

Merlinus Liberatus.

BEING AN

ALMANACK

For the Year of our Redemption,

1799,

Being the Third after *Bissexile*, or *Leap-Year* ;
And from the Creation of the World, according
to the best History, 5746,

And the 110th of our Deliverance by *K. William*

From *Popery and Arbitrary Government* ;

But the 104th from the

Horrid, Popish, Jacobite Plot.

Wherein are contained all Things fitting and useful for such a Work; as
an Ephemeris of the daily Motions of the Planets, with their various
Configurations, Aspects, Conjunctions, Lunations, Eclipses, Astronomical,
Astrological, Meteorological Observations, the Rising and Setting
of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of
the Tides, Terms, and daily Equation of Clocks, Length and Break,
Increase and Decrease of Days, Semidiurnal and Seminocturnal Arches
for several Latitudes, a Chronology, Remarks on the Divisions of the
Heavens, with Judgments of the Eclipses and Seasons, handled ac-
cording to the Rules of the Ptolomean Astrology, with many other
Things relating to the Truth of Astrology. And will equally serve
also for either *Parker's* or *Saunders's* Almanack, as it contains most
of the useful Parts of those other two Works, and *White's* Eph-
emeris contains the rest.

Calculated for the Meridian of

By JOHN PARTRIDGE.

— *Etiam Mortuus loquitur.* —

L O N D O N .

Printed for the *Company of STATIONERS* ;
And Sold by *GEORGE GREENHILL*, at their Hall,
in Ludgate Street.

[Price stitched Sixteen Pence.]

A Table of the Common Notes, and Moveable Feasts, for the Year of our Lord 1799.

Golden Number - - -	14	Easter Sunday - March 24
Epact - - - -	23	Rogation Sunday April 28
Dominical Letter - - -	F	Ascension Day - May 2

		God preserve.

PARTRIDGE. 1799.

An Explanation of this and the following Table:
 First find the Month on the Head of the Table, and the Day in the first Column on the
 left Hand, and in the Angle of meeting you have the Day of the Moon's Age, with
 which enter the following Table, and find your said Number in the left Hand Column,
 and over against it in the other Column is the Time of High Water at all the Places
 above mentioned, by Inspection.—Example, Jan. 25 I find the Moon to be 19 Days old,
 and over against 19 in the 1st Column I find 6 h. 12 m. in the 2d Column, 4 h. 42 m.
 and over against 19 in the 11th Column I find 6 h. 12 m. in the 3d Column, which are the Times of High Water at all those Places mentioned above in
 the 3d; which are the Times of High Water at all those Places mentioned above in

Et sic de ceteris.
 First find the Month on the Head of the Table, and the Day in the first Column on the
 left Hand, and in the Angle of meeting you have the Day of the Moon's Age, with
 which enter the following Table, and find your said Number in the left Hand Column,
 and over against it in the other Column is the Time of High Water at all the Places
 above mentioned, by Inspection.—Example, Jan. 25 I find the Moon to be 19 Days old,
 and over against 19 in the 1st Column I find 6 h. 12 m. in the 2d Column, 4 h. 42 m.
 and over against 19 in the 11th Column I find 6 h. 12 m. in the 3d Column, which are the Times of High Water at all those Places mentioned above in

Prs. Augusta Sophia,	Nov. 8,	1768	Duches, of Brunswick,	Aug. 11,	1737
Prs. Elizabeth,	May 22,	- 1770	Duke of Gloucester,	Nov. 25,	1743
Prince Ernest Augustus,	June 5,	1771			

SOVEREIGNS of EUROPE, their Accession, &c.

Kingdoms, &c.	To whom subject.	When born.	Began to reign.
England, &c.	George III.	June 4,	1738 Oct. 25, 1760
Russia	Paul	Oct. 1,	1754 Nov. 17, 1796
Spain	Charles IV.	Nov. 11,	1748 Dec. 1788
Portugal	Mary	Dec. 7,	1734 Feb. 24, 1777
Prussia	Fred.-Wm. III.	Aug. 6,	1770 Nov. 16, 1797
Denmark & Norway	Christian VII.	Jan. 29,	1749 Jan. 14, 1766
Sweden	Gustavus IV.	Nov. 1,	1778 Mar. 29, 1792
Germany	Francis II.	Feb. 12,	1767 Mar. 1, 1792
Poland	Stanislaus III.	Jan. 17,	1732 Nov. 25, 1764
Holland	William V.	March 8,	1748 Oct. 11, 1751
Papedom	Pius VI.	Dec. 27,	1717 Feb. 18, 1775
Sardinia	Victor	June 26,	1726 Mar. 20, 1773
Ottoman Empire	Selim III.	July 17,	1761 April 7, 1789
Two Sicilies,	Ferdinand IV.	Jan. 12,	1751 Oct. 6, 1759

The FULL WEIGHT of the COINS, with the LEAST WEIGHT allowed to pass of the Gold Coin.

