OUR GUARANTY CONTRACT

TO REFUND YOUR DOLLAR AT THE END OF THE YEAR

We, the undersigned, hereby Contract and Agree to refund the money paid by any subscriber, if at the end of the year the subscriber can conscientiously state that he or she receive no benefit from the instructive articles in the various departments in THE FUTURE HOME JOURNAL.

It being understood that the subscriber is to read the JOURNAL each month, participate in the co-operative clubs and departments, and to put the various systems and methods for the development of the mind, character and body to a practical test.

In Witness Whereof, we here affix the name of the corporation and the signature of the Treasurer.

The Future Home Publishing Company

PUBLISHERS OF BOOKS AND

THE FUTURE HOME JOURNAL.

$1. TO REFUND YOUR DOLLAR AT THE END OF THE YEAR $1.

NOTICE—Subscribers living in Canada, foreign countries, or New York City, should send one dollar and twenty-four cents for one year's subscription; the additional twenty-four cents being charged to cover the extra cost in mailing the Journal to these places. Remit by Post Office or Express Money Order, Registered Letter or Bank Draft. Kindly do not send postage stamps as a remittance for your subscription, as we receive so many that we cannot use postage stamps without discounting them. Address all correspondence and make remittance payable to THE FUTURE HOME PUBLISHING CO., 208 FIFTH AVENUE, NEW YORK.

During your personal experiences, you may have found that he could forget. He looks hurt and offended the street, as you must change there.

You reach your portmanteau, and you remember to take your memoranda and cards and address book. It is as if you were trying to make everything right. But some long evening gloves, which you never wear, and coffee, which you never drink after breakfast, are out.

Trustworthy maid to put certain things you discover—on entering the house, it is possible to make them right. You know nothing about anything, and you must change there. You order sent home.

Another day everything goes like clockwork. You set forth to make a long city journey to see a friend and find her at your gate, coming to see you. You have a sample of goods two years old you wish to match, and you find it on the first counter you look at.

An address which you have missed and worried over, a chance acquaintance mentions in your presence, and from dawn till dark everything happens just as you wish it to.

There are days when you see nothing but beautiful faces on the street. Whenever your eye rooms something on to please it: and again there are ugly women days—when it seems as if the horses of the locality had raided and all the ugly ducklings had down into the street.

I have encountered a score of men in an afternoon in different portions of a city, and all these experiences lead me to think there may be some truth in astronomical or metaphysical science, which tells us that certain conditions of the solar system affect certain classes of people and cause them to be stupid, or bright or to go out or stay at home. When one stops to ponder on the wonders of that mighty system, one feels certain possible which may be said of it.

nerves and are about to fall into a quiet sleep, the maid taps on the door and tells you a package has come. You feel the woman’s desire to look at your purchase immediately—and you open it to find a suit of gentleman’s underwear and a pair of suspenders!

Making Russia a Republic

The making of a republic is not so difficult as it may seem, if we are to believe what we are told by the people of foreign lands who have founded The United States of Russia.

For many years Russia and its people have declared their intention of having a free country, and although much blood has been shed, there is nothing resembling a republic—unless we believe that the present attempts are to be as successful as they are earnest.

For one man to overthrow a monarch and establish a republic of many states may seem impossible, especially when no plans are made for wars or lengthy arguments, but Ivan Norodny believes he can accomplish this with the aid of hundreds of Russians who favor the movement. He recognized the fact that he could not conduct his operations in Russia, and for this reason he has established his headquarters in Holland House, in New York City.

After forming what he calls a "powerful organization," General Norodny issued bonds to the value of $5,000,000 redeemable by "The United States of Russia." He is now trying to dispose of these bonds in this country in order to raise the funds necessary to his movement. No doubt thousands of Russians in this country will buy these bonds with the fond hope of some day redeeming them from a Russian republic. Whether General Norodny is successful in establishing a Republic or not, there is little doubt regarding the establishment of a fund of twice $5,000,000.

In order to acquaint the Russian people with the necessity for General Norodny to have his plans printed in circular form and then distributed secretly throughout Russia, even though various Russian newspapers are in favor of a Republic, it is impossible for them to print one word in favor of such a movement. For this reason Norodny and his organization must spread their plans by secret circulars and mouth to mouth explanations.

The circular issued by Norodny was sent to the Czar and all the rulers of the world, including President Roosevelt. It is worded as follows:

"Nicholas II., Czar of Russia: We, the undersigned representatives of the great Russian people, have for centuries felt both abused and humiliated by the acts and laws which you as Sovereign have imposed in quorum, unshakenly and of the highest value. That is why we are able to

When I first outlined this monthly journal, it was my intention to make it of practical value to the home. I wanted to interest the father, the mother, the husband and wife and the children. More than this, I wanted this Journal to give them such advice, suggestions and aid as would enable them to live better lives, become more successful and more happy. It has required constant observation of the facts and the individual wants; it has necessitated many changes of plans and numerous consultations with those who attempted this before and with those who are in a position to learn these wants.

Each and every department must have a personal element; it must appeal in a direct, practical and personal way if the department is to be a success. This idea has been accomplished in the present issue of The Future Home Journal, and I shall be glad to have my readers write me as to their opinions on this subject, for the Journal is to please you and you alone. Only that which you and desires are being carried out successfully.

Our Departments.

Just glance through the following pages and note the number of departments which have been instituted. I hope to keep these going from month to month, but this depends entirely upon my readers" response to them. There are many more I should like to establish. I want to cover every phase of home life if it is possible. Nothing of interest to the home shall be neglected if it is possible to make it a department in the Journal. Practical advice and help to each issue should contain something humorous or light in thought, and desire that something of this sort is given in each page, each column and every line, if you like, but give me suggestions. Don't say: "I don't like this," or "I don't like that." Tell me why you don't like it and what you would like. If all my readers will do this well, this Journal will become the best and most appreciated magazine in the country, and the distinctive quality of its readers—the real, the practical readers from his readers—the real, the constant, the practical reader will devote the space to something of more value.

Writing to the Editor.

One of the most difficult tasks connected with editing any magazine or Journal is to induce the writer to write to the editor and to continue the letters, for considerable space is attached to each letter and if they are not appreciated I dare not devote the space to something of more value.

As an assistance to the editor be exchanges his magazines with others each month. That is, he has a list of good monthly and weekly periodicals to which he sends This Picture Home Journal each month and they send their paper to him. Now, some editors use these exchange papers to clip from, giving the other magazine due credit in some cases. The value of such exchanges lies in the fact that it enables the editor to keep in touch with what his contemporaries are doing. He also has an opportunity of noting the progress of various branches of art, science and industry. Never should an editor take suggestions from another magazine, for the simple reason that he then oversteps the individuality and personality of his own readers. There are very few magazines published which have the same class of readers. Each and every periodical, to be successful, should cover a distinct field, and for this reason, if they continue, it must have a distinct class of readers.

Now if you will glance through this Journal carefully, you will note the distinctive quality of its reading matter and its departments. You will at once realize that many of them are entirely new and all of them are original in treatment. For this reason you will find our Journal different from all others, and that of course, it cannot be copied after or taken from any other publication.

What Readers Say.

I have lately received a letter from one of our Universal Church members. In it she suggests that we have printed a number of attractive postal cards bearing a spiritual quotation and on the other side announcement of the free membership to the Church. These cards could then be mailed to friends who would read the announcement and respond to it, while the card itself could be preserved. This is a valuable suggestion and we shall very much appreciate the cards prepared. If you want any of them write to me requesting them. Five will be mailed to each applicant.

I have also received a letter from one of our Universal Church members stating that he did not like the idea of the Journal, that it was too lofty and lofty reading and so little light and airy matter. By heavy matter, he means, as he pointed out, the deep scientific subjects which deal with matter requiring prolonged concentration. He thinks that the length of each issue should contain something humorous or light in thought, and I so far agree with him that I have tried to carry out this idea in this issue. Next month I shall have that work prepared by one who can write and be more successful.

Such letters as the above are what an editor likes to receive. They help him and—they help you. Let me hear what you would like to have.

A Word About the Future.

It is only natural, when interested in the past and present, to glance into the future—to make a guess, an attempt to see the results, of that great and seemingly imponderable future. This, I say, is only natural, and when I concentrate my thoughts upon the vast possibilities which lie in the path of this Journal I am overwhelmed with the responsibility which rests upon me. There are hundreds of readers, all over the world, looking to me and my editorial assistants for constant advice and help. I see the needs of homes looking to the Journal month after month for that hope and that strength which I think can be given. I see the innumerable ways in which we can see powerful foes of success and happiness must be dealt with, and I see the innumerable ways in which we can help. I see the innumerable ways in which we can help. I see the innumerable ways in which we can see the innumerable ways in which we can be added, more instruction given and more truth revealed, for the only way to fight ignorance is to educate, and education is the greatest asset to an invading army that can create a storm of crime and all obstacles to success and happiness exist upon ignorance. TRUTH alone can destroy them.
INDICATIONS
OF
WAR?

Some time before the sailing of the fleet to the Pacific, the United States was visited by many Japanese officials, who exhibited quite an unusual interest in our navy, even going so far as to visit and inspect many of the ships now upon the Pacific Ocean.

Immediately following this, spies were captured in various American forts on the western coast, and in the East. These spies had drawings of the forts and other information which was clearly of value to Japan.

Lately one of the members at Washington stated that at the present time there are on American ground more trained Japanese soldiers than we have in our entire army.

Now our fleet approaches the region included in the "field of probable war," and our government is ordering the submarine and torpedo boats to sink our Lake submarine torpedo boats, and that the Pinkertons are searching for an employee of the Lake Boat Company, who has evidently sold his allegiance to this country and his honesty to some secret plotters.

Men do not become spies in their own country and do not sell their aid to foreign countries to the detriment of their own, for mere pastime. The risk is too great, and there must be an incentive as well as reward to foreign countries to the detriment of their own, for mere pastime.

The risk is too great, and there must be an incentive as well as reward to foreign countries to the detriment of their own, for mere pastime.

The American prohibition wave has evidently touched the shores of England, and is about to flood the nation and clean it of the saloon. A bill has been introduced in the House of Commons which is to reduce the number of saloons to one-third and will at the same time bring the liquor traffic under the direct control of the Government. In England nearly $1,200,000,000 is invested in the liquor business and great alarm is expressed by the breweries, whose stocks have fallen rapidly. Of course, as in America, the breweries are planning to defeat the law by unfair methods, and they propose to raise the price of beer so that the workingman will be aroused to oppose the Government and thereby prevent the passage of the bill.

JAPAN AT WAR WITH CHINA.

Japan has given her final demands on the Chinese, and states that if a satisfactory reply is not forthcoming in a reasonable time, "immediate action" will be taken. Japan demands the restoration of the seized steamship Tatsu and the payment of indemnity. China wants time to investigate, but Japan will not tolerate this. The ship was seized on February 7th, because Chinese officials claimed that she carried arms and ammunition to the Chinese revolutionists. Japan says the entire cargo was legally and regularly consigned to a merchant.

Japan will probably be slow to go to war with China at present. Perhaps her reason for this is more obvious than the reason for our desire to prepare for war in the time of peace.

That we are greatly improving and quickly advancing in all fields of art, science and invention is evident from a brief review of the daily papers. In them we find recorded the latest inventions and the startling plans of the makers of history.

The trend and the capacity of the ocean liners have constantly increased until we believe that the limit has been reached. Now we find Lewis Nixon predicting that the future ocean vessels will be a quarter-mile long, having trolley cars to take passengers to their staterooms, many of the decks, special vaudeville companies and opera troupes for the passengers' amusement, stock tickers to record the market quotations hourly from New York and London, large daily newspapers published on board, and to this may be added the wireless telephone to New York and London, the wireless telegraph to any point in the world, the wireless photographic system whereby pictures may be sent from various countries to the ship without the use of electrical wires, and so on.

The present inhabitants of the province, German, half Belgian, number in all, about three thousand. There will be a casino, which in Esperanto means friendship.

