A. L. NELDEN, THE GREAT BEAUTY DOCTOR

Tells the Secret of Obtaining a Clear Complexion—
How to Get Rid of Wrinkles, Pimples, Blackheads, Skin and Scalp Diseases, to All Who Write, Absolutely Free!

ANDREW LINN NELDEN, M. D.

Dr. Nelden was for years the chief surgeon of the largest Dermatological Institute in the world. He founded and is chief of staff of the Largest Free Accident Hospital in New York, and is the chief operator. He is thoroughly equipped private establish­

ting in America, the Nelden Institute and Sanitarium.

Both in America and Europe he has revolutionized Plastic surgery and systems of correcting the imperfec­
tions of face and form which mother nature has inflicted upon many. Many physicians have stood amazed at the simplicity of his methods of correct­
log ugly features, and thousands of grateful patients in nearly all parts of the civilized world are singing his praise for the removal of wrinkles, pimples and blackheads, scalp dis­

cases and those terrible afflictions that have held them back in life's race for happiness and success in business and society.

One of the features of his system that has been proving a God-send to humanity is the accuracy with which he treats cases at their own homes, though thousands of miles away. He is treating hundreds who cannot come to him in the privacy of their own rooms, without the knowledge of their most intimate friends.

If you could sit in his office and read the thank you letters from those who in a few days after taking his home treatment have watched their pimples disappear as if by magic, the blackheads depart, and a pure, healthy complexion appear; the hair take on that silky gloss that brings sunshine to the soul and that sparkle of new youth in the eye, you would readily understand why his treatment has been proving a God-send to humanity.

Mrs. A., of Chicago, writes: "Words cannot express the gratitude I feel in having been, you might say, transform­
ed. You would have to have seen my face before I began your treatment, and see me now, in order to appreciate the great change in my appearance. Everything in my whole life has improved. From that shrink­
ing and timid disposition I have de­

developed a great desire to mingle socially, and everyone seems to feel more kindly toward me. I am now admired by many, while, as before, I was even afraid to show my face anywhere. May God bless you for what you have done for me."

Miss W., of Boston, writes: "I am so grateful for your treatment, and what it has done for my face, that I am telling all my friends who are troubled in any way to write you. I tried nearly all kinds of facial treat­
ments, but never received any per­

manent relief until I took your course of home treatment."" A. L. NELDEN, THE GREAT BEAUTY DOCTOR

SHOWING RESIDENCE OF GEORGE STANTON FLOYD-JONES, MASSAPEQUA, LONG ISLAND, N. Y.

Massapequa is New York's coming great suburban home center. A natural park, beautiful lakes, drives, private grounds, magni­

ficient homes and hotels—the great South Bay—the Ocean—salt and fresh water, fishing, boating and sailing.

The widening and deepening by the U. S. Government of the sea channel at Massapequa will prove a great shipping and docking center which will afford an outlet to the ocean for the surrounding country and which will make this property the most important point on Long Island.

Massapequa is situated on the Long Island Railroad, in Nassau County, 12 miles from the City limits and can be reached in less time than it took to come from 149th Street, the Bronx, before the subway opened. On completion of the subway to the Bronx the early buyers reaped millions in profits.

When the tunnels are completed and the road electrified to Massapequa, it will then take only 35 minutes to City Hall, New York. All these improvements are now under way and will be completed before the end of next year.

ASCO REALTY CO.—Owners and Developers

Dept. A, Lincoln Trust Bldg.

NEW YORK CITY
That some are born to reach great heights and that others may reach fame and power, is quite evident to all. But just how some are born in majesty to rule is not so evident, and, for that matter, it cannot be unless one is well versed in astrology. As an example, let us refer to the life of Secretary of War William Taft.

Mr. Taft was born on September 15th, 1857, in Cincinnati, Ohio. As a test I shall present herewith a horoscopical map of the heavens for Ohio for the exact minute of Mr. Taft’s birth, and will interpret its astrological meaning.

Let me state first, however, that in making the various maps, charts and configurations given in this delineation, I have followed strictly the standard system of astrology as presented in the authorized text-books. The interpretations given below are those which may be found in such books and in no way have they been altered to fit various facts or to mislead. The entire interpretation is given just as any competent astrologer would read the charts, regardless of the native’s personality, position or vocation. This, then, will be a supreme test of the reliability of true astrology.

It may be well to state that the charts, maps, interpretations and figures here presented required many days of careful work. Such horoscopes as this cannot be made by a student nor by one versed only in the superficial side of astrology. This is why a true horoscope is so seldom found.

Taking Mr. Taft’s minute of birth on his birthday, I have made the following map of birth.

It is needless to state that the sign rising upon the cusp of the first house describes well Mr. Taft’s physical appearance. I will not dwell upon this point, but will at once proceed to interpret the meaning of the various positions of the planets in the twelve houses and signs and their mutual aspects. In doing this I refer and consult only a standard text-book.

No. 1.—The Sun in House 7 indicates general popularity, especially with superiors. It also indicates a rise in life after marriage.

No. 2.—The Sun in good aspect with the Moon gives good health and vitality and general success, with favors from superiors, and the ability to plan, lead and calculate in important matters.

No. 3.—The Sun in good aspect with Mars gives energy of purpose, strength of will, courage, self-reliance, enterprise, ability to command and control and to organize. It attracts the native to responsible positions in public life and makes him fortunate for all marital and government service. It also favors the birth of sons.

No. 4.—Sun in good aspect to Saturn steadies the character, forethought and prudence and the power of organizing and directing.

No. 5.—Sun in good aspect to Uranus (Mr. Taft’s ruling planet) gives originality and independence, enterprise and ambition. It makes the mind active and clear and further favors him for public life and the holding of public appointments with governments, companies and associations.

No. 6.—Moon in the 7th house is good for marriage, popularity, public favor, social success and gain by partnership.

No. 7.—Moon in conjunction with Mars brings out the native’s martial tendencies, making him brave, but with a tendency to be rash. It also indicates a liability to accidents, fevers and dangers from fire or water.

No. 8.—Moon in bad aspect to Uranus makes the native somewhat eccentric, and may cause some slight nervous trouble. It would also indicate that the native is interested in philosophical, scientific and occult subjects. (Is this so?)

No. 9.—Mercury (Mr. Taft’s co-ruler) in the 8th house indicates that the native will have some trouble with partners (in marriage or business) and also indicates that the native’s death will be directly or indirectly connected with his nervous system. (See paragraph No. 8 above.)

No. 10.—Mercury in good aspect with Venus makes the native cheerful, happy, pleasant, smiling, good-natured and sociable. It improves the mind and mental faculties and gives taste and refinement and an inclination for music, art, etc., and indicates a touch of genius.

No. 11.—Venus in the 7th house indicates gains through social success giving public approval and popularity. It also indicates that Mr. Taft was destined to marry a woman who would have Venus prominent in her horoscope, since the 7th house is the house of marriage.

No. 12.—Venus in bad aspect to Jupiter indicates liberalitly often to extravagance.

No. 13.—Mars in the 7th house makes the native forceful, aggressive, and prominent in public affairs.

No. 14.—Mars in bad aspect to Uranus (his ruler) indicates that the native’s death will probably occur while traveling, bringing on fevers and nervous troubles in an unusual manner.

