From one point of view it is sad that destruction causes so much suffering and that is why the Teachers point the Way through Transmutation. Looking at Life as it passes through its changing forms, if the student will approach it from the standpoint of Reality he will have a firm foundation upon which to build and it will enable him to tread the Path with assurance. For he must know Love is the One Reality and have a strong conviction that all is well, in spite of appearances. As he harmonizes himself through his thinking with the higher Laws and the Love Principle, he will escape many of the hardships of the lower laws of life. As he tunes in with the Law of Good, the Law of Love, he naturally tunes out of the confusion, the fear and other negative aspects of the world about him. It is everyone's privilege to escape the inharmonies of life of the lower planes - not just the devotees - for Love is the open door, which is never closed, and the Path is flooded with Light, so that all who enter may find their way to peace and harmony. There are not just the chosen few, although it would almost appear so, since so few choose to tread the Path of Light and Love.

Weary and overburdened with its load of sorrow and fear, the great heart of humanity looks for an answer to the needs of the Hour. The One Love is the answer ... Love alone, which includes Wisdom. For Love is Wisdom and Wisdom is Love in the higher levels, and it should be so here. Through Love alone may man reach his goal of infinite Good, true happiness. Not through strife, not through argument, not through the manufacture of instruments of greater and greater destruction will he find peace. Only as he abides in Love, the One Love, creator of his being, only as he obeys the rules of Harmony (which is right action) may the earth once more lay the foundation for another Golden Age.

* * * * *

In Alice Winston's book, APOLLONIUS OF TYANA, two chapters are devoted to the Great Pyramid as it was when Apollonius travelled about giving his teaching. This should be of special interest to students as it is taken from a description of the akashic record of the Pyramid. In relation to this article, Apollonius' teaching on "Peace and Harmony" is especially pertinent.

"Pyramid Effects - Waves of Form"

'The effects produced by the pyramid are a function of its shape. All geometric forms have peculiar properties of their own. You might say that the pyramid produces a modification of the earth's magnetic field. The effect of this is to prevent oxidation.

'The razor blade is not easily dulled by use, but rather by oxidation of the molecular fringe of the edge during the time it is not in use.*

'The proportions of the pyramid, while not of critical importance probably do have an effect. There is probably some value in following the ratios of the Great Pyramid, since the Ancients constructed this in alignment with certain invisible bodies. For the same reason it may be of advantage to orient the pyramid with one side to the north, and even to place the razor blade lengthwise north & south. **

'The edge of the blade has its magnetic field. This field is not changed & the edge is not changed, but oxidation of the edge is prevented.

'This latter effect explains the dessication of food stuffs and the reason they do not decay - i.e., oxidize.

'On a suppurating wound there should be some beneficial effect. On a surface face cancer the spread of cancerous growth should at least be inhibited.

'Since saprophytes live on decaying (oxidizing) matter, it seems probable that they sense the fact that decay is arrested (under the pyramid) and hence try to get away. If they cannot escape they die and dry up.

'The material of which you make the pyramid is of some importance. Metal pyramids should be tested but it is doubtful whether they will work well. The same is true of plastic.

'Concerning the effects of geometric forms - many obscure factors are involved. It is not safe to assume that the same form will always produce exactly the same effects.

Professor Alfred Luntz (deep
trance mediumship of Mark Probert)

(Present: Four Electronic Engineers; business executive Mr. F. O.; Mrs. Irene Probert, Meade Layne).

NOTE: * In this connection: most razor blades are well shielded from the air, usually by individual waxed wrappers, until the package is opened.

** In experiments so far reported to the BSR, pyramids used have been of paper, dimensions $3\frac{1}{4}$ " on base line (of one side), 3" along slope line, corner to apex; or 6" x $6\frac{1}{2}$ ". Larger in same proportions. These are of course approximate. Whether any of these factors are critical, remains to be verified.

It has been reported by Verne Cameron (inventor of the Aurameter) that the effects are increased if the tip of the pyramid is connected by a wire to the apex of a near by cone. The Luntz Control when told of this replied: "This I do not understand".