The recent fire at the Collinwood school, in which over 170 children perished, is but a typical example of the many attempts being made in New York and elsewhere to burn the school buildings. Happily, no other school has had the loss of the Collinwood school, but the attempts in themselves are serious. The reason for this attack upon public schools is not yet plain, but Prof. Harve, who conducts our astrological department, says that these attacks upon the schools were clearly indicated in his charts many months ago. He claims the cause to be due to the various aspects of the planets now influencing the United States. Here is one reason, right or wrong, which in the light of his other accurate predictions and explanations, is worthy of note.

**THE DIFFERENCE OF TWENTY-FIVE YEARS.**

Just twenty-five years ago the United States joined with the people of New York City in its jubilant celebration of the joining of Manhattan island with its nearest neighbor by a bridge. It was considered the most important event of the century. But this month—twenty-five years later—Manhattan island again celebrates while the nation looks with awe, at the joining of the island with New Jersey by underground subways. The Brooklyn Bridge, the event of 1883, has long since ceased to be a wonder, and now the McAdoo tunnels and tubes under the Hudson River are considered the height of engineering achievement. What shall we consider important twenty-five, fifty and a hundred years hence?

**LIKE A THIEF IN THE NIGHT.**

You may shoot at a thief, an assassin or an enemy and miss the mark; but the noise of the shot will warn him of his danger and at the same time attract the attention of those within hearing distance who will aid in the capture. This is possible with the common gunshot and ammunition, but not so with the new smokeless, noiseless gun. The crack shot and the sharpshooter have always been a source of terror, but with a noiseless gun he becomes like a thief in the night, who may shoot without attracting attention, without giving warning and without ever being known. Is this invention of noiseless guns something to be really proud of in these times of peace and brotherly love??

**OUT OF THE FRYING-PAN INTO THE FIRE.**

Since we are to have flying battleships as described and illustrated in our January issue, it is but one step further to use these ponderous flying machines as assistants to the floating battleships, and this is what has been suggested to Secretary Metcalfe at Washington. He has received plans whereby a captive balloon may be utilized to feed coal to the battleships by sliding the coal from the balloon through a chute to the bunkers on the vessel. If this would be possible, it would do away with foreign coaling stations—but is it possible? The Secretary does not seem to think so.

**COAL FROM THE SKY.**

Some believe that the coming election will cause a panic and for this reason they are continuing the tight grasp upon their money which began during the panic of last year. This is a serious mistake. Every indication shows that the financial conditions are improving and there is nothing to warrant the feeling of a stringency during the coming ten months. All manufacturing firms, corporations and individuals with large business affairs are loud in their statements that the money market is in good condition and that money is not tight. Then why do a few continue to cry “hard times” and by their actions cause the only exceptions to the rule of prosperity?

**WHAT IS A ROW-BOAT?**

In a suburb of New York there is to be established a country home for aged animals, where old horses, cats and dogs can be kept in comfort until they die, when suitable funeral caskets and tombstones will be in evidence. It is pleasant to see our animal friends given such attention, but when we consider the fact that there are thousands of poor, old human beings in New York State who can never hope to have the comforts of a country home, it seems that something is very wrong with our present ideas of compassion and charity.

**BEASTS AND HUMANS.**

Success will not come to you from reading, "talking, "wishing, "guessing, "hoping, "saying, "thinking, "believing. BUT IT WILL COME SURELY, IF YOU

FIRST—Subscribe to The Future Home Journal, SECOND—persevere it from cover to cover and—THINK! THIRD, study the instructive lessons and—ACT! FOURTH—join the different movements and—WORK! FIFTH—learn to depend upon it for advice!

**Come Into Our World And Be A Success!**

THAT no one can say you have not tried to better your position in life.

You will get a brand new education in the principles of success that are twenty years ahead of the times.
The Universal Church of the Future

The Monthly Sermon

By Brother Wilson David

The reason why the Universal Church will be a success in itself is because the principles laid down, as shown below, are everlasting. We feel the need of such a universal principle to minister to the many, many people who do not or cannot go to a church and those who have become dissatisfied with creed and dogma.

If the numerous letters, appeals and requests be taken as an indication of the sincerity of those who write them, then will this Universal Church become in time one of the greatest religious movements. The enthusiasm displayed by the men and women who are members and co-workers of this grand and glorious movement is remarkable to a wonderful degree. In fact, such cooperation and so much commendation because we are meeting this crying need of humanity have reached me, that I am spurred on to greater efforts in my desire to help all our Church members during the services for the month of May:

O merciful Father, in Thy Name we are gathered. Thou hast promised to be present wherever we are gathered in Thy Name, and Father, we ask at this time for Thy bountiful blessing and grace. Lead us to follow in Thy path with that true fellowship and love for man which Thou so divinely shaped for us. May we be a blessing to each other, that in worshipping the Deity by prayer to be used by all our Church members during the services for the month of May:

Membership to the Universal Church is Absolutely Free. Send for Application Blank, Inclosing 2 cent stamp, to the Secretary, 208 Fifth Ave., New York.

CHURCH SERVICE FOR MAY

The following is the monthly prayer for May as used by all our Church members during the services for the month of May:

Greet your neighbor kindly, overlook his faults, seek, magnify his virtues—and oh, my friend, this world which may even now be dull or dark to you will be bright, full of light and glory. One never loses by doing good.

Let us help our Brother, lift him up, make him strong again.

Surely the prayer of one—given because of doing good will be heard by our Father who is in Heaven and He will bless us.

The principle, the dominant theme, therefore, on which the Universal Church is building its foundation is Love—Love for God and man—Brotherhood with all people—Harmony in all things.

Brotherhood—Harmony—One and the same, for where Brotherhood exists there also does Harmony reign, and where true

The Monthly Sermon

By Brother Wilson David

LY THE UNIVERSAL RELIGION.

No matter what nationality, religion or creed all people will be able to come and partake of the beneficent influences and advantages which emanate from this movement.

Men and women of to-day feel that in worshipping the Deity by means of the various creeds narrows the view and lessens the scope of their comprehension of the one God, and that those who do not worship in the same way or perhaps in the same Church can never be saved.

Oh, the error of it—the grave error—simply because one does not think in the same way concerning the same things she is to be ostracised. Alas! for my erring brother and sister! How different the teachings of the Universal Church are when compared with the narrower ones of a creed.

True Religion—one Universal Religion is founded on Love.

Love of God for Man.

Love of Man for God.

Love of Man for Man.

The principles, so simple and therefore so strong and full of meaning are those on which the Universal Church will march to success—for to be successful we must live up to and faithfully carry out the principles; and we, you and I, my friend, are going to do this. Are we not? I know without your answer that in your heart you say and mean yes!

I realize the work there is to be done and my friend, I am doing it. Putting forth for your benefit the best that is in me. May God Almighty grant me the strength and power to carry on this work in days to come.

Have you ever thought what a smile will do—how easily it can be given to the suffering, and what it means to such a one? Cheer those about you—be warm and true in your affection—give a helping hand to the Brother or Sister who is not as fortunate as you are.

Smile, no matter in what trouble, through what trials you are going—smile and make those about you happy. Try this for a week or a day and you will find peace, rest and comfort.

A little piece of poetry comes to my mind that will be good to tell to you, my friend.

Do you not find in your own experience that the best way to overcome an evil is to replace it with a good? If you have not, try it and see how it works out. The process may be slow but is always a sure one.

Although this great work has just been brought into the world, its scope is widespread, reaching into the outermost parts of the world everywhere where God reigns with Christ as Saviour.

THERE IS BUT ONE GOD AND ONE RELIGION, NAME-
ONWARD, FORWARD TO SUCCESS SAYS EVERY MEMBER OF THE FUTURE MAGNETIC SUCCESS CLUB.

For six months we have been urging men and women everywhere to join our Success Club. Many joined. They're happy now. Once they doubted, now they believe in Mental Co-operation. Long before the publication of this paper many were induced to join, knowing of the good success obtained by the leaders of the Club through home gatherings and mental co-operation.

We cannot find words with which to express our desire to have every reader of this paper join and participate in the helpful vibrations. Every member makes the club much stronger, and we hope by the end of the year to have a gigantic army of workers who are sufficiently interested in their own future success, health and happiness to spare a few minutes each day in silent thought, helping and being helped by an invisible, powerful law that defies distance and turns desires into accomplishments and hopes into realities.

We want your help; you need ours. Why not join our Club now? Remember a member is nothing to be a member. Send in your name and address, requesting membership and we will send you rules for co-operation. Address The Club, care of The Future Home Journal.

MEMBER NO. 12a WRITES: Dear President:

Every day I feel the benefits from every day for twenty days, and feel much improved. I wish the whole month as it is possible, and many days during the month of May. Participate in this work of mental operation as many days during the month as it is possible, and you will soon feel the benefits of many minds working together for health, success and happiness.

MEMBER NO. 7a WRITES: I have followed the formula every day for six months, and feel much improved. I wish the whole town where I live would join in these mental efforts; it would, I believe, change conditions very much. You can depend upon my hearty cooperation.

Note.—It costs nothing to participate in these mental efforts. Subscribe to the Future Home Journal, and become a regular member; don't stay on the outside. All are welcome.

THE FUTURE HOME JOURNAL

The Department of Instruction in Mental Health

In Success, Personal Influence and Mental Development

Conducted by FREDERICK T. McIntyre, D. S. T.

Each month in this department will be found practical instruction in Personal Magnetism, Hypnotism, Personal Influence, Suggestive Therapeutics, Telepathy and Allied Phenomena. Also instruction in Rapid Character Reading, which seems to be the vogue in business, society and politics. Our readers who follow the advice given and who put the systems taught to a test, should soon become successful in every branch. Each student of these subjects is invited to write to our Journal, "Department of Instruction," and give his experiences and results. This department will state the necessity of our subscribers paying large fees to schools and institutions for book and correspondence courses of instruction, as each month we will publish not only the works and methods of Prof. McIntyre but the methods of other authorities. Be sure to save these lessons; urge your friends to subscribe so that they will come in for the benefits of obtaining a knowledge of these subjects.

PROGRESS OF HYPNOTISM

The twentieth century opens its blank pages ready to record the events and achievements. We have ceased to sing the praises of our progress in the past, and have turned our attention, with renewed energy, to new developments, and, when the cover closes upon the last page of this century, new voices will exclaim, "What a wonderful century of wonderful inventions!" Every year marks new developments in the great science, universally known as "Hypnotism," and the time is not far distant when he who does not understand it will be looked upon as a fool.

The superior mind force of man, which was looked upon, in the middle ages, as an intangible phenomenon, has been removed from the realms of the unknown, and is today intelligently analyzed and taught in all its varied operations to our leading institutions of learning. The pages of history of the past centuries are replete with instances of the dominating influence of man's personality. The wonders performed by Magi and Persians of old, have been reduced to an exact science, which is now used to attract the attention of natural agencies, but rather to scientific principles. The clergy of to-day arm themselves with a store of personal magnetism before going to the pulpit. The school teacher takes his rod and almost makes new the dilapidated schools. The X-Ray and other wonderful discoveries enable us to build up almost make new the dilapidated organs of the human system.

HOW TO HYPNOTIZE

First Learn to Concentrate.

Take a small pin, having a round head, in your right hand, and fix your gaze upon the pin-head. While gazing steadily at the pin point, count up to twenty-five by counting mentally. Then number backwards, mentally. Do this several times. Practice in this exercise will soon develop your powers of concentration. Do this for a few moments each day before

(Continued on page nine.)
woman walked with an unsteady step; she faltered, and wavered as she approached the corner. She was not young, neither child nor old; no doubt between forty and fifty years of age—but oh! how care, want, privation and disgrace had changed her. The features were not those of a young or old, it was impossible to tell her age.

Her features presented, besides the signs of want and possible crimes, an unmistakable stamp of inborn refinement. In the past, in her youth, she may have been the petted child of kind and loving parents; she may have been the victim of environment and education that would have resulted in respected womanhood; she may have been a maid of a fashionable and aristocratic home, with all the opportunities of becoming the wife of some respected man and the mother of children always loving and caring for her. But now, alas for our social conditions! she walks the streets of New York, unknown, unknown, and unloved perhaps.

