VOX STELLARUM:

OR, A LOYAL

ALMANA

For the Year of HUMAN REDEMPTION

1799,

Being the Third after BISSEXTILE, OF LEAP-YEAR. In which are contained

All THINGS fitting for fuch a WORK; as,

A TABLE of TERMS and their RETURNS:

The Full, Changes, and Quarters of the MOON; The Rifing, Southing, and Setting of the SEVEN STARS; and other fixed Stars of Note; the MOUN's Age, and

A TIDE TABLE fitted to the fames

The Riling and Setting of the SUN; the Riling, Southing, and Setting of the MOON; Mutual Aspects; Monthly Observations; and many other Things, useful and profitable.

UNTO WHICH ARE ADDED

Aftrological Observations on the Four Quarters of the Wear.

A remarkable CHRONOLOGY; the ECLIPSES:

And other MATTERS, both curious and profitable.

With farther Observations on the Weather, Rain, &c. And an HIEROGLYPHIC adapted to the TIMES.

By FRANCIS MOO

Printed for the COMPANY of STATE And Sold by GEORGE GREENHILL, at their Halling Ludyan Street.

[Price Sixteen Pence, fliched.]

2 JANUARY XXXI Days.

Roufe up, Minerwa, and direct my Pen,
That I may tell how Things will be, and when:
When Starry Fate our Harm will less conspire,
And War, that Scourge of Nations, will expire.
All Hands aloft, ward off that secret Hate,
That seeks to overturn our Church and State.

Monthly Observations.

Rain fallen in Jan. 1797, at London, was 1,05 Inches.

Rain or Snow (more or lefs) within the Triduum of three Days; the following are the middle of those Days, NEW Moor 6 day, at 4 mars.

namely, the 8th, 12th, 16th, 22d, and 28th Days of this Month.

Courteous Reader,

You here, as usual, have the Depth of Rain fallen in each of the Months at London, as it was taken by the RAIN FIRST Quart. 14 day, at 4 months

GAGE fixed upon Somerfet House, in the Strand; the Depth of each Month's Rain is put down in Inches and decimal Parts of an Inch; the Depth of which, in the whole Year of 1797, at that Place, amounted to 24 Inches ve-

neral are full of Fears and Complaints; and well they may, for they have Rea-* fon to to be.

Spain

Betwixt Mount Gebal and Mount Gerisim,
Our faint and tott'ring Hopes long plac'd have been;
We've long been in Suspence, whether or not
A Blessing or a Curse would be our Lot.
May Heav'n, in Mercy, give the happy State,
And guard Old England from the Darts of Fate.

Turbulent

JUNE XXX Days 1001

Behold here's a new Crowd of Causes met,
Nor have the Planets done their Errand yet.
Consider well the Acts of some past Years,
New Matter now for a new Scene prepares;
We've Cause to sear some lurking Knaves there be,
That still are hatching of more Villainy.

How to fet a Clock or Watch by this Table. For example, Jan. the 1th, J find, by looking into the Table, that a Clock to be right must be 4 Minutes 8 Seconds faster than a Sun Dial; therefore I set it so much faster accordingly. And so of the rest. Twelve o'Clock is the best Time to set a Clock or Watch by a Dial.

29

Note, A Sun Dial shews Solar or Apparent Time; but a Clock, &c. hould be set to Equal or Mean Time, as the Table directs, to go true.