What results, if any, will be obtained if a small air-tight container is used to cover the blades instead of the pyramid? Results with food-stuffs? Three portions from a single meat sample should be tested simultaneously (a) under the pyramid (b) in a small airtight container (c) in the open.

ML

("The Cameron Cones and the Pyramid of Gizeh" has appeared in two recent issues of Clips, Quotes and Comments, "H - 3" and "H - 4" followed by "The Pyramid of Gizeh" in "H - 5", all three articles dealing with Verne Cameron's experiments with pyramids and cones. We have a few copies of these issues available for anyone who is particularly interested in this line of research. Price \$.50 each.)

* * * * *
A CONFIDENTIAL COMMUNICATION, received several years ago by M.L.. No further details were released.

The so-called Great Accident is not necessarily a sudden catastrophe and without warning. It will probably involve the gradual destruction of the Life Force in the atmosphere (by atomic energies); this will change the genetic patterns of all earth life - man, animal, and vegetable. Destructive growths, far worse than cancer, will appear in all organisms. This period will probably end in disasters of cataclysmic scope. But prior to that event the Etherian craft will remove all who wish to be removed, to a planet outside of your solar system.

Many scientists are working on means of releasing still higher energies than are now known. Some of these men are reincarnations of the entities which disregarded the warnings of the Overlords of the Etheric, and persisted in creating and experimenting with the life-forms of your globe. They are still driven by the compulsions of willfulness, and no governmental edict can restrain them. The end of your planet considered as an abode of Man, is 'predestined' - in the sense that the nature and character of man himself makes it inevitable. We see no present reason to avoid these conclusions.

NEW YORK SAUCER INFORMATION BUREAU, PO Box 26, Planetarium Station, NY 24

TO: All Flying Saucer Organizations

Gentlemen:

In trying to get a break-through on the Flying Saucer Story from our Government and the Air Force, NYSIB invites your organization to join in a concerted effort to deluge Congress with letters on the 4th of July, asking, not demanding, that the American people be given all the facts. Just to have people write to their Congressman haphazardly will only mean a few letters getting there every so often, without much action, if any at all. Using July 4th as B*Day, (break-through) we can have a coordinated plan of action and with letters coming in from all over the country, not too long before election time, it might just be the spark to touch off what we've all been waiting for. We, the people, are still the Government of the United States, a fact that seems to have been completely forgotten since the end of the last war, and if secrecy in Government is allowed to continue, we will eventually wind up the way other countries have, in complete dictatorship.

If we are being visited by Extra-terrestrial beings, and the evidence certainly points that way, then we have a right to know. The way that Major Donald Keyhoe was cut off the air, while he was giving the people some important information regarding a secret Senate committee at work right now, investigating secrecy in Government pertaining to Flying Saucers, is not the kind of thing the American People should take lightly. We have the right to know. Let's see to it that we do. NYSIB has a committee at work right now, finding out what the United Nations is doing about it, individually as Nations, and collectively. As soon as sufficient information is gathered, your organization will be forwarded the data.

Hoping you will do your part in the B-DAY PLAN, and get as many reporters and newscasters in your local area interested in it too, they can be of great help. We have two syndicated writers in NYSIB who are getting a campaign ready now, and if all the local publicity agencies have been briefed on the plan ahead of time, it will help insure its success.

MAKE THE BREAK IN '58

Very respectfully

Douglas Deane (Director: NYSIB)

"The Voice Of The Yada" *

In connection with the recent Russian bomb disaster, some of the facts are as follows:

The bomb was of exceptional size and power, and was suspended - was not detonated under earth or water. It was fired purposely with design of testing the amount of fall-out; but this fall-out was much greater than had been expected.

This mistake was due to an error in calculations and damage due to fall-out was extensive. The air-currents also had not been correctly calculated.

One important result will be to undermine the Russian pretense of having discontinued all the bomb tests.

A Note as to remedy and precaution: NIACIN will be used as an internal medication, subsequent to exposure to harmful radiation.

A Note as to Causes of Cancer: Cancer is a glandular imbalance. Certain cells are undernourished or not nourished at all, and these attack other cells. This is a question of the right kind of food, of nutritional values. A complete metabolism test should be made in each case to determine the required diet.