No. 15.—Mars in slightly good aspect to Saturn gives ambition, courage, determination; favors public life and assistance from superiors.

No. 16.—Jupiter in the 3rd house gives refinement of mind, good-will of brethren, benefits through education, literature and traveling. Also that the traveling will be often and successful.

No. 17.—Jupiter in good aspect to Neptune gives devotion to religion, philanthropy, love of art, the beautiful and elegant. It also gives a good imagination, and genius in some direction.

No. 18.—Saturn in the 6th house may cause trouble with digestion, liver, etc. Possible loss through servants. Success as manager, superintendent or in official appointment.

(Continued on next page.)
(Horoscope of Taft Continued.)

No. 19.—Saturn in good aspect with Uranus (his ruler) gives thoughtfulness, seriousness and concentration.

No. 20.—Uranus (his ruler) in the 3rd house is good for intellectual ability, attraction to new and strange subjects, etc. It increases the tendency to travel.

No. 21.—Neptune in the 1st house indicates that the native will be interested in travels on sea or water and at the same time increases the emotions and aesthetic genius.

Thus does the horoscope of Mr. Taft reveal his true nature, and who, forsooth, can say that Mr. Taft was NOT BORN TO RULE, DIRECT, and HOLD A PUBLIC OFFICE OF RESPONSIBILITY? Does not the life of Mr. Taft, as we know it publicly, demonstrate that he has simply lived the life indicated for him? Could he, by any manner of means, have remained an ordinary citizen, quiet, unknown and without public power? These are questions which every doubter must answer and students analyze.

But let us proceed to note the present astrological influences and the possibilities of the future.

There is a dictum, in fact, a rule and law, in astrology, that the positions of the planets on each day after birth indicate the incidents of each year after birth. Thus, in looking for the possibilities of the year beginning September 15th, 1908 (Mr. Taft's 51st birthday) we shall examine the positions of the planets on the 51st day after his birth, which was November 5th, 1857. Accordingly map No. 2 is a map for Mr. Taft's 52nd year.

In this map we find that the rising sign has progressed to the last degree of Aries, and this, being the first or head sign, indicates that the native's affairs will pertain to important, leading matters. We also find that Capricorn has progressed to the mid-heaven, which is the culmination, and this indicates that important, ruling, majestic, royal affairs will be prominent in the native's fifty-second year.

Another law of astrology is that the positions of the planets in this progressed horoscope as related by aspect to the planets in the natal-birth horoscope, will also indicate much. Accordingly we find first that in this progressed horoscope the Sun has advanced to a square or bad aspect to the Venus in the birth map. This would indicate that through being a little too aggressive in his public affairs he will arouse some public criticism and opposition. The Sun has also formed a bad aspect with his Jupiter, and this would indicate first that he will suffer somewhat through some writings or documents, and secondly from trouble with his throat.

In the future Mr. Taft must give this latter fact more attention.

In the July issue of this Journal there was published the authentic horoscope of the United States. By comparing Mr. Taft's progressed horoscope with that of the United States we find a remarkable coincidence. Mr. Taft's Sun for his fifty-second year is in absolute, exact and powerful aspect with the Government's Sun. Both are 13 degrees, and one is in Scorpio in the seventh house and the other in Cancer in the ninth house at the culmination. This, to an astrologer, means success and power in governmental affairs for Mr. Taft, and New York (ruled by Cancer) will play an important part in this in some way.

We also find that Mr. Taft's ruling planet, Mercury, is in good aspect with the Government's Jupiter, also at the mid-heaven in culmination. Then again, Taft's other ruler, Uranus, is also in good aspect with the Government's Mercury at the mid-heaven, and, more important than all of these is that Mr. Taft's Mars (which represents his martian, ruling position, is in conjunction with the Government's rising sign at the cusp. In other words, Mr. Taft's Mars is passing over the important place of the rising sign in the Government's map, indicating that his martian qualities will become prominent in the public affairs beginning with 1909.

Now let us examine the local influences at work on the day of election, November 3rd, 1908. We find that the Moon is sextile to his Jupiter, and since Neptune is considered the planet of hope and Jupiter the planet of fortune, this is favorable for his election.

Will he be elected? This is a difficult question to answer from his horoscope alone, for the horoscopes of other candidates might show the same favorable conditions, and in such a case all must be compared and the best selected.

Next month we will consider the horoscope of Wm. Jennings Bryan, the Democratic nominee.

THE BROKEN SWORD.

Fight ever on: this earthly stuff
If used God's way will be enough,
Face to the firing-line, O friend:
Fight out life's battle to the end.

One soldier, when the fight was red,
Threw down his broken sword and fled:
Another snatched it, won the day,
With what his comrade flung away!

—Edwin Markham, in The Nautilus.

HEALTH

By Oakley Selleck.

Health is our wealth in pocket and mind
Should be the main object of all sane mankind.
Of course, it is so, at least so we think,
But we defy Nature's laws
And to ill-health we sink.

Thoughts are really great factors in keeping us well;
Christian Science say this, and continues to tell
Us, there's nothing that ails us, you must believe it.
Stop your worry, and hurry. You're all right. Feeling fit.

But the body demands that attention be paid
To its sanitation, exercise, and arrayed.
In clean, sweet surroundings, of this I am sure,
If mind, soul and body are reasonably pure.

We object to the effort that exercise takes.
Our muscles are flabby, organs dull. Disease makes
An attack and we wonder what ails us, and say:
"I have really done nothing." Well, you should, every day.

There's a method of action we need sick or well
To ensure circulation, active organs, and will
Make you well, keep you well, if you try it you'll find
That the Future Success Club keeps healthy mankind.
The steamboat of yesterday and the ocean liner of tomorrow offer a world of thought in contrast. The possibilities of the future are just as vast as the advances already made.

It was in 1807—one hundred and one years ago—that Robert Fulton conceived the idea of utilizing steam as a power to move a boat upon the water. Although the idea was not a new one, yet Fulton was acclaimed a wonderful inventor, and succeeded in establishing a new "kind" of vessels. He was bold in his plans, for without a doubt they listened to him quietly as they would to a man mad with impossible ideas. They may have urged him on just to see how far he would go with the "foolish idea" and others may have hinted at the possible detention of Fulton in a mad house. At any rate, he seemed harmless as a maniac, and, of course, no one would ever ride in the boat he had planned. The wise-heads and those who thought they knew it all silently awaited the results, and predicted that "nobody will risk his life on a vessel with a roaring furnace in it." There was the point! They did not question the power of the steam, for they knew little regarding it, but the idea of having in the wooden boat a roaring furnace seemed to threaten total destruction to the vessel.

But Fulton persevered, and finally built a craft 130 feet long, which triumphantly carried twenty passengers. He was hailed as a marvelous inventor, and succeeded in establishing a new "kind" of vessels.

But look at our ocean liners today. Our biggest ships are 790 feet in length and carry very commodious structures. It will seem small in the future when our ocean liners will increase to a length of 1,000 feet, and carry no doubt 800,000 passengers. Such a giant ship is not only possible, but probable within 100 years. The steamers in the last 100 years are used as a basis of calculation in the next 100 years we can look for an ocean liner similar to the one illustrated on this page.
A DEPARTMENT FOR THE HIGHER MENTAL, MORAL AND PHYSICAL DEVELOPMENT OF CHILDREN.

Conducted by Mrs. Florence Hoff.

