

Merlinus Liberatus.

BEING AN

ALMANACK

For the Year of our Redemption,

1802,

The Sixth after *Bissextile*, or *Leap-Year* ;
And from the Creation of the World, according
to the best History, 5749,

The Second Year of the 19th Century,

And the 113th of our Deliverance by *K. William*
From *Popery and Arbitrary Government* ;

But the 107th from the

Horrid, Popish, Jacobite Plots.

Wherein are contained all Things fitting and useful for such a Work; as
an Ephemeris of the daily Motions of the Planets, with their various
Configurations, Aspects, Conjunctions; Lunations, Eclipses, Astronomical,
Astrological, Meteorological Observations; therising and Setting
of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of
the Tides, Terms, and daily Equation of Clocks; Length and Break,
Increase and Decrease of Days; Semidiurnal and Seminocturnal Arches
for several Latitudes; a Chronology; Remarks on the Divisions of the
Heavens, with Judgments of the Eclipses and Seasons, handled ac-
cording to the Rules of the Ptolomean Astrologers, with many other
Things relating to the Truth of Astrology, which will equally serve
also for either *Parker's* or *Saunder's* Almanack; this Edition contains most
of the useful Parts of those other Almanacks, and *White's* Eph-
emeris contains the rest.

Calculated for the Meridian of LONDON.

By JOHN PARTRIDGE.

Etiam Mortuus loquitur.

L O N D O N.

Printed for the COMPANY of STATIONERS,
By WILLIAM THORNE, Red Lion Court, Fleet Street.
And Sold by GEORGE GREENHILL, at their Hall, Ludgate Street.

[Price stitched Seventeen Pence.]

A Table of the Common Notes, and Moveable Feasts, for the Year of our Lord 1802.

Golden Number - - -	17	Easter Sunday - April 18
Epact - - - -	26	Rogation Sunday May 23
Dominical Letter - - -	C	Ascension Day - May 27

A Table of the Moon's Age for every Day throughout the Year 1802, whereby, with the Help of the next General Tide Table, the Times of High Water at all the Places mentioned above it are shewn by Inspection.

An Explanation of this and the following Table:

First find the Month on the Head of the Table, and the Day in the first Column on the left Hand, and in the Angle of meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Column is the Time of High Water at all the Places above mentioned, by Inspection.—*Example*, Jan. 23, I find the Moon to be 19 Days old, and over against 19 in the 1st Column I find 6 h. 12 m. in the 2d Column, 4 h. 42 m. in the 3d; which are the Times of High Water at all those Places mentioned above in the 2d and 3d Columns on that Day. *Et sic de ceteris.*

Prs. Augusta Sophia, Nov. 8, 1768	-	Princess of Wales, May 17, 1768	-
Prs. Elizabeth, May 22, -	1770	D—. of Brunswick, Aug. 11, 1737	-
Duke of Cumberland, June 5, 1771	-	Duke of Gloucester, Nov. 25, 1743	-

SOVEREIGNS of EUROPE, their Accession, &c.—

Kingdoms, &c.	To whom subject.	When born.	Began to reign.
England, &c.	George III.	June 4, 1738	Oct. 25, 1760
Russia	Alexander	-	1801
Spain	Charles IV.	Nov. 11, 1748	1788
Portugal	Mary	Dec. 7, 1734	Feb. 24, 1777
Prussia	Fred.-Wm. III.	Aug. 6, 1770	Nov. 16, 1797
Denmark & Norway	Christian VII.	Jan. 29, 1749	Jan. 14, 1766
Sweden	Gustavus IV.	Nov. 1, 1778	Mar. 29, 1792
Germany	Francis II.	Feb. 12, 1767	Mar. 1, 1742
Holland	William V.	March 8, 1748	Oct. 17, 1791
Papedom	Pius VII.	Aug. 11, 1742	1800
Sardinia	Victor	June 26, 1726	Mar. 20, 1773
Ottoman Empire	Selim III.	July 17, 1761	April 7, 1782
Two Sicilies,	Ferdinand IV.	Jan. 12, 1751	Oct. 8, 1759

The FULL WEIGHT of the COINS, with the LEAST WEIGHT allowed to pass of the Gold Coin.