Wt. allowed.	Full Wt.	Full Wt.
GOLD. dwt. gr.	dwt. gr.	S I L V E R. dwt. gr.
Guinea - 5 8	5 9 ³ / ₁₀	A Crown, - - - 19 8 ¹⁶ / ₃₁
Half Guinea, 2 16	2 16 ⁶ / ₉	Half Crown, - - - 9 16 ⁸ / ₃₁
Quarter Guin. 1 8	1 8 ³ / ₂ 8 ² / ₉	Shilling, - - - 3 20 ²⁸ / ₃₁
		Six Pence, - - - 1 22 ¹⁴ / ₃₁

According to the above proportions it appears, that the value of a lb. of silver is 62s. or 3l. 2s. and of a lb. of gold is 44 $\frac{1}{2}$ guineas, or 46l. 14s. 6d. Also that the oz. of silver is 5s. 2d. and the oz. of gold 3l. 17s. 10 $\frac{1}{2}$ d. So that the value of the standard gold is 15 times that of the silver, and 1-14th more.

A TABLE of TERMS and RETURNS for 1799.

Hilary Term begins January 23, ends February 12.

Returns or Essoign Days.

The Act is July 8.

CAMBRIDGE TERMS.

Lent Term - -	begins January 13,	- -	ends March 15.
Easter Term - -	begins April 3,	- -	ends July 5.
Michaelmas Term begins October 10,	- -	- -	ends Dec. 16.

The Commencement will be July 2.

8 January hath XXXI Days.

The Maleficks with bright Sol do roughly jar,
Filling the World with a domestic War;
In various Mischiefs they their Rays dispense,)
And shew Mankind their rugged Influence ;
Something they mean, you'll soon see their Intent,
The Strength of Fate is from these Causes sent.

10 February hath XXVIII Days.

Farther to know what 'tis makes Mortals jar,
Observe the Nature of the tempting Star;
To nimble witty Stibbons turn your Eye,
He shews a subtle, fly, intriguing Spy;
Who, whilst in Place, employs it for the Cause,
He's High-Church, Papist, Nothing, if you please.

VENUS is an Evening Star till Oct. 16; then a Morning Star for the rest of the Year.

March hath XXXI Days.

And thus it goes, stagg'ring from Hand to Hand,
 Till Couds of Causes meet, and make a Stand ;
 Matter in shatter'd Shapes, but artful made,
 Marches in Order to the grand Parade.
 Push'd into Action, though unseen, 'tis plain,
 The little Cloud leads on the Hurricane.

April hath XXX Days.

Saturn's malignant Rays corrupt the Sun,
And shew how human Wickedness begun.
Learn to hate Vice, then Virtue will adorn;
The Devil's Trade's undone if you reform.
Poor Sinners sculk, though most expert they be,
But Knaves of Quality are bold and free.

The two Superiors, when in hostile Square,
 On Earth send Discord, Thunder in the Air;
 In various Mischiefs they their Rays dispense,
 And shew Mankind their rugged Influence;
 They mould Religion too, as Nature craves;
 Of all Knaves I most hate religious Knaves.

JUNE hath xxx Days.

Mars like a hot brained Zealot of the times,
 Joins a Planet full fraught with great designs :
 In mishaped bigotry he doth appear,
 And, for his Holy Faith, can drink and swear,
 He loves the Church, and when he there doth
 come,
 Prays to that God, which he denies at home.

JULY hath xxxi Days.

M	h	4	D
D	25	II	8

The air's o'ercharged with matter of its own : 1 27 16 8
 With angry rays the Heavens seem to frown ; 6 28 17 13
 The nitrous part, by heat advancing higher, 11 28 19 12
 Breaks forth at last with ratlings, smoke, and fire, 16 29 20 12
 Hot heads, as well as air, of sulphur sinell, 21 30 21 12
 Fire and brimstone in their natures dwell, 26 31 22 12

Witches they say, can turn into a hare,
Or on a switch ride through the fleeting air;
'Tis all a trick, pray take it not amiss,
The Devil's in't if you believe all this.
Ill tongues and witchcraft, if these tales be true,
Nations may be bewitch'd as well as you.