The training of a child becomes a simple matter, if one has in mind the proper tendencies and characteristics of the child. It is absolutely necessary that the child be taught how to feel, how to think, and how to act.

A child is not born a miscreant; it is the result of circumstances, of the environment in which it is reared. If a child is not taught to feel love, kindness, harmonious and pure, then its life will naturally follow in this vein. All children are naturally disobedient and willful. All children are stubborn, disobedient, and willful. All children are disobedient and willful.

Disobedience is often the result of a natural causes. Disobedience is often the result of a natural causes. Disobedience is often the result of a natural causes. Disobedience is often the result of a natural causes.

The parents know that disobedience often results in harm. The parents know that disobedience often results in harm. The parents know that disobedience often results in harm. The parents know that disobedience often results in harm.

Disobedience becomes willful and disobedient. The child becomes willful and disobedient. The child becomes willful and disobedient. The child becomes willful and disobedient.

The parents warn the child not to touch the article, not to eat the article, not to play with the article, not to touch the article. The parents warn the child not to touch the article, not to eat the article, not to play with the article, not to touch the article.

A child finds that its mother is cruel, unkind, and severe. The child finds that its mother is cruel, unkind, and severe. The child finds that its mother is cruel, unkind, and severe. The child finds that its mother is cruel, unkind, and severe.

The parents warn the child not to do what it should not do. The parents warn the child not to do what it should not do. The parents warn the child not to do what it should not do. The parents warn the child not to do what it should not do.

Do not forget; you'll face the same. Do not forget; you'll face the same. Do not forget; you'll face the same. Do not forget; you'll face the same.

The things that age us most of all. The things that age us most of all. The things that age us most of all. The things that age us most of all.

We hear their cry and curse the things—It's Hell to think! Let's forget our flings! We hear their cry and curse the things—It's Hell to think! Let's forget our flings! We hear their cry and curse the things—It's Hell to think! Let's forget our flings! We hear their cry and curse the things—It's Hell to think! Let's forget our flings!

The passing of a great soul.

A Tribute to Eleanor Kirk.

It is with deep regret that The Future Home Journal gives publicity to the death of Mrs. Allen M. Ames (Eleanor Kirk). She was a pioneer of the “New Thought” movement in the United States and her work in the literary field has spread throughout the world.

She was an authoress of marked ability, a keen student of human nature and a living exemplification of her beliefs and doctrines. She was known best by her two most successful books, “The Influence of the Zodiac Upon Human Life” and “Libra,” a novel with astrological characters.

To the son and daughter surviving her we extend our heartfelt sympathy, as well as all our readers.
We are so accustomed to say "the moon" that it is hard to realize that we should say "our moon," for the earth's moon is not the only moon in our universe. Jupiter has four moons, Neptune has one, Uranus six, Mars two and Saturn eight. Of the twos we were born in our universe, we recognize but one, the one which belongs to our earth. For this reason we should call it our moon.

Of course, with the naked eye we can see only our moon, but in the large telescopes the other moons are visible.

What is a moon? This question has never been satisfactorily answered by science, but Professor Darwin is probably correct in his theory. It is to the effect that our globe, the earth, in a late stage of its development, amid the throes of disruption, gave birth to its solitary offspring. In other words, our moon is but a dead mass of matter which was originally a part of the earth, but was thrown off in a heated mass during the earth's development, amid the throes of disruption, gave birth to its solitary offspring.

The sun's rays strike the moon's surface until it is a heated mass during the earth's development, amid the throes of disruption, gave birth to its solitary offspring.

In the centre is shown the earth at X. Around this is a double circle, which represents the path of the moon around the earth. To the right of the earth is seen the sun with its light radiating toward the earth. The moon is represented by the letter M. Now, let us follow the moon in its travel. We will start when the moon is at letter A. It is then directly between the earth and the sun, consequently only the side of the moon toward the sun will be illuminated by the sun's rays and the side toward the earth will be dark; for, remember, the moon is a dark body and has no light of its own. When the moon is at A those who are on the day side of the earth do not see the moon illuminated, and it appears as shown at No. 1 below the illustration. Then the moon travels until it is situated as shown at B. From the day side of the earth we are then enabled to see just a little of the illuminated side of the moon indicated by the arrow at B. To us this appears as shown at No. 2 below. When the moon has traveled to C we are enabled to see half of the moon illuminated and half in darkness and it appears as shown at No. 3. Gradually the moon assumes position D, and almost all of the moon's illuminated surface is seen, as shown by the two arrows. Then the moon appears as shown at No. 4. Finally, after 14 days the moon assumes position E, and we may see, from the night side of the earth, the entire illuminated side of the moon, and it appears as shown at No. 5. The moon now starts upon its return, and at F it appears as shown at No. 6, which is like No. 4, only reversed. When at G it appears as shown at No. 7 and finally returns again to A.

The moon makes its entire revolution around the earth from A to A in 27 days 7 hours and 43 minutes. The movement between the letters A, B, C, D, E, F, G, H and A is then about three and one-half days.

But one side of the moon is known to us, and for this reason many have been led to believe that it is a disk. They reason that if it is a sphere which is continually revolving, we should have seen the other side of the moon. The reason does not take into consideration that since the moon not only passes around the earth, but also revolves, this would keep but one side of the moon's surface toward the earth.

Through the telescope the moon looks much like the surface of our earth. The illustrations on this page show the moon as it has been photographed through the telescope. We will note that there are many craters, ridges and mountains similar to those seen in foreign countries. The dark shadows are cast by the mountains and some are caused by deep surfaces which are probably bottoms of some former seas. The moon is without water at present, however, and there are no rivers, lakes or seas of any kind.

That the moon has a strong influence upon this earth is admitted by astronomy. The diameter of the moon is 2160 miles, which is perfectly round, so far as present measurements can tell. The area of the moon is about one-thousandth of the earth. Yet there is moon there for the entire British Empire with six million square miles to spare. Of course, the moon's surface has but about one-sixth its power here, therefore, a stone thrown in the air on the moon would rise to six times the height it would here. Our bodies would weigh less and air-ships would have little show of support on the ground. The temperature on the moon is about frost at all times and lowers to zero during the moon's long nights of fourteen days.

An eclipse of the sun is caused by the moon passing between the earth and the sun, and it is in the same declination. This prevents many different parts of the earth from seeing the sun at the time the moon passes in front of it. It would be like shown in illustration No. 1, where the moon is at A.

Next month we shall examine the planet Mars.

DREAMS REALIZED.

Henri Farman, the great French "Air Pilot," is giving startling exhibitions at Brighton Beach during this month, with a heavier-than-air machine. He drives his aeroplane through the air and around the race track with the speed of a racing automobile. In conversation with our editor the day before his last demonstration, Farman assured him that the heavier-than-air system of navigating nature's greatest realm, the air, was here to stay and that the dreams of our forefathers had been realized at last.

Israel Ludlow, one of America's best authorities, and who was seriously injured in Florida in a fall from an aeroplane, was a very much interested spectator at the Farman exhibition, and in conversation with our editor assured him that he was still to be counted upon for the able thought he has given the subject.