Her clothing was torn, ragged and soiled. Her shoes were soles less; her hat, once worthy of the name, was now but part of a crown, and this woman had no shoe to wear. Her hair, tangled and uncombed, flew in all directions with the wind of the April morning. Men passed her by without looking at her—knowing instinctively that she was intoxicated, and men—some men—were, at this, forgetting that they are partly responsible for it. Women passed by this poor creature, stepping broadly to the side, that they might not touch her. Children laughed and joked with ridicule while a policeman, the officer of the law, merely shrugged his shoulders, and every step forward was a step nearer to the street, where she met those who would arrest her by, shrugging their shoulders, and make her to sleep in a municipal lodging house as filthy as the worst streets, or else sleep in some vacant lot. What a sight! A woman,—the first step on the downward road. 

What were her thoughts? What had she to look forward to for that day? Those who passed by her were neat and clean. They had a bed in the room; they had their own room and had dressed in the morning with good clothes, and had eaten a good and warm meal before setting upon their journey for the day. Had this woman upon whom they passed enjoyed such necessities? Had she a meal? No, for the woman of the streets must beg her meals from door to door, and she cannot begin this before the morning sun. She has only ragged, dirty and intoxicated, but hungry, starved perhaps, and was now, after making her toilet, about to beg a few cents for bread, and then—the night would come again and she would be either drunk, as a vagrant, or else sleep in the municipal lodging house as filthy as the worst streets, or else sleep in some vacant lot. Does this woman need money? Does this woman need anything more than the courtesy which God and humanity demand of us.

If our readers could have seen what occurred one morning in April on the busy streets of New York, they would have realized what a misfortune it is that the social systems of this country, and elsewhere, are wrong—seriously wrong.

It was near one of the elevated railway stations in the district of patrol. Oh, the thought of it. Here in the height of God's creation,—the inmost individual. The designs, illustrations and matter reproduced in The Future Home Journal are fully protected by copyright. Imitations will be prosecuted.

LIVING IN NEW YORK CITY.

When you buy a newspaper, try to pay for it in advance. The important subscription rates are those which must exceed the above subscription price. The recent changes in the Postal Laws render this addition cost necessary.

The present is the time to work for the future!

VOL. I NO. 1 MAY 1908

Editorial

If our readers could have seen what occurred one morning in April on the busy streets of New York, they would have realized what a misfortune it is that the social systems of this country, and elsewhere, are wrong—seriously wrong.

It was near one of the elevated railway stations in the district of our publishing office, and within the zone of a police station. The time was just before eight o’clock, just that time that men, women and children are hurrying to their work, to seek to get to the parks for the beautiful spring-morning air.

On the corner there was one of the thousands of chewing-gum slot machines with which New York is dotted like a map is dotted with stars. In this machine there was a mirror which usually reflects the smiling face of some child expecting something to eat, and a dirty and something to drink. The machine was new, the lever was pulled, and the machine turned out a picture and gave enough change to buy a piece of bread and a dirty and something to drink.

Slowly turning the corner, there came a woman. Ah! how we love to reverence the name of woman. What sweet thoughts come to our mind as we think of the mother, sister, mother, or wife, or perhaps a sister or sweetheart—but how sad, how cruel it is when we must associate the name of womankind with what is degraded, disgraced.
A Chat with Women
By BEATRICE LEWIS

This is to be your column each month, and I want you to take an interest in it. I would like to become acquainted with all the women and girl readers of this Journal, mother, wife or sister who inspired within their breast the nobleness which history records. The greatest musicians have played to women; the greatest artists have painted to women and the greatest writers have written to us. For is not woman the medium of divine inspiration?

For this reason and for many others, I am conducting this column especially for you, and the thought of the men who themselves have inspired within their breast the nobleness which history records. The greatest artists have painted to women; the greatest writers have written to us. For is not woman the medium of divine inspiration?
A MONTHLY HOME JOURNAL OF INSPIRATION, PROGRESS AND SUCCESS

COPYRIGHTED, 1908, BY THE FUTURE HOME PUBLISHING CO.
Read How This Journal Will Put You on the Right Road to Health, Wealth and Happiness

The object of The Future Home Journal is to instruct its patrons in those subjects that have a direct bearing upon the future success and happiness of every man, woman and child who make up the great army of readers and subscribers.

It will be the aim of the Journal to develop the mind and character of every member of our family of readers to that plane in life where success and prosperity will attend their every effort.

It will have instructive articles each month that will inspire enthusiasm and progress, and each reader will receive a complete schooling in the fine arts of personal influence and power, thus enabling each subscriber to learn at home, during his spare moments, all the principles of success that go to make prosperity and contentment.

Then again, there are departments of instruction conducted by able authorities, embracing branches of industry that are taught by correspondence schools, enabling our readers to school themselves in the departments to which they are best adapted. The Journal will be your home instructor.

It will deal with the subjects that have a vital bearing upon your future, both in this world and the next, and you certainly want to be fully posted on these matters, don't you? Don't you wish to be posted on the future possibilities of certain stocks, enterprises, inventions, diseases, processes of treatment, discoveries, laws, sciences, territories, investments, psychic phenomena, new conditions and things we haven't heard of and that will be attracting our attention to-morrow?

Don't you wish to get out of the "old rut" into newer and brighter fields of thought and effort? Don't you wish to improve your position in life, physically, socially and financially?

If you do, the road is open to you, practically without cost, as The Future Home Journal will only cost you ONE DOLLAR for a whole year, twelve months.

We want to start our first year with a record-breaking subscription list, and if you want some of the success that is to follow in the wake of every subscriber, send now, and your "little mite" will help to establish the greatest periodical of its kind the world has ever seen. You will always feel that you helped to make it possible.

If you will read the Journal for the next twelve months you cannot help but improve. It may be the means of solving the problems that have stood between you and your success in life.

Take a glance at some of the department pages which are shown in reduced plates. Decide to start on the right road to health, success, prosperity and happiness—TO-DAY! Send in your subscription NOW! Don't put it off until to-morrow, for to-morrow never comes.

WHAT HAS THE FUTURE?
IN STORE FOR US?

The above cut shows, in reduced form, a double-page article. Similar articles will be run from time to time in The Future Home Journal.

What science is able to point out in regard to the future, we will give to our readers, so that they may benefit from the knowledge and foresight of able scientists and authorities on Astrology, Astronomy, Solar Biology, and kindred sciences.

ON OTHER SIDE OF THIS CIRCULAR

THIS IS THE ONLY HOME JOURNAL THAT

GUARANTEES YOU SATISFACTION,
SUCCESS IN YOUR UNDERTAKINGS,
AND AN EDUCATION IN THE SCIENCES OF MENTAL AND PHYSICAL DEVELOPMENT—OR

REFUNDS YOUR DOLLAR

To miss these instructive articles will be like voluntarily shutting your eyes to opportunities that may be the means of lifting you out of the depths of sorrow and gloom into sunshine and happiness. Don’t miss them. Subscribe to our Journal and make up your mind now that you are going to quit the wishing and hoping habit; that you are going to begin to-day to learn and to progress; that you are going to do all that is in your power to develop to that plane in life where God intended you should be and that you will have the satisfaction of knowing that you did the best that was in you to help yourself and those around you to succeed.

You may search the world over—you may pay big prices for courses of instruction—you may buy the books of the most learned professors—but, if you can get more benefit for one dollar than you can get by subscribing to our Journal, for one year anywhere in this wide world, you will have to go to some unknown planet where the people are hundreds of years ahead of our time.

Then again, availing our editor-in-chief are men of scientific attainments, versed in those subjects that tend to enlighten and elevate the minds of those who wish to think for themselves. Practical business men, church workers, instructors in those branches of science, commerce, law, art and physics, who will devote their entire time to the instructing of our readers. In fact, we hope to make our Journal a home instructor that will be interesting from cover to cover. In the interest of those who depend upon you, and in the interest of your own personal welfare and future, we ask you, not only to send in your subscription now, but to ask your friends to do so also.

Send one dollar for a year’s subscription. Do it now, and you will be thankful you joined a fast-growing army of successful readers of The Future Home Journal.

LADIES—THERE WILL BE MANY INSTRUCTIVE ARTICLES FOR THE HOME. WOMEN AND GIRLS WILL LEARN THROUGH OUR JOURNAL HOW TO IMPROVE THEIR APPEARANCE AND POSITION.
OUR GUARANTY CONTRACT
TO REFUND YOUR DOLLAR AT THE END OF THE YEAR

We, the Undersigned, hereby Contract and Agree to refund the money paid by any subscriber if at the end of the year the subscriber can conscientiously state that he or she receive no benefit from the instructive articles in the various departments in THE FUTURE HOME JOURNAL.

It being understood that the subscriber is to read the JOURNAL each month, participate in the co-operative clubs and departments and to put the various systems and methods for the development of the mind, character and body to a practical test.

NOTICE—Subscribers living in Canada, foreign countries, or New York City, should send one dollar and twenty-four cents for one year's subscription; the additional twenty-four cents being charged to cover the extra cost in mailing the JOURNAL to these places. Remit by Post Office or Express Money Order, Registered Letter or Bank Draft. Kindly do not send postage stamps as a remittance for your subscription, as we receive so many that we cannot use postage stamps without discounting them. Address all correspondence and make remittance payable to

THE FUTURE HOME PUBLISHING CO., 208 FIFTH AVENUE, NEW YORK
MAKING RUSSIA A RE-
PUBLIC.

The making of a republic is not so difficult as may seem, for we are to believe what we are told by those who are now attempting to found The United States of Russia.

For many years Russia and its people have declared their intention of having a free country, and, though much blood has been shed, Russia is far from being a republic—unless we believe that the present attempts are to be as successful as they are earnest.

For one man to overthrow a monarch and establish a republic must seem impossible, especially when no plans are made for wars or lengthy arguments, but Ivan Norodny believes he can accomplish this with the aid of hundreds of Russians who favor the movement. He recognized the fact that the best way to conduct the agitation in Russia, and for this reason he has established his headquarters in the Holland House, in New York City.

After formulating what he calls a "powerful organization," General Norodny issued bonds to the value of $5,000,000 redeemable by "The United States of Russia." He is now trying to dispose of these bonds in this country in order to raise the funds necessary to his movement. No doubt thousands of Russians in this country will buy these bonds with the fond hope of some day redeeming them from a Russian republic. Whether General Norodny is successful in establishing a Republic or not, there is little doubt regarding the establishment of a free country, for the statesmen of Russia $5,000 have their plans printed in circular form and then distributed secretly throughout Russia. Even though various Russian newspapers are in favor of a Republic, it is impossible for them to print one word in favor of such a movement. For this reason Norodny and his organization must spread their plans by secret circulars and month to month explanations.

The circular issued by Norodny was sent to the Czar and all the rulers of the world, including President Roosevelt. It is worded as follows:

"Nicholas II., Czar of Russia:"

"We the undersigned representatives of the great Russian people, feel both the acts and laws which you as Sovereign of our country have wrongly imposed and legally enforced upon us.

"In behalf of international justice and natural right we recognize our holy right to renounce all allegiance to you, accuse before the nations of the world as a common criminal and proclaim a new kingdom and new sovereignty, which we call "The United States of Russia."

"Justice and humanity will be the witnesses to our following ac-
cessions and proclamations in this national and international tri-
butancy;

"Respectfully submitted in behalf of the Committee of the Russian Republican Administration."

"Ivan Norodny,"
"Chief Executive Commissioner."

"Dated Moscow and New York City, 1907."

In the lower left-hand corner of this document is the seal of The United States of Russia. Then follows a list of accessions and proclamations as referred to Among the crimes of which the Czar is accused are: Oppression and slavery, demoralizing the Russian people, forcing them to become drunkards, encouraging anarch- y, spreading terrible massacres, protecting criminals, permitting robbery, violat- ing their oath, breaking promises, demanding taxes without permission, illegal executions of women and children, violating the proclaimed freedom of the press, confiscating the funds of the peasant- parishes.