Wt. allowed.	FULL WT.	FULL WT.
GOLD. dwt. gr.	dwt. gr.	SILVER. dwt. gr.
Guinea - 5 8	5 9 ¹¹ / ₁₂	A Crown, - - - - - 19 3 ¹¹ / ₁₂
Half Guinea, 2 16	2 16 ⁶ / ₁₂	Half Crown, - - - - - 9 16 ³ / ₁₂
Third of Guin. 1 7 ¹¹ / ₁₂	1 7 ¹¹ / ₁₂	Shillings - - - - - 3 20 ¹¹ / ₁₂
		Six Pence, - - - - - 4 22 ¹¹ / ₁₂

According to the above proportions it appears, that the value of a lb. of silver is 62s. or 3l. 2s. and of a lb. of gold is 44*1*/₂ guineas, or 46l. 14s. 6d. Also that the oz. of silver is 5s. 2d. and the oz. of gold 3l. 17s. 10*1*/₂d. So that the value of the standard gold is 15 times that of the silver, and 1-14th more.

A TABLE of TERMS and RETURNS for 1802.

Hilary Term begins *January 23*, ends *February 12*.

Returns or Essoign Days.

Exc. [Ret.] App. W. D.

In eight Days of St. Hilary, - -	<i>January 20</i>	21	22	23	Saturd.
In fifteen Days of St. Hilary, - - -	<i>January 27</i>	28	29	30	Saturd.
On the Morrow of the Purif. of bl. V. M. Feb. 3		4	5	6	Saturd.
In eight Days of the Purif. of bl. V. Mary,	<i>Feb. 10</i>	11	12		Friday.

Easter Term begins *May 5*, ends *May 31*.

In 15 Days of Easter, - - -	<i>May 2</i>	3	4	5	Wednes.
From the Day of Easter in 3 Weeks,	<i>May 9</i>	10	11	12	Wednes.
From the Day of Easter in 1 Month,	<i>May 16</i>	17	18	19	Wednes.
From the Day of Easter in 5 Weeks,	<i>May 23</i>	24	25	26	Wednes.
On the Morrow of the Ascension, - - -	<i>May 28</i>	29	30	31	Monday

Trinity Term begins *June 18*, ends *July 7*.

The Act is *July 12*.

CAMBRIDGE TERMS.

Lent Term - - -	begins <i>January 13</i> ,	- - -	ends <i>April 9</i>	9
Easter Term - - -	begins <i>April 28</i> ,	- - -	ends <i>July 9</i>	9
Michaelmas Term begins <i>October 10</i> ,	- - -	- - -	ends <i>Dec. 16</i>	16

The Commencement will be *July 6*.

8 January hath XXXI Days.

Now Hills and Dales beneath the Snow are lost,
 And Navigation seal'd up by the Frost ;
 Stern Winter rages, cruel and severe,
 And Vegetation scarcely does appear ;
 Congeal'd • Marble are the fruitful Plains,
 And Northern Seas are bound in icy Chains.

The Snow-drop now this Month does with it bring,
And thus proclaims the glad Approach of Spring;
Now gentle Gales and milder Breezes blow,
To check the Cold, and to dissolve the Snow;
The cheerful Days do now increase in Length,
And rugged Winter daily loses Strength.

VENUS will be a Morning Star till March 17; and then an Evening Star for the rest of the Year.

12 March XXXI Days.

The Sun, that great resplendent Orb of Light,
Now equally divides our Day and Night;
From th' angry North the Winds rush forth amain,
Their just Equilibrium to maintain;
Yet still the Sun preserves his potent Sway,
And on the Earth does genial Warmth display.