The state of the s
A plain and easy TABLE, shewing the Time of HIGH WATER.
Norz, That the Moon's Age being taken notice of in the Table, yen have the Time of High. Warks at all the under-named Plates. Queenborough, Porthouth, Southampton, Kentih Knock, Leith, Beathy, Me of Wight, Dunkirk, Candado, Coaft of Flanders, at the Spits and Dover Pier. Gravefend, Downs, Blacknefs, Romney, Thanet, Stilly Half-tide, North-Cape before Cocquit, and Detween Calais and Dover. London, Tinemcuth, Hartlepool, Amferdam, Whithy, Dori, Gastoin, West of Freland, at Groin, at Rotterdam, and in Robin Hood's Bay. Newcaffle, Humber, Falmouth, Severn-mouth, at the Spurn between Stilly and Lizard, Ramfey, Dartmouth, Ouerieg, Hull, St. David's, Holms of Plymouth, Anwerp, Hull, St. David's, Holms of Briftol, Lundy, St. Pauls, Salcom without Uffant, it Waterford, Borkon, and at Lynn Half-tide. Briftol, Lundy, St. Pauls, Salcom without Uffant, it Waterford, Borkon, and at Lynn Half-tide. Briftol, Lundy, St. Pauls, Salcom without Mant, it the Channel, between Foy and Falmouth. \$ 4	156	2	Head of Andromeda	13	42	10	10	2	56

THE brightest of the seven Stars is of the third magnitude, and hath 61 degrees of meridian altitude, and in colour participates of the D and §.

The fixed Stars all rife, fouth and fet, about four minutes fooner every night than they did the night before; this confidered, the exact time of rifing, fouthing, and fetting for any intermediate night, not herein noted, may be very eafily deduced from these Tables by inspection only.

To know the Time of rifing, southing, and setting of any star in this Table, for any day required, it is but considering how many hours and minutes that star rises, souths, or sets, either before or after the seven stars on that day, and you will have your desire; observing that in this Table, a stands for after, and b for before.

A N between

ACCOUNT of the ECLIPSES

AND OTHER

CELESTIAL APPEARANCES, In the Year 1799,

Calculated from New TABLES of the Motions of the Planets, founded on the latest Observations, according to the Newtonian System of Gravitation,

By HENRY ANDREWS, Astronomer, At Rayston, in the County of Hertford.*

A STRONOMY, for its Excellency, juftly challengeth the highest Place of all human Sciences; it lifteth the Heart of Man above the Heavens by invisible Lines and immortal Beams; meeteth with the Resection of Light incomprehensible, and procureth Delight and Satisfaction unspeakable.

Sacred Urania! with whose Beauty sir'd,
My Soul is ravish'd, and my Brain inspir'd;
O, teach me how thy wond'rous Works to trace,
In ev'ry Part of Universal Space;
Give me the Ways of wand'ring Stars to know,
The Height of Heav'n above and Depth of Earth below.

WITHIN the Limits of this Year there will be only two Eclipses of the SUN; and, as they fall about fix Months' Distance from each other, we must expect no Eclipses of the Moon, for the following Reason, in the Words of the great Kepler, Novilunia duo centralibus propinqua; Ergo, Circumstantia Pienilunia illibata Eclipse Lana toto Anno nullo; for which Reason also, such Eclipses of the Sun are seldom visible in these Northern Parts of the Earth, although the Sun were above the Horizon and shone ever so bright; for the Situation of us Europeans upon the Globe, requireth the Moon to have considerable North Latitude, to counterbalance her Parallax occa-

^{*} All fuch as write to him upon their own Bufiness, especially concerning Points of Curiosity, are desired to pay the Postage of their Letters, if they expect any Answer.

fioned thereby, in order to bring her between the Son and us. The first of these Eclipses is on Sunday the 5th Day of May, at 46 Minutes before our One o'Clock in the Morning; therefore, was the Moon's Latitude ever fo favourable, it must in consequence be invisible to us: But in the great South Sea, or Pacific Ocean, it will be a very great Eclipse, not total but annular; for along the Track of Central Appearance, the Spectators will be entertained with a beautiful Ring of Light quite round the Moon's dark Body; and in 8 Degrees of North Latitude, and 177 Degrees 37 Minutes East Longitude from London, this beautiful and grand Appearance (though, in some degree, awful to behold) will fall upon them precisely at their 12 o'Clock at Noon. This Eclipse will partially (more or less) be visible at the Sandwich Islands, at Otabeite, and the rest of the Society Isles, at the Friendly Islands, the New Hebrides, New Caledonia, and as far as New Zealand in the South Sea. It will also extend itself to the Westward, as far as the extensive Eastern Coast of New Holland, and the small Islands thereabout; also to New Guinea, the Ladrone Islands, and as far North from thence as the Island of Japan.

