OR

ASURVEY

OF THE

REVOLUTIONS

OF

EMPIRES.

By M. YOLNEY,

ONE OF THE DEPUTIES TO THE NATIONAL ASSEMBLY OF 1789;
AND AUTHOR OF TRAVELS INTO SYRIA AND EGYPT.

OR LIBRARY

TRANSLATED FROM TAP CHINE 876

THE THIRD EDITION W-YORK

I will dwell in folitude amidst the ruins of cities: I will enquire of the monuments of antiquity, what was the wisdom of former ages: I will ask the ashes of legislators, what causes have erected and overthrown simplifies; what are the principles of national prosperity and missortune: what the maxims upon which the peace of society and the happiness of man ought to be founded? Ch. iv. p. 24.

PREFACE.

THE plan of this publication was formed nearly ten years ago; and allufions to it may be feen in the Preface to Travels in Syria and Egypt, as well as at the end of that work, published in 1787. The performance was in fome forwardness when the events of 1788 in France interrupted it. Persuaded that a developement of the theory of political truth could not sufficiently acquit a citizen of bis debt to fociety, the author wished to add practice; and that particularly at a time when a fingle arm was of consequence in the defence of the general cause. The same desire of public benefit which induced him to suspend his work, has fince engaged him to refume it; and though it may not possess the same merit as if it had appeared under a 3

under the circumstances that gave rise to it, yet he imagines that at a time when new passions are bursting forth, passions that must communicate their activity to the religious opinions of men, it is of importance to disseminate such moral truths as are calculated to operate as a sort of curb and restraint. It is with this view he has endeavoured to give to these truths, hitherto treated as abstract, a form likely to gain them a reception. It was found impossible not to shock the violent projudices of some readers; but the work, so far from being the fruit of a disorderly and perturbed spirit, has been dictated by a sincere love of order and humanity.

After reading this performance it will be asked; how it was possible, in 1784, to have had an idea of what did not take place till the year 1790? The solution is simple: in the original plan, the legislator was a sistitious and hypothetical being: in the present, the author has substituted an existing legislator; and the reality has only made the subject additionally interesting.

INVO-

INVOCATION.

SOLITARY Ruins, facred Tombs, ye mouldering and filent Walls, all hail! To you I address my Invocation. While the vulgar shrink from your aspect with secret terror, my heart finds in the contemplation a thousand delicious sentiments, a thousand admirable recollections. Pregnant, I may truly call you, with useful lessons, with pathetic and irresistible advice

advice to the man who knows how to confult you. A while ago the whole world bowed the neck in filence before the tyrants that oppressed it; and yet in that hopeless moment you already proclaimed the truths that tyrants hold in abhorrence: mixing the dust of the proudest kings with that of the meanest flaves, you called upon us to contemplatethis example of EQUALITY. From your caverns, whither the musing and anxious love of LIBERTY led me, I faw escape its venerable shade, and with unexpected felicity direct its flight, and marshal my steps the way to renovated France.

Tombs,

· Tombs, what virtues and potency do you exhibit! Tyrants tremble at your aspect; you poison with secret alarm their impious pleasures; they turn from you with impatience, and, coward like, endeavour to forget you amid the sumptuousness of their palaces. It is you that bring home the rod of justice to the powerful oppressor; it is you that wrest the illgotten gold from the merciless extortioner, and avenge the cause of him that has none to help; you compenfate the narrow enjoyments of the poor, by dashing with care the goblet of the rich; to the unfortunate you offer a last and inviolable afylum;

afylum; in fine, you give to the foul that just equilibrium of strength and tenderness, which constitutes the wifdom of the fage and the fcience of life. The wife man looks towards you, and fcorns to amass vain grandeur and useless riches with which he must foon part: you check his lawless flights, without disarming his adventure and his courage; he feels the necessity of passing through the period affigned him, and he gives employment to his hours, and makes use of the goods that fortune has affigned him. Thus do you rein in the wild fallies of cupidity, calm the fever of tumultuous enjoyment, free the

the mind from the anarchy of the passions, and raise it above those little interests which torment the mass of mankind. We afcend the eminence you afford us, and, viewing with one glance the limits of nations and the succession of ages, are incapable of any affections but fuch as are fublime, and entertain no ideas but those of virtue and glory. Alas! when this uncertain dream of life shall be over, what then will avail all our bufy paffions, unless they have left behind them the footsteps of utility!

Ye Ruins, I will return once more to attend your lessons! I will resume my place in the midst of your wide spreading fpreading folitude. I will leave the tragic scene of the passions, will love my species rather from recollection than actual survey, will employ my activity in promoting their happiness, and compose my own happiness of the pleasing remembrance that I have hastened theirs.

RUINS:

O R

A SURVEY OF THE REVOLUTIONS OF EMPIRES.

CHAP. I.

THE TOUR:

In the eleventh year of the reign of Abd-ul Hamid, son of Ahmed, emperor of the Turks; when the Nogaian Tartars were driven from the Crimea, and a Mussulman prince, of the blood of Gengis Khan, became the vassal and guard of a woman, a Christian, and a queen *; I journeyed in the empire of the Ottomans, and traversed the provinces which formerly were kingdoms of Egypt and of Syria.

В

Directing

^{*} That is to say, in the year 1784. The reader is requested not to lose sight of this epocha. See the notes at the end of the volume.

Directing all my attention to what concerns the happiness of mankind in a state of society, I entered cities, and studied the manners of their inhabitants; I gained admission into palaces, and observed the conduct of those who govern; I wandered over the country, and examined the condition of the peasants: and no where perceiving aught but robbery and devastation, tyranny and wretchedness, my heart was oppressed with sorrow and indignation.

Every day I found in my route fields abandoned by the plough, villages deserted, and cities in ruins. Frequently I met with antiquemonuments; wrecks of temples, palaces, and fortifications; pillars, aqueducts, sepulchres. By these objects my thoughts were directed to past ages, and my mind absorbed in serious and prosound meditation.

Arrived at Hamsa on the borders of the Orontes, and being at no great distance from the city of Palmyra, situated in the desert, I resolved to examine for myself its boasted monuments. After three days travel in barren solitude, and having passed through a valley silled with grottoes and tombs, my

eyes

eyes were fuddenly ftruck, on leaving this valley and entering a plain, with a most astonishing scene of ruins. It consisted of a countless multitude of superb columns standing erect, and which, like the avenues of our parks, extended in regular files farther than the eye could reach. Among these columns magnificent edifices were observable, some entire, others in a flate half demolished. The ground was covered on all fides with fragments of fimilar buildings, cornices, capitals, shafts, entablatures, and pilasters, all confructed of a marble of admirable whiteness and exquifite workmanship. After a walk of three quarters of an hour along these ruins, I entered the inclosure of a vast edifice which had formerly been a temple dedicated to the fun; and I accepted the hospitality of some poor Arabian peafants, who had established their huts in the very area of the temple. Here I resolved for some days to remain, that I might contemplate, at leifure, the beauty of fo many stupendous works.

Every day I visited some of the monuments which covered the plain; and one evening that, my mind lost in reflection, I had B 2 advanced

advanced as far as the Valley of Sepulchres, I ascended the heights that bound it, and from which the eve commands at once the whole of the ruins and the immentity of the defert. ... The fun had just funk below the horizon; a streak of red still marked the place of his descent, behind the distant mountains of Syria: the full moon, appearing with brightness upon a ground of deep blue, rose in the east from the smooth bank of the Euphrates: the fky was unclouded; the air calm and ferene; the expiring light of day ferved to foften the horror of approaching darkness; the refreshing breeze of the night gratefully relieved the intolerable fultriness of the day that had preceded it; the shepherds had led the camels to their stalls; the grey firmament bounded the filent landscape; through the whole defert every thing was marked with stillness, undisturbed but by the mournful cries of the bird of night, and of some chacals * . . . The dusk increased, and already I could diffinguish nothing more than the

pale

^{*} An animal confiderably like the fox, but lefs cunning, and of a frightful aspect. It lives upon dead bodies, and rocks and ruins are the places of its habitation.

pale phantoms of walls and columns.... The folitariness of the situation, the serenity of evening, and the grandeur of the scene, impressed my mind with religious thoughtfulness. The view of an illustrious city deserted, the remembrance of past times, their comparison with the present state of things, all combined to raise my heart to a strain of sublime meditations. I sat down on the base of a column, and there, my elbow on my knee, and my head resting on my hand, sometimes turning my eyes towards the desert, and sometimes sixing them on the suins, I sell into a prosound revenis.

C H A P. II.

MEDITATIONS.

HERE, said I to myself, an opulent city once flourished; this was the seat of a powerful empire. Yes, these places, now so desert, a living multitude formerly animated, and an active crowd circulated in the streets which at present are so solitary. Within those walk, where a mournful filence reigns, the noise of the arts and the shouts of joy and festivity continually resounded. These heaps of marble formed regular palaces, these prostrate pillars were the majestic ornaments of temples, these ruinous galleries prefent the outlines of public places. There a numerous people affembled for the respectable duties of its worship, or the anxious cares of its subfistence: there industry, the fruitful inventor of fources of enjoyment, collected together the riches of every climate, and the purple of Tyre was exchanged for the precious thread of Serica; the foft tiffues

of Cassimere for the sumptuous carpets of Lydia; the amber of the Baltic for the pearls and persumes of Arabia; the gold of Ophir for the pewter of Thule (a).

And now a mournful skeleton is all that fubfifts of this opulent city, and nothing tomains of its powerful government but a vain and obscure remembrance! To the tumulthous throng which crowded under these porticos, the folitude of death has succeeded, The filence of the tomb is substituted for the hum of public places. The opulence of a commercial city is changed into hideous poverty. The palaces of kings are become the receptacle of deer, and unclean reptiles inhabit the fanctuary of the Gods. . . . What glory is here eclipfed, and how many labours are annihilated ! . . . Thus perish the works of men, and thus do nations and empires vanish away!

The history of past times strongly prefented itself to my thoughts. I called to mind those distant ages when twenty celebrated nations inhabited the country around me. I pictured to myself the Assyrian on the banks of the Tygris, the Chaldean on B 4 those

those of the Euphrates, the Perhan whose power extended from the Indus to the Mediterranean. I enumerated the kingdoms of Damafcus and Idumea; of Jerufalem and Samaria; and the warlike states of the Philiftines; and the commercial republics of Phenicia. This Syria, faid I to myfelf, now almost depopulated, then contained a hundred flourithing cities, and abounded withtowns, villages, and hamlets (b). Every where one might have feenoreltivated fields, frequented reads, and prowded drabitations. Ah! what are become of those ages of abundance and of life! Whatare become of fo many productions of the hand of man? Where are those ramparts of Nimveh, those walls of Babylon, those palaces of Persepolis, those temples of Balbec and of Jerusalem? Where are those fleets of Tyre, those dockyards of Arad, those work-shops of Sidon, and that multitude of mariners, pilots, merchants, and foldiers? Where those husbandmen, those harvests, that picture of animated nature of which the earth feemed proud? Alas! I have traverfed this defolate country, I have visited the places that were the theatro

theatre of so much splendour, and I have nothing beheld but solitude and desertion I I looked for those ancient people and their works, and all I could find was a saint mace, like to what the foot of a passenger leaves on the sand. The temples are thrown down, the palaces demolished, the ports silled up, the towns destroyed, and the earth, stript of inhabitants, seems a dreary burying-place.

... Great God! from whence proceed such melancholy revolutions? For what cause is the fortune of these countries so strikingly changed? Why are so many cities destroyed? Why is not that ancient population re-produced and perpetuated?

Thus absorbed in contemplation, new ideas continually presented themselves to my thoughts. Every thing, continued I, misleads my judgment, and falls my heart with trouble and uncertainty. When these countries enjoyed what constitutes the glory and felicity of mankind, they were an unbelieving people who inhabited them: it was the Phenician, offering human facrifices to Moloch, who brought together within his walls the riches of every climate; it was the Chaldean, prostrating

profirating: himself before a serpent *, who fubiugated opulent cities, and laid waste the palaces of kings and the temples of the Gods; it was the Persian, the worshipper of fire, who collected the tributes of a hundred nations; they were the inhabitants of this very city, adorers of the fun and stars, who erected fo many monuments of affinence and luxury. Numerous flocks, fertile fields, abundant harvests, every thing that should have been the reward of piety, was in the hands of idolaters: and now that a believing and boly people occupy the countries, nothing is to be feen but foliaude and feerility. The earth under these bleffed hands produces only briars and wormwood. . Man fows in anguish, and reaps vexation and cares; war, famine, and pestilende; affault him in turn. Yet, are not these the children of the prophets? This Christian, this Mussulman, this Jew, are they not the elect of Heaven, loaded with gifts and miracles? Why then is this race, beloved of the Divinity, deprived of the favours which were formerly showered upon the

The dragon Bel.

Heathen?

Heathen? Why do these lands, consecrated by the blood of the martyrs, no longer boast their former temperature and sertility? Why have those favours been banished as it were, and transferred for so many ages to other nations and different climes?

And here, pursuing the course of vicissitudes which have in turn transmitted the sceptre of the world to people so various in manners and religion, from those of ancient Asia down to the more recent ones of Europe, my native country, designated by this name, was awakened in my mind, and turning my eyes towards it, all my thoughts fixed upon the situation in which I had lest it *.

I recollected its fields to richly cultivated, its roads to admirably executed, its towns inhabited by an immense multitude, its ships scattered over every ocean, its ports folled with the produce of either India; and comparing the activity of its commerce, the extent of its navigation, the magnificence of its buildings, the arts and industry of its inhabitants, with all that Egypt and Syria

^{*} In the yest: 1782, at the close of the American war, could

could formerly boast of a similar nature, I pleafed myfelf with the idea that I had found in modern Europe the past splendour of Asia; But the charm of my reverie was prefently diffolved by the last step in the comparison. Reflecting that if the places before me had once exhibited this animated picture: who, faid I to myfelf, can affure me that their present desolation will not one day be the lot of our own country? who knows but that hereafter some traveller like myself will sit down upon the banks of the Seine, the Thames, or the Zuyder sea, where now, in the tumult of enjoyment, the heart and the eyes are too flow to take in the multitude of ferifations: who knows but he will fit down folitary amid filent ruins, and weep a people interned, and their greatness changed into an empty name ?

The idea brought tears into my eyes; and covering my head with the flap of my garment, I gave myself up to the most gloomy meditations on human affairs. Unhappy man! said I in my grief, a blind satality plays with thy destiny (c)! a satal necessity rules by chance the lot of mortals! But, no: they

are

are the decrees of celestial justice that are accomplishing! A mysterious God exercises his incomprehensible judgments! he has doubtless pronounced a secret malediction against the earth; he has struck with a curse the present race of men, in revenge of past generations. Oh! who shall dare to fathom the depths of the Divinity?

And I remained immoveable, plunged in profound melancholy.

The state than 1985 to go to 1984 and

CHAP. III.

THE APPARITION.

In the mean time a noise struck my ear, like to the agitation of a flowing robe, and the slow steps of a foot, upon the dry and rustling grass. Alarmed, I drew my mantle from my head; and casting round me a timid glance, suddenly, by the obscure light of the moon, through the pillars and ruins of a temple, I thought I saw, at my left, a pale apparition, enveloped in an immense drapery, similar to what spectres are painted when issuing out of the tombs. I shuddered; and while in this troubled state, I was hesitating whether to sty, or ascertain the reality of the vision, a hollow voice, in grave and solemn accents, thus addressed me:

How long will man importune the heavens with unjust complaint? How long, with vain clamours, will he accuse Fate as the author of his calamities? Will he then never open his eyes

eyes to the light, and his heart to the unfinuations of truth and reason ! This truth every where presents itself in radiant brightness; and he does not fee it! The voice of reason firikes his ear ; and he does not hear it! Unjust man I if you can for a moment suspend the delusion which fascinates your senses; if your heart be capable of comprehending the language of argumentation, interrogate thefe ruins! read the lessons which they present to you !....And you, facred temples! venerable tombs! walls once glorious! the witnesses of swenty different ages, appear in the cause of nature herfelf! come to the tribunal of found understanding, to bear testimony against an unjust accusation, to confound the declamations of false wisdom or hypocritical piety, and avenge the heavens and the earth of man who calumniates them!

What is this blind fatality, that, without order or laws, sports with the lot of mortals? What this unjust necessity, which confounds the issue of actions, be they those of prudence or those of folly? In what consists the maledictions of Heaven denounced against these countries? Where is the divine curse that perpetuates

permeasures this forme of defolation? Monuments of past ages! fay, have the heavens. changed their laws, and the earth its course? Has the fun extinguished his fires in the region of space? Do the seas no longer fend forth clouds? Are the rain and the dew fixed in the air? Do the mountains retain their fprings? Are the streams dried up? and do the plants no more bear fruit and feed? Anfwer, race of falsehood and iniquity, has God troubled the primitive and invariable order which he himself affigned to nature? Has heaven denied to the earth, and the earth to its inhabitants, the bleffings that were formerly dispensed? If the creation has remained the fame, if its fources and its inftruments are exactly what they once were, wherefore should not the present race have every thing within their reach that their ancestors enjoyed? Falsely do you accuse Fate and the Divinity: injuriously do you refer to God the cause of your evils. Tell me, perverse and hypocritical race, if these places are desolate, if powerful cities are reduced to folitude, is it he that has occasioned the ruin? Is it his hand that has thrown down thefe .

thefe walls, fapped thefe temples, marilated these oillars? or is it the hand of man? Is it the arm of God that has introduced the fword into the city and fet fire to the country, murdered the people, burned the harvests, rooted up the trees, and ravaged the pastures? or is it the arm of man? And when, after this devastation, famine has started up, is it the vengeance of God that has fent it, or the mad fury of mortals? When, during the famine, the people are fed with unwholesome provision, and pestilence ensues, is it inflicted by the anger of Heaven, or brought about by human imprudence! When war, famine, and pestilence united have swept away the inhabitants, and the land is become a defert, is it God who has depopulated it? Is it his rapacity that plunders the labourer, ravages the productive fields, and lays wafte the country; or the rapacity of those who govern? Is it his pride that creates murderous wars, or the pride of kings and their ministers? Is it the venality of his decisions that overthrows the fortune of families, or the venality of the organs of the laws? Are they his passions that, under a thousand forms, torment individuals

dividuals and nations; or the passions of human beings? And if in the anguish of their misfortunes they perceive not the remedies, is it the ignorance of God that is in fault, or their own ignorance? Cease, then, to accuse the decrees of Fate or the judgments of Heaven! If God is good, will he be the author of your punishment? If he is just, will he be the accomplice of your crimes? No, no; the caprice of which man complains, is not the caprice of destiny: the darkness that misleads his reason, is not the darkness of God; the source of his calamities. is not in the distant heavens, but near to him upon the earth; it is not concealed in the bosom of the divinity; it resides in himfelf, man bears it in his heart.

You murmur, and fay: Why have an unbelieving people enjoyed the bleffings of heavenand of the earth? Why is a holy and chosen race less fortunate than impious generations? Deluded man! where is the contradiction at which you take offence? Where the inconfistency in which you suppose the justice of God to be involved? Take the balance of bleffings and calamities, of causes and effects.

and

and tell me-When those infidels observed the laws of the earth and the heavens, when they regulated their intelligent labours by the order of the feafons and the course of the stars, ought God to have troubled the equilibrium of the world to defeat their prudence? When they cultivated with care and toil the face of the country around you, ought he to have turned afide the rain, to have withheld the fertilizing dews, and caused thorns to spring up? When, to render this parched and barren foil productive, their industry constructed aqueducts, dug canals, and brought the distant waters across the deserts, ought he to have blighted the harvests which art had created; to have defolated a country . that had been peopled in peace; to have demolished the towns which labour had caused to flourish; in fine, to have deranged and confounded the order established by the wildom of man? And what is this infidelity which founded empires by prudence, defended them by courage, and strengthened them by justice, which raised magnificent cities, formed yast ports, drained pestilential marthes, govered the fea with thips, the earth C 2 with

with inhabitants, and, like the creative spirit, diffused life and motion through the world. If fuch is impiety, what is true belief? Does holine's confift in destruction? Is then the God that peoples the air with birds, the earth with animals, and the waters with reptiles; the God that animates universal nature, a God that delights in ruins and sepulchres? Does he ask devastation for homage, and conflagration for facrifice? Would he have groans for hymns, murderers to worship him, and a defert and ravaged world for his temple? Yet fuch, boly and faithful generation, are your works! These are the fruits of your piety! You have massacred the people, reduced cities to ashes, destroyed all. traces of cultivation, made the earth a folitude; and you demand the reward of your labours! Miracles are not too much for your advantage! For you the peafants that you have murdered should be revived; the walls you have thrown down should rise again; the harvefts you have ravaged should flourish; the conduits that you have broken down should be renewed; the laws of heaven and earth, those laws which God has established for the display

difplay of his greatness and his magnificence. those laws anterior to all revelations and to all prophets, those laws which passion cannot alter, and ignorance cannot pervert, should be superseded. Passion knows them not; ignorance, which observes no cause and predicts no effect, has faid in the foolishness of her heart: " Every thing comes from "chance; a blind fatality distributes good " and evil upon the earth; fuccefs is not to " the prudent, nor felicity to the wife." Or else, assuming the language of hypocrify, the has faid: " Every thing comes from " God : and it is his fovereign pleasure to "deceive the fage, and to confound the "judicious." And the has contemplated the imaginary scene with complacency. "Good!" she has exclaimed. " I then am " as well endowed as the science that de-" fpifes me! The cold prudence which "evermore haunts and torments me, I will render useless by a lucky intervention of "Providence." Cupidity has joined the chorus. " I too will oppress the weak; I " will wring from him the fruits of his " labour: for fuch is the decree of Heaven, " fuch C 3

"fuch the omnipotent will of fate."—For myself, I swear by all laws human and divine, by the laws of the human heart, that the hypocrite and the deceiver shall be themselves deceived; the unjust man shall perish in his rapacity, and the tyrant in his usurpation: the sun shall change its course, before folly shall prevail over wisdom and science, before stupidity shall surpass prudence in the delicate art of procuring to man his true enjoyments, and of building his happiness upon a folid foundation.

CHAP. IV.

THE HEMISPHERE.

THUS spoke the Apparition. Astonished at his discourse, and my heart agitated by a diversity of reflections, I was for some time filent. At length, affuming the courage to fpeak, I thus addressed him: O Genius of tombs and ruins! your fudden appearance and your severity have thrown my senses into disorder, but the justness of your reasoning restores confidence to my foul. Pardon my ignorance. Alas! if man is blind, can that which constitutes his torment be also his crime? I was unable to diftinguish the voice of reason; but the moment it was known to me, I gave it welcome. Oh! if you can read my heart, you know how defirous it is of truth, and with what ardour it feeks it; you know that it is in this pursuit I am now found in these remote places. Alas I I have wandered over the earth, I have visited cities and countries; CA

countries; and perceiving every where mifery and desolation, the sentiment of the evils by which my fellow creatures are tormented has deeply afflicted my mind! I have faid to myself with a figh: Is man, then, created to be the victim of pain and anguish? And I have meditated upon human evils, that I might find out their remedy. I have faid, I will separate myself from corrupt societies; I will remove far from palaces where the foul is depraved by fatiety, and from cottages where it is humbled by mifery. I will dwell. in folitude amidst the ruins of cities: I will enquire of the monuments of antiquity what was the wildom of former ages: in the very bosom of sepulchres I will invoke the spirit, that formerly in Asia gave splendour to states and glory to their people: I will enquire of the ashes of legislators what causes have erected and overthrown empires; what are the principles of national prosperity and misfortune; what the maxims upon which the peace of fociety and the happiness of man ought to be founded.

I stopped; and casting down my eyes, I waited the reply of the Genius. Peace and happiness,

happiness, said he, descend upon him who practifes justice! Young man, fince your heart fearches after truth with fincerity; fince you can diftinguish her form through the mist of prejudices which blind the eyes, your enquiry shall not be vain: I will display to your view this truth of which you are in pursuit: I will show to your reason the knowledge which you defire; I will reveal to you the wisdom of the tombs, and the science of ages -Then approaching me, and placing his hand upon my head, Rife, mortal, faid he. and diferigage yourfelf from that corporeal frame with which you are incumbered-Instantly, penetrated as with a celestial flame. the ties that fix us to the earth feemed to be loosened; and lifted by the wing of the Genius, I felt myfelf like a light vapour conveyed in the uppermost region. There, from above the atmosphere, looking down towards the earth I had quitted, I beheld a scene entirely new. ... Under my feet, floating in empty space, a globe similar to that of the moon, but smaller, and less luminous. presented to me one of its faces *; and this

face

[·] See Plate I. representing half the terrestrial globe.

face had the appearance of a disk variegated with spots, some of them white and nebulous, others brown, green and grey; and while I exerted my powers in discerning and discriminating these spots—Disciple of truth, said the Genius to me, have you any recollection of this spectacle? O Genius, I replied, if I did not perceive the moon in a different part of the heavens, I should suppose the orb below me to be that planet; for its appearance resembles persectly the moon viewed through a telescope at the time of an teclipse: one might be apt to think the variegated spots to be seas and continents.

Yes, faid he to me, they are the seas and continents of the very hemisphere you in-

What, exclaimed I, is that the Earth that is inhabited by human beings?

It is, replied he. That brown space which occupies irregularly a considerable portion of the disk, and nearly surrounds it on all sides, is what you call the main ocean, which, from the south pole advancing towards the equator, first forms the great gulf of Africa and India, then stretches to the east across the Malay Islands, as far as the confines of Tartary,

Tartary, while at the west it incloses the continents of Africa and of Europe, reaching to the north of Asia.

Under our feet, that peninfula of a fquare figure is the defert country of Arabia, and on the left you perceive that great continent, scarcely less barren in its interior parts, and only verdant as it approaches the fea, the inhabitants of which are diftinguished by a fable complexion *. To the north, and on the other fide of an irregular and narrow fea +, are the tracts of Europe, rich in fertile meadows and in all the luxuriance of cultivation. To the right from the Caspian, extend the rugged furface and fnow-topt hills of Tartary. In bringing back the eye again to the fpot over which we are elevated, you fee a large white space, the melancholy and uniform defert of Cobi, cutting off the empire of China from the rest of the world. China itself is that furrowed surface which feems by a fudden obliquity to escape from the view. Farther on, those vast tongues of land and scattered points, are the peninsula,

Africa. + The Mediterranean.

and

and islands of the Malayans, the unfortunate proprietors of aromatics and perfumes. Still nearer you observe a triangle which projects strongly into the sea, and is the too samous peninsula of India (d). You see the crooked windings of the Ganges, the ambitious mountains of Thibet, the fortunate valley of Cassimere (12), the discouraging deserts of Persia, the banks of the Euphrates, and the Tigris, the rough bed of the Jordan (4), and the mouths of the solitary Nile. (See the Plate.)

O Genius, said I, interrupting him, the organ of a mortal would in vain attempt to distinguish objects at so great a distance. Immediately he touched my eyes, and they became more piercing than those of the eagle; notwithstanding which riversappeared to me no more than meandering ribbons, ridges of mountains irregular furrows, and great cities a nest of boxes varied among themselves like the squares in a chess-board.

The Genius proceeded to point out the different objects to me with his finger, and to develope them as he proceeded. These heaps of ruins, said he, that you observe in this

this narrow valley, laved by the Nile, are all that remain of the opulent cities that gave lustre to the ancient kingdom of Ethiopia (e). Here is the monument of its splendid metropolis, Thebes with its hundred palaces (f). the progenitor of cities, the memento of human frailty. It was there that a people, fince forgotten, discovered the elements of science and art, at a time when all other men were barbarous, and that a race, now regarded as the refuse of society, because their hair is woolly, and their skin is dark, explored. among the phenomena of nature, those civil and religious fystems which have fince held mankind in awe. A little lower the dark spots that you observe are the pyramids (1) whose masses have overwhelmed your imagination. Farther on, the coast (3) that you behold limited by the fea on one fide, and by a ridge of mountains on the other, was the abode of the Phenician nations; there stood the powerful cities of Tyre, Sidon, Ascalon, Gaza, and Berytus. This stream of water, which feems to disembogue itself into no sea (4), is the Jordan; and these barren rocks were formerly the scene of events, whofe

whose tale may not be forgotten. Here you find the defert of Horeb, and the hill of Sinai (5), where, by artifice which the vulgar were unable to penetrate, a fubtle and daring leader gave birth to institutions of memorable influence upon the history of mankind. Upon the barren strip of land which borders upon this defert, you fee no longer any trace of splendour; and yet here was formerly the magazine of the world. Here were the ports of the Idumeans (g), from whence the fleets of the Phenicians and the Jews, coasting the peninsula of Arabia, bent their voyages to the Persian gulf, and imported from thence the pearls of Havila, the gold of Saba and Ophir. It was here, on the fide of Oman and Bahrain, that existed that fite of magnificent and luxurious commerce, which, as it was transplanted from country to country, decided upon the fate of ancient nations. Hither were brought the vegetable aromatics, and the precious stones of Ceylon, the shawls of Cassimere, the diamonds of Golconda, the amber of the Maldives, the musk of Thibet, the alges of Cochin, the apes and the peacocks of the continent

tinent of India, the incense of Hadramut, the mytth, the filver, the gold dust, and the lyory of Africa. From hence were exported, fometimes by the Black Sea, in thips of Egypt and Syria, thefe commodities, which constituted the opulence of Thebes, Sidon, Memohis, and Jerufalem; fornetimes als cending the course of the Tygris and the Euphrages, they awakened the activity of the Affyrians, the Medes, the Chaldrans, and the Persians, and according as they were used or abused, cherished or overturned their wealth and prosperity. Hence grew up the magnificence of Persepolis, of which you may observe the mouldering columns (8); of Ecbatana (9), whose seven-fold walls are levelled with the earth; of Babylon (10), the ruins of which are trodden under foot of men (b); of Nineveh (11), whose name feems to be threatened with the fame oblivion, that has overtaken its greatness; of Thapfacus, of Anatho, of Gerra, and of the melancholy and memorable Palmyra. names, for ever glorious! celebrated fields! famous countries! how replete is your afpect with fublime instruction! How many profound

profound truths are written on the surface of this earth! Ye places that here witnessed the life of man, in so many different ages, aid my recollection while I endeavour to trace the revolutions of his fortune! Say, what were the motives of his conduct, and what his powers! Unveil the causes of his missingular fortunes, teach him true wisdom, and let the experience of past ages become a mirror of instruction, and a germ of happiness to present and suture generations!

CHAP. V.

CONDITION OF MAN IN THE UNIVERSE.

AFTER a short silence, the Genius thus resumed his instructions:

I have already observed to you, O friend of truth, that man vainly attributes his miffortunes to obscure and imaginary agents, and feeks out remote and mysterious causes, from which to deduce his evils. In the general order of the universe, his condition is doubtless subjected to inconveniencies, and his existence over-ruled by superior powers; but these powers are neither the decrees of a blind destiny, nor the caprices of fantastic beings. Man is governed, like the world of which he forms a part, by natural laws, regular in their operation, confequent in their effects, immutable in their effence; and these laws, the common fource of good and evil, are neither written in the distant stars, nor concealed in mysterious codes: inherent in the nature of all terrestrial beings, identified with D

Usaagle

with their existence, they are at all times and in all places present to the human mind; they act upon the senses, inform the intellect, and annex to every action its punishment and its reward. Let man study these laws, let him understand his own nature, and the nature of the beings that surround him, and he will know the springs of his destiny, the causes of his evils, and the remedies to be applied.

When the fecret power that animates the universe, formed the globe of the earth, he flamped on the beings which compose it effential properties, that became the rule of their individual action, the tie of their reciprecal connections, and the cause of the harmony of the whole. He hereby established a regular order of causes and effects, of principles and confequences, which, under an appearance of chance, governs the universe, and maintains the equilibrium of the world. Thus he gave to fire motion and activity, to air elasticity, to matter weight and dentity; he made air lighter than water, metals heavier than earth, wood less cohesive than steel; he ordered the flame to ascend, the stone to fall, the plant to vegetate; to man; whom

whom he decreed to expose to the encounter of so many substances, and yet wished to preferve his frail existence, he gave the faculty of perception. By this faculty, every action injurious to his life gives him a fenfation of pain and evil, and every favourable action a fensation of pleasure and good. By these impressions, sometimes led to avoid what is offensive to his senses, and sometimes attracted towards the objects that foothe and gratify them, man has been necessitated to love and preferve his existence. Self-love, the defire of happiness, and an aversion to pain, are the effential and primary laws that nature herfelf imposed on man, that the ruling power, whatever it be, has established to govern him: and these laws, like those of motion in the physical world, are the simple and prolific principle of every thing that takes place in the moral world.

Such then is the condition of man: on one fide, subjected to the action of the elements around him, he is exposed to a variety of inevitable evils; and if in this decree Nature appears too severe, on the other hand, just and even indulgent, she has not only D 2

tempered those evils with an equal portion of benefits, the has moreover given him the power of augmenting the one, and diminishing the other. She has feemingly faid to him, "Feeble work of my hands, I owe you " nothing, and I give you life. The world " in which I place you was not made on " your account, and yet I grant you the use " of it. You will find in it a mixture of " good and evil. It is for you to diftinguish "them; you must direct your own steps in " the paths of flowers and of thorns. Be the " arbitrator of your lot; I place your deftiny " in your hands."---Yes, man is become the artificer of his fate: it is himfelf who has created in turn the viciffitudes of his fortune, his fuccesses and his disappointments; and if, when he reflects on the forrows which he has affociated to human life, he has reason to lament his weakness and his folly, he has perhaps still more right to presume upon his force, and be confident in his energies, when he recollects from what point he has fet out, and to what heights he has been capable of elevating himfelf.

CHAP.

CHAP. VI.

ORIGINAL STATE OF MAN.

In the origin of things, man, formed equally naked both as to body and mind, found himself thrown by chance upon a land confused and savage. An orphan, deferted by the unknown power that had produced him, he faw no supernatural beings at hand to advertise him of wants that he owed merely to his fenses, and inform him of duties springing folely from those wants. Like other animals, without experience of the past, without knowledge of the future, he wandered in forests, guided and governed purely by the affections of his nature. By the pain of hunger he was directed to feek food, and he provided for his subsistence; by the inclemencies of the weather, the defire was excited of covering his body, and he made himself cloathing: by the attraction of a powerful pleasure, he approached a fellowbeing, and perpetuated his species.

D 3

Thus

Thus the impressions he received from external objects, awakening his faculties, developed by degrees his understanding, and began to instruct his profound ignorance: his wants called forth his industry; his dangers formed his mind to courage; he learned to distinguish useful from pernicious plants, to resist the elements, to seize upon his prey, to desend his life; and his misery was alleviated.

Thus felf-love, averfion to pain, and define of bappiness, were the simple and powerful motives which drew man from the favage and barbarous state in which Nature had placed bim: and now that his life is fown with enjoyment, that he can every day count upon some pleasure, he may applaud himself and fay: "It is I who have produced the " bleffings that encompass me; I am the " fabricator of my own felicity; a fecure " habitation, commodious raiment, an abun-" dance of wholesome provision in rich va-" riety, smiling valleys, fertile hills, popu-" lous empires, these are the works of my " hand; but for me, the earth, given up to " diforder, would have been nothing more " than

"than a poisonous swamp, a savage forest,
"and a hideous desert!" True, mortal
creator! I pay thee homage! Thou hast
measured the extent of the heavens, and
counted the stars; thou hast drawn the lightning from the clouds; conquered the sury
of the sea and the tempest, and subjected
all the elements to thy will! But, oh! how
many errors are mixed with these sublime
energies!

D4 CHAP.

CHAP. VII.

PRINCIPLES OF SOCIETY.

In the mean time, wandering in woods and upon the borders of rivers, in pursuit of deer and of fish, the first human beings, hunters and fishermen, beset with dangers, affailed by enemies, tormented by hunger, by reptiles, and by the animals they chased, felt their individual weakness; and, impelled by a common want of fafety, and a common fentiment of the same evils, they united their powers and their strength. When one man was exposed to danger, numbers succoured and defended him; when one failed in provision, another shared with him his prey. Men thus affociated for the fecurity of their existence, for the augmentation of their faculties, for the protection of their enjoyment; and the principle of fociety was that of felf-love.

Afterwards, instructed by the repeated experience of diverse accidents, by the fatigues

of

of a wandering life, by the anxiety refulting from frequent scarcity, men reasoned with themselves, and said: " Why should we con-" fume our days in fearch of the scattered " fruits which a parfimonious foil affords? "Why weary ourselves in the pursuit of " prey that escape us in the woods or the " waters? Let us affemble under our hand " the animals that nourish us; let us apply " our cares to the increase and defence of " them. Their produce will afford us a supof ply of food, with their spoils we may " clothe ourselves, and we shall live exempt " from the fatigues of the day, and folicitude " for the morrow." And aiding each other, they feized the nimble kid and the timid heep; they tamed the patient camel, the ferocious bull, and the impetuous horse; and applauding themselves on the success of their industry, they sat down in the joy of their hearts, and began to taste repose and tranquillity: and thus felf-love, the principle of all their reasoning, was the instigator to every art and every enjoyment.

Now that men could pass their days in leisure, and the communication of their ideas, they they turned upon the earth, upon the heavens, and upon themselves an eye of curiofity and reflection. They observed the course of the seasons, the action of the elements, the properties of fruits and plants; and they applied their minds to the multiplication of their enjoyments. Remarking in certain countries the nature of feeds, which contain within themselves the faculty of re-producing the parent plant, they employed to their own advantage this property of Nature: they committed to the earth barley, wheat, and rice, and reaped a produce equal to their most fanguine hopes. Thus they found the means of obtaining within a fmall compass, and without the necessity of perpetual wanderings, a plentiful and durable stock of provision; and encouraged by this discovery, they prepared for then felves fixed habitations, they constructed houses, villages, and towns; they assumed the form of tribes and of nations: and thus was felf-love rendered the parent of every thing that genius has effected, or human power performed.

By the sole aid then of his faculties, has man been able to raise himself to the astonishing ing height of his present fortune. Too happy would have been his lot, had he, scrupulously observing the law imprinted on his nature, constantly sulfilled the object of it! But, by a fatal imprudence, sometimes overlooking and sometimes transgressing its limits, he plunged in an abys of errors and missortunes; and self-love, now disordered, and now blind, was converted into a prolific source of calamities.

CHAP.

CHAP. VIII.

SOURCE OF THE EVILS OF SOCIETY.

In reality, scarcely were the faculties of men expanded, than, feized by the attraction of objects which flatter the fenses, they gave themselves up to unbridled desires. fweet fensations which nature had annexed to their true wants, to attach them to life, no longer fufficed. Not fatisfied with the fruits which the earth offered them, or their industry produced, they were desirous of heaping up enjoyments, and they coveted those which their fellow-creatures possessed. ftrong man rose up against a weak one to tear from him the profit of his labour: the weak man folicited the fuccour of a neighbour, weak like himself, to repel the violence. The strong man in his turn affociated himfelf with another strong man, and they faid : "Why should we fatigue our arms in pro-" ducing enjoyments which we find in the " hands of the feeble, who are unable to de-" fend

"fend themselves? Let us unite, and plun"der them. They shall toil for us, and we
"shall enjoy in indolence the fruit of their
"exertions." The strong thus associating
for the purpose of oppression, and the weak
for resistance, men reciprocally tormented
each other, and a fatal and general discord
was established upon the earth, in which the
passions, assuming a thousand new forms,
have never ceased to generate a regular train
of calamities.

Thus that very principle of felf-love, which, when restrained within the limits of prudence, was a source of improvement and selicity, became transformed, in its blind and disordered state, into a contagious poison, Cupidity, the daughter and companion of ignorance, has produced all the mischiess that have desolated the globe.

Yes, ignorance and the love of accumulation, these are the two sources of all the plagues that infest the life of man! They have inspired him with false ideas of his happiness, and prompted him to misconstrue and insringe the laws of nature, as they related to the connection between him and exterior exterior objects. Through them his conduct has been injurious to his own existence, and he has thus violated the duty he owes to himself; they have fortified his heart against compassion, and his mind against the dictates of justice, and he has thus violated the duty he owes to others. By ignorance and inordinate defire, man has armed himfelf against man, family against family, tribe against tribe, and the earth is converted into a bloody theatre of discord and robbery. They have fown the feeds of fecret war in the bosom of every state, divided the citizens from each other, and the same society is constituted of oppressors and oppressed, of masters and slaves. They have taught the heads of nations, with audacious insolence, to turn the arms of the fociety against itself, and to build upon mercehary avidity the fabric of political despotism: or they have taught a more hypocritical and deep-laid project, that imposed, as the dictate of heaven, lying fanctions and a facrilegious yoke: thus rendering avarice the fource of credulity. In fine, they have corrupted every idea of good and evil, just and . unjust,

unjust, virtue and vice: they have missed nations in a never-ending labyrinth of calamity and missake. Ignorance and the love of accumulation!.... These are the malevolent beings that have laid waste the earth; these are the decrees of fate that have overturned empires; these are the celestial maledictions that have struck those walls once so glorious, and converted the splendour of a populous city into a sad spectacle of ruins!... Since then it was from his own bosom all the evils proceeded that have vexed the life of man, it was there also he ought to have sought the remedies, where only they are to be found.

CHAP. IX.

THE ORIGIN OF GOVERNMENT AND LAWS:

In truth, the period foon arrived when men, tired of the ills they occasioned each other, fighed after peace; and reflecting on the nature and causes of those ills, they said: "We mutually injure one another by our " passions, and from a defire to grasp every " thing we in reality possess nothing. What " one ravishes to-day, another tears from " him to-morrow, and our cupidity rebounds " upon our own heads. Let us establish " arbitrators, who shall decide our claims " and appeale our variances. When the " strong rises up against the weak, the arbi-" trator shall repel him; and the life and " property of each being under a common sugrantee and protection, we shall enjoy " all the bleffings of nature."

Conventions, tacit or expressed, were thus introduced into society, and became the rule of the actions of individuals, the measure of their

their claims, and the law of their reciprocal relations. Chiefs were appointed to enforce the observance of the compact, and to these the people entrusted the balance of rights, and the sword to punish violations.

Then a happy equilibrium of powers and of action was established, which constituted the public safety. The names of equity and justice were acknowledged and revered. Every man, able to enjoy in peace the fruits of his labour, gave himself up to all the energies of his soul; and activity, awakened and kept alive by the reality or the hope of enjoyment, forced art and nature to display all their treasures. The fields were covered with harvests, the valleys with slocks, the hills with vines, the sea with ships, and man was happy and powerful upon the earth.

The disorder his imprudence had caused, his wisdom thus remedied. But this wisdom was still the effect of the laws of nature in the organization of his being. It was to secure his own enjoyments, that he was led to respect those of another, and the desire of Excumulation

accumulation found its corrective in enlightened felf-love.

Self-love, the eternal fpring of action in every individual, was thus the necessary basis, of all affociations; and upon the observance of this natural law has the fate of every nation depended. Have the factitious and conventional laws of any fociety accorded with this law, and corresponded to its demands? In that case every man, prompted by an overpowering instinct, has exerted all the faculties of his nature, and the public felicity has been the result of the various portions of individual felicity. Have these laws, on the contrary, restrained the effort of man in his pursuit of happiness? In that case his heart, deprived of all its natural motives, has languished in inaction, and the oppreffion of individuals has engendered general weakness.

Self-love, impetuous and rash, renders man the enemy of man, and of consequence perpetually tends to the dissolution of society. It is for the art of legislation, and for the virtue of ministers, to temper the grasping selfishness

felfishness of individuals, to keep each man's defire to possess every thing in a nice equiposses, and thus to resider the subjects happy, in order that; in the struggle of this with any other society, all the members should have an equal interest in the preservation and defence of the commonwealth.

From hence it follows, that the internal fplendour and prosperity of empires, have been in proportion to the equity of their governments; and their external power respectively, in proportion to the number of persons interested in the maintenance of the political constitution, and their degree of interest in that maintenance.

On the other hand, the multiplication of men by complicating their ties, having rendered the demarcation of their rights a point of difficult decision; the perpetual play of the passions having given rise to unexpected incidents; the conventions that were formed having proved vicious, inadequate, or null; the authors of the laws having either misunderstood the object of them, or dissembled it, and the persons appointed to execute them, instead of restraining the inordinate

A SURVEY OF THE

defires of others, having abandoned themfelves to the sway of their own avidity—society has, by these causes united, been thrown
into trouble and disorder; and desective laws
and unjust governments, the result of cupidity and ignorance, have been the soundation of the missortunes of the people, and
the subversion of states.

CHAP.

CHAP. X.

GENERAL CAUSES OF THE PROSPERITY OF ANCIENT STATES.

