## THE

## PREFACE.

- r er Cafe is much like 'Cicero's when be undertook to write of Pbilofophy, in Latine; there being then no Books upon that Subject, but what were written in Greek: When forme told Cicero, that be would take pains to no purpose, because such as studied Philosophy, would make ute of Greek Authors, and not read Latine Books, which treated of it but at fecond hand; and others, who were no admirers of this Science, would never trouble their Heads with either Greek or Latino. Cicero reply'd, they nee much's miftaken; for, raid he, the great cafe People will find in reading Latin Books, will tempt tho le to be Pisilofiploers who are none; and A 4 they

## The Preface.

they who already are Philosophers, by reading Greek Books, will be very glad to fee how PhiloSophy is handled in Latine.

Cicero might with good reason anfwer as he did, because the Excellency of his Genius, and the great Reputation be had acquired, warranted the fuccefs of all be wrote: But in a defign, not 'much unlike bis, I am far from having thole grounds of Confidence which he had. My purpose is to dijcourre of Philosophy, but not in a Pbilafophical manner; and to raife it to such a pitch, that it ball not be too dry and insipid a Subject to please Gentlemen; nor too mean and trifling to entertain Scholars. Should I be told, (as Cicero was) that Such a Difcourfe as this, would not pleafe the Learned, because it can teach them nothing, nor the Illeterate, because they will have no mind to learn; I will not anfwer as be did, It may be endedvouring to please every Body, I have pleas'd no Body; to keep the middle betwixt two Extrearns is difficult; and I believe I ball never define to put my Self a Second time to the like trouble.

## The Preface.

If this Book have the lack to be read, I declare to tho fe who have any knowledge of natural Philosophy, that 1 do not pretend to inftruct, but only to divert them, by perefeinting to their view in a gay and pleading Dress, that which they already know; but they to whom the Subject is new, may be both diverted and inftructed: the firft will ait contrary to my intention, if they look for Profit, and the Second if they lek for nothing but Pleafure.

I have chofen that part of Philofophy which is moot like to excite Curiofity; for what can more concern us, than to know how this World which we inhabite, is made; and whether there be any other Worlds like it, which are aldo inhabited as this is? They who have any thoughts to life, may throw them away upon Such Subjects as this; but I suppose they who can (pend their time better will not be at fo vain and fruitless an expence.

In there Difcourfes, I have introduc'd a Woman, to be inftructed in things of which

The Preface.
She never heard ; and I have made use of this Fiction, to render the Book the more acceptable, and to give encouragement to Ladies, by the Example of one of their own Sex, who without any fupernatural parts, or tincture of Learning, under ftands what isfaid to her; and without. any confufion, rightly apprehends what Vortex's and oo the Worlds are: And why may not there be aWoman like this imaginary Countess? Since her Conceptions are no other than fuck as the could not chafe but have?

To penetrate into things either obscure in themSelves, or but darkly expreffed, requires deep Meditation, and earneft application of the Mind; but here, nothing more is requifite than to read, and to print an Idea of what is read, in the Fancy, which will certainly be clear enough. I Jubal define no more of the fair Ladies, than that they will read this Syjteme of Pbilofophy, with the fame ap lication that they do a Romance or a Novel. 'Wis true that the Ideas of this Book are legs familiar to molt Ladies, than thole of $R_{c}$. mances

## The Preface.

mances are, but they are not more obscure; for at moft, twice or thrice thinking, will render'em very perfpicuous.

I have not compos'd an aery Syfteme, which hath no foundation at all: I have made use of Some true Philofophical Arguments, and of as many as I thought neceffary; but it falls out very luckily in this Subject, that the Physical Ideas are in themSelves very diverting ; and as they convince and fatisfie reafon, fo at the lame time they present to the Imagination a Spectacle, which looks as if it were made on purpose to please it.

When I meet with any Fragments which are not of this kind, I put them into Some pretty strange dress; Virgil bath done the like in his Georgicks, when his Subject is very dry, he adorns it with pleasant digreffious: Ovid hath done the fame in his Art of Loving; and tho' his Subject be of it Self very pleasing, yet be thought it tedious to talk of nothing but Love. My Subject bath more need of digreffions than

## The Preface.

than bis, yet I have made use of 'em very sparingly, and of Such only, as the natural liberty of converfation allows; the greateft part of 'em are in the beginning of the Book, because the wind cannot at fir $f$ be fo well acquainted with the principal Ideas which are profented to it; they are taken from the Subject it Self, or are as near to it as is poffible.

I have fancy'd nothing concerning the Inhabitants of the many Worlds, which is wholly fabulous; I have faid all that can be reajonably thought of them, and theVifl= on which I have added, have forme real foundation; what is true, and what isfalfe are mingled together, but fo as to be eafily diffinguefbed: I will not undertake to pufifie jo fantaftical and odd a Compofition, that is the principal point of the Work, and for which I can give no very goodreafon.

There remains no more to be laid in this Ireface; but to a fort of People who perhaps will not be eafily fat isfied; not but that I have good reafons to give 'em, but because

## The Preface.

because the beft that can be given, will not content' em; they are thole Scrupulous Perfoes, who imagine, that the placing inhabitaints anywhere, but upon the Earth, will prove dangerous to Religion: 1 know how exceffively tender forme are in Religious Matters, and therefore 1 am very unwilling ogive any offence in what I publish to People, whole opinion is contrary to that I maintain: But Religion can receive no prejudice by my Syfteme, which fills an infinity of Worlds with Inhabitants, if a little errour of the Imagination be but reetifyed. When'tis said the Moon is Inhabited, forme prefently fancy that there are Such Men there, as we are ; and Church Men, without any more ado, think bim an Atheift, who is of that opinion. None of Adam's Pofterity ever travel'd fo far as the Moon, nor were any Colo noes ever Sent thither; the Men then that are in the Moon, are not the Sons of Adam: And here again Theology mould be puzled, if there gould be Men nay where that never defended from Bans: To fay no more, this is the great difficulty

## The Preface.

difficulty to which all others may be reduc'd, to clear it by a larger explanation, I muft make use of Terms which deferve greater refpect, than to be put into a Pamphlet, fo trivial, and fo far from being Serious as this is; but perhaps there is no need of answering the Objection, for it concerns no body but the Men in the Moon: and I never yet fain there are Men there; if any ask, what the Inhabitants there are, if they be not Men ? all I can fay is, that Inever Saw them; and is not because $I$ have Seen 'em, that I peak of' em: Let none now think that I fay there are no Men in the Moon, purposely to avoid the Objecton made against me ; for it appears 'tic impolfible there gould be any Men there, according to that Idea I have framed of that infinite diversity and variety, which is to be observed in the works of Nature; This Idea runs through the whole Book, and cantor be contradicted by any PhiloSopher: And to think there may be more Worlds than one, is neither againft RedSon, or Scripture. If Godglorifyed him-

Self:

## The Preface.

Pelf in making one World, the more Worlds be made, the greater muft be his Glory: But I do not declare the fe Ideas to be Articles of my Faith; when I do, I hope I (ball have the fame Liberty as the reft of my Neighbours.
shive

# PLURALITY 

0 F

## Worlds.

YO U would haveme, Sir, give you an exact account, how I pafs'd my time in the Country; at the Countefs of $D-\cdots$, Are you fenfible fuch an exact Account will amount to a Volume ? Nay (what is worfe, ) a Volume of Philofophy ? I know you expect another kind of Entertainment, Dancing, Gaming, Hunting, ofc. but you muft take up with Vortex's, Planets, and New Worlds, thefe were the Subject of our Converfation. And by good luck you are a B Philu:

Philofopher, fo that it will be no great difappointment, nay, I fancy, you will be pleas'd, that I have brought over the Countefs to our Party, we could not have gain'd a more confiderable Perfon, for Youth and Beauty are ever ineftimable: If Wifdom would appear with fuccefs to Mankind, Do you think the would not do well to takeaupon her the Perfon of the Countefs? And yet was her Company but half fo agreeable, all the World would run mad afterWifdom But tho' I tell you all the difcourfe I had with the Lady, you muft not expect Miracles from me. It is impofible without her Wit, to exprefs but what fhe faid, in the fame manner fhefpake it: For my part, I think her very Learned, from the great difpofition the hath to Learning. Is it a poring upon Books that makes a Man of underftanding? I know many that have done nothing elfe, and yet I fancy are not one tittle the Wifer: But perhaps you expect, before I enter upon my Subject, I hould defcribe the Ladys Houfe, with all its Situa-
tion,

## A Plurality of Worids.

tion, many great Palaces have been turned infide ourward upon far lefs occafion: But I intend to fave you and my felf that labour, let it fuffice, that Itell you, 1 found no Company with the Countefs, and I was not at all difpleafed with it; the two firft days drain'd me of all the News I brought from Londoin, what 1 now fend you is the reft of our Cor:verfation, which I will divide into fu many parts, as we were Everings together.

## The Fint Evening.

W went one Evening after the Air was extremely refrefhing, becaufe that day had been very hot; the Noon had been up about an hour, and as fhe fhone between the Trees, made an agreeble mixture of Light and Darknefs ; the Stars were in all their Glory, and not a Cloud appear'd on the Azare Sky ; I was B 2 mu-
mufing on this awful Profpect, but who can think long of the Moon and Stars in the Company of a Pretty Woman! I am much miffaken if that's a time for Contemplation: Well Madam, Said I to the Counte $f s$, is not the Night as pleafant as the Day? The Day, faid fhe, like a fair Beauty, is clear and dazling; bu t the Night, like a brown Beauty, more foft and moving. Youare Generous Madam, I replyed, to prefer the Brown.You that have all the Charms that belong to the Fair: But is there any thing more Beautiful in Nature than the Day? The Heroines of Romances are generally fair, and that Beauty muft be perfect, which hath all the advantages of imagination. Tell not me, faid 'he, of perfect Beauty, nothing can be fo that is not moving. But fince youtalk of Romances, why do Lovers in their Songs and Elegies addrefs themfelves to the Night? "Tis the Night, Madam, faid I, that crowns their Joys, and therefore deferves their thanks. But 'tis the Night, faid Jhe, that hears their Complaints,

## A Plurality of Worlds.

and how comes it to pafs, the day is fo little trufted with their fecrets? I confefs, Madam, faid I, the night hath fomewhat a more melacholy Air, than the day ; we fancy the Stars march more filentiy than the Sun, and our thoughts wander with the more liberty, whilft we think all the W,orid at reft but our felves: Befides the day is more uniform, we fee nothing but the Sun, and light in the Firmament ; whillt the night gives us variety of Objecte, and hews us ten thoufand Stars, which infpire ns with as many pleafant Ideas. What you fay is true, faid Joc, I love the Stars, there is fomewhat charming in them, and I could almoft be angry with the Sun for effacing ' em . I can never pardon him, I cried, for keeping all thofe worlds from my fight : What Worlds, faid fue, looking earnetly upon me, what worlds do you mean?

I beg your pirdon, Madam, faid $I$, you have put me upon my folly, and I beg n to rave: what Folly, faidjee, I difcover none? Alas, faid $I$, I am afham'd, B 3

6 A Plurality of Worlds.
I muft own it, I have had a frong fancy every Star is a World. I will not fivear it is true, but mult think fo, becaule it is fo pleafant to believe it ; 'Tis a fancy come into my head, and is very diverting. If your folly be fo diverting, Said the Conntefs, Pray make me fenfible of it; provided the pleafure befo great, I will belive of the Stars all you would have me. It is, faid $I$, a diverfion, Madam, I fear you will not relih, 'tis not like one of Moliere's Plays, 'tis a Pleafure rather of the fancy than of the Judgment. I hope, replyed Joe,you do not think me incapable of it;teach me your Stars, I will fhew you the contrasy. No, Nu, I replyed, it fhall never be faid I was talking Philofophy at ten of the Clock at Night, to the moft amiable Creature in the World, find your Philofophers fomewhere elfe.

But in vain I excufed my felf, who could refif fo many Charms ? I was forcid to yield, and yet I knew not where to begin; for to a Perfon who underfood nothing of Natural Philofophy

# A Plurality of Worlds. 

why you miff go a great way about to prove that the Earth may be a Planet, the Planets fo many Earths, and all the Stars worlds ; however to give her a general Notion of Philofophy, I at lat refolved on this method. All Philofoply, raid I, Madam, is founded upon two things, either that we are too fort flighted, or that we are too curious; for if our eyes were better than they are, we fhould foo fee whether the Stars were worlds or not.; and if on the other file we were left curious, we fhould not care whether the Stars are Worlds or not, which I think is much to the fame purpofe. But the Bufinefs is we have a mind to know more than we fee: And again, if we could difern well what we do fee, it would be fo much known to us: But we fee things quite otherwise than they are. So that your true Philofopher will not believe what he doth tee, and is always conjecturing at what he doth not, which is a Life I think not much to be envy'd: Upon this I fancy to my felf, that Nature very much refembleth an

$$
\text { B } 4 \text { Opera, }
$$

## 8 <br> A Plurality of Worlds.

Opera, where you ftand, you do notfee the Stage as really it is; but it is placed with aḍantage, and all the Wheels and Movements arehid, to make the Reprefentation the more agreeable : Nor do you trouble your felf how, or by what means the Nachines are moved, tho certainly an Engineer in the Pit is affected with what doth not touch you; he is pleas'd with the motion, and is demonftrating to himfelf on what it depends, and how it comes to pafs. This Engineer then is like a Philofopher, tho' the difficulty is greater on the Philofophers part, the Machines of the Theatre being nothing fo curious as thofe of Nature, which difpofeth herWheels and Springs fo out of Gight, that we have been long a guefling at the movement of the Univerfe. Suppore then the Sages at an Opera, the Pythagoras's, the Plato's, the Arifotle's, and all the Wire Men who have made fuch a noife in the World, for thefe many Ages: We will fuppore 'em at the Reprefentation of Phaeton, where they fee the afpiring Youth lifted up by the Winds, but do not difover the

# A Plurality of Worlds. 

Wires by which he mounts, nor know they any thing of what is done behind the Scenes. Would you have all there Philofophers own themfelves to be ftark Fools, and confefs ingenuoufly they know not how it comes to pafs: No, no, they are not called Wife Men for norhing; tho', let me tell you, moft of their Wifdom depends upon the ignorance of their Neighbours. Every man prefently gives his opinion, and how improbable foever, there are fools enough of all forts to believe 'em : One tells you Pbapton is drawn up by a hidden Magnetick Vertue, no matter where it lies; and perhaps the grave Gentleman will take pet, if you ask him the Queftion. Another fays, Pbaeton is compofed of certain Numbers that make him mount; and after all the Philofopher knows no more of thofe numbers than a fucking Child of Algebra: A third tells you, Pbaetors hath a fecret love for the top of the Theatre, and like a true lover cannot be at reft out of his Miftreffes Company with an hundred fuch extravagant fan-

cies

cies, that a Man muft conclude the Old Sages were very good Banterers: But now comes Monfieur Defcartes, with fome of the Moderns, and they tell you Phaeton afcends becaufe a greater weight than he defcends; fo that now we do not believe a Body can move without it is pufhed and forced by another body, and as it were drawe by Cords, fo that nothing can rife or fall but by the means of a Counterpoife; he then that will fee Nature really as the is, muft ftard behind the Scenes at the O pera. I perceive, Jaid the Countefs, Philofophy is now become very Mechanical. So Mechanical, faid I, that I fear we fhall quickly be afhamed of it ; they will have the World to be in great, what a Watch is in little; which is very regular and depends only upon the juft difpofing of the feveral parts of the movement. But pray tell me, Madam, had you not formerly a more fublime Idea of the Univerfe? Do you not think you did then honour it more than it deferved? For moft have the lefs efteem of it fince

## A Plurality of Worlds.

they have pretended to know it. I am not of their opinion, faid he, I value it the more fince 1 know it refembles a Watch, and the whole order of $\mathrm{Na}-$ ture the more plain and eafie it is, to me it appears the more admirable,

I know not, faid I, who hath infpir'd you with thefe folid Notions, but I am certain there are few that have them befides your felf, People generally admire what they do not comprehend, they have a Veneration for Obfeurity, and lok upon Nature while they do not underfand her, as a kind of Magick, and defrife her below Legerdemain, when once they are acquainted with her; but I find you, Madam, fo much better difpofed, that I have nothing to do but to draw the Curtain, and thew you the World. That then which appears fartheft from the Earth, (where we refide) is called the Heavens, that Azure Firmament where the Stars are faftned like fo many Nails, and are calld fix'd, becaufe they feem to have no other Motion

I2 A Plurality of Worlds.
tion than that of their Heaven, which carries them with it felf from Eaft to Weft. Between the Earth and this great Vault (as I may call it) hang at different heights the Sun, and the Moon, with the other Stars, Mercury, Venus, Mars, Fupiter and Saturn, whica we call the Planets; thefe Planets, not being faftned to the fame Heaven, and having very unequal Motions, have divers Afpects and Pofitions. Whereas the fix'd Stars in refpect to one another, are always in the fame Scituation for Example, Charle's Wain which is compos'd of thofe feven Stars, hath been and ever will be as it now is, tho the Moon is fonietimes nearer to the Sun, and fometimes farther from it, and fo it is with the reft of the Planets. Thus things appeared to the Old Caldean Shepherds, whofe great leifure did produce thefe firt Obfervations, which have fince been the foundation of Aftronomy, for Aftronomy had its Birth in Caldea, as Geometry was born in Egypt, where the Inun.

## A Plurality of Worlds. $\quad 13$

Inundation of the Nile confounding the bounds of their Fields, was an occafion of their inventing exacter Meafures to diftinguifh every ones Land from that of his Neighbour. So that Aftronomy was the Daughter of Idlenefs, Geometry the Daughter of Intereft; and if we did but examine Poetry, we fhould certainly find her the Daughter of Love.