There are sixteen acclamations, and among these are two proclamations which in substance remedy the impositions of the Czar.

"This movement is constructive and will save Russia a Republic of twelve states.

In speaking of the movement, General Norodny said:

"This movement is constructive and will save Russia a Republic of thirteen states."

Continued on page 20
When I first outlined this monthly Journal, it was my intention to make it of practical value to the home. I wanted to interest the father, the mother, the husband and wife and the children. More than this, I wanted this Journal to give this want of this to me, and I think, has been accomplished in the present issue of The Future Home Journal, and I shall be glad to have my readers write me as to their opinions on this subject, for the Journal is to please you and you alone can tell whether my aims and desires are being carried out successfully.

Our Departments.

Just glance through the following pages and note the number of departments which have been instituted. I hope to keep these going from month to month, but this depends entirely upon my readers' response to them. There are many more I should like to establish. I want to cover every phase of home life if it is possible. Nothing of interest to the home shall be neglected if it is possible to make it a department in the Journal. Practical advice and help is what the Journal aims to give, and for this reason all departments must be of a practical nature. It has been suggested that we have a department devoted to lessons on the making of children's clothes. At the very start I had decided not to publish fashions nor to devote a department to fashions and clothes since there are many good magazines devoted to this one subject and I could not hope to do any better—probably not as good. However, a department devoting practical lessons on the making of children's clothes is different, and not at all like the vogue in other magazines. Its value of course depends entirely upon the mothers and wives who read our Journal, and from them I should like to have suggestions. Shall I establish such a department? Our artist suggested that we establish a department for the young girls and boys devoted to the making of pretty watercolor sketches and novelties, giving practical lessons in the art. This seemed to meet with the ideas of some of the departments of practical value and I shall have this matter prepared. My young readers tell me how they like the work and if I should continue the lessons, for considerable expense is attached to each lesson and if they are not appreciated I will devote the space to something of more value.

Writing to the Editor.

One of the most difficult tasks confronting an editor of a magazine is to induce the readers to write to the editor and tell their ideas. Some of my readers tell me they do not like its pages. Truly many will write and say: "I like your paper, and wish it success," etc., but while we appreciate the compliments and praise, it does not enable me to learn just which departments please and which do not. Praise spurs us on to do better work, but criticism enables the editor to improve his work.

I have often spoken of this matter to other publishers and editors and they all say the same thing. Each reader says: "What is the use of your comments and praise, it does not enable me to learn just which departments please and which do not. Praise spurs us on to do better work, but criticism enables the editor to improve his work."
The American prohibition wave has evidently touched the shores of England, and is about to flood the nation and clean it of the saloon. A bill has been introduced in the House of Commons which is to reduce the number of saloons to one-third and will at the same time bring the liquor traffic under the direct control of the Government. In England nearly $1,200,000,000 is invested in the liquor business and great alarm is expressed by the breweries, whose stocks have fallen rapidly. Of course, as in America, the breweries are planning to defeat the law by unfair methods, and they propose to raise the price of beer so that the workingman will be aroused to oppose the Government and thereby prevent the passage of the bill.

That we are greatly improving and quickly advancing in all fields of art, science and invention is evident from a brief review of the daily papers. In them we find recorded the latest inventions and the startling plans of the makers of history.

The size and the capacity of the ocean liners have constantly increased until we believed that the limit had been reached. Now we find Lewis Nixon predicting that the future ocean vessels will be a quarter-mile long, having trolley cars to take passengers to their state-rooms, moving sidewalks across the decks, special Vanderbilt companies and opera troupes for the passengers' amusement, stock tickets to record the market quotations hourly from New York and London, large daily newspapers published on board, and to this may be added the wireless telephone to New York and London, the wireless telegraph to any point in the world, the wireless photographic system whereby pictures may be sent from various countries to the ship without the use of electrical wires, and so on. Nothing would seem impossible and since Mr. Nixon is one of our largest American shipbuilders, he should know whereof he speaks.

Some time before the sailing of the fleet to the Pacific, the United States was visited by many Japanese officials, who exhibited quite an unusual interest in our navy, even going so far as to visit and inspect many of the ships now upon the Pacific Ocean.

Immediately following this, spies were captured in various American forts on the western coast, and in the East. These spies had drawings of the forts and other information which was clearly of value to Japan.

Lately one of the members at Washington stated that at the present time there are on American soil more trained Japanese soldiers than we have in our entire army.

Now our fleet approaches the region included in the "field of probable war," and our government is ordering the submarine and torpedo boats to get into practice and prepare for long journeys. On top of this to sink our Lake submarine torpedo boats, and that the Pinkertons are aiding to foreign countries to the detriment of their own, for mere pastime.

We find an employee of the firm making our torpedo boats trying to sell the models of our secret torpedo plans to a foreign nation.

The risk is too great, and there must be an incentive as well as reward with assurance of safety. Who is hiring or employing Japanese spies and our American workmen during this time of peace? Are these indications of war?

Now comes the startling information that attempts have been made to sink our Lake submarine torpedo boats, and that the Pinkertons are searching for an employee of the Lake Boat Company, who has evidently sold his allegiance to this country and his honesty to some secret plotters.

Men do not become spies in their own country and do not sell their aid to foreign countries to the detriment of their own, for mere pastime. The risk is too great, and there must be an incentive as well as reward with assurance of safety. Who is hiring or employing Japanese spies and our American workmen during this time of peace? Are these indications of war?

The present inhabitants of the province, half German, half Belgian, number in all, about three thousand. There will be a casino, an Esperanto College, a chamber for the protection of Esperantists' interests, an Esperanto theatre and newspaper. The government will be republican.

Kiam ni iros Amiejo?
SCHOOL FIRES.

The recent fire at the Collinwood school, in which over 170 children perished, is but a typical example of the many attempts being made in New York and elsewhere to burn the school buildings. Happily, no other school has had the loss of the Collinwood school, but the attempts in themselves are serious. The reason for these attacks upon public schools is not yet plain, but Prof. Harve, who conducts our astrological department, says that these attacks upon the schools were clearly indicated in his charts many months ago. He claims the cause to be due to the various aspects of the planets now influencing the United States. Here is one reason, right or wrong; which in the light of his other accurate predictions and explanations, is worthy of note.

THE DIFFERENCE OF TWENTY-FIVE YEARS.

Just twenty-five years ago the United States joined with the people of New York City in its jubilant celebration of the joining of Manhattan island with its nearest neighbor by a bridge. This was considered the most important event of the century. But this month—twenty-five years later—Manhattan island again celebrates while the nation looks with wonder and brotherly love?

You may shoot at a thief, an assassin or an enemy and miss the mark, but the noise of the shot will warn him of his danger and at the same time attract the attention of those within hearing distance who will aid in the capture. This is possible with the common gunshot and ammunition, but not so with the new smokeless, noiseless gun. The crack shot and the sharpshooter have always been a source of terror, but with a noiseless gun he becomes like a thief in the night, who may shoot without attracting attention, without giving warning and without ever being known. Is this invention of noiseless guns something to be proud of in these times of peace and brotherly love??

OUT OF THE FRYING-PAN INTO THE FIRE.

At last the notorious gas trust is to have legitimate and beneficial competition. Those of us who have longed for some illuminant which might be used as a cheap substitute for gas should be pleased to learn that such has been discovered. A St. Louis chemist has discovered an illuminant made from minerals that are twenty years ahead of the times. Experts agree as to its value. It will not only take the place of gas but will substitute electricity as a motive power. Thus we shall be rid of, perhaps (?), two trusts; but behold! the new illuminant is already contracted for with sole rights by the Steel Trust and the Welsbach Mantle Company, another trust, so the move only shoves us from the frying-pan into the fire.

BEASTS AND HUMANS.

FIR ED upon by a vessel. If this would be possible, it would do away with foreign coaling stations—but is it possible? The Secretary does not seem to think so.

FINANCIAL CONDITIONS.

A man was recently tried in a United States Court in Detroit because he had smuggled Chinese into this country. The Court passed upon the case as follows: The prisoner didn't bring the Chinese by land. According to law, the only way he could have smuggled them is in a vessel. The Court said that a row-boat is not a vessel, therefore the prisoner was released. If a row-boat is not a vessel, what is it? If smuggling is only recognized by the law, why is the law not right? Then why do a few continue to cry "hard times" and by their actions cause the only exceptions to the rule of prosperity?

In a suburb of New York there is to be established a country home for aged animals, where old horses, cats and dogs can be kept in comfort until they die, when suitable funeral caskets and tombstones will be in evidence. It is pleasant to see our animal friends given such attention, but when we consider the fact that there are thousands of poor, old human beings in New York State who can never hope to have the comforts of a country home, it seems that something is very wrong with our present ideas of compassion and charity.

Come Into Our World
And Be A Success!

Success will not come to you from Reading, Wishing, Talking, Guessing, Hoping.

BUT IT WILL COME SURELY, IF YOU

FIRST, Subscribe to The Future Home Journal, SECOND, peruse it from cover to cover and—THINK! THIRD, study the instructive lessons and—ACT! FOURTH, join the different movements and—WORK! FIFTH, learn to depend upon it for advice!

THEN

FIFTY-THREE

no one can say you have not tried to better your position in life. You will get a brand new education in the principles of success that are twenty years ahead of the times.
Greet your neighbor kindly, overlook his faults, and magnify his virtues—and oh, my friend, this world which may even now be dull or dark to you will be bright, full of light and glory. One never loses by doing good.

Let us help our Brother, lift him up, make him strong again.

Surely the members of the Universal Church have been given because of doing good will be heard by our Father who is in Heaven and He will bless us.

The principle, the dominant theme, on which the Universal Church is building its foundation is Love—Love for God and man—Brotherhood of love—Harmony in all things.

Brotherhood—Harmony—One and the same, for where Brotherhood exists there also does Harmony reign, and where true Continued on page 9

CHURCH SERVICE FOR MAY

The following is the monthly prayer to be used by all our Church members during the services for the month of May:

O meek, yet mighty, Thou Name are we gathered. Thou hast promised to be present wherever we are gathered in Thy Name, and Father, we ask at this time for Thy boundless blessing and grace. Lead us to follow in Thy path with that true fellowship and love for man which Thou hast given; may we ever be as Thine and others as Thine and ourselves, and may we, with Thy help, Thy love and Thy blessing, live a life of Goodness, Love, Purity, Fellowship and Reverence.

Bless all our members, give strength and health to the weak and peace and happiness to the wayfarer who is oppressed. Lead all the children to glory in their love for man and God.

Glory to God in the Highest! Amen.

The regular service of the Church should be held in the homes each Sunday of the month some time after noon and as given. Read the monthly sermon as above.

Sunday, the 3d. Repeat the above prayer; then read from the first chapter of the First Book of St. Peter, then read the sermon given on this page.

Sunday, the 10th. Repeat the above prayer, reading the second chapter of St. Peter, and reading the monthly sermon as above.

Sunday, the 17th. Repeat the above prayer, read the third chapter of St. Peter, and read the monthly sermon.

Sunday, the 24th. Repeat the above prayer, reading the fourth chapter of St. Peter and the monthly sermon.

Sunday, the 31st. Repeat the above prayer, reading the fifth chapter of St. Peter and the monthly sermon.

May Peace and Happiness reign supreme within thy home throughout the month! Amen.

The Universal Church of the Future

The Monthly Sermon

By Brother Wilson David

The reason why the Universal Church will be a success in itself is because the principles laid down, as shown below, are everlasting. We feel the need of such a universal principle to minister to the many, many people who do not or cannot go to a church and those who have become dissatisfied with creed and dogma.

If the numerous letters, appeals and requests be taken as an indication of the sincerity of those who write them, then will this Universal Church become a time one of the greatest religious movements. The enthusiasm displayed by the men and women who are members and co-workers of this grand and glorious movement is remarkable to a wonderful degree. In fact, such co-operation and so much commendation because we are meeting this crying need of humanity have reached me, that I am spurred on to greater efforts in my desire to reach your people. God indeed has revealed to me in this movement an opportunity to do good by writing and explaining his principles as divinely set forth in the Holy Scriptures.