In this sweet Month the Birds now joyful are,
 And do their great Creator's Praise declare;
 Vegetation now beginneth to revive,
 And fruitful Showers makes it for to thrive;
 The Fields and Meadows we with Joy survey,
 And thus anticipate the blooming May.

Delightful May! thou fairest of the Train,
With Joy we welcome thy Return again;
Where e'er we go, Delights do us surround,
And all the Fields are with fresh Verdure found;
Bright Phœbus now doth lengthen out the Days,
And with increasing Splendor Light displays.

The Sun approaching his Apogee Seat,
Thro' fluid Air diffuses liberal Heat;
Unto the Pole the lengthen'd Day explores,
And with his Rays salutes the Northern Shores;
Upon his Journey constantly proceeds,
And enters Cancer with his fiery Steeds.

Now Lightnings blaze, and awful Thunders roll,
The haughty Pride of Man for to controul ;
The angry Shafts with forky Vengeance fly,
And thus the guilty Sinner terrify.
God sends his glittering Arrows thro' the Air,
And tells them whom to kill and whom to spare.

Now waving Crops the fruitful Plains adorn,
 And soon they put their Sickle to the Corn ;
 Universal Plenty every where abounds,
 Whilst Harvest-Home ! from ev'ry Hill resounds.
 Thus God on us his Blessings does bestow,
 And makes our Cup with Plenty overflow.

Darkness and Light now the just Balance weigh,
 And equally proportions Night and Day;
 The Sun thus passing thro' the heav'nly Signs,
 The four Quarters of the Year defines;
 The Days and Nights again now equal are,
 And North and South an equal Portion share.

The Husbandman does now, with prudent Care,
 For a future Harvest carefully prepare;
 Unto the Ground his Seed does now commit,
 God grant the Season may his Purpose fit;
 Cause all Obstructions to the Crop to cease,
 And crown his Labours with a vast Increase.

Now Sol in Southern Seas his Glory hides,
 And dark'ning Fogs surround th. Mountain's Sides ;
 The heavy Rains now make the Rivers swell,
 And the thick Mills the Sun can scarce dispell ;
 Thus dark November does excite our Care,
 Against approaching Winter to prepare.

Last comes December, ling'ring in the Rear,
And now the Cold is rigid and severe;
The circling Year almost its Course has run,
And the short Days do scarce admit the Sun.
Now let us all the Lord of Hosts implore,
To be our Friend when Time shall be no more.

OF THE
ECLIPSES
OF THE
SUN AND MOON.

IN this year there will be four Eclipses, two of the Sun and two of the Moon; they happen in the following order:

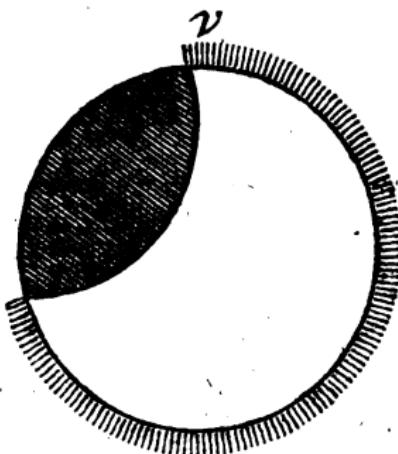

The first is a solar defect, on *Thursday* the 4th day of *March*, in the morning, about 5 o'clock, therefore invisible here, and, by reason of the *Moon's* South Latitude, to all the Northern parts of the *Globe*; but in those parts more Southerly this will be a great Eclipse, even so, that in the unknown parts of the *Globe*, lying under 58 deg. of South Latitude and about 114 deg. East Longitude from *London*, the inhabitant, if any, will be surprised with a total Eclipse of the *Sun*, at their mid-day, or 12 at noon.