I am glad, faid the Lady, I have learnt the Genealogy of the Sciences, and am convinced I muft ftick to Afrroncmy, my Soul is not mercenary enough for Geomerry, nor is it tender enough for Poetry; but I have as much time to Spare as Aftronomy requires, befide, we are now in the Country, and lead a kind of Paftoral Life, all which fuits beft with Aftronomy. Do not deceive your felf, Madam, faid I, 'tis not a true Shepherds life to talk of the Stars and Planets : See if they pafs their time fo in Afrea. That fort of Shepherds Craft, replyed fie, is too dangerous for me to learn: I love the
honett

## 14 <br> A Plurality of Worlds.

honef Caldans, and you muft teach me their Rules, if you would have me improve in their Science. But let us proceed, When they had ranked the Heavens in that manner you tell me, pray, what is the next Queftion? The next, faid $I$, is the difpofing the fiveral parts of the Univerfe, which the Learned call, making a Syfteme; but before I expound the firf Syfteme, I would have you obferve, we are all naturally like that Mad man at Athens, who fancy'd all the Ships were his; that came into the Port Pyreuma: Nor is our Folly lefs extravagant, we believe all things in Nature defign'd for our ufe; and do but ask a Philofopher; to what purpofe there is that prodigious company of fixed Stars, when a far lefs number would perform the fervice they do us ? He anfwers coldly, they were made to pleafe our Sight. Upon this Principle they imagined the Earth refted in the Centre of the Univerfe, while all the Celeftial Bodies (which were made for it) took the pains

## A Plurality of Worlds.

15
pains to turn round to give light to it. They placed the Moon above the Earth, Mercury above the Moon, after Venus, the Sun, Mars, Fupiter, Saturn, above all thele they fet the Heaven of fixed Stars, the Earth was juft in the middle of thofe Circles which contain the Planets, and the greater the Circles were, they were the farther diflant from the Earth, and by confequence the fartheft Planets took up the moft time in finifhing their courfe, which in effect is true: But why, faid the Counte/s. interrupting me, do you diflike this Syfteme: It feems to me very Clear and Intelligible. However, Madam, faid I, I will make it plainer; for fhould I give it you as it came from Ptolomey its Author, or fome other who have fince fludied it, I fhould fright you, I fancy, inftead of diverting you. Since the Motions of the Planets are not fo regular, but that fometimes they go fafter, fometimes flower, fometimes are nearer the Earth, and fometimes farther from it ; the Ancients did

## 16 <br> A Plurality of Worlds.

did invent I do not know how many Orbs or Circles involved one within? another, which they thought would falve all Oojections; this confufion of Circles was fo great, that at that time when they knew no better, a certain King of Arrazon, a great Mathematician, but not much troubled with Religion, faid, That hadd God cnnuulted bime mben he made the World, be would have told him hrov to bave framed it better. Tht fancy was very Atheitical, and no doubt the Infructions he would have given the Almighty, was the fupprefling thofe Circles with which they had cloged the Celeftial Motions, and the taking away two or three fuperfluous Heavens which they placed above the fixed Stars; for thefe Philofophers to explain the Motion of the Celeftial Bodies, had above the uppermoft Heaven (which we fee,) found another of Cryftal, to influence and give Motion to the inferiour Heavens: and wherever they heard of another Motion, they prefently clappd up a Cryftal Heaven which coft 'em' nothing.

## A Plurality of Worlds.

nothing: But why muft their Heaven be of Cryftal, faid the Countefs, would nothing elfe ferve as well ? No, no, I replyed, nothing fo well; for the Light was to come thro' them, and yet they were to be folid. Arifotle would have it fo, he had found folidity to be one of their Excellencies, and when he had once faid it, no body would be forude as to queftion it. But it feems there were Comets much higher than the Philoiophers expected, which as they pafs'd along brake the Cryftal Heavens, and confounded the Univerfe. But to make the beft of a bad Market, they prefently melt down their broken Glafs, and to Arifotle's Confufion, made the Heavens fluid; and by the obfervations of thefe latter Ages it is now out of doubt, that Venus and Mercury turn round the Sun, and not round the Earth, according to the Antient Syfteme, which is now every where exploded, and all the Ipfe Dixits not worth a rufh. But that which I am going to lay down, will falve all, and is fo clear, that the King of Argagon him-

$$
C \quad \text { felf }
$$

## 18 APlurality of Worlds.

felf may fpare his Advice. Methinks, faith the Countefs, your Philofophy is a kind of Out-cry, where he that offers to do the work cheapeft, carries it from all the reft. 'Tis very true, faid I, Nature is a great Hufwife, the always makesufe of what cofts leaft, let the difference be never fo inconfiderable; and yet this frugality is accompany'd with an extraordinary magnificence, which fhines thro' all her works ; that is, the is magnificent in the defign, but frugal in the Execution ; and what can be more praife worthy, than a great defignaccomplifh'd with a little Expence? But in our Ideas we turn things topfie-turvy, we place our thrift in the defign, and are at ten times more charge in Workmanfhip than it requires, which is very, ridiculous: Imitate Nature then, Saith 乃e, in your Syfteme, and give me as little trouble as you can to comprehend you. Fear itnot Madam, Said I, we have done with our impertinencies; Imagine then a German call'd Copernicus confounding every thing tearing in ppieces the beloved Circles of Antiquity

## A Plurality of Worlds.

Antiquity, and thattering their Cryftal Heavens like fo many glafs Windows, feiz'd with the noble Rage of Aftronomy he fratcheth up the Earth from the Centre of the Univerfe,fendsher packing, and place:h the Sun in the Centie to which it did more juftly belong, the Planets no longer turn round the Earth, and do notinclofe it in the Circlesthey defribe; if they give us light, it is but by chance, and as they meet us in their way. All now turns round the Sun, the Earth herfelf goes round the Sun, and Copernicus to punifh the Earth for her former Lazyneff, makes her contribute all he can to the motion of the Planets and Heavens, and now ftripp'd of all the heavenly Equipage with which the was fo glorioully attended, the hath nothing left her but the Moon which fillt turns roundabout her: Fair and foftly, faith the Countefs, I fancy you your felf are feiz'd with the Noble Fury of Aftronomy ; a little lefs rapture, and I hall underftand you the better. The Sun you fay is in the Centre of the Univerfe, and

$$
\mathrm{C}_{2}
$$

## 20 <br> A Plurality of Worlds.

is immoveable; what follows next it is Mercury, faid I, he turns round the Sun fo that the Sun is the Centre of the Circle wherein Mercury moves; above Mercury is $V_{\text {enus, }}$ who turns alfo round the Sun; after comes the Earth, which being placed higher than Mercury and Venus, makes a greater circle round theSun than either of them; at laft come Mars, $\mathcal{F}^{-}$ piter, Saturn, in the fame order I name 'em, fo that Saturn hath the greateft circle round the Sun, which is the reafon he is a longer time in making his RevoIntion than any of the other Planets. And the Moon, you have forgot her, Said Be : We fhall quickly find her again, ,aid $I$, the Moon turns round the Earth, and doth not leave her, but as the Earth advanceth in the Circle, which the defribes about the Sun, and if the Moon turns round the Sun, it is becaufe fhe will not quit the Earth; I underftand you, faid free, and I love the Moon for ftaying with us when all the other Planets do abandon us; nay I fear your German would have willingly taken her away

## A Plurality of Worlds.

too if he could, for in all his proceedings, I find he had a great figight to the Earth. 'Twas well done of him, faid I, to abate the Vanity of Mankind, who had taken up the beft place in the Univerfe, and it pleafeth me to fee the Earth in the crouds of the Planets. Sure, faid /he, you do not think their Vanity extends it felf as far as Aftronomy! Do you believe you have humbled me, in telling me the Earth goes round the Sun? For my part I do not think my felf at all the worfe for't. I confefs, faid I, Madam, I believe a fair Lady would be much more concern'd for her place at a Ball, than for her rank in the Univerfe; and the Precedence of two Planets will not make half fuch a noife in the World, as that of two Ambaffadours; however the fame inclination which reigns at a Ceremony, governs in a Syfteme, and if you love the uppermoft place in the one, the Philofopher defires the Centre in the other; he flatters himfelf that all things were made for him, and infenfibly believes a matter of pure feculation to be a point of InteC 3 reft

## 22 <br> A Plurality of Worlds.

reft. This is a Calumny, faid 乃he, you have invented againt Mankind; why did they receive this Syfteme if it was fo abafing? I know not, faid $I$, but I am fure Copernicus himfelf diftrufted the fuecefs of his opinion, he was a long time before he would venture to publifh it, nor had he done it then without the importunity of his Friends. But do you know what became of him ? the very day they brought him the firf Proof of his Book, he dy'd ; he forefaw he fhould never be able to clear all the Contradictions, and very wifefly flipt out of the way. I would be juft to all the World, Said the Countefs; but tis hard to fancy we move and yet fee we do not change our place; we find our felves in the Morning where welay down at Night: Perhaps you will tell me the whole Earth moves --Yes certainly, faid $I$, it is the fame cafe as if you fell afleep in a Boat upon the River, when you awake you find your felf in the fame place, and the fame fituationin refpect of all the'parts of the Boat. 'Tis true, See replyed, but here's a great diffe-

## A Plurality of Worlds.

rene, when I awake Ifind another hoar and that Chows me, my Boat hath changed place. But'tis not the fame with the Earth, I find all things as I left' em. No no, said $I$, there is another hoar too; You know that beyond the Circles of the Planets are fixed Sars, there is our hoar I am upon the Earth, and the Birch makes a great Circle round the Sun, I look for the Centre of the Circle and fee the Sun there, I then direct my fight beyond the Sun in a right Line, and could certainly difcover the fixed Stars which anfwer to the Sun, but that the light of the Sun effaceth'em: But at Night I ealily perceive the Stars which correfponded with him in the day, which is exactly the fame thing; if the Earth did not change its place in the Circle where it is, I fhould fee the Sun always againft the fame fixed Stars, but when the Earth doth change its place, the Sun mut inffer to other Stars and there again is your Shoar which is always changing. And Peeing the Earth makes her Circle in a year, I fee the Sun likewife in the C 4 face

## 24 <br> A Plurality of Worlds.

fpace of a year anfwer fucceffively to the whole Circle of the fixed Stars, which Circle is called the Zodiack : I will draw you the Figure of it, if you pleafe, on the Sand? 'Tis no matter, faid fhe, I can do well enough without it ; befide, it will give an Air of Learning to my Park which I would not have in it : For I have heard of a certain Philofopher, who being Shipwrack'd, and caft upon an unknown Illand, feeing feveral Mathematical Figures traced on the Sea Shore, cry'd out to thofe that followed him, Courage, Courage, my Companions, the Ille is inhabited, behold the foottteps of Men: But you may fare your Figures, fuch Footfteps are not decent here.

I confers, faid I, Madam, the footiteps of Lovers would better become this Place; that is, your Name and Cypher grav'd on the Trees by your Adorers. Tell not me, faid fhe, of Lovers and Adorers, I am for my beloved Sun and Planets. But how comes it to pafs that the Sun as to the fixed

## A Plurality of Worlds. 25

 ixed Stars compleats his courfe but in year, and yet goes over our Heads every day ? Did you never, I replyed, obferve a Bowl on a Bowling Green? It runs towards the Block, and at the fame time turns very often round it felf fo that the parts which were above are below, and thofe which were below are above; juft fo it is with the Earth, at the fame time that fhe advanceth on the Circle which in a years fpace fhe makes round the Sun, in twenty four hours the turns round her felf; fothat in twenty four hours every part of the Earth loofeth the Sun, and recovers him again, and as it turns towards the Sun, it feems to rife ${ }_{2}$ and as it turns from him; it feems to fall. It is very pleafant, faid Jhe, that the Earth mult take all upon her felf, and the Sun do nothing. And when the Moon, the other Planets, and the fixed Stars feem to go over our heads every twenty four hours, you'll fay that too is only Fancy? Pure Fancy, Jaid 1, which proceeds from the fame caufe, for the Planets
## 26 A Plurality of Worlds.

nets compleat their courfes round the Sun at unequal times, according to their unequal diftances, and that which we fee to day anfwer to a certain Point in the Zodiack or Circle of the fixed Stars, to morrow we fee anfwer to another point, becaufe it is advanced on its own Circle as well as we are advanced upon ours. We move, and the Planets move too, which muft make a great alteration; fo that what feems irregular in the Planets, proceeds only from our motion, when in truth they are all very regular: I will fuppofe'em fo, Said the Countefs, but I would not have their regularity put the Earth to fo great trouble; methinks you exact too much activity from fo ponderous a Mafs. But, Jaid I, had you rather that the Sun and all the Stars, which are vaft great Bodies, fhould in tweney four hours travel fuch an infinity of Miles, and make fo prodigious a Tour as they needs muft, if the Earth did not turn round it felf every twenty four hours? Oh, faid 乃ee, the Sun and not very difficult; but the Earth, I fancy , is a little unweildy : That fignifies nothing, I replyed, for what do you think of a firft rate Ship, which carries near an hundred Guns, and a thoufand Men, befides her Provilions and other Furniture? you fee one puff of Wind makes it fail on the Water, becaufe the Water is liquid, and being eafily feparated doth very little refift the motion of of the Ship: So the Earth tho never fo maflive is as eafily born up by the Celeftial Matter, which is a thoufand times more fluid than the Water, and fills all that great fpace where the Planets float; for where would you the Earth fhould be faftned to refift the motion of the Celeftial Matter, and not be driven by it ? You may as well fancy a little block of Wood can withftand the current of a River. But pray, faid Jhe, how can the Earth with all its weight be bornup by your Celeftial Matter, which muft be very light, becaure it is fo fluid? It doth not argue,

28 A Plurality of Worlds.
faid $I$, that what is moft fluid is moft light: for what think you of the great Veffel I mentioned but now, which with all its burthen is yet lighter than the Water it floats on? I will have nothing to do with that great Veffel, faid foe, and I begin to apprehend my felf in fome danger on fuch a whirlegig as you have made of the Earth: There is no danger, I replyed; but Madam, if you are afraid, we will have the Earth fupported by four Elephants, as the Indians believe it. Hey day, cried Jhe, here's another Syfteme; however I love thofe People for taking care of themfelves, they have a good Foundation to trult to, while you Copernicians are a little too venturous with the Celeftial Matter; and yet I fancy if the Indians thought the Earth in the leaft danger of finking, they would double their Number of Elephants. They do well, faid I, laughing at her fancy, who woald lleep in Fear? and if you have occation for em to night, we will put as many as

## A Plurality of Worlds.

 'em away again by degrees as you grow better confirm'd. I do not think 'em very necelfary, faid foe, I have courage enough to turn. You fhall turn with pleafure, Madam, faid $I$, and fhall find delightful Ideas in this Syfteme. For Example, fometimes Ifancy my felf furpended in the Air, without any motion, while the Earth turns round me in twenty four hours; I fee I know not how many different Faces pafs under me, fome white, fome black and fome tauny ; fometimes I fee Hats, and fometimes Turbants, now Heads with Hair, and then fhav'd Heads; here I fee Cities with Steeples, others with Spires and Crefcents, others with Towers of Purcelain, and anon great Countreys with nothing but Cottages; here I fee vaft Oceans, and there moft horrible Defarts ; in fhort I difcover the infinite variety which is upon the furface of the Earth. I confeff, faid foe, twenty four Hours would thus be very well beftowed, fo that in the fame place where
## 30 A Plurality of Worlds.

where we are now, I do not mean in the Park, but we will fuppofe our felves in the Air, other People continually pais by who takeup our place, and at the end of twenty four hours we return to it again.

Copernicus himfelf, faid $I$, could not have comprehended it better: Firft then we fee fome of our Neighbours paffing by us, up to the Ears in Politicks, yet fetling their Nation no better than wedo the World in the Moon; then follows a great Sea, perhaps a Fleet of Ships, perbaps a Mackrel Boat, no matter whether; then come fome of the $I$ roquois going to eat a Prifoger for their Breakfaft, who feems as little concern'd as his Devourers: Afterappear the Women of the Land of Feffo, who fpend all their time in dreffing their Husbands Dinners and Suppers, and painting their Lips and Eye-brows blue, only to pleafe the greateft Villains in the World : Then the fair Circafins, who are very free of their favours, and grant all to the firf Comer, except a little

## A Plurality of Worlds.

little they referve for their Husbands; then the Tartars going to fteal Concubines for the Turks and Perfians; and at laft our own dear Countrymen, it may be in fome points as ridiculous as the beft of 'em. It is very pleafant, faid the Countefs, but to imagine what you tell me , tho if I was above, and faw all this, I would have the Liberty to haften or retard the motion of the Earth accoroing as the Objects pleas'd me more or lefs, and I affure youI fhould quickly fend packing the Politions and Maneaters, but fhould have a great curiofity for the fair-Circalfians, for methinks they have a cuftom very particular. They are fo extreamly Beautiful, faid I, that their Husbands have enough and to fpare to a Stranger. I fear then, faid fhe, the Women of our Country are very ugly, in refpect of thofe fair Ladies, for the Husbands part with nothing here, butkeep all to themfelves: 'Tis becaufe they make more ufe, I replyed, of Hold your peace faid She, $^{\text {and no }}$ nore of your Fooleries

## 32 A Plurality of Worlds.

I have a difficulty to clear, and you mult be ferious. As the Earth moves, the Air changeth every moment, fo we breath the Air of another Country: Not at all, I replyed, for the Air which encompaffeth the Earth,doth not extend above a certain height,perhaps 20 leagues it follows us and turns with us:Have you not feen the work of a Silk-Worm, the Shells which thofe little Animals imprifon themflves in, and weave with fo much Art; they are made of a silk very clofe, but are covered with a Down very flack and foft: So the Earth which is rolid, is covered from the furface 20 Leagues upwards with a kimd of Down, which is the Air, and all the Shell of the Silk-Worm turns at the fame time: Beyond the Air is the Celeftial Matter, incomparably more pure and fubtle, and much more agitated than the Air: You r comparifon, faid fhe, is fomewhat mean and yet what wonders are wrought, what Wars, what Changes in this little Thell? 'Tis true, I replyed, but Nature takes no notice of fuch little particular

## A Plurality of Worlds.

Motions, but drives us along with the general motion, as if fhe were at Bouls. Methinks, faid Jhe, "tis viery ridiculous to be upon a thing that turns, and yet not be well affured that it doth turn;and to tell you the truth, I begin to diftrult the reafons you give, why we fhould not be fenfible of the Motion of theEarth; for is it poffible there thould not fome little mark be left, by which we might perceive it?

All Motions, faid 1, the mofe coms mon and natural they are, are the lefs perceptible, and this holds true even in Morality; the motion of felf Love is fo natural to us, that for the moft rart we are not fenfible of it, and we believe we act by other Principles: You are Mordlizing, Jaid fbe, to a quertion of Natural Philofophy: But'tis enough for the firft time, let us now go home, and meet here again to morrow; you with yout Syftemes, and I with my ignorance.

