PREAMBLE

1. Persons are known by the Organizations with which they are affiliated and Organizations are known by the Persons composing them.

2. When the Visible Spectrum Research Institute was chartered on Friday, June 19, 1953 and the reins of the Organization were placed in the hands of its President Dinshah P. Ghadiali, he found it necessary from experiences, to have it function with a Code Of Rules so drastic, hard and fast, that the integrity of the followers of the Students and Experimenters of the Science of the Visible Spectrum of Light and Color — so novel and singular to its opponents — may never be questioned or impeached.

3. With such aim in mind, this Code was drafted not with any intention of harassing the honest Student or Experimenter, but, with the sole goal in mind of barring the entrance of any person, with wrong, insincere, dishonest or fraudulent motives, into this unselfish Service Of Mankind.

4. Thus, this Code under which all Members must enlist and work, is the most iron-clad, far-reaching, inflexible, Integrity System established by any Fraternal Organization anywhere. It allows no Exceptions or Favoritisms, no Loopholes or Escapes, no Graft or Wire-pulling, no opportunity to mean one and do another. It is severe, it is strict — exceedingly strict in many ways — but, it is absolutely fair, just, equitable and uniform, admitting no tolerance of any devious or crooked methods or secret, underhanded activities.

5. Visible Spectrum Research as a Science can be protected solely by its followers; by the calibre of its Students and Experimenters will it be judged by the people. Therefore, its followers must deliver the full measure of its claims, make no claims not true or tenable and maintain their reputations as conscientious seekers of the Truth. Those who will not or can not do so, must drop out or be weeded out and this Code of ours is the solution — it is the salvation of all concerned.

6. Visible Spectrum Research Institute, will become in time, the foremost, best recognized and most respected body of workers for the welfare of Humanity. It is headed toward unobstructed success and those who will adhere to its high principles will be honored as pioneers of a great Cause.

7. To all Members of Visible Spectrum Research Institute, I make a soulful request to follow the Code implicitly. It is for their protection and the protection of all concerned and their faithful compliance will radiate credit on the entire Organization.

8. You are being watched ceaselessly by the people, by the followers of other Systems and Sciences, by those also who wish you no well — let them watch you, you watch your steps and nothing in the World will succeed in belittling you or your righteous efforts.

9. Let us march onward with steps firmer than ever, until the blessings attainable through the powers and effects of the Visible Spectrum of Light and Color reach all who need them and Mankind is freed from the grip of dogmas and doctrines, conceptions and confusions, which have beclouded the minds of thinkers for thousands of years and ruined the welfare of untold numbers by their unstable, chameleonic fundamentals.

10. I repeat, worthy Members, fail not in your Duty. Fear nothing, for the honest individual has nothing to fear, because, their common sense and uncommon integrity will always be their guardians.

Your Humble Servant

DINSHAH P. GHADIALI,
President.

OXYGEN CONCENTRATION CAUSES BLINDNESS

It has been an obstetric custom to place prematurely born babies in incubators and feeding them with Oxygen gas. Now, Dr. Jonathan T. Lanman, Dr. Loren P. Guy and Dr. Joseph Dancis after conducting controlled study on 64 premature babies, weighing 2 to 4 pounds at birth, in the Bellevue Hospital Premature Nursery, in New York, declare excessive Oxygen concentration used to save the lives of such babies, is directly responsible for Retrolental Fibroplasia (a dense fibrous growth behind the lens of the eye) causing Blindness in the infants. They are unable to state why life-giving Oxygen should have such adverse effect. When will interference in Nature's Laws be duly recognized and respected?

POWER OF OZONE

Writing in the American Journal of Public Health, Dr. Leon J. Warsaw of New York states that "Those 3-D movie glasses can be sanitized by exposure to Ozone, so they can be used by the next patron without fear of transmitting infection. Exposure to an Ozone atmosphere for half an hour kills germs without harm to the lenses." This is corroborated by "today's health", published by the American Medical Association, in its issue of March 1954. Ozone is an allotropic modification of Oxygen gas and is produced in Nature, during thunder storms by lightning.

MAN-MADE MILK

Haines B. Lockhart for Swift & Co. of Chicago, Illinois, patented an artificial "Milk", Number 2,673,803. It is a mineral-enriched meat product that simulates cow's milk in the Calcium, Phosphorus, Magnesium, Potassium, Sodium and Fat content and the liquid is claimed to have "an appetizing and agreeable" flavor and is said to be desirable for children and adults suffering from loss of appetite! What next?

HARMFUL HONEY

Writing in the Sunday Pictorial Review of March 28, 1954, Pete Howe states: "If bees make their honey from Rhododendron Blossoms, then it is so poisonous people can not eat it without serious harm." Refer to my prior warnings in Rational Food Of Man.

POISONING DRINKING WATER WITH IODINE, CHLORINE AND FLUORINE

Several years ago, a pseudo-scientific craze started that deficiency of Iodine in drinking water, was responsible for the prevalence of Goiter in certain regions. So, in places like Rochester, New York, the authorities began to pour about 8 pounds of Iodine in the city water supply. When it is known that the human body has only about $\frac{1}{2}$ Grain of Iodine in the Thyroid Gland in the neck, the effect of such mixture may well be considered.

Similar addition of Chlorine, a poisonous gas, is made in many cities where the authorities believe there is sewage pollution. The disagreeable taste of such Chlorinated Water, makes it truly repulsive to the sensitive mouth. The human body has about 0.0850 per cent only of Chlorine in its chemical build and the empirical addition of Chlorine does not benefit. The sewage may be altered in character, but, it stays sewage just the same.

Now comes the fantastic cry of Fluorine, a worse poisonous gas. There is a disease known as "Chronic Endemic Fluorosis", which in plain American language means "Long continued poisoning with Fluorine in restricted areas of the country". The effect of this disease is to produce "Mottled Enamel" and it is especially found in districts where the drinking water contains 1 part or more of Fluorine in 1,000,000 parts. The permanent teeth of children drinking such Fluorinated Water, erupt more or less chalky white in color and later are liable to become pitted and spotted brown, yellow or even nearly black. The enamel so to say becomes "mottled". The Fluorine content of the human body is not more than 0.0800 per cent and the true cause of the diseased teeth is quite different — but, of that I shall write later.

For corroboration of the views expressed herein, the learned truth-seekers are requested to refer to The American Illustrated Medical Dictionary, by Dr. W. A. Newman Dorland, Lieut.-Colonel M. R. C., U. S. Army, sponsored by the American Medical Association, under caption "enamel".