The second will be a partial Eclipse of the *Moon*, on *Friday* the 19th day of *March*, at 6 min. past 11 o'clock in the forenoon, therefore invisible to us.—At the middle of this Eclipse the *Moon* is vertical just upon the Equator, in about 167 degrees of Longitude West from *London*; hence it appears that this Eclipse will be visible in *New Zealand*, *New Holland*, *New South Wales*, at *Otaheite* and all the *Society Islands*, the *Friendly Islands*, the *New Hebrides*, the *Molucca Islands*, those of *Sunda*, *Sumatra*, *Borneo*, in *Eastern Tartary*, and the Eastern parts of *Russia*. The defect, where visible, is 5 deg. 16 min. upon the North side of the *Moon*.

The third is an Eclipse of the *Sun*, at Sun rise, on *Saturday* the 28th day of *August*, and visible here from Sun rise to the end, if the air proves favourable.—That morning

morning at *London* the *Sun* rises at 5 minutes past 5 o'clock. The middle of the Eclipse, or time of the greatest obscuration, is in 14 minutes after the *Sun* has risen, and will then appear near 5 digits eclipsed; and the Eclipse will end at 13 minutes past 6 o'clock, according to app. Time.

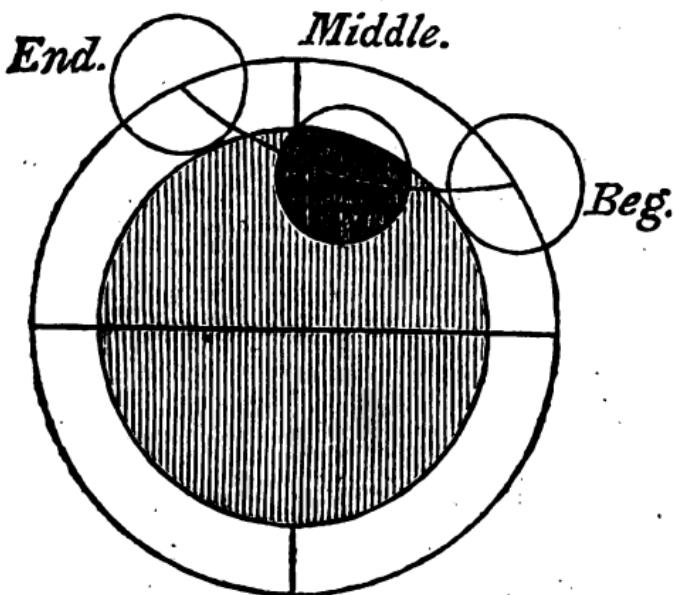

A Type of the Sun's Eclipse.

Note. The above delineation shews the appearance of the *Sun* at the time of the greatest obscuration at *London*; but without much error will serve the whole Kingdom. V. the *Sun's* uppermost point or vertex.

The fourth, and last of these Eclipses, will be a small one of the *Moon*, and visible with us if the air proves clear; it happens on *Saturday* night, the 11th of *September*. At the middle of this Eclipse the *Moon* will be directly over their heads on the Eastern boundary of *Congo*, in *Africa*, in about 4 degrees of South Latitude, and 20 deg. East Longitude from *London*, therefore this Eclipse will be visible in *Africa*, in the Island of *Madagascar*, and great part of the *Indian Sea*, the Western parts of *Asia*, and all *Europe*; but the *Moon* will rise eclipsed in *South America*; though with us, in this Kingdom, it may be expected nearly to correspond with the following Type and Times.

A Type of the Moon's Eclipse.

Sept. 11, at night.	London h. m.	York h. m.	Edinb. h. m.	
Eclipse begins	9 14	9 9	9 1	
Middle - - -	10 39	10 34	10 26	app. time.
Eclipse ends -	12 5	12 0	11 52	
Digits eclipsed 9° 12' 0".				