In returning back to the Cattle, that I might fay all I could on the Subject, I told her of a third Syfteme, invented br D

34 A Plurality of Worlds.
Titio Brabe, who had fixed the Eatth in the Centre of the Worl1, turned the Sun found the Earth, and the reft of the Planets sound the Sun; for fince the new difcoverits, there was no way left to have the Planets turn round the Earth. But the Countefs whohad a quick apprehenfion, faid, flethought it was too affected, among fo many great Bodies, to exempt the Earth only fiom turning round the Sun; that it was immpoper to make the Sun turn round the Earth, when all the Planets turn round the Sun ; and that tho' this Syiteme was to prove the immobility of the Earth, yet fhe thought it very improbable: So we refolv'd to ftick to Copernicus, whofe opinion we thought moft Uniform, Probable and Diverting.

## The Second Evening.

N the Morning, I fent to the Countef's Apartment, to know how the had refted, and whether the Motion
of
of the Earth had not diffurbed her? he anfwered, fhe began to be accuftomed to it, and that the had flept as well as Copernicus himfelf: Soon after there came fome Neighbours to dine with her, but they went away in the Evening; fo that after Supper we walk'd again into the Park, and immediately fel! upon our Syftemes. She fo well conceiv'd what I told her the Night before, that the defired I would proceed without any repitition. Well, Madam, faid $I$, Since the Sun, which is now immoveable, hath left off being a Planet; and theE arth which turns round him is now become one, you will not befurprized when you hear that the Moon is an Earth too, and that the is inhabited as ours is, I confefs, faid hbe, I have often heard talk of the World in the Moon, but I always looked upon it as Vifionary and meer Eancy. And it may be fo ftill, faid $I_{\text {, }}$ I am in this cafe as People in a Civ I War, where she uncertainty of what may happen makes em hold intelligence with the oppofite

$$
D_{2} \quad P_{215}
$$

36 A plurality of Worlds.
Pariy; For tho' I verily believe the Moon is inhabited, I live civilly with thofe who do not believe it; and I am (as fome honeft Gentlemen in point of Religion) ftill ready to embrace the prevailing opinion, but till the Unbelievers have a more confiderable Ad. vantage, I am for the People in the Moon.

Suppofe there had never been any Consmunication between London and Greernizich, and a Cockney who was never beyond the Walls of London, faw Greenvich from the top of a Pyramid; vou ask him if he believes Greenvich is Inhabited as London is? He prefently anfwers, No; for faith he, I fee People at London, but none at Greenwich; nor did I ever hear of any there: 'Tis true, you tell him, that from the Pyramid he cannot perceive any Inhabitants atGreenwich, becaufe of the diffance; but all that be doth difcover of Greenwich very much refembleth what he fees at London, the Steeples, Houfes, Walls; fo that it may very well be Inhabited as London

## A Plurality of Worlds

is; all this fignifies nothing, my Cockney fill perfifts Greenwich is not incabited, because he fees no body there. The Moon is our Greenwich, and every one of us as meet Cockneys as he that never was out of the found of BowBell. You are too Revere, Said be, upon your fellow Citizens; we are not all fare fo filly as your Cockney; fence Greenwich is jut as London is, he is a Fool if he doth not think it inhabited: But the Moon is not at all ike the Earth. Have a care of what you fay, I replied, for if the Moon rcfembleth the Earth, you are under a neceflity to believe it inhabited. If it be fo, fail he e, I own I cannot be dilpens'd from believing it, and you feem fo confident of it, that I fear I muff, whether I will or no. 'Sis true, the two Motions of the Earth, (which I could never Imagine till now) do a little flagger me as to all the reft, But yet how is it poffible the Earth Should enlighten as the Moon doth, without which they cannot be alike? If that be all, Said $I$, the difference is D 3
$58 \quad$ A Plurality of Worlds.
not great, for 'tis the Sun which is the fole Fountain of Light; that Quality proceeds only from him, and if the Planets give Light to us, it is becaufe they firt receive it from the Sun; the Sun fends Light to the Moon, and the reflects it back on the Earth; the Earth in the fame manner receives Light from the Sun, and fends it to the Moon; for the Diftance is the fame between the Earth and the Moon, as between the Mnon and the Earth. But is the Earth faid the Countefs, as fit to fend back the Light of the Sun as the Moon is? You are altogether for the Moon, faid $I$, the is much obliged to you ; but you muft know that Light is made up of certain little Bells, which rebound from what is folid, but pafs through what admits of an entrance in a right Line, as Air or Glafs: Sothat, that which makes the Moon enlighten us, is that the is a Firm and folid Body, from which the little Balls rebound; and we muft deny our Senfes, if we will not allow the Earth the fame Solidity; in fhort, the
difference

## A Plurality of Worlds.

difference is how we are feasted, for the Moon being at fo vat a diftance from us, we can only difenver her to be a Body of Light, and do not perceive that the is a great $\mathrm{Ma} / \mathrm{s}$, altogether like the Earth: Whereas on the contrary, becaufe we are fo near the Eirth, we know her to be a great Mas, but do not difcover her to be a Body of Light, for want of the due distance: It is just fo with us all, Said the Countefs, we are dazled with the Quality and Fortune of thole who are above $u_{j}$, when, do but look to the Bottom and we are all alike.

Very true, fail I, we would judge of all things, but frill ftand in the wrong place; we are too near to $j$ inge of our felves, and to s far off to know others: So that the true way to fee things as they are is to be between the Moon and the Earth, to be purely a Spectator of this World, and not an Inhabitant. I hall never be fatisfy'd, raid She, for the Injultice we do the Eurch, and the two favourable opinion we have
of the Moor, till you affure me that the People in the Moon are as little acquainted with their Advantages, as we are with ours, and that they take our Earth for a Planet, without knowing theirs is one too. Do not doubt it, faid 1, we appear to them to perform very regularly our function of a Planet: ' 'Tis true, they do not fee us make a Circle round them, but that is no great matter. That half of the Moon which was turn'd towards us at the beginning of the World, hath been turn'd towards us ever fince; the Eyes, Mouth and Face which we have fancyed of the Spots in her, are fill the fame, and if the other oppofite half fhould appear to us, we thould no doubt fancy another Figure from the different fpots that are in it : Not but that the Moon turns upon her felf, and in the fame time that the turns round the Earth, that is in a Month; but while the is making that turn upon her felf, and that fhe fhould hid a cheek for Example and appear fomewhat elfe to us, the makes a like part of her Circle round

## APlurality of Worlds.

round rhe Earth, and fill prefents to us the fame Cheek; fo that the Moon, who in refpect of the Sun and Stars turns round her felf, in refpect of us doth not turn at all ; they feem to her to rife and fet in the fpace of fifteen days; but for our Earth, it appears to her to be held up in the fame place of the Heavens: ' ${ }^{~}$ is true, this apparent Immobility is not very agreeable for a Body which fhould pafs for a Planet, but it is not altogether perfect, the Moon hath a kind of trembling, which caufeth a little corner of her face to be fometimes hid from us, and a little corner of the oppofite half appears; but then upon my word fhe attributes that trembling tous, and fancys that we have in the Heavens the motion of a Pendulum, which vibrates to and fro.

I find, faith the Countefs, the Planets are juft like us; we caft that upon others which is in our felves; the Earth faith, 'Tis not I that turn, 'tis the Sun; the Moon faith, 'tis not I that Shake, tifs the Earth; there is a great deal of

errour

# 42 <br> A Plurality of Worlds. 

errour every where. But I would not advife you, faid $I$, to undertake the reforming it; you had better convince your felf of the entire refemblance of the Eart' and the Moon : Imagine then thefe two great Bowls held up in the Heavens, j0a know that the Sun always enlightens the one half of a Body that is round, and the other half is in the Shadow; there is then one half of the Earth and one half of the Moon which is enlightned by the Sun; that is, which hath Day, and the other half which is Night. Obferve alfo that as a Ball hath lefs force after it hath been ftruct againft a Wall which fends it to the other fide, fo Light is weakned when it is reffected. This Pale Light whichcomes to us from the Moon, is the very Light of the Sun, but it cannot come to us from the Moon but by reflection; it hath loft much of the farce and luftre it had when it came direitly from the Sun upon the Moon; and that bright Light which thines directly upon us from the Sin, and which the Earth reflects

## A Plurality of Worlds.

reflects upon the Moon, is as pile and weak when it arrives there; fo that the Light which appears to us in the Moon, and which enlightens our Nights, is the parts of the Moon which have Day, and that part of the Earth which hath Day, when it is oppofite to the part of the Moon which hath Night, gives Light to it : All depends upon how the Moon and the Earth behold one another. At the beginning of the Month we do not fee the Moon, becaufe the is between the Sun and us; that half of her which hath Day, is then turned toward the Sun, and that half which hath Night, turned towards us; we cannot fee it then, becaufe it hath no Light upon it; but that half of the Moon which hath Night, being turned to the half of the Earth, which bath Day, fees us without being perceiv'd, and we then appear to them juft as the full Moon doth to us; fo that, as I may fay, the People of the Moon have then a full Earth; but the Moon being advanc'd upon her Circle

## 44 <br> A Plurality of Worlds.

of a Month, comes from under the Sun and begins to turn towards us a little corner of the half which is Light, there's the Crefcent ; then thofe parts of the Moon which have Night do not fee all the half of the Earth which hath Day, and we are then in the Wayn to them.

I comprehend you very well, faid the Countefs, the People inthe Moon have a Month quite contrary to us; when we have a full Moon.their half of the Moon which is Light is turned to our half of the Earth which is dark ; they do not fee us at all, and they have then a new Earch, this is plain. But now tell me how come the Eclipfes? You may eafily guefs that, faid I, when it is new Moon, that fhe is between the Sun and us, and all her dark half is turned towards us who have Light, that obfcure fhadow is caft upon us, if the Moon be directly under the Sun, that fhadow hidshim from us and at the fame time obfcures a part of that half of the Earth which is Light, which was feen by that half

## A Plurality of Worlds.

of the Moon which was dark, here then is an Eclipfe of the Sun to us during our Day, and an Ecliple of the Earth to the Maon during her Night. When it is full Moon, the Earth is between her and the Sun, and all the dark half of the Earth is turned towards all the light half of the Moon; the ભhadow then of the Earth cafts it felf towards the Moon, and if it falls on the Moon, ic obfcures that light half which we fee, which hath then Day, and hinders the Sun from fhining onit: Here then is an Eclyple of the Moon to us during our Night and an Eclypfe of the Sun to the Moon during her day: Butthe reafon that we have not Eclyples every time that the Moon is between the Sun and the Earth, or the Earth between the Sun and the Moon, is, becaufe thefe three Bodies are not exactly placed in a right Line, and by Confequence that that fhould make the Eclypfe, cafts its fhadow a little befide that which fhould be obfcured.

## 46 A Plurality of Worlds.

I am furprized, faid the Conntefs, that there fhould be fo little myftery in Eclipfes, and that the whole World fhould not know the caufe of 'em. Nor never will, faid I, as fome People go about it. In the Eaft Indies, when the Sun and the Moon are in Eclipfe, they believe a certain Devil who hath black Claws is feifing on thofe Planets with his Talons, and during that time the Rivers are coven'd with the Heads of Indians, who are up to the Neck in Water becaufe they efteem it a very devout Pofture, to implore the Sun and the Moon to defend themfelves againft the Devil. In America they are perfuaded that the S in and the Moon, when Eelipfed, are angry, and what is it they will not do to be reconciled with them? The Greeks, who were forefined, did they not believe the Moon was enchanted, and that the Magicians forced her to defeend from Mcaven, and thed a dangerous juice on the Plants? Nay, in what a pannick fear were we in atove thirty years ago at an Eclipfe of the Sun?

## A Plurality of Worlds.

Sun? How many People hid themfelves in their Cellars, and all the Philofophers of Grefham could not perfwade them to come out till the Eclipfe was over?

Methinks, faid Jhe, 'cis fcandalous for Men to be fuch Cowards; there ought to be a general Law of Mankind to prohibit the difcourfing of Eclipfes, that we might not call to mind the Follies that have beenfaid and done upon that Subject. Your Law ther, faid I, muit abolith even the memory of all things, and forbid us to fpeak at all, for I know nothirg in the World which is not a Monument of the folly of Man.

But what do you think, faid foe, of the People in the Moon, are they as afraid of an Eclipfe as we are ? It would be very burlefque for the Indians there to te up to the neck in Water; that the Americans fhould believe the Earth angry with them ; the Greeks fancy we were bewitched, and would deftroy their Plants; in fhort, that we fhould caufe the fame Confternation among them, as they Ido not doubt it at all ; for why fhould the People of the Moon have more Wit than we? What right have they to affright us and not we them ? For my part, I believe that fince a prodigious Company of Men have been and ftill are fuch fools to adore the Moon, there are People in the Moon that worfhip the Earth, and that we are upon our knees the one to the other. But fure, Said Soe, we don't pretend to fend any influences to the Moon, and to give a Crifis to her fick $;$ if the People have any Wit in thofe parts, they will foan deftroy the Honour we flatter our felves with, and I fear, we fhall have the difadvantage.

Fear it not Madam, faid I; do you think we are the only Fools of the IUniverfe? Is it not confiftent with Ignorance to fpread it felf every where ? 'Tis true, we can only guefs at the Folly of the People in the Moon,but 1 no more doubt it, than I do the moft authentick News that comes from thence.

## A Plurality of Worlds.

What News comes from thence, faid Shew ? That which the Learned bring us, 1 reply'd, who travel thither every day with their Tubes and Tellefcopes: they: will tell you of their difcoveries there, of Lands, Seas, Lakes, high Mountains; and deep Abyfles.

I fancy indeed, faid Jbe, they may difcover Mountains and Abyfles, becaufe of the remarkable inequality; but how do they diftinguifh Lands and Seas? Very eafily, faid I, for the Waters letting part of the Light pafs thro' them, fend back but a very little, fo that they appear afar off like fo many dark Spots; whereas the Lands being folid, reflect the whole Light, and appear to be more bright and fhining: Nay, they pretend to be fo well acquainted with the feveral parts that they have given themall Names ; one place they call Copernicus, another Archimedes, another Galileus; there is the Cafpian Sea, the Black Lake, the Porphirite Mountains ; in fhort, they have publifh'd fuch exact defcriptions of the Moon, that a very Almanack-maket

50 A Plarality of Worlds.
ker will be no more to feek there, than I am in London.

I muft own then, faid the Countefs, they are very exact ; but what do they fay to the infide of the Country ? I would very fain know that. 'Tis impoffible, I reply'd, Mr. Flamfted himfelf, ( one of the moft Learned Aftronomers of our Age) cannot inform you. You muft ask that of Afolfo, who was carried into the Moon by St. Yobn. I am going to tell you one of the agreeable Follies of Ariofto, and I am confident you will be well pleafed to hear it : I muft confefs he had better have let alone St. Yobri, whofe Name is fo worthy of Refpect, but 'tis a Poetical Licenfe, and muft be allow'd. The Poem is dedicated to a Cardinal, and a great Pope hath honour'd it with his Approbation, which is prefix'd to feveral of the Editions ; this is the Argument, Rowland Nephew to Charlemagne, falls mad becaufe the fair Angelica prefers Medore before him. Aftolfo a Knight Errant, finding himfelf one day in the terreftrial

## A Plurality of Worlds. $\quad 5 \mathrm{t}$

 terreftrial Paradife, which was upon the top of a very high Mountain, whereto he was carried by his flying Horfe, meets St. John there, who tells him, if he would have Rowland cured, he muff make a Voyage with him into the Moon. Aftolfo, who had a great mind to fee Countries, did notftand much upon entreaty, and immediately there came a fiery Chariot which carry'd the Apoftle and the Knight up into the Air ; Aftolfo being no great Philofopher, was furpriz'd to find the Moon fo much bigger than it appear'd to him when he was upon the Earth; to fee Rivers, Seas, Mountains, Cities, Forefts, nay, what would have furpriz'd me too, Nymphs hunting in thole Forefts; but that which was molt remarkable, was Valley where you might find any thing that was loft in our World, of what nature foever; Crowns, Riches, Fame, and an infinity of Hopes, the time we fend in Play, and in fearching for the Philofophers Stone, the Alms we give after our Death, the Verfes we prefent to great Men and$$
\mathrm{I}_{2} \quad \text { Princes, }

A Plurality of Worlds.
Prince, and the Sighs of Lovers. I know not, faid fle, what became of the Sighs of Lovers in the time of $A$ rinfto, but I fancy there are very few of 'em afcend to the Moon in our days. Ah, Madam, I repiyed, how many doth the Countefs of $D — — r$ fend thither every day? thofe that are addrefs'd to her, will make a confiderable Heap; and I affure you the Moon keeps all fafe that is loft here below. Yet I muft tell you Ariofto doth but whifper it, tho every thing is there, even to the donation of Conftantine, (i.e.) the Popes have pretended to be Mafters of Rome and Italy by Virtue of a Donation which the Emperor Conftantine made Silvefter; and the truth is, no body knows what is become of it ; bur what do you think is not to be found in the Moon ? Folly, all that ever was upon the Earth is kept there ftill, but in lieu of it, it is not to be imagined how many Wits (if I may fo call'em ) that are loft here, are got up into the Moon, they are fo many Vials

## A Plurality of Worlds. 53

Vials full of a very futile Liquor, which evaporates immediately, if it be not well ftopp'd ; and upon every one of there Vials the Names are written to whom the Wits belong ; I think Ariaof to hath heap'd 'em upon one annthee a little confuredly, but for order: fake we will fancy 'em placed upon Shelves in a long Gallery; Adolfo wonder'd to fee feveral Vials full infcrib'd with the Names of the molt confiderable Statefemen, Divines, Law yer, 心. Beefs me, fail be, is my Lord-and my Lord-..-here! Sir Tho. Sir Yo. nay, Doctor and Fan their too? Why in my Cointrey we look upon 'em as Oracles ; and after all it feems, they are but little better than mad Men, if not farl Fools. I find now the poor Rogue was in the right, tho he was foundly whipp'd fort, who told the Judge that he had feenan ifs cloathed in Scarlet; and a right Worfhipful Alderman, that he knew not which was the greatelt Bruit of the two, the Beat that bore

54 A Plurality of Worlds.
the Furr, or the Beaft that wore it ; but had I been there, I fhould have told Afloffo the faucy Knave was well enough ferv'd, for we are not to look upon the Man, but the Place he fills; we are to reverence a Magiftrate when and wherefoever we meet him, and to fuppofe his Merit was the fole caufe of his Preferment, tho we are certain it came by Bribary or Pimping; but enough of this, let us return to our Vials. To confefs the truth, I begin to fear fince I have entertain'd you with thefe Philofophical and Poetical Vifions, mine there is not very empty; however, 'ris fome confolation to me that while you are to attentive, you have a little Glafs full as well as your Servant: The good Knight found his own wits among the reft, and with the Apoftles leave funffed itall up his Nofe, like fo much Queen of Hungary's Water; but Arofoto faid he did not carry it far, it feturned again to the Moon a little after.