We are building this Universal Church on the lines of the needs of humanity and I feel that the plan of action laid out, building as we are according to the inspirations of generosity and love that we are building on the right foundation.

Have you not found in your own experience that the best way to overcome an evil is to replace it with a good? If you have not, try it and see how it works out. The process may be slow but is always a sure one.

Although this great work has just been brought into the world, its scope is widespread, reaching into the outermost parts of the world everywhere where God reigns with Christ as Saviour.

There is but one God and one religion, namely the universal religion. No matter what nationality, religion or creed all people will be able to come and partake of the beneficent influences and advantages which emanate from this movement.

Men and women of to-day feel that in worshipping the Deity by means of the various creeds narrows the view and lessens the scope of their comprehension of the one God, and that those who do not worship in the same way or perhaps in the same Church can never be saved.

Oh, the error of it—the grave error—simply because one does not think in the same way concerning the same things is to be ostracized. Alas for my erring brother and sister! How different the teachings of the Universal Church are when compared with the narrowness of a creed.

The principles, so simple and therefore so strong and full of meaning are those on which the Universal Church will march to success—for to be successful we must live up to and faithfully carry out the principles; and we, you and I, my friend, are going to do this. Are we not? I know without your answer that in your heart you say and mean yes!

I realize the work there is to be done and my friend, I am doing it. Putting forth for your benefit the best that is in me. May God Almighty grant me the strength and power to carry on this work in days to come.

Have you ever thought what a smile will do—how easily it can be given to the suffering, and what it means to such a one? Cheer those about you—be warm and true in your affections—give a helping hand to the Brother or Sister who is not as fortunate as you are.

Smile, no matter in what trouble, through what trials you are going—smile and make those about you happy. Try this for a week or a day and you will find peace, rest and comfort.

A little piece of poetry comes to my mind that will be good to tell to you, my friend.

A smile—a word, a touch
Yet either may win—
A soul from sin
Or smooth the way to Heaven.

A smile may lighten the failing heart
A word may soften pain's keenest dart
A touch may lead us from sin apart
How easily either is given.

Do not only think happiness and love, but live them out in every
Be in harmony with the things and conditions around you, and though they often be disagreeable and maybe are hard to bear—so conduct and carry yourself that you will be master of the situation at all times.

Let us be wealthy—wealthy not of world's goods alone but wealthy because of a humble and contrite spirit, wealthy because of love of God and fellowman predominate and makes us brothers in the best and truest sense of the word.

Brothers! Oh, precious name—brothers! Oh, name divine! when we shall be in harmony with men around us, in harmony with conditions that encompass us—in harmony with the universe—in harmony with God!

Those who truly love God and can from their heart say they love their neighbor as they love themselves will surely be blessed by the most High and attain the kingdom of God!
ONWARD, FORWARD TO SUCCESS SAYS EVERY MEMBER OF THE FUTURE MAGNETIC SUCCESS CLUB.

For six months we have been urging men and women everywhere to join our Success Club. Many joined. They're happy now. Once they doubted, now they believe in Mental Co-operation. Long before the publication of this paper many mental members have written expressing the great success obtained by the leaders of the Club through home gatherings and mental co-operation.

Reco-operating with the many minds of every reader of this paper join and participate in the helpful vibrations. Everyone makes the club that much stronger, and we hope by the end of the year to have a gigantic army of workers who are sufficiently interested in their own future success, health and happiness to spare a few minutes each day in silent thought, helping and being helped by an invisible, powerful law that defies distance and turns desires into accomplishments and all our problems.

We want your help; you need ours. Why not join our Club now?

Remember, it costs nothing to be a member. Send in your name and address, requesting membership and we will send you rules for co-operation. Address The Club, care of The Future Home Journal.

PROGRESS OF HYPNOTISM

The twentieth century opens its blank pages ready to record new events and achievements. We have come, since the publication of this paper, much progress in the past, and have turned our attention, with renewed energy, to new developments, and, when the covers close upon the last page of this century, new voices will be telling of startling discoveries and wonderful inventions.

Every year marks new developments in the great science, universally known as "Hypnotism," and the time is not far distant when even those who do not understand it will be relegated to the ranks of the unsuccessful.

The superior mind force of man, which was looked upon, in the middle ages, as an intangible phenomenon, has been removed from the realms of the unknown, and is to-day intelligently analyzed and taught in all its various operations to our leading institutions of learning.

The pages of history of the past century are rife with the names of the dominating influence of man's personality. The wonders performed by the Indian fakirs, the Magi and Persians of old, have been reduced to an exact science, performed by the Indian fakirs, the Magi and Persians of old. The school teacher takes his rod and almost make new the dilapidated organs of the human system.

To-day the great question in regard to the science of Hypnotism is not one concerning its rights of acceptance as a true science, but rather a question of "How can I get results in the easiest and most sure way?""Take a small pin, having a round head, and fix your gaze upon the pin-head. While gazing steadily, put the pin into a rubber or a piece of waterproof paper. You will find the pin-head invisible, mentally, and almost make new the dilapidated organs of the human system.

HOW TO HYPNOTIZE.

Take a small pin, having a round head, and fix your gaze upon the pin-head. While gazing steadily, put the pin into a rubber or a piece of waterproof paper. You will find the pin-head invisible, mentally, and almost make new the dilapidated organs of the human system.

(Continued on page nine.)
The woman walked with an unsteady step; she faltered, and wavered as she approached the corner. She was tall, thin, and wore a hat of straw; no doubt, between forty and fifty years of age—but oh! how changed from the petted child of kind and loving parents; she may have had the environment and education that would make her a criminal and must for ever live outside of the pale of respectability. She stood despised, rejected of men, begging her meals from door to door, and help. She then tries to find employment, but being a woman, she is not so much like the regions of the North Pole will be able to live here then. A nation of millions, where the vast individual fortunes, where the result of our wonderful advanced thought,—here, mind you, where the immigrants and our advanced thought,—here, mind you, where the conditions which God and Human-It was near one of the elevated railway stations in the district of our publishing office, and within the city limits. The time was a little past eight, just the time that men, women and children are hurrying to work, to school and home for the beautiful spring-morning air. The corner there was one of the thousands of churning-gum slot machines with which New York is dotted like a map is dotted with houses. In this machine there was a mirror which usually reflects the smiling face of some child exchanging a penny for the gum or piece of chocolate. These mirrors are for decorative purposes, and it is seldom that they are called upon to reflect anything more than the cheerful youthful, happy life. But this morning the mirror was destined to receive and reflect a picture and enough and cruel enough to rend to pieces its brittle form. Slowly turning the corner, there came a woman. Ah! how we love to reverence the name of woman. What were her thoughts? What was she thinking? Slowly, as we picture a mother, some mother, or wife, or perhaps a sister or sweetheart. Slowly, as we look at a woman, how cruel it is when we must associate with the name of woman all that is degraded, disgraced. This

A Chat with Women
By BEATRICE LEWIS

This is to be your column each month, and I want you to take an interest in it. I would like to become acquainted with all the women and girl readers of this Journal through this department, so that I might help and aid them. I shall from time to time write upon such subjects as will help and inspire my sisters, and in addition will gladly answer on this page such questions as my sisters wish to ask of me.

In these days of commercialism and strenuous activities in science, art, literature and business, the women and the girls with their many interests are overlooked. The average magazine devotes its space to the interests of the family and to benefiting the collective members of the family and to benefiting the collective members of the family and to benefiting the collective members of the family and to benefiting the collective members of the family. The women and the girls with their many interests are overlooked.

If you wish to put a person to sleep by suggestion, you know that you will have no effect upon him if you are not thinking of putting him to sleep. If you wish to put a person to sleep by suggestion, you know that you will have no effect upon him if you are not thinking of putting him to sleep. If you wish to put a person to sleep by suggestion, you know that you will have no effect upon him if you are not thinking of putting him to sleep. If you wish to put a person to sleep by suggestion, you know that you will have no effect upon him if you are not thinking of putting him to sleep.

The whole fact of the matter is, sisters, the men do not need external temptation from women. I believe that even if there were no women living the men would find a way to do wrong. This is the egotistical opinion of the men who deny their ability to do wrong without external inspiration. But the truth is this: all women have inspired some man to do good, while discouraging his waywardness. The merchant who boasts of his success must admit that he would not be what he is today but for the good influence of women and the girls with their many interests are overlooked.

Since the creation of the world woman has been credited with inspiring men to do wrong. This is the egotistical opinion of the men who deny their ability to do wrong without external inspiration. But the truth is this: all women have inspired some man to do good, while discouraging his waywardness. The merchant who boasts of his success must admit that he would not be what he is today but for the good influence of women and the girls with their many interests are overlooked.

The Importance of Curtains

The curtains of a room are the completing feature; the one touch necessary to make of the room, whether it be the luxurious reception hall of the mansion or the homely living room of the suburban cottage, an abode of rest and refinement. It is true, however, that many an otherwise charming interior decoration oftentimes gives the housewife the least concern, and many an otherwise charming interior is marred by stiff, ungraceful, inharmonious or cheap hangings.

The range of attractive fabrics for this essential part of the home furnishings is practically limitless, and it is now possible to have as attractive interiors when economy is an important factor as it is if the expense of decoration has not to be considered. The old-fashioned lace curtain which held its position so tenaciously as part and parcel of the decoration has not been cast aside, but is an important factor as it is if properly selected. Curtains and draperies are of the characteristics of the room and it is now possible to have an artistic little nest for any season brought with it a new until they are threadbare.

There is one feature in regard to which the one thing to be avoided must, however, be of either the silk or wash material will make a small room seem smaller and this must be remembered. The most desirable feature is to have the library or dining room seem spacious, it is always better to allow light and be drawn taut at the top and bottom.

The rooms of a great many of the modern houses have already been festooned in the style of the closed doors, thus giving an appearance of space which the latter will not do, and this is a fact. The architec­tures of the archway must conform to the interiors of both rooms which they separate. The day of the heavy velour and chenille por­tiere has passed and in their place nothing gives such an air of elegance as hangings of raw silk. It is not expensive, comes in the most exquisite colorings, has all of the richness of the heavier curtain and also of course, stiffness of texture. If the architec­ture of hangings for hangings of this material may be had by running a long straight fold down the sides and the bottom on one side—that is, on the side turned into one room—and applying a spray of flowers through the length of the fold. This allows of keeping in harmony with whatever may be the distinct decorative effect of each room. Fabric is made in selecting door hangings and portieres of dif­ferent colors. It is always wise to have a curtail of the same color or, although they may not necessarily be of the same material. For instance, the parlor, reception hall or library may be decorated with the silk hangings in a dull blue or reseda shade of green, or old rose, and the same color may be carried out in denim, barlap or cretonne for the dining room. But there is much done to the simple wash fabrics are effective but it is all too often, when the wall coverings are of the deeper tones of color, is lost sight of and only the gen­eral restfulness of the whole effect remains.

For parlor or living room win­dows, if an inner, or glass cur­tain, is desirable, it may hang free from the window frame at the top to the bottom of the sash, and, adapted over the casing of the window, a short festoon of raw silk, with either a silk ball edging or a border of narrow val­ve-like tassels. This silk may be in any of the light shades which is harmonious with the wall decor­ations. Rose pink or old rose may be used with the dull greens, gray or buff; while, should the wall coverings be of the deeper tones of red, a shade exactly matching the ground of the paper would be prefer­able for small windows, do not use figured draperies, for no mat­ter how artistic the work, they have a bunchy appearance. If the door has not any separate panel, the architec­ture may be had, with the exception that the silk over cur­tains covers the entire area of the covering the thin curtain beneath, or it may be separated for about five or six inches in the centre to allow of it being drawn taut at the top and bottom.