Such, O man, who enquirest after wisdom, have been the causes of the revolutions of those ancient states of which you contemplate the ruins! Upon whatever fpot I fix my view, or to whatever period my thoughts recur, the same principles of elevation and decline, of prosperity and destruction, present themselves to the mind. If a people were powerful, if an empire flourished, it was because the laws of convention were conformable to those of nature; because the government procured to every man respectively the free use of his faculties, the equal security of his person and property. On the contrary, if an empire has fallen to ruin or disappeared, it is because the laws were vicious or imperfect, or a corrupt government has checked their operation. If laws and government, at first rational and just, have afterwards become deprayed,

depraved, it is because the alternative of good and evil derives from the nature of the heart of man, from the succession of his inclinations, the progress of his knowledge, the combination of events and circumstances; as the history of the human species proves.

In the infancy of nations, when men still lived in forests, all subject to the fame wants, and endowed with the fatne faculties, they were nearly equal in ffrength; and this equality was a circumstance highly advantageous to the formation of fociety. Each individual finding himself independent of every other, no one was the flave, and no one had the idea of being master of another. Untaught man knew neither fervitude nor tyranny. Supplied with the means of providing fufficiency for his fublishence, he thought not of borrowing from ftrangers. Owing nothing, and exacting nothing, he judged of the rights of others by his own. Ignorant also of the art of multiplying enjoyments, he provided only what was necesfary; and superfluity being unknown to him, the defire to engross of confequence remained unexcited; or if excited, as it attacked others

in those possessions that were wholly indispensible, it was resisted with energy, and the very foresight of this resistance maintained a salutary and immoveable equilibrium,

Thus original equality, without the aid of convention, maintained personal liberty, secured individual property, and produced order and good manners. Each man laboured separately and for himself: and his heart being occupied, he wandered not in pursuit of unlawful desires. His enjoyments were sew, but his wants were satisfied: and as nature had made these wants less extensive than his ability, the labour of his hands soon produced abundance; abundance population; the arts developed themselves, cultivation extended, and the earth, covered with numerous inhabitants, was divided into different domains.

The relations of men becoming complicated, the interior order of fociety was more difficult to maintain. Time and industry having created affluence, cupidity awoke from its slumber; and as equality, easy between individuals, could not subsist between families, the national balance was destroyed.

It

It was necessary to supply the loss by means of an artificial balance; it was necessary to appoint chiefs, and establish laws; but as these were occasioned by cupidity, in the experience of primitive times they could not but partake of the origin from which they sprung. Various circumstances however concurred to temper the disorder, and make it indispensible for governments to be just.

States being at first weak, and having external enemies to fear, it was in reality of importance to the chiefs not to oppress the subject. By diminishing the interest of the citizens in their government, they would have diminished their means of resistance; they would have facilitated foreign invasion, and thus endangered their own existence for superfluous enjoyments.

Internally, the character of the people was repellent to tyranny. Men had too long contracted habits of independence; their wants were too limited, and the consciousness of their own strength too inseparable from their minds.

States being closely knit together, it was difficult to divide the citizens, in order to oppress oppress some by means of others. Their communication with each other was too easy, and their interests too simple and evident. Beside, every man being at once proprietor and cultivator, he had no inducement to sell himself, and the despot would have been unable to find mercenaries.

If diffensions arose, it was between family and family, one faction with another; and a considerable number had still one common interest. Disputes, it is true, were in this case more warm, but the sear of soreign invasion appealed the discord. If the oppression of a party was effected, the earth being open before it, and men, still simple in their manners, finding every where the same advantages, the party migrated and carried their independence to another quarter.

Ancient states then enjoyed in themselves numerous means of prosperity and power.

As every man found his well-being in the constitution of his country, he felt a lively interest in its preservation; and if a foreign power invaded it, having his habitation and his field to defend, he carried to the combat the ardour of a personal cause, and his patriotic

triotic exertions were prompted by felf-defence.

As every action useful to the public excited its esteem and gratitude, each was eager to be useful, and talents and civil virtues were multiplied by self-love.

As every citizen was called upon indifcriminately to contribute his proportion of property and personal effort, the armies and the treasuries of the state were inexhaustible.

As the earth was free, and its possession easy and secure, every man was a proprietor, and the division of property, by rendering luxury impossible, preserved the purity of manners.

As every man ploughed his own field, cultivation was more active, provisions more abundant, and individual opulence constituted the public wealth.

As abundance of provision rendered subfistence easy, population rapidly increased, and states quickly arrived at their plenitude.

As the produce was greater than the confumption, the defire of commerce started up, and exchanges were made between different nations, which were an additional stimulus to their their activity, and increased their reciprocal enjoyments.

In fine, as certain places in certain epochas combined the advantage of good gobernment with that of being placed in the road of circulation and commerce, they became rich magazines of trade, and powerful feats of dominion. It was in this manner that the riches of India and Europe, accumulated upon the banks of the Nile, the Tigris, and the Euphrates, gave fuccessive existence to the splendour of a thousand metropolisses.

The people, become rich, applied their fuperfluity of means to labours of public utility; and this was, in every state, the æra of those works, the magnificence of which astonishes the mind; those wells of Tyre (i), those artificial banks of the Euphrates, those conduits of Medea (k), those fortresses of the Desert, those aqueducts of Palmyra, those temples, those porticos... And these immense labours were little oppressive to the nations that completed them, because they were the fruit of the equal and united effort of individuals free to act and ardent to desire.

Thus

Thus ancient states prospered, because social institutions were conformable to the true laws of nature, and because the subjects of those states, enjoying liberty and the security of their persons and their property, could display all the extent of their faculties, and all the energy of self-love.

CHAP.

CHAP. XI.

SENERAL CAUSES OF THE REVOLUTIONS
AND RUIN OF ANCIENT STATES.

In the mean time the inordinate defire of accumulation had excited a constant and universal struggle among men, and this struggle, prompting individuals and societies to reciprocal invasions, occasioned perpetual commotions and successive revolutions.

At first, in the savage and barbarous state of the first human beings, this inordinate desire, daring and serocious in its nature, taught rapine, violence, and murder; and the progress of civilization was for a long time at a stand.

Afterwards, when focieties began to be formed, the effect of bad habits communicating itself to laws and government, civil institutions became corrupt, and arbitrary and factitious rights were established, which gave the people depraved ideas of justice and morality.

Because

Because one man, for example, was stronger than another, this inequality, the result of accident, was taken for the law of nature (1); and because the life of the weak was in his power, and he did not take it from him, he arrogated over his person the absurd right of property, and individual statery prepared the way for the slavery of nations.

Because the chief of a family could exercise an absolute authority in his own house, he made his inclinations and affections the sole rule of his conduct; he conferred and withheld the conveniences and enjoyments of life without respect to the law of equality or justice, and paternal tyranny laid the soundation of political despotism (m).

In focieties formed upon fuch bases, time and industry having developed riches, inordinate desire, restricted by the laws, became artificial without being less active: Under the mask of union and civil peace, it engendered in the bosom of every state an intestine war, in which the citizens divided into opposite corps of orders, classes, and families, simed to appropriate to themselves, under the name of supreme power, the ability of grasping

grasping and controlling every thing at the will of their passions. It is this spirit of rapacity, the disguises of which are innumerable, but its operation and end uniformly the same, that has been the perpetual scourge of nations.

Sometimes opposing social compact, or deftroying that which already existed, it has abandoned the inhabitants of a country to the tumultuous shock of all their jarring principles; and the dissolved states, under the name of anarchy, have been tormented by the passions of every individual member.

Sometimes a people jealous of its liberty, having appointed agents to administer, these agents have assumed to themselves the powers of which they were only the guardians; have employed the public funds in corrupting elections, gaining partizans, and dividing the people against itself. By these means, from temporary, they have become perpetual, from elective, hereditary magistrates; and the state, agitated by the intrigues of the ambitious, by the bribes of the wealthy leaders of factions, by the venality of the indolent poor, by the empiricism of declaim-

ers,

ers, has been troubled with all the inconveniences of democracy.

In one country, the chiefs, equal in strength, mutually asraid of each other, have formed vile compacts and coalitions, and portioning out power, rank, honours, have arrogated to themselves privileges and immunities; have erected themselves into separate bodies and distinct classes; have tyrannised in common over the people, and, under the name of aristocracy, the state has been tormented by the passions of the wealthy and the great.

In another country, tending to the same end by different means, facred imposters have taken advantage of the credulity of the ignorant. In the secrecy of temples, and behind the veil of altars, they have made the Gods speak and act; have delivered oracles, worked pretended miracles, ordered sacrifices, imposed offerings, prescribed endowments; and, under the name of theocracy and religion, the state has been tormented by the passions of priests.

Sometimes, weary of its disorders or of its tyrants, a nation, to diminish the sources of its evils, gave itself a single master. In that case, if the powers of the prince were limited,

his

his only dollte was to extend them s if indefinite, he abused the trust that was confided to him; and, under the name of monarchy, the fate was tormented by the paffions of kings and princes.

Then the factious, taking advantage of the. general discontent, flattered the people, with the hope of a better master; they scattered gifts and promifes, dethroned the despot to hibstitute themselves in his stead; and difpates for the faccession or the division of power, have tormented the state with the diforders and devastations of civil war.

In fine, among these rivals, one individual more artful or more fortunate than the rest. gaining the afcendancy, concentred the whole power in himself. By a singular phenomenon, one man obtained the mastery over millions of his fellow-creatures, against their will, and without their consent; and thus the art of tyranny appears also to have been the offspring of inordinate defire. Observing the spirit of egotism that divided mankind, the ambitious adroitly fomented this spirit: he flattered the vanity of one, excited the jealoufy of another, favoured the avarice of a third.

third, enflamed the resentment of a fourth, irritated the paffions of all. By opposing interests or prejudices, he fowed the feeds of divisions and hatred. He promised to the poor the spoil of the rich, to the rich the fubjugation of the poor; threatened this man by that, one class by another; and ifolating the citizens by diffrust, he formed his own strength out of their weakness, and imposed on them the yoke of opinion, the knots of which they tied with their own hands. By means of the army he extorted contributions; by the contributions he disposed of the army; by the corresponding play of money and places, he bound all the people with a chain that was not to be broken, and the states which they composed fell into the flow decay of despotism.

Thus did one and the fame spring, varying its action under all the forms that have been enumerated, incessantly attack the continuity of states, and an eternal circle of vicissitudes have sprung from an eternal circle of passions.

This constant spirit of egotism operated two principal effects equally destructive: the

one,

one, that by dividing societies into all their fractions, a state of debility was produced, which facilitated their dissolution; the other, that always tending to concentre the power in a single hand, it occasioned a successive absorption of societies and states, satal to their peace and to their common existence (n).

Just as in a fingle state, the nation had been absorbed in a party, that party in a family, and that family in an individual, there also existed an absorption of a similar kind between state and state, attended with all the mischiefs in the relative situation of nations, that the other produced in the civil relation of individuals. One city subjected its neighbour city, and the refult of the conquest was a province; province swallowed up province, and thus produced a kingdom; between two kingdoms a conquest took place, and thus furnished an empire of unweildy bulk. Did the internal force of these states increase in proportion to their mass? On the contrary, it was diminished; and far from the condition of the people being happier, it became every day more oppressive and F 2 wretched.

wretched, by causes inevitably flowing from the nature of things.

Because, as the boundaries of states became extended, their administration became more complicated and difficult; and to give motion to the mass it was necessary to increase the prerogatives of the sovereign, and all proportion was thus annihilated between the duty of governors and their power,

Because despots, feeling their weakness, dreaded all those circumstances that developed the force of nations, and made it their study to attenuate it.

Because nations, estranged from each other by the prejudices of ignorance and the serocity of hatred, seconded the perversity of governments, and employing a standing sorce for reciprocal offence, aggravated their slavery.

Because, in proportion as the balance between states was broken, it became easy for the strong to overwhelm the weak.

Because, in proportion as state became blended with state, the people were stripped of their laws, their customs, every thing by which they were distinguished from each other, other, and thus lost the great mover felfish-ness, which gave them energy.

And despots, considering empires in the light of domains, and the people as their property, abandoned themselves to depredations, and the licentiousness of the most arbitrary authority.

And all the force and wealth of nations were converted into a fupply for individual expence and personal caprice; and kings. in the wearisomeness of satiety, followed the dictates of every factitious and depraved tafte (o). They must have gardens constructed upon arches, and rivers carried to the fummit of mountains; for them fertile fields . must be changed into parks for deer, lakes formed where there was no water, and rocks elevated in those lakes; they must have palaces constructed of marble and porphyry, and the furniture ornamented with gold and diamonds. Millions of hands were thus employed in sterile labours; and the luxury of princes being imitated by their parafites, and descending step by step to the lowest ranks, became a general fource of corruption and empoverishment.

F 3

And

And the ordinary tributes being no longer adequate to the infatiable thirst of enjoyment, they were augmented: the consequence of which was, that the cultivator, finding his toil increase without any indemnity, lost his courage; the merchant, seeing himself robbed, took a disgust to industry; the multitude, condemned to a state of poverty, exerted themselves no farther than the procurement of necessaries required, and every species of productive activity was at a stand.

And the surcharge of taxes rendering the possession of lands burthensome, the humble proprietor abandoned his field, or sold it to the man of opulence; and the mass of wealth centered in a few individuals. As the laws and institutions favoured this accumulation, nations were divided into a small body of indolent rich, and a multiude of mercenary poor. The people, reduced to indigence, debased themselves; the great, cloyed with superfluity, became depraved; and the number of citizens interested in the preservation of the state decreasing, its strength and existence were by so much the more precarious.

In

In another view, as there was nothing to excite emulation or encourage instruction, the minds of men sunk into profound ignorance.

The administration of affairs being secret and mysterious, there existed no means of reform or hope of better times; and as the chiefs ruled only by violence and fraud, the people considered them but as a faction of public enemies, and all harmony between the governed and the governors was at an end.

The states of opulent Asia become enervated by all these vices, it happened at length that the vagrant and poor inhabitants of the deserts and the mountains adjacent, coveted the enjoyments of the sertile plains, and instigated by a common cupidity, they attacked polished empires, and overturned the thrones of despots. Such revolutions were rapid and easy, because the policy of tyrants had enseebled the citizens, razed the fortresses, destroyed the warlike spirit of resistance, and because the oppressed subject was without personal interest, and the mercenary soldier without courage.

Hordes of barbarians having reduced whole F 4 nations

nations to a state of slavery, it followed that empires, formed of a conquering and a vanquished people, united in their beson two classes of men essentially opposite and inimical to each other. All the principles of society were dissolved. There was no longer either a common interest, or public spirit; on the contrary, a distinction of easts and conditions was established, that reduced the maintenance of disorder to a regular system; and accordingly as a man was descended from this or that blood, he was born vassal or tyrant, live stock or proprietor:

The oppressors being in this case less numerous than the oppressed, it became necessary, in order to support this false equilibrium, to bring the science of tyranny to perfection. The art of governing was now nothing more than that of subjecting the many to the sew. To obtain an obedience so contrary to instinct, it was necessary to establish the most severe penalties; and the cruelty of the laws rendered the manners atrocious. The distinction of persons also establishing in the state two codes of justice, two species of rights, the people, placed between

between the natural inclinations of their hearts, and the oath they were obliged to pronounce, had two contradictory confciences; and their ideas of just and unjust had no longer any foundation in the understanding.

Under fuch a system the people sell into a state of depression and despair; and the accidents of nature increasing the preponderance of evil, terrified at this groupe of calamities, they referred the causes of them to superior and invisible powers: because they had tyrants upon earth, they supposed there to be tyrants in heaven; and superstition came in aid to aggravate the disasters of nations.

Hence originated gloomy and milanthropic systems of religion, which painted the
Gods malignant and envious like human despots. To appeale them, man offered the sacrifice of all his enjoyments, punished himself with privations, and overturned the laws
of nature. Considering his pleasures as
crimes, his sufferings as expiations, he endeavoured to cherish a passion for pain, and
to renounce self-love; he persecuted his
senses;

fenses, detested his life, and by a self-denying and unsocial system of morals, nations were plunged in the sluggishness of death.

But as provident nature had endowed the heart of man with inexhaustible hope, perceiving his defires disappointed of happiness here, he pursued it elsewhere; by a sweet illusion, he formed to himself another country, an afylum, where, out of the reach of tyrants, he should regain all his rights. Hence a new disorder arose. Smitten with his imaginary world, man despised the world of nature: for chimerical hopes he neglected the reality. He no longer confidered his life but as a fatiguing journey, a painful dream; his body as a prison that withheld him from his felicity; the earth as a place of exile and pilgrimage, which he disdained to cultivate. A facred floth then established itself in the world; the fields were deserted, waste lands increased, empires were dispeqpled, monuments neglected, and every where ignorance, superstition and fanaticism uniting their baleful effects, multiplied devastations and ruins.

Thus,

Thus, agitated by their own passions, men, whether in their individual capacity, or as collective bodies, always rapacious and improvident, passing from tyranny to slavery, from pride to abjectness, from presumption to despair, have been themselves the eternal instruments of their missortunes.

Such was the fimplicity of the principles that regulated the fate of ancient states; such was the feries of causes and effects, consecutive and connected with each other, according to which they rose or fell in the scale of human welfare, just as the physical causes of the human heart were therein observed or infringed. A hundred divers nations, a hundred powerful empires, in their incessant vicissitudes, have read again and again these instructive lesions to mankind . . . And these lessons are mute and forgotten! The difeases of past times have appeared again in the present! The heads of the different governments have practifed again, without restraint, exploded projects of deception and despotism! The people have wandered as before in the labyrinths of superstition and ignorance!

And

And what, added the Genius, calling up his energies afresh, is the consequence of all this? Since experience is useless, since salutary examples are forgotten, the scenes which were acted before are now about to be renewed; revolutions will again agitate people and empires; powerful thrones will, as before, be overturned; and terrible catastrophes remind the human species, that the laws of nature, and the precepts of wisdom and truth, cannot be trampled upon in vain,

CHAP. XII.

LESSONS TAUGHT BY ANCIENT, RE-

In this manner did the Genius address me. Struck with the reasonableness and cohe, tence of his discourse, and a multiplicity of ideas crowding upon my mind, which, while they thwarted my habits, led my judgment at the same time captive, I remained absorbed in profound filence. Meanwhile, as in this fombre and thoughtful disposition I kept my eyes fixed upon Afia, clouds of smoke and of flames at the north, on the shores of the Black Sea, and in the fields of the Crimea, fuddenly attracted my attention. They appeared to ascend at once from every part of the peninsula, and passing by the isthmus to the continent, they purfued their course, as if driven by an easterly wind, along the miry lake of Asoph, and were lost in the verdant plains of the Coban. Observing more attentively the course of these clouds, I perceived

coived that they were preceded or followed by fwarms of living beings, which, like ants disturbed by the foot of a passenger, were in lively action. Sometimes they seemed to move towards and rush against each other. and numbers after the concussion remained motionless. Disquieted at this spectacle, I was endeavouring to distinguish the objects, when the Genius faid to me: Do you fee those fires which spread over the earth, and are you acquainted with their causes and effects ?- O Genius, I replied, I fee columns of flame and smoke, and as it were insects that accompany them; but difcerning with difficulty, as I do, the masses of towns and monuments, how can I diffinguish such petty creatures? I can see nothing more than that these insects seem to carry on a fort of mock battles; they advance, they approach towards each other, they attack, they purfue.-It is no mockery, faid the Genius, it is the thing itself .- And what name, replied I, shall we give to these foolish animalculæ that destroy each other? Do they live only for a day, and is this short life further abridged by violence and murder ?- The Genius then once more touched

touched my eyes and my ears. Liften, faid he to me, and observe. - Immediately, turning my eyes in the fame direction, alas! faid I, transpierced with anguish, these columns of flame, these insects, O Genius ! they are men, and the ravages of war! These torrents of flame afcend from towns and villages fet on fire! I fee the horsemen that light them. I fee them fword in hand overrun the country. Old men, women, and children, in confused multitudes, fly before them. I fee other horfemen, who, with their pikes upon their shoulders, accompany and direct them: I can even diftinguish by their led horfes, by their kalpacks, and by their tufts of hair (p), that they are Tartars; and without doubt those who pursue them in triangular hats and green uniforms are Muscovites. I understand the whole: I perceive that the war has just broken out afresh between the empire of the Czars and the Sultans .- Not yet, replied the Genius; this is. only the prelude. These Tartars have been, and would ftill be troublesome neighbours; the Muscovites are ridding themselves of them. Their country is an object of conve-

nience

nience to their less uncivilized enomies; it rounds and makes complete their dominions; and as the first step in the project that has been conceived, the throne of the Guerais is overturned.

In reality I saw the Russian slag hoisted over the Crimea, and their vessels scattered upon the Euxine.

Meanwhile, at the cries of the fugitive Tartars, the Musiulman empire was in commotion. "Our brethren," exclaimed the children of Mahomet, "are driven from their habitations; the people of the prophet are outraged; infidels are in possession of a confectated land (q), and profune the temples of Islamism! Let us arm ourselves to a venge the glory of God and our own cause."

A general preparation for war then took place in the two empires. Armed men, provisions, ammunition, and all the murderous accourtements of battle, were every where affembled. My attention was particularly attracted by the immense crowds that in either nation thronged to the temples. On one side the Mussulmans, affembled before their mosques, washed their hands and feet,

pared

pared their nails, and combed their beard: then spreading carpets upon the ground, and turning themselves towards the south, with their arms fometimes croffed and fometimes extended, they performed their genuflections and proftrations. Recollecting the disasters they had experienced during the last war, they cried: " God of clemency and pity, hast " thou then abandoned thy faithful people? . " Why dost thou, who has promised to thy " prophet the dominion of nations, and fig-" nalized religion by fo many triumphs, de-" liver up true believers to the fword of infidels?" And the Imans and the Santons faid to the people: " It is the chaftisement of " your fins. You eat pork, you drink wine, you touch things that are unclean: God " has punished you. Do penance; purify " yourselves; say your creed *; fast from the " rifing of the fun to its fetting; give the " tenth of your goods to the mosques; go " to Mecca; and God will make your arms " victorious." Then, assuming courage, the péople gave a general shout. " There is but

ene

There is but one God, and Mahomet is his prophet.

"one God," faid they in a transport of rage,
and Mahomet is his prophet! accursed be
every one that believeth not!... Indulgent God! grant us the favour to exterminate these Christians: it is for thy glory
we fight, and by our death we are martyrs to thy name."—And having offered sacrifices, they prepared themselves for battle.

On the other hand, the Russians on their knees exclaimed: "Let us give thanks to "God, and celebrate his power: he has " ftrengthened our arm to humble his ene-" mies. Beneficent God! incline thine ear " to our prayers. To please thee we will " for three days eat neither meat nor eggs. " Permit us to-exterminate these impious " Mahometans, and overthrow their empire, " and we will give thee the tenth of the spoil, " and erect new temples to thy honour." The priests then filled the churches with fmoke, and faid to the people: "We pray " for you, and God accepts our incense, and " bleffes your arms. Continue to fast and · " to fight; tell us the faults you have fecret-" ly committed; bestow your goods on the " church: church; we will absolve you of your sins, "and you shall die in a state of grace." And they sprinkled water on the people, distributed among them little bones of departed saints to serve as amulets and talismans; and the people breathed nothing but war and destruction.

Struck with this contrasting picture of the same passions, and lamenting to myself their pernicious consequences, I was reslecting on the difficulty the common Judge would find in complying with such opposite demands, when the Genius, from an impulse of anger, vehemently exclaimed:

What madness is this which strikes my ear? What blind and fatal infanity possesses the human mind? Sacrilegious prayers, return to the earth from whence you came! Ye concave heavens, repel these murderous vows, these impious thanksgivings! Is it thus, O man, you worship the Divinity? And do you think that he, whom you call Father of all, can receive with complacence the homage of free-booters and murderers? Ye conquerors, with what sentiments does he behold your arms reeking with blood that he

G 2 has

has created? Ye conquered, what hope cart you place in useless moans? Is he a man that he should change, or the son of man that he should repent? Is he governed like you by vengeance and compassion, by rage and by weariness! Base idea, how much unworthy of the Being of Beings! Hear these men, and you would imagine that God is a Being capricious and mutable; that now he loves, and now he hates; that he chastises one, and indulges another; that hatred is engendered and nourished in his bosom; that he spreads fnares for men, and delights in the fatal effects of imprudence; that he permits ill, and punishes it; that he foresees guilt, and acquiesces; that he is to be bought with gifts like a partial judge; that he reverses his edicts like an undiscerning despot; that he gives and revokes his favours because it is his will. and is to be appealed only by fervility like a favage tyrant. I now completely understand what is the deceit of mankind, who have pretended that God made man in his own image, and who have really made God in theirs; who have ascribed to him their weakness, their errors, and their vices; and in the conclusion.

conclusion, surprised at the contradictory nature of their own affertions, have attempted to cloke it with hypocrifical humility, and the pretended impotence of human reafon, calling the delirium of their own understandings the facred mysteries of heaven.

They have faid, God is without variablenefs, and they pray to him to change. They have faid that he is incomprehenfible, and they have undertaken to be interpreters of his will.

A race of impostors has made its appearance upon the earth, who, pretending to be in the confidence of God, and taking upon themselves the office of instructing the people, have opened the flood-gates of falsehood and iniquity. They have affixed merit to actions which either are indifferent or abfurd. They have dignified with the appellation of virtue the observance of certain postures, and the repetition of certain words and names. They have taught the impiety of eating certain meats on certain days rather than on others. It is thus the Jew would fooner die than work on the fabbath. It is thus the Persian would endure suffocation before

before he would blow the fire with his breath. It is thus the Indian places fupreme perfection in fmearing himfelf with cow-dung, and mysteriously pronouncing the word Aûm (r). It is thus the Muffulman believes himself purified from all his fins by the ablution of his head and his arms; and disputes, sabre in hand, whether he ought to begin the ceremony at the elbow (s) or the points of his fingers. It is thus the Christian would believe himself damned: were he to eat the juice of animal food inflead of milk or butter. What fublime and truly celestial doctrines! What purity of morals, and how worthy of apostleship and martyrdom! I will cross the seas to teach these admirable laws to savage people and distant nations. I will say to them; " Chil-" dren of nature, how long will you wander " in the paths of ignorance? How long will " you be blind to the true principles of mo-" rality and religion? Vifit civilized na-" tions, and take lessons of pious and learn-" ed people. They will teach you, that, to " please God, you must in certain months " of the year faint all day with hunger and " thirft.

"thirst. They will teach you how you may shed the blood of your neighbour, and purify yourselves from the stain, by repeating a profession of faith, and making a methodical ablution: how you may rob him of his goods, and be absolved from the guilt, by sharing them with certain persons whose profession it is to live in idleness upon the labour of others."

Sovereign and mysterious Power of the Universe! secret Mover of Nature! universal Soul of every thing that lives! infinite and incomprehenfible Being, whom, under fo many forms, mortals have ignorantly worshipped! God, who in the immensity of the heavens dost guide revolving worlds, and people the abyss of space with millions of funs : say, what appearance do those human infects, which I can with difficulty diffinguish upon the earth, make in thy eyes? When thou directest the stars in their orbits, what to thee are the worms that crawl in the dust? Of what importance to thy infinite greatness are their distinctions of sects and parties? And how art thou concerned with the fubtleties engendered by their folly?

G 4 And

And you, credulous men, shew me the efficacy of your practices! During the many ages that you have observed or altered them, what change have your prescriptions wrought in the laws of nature? Has the sun shone with greater brilliance? Has the course of the seasons at all varied? Is the earth more fruitful, are the people more happy? If God be good, how can he be pleased with your penances? If he be infinite, what can your homage add to his glory? Inconsistent men, answer these questions!

Ye conquerors, who pretend by your arms to serve God, what need has he of your aid? If he wishes to punish, are not earthquakes, volcanoes, and the thunderbolt in his hand? And does a God of clemency know no other way of correcting but by extermination?

Ye Mussulmans, if your missortunes were the chastisements of heaven for the violation of the five precepts, would prosperity be showered on the Franks who laugh at these things? If it is by the laws of the Koran that God judges the earth, what were the principles

principles by which he governed the nations that existed before the prophet, the numerous people who drank wine, ate pork, and travelled not to Mecca, yet to whom it was given to raise powerful empires? By what laws did he judge the Sabeans of Nineveh and of Babylon; the Persian, who worshipped fire; the Greek and Romanidolaters; the ancient kingdoms of the Nile, and your own progenitors the Arabs and Tartars? How does he at present judge the various nations that are ignorant of your worthip, the numerous casts of Indians, the vast empire of the Chinese, the swarthy tribes of Africa, the islanders of the Atlantic Ocean, the colonies of America!

Presumptuous and ignorant men, who artogate to yourselves the whole earth, were God to summon at once all past and present generations, what proportion would those Christian and Mussulman sects, calling themselves universal, bear in the vast assemblage? What would be the judgment of his fair and impartial justice respecting the actual mass of mankind? It is in estimating the general system of his government that you wander among

among multiplied abfurdities; and it is there that, in reality, truth presents itself in all its evidence. It is there that we trace the fimple but powerful laws of nature and reafon; the laws of the common mover, the general cause; of a God impartial and just, who, that he might fend his rain upon a country, asks not who is its prophet; who causes his sun equally to shine on all tribes of men, whether diftinguished by a fair or a fable complexion, on the Jew as on the Muffulman, on the Christian as on the Heathen; who multiplies the inhabitants of every country with whom order and industry reign; who gives prosperity to every empire where justice is observed, where the powerful is restrained, and the poor man protected by the laws; where the weak lives in fafety, and where all enjoy the rights which they derive from nature and an equitable compact.

Such are the principles by which nations are judged! This is the true religion by which the fate of empires is regulated, and which, O Ottomans, has ever decided that of your own empire! Interrogate your ancestors; ask them by what means they rose

to greatness, when, idolators, few in number and poor, they came from the deferts of Tartary to encamp in these fertile countries? Ask them if it was by islamism, at that period unknown to them, that they conquered the Greeks and Arabs; or by their courage, prudence, moderation, and unanimity, the true powers of the focial state? Then the Sultan himself administered justice and maintained order: then the prevaricating judge and the rapacious governor were punished. and the multitude lived in eafe: the cultivator was fecure from the rapine of the janizary, and the fields were productive: the public roads were fafe, and commerce flourished, It is true you were a league of robbers, but among yourselves you were just. You subjugated nations, but you did not oppress them. Vexed by their own princes they preferred being your tributaries. " Of what importance is it to me, faid the " Christian, whether my master be pleased " with images or breaks them in pieces, " provided he is just towards me? God will " judge his doctrine in heaven." You were temperate and hardy; your enemies foft and effeminate; battle; they had forgotten its principles: you had experienced chiefs, warlike and disciplined troops; the hope of hooty excited ardour; bravery was recompensed; disobedience and cowardice punished, and all the springs of the human heart were in action. You thus conquered a hundred nations, and out of the mass founded an immense empire.

But other manners succeeded. The laws of nature, however, did not less operate in your misfortunes than in your prosperity, You destroyed your enemies, and your grasping ambition, still in force, preyed upon yourfelves. Having become rich, you commenced an internal contest respecting the division and the enjoyment of your riches, and diforder was generated through every class of your fociety. The Sultan, intoxicated with his greatness, misunderstood the object of his functions, and all the vices of arbitrary power presently unfolded themselves. Meeting with no ob-. stacle to his desires, he became a depraved character. Weak, and arrogant at the same time, he fourned the people, and would no longer be influenced and directed by their voice.

voice. Ignorant, and yet flattered, he neglectedall instruction, all study, and sunk into total incapacity. Become himself unqualified for the conduct of affairs, he committed the trust to hirelings, and these hirelings deceived him. To fatisfy their own passions, they stimulated and increased his; they multiplied his wants, and his enormous luxury devoured every thing, He was no longer content with the frugal table, the modest attire, and the fimple habitation of his anceftors: the earth and fea must be exhausted to fatisfy his pride; scarce furs must be fetched from the pole, and coftly tiffues from the equator; he confumed at a meal the tribute of a city, and in a day the revenue of a province. He became infested with an army of women, eunuchs, and courtiers. was told that the virtue of kings confifted in liberality; and the munificence and treafures of the people were delivered into the hands of parafites. In imitation of the mafter, the flaves were also defirous of having magnificent houses, furniture of exquisite workmanship, carpets richly embroidered, vafes of gold and filver for the vileft uses; and all the the wealth of the empire was swallowed up in the Seraï.

To supply this inordinate luxury the slaves and the women sold their influence; and venality introduced a general depravation. They sold the favour of the prince to the Vissier, and the Visier sold the empire. They sold the law to the Cadi, and the Cadi sold justice. They sold the altar to the priest, and the priest sold heaven. And gold obtaining every thing, nothing was left unpractised to obtain gold. For gold, friend betrayed friend; the child his father; the servant his master; the wife her honour; the merchant his conscience; and there no longer existed in the state either good faith, manners, concord, or stability.

The Pacha, who purchased his office, prefently had recourse to the system of farming it for a revenue, and exercising upon it every species of extortion. He sold the collection of the taxes, the command of the troops, the administration of the districts; and in proportion as every employment was temporary, rapine, diffusing itself from rank to rank, was rapid and precipitate. The exciseman oppressed pressed the merchant by his exactions, and trade was annihilated. The Aga stript the husbandman, and cultivation was degraded. The labourer, robbed of his little capital, had not wherewith to sow his field: taxes nevertheless became due, and he was unable to pay them; he was threatened with corporal punishment, and driven to the expedient of a loan: specie, for want of security, was withdrawn from circulation; the interest of money became enormous, and usury aggravated the misery of the poor.

Inclement seasons, periods of dearth, had rendered the harvests abortive, but government would neither forgive nor postpone its demands. Distress began its career: a part of the inhabitants of the villages took refuge in the cities; the burthen upon those that remained became greater, their ruin was confummated, and the country depopulated.

Driven to the last extremity by tyranny and insult, certain villages broke out into rebellion. The Pacha considered the event as a subject of rejoicing; he made war upon them, took their houses by storm, ransacked their goods, and carried off their cattle. The

Georgic

foil became a defert, and he exclaimed:
"What care I; I shall be removed from it to-morrow."

Yet again, the want of cultivation led one flep farther. Periodical rains or swelling tides overflowed the banks and covered the country with swamps: these swamps exhaled a putrid air, which spread chronical diseases, pestilence, and sickness of a thousand forms, and was followed by a still farther decrease of population, by penury and ruin.

Oh! who can enumerate all the evils of this tyrannical system of government!

Sometimes the Pachas make war of themfelves, and to avenge their personal quarrels,
provinces are laid waste. Sometimes, dreading their masters, they aim at independence,
and draw upon their subjects the chastisement of their revolt. Sometimes, fearing these very subjects, they call to their
aid and keep in pay foreign troops, and to
be sure of them, they indulge them in every
kind of robbery. In one place, they commence an action against a rich man, and
plunder him upon salse pretences. In another, they suborn witnesses, and impose a
fine

fine for an imaginary offence. On all occasions they excite the hatred of sects against each other, and encourage informations for the sake of increasing their own corrupt advantages. They extort from men their propetty; they attack their persons; and when their imprudent avarice has heaped into one mass the riches of a province, the supreme government, with execrable persidy, pretending to avenge the oppressed inhabitants, draws to itself their spoil in the spoil of the culprit, and wantonly and vainly expiate in blood the crime of which it was itself the accomplice.

O iniquitous beings, sovereigns or ministers, who sport with the life and property
of the people! was it you who gave breath
to man, that you take it from him? Is it
you who fertilize the earth, that you dissipate
its fruits? Do you satigue your arms with
ploughing the field? Do you expose yourselves to the heat of the sun, and endure
the torment of thirst in cutting down the
harvest and binding it into sheaves? Do you
watch like the shepherd in the nocturnal

H dew?

dew? Do you traverse deserts like the indefatigable merchant? Alas! when I have reflected on the cruelty and infolence of the powerful, my indignation has been roused, and I have faid in my anger: What! will there never appear upon the earth a race of men who shall avenge the people and punish tyrants! A small number of robbers devour the multitude, and the multitude fuffer themfelves to be devoured! O degraded people, awake to the recognition of your rights! authority proceeds from you, yours is all the power. Vainly do kings command you in the name of God and by their lance : foldiers, obey not the fummons. Since God supports the Sultan, your fuccour is useless; fince the fword of heaven suffices him, he has no need of yours; let us see what he can do of himfelf.... The foldiers have laid down their arms; and lo, the masters of the world are as feeble as the meanest of their subjects! Ye people, know then that those who govern you are your chiefs and not your masters; your guardians appointed by yourselves, and not your proprietors; that your wealth is your

your own, and to you they are accountable for the administration of it; that kings or subjects, God has made all men equal, and no human being has a right to oppress his fellow-creature.

But this nation and its chiefs acknowledge not these facred truths. . . . Be it so; they will fuffer the confequences of their error. The decree is gone forth; the day approaches when this colosius of power shall be dashed to pieces, and fall crushed by its own weight. Yes, I fwear by the ruins of fo many demolished empires, that the crescent shall undergo the fame fate as the states whose mode of government it has imitated! A foreign people shall drive the Sultans from their metropolis; the throne of Orkhan shall be subverted; the last shoot of his race shall be cut off; and the horde of the Oguzians (t). deprived of their chief, shall be dispersed like that of the Nogaians. In this diffolution the subjects of the empire, freed from the yoke that held them together, will refume their ancient distinctions, and a general anarchy will take place, as happened in the em-H 2 pire

pire of the Sophis (u), till there shall arise among the Arabs, the Armenians, or the Greeks, legislators who shall form new states. Oh! were a fagacious and hardy race of men to be found, what materials of greatness and glory are here ! But the hour of deftiny is arrived. The cry of war strikes my ear, and the catastrophe is about to commence. In vain the Sultan draws out his armies; his ignorant foldiers are beaten and fcattered. In vain he calls upon his subjects: their hearts are callous; his fubjects reply: " It " is decreed; and what is it to us who is " to be our master? we cannot lose by the " change." In vain these true believers invoke heaven and the prophet, the prophet is dead, and heaven without pity answers: " Cease to call upon me. You are the au-" thors of your calamities, find yourselves "their remedy. Nature has established " laws, it becomes you to practife them. " Examine and reflect upon the events that " take place, and profit by experience. It " is the folly of man that works his destruc-" tion; it is his wildom that must save him.

"The people are ignorant; let them get understanding: their chiefs are deprayed; let
them correct their vices and amend their
lives, for such is the decree of nature:

Since the evils of society flow from IGNORANCE and INORDINATE DESIRE, men
will never ccase to be tormented till they
fhall become intelligent and wise; till they
fhall practise the art of justice, sounded on
a knowledge of the various relations in
which they stand, and the laws of their own
organization *."

CHAP.

 A fingular moral phenomenon made its appearance in Europe in the year 1788. A great nation, jealous of its liberty, contracted a fondness for a nation the enemy of liberty; a nation friendly to the arts for a nation that detefts them; a mild and tolerant nation for a perfecuting and fanatic one; a focial and gay nation for a nation whose characteristic are gloom and misanthropy; in a word, the French were smitten with a passion for the Turks: they were desirous of engaging in a war for them, and that at a time when a revolution in their own country was just at its commencement. A man who perceived the true nature of the fituation, wrote a book to diffuade them from the war: it was immediately pretended that he was paid by the government, which in reality wished the war, and which was upon the point of thutting him up in a flate prison. Another man wrote H 3

CHAP. XIII.

WILL THE HUMAN RACE BE EVER IN A BETTER CONDITION THAN AT PRESENT.

OPPRESSED with forrow at the predictions of the Genius, and the feverity of his reasoning: Unhappy nations, cried I, burst-ing

to recommend the war: he was applauded, and his word was taken in payment for the science, the politeness and importance of the Turks. It is true that he believed in his own thefis, for he had found among them people who cast a nativity, and alchemists who ruined his fortune; as he found Martinists at Paris, who enabled him to sup with Sefoffris, and Magnetifers who concluded with destroying his existence. Notwithstanding this, the Turke were beaten by the Ruffians, and the man who then predicted the fall of their empire, perfifts in the prediction. The refult of this fall will be a complete change of the political system, as far as it relates to the coast of the Mediterranean. If, however, the French become important in proportion as they become free, and if they make use of the advantage they will obtain, their progress may eafily prove of the most honourable fort, inasmuch as, by the wife decrees of fate, the true interest of mankind evermore accords with their true morality.

ing into tears! Unhappy my own lot! I now despair of the felicity of man! since his evils flow from his own heart, fince he must himself apply the remedy, woe for ever to his existence! For what can restrain the inordinate defire of the powerful? Who . shall enlighten the ignorance of the weak? Who instruct the multitude in the knowledge of its rights, and force the chiefs to discharge the duties of their station? Individual will not cease to oppress individual, one nation to attack another nation, and never will the day of prosperity and glory again dawn upon these countries. Alas! conquerors will come; they will drive away the oppressors; and will establish themselves in their place; but, fucceeding to their power, they will succeed also to their rapacity, and the earth will have changed its tyrants, without lessening the tyranny.

Then turning towards the Genius: O Genius! faid I, despair has taken hold of my heart. While you have instructed me in the nature of man, the depravity of governors, and the abjectness of those who

H 4

are governed, have given me a difgust to life; and since there is no alternative but to be the accomplice or the victim of oper pression, what has the virtuous man to do but to join his ashes to those of the tombs!

The Genius, fixing upon me a look of feverity mixed with compassion, was filent. After a few minutes he replied: Is it then in dying that virtue confifts? The wicked man is indefatigable in the confummation of vice, and the just disheartened at the first obstacle which stands in the way of doing good!.... But fuch is the human heart: fuccess intoxicates it to presumption, disappointment dejects and terrifies it. Always the victim of the fensation of the moment, it judges not of things by their nature but by the impulse of passion.... Mortal, who despairest of the human race, upon what profound calculation of reasonings and events is your judgment formed? Have you fcrutinized the organization of fenfible beings, to determine with precision whether the springs that incline them to happiness are weaker than those which repel? or rather, viewing

viewing at a glance the history of the species, and judging of the future by the example of the past, have you hence discovered with certainty, that all proficiency is impossible? Let me ask: Have societies, since their origin, made no step towards instruction and a better state of things? Are men still in the woods, destitute of every thing, ignorant, stupid, and ferocious? Are there no nations advanced beyond the period, when nothing was to be seen upon the face of the globe but favage freebooters or favage flaves? If individuals have at certain times, and in certain places, become better, why should not the mass improve? If particular societies have attained a confiderable degree of perfection, why should not the progress of the general fociety advance? If first obstacles have been overcome, why should succeeding ones be infurmountable?

But you are of opinion that the human race is degenerating? Guard yourself against the illusion and paradoxes of misanthropy. Distatisfied with the present, man supposes in the past a perfection which does not exist, and

and which is merely the discoloration of his chagrin. He praises the dead from enmity to the living, and employs the bones of the fathers as an instrument of chastisement against the children.

To establish this principle of a retrograde perfection, it is necessary that we should contradict the testimony of facts and reason. Nor is this all; the facts of hiftory might indeed be equivocal, but it is farther necesfary that we should contradict the living fact of the nature of man: that we should affert that he is born with a perfect science in the use of his fenses; that, previous to experience, he is able to diftinguish poison from aliment; that the fagacity of the infant is greater than that of his bearded progenitor; that the blind man can walk with more affurance than the man endued with fight; that man, the creature of civilization, is less favoured by circumftances than the cannibal; in a word, that there is no truth in the existing gradation of instruction and experience.