The fecond of these Eclipses is on Monday the 28th Day of October, at 36 Minutes past our Five o'Clock in the Evening, invisible to us; at which Time the Sun is vertical in the great South Sea or Pacific Ocean, near to the Western Coast of Peru in South America, in 5 Degrees 15 Minutes South Latitude, and 82 Degrees 45 Minutes of West Longitude from London, where the Sun will be centrally and totally eclipsed at Noon-Day, and that for the Space of two Minutes at least; which will be an awful and terrific Sight to those unacquainted with the Principles of Astronomy. This Eclipse will be visible in a partial Manner (more or less) to the whole Continent of South America; it will extend itself to the Island of Jamaica, to the Island of Cuba, and all the rest of the West India Islands; also into Florida, Georgia, and Carolina, on the Continent of North America; it will also extend itself to the Westward as far as Otaheite, one of the Society Isles, and Eastward as far as the Cape Verd Islands, on the Coast

of Africa.

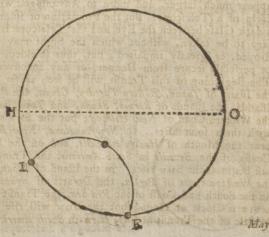

Concerning the famous TRANSIT of the PLANET MER-CURY over the SUN'S Disk, which happens on Tuesdays the 7th Day of May, 1799, and visible (if Clouds interpose not) from the Beginning to the End, both to us and all Europe.

THE Transits of the Planets VENUS and MERCURY over the SUN's Disk are curious Appearances in Astronomy, which do not often happen, especially of Venus, not more than once or twice in a Century. The first of this Kind that was ever feen fince the Beginning of the World, was a Transit of Venus in the Year 1639, and was predicted by Mr. JEREMIAH HORROX, an Englishman, and observed only by him and his Friend, Mr. CRABTREE, both residing near Liverpool. The Planet MERCURY, entirely divested of its Radiancy, will this Year traverse the Sun's Face for near Seven Hours and a Half, in Form of a round black Spot, and will be feen, if the Sky be clear at the Time, to all Places of the Earth where the Sun is up. MERCURY will be visible to sharp Eyes without a Telescope, only defended by the Interpolition of a dark Glass, or a Piece of clear Window Glass smoked over the Flame of a Candle, but will appear much larger, and more to Advantage, with the Help of a Telescope: But the Precaution of interposing a dark Glass between the Eye and the Telescope is necesfary to be taken, without which the Sight may be destroyed, or greatly impaired; but, thus shielded, it will be perfectly fecure from Danger, or any Inconvenience. The Beginning of this Transit will be seen as far East as the Island of Japan, Eastern Tartary, China, the Philipine Islands, the Islands of Borneo, Sunda, and Java, and also the Western Coast of New Holkand; but the Sun will set with them foon after. In Newfoundland, New Britain, near the Mouth of Hudson's Straits, and on the Eastern Coasts of the Brazils in South America, the Transit will just begin as the Sun rifes. In the Island of Madagascar, the Western Parts of Persia, the Defarts of Arabia, and on the South East Coast of the Red Sea, the Transit begins at 12 o'Clock at Noon; but the Sun will rife at the Middle of the Transit at Cape Horn in South America. In the

TRANSIT of MERCURY.