## A Plurality of Worlds.

## *-The love of one fair Northen Lass,

 Sent up bis wit unto the place it was.Well, he did not forget Orlando's Vial, which was the occafion of his Voyage, but he was curfedly plagu'd to carry it, for Hero's wits are naturally very heavy, and there did not want one drop of it; in conclufion Ariofte, acording to his laudable cultom, addreffech himfeif to his Miftrefs in this manner,
*Fair Mifierefs, who for me to Heav<super>n foal fly, To bring ag ain from thence my wandring wit ? Which I till lope, fence from that piercing eye

The Dart came forth that ftrift my Heart did Nor of my lo rs at all complain would I, (hit: Might 1 but keep that which remaineth yet : But if it fill decrease, within Short Space, I doubt I hall be in Orlando's case;
$\Upsilon_{e t}$, well 1 pot where to recover mine,
Tho not in Paradife, nor Cynthia's Sphere, $\Upsilon_{e t}$ doubtless in a Place no tees divine,

In that sweet Face of yours, in that fair Hair, That ruby Lip, in tho fe two ftarlike cyan,

There is my wit, I know it wanders there,

$$

[^0]56 APlurality of Worlds.
Andwith my Lips, if you would give me leave, I there would Search, Ithence would it receive:

Is not this very fine? To reafon like Ariofto, the fafeft way of lofing our wits is to be in tove; for you fee they do not go far from us, we may recovere 'em again at our Lips: but when we lofe'em by other means, as for example, by Philofophizing, whip they are gone into the Moon, and there is no coming at 'em again when we would. Howevèr, faid the Countefs, our Vials have an honourable Station among the Philofophers, when'tis forty to one, but Love fixeth our Wits on an Object we cannot but beafham'd. of. But to takeaway mine intirely, pray tell me, but tell me ferioully, if you believe there are any Men in the Moon; for methinks hitherto you have not been very politive. Fof my part, faid $I, I$ do not believe there are Men in the Moon, for do but obfeve how much the Face of Nature is chan ${ }^{3} \mathrm{~d}$ batween this and China; other Vifages, Shapes, Manners, nay almoft other

## A Plurality of Words.

 ther Principles of Reafon; and therefore, between us and the Moon the alteration mult be muchmore confiderable. In the Lands that have been lately difcovered, we can fearce call the Inhabitants Men, they are rathe Animals of humane fhape,and that too fometimes very Imperfect, almoft without humane Reafon ; he therefore that will travel to the Moon, mult not expect to find Men there.What fort of People will they be then, Jaid the Countels ? Troth, Madam, faid I, I know not; for put the cafe that we our felves inhabited the Moon, and were not Men, but rational Creatures; could we imagin, do you think, fuch fantaftical People upon the Earth, as Mankind is? Is it poffible we fhould have an Idea of fo ftrange a Compofition,a Creature of fuch foolifh Paffions, and fuch wife Reflections? So Learned in things of no ufe, and fo ftupidly Ignorant of what moft concerns him? So much concern for Liberty, and yet fuch great inclinations to Servitude? So defirous of Happinefs,

58 A Plurality of Worlds.
Happinefs, and yet fo very incapable of being fo ? the People in the Moon muft be wife indeed to fuppofe all this of us. But do we not fee our felves continually, and cannot fo much as guefs how we were made ? So that we are forc'd to fay the Gods when they created us were drunk with Nector,\& when they were fober again, could not chufe but laugh at their own handy-work. Well, well, faid the Countefs, we are fafe enough then, they in the Moon know nothing of us; butI could wifh we wẹre a little better acquainted with them, for it troubles me that we fhould fee the Moon above us, and yet not know what is done there. Why, faid $I$, are you not as much concern'd for that part of the Earth which is, not yet difcover'd ? What Creatures inhabit it, and what they do there? for we and they are carry'd in the fame Veffel: they poffefs the Prow, and we the Poop, and yet there is no manner of Communication between us; they do not know at one end of the Ship

## A Plurakity of Worlds. <br> 59

Ship who lives or what is done at the other end ; and you would know what paffeth in the Moon, which is another great Veffel, falling in the Heavens at a valt diftance from us.

Oh, faid Jhe, for the Earth I reckon it all as good as difcover'd, and can guefs at the People, tho I never heard a word of 'em ; for certainly they all refemble us very much, and we may know 'em better when we have a mind to't ; they will fay where they are, and 'tis no more but going to fee'em ; but we cannot get into the Moon if we would, fo that I defpair of knowin what they do there. You would laugh at me, faid I, if I fhould anfwer you ferioufly, perhaps I may deferve it, and yet, I fancy. I can fay a great deal to juftifie a ridiculous thought that is juft now come into my Head; nay to ufe the Fools beft Argument, I'll lay a wager I make you own (in fpite of Reafon) that one of thefe

## 60 A Plurality of Worlds.

 thefe days there may be a Communication betwen the Earth and the Moon, and who knows what great Advantages we may procure by it? Do but confider America before it was difcover'd by Calumbus, how profoundly ignorant were thofe People, chey knew nothing at all of Arts and Sciences, they went naked, had no other Arms but a Bow and Arrows, and did not conceive they might be carried by Animals; they look'd upon the Sea as a wide Space, for bidden to Man, that it was joyn'd to the Heavens, and that beyond it was nothing: 'Tis true, after having fpent whole years in making hollow the truks of great Trees with fharpe ftones, they put themfelves to Sea in thefe Trunks, and floated from Land to Land, as the Wind and Waves drove 'em ; but how often was their Trough overfet, and they fored to recover it again by fwimming ? So that (except when they were on the Land) it might be faid they were continually fwimming : And
## A Plurality of Worlds. $\quad 6 \mathrm{E}$

And yet had any one but told 'em of another kind of Navigation incomparably more perfect and ufeful than their own, that they might eafily pafs over that infinite Space of Water, that they might ftop in the middle of the Waves, and in fome fenfe command the Winds, and make their Veffel go faft or flow as they pleas'd ; in fhort, that this impalfable Ocean fhould be no obftacle to their converfing with another different people ; do you think they would have believ'd you? and yet at laft that day is come; the unheard of and moft furprizing Sight appears, vaft great Bodies, with white Wings, are feen to fly upon the Sea, to vomit Fire from all Parts, and to caft on their Shoars an unknown People, all fcaled with Iron, who difpofe and govern Monfters as they pleafe ; carry Thunder in their Hands, and over throw and deftroy whoever refifts 'em : From whence came they? Who brought 'em over the Sea? Who gave to 'em the Difpofal of the Fire

62 A Plurality of Worlds.
of Heaven ? Are they Gods? Are they Sons of the Sun? for certainly they are not Men. Do but confider, Madam, the furprize of the Americans, there can be nothing greater; and after this, fhall any one fay there fhall never be a Communication between the Moon and the Earth. Did the Americans believe there would ever be any between them and Europe, till it came to pafs? 'Tis true, you muft pafs this great Space of Air and Heaven which is between the Earth and the Moon; but did not thofe valt Seas feem at firft as impaffable to the Americans? You rave, I think, faid Jbe, did you not own the Americans were fo ignorant, that they had not the leaft conception of croffing the Sea; but we who know a great deal more than they, can imagine and fancy the going through the Air, tho we are affurd it is not to be done. There is fomewhat more than fancy, I reply'd, when it hath been already practis'd for feveral have found the fecret of faftening

Wings,

## A Plurality of Worlds:

Wings, which bear them up in the Air, to move them as they pleafe, and to fly over Rivers, and from Steeple to Steeple; I cannot fay indeed they have yet made an Eagles flight, or that it doth not colt now and then a Leg or an Arm to one of thefe new Birds; but this may ferve to reprefent the firft Planks that were launch'd on the Water, and which were the very beginning of Navigation; there were no Veffels then thought of to fail round the World, and yetyou fee what great Ships are grown by little and little from thofe firft Planks. The Art of Flying is but newly invented, it will improve by degrees, and in time grow prefect ; then we may fly as far as the Moon. We do not yet pretend to have difcover'd all things, or that what we have difcov'rd can receive no addition ; and therefore, pray let us agree, there are yet many things to be done in the Ages to come. Were you to live a thoufand Ages, faid the Countefs, I

64 A Plurality of Worlds.
I can never believe you will fly, but you muff endanger your Neck. I will not, I reply'd, be fo unmannerly. as to contradict a fair Lady, but tho we cannot learn the Art here, I hope you will allow they my fly better in the Moon ; 'tic no great matter whether we go to them, or they come to us, we Shall then be the Americans, who knew nothing of Navigation, and yet there were very good Ships at tother end of the World. Were it fo, said Joe, the People in the Moon would have been here before now. All in good time, Said I, the Europians were not in America till at the end of forme thoufands of years, they were fo long in improving Navigation to the point of crofting the Ocean. The People in the Moon have already made forme fort Voyages in the Air ; they are exercifing continually, and by degrees will be more expert, than we foal fee 'em, and God knows how we Shall be furprized. It is unfufferable, said Se, you

## A Plurality of Worlds. 65

you fhould banter me at this rate, and juftifie your ridiculous Fancy by fuch falfe reafoning. I am going to demonftrate, faid I, you reproach me very unjnftly: Confider, Madam, that the World is unfolded by degrees; for the Ancients were very pofitive, that the Torrid and Frigid Zones were not inhabitable, by reafon of their exceffive Heat and Cold ; and in the time of the Romans, the general Map of the World was but very little extended beyond that of their Empire; which tho in one fenfe, exprefs'd much Grandeur, in another fenfe, was a fign of as great Ignorance; however, there were Men found both in very hot and in very cold Countrys; fo that you fee the World is already encreas'd ; after that, it was thought that the Ocean cover'd the whole Earth, except what was then difcover'd, there was no talk then of the Antipodes, not fo much as a thought of 'em, for who could fancy their Heels at top, and their Heads F

66 A Pluraliiy of Worlds.
at bottom, and yet after all their fine reafoning, the Antipodies were difcover'd ; here's now another half of the World ftarts up, and a new Reformation of the Map; methinks this, Madam, fhould reftrain us, and teach us not to be fo pofitive in our Opinions, the World will unfoldit felf more to us hereafter ; then we fhall know the People in the Moon as well as we do now the Antipodes; but all things muft be done in order, the whole Earth muft be firft difcover'd, and till we are perfectly acquainted with our own Habitation, we fhall never know that of our Neighbours. Without fooling, faid the Countefs, you arefo very profound in this Point, that I begin to think you are in earneft, and believe what you fay. Not fo neither, Said $I$, but I would fhew you how eafie it is to maintain a chymerical Notion, that may ( like fome opinions in Religion, ) perplex a Man of Underftanding, but never perfwade him ; there is nothing

## A Plurality of Worlds.

perfwades but Truth, it hath no need of all its proofs, but enters naturally into our Underftanding; and when once we have learn'd it, we do nothing but think of it. I thank you then, faid Jbe, for impofing on me no longer; for I confefs your falle reafoning difturb'd me, but now I fhall fleep very quietly, if you think fit to go home.
$\stackrel{F}{2}$
The

68 A Plurality of Worlds.

## The Tbird Evening.

THE Countefs was fo intent up. on her Notions, that fhe would fain have engag'd me next day, to go on where I left off; but I told her, fince the Moon and Stars were become the Subject of our Difcourfe, we would truft our Chymaras with no body elfe : At Night we went again into the Park, which was now dedicated to our learned Converfation.

Well, Madam, faid I, I have great News for you ; that which I told you laft Night, of the Moon's being inhabited, may not be fo now: There is a new Fancy got into my Head, which puts thofe People in great danger. I cannot fuffer it, faid fiee; yefterday you were preparing me to receive a Vifit from'em, and now there are no fuch People

## A Plurality of Worlds. 69

ple in Nature: Once you would have me believe the Moon was inhabited; I furmounted the Difficulty I had, and will now believe it. You are a little too nimble, I replied; did I not advife you never to be entirely convinced in things of this nature, but to referve half of your underftanding free and difengaged, that you may admit of the contrary opinion, if there be any occafion. I care not for your Sentence;, Said hoe, let us come to matter of Fact. Are we not to confider the Moon as Greenwich? No, said I, the Moon doth not fo much refemble the Earth, as Greenwich doth London: The Sun draw's from the Earth and Water, Exhalations and Vapours, which mounting to a certain height in the Air, do there affemble and form the Clouds; there uncertain Clouds are driven ir regularly round the Globe, fometimes shadowing one Countrey, and fometimes another; he then who beholds the Earth from a-far of, will fee frequent alterations upon ifs furface, becaufe a great Country overF 3
call

## 90 <br> A Plurality of Worlds.

caft with Clouds, will appear dark qr light, as the Clouds flay,or pafs over it; he will fee the Spots on the Earth often change their Place, and appear or difappear as the Clouds remove; but we fee none of thefe changes wrought upon the Moon, which .would certainly be the fame, were there but Clouds about her ; but on the contrary, all her Spots are fix'd and certain, and her light parts continue where they were at firft, which truely is a great misfortune; for by this reafon, the Sun draws no Exhalations or Vapours above the Moon ; fo that it appears fhe is a Body infinitely more hard, and folid than the Earth whofe fubtile parts are eafily feparated from the reft, and mount upwards as foon as heat puts them in Motion: But it muft be a heap of Rock and Marble, where there is no Evaporation; befides, Exhalations are fo natural and neceffary where there is Water, that there can be no Water at all, where there is no Exhalation ; and what fort of Inhabitants

## A Plurality of Worlds.

habitations mult thofe be, whofe Country affords no Water, is all Rock, and produceth nothing? Very fine, faid The, you have forgot fince you affur'd me, we might from hence diftinguifh Seas in the Moon ; nay, You or your Friends were Godfathers to fome of 'em. Pray, what is become of your Ciapiain Sea, and your Black Lake? All Conjecture, Madam, 1 replyed, tho for your Ladyfhips fake, I amvery forry for it; for thofe dark places we took to be Seas, may perhaps be nothing but large Cavities; 'tis hard to guefs aright at fo great a diftance. But will this fuffice then, faid Joe, to extirpate the People in the Moon? Not altogether, I reply'd, we will neither determine for, nor againft them. I murt own my weakneis (if it be one ) faid fhe, I cannot be fo perfectly undetermined as you would have me to be, but muft believe one way, or the other ; therefore pray fix me quickly in my opinion, as to the Inhabitants of the Moon ; preferve or annihilate them,

$$
\begin{equation*}
\text { F } 4 \tag{25}
\end{equation*}
$$

72 A Plurality of Worlds.
as you fhall think fit; and yet methinks I have a ftrange inclination for 'em, and would not have'em deftroy'd, if it were polfible to fave 'em. You know, Madam, faid I, I can deny you nothing ; the Moon fhall be no longer a Delart, but to do you ferwice, we will repeople her. Since to all appearance the Spots in the Moon do not change, I cannot conceive there are any Clouds about her, that fometimes obfcure one part, and fometimes another; yet this doth not hinder, but that the Moon fends forth Exhalations, and Vapours. Our Clouds which we fee in the Air, are nothing but Exhalations and Vapours, which at their coming out of the Earth, were feparated into fuch minute Particles, that they could not be difcern'd ; but as they afcend higher, they are condens'd by the Cold, and by the re-union of their Parts, are renderd vilible; after which they become great Clouds, which fluctuate in the Air, till they return back again in Rain; however thefe Exhalations and

## A Plurality of Words.

 and Vapours do fometimes keep themfelves fo difpers'd, that they are imperceptible; or if they do affemble, it is in forming fuch fubtile Dews that they cannot be difcern'd to fall from any Cloud. It may likewife happen, that the Vapours which go out of the Moon (for it is incredible that the Moon is fuch a Mafs, that all its parts are of an equal Solidity, all at reft one with another, and all incapable of any alteration from the efficacy of the Sun ; I am fure we are yet unacquainted with fuch a Body: Marble it felf is of another Nature, and even that which is moft Solid, is fubject to change and alteration ; either from the fecret and invifible motion it hath within it felf, or from that which it receives from without) it may fo happen then, that the Vapours which iffue from the Moon, may notaffemble round her in Clouds, and may not fall back again in Rain, but only in Dews. It is fufficient for this, that the Air with which the Moon is environ'd, (for it is certain that the Moon is encompaffed with Air74 A Plurality of Worlds.
as well as the Earth) be a little different from our Air, and the Vapours of the Moon a little different from thofe of the Earth, which is very probable. Hereupon the matter being ptherwife difpos'd in the Moon than on the Earth, the Effects muft be different; tho it is of no great confequence whether they are or no; for from the moment we have found an inward motion in the parts of the Moon, or produced by foreign Cau fes, here is enough for the new birth of its Inhabitants, anda fufficient and neceffary fund for their fubfiftance. This will furnifh us with Corn, Fruit, Water, according to the cuftom or manner of the Moon, which I do not pretend to know ; and all proprotion'd to the wants and ufe of the Inhabitants, with whom I pretend to be as little acquainted. That is to fay, reply'd the Countefs, you know all is very well, without knowing how it is fo , which is a great deal of Ignorance upon a very little Knowledge ; however I comfort my felf, that you have given the Moon

## A Plurality of Worlds. 75

her Inhabitants again, and have wrap'd her in an Air of her own, without which a Planet would feem but very naked.
'Tis thefe two different Airs, faid $I$, that hinder the Communication of the two Planets ; if it was only flying, as I told you yefterday, who knows but we may improve it to perfection, tho I confefs there is but little hopes of it ; the great diftance between the Moon and the Earth is a difficulty noteafily to be furmounted, yet were the diftance but inconfiderable, and the two Planets almolt contiguous, it would be ftill impoffible to pafs from the Air of the one, into the Air of the other : The Water is the Air of Fifhes, they never pafs into the Air of the Birds, nor the Birds into the Air of the Fifh ; and yet 'tis not the diftance that hinders them, but both are imprifoned by the Airthey breath in ; we find our Air confifts of thicker and groffer Vapours than the Air of the Moon. So that one of her Inhabitants arriving at the Confines

76 A Plurality of Worlds. of our World, as foon as he enters our Air will inevitably drown himfelf, and we fhall fee him fall dead on the Earth.