FOR OUR INFORMATION: The SPACE CRAFT will not run on magnetic propulsion beyond the ionosphere. The ionosphere would destroy any magnetic sink between the craft and the earth. Beyond that limit they operate on solar energy. There is almost no effect of the earth's magnetic field beyond the ionosphere. The magnetic field will change according to the density of the nearest body. The craft will depend almost entirely on the solar energy. The colors noted about these craft are not due to temperature changes, but to electronic changes. No earth metal could stand such heat changes without becoming very brittle. It is the play of electrons produced by the solar radiation on the body of the craft and produces conditions similar to those that cause the aurora borealis.

NATALI, Nov. 3, '54

SEANCE MEMORANDUM # 10: has just been re-mimeographed and is now ready for release. This is a 33 page brochure, deep trance mediumship of Mark Probert, Inner Circle Controls. This is available from BSR Headquarters, while the supply lasts. Price \$1.25.

* THE YADA is perhaps the best known of the trance Controls of a celebrated medium, Mark Probert of San Diego.

THE UNDERGROUND RACESby Ramon Natalli

(This communication was received through the mediumship of Mark Probert, and was apparently occasioned by a conversation between M.P. and myself concerning the book, Phantom of the Poles, by William Reed. Natalli was an Italian astronomer of the 16th Century and has pursued the same science during his life in the astral).

M.L.

Well, you do indeed live inside of a ball, as Koresh teaches, but it is not a ball or shell of dense matter but of etheric substance. Each universe creates its own ball or shell. As for space, it is unlimited. (Q.) Yes, sir, we do (live on the exterior of a dense globe). (Q.) No, your world is not an oblate sphere; it is shaped much like a top. This is a large subject.

Yes, indeed, there are vast underground regions (caverns) that stretch from equatorial Africa to the north pole, and also to Venezuela, where there is an opening. (Q.) Yes, these caverns connect, and this explains the resemblance of many customs and religious rites of early peoples; there was underground communication. (Q.) The opening in Venezuela is in the southern tip, in the region north of Loreto. These caverns will explain to you the mysterious disappearance of whole races from time to time (such as the Mayas or pre-Mayas). I can't give you very much right now -this is a difficult mode of communication for me. This is Ramon Natalli. I am going to experiment with this method of working (i.e. clairaudience). But I'm not side-stepping your questions.

(Q. re size of underground population) I would say several millions. Oh, yes, they are humans. Yes, there is some contact, but mainly through their secret organizations. These people as a whole are much more healthy than those of the surface. (Q.) The reason they entered the caverns originally, was that they discovered that the upper atmosphere was teeming with disease germs (and other harmful elements).

(Q.) These people as a whole know little or nothing about your surface life. Such knowledge is in the hands of the higher teachers. (Q.) Yes, in some parts of the underground world people possess a high degree of culture. (Q.) Yes, there are openings in Mexico, and one in the region of Alberta, Canada. Many of the sudden appearances of strange looking animals are explained by these facts.

Yes, there is an opening in the region of the Bering Straits. (Q.) Yes, it is true that surface waters, ocean waters, enter the earth, And this inflowing current is one of the main causes of fluctuation of

the magnetic fields - the magnetic poles. (Q.) Most of the caverns lie at 10 to 20 thousand feet below the surface. It is true that there are warm (even tropical) areas near the poles. They are walled in by ice and by mountains. Yes, there is open water, and the ocean stream flows into the earth. It becomes warm from the abundant heat of the interior- it is almost boiling at some points. (Q.) The aurora is caused by an energy play between the core of the earth and the atmosphere- it is an electro-magnetic phenomenon..... Some caverns were destroyed when Atlantis went under. (Q.) Yes, the story is theoretically possible. Olaf Jensen could have been carried into the interior in his boat, and by most careful navigating could have emerged at the south pole. A whole fleet could enter the earth so far as that is concerned. I'll try to tell you more later and then you will understand better.

QUESTION & ANSWER: The LaoTse Control. Mark Probert, Medium.

(Questions by M.L.- "Q". Text of questions omitted).