39

the Island of Ceylon in the Indian Sea, and on the Coromandel and Malabar Coasts, and to the Eastern Parts of Western Tartary, the Sun will set with them soon after the Middle of the Transit; but at the Cape of Good Hope, in Africa, the Transit ends as the Sun sets. This Transit will be feen, from the Middle to the End, to all North and South America, and the West India Islands; but the whole of this Transit will be visible at the Azores, the Canary, and Cape Verd Islands, and also at the Island of St. Helena, as well as with us and all the rest of Europe. -MERCURY being a fickle Planet, and these Appearances very rare, I would not be too peremptory in my Affertions; but I hope the Appearances in these Kingdoms will not greatly deviate from the following Type and Calculations, made from new and improved Tables. The Delineation or Type-is adapted to the City of LONDON, and shows the Track of MERCURY from the Beginning to the End, which will appear, according to my Calculations, to be performed in a Curve Line, Convex towards the Sun's Centre; it also will be sufficient to inform the curious-Observer, in what Part of the Sun's Periphery he may expect the Point of Ingress, and will tolerably serve for the whole Kingdom at large.

May 7th, 1799. App. Time.	London. h.m. s.	York. h. m. s.	Edinb. h. m. s.	d island
Central Ingress Middle of Trans.	9 1 31	8 57 4	8 48 42	morn.
Ecliptic Conj. Central Egress	0 58 52	0 54 25	0 46 3	Silla Her

Note, HO, an Horizontal Line; I, the Place where Mercury will enter the Sun's Disk, which will be about 59 Degrees to the left of his lowermost Point; E, the Egrels or Place where Mercury goes off the Sun, which will be just at his lowermost Point, as the Type before sheweth. Under the Meridian of London, Mercury enters the Sun's Disk about 9 in the Morning, and goes off again about 25 Minutes after 4 o'Clock in the Afternoon; but accordingly as Places are situated to the East or West of the Meridian of London, just so much later or sooner will the Times of the Transit happen at those Places, which will be as their Disserence of Longitudes are in Time. The Time at Cambridge will be much the same as at London.

Some other Celestial Appearances.

ON JANUARY the 16th, in the Morning, there happens a notable Occultation of the Planet Jupiter by the Moon, which, should the Air prove clear, will be well worth the Attention of Astronomers: The Moon will be feen approaching this sine Star for some Time before the Immersion takes place, which will appear a little above the Moon to the left, as is shown by the annexed Type, which is adapted to London, and will, without sensible Error,

ferve the whole Kingdom. Jupiter will be feen to immerge behind the dark Part of the Moon at I, at 49 Min. past 1 o'Clock in the Morning; and will again emerge from the bright Part of the Moon at E, at 40 Min. past 2, apparent Time, after being hid 51 Minutes. This Occultation will make a beautiful Appearance through a Telescope.

Note:

Note, In the Southern Parts of this Kingdom, the Moon will fet before the Occultation is over; but in the Northern Parts, the End will happen before the Moon fets, if my Numbers are right or nearly right.

On SUNDAY, the 24th of November, in the Morning, foon after the Moon rifes, she will eclipse the bright and refulgent Planet Venus, then our Morning Star; the Ap-

pearance of which will be as in the annexed Type, which represents the light and dark Parts of the Moon, both in Quantity and Polition, as it is expected to be.—Venus will immerge behind the bright Part of the Moon, at I, at 5 Min. past 4 o'Clock; and Venus will again emerge from behind the dark Part of the Moon at E, at 4 Min. past 5 o'Clock, Solar Time. The Moon is ex-

pected to rife at London that Morning; at 49 Minutes past 3 o'Clock; and in Latitude 54 Degrees North, at 52 Minutes past 3. This will be an Occultation well worth the Attention of Astronomers, and other curious Persons, and will make a beautiful Appearance through a Telescope, though visible to the naked Eye, as well as that of Jupiter before-mentioned. These Calculations are made for the Meridian and Latitude of London.

OBSERVATIONS on the WEATHER GLASS, and the confequent Changes in the Air in this Country, viz. GREAT BRITAIN.

I. IN Winter, Spring, and Autumn, the sudden Falling of the Mercury, and that for a large Space, denotes high Winds and Storms; but in Summer it denotes heavy Showers, and often Thunder: and it always sinks lowest of all for great Winds, though not accompanied with Rain; though it falls more for Wind and Rain together than for either of them alone. Also if, after Rain, the Wind change into any Part of the North, with a clear

and dry Sky, and the Mercury rife in the Tube, it is a

certain Sign of fair Weather.