Tyrants and tyranny ! what can be worse ?
 (To all but slaves) an everlasting curse :
 When his wild will constrains you to obey,
 He then insults you like a beast of prey,
 Let such as slavery seek, to France repair,
 Let tyranny no more infest our British air.

For some good end, and for some future use,
This month our noble Monarch did produce,
Whose noble soul, and glorious actions show,
His enmity to Rome, and tyrants too;
Heaven guide his will, make justice his delight,
And all his actions crown with glory bright.

NOVEMBER hath xxx Days.

On its fourth day November to adorn,
Was noble, just, and good King William born ;
Who sav'd this Realm from Rome, which Gallic
aid,
By passive cant and loyalty betray'd :
When knaves and fools had run the ship aground.
'Fill William came, no Pilot could be found.

30 DECEMBER hath xxxi days.

Poor men are little shrubs, rich men tall trees,
 Those 'scape sequestring storms, so do not these;
 The man of riches, and the Potentate,
 Most subject are to bitter frowns of fate:
 For in this world, all's fickle, nought is firm,
 Law, Cities, Empires, have but here their
 term.

Of the ECLIPSES of the SUN, 1799.

THIS year affords two Eclipses of the SUN, both of them nearly central; the one before his Apogee, and the other after it; consequently we cannot expect the Moon to be eclipsed at all until the year following.

The first of these Solar Eclipses will happen on Sunday, the 5th of May, at 15 minutes before our 1 o'clock in the morning; therefore, of course, it must be invisible to us. This will be a very great Eclipse in the Great Pacific Ocean; for in 8 degrees of North latitude, and 177 degrees 37 minutes of East longitude from London, the Sun will be both centrally and annularly eclipsed, and that precisely at noon-day, when a beautiful and splendid ring of light will appear all around the Moon's dark body. The Sun also will be partially eclipsed (more or less in quantity) at the Sandwich Islands, at the Society and Friendly Islands, the New Hebrides, New Caledonia, and it will be seen as far as New Zealand, towards the South Pole. It will be visible in New Holland, New Guinea, the Ladrone Islands, and as far North from thence as the Island of Japan.

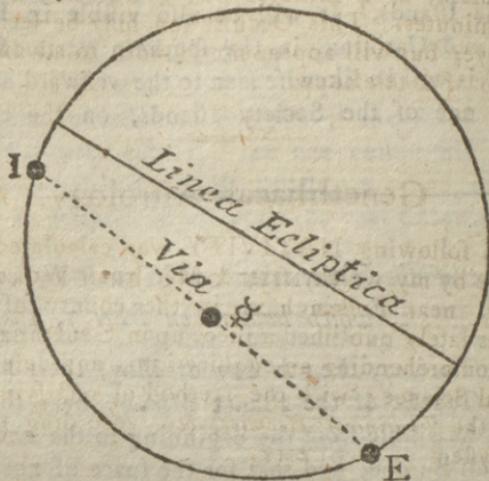

The other Solar Eclipse happens on Monday the 28th of October, at 36 minutes past our 5 o'Clock in the evening, invisible to us; for the Sun sets that day, at London, at 54 minutes past 4 o'clock. This is also a very great Eclipse, for it will be both central and total at noon-day, in the Great Pacific Ocean, or Great South Sea, near the western coasts of Peru, in South America, in 5 degrees 15 minutes of South latitude, and about 83 degrees of West longitude from London. This Eclipse will be visible (more or less in quantity) to the whole continent of South America; it will be seen at the Island of Jamaica;

Jamaica; at the Island of Cuba, and all the rest of the West India Islands. It will be also visible in Florida, Georgia, and Carolina, in the southern parts of North America. It will be likewise seen to the westward as far as Otaheite, one of the Society Islands, on the coast of Africa.

An Account of the TRANSIT OF MERCURY over the SUN'S DISK, which happens on May 7, 1799.