I fhould reioyce at a Wreck, faid the Countefs, as much as my Neighbourson the Coalt of Suffex; how pleafant would it be to fee 'em lie fcatered on the ground, where we might confider at our eafe, their extraordinary Figures? But what, faid I, if they could fwim on the outward furface of our Air, and be as curious to fee us, as you are to fee them ; fhould they Angle or caft a Net for us, as for fo many Fifh, would that pleafe you? why not? faid the Countefs; For my part I would go into their Nets of mine own accord, were it but for the pleafure to fee fuch ftrange Fifhermen.

You would be very Sick, faid I, when you were drawn to the top of our Air, for it is not refpirable inall its extent, as may be feen on the tops of fome

# A Plurality of Worlds. 

fome very high Mountains; and I admire that they who have the folly to believe that our Faries, whom they alow to be Corporeal, and to inhabit the moft pure and refin'd Air, do not tell us that the reafon why they give us fuch fhort and feldom vifits, is that there are very few among them that can dive, and thofe that can, if it be poffible to get through the thick Air where we are, cannot ftay half fo long in it, as one of the worft of Sir Harry Blunt's Sponge getherers. Here then are natural Barricades, which defend the paffage out of our World, as well as the Entry into that of the Moon ; fo that fince we can only guefs at that World, let us fancy all we can of it. For Example, I will fuppofe that we may fee there the Firmament, the Sun, and the Stars, of another colour than what they are here; all thefe appear to us through a kind of Natural Spectacles, which change and alter the Objects. Thefe Spectacles are our Air, mix'd as it is with Vapours and Exhalations, and which doth net extend

78 A Plurality of Worlds.
it felf very high. Some of our Modern Philofophers pretend, of it felf its is blue, as well as the Water of the Sea,and that this colour neither appears in the one nor in the other, but ata great depth; the Firmament,fay they, where the fix'd Stars are faftned, hath no peculiar light of its own, and by confequence muft appear black, but we fee it through the Air which is blue, and therefore to us it appears blue ; which if fo, the Beams of the Sun and Stars cannot pafs through the Air without being ting'd a little with its colour, and lofing as much of their own; yet were the Air of no colour, it is very certain, that through a great Mift the light of a Flambeau at fome diftance appears reddifh, though itbe not its true natural colour. Our Air is nothing but a great Mift, which changeth the true colour of the Skey, of the Sun and of the Stars ; it belongs only to the Celeftial Matter to bring us the Light and Colours as they really are in all their purity; fo that fince the Air of the Moon is of another nature than our Air, or is
ftain'd

## A Plurality of Worlds.

79
ftain'd of another colour, or at leaft is another kind of Mift, which caufeth other alterations to the Colours of the Celeftial Bodies; in fhort, as to the People of the Moon, their Spectacles through which they fee every thing are chang'd.

If it be fo, faid the Countefs, I prefer my abode before that of the Moon; for I cannot believe the Celeftial Colours are fo well fuited as they are here; for if you will let us put green Stars on a red Sky, they cannot be fo agreeable as Stars of Gold on an Azure Firmament. To hear you, faid I, one would think you was chufing a Petticoat, or a fuit of Knots ; but believe me, Nature hath as good a Fancy as Mrs. Harrifon; leave it to her to chufe Colours for the Moon, and I'll engage they fhall be well forted; fhe will not fail to vary the Profpect of the Univerfe, at every different point of Sight, and always the Alteration fhall be very agreeable. I know very well, Said the Countefs, her Skill in this Point ; fhe is
not at the charge of changing the $\mathrm{Ob}^{-}$ jects, but only the Spectacles, and hath the credit of this great variety, without being at any expence ; with a blue Air, fhe gives us a blue Firmament ; and perhaps with a red Air, fhe gives to the Inhabitants of the Moon a red Firmament ; and yet ftill it is but the fame Firmament ; nay, I am of opinion, fhe hath plac'd a fort of Spectacles in our Imagination, through which we fee all things, and which to every particular Man change the Objects. Alexander look'd on the Earth as a fit place to c ftablifh a great Empire, it feem'd to CeLadion a proper refidence for Aftrea, and it appear'd to a Philofopher, a great Planet in the Heavens, cover'd with Fools: I do not believe the Sights vary more betweer the Earth and the Møon, than they do between one man's Fancy and anothers.

This change in our Imaginations, faid $I$, is very furprizing ; for they are ftill the fame Objects, tho' they appear different;

## A Plurality of Words. gi

ferent; when in the Moon, we may fee other Objects we do not fee here, or at leaft, not fee all there we do fee here ; perhaps in that Country they know nothing of the Dawn and the Twilight, before the Sun rifeth, and after the Sun fens; the Air which encompaffeth, and is elevated above us, receives the Rays, fo that they cannot ftrike on the Earth ; and being grows, tops fame of them, and fends 'em to us, tho' indeed they were never naturally defign'd us; fo that the Day-break and the Twilight are a fabour which Nature bellows on us; they are a Light which regularly we fhould not have, and which the gives us over and above our due; but in the Moon, where apparently the Air is more pure, and therefore not fo proper to fend down the Beamsitreceives from the Sun before his riffing, and after his fetting ; you have not that Light of Grace (as I may call it) which growing greater by degrees, doth more agreeably prepare you for the arrival of the Sun, and which growing weaker, and diminifling by

82 A Plurality of Worlds. degrees, doth infenfibly prepare you for the Sun's departure : But you are in a profound darknefs, where a Curtain (as it were) is drawn all on a fudden, your Eyes are immediately dazled with the whole light of the Sun, in all its glory and brightnefs; fo likewife, you are on a fudden furpriz'd with utter Darknefs; the Night and the Day have no medium between them, but you fall in a moment from one extreme into the $0-$ ther. The Rainbow likewife is not known to them in the Moon; for if the Dawn is an effect of the groffnefs of the Air and Vapours, the Rainbow is form'd in the Clouds, from whence the Rain fall; fo that the moft beautiful things in the World, are produced by thofe things which have no beauty at all. Since then there are no Vapours thick enough, nor no Clouds of Rain about the Moon, farewell Dawn, adieu Rainbow : What muft Lovers do for Similies in that Country, when fuch an inexhauftible Ma gazine of Comparifons is taken from them?

## A Plurality of Worlds.

I doubt not, faid the Gountefs, but there are thofe in the Moon as good at Simily as the greateft Beau in CoventGarden; and had they neither Sun nor Stars,Pearls nor Rubies, R ofes nor Lillies, yet could fay as many fine chingsto a Vifor Mask, as the pertelt Witatthe Puppet flow ; and they are well enough recompenc'd for the lofs of our Dawn and Rainbow ; for by the fame reafon, they have neither Thunder nor Lightning, both which are formed in the Clouds; how glorious are their Days, the Sun continually fling? How pleafant their Nights, not the leaft Star is hid from them? They never hear of Storms or Tempefts, which certainly are an effect of the wrath of Heaven: Do you think then they ftand in need of our pity? You are defcribing the Moon, I replyed, like an enchanted Palace; but do you think it is fo pleafant to have a fcorching Sun always over our Head, and not the leaft Cloud to moderate its Heat? Tho' I fancy 'tis for this reafon

64 A Plurality of Worlds.
that Nature hath made great Cavities in the Moon ; we can difcern 'em eafily with our Tellefcopes, for they are not Mountains, but fo many Wells or Vaults in the middle of a Plain ; and what do we know but the Inhabitants of the Moon, being continually broil'd by the exceffive heat of the Sun, do retire inthofe great wells; perhaps they live no where elfe, and 'tis there they build 'em Cities ; for we ftill fee in the Ruines of old Rome, that that part of the City which was under ground, was almoft as large as that which was above ground. I fancy, during the late fiege of Buda, they lived thereas they do in the Moon, or 'tis but going to the Fountain Tavern Cellar, where the feveral Vaults are as fo many high Streets, the Vats, Pipes, Hogsheads, to many different Edifices, and the Drawers and Coopers, like fo many Troglodites. I perceive you laugh at me, yet if I may be fo free with a fair Lady, you deferve it much better than I; for you believe the People in the Moon muft live upon the furface of

## A Plurality of Worlds.

their Planet, becaufe we do fo upon ours ; but quite contrary, fince we dwell upon the Superficies of our Planet, they fhould not dwell upon the fuperficies of their Planet ; if things differ fo much in this World, what mult they do in another?
'Tis no matter, faid the Countefs, I can never fuffer the Inhabitants of the Moon to live in perpetual darknefs. You will be more concern'd for 'em, I replyd, when I tell you that one of the ancient Philofophers did long fince di:cover the Moon to be the abode of the bleffed Souls departed out of this Life, and that all their happinefs confifted in hearing the Harmony of the Spheres; that is, the Mufick (I had like to have faid Noife) which is made by the motion of the Celeftial Bodies; if you have feen a Rarće Shom, you will eafily comprehend it: But becaufe the Philofopher pretends to know exactly all they do there, he tells you, that when the Moon is obfcured by the fhadow of

86 A Plurality of Worlds.
the Earth, they no longer hear the Hea venly Mufick, but howlllike fo many Souls in Purgatory; fo that the Moon taking pity of 'em, makes all the haft, fhe can to get into the Light again. Methinks then, fays fhe, we fhould now and then fee fome of the Bleffed Souls arrive here from the Moon, for certainly they are fent to us. I confefs indeed, faid, , it would be very pleafant to fee different Worlds; fuch a Voyage, tho' but in imagination, is very delightful ; what would it be in effect? It would be much better certainly than to go to Japan, which at beft, is but crawling from one end of the World to t'other, and after all to fee nothing but Men. Well then, Jays Soe, let us travel over the Planets, as faft as we can ; what fhould hinder us ? Let us place our felves at all the different Profpeits, and from thence confider the Univerfe. But firft, have we any thing more to fee in the Moon? I believe not, I replyed; at leaft, you have feen all I can fhew you, Coming

## A Plurality of Worlds 87

ing out of the Moon, towards the Sun, we fee $V$ enus, which puts me again in mind of Greenwich. Venus turns upon her felf, and round the Sun, as well as the Moon; they likewife difcover by their Tellefcopes, that Venus like the Moon, if I may fpeak after the fame manner) is fometimes $n \cdot w$, fometimes full, and fometimes in the Nayn,according to the divers fituations she is in, in refpect of the Earth.

The Moon to all appearance, is inhabited, why fhould not Venus be fo too ? You are fo full of your Whys, and your Wherefores, fays Jbe, interrupting me, that I fancy you are fending Colonies to all the Planets. You may be certain, fo I will, I replyed, for I fee no reafon to the contrary; we find that all the Planets are of the fame nature, all obfcure Bodies, which receive no light but from the Sun, and then fend it to one another ; their motions are the fame fo that hitherto they are alike; and yer if weare to believe that thefe vaft BoG 4 dies
dies are not inhabited, I think they were made but to little purpofe ; why fhould Nature be fo partial, as to except only the Earth? But let who will fay the contrary, I muft believe the Planets are peopled as well as the Earth. Ifind, fays the Countefs, with fomeconcern, a Yhilofopher will never make a good Martyr, you can fo quickly fhift your Opinion, 'twas not many minutes fince the Moon was a perfect Defart, now the reft of the Planets are inhabited. Whytruly, Madam, Caid I, there is a time for all things, and your true Philofopher believes any thing, or nothing, as the Maggot bites. Had you taken me in the fceptical Vein, I would have as foon granted a Nation in a Muftard Ball, as a living Creature in the Moon ; but the tide is turn'd, and all the Planets are Peopled like an Anthill ; yet, Raillery apart, this is not fo very improbable as you think it ; for do you believe we difcover, (as I may fay) all the Inhabitants of the Earth? there be as many kinds of invifible as vifible

## A Plurality of Worlds.

vifible Creatures ; we fee from the Elephant to the very hand-worm, beyond which our fight fails us, and yet counting from thatminute Creature, there are an infinity of leffer Animals, which were they perceptible, would be as little in comparifon with a Mite, as a Mite is of an Ox. How lately have our Virtuofo's found out the Pepper Worms, which in the leaft drop of Water appear like fo many Dolphins, fporting in the Ocean; nay, they tell you that the fharpnefs of Vineger confifts in the fiercenefs of the little Animals that bite you by the Tongue; not to name the blue on Plums,and twenty Experiments of the like nature.

Nay, to fhew you that they can fee as far into a Millitone as Defcartes himfelf, they have difcovered that feveral, even of the mot folid Bodies, are nothing but an immenfe fwarm of imperceptible Animals: Do but confider this little Leaf; why it is a great World, of a vaft extent, what Mountains, what Abyffes

90
A plurality of Worlds.
byffes are there in it? the Infects of one fide, know no more of their fellow Creatures on t'other fide, than you and I can tell what they are now doing at the Antipodes; is it not reafon then that a great Planet fhould be inhabited ? In the hardeft Stones for Example, in Marble, there are an infinity of Worms, which fill up the vacuums, and feed upon the fubftance of the Stone ; fancy then millions of living Creatures to fublift many years on a grain of Sand; fo that were the Moon but one continued Rock, fhe hould be gnaw'd by thefe invifible Mites, (as if fhe were a green Cheefe) rather than not be inhabited: In fhort, every thing is animated, and the Stones upon Salifbury Plain are as much alive as a Hive of Bees; imagine then thofe Animals which are yet undifcovered, and add them and thofe which are but lately difcover'd, to thofe we have always feen, you will find the Earth fwarms with Inhabitants. Why then fhould Nature which is fruitful to an excefs here, be fo very barren in the reft of

## A Plurality of Worlds.

the Planets? I muft own, faid the Countefs, you have convinc'd my Reafon,but you have confounded my fancy, with fuch variety, that I cannot imagine how Nature, which hates Reperitions, fhould produce fo many different kinds. There is no need of Fancy, I reply'd, do but truft your Eyes, and you will eafily perceive how Nature diverfifies in thefe feveral Worlds.

All humane Faces, in general,are of the fame Model, and yet the Europeans and the African have two particular Moulds; nay, commonly every Family have a different Form ; what fecret then has Nature to fhew fo much variety in the fingle Face ? Our World, in refpect of the Univerfe, is but a little Family; all whofe Faces have fome refemblance ; in another place, there is another Family, whofe faces have a different Air and Fafhion; the difference too increafeth with the diftance, for whofoever fhould fee an Inhabitant of the Moon, and anInhabitant of the Earth, would foon perceive

## 92 <br> A Plurality of Worlds.

ceive they were nearer Neighbours than one of the Earth, and one of Saturn; here, for Example, we have the ufe of Voice, in another World, they fpeak by Signs, and at a greater diftance they do not Speak at all ; here our Reafon is form'd by Experience, in the next World, Experience contributes little towards it; and in the next to that, old Men know no more than Children; here we are troubled more with what is to come, than with what is paft ; further off, they are not concerned with either, which by the way, I think, is much the better: Here, 'tis thought we want a fixth Senfe, which would teach us many things, of which we are now ignorant ; this fixth Senfe is apparently in another World, where they want one of the five which we enjoy; nay, perhaps there is a much greater number of Senfes, but in the Partition we have made of 'em with the Inhabitants of the other Planets, there are but five fall'n to our fhare, with which we are well contented, for want of being acquainted

## A Plurality of Worlds.

quainted with the reft: Our Sciences have bounds, which the wit of Man could never pafs; there is a point where they fail us on a fudden, the reft is referv'd for other Worlds, where fomewhat which we know, is unknown to them. This Planet enjoys the pleafures of Love, but lies defolate in feveral places by the fury of War ; in another Planet they enjoy a perpetual Peace, yet in the midft of that Peace, know nonothing of Love, and time lies on their hands; in a word, that which Nature practifes here in little, in diftributing her Gifts among Mankind ; the does at large in other Worlds, where fhe makes ufe of that admirable fecret fhe hath to diverfifie all things, and at the fame time makes 'em equal, by compenfating for the inequality; this I confefs is on the Borders of Nonfenfe, but a Man is ne'er the lefs a Philofopher for being a little obfcure, if not unintelligible.

But

## 94 <br> A plurality of Worlds.

But is it not time,Madam,to be ferious, how will you difpofe of all thefe Notions; Trouble not your felf, fays $/$ he, Fancy is a great Traveller ; I already comprehend thefe feveral Worlds, and reprefent to my felf their different Characters and Cuftoms; fome of 'em, I affure you, are very extraordinary; I fee at this moment, a thoufand different Figures, tho I cannot well defrribe 'em. Oh leave 'em, I reply'd, to your Dreams, they will reprefent'em very faithfully.

## A Plurality of Worlds.

## The Fourth Evening.

IHave been told of a Phyfician that makes his Patientsdream as he pleaby prefcribing fuch a Specifick for their Supper,as works thofe impreffions he would have on the Fancy; of what ufe he may be to the modern Poets, I leave to the curious; and return to the Countefs, who either did not dream at all, or nothing to the purpofe ; fo that continuing our Voyage to the other World, we could only guefs at their Inhabitants. We were come to Venus, and I told her, that $V$ enus certainly turn'd on it felf, tho no body couid tell in what time, and confequently were ignorant how long her Day lafted; but heer Year was compos'd of eight Months, becaufe 'tis in that time fhe turns round the Sun: And feeing Venus is forty times lefs than the Earth, the Earth appears (to them in Venus) to be a Planet, forty times bigger than $V$ enus appears to us

## 96 A Plurality of Worlds.

 on the Earth ; and as the Moon is forty times leffer than the Earth, fo fhe feems to be juft of the fame magnitude, to the Inhabitants of Kenus, as here $V$ enus feems to us.I fee then, fays the Countefs, that the Earth is not to Venus, what Venus is to the Earth I mean, that the Earth is too bigg to be the Mother of Love, or the Shepherd's Star to $V$ enus; but the Moon, which appears to $V$ enus, of the fame big. nefs that $V_{\text {enus }}$ appears to us, is affign'd to be the Mother of Love, and Shepherds Star to Venus; for fuch names are only proper for a little brisk airy Planer, bright, and Thining as the Goddefs her felf.Oh, bleffed Moon, how happy art thou to prefide over the Amours of thofe gallant People, where all they fay, is loft and moving, and perfectly refin'd from the drofs of our Wits, who are fitter for a Bear-Garden than a Circle? How grofs is their Courthip?how mean their Raillery ? without any diftinction of time, place, or perfon; they make Love, (as they call it) but one way,

## A Plurality of Worlds. 97

 and the form is the fame, at a Farce, or Funeral. Be not fo very fevere, I reply'd, if fome of our Beaux Speak plain Engli/h, fome of your Belles, like 'em ne're the worfe for't : The art of Love is as much improv'd as the art of War, the Generals of this Age take a Town in two days, which in the laft, held out as many years ; and the Rofes, Lillies, Pearls, and Rubies, (a whining Lovers train of Artillery) are grown as ufelefs as Bows and Arrows: Tho' after all, I muft own they have another Standard in the Planet Venus; there Clelia and Partleniffa, is below the language of Grooms and Chamber-Maids ; and every Porter and Car-Man a perfect Sir Court$l y$; but then confider the difference of Climats; Venus is much nearer than the Earth is to the Sun, from whence the receives a more vigorous and active influence.I find, Jays the Countefs, it is eafie enough to guefs at the Inhabitants of Venus; they refemble what I have read of the Moors of Granada, who were a

# 98 A Plurality of Worlds. 

little black People, fcorch'd with the Sun, witty, full of Fire, very Amorous, much inclin'd to Mufick and Poetry, and ever inventing Mafques and Turnaments in honour of their Miftreffes, Pardon me, Madam, faid $I$, you are little acquainted with the Planet; Granada in all its Glory, was a perfect Greenland to it ; and your gallant Moors, in comparifon with that People, were as ftupid as fo many Laplanders.