Young man, believe the voice of tombs

REVOLUTIONS OF EMPIRES.

and the testimony of monuments. There are countries which have doubtless fallen off from what they were at certain epochas: but if the understanding were to analyse thoroughly the wisdom and felicity of their inhabitants at those periods, their glory would be found to have less of reality than of splendour; it would be seen, that even in the most celebrated states of antiquity, there existed enormous vices and cruel abuses, the precise cause of their instability; that in general the principles of government were atrocious; that, from people to people, audacious robbery, barbarous wars, and implacable animofities were prevalent (x); that natural right was unknown; that morality was perverted by fenfeless fanaticism and deplorable superstition; that a dream, a vision, an oracle, were the frequent occasion of the most terrible commotions. Nations are not perhaps yet free from the power of these evils; but their force is at least diminished, and the experience of past times has not been wholly loft. Within the three laft centuries especially, the light of knowledge

has been increased and diffeminated; civilization, aided by various happy circumstances, has perceptibly advanced, and even inconveniences and abuses have proved advantageous to it: for if conquests have extended kingdoms and states beyond due bounds, the people of different countries, uniting under the same yoke, have lost that spirit of estrangement and division which made them all enemies to one another. If the hands of power have been strengthened, an additional degree of system and harmony has at least been introduced in its exercise. If wars have become more general in the mass of their influence and operation, they have been less destructive in their details. If the people carry to the combat less personality and less exertion, their struggles are less sanguinary and ferocious. If they are less free, they are less turbulent; if they are more effeminate, they are more pacific. Despotism itself seems not to have been unproductive of advantages: for if the government has been absolute, it has been less perturbed and tempestuous; if thrones have been

been regarded as hereditary property, they have excited less diffention, and exposed the people to fewer convultions; in fine, if defpots, with timid and mysterious jealousy have interdicted all knowledge of their administration, all rivalship for the direction of affairs, the passions of manking, excluded from the political career, have fixed upon the arts and the science of nature; the sphere of ideas has been enlarged on every fide; man, devoted to abstract studies, has better understood his place in the system of nature, and his focial relations; principles have been more fully discussed, objects more accurately discerned, knowledge more widely diffused, individuals made more capable, manners more fociable, life more benevolent and pleafing; the species at large, particularly in certain countries, have been evidently gainers: nor can this improvement fail to proceed, fince its two principal obstacles, those which have hitherto rendered it so flow, and frequently retrograde, the difficulty of transmitting ideas from age to age, and communicating them rapidly from man to man, have been removed.

With

With the people of antiquity, every canton and every city, having a language peculiar to itself, stood aloof from the rest, and the refult was favourable to ignorance and anarchy: they had no communication of ideas, no participation of discoveries, no harmony of interests or of will, no unity of action or conduct. Beside, the only means of diffusing and transmitting ideas being that of speech, fugitive and limited, and that of writing, flow of execution, expensive, and acquired by few, there refulted an extreme difficulty as to instruction in the first instance, the loss of advantages one generation might derive from the experience of another, instability, retrogradation of science, and one unvaried scene of chaos and childhood.

On the contrary, in the modern world, and particularly in Europe, great nations having allied themselves by a fort of universal language, the firm of opinion has been placed upon a broader basis; the minds of men have sympathised, their hearts have enlarged; we have seen agreement in thinking, and concord in acting: in fine, that

- Google

facred art, that memorable gift of celestial genius, the press, furnished a means of communicating, of diffusing at one instant any idea to millions of the species, and of giving it a permanence which all the power of tyrants has been able neither to suspend nor to suppress. Hence has the vast mass of instruction perpetually increased; hence has the atmosphere of truth continually grown brighter, and a strength of mind been produced that is in no fear of counteraction. And this improvement is the necessary effect of the laws of nature; for by the law of fensation, man as invincibly tends to make himself happy, as the flame to ascend, the stone to gravitate, the water to gain its level. His ignorance is the obstacle which misleads him as to the means, and deceives him respecting causes and effects. By force of experience he will become enlightened; by force of errors he will fet himfelf right; he will become wife and good, because it is his interest to be so: and ideas communicating themselves through a nation, whole classes will be instructed, science will be univerfally

fally familiar, and all men will understand what are the principles of individual happiness and of public felicity; they will understand what are their respective relations, their rights, and their duties, in the focial order; they will no longer be the dupes of inordinate defire; they will perceive that morality is a branch of the science of phyfics, composed it is true of elements complicated in their operation, but simple and invariable in their nature, as being no other than the elements of human organization itfelf. They will feel the necessity of being moderate and just, because therein confists the advantage and fecurity of each; that to wish to enjoy at the expence of another is a false calculation of ignorance, because the refult of fuch proceeding, are reprifals, enmity, and revenge; and that dishonesty is invariably the offspring of folly.

Individuals will feel that private happiness is allied to the happiness of society:

The weak, that instead of dividing their interests, they ought to unite, because equality constitutes their strength:

The

The rich, that the measure of enjoyment is limited by the constitution of the organs, and that lassitude follows satiety:

The poor, that the highest degree of human felicity consists in peace of mind and the due employment of time:

Public opinion, reaching kings on their thrones, will oblige them to keep themselves within the bounds of a regular authority:

Chance itself, serving the cause of nations, will give them sometimes incapable chiefs, who, through weakness, will suffer them to become free; and sometimes enlightened chiefs, who will virtuously emancipate them:

Individuality will be a term of greater comprehension, and nations, free and enlightened will hereafter become one complex individual, as single men are now: the consequences will be proportioned to the state of things. The communication of knowledge will extend from society to society, till it comprehends the whole earth. By the law of imitation the example of one people will be followed by others, who will adopt its spirit and its laws. Despots themselves, perceiving that they can no longer maintain

I their

their power without justice and beneficence, will be induced, both from necessity and rivalship, to soften the rigour of their government; and civilization will be universal.

Among nations there will be established an equilibrium of force, which, confining them within the limits of just respect for their reciprocal rights, will put an end to the barbarous practice of war, and induce them to submit to civil arbitration the decision of their disputes (y); and the whole species will become one grand society, one individual family governed by the same spirit, by common laws, and enjoying all the selicity of which human nature is capable.

This great work will doubtless be long accomplishing, because it is necessary that one and the same motion should be communicated to the various parts of an immense body; that the same leaven should assimilate an enormous mass of heterogeneous elements: but this motion will effectually operate. Already society at large, having passed through the same stages as particular societies have done, promises to lead to the same results. At first, disconnected in its parts, each individual

dividual stood alone; and this intellectual folitude constituted its age of anarchy and childhood. Divided afterwards into fections of irregular fize, as chance directed, which have been called states and kingdoms, it has experienced the fatal effects which refult from the inequality of wealth and conditions; and the aristocracy by which great empires have domineered over their dependencies, have formed its fecond age. In process of time, these paramount chiefs of the globe have disputed with each other for superiority, and then was feen the period of factions and civil broils. And now the parties, tired of their discords and feeling the want of laws, figh for the epocha of order and tranquillity. Let but a virtuous chief arise, a powerful and just people appear, and the earth will arrive at supreme power. It waits a legislative people; this is the object of its wishes and its prayers, and my heart hears its voice.... Then turning to the quarter of the West: Yes, continued he, a hollow noise already strikes my ear; the cry of liberty, uttered upon the farther shore of the Atlantic, has reached to the old continent. this I 2

this cry a fecret murmur against oppression is excited in a powerful nation; a salutary alarm takes place respecting its situation; it enquires what it is and what it ought to be; it examines into its rights, its resources, and what has been the conduct of its chiefs...... One day, one reslection more.... and an immense agitation will arise, a new age will make its appearance, an age of assonishment to vulgar minds, of surprise and dread to tyrants, of emancipation to a great people, and of hope to the whole world.

CHAP.

CHAP. XIV.

GRAND OBSTACLE TO IMPROVEMENT.

THE Genius ftopt. My mind however, preoccupied with gloomy forebodings, yielded not to perfuafion; but fearful of offending him by opposition, I made no reply. After a short interval; fixing on me a look that transpierced my foul: You are filent, faid he, and your heart is agitated with thoughts which it dares not utter !- Confused and terrified: O Genius, I made anfwer, pardon my weakness: truth alone has doubtless proceeded from your lips; but your celestial intelligence can distinguish its traits. where to my gross faculties there appear nothing but clouds. I acknowledge it, conviction has not penetrated my foul, and I feared that my doubts might give you offence.

And what is doubt, replied he, that it should be regarded as a crime? Has man the power of thinking contrary to the impressions that are made upon him? If a truth

I 3

be

Langle

be palpable, and its observance important, let us pity the man who does not perceive it: his punishment will infallibly spring from his blindness. If it be uncertain and equivocal, how is he to find in it what does not exist? To believe without evidence and demonstration is an act of ignorance and folly. The credulous man involves himself in a labyrinth of contradictions; the man of sense examines and discusses every question, that he may be consistent in his opinions; he can endure contradiction, because from the collision evidence arises. Violence is the argument of salsehood; and to impose a creed authoritatively, is the index and proceeding of a tyrant.

Emboldened by these sentiments, I replied: O Genius, since my reason is free, I strive in vain to welcome the flattering hope with which you would console me. The sensible and virtuous soul is prone enough to be hurried away by dreams of fancied happiness; but a cruel reality incessantly recals its attention to suffering and wretchedness. The more I meditate on the nature of man, the more I examine the present state of society, the less possible does it appear to me that

119

that a world of wisdom and felicity should ever be realized. I furvey the face of our whole hemisphere, and no where can I perceive the germ of a happy revolution. All Asia is buried in the most profound darkness. The Chinese, subjected to an infolent despotism (z), dependent for their fortune upon the decision of lots, and held in awe by strokes of the bamboo, enslaved by the immutability of their code, and by the irremediable vice of their language, offer to my view an abortive civilization and a race of automata. The Indian, fettered by prejudice, and manacled by the inviolable inftitution of his casts, vegetates in an incurable . apathy. The Tartar, wandering or fixed, at all times ignorant and ferocious, lives in the barbarity of his ancestors. The Arab, endowed with a happy genius, loses its force and the fruit of his labour in the anarchy of his tribes, and the jealoufy of his families. The African, degraded from the state of man, feems irremediably devoted to fervitude. In the North I fee nothing but ferfs, reduced to the level of cattle, the live stock of the estate upon which they live (1). Ig-I 4 norance,

norance, tyranny, and wretchedness have every where struck the nations with stupor; and vicious habits, depraying the natural fenses, have destroyed the very instinct of happiness and truth. In some countries of Europe, indeed, reason begins to expand its wings; but even there; is the knowledge of individual minds common to the nation? Has the superiority of the government been turned to the advantage of the people? And these people, who call themselves polished, are they not those who three centuries ago filled the earth with their injustice? Are they not those who, under the pretext of commerce, laid India waste, dispeopled a new continent, and who at present subject Africa to the most inhuman slavery? Can liberty fpring up out of the bosom of despots, and justice be administered by the hands of rapacity and avarice? O'Genius! I have beheld civilized countries, and the illusion of their wisdom has vanished from my fight. I faw riches accumulated in the hands of a few individuals, and the multitude poor and destitute. I saw all right and power concentered in certain classes, and the mass

of the people passive and dependent. I saw
the palaces of princes, but no incorporation
of individuals as such, no common-hall of
nations. I perceived the deep attention that
was given to the interests of government; but
no public interest, no sympathetic spirit. I
saw that the whole science of those who command consisted in prudently oppressing; and
the refined servitude of polished nations only
appeared to me the more irremediable.

With one obstacle in particular my mind was fensibly struck. In surveying the globe, I perceived that it was divided into twenty' different lystems of religious worship. Each nation has received, or formed for itself, opposite opinions, and ascribing to itself exclusively the truth, has imagined every other. to be in error. But if, as is the fact, in this discordance the majority deceive themfelves, and deceive themselves with fincerity, it follows that the human mind as readily imbibes falsehood as truth; and in that case how is it to be enlightened? How are prejudices to be extirpated that first take root in the mind? How is the bandage to be removed from the eyes, when the first article

in every creed, the first dogma of all religious, is the profcription of doubt, of examination, and of the right of private judgment? Howis truth to make itself known? If the refort to the demonstration of argument, pufillanimous man appeals against evidence to his: conscience. If she call in the aid of divine authority, already prepoffessed, he opposes an authority of a fimilar kind, and treats all innovation as blafphemy. Thus, in his blindness, riveting the chains upon himself, does he become the sport of his ignorance and passions. To dissolve these fatal shackles, a miraculous concurrence of happy circumstances would be necessary. It would be necessary that a whole nation, cured of the delirium of superstition, should no longer be liable to the impressions of fanaticism; that, freed from the yoke of a false doctrine, it should voluntarily embrace the genuine syftem of morality and reason; that it should become at once courageous and prudent, wife and docile; that every individual, acquainted with his rights, should scrupulously observe their limits; and the poor should know how to refift feduction, and the rich the allure-

ments

Here, oppressed with forrow, my heart deprived me of utterance. The Genius made no reply; but in a low tone of voice I heard him him say to himself: "Let us revive the hope "of this man; for if he who loves his fellow"creatures be suffered to despair, what is to become of nations? The past is perhaps but too much calculated to deject him.
"Let us then anticipate futurity; let us un"veil the astonishing age that is about to arise, that virtue, seeing the end of its "wishes, animated with new vigour, may "redouble its efforts to hasten the accomplishment of it."

CHAP. XV.

NEW AGE.

Scarcely had the Genius uttered to himself these words than an immense noise proceeded from the West, and turning my eyes to that quarter, I perceived at the extremity of the Mediterranean, in the country of one of the European nations, a prodigious movement, similar to what exists in the bosom of a large city when, pervaded with sedition, an innumerable people, like waves, sluctuate in the streets and public places. My ear, struck with their cries, which ascended to the very heavens, distinguished at intervals these phrases:

"What is this new prodigy? What this "cruel and mysterious scourge? We are a "numerous people, and we want strength! "We have an excellent soil, and we are destitute of provision! We are active and "laborious, and we live in indigence! We pay enormous tributes, and we are told

" that

"that they are not sufficient! We are at peace without, and our persons and proreprety are not safe within! What then is the secret enemy that devours us?"

From the midst of the concourse, some individual voices replied: "Erect a standard "of distinction, and let all those who, by "useful labours, contribute to the support "and maintenance of society, gather round "it, and you will discover the enemy that "preys on your vitals."

The standard being erected, the nation found itself suddenly divided into two bodies of unequal magnitude and diffimilar appearance: the one innumerable and nearly integral, exhibited, in the general poverty of their dress, and in their meagre and sunburnt faces, the marks of toil and wretchedness; the other a pretty groupe, a valueless faction, presented, in their rich attire, embroidered with gold and silver, and in their sleek and ruddy complexions, the symptoms of leisure and abundance. Considering shese men more attentively, I perceived that the large body was constituted of labourers, artifans, tradesmen, and every profession useful

127

to fociety; and that in the leffer groupe there were none but priests, courtiers, public accountants, commanders of troops, in short, the civil, military, or religious agents of government.

The two bodies being front to front affembled, and having looked with aftonishment at each other, I saw the feelings of indignation and resentment spring up in the one, and a fort of panic in the other; and the large said to the small body:

Why stand you apart? Are you not of our number?

No, replied the groupe; you are the people; we are a privileged class; we have laws, customs, and rights peculiar to ourselves.

People.

And what labour do you perform in the fociety?

Privileged Class.

None: we are not made to labour.

People,

How then have you acquired your wealth?

Privileged Class.

By taking the pains to govern you.

People.

People.

To govern us! and is this what you call governing? We toil, and you enjoy; we produce, and you diffipate; wealth flows from us, and you abforb it... Privileged men, class distinct from the people, form a nation apart, and govern yourselves (2).

Then, deliberating on their new fituation, fome among the groupe faid: Let us join the people, and partake their burthens and cares; for they are men like ourselves. Others replied: To mix with the herd would be degrading and vile; they are born to serve us, who are men of a superior race. The civil govenors said: the people are mild and naturally servile; let us speak to them in the name of the king and the law, and they will return to their duty. . . . People! the king decrees, the sovereign ordains.

People.

The king cannot decree any thing which the fafety of the people does not demand; the fovereign cannot ordain but according to law.

Civil Governors.

The law calls upon you for fubraission.

People.

REVOLUTIONS OF EMPIRES, 12

People.

The law is the general will; and we will a new order.

Civil Governors.

You are in that case rebels.

People.

A nation cannot be a rebel; tyrants only age rebels.

Civil Governors.

The king is on our fide, and he enjoins you to fubmit.

People.

Kings cannot be separated from the nation in which they reign. Our king cannot be on your fide; you have only the phantom of his countenance.

Then the military governors advanced, and they faid: The people are timorous; it is proper to threaten them; they will yield to the influence of force....Soldiers, chastise this insolent multitude!

People.

Soldiers, our blood flows in your veins ! will you itrike your brothers? If the people be destroyed, who will maintain the army?

And the foldiers, grounding their arms,

K faid

130 A SURVEY OF THE

faid to their chiefs: We are a part of the people; we whom you call upon to fight against them.

Then the ecclesiastical governors said: There is but one resource left. The people are superstitious; it is proper to overawe them with the names of God and religion.

Priefts.

Our dear brethren, our children, God has commissioned us to govern you.

People.

Produce the patent of his commission.

Priefts.

You must have faith; reason leads men into guilt.

People.

And would you govern us without reason?

Priests.

 God is the God of peace; religion enjoins you to obey.

People.

No; justice goes before peace; obedience implies a law, and renders necessary the cognizance of it.

Priefts.

This world was intended for trial and fuffering.

People.

People.

Do you then shew us the example of suffering.

Priefts.

Would you live without Gods or kings?

People.

We abjure tyranny of every kind.

Priefts.

You must have mediators, persons who may act in your behalf.

People.

Mediators with God, and mediators with the king! Courtiers and priests, your services are too expensive; henceforth we take our affairs into our own hands.

Then the smaller groupe exclaimed: It is over with us; the multitude are enlightened. And the people replied: You shall not be hurt; we are enlightened, and we will commit no violence. We desire nothing but our rights: resentment we cannot but feel, but we consent to pass it by: we were slaves, we might now command; but we ask only to be free, and free we are.

K 2 CHAP.

CHAP. XVI.

A FREE AND LEGISLATIVE PEOPLE.

I now reflected with myself that public power was at a stand, that the habitual government of this people was annihilated, and I shuddered at the idea of their falling into the dissolution of anarchy. But taking their affairs immediately into their consideration, they quickly dispelled my apprehensions.

"It is not enough, said they, that we have freed ourselves from parasites and tyrants, we must prevent for ever the revival of their power. We are human beings, and we know, by dear-bought experience, that every human being incessed fantly grasps at authority, and wishes to enjoy it at the expence of others. It is therefore necessary to guard ourselves beforehand against this unfortunate propensity, the prolific parent of discord; it is necessary to establish rules by which our rights

" rights are to be determined and our con-" duct governed. But in this investigation " abstruse and difficult questions are in-" volved, which demand all the attention " and faculties of the wifest men. Occupied " in our respective callings, we have neither " leifure for these studies, nor are we com-" petent of ourselves to the exercise of such " functions. Let us select from our body " certain individuals, to whom the employ-" ment will be proper. To them let our " common powers be delegated, to frame for " us a fystem of government and laws: let us " constitute them the representatives of our " interests and our wills; and that this re-" presentation may be as accurate as possible, "and have comprehended in it the whole " diversity of our wills and interests, let the " individuals that comprize it be numerous, " and citizens like ourselves."

The selection being made, the people thus addressed their delegates: "We have hither"to lived in a society formed by chance,
without fixed clauses, without free conwentions, without stipulation of rights,
without reciprocal engagements; and a
K 3 "multitude

"multitude of diforders and evils have been the refult of this confused state of things, " We would now, with mature deliberation, "frame a regular compact; and we have made choice of you to draw up the articles " of it. Examine then with care what " ought to be its basis and principles. In-" veftigate the object and tendency of every " affociation; observe what are the rights " which every individual brings into it, the " powers he cedes for the public good, and "the powers which he referves entire to "himself. Communicate to us equitable " laws and rules of conduct. Prepare for " us a new fystem of government, for we "" feel that the principles, which to this day " have guided us, are corrupt. Our fathers " have wandered in the paths of ignorance, " and we from habit have trod in their fleps. "Every thing is conducted by violence, " fraud, or delufion; and the laws of mo-" rality and reason are still buried in obscu-" rity. Do you unfold the chaos; discover " the time, order, and connexion of things; " publish your code of laws and rights; and " we will conform to it."

And this people raised an immense throne in the form of a pyramid, and seating upon it the men they had chosen, said to them: "We raise you this day above us, that you may take a more comprehensive view of "our relations, and be exalted above the at"mosphere of our passions.

"But remember that you are citizens like " ourselves; that the power which we con-" fer upon you belongs to us; that we give " it as a trust for which you are responsible, " not as exclusive property, or hereditary " right; that the laws which you make, you " will be the first to submit to; that to-" morrow you will descend from your sta-" tions, and rank again with us; that you " will have acquired no distinguishing right, " but the right to our gratitude and esteem. " And oh! with what glory will the uni-" verse, that reveres so many apostles of " error, honour the first assembly of en-" lightened and reasonable men, who shall " have declared the immutable principles of " justice to mankind, and confecrated in the "very face of tyrants the rights of na-" tions !"

K4 CHAP.

CHAP. XVII.

UNIVERSAL BASIS OF ALL RIGHT AND ALL LAW.

THESE men, chosen by the people to investigate the true principles of morality and reason, then proceeded to the object of their mission: and after a long examination, having discovered a universal and fundamental principle, they said to their constituents: "We "have employed our faculties in the investi-" gation you demand of us, and we conceive "the following to be the primordial basis "and physical origin of all justice and all "right.

"Whatever be the active power, the mov"ing cause that directs the universe, this
"power having given to all men the same
"organs, the same sensations, and the same
"wants, has thereby sufficiently declared
"that it has also given them the same rights
"to the use of its benefits; and that in the
"order of nature all men are equal.

" Secondly,

"Secondly, inasmuch as this power has given to every man the ability of preserving and maintaining his own existence, it clearly follows, that all men are constituted ed independent of each other, that they are created free, that no man can be subiged and no man sovereign, but that all men are the unlimited proprietors of their own persons.

"Equality, therefore, and liberty, are two "effential attributes of man, two laws of "the Divinity, not less effential and immu-"table, than the physical properties of ina-"nimate nature.

"Again, from the principle, that every man is the unlimited mafter of his own person; it follows, that one inseparable condition in every contract and engagement is the free and voluntary consent of all the persons therein bound.

"Farther, because every individual is equal to every other individual, it follows, that the balance of receipts and payments in political society, ought to be rigorously in equilibrium with each other;
fo that from the idea of equality immediately

" ately flows that other idea of equity and "justice *.

"Finally, equality and liberty conflitute the physical and unalterable basis of every union of men in society, and of consequence the necessary and generating principle of every law and regular system of government (3).

"It is because this basis has been invaded,
that the disorders have been introduced
among you, as in every other nation, which
have at length excited you to resistance. It
is by returning once more to a conformity
with this rule, that you can reform abuses
and reconstitute a happy order of society.

"We are bound however to observe to

"We are bound however to observe to
"you, that from this regeneration there will
"result an extreme shock to be endured in
"your habits, in your fortunes, and in your
"prejudices. Vicious contracts must be
dissolved, unjust prejudices abolished, imaginary distinctions surrendered, and iniqui-

auos "

The etymology of the words themselves trace out to us this connexion: equilibrium, equalitas, equitas, are all of one family, and the physical idea of equality in the scales of a balance is the source and type of all the rest.

" tous descriptions of property abrogated;

" in fine, you must set out once more from

" the state of nature. Consider whether you

" are capable of these mighty facrifices."

They concluded: and while I reflected upon the inherent cupidity of the human heart, I was induced to believe that the people would reject a melioration presented under such austere colours. I was mistaken. Instantly a vast crowd of men thronged towards the throne, and folemnly abjured all riches and all diffinctions. "Unfold to us. " cried they, the laws of equality and liberty: " we disclaim all future possession that is not " held in the facred name of justice. Equality, " liberty, justice, these are our inviolable code,

" these names shall inscribe our standard."

Immediately the people raised a mighty standard, varied with three colours, and upon which those three words were written. They unfurled it over the throne of the legislators, and now for the first time the symbol of universal and equal justice appeared upon the earth. In front of the throne the people built an altar, on which they placed golden scales, a sword, and a book, with this legend: legend: TO EQUAL LAW, THE PROTECTOR, AND THE JUDGE. They then drew round the throne a vast amphitheatre, and the nation seated itself to hear the publication of the law. Millions of men, in act of solemn appeal to heaven, listed up their hands together, and swore, "that they would "live equal, free, and just; that they would "respect the rights and property of each other; that they would yield obedience to "the law and its ministers regularly approposited."

A fight like this, fo full of sublimity and energy, so interesting by the generous emotions it implied, melted me into tears; and addressing myself to the Genius, I said: "Now may I live, for after this there is nothing which I am not daring enough to hope."

CHAP. XVIII.

CONSTERNATION AND CONSPIRACY OF

MEANWHILE, scarcely had the solemn cry of liberty and equality refounded through the learth, than aftonishment and apprehenfion were excited in the different nations. In one place, the multitude, moved by defire, but wayering between hope and fear; between a fense of their rights and the habitual yoke of flavery, betrayed fymptoms of agitation: in another kings, suddenly roused from the fleep of indolence and despotism, were alarm ed for the fafety of their thrones: every where those classes of civil and religious tyrants, who deceive princes and oppress the people, were feized with rage and confternation; and concerting plans of perfidy, they faid to one another: "Woe be to us, should " this fatal cry of liberty reach the ear of the " multitude, and this destructive spirit of " justice

" justice be differninated." ... And feeing the standard waving in the air: "What a swarm of evils, cried they, are included in these "three words? If all men are equal, where sis our exclusive right to honours and " power? If all men are, or ought to be free, " what becomes of our flaves, our vaffals; " our property? If all are equal in a civil " capacity, where are our privileges of birth and fuccession, and what becomes of no. " bility? If all are equal before God, where will be the need of mediators, and what " is to become of the prietthood? Ah! let us " accomplish without a moment's delay the "destruction of a germ so prolific and con-" tagious! let us employ the whole force of our art against this calamity. Let us " found the alarm to kings, that they may "join in our cause. Let us divide the peo-" ple; let us engage them in war, and turn " aside their attention by conquests and na-"tional jealoufy. Let us excite their ap-" prehenfious respecting the power of this " free nation. Let us form a grand league " against the common enemy. " Let us pull " down this facrilegious standard, demolish

143

" this throne of rebellion, and quench this " fire of revolution in its outlet."

. And in reality, the civil and religious tyrants of the people entered into a general combination, and having gained, either by con-Braint or feduction, multitudes on their fide, they advanced in an hostile manner against the free nation, Surrounding the altar and the throne of natural law, they domanded, with loud tries: "What is this new and ho-" retical doctrine? What this impieus altar, " this fagrilegious worthin? ... True believfers and loyal subjects b Would you not sup-" pose that to day truth has been first disco-" vered, and that hitherto you have been in-" volved in error? Would you not suppose "that these men, more fortunate than your " felves, have alone the privilege of being " wife? And you, rebel and guilty nation, do " you not feel that your chiefs millead you? " That they adulterate the principles of your " faith, and overturn the religion of your fa-" thers? Tremble left the wrath of heaven 55 be lighted against you; and hasten by speedy " repentance to expiate your error."

But inaccessible to seduction as to terror, the free nation kept silence: it maintained

144 A SURVEY OF THE

an exact discipline in arms, and continued to exhibit an imposing attitude.

And the legislators faid to the chiefs of nations: " If when we went on with our eves hood-winked, our fteps did not fail " to be enlightened, why, now that the bandage is removed, hould we conceive withat we are involved in darkness? If we, "who prefcribe to mankind to exert their * faculties, deceive and millead them, what wean be expected from those who de-"fire only to maintain them in blind-" ness? Ye chiefs of nations, if you possels " truth communicate it : we shall receive it " with gratitude; for with ardour we pur-" fue it, and with interest shall engage in " the discovery. We are men, and may be " deceived; but you also are men and as " fallible as ourselves. Affist us in this la-"byrinth, in which the human species has wandered for fo many ages: affift us to " diffipate the illusion of evil habits and " prejudice. Enter the lifts with us in " the shock of opinions which dispute for our acceptance, and engage with us in " tracing the pure and proper character of " truth. Let us terminate to day the long " combat

REVOLUTIONS OF EMPIRES.

combat of error: let us establish between it and truth a solemn contest: let us call in men of every nation to assist us in the judgment: let us convoke a general assembly of the world; let them be judges in their own cause; and in the successive trial of every system, let no champion and no argument be wanting to the side of prejudice or of reason. In fine, let a fair examination of the result of the whole, give birth to universal harmony of minds and opi-

18 m : 2 1 1 1

MAR TINE HAR TXIX.

GENERAL ASSEMBLY DE THE PROPLE.

Thus spoke the legislators of this free people; and the multitude, seized with the spirit of admiration, which every reasonable proposition never fails to inspire, should their applause, and the tyrants remained alone, overwhelmed with confusion.

A scene of a new and astonishing nature then presented itself to my view. All the people and nations of the globe, every race of men from every different climate, advancing on all sides, seemed to assemble in one inclosure, and form in distinct groupes animmense congress. The motley appearance of this innumerable crowd, occasioned by their diversity of dress, of seatures and of complexion, exhibited a most extraordinary and most attractive spectacle.

On one fide I could diftinguish the European with his short and close habit, his triangular hat, smooth chin, and powdered

hair;

hair; and on the opposite side the Asiatic with a flowing robe, a long beard, a shaved head and circular turban. Here I observed the inhabitants of Africa, their skin of the colour of ebony, their hair woolly, their body girt with white and blue fish-skin, and adorned with bracelets and collars of corals, shells and glass-beads; there the northern tribes inveloped in bags of skin; the Laplander with his piked bonnet and his fnow shoes; the Samoiede with glowing limbs and with a strong odour; the Tongouse with his bonnet shaped like a horn, and carrying his idols pendent from his neck; the Yakoute with his freckled skin; the Calmuc with flattened nose and with little eyes, forced as it were to have no correspondence with each other. Farther in the distance were the Chinese, attired in filk, and with their hair hanging in treffes; the Japanese of mingled race; the Malayans with spreading ears, with a ring in their nose, and with a vast hat of the leaves' of the palm-tree (4); and the Tatoued inhabitants of the islands of the ocean and of the continent of the Antipodes *. The

^{*} The country of the Papons, or New Guinea.

L 2 contemplation

contemplation of one species thus infinitely varied, of one understanding thus modified with extravagance, of one organization affurning fo contrary appearances, gave me a a very complicated fensation, and excited in me a thousand thoughts (5). I contemplated with aftonishment this gradation of colour, from a bright carnation to a brown fcarcely less bright, a dark brown, a muddy brown, bronze, olive, leaden, copper, as far as to the black of ebony and jet. I observed the Cassimerean, with his rose-coloured cheek, next in vicinity to the fun-burnt Hindoo; the Georgian standing by the Tartar; and I reflected upon the effect of climate hot or cold, of foil mountainous or deep, marshy or dry, wooded or open. I compared the dwarf of the pole with the giant of the temperate zone; the lank Arab with the potbellied Hollander; the squat figure of the Samoiede with the tall and slender form of the Sclavonian and the Greek; the greafy and woolly head of the Negro with the shining locks of the Dane; the flat-faced Calmuc, with his eyes angle-wife to each other and his nose crushed, to the oval and **fwelling**

swelling visage, the large blue eyes, and the aquiline nose, of the Circassian and the I contrasted the painted linens of India with the workmanlike cloths of Europe; the rich furs of Silefia; the various clothing of favage nations, skins of fishes, platting of reeds, interweaving of leaves and of feathers, together with the blue-stained figures of ferpents, stars, and flowers, with which their skin is varied. Sometimes the general appearance of this multitude, reminded me of the enamelled meadows of the Nile and the Euphrates, when, after rains and inundations, millions of flowers unfold themselves on all fides; and sometimes it resembled, in murmuring found and bufy motion, the innumerable swarms of grashoppers which alight in the fpring like a cloud upon the plains of Hauran.

At fight of fo many living and percipient, animals, I recollected, on one fide, the immense multitude of thoughts and sensations which were crowded into this space; and on the other, reflected on the contest of so many opinions and prejudices, and the struggle of to many capricious paffions; and I was ftruck with

transple

with aftonishment, admiration, and apprehension... When the legislators, having enjoined silence, presently fixed my attention on themselves.

" Inhabitants of the earth, faid they, a " free and powerful nation addresses you in " the name of justice and of peace, and offers " as the fure pledge of its fincerity, its convic-" tion and experience. We were for a long "time tormented with the fame evils as you; " we have enquired into their origin, and we " have found them to be derived from vio-" lence and injustice, which the inexperience " of past ages established into laws, and the " prejudices of the present generation have " supported and cherished. Then, abolish-" ing every factitious and arbitrary institution, " and ascending to the source of reason and " of right, we perceived that there existed in " the order of the universe, and in the physi-" cal constitution of man, eternal and immu-" table laws, which waited only his obser-" vance to render him happy. O men of dif-" ferent climes, look to the heavens that give " you light, to the earth that nourishes you! " Since they present to you all the same gifts; ff fince

"has believed on you the fame life, the fame organs, the fame wants, has it not also given you the fame right to the use of its benefits! Has it not hereby declared you to be all equal and free? What mortal then shall dare resuse to his fellow-creature that which is granted him by nature? O nations! let us hanish all tyranny and discord; let us form one society, one vast family; and since mankind are all constituted alike, let there henceforth exist but one law, that of nature; one code, that of reason; one throne, that of justice; one altar, that of union."

They ceased: and the multitude rended the skies with applause and acclamation; and in their transports made the earth resound with the words equality, justice, union. But different seekings presently succeeded to this first emotion. The doctors and chiefs of the people exciting in them a spirit of disputation, there arose a kind of murmur, which, spreading from groupe to groupe, was converted into uproar, and from uproar into disorder of the first magnitude. Every sta-

L 4 tion

fion assumed exclusive pretentions, and claimed the preference for its own opinions and code.

"You are in error," faid the parties pointing at each other; "we alone are in possession "of reason and truth: ours is the true law, "the genuine rule of justice and right, the "fole means of happiness and persection; all "other men are either blind or rebellious." And the agitation became extreme.

But the legislators having proclaimed filence: "People," faid they, "by what im-" pulse of passion are you agitated? Where " will this quarrel conduct you? What ad-" vantage do you expect from this diffention? " For ages has the earth been a field of dif-" putation, and torrents of blood have been " Thed to decide the controversy: what profit " have you reaped from fo many combats and " tears? When the strong has subjected the " weak to his opinion, has he thereby furf' thered the cause of evidence and truth? O " nations, take council of your own wildom! " If disputes arise between families, or in-" dividuals, by what mode do you reconcile " them ! Do you not appoint arbitrators?

REVOLUTIONS OF EMPIRES. " Yes." exclaimed the multitude unanimoufly. " Treat then the authors of your pre-" fent diffensions in a similar manner. Com-" mand those who call themselves your in-" ftructors, and who impose on you their " creed, to discuss in your presence the argu-" ments on which it is founded. Since they " appeal to your interests, understand in what " manner your interests are treated by them. "... And you, chiefs and doctors of the " people, before you involve them in the " discordance of your opinions, let the rea-" fons for and against these opinions be " fairly discussed. Let us establish a solemn " controverly, a public investigation of truth; " not before the tribunal of a frail indivi-" dual, or a prejudiced party, but in presence " of the united information and interests of " mankind; and let the natural fense of the

" whole species be our arbitrator and judge."

CHAP. XX.

INVESTIGATION OF TRUTH.

I HE people having by shouts expressed their approbation, the legislators said: "That we may proceed in this grand work with " order and regularity, let a spacious am-" phitheatre be formed in the fand before "the altar of union and peace; let each " fystem of religion and each particular fect. " erect its propor and diftinguishing standard "in points of the circumference; let its " chiefs and lits doctors place themselves " round it, and let their followers be ranged " in a right line terminated by the standard." . The amphitheatre being traced out, and order proclaimed, a prodigious number of standards were instantly raised, similar to what is feen in a commercial port, when, on days of festivity, the flags of a hundred nations stream from a forest of masts. At fight of this aftonishing diversity, I addressed myself to the Genius: I scarcely supposed the earth, faid

faid I, to be divided into more than eight or ten different systems of religion, and I then despaired of conciliation: how can I now hope for concord when I behold thousands of different parties!—These, however, replied the Genius, are but a part of what exist; and yet they would be intolerant!

As the groupes advanced to take their stations, the Genius, pointing out to me the fymbols and attributes of each, thus explained to me their meaning.

That first groupe, said he, with a green flandard, on which you fee displayed a cross, a bandage, and a fabre, is formed of the followers of the Arabian prophet. To believe in a God (without knowing what he is); to have faith in the words of a man (without understanding the language in which he (peaks); to travel into a defert in order to pray to the Deity (who is every where); to wash the hands with water (and not abstain from blood); to fast all day (and practife intemperance at night); to give alms of their own property (and to plunder the property of their neighbour): fuch are the means of perfection instituted by Mahomet, such the fignals

156 A SURVEY OF THE

fignals and characteristics of his true followers; and whoever professes not these tenets, is confidered as a reprobate, has the facred anathema denounced against him, and is devoted to the fword. A God of clemency, the author of life, has, according to them, instituted these laws of oppression and murder; has instituted them for the whole universe, though he has condescended to reveal. them but to one man; has established them from all eternity, though they were made known by him but yesterday. These laws ore fufficient for all the purposes of life, and yet a volume is added to them; this volume was to diffuse light, to exhibit evidence, to lead to perfection and happiness, and yet, in the very life-time of its prophet, its pages, every where abounding with obscure, ambiguous, and contradictory passages, needed explanation and commentaries; and the perfons who undertook to interpret them, varying in opinion, became divided into fects and parties opposite and inimical to each other. One maintains that Ali is the true successor, and another takes the part of Omar and Aboubekre. This denies the eternity of the Koran.

Koran, that the necessity of abbutions and The Carmite profcribes pilgriprayers. mage, and allows the use of wine; the Hake mite preaches the doctrine of transmigration, and thus are there fects to the number of feventy-two, of which you may enumerate the different standards (6). In this discordance, each afcribing the evidence exclusively. to itself, and stigmatizing the rest with herefy and rebellion, has turned against them, its fanguinary zeal. And this religion, which celebrates a beneficent and merciful God, the common parent of the whole human race, converted into a torch of discord and an incentive to war, has never ceased for twelve, hundred years to whelm the earth in blogd, and spread ravage and desolation from one. extremity of the ancient hemisphere to the. other (7).

The men you see distinguished by their vast white turbans, their hanging sleeves and long rosaries, are the Imans, the Mollas, and the Mustis; and not far from them are the Dervises with a pointed bonnet, and the Santons with their sacred tonsure. They utter with vehemence their several confes-

fions

fions of faith; they dispute with eagerness tespecting the more or less important sources of impurity; the mode of performing ablustions; the attributes and perfections of God; the Chastan and the good and evil Genii; death; the resurrection; the interrogatory which succeeds the tomb; the passage of the perilous bridge, and its hair-breadth escapes; the balance of good and bad works; the pains of hell, and the joys of paradise.

By the fide of these, that still more numerous groupe, with standards of a white ground strewed with crosses, confists of the worshippers of Jefus. Acknowledging the fame God as the Muffulmans, founding their belief on the same books, admitting fike them a first man, who loft the whole human race by eating an apple, they yet feel towards them a holy horror; and from motives of piety, these two sects reciprocally treat each other as impious men and blasphemers.' Their chief point of diffension is, that the Christian, after admitting the unity and indivisibility of God, proceeds to divide himinto three persons, making of each an entire and complete God, and yet preserving an identical

REVOLUTIONS OF EMPIRES.

identical whole: he adds, that this Being, who fills the universe, reduced himself to the statute and form of a man, and assumed material, perishable, and limited organs, without ceasing to be immaterial, eternal, and infinite. The Mussulman, on the contrary, not able to comprehend these mysteries, though he readily conceives of the eternity of the Koran, and the mission of the prophet, treats them as absurdities, and rejects them as the visions of a disordered brain. Hence result the most implacable animosities.

Divided among themselves, the Christian sects are not less numerous than those of the Muffulnian religion; and the quarrels that agreate them are by so much the more violent, since the objects for which they contend being inaccessible to the senses, and of consequence incapable of demonstration, the opinions of each sectary can have no other soundation than that of his will or captice. Thus agreeing that God is an incomprehensible and unknown being, they nevertheless dispute respecting his effence, his mode of acting, and his attributes. Agreeing that his supposed transformation into man, is an enigma

enigms above the human understanding, they still dispute respecting the confusion or the diffinction of two wills and two natures. the change of substance, the real or fictitious presence, the mode of incarnation, &c. &c. Hence innumerable fects, of which two or three hundred have already perished, and three or four hundred others still exist, and are represented by that multitude of colours. in which your fight is bewildered. The first in order, surrounded by a groupe absurd and discordant in their attire, red, purple, black, white, and speckled, with heads wholly or partially shaved, or with their hair short, with red caps, fquare caps, here with mitres, there with beards, is the standard of the Roman pontiff, who, applying to the priesthood the pre-eminence of his city in the civil order, has erected his supremacy into a point of religion, and made of his pride an article of faith.

At the right, you see the Greek Pontiff, who, proud of the rivalship set up by his metropolis, opposes equal pretensions, and supports them against the Western church, by the superior antiquity of that of the East.

At

REVOLUTIONS OF EMPIRES. 161

At the left, are the standards of two recent chiefs *, who, throwing off a voke that was become tyrannical, have, in their reform, erected altars against altars, and gained half Europe from the Pope. Behind them are the inferior fects into which these grand parties are again subdivided, the Nestorians, the Eutycheans; the Jacobites, the Iconoclasts, the Anabaptists, the Presbyterians, the Wiclifites, the Ofiandrins, the Manicheans, the Pietifts, the Adamites, the Enthuliafts, the Quakers, the Weepers, together with a hundred others (8); all of diffinct parties, of a perfecuting spirit when strong, tolerant when weak, hating each other in the name of a God of peace, forming to themselves an exclusive paradife in a religion of universal charity, each dooming the rest, in another world, to endless torments, and realizing here the imaginary hell of futurity.

Next to this groupe, observing a single standard of a hyacinth colour, round which were gathered men in all the various dresses of Europe and Asia: Here, said I to the Genius, we shall at least find unanimity.—

* Luther and Calvin.

M

At

162 A SURVEY OF THE

At first fight, replied he, and from an incidental and temporary circumstance this would feem to be the cafe: but do you not know what system of worship it is ?- Then perceiving in Hebrew letters the monogram of God, and branches of the palmtree in the hands of the Rabbins: Are not these, said I, the children of Moles, dispersed over the earth, and who, holding every nation in abhorrence, have been themselves univerfally despised and persecuted ?- Yes, replied the Genius, and it is for this very reason that, having neither time nor liberty to dispute, they have preserved the appearance of unanimity. But in their re-union, no fooner shall they compare their principles, and reason upon their opinions, than they will be divided, as formerly, at least into two principal fects *, one of which, taking advantage of the filence of their legislator, and confining itself to the literal sense of his books, will deny every dogma not therein clearly understood, and of consequence will reject as inventions, the immortality of the foul, its transmigration into an abode of hap-

piness

The Sadducees and the Pharifees.

piness or seat of pain, its resurrection, the last judgment, the existence of angels, the revolt of a fallen spirit, and the poetical system of a world to come: and this savoured people, whose perfection consists in the cutting off a morsel of their slesh, this atom of people that in the ocean of mankind is but as a small ways, and that pretends that the whole was made for them alone, will farther reduce by one half, in consequence of their schism, their already trivial weight in the balance of the universe.

The Genius then directed my attention to another groupe, the individuals of which were clothed in white robes, had a veil covering the mouth, and were ranged round a standard of the colour of the clouds gilded by the rising sun. On this standard was painted a globe, one hemisphere of which was black and the other white. The sate of these disciples of Zoroaster (9), continued he, this obscure remnant of a people once so powerful, will be similar to that of the Jews. Dispersed as they are at present among other nations, and persecuted by all, they receive without discussion the precepts

M 2

that

that are taught them: but fo foon as their Mobed and their Destours (10) shall be restored to their full prerogatives, the controverfy will be revived respecting the good and the bad principle, the combats of Ormuz, God of light, and Ahrimanes, God of darkness; the literal or allegorical senses of these combats; the good and evil Genii; the worship of fire and the elements; pollution and purification; the refurrection of the body, or the foul, or both (11); the renovation of the prefent world, or the production of a new which is to fucceed it. The Parfes will ever divide themselves into fects, by fo much the more numerous as their families shall have contracted different manners or opinions during their dispersion.

Next to these are standards which exhibit upon a blue ground monstrous figures of human bodies, double, triple, or quadruple, with the heads of lions, boars, and elephants, and tails of fishes, tortoises, &c. These are the standards of the Indian sects, who find their Gods amidst the animal creation, and the souls of their kindred in reptiles and insects. These men anxiously support hospitals

pitals for the reception of hawks, serpents, and rats, and look with horror upon their brethren of mankind! They purify themselves with the dung and urine of a cow, and consider themselves as polluted by the touch of a heretic! They wear a net over their mouths, lest by accident a sly should get down their throat, and they should thus interrupt the progress of a purified spirit in its purgatory; but with all this humanity in unintelligible cases, they think themselves obliged to let a Paria (12) perish with hunger rather than relieve him! They worship the same Gods, but inlist themselves under

This first standard, separated from the rest, and on which you see represented a figure with four heads, is the standard of Brama, who, though the Creator of the universe, has neither followers nor temples, and who, reduced to serve as a pedestal to the Lingam (13), receives no other mark of attention than a little water sprinkled every morning over his shoulder by the Bramin, and a barren song in his praise.

hostile standards.