(Q.) by ML: Can you then define reality as over against illusion and the 'unreal'? LaoTse: No, can you?

(Q.) Then there is no test of the 'real', but only relative degrees of clarity and permanence in consciousness?

LaoTse: That is right. The one great truth on all planes is that absolute truth is unobtainable - finality is unobtainable. Each of us has such knowledge, such life experience as his consciousness holds for him- as his status as an entity or center of awareness permits for him.

And now I wish to add something concerning this practise of communication between your plane and ours. It is perfectly true that the self-mind of a medium is capable of impersonating, with the greatest exactness and fidelity, any other person on any plane of existence. Such a person may be a loved one, a friend, a relative, or some great and distinguished person. All memories and all personal characteristics may be imitated with the utmost fidelity, since the higher self of the entranced medium has access to all knowledge.

There is no sure method by which this impersonation or substitution can be detected from your side. This is truth - but it is NOT a truth that invalidates spirit communication. It is serious error, to argue from this fact, that spirit communication does not exist, or that all is delusion and a kind of fraud.

The tendency to such impersonation, where it exists, can be held in check by guides and controls on our side. We watch over our instrument, and over you also. What utter folly it would be on our part, to

fail to do this!

The multitude who seek communication with our plane, seek consolation first of all. The higher self of the medium may seek to bring this consolation, and often does bring it. His intent is not to deceive, but to comfort. He feels that this is right and good, because it is true that your loved ones live, and love, and remember. But perhaps they cannot come to you. Many are the reasons why this coming may be impossible. Therefore, the higher self of the medium may bring comfort in their stead.

I repeat, this does not mean that your departed ones do not communicate with you. They continually do so at seances and in other ways, but not always even when they seem to. These occasions, these exceptions, cannot be detected by you. "Proof" is not possible as you would desire it. I mean, proof of identity of communicating spirits. Judge all communications by their content. If there be knowledge and wisdom in them, opening new avenues of thought and helping with your problems, take them into your lives and hearts. Weigh what I have said carefully and justly. Do not let one fact or one side of this matter obscure the other.

THE HARRY LAVERNE TWINING CONTROL. Mark Probert, Medium.

(Professor Twining was well-known as an educator and as a chemist, and for his achievement in synthetic production of gold. Questions by M.L.- "Q").

Prof. Twining: No, there are no terms to describe these forces except those of the quantum theory. If all force acted in a continual and constant stream, all Nature would flow in the same direction, so to speak. And all life would cease. There would be no separation or variety. Nothing in Nature can become completely polarized. The quantum theory denies the objectivity of the physical world and all things in it. It affirms the principle of eternal flux and denies a static objectivity.

(Q.) The other day, if I understood you correctly, you hinted that what is called the dilemma of solipsism could be resolved by the analogy of the energy exchange and transmutation of neutrons and protons. Each particle, you seemed to argue, retained identity and continued existence, but this very identity consisted in incessant flux. By this analogy, although the physical presence of (say) Mark Probert here, reduces to terms of my own consciousness, and my own presence to terms of his awareness, still the identity of each of us is preserved. Is this substantially correct?

Prof. Twining: Yes, that is the theory we now hold. Life is interspersed with moment-to-moment changes, and only God himself knows where facts are absolute with no further absolute.

(M.L. repeated a few verses from Tennyson: "All thoughts, all creeds, all dreams are true....etc." Prof. Twining commented: Is it not too bad that such a poem cannot be printed in every school book? Then the child would grow up to understand that his dreams and desires are no better and no worse, no higher and no lower than his neighbor's. For years I tore my hair about such problems - until in the end I had very little hair left to tear.

No, I do not feel any more optimistic about man's condition and prospects now than I did in the later years of my earth life, when I found nothing was to be gained by offering truth to the herd.

Also, in the quantum theory you will find the proof of spontaneous generation. (Q.) Yes, it is constantly in progress, not a matter of a past event. Once a law is set into action on any plane, it becomes a constant. Because man does not know this, when he breaks any of these laws, his suffering begins. But the beauty and justice of Nature make it so that he does not pay one whit more or less than the amount to which the law was broken.