UPON Tuesday, the 7th day of May, there happens a notable Transit of the Planet *Mercury* over the *Sun*, which will be visible from the beginning to the end, both to us and all Europe, and that for the space of near seven hours and a half. The Planet *Mercury*, divested intirely of its radiancy, will be seen on the *Sun*, in the form of a round black spot, and visible, if the sky be clear at the time, to all places of the Earth where the *Sun* is up. *Mercury* may be seen on the *Sun* by sharp eyes, only defended by the interposition of a dark glass, or a piece of clear window glass smoked over the flame of a candle; but will appear much larger, and more to advantage, with the help of a telescope. The precaution of interposing a dark glass between the eye and the telescope will be necessary, or otherwise the sight may be impaired, if not nearly destroyed; but, thus shielded, it will be perfectly secure from danger, or any inconvenience. This Transit will be visible, from the middle to the end, to all North and South America, and the West India Islands; the beginning will be seen in Eastern Tartary, China, the Philippine Islands, the Islands of Borneo, Sunda, and Java, and on the western coast of New Holland, but the *Sun* will set with them soon after.

THE TYPE.

At London, according to apparent time, the ingress at I, is May the 7th, at 1 minute after 9 o'clock in the morning ; the middle of the transit will be at 43 minutes past 12 at noon ; and the egress at E, is at 25 minutes past 4 in the afternoon.

OCCULTATIONS of the PLANETS by the MOON.

ON Wednesday, the 16th of January, there happens an Occultation of the Planet *Jupiter* by the *Moon*, and visible in these parts, if the air proves clear. *Jupiter* will be seen some time at a little distance from the *Moon*; and at 49 minutes past 1 o'clock in the morning, will be seen to immerge behind the dark part of the *Moon's* Limb; and at 40 minutes past 2, solar time at London, he will appear again to emerge from behind the bright part of the *Moon's* limb; after being hid 51 minutes. Though this may be seen by the naked eye, yet it will appear the most beautiful through a telescope.

Also, on Saturday, the 24th of November, soon after the *Moon* rises in the morning, she will eclipse the morning Star, the beautiful Planet *Venus*. This fine Star will immerge behind the bright part of the *Moon*, at 5 minutes past 4 o'clock, solar time at London; and *Venus* will

will again be seen to emerge from behind the dark part of the Moon, at 4 minutes past 5 o'clock; after being hid 59 minutes. This Occultation may be seen with the naked eye; but will appear much more to advantage with the help of a telescope.

Genethliacal Astrology.

THE following NATIVITY was calculated and sent me by my worthy friend Mr. JOHN WORSDALE, of Spanby, near Folkingham, in the county of Lincoln, who has lately published a piece upon Genethliacal Astrology, comprehending an enquiry into, and defence of the Celestial Science; with the method of rectifying Nativities by the *Trutine of Hermies*, &c. according to the genuine system of PTOLEMY.

The NATIVITY of a YOUNG LADY.

“ In plains of Shinor, where enlarged sky
“ Presents vast prospects for th’ admiring eye,
“ The long liv’d Patriarchs, as their flocks they fed,
“ Observ’d the wand’ring glories over head;
“ Trac’d all their laws and motions, and from thence,
“ By sage experience, learn’d their influence.”

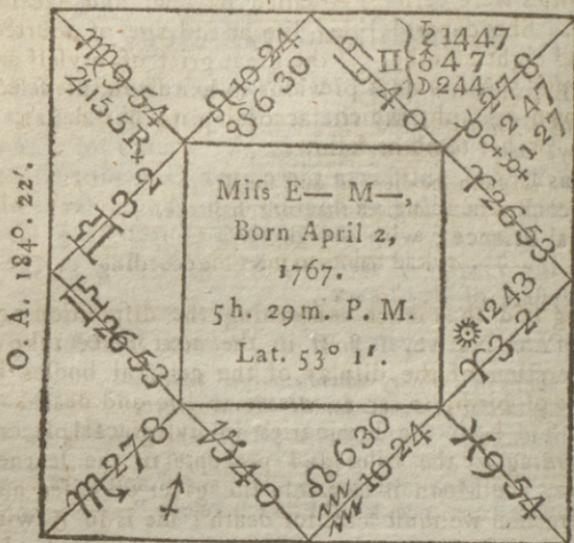

This is the Nativity of a young lady, who was very nearly related to me; the time of her birth was carefully observed, and the apparent time obtained by her father, by whose permission I now present it to the public, for the pleasure of those who delight to employ their leisure hours in sidereal speculations.

I shall begin first with observing, that in this geniture we find the celestial sign Δ occupying the ascendant, and φ , being lady thereof, signifies the native, whom we find in δ of \wp , who has dignities in the ninth house, the house of religion and science, thereby disposing of the \mathbb{D} , \mathfrak{Z} and H_2 . Such a position gives a beautiful person, adorned with wit, ingenuity, and eloquence; makes the native courteous, and furnishes her with variety of arts and learning, and is consequently a configuration of very great importance; all which circumstances in this nativity

nativity have been confirmed in a most astonishing manner, as will evidently appear from the following authentic particulars.