The second standard on which you see M 3 painted painted a kite, his body scarlet and his head white, is that of the Vichenou, who, though preserver of the universe, has passed a part of his life in malevolent actions. Sometimes you see him under the hideous forms of a boar and a lion tearing the entrails of mankind; sometimes under that of a horse (14), soon to appear upon the face of the earth, with a sabre in his hand, to destroy the present inhabitants of the world, to darken the stars, to drive the planets from their spheres, to shake the whole earth, and to oblige the mighty serpent to vomit a slame which shall consume the globes.

The third standard is that of Chiven, the destroyer of all things, the God of desolation, and who nevertheless has for his emblem the instrument of production; he is the most detestable of the three, and he has the greatest number of followers. Proud of his attribute and character, his partizans in their devotions (15) express every fort of contempt for the other Gods, his equals and his brothers, and imitating the inconsistency that characterises him, they profess modesty and chastity, and at the same time publicly

publicly crown with flowers, and bathe with milk and honey, the obscene image of the Lingam.

Behind them came the less magnificent standards of a multitude of Gods, male, female, and hermaphrodite, related to and connected with the three principal, who pass their lives in intestine war, and are in this respect imitated by their worshippers. These Gods have need of nothing, and receive offerings without ceasing, Their attributes are omnipotence and ubiquity, and a Bramin with some petty charm imprisons them in an image, or in a pitcher, and retails their favours according to his will and pleafure.

At a still greater distance you will observe a multitude of other standards, which, upon a yellow ground, common to them all, have different emblems figured, and are the standards of one God, who, under various names, is acknowledged by the nations of the East. The Chinese worship him under the name of Fôt (16); the Japanese denominate him Budjo; the inhabitants of Ceylon, Beddhou; the people of Laos, Chekia; the Peguan, Phta; the Siamese, Sommona-Kodom; the

M 4 people people of Thibet, Budd and La; all of them agree as to most points of his history; they celebrate his penitence, his fufferings, his fasts, his functions of mediator and expiator, the enmity of another God his adversary, the combats of that adversary and his defeat: but they disagree respecting the means of recommending themselves to his favour, respecting rites and ceremonies, respecting the dogmas of their interior and their public doctrine. Thus the Japanese Bonze, in a yellow robe, and with his head uncovered, preaches the eternity of fouls and their fuccessive transmigration into different bodies; while his rival, the Sintoift, denies that the foul can exist independently of the senses (17), and maintains that it is the mere refult of the organization with which it is connected, and with which it perishes, as the found of a flute is annihilated when you break it in pieces. Near him the Siamese, with shaved eye-brows, and with the Talipat screen in his hand (18), recommends alms-giving, purifications and offerings, at the very time that he believes in blind necessity and immutable fate. The Chinese Ho-Chang Ho-Chang facrifices to the fouls of his anceftors, while his neighbour, the follower of Confucius, pretends to discover his future destiny by the toffing of counters and the conjunction of the stars (19). Observe this infant attended by a numerous crowd of priests with yellow garments and bonnets: he is the grand Lama, and the God of Thibet has just become incarnate in his person (20). He however has a rival on the banks of the Baikal; nor is the Calmuc Tartar in this respect any way behind the Tartar of They are agreed in this important doctrine, that God can become incarnate only in a human body, and fcorn the stupidity of the Indian, who looks down with reverence upon cow-dung, though they themselves preserve with no less awe the excrements of their pontiff (21).

As these standards passed, an innumerable crowd of others presented themselves to our eyes, and the Genius exclaimed: I should never come to a conclusion, were I to detail to you all the different systems of belief which divide these nations. Here the Tartar Hordes adore, under the figure of animals, insects,

infects, and birds, the good and the evil Genii, who, under a principal but indolent divinity, govern the universe, by their idolatry giving us an image of the ancient paganism of the western world. You see the strange dress of their Chamans, a robe of leather fringed with little bells and rattles. embroidered with idols of iron, claws of birds, skins of serpents, and heads of owls: they are agitated with artificial convulsions, and with magical cries evoke the dead to deceive the living. In this place you behold the footy inhabitants of Africa, who, while they worship their Fetiches, entertain the fame opinions, The inhabitant of Juida adores God under the figure of an enormous ferpent, which for their misfortune the fwine regard as a delicious morfel (22). The Teleutean dreffes the figure of his God in a variety of gaudy colours, like a Russian soldier; and the Kamchadale, finding that every thing goes on ill in this world and under his climate, represents God to himself under the figure of an ill-natured and arbitrary old man (23), smoking his pipe and fitting in his traineau employed in

the hunting of foxes and martins. In fine, there are a hundred other favage nations, who, entertaining none of these ideas of civilized countries respecting God, the soul, and a suture state, exercise no species of worship, and yet are not less favoured with the gifts of nature, in the irreligion to which nature has destined them.

CHAP. XXI.

PROBLEM OF RELIGIOUS CONTRADIC-TIONS.

THE different groupes having taken their stations, and profound filence succeeding to the confused uproar of the multitude, the legislators faid: " Chiefs and doctors of the " people! you perceive how the various " nations of mankind, living apart, have hi-" therto pursued different paths, each be-" lieving its own to be that of truth. If " truth, however, is one, and your opinions " are opposite, it is manifest that some of " you must be in error: and fince so many " men deceive themselves, what individual " shall dare fay, I am not mistaken? Begin, " then, by being indulgent respecting your " disputes and diffentions. Let us all seek " truth, as if none of us had possession of it. " The opinions which to this day have go-" verned the earth, produced by chance, " diffeminated in obscurity, admitted with-" out discussion, credited from a love of ' novelty

"novelty and imitation, have in a manner clandestinely usurped their empire. It is time, if they are founded in reality, to give them the solemn stamp of certainty, and to legitimate their existence. Let us this day cite them to a dominon and gemeral examination; let each make known his creed; let the united affembly be the judge, and let us acknowledge that to be the only true one, which is proper for the whole human race."

Then, in order of position, the first standard at the left being desired to speak: "There can be no doubt," said they, "that "ours is the only true and infallible doc-"trine. In the first place, it is revealed "by God himself."

"So also is ours," exclaimed all the other standards, "and there can be no room for doubt."

"But it is at least necessary to explain it," faid the legislators, " for it is impossible for " us to believe any thing of which we are " ignorant."

"Our doctrine," refumed the first standard, "is proved by numerous facts, by a "crowd of miracles, by resurrections from "the 174

" the dead, by torrents suddenly dried up, "mountains removed from their situations, "&c. &c."

"We also," cried the rest, "are in possesses "from of miracles without number;" and each began to recite the most incredible things.

"Their miracles," replied the first standard, " are imaginary, or the prestiges of the "evil spirit who has deluded them."

To this it was answered by the others:
"They are yours, on the contrary, that are
"imaginary;" and each speaking of himself
added: "Ours are the only true ones, all
"other miracles are false."

"Have you living witnesses of their truth?" the legislators asked.

"No," they univerfally answered: "they are ancient facts, of which the witnesses are dead, but these facts are recorded."

"Be it so," replied the legislators: "but "as they contradict each other, who shall "reconcile them?"

"Just arbiters!" cried one of the standards, "as a proof that our witnesses have "feen the truth, they died in confirmation "of it; and our creed is sealed with the "blood of martyrs." "So also is ours," exclaimed the rest:

"we have thousands of martyrs, who have

died in the most agonizing tortures, with
out in a single instance abjuring the truth."

And the Christians of every sect, the Mussulmans, the Indians, the Japanese, recounted endless legends of confessors, martyrs, penitents, &c.

One of these parties having denied the martyrology of the others: "We are ready," cried they, "to die ourselves to prove the infallibility of our creed."

Instantly a crowd of men of every sect and of every religion, presented themselves to endure whatever torments might be inslicted on them; and numbers of them began to tear their arms, and to beat their head and their breast, without discovering any symptom of pain:

But the legislators putting a flop to this violence: "O men!" faid they to them, "hear with composure the words we ad-"dress to you. If you die to prove that two "and two make four, will this truth gain "additional confirmation by your death?"

"No," was the general answer.

" If

"If you die to prove they are five, will "this make them five?"

" No," they again replied.

"What, then, does your persuasion prove; " fince it makes no alteration in the exist-" ence of things. Truth is one; your opi-"nions are various; many of you must "therefore be mistaken. And since man, as " is evident, can perfuade himfelf of error, "how can his perfuafion be regarded as the "demonstration of evidence? Since error " has its martyrs, what is the fignet of " truth? Since the evil spirit works mira-" cles, what is the diftinguishing character-" iftic of the Divinity? Beside, why this " uniform refort to incomplete and infuffi-" cient miracles? Why not rather, instead " of these violations of nature, change the " opinions of rational beings? Why mur-" der and terrify men, instead of enlighten-" ing and inftructing them?

"O credulous mortals, and obstinate in
your credulity! as we are none of us certain of what passed yesterday, of what is
passing this very day before our eyes, how
can we-swear to the truth of what happened

"pened two thousand years ago? Weak, and at the same time proud beings! the laws of nature are immutable and prosound, our understandings full of illusion and frivolity, and yet we would decide upon and comprehend every thing. But in reality it is easier for the whole human race to fall into error, than an atom of the universe to change its nature."

"Well then," faid one of the doctors,

"let us leave the evidence of facts, fince such

"evidence is equivocal, and let us attend to

"the proofs of reason, and the intrinsic me
"rit of the doctrine itself."

An Iman of the law of Mahomet, with a look of confidence, then advanced in the fand, and having turned himself towards Mecca, and uttered with emphasis his confession of faith: "Let God be praised!" said he, in a grave and authoritative voice; "the "light shines in all its splendour, and the "truth has no need of examination." Then exhibiting the Koran: "Behold the light "and the truth in their genuine colours! In "this book every doubt is removed; it will conduct the blind man safely, who shall N "receive

"receive without discussion the divine word,
given to the prophet to save the simple
and confound the wise. God hath appointed Mahomet to be his minister upon
earth; he has delivered up the world to
him, that he might subdue by his sword
fuch as resuse to believe in his law. Infidels dispute his authority, and resist the
truth: their obduracy proceeds from God,
who has hardened their hearts that he
might inslict upon them the most dreadful
chastisements *."

Here a violent murmur from all fides interrupted the Iman. "What man is this," cried every groupe, "who thus gratuitously "commits outrage? By what right does he "pretend, as conqueror and tyrant, to impose his creed on mankind? Has not God "created us as well as him with eyes, under-"standing, and reason? Have we not an equal "right to make use of them in determining

" what

^{*} This passage contains the sense and nearly the very words of the first chapter of the Koran; and the reader will observe in general, that, in the pictures that follow, the writer has endeavoured to give as accurately as possible the letter and spirit of the opinions of each party.

" what we ought to reject, and what to be-

" lieve? If he have the right to attack, have

" not we the right to defend ourselves? If he

" be content to believe without examination,

" are we therefore not to employ our reason

" in the choice of our creed?

"And what is this fplendid doctrine which
"fears the light? What this apostle of a God
"of clemency who preaches only carnage
"and murder? What this God of justice who
"punishes a blindness which himself has
"caused? If violence and persecution are the
"arguments of truth, mildness and charity

" must they be the indices of falsehood?"

A man advancing from the next groupe then said to the Iman: "Admitting that "Mahomet is the apostle of the better doc-"trine, the prophet of the true religion, "condescend to tell us, in practising this doctrine whom we are to follow, his son-"in-law Ali, or his vicars Omar and Abou-"bekre (24)?"

At the mention of these names a terrible schism arose among the Mussulmans. The partisans of Omar and of Ali, treating each other as heretics and blasphemers, were N 2 equally

equally lavish of execrations. The dispute even became so violent, that it was necessary for the neighbouring groupes to interpose to prevent their coming to blows.

Some degree of tranquillity being at length restored, the legislators said to the Imans: "You fee what are the confequences which " refult from your principles! were they " carried into practice, you would by your " enmity destroy each other till not an in-"dividual would remain: and is it not the " first law of God, that man should live?" Then addressing themselves to the other groupes: " This spirit of intolerance and " exclusion," faid they, " is doubtless shock-" ing to every idea of justice, and destroys " the whole basis of morals and society: shall " we not, however, before we entirely reject ** this code, agree to hear some of its dogmas " recited, that we may not decide from " forms only, without having investigated " the religion itfelf?"

The groupes having consented to the proposal, the Iman began to explain to them how God, who before time had spoken to the nations sunk in idolatry by twenty-four thousand

thousand prophets, had at length sent the last, the extract and perfection of all the rest, Mahomet, in whom was vested the salvation of peace: he informed them that to prevent the word of truth from being any more perverted by infidels, the divine clemency had written with its own fingers the chapters of the Koran; and that the Koran, by virtue of its character of the word of God, was, like its author, uncreated and eternal. He proceeded to explain to them the dogmas of Islamism; that this book had been transmitted from heaven leaf by leaf in twenty-four thousand miraculous visions of the angel Gabriel; that the angel announced his approach by a small still knocking, which threw the prophet into a cold fweat; that Mahomet had in one night traversed ninety heavens, mounted upon the animal called Borak, one half woman and one half horse; that being endowed with the gift of miracles, he walked in the funshine unattended by a shadow, caused with a single word trees already withered to resume their verdure, filled the wells and the cifterns with water, and cut in two equal parts the body of the moon; that, authorized by a commission from

from heaven, he had propagated, sword in hand, a religion the most worthy of God for its fublimity, the most suitable to man for the fimplicity of its injunctions, confifting indeed only of eight or ten principal doctrines, fuch as the unity of God; the authority of Mahomet, the only prophet of God; our duty to pray five times in a day; to fast one month in the year; to repair to Mecca once at least in our lives; to pay the tenth of all that we posses; to drink no wine, to eat no pork, and to make war upon 'the infidels (25); upon which conditions every Musfulman, being himself an apostle and a martyr, should enjoy in this life a thousand bleffings, and in the world to come, after a folemn trial, his foul being weighed in the balance of good works, his absolution pronounced by the two black angels, and his progress performed over the bridge that croffes the infernal pit, as narrow as a hair and as keen as a razor, should be received in the feat of delights, bathed in . rivers of milk and honey, embalmed in the perfumes of India and Arabia, and live in uninterrupted commerce with those chaste females, the celestial Houris, who present a perpetually

perpetually renewed virginity to the elect, who preserve a perpetual vigour.

An involuntary smile was visible in the countenance of every one at this relation; and the various groupes, reasoning upon these articles of belief, unanimously said: "Is it "possible for reasonable beings to have faith "in such reveries? Might one not suppose "that a chapter had been just read to us "from the Thousand and One Nights?"

A Samoiede advancing in the sand then said: "The paradise of Mahomet is in my opinion excellent: but one of the means of obtaining it puzzles me extremely. If, as this prophet ordains, it is necessary to abstain from meat and drink between the rising and setting of the sun, how in our country is such a fast practicable, where the sun continues above the horizon for six months together?"

To vindicate the honour of their prophet, the Musiulman doctors denied the possibility of this; but a hundred people bearing testimony to the fact, the infallibility of Mahomet sustained a violent shock.

"It is fingular," faida European, "that God N 4 " should "fhould continually have revealed what was "going on in heaven, without ever having "informed us of what passes upon earth."

"Their pilgrimage," faid an American," " is to me an insuperable difficulty. For let " us suppose a generation to be twenty-five " years, and the number of males existing on " the globe to be a hundred millions: in " this case, each being obliged to travel to " Meeca once during his life, there would be " annually engaged in the pilgrimage four " millions of men; and as it would be im-" practicable for them to return in the fame " year, the number would be doubled, or in " other words would amount to eight mil-"lions. Where are provisions, accommoda-"tion, water, and veffels to be found for this " univerful procession? What numerous mi-" racles would it not be necessary to work!" "The proof," faida Catholic Divine, "that " the religion of Mahomet is not a revealed " religion, is, that the majority of ideas upon " which it is founded existed for a long time " before it, and that it is nothing more than a " confused mixture formed out of the truths " " of our holy religion and that of the Jews; which

s, which an ambitious man has made ferve " his projects of dominion, and his worldly " views. Turn over the pages of his book : " you will see little else than the histories of "the Old and New Testament travestied " into the most absurd tales, and the rest a "tiffue of vague and contradictory declama-"tion, and ridiculous or dangerous precepts. " Analyze the spirit of these precepts, and " the conduct of their apostle: you will find " a fubtle and daring character, which, to ar-"rive at its end, works, it is true, with ad-"mirable skill upon the passions of those "whom it wishes to govern. It addresses " itself to simple and credulous men, and it " tells them of prodigies: they are ignorant " and jealous, and it flatters their vanity by " despising science; they are poor and rapa-" cious, and it excites their avidity by the hope " of plunder; having nothing at first to give " them on earth, it creates treasures in hea-" ven; it makes them long for death, as the " supreme bleffing; the dastardly it threa-" tens with hell; to the brave it promifes " paradife; the weak it strengthens by the " principle of fatality: in short, it produces " the

"the attachment it requires, by every al"lurement of the fenses, and the fascination
" of all the passions.

" How different is the character of the "Christian doctrine! and how much does its " empire, established on the wreck of every " natural inclination and the extinction of " all the passions, prove its celestial origin! " How forcibly does its mild and compaf-" fionate morality attest its emanation from " the Divinity! Many of its dogmas, it is " true, are beyond the reach of human un-" derstanding, and impose on reason a re-" fpectful filence; but this very circum-" stance the more fully confirms its revela-" tion, fince the faculties of men could never " have invented fuch fublime mysteries."-Then, with the Bible in one hand, and the Four Evangelists in the other, the doctor began to relate that in the beginning, God (after having passed an eternity without doing any thing) conceived at length the defign (without apparent motive) of forming the world out of nothing: that having in fix days created the whole universe, he found himself tired on the seventh: that having placed

placed the first pair of human beings in a delightful garden to make them completely happy, he nevertheless forbad them to taste of the fruit of one tree which he planted within their reach: that these first parents having yielded to temptation, all their race (as yet unborn) were condemned to fuffer the penalty of a fault which they had no share in committing: that after permitting the human species to damn themselves for four or five thousand years, this God of compassion ordered his well-beloved son, engendered without a mother and of the fame age as himself, to descend upon the earth in order to be put to death, and this for the falvation of mankind, the majority of whom have nevertheless continued in the road to fin and damnation: that to remedy this inconvenience, this God, the fon of a woman, who was at once a mother and a virgin, after having died and rifen again, commences a new existence every day, and under the form of a morfel of dough is multiplied a thousand fold at the pleasure of the basest of mankind. Having explained these dogmas, he was going on to treat of the doctrine of the

the Sacraments, of absolution and anathema. of the means of purifying men from crimes of every fort with a drop of water and the muttering half a dozen words; but he had no fooner pronounced the names of indulgence, papal prerogative, fufficient grace, and effectual grace, than he was interrupted by a thousand voices at once. It is a horrid corruption, cried the Lutherans, to pretend to fell for money the pardon of fin; it is conirary to the sense of the gospel, said the Calvinists, to talk of the real presence in the Sacrament. The Pope, exclaimed the Jansenists, has no power to decide upon any thing without a council. Thirty fects at once mutually accused each other of herely and blasphemy, and their voices were so confused that it was no longer possible to distinguish a word they uttered.

After some time, silence being at length restored, the Musiulmans said to the legislators: "Since you have rejected our doctrine as containing things incredible, can you possibly admit that of the Christians, which is still more contrary to justice and common sense? An immaterial and infinite "God

"God to transform himself into a man!
"To have a son as old as himself! This
"God-man to become bread, which is eaten
"and undergoes digestion! What absurdi"ties have we equal to these? Is it to these
"men belong the exclusive right of exact"ing a blind obedience? And will you ac"cord to them privileges of faith, to our
"detriment?"

Some savage tribes then advanced: "What," said they, "because a man and a woman eat an apple six thousand years ago, is the whole human race to be involved in dammation? And do you call God just? What tyrant ever made the children responsible for the sins of their fathers? How can one man answer for the actions of another? Would not this be overthrowing every principle of equity and reason?"

"Where," exclaimed others, " are the "witnesses and proofs of all these pretended facts? It is impossible to receive them without evidence. The most trivial action in a court of judicature requires two witnesses, and are we to believe all this "upon mere tradition and hearsay?"

A Jewish

190 . A SURVEY OF THE

A Jewish Rabbin then, addressing the afsembly, said: "For the general sacts we are
"indeed sureties; but as to the form and ap"plication of those facts, the case is different,
"and the Christians are here condemned out
"of their own mouth. They cannot deny
"that we are the stock from which they are
"descended, the trunk upon which they
"have been grafted; from whence it sol"lows by an inevitable dilemma, that either
"our law is from God, and then theirs is a
"heresy, since it differs from ours; or our law
"is not from God, and then whatever proves
"its salsehood is destructive of theirs."

"But there is a proper line of distinction," said the Christian, "to which it is necessary to attend. Your law is of God as typical and preparative, not as final and absolute; you are but the image, of which we are the reality."

"We are not ignorant," replied the Rabbin, "that fuch are your pretentions; but "they are perfectly suppositious and false. "Your system rests entirely on mystical (26), "visionary, and allegorical interpretations. "You pervert the letter of our books, sub-

REVOLUTIONS OF EMPIRES: 19

" stitute continually for the true sense of a " passage the most chimerical ideas, and find " in them whatever is agreeable to your " fancy, just as a roving imagination disco-" vers figures in the clouds. You have thus "imagined a spiritual Messiah, where our " prophets speak only of a political king. "You have interpreted into a redemption of " the human race, what refers folely to the " re-establishment of our nation. Your pre-" tended conception of the virgin is derived " from a phrase which you have wrested " from its true meaning. You construe " every thing as you please. You even find. " in our books your doctrine of the Trinity, " though they contain not the most indirect " allusion to it, and though the idea was an " invention of profane nations, and admitted "into your code, together with a multitude " of other opinions of every worship and sect " of which it is composed, during the chaos-" and anarchy of the three (first ages."

At these words, transported with indignation, and crying out sacrilege, blasphemy! the Christian doctors were disposed to lay violent hands upon the Jew: and a motley groupe 41

groupe of monks, fome in black, fome in white, advancing with a standard on which pincers, a gridiron, and a funeral pile, and the words justice, charity, and mercy, were painted *, exclaimed: " It is proper to make an . " example of this impious heretic, and to " burn him alive for the glory of God!" And already they had pictured to their loraginations the scene of torture, when the Musfulmans in a tone of irony said to them: " Such is the religion of peace, whose hum-" ble and humane spirit you have so loudly " vaunted! Such that evangelical charity " which combats incredulity with no other "weapon than mildness, and opposes only " patience to injuries! Hypocrites, it is thus " you deceive nations! It is in this manner " you have propagated your destructive er-" rors! When weak, you have preached li-" berty, toleration, and peace; when power "has been in your hands, you have prac-" tifed violence and perfecution !" And they were beginning to recite the wars and murders of Christianity, when the legif-

lators

This description answers exactly to the colours of the Impulition of Spanish Jacobins.

laters, demanding filence, affuaged for a while the diffcord.

"It is not," replied the monks in a tone of affected mildness and humility, "ourselves "that we would avenge, we are desirous "only of defending the cause and glory of "God."

"And what right have you," faid the Imans, "to constitute yourselves his repre"sentatives more than we? Have you pri"vileges that we are not favoured with?

"Are you beings of a different nature from "us?"

"To take upon ourselves to defend God,
is to insult his wisdom and power," said
another groupe. "Does he not know better than mortals what is becoming his
dignity!"

"Certainly," rejoined the monks; "but "his ways are fecret."

"You, however," said the Rabbins, "will always find the difficulty insuperable of "proving that you enjoy the exclusive pri"vilege of comprehending them." And the Jews, proud of finding their cause supported, fendly pleased themselves with the idea that

their

their books would be triumphant; when the Mobed * of the Parses begged leave to speak.

"We have heard," faid he to the legisla-" tors, the account of the Jews and Christians " respecting the origin of the world, and " though they have introduced various cur-" ruptions, they have related a number of " facts which our religion admits; but we " deny that they are to be attributed to the "Hebrew legislator. It was not he who " made known to mankind these sublime " dogmas, these celestial events: it was not " to him that God revealed them, but to our " holy prophet Zoroaster; and proofs of. " this are to be found in the very books in " question. If you examine with attention " the detail of laws, of rights, and of pre-" cept's established by Moses, you will no " where find the most tacit indication of " what conflitutes at present the basis of the " Jewish and Christian theology. You will " perceive no trace either of the immortality " of the foul, or a life to come, or hell, or

Highpriest.

" paradife,

" paradife, or the revolt of the principal an" gel, author of all the evils which have af" flicted the human race, &c. These ideas
" were unknown to Moses, and this appears
" from indisputable evidence, since it was not
" till four hundred years after him that they
" were first promulgated by Zoroaster in
" Asia (27)."

The Mobed added, addreffing himfelf to the Rabbins: "It was not till this epocha, " till after the age of your first kings, that " these ideas appeared in your writings; and "then their appearance was furtive and " gradual, according as there grew up a po-"litical relation between your ancestors and " ours. It was particularly at the period " when, conquered and dispersed by the " kings of Nineveh and Babylon, your pro-" genitors reforted to the banks of the Ti-" gris and the Euphrates, and refided in our " country for three successive generations, " that they imbibed our manners and opi-" nions, which before they had regarded " with aversion, as contrary to their law. "When our king, Cyrus, had delivered them " from

196.

from flavery they felt attached to us from fentiments of gratitude; they became our disciples and imitators, and introduced our peculiar doctrines into the corrected publication of their facred books (28); for your Genesis in particular was never the work of Moses, but a compilation digested after the return from the Babylo-inside captivity, and containing in it the Chaldean opinions respecting the origin of the world.

" At first the pure followers of the law, " opposing to the emigrants the letter of the " text and the absolute silence of the pro-" phet, endeavoured to overpower these in-" novations; but they ultimately prevailed, " and our doctrines, modified according to " your ideas, gave rife to a new fect. You " expected a king, the restorer of your poli-" tical independence; we announced a God, "the regenerator of the world, and the fa-" viour of mankind. These ideas blended " together, constituted the tenets of the Es-" fenians, and through them became the " basis of Christianity. Jews, Christians, " Mahometans, however lofty may be your " pretentions,

" pretensions, you are, in your spiritual and

" immaterial fystem, only the blundering

" followers of Zoroafter"

Having thus commenced his discourse, the Mobed went on to the detail of his religion : and supporting his fentiments by quotations from the Zadder and the Zendavesta, he recounted in the same order as they are found in the book of Genefis, the creation of the world in fix gahans (29); the formation of a first man and a first woman in a peculiar and. celestial habitation, under the reign of perfect good; the introduction of evil into the world by the great lizard, the emblem of Ahrimanes; the revolt and combat of this magnificent genius of darkness, against Ormuz the benevolent God of light; the distribution of angels into white and black, good and ill; their hierarchy confifting of cherubim, feraphim, thrones, dominions, &c.; the end of the world at the close of fix thousand years; the coming of the Lamb, the regenerator of nature; the new world; the life to come in an abode of felicity or anguish; the passage of fouls over the bridge of the abyls; the celebration of the mysteries of Mithra; the unleavened

unleavened bread that is fet apart for the initiated: the baptism of new-born children; extreme unction and auricular confession (30); in a word, he repeated so many articles analogous to those of the three preceding religions, that his discourse seemed to be a commentary or a continuation of the Koran or the Apocalypse.

But the Jewish, Christian, and Mahometan doctors excepted to this detail, and treating the Parses as idolatrous worshippers of fire, charged them with falsehood, invention, and alteration of facts. A violent dispute then arose respecting the dates of events, their order and fuccession, respecting the origin of opinions, their transmission from one people to another, the authenticity of the books which establish them, the epocha when these books were composed, the character of their compilers, the value of their testimony; and the various parties proving, each against the rest, contradictions, improbabilities, and the · counterfeit nature of their books, accused one another of having founded their creed upon popular rumours, upon vague traditions, upon abfurd fables, invented by folly, and admitted mitted without examination by unknown, ignorant, or partial writers, at doubtful periods, and different from those to which their partisans referred them.

A loud rumour was now excited under the standards of the various Indian sects, and the Bramins, entering their protest against the claims of the Jews and the Parfes, faid: "What are these upstart and almost un-"known people, who thus arrogantly con-"fider themselves as the founders of nations. " and the depositories of the sacred archives? "To hear their calculations of five or fix "thousand years, one would suppose that " the world was but of yesterday, whereas " our monuments prove a duration of many " thousands of centuries. And in what re-" fpect are their books preferable to ours? " Are then the Vedes, the Chastres, the " Pourans, inferior to the Bible, the Zenda-" vesta, the Sadder (31)? Is not the testi-" mony of our progenitors and our Gods, of " equal value with that of the Gods and " progenitors of the western world? Oh! " were we permitted to reveal to profane " men the mysteries of our religion! Did

"not a faced weil justly hidesour doctrine "from everyneye!"..... i you for find

The Bramins finddenly observing a pode found filencer "How," faid the legislators, "can we admit your doctrine, if you resust "to make it known? How could its first "authors propagate it, when, having fall "possession of it, they regarded even their own people as profance? Has heaven required it that it might be kepta secrets."

The Bramins however persisted in their silence, and a European at this moment offering to speak, remarked, that their secrecy was at present an empty form, that their secrecy cred books were divulged and their doctrine explained; he accordingly undertook to required its several articles.

Beginning with an abstract of the sour Nedes, the twenty-eight Pourans, and the five on six Chastees, he recounted how an immaterial, infinite, eternal, and round Being, assure having passed an immitted portion of time in self-contemplation, desirous at length of manifesting himself, separated the faculties of male and semale which were in him, and operated an act of generation of which the Lingam

hingam remains the emblem: how from this first act were born three divine powers, of themames of Brama, Bichen, or Vichenou, and Chibor Chiven (22), the first deputed to create, the fecond to preferve, the third to deftroy drichange the form of the universe. He then detailed the history of their exploits and adventures, and related how Brama, proud of having created the world and the eight Bobouns (or spheres) of probation, and of being preferred to his equal Chib, this pride occasioned between them a combat, in which the globes or celestial orbits were broken to pieces, as if they had been a balket of eggs: how Brama overcome in this contest, was reduced to ferve as a pedestal to Chib, metamorphofed into the Lingam: how Vichenou, the preserver of the universe, had, in the discharge of his function, assumed nine animal and mortal forms; how under the first, that of a fish, he saved from the univerfal deluge a family by whom the earth was re-peopled; afterwards, in the shape of a tortoile (33), drew from the fea of milk the mountain Mandreguiri (the Pole); then, under that of a boar, tore the entrails of the giant

giant Erenniacheffen, by whom the earth had been sunk in the abyss of Djole, from which he delivered it; how he became incarnate under the form of the Black Shepherd, and bearing the name of Christen rescued the world from the venomous serpent Calengam, whose head he crushed, after having himself received a wound in his heel.

Paffing to the history of the secondary Genii, unfolded to the affembly how the Eternal, for the difplay of his glory, had created divers orders of angels, whose office it was to fing his praises and direct the univerife: that a part of these angels had revolted under the conduct of an ambitious chief, who wished to usurp the power of God, and take the reigns of government into his own hands: that God precipitated them into a world of darkness as a punishment for their misdeeds: that at last; touched with compassion, he conferted to withdraw them from thence, and to receive them again into favour, after previously fubjecting them to a long state of probation: that for this purpose, having created fifteen orbits or regions of planets, and bodies to inhabit them, he obliged thefe rebellious

rebellious angels to undergo eighty-seven transmigrations: that the souls, thus purified, returned to their primitive source, to the ocean of life from which they had emanated: that as all living beings contained a portion of this universal soul, it was an act of great criminality to deprive them of it. He was proceeding to develope the rites and ceremonies of this religion, when, speaking of offerings and libations of milk and butter to Gods of wood and of brass, he was interrupted by a universal murmur mixed with loud bursts of laughter.

Each of the different groupes reasoned in its own particular manner respecting this system. "They are idolaters," said the Mussulmans, "it is our duty to exterminate them ".... "They are mad," said the followers of Confucius, "it is our duty to cure them ".... "What absurd Gods," cried the rest, "a set "of fat monkeys begrimmed with smoke, "whom they wash like children in clouts, "and from whom they drive away the slies, "lured by the taste of honey, who would "otherwise desile them with their excrements!"

At these words a Bramin, bursting with indignation,

indignation, exclaimed: "These are in"forutable mysteries, the prosound em"blems of truth, which you are not wor"thy to know."

" And how comes it," replied a Lama of Thibet, " that you are more worthy than we? " Is it because you pretend to be sprung " from the head of Brama, while the rest of " mankind derive their origin from the less " noble parts of his body? If you would " fupport the fable of your origin, and the " vain distinctions of your casts, prove that " you are of a nature different from us; prove " at least by historical testimony the allego-" ries you maintain; nay, prove that you are " really the authors of this fystem; for on our " part we are able to prove, if that were " necessary, that you have only stolen and " disfigured it; that you have borrowed the " ancient paganism of the western world, " and blended it by an abfurd conceit with " the purely spiritual nature of our Gods " (34), a nature which stoops not to address " itself to the senses, and was wholly unknown " to the world till the mission of Beddou."

Instantly innumerable voices demanded to be informed of this nature, and to hear of that that God with whose very name the majority of them were unacquainted. In pursuance of this demand, the Lama resumed.

" In the beginning," faid he, "there was " one God, self-existent, who passed through " a whole eternity, abforbed in the contem-" plation of his own reflections, ere he de-" termined to manifest those perfections to " created beings, when he produced the " matter of the world. The four elements, " at their production, lay in a state of mingled " confusion, till he breathed upon the face of " the waters, and they immediately became " an immense bubble, shaped like an egg, " which when complete became the vault or " globe of the heavens in which the world is "inclosed (35). No sooner was the earth " and the bodies of animals produced, than " God, the fource of motion, bestowed upon " them as a living foul a portion of his fub-" flance. Thus the foul of every living "thing, being only a fraction or separate " part of the univerfal foul, no percipient " being is liable to perish, but merely changes " its form and mould as it passes successively " into different bodies. But of all the fub-" Stantial

" stantial forms that of man is most pleasing " to the Divine Being, as most resembling " his uncreated perfections; and man, when, " by withdrawing himfelf from the com-" merce of the fenses, he becomes absorbed " in the contemplation of his own nature. " discovers the Divinity that resides in it, and " himself becomes worthy of Divinity. Thus " is God inceffantly rendering himfelf incar-" nate; but his greatest and most solemn in-" carnation was three thousand years ago, " in the province of Cassimere, under the " name of Fôt or Beddou, for the purpose of " teaching the doctrine of felf-denial and felf-" annihilation." The Lama proceeded to detail the history of Fôt, observing, that he had forung from the right intercostal of avirgin of the royal blood, who, when the became a mother, did not the less continue to be a virgin: that the king of the country, uneasy at his birth, was defirous to put him to death, and caused all the males who were born at the fame period to be massacred: that being saved by shepherds, Beddou lived in the desert to the age of thirty years, at which time he opened his commission, preaching the doctrine

trine of truth and casting out devils: that he performed a multitude of the most astonishing miracles, spent his life in fasting and the severest mortifications, and at his death bequeathed to his disciples the volume in which the principles of his religion are contained. The Lama then began to read—

"He that forfaketh his father and his mother," fays Fôt, "to follow me, shall become a perfect Samanean (a heavenly being).

"He that keepeth my precepts to the fourth degree of perfection, shall acquire the power of flying in the air, of moving earth and heaven, of protracting or short-

" ening his life, and of rifing again.

"The Samanean looks with contempt on riches, and makes use only of such things as are strictly necessary. He mortifies the flesh, subdues his passions, fixes his desires and affections on nothing terrestrial, meditates without ceasing upon my doctrine, endures injuries with patience, and bears no enmity against his neighbour.

"Heaven and earth," fays Fôt, " shall pass away; despise therefore your bodies which " are composed of the four perishable ele-

" ments, and think only of your immortal foul.

"Hearken not to the fuggestions of the

" flesh: fear and forrow are the produce of

"the passions: stifle the passions, and fear

" and forrow will thus be destroyed."

"Whosoever dies," says Fôt, "without having received my doctrine, becomes again and again an inhabitant of the earth,

" till he shall have embraced it."

The Lama was going on with his extracts when the Christians interrupted him, observing, that this religion was an alteration of theirs; that Fôt was Jesus himself disfigured, and that the Lamas were nothing more than a degenerate sect of the Nestorians and Manicheans.

But the Lama (36), supported by all the Chamans, Bonzes, Gonnis, Talapoins of Siam, of Ceylon, of Japan, and of China, demonstrated to the Christians from their own Theologians, that the doctrine of the Samaneans was known through the East upwards of a thou-fand years before Christianity existed; that their name was cited previous to the reign

of Alexander, and that that of Boutta or Beddou could be traced to a more remote antiquity than that of Jesus-" And now, faid they, retorting upon the Christians, " do you prove to us that you are not your-" felves degenerated Samaneans; that the " man whom you consider as the author of " your fect is not Fôt himself in a different " form. Demonstrate his existence by his-" torical monuments of fo remote a period " as those which we have adduced (37); " for as it appears to be founded on no au-" thentic testimony, we absolutely deny its " truth; and we maintain that your gospels " are taken from the books of the Mythriacs of Persia, and the Essenians of Syria, who "were themselves only reformed Sama-" neans (38)."

These words excited a general outcry on the part of the Christians, and a new dispute more violent than any preceding one was on the point of taking place, when a groupe of Chinese Chamans, and Talapoins of Siam came forward, pretending that they could easily adjust every difference, and produce in the assembly a uniformity of opinion.

nion, and one of them speaking for the rest, faid: " It is time that we should put an " end to all these frivolous disputes, by " drawing afide the veil and expofing to " your view the interior and fecret doctrine " which Fôt himself, on his death-bed, re-" vealed to his disciples (39). These va-" rious theological opinions are mere chi-" meras; these accounts of the attributes, " actions and life of the Gods are nothing " more than allegories and mysterious sym-" bols, under which moral ideas, and the " knowledge of the operations of nature in "the action of the elements and the revo-" lutions of the planets, are ingeniously de-" picted.

"The truth is, that there is no reality in any thing; that all is illusion, appearance, a dream; that the moral metemsychosis is nothing more than a figurative sense of the physical metemsychosis, of that successive motion by which the elements of which a body is composed, and which never perish, pass, when the body itself is dissolved, into a thousand others, and form new combinations. The soul is merely

merely the vital principle refulting from " the properties of matter, and the action of " the elements in bodies, in which they " create a spontaneous movement. To sup-" pose that this result of organization, which " is born with it, developed with it, fleeps " with it, continues to exist when organiza-"tion is no more, is a romance that may be " pleasing enough, but that is certainly chi-" merical. God himself is nothing more ** than the principal mover, the occult power " diffused through every thing that has be-" ing, the fum of its laws and its properties, " the animating principle, in a word, the " foul of the universe; which, by reason of " the infinite diversity of its connections and " operations, confidered fometimes as fimple " and fometimes as multiple, fometimes as "active and sometimes as passive, has ever " presented to the human mind an infolv-" able enigma. What we can comprehend "with greatest perspicuity is, that matter " does not perish; that it possesses essential " properties, by which the world is go-" verned in a mode fimilar to that of a liv-"ing and organised being; that, with re-" Spect

" fpect to man, the knowledge of its laws is what constitutes his wisdom; that in their observance consist virtue and merit; and evil, sin, vice, in the ignorance and violation of them; that happiness and missor-tune are the respective result of this observance or neglect, by the same necessity that occasions light substances to ascend, heavy ones to fall, and by a fatality of causes and effects, the chain of which extends from the smallest atom to the stars of greatest magnitude and elevation (40)."

A crowd of Theologians of every sect instantly exclaimed, that this doctrine was rank materialism, and those who professed it impious Atheists, enemies both of God and man, who ought to be extirpated from the earth.—" Strange reasoning," replied the Chamans. "Supposing us to be mistaken, "which is by no means impossible, since it "is one of the attributes of the human mind "to be subject to illusion, what right have "you to deprive beings like yourselves of "the life which God has given them? If "heaven considers us as culpable, and looks "upon us with horror, why does it dispense

" to us the same bleffings as to you! If it " treats us with endurance, what right have "you to be less indulgent? Pious men, " who speak of God with so much certainty " and confidence, condescend to tell us what " he is; explain, fo that we may compre-" hend them, those abstract and metaphy-" fical beings which you call God and the " foul: substances without matter, exist-" ence without body, life without organs or " fensations. If you discover these beings " by means of your fenses, render them in " like manner perceptible to us. If you " fpeak of them only upon testimony and " tradition, show us a uniform recital, and " give an identical and determinate basis to " your creed."

There now arose a warm controversy between the Theologians respecting the nature of God and, his mode of acting and manifesting himself; respecting the soul and its union with the body, whether it has existence previous to the organs, or from the time of their formation only; respecting the life to come and another world; and every sect, every school, every individual, differing P 3 from from the rest as to all these points, and asfigning for its dissent plausible reasons and respectable but opposite authorities, they were all involved in an inextricable labyrinth of contradictions.

At length, the legislators having restored filence, recalled the dispute to its true object, and faid : " Leaders and instructors of the " people, you came hither for the purpose " of investigating truth; and at first every " one of you, confident in his own infalli-" bility, demanded an implicit faith: pre--" fently, however, you felt the contrariety " of your opinions, and confented to fubmit " them to a fair comparison and a common " rule of evidence. You proceeded to ex-" pose your proofs: you began with the " allegation of facts; but it presently ap-" peared that every religion and every fect " had its miracles and its martyrs, and had " an equal cloud of witnesses to boast, who " were ready to prove the rectitude of their " fentiments by the facrifice of their lives. "Upon this first point therefore the balance " remained equal.

"You next passed to proofs of reasoning:
"the

" the fame arguments were alternately ap-" plied to the support of opposite proposi-" tions; the same affertions, equally gratui-" tous were successively advanced and re-" pelled; every one was found to have an " equal reason for denying his assent to the " lystem of the others. A farther conse-" quence that arose from thus confronting " your fystems was, that, notwithstanding " their distimilitude in some points, their " refemblance in others was not less strik-"ing. Each of you claimed the first de-" polit and the original discovery; each of " you taxed his neighbour with adulteration "and plagiarism, and a previous question "to the embracing of any of your doctrines " appeared to refult from the history of opi-" nions.' -

"A still greater embarrassment arose "when you entered into the explication of "your doctrines: the more assiduous were "your endeavours, the more confused did "they appear; they rested upon a basis in"accessible to human understanding, of consequence you had no means to judge their validity, and you readily admitted P 4 "that,

"that, in afferting them, you were the cohos
"of your fathers. Hence it became impor"tant to know how they had come into the
"hands of that former generation, who had
"no means of learning them different from
"yourselves. Thus the transmission of theo"logical ideas from country to country, and
"their first rise in the human understanding,
"were equally mysterious, and the question
"became every moment more complicated
"with metaphysical subtlety and antiquarian
"research.

"But as these opinions, however extra"ordinary, have some origin; as all ideas,
"even the most abstracted and fantastical,
"have in nature some physical model, we
"must ascend to that origin in order to dis"cover what this model is, and how the
"understanding came by those ideas of
"Deity, the soul and immaterial beings,
"that are so obscure, and which form the
"foundation of so many religious systems;
"we must trace their lineal descent and the
"alterations they have undergone in their
"various successions and ramifications. If
"therefore there are in this assembly men
"who

"who have made these objects their pecu"liar study, let them come forward and en"deavour to dispel, in the presence of the
"nations of the earth, the obscurity of opi"nions in which for so long a period they
"have all wandered."

CHAP.

C.H.A.P. XXII.

ORIGIN AND GENEALOGY OF RELIGIOUS

At these words a new groupe, formed in an instant of individuals from every standard, but undistinguished by any, advanced in the sand, and one of the members, speaking in the name of the general body, said:

"Legislators, friends of evidence and of truth!

"That the subject of which we treat should be involved in so many clouds, is by no means astonishing, since, beside the difficulties that are peculiar to it, thought itself has, till this moment, ever had shackles imposed upon it, and free enquiry, by the intolerance of every religious system, been interdicted. But now that thought is unrestrained, and may develope all its powers, we will expose in the face of day, and submit to the common judgment of assembled nations, such rational truths as unprejudiced minds

minds have by long and laborious study discovered: and this, not with the design of imposing them as a creed, but from a desire of provoking new lights, and obtaining better information.