The life produced by spontaneous generation is nearly always of a microscopic or sub-microscopic order. It is true that multi-cellular organisms can arise, but they do not last long. (When asked why, Prof. Twining said something about the 'need of the entity to acquire sufficient life-force to impress the seed' but the medium could not catch the statement clearly).

Questioned about experiments in which the forms of microscopic crystals are said to have been altered by mind-energy (Littlefield, Morley-Martin et al.) Prof. Twining replied: Yes, this effect takes place. Note that concentrated thought is one of Man's greatest powers... Thought DOES affect objective matter. Back of all the fairy stories lie the mystic teachings of man - of his true Self, from which he has become lost.

But the words mystic and mysticism should be stricken from all occult work. They have become like dirty window panes through which man is unable to see his true self. **

(Q.) Do you think lightly, then, of the teachings and experiences of the great mystics?

Prof. Twining: No, I am not taking them lightly. But if life truths are to be presented it must be done with all sense of mysticism stripped away, and put in a plain and an almost elementary manner. Especially is this true with regard to the American people.

(Q.) Yes, I know that all nations are much the same in that way, but you have become wrapped up in money-making and falsifying, and have been taught that almost anything that does not work on the so-called physical senses is either trickery for fun or else plain fraud.

The masses will advance only through individuals and to the extent that these latter advance.

Between the act of doing something and the thought there is a little interval of time that is empty, and it is in that field that we can best work. It lies between any doing and any thinking. *

-----*****-----*****-----

(NOTES): The expressions marked (**) do not seem to be well-considered and might be subject to a book-full of comment, but are characteristic of many mathematicians and physicists who lack philosophic and occult background.

This is of great interest. "Concentration, or Yoga", says Patanjali, "is the hindering of the modifications of the thinking principle." This is usually interpreted to mean one-pointedness (W.Q.J. et al.). But all mental activity consists of such modifications. Even the higher reaches of contemplation, the thinking principle is 'modified' into the form of the object contemplated. To 'blank out' the modification is to blank out the 'principle' as well. Yet, the communicator, between action and thought (almost certainly between thoughts also) there are lacunae, or 'spaces' of at least comparative inaction, momentary gaps of blankness- and it is into these that words, thoughts, feelings from the other planes can penetrate. Thus, in ordinary life the would-be communicator must continually watch his chance, catch the earth-consciousness at the exact instant. There is every evidence from experience, that this is exactly what takes place. The communicator makes this explicit. Furthermore, he is connecting it with a kind of quantum theory of consciousness. Mental action is also 'atomic' or 'particulate'. The stream of consciousness as understood by the older psychologists is an illusion. Identity does not depend on or derive from continuity. Mind is an energy, and all energy is particulate. Into the 'inter-atomic spaces' of this energy flow, the 'mind-atoms' of the thought of the communicating entity find entrance. Their nature enables them to incorporate with the consciousness 'stream' of the recipient. The whole question of the role of passivity in meditation and contemplation, as also in mediumistic 'development' work, would be reconsidered in terms of this 'mental-quantum' concept. Note that this points to one more arch in the bridge-building between contemporary nuclear physics and occult teachings..... Whether or not we agree with the communicator or with each other is of little comparative importance; the point is, that these communications open up immense vistas upon the probable science-philosophy of the future.

M.L.

MANUSCRIPT FOUND BY A BOTTLE

- M. L. -

Now concerning the ECCENTRICITIES OF GOD, who once permitted Himself to become conscious and self-observant. That was because He was bored by being a Universal Subconsciousness. It is true He could not be conscious of being bored; we speak philosophically and say He acted AS IF. Normally He is bored, or wise or witty or self-important, only when manifesting as a human being. Not in all human beings, either, but only in those who have big bellies and pay an income tax. So it was however, He became bored or as if bored, and since He was not in Time or Space it was difficult to get a good look at Himself. He had to flip up one of His human manifestations and hold it to His eye to look through, as Nero looked through an emerald at the shambles of the circus. So it was with God.