But what do you think then of the Inhabitants of Mercury? They are yet nearer to the Sun, and are fo full of Fire, that they are abfolutely mad ; I fancy, they have no Memory at all, like moft of the Negroes, that they make no reffections, and what they do is by fudden ftarts, and perfect hap-hazard; in fhort, Mercury is the Bedlam of the $\mathrm{U}_{-}$ niverfe; the Sun appears to them much greater then it does to us, becaufe they are much nearer to it than we ; it fends them fo vaft and ftrong a Light, that the moft glorious day here, would be no more with them than a declining twilight;

## A Plurality of Worlds. 99

 twilight : I know not if they can difftinguilh Objects, but the heat to which they are accuftom'd, is fo exceflive, that they would be ftarved with Cold in the Torrid Zone; their Year is but three Months, but we know not the exact length of their Day, becaufe Mercury is fo little, and fo near the Sun; it is, (as it were) loft in his Rays, and is very hardly difoover'd by the Aftronomers ; fo that they cannot obferve how it moves on its Centre, but becaufe it is fo little, fancy it compleats its Motion in a little time; fo that by confequence, the Day there is very fhort, and the Sun appears to them like a vaft fiery Furnace at a little Diftance, whofe Motion is prodigioufly fwift and rapid; and during their Night, Venus and the Earth (which muft appear confiderably big) give light to them; as for the other Planets which are beyond the Earth, towards the Firmament, they appear lefs to them in Mercury, than they do to us here, and they receive but little Light from them, perhaps none at all; the fix'd Stars like$\mathrm{H}_{2}$
## 100 A Plurality of Worlds.

wife feem lefs to them, and fome of 'em totally difappear,which,were I there, I fhould efteem a very great lofs.

What fignifies the lofs of a few fix'd Stars? Says the Countefs; I pity 'em for the exceffive heat they endure; let us give 'em fome relief, and fend Mercury a few of the refrefhing Showers they have fometimes four Months together in the hotteft Countries during their greateft extremity. Your Fancy is good, Madam, I reply'd, but we will relieve 'em another way ; In China there are Countries which are extreamly hot by their Situation : Yet in Fuly and Auguft are fo cold, that the Rivers are Frozen; the reafon is, they are full of Salt-Petre, which being exhal'd in great abundance by the exceffive heat of the Sun, makes a perfect Winter at Midfummer. We will fill the little Planet with SaltPetre, and let the Sun fhine as hot as he pleafes. And yet after all, who knows but the Inabitants of Mercury may have no occafion either for Rain, or Salt-Petre? If it is a certain truth, that Nature

## A Plurality of Worlds. 101

 never gives life to any Creature, but where that Creature may live ; then thro' Cuftom, and ignorance of a better Life, thofe People may live happily.After Mercury comes the Sun,but there is no poffibility of Peopling it, nor no room left for a Wherefore. By the Earth which is inhabited, we judge that other Bodies of the fame Nature may be likewife inhabited; But the Sun is a Body not like the Earth or any of the Planets; the Sun is the Source or Fountain of Light, which tho' it is fent from one Planet to another, and receives feveral alterations by the way, yet all originally proceeds from the Sun, he draws from himfelf that precious fubftance which heemits from all fides, and which reflects when it meets witha folid Body, and fpreads from one Planet to another thofe long and vafterains of Light which crofs, ftrike thro', and intermingle in a thoufand different fafhions, and make (if I may fo fay,) the Richeft Tiffu's in the World. The Sun likewife is placed

## 102 A Plurality of Worlds.

in the Centre, from whence with moft Convenience, he may equally diftribute and animate by his Heat; it is then a particular Body, but what fort of Body has often puzled better Heads than mine. It was thought formerly a Body of pure Fire, and that Opinion paffed currant till the beginning of this Age; when they perceived feveral Spots on its Surface. A little after they had difcover'd newPlanets, (of which, hereafter) which fome faid were thofe Spots; for thofe Planets moving round the Sun, when they turned their Dark half to us, muft neceffarily hide part of it ; and had not the Learned with thefe pretended Planets made their Court before to moft of the Princes in Europe, giving the Name of this Prince to one, and of that Prince to another Planet; I believe they would have quarrel'd who thould be Mafter of thefe Spots, that they might have nam'd them as they pleas'd.
'Twas but t'other day, fays the Coun$t e f_{s}$, you were defcribing the Moon, and call'd reveral Places by the Names of

## A Plurality of Worlds. 103

 the moft famous Aftronomers. I was pleafed with the Fancy; for fince the Princes have feiz'd on the Earth; 'tis fit the Philofophers (who are as proud as the beft of 'em) fhould referve the Heavens for themfelves without any Competitors. Oh! Trouble not your felf, faid I, the Philofophers make the beft Advantage of their Territories; and if they part with the leaft Star, 'tis on very good Terms; let me tell you, an Acre of Land in England, is worth ten thoufand in the Moon, but the Spots on the Sun are fallen to nothing; the Actions of Penfilvania are not half fo low, 'tis now difcover'd that they are not Planets, but Clouds, Streams, or Drofs, which rife upon the Sun, fometimes in great Quantity, fometimes in lefs; fometimes they are dark, fometimes clear, fometimes they continue a great while, and fometimes they difappear as long. It feems the Sun is a Liquid Matter, fome think of melted Gold, which boils over (as it were) continually , and by the Force of its Motion calls $\mathrm{H}_{4}$ the
## 104 A Plurality of. Worlds.

the Scum or Drofs on its furface, where it is confumed, and others arife. Imagine then what ftrange Bodies thefe are, when fome of them are as big as the Earth; What a valt quantity mult there be of this melted Gold, and what muft be the extent of this great Sea of Light and Fire which they call the Sun? Others fay, the Sun appears through their Tellefcopes, [which are the AftronomersSpectacles] full of Mountains which vomit Fire continually, and are joyn'd together like Millions of Etna's. Yet there are thofe that fay thefe burning Mountains are pure Vifion, caus'd by a fault in the Spectacles; but what fhall we truft, if we muft diftruft our Tellefcopes to which we owe the knowledge of fo many New Objects? But let the Sun be what it will, it cannot be at all proper for habitation; and what pity tis not, for how pleafant would it be ? You might then be at the Centre of the Univerfe, where you would fee all the Planets turn regularly about you, but now we know nothing but extravagant

## A Plurality of Worlds. 10 g

fancies, becaufe we do not ftand in the proper place ; there is but one place in the World where the ftudy or knowledge of the Stars is eafily obtain'd, and what pity 'tis there is no body there. You forget your felf fure, fays floe, were you in the sun you would fee nothing, neither Planets nor fix'd Stars; doth not the Sun efface all? So that could there be any Inhabitants there, they might juftly think themfelves the only people in Nature.

I own, faid $I$, my miftake; I was thinking of the Situation of the Sun, and not of the effect of its Light: I thank you for you Correction, but muft take the boldnefs to tell you, that you are in an Errour, as well as my felf; for were there Inhabitants in the Sun, they would not fee at all, either they could not bare the ftrength of its light, or for want of a due diftance, they could not receive it ; fo that things well confider'd, all the People there mult be ftark blind, which is another realon why the Sun cannot be Inhabited; but let us
pur-

## 106 A Plurality of Worlds.

 purfue our Voyage. We are nowarriv'd at the Centre, which is always the Bottom, or loweft Place of what is round ; if we go on, we muft afcend; we fhall find Mercury, Venus, the Earth, the Moon, all the Planets we have already vifited ; the next is Mars: Mars hath nothing curious that I know of, his Day is not quite an Hour longer than ours, but his Year is twice as much as our Year; he is a little lefs than the Earth; and the Sun feems not altogether fo large and fo bright to him, as it appears to us? But let us leave Mars, he is not worth our ftay: But what a pretty thing is $\mathcal{F} u p i t e r$, with his four Moons, or Yeomen of the Guard ; they are four little Planets that turn round him, as our Moon turns round us. But why, fays 乃be, interrupting me, muft there be Planets to turn round other Planets, that are no better than them* felves ? I hould think it would be more regular and uniform, that all the Planets, little and great, without any diftinction, fhould have one and the fame motion round the Sun.
## A Plurality of Worlds. 107

Ah, Madam, Jaid $I$, if you knew what were $D_{e f \text { cartes's }}$ Whirlpools orVortex's, (whofe Name is terrible, but their Idea pleafant) you would not talk as you do. Muft my Head, fays fae, fmiling turn round to comprehend 'em, or muft I become a perfect Fool to underftand the Mifteries of Philofophy? Well, let the World fay what it will, go on with your Whirlpools. I will, faid I, and you fhall fee the Whirlpools are worthy of thefe Tranfports: That then which we call a Whirlpool, or Vortex, is a Mals of Matter, whofe Parts are feperated or detach'd one from another, yet have all one uniform Motion, and at the fame time, every one is allow'd or has a particular Motion of its own, provided it follows the general Motion: Thus a Vortex of Wind, or Whirlwind, is an infinity of little Particles of Air, which turn round all together, and involve whatever they meet with. You know the Planets are born up by the Celeftial Matter, which is prodigioufly fubtile and active; fo that this
great

## 108 A Plurality of Worlds.

 great Mafs, or Ocean of Celeftial Matter, which flows as far as from the Sun to the fix'd Stars, turns round, and bears the Planets along with it, making them all turn after the fame manner round the Sun, who poffeffes the Centre, but in a longer or a fhorter time, according as they are farther or nearer in diftance to it; there is nothing to the very Sun, which does not turn, but he turns on himfelf, becaufe he is juft in the middle of this Celeftial Matter ; and you muft know by the way, that were the Earth in his place, it muft turn on it felf, as the Sun does. This is the great Vortex, of which the Sun is Lord; yet at the fame time, the Planets make little particular Vortex's, in imitation of that of the Sun, each of them in turning round the Sun, doth at the fame time turn round it felf, and makes a certain quantity of Celeftial Matter turn round it likewife, which is always prepar'd to follow the Motion the Planet gives it, provided it is not diverted from its general Motion ; this then is the particu-
## A Plurality of Worlds. 109

lar Vortex of the Planet, which pufhes it as far as the frength of its Motion reaches, and if by chance, a leffer Planet falls into the Vortex of a greater Planet, it is immediately born away by the greater, and is indifpenfably forcd to turn round it, tho at the fame time, the great Planet, the little Planet, and the Vortex which enclofes 'em, all turn round the Sun: 'Twas thus at the beginning of the World, when we made the Moon follow us, becaufe the was within the reach of our Vortex, and therefore wholly at our difpofe : $\mathcal{F} x-$ piter was ftronger, or more fortunate than we, he had four little Planets in his neighbourhood, and he brought'em all four under his fubjection ; and no doubt, we, tho a principal Planet, had had the fame Fate, had we been within the Sphere of his Activity; he is ninety times bigger than the Earth, and would certainly have fwailow'd us into his Vortex; we had then been no more than a Moon in his Family, when now we have one to wait on us; fo that yot

1 :o A Plurality of Worlds. you fee the Advantage of Situation, decides often all our good Fortune.

But pray, fays foe, who can affure us we fhall ftill continue as we do now? If we fhould be fuch Fools as to go near Fupiter, or he fo Ambitious as to approach us, what will become of us? For if (as you fay) the Celeftial Matter is continually under this great Motion, it muft needs agitate the Planets irregularly ; fometimes drive "em together, and fometimes feperate 'em. Luck is all, faid $I$; we may win as well as lofe, and who knows, but we Chould bring Mercury and Venus under our Government , they are little Planets, and cannot refift us; but in this Particular, Madam, we need not hope or fear ; the Planets keep within their own Bounds, and are oblig'd (as formerly the Kings of Cbina were) not to undertake new Conquefts. Have you not feen when you put Water and Oyl together, the Oyl fwims a top; and if to thefe two Liguors, you add a very light Liquor, the Oyl bears it up, and it will not fink to the Water: But

put

## A Plurality of Worlds. 111

 put an heavier Liquor, of a juft weight and it will pafs through the Oyl, which is too weak to furtain it, and fink till it comes to the Water, which is ftrong enough to bear it up; fo that in this Liquor, compos'd of two Liquors, which do not mingle, two Bodies of an unequal weight, will naturally affume two different Places; the one will never afeend, the other will never defcend: Fancy then that the Celeftial Matter which fills this great Vortex, hath feveral refting Places, one by another, whofe weight are different, like that of Oyl, Water, and other Liquors; the Planets too are of a different Weight, and confequently every Planet fettles in that Place which has a juft ftrength to fuftain and keep it equilibrate, fo you fee 'tis impoffible it fhould ever go beyond.Would to God, fays the Countefs, our World were as well regulated, and every one among us knew their proper Place. I am now in no fear of being over-run by Fupiter; and fince he lets us alone in our Vortex, with our Moon, I do not

## 112 A Plurality of Worlds.

 envy him the four which he hath. Did you envy him, I reply'd, you would do him wrong, for he has no more than what he has occafion for; at the diftance he is from the Sun, his Moons receive, and fend him but a very weak light; it is true, that as he turns upon himfelt in Ten Hours, his Nights, by confequence, are but Five Hours long ; fo one would think there is no great occafion for four Moons; but there are other things to be confidered. Here under the Poles, they have fix Months Day, and fix Months Night, becaufe the Poles are the two extremities of the Earth, the fartheft removed from thofe places where the Sun is over 'em in a Perpendicular Line. The Moon feems to keep almoft the fame courfe as the Sun, and if the Inhabitants of the Pole fee the Sun during one half of his courle of a Year, and during the other half, do not fee him at all; they fee the Moon likewife during one half of her courfe of a Month ; that is, the appears to 'em Fifteen Days, but they do not fee her during
## A Plurality of Worlds. 11 ;

the other half. Jupiter's Year is as much as twelve of ours, fo that there muft be two oppofite extremities in that Planet, where their Night and their Day are fix Years each. A Night fix Years long, is a little difconfolate, and 'tis for that reafon, I fuppofe, they have four Moons ; that which (in regard to Fupiter) is uppermoft, finifheth its courfe about him in Seventeen Days, the Second in feven, the Third three Days and an half, and the Fourth in two and forty Hours ; and tho they are fo unfortunate as to have fix years Night, yet their courfe being exactly divided into halves, they never pafs above one and twenty Hours, wherein they do not fee at leaft the laft Moon, which is a great comfort in fo tedious a darknesf; fo that be where you will,thefe four Moons are fometimes the prettieft fight imaginable; fometimes they rife all four together, and then feparate according to the inequality of their courfe ; fometimes they are all in their Meridian, rang'd one above another, fometimes you fee em at equal I diftances

## 114 A Plurality of Worlds.

 diftances on the Horizon, fometimes when two rife, the other two go down. Oh, how I thou'd love to fee this pleafant Sport of Eclipfes; for there is not a Day paffes but they Eclipfe the Sun, or one another; and they are fo accuftom'd to this diverfion in Fupiter, that the late Duke of $B---m$ in bis Reherfal, brought the Dance of Eclipfes from that Planet, as now moft of our modifh Dances come out of France.Well, fays the Countefs, I hope you will People thefe four Moons, tho' you fay they are but little fecondary Planets, appointed to give Light to another Planet during its Night. Do not doubt it, I reply'd; thefe Planets are not a jot the worfe to be inhabited, for being forc'd to turn round another Planet of greater Confequence. I would have then, Says flue, the People of thefe four Moons, to be fo many Colonies under Jupiter's Government; they fhould receive their Laws and Cuftoms from him. Would it not be convenient too, faid I, that they fhould fend Deputies with Addrefles

## A Plurality of Worlds. 115

dreffes to bim; for he hath certainly a more abfolute command over his Moon, than we have over ours; tho' his Power after all, is but imaginary, and confifts chiefly in making 'em afraid; for that Moon which is neareft to him, fees that he is three Hundred and fixty times bigger than our Moon appears to us; for in truth, he is fo much bigger than fhe ; he is alfo much nearer to them, than our Moon is to us, the which makes him appear the greater, fo that this formidable Planet hangs continually over their Heads, at a very little diftance and if the Gauls were afraid heretofore that the Heavens would fall on 'em, I think the Inhabitants of that Moon may well be apprehenfive that Fupiter will at fome time or other overwhelm 'em: They are, fays jhe, I fancy, poffers'd with that fear, becaufe they are not concern'd at Eclipfes: Every one has their due folly; we are afraid of an Eclipfe, and they, that Fupiter will fall on their Heads. It is very true, faid $I$, the Inventer of the third Syftem, I told you tother

I 2
night,

## 116 A Plurality of Worlds.

 night, the famous Ticho Brabe, (one of the greatef Aftronomers that ever was,) did not apprehend the leaft danger from an Eclipfe, when every body elfe was under the greateft confternation; yet this great Man had as an unaccountable a fear, did a Hare crofs him, or were the firt Perfon he met in a Morning an old Woman, home prefently went Ticho Brabe, he thut himfelf up for that day, and would not meddle with the leaft Bufinefs.Let us go on with ours tho, fays the Countefs, and leave Ticho Brabe to defend his Superftition. Pray tell me, if the Earth be fo little in comparifon of Fupiter, whether his Inhabitants do difcover us? Indeed, Said I, I believe not ; for if we appear to him ninety times lefs than he appears to us; judge you if there be any pofibility: Yet this we may reafonably conjecture, that there are Aftronomers in Fupiter, that after they have maid the moft curious Telefcopes, and taken the cleareft Night for their obfervations, they may have-difcover'd a little Planet in the Heavens, which

## A Plurality of Worlds. 117

which they never faw before; if they publifh their difcovery, moft People know not what they mean, or laugh at 'em for Fools ; nay, the Philofophers themfelves will not believe 'em, for fear of deftroying their own Opinions; yet fome few may be a little curious; they continue their obfervations, difcover the little Planet again, and are now affur'd it is no Vifion; then they conclude it hath a motion round the Sun, which it compleats in a year, and at laft, (thanks to the Learned,) they know in Fupiter our Earth is a World, every body runs to fee it at the end of the Telefcope, tho' 'tis fo little, 'tis hardly difcover'd.