Mr. Ludlow, inventor of the Ludlow Aeroplane, was one of the first scientists in America to advocate the heavier-than-air ship. Hamilton, the daring balloonist, who has had more narrow escapes than most navigators of the air, is at Brighton Beach giving a series of demonstrations with his dirigible balloon. His airship is always under his control, so much so that he paid a visit to Farman the other day in his "Bird of the Winds," after which he arose and sailed back to his quarters.

It's only a question of time. Until our own airship is ready for collecting parcels, mail, etc., we respectfully request our readers to send in their subscription to the Future Home Journal by the old method. Send it by mail, now!
THE UNIVERSAL CHURCH OF THE FUTURE

SERMON FOR FIVE WEEKS.

By Brother Wilson David.

"Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."—St. Matthew, V:16.

Yes. brother or sister, let your light so shine that men may see your good works. To be good secretly evidences selfishness; to be good merely for the praise it attracts is also selfishness. But to be good that others may follow your example and see the folly of wickedness is the wish of God.

Selfishness and personal gain are incentives which lead many to devot religious customs. The desire to aid fellowman and to lead a righteous life than those who live in Calcutta, India. But in their own districts their individual gain is far superior to men in other callings, to quickly cure a patient, or to tell him or her that there is nothing much the matter with them, but a little fear is to deprive themselves of their fee. Humanism, individualism and war with self-interest. This is easily perceived—the patient wins and the doctor loses. To be honest, genuinely morally honest, is to be a loser for a doctor. So we can see how much superior he is to the poor morals he protects. His education gives him a vast knowledge about us and all kinds of ailments that are in the world, and the public must seek his particular knowledges. A modest sign is all that is necessary. A modest sign is all that is necessary. The public must seek them out. Modesty and propriety forbids that they show themselves, at least favorably. They are in the same fix as a German theatrical manager in Cincinnati once found himself. The manager sees the sign, rushes inside much excited shouting: "Take it in! Take it in! Aren't we going to give a matinee to-day," asked the employee. "Sure," said the manager, "but I don't want to strike the average.

SIRHEN TO THOSE DESIRING TO VISIT NIAGARA FALLS FOR THE CONVENTION.

In our June issue we announced the plans of a New Thought convention to be held at Niagara Falls next September. We offered to send a number of representatives to this convention absolutely free, and many applied for further particulars.

We regret to announce to our readers and friends that we have refrained from soliciting business for fees of any kind and this will be entirely discontinued. The members and Thy children, these words of Inspiration, Power and Strength.

In Thy Name, we ask these things that greater Love and Goodness may reign upon the land which Thou hast given to us. Amen.

PRAYER.

Almighty Father, King of Love, Goodness, Wisdom and Power, be with Thy humble and feeble children. Bestow upon Thy humble and feeble children. Let Thy Light and Wisdom, and let the work we are doing. Let us Light and we want our members to let their light so shine that Man and God may see the goodness of the work we are doing. The members of this church live throughout the land. They are in all parts of the globe, from China and India to Alaska. All are working harmoniously, quietly and sincerely for God and Man. There can be no personal gain in membership of this kind. Our brothers and sisters in Alaska can never hope to gain fame and renown from membership in this Church any more than those who live in Calcutta, India. But in their own districts their lights so shine that their fellow beings see the goodness of the work and in this they are truly Godly.

Always let us keep Love, Goodness, Fellowship and Fellowship in our hearts. Let us at all times remember that we are all brothers and sisters; that mankind is one large family and that we therefore owe it to our fellow being to help him, to inspire him and to benefit him. Remember that the Church of this kind is the Church of this great family.

SERVICE FOR 5 WEEKS.

August 16th: Read sermon for the month, followed by reading 5th chapter of St. Matthew and the prayer given on this page.

August 23rd: Same as above, except reading of 6th chapter of St. Matthew.

August 30th: Same as above, reading 7th chapter of St. Matthew.

Sept. 6th: Same as above, reading 8th chapter of St. Matthew.

Sept. 13th: Same as above, reading 9th chapter of St. Matthew.

THE HIGHEST QUALITY OF HONOR REQUIRED BY OUR DOCTORS AND LAWYERS.

Two great professions that require more honor, a higher quality and conception of honor than possibly any other. The ethics of their profession forbids that they be seen anywhere as less than honorable. They are of the race whose blood is inherited from the ancients. A modest sign is all that is necessary. The public must seek them out. Modesty and propriety forbids that they show themselves, at least favorably. They are in the same fix as a German theatrical manager in Cincinnati once found himself. The manager sees the sign, rushes inside much excited shouting: "Take it in! Take it in! Aren't we going to give a matinee to-day," asked the employee. "Sure," said the manager, "but I don't want to strike the average.

A REAL ESTATE MAN SAYS:

"If you are looking for homes, lots or acreage on Long Island and wish to put your money where it has a chance of appreciating in value, write to me and tell me what section you are interested in and I will tell you what you can secure through us. I have a place on "The Ground Floor." Address John A. Rapelye, Office A, Broadway, Newtown, L. I., N. Y.

(Continued 3rd column, page 65.)
THE FUTURE HOME JOURNAL.

Review of Books

FICTION.
The Master Influencer. By Thomas McKean. An excellent novel of modern times, well written and interesting. This novel of the season will appeal to the careful reader as does this novel. It is attractive and richly illustrated and is a good book for the careful reader as does this novel. By Charles R. Kennedy. This novel contains the original words of the play of the same name and as such, it is an interesting novel of modern times well written. Published by J. B. Lippincott Company, Philadelphia. Price, $1.50.
The Servant in the House. By Charles R. Kennedy. This book contains the original words of the play of the same name and as such, it is an interesting novel of modern times well written. Published by J. B. Lippincott Company, Philadelphia. Price, $1.50.

SCIENCE.

Long Life and How to Attain It. By Pearce Kintzing, M.D. At last we have a book by a well-known physician dealing with the oldest problem in human life. By Dr. Kintzing does not reveal some secret hitherto unknown process whereby long life may be attained and the reader is eventually pleased that this is not the case. He deals with the subject in plain words to the layman. There are some theories which are not acceptable to the medical world. His chapters on "Food and Nutrition" and "The Mind" treat old subjects in a new and interesting manner. Published by Funk and Wagnalls Company, New York. Price, $1 net.

New Old Healing. By Henry Wood. The author is not unknown to students of similar subjects and this book deals with an important subject in a vital and interesting manner. His analyses of the laws and processes underlying all modern healing methods will be welcomed by students and scientists. The chapters pertaining to Prayer Cure, The Hidden Psychic Forces, Unbiased View of Christian Science, and The Word of God, present many new and important facts. Published by Lothrop, Lee and Shepard Company, Boston. Price, $1.20 net.

Scientific Research and the Resurrection. By Prof. James H. Hyslop. The author's name and fame is enough to warrant a large sale of this book. Prof. Hyslop has written many books on psychological research, but this recent book embodies many theories that hitherto neglected. The chapters dealing with The Humorous Aspects of Psychological Research, Vision, and The Nature of Life After Death, present clearly to the reader the value of psychological research. Published by Funk and Wagnalls Company, New York. Price, $1.50 net.

The Immortality of the Soul. By Sir Oliver Lodge. The subject is embodied in a lecture given to the Royal Institution in October, 1907. This lecture is a new and interesting subject and is an active member of the English Society for Psychical Research and his works have been published in many languages. Published by The Ball Publishing Company, Boston. Price, $1 net.