An Idea That Cost Millions

By B. GORDON PALMER

Have you ever stopped to think what proportions an idea can grow to? Mr. Andrew McAdoo, one of these ideas, caused the works of man and realized how one little idea, carefully taken care of and nurtured, grows to such enormous proportions that it actually overpowers the mind in its bigness?

Everything done in this world is the result of the evolution of an idea. An idea has been growing very humbly and slowly growing each day until it is consumed in a great work. Have you ever pondered over the fact that an idea is absolutely irresistible?

An idea, a thought, is to day accepted by psychologists as being a mere mental phenomenon. But this mental phenomenon, this thought, this idea, has changed the destiny of nations; an idea has removed mountains and has turned the course of rivers from their beds; an idea has stemmed the tides of oceans, and this very day uniting the wild Atlantic with the vast but placid Pacific.

In beginning anything one must first have an idea. The idea is the careful thought and persistence it must be worked out.

The above illustration, representing a cross section of the street and underground tunnel system, was conceived by Mr. McAdoo.

The tunnel is a result of an idea. The idea has been the driving force behind the tunnel. The idea has been the impetus to the tunnel. The idea has been the impetus to the tunnel.

The McAdoo tunnels under the Hudson river, connecting New Jersey with New York City, are the result of an idea. Years ago this idea was conceived—the tunnel was started—but alas, hope was lost and the idea was allowed to be forgotten, but it was not dead.

It remained for a young Southern gentleman to resurrect this idea and carry it out to completion.

After struggling for nine years to get a foothold in the practice of law, in New York, Mr. McAdoo turned his attention to the idea of completing the old Hanks tunnel, in which $4,000,000 had already been sunk.

The lawyer knew all the difficulties of the undertaking, the enormous capital required, and the dangers involved.

On the other hand, his analytical mind comprehended all that the tunnel would mean to the people of New Jersey, and to the tens of thousands of passengers who were daily compelled to cross the river by means of the ferries.

In the vision of the future he saw the Jersey hills and farm lands dotted with the magnificent country homes of New York business men and farmers, all the way to the city of New York.

He knew that the present population of New Jersey and the present passenger traffic over the river would easily support the tunnel and pay a fair percentage upon the investment. He also knew that the completion of the tunnel would mean a vast increase in the suburban population of New Jersey.

The more Mr. McAdoo thought about it, the more feasible the scheme appeared. He interviewed many financiers, but they looked upon the undertaking as visionary.

"No use in trying it," they said, "you will only lose your money and the money of your backers."

But Mr. McAdoo was not to be dissuaded. He had pluck and resolution and a wonderful amount of energy. He drove straight ahead in his characteristic fashion, and it was not long before he had formed a syndicate, and with Charles M. Jacobs as chief engineer, was ready to go ahead with the work.

Mr. Jacobs was the man of all the others for the task. He was able and willling and filled with enthusiasm and energy that characterized Mr. McAdoo.

Many years previously, Mr. Jacobs had been the first man to stick his head through the old gas tunnel under the East River. "I will also be the first to poke my head through the Hudson River tunnel," he said to Mr. McAdoo, with a laugh. This was before he had completed his work on the plan. He made good his word when the boring was completed last year.

After organizing the syndicate and acquiring the right of the old tunnel company, traffic agreements were made with the North Jersey Street Railway Company, as well as the Pennsylvania, Lackawanna and Erie roads.

Work was recommenced on the tunnel in 1902. At that time 1,550 feet had been bored from the Jersey side and 500 from the New York side, leaving 3,350 feet yet to bore.

When Mr. Jacobs took hold of the tunnel, he worked straight ahead in his characteristic fashion, and it was not long before he had formed a syndicate, and with Charles M. Jacobs as chief engineer, was ready to go ahead with the work.

But Mr. McAdoo was not to be dissuaded. He had pluck and resolution and a wonderful amount of energy. He drove straight ahead in his characteristic fashion, and it was not long before he had formed a syndicate, and with Charles M. Jacobs as chief engineer, was ready to go ahead with the work.

The shield consisted of a circular shell a little larger than the outside diameter of the finished tunnels. In the diaphragm, openings were made through which the excavated material was passed.

As the work progressed the shield was forced forward by means of hydraulic rams arranged near the shield. The total pressure of these rams was 2,500 tons, or about ten tons to the square foot of the exposed face.

The work was slow and tedious by reason of the compressed air, the "sand hogs" at times working under a pressure of eighty-eight pounds to the square inch.

But the compressed air was a necessity in order to prevent an inrush of water over the face of the shield. At times the water level was within twelve feet of the top of the advancing shield.

It was impossible for the men to pass directly from the ordinary air pressure to or from their work, and it was found necessary to make three changes of air pressure, three different air pressures before the men could accustom themselves to the extraordinary requirements of the work behind the shield.

The pressure in the first chamber was slightly above the normal, fifteen pounds to the square inch. In the second it was twenty-two or twenty-three pounds. In the third it ranged from thirty to thirty-eight pounds and the air pressure was generally fatal.

Any defect of physical organization would defeat a man from through which the work. Consequently all those who were accepted as laborers had to undergo a rigorous examination. Tobacco and liquor were absolutely forbidden.

The men were especially cautioned against leaving the shield chamber too suddenly. Paralysis sometimes followed a too hasty exit. This malady is called the "hicks" on account of the severe cramps which beset the victim in strange attitudes. To cure the laborers of this malady, Engineer Jacobs contrived a huge outdoor chamber, built like a big rollar, where victims of the hicks were taken and subjected to the air pressure under which they were accustomed to work.

The tunnel tubes are twelve feet high and ten feet wide. The entire cost of the system when completed will be about $10,000,000.

The system, when complete, will comprise eighteen miles of underground and under-river track.

Every tube is constructed either of concrete or metal, so that, like the cars and the tunnel, there is no possibility of fire.

Throughout the tunnel the ventilation is said to be perfect. In the tubes under the river the atmosphere is always cool and delightful, as each train going through acts as a piston, forcing the air ahead of it and drawing in a fresh supply from the surface as it proceeds.

This was carried out by faithfulness to an idea, by believing in it, one of the greatest works either of ancient or modern times.

If you, my reader, have an idea, stick to it. Live up to your idea, and do it. Persevere, though defeat stares you in the face. Forge ahead with your idea, and your hard work and hardships will fall away when boldly attacked.

Make up your mind to do something before you go ahead and do it. Work until you have accomplished what you set out to do. In all great schemes of work, though many times discouraged had faith and strength enough to carry out his idea.
Makings of Future History

A brief review of what is being done in all parts of the world at the present time for the future benefit of mankind.

RELIGION.

Miss Phoebe Cousens, formerly a mother of All Saint's Episcopal Church, (known as "Rockefeller's Church"), recently stated that: "It is time that we had a Bible in our own language and not in the language of the hundred years ago."

The Rev. R. J. Campbell, pastor of the Temple Church, London, is coming to America to find a new religious sect and church. He proposes a new theology, the central idea of which is the denial of the divine origin of Christ whom he regards as merely a social reformer.

The Reverend Samuel Fallows, of Chicago, said recently in the Chicago Tribune: "The physician sees a patient in his office and prescribes for his bodily needs, but does his consultation room always afford the necessary atmosphere or has he, busy as he is, the time to follow out the additional work of mental and spiritual uplifting required in many cases? This is just where the Church should proffer its peculiar facilities so long neglected.

HYPNOTISM.

Dr. Frederick Van Eeden, of Holland, gave a lecture recently in Holland, gave a lecture recently in Holland and declared that after practicing many years with drugs, that hypnotism and mental suggestion were more effective. Dr. Van Eeden is a well-known sociologist and psychologist, and his medical practice entirely in favor of hypnotism.

Dr. Margaret Cross Holland has recently arrived in New York City from India, with three high caste bazaars and 100,000 followers. She has all the well-known psychologists and scientists meet at some large hall where she will have those Hindis adopt persons their many weird and occult feats for the benefit of psychological research.

Mrs. J. H. Higgins, the pretty wife of a well-known New York physician, recently opened a bureau for the free treatment of the poor with hypnotism. Her work has made such an impression upon Dr. Leonard Parks, of the fashionable Calvary Church of New York, that he has consented to have her use the parish house as a free clinic.

A young girl, it is reported by the medical records, who lived near the right line and will do much to the medical world always afford the necessary vibrations and register them. A vibration and now comes Theodore Bendix, a well-known New York musician who says that if he could find even a magnetic message from his corresponding vibration he could wreck any of the large sky-scraper buildings in a few moments. The children when weighed and read, and the effects of how to find the various vibrations of everything we see, hear and feel, and should we find the proper corresponding vibration, the world may be wrecked more effectively than by dynamite or earthquakes.

MIND READING AND TELEPATHY.

Telepathy can be used to train and educate children, according to the noted doctor and scientist, Van Eeden, who says that if parents would use mind-reading at bedtime they would have discovered their children's thoughts and be enabled to train and suggest to them accordingly.

That thought produces magnetic vibrations of various qualities, which in turn may produce similar vibrations upon another mind. Van Eeden thereby conveys a message, which seems to be proven by the invention of instruments which measure these vibrations and register them physically, as well as read his thoughts.

SPIRITUALISM.

Once again the well-known psyche smidium, Mrs. Piper of Boston, will go to England to receive further investigation at the hands of Mr. Oliver Lodge and other eminent scientists. Mrs. Piper was under similar investigation in the United States and found her and abroad by various social scientists, and to date no other investigation has ever been made of the subject. This book will reveal the subject's weak spots, mentally and physically, as well as read his thoughts.

OCCULT BOOKS.

"We have a complete supply on hand. Tell us what you want and we will send you the prices. Some slightly used books at very low prices. Course of Instruction from various schools and institutions. Future Home Publishing Co., 208 Fifth Avenue, N. Y."

OSTEOPATHY.

Home and Study Course by eminent Osteopath and M. D. thorough and complete, with latest developments of this progressive science. Instructive equivalent of college teaching. Send for full description and sample pages. Special terms to physicians. Dept. G., Metropoli
tan College of Osteopathy, Chicago, Ill.

Review of Books

The Power of Concentration, by Ernest Mills. This book needs no other endorsement than that which the author's name gives it. His experiences are so strikingly of great value, but this book will prove even more so. "The Future Home Bookshop, 208 Fifth avenue, New York. Use Postal Money Orders—anywhere safer.
The Garden of Eden in Ohio?

By Mrs. E. M. Atter.

(Written for The Future Home Journal.)

Did America people the world? This is a question which has led to scientific investigation and which seems to be answered in the affirmative.

Eleven years ago Morris K. Jesup, whose recent death gives prominence to his work, organized the Jesup North Pacific Expedition of the American Museum of Natural History. At that time Mr. Jesup was president of the American Museum, and it was his intention to make this expedition as thorough in scope as possible. Seven years were spent in minute study of the aboriginal tribes of America and Siberia. Mr. Jesup volunteered to pay the entire expenses of such an expedition and the results are now to be published in twenty volumes in Holland, written in French.

At the very start it was Mr. Jesup's intention to scientifically prove the location of the beginning of the human race. He lived to have the assurance from his assistants that the human race had its beginning in America instead of Asia.

Recently there has appeared in the Columbus (Ohio) Citizen an article to the effect that the fertile valley of Ohio nourished the first man race. The Ohio Society has a territory in Warren County, Ohio, near the Miami River known geologically as The Lower Silurian Age. It is almost a compact mass of fossil of the lower forms of life. Thousands of specimens have been secured and sent to museums.

There is a territory in Warren County, Ohio, near the Miami River known geologically as The Lower Silurian Age. It is almost a compact mass of fossil of the lower forms of life. Thousands of specimens have been secured and sent to museums.

Eight miles east of Lebanon (the county seat of Warren County) a fort called Fort Ancient, built by mound-builders. There was at one time, but now demolished, the pit of it, a fort, a circle and a square, contingent in this locality, which was supposed to have been a worshiping place for the ancient tribes of earth. The city of Circleville is the site upon the warships in the harbors of the United States.
How to Become a Builder

Complete Course and Seven Books Free

The construction of country homes, bungalows, barns, stables and other small buildings, offers the country lad, and the city one, too, a very profitable field of labor. Building is not only a trade, but a profession, and one that is not confined as is carpentry, which of course is but one branch of building.