The SCHEME of her NATIVITY.

R. A. $94^{\circ} 22'$.

The Latitude of the Planets.

$\text{H } 1^{\circ} 13' \text{ S.}$	$\text{J } 1^{\circ} 2' \text{ N.}$	$\text{S } 2^{\circ} 45' \text{ N.}$
$24^{\circ} 30' \text{ N.}$	$20^{\circ} 24' \text{ S.}$	$04^{\circ} 34' \text{ N.}$

The Declination of the Planets.

$\text{H } 21^{\circ} 23' \text{ N.}$	$\text{O } 5^{\circ} 2' \text{ N.}$	$\text{D } 25^{\circ} 6' \text{ N.}$
$24^{\circ} 15' \text{ N.}$	$12^{\circ} 2' \text{ N.}$	
$21^{\circ} 59' \text{ N.}$	$14^{\circ} 27' \text{ N.}$	

When this native was only twelve years of age, she understood the Latin language completely, to the great astonishment of many persons of talents, who were acquainted with her; she also at that age was perfectly able to calculate eclipses, both solar and lunar, which amazed every regular student in the noble science of astronomy. This native was also much attached to the study of music,

ASTROLOGICAL OBSERVATIONS. 45.

in which she advanced very considerably; the instruments which she played upon most were the spinet, organ, and harpsichord; she was also affected to the study of poetry, and wrote several very elaborate pieces which met with universal approbation: In fine, I presume, her morals and abilities were perhaps equalled by few, and excelled by none. She departed this life at the age of fourteen years and eight months, to the great grief of myself and her parents. A few day's previous to her death, she selected her own epitaph, which, according to her desire, is engraven on her tomb as follows:

“ In faith she dies, in dust she lies ;
“ But faith foresees that dust shall rise,
“ When Jesus, by Almighty Word,
“ Calls his dead Saints to meet their Lord.”

Having said thus much concerning the disposition and morals of this native, I shall in the next place take a short inspection of the display of the celestial bodies in her figure of birth, so far as relates to life and death.— We here find both the luminaries in hylegiacal places; but according to the rules and precepts of the learned PTOLEMY, the Moon is certainly the giver of Life, and to her direction we must look for death; she is in ♀ with ♂, the ☽'s dispositor, and applying to the body of ♀, by a right motion in the Zodiac, and also to the □ of ♁; it is moreover observable, that the ♀ is afflicted by the body of ♂, which unfortunate configuration is considerably augmented by the violent beams of Aldebaran; therefore it is obvious, from these considerations, that the ♀'s direction to the ♀ of ♀ in the Zodiac, deprived her of life, as the Almighty had appointed it from the beginning. In this figure, ♁ is afflicted in a violent part of the Heavens, retrograde, and in his detriment, and also in □ of ♀; but as ♁, by being unfortunate, could by no means break the malignant efficacy of ♀, so we may rationally conclude that this Nativity is very weak, owing to the unfortunate position of the ♀, to whom the dignity of Hyleg belongs. Much more might be said on this geniture, but I shall decline entering into particulars, especially concerning the quality of death, which I am inclined to think and believe must have been very remarkable;

able; and tho' I have never yet heard any thing relative to the species of the calamity of which the Native died, yet what is found displayed in the celestial constitution concerning it, I do not think requisite to disclose, but shall leave that important subject until a future opportunity; and conclude, by observing from the foregoing premises, that there is consequently a time for every purpose under heaven, which cannot by any means be counteracted or opposed by the most skilful of human inventions; and also that we, in this state of frailty and corruption, are in a degree similar to the flowers and grass of the field, which, when plucked up, whither, die, and return no more.

Astrological Observations for the Year 1799.

THE WINTER QUARTER, Or, The Sun's Transit through ♑, ♒, ♓, ♔.

THIS Quarter begins December 21, at 42 min. past 12 o'clock at noon, 1798, when 10 deg. of *Capricorn* culminate, and 25 deg. of *Aries* ascend in the East; h in the 4th, in 24 degrees of \alpha ; u in the ascendant, in 17 degrees of \gamma ; δ in \nu , the ascendant of *England*; \varphi in 28 degrees of \lambda ; \vartheta in 19 degrees of \nu ; and the \Delta in 10 degrees of \Pi , posited in the second house; ab * of \delta , ad 8 of \vartheta :—Thus stand the Face of the Heavens at this Ingress.