Wanted—A Theology. By Rev. Mr. A. T. Cleland. This book is the continuation of the work of Dr. Carter in his contention against the scholastic theology of his day. In its service will be found a plain and outspoken indictment against the old doctrines and a plea for the spirit of religion and the brotherhood of God and Man. It is a book well worth of serious thought for the clergy and layman alike. Published by The Funk and Wagnalls Company, New York. Price, 75 cents net.

The Tread Lightly. By F. H. France. This book begins with "The Secret of the East" and ends with "All Truth Is One." Between these chapters are many others dealing with The Evolution of the Soul, Rays of Infinite Light, Fate and Free Will, and Hell and Heaven. Those who have not seen the play should read the book and become acquainted with the exact words. Published by The Macmillan Company, New York. Price, $1 net.

Brain Roofs and Porticos. By Jessie Allen Fowler. This is a rather unique title for a book, but when you read the subject and the title really explains the subject. If you are interested in that wonderful science of phrenology you must read this book by one of the best authorities on the subject. Aside from the hundreds of topics and phases of phrenology and character reading presented in this book, it is beautifully illustrated from photographs and the invaluable tables that are included in the literature class. Published by the author, $7.50.

The Doctrine of Modernism and Its Refutation. By J. Godfrey, D.D., Dr. J. D. J. Dr. H. J. D. M. Johnson. Modernism is a confused system or theory, and lays bare its general and underlying principles. Published by E. S. and J. E. McVey, Philadelphia. Price, bound in cloth, 75 cents net.

THE ASTROLOGER. We have before us a collection of short articles on Astrology by Prof. Weston. They are published under the general title of The Astrologer, seven numbers being already issued and five more are yet to come monthly during the remainder of 1908. This collection is certainly one of the best and most complete that we have lately seen. It is a rare and interesting book of really useful and scientific articles on the Science of Astrology together with a compact form, for generally we find it necessary to search about through the various chapters of an astronomical book to get at a few facts, but here we have the real astrology in something like coherent form and ready to be read by the busy, the ill or damped, the dreamer's horizon, the exceedingly valuable prenatal correction plan, which is given, and the invaluable tables that are given, are simply treasures that no student of astrology can at all afford to miss. The first six numbers of The Astrologer are ready for mailing, price $1.25; or the 12 may be ordered, $2.50. Address Prof. L. H. Weston, Box 201, Portland, Oregon. The edition is limited. Now is the time to send. Postal Money Order is the safest form of remittance.

HIGHEST QUALITY OF HONOR. (Continued from page 64.)

... experience—on whom? And the law says it's all right, doctor, go ahead. With our lawyers the case is almost exactly the same. To settle a case casually is to inflict a loss on themselves. They thrive upon legal disputes and stop legal quarrels would destroy their prosperity. Like the doctor who, when ill or factored, of others, so the lawyer thrives upon the quarrels of others, and to cure or settle is a loss to his profession (except of course there are branches that are not included in the litigation class). In the United States which is a highly professional profession, to-day probably the most dangerous. Lawyers are constantly mixed with the rich and low and social degree. If any theft of magnitude is contemplated by power or, in other words, of rich men, lawyers are consulted, and it is done upon legal advice. Making them accessories before the fact; if they have been committed, the lawyer is the bulwark to protect the evildoer. Upon this... our lawyers thrive.

Remarkable Invention

AN INSTRUMENT THAT IMPROVES AND STRENGTHENS EYESIGHT.

Spectacles May Be Abandoned

The law, which is supposed to be infallible, is not infallible. It is a rare thing to get a number of really rare things like coherent form and ready to be read by the busy, the ill or damped, the dreamer's horizon, the exceedingly valuable prenatal correction plan, which is given, and the invaluable tables that are given, are simply treasures that no student of astrology can at all afford to miss. The first six numbers of The Astrologer are ready for mailing, price $1.25; or the 12 may be ordered, $2.50. Address Prof. L. H. Weston, Box 201, Portland, Oregon. The edition is limited. Now is the time to send. Postal Money Order is the safest form of remittance.

The Future Home Journal.

DECLARATION OF INTERNAL INDEPENDENCE. (Continued from page 61).

... the Darwin theory; let us assume that the highest development in the animal kingdom was the ape. Constant pressure would either force the ape to develop protection from external foes, develop the ape's mental abilities, which brought about internal development, or develop the ape's mental and internal plane. Evolution, as applied to physical progression, was but the result of the mind's progression.

The ape soon learned that many necessities of life must be made and prepared and the hands and feet were used. Gradually, the hands were moved more than the feet and later the feet were developed more than the feet. The fingers became more limber and the brain grew stronger, an intelligent control of them. Thus we find that gradually the ape developed hands and fingers of more human control. This explains the resulting development of these members, but internal progression, the development of the mind, explains the cause.

Then the more advanced ape sought freedom in action, in life, in the world, and the ape of the apes sought to improve its conditions and the result was further development of the species which, seemingly, was the first link in the human chain. Thousands of years after we find the cliff-dweller, living rudely and amid barbarous conditions, but still seeking advancement and independence. His mental and mental abilities had become more fully developed and he now sought freedom from life with lower animals.

In the time of the various species of animals and the races of men did the race of man take possession of known lands, seeking greater freedom and independence. Their mental development led them to do this. They became more versed in the natural laws, the sciences and the arts. This mental, internal progression, was the cause of further evolution.

Then, education and liberal thinking led our forefathers to fight for still more independence and last month we celebrated the anniversary of the attainment of one form of independence.

The whole history of man is replete with the truth that the internal mental progression leads to independence and that this is the cause of evolution.

Success, power, wealth and happiness are not the result of constant internal progression and as soon as mankind can declare its internal independence of all material things, it will have achieved again a far greater victory over the worst enemy and tyranny of all—materialism and spiritual ignorance.

In some later issue I shall describe the true method of internal progress.

EDITORIAL

This is to be our monthly editorial and it will pertain to politics. Do not fear, however, that we are going to do much preaching, or that we shall need to do much preaching, or that we are going to ask you to vote one way or the other. But we can't help it! We told you at the start that this editorial paper would deal with the political platform.

Have you ever stopped to think what the word "Editorial" means? An editorial is supposed to express the opinions of the editor or editorial staff of the publication and if this is true our editorials should have a personal ring for you. By this time you may have realized that we really think and believe. But this editorial may give you an inner glimpse of the true feelings of the editorial staff.

We feel that we should write on politics although in our "Survey of the Word" for June we expressed the opinion that our politics were strange. This may seem like beating around the bush, or bearing our hearts out to the average person directly, for it is past, and you must dream again.