It muft be pleafant, fay: She, to fee the Aftronomers of both Planets, levelling their Tubes at one another, like two Files of Mufqueteers, and mutually asking, what World is that? What People inhabit it ? Not fo faft neither, $I$ reply'd, for tho they may from Fupiter difcover our Earth, yet they may not know us; that is, they may not have I 3 the

## 118 A Plurality of Worlds.

 the leaft fufpicion it is inhabited; and fhould any one there chance to have fuch a fancy, he might be fufficiently ridiculd, if not profecuted for it ; for my part, I believe they have work enough to make difcoveries on their own Planet, not to trouble their Heads with ours ; and had Sir Francis Drake and Columbus been in fupiter, they might have had good employments; why, I warrant you, they have not yet difcover'd the hundredth part of their Planet. But if Mercury is folittle,they are all (as it were) near Neighbours, and "tis but taking a walk, to go round that Planet. But if we do not appear to 'em in Fupiter, they cannot certainly difcover Venus and Mercury, which are much lefs than the Earth, and at a greater diftance; but in lieu of it,they fee Mars, their own four Moons, and Saturn, with his ; this I think is work enough for their Aftronomers; and Nature hath been fo kind to conceal from 'em the reft of the Univerfe. Do you think it a favour then, fays 乃be? Yes certainly, faid I for there are fixteen Pla-
## A Plurality of Worlds. 119

 nets in this great Vortex: Nature faves us the trouble of ftudying the Motions of 'em all, and fhows us but Seven, which I think is very obliging, tho' we know not how to value the kindnefs, for we have recover'd the other Nine which were hid from us, and for render the Science of Aftronomy much more difficult than Nature defign'd it.If there are fixteen Planets, fays fhe, Saturn muft have five Moons. 'Tis very true, faid $I$, and two of thefe five, are but lately difcover'd; but there is fomewhat that is more remarkable, fince his Year is thirty of ours, there are confequently in him fome Countries, where. their Night is fifteen Years long; and what can you imagine Nature hath invented to give Light, during fo dreadfula Night? Why, the hath not only given Saturn five Moons, but fhe hath encompafs'd him round with a great Circle or Ring, the which being plac'd beyond the reach of the fhadow which the Body of that Planet cafts, reflects the light of the Sun continually on thofe places

520 A Plurality of Worlds. where they cannot fee the Sun at all.

I proteft, Jays the Coustefs, this is very furprizing, and yet all is contriv'd in fuch great order, that it is impofible not to think but Nature took time to confider the neceffities of all animate Beings, and that the difpofing of thefe Moons was not a work of Chance, for they are only divided among thofe Planets which are fartheft diftant from the Sun, the Earth, Fupiter, Saturn; indeed it was not worth while to give any to Mercury o: Venus, they have too much light already; and they account their Nights (as fhort as they are) a greater bleffing than their Day. But pray, why was not Mars a Moon too? It feems he has none, tho ${ }^{\circ}$ he is much further than the Earth from the Sun. It is very true, faid $I$; no doubt but he hath other helps, tho' we do not know 'em: You have feen the Pbophborus, both liquid and dry, how it receives and imbibes the rays of the Sun, and what a great light it will caft in a dark Place: Per haps Mars hath many great high Rocks, which are fo many ra-

## A Plurality of Worlds. 101

 tural Phofplorus's, which in the day take in a certain provifion of light, and return it again at Night. What think you, Madam, is it not very pleafant when the Sun is down to fee thofe lighted Rocks, like fo many Illuminations at a Birth-day Night? Befides, there is a kind of Bird in America, that yields fuch a light, you may read by it in the darkeft Night; and who knows but Mars may have great flocks of thefe Birds, that as foon as it is Night, difperfe themfelves into all parts, and fpread from their Wings another day.I am not at all contented, fays fbe, with your Rocks, or your Birds; 'tis a pretty fancy indeed, but 'tis a fign that there fhould be Moons in Mars, fince Nature hath given fo many to Saturn and Fupiter; and if all the other Worlds that are diffant from the Sun, have Moons, why fhould Mars only be excepted? Ah, Madam, faid 1, when you are a little more dip'd in Philofophy, you will fand exceptions in the very beft Syftems; there are always fome things that agree

## 122 A Plurality of Worlds.

 extream well, but then there are others that do not accord at all; thofe you mult leave as you found 'em, if ever you intend to makean end: We will do fo by Mars, if you pleafe, and fay no more of him ; but return to Saturn. What do you think of his great Ring, in the form of a femy Circle, that reaches from one end of the Horizon to the other, which reflecting the light of the Sun, performs the office of a continual Moon? And muft we not inhabit this Ring too, Says fae ? I confefs, faid I, in the humour I am in, I could almolt fend Colonies every where; and yet I can't well plant any there, it feems fo irregular a habitation; but for the five little Moons, they cannot chufe but be inhabited; tho fome think this Ring is a Circle of Moons, which follow clofe to one another, and have an equal Motion; and that the five little Moons fell out of this Circle; how nuny Worlds are there then in the Vortex of Saturn? But let it be how it will, the People in Saturn live very miferably: ${ }^{\text {'Tis true, this Ring gives light to 'em, }}$ but
## A Plurality of Warlds. $\mathrm{I}_{2} 3$

but it muft be a very poor one, when the Sun feems to 'em but a little pale Star, whofe light and heat cannot but be very weak at fo great a diftance; they fay Greenland is a perfect Bagnio in comparifon of that Planet, and that they would expire with heat in our coldeft Countries.

You give me, fays flee, fuch an Idea of Saturn,that makes me fhake with cold, and that of Mercury, puts me into a feaver. It cannot be otherwife, I reply'd. for the two Worlds, which are the extremities of this great Vortex, muft be oppofite in all things. They mult then, Says fhe, be very wife in Saturn, for you told me they were all Fools in Mercary. If they are not wife, Said I, yet they have all the appearances of being very Flegmatick: They are People that know not what it is to laugh, they take a days time to anfwer the leaft queftion you can ask 'em; and are fo very grave, that were Cato living among 'em, they would think him a merry Andrew.

## 124 A Plurality of Worlds.

It is odd to confider, fays fee, that the Inhabitants of Mercury are all life, and the Inhabitants of Saturn quite contrary; but among us, fome are brisk, and fome are dull; it is, I fuppofe, becaufe our Earth is plac'd in the middle of the other Worlds,and fo we participate of bothextreams, there is no fix'd or determin'd Character ; fome are made like the Inhabitants of Mercary, fome like thofe of Saturn; we are a mixture of the feveral kinds that are found in the reft of the Planets. Why, Said $I$, do you not approve of the Idea? Methinks it is pleafant to be compos'd of fuch a fantaftical Affembly, that one would think we were collected out of different Worlds; we need not travel, when we fee the other Worlds in Epitome at home.

I amfure, fays the Countefs, we have one great convenience in the fituation of our World; it is not fo hot as Mercury or Venus, no: fo cold as Fupiter or Saturn; and our Councry is fo juftly plac'd, that we have no excefs either of Heat or Cold. I have heard of a Philofopher,

## A Plurality of Worlds. 125

fopher, who gave thanks to Nature that he was born a Man, and not a Beaft, a Greek, and not a Barbarian; and for my part, I render thanks that I am feated in the moft temperate Planet of the Univere, and in one of the moft temperate Regions of that Planet. You have more reafon, Said I, to give thanks that you are Young, and not Old; that you are Young and Handfome, and not Young and Ugly ; that you are Young, Handfome and an Englifh Woman, and not Young, Handfome, and a Spaniard, or an Italian; thefe are other-guefs Subjects for your thanks, than the Situation of your Vortex, or the Temperature of your Country.

Pray Sir, Jays fhe, let me give thanks for all things,to the very Votex in which I am planted: Our proportion of Happinefs is fo very fmall, that we fhould lore none, but improve continually what we have, and be grateful for every thing, tho' never fo common or inconfiderable. If nothing but exquifite pleafure will ferve us, we muft wait a long time, and be

## 126 A Plurality of Worlds.

fure to pay too dear for it at laft. I wifh, faid I, that Philofophy was the pleafure you propofe, that when you think of Vortex's you would not forget an humble Servant of your Ladyfhips. I efteem it a pleafure, fays fhe, while it diverts innocently, but no longer. I will engage for it till to morrow, I reply'd, for the fix'd Stars are beyond what you have yet feen.

THE

## A Plurality of Worlds. $\quad \mathbf{1}_{2} 7$.

## THE

## Fifth EVENING.

THE Countefs was very impatient to know what would become of the fix'd Stars; are they inhabited, fays fhe, as the Planets are, or are they not inhabited? What thall we do with 'em? You may foon guefs, faid $I$; the fix'd Stars cannot be lefs diftant from the Earth than fifty millions of leagues; nay, if you anger an Aftronomer, he will fet em further. The diftance from the Sun to the fartheft Planet, is nothing in comparifon of the diftance from the Sun, or from the Earth, to the fix'd Stars, it is almoft beyond Arithmetick. You fee their light is bright and fhining, and did they receive it from the Sun, it muft needs be very weak after a paffage of fifty millions of Leagues; then judge how muck it is wafted by reflection; for it comes back again as far to us; fo that forwards

## 128 A Plurality of Worlds.

 and backwards, here are an hundred millions of Leagues for it to pafs; and it is impoffible it fhould be fo clear and ftrong as the light of a fixd Stars, which cannot but proceed from it felf; fo that, in a word, all the fix'd Stars are fo many Suns.I perceive, fays the Countefs, where you would carry me; you are going to tell me, that if the fix'd Starsare fo many Suns, and our Sun the centre of a Vortex that turns round him, why may not every fix'd Star be the centre of a Vortex that turns round the fix'd star? Our Sun enlightens the Planets; why may not every fix'd Star have Planets to which they give Light ? You have faid it, I reply'd, and I will not contradict you.

You have made the Univerfe folarge, fays fhe, that I know not where I am, or what will become of me ; what is it all to be divided into heaps confufedly, one among another? Is every Star the Centre of a Vortex, as big as ours? Is that vaft fpace which comprehends our Sun and Planets, but an inconfiderable part of the

Uni-

## A Plurality of Worlds: 129

 Univerfe? And are there as many fuch fpaces $_{8}$ as there are fix'd Stars? I proteft it is dreadful. Dreadful,Madam, faid I; I think it very pleafant, when the Heavens were a little blue Arch,ftuck with Stars; methought the Univerfe was too ftrait and clofe, I was almoft fiffed for want of Air; but now it is enlarg'd in heighth and breadth, and a thoufand and a thoufand Vortex's taken in ; I begin to breath with more freedom, and think the Univerfe to be incomparably more magnificent than it was before. Nature hath fpar'd nocoft, even to profufenefs, and nothing can be fo glorious, as to fee fuch a prodigious number of Vortex's, whofe feveral centres are pofféfs'd by a particular Sun, which makes the very Planets turn round it. The Inhabitants of a Planet of one of thefe innumerable Vortex's, fee on all fides thefe luminous centres of the Vorte, with which they are encompalf'd ; but perhaps they do not fee the Planets, who receiving but a faint Light from their Sun, cannot fend it beyond their own World.
## 130 A Plurality of Worlds.

You prefent me with a kind of Perfpective of fo vaft a length, that no Eye can reach to the end of it : I plainly fee the Inhabitants of the Earth, and you have made me difcover thofe that dwell in the Moon, and in other Planets of our Vortex ; but thefe indeed, I do not fee fo clearly as thofe of the Earth; after thefe, we come to the Inhabitants of the Planets which are in the other Vortex's, but they are funk into fo great a depth, that tho' I do all I can to fee them, yet I muft confefs I can hardly perceive em ; by the expreffion you ufe in fpeaking of 'em, they feem to be almoft annihilated; you ought then to call 'em the Inhabitants of one of thofe innumerable Vortex's: We our felves, for whom the fame expreffion ferves, muft confefs, that we fcarce know where we are, in the midft of fo many Worlds; for my own part, I begin to fee the Earth fo fearfully little, that I believe from henceforth, I fhall never be concern'd at all for any thing; That we fo eagerly defire to make our Selves great, that we are always defigning,
always

## A Plurality of Worlds. $\mathbf{1}_{3} \mathrm{t}$

always troubling and haraffing our felves, is certainly becaufe we are ignorant what thefe Vortex's are; but now I hope my new Lights will in part juftifie my Lazinefs, aud when any one reproaches me with my carelefsnefs, I will anfwer, $A b$ did you but know what the fix'd Stars are! It was not fit, faid I, that Alexander fhould know what they were; for a certain Author who maintains that the Moon is inhabited, very gravely tells us, that Arifotle, (from whom no truth could be long conceal'd) muft neceffarily be of an opinion, back'd with fo much reafon; buit yet he could never acquaint Alexander with the fecret, fearing he might run mad with defpair, when he knew there was another World which he could notconquer; with much more reafon then was this Myftery of Vortex's, and fix'd Stars kept fecret in Alexander's time, for tho' they had been known in thofe days, yet a Man would have been a great Fool, to have faid any thing of 'em to Alexander; it hiad been but an ill way of making his court that ambitious K 2 Prince

132 A Plurality of Worlds.
Prince; for my part, I that know 'em, am not a little troubled to find my felf not one jot the wifer for all the knowledge I have of 'em ; the moft they can do, according to your way of reafoning, is but to cure People of their ambition, and their unquiet reftlefs humour, which are difeares I am not at all troubled with; I confefs, I am guilty of fo much weaknefs, as to be in love with what is beautiful ; that's my diftemper,and I am confident, the Vortex's can never cure it: What if the other Worlds render ours fo very little ? They cannot fpoil fine Eyes, or a pretty Mouth; their value is ftill the fame, in fpite of all the Worlds that can pofibly exift.

This Love, reply'd the Countefs, fimiling, is a frrange thing; let the World go how 'twill,'tis never in danger ; there is no Syltem can do it any harm. But tell me freely, is your Syftem true ? Pray conceal nothing from me; I will keep your fecret wery faithfully; it feems to have for its foundation, but a flight probability; which is, that if a fix'd

## A Plurality of Worlds. 133

 fix'd Star be in it felf a luminious Body, like the Sun, then by confequence, it muft, as the Sun is, be the Centre and Soul of a World ; and have its Planets turning round about it : But is there an abfolute neceffity it muft be fo ? Madam, faid I, fince we are in the humour of mingling amorous Follies with our moft ferious Difcourfe, I muft tell you, that in Love and the Mathematicks, People reafon alike : Allow never fo little to a Lover, yet prefently after you muft grant him more; nay, more and more; which will at laft go a great way: In like manner, grant but a Mathematician one little Principle, he immediately draws a confequence from it, to which you mult neceffarily affent; and from this confequence another, till he leads you fo far (whether you will or no) that you have much ado to believe him. Thefe two forts of People, Lovers and Mathematicians, will always take more than you give 'em. You grant that when two things are like one another in all thofe things that appear to you, it is poffible K 3
## $I_{34}$ A Plurality of Worlds.

 they may be like one another in thofe thingsthat are not vifible, if you have not fome good Reafon to believe otherwife : Now this way of arguing have I made ufe of. The Moon, Jay I, is inhabited, becaufe fhe is like the Earth; and the other Planets are inhabited, becaufe they are like the Moon; I find the fix'd Stars to be like our Sun, therefore I attribute to them what is proper to that: You are now gone too far to be able to retreat, therefore you mult go forward with a good Grace. But, Jays the Countefs, if you build upon this Refemblance or Likenefs which is between our Sun and the fix'd Stars, then, to the People of another great Vortex, our Sun muft appear no bigger than a fmall fix ${ }^{\circ}$ Star, and can be feen only when'tis Night with them. Without doubt, Madam, faid $I$, it muft be fo: Our Sun is much nearer to us, than the Suns of other Vortex's, and therefore its Light makes a much greater Impreffion on our Eyes, than theirs do: We fee nothing but the Light of our own Sun, and when we fee that, it darkens
## A Plurality of Worlds. 135

darkens and hinders us from feeing any other Light: but in another great Vortex, there is another Sun, which rules and governs, and, in its turn, extinguifheth the Light of our Sun, which is never feen there, but in the Night, with the reft of the other Suns, that is the fix'd Stars; with them our Sun is faftned to the great arched Roof of Heaven, where it makes a part of fome Bear or Bull : For the Planets which turn round about it, (our Earth for Example) as they are not feen at fo vaft a Diftance, fo no Body doth fo much as dream of 'em : All the Suns then are Day Suns in their own Vortex's, but NightSuns in other Vortex's: In his own World or Sphere every Sun is fingle, and there is but one to be feen; but every where elfe, they ferve only to makea Number. May not the Worlds, reply'd the Countefs, not:withftanding this great Refemblance between 'em, differ in a thoufand other things; for tho they may be alike in one particular, they may differ infinitely in others.

136 A Plurality of Worlds.
It is certainly true, faid $I$; but the difficulty is to know wherein they differ. One Vortex hath many Planets that turn round about its Sun; another Vortex hath buta few: In one Vortex, there are inferiour or leśs Planets, which turn about thofe that are greater; in another perhaps, there are no inferiour Planets; here, all the Planets are got round about their Sun, in form of a little Squadron; beyond which, is a great void Space, which reacheth to the neighbouring Vortex's : In another Place, the Planets take their Courfe towards the out fide of their Vortex, and leave the middle void. There may be Vortex's alfo quite void, without any Planets at all; others may have their Sun not exactly in their Centre ; and that Sun may fo move, as to carry its Planets along with it : Others may have Planets which in regard of their Sun, afeend, and defcend, according to the change of their Equilibration, which keeps them fufpended. But I think I have faid enough for a Man that was never out of his own Vortex.

## A Plurality of Worlds.

It is not fo much, reply'd the Countefs, confidering what a multitude of Worlds there are ; what you have faid is fufficient but for five or fix, and from hence I fee thoufands.