In the first place, I observe the planet *Mars* hastening to a Zodiacacl □ Aspect of *Saturn*, from cardinal and tropical signs; *Mars* in his own dignities, and *Saturn* in the dignities of the *Moon*.—Here appears to be much murmuring and repining amongst all ranks of people; some of the positions of the planets are for Peace, while others imply War and Bloodshed; thus are the Nations of the Earth divided. The position of the two grand superiors, *Saturn* and *Jupiter*, are not circumstanced to give much Peace to *Ireland*, though they are in a Sextile Aspect to each other; these planets, in their passage through the Zodiack, have had some effect over the ruling passions of mankind; for by their Trine and Sextile Aspects, first one

one and then another have withdrawn themselves from the scenes of blood and slaughter, and have made peace with *France*; yet other configurations (as second causes under God) of malevolent Planets, have had different effects on others, so that the war, even to this time of my writing, is prosecuted with great vigour on the part of *Great Britain*; but even she has more than once made an attempt to negotiate a Peace. In taking a view of this Ingress, I find that in *Holland*, *France*, *Germany*, *Italy*, *Spain*, &c. there will be great divisions, discontents, and murmurings, by reason of great loss of trade, and other afflictions; the flames of which will perhaps reach *America*, but that people will act with great caution and prudence. The poverty of the people of *France* occasions them to make many and grievous complaints against their rulers, which will be the occasion of great contentions, insurrections, and animosities.

THE SPRING QUARTER,

Or, *The Sun's Transit through ♈, ♉, ♊.*

THIS Quarter takes its beginning on the 20th of March, at 17 minutes past 2 in the afternoon, at which time 7 degrees of ♈ are on the meridian, while 21 degrees of ♉ ascend in the east; the ♊ ad * h , Δ of ♋ et ♌. In considering the configurations of the Planets at this Ingress, I find they imply many calamities to mankind, as commotions, wars, seditions, and subversions of Kingdoms and States; with treasons, treacheries, &c. The places where the grand scene of affairs may be expected, are *Italy*, *France*, *Germany*, *Russia*, *Portugal*, *Spain*, and other places nearer home; and indeed most of the European Powers seem to be concerned in one shape or other in the superlative actions of these times. The evil spirit of *France* is still at work, in contriving and carrying on some designs against our liberties, land, and nation; — a strange spirit of discord appears amongst mankind, — but *Great-Britain* will keep her ground amidst this din of war and ruin. If the *French* attempt to invade us, they will assuredly suffer for their rashness, even to a total defeat, with great loss of men and ships.

THE SUMMER QUARTER,

Or, *The Sun's Transit through ☽, Α, ☽.*

THIS Quarter begins the 21st day of June, at 3 min. past 12 at noon, when the beginning of ☽ is on the M. C. and the beginning of ☾ will be on the eastern angle; the ♀ ab ♀, ♀ et Δ, ♀, ☽, et the ☽. The ♂ of ♀ and ☽ in ☽, on the M. C. is most to be noted, as it is a conjunction of great import, and signifies very eminent and active doings amongst mankind; it principally respects Europe, and shows most eminent actions to be carried on with great resolution and celerity. The Russians exert themselves with great valour and prudence; the French Republic appears formidable; Holland and Prussia under great desertions and disturbance. The City of Constantinople is concerned in the male influences of this rugged Aspect: It denotes raging distempers, fevers, and unusual fires, and fiery appearances in the air; and sometimes tempestuous weather and inundations.

THE AUTUMNAL QUARTER,

Or, *The Sun's Transit through ☽, Η, ♀.*

THIS Quarter begins September 23, at 49 minutes past 1 in the morning, when 29 degrees of ♀ are on the M. C. and 16 degrees of Η ascend in the east; the ♀ ab ♂ ♀ et Δ ♀, ad * ☽ et ♂. I cannot sing Peace, or say our *quietus est* is yet signed, for our enemies are many. This year will be productive of great accidents and vicissitudes, in several parts of Europe; various and sudden mutations; but let us be content, for our condition is better than some of our neighbours; yet there are some hopes of another negociation for Peace being set about.—I wish it success. The affairs of Italy and Spain are yet in great confusion. The Germans, French, Dutch and English hope for better times. O, Ireland, thou also hopeft for better times. God bless King GEORGE, and the whole NATION at large.

FINIS.