But alas! when awake and conscious, the money would not escape him, for he believed he was safe. And to teach man to know man­

Lack of exercise, general and special; are the causes of most of the chronic ailments that afflict mankind. Most people are disinclined to physical effort. Walk a few blocks, and had enough. Few breathe deeply to give the lungs full inflation that the oxygen may reach the blood by absorption and some oxodize and burn up the impurities brought by its ceaseless flow from all parts of the body to the lungs. That’s what it is brought for. Thence to the heart to be driven by its ceaseless beat out through the body to irrigate and stimulate growth. We breathe just enough to keep us alive, and the action automatic to that degree it requires no effort on our part. It is not surprising that we are ill. But it is surprising that we remain as well as we do, considering the slight consideration given to our personal appearance, in our clothing and costumes. Why do we do this? For the power and fascination of a fine, human face and personality is a peculiarity of age, it attacks us from the moment, looks wise, writes out some queer characters on a slip of paper, tells you to go to a drug store and have it filled. If he had not mentioned that it was to be filled at a drug store you would have taken it to a Chinese laundry, no doubt, and come back to do it. Trying to counteract with poison your indifference to rules of health in general, and of human hygiene in particular, by exercising all parts of the human body and limbs and without the slightest effort or loss of energy to the patient and making the treatment pleasurable. And this method is known the world over as the Zander mechanico therapeutic. Naturally it has developed in Germany and Europe more rapidly than in the United States. We are a busy people, and have no time to think about the preservation of our health until we discover it slipping away from us. But this Zander treatment makes one appeal that is potent. It’s money (time saving) power: sprains, fractures, adhesions, stiff joints, contracted tendons, etc., are speeded to recovery in half the ordinary time required by physicians. Frequently the Zander is the only remedy. Space prevents a lengthy discussion of the subject; however, readers that come to the notice of the editor of this paper will be cheerfully written up and recommended to our followers. But it must be good, and do all it claims, be a piano player. That he is a barber, or anything. The subject can be made to act any part with few sentences. The number of subjects. A good operator, who is something of a humorist, or actor, can get better returns than any other. For his price you will enter into the spirit of his work.

In our next issue we will take up the use of hypnotic suggestion in the treatment of chronic diseases, nervous disorder and minor ailments. The reader should derive a great benefit from this department, and the methods given for self-treatment through auto-suggestion are by the best authorities. For the one who wishes to delve deeper into these allied sciences we recommend our Book Shop. We have for sale at list prices all of the standard works on Hypnotism and kindred sciences. Hypnotism, by Moll. Suggestive Therapeutics, by Bernheim, and all of the late works. For a list of good books that are instructive and not all theory, address the Future Home Journal. Also see page 65, this issue.

To Beautify the Teeth.

To beautify the teeth and sweeten the breath, mix 1 ounce of chlorate of lime in one pint of soft water and let it stand 24 hours and pour off one pint; and add 40 drops of the essence of rose.

Violet Mouth Wash.

Tincture of orris ½ pint, spirit of rose ½ pint, alcohol ¼ pint, altar of almonds 5 drops. Shake well and rinse the mouth after eating.

Any good system for improving the appearance of the mouth and teeth will be of great interest to the readers that come to the notice of the editor of this paper will be cheerfully written up and recommended to our followers. But it must be good, and do all it claims,
Note: We have secured from Mr. Thurston the sole right to publish from month to month the entire lessons which comprise the four parts of his science. This is a complete, illustrated and practical course of physics, which he has not attempted to publish in its pages such an exhaustive work as this and we are anxious to have our readers follow the lessons carefully. If you secure future issues of this magazine and preserve them you will have the entire science of "The New Ontology," which will cover many pages.

"The New Ontology" completely covers the subjects of Hypnosis, Telepathy, Psychology, Biology, Astrology, Cosmology, Ontology, Psychical and Spiritual Healing, Personal Magnetism, Clairvoyance, Disease, Health, Happiness and Success. Methods and complete rules are given for producing these occult and mysterious phenomena, and the science clearly shows how health may be obtained and maintained. "The New Ontology" is, without a doubt, the most complete and wonderful science ever written, and was prepared during a period of three years, while Mr. Thurston was testing his methods on himself and the entire New York Institute for Psychical Research. This science is not published in book form and can only be learned through the series published in this magazine.

Lesson Number Six.

In my previous lesson I explained the theory of how life is created. It shall now go into the physiological detail. The importance of this cannot be overestimated.

Simply stated, the proposition is this: Life, in any form, depends upon the action of positive electricity generated and contained within the earth's electrification, coming in contact with the negative electricity generated and contained within the elements and substances of the earth.

This leaves two principles to be proven, (a) That the earth contains negative electricity; and (b) That the sun generates and maintains the atmosphere only positive electricity.

Now let us examine the proof as to the first principle.

Lorid, King, published the first book containing this fact in the following words: "The earth itself is a great magnet."

Grov, in 1849, proposed the theory which is now generally accepted by science, namely, that the magnetism of the earth is due to its own central core or iron nals affected by the action of positive electrical currents circulating around it, and also by the positive electrical action of the sun.

In regard to the second principle we find that: Benjamin Franklin proved that the sky and atmosphere contained and contained positive electricity, in the atmosphere, coming in contact with the negative electricity generated and contained within the elements and substances of the earth.

This leaves two principles to be proven, (a) That the earth contains negative electricity; and (b) That the sun generates and maintains the atmosphere only positive electricity.

In the experiments of Lemonier, Cavallio, Baccia, Ceca and more recently Quellet and Lord Kelvin, proof has been found that the down stream of the earth is electrified negatively, and that up the stream of the earth is electrified positively while the earth is electrified negatively.

A book is being written by the New York Institute for Psychical Research. This science is not published in book form, and can only be learned through the series published in this magazine.
reason they did not create life from dead matter. That the atmosphere with its sustaining forces, and aided in their methods of creating life is unconsciously admitted by Dr. Littlefield when he says that his students "contained no life in itself but at the same time proved to be very susceptible to atmospheric conditions."

To show that the chemical solution used by Dr. Littlefield to create "living organisms" was insufficient to produce positive currents of electricity, we need only refer to his own words. Placing a human hair under the microscope after it had been exposed to the atmosphere, he noticed that "it possessed peculiar magnetic properties, the centre of the drop representing one pole of the magnet and the periphery the other." This statement clearly indicates that there were two electrical currents at work in that drop of water, for there can be no magnetic properties unless both positive and negative electrical currents are at work.

No matter what combination of chemicals were used, the living vital force cannot exist without it independently. The student will recall the fundamental propositions in the first lesson, that although matter does exist its existence is not independent. The Christian Synthesis propounds that "there is no matter, that matter does not exist at all, but that mind is all there is. How erroneous this is in this teaching. In the teaching of the two above. Mind is the controlling factor; but mind must have matter in which and with which to manifest itself. The vital force may be electrical in nature and may be all-important, but without a material substance in which to operate this powerful vital force would be useless.

Having progressed this far, let me clear the way to the next step. Littlefield has said that the creation of life must be in nature, and the mechanism is as follows: First, Littlefield says what was evident to one of the world's greatest scientists after making many experiments, but they did not yield results. When Dr. Littlefield made these experiments he was not working on the electrical theory of life but was attempting to create life from seemingly dead matter.

This being true, it is all the more remarkable that in the experiments made by scientists up to this theory was presented in this manner: That life is, in fact, the presence of the vital force, and that this electrical force, operating upon the material substances of our bodies, causes life. That the vital force coming from a Divine source is the sacred "breath of life" mentioned throughout the Bible. Hence, man is Divine in Soul-force. We shall now proceed to the next lesson.

THE CREATION OF LIFE.

It seems hardly necessary to treat this question of the human being the substance or the nature of matter for its existence. It is everywhere ready to be taken into the animal body by THE ACT OF RESPIRATION for and constituted of the tissues by the inorganic compounds normal to them.