The man who can build artistic homes in the country, who can plan them and then contract to build and complete them, is never out of employment. He is considered in every locality as a man most needed and his services are always well paid for and he can live an independent life.

In most of our country towns and villages carpenters can be found without little difficulty, but a builder, a man who can plan, construct and complete a modern home or a practical modern barn, is as hard to be found as a man who can plan and construct an undergound railway. There is no reason for this except that the country, the wide stretch of towns and the suburbs of the large cities; in fact, there are more districts of our country nearer and to and from his country home. This means, of course, that the man who plans the building can be relied upon to carry out his plans, which is not always the case when a builder works from other’s plans.

Any man who can read and write, who can plan a home or a practical modern barn, is as hard to be found as a man who can plan and construct an underground railway. There is no reason for this except that the country, the wide stretch of towns and the suburbs of the large cities; in fact, there are more districts of our country nearer and to and from his country home. This means, of course, that the man who plans the building can be relied upon to carry out his plans, which is not always the case when a builder works from other’s plans.

A Railroad Mystery

Written for The Future Home Journal
By J. A. F. HOLMES

"Don't tell me, Franklin, that a train, or rather, an engine and baggage car, left the station in the city yesterday. If you do, I shall leave the city as if by magic and never return. I believe you have been engaged in a task of work."

Franklin thought for a moment, then said: "The train left the station at 1:45 and ran until 3:15, when it arrived at the outskirts of the town."

"Thank you, Franklin. I shall be in need of your services today."

Franklin left the office of the manager of the J. C. R. R. in the morning. He was promised a ten-cent bill for his services to the buying agent rather boastfully, "that the J. C. R. R., as usual, ran its transfer train contenting the money of the express companies and the R. F. from New York to Warren."

The manager of the J. C. R. R. was a small town midway between New York and Philadelphia. At this station the trains always had to stop to change three passenger cars and one baggage car. It was 11.45 as usual. It was seen passing Tower 14, which is within four miles of the city. The train then left with the baggage cars.

Two days later, while the manager and his assistants were making the boasted investigation, they received news that the second disappearance had taken place and this time the engine and baggage car had disappeared.

"I know where your cars are. They were left at the junction of the road and the branch line."

"Nevertheless, Mr. Davis, you may go off the tracks upon the ground or,—or, well,—I'll be hanged, if that isn't the most simple solution on earth. Mr. Davis, I don't believe you have a search for the wagon and men, but, where are the cars. This is also important. They certainly did not go up in the air; they did not go off the tracks upon the ground or we would find the tracks and,—or, perhaps the tracks crossed the railroad."

"It's clear to me," said the manager, rather boastfully, "that the men had the missing cars here and took them from them the money in wagons."

"That may be,—in fact I know it is true," replied Franklin, breaking into a smile. "What happens to the engine and baggage car?"

"Well, you go at the job then. Mr. Davis, the cars either went into the air, over the ground or,—or, well,—I'll be hanged, if that isn't the most simple solution on earth. Mr. Davis, I don't believe you have a search for the wagon and men, but, where are the cars. This is also important. They certainly did not go up in the air; they did not go off the tracks upon the ground or we would find the tracks and,—or, perhaps the tracks crossed the railroad."

"Are you crazy, man? How could the cars go off in the air? I fear for your reason. We had better return and secure more practical men. Yes, by all means, let us return at once."

"Nevertheless, Mr. Davis, you will find your cars at the bottom of the canal. They are there for they dropped from the air into the water. Secure your wrecking cars and lift them upon the rails and you will find your cars none the worse for their drenching."

It was two days later when the young detective and his assistants reported finding five men in a farm house with all the missing money.

"Now, tell me, Franklin, as you promised, which of those cars did the men get into the canal?"

"Well, at first I simply came to that conclusion by reasoning. If they did not go up in the air, they must have gone on the tracks or on the ground, or,—in the water. The tracks at all there were three places for them to go to. It all depended upon which of the cars the men got into."

"Continued on page 10."
A Complete Course of Lessons On A New Science Which Explains Life, Death and all Spiritual Phenomena

Our science is the only knowledge we have of life, death and all its mysteries. This is the first time any magazine has attempted to publish in its pages such an exhaustive work as this and we are anxious to have our readers thoroughly understand it. This will lead us to the conclusion that you will have the entire science of "The New Ontology," which will cover many pages.

Our science completely covers the subject of Hypnotism, Telepathy, Psychology, Biology, Astrology, Cosmology, Ontology, Psychical and Spiritual Healing, Personal Magnetism, Clairvoyance, Disease, Health, Happiness and Success. Methods and complete rules are given for producing these effects, which are purely matter of fact and may be obtained and maintained.

The "New Ontology," is, without a doubt, the most complete and wonderful science ever written, and was prepared during a period of three years, while Mr. Thurston was systematically in connection with his work before The New York Institute for Psychical Research. This science is not published in book form and can only be learned through the series published in this magazine.

NEW ONTOLOGY.

Lesson No. Three.

Let me give another illustration of this point. If we place our hands upon a piece of glass, we feel something smooth and hard. This is about the only impression we have. Were our eyes closed, we could hardly tell whether it was glass, polished wood or polished marble. But, seeing, we have another additional impression which tells us that the object under our hand is hard, and looks like what we have been taught is "glass." Therefore our reasoning tells us it is "glass." But, suppose all our life we had been taught what is known as "glass" is really iron, would we do otherwise than interpret what we see and feel as being "iron"?

The point I wish to impress upon you fully is the reasoning of what we see, hear, feel, and smell, depends upon our education, belief and reasoning.

Can you appreciate the fact that our five senses are very unreliable? Can you understand that we cannot depend upon the five senses? They are five senses? They make various impressions upon our consciousness, but the interpretation of these impressions depends entirely upon our reasoning, and as our reasoning depends upon our education and beliefs, I have an eighth proposition to make which is as follows: THE RELIABILITY OF OUR FIVE SENSES DEPENDS UPON OUR BELIEFS.

Now, on the other hand, the reasoning of the Subjective Mind is limited. It can reason only deductively. At least it has never given any evidence of reasoning other than deductively, and has never reasoned inductively.

This difference in reasoning between the two minds should be carefully noted, its entire dependence upon us.

The next step in my instruction is the study of the susceptibility of the two minds. This part of the subject needs careful attention.

The subjective mind will appreciate a suggestion, reason over it carefully in all the methods possible with the objective mind, and if it seems reasonable and acceptable, it will carry out the idea. The process of this acceptance and its result will be explained later. Just remember, the reasoning of the subjective mind is explained by each mind in reasoning the value of a suggestion.

We all know that if asked or suggested something, we do not always decide, through reasoning, whether it seems right. We cannot be made to carry out a suggestion against our will. In other words, we cannot and will not carry out a suggestion which does not meet with our approval after we have carefully analyzed it. The objective mind, which is in control during our normal or sensible condition, can reason by all processes and consequently will learn the ultimate result of the suggestion if carried out.

If this result does not meet our approval, we do not accept it. Education, material ideas, and common approval after we have carefully analyzed it, also our normal, or sensible, condition plays an important part in protecting us.

Just so it is with the two minds. The subjective mind being convinced through false impressions and wrong conclusions, he will accept as reliable any suggestion given to him.

The objective mind depends altogether upon the reasoning of the subjective mind to persist only such suggestions which are safe, reliable, and right, to enter the consciousness of the subjective mind. Consequently, the latter mind does not question any suggestion given to it by the objective mind.

It is similar to a house filled with valuable articles, which is protected by a bodyguard who has been taught to question those who wish to enter and to deny admittance to those who are not approved. The man inside depends entirely upon the guards outside to allow only those whom he knows to enter, learned, or been taught, to depend safely upon those guards and for this reason he accepts as reliable any suggestion given to him.

Consequently, as soon as this decision is reached, it is conveyed to the objective mind, which in turn makes the final decision. On the other hand, the objective mind, of his consciousness. The subjective mind which actually is the only impression we have made the same statement. His reasoning is this means! Conclude that you are going to explain.

What it means to the subjective mind, then the person giving the suggestion substitutes his objective mind for that of the person receiving the suggestions. He does this for two reasons. First, his conclusions are impressed upon the other's subjective mind which in turn makes the final decision. If he made the same statement. His reasoning is this means! Conclude that you are going to explain.

When the objective mind is held in abeyance and the suggestions are given directly to the subjective mind, it is obvious that the suggestions substitutes his objective mind for that of the person receiving the suggestions. He does this for two reasons. First, his conclusions are impressed upon the other's subjective mind which in turn makes the final decision. If he made the same statement. His reasoning is this means! Conclude that you are going to explain.

The second reason is that he will feel better, his pain will disappear, and he will be happy. He will then be happy and he will be happy.

If a person who is feeling sickly is met on the street and told once that he is going to explain, he will probably feel better, although the statement has made him think. He meets another who says the same thing. Again, he may doubt, but his thinking is strengthened. He meets another and another and another all saying the same thing, and although he at first doubted, believing these impressions, he will now begin to question why all these people have made the same statement. The subjective mind will tell him that it must be so! After due thought he comes to the conclusion that he has been convinced, even if it means that he is feeling or looking well and that the others, who cannot have any object in so doing, are telling the truth.

As soon as this conclusion is reached it is accepted by the subjective mind, which in turn carries out the idea that he is feeling better.
THE GRUMBLER

Note.—There are many people in this world who do nothing else but grumble with anything and everything, from the size of the sea-waves to the shape of the earth. We have engaged one of these grumblers to write for this department. He seems to examine everything with a microscope and is sure to find a flaw.

I see by the various papers and magazines that some scientist, having nothing else to do, has invented a harmless gun powder, and finished the job?

It seems to me like a foolish waste of time and money, and for, anyway.

As much smoke and noise as possible, anyway.

Western coast shooting at targets.

Need practice, and if they do—why so waste of time and money, this target shooting. That's the best practice, anyway.

The claim that a man by the name of Pat has the greatest following—why, some one or something is being hurt by it. That's what I think, anyway.

We have just read an account, sent by the various papers and magazines, that some scientist, having nothing else to do, has invented a harmless gun powder, and finished the job.

I have just read an account, sent by the various papers and magazines, that some scientist, having nothing else to do, has invented a harmless gun powder, and finished the job. Now who has made the fine distinction between what is moral, immoral, and moral, and who has made the finer distinction as to why is there one moral law at one time in one place, and immoral and unmoral at another time in another place? The law of our land is that all grumblers by women is immoral in public, why is there a difference made between the public and the theatre and the public in the street?

If civilization has decreed that women and men should dress in a certain way, depend whether she is considered being moral, why can the maiden of the jungle and the man of the semi-civilized countries dress in such manner as would be considered, in New York to the New York people, and yet seldom criticised by the New Yorkers when seen in the foreign countries? Does not this show that we unconsciously admit the elasticity of so-called moral laws and that there is no fundamental moral law?

Some have said that all moral laws are based upon religious doctrine, but this cannot be true, since religions within themselves, disagree as to what is moral and immoral.

It is not only that author which has permitted free and elastic marriage laws and conditions, while other Protestant churches adhere to a more or less strict and strict on the same subject. Wherein is this difference? Why did the so-called Mormon religion, permit social and civil conditions which are immoral, or at least immoral by other religions?

To sum up the matter, it is evidently clear that all moral laws merely express the personal opinions of the individual who imposes them, and these laws are interpreted by the individuals, each to his own understanding and his own beliefs and desires. For this reason there can be no fundamental moral law.

Where a certain unwritten moral law is consciously or unconsciously practiced by a number in one locality, there, that law may become a written law, or a local universal law. She has no right to impose her views.