"Chiefs and instructors of the people, you are not ignorant of the profound obscurity in which the nature, origin, and history of the dogmas you teach are inveloped. Imposed by force and authority, inculcated by education, maintained by the influence of example, they were perpetuated from age to age, and habit and inattention strengthened their empire. But if man, enlightened by experience and reflection, summon to the bar of mature examination the prejudices of his infancy, he presently discovers a multitude of incongruities and contradictions which awaken his sagacity, and call forth the exertion of his reasoning powers.

"At first, remarking the various and opposite creeds into which nations are divided, we are led boldly to reject the infallibility claimed by each; and arming ourselves alternately with their reciprocal pretensions, to conceive that the senses and the understand-

ing

ing emanating directly from God, are a law not less facred, and a guide not less fure than the indirect and contradictory codes of the prophets.

"If we proceed to examine the texture of the codes themselves, we shall observe that their pretended divine laws, that is to say, laws immutable and eternal, have risen from the complexion of times, of places, and of persons; that these codes issue one from another in a kind of a genealogical order, mutually borrowing a common and similar fund of ideas, which every institutor modifies agreeably to his fancy.

"If we ascend to the source of those ideas, we shall find that it is lost in the night of time, in the infancy of nations, in the very origin of the world, to which they claim alliance; and there, immersed in the obscurity of chaos, and the fabulous empire of tradition, they are attended with so many prodigies as to be seemingly inaccessible to the human understanding. But this prodigious state of things gives birth itself to a ray of reasoning, that resolves the difficulty; for if the miracles held out in systems of religion have

have actually existed; if, for instance, metamorphoses, apparitions, and the conversations of one or more Gods, recorded in the sacred books of the Hindoos, the Hebrews, and the Parses, are indeed events in real history, it follows that nature in those times was perfectly unlike the nature that we are acquainted with now; that men of the present age are totally different from the men that formerly existed; and, consequently, that we ought not to trouble our heads about them.

"On the contrary, if those miraculous facts have had no real existence in the physical order of things, they must be regarded solely as productions of the human intellect: and the nature of man, at this day, capable of making the most fantastic combinations, explains the phenomenon of those monsters in history. The only difficulty is to ascertain how and for what purpose the imagination invented them. If we examine with attention the subjects that are exhibited by them, if we analize the ideas which they combine and associate, and weigh with accuracy all their concomitant circumstances, we shall find a solution perfectly conform-

able to the laws of nature. Those fabulous stories have a figurative sense different from their apparent one, they are founded on fimple and physical facts: but these facts, being ill conceived and erroneously represented, have been disfigured and changed from their original nature by accidental causes dependent on the human mind, by the confusion. of figns made use of in the representation of objects, by the equivocation of words, the defeat of language, and the imperfection of writing. These Gods, for example, who act fuch fingular parts in every fystem, are no other than the physical powers of nature, the elements, the winds, the meteors, the ftars, all which have been personified by the necessary mechanism of language, and the manner in which objects are conceived by the understanding. Their life, their man+ ners, their actions, are only the operation of the same powers, and the whole of their pretended history no more than a description of their various phenomena, traced by the first naturalist that observed them, but taken in a contrary sense by the vulgar who did not understand it, or by succeeding genera-

twogle

tions

tions who forgot it. In a word, all the theological dogmas respecting the origin of the world, the nature of God, the revelation of his laws, the manifestation of his perfon, are but recitals of aftronomical facts, figurative and emblematical narratives of the motion and influence of the heavenly bodies. The very idea itself of the Divinity, which is at present so obscure, ab-Aracted, and metaphyfical, was in its origin merely a composit of the powers of the material universe, considered sometimes analytically, as they appear in their agents and their phenomena, and fometimes fynthetically, as forming one whole, and exhibiting an harmonious relation in all its parts. Thus the name God has been bestowed sometimes upon the wind, upon fire, water, and the elements; fometimes upon the fun, the stars, the planets, and their influences; fometimes upon the universe at large, and the matter of which the world is composed; formetimes upon abstract and metaphysical properties, fuch as space, duration, motion, and intelligence; but in every instance, the idea of a deity has not flowed from the miraculous revelation of an invisible world,

but has been the natural result of human reflection, has followed the progress and undergone the changes of the successive improvement of intellect, and has had for its subject the visible universe and its different agents.

"It is then in vain that nations refer the origin of their religion to heavenly inspiration; it is in vain that they pretend to describe a supernatural state of things as first in the order of events: the original barbarous state of mankind, attested by their own monuments (41), belies all their affertions. These affertions are still more victoriously refuted by confidering this great principle, that man receives no ideas but through the medium of his senses (42): for from hence it appears, that every system which ascribes human wifdom to any other fource than experience and fenfation, includes in it a usegor meolegov, and represents the last results of understanding as earliest in the order of If we examine the different religious fystems which have been formed respecting the action of the Gods, and the origin of the world, we shall discover at every turn an anticipation in the order of narrating things, which

which could only be fuggested by subsequent resection. Reason, then, emboldened by these contradictions, hesitates not to reject whatever does not accord with the nature of things, and accepts nothing for historical truth that is not capable of being established by argument and ratiocination. Its ideas and suggestions are as follow:

"Before any nation received from a neighbour nation dogmas already invented; before one generation inherited the ideas of another, none of these complicated systems had existence. The first men, the children of nature, whose consciousness was anterior to experience, and who brought no preconceived knowledge into the world with them, were born without any idea of those articles of faith which are the refult of learned contention; of those religious rites which had relation to arts and practices not yet in existence; of those precepts which suppose the paffions already developed; of those laws which have reference to a language and a focial order hereafter to be produced; of that God, whose attributes are abstractions of the knowledge of nature, and the idea of whole

whose conduct is suggested by the experience of a despotic government; in fine, of that foul and those spiritual existences which are faid not to be the object of the fenses, but which, however, we must for ever have remained unacquainted with, if our senses had not introduced them to us. Previously to arriving at these notions, an immense catalogue of existing facts must have been ob-Man, criginally favage, must have learned from repeated trials the use of his organs. Successive generations must have invented and refined upon the means of fubfiftence; and the understanding, at liberty to difengage itself from the wants of nature, must have risen to the complicated art of comparing ideas, digefting reasonings, and feizing upon abstract similitudes.

SECT. I. Origin of the idea of God: Worship of the elements, and the physical powers of nature.

"IT was not till after having furmounted those obstacles, and run a long career in the night of history, that man, restecting on his state, began to perceive his subjection to forces

of his will. The sun gave him light and warmth; fire burned, thunder terrified, the winds buffetted, water overwhelmed him; all the various natural existences acted upon him in a manner not to be resisted. For a long time, an automaton, he remained passive, without enquiring into the cause of this action; but the very moment he was desirous of accounting to himself for it, astonishment seized his mind; and passing from the surprise of a first thought to the reverie of curiosity, he formed a chain of reasoning.

At first, considering only the action of the elements upon him, he inferred, relatively to himself, an idea of weakness, of subjection, and relatively to them, an idea of power, of domination; and this idea was the primitive and fundamental type of all his conceptions of the Divinity.

"The action of the natural existences, in the second place, excited in him sensations of pleasure or pain, of good or evil; by virtue of his organization, he conceived love or aversion for them, he desired or dreaded their

Q2 presence;

presence; and fear or hope was the principle of every idea of religion.

" Afterwards, judging every thing by compatison, and remarking in those beings a motion fpontaneous like his own, he fupposed there to be a will, an intelligence inherent in that motion, of a nature fimilar to what existed in himself; and hence, by way of inference, he started a fresh argument .-Having experienced that certain modes of behaviour towards his fellow-creatures wrought a change in their affections and governed their conduct, he applied those practices to the powerful beings of the universe. "When " my fellow-creature of fuperior strength," faid he to himself, " is disposed to injure me, " I humble myself before him, and my prayer " has the art of appearing him. I will pray " to the powerful beings that strike me. I " will supplicate the faculties of the winds, " the planets, the waters, and they will hear " me. I will conjure them to avert the ca-" lamities, and to grant me the bleffings " which are at their disposal. My tears will " move, my offerings propitiate them, and I " shall enjoy complete felicity." " And. "And, simple in the infancy of his reason, man spoke to the sun and the moon, he animated with his understanding and his passions the great agents of nature; he thought by vain sounds and useless practices to change their inflexible laws. Fatal error! He desired that the water should ascend, the mountains be removed, the stone mount in the air; and substituting a fantastic to a real world, he constituted for himself beings of opinion, to the terror of his mind and the torment of his race.

"Thus the ideas of God and religion forung, like all others, from physical objects, and were in the understanding of man the produce of his sensations, his wants, the circumstances of his life, and the progressive state of his knowledge.

"As these ideas had natural beings for their first models, it resulted from hence that the Divinity was originally as various and manifold as the forms under which he seemed to act: each being was a Power, a Genius, and the first men found the universe crowded with innumerable Gods.

"In like manner the ideas of the Divinity having had for motors the affections of O 2 the the human heart, they underwent an order of division calculated from the sensations of pain and pleasure, of love and hatred: the powers of nature, the Gods, the Genii, were classed into benign and malesicent, into good and evil ones: and this constitutes the universality of these two ideas in every system of religion.

" These ideas, analogous to the condition of their inventors, were for a long time confused and gross. Wandering in woods, beset with wants, destitute of resources, men in their favage state had no leifure to make comparisons and draw conclusions. Suffering more ills than they tasted enjoyments, their most habitual sentiment was fear, their theology terror, their worship confined to certain modes of falutation, of offerings which they presented to beings whom they supposed to be ferocious and greedy like themselves. In their state of equality and independence, no one took upon him the office of mediator with Gods as infubordinate and poor as himfelf. No one having any fuperfluity to dispose of, there existed no parafite under the name of prieft, nor tribute under

under the name of victim, nor empire under the name of altar; their dogma and motality, jumbled together, were only felf-prefervation; and their religion, an arbitrary idea without influence on the mutual relations existing between men, was but a vain homage paid to the visible powers of nature.

"Such was the first and necessary origin of every idea of the Divinity."

The orator then addressing the savage nations, said: "We appeal to you, who have received no foreign sectitious ideas, whether your conceptions have not been formed precisely in this manner? We ask you also, learned theologians, if such be not the unanimous record of all the monuments of antiquity (43)?

SECT. II. Second system: Worship of the Stars, or Sabeisin.

"But those same monuments offer us a more methodical and more complicated system, that of the worship of all the stars, adored at one time under their proper form, at another under emblems and sigurative Q 4 symbols.

fymbols. This worship was also the effect of the knowledge of man in physics, and derived immediately from the first causes of the social state; that is to say, from wants and arts of the first degree, the elements as it were in the formation of society.

. "When men began to unite in fociety, they found it necessary to enlarge the means of their fubfishence, and consequently to apply themselves to agriculture; and the practice of agriculture required the observation and knowledge of the heavens (44). It was · necessary to know the periodical return of the fame operations of pature, the fame phenomena of the skies; it was necessary to regulate the duration and fuccession of the feasons, months and year. In order to this it was requifite to become acquainted with the march of the fun, which in its zodiacal revolution showed itself the first and supreme agent of all creation; then of the moon, which by its changes and returns regulated and distributed time; finally of the stars, and even of the planets, which, by their appearance and disappearance on the horizon and the nocturnal hemisphere, formed the minuteft divisions. In a word it was necessary to establish an entire system of astronomy, to form an almanac; and from this labour there quickly and fpontaneously resulted a new manner of confidering the dominant and governing powers. Having observed that the productions of the earth bore a regular and constant connection with the phenomena of the heavens; that the birth, growth, and decay of each plant, were allied to the appearance, exaltation and decline of the fame planet, the same groupe of stars; in short, that the langour or activity of vegetation feemed to depend on celestial influences, men began to infer from this an idea of action, of power, in those bodies, superior to terrestrial beings; and the stars dispensing scarcity or abundance, became powers, Genii (45), Gods, authors of good and evil.

"As the state of society had already introduced a methodical hierarchy of ranks, employments and conditions, men, continuing to reason from comparison, transferred their new acquired notions to their theology, and the result was a complicated system of gradual Divinities, in which the sun, as the first

God.

God, was a military chief, a political king; the moon, a queen, his confort; the planets, fervants, bearers of commands, messengers: and the multitude of stars, a nation, an army of heroes, of Genii, appointed to govern the world under the command of their officers; every individual had a name, functions, attributes, drawn from its connections and influences, and even a sex derived from the gender of its appellation (46).

"As the state of society had introduced certain usages and complex practices, worthip, leading the van, adopted fimilar ones. Ceremonies, fimple and private at first, became public and folemn; offerings were more rich and more numerous; rites more methodical; places of affembly, chapels and temples were erected; officers, pontiffs, created to administer; forms and epochas were settled; and religion became a civil act, a political tie. But in this developement it altered not its first principles, and the idea of God was still that of physical beings, operating good or ill, that is to fay, impressing sensations of pain or pleasure: the dogma was the knowledge of their laws or modes of acting; virtue and

and fin the observance or infringement of those laws; and morality, in its native fimplicity, a judicious practice of all that is conducive to the preservation of existence, to the well-being of the individual and of his fellow-creatures (47).

" Should it be asked at what epoch this fystem took birth, we shall answer, supported by the authority of the monuments of aftronomy itself, that its principles can be traced back with certainty to a period of nearly seventeen thousand years (48). Should we farther be asked to what people or nation it ought to be attributed, we shall reply, that those self-same monuments, seconded by unanimous tradition, attribute it to the first tribes of Egypt. And when reason finds in that region a concurrence of all the physical circumstances calculated to give rise to it; when it finds at once a zone of heaven. in vicinity of the tropic, equally free from the rains of the equator, and the fogs of the north (49); when it finds there the central point of the antique sphere; a falubrious climate; an immense yet manageable river; a land fertile without art, without fatigue; inundated.

inundated, without pestilential exhalations; situate between two seas which lave the shores of the richest countries—it becomes manifest that the inhabitant of the districts of the Nile, inclined to agriculture from the nature of his soil; to commerce, from the facility of communication; to geometry, from the annual necessity of measuring his posses, so astronomy, from the state of his heaven, ever open to observation, must first have passed from the savage to the social state, and consequently attained that physical and moral knowledge proper to civilized man.

"It was thus, upon the distant shores of the Nile, and among a nation of sable complexion, that the complex system of the worship of the stars, as connected with the produce of the soil and the labours of agriculture, was constructed. The worship of the stars under their proper forms, or their natural attributes, was a simple process of the human understanding; but in a short time the multiplicity of objects, their relations, their action and re-action, having consounded the ideas and the signs that represented them, a consequence

REVOLUTIONS OF EMPIRES. 237 consequence resulted as absurd in its nature as perniclous in its tendency.

SECT. III. Third System: Worship of symbols, or idolatry.

"From the instant this agricolar race had turned an eye of observation on the stars. they found it necessary to distinguish individuals or groupes, and to affign to each a proper name. A considerable difficulty here presented itself; for on the one hand, the celestial bodies, similar in form, offered no peculiar character by which to denominate them; and on the other hand, language, poor and in a state of infancy, had no expreffions for fo many new and metaphyfical ideas. The usual stimulus of genius, necessity, conquered all obstacles. Having remarked that in the annual revolution, the renewal and periodical appearance of the productions of the earth were constantly connected with the rifing and fetting of certain stars, and with their position relatively to the sun, the mind, by a natural mechanism, associated in its thought terrestrial and celestial objects, which had in fact a certain alliance; and applying

to them the same sign, it gave to the stars and the groupes it formed of them, the very names of the terrestrial objects to which they bore affinity (50).

"Thus the Ethiopian of Thebes called stars of inundation, or of Aquarius, those under which the river began to overflow *; stars of the ox or bull, those under which it was convenient to plough the earth; stars of the lion, those under which that animal, driven by thirst from the deserts, made his appearance on the banks of the Nile; stars of the sheaf, or of the harvest maid, those under which the harvests were got in; stars of the lambs, stars of the goat, those under which those valuable animals brought forth their young; and thus was a first part of the difficulty resolved.

"On the other hand, man, having remarked in the beings that furrounded him certain qualities peculiar to each species, and having invented a name by which to design them, speedily discovered an ingenious mode of generalizing his ideas, and transferring the name

[•] This must have been June. See Note (46).

already.

already invented to every thing bearing a fimilar or analogous property or agency, enriched his language with a multiplicity of

metaphors and tropes.

"Thus the same Ethiopian, having obferved that the return of the inundation anfwered constantly to the appearance of a very beautiful star towards the source of the Nile, which feemed to warn the hufbandman against being surprised by the waters, he compared this action with that of the animal who by barking gives notice of danger, and called this star the dog, the barker (Syrius). In the same manner he called stars of the crab, those which showed themselves when the fun, having reached the bounds of the tropic, returned backwards and fideways like the crab or Cancer; stars of the wild goat, those which, the sun being arrived at its greatest altitude, at the top of the horary gnomon, imitated the action of that animal who delights in climbing the highest rocks; stars of the balance, those which, the days and nights being of the same length, seemed to observe an equilibrium like that instrument; stars of the scorpion, those which were perceptible when certain regular winds brought a burning vapour like

like the poison of the scorpion. In the same manner he called by the name of rings and serpents the figured traces of the orbits of the stars and planets (51); and this was the general means of appellation of all the heavenly bodies, taken in groupes or individually, according to their connection with rural and terrestrial operations, and the analogies which every nation found them to bear to the labours of the field and the objects of their climate and soil.

" From this proceeding it refulted, that abject and terrestrial beings entered into association with the fuperior and powerful beings of the heavens : and this affociation became more rivetted every day by the very conftitution of language and the mechanism of the mind. Men would fay, by a natural metaphor: " The bull spreads upon the earth the " germins of fecundity (in fpring); and " brings back abundance by the revival of " vegetation. The lamb (or ram) delivers " the heavens from the malevolent Genii of " winter; and faves the world from the fer-" pent (emblem of the wet feafon). The " fcorpion pours out his venom upon the " earth, and spreads diseases and death, &cc." This

"This language, understood by every body, was at first attended with no inconvenience; but, in process of time, when the almanac had been regulated, the people, who could do without further observation of the skies, lost fight of the motive which led to the adoption of these expressions; and the allegory still remaining in the practices of life, became a fatal stumbling-block to the understanding and reason. Habituated to join to fymbols the ideas of their models, the mind finally confounded them; then those same animals which the imagination had raifed to heaven, descended again on the earth; but in this return, decked in the livery and invested with the attributes of the stars, they imposed upon their own authors. The people, imagining that they faw their Gods before them, found it a more easy task to offer up their prayers. They demanded of the ram of their flock, the influence which they expected from the celestial ram; they prayed the scorpion not to pour out his venom upon Nature; they revered the fish of the river, the crab of the sea, and the scarabeus of the slime; and by a series of corrupt,

corrupt, but inseparable analogies, they lost themselves in a labyrinth of consequent abfurdities.

"Such was the origin of this ancient and fingular worship of animals; such the train of ideas by which the character of the Divinity became common to the meanest of the brute creation; and thus was formed the vast, complicated, and learned theological system which, from the banks of the Nile, conveyed from country to country by commerce, war, and conquest, invaded all the old world; and which, modified by times, by circumstances, and by prejudices, is still to be found among a hundred nations, and subsists to this day as the secret and inseparable basis of the theology of those even who despise and reject it."

At these words, murmurs being heard in various groupes: "I repeat it," continued the orator. "People of Africa! hence, for example, has arisen among you the adoration of your Feteches, plants, animals, pebbles, bits of wood, before which your ancestors would never have been so absurd as to prostrate themselves, if they had not seen

feen in them talismans, partaking of the nature of the stars (52). Nations of Tartary! this is equally the origin of your Marmouzets, and of the whole train of animals with which your Chamans ornament their magic robes. This is the origin of those figures of birds and serpents, which all the favage nations, with mystic and facred ceremonies, imprint on their skin. Indians! it is in vain you cover yourselves with the veil of mystery: the hawk of your God Vichenou is but one of the thousand emblems of the fun in Egypt, and his incarnations in a fish, boar, lion, turtle, together with all his monstrous adventures, are nothing more than the metamorphofes of the fame star, which, passing successively through, the figns of the twelve animals *, was fupposed to assume their forms, and to act their astronomical parts (53). Japanese! your bull which breaks the egg of the world, is merely that of the heavens, which, in times of yore, opened the age of the creation, the equinox of Spring. Rabbins, Jews! that fame bull is the Apis worshipped in Egypt,

* The Zodiac.

R 2

and

and which your ancestors adored in the idol of the golden calf. It is also your bull, children of Zoroaster! that, sacrificed in the symbolic mysteries of Mithra, shed a blood fertilizing to the world. Laftly, your bull of the Apocalypse, Christians! with his wings, the fymbol of the air, has no other origin: your lamb of God, immolated, like the bull of Mithra, for the falvation of the world, is the felf-fame fun in the fign of the celestial ram, which, in a subsequent age, opening the equinox in his turn, was deemed to have rid the world of the reign of evil, that is to fay, of the ferpent, of the large fnake, the mother of winter and emblem of the Ahrimanes or Satan of the Perfians. your institutors. Yes, vainly does your imprudent zeal confign idolaters to the torments of the Tartarus which they have invented: the whole basis of your system is nothing more than the worship of the star of day, whose attributes you have heaped upon your chief personage. It is the sun which, under the name of Orus, was born, like your God, in the arms of the celestial virgin, and passed through an obscure, indigent,

digent, and destitute childhood, answering to the feafon of cold and frost. It is the fun, which, under the name of Ofiris, perfecuted by Typhon and the tyrants of the air, was put to death, laid in a dark tomb, the emblem of the hemisphere of winter, and which, rifing afterwards from the inferior zone to the highest point of the heavens, awoke triumphant over giants and the destroying angels. Ye priests! from whom the murmurs proceed, you wear yourselves its figns all over your bodies. Your tonfure is the disk of the sun; your stole its Zodiac (54); your rosaries the symbols of the stars and planets. Pontiffs and prelates! your mitre, your crosser, your mantle, are the emblems of Ofiris; and that crucifix of which you boast the mystery, without comprehending it, is the cross of Serapis, traced by the hands of Egyptian priests on the plan of the figurative world, which, paffing through the equinoxes and the tropics, became the emblem of future life and refurrection, because it touched the gates of ivory and horn through which the foul was to pass in its way to heaven."

R 3

Here

Here the doctors of the different groupes looked with aftonishment at one another, but none of them breaking silence, the orator continued.

"Three principal causes concurred to produce this confusion of ideas. First, the necessity, on account of the infant state of language, of making use of sigurative expressions to depict the relations of things; expressions that, passing afterwards from a proper to a general, from a physical to a moral sense, occasioned, by their equivocal and synonymous terms, a multiplicity of mistakes.

"Thus having at first said, that the sun surmounted and passed in its course through the twelve animals, they afterwards supposed that it combated, conquered, and killed them, and from this was composed the historical life of Hercules.

"Having faid that it regulated the period of rural operations, of feed time and of harvest; that it distributed the seasons, ran through the climates, swayed the earth, &c. it was taken for a legislative king, a conquering warrior, and hence they formed the stories

- Gangle

REVOLUTIONS OF EMPIRES. 247

Stories of Osiris, of Bacchus, and other similar Gods.

"Having said that a planet entered into a fign, the conjunction was denominated a marriage, adultery, incest (55): having farther said, that it was buried, because it sunk below the horizon, returned to light and gained its state of eminence, they gave it the epithet of dead, risen again, carried into heaven, &c.

" The fecond cause of confusion was the material figures themselves, by which thoughts were originally painted, and which, under the name of hieroglyphics, or facred characters, were the first invention of the mind. Thus to denote an inundation, and the necessity of preserving one's-self from it, they painted a boat, the vessel Argo; to express the wind, they painted a bird's wing; to specify the season, the month, they delineated the bird of passage, insect, or animal, which made its appearance at that epoch; to express winter they drew a hog, or a ferpent, which are fond of moist and miry places. The combination of these figures had also a meaning, and was substituted for R 4 words

words and phrases * (56). But as there was nothing fixed or precise in this fort of language, as the number of those figures and their combinations became excessive and burdensome to the memory, confusions and false interpretations were the first and obvious result. Genius having afterwards invented the more simple art of applying signs to sounds, of which the number is limited, and of painting the word instead of the thought, hieroglyphic pictures were, by means of alphabetical writing, brought into disuse; and from day to day their forgotten significations made way for a variety of illusions, equivoques, and errors.

"Lastly, the civil organization of the first states was a third cause of confusion. Indeed, when the people began to apply themselves to agriculture, the formation of the rural calendar requiring continual astronomical observations, it was necessary to chuse individuals whose province it should be to watch the appearance and setting of certain stars, to give notice of the return of the inundation, of particular winds and rains, and

the

^{*} See the examples cited in note (45).

that

that accompanied it, the people, plunged daily in the thickest darkness, became more fuperstitious and more slavish. Seeing human beings produce certain phenomena, announce. as it were at will, eclipses and comets, cure diseases, handle noxious serpents, they supposed them to have intercourse with celestial powers; and, to obtain the good or have the ills averted which they expected from those powers, they adopted these extraordinary human beings as mediators and interpreters. And thus were established in the very bosom of states facrilegious corporations of hypocritical and deceitful men, who arrogated to themselves every kind of power; and priests, being at once astronomers, divines, naturalists, physicians, necromancers, interpreters of the Gods, oracles of the people, rivals of kings or their accomplices, instituted under the name of religion an empire of myslery, which to this very hour has proved ruinous to the nations of mankind."

At these words the priests of all the groupes interrupted the orator; with loud cries, they accused him of impiety, irreligion, blasphemy, and were unwilling he should proceed: but the legislators having observed, that

that what he related was merely a narrative of historical facts; that if those facts were false or forged, it would be an easy matter to resute them; and that if every one were not allowed the perfect liberty to declare his opinion, it would be impossible to arrive at truth—he thus went on with his discourse.

"From all these causes, and the perpetual affociation of dissimilar ideas, there followed a strange mass of disorders in theology, morality, and tradition. And first, because the stars were represented by animals, the qualities of the animals, their likings, their sympathies, their aversions, were transferred to the Gods and supposed to be their actions. Thus the God schneumon made war against the God crocodile; the God wolf wanted to eat the God sheep; the God stork devoured the God serpent; and the Deity became a strange, whimsical, serocious being, whose idea missed the judgment of man, and corrupted both his morals and his reason.

"Again, as every family, every nation, in the spirit of its worship adopted a particular star or constellation for its patron, the affections and antipathies of the emblematical brute brute were transferred to the sectaries of this worship; and the partisans of the God dog were enemies to those of the God wolf; the worshippers of the God bull, abhorred those who sed upon beef, and religion became the author of combats and animosities, the sense-less cause of frenzy and superstition (57).

Farther, the names of the animal stars having, on account of this same patronage, been conferred on nations, countries, mountains, and rivers, those objects were also taken for Gods; and hence there arose a medley of geographical, historical, and mythological beings, by which all tradition was involved in confusion.

In fine, from the analogy of their supposed actions the planetary gods having been taken for men, heroes, and kings; kings and seroes took in their turn the actions of the Gods for models, and became, from imitation, warlike, conquering, sanguinary, proud, lascivious, indolent; and religion consecrated the crimes of despots, and perverted the principles of governments.

SECT.

SECT. IV. Fourth System: Worship of two principles, or Dualism.

"MEANWHILE the astronomical priests, enjoying in their temples peace and abundance, made every day fresh progress in the sciences; and the system of the world gradually displaying itself before their eyes, they started successively various hypotheses as to its agents and effects, which became so many systems of theology.

"The navigators of the maritime nations, and the caravans of the Afiatic and African Nomades, having given them a knowledge of the earth from the Fortunate Islands to Serica, and from the Baltic to the fources of the Nile, they discovered, by a comparison of the different Zones, the rotundity of the globe, which gave rife to a new theory. Observing that all the operations of Nature, during the annual period, were fummed up in two principal ones, that of producing and that of destroying; that upon the major part of the globe, each of these operations was equally accomplished from one to the other equinox; that is to fay, that during the fix months

months of fummer all was in a state of procreation and increase, and during the fix months of winter all in a state of languor and nearly dead, they supposed nature to contain two contrary powers always struggling with and refifting each other; and confidering in the same light the celestial sphere. they divided the pictures, by which they represented it into two halves or hemispheres, fo that those constellations which appeared in the fummer heaven formed a direct and fuperior empire, and those in the winter heaven an opposite and inferior one. Now as the fummer conftellations were accompanied with the feafon of long, warm, and unclouded days, together with that of fruits and harvests, they were deemed to be the powers of light, fecundity, and creation; and by transition from a physical to a moral fense, to be Genii, angels of science, beneficence, purity, virtue: in like manner the winter constellations, being attended with long nights and the polar fogs, were regarded as genii of darkness, destruction, death, and, by fimilar transition, as angels of wickedness, ignorance fin, vice. By this dispofal.

fal, heaven was divided into two domains, two factions; and the analogy of human ideas opened already a vast career to the slights of imagination; but a particular circumstance determined, if it did not occasion the mistake and illusion. (Consult Plate II. at the end of the volume.)

" In the projection of the celestial sphere drawn by aftronomical priefts (58), the Zodiac and the constellations disposed in a circular order, presented their halves in diametrical opposition: the winter hemisphere was adverse, contrary, opposite to, being the Antipodes of, that of summer. By the continued metaphor these words were converted into a moral fense, and the adverse angels and Genii became rebels and enemies (50). From that period the whole astronomical history of the constellations was turned into a political history; the heavens became a human state, where every thing happened as it does on earth. Now as the existing states, for the most part despotic, had their monarchs, and as the fun was the apparent fovereign of the skies, the summer hemifphere (empire of light), and its constellations (a nation of white angels), had for king

king an enlightened, intelligent, creative, benign God; and as every rebellious faction, must have its chief, the hemisphere of winter (the fubterraneous empire of darkness and woe), together with its stars (a nation of black angels, giants, or demons), had for leader a malignant Genius, whose part was affigned, by the different people of the earth, to that flar which appeared to them the most remarkable. In Egypt it was origiginally the Scorpion, the first fign of the Zodiac after the Balance, and the hoary chief of the wintry figns: then it was the bear or the polar ass, called Typhon, that is to say, deluge (60), on account of the rains which poured down upon the earth during the dominion of that star. In Persia, at a subsequent period (61), it was the ferpent, which, under the name of Ahrimanes, formed the basis of the system of Zoroaster; and it is the same, Christians and Jews, that is become your ferpent of Eve (the celestial origin), and that of the cross; in both cases the emblem of Satan, the great adversary of the Ancient of Days, fung by Daniel. In Syria it was the hog or wild boar, enemy of Adonis, because in that country the office of the Northern

pain;

pain; whence originated all religious acts of the fombre kind (63), tears, grief, mourning, felf-denial, blood-offerings, and cruel facrifices.

"From the same source slowed the division of terrestrial beings into pure and impure, sacred or abominable, according as their species was sound among the respective constellations of the two Gods, and made a part of their domains. This produced, on one hand, the superstitions of pollution and purification; and on the other, the pretended essicacious virtues of amulets and talismans.

"You now understand," continued the orator, addressing himself to the Indians, Persians, Jews, Christians and Mussulmans, "you
now understand the origin of those ideas of
combats and rebellion, which equally pervade your respective mythology. You perceive what is meant by white and black angels; by the cherubs and seraphs with heads
of an eagle, a lion or a bull; the Deus, devils or demons with horns of goats and tails
of snakes; the thrones and dominions, ranged
in seven orders or gradations, like the seven
spheres of the planets; all of them beings
acting

acting the same parts, partaking of the same attributes in the Vedas, the Bibles, or the Zendavesta; whether their chief be Ormuzd or Brama, Typhon or Chib-en, Michael or Satan; whether their form be that of giants with a hundred arms and feet of serpents, or that of Gods metamorphosed into lions, storks, bulls and cats, as they appear in the sacred tales of the Greeks and Egyptians: you perceive the successive genealogy of these ideas, and how in proportion to their remoteness from their sources, and as the mind of man became refined, their gross forms were purified, and reduced to a state less shocking and repulsive.

"But, just as the system of two opposite principles or deities originated in that of symbols; in the same manner you will find a new system spring out of this, to which it served in its turn as a soundation and support."

SECT. V. Mystical or moral worship, or the system of a future state.

"In reality, when the vulgar heard talk of a new heaven and another world, they foon

S 2 gave

gave a body to these sictions; they erected on it a solid stage and real scenes; and their notions of geography and astronomy served to strengthen, if they did not give rise to the allusion.

"On the one hand, the Phenician navigators, those who passed the pillars of Hercules to fetch the pewter of Thule and the amber of the Baltic, related that at the extremity of the world, the boundaries of the ocean (the Mediterranean), where the fun fets to the countries of Asia, there were fortunate Islands, the abode of an everlasting spring; and at a farther distance, hyperborean regions, placed under the earth (relatively to the tropics), where reigned an eternal night *. From these stories, badly understood, and no doubt confusedly related, the imagination of the people composed the Elysian Fields (64), delightful sports in a world below, having their heaven, their fun and their stars; and Tartarus, a place of darkness, humidity, mire, and chilling frost. Now, inasmuch as mankind, inquisitive about all that of which they

are

^{*} Nights of fix months duration.

are ignorant, and defirous of a protracted existence, had already exerted their faculties respecting what was to become of them after death; inasmuch as they had early reasoned upon that principle of life which animates the body, and which quits it without changing the form of the body, and had conceived to themselves airy substances, phantoms and shades, they loved to believe that they should resume in the subterranean world that life which it was so painful to lose; and this abode appeared commodious for the reception of those beloved objects which they could not prevail on themselves to renounce.

"On the other hand, the aftrological and philosophical priests told such stories of their heavens as perfectly quadrated with these sictions. Having, in their metaphorical language, denominated the equinoxes and solftices the gates of heaven, or the entrance of the seasons, they explained the terrestrial phenomena by saying, that through the gate of horn (first the bull, afterwards the ram), vivifying sires descended, which, in spring, gave life to vegetation, and aquatic Spirits, which caused, at the solfstice, the overslowing

S₃ of

of the Nile: that through the gate of ivery (originally the Bowman, or Sagittarius, then the Balance) and through that of Capricorn, or the urn, the emanations or influences of the heavens returned to their fource and reascended to their origin; and the milky Way which passed through the doors of the folftices, feemed to them to have been placed there on purpose to be their road and vehicle (65). The celestial scene farther prefented, according to their Atlas, a river (the Nile, defignated by the windings of the Hydra); together with a barge (the vessel Argo), and the dog Sirius, both bearing relation to that river of which they forboded the overflowing. These circumstances added to the preceding ones, increased the probability of the fiction; and thus, to arrive at Tartarus or Elyfium, fouls were obliged to cross the rivers Styx and Acheron, in the boat of Charon the ferryman, and to pass through the doors of horn and ivory, which were guarded by the mastiff Cerberus. At length a civil usage was joined to all these inventions, and gave them confistency.

" The

"The inhabitants of Egypt having remarked that the putrefaction of dead bodies became in their burning climate the fource of pestilence and diseases, the custom was introduced in a great number of states, of burying the dead at a distance from the inhabited districts, in the defert which lies at the West. To arrive there it was necesfary to cross the canals of the river in a boat, and to pay a toll to the ferryman, otherwise the body, remaining unburied, would have been left a prey to wild beafts. This custom suggested to her civil and religious legislators, a powerful means of affecting the manners of her inhabitants; and addressing savage and uncultivated men with the motives of filial piety and reverence for the dead, they introduced, as a necessary condition, the undergoing that previous trial which should decide whether the deceased deserved to be admitted upon the footing of his family honours into the black city. Such an idea too well accorded with the rest of the business not to be incorporated with it: it accordingly entered for an article into religious creeds, and hell had its Minos and its Radaman-S 4

SECT. VI. Sixth System: The animated world, or worship of the universe under different emblems.

"WHILE the nations were losing themfelves in the dark labyrinth of mythology and fables, the physiological priests, pursuing their studies and enquiries about the order and disposition of the universe, came to fresh results, and set up fresh systems of powers and moving causes.

"Long confined to fimple appearances, they had only feen in the motion of the stars an unknown play of luminous bodies, which they supposed to roll round the earth, the central point of all the spheres; but from the moment they had discovered the rotundity of our planet, the consequences of this first fact led them to other considerations, and from inference to inference they rose to the highest conceptions of astronomy and physics.

"In truth, having conceived the enlightened and simple idea, that the celestial globe is a small circle inscribed in the greater circle of the heavens, the theory of the concentral circles

eircles naturally presented itself to their hypothesis, to resolve the unknown circle of the terrestrial globe by known points of the celestial circle; and the measure of one or feveral degrees of the meridian, gave precifely the total circumference. Then taking for compass the diameter of the earth, a fortunate genius described with auspicious boldness the immense orbits of the heavens; and, by an unheard of abstraction, man, who scarcely peoples the grain of fand of which he is the inhabitant, embraced the infinite. distances of the stars, and launched himself into the abysis of space and duration. There a new order of the universe presented itself, of which the petty globe that he inhabited no longer appeared to him to be the center: this important part was transferred to the enormous mass of the sun, which became the inflamed pivot of eight circumjacent spheres, the movements of which were henceforward Submitted to exact calculation.

"The human mind had already done a great deal, by undertaking to resolve the disposition and order of the great beings of nature; but not contented with this first effort, it wished

alfo

also to resolve its mechanism, and discover its origin and motive principle. And here it is that, involved in the abstract and metaphyfical depths of motion and its first cause, of the inherent or communicated properties of matter, together with its successive forms and extent, or, in other words, of boundless space and time, these physiological divines lost themselves in a chaos of subtle argument and scholastic controversy.

"The action of the fun upon terrestrial bodies, having first led them to consider its fubstance as pure and elementary fire, they made it the focus and refervoir of an ocean of igneous and luminous fluid, which, under the name of ether, filled the universe, and nourished the beings contained therein. They afterwards discovered, by the analysis of a more accurate philosophy, this fire, or a fire fimilar to it, entering into the composition of all bodies, and perceived that it was the grand agent in that spontaneous motion, which in animals is denominated life, and in plants vegetation. From hence they were led to conceive of the mechanism and action of the universe, as of a homogeneous WHOLE, a fingle

REVOLUTIONS OF EMPIRES. 269

in place, had a reciprocal connection with each other (69); and of the world as a living fubstance, animated by the organical circulation of an ingneous or rather electrical stuid (70), which, by an analogy borrowed from men and animals, was supposed to have the sun for its heart (71).

"Meanwhile, among the theological philosophers, one sect beginning from these principles, the refult of experiment, faid: That nothing was annihilated in the world; that the elements were unperishable; that they changed their combinations, but not their nature; that the life and death of beings were nothing more than the varied modifications of the same atoms; that matter contained in itself properties, which were the cause of all its modes of existing; that the world was eternal (72), having no bounds either of space or duration. Others said: That the whole universe was God; and, according to them, God was at once effect and cause, agent and patient, moving principle and thing moved, having for laws the invariable properties which constitute fatality; and

and they defignated their idea sometimes by the emblem of PAN (the GREAT ALL); or of Jupiter, with a starry front, a planetary body, and feet of animals; or by the symbol of the Orphic egg *, whose yolk suspended in the middle of a liquid encompassed by a vault, represented the globe of the fun fwimming in ether in the middle of the vault of heaven (73); or by the emblem of a large found ferpent, figurative of the heavens, where they placed the first princicle of motion, and for that reason of an azure colour. Rudded with gold spots (the stars), and devotiring his tail, that is, re-entering into himfelf, by winding continually like the revolutions of the fpheres; or by the emblem of a inan, with his feet pressed and tied together to denote immutable existence, covered with a mantle of all colours, like the appearance of nature, and wearing on his head a sphere of gold (74), figurative of the sphere of the planets; or by that of another man fometimes Seated upon the flower of Lotos, borne upon the abyss of the waters, at others reclined upon

Vide Œdip. Ægypt. tom. II. p. 205.

a pile

REVOLUTIONS OF EMPIRES. a pile of twelve cushions, fignifying the twelve celeftial figns. And this, O nations of India. Japan, Siam, Thibet, and China, is the theologg, which, invented by the Egyptians, has, been transmitted down and preserved among yourselves, in the pictures you give of Brama, Beddou, Sommanacodom, and Omito. This. O ye Jews and Christians, is the counterpart of an opinion, of which you have retained a certain portion, when you describe God as the breath of life moving upon the face of the wal ters, alluding to the wind (75), which at the origin of the world, that is, at the departure of the spheres from the fign of the Crab, announced the overflowing of the Nile, and feemed to be the preliminary of creation."

SECT. VII. Seventh System: Worship of the Soul of the World, that is, the element of fire, the vital principle of the universe.

"BUT a third set of the theological philosophers, disgusted with the idea of a being at once effect and cause, agent and patient, and uniting in one and the same nature all contrary attributes, distinguished the moving principle from the thing moved; and laying

it

it down as a datum that matter was in itself inert, they pretended that it received its properties from a distinct agent of which it was only the envelope or case. Some made this agent the igneous principle, the acknowledged author of all motion; others made it the fluid called ether, because it was thought to be more active and fubtile: now, as they denominated the vital and motive principle in animals, a foul, a spirit; and as they always reasoned by comparison, and particularly by comparison with human existence, they gave to the motive principle of the whole universe the name of soul, intelligence, fpirit; and God was the vital spirit, which, diffused through all beings, animated the vast body of the world. This idea was reprefented fometimes by You-piter, effence of motion and animation, principle of existence, or rather existence itself (76); at other times by Vulcan, or Phtha, elementary principle of fire, or by the altar of Vesta, placed centrally in her temple, like the fun in the fpheres; and again by Kneph, a human being dreffed in deep blue, holding in his hands a sceptre and a girdle (the Zodiac), wearing on his

his head a cap with feathers, to express the fligacity of thought, and producing from his

mouth the great egg (77).

"As a consequence from this system, every being containing in itself a portion of the igneous or etherial fluid, the universal and common mover, and that fluid, foul of the world, being the Deity, it followed that the fouls of all beings were a part of God himfelf, partaking of all his attributes, that is, being an indivisible, simple, and immortal fubstance: and hence is derived the whole fystem of the immortality of the foul, which at first was eternity (78). Hence also its transmigrations known by the name of metempsychosis, that is to say, passage of the vital principle from one body to another; an idea which forung from the real transmigration of the material elements. Such, O Indians; Budfoists, Christians, Mussulmans, was the origin of all your ideas of the spirituality of the foul! Such was the fource of the reveries of Pythagoras and Plato, your institutors, and who were themselves but the echoes of another, the last sect of visionary philosophers that it is necessary to examine.

T

SECT.

SECT. VIII. Eighth system: The world a machine: worship of the Demi-ourgos, or supreme artiscer.

" HITHERTO the theologians, in exercifing their faculties on the detached and fubtile fubstances of ether and the igneous principle, had not however ceased to treat of existences palpable and perceptible to the fenfes, and their theology had contihued to be the theory of physical powers, placed fometimes exclusively in the stars, and fometimes diffeminated through the universe. But at the period at which we are arrived, fome superficial minds, losing the chain of ideas which had directed these profound enquiries, or ignorant of the facts which ferved as their bafis, rendered abortive all the refults that had been obtained from them, by the introduction of a strange and novel chimera. They pretended that the universe, the heavens, the stars, the fun, differed in no respect from an ordinary machine; and applying to this hypothesis a comparison drawn from the works of art, they erected an edifice of the most whimsical sophisms. "A machine,"

faid they, "cannot form itself, there must be "a workman to construct it; its very exist"ence implies this. The world is a machine:

" it has therefore an artificer (79)."

" Hence the Demi-ourgos, or supreme artificer, the autocrator and fovereign of the universe. It was in vain that the ancient philosophy objected to the hypothesis, that this artificer did not stand in less need of parents and an author, and that a scheme, which added only one link to the chain by taking the attribute of eternity from the world and giving it to the creator, was of little value. These innovators, not contented with a first paradox, added a fecond, and applying to their artificer the theory of human understanding, pretended that the Demi-ourgos fathioned his machine upon an archetype or idea extant in his mind. In a word, just as their masters, the natural philosophers, had placed the primum mobile in the sphere of the fixed stars, under the appellation of intelligence and reason, fo their apes, the spiritualists, adopting the same principle, made it an attribute of the Demi-ourgos, representing this being as a distinct fubstance, necessarily existing, to which

T 2

they applied the terms of Mens or Logds, in other words, understanding and speech. Separately from this being, they held the existence of a folar principle, or foul of the world, which, taken with the preceding, made three gradations of divine personages; first, the Demi-ourgos, or supreme artificer; secondly, the Logos, understanding or speech: and thirdly, the spirit or soul of the world (80). And this, O Christians, is the fiction on which you have founded your doctrine of the Trinity; this is the system, which, born a Heretic in the Egyptian temples, transmitted a Heathen to the schools of Greece and Italy, is now Catholic or Orthodox by the conversion of its partifans, the disciples of Pythagoras and Plato, to Christianity.