II. After very great Storms of Wind, when the Quickfilver has been low, it commonly rises again very fast. In settled, fair, and dry Weather, except the Mercury fink much, expect but little Rain; for its small sinking then is only for a little Wind, or a few Drops of Rain; and the Mercury foon rifes again to its former Station. In a wet Season, suppose in Hay Time and Harvest, the smallest Sinking of the Quicksilver must be minded; for, when the Conflitution of the Air is much inclined to Showers, a little Sinking in the Barometer then denotes more Rain, as it never frands then very high. And if, at fuch a Season, it rises suddenly very fast, and high, expect not fair Weather more than a Day or two, but rather think the Mercury will fall again very foon, and Rain immediately to follow; the flow gradual rifing and keeping on for two or three Days, being most to be depended on for a Weck's fair Weather: And the unfettled State of the Quickfilver always denoting uncertain and changeable Weather, especially when the Mercury stands any where about the Word Changeable on the Scale. The greatest Heights of the Mercury in this Country arising from Easterly and North-Easterly Winds, it may often rain or fnow, the Wind being in those Points, though the Barometer fink little or none, or perhaps may be in a rifing State. The Mercury finks for Wind as well as Rain in all the other Points of the Compass, but rifes as the Wind shifts about to the North or East, or between those Points: yet, if the Barometer should fink with the Wind in that Quarter, expect it foon to change from thence; or else, should the Fall of the Mercury be much, a heavy Rain is then likely to ensue, as sometimes happens. Take Heed of buying WEATHER GLASSES of People who hawk them about the Country, as there is a great Deal of Deception in them. - See Page 41 of my last Year's Almanack.

NOTE, Good Weather Glasses that may be depended upon, Barometers and Thermometers, properly adjusted, may always be had of HENRY ANDREWS, at Royston in Hertfordshire; and sent safe to any Part of the Kingdom. Letters must be Post paid.

Judicoum!

Judicium Astrologicum pro Anno 1799.

Or, An Aftrological Judgment for the whole Year, from the Influx and Influences of the Planets (as Second Gauses under God) with respect to the Affairs of the World.

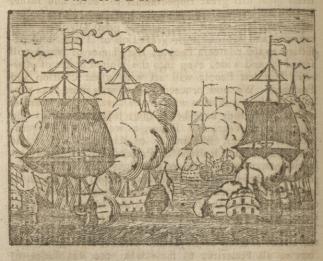

THE INTRODUCTION.

Courteous Reader,

Judrenia

N feveral of my former Almanacks, I have taken No-I tice, that the SPIRIT of GOD is now performing great Wonders in all Nations, in order to bring about some great Work of Reformation amongst Mankind; wherein I have made it appear, by a numerous Train of Deductions, that feveral Scripture Prophecies are at this Time fulfilling in the World, tending to the Overthrow and Deftruction of Popery, Superstition, and arbitrary Power. What a Fund of Reflection upon the Fate of Nations does the Fall of ROME at this Time give Rife to! Rome, which filled the World with her Arms, and had so long enslaved Mankind, is sunk at last into the Arms of a Conqueror; her Papal Power, which could have brought Kings from the furthest Ends of the Earth to kneel before it, which could make a Monarch a folitary Being among his Subjects, and strip him by a few Words of all Happiness and Authority; which could have called Millions of Swords from their Scabbards, to revenge a Look that threatened it with Infult, has been annihilated without a Struggle, and not a Sigh of Regret is breathed by any one at its Fate! May we not, therefore, be justified in confidering the present Power of France as the appointed Instrument of Punishment to the corrupt Part of the Christian World, and of Discipline and Trial to those who hold the Faith which was once delivered unto the Saints.

THE HIEROGLYPHIC.