He took one look for the tenth of a second at the space-time jumble, the way you and I blink at a landscape, and that was plenty. Because things are Ideas and ideas are Things He couldn't tell which was which and it didn't matter. All things are in Him, from a gnat to a nebula, as well as Man's ideas of both and the ideas of both concerning Man, which perhaps are not complimentary. At any rate a thing and a thought were indistinguishable to Him just as they are to some psychologists who are also omniscient and it isn't worth while to try to separate them. The first thing God saw was a snake and a naked woman looking for experience, but it was a mere accident that giew came first, or else it was a Complex. Afterward there was a family row with the man getting the worst of it. There was also a hairy aborigine eating one of the snake's descendants, and a sixteen foot lizard biting at the aborigine.

The lizard intrigued Him on account of its possibilities; it seemed as though it might develop a Culture if it could catch enough to eat meanwhile. But then came a giant named Nimrod, who changed into a sweaty Englishman in red breeches, and the lizard was gone. There was a splash of water and Noah went by in his houseboat with a consignment for the zoo, followed by Henry Ford in his peace-ship. This couldn't be helped because God's mind is timeless and works by association of ideas. Osiris struggled with Typhon, Luther tweaked the devil's nose with his pincers, and General Johnson pounded his desk and swallowed a cigar butt. A hook-nosed chocolate-colored shepherd dpuble-crossed his brother and told a lie to his dad, thereby laying the foundations of modern diplomacy and the Jew movie-trust. Zoroaster went by composing a hymn to Ahura Mazda and forgetting to copyright it. Nietzsche came by sneering at slave-psychology and the Germans invented the goose-step. Caesar murdered a million Gauls and then got on the receiving end himself. Napoleon went by biting his finger-nails, and a prosperous Lydian saved himself from being toasted alive by making

a wise crack about human happiness.

Bed bugs appeared in England and were eaten by cockroaches, who were there first and glad of it. A wood's man, orang utang, mated with an imbecile woman and founded a negroid dynasty. Torquemada suffered a visitation of the Holy Spirit. An idiot emperor built a house out of gold and popularized the Persian sintries. A caged wolf in a zoo became maniac and howled in his own language, 'man is the animal who knows cruelty'. A flea folded its antennae into the grooves of its head, then crept through the thin meshes of a philosophers breeches. And the philosopher scratched him vainly and said, Mind controls all, and matter, including fleas, is the veil of Maya. A famous mathematician said an atom was a wave of probability with nothing to wave in, and took to writing books on Happiness and Marriage. A learned physicist read Plato and felt conviction of sin. An American economist intimated there were only six men in the world, including himself, who understood his subject - though he had some doubts about the other five. A wit said there were only ten persons who understood Einstein and only three who had not tried to. A scientist was murdered in Africa and a withh-doctor lynched in New York, but if each had stayed at home nothing would have happened to them.

Jesus went by and paused to look at a dead dog by the wayside. "Pearls are not equal to the whiteness of its teeth," He said joyfully; but the disciples held their noses.

Bishop Leo went by on his way to hornswoggle Attila.

Mohammed went by arguing with Gabriel.

Columbus discovered a continent without knowing it and died in poverty. Half the world owes him a grudge ever since. A Chinaman invented printing and was boiled for it, quite properly. Catholics massacred protestants, Japanese massacred Catholics, Christians generally massacred everybody they could. In an African jungle, army ants devoured a drunken explorer. A cicada sucked at the root of an ash tree for seventeen years, and then was dug up and eaten by a tubercular monkey. A hundred thousand children set out to capture Jerusalem and were sold into slavery. The Pope slept with his daughters and tortured heretics. The professors at Padua damned telescopes. Oliver Cromwell damned the royalists. Fundamentalists damned Darwin, Upton Sinclair, and Margaret Sanger. One republican, who did not need a job, damned the democrats. The American Legion damned Carl Marx, Stalin, and the human intelligence. A frustrated tom cat on the roof of a Kentucky outhouse damned everybody. A scientist counted the seventeen thousand facets in the eye of a butterfly and started an argument. A blue-jay put seventeen hundred acorns through a hole in the roof and became discouraged. A Congo medicine man violated seventeen virgins in succession and felt better for it. Then a comet came by and started a new religion. A tortoise off the coast of Mexico opened one eye and said,

'This is my two-hundredth birthday it's a fine world where nothing ever happens.' A stylops after its life of two hours died contentedly, remarking that its time had come. A dead man brought to life murdered the doctor who revived him. A hundred and fifteen people claimed to have shot a single communist, so none of them got the prize.