"Thus the Deity, after having been originally confidered as the fensible and various action of meteors and the elements; then as the combined power of the stars, considered in their relation to terrestrial objects; then as those terrestrial objects themselves, in confequence of consounding symbols with the things they represented; then as the complex power of Nature, in her two principal operations

operations of production and destruction; then as the animated world without diffinction of agent and patient, cause and effect; then as the folar principle or element of fire acknowledged as the fole cause of motionthe Deity, I fay, confidered under all these different views, became at last a chimerical and abstract being; a scholastic subtlety of fubstance without form, of body without figure; a true delirium of the mind beyond the power of reason at all to comprehend. But in this its last transformation, it seeks in vain to conceal itself from the senses: the feal of its origin is indelibly stamped upon it. All its attributes, borrowed from the physical attributes of the universe, as immensity, eternity, indivisibility, incomprehensibleness; or from the moral qualities of man, as goodness, justice, majesty; and its very names (81), derived from the physical beings which were its types, particularly the fun, the planets, and the world, present to us continually, in spite of those who would corrupt and disguife it, infallible marks of its genuine nature.

"Such is the chain of ideas through which T 3 the

the human mind had already run at a period anterior to the politive recitals of history; and fince their fystematic form proves them to have been the refult of one scene of study. and investigation, every thing inclines us to place the theatre of investigation, where its primitive elements were generated, in Egypt. There their progress was rapid, because the idle curiofity of the theological philosophers had, in the retirement of the temples, no other food than the enigma of the universe, which was ever present to their minds; and because, in the political diffentions which long disunited that country, each state had its college of priefts, who, being in turns auxiliaries or rivals, hastened by their difputes the progress of science and discovery a(82).

"On the borders of the Nile there happened at that distant period, what has since been repeated all over the globe. In proportion as each system was formed, it excited by its novelty quarrels and schisms: then, gaining credit even by persecution, it either destroyed anterior ideas, or incorporated itfelf with and modified them. But political institutions inftitutions taking place, all opinions, by the aggregation of states and mixture of different people, were at length confounded; and the chain of ideas being lost, theology, plunged in a chaos, became a mere logogryph of old traditions no longer understood. Religion, losing its object, was now nothing more than a political expedient by which to rule the credulous vulgar; and was embraced either by men credulous themselves and the dupes of their own visions, or by bold and energetic spirits, who formed vast projects of ambition."

SECT. IX. Religion of Moses, or worship of the soul of the world (You-piter).

"Or this latter description was the Hebrew legislator, who, desirous of separating his nation from every other, and of forming a distinct and exclusive empire, conceived the design of taking for its basis religious prejudices, and of erecting round it a sacred rampart of rites and opinions. But in vain did he proscribe the worship of symbols, the reigning religion, at that time, in Lower Egypt and Phenicia (83): his God was not

on that account the less an Egyptian God, of the invention of those priests whose disciple Moses had been; and Yaboub (84), detected by his very name, which means effence of beings, and by his fymbol, the fiery bush, is nothing more than the foul of the world, the principle of motion, which Greece shortly after adopted under the same denomination in her You-piter, generative principle, and under that of Ei, existence (85); which the Thehans consecrated by the name of Kneph; which Sais worshipped under the emblem of Is veiled, with this inscription, I am all that has been, all that is, and all that will be, and no mortal has drawn afide my veil; which Pythagoras honoured under the appellation of Vesta, and which the Stoic philosophy defined with precision, by calling it the principle of In vain did Moses wish to blot from fire. his religion whatever could bring to remembrance the worship of the stars; a multiplicity of traits in spite of his exertions still remained to point it out: the feven lamps of the great candleftick, the twelve stones or figns of the Urim of the high-prieft, the feast of the two equinoxes, each of which at

that epocha formed a year, the ceremony of the lamb or celestial ram, then at its sisteenth degree; lastly, the name of Osiris even preferved in his song (86), and the ark or coffer, an imitation of the tomb in which that God was inclosed; all these remain to bear record to the genealogy of his ideas, and their derivation from the common source."

SECT. X. Religion of Zoroafter.

"ZORDASTER was also a man of the same bold and energetic stamp, who, five centuries after Moses, and in the time of David, revived and moralized among the Medes and Bactrians the whole Egyptian fystem of Osiris, under the names of Ormuzd and Ahrimanes. He called the reign of fummer, virtue and good; the reign of winter, fin and evil; the renovation of nature in fpring, creation; the revival of the spheres in the fecular periods of the conjunction, refurrection; and his future life, hell, paradife, were the Tartarus and Elysium of the ancient astrologers and geographers; in a word, he only confecrated the already existing reyeries of the mystic system."

SECT.

SECT. XI. Budoifm, or religion of the Sumaneans.

In the same rank must be included the promulgators of the sepulchral doctrine of the Samaneans, who, on the basis of the metempfychofis, raifed the misanthropic system of felf-renunciation and denial, who, laying it down as a principle, that the body is only a prison where the foul lives in impure confinement; that life is but a dream, an illufion, and the world a place of paffage to another country, to a life without end; placed virtue and perfection in absolute insensibility, in the abnegation of physical organs, in the annihilation of all being: whence resulted the fasts, penances, macerations, solitude, contemplations, and all the deplorable practices of the mad-headed Anchorets."

SECT. XII. Braminism, or the Indian System.

"FINALLY, of the same cast were the founders of the Indian system, who, refining after Zoroaster upon the two principles of creation and destruction, introduced an intermediate one, that of conservation, and upon their trinity in unity, of Brama, Chiven, and Bichenou,

Bichenou, accumulated a multitude of traditional allegories, and the alembicated subtleties of their metaphysics."

"These are the materials which, scattered through Asia, there existed for many ages, when, by a fortuitous course of events and circumstances, new combinations of them were introduced on the banks of the Euphrates, and on the shores of the Mediterranean."

SECT. XIII. Christianity, or the allegorical worship of the Sun, under the cabalistical names of Chris-en or Christ, and Yês-us or Jesus.

"In constituting a separate people, Moses had vainly imagined that he should guard them from the influence of every foreign idea: but an invincible inclination, sounded on affinity of origin, continually called back the Hebrews to the worship of the neighbouring nations; and the relations of commerce that necessarily subsisted between them, tended every day to strengthen the propensity. While the Mosaic institution maintained its ground, the coercion of government and the laws, was a considerable obstacle to the inlet

Aschoole

of innovations; yet even then the principal places were full of idols, and God the fun had his chariot and horses painted in the palaces of kings, and in the very temple of Yahouh: but when the conquests of the kings of Nineveh and Babylon had diffolved the bands of public power, the people left to themselves, and solicited by their conquerors, no longer kept a restraint on their inclinations, and profane opinions were openly professed in Judea. At first the Assyrian colonies, placed in the fituation of the old tribes, filled the kingdom of Samaria with the dogmas of the Magi, which foon penetrated into Judea. Afterwards Jerusalem having been subjugated, the Egyptians, Syrians and Arabs, entering this open country, introduced their tenets, and the religion of Moses thus underwent a second alteration. In like manner the priefts and great men, removing to Babylon, and educated in the science of the Chaldeans, imbibed, during a refidence of feventy years, every principle of their theology, and from that moment the dogmas of the evil Genius (Satan), of the archangel Michael (87), of the Ancient of Days

Days (Ormuzd), of the rebellious angels, the celestial combats, the immortality of the soul, and the refurrection, dogmas unknown to Moses, or rejected by him, fince he observes a perfect filence respecting them, became naturalized among the Jews.

- "On their return to their country, the emigrants brought back with them thefe ideas; and at first the innovations occasioned disputes between their partisans, the Pharifees, and the adherents to the ancient national worship, the Sadducees: but the former, feconded by the inclination of the people, and the habits they had already contracted, and supported by the authority of the Persians, their deliverers, finally gained the ascendancy, and the theology of Zoroafter was confecrated by the children of Mofes (88).
 - " A fortuitous analogy between two leading ideas, proved particularly favourable to this coalition, and formed the basis of a last fystem, not less surprising in its fortune than in the causes of its formation.
 - " From the time that the Affyrians had destroyed the kingdom of Samaria, some sagacious

gacious spirits foresaw, announced, and predicted the same sate to Jerusalem: and all
their predictions were stamped by this particularity, that they always concluded with
prayers for a happy re-establishment and regeneration, which were in like manner spoken
of in the way of prophesies. The enthusiasm
of the Hierophants had sigured a royal deliverer, who was to re-establish the nation in
its ancient glory: the Hebrews were again to
become a powerful and conquering people,
and Jerusalem the capital of an empire that
was to extend over the whole world.

"Events having realized the first part of those predictions, the ruin of Jerusalem, the people clung to the second with a sirmness of belief proportioned to their missortunes; and the afflicted Jews waited with the impatience of want and of desire for that victorious king and deliverer that was to come, in order to save the nation of Moses, and restore the throne of David.

"The facred and mythological traditions of precedent times had spread over all Asia a tenet perfectly analogous. A great mediator, a final judge, a future saviour, was spoken of, who.

who, as king, God, and victorious legislator. was to restore the golden age upon earth (80). to deliver the world from evil, and regain for mankind the reign of good, the kingdom of. peace and happiness. These ideas and expressions were in every mouth, and they confoled the people under that deplorable state. of real fuffering into which they had been, plunged by fuccessive conquests and conqueross, and the barbarous despotism of their, governments. This refemblance between, the oracles of different nations and the predictions of the prophets, excited the attention of the Jews; and the prophets had doubtless been careful to insuse into their pictures. the spirit and style of the facred books employed in the Pagan mysteries. The arrival of a great ambassador, of a final saviour. was therefore the general expectation in Judea, when at length a fingular circumstance was made to determine the precise period of his coming.

It was recorded in the facred books of the Perfians and the Chaldeans, that the world, composed of a total revolution of twelve thousand periods, was divided into two partial revolutions, of which one, the age and reign of good, was to terminate at the expiration of fix thousand, and the other, the age and reign of evil, at the expiration of another fix thousand.

"Their first authors had meant by these recitals, the annual revolution of the great celestial orb (a revolution composed of twelve months or figns each divided into a thousand parts), and the two systematic periods of winter and fummer, each confifting equally. of fix thousand. But these equivocal expresfions having been erroneously explained, and having received an absolute and moral, in-Read of their astrological and physical fense, the refult was, that the annual was taken for a secular world, the thousand periods for a thousand years; and judging, from the appearance of things, that the present was the age of misfortune, they inferred that it would terminate at the expiration of the fix thousand pretended years (90).

"Now, according to the Jewish computation, six thousand years had already nearly elapsed since the supposed creation of the world (91). This coincidence produced considerable

REVOLUTIONS OF EMPIRES. 280 confiderable fermentation in the minds of the people. Nothing was thought of but the approaching termination. The Hierophants were interrogated, and their facred books examined. The great Mediator and final Judge was expected, and his advent defired, that an end may be put to fo many calamities. This was fo much the fubiect of conversation, that some one was said to have feen him, and a rumour of this kind was all that was wanting to establish a general certainty. The popular report became a demonstrated fact; the imaginary being was realized; and all the circumstances of mythological tradition being in fome manner connected with this phantom; the refult was an authentic and regular hiftory, which from henceforth it was blafphemy to doubt.

"In this mythological history the following traditions were recorded: "That, "in the beginning, a man and a woman bad, "by their fall, brought fin and evil into the "world." (Examine plate II.)

"By this was denoted the astronomical fact of the celestial Virgin, and the herdsinan U (Bootes)

(Bootes) who, fetting heliacally at the autumnal equinox, refigned the heavens to the wintry constellations, and seemed, in sinking below the horizon, to introduce into the world the genius of evil, Ahrimanes, represented by the constellation of the Serpent (92.)

"That the woman had decoyed and seduced the man (93)."

"And in reality, the Virgin setting first, appears to draw the Herdsman (Bootes) after her.

"That the woman had tempted him, by offering him fruit pleasant to the sight and good for food, which gave the knowledge of good and evil."

"Manifestly alluding to the Virgin, who is depicted holding a bunch of fruit in her hand, which she appears to extend towards the Herdsman: in like manner the branch, emblem of autumn, placed in the picture of Mithra (94) on the front of winter and summer, seems to open the door, and to give the knowledge, the key, of good and evil.

"That this couple had been driven from the celestial garden, and that a cherub with a flaming.

"And when the Virgin and the Herdfman fink below the Western horizon, Perseus rises on the opposite side (95), and sword in hand, this Genius may be said to drive them from the summer heaven, the garden and reign of fruits and slowers.

"That from this virgin would be born, would spring up a shoot, a child, that should crush the serpent's head, and deliver the world from sin."

"By this was denoted the Sun, which, at the period of the summer solstice, at the precise moment that the Persian Magi drew the horoscope of the new year, squad itself in the bosom of the Virgin, and which, on this account, was represented in their astrological pictures in the form of an infant suckled by a chaste virgin (96), and afterwards became, at the vernal equinox the Ram or Lamb, conqueror of the constellation of the Serpent, which disappeared from the heavens.

"That in his infancy, this restorer of the U 2 "divine

" divine or celeftial nature, would lead a mean, "bumble, obscure and indigent life."

"By which was meant, that the winter fun was humbled, depressed below the horizon, and that this first period of his four ages, or the seasons, was a period of obscurity and indigence, of fasting and privation."

"That being put to death by the wicked, he would gloriously rise again, ascend from helf into beaven, where he would reign for ever."

"By these expressions was described the life of the same Sun, who, terminating his career at the winter solstice, when Typhon and the rebellious angels exercised their sway, seemed to be put to death by them; but shortly after revived and rose again (97) in the sirmament, where he still remains.

"These traditions went still farther, specifying his astrological and mysterious names; maintaining that he was called sometimes Chris or Conservator (98); and hence the Hindoo God, Chris-en, or Christna; and the Christian Chris-tos, the son of Mary. That at other times he was called Yes, by the union

union of three letters, which, according to their numerical value, form the number 608, one of the folar periods (99). And behold, O Europeans, the name which, with a Latin termination has become your Yes-us or Jesus; the ancient and cabalistical name given to young Bacchus, the clandestine son of the virgin Minerva, who in the whole history of his life, and even in his death, calls to mind the history of the God of the Christians; that is, the star of day, of which they are both of them emblems."

At these words a violent murmur arose on the part of the Christian groupes; but the Mahometans, the Lamas and the Hindoos having called them to order, the orator thus concluded his discourse.

"You are not to be told," faid he, "in what manner the rest of this system was formed in the chaos and anarchy of the three first centuries; how a multiplicity of opinions divided the people, all of which were embraced with equal zeal and retained with equal obstinacy, because alike founded on ancient tradition, they were alike facred. You know how, at the end of three centu-

U 3 ries,

turies, government having espoused one of these sects, made it the orthodox religion; that is to say, the predominant religion, to the exclusion of the rest, which, on account of their inferiority, were denominated heresies; how, and by what means of violence and seduction this religion was propagated and gained strength, and afterwards became divided and weakened; how, six centuries after the innovation of Christianity, another system was formed out of its materials and those of the Jews, and a political and theological empire was created by Mahomet at the expence of that of Moses and the vicars of Jesus.

"Now, if you take a retrospect of the whole history of the spirit of religion, you will find, that in its origin it had no other author than the sensations and wants of man: that the idea of God had no other type, no other model, than that of physical powers, material existences, operating good or evil, by impressions of pleasure or pain on sensible beings. You will find that in the formation of every system, this spirit of religion pursued the same track, and was uniform

form in its proceedings; that in all, the dogma never failed to represent, under the name God, the operations of nature, and the passions and prejudices of men; that in all, morality had for its fole end, defire of happiness and aversion to pain; but that the people and the majority of legislators, ignorant of the true road that led thereto, invented false, and therefore contrary ideas of virtue and vice, of good and evil; that is, of what renders man happy or miserable. You will find, that in all, the means and causes of propagation and establishment exhibited the same scenes, the same passions, and the fame events, continual disputes about words, false pretexts for inordinate zeal, for revolutions, for wars, lighted up by the ambition of chiefs, by the chicanery of promulgators, by the credulity of profelytes, by the ignorance of the vulgar, and by the grasping cupidity and the intolerant pride of In short, you will find that the whole all. history of the spirit of religion, is merely that of the fallibility and uncertainty of the human mind, which, placed in a world that it does not comprehend, is yet defirous of folv-

U 4

ing

ing the enigma; and which, the aftonished spectator of this mysterious and visible prodigy, invents causes, supposes ends, builds systems; then, finding one defective, abandons it for another not less vicious; hates the error that it has renounced, is ignorant of the new one that it adopts; rejects the truth of which it is in pursuit, invents chimeras of heterogeneous and contradictory beings, and, ever dreaming of wisdom and happiness, loses itself in a labyrinth of torments and illusions."

CHAP.

CHAP. XXIII.

END OF ALL RELIGIONS THE SAME.

Thus spoke the orator, in the name of those who had made the origin and genea-logy of religious ideas their peculiar study.

The theologians of the different systems now expressed their opinions of this discourse. " It is an impious representation," faid some, " which aims at nothing less than the sub-" version of all belief, the introducing in-" fubordination into the minds of men, and " annihilating our power and ministry."-" It is a romance," faid others, " a tiffue of " conjectures, fabricated with art, but desti-" tute of foundation."-The moderate and prudent faid, " Supposing all this to be true, " where is the use of revealing these myste-" ries? Our opinions are doubtless pervaded " with errors, but those errors are a neces-" fary curb on the multitude. The world, " has gone on thus for two thousand years; " why should we now alter its course?" The

The murmur of disapprobation, which never fails to arise against every kind of innovation, already began to increase, when a numerous groupe of plebeians and untaught men of every country and nation, without prophets, without doctors, without religious worship, advancing in the sand, attracted the attention of the whole assembly; and one of them, addressing himself to the legislators, spoke as follows:

" Mediators and umpires of nations! The Arange recitals that have been made during the whole of the present debate, we never till this day heard of; and our understanding, aftonished and bewildered at such a multitude of doctrines, some of them learned, others abfurd, and all unintelligible, remains in doubt and uncertainty. One reflection however has struck us: in reviewing fo many prodigious facts, fo many contradictory affertions, we could not avoid asking ourselves, Of what importance to us are all these discussions? Where is the necessity of our knowing what happened five or fix thousand years ago, in countries of which we are ignorant, among men who will ever . be

be unknown to us? True or false, of what importance is it to us to know whether the world has existed six thousand years or twenty thousand; whether it was made of something or of nothing; of itself, or by an artificer, equally in his turn requiring an author? What! uncertain as we are of what is passing around us, shall we pretend to ascertain what is transacting in the sun, the moon, and imaginary spaces? Having forgotten our own infancy, shall we pretend to know the infancy of the world? Who can attest what he has never seen? Who can certify the truth of what no one comprehends?

"Beside, what will it avail as to our existence, whether we believe or reject these chimeras? Hitherto neither our fathers nor ourselves have had any idea of them, and yet we do not perceive that on that account we have experienced more or less sun, more or less subsistence, more or less good or evil.

"If the knowledge of these things be necessary, how is it that we have lived as happily without it as those whom it has so much disquieted? If it be superfluous, why should we now take upon ourselves the burthen?"

then?"—Then addressing himself to the doctors and theologians: "How can it be required of us, poor and ignorant as we are, whose every moment is scarcely adequate to the cares of our substitutione and the labours of which you reap the profit; how can it be required of as to be versed in the numerous histories you have related, to read the variety of books which you have quoted, and to learn the different languages in which they are written? If our lives were protracted to a thousand years, scarcely would it be sufficient for this purpose."

"It is not necessary," faid the doctors, that you should acquire all this science:

we possess it in your stead."

"Meanwhile," replied these children of simplicity, "with all your science, do you agree among yourselves? What then is its utility? Besides, how can you answer for us? If the faith of one man may be the substitute of the faith of many, what need was there that you should believe? Your fathers might believe for you; and that would have been the more reasonable, since they were the eye-witnesses upon whose credity ou depend. Lastly, what is this circumstance

- "To believe wrong respecting it would be offensive to God," said the doctors.
- "How do that?" cried the children of him the?
- "From our teriptures," replied the doc-
- "We do not understand them," rejoined the simple men.
- "We understand them for you," said the doctors.
- "There lies the difficulty," refumed fimple men. "By what right have you pointed yourselves mediators between God and us?"
- "By the command of God," faid the doctors.
- "Give us the proof of that command," faid the simple men.
 - " It is in our scriptures," faid the doctors."
- "We do not understand them," answered the simple men; nor can we understand how a just God can place you over our heads. Why does our common Father require

quire us to believe the same propositions with a less degree of evidence? He has spoken to you; be it so; he is infallible, he cannot deceive you. But we are spoken to by you; and who will assure us that you are not deceived, or that you are incapable of deceiving? If we are mistaken, how can it consist with the justice of God, to condemn us for the neglect of a rule with which we were never acquainted?"

"He has given you the law of nature," faid the doctors.

"What is the law of nature?" faid the fimple men. "If this law be fufficient, why does he give us another? If it be infufficient, why did he give us that?"

"The judgments of God," replied the doctors, " are mysterious; his justice is not restrained by the rules of human justice."

"If justice with him and with us," said the simple men, " mean a different thing, what criterion can we have to judge of his justice? And once more, to what purpose all these laws? What end does he propose by them?"

"To render you more happy," replied a doctor, "by rendering you better and more virtuous.

virtuous. God has manifested himself by fo many oracles and prodigies to teach mankind the proper use of his benefits, and to dissuade them from injuring each other."

"If that be the case," said the simple men, "the studies and reasonings you told us of are unnecessary: we want nothing but to have it clearly made out to us, which is the religion that best sulfils the end that all propose to themselves."

Instantly, every groupe boasting of the superior excellence of its morality, there arose among the partisans of the different systems of worship, a new dispute more violent than any preceding one. "Ours," faid the Mahometans, "is the purest morality, which teaches every virtue useful to men and acceptable to God. We profess justice, disinterestedness, resignation, charity, almsgiving, and devotion. We torment not the soul with superstitious fears; we live free from alarm, and we die without remorse."

"And have you the presumption," replied the Christian priests, " to talk of morality; you whose chief has practised licentiousness, and preached doctrines that are a scandal to all purity, and the leading principle of whose

whose religion is homicide and war strop the truth of this we appeal to experience? For twelve centuries part your fanaticiff has never ceased to spread desolation and carnage through the nations of the earth ? and that Asia, once so flourishing, now languishes in infignificance and barbarffin. is ascribable to your doctrine; to that doctrine, the friend of ignorance, the enemy of all instruction, which, on the one hand? confecrating the most absolute despotisting in him who commands, and on the other: imposing the most blind and passive obedience on those who are governed, has benumbed all the faculties of man, and plunged nations in a state of brutality.

How different is the case with our sublime and celestial morality! It is the that drew the earth from its primitive barbarity, from the absurd and cruel superstitions of idolatry, from human sacrifices (100), and the orgics of Pagan mystery: it is the that has purified the manners of then, proscribed incest and adultery, polished savage nations, abolished slavery, introduced new and unknown virtues to the world, universal charity, the equality.

of mankind in the eyes of God, forgiveness and forgetfulness of injuries, extinction of the passions, contempt of worldly greatness, and, in short, taught the necessity of a life persectly holy and spiritual."

"We admire," faid the Mahometans, " the ease with which you can reconcile that evangelical charity and meekness of which you so much boast, with the injuries and outrages that you are continually exercifing towards your neighbour. When you criminate with fo little ceremony the morals of the great character revered by us, we have a fair opportunity of retorting upon you in the conduct of him whom you adore: but we difdain fuch advantages, and, confining ourselves to the real object of the question, we maintain, that your gospel morality is by no means characterised by the perfection which you ascribe to it. It is not true, that it has introduced into the world new and unknown virtues: for example, the equality of mankind in the eyes of God, and the fraternity and benevolence which are the confequence of this equality, were tenets formerly professed by the sect of Hermetics and Sama-

A

neans

neans (101), from whom you have your descent. As to sorgiveness of injuries, it had been taught by the Pagans themselves; but in the latitude you give to it, it ceases to be a virtue, and becomes an immorality and a crime. Your boafted precept, to him that strikes thee, on thy right cheek turn the other also, is not only contrary to the feelings of man, but a flagrant violation of every principle of juffice; it emboldens the wicked by impunity, degrades the virtuous by the fervility to which it subjects them; delivers up the world to disorder and tyranny, and disfolves the bands of fociety: fuch is the true spirit of your doctrine. The precepts and parables of your gospel also never represent God other than as a despot, acting by no rule of equity; than as a partial father, treating a debauched and prodigal for with greater favour than his obedient and virtuous children; than as a capricious mafter, giving the fame wages to him who has wrought but one hour, as to those who have borne the Thurthen and breat be the day, and preferring the 12th comers to the first . In theri, you morality throughout is unfriently to human intercourfe.

intercourse, a code of misanthropy, calculated to give men a disgust for life and society, and

attach them to folitude and celibacy.

"With respect to the manner in which you have practifed your boafted doctrine, we in our turn appeal to the testimony of fact, and ask: Was it your evangelical meekness and forbearance which excited those endless wars among your fectaries, those atrocious perfecutions of what you called heretics, those crusades against the Arians, the Manicheans and the Protestants; not to mention those which you have committed against us, nor the facrilegious affociations still sublisting among you, formed of men who have fworn to perpetuate them *? Was it the charity of your gospel that led you to exterminate whole nations in America, and to destroy the empires of Mexico and Peru; that makes you still desolate Africa, the inhabitants of which you fell like cattle, notwithstanding the abolition of flavery that you pretend your religion has effected; that makes you ravage

India

The Oath taken by the Knights of the Order of Malta, is to kill, or make the Mahometass prisoners, for the glory of God.

India whose domains you usurp; in short, is it charity that has prompted you for three centuries past to disturb the peaceable inhaviorants of three continents, the most prudent of whom, those of Japan and China, have been constrained to banish you from their country, that they might escape your chains and recover their domestic tranquillity?"

Here the Bramins, the Rabbins, the Bonzes, the Chamans, the priests of the Molucca Islands and of the coast of Guinea, overwhelming the Christian doctors with reproaches, cried: "Yes, these men are robbers and hypocrites, preaching simplicity to enveigle considence; humility, the more easy to enslave; poverty, in order to appropriate all riches to themselves; they promise another world the better to invade this; and, while they preach toleration and charity, they commit to the slames, in the name of God, those who do not worship him exactly as they do."

Lying priests," retorted the millionaries,
"it is you who abuse the credulity of ignorant nations, that you may bend them to
your yoke: your ministry is the art of impos-

REVOLUTIONS OF EMPIRES. ture and deception : you have made religion a fystem of avarice and cupidity : you feign to have correspondence with spirits, and the oracles they iffue are your own wills; you pretend to read the flars, and your defires only are what deftiny decrees: you make idols speak, and the Gods are the mere instruments of your passions: you have invented facrifices and libations for the fake of the profit you would thus derive from the milk of the flocks, and the flesh and fat of victims; and under the cloak of piety you devour the offerings made to Gods who cannot eat, and the substance of the people, obtained by industry and toil."

"And you," replied the Bramins, the Bonzes, and the Chamans, "fell to the credulous furvivor vain prayers for the fouls of his dead relatives. With your indulgences and abfolutions you have arrogated to yourselves the power and functions of God himself: and making a traffic of his grace, you have put heaven up to auction, and have founded, by your system of expiation, a tariff of crimes that has perverted the consciences of men (102)."

X 3 "Add

"Add to this," faid the Imans, "that with these men has originated the most insidious of all wickedness, the absurd and improus obligation of recounting to them the most impenetrable secrets of actions, of thoughts, of velleites, (confession); by means of which their insolent curiosity has carried its inquisition even to the sacred fanctuary of the nuptial bed (103), and the inviolable asylum of the heart."

By thus reproaching each other, the chiefs of the different worthips revealed all the crimes of their ministry, all the hidden vices of their profession, and it appeared that the spirit, the fystem of conduct, the actions and manners of priefts were, among all nations, uniformly the same: that, every where they had formed fecretaffociations, corporations of individuals, enemies to the rest of the society (104):that they had attributed to themselves certain prerogatives and immunities, in order to be exempt from the burthens which fell upon the other classes :- that they shared neither the toil of the labourer, nor the perils of the foldier, nor the viciflitudes of the merchant:-that they led a life of celibacy,

to avoid domestic inconveniences and cares that, under the garb of poverty, the found the fecret of becoming rich, and of procuring every enjoyment; -that under the name of mendicants, they collected imposts more confiderable than those paid to princes:-that under the appellation of gifts and offerings, they obtained a certain revenue unaccompanied with trouble or expence :- that upon the pretext of feclution and devotion, they lived in indolence and licentiousness: that they had made alms a virtue, that they might fubfift in comfort upon the labour of other men:-that they had invented the ceremonies of worship to attract the reverence of the people, calling themselves the mediators and interpreters of the Gods, with the fole view of affuming all his power; and that for this purpole, according to the knowledge or ignorance of those upon whom they had to work, they made themselves, by turns, astrologers, casters of planets, augurers, magicians (106), necromancers, quacks, courtiers, confessors of princes, always aiming at influence for their own exclusive advantage: -that fometimes they had exalted the prerogative rogative of kings, and held their persons to le facred, to obtain their favous or participate in their power: that at others they had decried this doctrine and preached the murder of tyrants (referving it to themselves to fpecify the tyranny), in order to be revenged of she flights and disobedience they had experienced from them: arthut at all times they had called by the name of impiety what proviod injurious to their intefest; had opposed public instruction, that they might monopoline science, and, in short, had universally found the fegret of living in tranquillity amida the aparchy they occasioned; fecurd, under the despotism they fanctioned; in indolence, amidft the industry they recommended; and in abundance, in the very bosom of Tearcity; and all this, by carrying on the finguher consumerce of felling words and gestures to the produleus, who paid for thom as for commodities of the greatest value (107).

Then the people, seized with sury, were upon the point of tearing to pieces the men who had deceived them; but the legislators, arresting this fally of violence, and addressing the chiefs and doctors, said: And is it thus,

miffed and abuted them all ris

And the terrified priests replied: " O legis lators, we are men, and she people are fo superstitious ! their weakness excited us to take advantage of it *."

And the kings faid: "O legislators, the people are fo fervile and fo ignorant! they have proferated themselves before the yoke which we scarcely had the boldness to show to them +."

Then the legislators, turning towards the people, faid to them; "Remember what you have just heard; it contains two important truths. Yes, it is yourselves that cause the evils of which you complain; it is you that encourage tyrants by a base flattery of their power, by an abfurd admiration of their pretended beneficence, by converting obedience into fervility, and liberty into licentiousness, and receiving every imposition with credulity.

CHAP. XXIV.

SOLUTION OF THE PROBLEM OF CON-TRADICTIONS.

The legislators then resumed their address. "Onations!" said they, "we have heard the discussion of your opinions; and the discord that divides you has suggested to us various reflections, which we beg leave to propose to you as questions which it is necessary you should solve.

"Confidering, in the first place, the numerous and contradictory creeds you have adopted, we would ask on what motives your persuasion is founded? Is it from deliberate choice that you have enlisted under the banners of one prophet rather than under those of another? Before you adopted this doctrine in preference to that, did you first compare, did you maturely examine them? Or has not your belief been rather the chance result of birth, and of the empire of education and habit? Are you not

not born Christians on the banks of the Tiber, Mahometans on those of the Euphrates, Idolaters on the shores of India, in the same manner as you are born fair in cold and temperate regions, and of a sable complexion under the African sun! And if your opinions are the effect of your position on the globe, of parentage, of imitation, are such fortuitous circumstances to be regarded as grounds of conviction and arguments of truth?

"In the second place, when we restect on the proscriptive spirit and the arbitrary intolerance of your mutual claims, we are terrified at the consequences that slow from your principles. Nations! who reciprocally doom each other to the thunder-bolts of celestial wrath, suppose the universal Being, whom you revere, were at this moment to descend from heaven among this crowd of people, and, clothed in all his power, were to sit upon this throne to judge you: suppose him to say—" Mortals! I consent to adopt "your own principles of justice into my administration. Of all the different religions you profess, a single religion shall "now

" now be preferred to the reft; all the others, " this vaft multitude of standards, of nations. " of prophets, shall be condemned to ever-" lasting destruction. Nor is this enough: " among the different fects of the chosen re-" ligion one only shall experience my favour, " and the rest be condemned. I will go " farther than this: of this fingle fect of "this one religion, I will reject all the in-" dividuals whose conduct has not corne-" fponded to their speculative precepts. O " man! few indeed will then be the number " of the elect you affign me! Penurious " hereafter will be the stream of beneficence " which will fucceed to my unbounded " mercy? Rare and folitary will be the ca-

"destine to my greatness and my glory."

And the legislators arising said: "It is enough; you have pronounced your will.

Ye nations, behold the urn in which your names shall be placed; one single name shall be drawn from the multitude; approach and conclude this terrible lottery."—But the people, seized with terror, cried: "No, no; we are brethren and equals, we cannot coment

" talogue of admirers that you henceforth

318

lators having testumed their seats, continued;
"O men I who dispute upon so many subjects, lend an attentive ear to a problem we
submit to you, and decide it in the exercise
of your own judgments."—The people accordingly lent the strictest attention; and the
legislators lifting one hand towards heaven,
and pointing to the sun, said: "O nations,
is the form of this sun which enlightens you
triangular or square?"—And they replied
with one voice, "It is neither, it is round."

Then taking the golden balance that was upon the altar, "This metal," asked the legislators, "which you handle every day, is a mass of it heavier than another mass of equal dimensions of brass?"—"Yes," the people again unanimously replied; "gold is heavier than brass."

The legislators then took the sword. "Is this iron less hard than lead?"—" No." said the nations.

" Is fugar fweet and gall bitter ?- " Yes."

" Do you love pleasure, and hate pain?"—

"Respecting these objects and a multi-

plicity of others of a fimilar nature, you have then but one opinion. Now tell us, is there an abyls in the centre of the earth, and are there inhabitants in the moon?

At this question a general noise was heard, and every nation gave a different answer. Some replied in the affirmative, others in the negative; some said it was probable, others that it was an idle and ridiculous question, and others that it was a subject worthy of enquiry; in short there prevailed among them a total disagreement.

After a short interval, the legislators having restored silence: "Nations," said they, "how is this to be accounted for? We proposed to you certain questions, and you were all of one opinion without distinction of race or sect: fair or black, disciples of Mahomet or of Moses, worshippers of Bedou or of Jesus, you all gave the same answer. We now propose another question, and you all differ! whence this unanimity in one case, and this discordance in the other."

And the groupe of simple and untaught men replied: "The reason is obvious. Respecting the first questions, we see and feel the the objects; we speak of them from sensistion: respecting the second, they are above the reach of our senses, and we have no guide but conjecture."

"You have folved the problem," faid the legislators; "and the following truth is thus by your own confession established: When, ever objects are present and can be judged of by your senses, you invariably agree in opinion; and your differ in sentiment only when they are absent and out of your reach.

"From this truth flows another equally clear and deferving of notice. Since you agree respecting what you with certainty know, it follows, that when you disagree, it is because you do not know, do not understand, are not sure of the object in question or in other words, that you dispute, quarrel and fight among yourselves, for what is uncertain, for that of which you doubt. But is this wise; is this the part of rational and intelligent beings?

"And is it not evident, that it is not truth for which you contend; that it is not her cause you are jealous of maintaining, but the cause of your own passions and prejudices; that

that it is not the object as it really exists that you wish to verify; but the object as it appears to you it that it is not the evidence of the thing that you are anxious should prevail, but your personal apinion, your mode of feeing and judging? There'is a power that you want to exercise, an interest that you want to maintain; a prerogative that you want to affame; in fhort, the whole is a struggle of vanity. And as every individual, when he compares himself with every other, finds himfelf to be his equal and fellow, he relifts by a fimilar feeling of right; and from this right, which you all deny to each other, and from the inherent consciousness of your equality, fpring your disputes, your combats and your intolerance.

"Now, the only way of restoring unanimity is by returning to nature, and taking the order of things which she has established for your director and guide; and this farther truth will then appear from your uniformity of fentiment:

"That real objects have in themselves an identical, constant, and invariable mode of existence, and that in your organs exists a

fimilar

fimilar mode of being affected and impressed by them.

"But at the same time, inasmuch as these organs are liable to the direction of your will, you may receive different impressions, and find yours were under different relations towards the same objects; so that you are with respect to them, as it were a fort of mirror, capable of reslecting them such as they are, and capable of disfiguring and misrepresenting them.

"As often as you perceive the objects, fuch as they are, your feelings are in accord with the objects, and you agree in opinion; and it is this accord that constitutes truth.

"On the contrary, as often as you differ in opinion, your differtions prove that you do not see the objects such as they are, but vary them.

"Whence it appears, that the cause of your differtions is not in the objects them-selves, but in your minds, in the manner in which you perceive and judge.

"If therefore we would arrive at uniformity of opinion, we must previously establish certainty, and verify the resemblance blance which our ideas have to their models. Now this cannot be obtained, except fo far as the objects of our enquiry can be referred to the testimony and subjected to the examination of our senses. Whatever cannot be brought to this trial is beayond the limits of our understanding; we have neither rule to try it by, nor measure by which to institute a comparison, nor source of demonstration and knowledge concerning it.

"Whence it is obvious, that, in order to live in peace and harmony, we must consent not to pronounce upon such objects, nor annex to them importance; we must draw a line of demarcation between such as can be verified and such as cannot, and separate by an inviolable barrier, the world of fantastic beings from the world of realities: that is to say, all civil effect must be taken away from theological and religious opinions.

"This, O nations, is the end that a great people, freed from their fetters and prejudices, have proposed to themselves; this is the work in which, by their command, and under their immediate auspices, we were en-

Y 2 gaged,

gaged, when your kings and your priests came to interrupt our labours.... Kings and priests, you may yet for a while suspend the solemn publication of the laws of nature; but it is no longer in your power to annihilate or to subvert them."

A loud cry was then heard from every quarter of the general affembly of nations; and the whole of the people, unanimously testifying their adherence to the sentiments of the legislators, encouraged them to resume their facred and fublime undertaking. "Investigate," said they, " the laws which nature, for our direction, has implanted in our breafts, and form from thence an authentic and immutable code. Nor let this code be calculated for one family, or one nation only, but for the whole without exception. Be the legislators of the human race, as ye are the interpreters of their common nature. Shew us the line that separates the world of chimeras, from that of realities; and teach us, after so many religions of error and delufion, the religion of evidence and truth."

Upon this, the legislators resuming their enquiry into the physical and constituent attributes attributes of man, and the motives and affections which govern him in his individual and focial capacity, unfolded in the following terms the laws on which Nature herself has founded his felicity.

END OF THE FIRST PART.

ė

NOTES.

PAGE 1. (*) Eleventh year of Abd-ul Hâmid. That is, 1784 of the Christian æra, and 1198 of the Hegira. The emigration of the Tartars took place in March, immediately on the manifesto of the empress declaring the Crimea to be incorporated with Russia... A Mussulman prince of the name of Gengis Khan. It was Châhin Guerai. Gengis Khan was borne and served by the kings whom he conquered: Châhin, on the contrary, after selling his country for a pension of eighty thousand roubles, accepted the commission of captain of guards to Catherine II. He afterwards returned home, and, according to custom was strangled by the Turks.

Page 7. (a). The precious thread of Serica. That is the filk originally derived from the mountainous country where the great wall terminates, and which appears to have been the cradle of the Chinese empire. . . The tissues of Cassimere. The shawls which Ezekiel seems to have described under the appellation of Choud-choud. . . The gold of Ophir. This country, which was one of the twelve Arab Y 4 cantons,

cantons, and which has so much and so unsuccessfully been sought for by the antiquaries, has left however some trace of itself in Ofor, in the province of Oman, upon the Persian Gulph, neighbouring on one side to the Sabeans, who are celebrated by Strabo for their plenty of gold, and on the other to Aula or Hevila where the pearl sishery was carried on. See the 27th chapter of Ezekiel, which gives a very curious and extensive picture of the commerce of Asia at that period.

Page 8. (b). This Syria contained a bundred flourishing cities. According to Josephus and Strabo, there were in Syria twelve millions of souls; and the traces that remain of culture and habitation confirm the calculation.

Page 12. (c). A blind fatality. This is the universal and rooted prejudice of the East. "It was written," is there the answer to every thing. Hence result an unconcern and apathy, the most powerful impediments to instruction and civilization.

Page 28. (d). The too famous peninfula of India. Of what real good has been the commerce of India to the mass of the people? On the contrary, how great the evil occasioned by the superstition of this country having been added to the general superstition?

Page 29. (e). Ancient kingdom of Ethiopia. In the next volume of the Encyclopedia will appear a memoir respecting the chronology of the twelve ages anterior to the passing of Xerxes into Greece, in which I conceive mysfelf to have proved, that Upper Egypt formerly composed a distinct kingdom, known to the Hebrews by the name of Kous, and to which the appellation of Ethiopia was specially given. This kingdom preserved its independence to the time of Psammeticus, at which period, being united

united to the Lower Egypt, it lost its name of Ethiopia, which thenceforth was bestowed upon the nations of Nubia, and upon the different hordes of Blacks, including Thebes, their metropolis.

Page id. (f). Thebes with its hundred palaces. The idea of a city with a hundred gates, in the common acceptation of the word, is so absurd, that I am assonished the equivoque has not before been selt.

It has ever been the custom of the East to call palaces and houses of the great by the name of gates, because the principal luxury of these buildings consists in the singular gate leading from the street into the court, at the sarthest extremity of which the palace is situated. It is under the vestibule of this gate that conversation is held with passengers, and a fort of audience and hospitality given. All this was doubtless known to Homer; but poets make no commentaries, and readers love the marvellous.

This city of Thebes, now Lougfor, reduced to the condition of a miferable village; has left aftonishing monuments of its magnificence. Particulars of this may be feen in the plates of Norden, in Pocock, and in the recent travels of Bruce. These monuments give credibility to all that Homer has related of its splendour, and led us to infer of its political power and external commerce.

Its geographical position was favourable to this twofold object. For, on one side, the valley of the Nile, singularly fertile, must have early occasioned a numerous population; and, on the other, the Red Sea giving communication with Arabia and India, and the Nile with Abyssinia and the Mediterranean, Thebes was thus naturally allied to the richest countries on the globe; an alliance

alliance that procured it an activity fo much the greater. as Lower Egypt, at first a swamp, was nearly, if not totally, uninhabited. But when at length this country had been drained by the canals and dikes which Sefoftris constructed, population was introduced there, and wars arose which proved fatal to the power of Thebes. Commerce then took another route, and descended to the point of the Red Sea, to the canals of Sefostris (See Strabo) and wealth and activity were transformed to Memphis. This is manifestly what Diodorus means, when he tells us (Lib. I. fect. 2.) that as foon as Memphis was established and made a wholesome and delicious abode, kings abandoned Thebes to fix themselves there, Thus Thebes continued to decline, and Memphis to flourish till the time of Alexander, who, building Alexandria on the border of the sea, caused Memphis to fall in its turn; fo that prosperity and power seem to have descended historically step by step along the Nile: whence it refults, both physically and historically, that the existence of Thebes was prior to that of the other cities. The testimony of writers is very positive in this respect. " The "Thebans," fays Diodorus, " confider themselves as the " most ancient people of the earth, and affert, that with " them originated philosophy and the science of the " stars. Their fituation, it is true, is infinitely favourable " to astronomical observation, and they have a more accu-" rate division of time into months and year than other " nations, &c."

What Diodorus fays of the Thebans, every author and himself elsewhere, repeat of the Ethiopians, which tends more firmly to establish the identity of place of which I have spoken. "The Ethiopians conceive themselves (says

* he, Lib. III.) to be of greater antiquity than any other ration: and it is probable that, born under the sun's path, its warmth may have ripened them earlier than other men. They suppose themselves also to be the inventors of divine worship, of sestivals, of solemn assemblies, of sacrifices, and every other religious practice. They affirm that the Egyptians are one of their colonies, and that the Delta, which was formerly sea, became land by the conglomeration of the earth of the higher country, which was washed down by the Nile. They have, like the Egyptians, two species of letters, hieroglyphics and the alphabet; but among the Egyptians the first was known only to the priests, and by them transmitted from father to son, whereas both species are common among the Ethiopians."

"The Ethiopians," fays Lucian, page 985, "were the first who invented the science of the stars, and gave mames to the planets, not at random and without meaning, but descriptive of the qualities which they concived them to posses; and it was from them that this art passed, still in an impersect state, to the Egyptians."