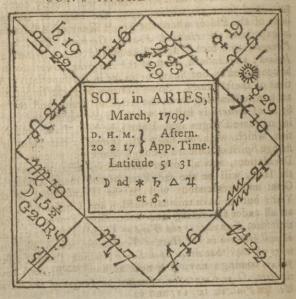

Of the Brumal Ingress, or Winter Quarter.

THIS Quarter begins December 21, 1798, at 42 Mi nutes past 12 o'Clock at Noon, when to Degrees of 19 culminate, and 25 Degrees of v ascend the Eastern Finitor. Mars is in 4 Deg. of v, the Ascendant of England; he has just risen above the Earth; 4 in 17 Degrees; & retrograde, located in the Eastern Angle; b in 24 Degrees; 23 retrograde; the D in 10 Degrees II, the Afcendant of London, ab * 8, ad 8 of 9. The Planet Mars is haftening to a Zodiacal D Aspect of b, from Cardinal and Tropical Signs; Mars in his own Dignities, and Saturn in the Dignities of the Moon. From a View of the Planetary Configurations at this Ingress, some Pofitions are for Peace and Concord, while others are for War and Bloodihed; and thus are the Nations of the Earth divided. The Position of the two grand Superiors, Jupiter and Saturn, will, I doubt, help but little to the Peace and Tranquillity of IRELAND, as they are, from particular

particular Circumstances, very weak in the Figure; there feems to be still great Impediments to Peace, and rather fix than remove our Complaints. In France, Holland, Germany, Italy, and Spain, there will be great Divisions, Difcontents, and Murmurings, great Loss of Trade, and Affliction to the common People; the Flames of which will spread far and wide, even into the United States of America; but that People will act with great Caution and Prudence. We now proceed to fay, it is more than probable the French Nation will not be always fo rampant as of late Years they have been, there being auspicious and also disastrous Years and Times, as well in the Government of Empires, Monarchies or Kingdoms, as in the Reigns or Annual Rulings of Princes or Republican Governments, of which France has lately had the most remarkable Experience in the Life, Reign, and Death of their late unfortunate King, whose proper Sins could not or did not exceed the Number of other Mens; but he perished (as we may say) by the peculiar Fate of France, God fo permitting, as it was the Fate of our unfortunate CHARLES I. King of England. These are general Warnings to all Posterity, to shew what the Revolution of Time, their Sins, and the Sins of Nations will bring about, fo ALMICHTY GOD having decreed it :- ALL THINGS HAVE A TIME TO BE BORN, TO INCREASE, TO DIE, AND TO BE EXTINGUISHED! More than this cannot be faid, or may we fafely deliver. Several States and Kingdoms in Europe, we are forry to fay, are yet lamentably to suffer by Decay of Trade, intestine Divisions, Losses at Sea, Tumults, and the Sword! But yet, let all those People whom it may concern, observe this short aftrological and cabalistical Judgment, That if any foreign Power shall attempt an Invasion, or to bring in a foreign Army amongst us, to destroy or bring us into Slavery, we predict they shall assuredly fail in their Purpose, and shall never attain their Designs, but perish in the very Attempt. I now hasten to give you the Scheme of the Sun's Ingress into Aries:

SUN's INGRESS into ARIES.

Of the Vernal, or Spring Quarter.

THE Sun now begins to display his genial Influence on the Earth, and this Quarter commences on the 20th of March, at 17 Minutes past 2 o'Clock in the Asternoon; and the Planets are configurated and displayed as in the above Scheme. Here is Appearances of Treaties offered, Messengers sent to and fro, great Discourses of Peace, in or near these Times, but I doubt nothing less is thought of but to gain Advantages, or other Purposes. The Position of Mars and Jupiter in the Ascendant of Ireland, on the Cusp of the Medium Coeli, is a sanguine and very malignant Aspect, for it implies great Calamities to Mankind, as Commotions, Wars, Seditions, Subversions of Kingdoms and States, Alteration of Laws, Customs, and Rights, &c. The great Heroes of the Age have now an Oppor-