"2d. Life is not a principle dependent on cell action or physical functions, but may be in-fused into organisms after the vital organs have ceased to perform their vital functions by containing only the negative electrical elements, which, as has been explained, cannot contain or manifest the positive electrical force. Thus present in the egg or ovum because of its contact with and formation from the female mother. This egg or ovum is later on fertilized by contact with a substance called sperm. Nature further states in the egg or ovum, the sperm, and has many ways of bringing them together. Science cannot make or initiate the egg or sperm, but science can simply all life; this egg or ovum without using sperm.

Thus we see that after nature has imparted the proper chemical, earthly material negative substances composing the egg or ovum, science can apply life to this egg by using nature's laws and not substituting them as some claim.

The question is—what is sperm? The vital nature of all life is not of import, but its life-qualities are. Since sperm can give life to the negative elements of the egg, it means that this sperm is the positive force, and this precisely the case. Therefore, instead of using sperm science can simply apply the positive force in another way.

The atmosphere at the same time acting upon the egg gives it the positive elements and life is created.

Where life is produced within the womb of the female the egg is dependent, and is nourished with the sperm from the male. This then produces a chemical action, and since the female's womb contains both the negative and positive electrical currents, it is a storehouse of the vital force, and this force of life is imparted to the egg after being fertilized and life is manifested at once. After birth, when the growth (or child) is delivered from the womb and all connection with it is severed, the positive electrical forces of the atmosphere, the lungs, and the lungs of the new-born infant, independent of the mother.

No matter how far the development in the womb may be and how strong in life force the ovum may be, if the mother dies the ovum will die, for its life, until born, is dependent upon the life of the womb. For the same reason if the new-born does not immediately breathe the atmosphere after severing connection with the womb it will die; for there are but two ways for the Life to remain in this new body—one, if the mother is breathing the womb containing the positive current, and the other is by breathing the atmosphere and thereby taking into the body the positive electrical currents by which the air and atmosphere contains.

We find, therefore, that animal life is dependent upon certain electrical substances acting upon one another, producing the condition necessary to receive the positive electrical force of the atmosphere; and the chemical action is taking place continually in a living body, and all the while the atmosphere, containing the positive currents, acting upon these substances, maintaining life.

Therefore, life really depends upon the positive electrical currents acting upon the negative electrical qualities of the matter which composes our bodies.

My students cannot learn the following conclusion and fact too well. If they will reason a moment they will see what vast knowledge is contained in that brief statement; they will find the whole key to life. Later on in this science it will be shown how the positive electrical current can be strengthened or weakened, how the negative may be maintained and prolonged. Health will appear as the highest quality, clearly obtained and maintained and disease and premature death will lose their power.

THE GROWTH OF THE MIND AND BODY.

After birth the animal body continues to grow. This growth is constantly taking place within the body, repairing tissues and parts worn out and giving the needed substances for the active life of the body. In this the electrical forces play a most important part. Every cell and every part of the body, whether of the bones, flesh, tissue or blood, is held in place and in proper condition by the magnetic attraction of the positive and negative currents within the body. The electrical currents of the body keep the flesh and bones in place. The food we eat contains elements of the earth with its negative qualities, and when these are taken into the body they form chemical substances which the positive electrical current can act upon.

The heart is a pump keeping the blood in circulation. Its action is caused by the electrical forces of the body. There is an outer covering to the heart, like a bag, completely covering it. In this sack is contained the chemical solution of which science knows very little. In fact, medicine and physiology have not yet examined carefully the exact composition of the solution, and in many books on the subject of physiology the nature of this solution is treated so slightly that it surprises the student. The heart is a most vital and important organ, and for this reason alone it should receive careful attention. This subject will be treated separately.

The lungs act as the receiving station for the positive electrical force necessary to maintain life in the negative elements of the body. Every breath of air reaching the lungs gives life; not in the way that physiology teaches, but because electrical currents of the atmosphere from the Divine source.
WE ARE YOU BORN IN VIRGO?
From Aug. 23rd to Sept. 22nd.

Mercury is the ruling planet of this sign and gives the promise of great honors through your own personal work. The ability of which you must be very careful and that is the tendency to exaggerate in speaking. Do not rush headlong into so-called "Clear Business Schemes," as you will never be successful in such ventures. Your great success will be in plodding work. Be patient. Mercury is always represented with wings on his hands and feet illustrating his restless nature of his subjects. This you have to combat. Learn to wait and all your desires will be realized, never suddenly. You must watch them develop under sympathetic patience. Stick doggedly to the things you wish and infuse your mind with the fact that you must succeed and you will.

You are a cool reasoner and have a spirit of equity and mercy with a taste for everything that is honest and straightforward. Your moral nature is clear, you have love and confiding, and still few persons understand you. You have a strong will and you are too easily influenced through sentiment. You reason well and then afterward allow your feelings to control you and even against the advice of better judgment. You show little temper, are against the advice of better judgment. You have few friends; this, however, is your own fault. The ones you have are un­derstand, but you are too easily influenc- ed, however, and your existence quickly follows your wrath.

Some travels, later in life, will bring you some money, although you will win more fame than money. With such abilities and qualifications as you have you should make an excellent musician, writer, or teacher. Music would also interest you and you would soon find yourself a reliable critic. As an artist you would have considerable success. In order to show you what other women can do who were born under practically the same conditions as were you, I will give you a list of people who you must know and whose lives you would do well to study: Queen Elizabeth, Dr. Mary Jacobi, and Mary E. Lease.

MARRIAGE.
You will find that either a Taurus or a Capricorn person will make the best marriage partner for you from the viewpoint of sympathy. I will describe these persons so that you may have a clearer picture. A Taurus person is born between April 20th and May 20th and in general they are fond of life and pleasure and excitement rather than a quiet melancholy life. They have executive ability, although they are often exact in their desires. The tastes and talents of a Taurus person are very similar as yours, both liking music, drama, art and poetry. For this reason and many others there would be close sympathy between you and a Taurus person. Capricorn subjects are born between December 22nd and January 20th. In nature they are studious, scientific, and have excellent business abilities. They are especially fond of justice and economy and for this reason would make a good partner for you. As an artist you would have considerable success. A Capricorn person would be the most sympathetic partner for a Virgo subject.

A PREDICTION.
We predict that if you are not a regular subscriber to The Future Home Journal and only read it occasionally, that you will miss something.
The Future Magnetic Success Club :: :: ::

"IN UNION THERE IS STRENGTH"

HOW THE CLUB CAN HELP YOU.

Our motto is: "In Union there is strength." The mighty army of a battle can never win a victory through its co-operative strength; the political party of the day can forestall its victory through the combined strength of the opposite party. Individually a man may be weak, but his combined strength, when concentrated upon one purpose is formidable and beyond defeat.

The prisoner awaiting trial arouses public sympathy. He may be in doubt as to the success of his release. That the public desires his release. He may have many who are wishing and hoping for his release; he learns in many ways, through the newspapers, let himself know that many are wishing and hoping for his release; he learns in many ways, through the newspapers, let himself know that many are wishing and hoping for his release.

The members composing either of the political party of the day can establish faith and confidence in the leaders of the Club through its co-operative strength; for success and happiness. Who can say that his thoughts and their mental strength toward benefiting him and bettering his health; he knows that they are in sympathy with him. The member who is unsuccessful feels in an occult way the daily thought-waves of the thousands of successful members who are sending to him their strength and success.