It would be eafy to multiply citations upon this subject; from all which it follows, that we have the strongest reason to believe that the country neighbouring to the tropic, was the cradle of the sciences, and of consequence that the first learned nation was a nation of Blacks, for it is incontrovertible, that by the term Ethiopians, the ancients meant to represent a people of black complexion, thick lips, and woolly hair. I am therefore inclined to believe, that the inhabitants of Lower Egypt were originally a foreign colony imported from Syria and Arabia, a medley

medley of different tribes of Savages, originally shepherds and fishermen, who by degrees formed themselves into a nation, and who, by nature and descent, were enemies of the Thebaus, by whom they were no doubt despited and treated as barbarians.

I have fuggested the same ideas in my Travels into Syria, sounded upon the black complexion of the Sphinx. I have since ascertained, that the antique images of Thebais have the same characteristic; and Mr. Bruce has offered a multitude of analogous sacts: but this traveller, of whom I heard some mention at Cairo, has so interwoven these sacts with certain systematic opinions, that we should have recourse to his narratives with caution.

It is fingular that Africa, fituated so near us, should be the country on earth which is the least known. The English are at this moment making attempts, the success of which ought to excite our emulation.

Page 30. (g). Here were the ports of the Idumeans, Ailah (Eloth), and Athom-Gaber (Hesion-Geber). The name of the sirst of these towns still subsists in its ruins, at the point of the gulph of the Red Sea, and in the route which the pilgrims take to Mecca. Hesion has at present no trace, any more than Qolzoum and Faran: it was, however, the harbour for the sleets of Solomon. The vessels of this prince, conducted by the Tyrians, sailed along the coast of Arabia to Ophir in the Persian Gulph, thus opening a communication with the merchants of India and Ceylon. That this navigation was entirely of Tyrian invention, appears both from the pilots and shipbuilders employed by the Jews, and the names that were given to the trading islands, viz. Tyrus

and

and Aradus, now Barhain. The voyage was performed in two diffent modes, either in causes of ofier and rushes, covered on the outside with skins done over with pitch: these vessels were unable to quit the Red Sea, or so much as to leave the shore. The second mode of carrying on the trade was by means of vessels with decks of the fize of our long boats, which were able to pass the strait and to weather the dangers of the ocean: but for this purpole it was necessary to bring the wood from Mount Lebanus and Cilicia, where it is very fine and in great abundance. This wood was first conveyed in floats. from Tarfus to Phenicia, for which reason the veffels were called ships of Tarsus: from whence it has been ridiculously inferred, that they went round the promontary of Africa as far as Tortofa in Spain. From Phenicia it was transported on the backs of camels to the Red Sea, which practice still continues, because the shores of this fea are absolutely unprovided with wood even for fuel. These vessels spent a complete year in their voyage, that is, failed one year, fojourned another, and did not return till the third. This tediousness was owing, first to their cruizing from port to port, as they do at prefent; secondly, to their being detained by the Monfoon currents; and thirdly, because, according to the calculations of Pliny and Strabo, it was the ordinary practice among the ancients to spend three years in a voyage of twelve hundred leagues. Such a commerce must have been very expenfive; particularly as they were obliged to carry with them their provisions and even fresh water. For this reason Solomon made himfelf mafter of Palmyra, which was at that time inhabited, and was already the magazine and high road of merchants by the way of the Euphrates.

This

This conquest brought Solomon much hearer to the country of gold and pearls. This alternative of a route either by the Red Sea or by the river Euphrates was to the ancients, what in later times has been the alternative in a voyage to the Indies, either by crossing the Isthmus of Suez or doubling the Cape of Good Hope. It appears that till the time of Moses this trade was carried on across the desert of Syria and Theais; that afterwards it fell into the hands of the Phenicians, who fixed its site upon the Red sea, and that it was mutual jealousy that induced the kings of Nineveh and Babylon to undertake the destruction of Tyre and Jerusalem. I insist the more upon these facts, because I have never seen any thing-reasonable upon the subject.

Page 31. (h). Babylon, the ruins of which are trodden under first of men. It appears that Babylon occupied on the Eastern Bank of the Euphrates a space of ground six leagues in length. Throughout this space bricks are found, by means of which daily additions are made to the town of Hellé. Upon many of these are characters written with a nail similar to those of Persepolis. I am indebted for these facts to M. de Beauchamp, grand vicar of Babylon, a traveller equally distinguished for his knowledge of astronomy and his veracity.

Page 59. (i). Those wells of Tyre. See respecting these monuments, my Travels into Syria, vol. ii. p. 214.

Those artificial banks of the Euphrates. From the town or village of Samaouât the course of the Euphrates is accompanied with a double bank, which descends as far as its junction with the Tygris, and from thence to the sea, being a length of about a hundred leagues French measure. The heighth of these artificial banks is not uni-

form,

form, but increases as you advance from the sea; it may be estimated at from twelve to fifteen feet. But for them. the inundation of the river would bury the country around, which is flat, to an extent of twenty or twentyfive leagues; and even, notwithstanding these banks, there has been in modern times an overflow which has covered the whole triangle formed by the junction of this river to the Tigris, being a space of country of 130 square leagues. By the stagnation of these waters an epidemical difease of the most fatal nature was occasioned. It follows from hence, 1. That all the flat country bordering upon these rivers was originally a marsh; 2. That this marsh could not have been inhabited previously to the construction of the banks in question; 3. That these banks could not have been the work but of a population prior as to date: and the elevation of Babylon therefore must have been posterior to that of Nineveh, as I think I have chronologically demonstrated in the memoir above cited. See Encyclopedie, vol. xiii. of Antiquities.

Page id. (k). Those conduits of Medea. The modern Aderbidjan, which was a part of Medea, the mountains of Kourdestan, and those of Diarbekr, abound with subterranean canals, by means of which the ancient inhabitants conveyed water to their parched soil in order to fertilize it. It was regarded as a meritorious act, and a religious duty prescribed by Zoroaster, who, instead of preaching celibacy, mortifications, and other pretended virtues of the Monkish sort, repeats continually in the passages that are preserved respecting him in the Sad-der and the Zend-avesta, "That the action most pleasing to "God is to plough and cultivate the earth, to water it with running streams, to multiply vegetation and living beings,

" beings, to have numerous flocks, young and fruitful " virgine, a multitude of children, &c. &c."

Page 62. (1). This inequality, the refult of accident, was taken for the law of nature. Almost all the ancientsphilose sophers and politicians have laid it down as a principle, that men are born unequal, that nature has created some to be free, and others to be slaves. Expressions of this kind are to be found in Aristotle, and even in Plato, called the divine, doubtless in the same sense as the my-thological reveries which he promulgated. With all the people of antiquity, the Gauls, the Romans, the Athenians, the right of the strongest was the right of nations; and from the same principle are derived all the political disorders and public national crimes that at present exist.

Page id. (m). Paternal tyranny laid the foundation of political despotism. Upon this single expression it would be easy to write a long and important chapter. might prove in it, beyond contradiction, that all the abuses of national governments have sprung from those of doinestic government, from that government called patriarchal, which superficial minds have extolled without having analyzed it. Numberless facts demonstrate, that with every infant people, in every favage and barbarous flate, the father, the chief of the family, is a despot, and a cruel and insolent despot. The wife is his flave, the children his fervants. This king fleeps or fmokes his pipe, while his wife and daughters perform all the drudgery of the house, and even that of tillage and culti- : vation, as far as occupations of this nature are practifed in fuch focieties; and no fooner have the boys acquired firength, than they are allowed to beat the females and make

make them ferve and wait upon them as they do upon their fathers. Similar to this is the flate of our own uncivilized peafants. In proportion as civilization foreads, the manners become milder, and the condition of the women improves, till, by a contrary excess, they arrive at deminion, and then a nation becomes effeminate and corrupt. It is remarkable, that parental authority is great according as the government is despotic. China, India, and Turkey are striking examples of this. One would suppose that tyrants gave themselves accomplices, and interested subaltern despots to maintain their authority. In opposition to this the Romans will be cited; but it remains to be proved that the Romans were men truly ·free; and their quick paffage from their republican de-Tpotism to their abject fervility under the emperors, gives room at least for confiderable doubts as to that freedom.

Page 67. (n). Always tending to concenter the power in a fingle hand. It is remarkable, that this has in all instances been the constant progress of societies: beginning with a flate of anarchy or democracy, that is, with a great division of power, they have passed to aristocracy, and from aristocracy to monarchy. Does it not hence follow, that those who constitute states under the democratic form, destine them to undergo all the intervening troubles between that and monarchy; and that the supreme adminiftration by a fingle chief is the most natural government, as well as that best calculated for peace?

Page 69. (e). And kings followed the dictates of every Mepraved tafle. It is equally worthy of remark, that the conduct and manners of princes and kings of every country and every age, are found to be precifuly the fame at fimilar

L-10000

fimilar periods, whether of the formation or diffolution of empires. History every where presents the same pictures of luxury and folly; of parks, gardens, lakes, rocks, palaces, furniture, excess of the table, wine, women, concluding with brutality.

The abfurd rock in the garden of Verfailles has alone cost three millions. I have sometimes calculated what might have been done with the expence of the three pyramids of Gizah, and I have found that it would easily have constructed, from the Red Sea to Alexandria, a canal 150 feet wide and 30 deep, completely covered in with cut stones and a parapet, together with a fortisted and commercial town, consisting of 400 houses surnished with cisterns. What difference in point of utility between such a canal and these pyramids?

Page 79. (p). By their led horses, &c. A Tartar horses man has always two horses, of which he leads one in hand... The Kalpak is a bonnet made of the skin of a sheep or other animal. The part of the head covered by this bonnet is shaved, with the exception of a tust about the size of a crown-piece, and which is suffered to grow to the length of seven or eight inches, precisely where our priests place their tonsure. It is by this tust of hair, worn by the majority of Mussulmans, that the angel of the tomb is to take the elect and carry them into Paradise.

Page 80. (q). Infidels are in possession of a consecrated land. It is not in the power of the sultan to cede to a foreign power a province inhabited by TRUE BELIEVERS. The people, instigated by the lawyers, would not sail to revolt. This is one reason which has led those who know the Turks.

Turks, to regard as chimerical the ceding of Candia, Cyprus, and Egypt, projected by certain European potentates.

Page 86. (r). Pronouncing mysteriously the word Aum. This word is in the religion of the Hindoos a sacred emblem of the Divinity. It is only to be pronounced in secret, without being heard by any one. It is formed of three letters, of which the first, a, signifies the principle of all, the creator, Brama; the second, u, the conservator, Vichenou; and the last, m, the destroyer, who puts an end to all, Chiven. It is pronounced like the monosyllable om, and expresses the unity of those three Gods. The idea is precisely that of the Alpha and Omega mentioned in the New Testament.

Page id. (s). Whether he ought to begin the ceremony at the elbow, &c. This is one of the grand points of schism between the partizans of Omar and those of All. Suppose two Mahometans to meet on a journey, and to accost each other with brotherly affection: the hour of prayer arrives; one begins his ablution at his singers, the other at the elbow, and instantly they are mortal enemies. O sublime importance of religious opinions! O prosound philosophy of the authors of them!

Page 99. (t). The horde of Oguzians. Before the Turks took the name of their chief Othman I. they bore that of Oguzians; and it was under this appellation that they were driven out of Tartary by Gengis, and came from the borders of Gihoun to settle themselves in Anatolia.

Page 100. (u). Ageneral anarchy take place, as happened in the empire of the Sophis. In Persia, after the death of Thamas-Koulikan, each province had its chief, and for Z 2 forty

forty years these thiefs were in a constant state of war. In this view the Turks do not say without reason: "Ten " years of a tyrant are less destructive than a single night " of anarchy."

Page 107. (x). From people to people barbarous wars were prevalent. Read the history of the wars of Rome and Carthage, of Sparta and Messina, of Athens and Syracust, of the Hebrews and the Phenicians: yet these are the nations of which antiquity boosts as being most polished!

Page 114. (y). The decision of their disputes. What is a people? An individual of the society at large. What a war? A duel between two individual people. In what manner ought a society to act when two of its members fight? Interfere and reconcile, or repress them. In the days of the Abbe de Saint-Pierre this was treated as a dream, but happily for the human race it begins to be realized.

Page 119. (2). The Chinese subjected to an insolent despotism. The emperor of China calls himself the son of heaven, that is, of God; for in the opinion of the Chinese, the material heaven, the arbiter of satality, is the Deity himself. "The emperor only shows himself once in ten months, lest the people, accustomed to see him, might lose their respect; for he holds it as a maxim, that power can only be supported by sorce, that the people have no idea of justice, and are not to be governed but by coercion." Narrative of two Mahometan Travellers in 851 and 877, translated by the Abbe Renaudot in 1718.

Notwithstanding what is afferted by the missionaries, this situation has undergone no change. The bamboo fill reigns in China, and the son of heaven bastinades, for the most trivial fault, the Mandarin, who, in his turn, bastinades the people. The Jesuits may tell us that this is the best governed country in the world, and its inhabitants the happiest of men: but a single letter from Amyot has convinced me, that China is a truly Turkish government, and the account of Sonnerat confirms it. See Vol. II. of Voyage our Indes, in 4to.

The irremediable vice of their language. As long as the Chinese shall in writing make use of their present characters, they can be expected to make no progress in civilization. The necessary introductory step must be the giving them an alphabet like our own, or the substituting in the room of their language that of the Tartars: the improvement made in the latter by M. de Lengles, is calculated to introduce this change. See the Mantchon alphabet, the production of a mind truly learned in the formation of language.

Page 119. (1.) In the North I fee nothing but ferfs reduced to the level of cattle. When this was written the revolution in Poland bad not taken place. I beg leave to apologife to the virtuous nobles and the enlightened prince by whom it was effected.

Page 128. (2.) And govern yourselves. This dialogue between the people and the indolent classes, is applicable to every society; it contains the seeds of all the political vices and disorders that prevail, and which may thus be defined; men who do nothing, and who devour the substance of others; and men who arrogate to themselves particular rights and exclusive privileges of wealth and indolence. Compare the Mamlouks of Egypt, the nobility of Europe, the Nairs of India, the Emirs of Arabia, the Patricians of Rome, the Christian clergy, the Imans,

the Bramins, the Bonzes, the Lamas, &c. &c. and you will find in all the same characteristic feature,—" Men "lighing in idleness at the expence of those who labour."

Page 138. (3). Equality and liberty conflitute the physical basis. In the declaration of rights there is an inversion of ideas in the first article, liberty being placed before equality from which it in reality springs. This defect is not to be wondered at; the science of the rights of man is a new science; it was invented yesterday by the Americans, to day the French are perfecting it, but there yet remains a great deal to be done. In the ideas that constitute it there is a genealogical order which, from its basis, physical equality, to the minutest and most remote branches of government, ought to proceed in an uninterrupted series of inferences. This will be demonstrated in the second part of this work.

Page 147. (4.) A vast hat of the leaves of the palm-tree. This species of the palm-tree is called Latanier. Its leaf, similar to a fan-mount, grows upon a stalk issuing directly from the earth. A specimen may be seen in the botanic garden.

Page 148. (5.) The contemplation of one species thus infinitely varied. A hall of costumas in one of the galleries of the Louvre, would in every point of view be an interesting establishment: it would furnish an admirable treat to the curiosity of a great number of men, excellent models to the artist, and useful subjects of meditation to the physician, the philosopher, and the legislator. Picture to yourself a collection of the various faces and figures of every country and nation, exhibiting accurately colour, features and form: what a field for investigation and enquiry as to the influence of climate, manners, aliment, &c.! It might truly be flyled the science of man! Buffon has attempted a chapter of this nature, but it only serves to exhibit more flrikingly our actual ignorance. Such a collection it is said is begun at Petersburg, but it is said at the same time, to be as impersect as the vocabulary of the 300 languages. The enterprize would be worthy of the French nation.

Page 157. (6). Thus are there fells to the number of feventy-two. The Mussulmans enumerate in common seventy-two sels; but I read, while I resided among them, a work which gave an account of more than eighty, all equally wise and important.

Page id. (7). Has never ceased for twelve hundred years. Read the history of Islamism by its own writers, and you will be convinced that one of the principal causes of the wars which have desolated Asia and Africa since the days of Mahomet, has been the apostolical fanaticism of its doctrine. Cæsar has been supposed to have destroyed three millions of men: it would be interesting to make a similar calculation respecting every sounder of a religious system.

Page 161. (8). The Nestorians, the Eutycheans, and a hundred others. Consult upon this subject Dictionnaire des Heresies par l'Abbe Pluquet, in two volumes, 8vo; a work admirably calculated to inspire the mind with philosophy, in the sense that the Lacedemonians taught their children temperance, by shewing to them the drunken Heliotes.

Page 163. (9). Disciples of Zoroaster. They are the Parles, better known by the opprobrious name of Gaures or Guebres, another word for infidels. They are in Asia Z 4 what

what the Jews are in Europe. The name of their pope or high pricft is Mobed.

Page 164. (10). Their Deflours; that is to fay, their priests. See, respecting the rites of this religion, Henry Lord, Hyde, and the Zendavesta. Their costuma is a robe with a belt of sour knots, and a veil over the mouth for fear of polluting the fire with their breath.

Page id. (11). The resurrection of the body, or the saul, or bith. The Zoroaftrians are divided between two opinions, one party believing that both soul and body will rise, the other, that it will be the soul only. The Christians and Mahometans have embraced the most solid of the two.

Page 165. (12). They wear a net over their mouths, &c. According to the system of the Metempsycholis, a soul, to undergo purification, passes into the body of some insect or animal. It is of importance not to disturb this penance, as the work must in that case begin as fresh... Paria. This is the name of a cast or tribe reputed unclean, because they eat of what has enjoyed life.

Page id. (13). Brama,—reduced to ferve as a pedefial to the Lingam. See Sonnerat, Voyage aux Indes. Vol. I.

Page 166. (14). Hideous forms of a boar, a lion, &c. These are the incarnations of Vichenou, or metamorpholes of the sun. He is to come at the end of the world, that is, at the expiration of the great period, in the form of a horse, like the sour horses of the agocalypse.

Page id. (15). In their devotion, &c. When a fectary of Chiven hears the name of Vichenou pronounced, he flops his ears, flies, and purifies himself.

Page 167. (16). The Chinese warship him under the name

of For. The original name of this God is Baits, which in Hebrew fignifies an egg. The Arabs pronounce in Baidh, giving to the dh-an emphatic found which makes it approach to dz. Kempfer; an accurate traveller, writes it Budfo, which must be pronounced Boudfo, whence is derived the name of Budfoift and of Bonze, applied to the priefts, Clement of Alexandria, in his Stromata, writes it Bedou, as it is pronounced also by the Chingulais; and Saint Jerome, Boudda and Boutta. At Thibet they call it Budd: and hence the name of the country called Boud-tan and Ti-budd: it was in this province that this system of religion was first inculcated in Upper Asia: La is a corruption of Allah, the name of God in the Syriac language, from which many of the Eastern dialects appear to be derived. The Chinese having neither b nor d, have supplied their place by f and t, and have therefore faid Fout.

Page 168. (17). That the foul can exist independently of the senses. See in Kempfer the doctrine of the Sintoists, which is a mixture of that of Epicurus and of the Stoics.

Page id. (18). Taliput fereen. It is a leaf of the Latanier species of the palm tree. Hence the Bonzes of Siam take the appellation of Talapoin. The use of this screen is an exclusive privilege.

Page 169. (19). Conjunction of the flars. The sectaries of Confucius are no less addicted to affrology than the Bonzes. It is indeed the malady of every eastern nation.

Page id. (20). The Grand Lama. The Delai-La-Ma, or immense high priests of La, is the same person whom we find mentioned in our old books of travels, by the name

name of Prefter John, from a corruption of the Perlian word Djehan, which fignifies the world, to which has been prefixed the French word preftre or pretre, priest. Thus the priest world and the God world are in the Perfian idiom the same.

Page id. (21). The excrements of their pontiff. In a recent expedition, the English have found certain idols of the Lamas filled in the inside with sacred pastils from the close-stool of the high-priest. Mr. Hastings, and Colonel Pollier who is now at Lausanne, are living witnesses of this sact, and undoubtedly worthy of credit. It will be very extraordinary to observe, that this disgusting ceremony is connected with a profound philosophical system, to wit, that of the metempsychosis, admitted by the Lamas. When the Tartars swallow these sacred relics, which they are accustomed to do, they imitate the laws of the universe, the parts of which are incessantly absorbed and pass into the substance of each other. It is upon the model of the serpent who devours his tail, and this serpent is Budd and the world.

Page 170. (22). The inhabitant of Juida, &c. It frequently happens, that the fwine devour the very species of serpents which the negroes adore, which is a source of great desolation in the country. President de Brosses has given us in his history of the Feriche, a curious collection of absurdities of this nature... The Teleutean dresses, &c. The Teleuteans, a Tartar nation, paint God as wearing a vesture of all colours, particularly red and green; and as these constitute the uniform of the Russian dragoons, they compare him to this description of soldiers. The Egyptians also dress the God World in a garment

garment of every colour. Eufebius Prap. Evang. p. 115. 7. 3. The Teleuteans call God Bou, which is only an alteration of Boudd, the God Egg and World.

Page id. (23). The Kamchadale represents God under the figure of an ill-natured and arbitrary old man. Confult upon this subject a work entitled, Description des Peuples soumis à la Russe, and it will be sound that the picture is not overcharged.

Page 179. (24.) His son-in-law Ali, or his vicars Omar and Aboubekre. These are the two grand parties into which the Mussulmans are divided. The Turks have embraced the second, the Persians the first.

Page 182. (25). To make war upon infidels. Whatever the advocates for the philosophy and civilization of the Turks may affert, to make war upon infidels is confidered by them as an obligatory precept and an act of religion. See Reland de Relig. Moham.

Page 150. (26). Your system rests entirely on mystical interpretations. When we read the sathers of the church, and see upon what arguments they have built the edifice of religion, we are inexpressibly associated with their credulity, or their knavery; but allegory was the rage of that period: the Pagans employed it to explain the actions of their Gods, and the Christians acted in the same spirit when they employed it after their sashion.

Page 195. (27). It was not till four hundred years after. See the Chronology of the Twelve Ages, in which I conceive myself to have clearly proved that Moses lived about 1400 years before Jesus Christ, and Zoroaster about a thousand.

Page 196. (28). In the corrected publication of their facred books. In the first periods of the Christian church, not only

only the most learned of those who have since been demominated heretics, but many of the orthodox, conceived Moses to have written neither the law nor the Pentateuch, but that the work was a compilation made by the elders of the people and the Seventy, who, after the death of Moses, collected his scattered ordinances, and mixed with them things that were extraneous; similar to what happened as to the Koran of Mahomet. See Les Glementines, Homel, 2. sect. 51. and Homel. 3. sect. 42.

Modern critics, more enlightened or more attentive than the ancients, have found in Genesis in particular, . marks of its having been composed on the return from she captivity; but the principal proofs have escaped them. These I mean to exhibit in an analysis of the book of Genefis, in which I shall demonstrate that the tenth chapter, among others, which treats of the pretended generations of the Man called Noah, is a real geographical picture of the world, as it was known to the Hebrews at the epoch of the captivity, which was bounded by Greece or Hellas at the West, mount Caucasus at the North, Persia at the East, and Arabia and Upper Egypt at the South. All the pretended personages from Adam to Abraham or his father Terah, are mythological beings, stars constellations, countries. Adam is Bootes; Noah is Oferis, Xifuthrus, Janus, Saturn; that is to fay Capricorn, or the celestial Genius that opened the year. The Alexandrian Chronicle fays expressly, page 85, that Nimed was supposed by the Persians to be their first. king, as having invented the art of hunting, and that he ... was translated into heaven, where he appears under the name of Orion.

Page 197. (29). Creation of the world in fix gahans, or periods,

periods, or into fix gahan-bars, that is, fix periods of time. Thefe periods are what Zoroaster calls the thousands of Glid or of light, meaning the fix fummer months. In the first, say the Persians, God created (arranged in order) the heaven's; in the fecond the waters; in the third the earth; in the fourth trees; in the fifth animals; and in the fixth man: corresponding with the account in Genefis. For particulars fee Hyde, ch. 9. and Henry Lord, ch, 2. On the religion of the ancient Persians. It is remarkable, that the same tradition is found in the facred books of the Etrurians, which relate, " that the " Fabricator of all things had comprised the duration of " his work in a period of twelve thousand years, which " period was diffributed to the twelve houses of the fun." In the first thousand, God made heaven and earth; in the fecond, the firmament; in the third, the sea and the waters; in the fourth, the fun, moon, and ftars; in the fifth, the foul of animals, birds, and reptiles; in the fixth. man. See Suidas, at the word Tyrrhena; which shows first, the identity of their theological and astrological opinions; and fecondly, the identity, or rather confusion of ideas, between absolute and systematical creation, that is, the periods affigned for renewing the face of nature, which were at first the period of the year, and afterwards periods of 60, of 600, of 25,000, of 36,000, and of 432,000 years.

Page 198. (30). Auricular confession, &c. The modern Parses and the ancient Mithriacs, who are the same sect, observe all the Christian sacraments, even the laying on of hands in confirmation. "The priest of Mithra," says Tertullian (de Præscriptione, c. 40.) "promises absolution from sin on confession and baptism; and, if I "rightly

"rightly remember, Mithra marks the foldiers in the fores head (with the chrism, called in Egyptian Kouphi); he celebrates the sacrifice of bread, which is the resurrection, and presents the crown to his followers, menacing them at the same time with the sword, &c."

In these mysteries they tried the courage of the initiated with a thousand terrors, presenting fire to his face, a sword to his breast, &c.; they also offered him a crown which he refused, saying, God is my crown: and this crown is to be seen in the celestial sphere by the side of Bootes. The personages in these mysteries were distinguished by the names of the animal constellations. The ceremony of mass is nothing more than an imitation of these mysteries and those of Eleusis. The benediction the Lord be with you, is a literal translation of the formular of admission chon-k. am, p-ak. See Beausob. Hist. Du Manicheisme, vol. ii.

Page 199. (31). The Vedes, the Chaffres, and the Pourans These are the facred volumes of the Hindoos; they are fometimes written Vedams, Pouranams, Chastrans, because the Hindoos, like the Persians, are accustomed to give a nafal found to the terminations of their words, which we represent by the affixes on and an, and the Portuguese by the affixes om and am. Many of these books have been translated, thanks to the liberal spirit of Mr. Hastings, who has founded at Calcutta a literary fociety and a printing prefs. At the fame time, however, that we express our gratitude to this society, we must be permitted to complain, of its exclusive spirit, the number of copies printed of each book being fuch as it is impossible to purchase them even in England; they are wholly in the hands of the East India proprietors? Scarcely

Scarcely even is the Afiatic Mifcellany known in Europe, and a man must be very learned in oriental antiquity before he fo much as hears of the Jones's, the Wilkins's and the Halhed's, &c. As to the facred books of the Hindoos, all that are yet in our hands are the Bhagvat Geeta, the Ezour-Vedam, the Bagavadam, and certain fragments of the Chastres printed at the end of the Bhagvat Geeta. These books are in Indostan what the Old and New Testament are in Christendom, the Koran in Turkey, the Sad-der and the Zendavesta among the Parses, &c. When I have taken an extensive survey of their contents, I have fometimes afked myself, what would be the loss to the human race if a new Omar condemned them to the flames; and unable to discover any mischief that would ensue, I call the imaginary chest that contains them, the box of Pandora.

Page 201. (32). Brama, Bichen or Vichenou, Chib or Chiven. These names are differently pronounced according to the different dialects: thus they say Birmah, Bremma, Brouma. Bichen has been turned into Vichen by the easy exchange of a B for a V, and into Vichenou by means of a grammatical affix. In the same manner Chib, which is synonymous with Satan, and signifies adversary, is frequently written Chib-a and Chiv-en; he is called also Rouder and Routr-en, that is, the destroyer.

Page id. (33). In the shape of a tortoise. This is the constellation testudo, or the syre, which was at first a tortoise, on account of its slow motion round the Pole; then a syre, because it is the shell of this reptile on which the strings of the syre are mounted. See an excellent memoir of M. Dupuis, sur l'Origine des Constellations, in 440.

Page 204. (34). That you have borrowed the ancient Paganism

Paganism of the Western world. All the ancient opinions of the Egyptian and Grecian theologians are to be found in India, and they appear to have been introduced, by means of the commerce of Arabia and the vicinity of Persia, time immemorial.

Page 205. (35). Breathed upon the face of the system. This cosmogony of the Lamas, the Bonzes, and even the Bramins, as Henry Lord asserts, is literally that of the ancient Egyptians. "The Egyptians," says Porphyry, "call "Kneph, intelligence, or efficient cause of the universe. "They relate that this God vomitted an egg, from which "was produced another God named Phiba or Vulcan, "(igneous principle, or the sun,) and they add, that this egg is the world." Buseb. Prap. Evang. p. 115.

They represent," fays the same author in another place, "the God Kneph, or efficient cause, under the form of a man in deep blue (the colour of the sky), having in his hand a sceptre, a belt round his body, and a small bonnet royal of light feathers on his head, to denote how very subtile and sugacious the idea of that being is," Upon which I shall observe, that Kneph in Hebrew signifies a wing, a feather, and that this colour of sky-blue is to be found in the majority of the Indian Gods, and is, under the name of Narayan, one of their most distinguishing epithets.

Page 208. (36). That the Lamas were a degenerate feet of the Neflerians. This is afferted by our millionaries, and among others by Georgi in his unfinished work of the Thibetan alphabet: but if it can be proved that the Manicheans were but plagiarists, and the ignorant echo of a doctrine that existed fifteen hundred years before them, what becomes of the declarations of Georgi? See upon this subject Beausob. Hist. du Manicheisme.

But

But the Lama demonstrated, Gc. The eaftern writers in general agree in placing the birth of Bedou 1027 years before Tefus Christ, which makes him the cotemporary of Zoroaster, with whom, in my opinion, they confound him. It is certain that his doctrine notoriously existed at that epoch: it is found entire in that of Orpheus, Pythagoras, and the Indian gymnosophists. But the gymnosophists are cited at the time of Alexander as an ancient feet already divided into Brachmans and Samaneans. See Bardefanes en Saint Jerome, Epitre à Joviens. Pythagoras lived in the ninth century before Jesus Christ; See Chronology of the Twelve Ages; and Orpheus is of still greater antiquity. If, as is the case, the doctrine of Pythagoras and that of Orpheus are of Egyptian origin, that of Bedou goes back to the common fource; and in reality the Egyptian priests recite that Hermes, as he was dying, faid: "I have hitherto lived an exile from my " country, to which I now return. Weep not for me, "I ascend to the celestial abode, where each of you will " follow in his turn: there God is: this life is only " death." Chalcidius in Thimeum. Such was the profesfron of faith of the Samaneans, the fecturies of Orpheus, and the Pythagoreans. Farther, Hermes is no other than Bedou himself; for among the Indians, Chinese, Lamas, &c. the planet Mercury, and the corresponding day of the week (Wednesday) bear the name of Bedou: and this accounts for his being placed in the rank of mythological beings, and discovers the illusion of his' pretended existence as a man, since it is evident that Mercury was not a human being, but the Genius or Decan, who, placed at the fummer folftice, opened the Egyptian

Egyptian year: hence his attributes taken from the constellation Syrius, and his name of Anubis, as well as that of Esculapius, having the figure of a man and the head of a dog: hence his ferpent, which is the Hydra, emblem of the Nile (Hydor, humidity); and from this ferpent he feems to have derived his name of Hermes, as Remes (with a schin), in the oriental languages, fignifies ferpent. Now Bedou and Hermes being the fame names, it is manifest of what antiquity is the fystem ascribed to the former. As to the name of Samanean, it is precifely that of Chaman preserved in Tartary, China, and India. The interpretation given to it is, man of the woods, a hermit mortifying the flesh, such being the characteristic of this sect; but its literal meaning is celesial (Samioui), and explains the fystem of those who are called by it. This system is the same as that of the fectaries of Orpheus, of the Essenians, of the ancient Anchorets of Persia and the whole Eastern country. See Porphyry, de Abstin. Animal. These celestial and penitent men, carried in India their infanity to fuch an extreme, as to wish not to touch the earth, and they accordingly lived in cages suspended to trees, where the people, whose admiration was not less absurd, brought them provisions. During the night there were frequent robberies, rapes and murders, and it was at length difcovered that they were committed by those men, who, descending from their cages, thus indemnified themselves for their restraint during the day. The Bramins, their rivals, embraced the opportunity of exterminating them; and from that time their name in India has been fynonymous with hypocrite. See Hift. de la Chine, in 5 vols.

4to. at the note page 50; Hift. de Huns, 2 vols.; and Preface to the Ezour-Vedam.

Page 209. (37). Demonstrate his existence, &c. There are absolutely no other monuments of the existence of Jefus Christ as a human being, than a passage in Josephus (Antiq. Jud. lib. 18. c. 3.), a fingle phrase in Tacitus, (Annal. lib. 15. c. 44.), and the Gospels. But the passage in Josephus is unanimously acknowledged to be apperyphal, and to have been interpolated towards the close of the third century, (See Trad. de Fosephe, par M. Gillet); and that of Tacitus is so vague, and so evidently taken from the deposition of the Christians before the tribunals, that it may be ranked in the class of evangelical records. It remains to enquire of what authority are these records. "All the world knows," fays Faustus, who, though a Manichean, was one of the most learned men of the third century, " All the world knows, that the Gospels were neither written by Jesus Christ, nor his apostles, " but by certain unknown perfons, who, rightly judging "that they fhould not obtain belief respecting things "which they had not feen, placed at the head of their " recitals the names of contemporary apostles." Beaufob. vol. i. and Hift. des Apologiftes de la Relig. Chret. par Burigni, a sagacious writer, who has demonstrated the absolute uncertainty of these foundations of the Christian religion; fo that the existence of Jesus is no better proved than that of Ofiris and Hercules, or that of Fôt or Bedou, with whom, fays M. de Guignes, the Chinese continually confound him, for they never call Jesus by any other name than Fôt. Hift. de Huns.

Page id. (38.) Your Gospels are taken from the books of the Mithriacs. That is to say, from the pious romances A a 2 formed formed out of the facred legends of the Mysteries of Mithra, Ceres, Isis, &c.; from whence are equally derived the books of the Hindoos and the Bonzes. Our missionaries have long remarked a striking resemblance between those books and the Gospels, M. Wilkins expressly mentions it in a note in the Bhagvat-Geeta. All agree that Krisna, Fôt, and Jesus, have the same characteristic features; but religious prejudice has stood in the way of drawing from this circumstance the proper and natural inference. To time and reason must it be left to display the truth.

Page 210. (39). The interior and secret doctrine. The Budsoists have two doctrines, the one public and oftensible, the other interior and secret precisely like the Egyptian priests. It may be asked, why this distinction? It is, that as the public doctrine recommends offerings, expiations, endowments, &c. the priests find their prosit in teaching it to the people; whereas the other, teaching the vanity of worldly things, and attended with no lucre, it is thought proper to make it known only to adepts. Can the teachers and followers of this religion, be better classed than under the heads of knavery and credulity?

Page 212. (40). That happiness and missertune, &c. These are the expressions of La Loubere, in his description of the kingdom of Siam and the theology of the Bonzes. Their dogmas, compared with those of the ancient philosophers of Greece and Italy, give a complete representation of the whole system of the Stoics and Epicureans, mixed with astrological superstitions, and some traits of Pythagorism.

Page 224. (41). The original barbarous flate of mankind.

It

It is the unanimous testimony of history, and even of legends, that the first human beings were every where savages, and that it was to civilize them, and teach them to make bread, that the Gods manifested them-selves.

Page id. (42). Man receives no ideas but through the medium of his senses. The rock on which all the ancients have split, and which has occasioned all their errors, has been their supposing the idea of God to be innate and coeternal with the soul; and hence all the reveries developed in Plato and Jamblicus. See the Timæus, the Phedon, and De Myst. Ægyptiorum, sect. 1. c. 3.

Page 231. (43). Record of all the monuments of antiquity. It clearly refults, fays Plutarch, from the verses of Orpheus and the sacred books of the Egyptians and Phrygians, that the ancient theology, not only of the Greeks, but of all nations, was nothing more than a system of physics, a picture of the operations of nature, wrapped up in mysterious allegories and enigmatical symbols, in a manner that the ignorant multitude attended rather to their apparent than to their hidden meaning, and even in what they understood of the latter, supposed there to be something more deep than what they perceived. Fragment of a work of Plutarch now lost, quoted by Eusebius, Prepar. Evang. lib. 3. ch. 1. p. 83.

The majority of philosophers, says Porphyry, and among others Chæremon (who lived in Egypt in the first age of Christianity), imagine there never to have been any other world than the one we see, and acknowledge no other Gods of all those recognized by the Egyptians, than such as are commonly called planets, signs of the Zodiac, and constellations; whose aspects,

Aa3

that

that is, riking and fetting, are-supposed to influence the fortunes of men; to which they add, their divisions of the figns into decans and dispensers of time, whom they style lords of the afcendant, whose names, virtues in the relieving distempers, rising, setting, and presages of future events, are the subjects of almanacks; (for be it observed, that the Egyptian priefts had almanacks the exact counterpart of Matthew Lansberg's) for when the priests affirmed that the fun was the architect of the universe, Chæremon prefently concludes that all their narratives respecting Isis and Osiris, together with their other facred fables, referred in part to the planets, the phases of the moon, and the revolution of the fun, and in part to the ftars of the daily and nightly hemispheres and the river Nile; in a word, in all cases to physical and natural existences, and never to such as might be immaterial and incorporeal. . . . All these philosophers believe, that the acts of our will, and the motion of our bodies, depend upon those of the stars to which they are subjected, and they refer every thing to the laws of phylical necessity, which they call destiny or Fatum, supposing a chain of causes and effects which binds, by I know not what connection, all beings together, from the meanest atom to the supreme power and primary influence of the Gods; fo that, whether in their temples or in their idols, the only subject of worship is the power of destiny. Porphyr. Epift. ad fanebonem.

Page 232. (44). The practice of agriculture required the observation and knowledge of the heavens. It continues to be repeated every day, on the indirect authority of the book of Genesis, that astronomy was the invention of the children of Noah. It has been gravely said, that, while wandering

wandering shepherds in the plains of Shinar, they employed their leisure in composing a planetary system: as if shepherds had occasion to know more than the Polar star, and if necessity was not the sole motive of every invention! If the ancient shepherds were so studious and sagacious, how does it happen that the modern ones are so stupid, ignorant, and inattentive? And it is a fact, that the Arabs of the desert know not so many as six constellations, and understand not a word of astronomy.

Page 233. (45). Genii, Gods, authors of good and evil. It appears that by the words genius, the ancients denoted a quality, a generative power; for the following words, which are all of one family, convey this meaning: generary, genos, genesis, genus, gens:

The Sabeans, ancient and modern, fays Maimonides, acknowledge a principal God, the maker and inhabitant of heaven; but on account of his great distance they conceive him to be inaccessible; and in imitation of the conduct of people towards their kings, they employ as mediators with him, the planets and their angels, whom they call princes and potentates, and whom they suppose to reside in those luminous bodies as in palaces or tabernacles, &c. More-Nebuchim, pars 3. c. 29,

Page 234. (46). And even a fex derived from the gender of its appellation. According as the gender of the object was in the language of the nation masculine or feminine, the Divinity who bore its name was male or female. Thus the Cappadocians called the moon God, and the sun Goddess; a circumstance which gives to the same beings a perpetual variety in ancient mythology.

Page 235. (47). Morality was a judicious practice of all that is conducive to the prefervation of existence. We may A a 4

add, fays Plutarch, that these Egyptian priests always regarded the preservation of health as a point of first importance, and as indispensably necessary to the practice of piety and the service of the Gods. See his account of Is and Osiris, towards the end.

Page id. (48). That its principles (those of astronomy). can be traced back to a period of 17,000 years. The historical orator follows here the opinion of Mr. Dupais, who, in his learned memoir concerning the origin of the confiellations, has affigned many plaufible reasons to prove that Libra was formerly the fign of the vernal, and Aries of the nocturnal equinox; that is, that fince the origin of the actual aftronomical fystem, the procession of the equinoxes has carried forward by feven figns the primitive order of the Zodiac. Now estimating the procession at about feventy years and a half to a degree, that is 2.115 years to each fign; and observing that Aries was in its fifteenth degree, 1,447 years before Christ, it follows, that the first degree of Libra could not have coincided with the vernal equinox more lately than 15,194 years before Christ, to which if you add 1790 years fince Christ, it appears that 16,984 have elapsed since the origin of the Zodiac. The vernal equinox coincided with the first degree of Aries 2,504 years before Christ, and with the first degree of Taurus 4,619 years before Christ. Now it is to be observed, that the worship of the Bull is the principal article in the theological creed of the Egyptians, Perfians, Japanele, &c.; from whence it clearly follows, that some general revolution took place among those nations at that time. The chronology of five or fix thousand years in Genesis is little agreeable to this hypothelis; but as the book of Genefis cannot claim to

be

be confidered as a history farther back than Abraham, we are at liberty to make what arrangements we please in the eternity that preceded.

Page id. (49). When reason finds there a zone of houses equally free from the rains of the equator and the fogs of the North. Mr. Bailli, in placing the first astronomers at Selingenskoy, near the lake Baikal, paid no attention to this twofold circumstance: it equally argues against their being placed at Axoum on account of the rains, and the Zimb sty of which Mr. Bruce speaks.

Page 238. (50). Men gave to the flars, &c. "The "ancients," fays Maimonides, "directing all their at"tention to agriculture, gave names to the flars derived "from their occupation during the year." More No. pars 3.

Page 240. (51). They call by the name of ferpents the figured traces of the orbits. The ancients had verbs from the substantives crab, goat, tortaile, as the French have at present the verbs ferpenter, coquetier. The history of all languages is nearly the same.

Page 243. (52). If they had not feen in them talifinant partaking of the nature of the stars. The ancient astrologers, says the most learned of the Jews (Maimonides), having sacredly assigned to each planet a colour, an animal, a tree, a metal, a fruit, a plant, formed from them all a sigure or representation of the star, taking care to select for the purpose a proper moment, a fortunate day, such as the conjunction of the star, or some other savourable aspect, They conceived, that by their magic ceremonies they could introduce into those sigures or idols the influences of the superior beings after which they were modelled. These were the idols that the Chaldean-Sabeans

Sabeans adored; and in the performance of their worfhip they were obliged to be dressed in the proper colour... The astrologers, by their practices, thus introduced idolatry, desirous of being regarded as the
dispensers of the favours of heaven; and as agriculture
was the sole employment of the ancients, they succeeded
in persuading them, that the rain and other blessings of
the seasons were at their disposal. Thus the whole art
of agriculture was exercised by rules of astrology, and the
priests made talismans or charms which were to drive
away locusts, slies, &c. See Maimonides, More, Nebuchim,
pars 3. c. 29.

The priests of Egypt, Persia, India, &c. pretended to bind the Gods to their idols, and to make them come from heaven at their pleasure. They threatened the sun and moon, if they were disobedient, to reveal the secret mysteries, to shake the skies, &c. &c. Euseb. Pracep. Euang. p. 198, and samblicus de Mysteriis Egypt.

Page id. (53). The fun was supposed to assume their forms (the forms of the twelve animals). These are the very words of Iamblicus de Symbolis Ægyptiorum, c. 2. sect. 7. The sun was the grand Proteus, the universal metamorphist.

Page 245. (54). Your tonfure is the difk of the fun. The Arabs, fays Herodotus, shave their heads in a circle and about the temples, in imitation of Bacchus (that is the fun,) who shaves himself, they say, in this manner. Jeremiah speaks also of this custom. The tust of hair which the Mahometans preserve, is taken also from the sun, who was painted by the Egyptians at the winter solftice, as having but a single hair on his head... Your stole its Zodiac. The robes of the goddess of Syria and of Diana

of

of Ephesus, from whence are borrowed the dress of priests, have the twelve animals of the Zodiac painted on them.... Rosaries are found upon all the Indian idols, constructed more than four thousand years ago; and their use in the East has been universal for time immemorial..... The crosser is precisely the staff of Bootes or Osiris (See Plate II.) All the Lamas wear the mitre or cap in the shape of a cone, which was an emblem of the sun.

Page 247. (55.) Having faid that a planet entered into a fign, their conjunction was denominated a marriage, &c. These are the very words of Plutarch in his account of Iss and Osiris. The Hebrews say, in speaking of the generations of the Patriarchs, et ingressus est in eam. From this continual equivoque of ancient language, proceeds every mistake.

Page 248. (56). The combination of these figures had also a meaning. The reader will doubtless see, with pleasure, some examples of ancient hieroglyphics.