Opportunity to shew their Valour; many eminent and extraordinary Events and Alterations will shortly come to pass, and show themselves upon the Stage of Europe; fome of the Places where the grand Scene of Affairs may be expected, are Holland, France, Germany, Italy, Spain, Portugal, to which, I fear, I must add Great-Britain and Ireland; and, indeed, most of the European Powers seem to be concerned in one Shape or other in the superlative Actions of these Times. Some Matters of great Importance are now hammering upon the Anvil of State, and the evil Spirit of France is still at work, in contriving and carrying on some Designs against our Liberties, Land, and Nation, which, we hope, God will prevent; but there is a strange Spirit of Discord amongst Mankind, whence Wars, Devastations, and all other Calamities usually attending the fame, will be the fad Fate of too many Countries. Great and tremendous will be the Transactions of this Year; but we have this Satisfaction and Consolation, they are all under the ruling and controlling Power of God; therefore, Keep close to the Word of God's PATIENCE, and be will keep you in the Hour of Temptation, which shall come to try all those that dwell upon Earth; which Time, I assure you, is coming; nay, it is near at hand :- Be wife now, therefore, O ye Kings; be instructed ye Judges of the Earth, &c. see Pjal. ii. 10, 11, and 12.

Of the Estival, or Summer Quarter,

WHICH begins on the 21st day of June, at 3 Minutes past 12 at Noon, when the first Degree of 25 will be on the Cusp of the Medium Cool; and the first Degree of will be on the Ascendant; ?, Lady thereof, is in 10 Degrees of A, on the Cusp of the 11th, afflicted of the Moon in 25. At this Ingress, happens a notable 6 of B and 8, in 25: these malevolent Planets are pointed in the 10th, one in his Detriment, and the other in his Fall: they violently afflict each other; there is also a 6 of 4 and 8, in 11, the Ascendant of London; they are located in the 9th House of the Figure: Thus stands the Face of the Heavens at this Ingress. The 6 of Saturn and Mars is a remarkable Consiguration, as the meeting of these two malevolent Planets is in Cancer, a cardinal and tropical

Sign; Saturn here corrupts the Influence of the Moon, who hath her Dignities in that Sign; and Mars destroys the Influence of Jupiter, who is therein exalted. Cardinal Signs possess the Angles of the Figure, which show the Effects of this Conjunction to be most eminent, and to promote great and notable Actions. This Conjunction principally respects Europe, and shows most eminent Actions to be carried on with great Refolution and Celerity. The French Republic, and also Great-Britain, appear very formidable to some of their Neighbours; and fome confiderable Changes appear in the Affairs of some of the German Princes, &c. The Russians exert themselves with great Valour and Prudence. Holland and Pruffia under some Uneafiness and Disorder, as is also the City of Constantinople. This Conjunction denotes some raging Distempers, Fevers, unusual Fires, and fiery Appearance in the Air, as also tempestuous Weather, Inundations, Earthquakes, and the like. I hope we may be free!

Of the Autumnal Quarter,

WHICH commences on Monday, the 23d Day of Suptember, at 49 Minutes past 1 in the Morning, when 29 Degrees of or will be upon the Mid-Heaven, and 16 Degrees of A are ascending. The Planets are thus posited, viz. 1 7 Degrees of A, in the 12th House; 4 in the 11th just entering 5; 8 27 Degrees of 112, on the Cusp of the 3d; 2 1 Deg. of m, located in the 4th; \$ 13 Degrees of m, in the 2d; the D in 9 Degrees of s, ab 6 21 et A 2, ad * & et 3: Thus will fland the Face of the Heavens at this Ingress, and from which I infer, that notwithstanding some Overtures have been made for Peace, yet, I doubt, the Felicity of all Europe, particularly Great Britain and Ireland, is not yet so near at Hand; the Sufferings of this Nation, I fear, are not yet quite over, for our Enemies are many. Some great Things will shortly be brought before a great and august Assembly; I wish they may tend to the Peace and Welfare of Mankind; and I pray to God to protect our most gracious King and Sovereign, and the whole Nation at large.