Will you miss this power for success, health and happiness, or will you join the club now and receive its manifold benefits? Remember, membership is absolutely free to those who are subscribers to this journal. Write to-day for particulars, for it may be the start upon the road to SUCCESS.

ONWARD, FORWARD TO SUCCESS, SAYS EVERY MEMBER OF THE FUTURE MAGNETIC SUCCESS CLUB.

For several months we have been urging men and women everywhere to join our Success Club. Many joined. They're happy now. Slowly the army of sympathizers grows. His position becomes the leading topic of discussion in the city and at once there is a mighty army of men and women sending to him their thought-waves for success and happiness. Who can say that this does not at once establish faith and confidence in the prisoner that his final release is not the result of the co-operation of that mighty army?

And so it is with the members of The Future Magnetic Success Club. Each member may be weak, unhealthy, unsuccessful and unhappy; but the strength of all the members combined is a mighty strength, too formidable to be estimated here. And this strength is directed, through co-operation, upon the betterment of each member. The member who is sick KNOWS in an occult way that thousands of fellow members are directing their thoughts and their mental strength toward benefiting him and bettering his health; he knows that they are in sympathy with him. The member who is unsuccessful feels in an occult way the daily thought-waves of the thousands of successful members who are sending to him their strength and success.

Will you miss this power for success, health and happiness, or will you join the club now and receive its manifold benefits? Remember, membership is absolutely free to those who are subscribers to this journal. Write to-day for particulars, for it may be the start upon the road to SUCCESS.

SPECIAL ADVICE TO ADVANCED MEMBERS.

The following secret code advice is for the advanced members of The Future Magnetic Success Club. Those who are not advanced members cannot read this secret advice and should become an advanced member in order to participate in the information here given.

Make application to The Future Magnetic Success Club, care of The Future Home Journal, 208 Fifth Avenue, New York.

THE GRUMBLER

Note.—There are many people in this world who do nothing but grumble with anything and everything from the size of the sea-waves to the shadow of the earth. We have engaged one of these grumblers to write for this department. He seems to examine everything with a microscope and is sure to find a flaw.

Have you ever been disappointed? Well, I was sadly disappointed last month because the editor of this newspaper forgot to dismiss me on time. That's the way I feel and I think my department is as important as any other. I'm going to see that this does not happen again.

Now look at that ocean liner which is described and illustrated on this page of this issue. Did you ever see anything like that? Just think of it—there will even be race-track and trolley cars. Now that will end the pleasures of taking a trip across the ocean. Those who leave the city to escape the racing amusement will be known to find themselves by them on the ships. Those who detest gambling at horse races and seek to avoid the "odds" will find bookmakers running all around the ship, crying odds and entries and taking your money. Anyway, if those you will have the excellent chance to jump overboard. And then the trolley cars. Herefore it is impossible to enjoy any of the ships for seven or eight days and never have to dodge anything but seasickness. But now, or in the future rather, you will have to dodge every five minutes or a trolley car will run you down or run you in, if not run you off. It's a shame and I'm going to protest to Mr. Taft when he is president next March to prevent builders from making such boats as these.

Speaking of Mr. Taft reminds me. He is surely a good-natured old fellow. I don't seem to mind that there was a William J., living out West. He just smiled and smiled, and then smiled some more. I guess it was about Teddy's hearted sooner or later get into—well, those who never smile know me. So cheer up. Join the ranks of smilers and pass by those who look as though the sun was the last silver dollar and the moon a counterfeit lead quarter.

Are you interested in good books?—Read our book review in this issue and BUY.

The "Sinless One," the great Mahatma from India, who came to New York last year to convert everybody and everything, found that he could not do it. He was successful in having a number of wealthy people support him in an elegant house in the rich part of the city and he lived like a king. But after while some of the investigators of the city learned a thing or two and the "Sinless One" moved quickly to England. And then—he kissed one of his many pretty-stern-lookers and she had him arrested. He told the court he was the "Sinless One" and could not murder him without committing a sin even if he wanted to. But the court was sceptical and could not believe him and he is now suffering from such scepticism.

If only one of these Mahatmas would come to New York and ask for everything but money, he might be successful; but it seems that these Mahatmas need more money to live and preach than fifty Methodist clergymen. Now, why?

The Divine Language of Celestial Correspondences

By COULSON TURNBULL, Ph. D.
A Story of the Heavenly Bodies, and their Vi-
lations and Science, with their relation to the

THE Future Publishing Company has secured several hundred full-size building lots for distribution among enterprising men, women, boys and girls everywhere.

Show a copy of this Magazine to your friends and acquaintances, it will help you to secure the lot. (Sample copies 10c each)

Induce 25 persons to subscribe to this paper for one year and we will send you a deed to a lot, making you the owner of a piece of property that will some day be worth a great deal of money.

The First Subscription you send will reserve the lot for you. Send in the person's name and address and one dollar and make the start. You can have several months' time in which to send in the 25 subscriptions. Send them as fast as you get them and we will send you a receipt for each subscription. When the twenty-five subscriptions are all sent in, we will send you a deed properly executed, with full description and title. You should be able to sell your lot for a good price, in a short time, if you desire to do so.

NEW TRANSPORTATION UNDER WAY.

All shrewd and successful investors recognize that there is no element so necessary to a sure and rapid rise in real estate values as the element of transportation.

The investor who would secure the greatest profit must, with a property eye, anticipate the pending transportation improvement and invest in advances of the masses, and consequently at a low level of values.

From a careful perusal of the facts following, one provokes with remarkable clearness that the present is the opportune moment to invest in properly located property on Long Island.

There is at the present time under completion additional transportation facilities leading into Long Island to cost the almost inconceivable sum of more than SIX HUNDRED AND SEVENTY-EIGHT MILLION DOLLARS.

Nanobly--
The Pennsylvania R. R. Long Island four tube tunnels from 322 and 332 Streets, Manhattan, to Long Island, connecting with L. I. Pennsylvania R. R. system.
The Municipal Tunnel to be built through 34th Street, Manhattan, to Long Island Island, affording an entrance to the Metropolitan Street Railway system.
The Boulevard 42nd Street Tunnel, connecting with the Subway in Manhattan and the N. Y. & Queens County Tunnel system, in Long Island, both of which are controlled by the Belmont Syndicate.
The Municipal Tunnel, to be built under 59th Street and the East River, from 11th Avenue, Manhattan, to Woodside, Long Island.
The Blackwell's Island Bridge, from 99th Street and 53 Avenue, Man-
hattan, to Long Island City, provid-
ing connecting for the entrance into Queens Borough, Long Island, of the Manhattan Elevated system.
The Ward and Randall's Island Bridge, to be used also by the New York, New Haven & Hartford Rail-
road, together with the Pennsylvania R. R., making a direct connection from New York City to the New England States and the East and West, thereby providing quick and direct transportation from all sections of the city into Long Island.

TO ADVERTISERS WHO DON'T KNOW BUT WHO THINK THEY DO

LISTEN: If you place a small advertisement or a large one in THE FUTURE HOME JOURNAL any month this year we will have a man who is known to be one of the most clever ad writers in this country re-write your ad. As he thinks it should be written. The revised copy will appear in the following issue, properly keyed, so that you can tell if it is an improvement over your copy or not. The revised ad may prove to be a great winner, and if it is, you can run it in other papers and reap the harvest good copy brings. Write and ask our editor about it.