"The Egyptians (fays Hor-appolo) represent eternity by the figure of the sun and moon. They designate the world by a blue serpent with yellow scales (stars, it is the Chinese Dragon). If they were desirous of expressing the year, they drew a picture of His, who is also in their language called Sothis, or dog-star, one of the sirst confeellations, by the rising of which the year commences: its inscription at Sais was, It is I that rise in the constellation of the Dog.

"They also represent the year by a palm-tree, and the month by one of its branches; because it is the nature of this tree to produce a branch every month. They farther represent it by the fourth part of an acre of land." (The whole

whole acre divided into four denotes the biffextile period of four years. The abbreviation of this figure of a field in four divisions, is manifeltly the letter ba or bet, the feventh in the Samaritan alphabet; and in general all the letters of the alphabet are merely aftronomical hieroglyphics: and it is for this reason that the mode of writing is from right to left, like the march of the stars). -" They denote a prophet by the image of a dog, because the dog-star (Anoubis) by its rising gives notice of the inundation. Noubi in Hebrew fignifies prophet,-They represent inundation by a lion, because it takes place under that fign : and hence, fays Plutarch, the custom of placing at the gates of temples figures of lions with water iffuing from their mouths .- They express the idea of God and Destiny by a star. They also represent God, fays Porphyry, by a black stone, because his nature is dark and obscure. All white things express the celestial and luminous Gods: all circular ones the world, the moon, the fun, the destinies: all semicircular ones, as bows and crescents, are also descriptive of the moon. Fire and the Gods of Olympus, they represent by pyramids and obelifks: (the name of the fun Baal is found in this latter word): the fun, by a cone (the mitre of Ofiris): the earth, by a cylinder (which revolves) : the generative power of the air, by the phalus, and that of the earth, by a triangle, emblem of the female organ. Euleb. Pracep. Evang. 5. 98.

Clay (fays Iamblicus de Symbolis, fect. 7, c. 2.) denotes matter, the generative and nutrimental power, every thing which receives the warmth and fermentation of life.

"A man litting upon the Lotos or Nenuphar, represents the moving spirit (the sun), which, in like manner as the the plant lives in the water without any communication with clay, exists equally distinct from matter, swimming in empty space, resting on itself: it is round also in all its parts like the leaves, the flowers and the fruit of the Lotos. (Brama has the eyes of the Lotos, says Chaster Neadirsen, to denote his intelligence: his eye swims over every thing, like the flowers of the Lotos on the waters). A man at the helm of a ship, adds Iamblicus, is descriptive of the sun which governs all. And Porphyry tells us, that the sun is also represented by a man in a ship resting upon an amphibious crocodile (emblem of air and water).

"At Elephantine they worshipped the figure of a man in a sitting posture, painted blue, having the head of a ram, and the horns of a goat which encompassed a disk: all which represented the sun and moon's conjunction at the sign of the ram; the blue colour denoting the power of the moon at the period of junction, to raise water into clouds. Euseb. Pracep. Evang. p. 116.

"The hawk is an emblem of the fun and of light, on account of his rapid flight, and his foaring into the highest regions of the air where light abounds.

"A fish is the emblem of aversion, and the Hippopotamus of violence, because it is said to kill its father and ravish its mother. Hence, says Plutarch, the emblematical
inscription of the temple of Sais, where we see painted on
the vestibule, 1. A child. 2. An old man. 3. A hawk.
4. A fish. 5. A hippopotamus; which signify, 1. Entrance
(into life). 2. Departure. 3. God. 4. Hatred. 5. Injustice. (See Isis & Osiris).

"The Egyptians, adds he, represent the world by a Scarabeus, because this insect pushes, in a direction con-

trary

trary to that in which it proceeds, a ball containing its eggs, just as the heaven of the fixed stars causes the revolution of the sun (the yolk of an egg) in an opposite direction to its own.

"They represent the world also by the number five, being that of the elements, which, says Diodorus, are earth, water, air, fire, and ether or spiritus. The Indians have the same number of elements, and according to Macrobius's Mystics they are the supreme God, or primum mobile, the intelligence, or mens, born of him, the soul of the world which proceeds from him, the celestial spheres and all things terrestrial. Hence, adds Plutarch, the analogy between the Greek pente, five, and pan, all.

"The ass," says he again, "is the emblem of Typhon, because like that animal he is of a reddish colour. Now Typhon signifies whatever is of a mirey or clayey nature; (and in Hebrew I find the three words, clay, red, and ass, to be formed from the same root, hamr. Iamblicus has farther told us, that clay was the emblem of matter; and he elsewhere adds, that all evil and corruption proceeded from matter: which, compared with the phrase of Macrobius, all is perishable, liable to change in the celestial sphere, gives us the theory, first physical, then moral, of the system of good and evil of the ancients."

Page 252. (57). The fenfeless cause of superstition. These are properly the words of Plutarch, who relates, that those various worships were given by a king of Egypt to the different towns to disunite and enslave them (and these kings had been taken from the cast of priests). See Iss & Osiris.

Page 255: (58). In the projection of the celeftial fibere. The ancient priests had three kind of spheres, which it may be useful to make known to the reader.

"We read in Eusebius," says Porphyry, " that Zoroafter was the first who, having fixed upon a cavern pleafantly situated in the mountains adjacent to Persia, formed the idea of confecrating it to Mithra (the fun) creator and father of all things: that is to fay, havingmade in this cavern feveral geometrical divisions, reprefenting the feafons and the elements, he imitated on a fmall scale the order and disposition of the universe by Mithra. After Zoroaster, it became a custom to confecrate caverns for the celebration of mysteries: fo that in like manner as temples were dedicated to the Gods, rural altars to heroes and terrestrial deities, &c. subterraneous abodes to infernal deities, fo caverns and grottoes were confecrated to the world, to the universe, and to the nymphs: and from hence Pythagoras and Plato borrowed the idea of calling the earth a cavern, a cave, de Antro Nympharum."

Such was the first projection of the sphere in relief: though the Persians give the honour of the invention to Zoroaster, it is doubtless due to the Egyptians: for we may suppose, from this projection being the most simple, that it was the most ancient; the caverns of Thebes, full of similar pictures, tend to strengthen this opinion.

The following was the second projection, "The prophets or hierophants," says Bishop Synnesius, "who had been initiated in the mysteries, do not permit the common workmen to form idols or images of the Gods; but they descend themselves into the sacred caves, where they they have concealed coffers containing certain spheres, upon which they construct those-images secretly and without the knowledge of the people, who despite simple and natural things, and wish for prodigies and sables."

(Syn. in Calvit.) That is, the ancient priests had armillary spheres like ours; and this passage, which so well agrees with that of Charemon, gives us the key to all their theological astrology.

Laftly, they had flat models of the nature of Plate II. with this difference, that they were of a very complicated nature, having every fictitious division of decan and subdecan, with the hieroglyphic figns of their influence. Kircher has given us a copy of one of them in his Egyptian Œdipus, and Gybelin a figured fragment in his book of the calendar (under the name of the Egyptian Zodiac). The ancient Egyptians, fays the astrologer Julius Firmicus (Astron. lib. ii. and lib. iv. c. 16). divide each fign of the Zodiac into three fections; and each fection was under the direction of an imaginary being, whom they called Decan, or chief of ten; fo that there were three Decans a month; and thirty-three a year. Now these Decans, who were also called Gods (Thei), regulate the destinies of mankind-and they were placed particularly in certain stars. They afterwards imagined in every ten three other Gods, whom they called arbiters; to that there were nine for every month, and these were farther divided into an infinite number of powers. (The Persians and Indians made their spheres on similar plans; and if a picture thereof were to be drawn from the description given by Scaliger at the end of Manilius, we should find in it a complete explanation of their hieroglyphics, for every article forms one).

Page id. (59.) The adverse Genii. At wes for this reason the Persians always wrote the name of Ahrimanes inverted thus: same and the same of the control of

Page 256. (60). Typhon, that is to fay delage. Typhon, pronounced Touphon by the Greeks, is precifely the touthan of the Arabs, which fignifies deluge; and these deluges in mythology are nothing more than winter and the rains, or the overflowing of the Nile; as their pretended fires which are to deferoy the world, are fimply the furnimer featon. And it is for this reason that Aria Stotle (De Meteor. lib. I. c. xiv.), fays, that the winter of the great cyclic year is a deluge; and its fummer a con-" The Egyptians, fays Porphyry, ". emflagration. ploy every year a talifman in remembrance of the world: at the fummer folftice they mark their houses, flocks and trees with red, supposing that on that day the whole world had been fet on fire. It was also at the same period that they celebrated the pyrric or fire dance." (And this illustrates the origin of purifications by fire and by water: for having denominated the tropic of Cancer the gate of heaven, and of genial heat or celeffial fire, and that of Capricorn the gate of deluge or of water, it was imagined that the fpirits or fouls who paffed through these gates in their way to and from heaven. were roafted or bathed: hence the baptism of Mithra, und. the passage through flames, observed throughout the East long before Moses).

Page id. (61). In Persia in a subsequent period. That is, when the ram became the equinoxial sign, or rather when the alteration of the skies shewed that it was no longer the Bull. See Note 48.

Page 257. (62). Whence are derived all religious acts
of a gay nature. All the ancient festivals respecting the
return and exaltation of the sun were of this description:
bence the bilaria of the Roman calendar at the period of
the pullage (Pascha) of the vernal equinox. The dances
were imitations of the march of the planets. Those of
the Dervises still represent it to this day.

Page 258. (63). All religious acts of the fombre kind. "Sacrifices of blood," fays Porphyry, "were only offered to Demons and evil Genii to avert their wrath... Demons are fond of blood, humidity, stench." Apud. Euseb. Prop. Ev. p. 173.

"The Egyptians," fays Plutarch, "only offer bloody victims to Typhon. They facrifice to him a red ox, and the animal immolated is held in execration, and loaded with all the fins of the people." (The goat of Moses). See Isia and Osiris.

Division of terrestrial beings into pure and impure, sacred and abominable. Strabo says, speaking of Moses and the Jews, "Circumcision and the prohibition of tertain kinds of meat sprung from superstition."—And I observe, respecting the ceremony of circumcision, that its object was to take from the symbol of Osiris (Phallus) the pretended obstacle to secundity; an obstacle which bore the seal of Typhon, "whose nature," says Plutarch, "is made up of all that hinders, opposes, causes obstruction."

Page 260. (64). Elysian-fields. Aliz, in the Phenician or Hebrew language fignifies dancing and joyous.

Page 262. (65). The Milky way. See Macrob. Som. Scip. c. 12; and Note (78).

Page 265. (66). The bodies of its inhabitants cast no flude. There is on this subject a passage in Plutarch, so interesting and explanatory of the whole of this system. that we shall cite it entire. Having observed that the theory of good and evil had at all times occupied the attention of philosophers and theologians, he adds: " Many suppose there to be two Gods of opposite inclinations, one delighting in good the other in evil; the first of these is called particularly by the name of God, the fecond by that of Genius or Demon. Zoroafter has denominated them Oromaze and Ahrimanes, and has faid that, of whatever falls under the cognizance of our fenses, light is the best representation of the one, and darkness and ignorance of the other. He adds, that Mithra is an intermediate being, and it is for this reason the Persians call Mithra the mediator or intermediator. Each of these Gods has diftinct plants and animals confecrated to him; for example, dogs, birds and hedge-hogs belong to the good Genius, and all aquatic animals to the evil one.

"The Persians also say, that Oromaze was born or formed out of the purest light; Ahrimanes, on the contrary, out of the thickest darkness: that Oromaze made six Gods as good as himself, and Ahrimanes opposed to them six wicked ones: that Oromaze afterwards multiplied himself threefold (Hermes trismegistus), and removed to a distance as remote from the sun as the sun is remote from the earth; that he there formed stars, and, among others, Syrius, which he placed in the heavens as a guard and centinel. He made also twenty-four other Gods, which he inclosed in an egg; but Ahrimanes created an equal number on his part, who broke the egg, and from that moment good and evil were mixed (in the universe). But Ahrimanes is

one day to be conquered, and the earth to be made equal and fmooth, that all men may live happy.

Theopompus adds, from the books of the Magi, that one of these Gods reigns in turn every three thousand years, during which the other is kept in subjection; that they afterwards contend with equal weapons during a similar portion of time, but that in the end the evil Genius will fall (never to rise again). Then men will become happy, and their bodies cast no shade. The God who mediates all these things reclines at present in repose, waiting till he shall be pleased to execute them." See Isis and Osiris.

There is an apparent allegory through the whole of this passage. The egg is the fixed sphere, the world; the six Gods of Oromaze are the six signs of summer, those of Ahrimanes the six signs of winter. The forty-eight other Gods are the forty-eight constellations of the ancient sphere, divided equally between Ahrimanes and Oromaze. The office of Syrius, as guard and centinel, tells us that the origin of these ideas was Egyptian: finally, the expression that the earth is to become equal and smooth, and that the bodies of happy beings are to cast no shade, proves that the equator was considered as their true paradise.

Page 265, (67). The cave of Mithra. See Note (58). In the caves which priests every where constructed, they celebrated mysteries which consisted (says Origen against Celsus) in imitating the motion of the stars, the planets, and the heavens. The initiated took the name of constellations and assumed the figures of animals. One was a lion, another a raven, and a third a ram. Hence the use of masks in the first representation of the drama. See Aut. Devoilé, vol. ii. p-244. "In the mysteries of Ceres the chief in the procession called himself the creator; the bearer

ef the toreh was denominated the fun: the person nearest to the altar, the moon; the herald or deacon, Mercury.
In Egypt there was a sessival in which the men and women represented the year, the age, the seasons, the different
parts of the day, and they walked in procession after Bacchus. Athen. lib. v. c. 7. In the cave of Mithra was a
ladder with seven steps, representing the seven spheres of
the planets, by means of which souls ascended and descended. This is precisely the ladder in Jacob's vision,
which shows that at that epocha the whole system was
formed. There is in the French king's library a superb
volume of pictures of the Indian Gods, in which the ladder is represented with the souls of men mounting it."

Page 267. (68). Exact calculation. Confult the ancient aftronomy of M. Bailly, and you will find our affertions respecting the knowledge of the priests amply proved.

Page 269. (69). A reciprocal connection. These are the very words of Jamblieus. De Myst. Ægypt.

Page id. (70.) Or rather electrical fluid. The more I consider what the ancients understood by ether, and spirit, and what the Indians call akache, the stronger do I find the analogy between it and electrical sluid. A luminous sluid, principle of warmth and motion, pervading the universe, forming the matter of the stars, having small round particles, which infinuate themselves into bodies, and fill them by dilating itself, be their extent what it will, what can more strongly resemble electricity?

Page id. (71.) Was supposed to have the sun for its heart. Natural philosophers, says Macrobius, call the sun the heart of the world. Som. Scip. c. 20. The Egyptians, says Plutarch, call the East the face, the North the right-

fide,

fide, and the South the left-fide of the world, because there the heart is placed. They continually compare the universe to a man; and hence the celebrated microsofm of the Alchymists. We observe by the by, that the Alchymists, Cabalists, Free-masons, Magnetisors, Martinists, and every other such fort of visionaries, are but the mistaken disciples of this ancient school: we say mistaken, because, in spite of their pretensions, the thread of the occult science is broken.

Page id. (72). That the world was eternali See the Pythagorean Ocellus Lucanus.

Page 270. (73). The Orphic egg. This comparison of the fun with the yolk of an egg refers, 1. To its round and yellow figure; 2. To its central fituation; 2. To the germ or principle of life contained in the yolk. May not the oval form of the egg allude to the elipsis of the orbs? I am inclined to this opinion. The word Orphic offers a farther observation. Macrobius says (Som. Scip. c. 14. and c. 20), that the fun is the brain of the universe, and that it is from analogy that the skull of a human being is round, like the planet, the feat of intelligence. Now the word Orph (with ain) fignifies in Hebrew the brain and its feat (cervix): Orpheus, then, is the fame as Bedou, or Baits; and the Bonzes are those very Orphics which Plutarch represents as quacks, who ate no meat, vended talifmans, and little stones, and deceived individuals, and even governments themselves. See a learned Memoir of Freret fur les Orphiques, Acaddes Inferip. vol. 23. in 4to.

Page 272. (76). You-piter. This is the true pronunciation of the Jupiter of the Latins. . . Existence itself. This is the fignification of the word You. See Note (84).

Page 273. (77). Producing the great egg. See Note (35). Page id. (78). The immortality of the foul, which at first was eternity. In the system of the first spiritualists, the soul was not created with, or at the same time as the body, in order to be inserted in it: its existence was supposed to be anterior and from all eternity. Such, in a few words, is the doctrine of Macrobius on this head. Som. Scip. passim.

"There exists a luminous, igneous, subtle fluid, which, under the name of ether and spiritus, fills the universe. It is the effential principle and agent of motion and life, it is the Deity. When an earthly body is to be animated, a fmall round particle of this fluid gravitates through the milky way towards the lunar fphere, where, when it arrives, it unites with a groffer air, and becomes fit to affociate with matter: it then enters and entirely fills the body, animates it, fuffers, grows, increases, and diminishes with it; lastly, when the body dies, and its gross elements diffolye, this incorruptible particle takes its leave of it, and returns to the grand ocean of ether, if not retained by its union with the lunar air: it is this air or gas, which, retaining the shape of the body, becomes a phantom or ghost, the perfect representation of the deceased. The Greeks called this phantom the image or idol of the foul; the Pythagoreans, its chariot, its frame; and the Rabbinical school, its vessel, or boat. When a man had conducted himself well in this world, his

whole foul, that is, its chariot and ether, ascended to the moon, where a separation took place: the chariot lived in the lunar Elyfium, and the ether returned to the fixed fphere, that is, to God: for the fixed heaven; fays Macrobius, was by many called by the name of God (c. 14.) If a man had not lived virtuously, the foul remained on earth to undergo purification, and was to wander to and fro, like the ghofts of Homer, to whom this doctrine must have been known, since he wrote after the time of Pherecydes and Pythagoras, who were is promulgators in Greece. Heredotus, upon this occasion, says, that the whole romance of the foul and its transmigrations was invented by the Egyptians, and propagated in Greece by men, who pretended to be its authors. I know their names, adds he, but shall not mention them (lib. 2.). Cicero, however has politively informed us, that it was Pherecydes, master of Pythagoras. Tuscul. lib. 1. sed. 16. Now admitting that this system was at that period a novelty, it accounts for Solomon's treating it as a fable, who lived 130 years before Pherecydes. " Who knoweth," fays he, " the spirit of a man that it goeth upwards? I faid in my heart concerning the effate of the fons of men, that God might manifest them, and that they might fee that they themselves are beasts. For that which befalleth the fons of men, befalleth beafts; even one thing befalleth them; as the one dieth, fo dieth the other; yea they have all one breath, so that a man hath no pre-eminence above a beatt: for all is vanity." Eccles. c. iii. v. 18:

And fuch had been the opinion of Moses, as a translator of Herodotus (M. Archer of the Academy of Inscriptions), justly observes in note 389 of the second book, where

where he fays also, that the immortality of the soul was not introduced among the Hebrews till their intercourse with the Assyrians. In other respects, the whole Pythagorean system, properly analysed, appears to be merely a system of physics badly understood.

Page 275. (79). The world is a machine; it has therefore an artificer. All the arguments of the spiritualists are founded on this. See Macrobius, at the end of the second book, and Plato, with the comments of Marcilius Ficinus.

Page 276. (80). The demi-ourges, the logos, and the spirit. These are the real types of the Christian Trinity. See Note (99).

Page 277. (81). Its very names. In our last analyfis we found all the names of the Deity to be derived from some material object in which it was supposed to refide. We have given a confiderable number of instances; let us add one more relative to our word God. This is known to be the Deus of the Latins, and the Theos of the Greeks. Now by the confession of Plato (in Cratyle), of Macrobius (Saturn, lib. 1. c. 24), and of Plutarch (Isis & Ofiris), its root is thein, which fignifies to wander, like planein, that is to fay, it is fynonimous with planets; because, all our authors, both the ancient Greeks and barbarians particularly worshipped the planets. I know that fuch enquiries into etymologies have been much decried: but if, as is the case, words are the representative figns of ideas, the genealogy of the one becomes that of the other, and a good etymological dictionary would be the most perfect history of the human understanding. It would only be necessary in this enquiry to observe certain precautions, which have hitherto

hitherto been neglected, and particularly to make an exact comparison of the value of the letters of the different alphabets. But, to continue our subject, we shall add, that in the Phenician language, the word that (with ain) fignifies also to wander, and appears to be the derivation of thein. If we suppose Dens to be derived from the Greek Zeus, a proper name of You-piter, having zaw. I live, for its root, its femfe will be precifely that of you, and will mean foul of the world, igneous principle. See Note (84). Div-us, which only fignifies Genius. God of the fecond order, appears to me to come from the oriental word div substituted for dib, wolf and chacal, one of the emblems of the fun. At Thebes, favs Macrobius, the fun was painted under the form of a wolf or chacal, for there are no walves in Egypt. The reason of this emblem, doubtless, is that the chacal, like the cock, announces by its cries the fun's rifing; and this reason is confirmed by the analogy of the words lykes, wolf, and lyke, light of the morning, whence comes lux,

Dius, which is to be understood also of the sun, must be derived from dih, a hawk. "The Egyptians," says Porphyry (Euseb. Pracep. Evang. p. 92.) "represent the sun under the emblem of a hawk, because this bird soars to the highest regions of air where light abounds." And in reality we continually see at Cairo large slights of these birds, hovering in the air, stom whence they descend not but to stun us with their shrieks, which are like the monofyllable dih: and here, as in the preceding example, we find an analogy between the word dies, day, light, and Dius, God, Sun.

Page 278. (82). The progress of science and discovery.

One of the proofs that all these systems were invented in

Egypt,

Egypt, is, that this is the only country where we see a complete body of doctrine formed from the remotest antiquity.

Clemens Alexandrinus has transmitted to us (Stromat. lib. 6.), a curious detail of the 42 volumes which were borne in the procession of Isis. "The priest," fays he. " or chanter, carries one of the symbolic instruments of " music, and two of the books of Mercury; one contain-"ing hymns of the Gods, the other the lift of kings. " Next to him the boroscope (the regulator of time), " carries a palm and a dial, fymbols of aftrology; he " must know by heart the four books of Mercury which " treat of aftrology: the first on the order of the planets: " the fecond on the rifings of the fun and moon, and " the two last on the rising and aspect of the stars. "Then comes the facred author, with feathers on his " head (like Kneph) and a book in his hand, together with ink, and a reed to write with (as is still the " practice among the Arabs). He must be versed in "hieroglyphics, must understand the description of the " universe, the course of the sun, moon, stars, and " planets, be acquainted with the division of Egypt into " 36 nomes, with the course of the Nile, with instru-"ments, measures, facred ornaments, and facred places. " Next comes the stole bearer, who carries the cubit of " justice, or measure of the Nile, and a cup for the liba-"tions; he bears also in the procession ten volumes on "the subject of facrifices, hymns, prayers, offerings, " ceremonies, festivals. Lastly arrives the prophet, bearing in his bosom a pitcher, so as to be exposed to view: "he is followed by persons carrying bread (as at the " marriage of Cana). This prophet, as prefident of the " mysteries.

mysteries, learns ten other sacred volumes, which treat of the laws, the Gods, and the discipline of the priests.
Now there are in all forty-two volumes, thirty-six of which are studied and got by heart by these personages, and the remaining six are set apart to be consulted by the passophores: they treat of medicine, the construction of the human body (anatomy), diseases, remedies, in-

We leave the reader to deduce all the consequences of such an Encyclopedia. It is ascribed to Mercury; but Jamblicus tells us that each book, composed by priests, was dedicated to that God, who, on account of his title of Genius or decan opening the zodiac, presided over every enterprise. He is the Janus of the Romans, and the Guianes of the Indians, and it is remarkable that Yanus and Guianes are homonymous. In short, it appears that these books are the source of all that has been transmitted to us by the Greeks and Latins in every science, even in alchymy, necromancy, &c. What is most to be regretted in their loss, is that part which related to the principles of medicine and diet, in which the Egyptians appear to have made a considerable progress, and to have delivered many useful observations.

Page 279. (83). The reigning religion in Lower Egypt. "At a certain period," fays Plutarch (de Ifide) "all the Egyptians have their animal Gods painted. The Thebans are the only people who do not employ painters, because they worship a God whose form comes not under the senses, and cannot be represented. And this is the God whom Moses, educated at Heliopolis, adopted; but the idea was not of his invention.

Page 280. (84). And Yuhouh. Such is the true pronunciation nunciation of the Jehovah of the moderns, who violate in this respect every rule of criticism; since it is evident that the ancients, particularly the Eastern Syrians and Phenicians, were acquainted neither with the Jé nor the V, which are of Tartar origin. The substituting usage of the Arabs, which we have re-established here, is confirmed by Diodorus, who calls the God of Moses Iaw, (lib. 1.), and Iaw and Iahouh are manifestly the same word: the identity continues in that of Iou-piter; but in order to render it more complete, we shall demonstrate the signification to be the same.

In Hebrew, that is to fay, in one of the dialects of the common language of Lower Afia, Yahouh is the participle of the verb bih, to exist, to be, and signifies existing; in other words, the principle of life, the mover or even motion (the universal soul of beings). Now what is Jupiter? Let us hear the Greeks and Latins explain their theology. "The Egyptians," says Diodorus, after Manatho, priest of Memphis, "in giving names to the five elements, called spirit, or ether, Youpiter, on account of the true meaning of that word: for spirit is the source of life, author of the vital principle in animals; and for this reason they considered him as the father, the generator of beings." For the same reason Homer says, father, and king of men and gods (Diod. lib. 1. sett. 1.)

"Theologians," fays Macrobius, "confider You-piter as the foul of the world." Hence the words of Virgil: "Muses let us begin with You-piter; the world is sull of You-piter" (Somn. Scip. ch. 17.) And in the Saturnalia he says, "Jupiter is the sun himself." It was this also which made Virgil say: "The Spirit nourishes the "life (of beings), and the soul diffused through the vast "members

members (of the universe), agitates the whole mass, and forms but one immense body."

"Ioupiter," fays the ancient verses of the Orphic fect, which originated in Egypt; verses collected by Onomacritus in the days of Pififtratus, " Ioupiter, reprea fented with the thunder in his hand, is the beginning, " origin, end, and middle of all things: a fingle and " universal power, he governs every thing; heaven, earth, fire, water, the elements, day, and night. "These are what constitute his immense body: his eyes are the fun and moon: he is space and eternity; in in fine," adds Porphyry, " Jupiter is the world, the unies verse, that which constitutes the essence and life of all " beings. Now," continues the fame author, " as phia losophers differed in opinion respecting the nature and constituent parts of this God, and as they could invent " no figure that should represent all his attributes, they ar painted him in the form of man. . . He is in a fitting * posture, in allusion to his simmutable essence; the e upper part of his body is uncovered, because it is in " the upper regions of the universe, (the stars) that he a most conspicuously displays himself. He is covered from the waift downwards, because respecting ter-" reffrial things he is more fecret and concealed. He " holds a sceptre in his left hand, because on the left " fide is the heart, and the heart is the feat of the undera standing, which (in human beings) regulates every " action." Eufeb. Praper. Evang. p. 100.

The following passage of the geographer and philosopher Strabo, removes every doubt as to the identity of the ideas of Moses and those of the heathen theologians.

" Mofes,

"Moses, who was one of the Egyptian priests, taught his followers, that it was an egregious error to represent the Deity under the form of animals, as the Egyptians did, or in the shape of man, as was the practice of the Greeks and Africans. That alone is the Deity, said he, which constitutes heaven, earth, and every living thing; that which we call the world, the fun of all things, nature; and no reasonable person will think of representing such a being by the image of any one of the objects around us. It is for this reason, that, rejecting every species of images or idols, Moses wished the Deity to be worshipped without emblems, and according to his proper nature; and he accordingly ordered a temple worthy of him to be erected, &c." Geograph. lib. 16. p. 1104, edition of 1707.

The theology of Moses has, then, differed in no respect from that of his followers, that is to say, from that of the Stoics and Epicureans, who consider the Deity as the soul of the world. This philosophy appears to have taken birth, or to have been differentiated when Abraham came into Egypt (200 years before Moses), fince he quitted his system of idols for that of the God Yabouh; so that we may place its promulgation about the seventeenth or eighteenth century before Christ; which corresponds with what we have said, Note (78).

As to the history of Moses, Diodorus, properly represents it when he says, lib. 34 5 40, "That the Jews "were driven out of Egypt at a time of dearth, when the "country was full of foreigners, and that Moses, a man of extraordinary prudence and courage, seized this "opportunity of establishing his religion in the mountains of Judea." It will seem paradoxical to assert, that the 600,000 armed men whom he conducted thither ought ought to be reduced to 6,000; but I can confirm the affertion by so many proofs drawn from the books themfelves, that it will be necessary to correct an error which
appears to have arisen from the mistake of the transcribers.

Page 280. (85). Ei, existence. This was the monofyllable written on the gate of the temple of Delphos. Plutarch has made it the subject of a differtation.

Page 281. (86). The name of Ofiris preserved in his song. These are the literal expressions of the book of Deuteronomy, ch. 32. "The works of Tsour are perfect." Now Tsour has been translated by the word creator; its proper signification is to give forms, and this is one of the definitions of Osiris in Plutarch.

Page 284. (87). Of the Archangel Michael. "The mames of the angels and of the months, such as Gabriel, "Michael, Yar, Nisan, &c. came from Babylon with the Jews;" says expressly the Talmud of Jerusalem. See Beausob. Hist. du Manich. Vol. II. p. 624, where he proves that the saints of the Almanac are an imitation of the 365 angels of the Persians; and Jamblicus in his Egyptian Mysteries, seet. 2. c. 3. speaks of angels, archangels, seraphim, &c. like a true Christian.

Page 285. (88). Theology of Zaroaster. "The whole phi"losophy of the gymnosophists," says Diogenes Laertius
on the authority of an ancient writer, "is derived from
that of the Magi, and many affert that of the Jews to
have the same origin." Lib. 1. c. 9. Magasthenes, an
historian of repute in the days of Seleucus Nicanor, and
who wrote particularly upon India, speaking of the philosopy of the ancients respecting natural things, puts
the Brachmans and the Jews precisely on the same footing.

Page

Page 287. (89). To restore the golden age upon earth. This is the reason of the application of the many Pagan oracles to Jesus, and particularly the sourth eclogue of Virgil, and the Sybilline verses so celebrated among the ancients.

Page 288. (90). At the expiration of the fix thousand pretended years. We have already feen, note 29, this tradition current among the Tuscans; it was differninated through most nations, and shows us what we ought to think of all the pretended creations and terminations of the world, which are merely the beginnings and endings of astronomical periods invented by astrologers. That of the year or folar revolution, being the most simple and perceptible, served as a model to the rest, and its comparison gave rife to the most whimsical ideas. Of this description is the idea of the four ages of the world among the Indians. Originally these four ages were merely the four feafons; and as each feafon was under the supposed intfluence of a planet, it bore the name of the metal appropriated to that planet: thus fpring was the age of the fun, or of gold; fummer the age of the moon, or of filver; antumn the age of Venus, or of brass; and winter the age of Mars, or of iron. Afterwards when aftronomers invented the great year of 25 and 36 thousand common years, which had for its object the bringing back all the stars to one point of departure and a general conjunction, the ambiguity of the terms introduced a fimilar ambiguity of ideas; and the myriads of celeftial figns and periods of duration which were thus measured, were easily converted into fo many revolutions of the fun. Thus the different periods of creation which have been fo great a fource of difficulty and misapprehension to curious enquirers,

quirers, were in reality nothing more than hypothetical calculations of affronomical periods. In the fame manner the creation of the world has been attributed to different feafons of the year, just as these different seasons have ferved for the fictitious period of these conjunctions; and of confequence has been adopted by different nations for the commencement of an ordinary year. Among the Egyptians this period fell upon the fummer folitice, which was the commencement of their year; and the departure of the spheres, according to their conjectures, fell, in like manner, upon the period when the fun enters Cancer. Among the Persians the year commenced at first in the fpring, or when the fun enters Aries; and from thence the first Christians were led to suppose that God created the world in the spring: this opinion is also favoured by the book of Genefis; and it is farther remarkable, that the world is not there faid to be created by the God of Moses (Yahouh), but by the Elohim or gods in the plural, that is, by the angels or genii, for so the word constantly means in the Hebrew books. If we farther observe that the root of the word Elohim fignifies strong and that the Egyptians called the

erful leaders, attribute are book of Genefis affirms no as than that the world was created by the any these very genit whom, according to Sanchoniathon, Mercury excited against Saturn, and who were called Elohim. It may be farther asked, why the plural substantive Elohim is made to agree with the singular verb bara (the Elohim creates) after the Babylonish.

Being manytoni

therefore

therefore thought proper to introduce a pious solecism in language, which it is evident had no existence before Moses: thus in the names of the children of Jacob many of them are compounded of a plural verb, to which Elohim is the nominative case understood, as Raouben (Reuben), they have looked upon me, and Samaonni (Simeon), they have granted me my prayer, to wit, the Elohim. The reason of this etymology is to be sound in the religious creeds of the wives of Jacob, whose gods were the taraphim of Laban, that is, the angels of the Persians, and the Egyptian decans.

Page id. (91). Six thousand years had already nearly elapsed since the supposed creation of the world. According to the computation of the Seventy, the period elapsed confished of about 5,600 years, and this computation was principally followed. It is well known how much, in the first ages of the church, this opinion of the end of the world agitated the minds of men. In the sequel, the general councils, encouraged by finding that the general conflagration did not come, pronounced the expectation that prevailed heretical, and its believers were called Millenarians; a circumstance curious enough, since it is evident from the history of the Gospels that Jesus Christ was a Millenarian, and of consequence a heretic.

Page 290. (92). Constillation of the ferpent. "The Persians," says Chardin, "call the constellation of the ferpent Ophicus, serpent of Eve; and this serpent Ophicus or Ophioneus plays a similar part in the theology of the Phenicians," for Pherecydes, their disciple, and the master of Pythagoras, said "that Ophioneus serpentinus had been chief of the rebels against Jupiter." See Mars.

C G. 2

. . .

Ficin. Apol. Socrat. p. m. 797. col. 2. I shall add that appeal (with ain) fignifies in Hebrew serpent.

Page id. (93). Seduced the man. In a physical sense to seduce, seducere, means only to attract, to draw after us.

Page id. (94). Picture of Mithra. See this picture in Hyde, page 111, edition of 1760.

Page 291. (95). Perfeus rifes on the opposite side. Rather the head of Medufa; that head of a woman once fo beautiful, which Perseus cut off, and which he holds in his hand, is only that of the virgin, whole head finks below the horizon at the very moment that Perseus rises; and the ferpents which furround it are Ophiucus and the Polar Dragon, who then occupy the zenith. This shews us in what manner the ancients composed all their figures and fables. They took such constellations as they found at the same time on the circle of the horizon, and collecting the different parts, they formed groupes which ferved them as an almanac in hieroglyphic characters. Such is the fecret of all their pictures, and the folution of all their mythological monsters. The Virgin is also Andromeda, delivered by Perseus from the whale that purfues her (pro-fequitur.)

Page id. (96). By a chafte virgin. Such was the picture of the Persian sphere, cited by Aben Ezra in the Calum Poeticum of Blaeu, p. 71. "The picture of the first decan of the Virgin," says that writer, "represents a beautiful virgin with slowing hair, sitting in a chair, with two ears of corn in her hand, and suckling an infant, called Jesus by some nations, and Christ in Greek."

In the library of the king of France is a manuscript in Arabic, marked 1165, in which is a picture of the twelve figns;

figns; and that of the Virgin reprefents a young woman with an infant by her fide: the whole scene indeed of the birth of Jesus is to be found in the adjacent part of the heavens. The stable is the constellation of the charioteer and the goat, formerly Capricorn; a confellation called præsepe Jovis Heniochi, stable of Iou; and the word Ion is found in the name Iou-feph (Joseph). At no great diftance is the ass of Typhon (the great she-bear), and the ox or bull, the ancient attendants of the manger. Peter the porter, is Janus with his keys and bald forehead: the twelve apostles are the genii of the twelve months, &c. This Virgin has acted very different parts in the various systems of mythology: she has been the Isis of the Egyptians, who faid of her in one of their inscriptions cited by Julian, the fruit I have brought forth is the fun. The majority of traits drawn by Plutarch apply to her, in the fame manner as those of Osiris apply to Bootes: also the feven principal stars of the she-bear, called David's chariot, were called the chariot of Ofiris (See Kirker); and the crown that is fituated behind, formed of ivy, was called Chen Osiris, the tree of Osiris. The Virgin has likewise been Ceres, whose mysteries were the same with those of Isis and Mithra; she has been the Diana of the Ephefians; the great goddess of Syria, Cybele, drawn by lions; Minerva, the mother of Bacchus; Astræa, a chaste virgin taken up into heaven at the end of the golden age; Thems, at whose feet is the balance that was put in her hands; the Sybil of Virgil, who descends into hell, or finks below the hemisphere with a branch in her hand, Stc.

Page 292. (97). Rose again in the firmament. Resurgere, to rise a second time, cannot fignify to return to life, but

C c 3

in a metaphorical feed; but we see continually mistakes of this kind result from the ambiguous meaning of the words made use of in ancient tradition.

Page id. (98). Chris, or confervator. The Greeks used to express by X, or Spanish iota, the aspirated ha of the Orientals, who faid baris. In Hebrew heres signifies the fun, but in Arabic the meaning of the radical word is, to guard, to preserve, and of haris, guardian, preserver. It is the proper epithet of Vichenou, which demonstrates at once the identity of the Indian and Christian Tringues, and their common origin. It is manifestly but one system, which, divided into two branches, one extending to the east, and the other to the west, assumed two different forms: its principal trunk is the Pythagorean fystem of . the foul of the world, or lou-piter. The epithet piter, or father, having been applied to the demi-ourgos of Plato, gave rife to an ambiguity which caufed an enquiry to be made respecting the son of this father. In the opinion of the philosophers the son was understanding; Nons and Logos, from which the Latins made their Varbum. And thus we clearly perceive the origin of the eternal father and of the Verbum his fon, proceeding from him (Mens ex. Den nata, fays Macrobius): the anima or spiritus mundi was the Holy. Ghost; and it is for this reason that Manes, Basilides, Valentinius, and other pretended heretics of the first ages, who traced things to their fource, faid, that God; the. Father was the supreme inaccessible light (that of the heaven, the primum mobile, or the aplanes); the Son the fecondary light refident in the fun, and the Holy Ghoft the atmosphere of the earth (See Beausob. Vol. II. p. 586): hence, among the Syrians, the representation of the Holy Ghost by a dove, the bird of Venus Urania, that is, of the

the air. The Syrians (fays Nigidius de Germanico) affert that a dove fat for a certain number of days on the egg of a fish, and that from this incubation Venus was born: Sextus Empiricus also observes (Inst. Pyrrh. lib. 3. c. 23.) that the Syrians abstain from eating doves; which internates to us a period commencing in the sign Pisces, in the ewinter folstice. We may farther observe, that if Chris comes from Hanisch by a chin, it will signify artisticer, an epithet belonging to the sun. These variations, which must have embarrassed the ancients, prove it to be the real type of Jesus, as had been already remarked in the time of Tertuslian. "Many," says this writer, "suppose with greater probability that the sun is our God, and they re
fer us to the religion of the Persians." Apologet. c. 16.

Page 293. (99). One of the folar periods. See a curious ode to the Sun, by Martianus Capella, translated by Gebelin.

Page 304. (100). Human facrifices. Read the cold declaration of Eufebius (Prep. Evang. lib. 1. p. 11.) who pretends that, fince the coming of Christ, there have neither been wars, nor tyrants, nor cannibals, nor fodo-thites, nor persons committing incest, nor lavages devouring their parents, &c. When we read these fathers of the church, we are astonished at their infincerity or infatuation.

Page 306. (101). Seet of Samaneans. The equality of mankind in a state of nature, and in the eyes of God, was one of the principal tenets of the Samaneans, and they appear to be the only ancients that entertained this opinion.

Page 309. (102.) Perverted the consciences of men. As tong as it shall be possible to obtain purification from C c 4 crimes, refines, and exemption from punishment; by meant of money or other frivolous practices; as long as kingdon's great men shall suppose that building temples of instituting soundations, will absolve them from the guilt of oppression and homicide; as long as individuals shall instagine that they may rob and cheat, provided they observe fast during Lent, go to consession, and receive extreme unction, it is impossible these, should exist in society any morality or virtue t, and it is from a deep conviction of truth, that a modern philosopher has called the document of expiations in virtue that she specially.

Page 310. (103). Has carried its inquifition even to the focred fanctuary of the nuptial bad. The Multiplemans, who suppose women to have no souls, are shocked at the idea of confession, and say; How can an honest man think of listening to the recital of the actions or the serrer thoughts of a woman? May we not also alk, on the other, hand, how can an honest woman consent to reveal them.

Page id. (104). That every where they had formed ferret.

affociations, memies to the rest of the faciety. That we may;
understand the general feelings of priests respecting the
rest of mankind, whom they always call by the name of
the people, let us hear one of the doctors of the shutch.

"The people," says Bishop Synnesius, in Calvit. page 315.

"are desirous of being deceived, we cannot act otherwise:
"respecting them. The case was similar with the ancient.

"priests of Egypt, and for this reason they shut them.

"selves up in their temples, and there composed their

"mysteries out of the reach of the eye of the people."

And forgetting what he has just before said, he addethe for had the people been in the secret, they might have
the been offended at the deception played upon them.

to the mean time with the people to long as they are the people! For my own part, to myfelf I shall always be a philosopher, but in dealing with the that of manwhind I shall be a priest.

A little jargon," fays Gregory Nazianzen to St.

Jereme (Hieren. ad Nep.) " is all that is necessary to

"impose on the people. The less they comprehend, the

"more they admire. Our foresathers and doctors of

"the church have often said, not what they thought,

"but what circumstances and necessary dictated to

"them."

We endeavour," fays Sanchoniathon, "to excite admiration by means of the marvellous." (Prap. Evang. III. 3:)

Such was the conduct of all the priefts of antiquity, and is will that of the Bramms and Lamas, who are the exact counterpart of the Egyptian priefts. Such was the practice of the Jeffeits, who marched with hafty firides in the fame pareer. It is useles to point out the whole depravity of fact a doctrine. In general every affociation which has mystery for its basis, or an oath of secrety, is a seague of robbers against society, a league divided in its very bolom into knaves and dupes, or in other words agents and instruments. It is thus we ought to ridge of those modern clubs, which, under the name of Hluminatifts, Martinells, Caglioftronials, Free maions and Meimerites, infeft Europe. Their locieties ape the follies and deceptions of the ancient Cabaliffs, Magicians, Orphics, &c. who, fays Plutarch, led into errors of confiderable magnitude not only individuals, but kings and nations.

Page 31 v. (106). They made themselves in turns aftro-

logers, caffers of planets, magicians, &c. What is nimgician, in the fense in which the people understand the word? a man who by words and gostures pretends to act on supernatural heings, and compel them to descend at his call and obey his orders. Such was the conduct of the ancient priests, and such is still that of all priests in idolatrous nations, for which reason we have given them the denomination of magicians.

And when a Christian priest pretently to make God descend from between to fix hier to a prototel of leaven, and to pender the means of this talifoan, fouls pure and in a state of grace, what is all this but a trick of magic? And where is the difference between a Chaman of Tartary who invokes the genir, or an Indian Bramin, who makes his Vichenou descend in a vessel of water to drive away evil fpirits? Yes, the identity of the spirit of priests in every age and country is fully established! Every where it is the affumption of an exclusive privilege, the presented faculty of moving at will the powers of nature; and this assumption is so direct a violation of the right of equality, that whenever the people shall regain their importance, they will for ever abolish this facrilegious kind of nobility, which has been the type and parent flock of the other species of nobility.

Page 312. (107). Who paid for them as for commudities of the greatest value. A curious work would be the comparative history of the aganses of the pope and the passils of the grand Lama. It would be worth while to extend this idea to religious ceremonies in general, and to confront, column by column, the analogous or contrasting points of faith and superstitious practices in all nations. There is one more species of superstition which it would

Google

be equally falutary to cure, blind veneration for the great; and for this purpose it would be alone sufficient to write a minute detail of the private life of kings and princes. No work could be so philosophical as this; and accordingly we have seen what a general outcry was excited among kings and the panders of kings, when the Anecdotes of the Court of Berlin first appeared. What would be the alarm were the public put in possession of the sequel of this work? Were the people fairly acquainted with all the crimes and all the absurdities of this species of idol, they would no longer be exposed to cover their specious pleasures, of which the plausible and hollow appearance disturbs their peace, and hinders them from enjoying the much more solid happiness of their own condition.