Adolph the maybe-Aryan went by with a knife in his teeth, dreaming of a universal pogrom.

Benito the belligerent went by disguised as a pansy. Alexander wept - and so did Jesus.

The children of Israel complained unreasonably that they could not make bricks without straw. French peasants, starving, became more unreasonable still when told to eat cake instead of bread. American economists decided that the way to make everybody prosperous was to raise prices. A Scotch financier ruined the French government by selling it nothing and charging fifty million dollars for it. Miracles at St. Medard cemetery were officially forbidden. A newspaper publisher told the truth about the House of Commons. College students told the truth about Willie Hearst. There was a twenty-four hour epidemic of truth-telling. Insul wept - and so did the munition trust.

St. Sabinus lived on rotten corn and slept in a thorn bush. American coal miners lived on mouldy dog biscuits. Capitalists endowed institutions for economic research. A professor had doubts about the immaculate conception, and lost his job. Galileo admitted that the earth didn't move after all. The ghost of Alba visited a southern chain gang and turned green. The witch of Endor put on a materialization performance, and an English scientist lived for three years with a spook. Madam Blavatsky said all mediums were scrofulus, and a congressman said that everyone over sixty was a bum. An evangelist foretold the end of the world for the seventy-third time, and a leading biologist said that prophecy was a verified fact. Jonah told a tall story and an Italian philosopher was burned for disbelieving it.

For purely altruistic reasons the Belgians invaded the Congo, the English invaded India, the Germans invaded Belgium, the French invaded everywhere, the United States gobbled up islands, the Japanese tried to gobble China, everybody grabbed everything grabbable, carrying the fine fruits of culture to benighted neighbors. God perceived that brotherly love was the mainspring of history,. Barons at Runnymede started a new deal. So did Alexander II, William Penn, St. Peter, Lenin, Mrs. Eddy, Judge Jeffreys, Innocent III, John Law, F. D. R., and eleven thousand nine hundred and twenty-six other important and conscientious people. God's mind kept working by association of ideas. He saw scholastics arguing about angels on a needle point, and modern scientists debating as to why cocks crow at midnight. The Greeks cursed at people who whistled in bath rooms, and the Rotary Club insisted that everyone ought to whistle all the time. Confucius remarked

that a woman had the mind of a hen, but an exceptional woman might have the mind of two hens; Schopenhauer and Bernard Shaw elaborated on it. The Hottentots invented nudism. Caligostro invented economics. Buddha invented Christian Science. The devil invented gunpowder, broiled lobster and the Versailles treaty. The ghost of Aristotle founded Oxford. Phillip II and John Calvin founded Fundamentalism.

All these things, and a million more, appeared to God's eye in that split-second of His introspection. The idea of His own Perfection in Holiness was very strong in Him, since it had been suggested to Him by His admirers for many thousands of years. Order and Law and righteousness were His, along with solicitude for sparrows, and the mercy which tempers justice, and the flames of hell and the gold pinnacles of heaven. Yet somehow, somewhere, a faint discordant note vexed the cosmic harmony. Not Set or Ahriman or Ludifer certainly, for these magnificent fiends were also His Ideas - the ingenious disguise of His beneficence. What is it, then? said God; and with the flicker of His uncertainty the stars reeled in their courses. And the world would have returned to chaos in the twitch of an eyelid, had it not been for a biologist who was reading Eddington. Perhaps - he muttered to himself - perhaps God too is a Product of Evolution.

On hearing this idea, which was really His own though He had not yet thought of it, God smiled complacently, knowing that if He was not wholly perfect He was certain to become so. Yet because on the whole He was much happier as a subconsciousness, He closed his eyes and ceased to observe Himself. Resting His faith upon the firm rock of Science, He dreamed once more His cosmic dream, And the infinite galaxies returned untroubled to the places appointed for them.