What, Madam, would you fay, if Ifhould tell you, there are many more fix'd Stars than thofe you fee? and that an infinite Number are difcover'd with Glaffes, which never fhew'd themfelves to our Eyes: In only one Conftellation, where it may be, we count twelve or fifteen, there are as many to be found as ufually appear in the whole HemiSphere.
I fubmit, fays the Countefs, and beg your pardon: You quite confound me with Worlds and Vortex's. I have yet more to tell you, Madam, faid I: You fee that whitenefs in the Sky, which fome call the milky way; can you imagine what that is? 'Tis nothing but an infinity of fmall Stars, not to be feen by our Eyes, becaufe they are fo very little; and they are fown fo thick, one by another, that they feem to be one continu'd whitenefs:
$13^{\circ}$ A Plurality of Worlds.
nefs : I wifh you had a Glafs, to fee this Ant-hill of Stars, and this Clutter of Worlds, if I may fo call 'em: They are in fome fort, like the Maldivian Iflands: thofe twelve thoufand Banks of Sand, feparated by narrow Channels of the Sea, which a Man may leap as eafily, as over a Ditch : So near together are the Vortex's of the Milky way, that the People in one World, may talk, and fhake Hands with thofe of another; at leaft I believe the Birds of one World, may eafily fly into another; and that Pigeons may be train'd up to carry Letters, as they do in the Levant. Thefe little Worlds are excepted out of that general Rule, by which one Sun in his own Vortex, as foon as he appears, effaceth the Light of all other foreign Suns: If you were in one of thefe little Vortex's of the Milky way, your Sun would not be much nearer to you, and confequently, would not make any much greater fenfible Impreffion on your Eyes, than a hundred thoufand other Suns of the neighbouring Vortex's You would then fee your Heaven fhine bright

## A Plurality of Worlds.

bright with an infinite Number of Fires, clofe to one another, and but a little diftant from you; fo that tho you fhould lofe the Light of your own particular Sun, yet there would ftill remain vifible Suns enough befide your own, to make your Night as light as Day, at leaft, the difference would hardly be perceiv'd, for the Truth is, you would never have any Night at all : The Inhabitants of thefe Worlds accuftom'd to perpetual Brightnefs, would be ftrangely aftonifh'd, if they fhould be told that there are a miferable fort of People, who where they live, have very dark Nights, and when 'tis Day with them, they never fee more than one Suin, certainly they would think Nature had very little kindnefs for us, and would tremble with Horrour, to think what a fad Condition we are in.
I do not ask you, faid the Countefs, whether in thofe Worlds of the Milky way, there be any Moons; I fee they would be of no ufe to thofe principal Planets which have no Night, and move
$\mathbf{1}_{40}$ A Plurality of Worlds.
in fpaces too ftrait and narrow to cumber themfetves with the baggage of inferiour Planets : Yet pray take notice, that by your liberal Multiplication of Worlds, you have flarted ail Objection, not eafily anfwered: The Vortex's whofe Suns we fee, touch the Vortex in which we are, and if it he true, that Vortex's are round, how then can fo many Bowls or Globes all touch one fingle one ? I would in imagine kow this may be done, but cannot think which way.

Yax fhew a great deal of Wit, Madant fuit $I$, in raifing this doubt, and likervile in not being able to refolve it; for in it felf the thing is extreme difficult, and in the manner you conceive it, no anfwer can be given to it; and he muft be a Fool who goes about to find Anfwers to Objections which are unanfwerable. If our Vortex had the form of a Die, it would have fix fquares or flat Fa ces, and would be far from being round, and upon every of thefe Squares, might be plac: d a Vortex of the fame Figure, but if inftead of thefe fix Square Faces,

## A Plurality of Worlds. $\mathbf{1}_{4}$

 it had twenty, fifty, or a thoufand; then might a thoufand Vortex's be plac'd upon it, one upon every flat; and you know very we!l, that the more flat Faces any Body hath on its outfide, the nearer it approacheth to roundnefs, juft as a Diamond cut facet-wife on every fide, if the Facets be very many and little, it will look as round as a Pearl of the fame bignefs: 'Tis in this manner that the Vortex's are round; they have an infinite number of Facets on their outfide, and every one of 'em hath upon it another Vortex ; thefe Faces are not all equal and alike ; but here, fome are greater, and there, fome lefs ; The leaft facets of our Vortex, for Example, anfwer to the Milky way, and fuftain all thofe little Worlds. When two Vortex's are fupported by the two next flats on which they ftand, if they leave beneath any void fpace, between them, as it muft often happen, Nature, who is an excellent Hufwife, and fuffers nothing to be ufelefs, prefently fills up this void fpace with a little Vortex or two, perhaps142 A Plurality of Worlds.
haps with a thoufand, which never $\mathrm{in}^{\text {- }}$ commode the others, and become one, two, or a thoufand Worlds more; fo that there may be many more Worlds than our Vortex hath flat Faces to bear 'em: I will lay a good Wager, that tho' thefe little Worlds were made only to be thrown into the Corners of the Univerfe, which otherwife would have been void and ufelefs; and tho they are unknown to other Worlds which they touch, yet they are well fatisfy'd with their being where they are : Thefe are the little Worlds, whofe Suns are not to be difcover'd but with a Tellefcope, and whofe number is prodigious to conclude, all thefe Vortex's are join'd to one another in fo admirable a manner, that every one turns round about his Sun, without changing Place ; every one hath fuch a turn as is moft eafie, and agreeable to its own fituation : they take hold of one another, like the Wheels of a Watch, and mutually help one anothers motion : And yet 'tis true, that they act contrary to one another.

Every

## A Plurality of Worlds. $\mathbf{1}_{43}$

Every World, as fome fay, is like a Foot-ball, made of a Bladder, cover'd with Leather, which fometimes fwells of its own accord, and would extend it felf, if it were not hindred. But this fwelling World being prefs'd by the next to it, returns to its firft Figure ; then fwells again, and is again depreft; and fome affirm, that the Reafon why the fix'd Stars give a twinkling and trembling Light, and fometimes feem not to fline at all, is hecaufe their Vortex's perpetually pufh and prefs our Vortex, and ours again continually repulfeth theirs.
I am in love with thefe Fancies, faid the Countefs; I am pleas'd with thefe Foot-balls, which fwell every Moment, and fink again, and with thefe Worlds, which are continually ftriving and pufhing one another: But above all, I am pleas'd to fee how this juftling keeps up the Trade of Light, which is certainly the only Correfpondence that is between them.

## 144 A Plurality of Worlds.

No, no, Madam, faid $I$; Light is not their fole Commerce; the Neighbouring Worlds fometimes fend Vifits to us, and that in a very magnificent and fplendid manner: There come Comets to us from thence, adorn'd with bright fhining Hair, Venerable Beards, or Majeflick Tails; thefe, faid the Countefs are Embaffadors, whofe Vifits may be well fpared, fince they ferve only to affright us. They fare only Children, faid I, with their extraordinary train; but inIsed, the Number of fuch Children is now a days very great. Comets are nothing but Planets, which belong to a Neighbouring Vortex, they move towards the out-fide of it; but perhaps this Vortex being differently prefs'd by thole Vortex's which encompars it, it is rounder above than it is below, and it is the lower Part that is ftill towards us. Thefe Planets which have begun to move in a Circle above, are not aware that below their Vortex will fail "em, becaufe it is as it were broken. Therefore to continue the Circular Motion it is neceffary

## A Plurality of Worlds. 145

that they enter into another Vortex, which we will fuppofe is ours, and that they cut through the outrides of it. They appear to us very high, and are much higher than Saturn, and according to our Syftem, it is abfolutely neceffary they fhould be fo high, for Reafons that fignifie nothing to our prefent Subject. From Saturn downwards to the outrides of our Vortex, there is a great void face without any Planets. Our Adverfaries often ask us, to what purpose this void face ferves? but let them not trouble themfelves any more, I have found an ufe for it. 'This the Apartment of thole ftrange Planets, which come into our World.

I underftand you, fays foe, we do not fifer them to come into the Heart of our Vortex, among our own Planets, but we receive them as the Grand Signior doth the Embaffadours that are fent to him; he will not thew them fo much reflect as to let 'em lodge in Confantinople, but Quarters 'em in one of the Suburbs of the City: Madam, Said $I$,

## 146 A Plurality of Worlds.

we, and the Ottomans agree likewife in this, that as we receive Embaffadours, but never fend any, fo we never fend any of our Planets into the Worlds that are next us.

By this, fays foe, it appears that we are very proud, however, I do not yet very well know what I am to believe. Thefe foreign Planets with their Tails and their Beards have a terrible Countenance, it may be they are fent to affront us; but ours that are of another make, if they fhould get into other Worlds, are not fo proper to make People afraid.

Their Beards and their Tails, Madam, faid I, are not real, they are Pbonomena, and but meer Appearances. Thefe foreign Planets differ in nothing from ours, bat entring into our Vortex, they feem to us to have Tails or Beards, by a certain fort of Illumination which they receive from the Sun, and which hath not been yet well explain'd. But certain it is, that 'tis but a kind of Illumination, and when I am able I will tell

## A Plurality of Worlds. 147

tell you how 'tis done. I wifh then, Says foe, that our Saturn would go take a Tail and a Beard in another Vortex, and affright all the Inhabitants of it. That done, I would have him come back again, leaving his terrible Accoutrements behind him, and taking his ufual place amongft onr other Planets, fall to his ordinary bufinefs. 'Tis better for him, Said I, not to go out of our Vortex. I have told you how rude and violent the Shock is, when two Vortex's jufte one another, a poor Planet muft needs be terribly fhaken, and its Inhabitants in no better condition. We think our felves very unhappy when a Comet appears, but 'tis the Comet that is in an ill cafe. I do not believe that, fays fhe, it brings all its Inhabitants with it in very good Health ; there can be nothing fo diverting as to change Vortex's. We that never go out of our own, lead but a dull Life; if the Inhabitants of a Comet had but the wit to forefee the time when they are to come into our World, they that had already made the Voyage,

## I48 A Plurality of Worlds.

 would tell their Neighbours beforehand what they would fee, they would tell them, that they would difcover a Planet with a great Ring about it, meaning our Saturn, they would alfo fay, you Thall fee another Planet which hath four little ones to wait on it; and perhaps fome of them, refolv'd to obferve the very Moment of their entring into our World, would prefently cry out, A new Sun, a new Sun, as Sailors ufe to cry, Land, Land.You have no reafon then, faid $I$, to pity the Inhabitants of a Comet, yet I fuppofe you will think their Condition lamentable, who inhabit a Vortex whofe Sun comes in time to be quite extinguilh$\epsilon \mathrm{d}$, and confequently live in Eternal Night, How, cry'd the Countefs, can Suns be put out? Yes, without doubt, faid I, for People fome thoufand years ago faw fix'd Stars in the Sky, which are now no more to be feen; thefe were Suns which have loft their Light, and certainlv there muft beftrange Defolation in their Vortex's, and a general Morta-

## A Plurality of Worlds: 149

lity over all the Planets, for what can People do without a Sun? This is a difmal Fancy, faid the Countefs, I would not if i could help it, let it come into my Head, I will tell you if you pleafe, I replyd, what in this particular is the Opinion of Learned Aftronomers. They think that the fix'd Stars which have diappear'd, are not quite extinguilh'd, but that they are half Suns, that is, they have one half Dark, and the other half Light, and turning round upon their own Axis or Centre, they fometimes fhew us their Light fide, and afterwards turningi to us their Dark fide, we fee them no more. To oblige you Madam, I will be of this Opinion, becaufe it is not fo harfh as the other, but I cannot make it good, but in relation to fome certain Stars, becaufe as fome have lately obferved, thofe Stars have their Regulated times of appearing, and difappearing, otherwife there could be no fuch thing as half Suns. But what fhall we fay of Stars, which totally difappear, and never fhew themfelves again after they have finifh'd

## 150 A Plurality of Worlds.

finifh'd theirCourfe of turning round upon their own Axis? you are too juft, Madam, to oblige me to believe that fuch Stars are half Suns. However, I will try once more what I can do in favour of your Opinion; the Suns are not extinct, they are only funk fo low into the immenfe depth of Heaven, that we cannot poffibly fee them, in this Cafe the Vortex follows his Sun and all's well again. 'Tis true, that the greateft part of the fix'd Stars have not this motion, by which they remove themfelves fo far from us, becaufe at other times they might return again nearer to us, and we fhould fee them fometimes greater, and fometimes lefs, which never happens. But we will fuppofe that none but the Little, Light, and moft Active Vortex's which flip between the others make certain Voyages, after which they return again, while the main Bady of Vortex's remain unmov'd. 'Tis likewife very ftrange that fome fix'd Stars fhew themfelves to us, fpending a great deal of time in appearing, and difappearing, and at laft, totally

## A Plurality of Worlds. 15 I

 totally and entirely difappear. Half Suns would appear again at their fet and regulated time. Now, Madam, boldly declare your Opinion: Muft not thefe Stars of neceflity be Suns which are fo much darkned, as not to be vifible to us, yet afterwards thine again, and at laft are wholly extinct ? How can a Sun, Said the Countefs, be darkned, and quite extinguilh'd, when it is in its own Nature a Fountain of Light? It may be done Madam, faid $I$, with all the eafe in the World, if Difcartes's Opinion be true, that our Sun hath Spots; now whether thefe Spots be Scum or thick Mifts, or what you pleafe, they may thicken and unite, till at laft they cover the Sun with a Cruft, which daily grows thicker, and then farewel Sun. We have hitherto fcap'd pretty well; but 'tis faid, that the Sun for fome whole years together hath look'd very pale; for Example, the year after Cefar's death ; it was this Cruft that then began to grow, but the force of the Sun broke and diffipated it; had it continued, we had been all loft People. You L 4 make$\mathrm{I}_{52}$ A Plurality of Worlds. make me tremble, reply'd the Countess: and now I know the fatal confequences of the Sun's paleness, I believe, inftead of going every Morning to my Glass, to fee how I look, I fall capt my Eyes up to Heaven, to fee whether or no the Sun looks pale. Oh, Madam, laid I, there is a great deal of time required to ruine a World. Grant it, Said he, yet 'tic but time that is required. I confers it, faid I; all this immenfe mas of Matter that compotes the Univerfe, is in perpetual motion, no part of it excepted; and fince every part is moved, you may be fare that changes mut happen loner or later; but fill in times proportioned to the Effect. The Ancients were pleafant Gentlemen, to imagine that the celestial Bodies were in their own nature unchangeable, becaufe they obferved no change in them; but they did not live long enough to confirm their Opinion by their own Experience; they were Boys in comparifon of us. Give me leave, Madam, to explain my felf by an Allegory: If Roles, which lat but a day, could

## A Plurality of Worlds. 153

 could write Hiftories, and leave Memoirs one to another; and if the firft Role flould draw an exact Picture of their Gardiner, and after fifteen thoufand RofeAges, it fhould be left to other Rofes, and fo left ftill to thofe that fhould fucceed, without any change in it ; fhould the Rofes hereupon fay, we have every day feen the fame Gardiner, and in the memory of Rofes, none ever faw any Gardiner but this; he is ftill the fame he was, and therefore certainly he will die, as we do; for there is no change at all in him. Would not thefe Rofes, Madam, talk very foolifhly? and yet there would be more reafon in their difcourfe, than there was in what the Ancients faid concerning celeftial Bodies; and though even to this very day there fhould appear no vifible change in the Heavens, and the matter of which they are made, fhould have all the figns of an eternal duration without any change; yet I would not believe 'em unchangeable, till I had the experience of many more Ages. Ought we, who laft but a moment,
## 154 A Plurality of Worlds.

moment, make our continuance the meafure of any other things duration; 'tis not fo eafie a matter to be eternal. To have lafted many Ages of Men, one after another, is no fign of Immortality. Truly, Says the Countefs, I find the Worlds are far from being able to pretend to it ; I will not do 'em fo much honour, as to compare 'em to the Gardiner that lived fo much longer than the Rofes: I begin to think 'em like the Rofes themfelves, which blow one day, and die the next : For now I underftand, that if old Stars difappear, new ones will come in their room, becaufe every fpecies muft preferve it felf. No fpecies, Madam, faid $I$, can totally perifh; fome perhaps will tell you, that fuch new Stars are Suns, which return to our fight again, after they have been a long time hid from us, in the profundity of Heaven : Others may tell you, they are Suns cleared from that thick Cruft, which once covered them : If I fhould think all this poffible, yet I likewife believe that the Univerfe may be framed in fuch a man-

## A Plurality of Worlds. 155

ner, that from time to time it may produce new Suns; why may not that matter which is proper to make a Sun, be difpers'd here and there, and gather it felf again at long run, into one certain place, and lay the foundation of a new World ? I am very much inclin'd to believe fuch new Productions, becaufe they fuit with that glorious and admirable Idea which I have of the works of Nature. Can we think that wife Nature knows no more than the fecret of making Herbs and Plants live and die by a continual Revolution? I am verily perfwaded, and are not you fo too, Madam? that Nature, without much coft or pains can put the fame fecret in practice uipon the Worlds. I now find, fays the Countefs, the Worlds, the Heavens, and celeftial Bodies fo fubject to change, that I am come tomy felf again. To come the better again to our felves, I reply'd, let us fay no more of thefe Matters. We are arrived at the very roof and top of all the Heavens; and to tell you whether there be any Stars beyond it, you muft have an abler
is6 A Plurality of Worlds. bler Man than I am; you may place Worlds there, or no Worlds, as you pleafe: 'Tis the Philofophers Empire to defcribe thofe vaft invifible Countries, which are, and are not, or are fuch as he pleafes to make 'em: It is enou h for me, to have carried your mind as far as you can fee with your Eyes.

Well, fays the Countefs, I have now in my Head, the Syftem of the Univerfe: How learned am I become ? Indeed, Madam, faid I, you are pretty knowing, and you are fo with the advantage of believing, or not believing any thing I have faid: For all my pains, I only beg this favour, that when ever you fee the Sun, the Heaven, or the Stars, you will think of me.

BOOKS

BOOKS Printed, and fold by Tho. Osborne next Grays-Inn-Walks, and Rich. Wellington at the Dolphin and Crown in St. Paul's CburchYard.
$T$ HE Hiftory of Polybius the Megalopolitan; containing a General Account of the Tranfactions of the whole World, but principally of the Roman People, during the Firft and Second Punick Wars. Tranflated by Sir Henry Sbeers, and Mr. Dryden. In Three Volumes: The Third Volume never before printed.