And this brings to my mind the great truth that those who complain and criticise the most are the ones who in time of trouble seek aid from others. Those who criticise and all religious movements are generally the first to seek its aid and when need overtakes them, then note the spirit of the givers! All past animosity is forgiven, all insults are forgotten and they give freely. Truly human nature in America is immoral, the smoking of cigarettes by women on the streets, but they may with due propriety smoke in various theatres, cafes, hotels, halls and reception rooms.

Now who has made the fine distinction between what is moral, immoral and moral, and who has made the finer distinction as to why is there one moral law at one time in one place, and immoral and unmoral at another time in another place? The law of our land is that all grumblers by women is immoral in public, why is there a difference made between the public and the theatre and the public in the street?
WERE YOU BORN IN GEMINI
From May 21 to June 21

If you were born on or between these dates you were born in the Zoodiacal sign of Gemini. The symbol of this sign is two twins, and it is a double, airy and mutable sign.

The characteristics which this sign bestows upon its subjects are as follows:

It makes them pleasing, accommodating in disposition, but having a mind of their own and independent in thought and action. They never allow their temper to become violent and are always repentant.

In health these subjects must continually regard their vital organs. Bladder troubles and malaria seem to affect them often throughout their lives.

In a business way, Gemini subjects would be successful as teachers. The women born under this sign would make excellent teachers to children. The women are always natural home-makers and make their homes and surroundings artistic and beautiful.

In a professional way the women can succeed as stenographers, typists, secretaries, or office clerks.

The men born in the sign of Gemini make good speculators, professional men and merchants. As merchants they can deal with learned buyers and sellers. As professional men they can deal with learned subjects such as teaching, lecturing, art and literature clerks.

Business partners for men or women born in the sign of Gemini should be those born on or between April 21 and May 20.

Famous and well-known men born in the sign of Gemini are:
- Ralph Waldo Emerson
- Jay Gould
- Cornelius Vanderbilt
- Bulwer Lytton
- Sir Edwin Arnold

The ruling planet of Gemini is Mercury, and, of course, this becomes the ruling planet of those born in this sign. Mercury is a mental and speech planet and rules writing, thinking, planning, ordinary and all work requiring mental calculations.

It is such a sensitive planet that its effects on the human system and these people should never worry or allow their nerves to be affected, in any manner as a nervous breakdown will result.

NOTE—If you wish to learn more regarding all the signs of the Zodiac and their planets so that you can understand the characteristic fortunes of others, write to Harve, care of the Future Home Publishing Co., 238 Fifth Avenue, New York City, enclosing a stamp. They will tell you how you can secure, absolutely free, a complete course of lessons on Solar Biology and Character Reading from the birth dates.
ter, and reasoning deductively, he must feel better and at once proceeds to bring about this result. You have noticed this in the sick room. Every physician will tell you what it means to a patient when numerous callers tell the sick one he or she is improving, etc., this rule, if exact, must work both ways. Therefore, if this same person is a good jeweler, he will have many times that he is actually looking better, and is about to believe this suggestion, learns that those who told him this were in order to make him feel better, he will immediately reason that he must look bad if every one he meets is trying to convince him otherwise. He will reason that his very poor condition must be the cause of their sympathy and kindly words. And as soon as this suggestion reaches the subjective mind it accepts it and, believing that the man is sickly, will at once aid in producing this result.

Physicians will testify to this also. How many deaths and serious illnesses have been caused by the constant statements before friends that someone looking bad! More persons who have had a good chance of recovery have been driven up hope and allowed a fatal suggestion to reach the subjective mind through continued statements that they are very sickly, than have ever been cured through the same process.

All those examples tend to show how the power of the soul as he will. He may produce such physical conditions as he decides upon. This proves the absolute power of the mind.

**In Review.**

I have shown you that the mind and soul are one; that is, the mind is part of the soul. I have further shown that this mind is divided into two parts, each having a power and intelligence. I have further shown that the brain is but a physical organ of the mind.

You understand that the soul with its subjective mind is the only real governing intelligence in man. Accordingly, I submit this statement:

The real, important, vital part of man is MIND, with its divisions, intelligence, powers, functions and attributes.

**The Vital Power.**

We now come to one of the most important parts of the entire science which has to do with the vital force, or life itself. I propose to show the real vital force and its relation to the soul and mind. However, before proceeding to this subject it is necessary to explain a great deal which we have already covered and to add materially to the propositions presented.

It is only reasonable to assume that if the soul is really the controlling intelligence of the human body, then, the soul is part of the vital force of life. In other words, the vital force must either be vested in the soul, or else the soul controls the vital force.

We all realize that life begins with the entrance of the body. We also realize that life ends when the soul leaves the body.

My fundamental proposition says that God breathed "the breath of life" into the nostrils of Man and Man became a Living Soul." Thus we will see that the vital force of life forms the living soul.

I will further show that the intelligence of the soul, exercised through the mind, controls and guides the vital power, or force of life.

Therefore I have one more proposition: The soul is mind, life, intelligence. Life is soul, intelligence, mind. Mind is life, soul, intelligence. The four terms are synonymous.

(Continued in next issue.)

The previous lessons can be secured at ten cents each.

A Railroad Mystery

(Continued from page 51)

In one of the Western cities there were two small printing shops, each boasting of owning a weekly newspaper. The shops in such localities are usually very crude and far from what we may call modern. Their printing usually has the appearance of having been accomplished with a sword, the paper is meager and the newspaper itself reminds one of the old-fashioned weekly sheets of Franklin's time. As this is quite natural, the two owners of the printing establishments were rivals. Each thought that if the other would cease printing his paper the other would flourish. Consequently divers means were used to hinder the production of the other. Thus it happened that one week, the proprietor of the "Western Howler" planned to keep the "Mountain Bell" from ringing its belated news. Mr. Graham, owner of the "Bell," enlisted the services of one of the town's questionable characters to steal silently in the dark of night to the rival printing shop and take the type with which the "Bell" was to be printed within two days. Had the burglar succeeded the "Bell" would not have rung with the usual chime that week, but the burglar bungled, and being scared while at his usual thieving occupation, he proceeded only in securing all the type in one division of the type-case.

Two days later the "Mountain Bell" appeared as usual with its four-page sheet, and although the headlines in the matter appeared correct there was evidently something radically wrong with the small type matter on each page. The spelling seemed to be either very wrong or very correct, for it might have been Carnegie spelling. However, in seeking for the cause of such mysterious changes we found that the slow and peaceful Western town, the reader of the "Bell" was surprised to find the following editorial on the second page:

(Read this aloud.)

**EDITORIAL.**

Once again the Mountain Bell thuffeth from the jealously disappointment of its rival printer. This time he has thucceded in accomplishing a most terrible act for he hath thent of hith helpeth to destroy thome of our type. We do not know why he did not steal all of the type and we are grateful for thrall favor for he left it except the letter which followeth the letter "r" and for thith reaathon we cannot use the thith letter in thith edition of our paper which is not of any use to us. However we are not to be daunted in our work and we thall therefore publish our editorial thith instant. It herewith followeth.

"Revenge ith Mine."

Thalith the Lord.

**THE CYNIC.**

Let others sing with joyful lays, And tell in rhyme the various ways By which they get their daily bread, But I can't sing with spirit dead. The past has never brought to me The joys which others claim to see. The future holds no promise bright, And if I were to die to-night, No foolish thought of Life Forever, The honest reward of good endeavors, Would e'er deceiveth this mind of mine, That man's possess'd of ought Divine.

No hopes of Golden Crown have I, Nor lordly mansion in the sky; The Golden Thrones which others crave, Won't interest me in my grave. As all creation is but a strife,— Why should I seek another life? For angels, harps and robes of bliss, Are comfortless, to me, if this Be all that's gained by living here, While losing those we hold most dear. Praise not to me of Life Eternal, When life on earth is Hell Infernal! GEORGE WILLIAMS.

**PARTNER WANTED.**

A partner wanted to take a half interest in two valuable patents already secured. Apply to J. W. Carraway, Sanibel, Fla.
and it is not in any sense connected with anarchy, which will doubtless oppose our movement as much as they oppose the present government.

"I shall send these circulars and proclamations to every town clerk and have him do the rest. It will take time, of course, but we have planned to have the new Republic thoroughly in control by October 30, 1910. We shall have Constitution like that of The United States of America, with a President elected for three years and a Duma as a lower house and a Senate as upper house, members of both to be elected by the people."

Thus we have the making of a Republic. To hear the General speak it would appear that all that is necessary is to raise the five million dollar fund with the bonds, send broadcast the circulars, have organizations throughout Russia in consequence, command the Czar to give in, and elect a President and form a Constitution.

Many will say at the plan and claim that it is impossible. It does seem doubtful, but we must not forget that the Russian people have suffered so greatly and are so enthusiastic regarding the possibility of freedom that it will take but little to arouse intense action. It will show, if the plan succeeds, what concentration to one purpose, energized by determination and suffering can accomplish, even if the task is as formidable as overthrowing a long established government, and it would seem that the Czar and his advisors do fear the results, for they have already shown their desire to oppose the movement. This would indicate that the plan is formidable, if attacked seriously. Does the Czar realize that his fears and opposition of the movement give it greater strength and determination? Let him recall the Pope's fear and opposition of the "modernists" and the resulting struggle and determination with which the modernists' movement assumed.

General Norodny has shown business ability and confidence in his every step and this is important and necessary if not successful in every important movement.

How You Can Secure A Lot

25x100 FEET, AT SOUTH-
AMPTON TOWNSHIP,
SUFFOLK COUNTY,
LONG ISLAND,
NEW YORK

Absolutely Free

The Future Home Publishing Company has secured 500 full size building lots for distribution among enterprising men, women, boys and girls everywhere.

Show a copy of this Magazine to your friends and acquaintances; it will help you to secure the lot. (Sample copies 10c each.)

Induce 25 persons to subscribe to this paper for one year and we will send you a deed to a lot, making you the owner of a valuable piece of property that will some day be worth a great deal of money.

The First Subscription you send will secure the lot. Send in the person's name and address and one dollar and make the start. You can have six months' time in which to send in the 25 subscriptions. Send them as fast as you get them and we will send you a receipt for each subscription. When the twenty-five subscriptions are all sent in, we will send you a deed properly executed, with full description and title. We agree to pay the taxes for two years as an extra inducement to you. The taxes, however, are very small, but we will do this with a view to looking after your interest. You should be able to sell your lot for many times this price, in a short time, if you desire to do so.

Act promptly as only the first 500 workers who apply will be accepted.

Address all correspondence and subscriptions to

THE Future Home Publishing Co.
Real Estate Dept.

NEW YORK

Do You Believe In God?

DO YOU GO TO CHURCH?

If you do, you will be interested in the new Church now being founded by this magazine. If you believe there is a God and that you should worship Him you will find this new Church to be all that you desire. It gives you an opportunity to worship God in a manner which is void of all denominational, all creed and all mythology. It is a Universal Church with a Universal Religion and a Universal God.

IF YOU DO NOT GO TO CHURCH

you will find the Universal Church to be just what you wish. You may remain at home and worship the true God as devoutly and sincerely as you can by attending the services at any church building. God is Universal. He is everywhere, and can give His blessings to the humble in their homes as well as to the wealthy in their costly edifices. There is more true religion in the homes than there is in stately towering Cathedrals, and that is why this new Universal Church and Religion will come to the homes.

No matter where you live, you can become a member of The Universal Church of the Future and receive the weekly sermons and prayers and the monthly communion with God. Let your home on Sunday be your church, and in the solemn quietness, speak with God through this new Universal Religion.

IF YOU DO NOT BELIEVE IN GOD

There must be a reason for your doubt, and this new Universal Religion will teach you the TRUTH and remove this reason for doubting. The Universal Church of the Future does not have unnecessary systems of worship, nor does it have all mythology. It is a Universal Church, and that you should worship Him you desire. It gives you an opportunity to worship God in a manner which is void of all denominational, all creed and all mythology. It is a Universal Church with a Universal Religion and a Universal God.

Join the New Church Today. Send for Information and Application Blank. No Matter what nationality, what creed, religion or denomination you are by birth or belief, you are entitled to membership.