Beside these Eclipses of the Sun and Moon, there happens on *Tuesday*, the 9th of *November*, a Transit of the Planet *Mercury* over the Sun's disk, and visible here from Sun rise to the end, if the air proves clear, for the Sun will rise with *Mercury* upon his face, and will appear in the form of a round black spot through a Telescope; as *Mercury* is so very small it will not be very easily seen through smoked glass.—*Mercury* enters upon the Sun's disk, with respect to the meridian of *London*, at 28 min. past 6; but the Sun will not rise till 25 min. past 7.—The middle of the Transit is at 14 minutes past 9; and *Mercury* will leave the Sun's disk at 12 at noon, app. time.—I also find by my calculations, that the *Moon* will Eclipse the Planet *Jupiter* the 21st of *January*, at 9 at night; and also on the 17th of *February*, at 9 at night; and again the 13th

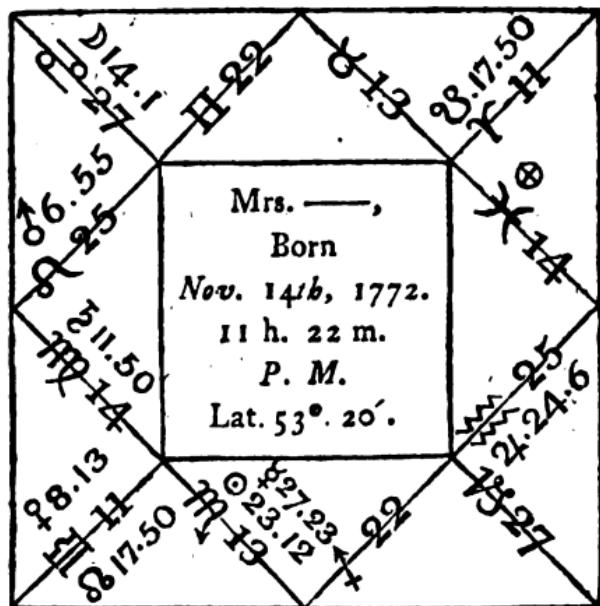

of April, at half an hour past 2 o'clock in the morning.—These may be seen by the naked eye, if the air proves clear.

GENETHLIACAL ASTROLOGY.

THE following Nativity was sent me by my worthy friend, Mr. John Worsdale, of Danington Northberpe, near Boston, Lincolnshire:—He has published two Tracts on Genethliacal Astrology, and also intends to publish an entire new work on the Science of Astrology; and he wishes to inform the Public that he does nothing in Astrology but for amusement only, on which account those that write to him in future need not expect any answer to their letters. The art of foretelling future events and contingencies undoubtedly had its origin in the most early ages; and the desire of prying into the secrets of Futurity, appears to be a natural instinct in the human soul. This science having been studied by men of the first eminence in the scientifical and literary world, both in this and other countries, down to the present age, (viz. *Thales*, *Miletus*, *Ptolemy*, *Tycho Brahe*, *Bishop Butler*, *Sir Isaac Newton*, the Poet *Dryden*, and many others;) the truth of which having been varified by innumerable facts, and the fulfilment of many recent events, have sufficiently established its credit beyond the cavils of the incredulous, and vindicated its well informed professors from the charge of imposture.—It may therefore be asserted without hesitation, that from a Nativity, correctly taken, the most ample satisfaction may be obtained; as a proof of which I here give the following geniture to the Public:—The given time of birth was November 14, 1772, 11 h. 30 m. P. M. but it is evident the native was born 8 min. sooner, because she was afflicted with a slow melancholy fever, at the age of 19 years and 7 months, which was occasioned by the effect of the ascendant to the body of Δ , he being in mundane parallel with δ . As to her marriage, it took place on the M. C. ad Δ of φ , followed by Δ of \mathcal{U} ; not that

that every native is married on those directions, but because ♀ is strong, and beheld by ☽, ♂, and ♁, and not afflicted by ☽. Her husband is signified by ♁, and partly by ☽; the last more immediately concerns his intellects.

Here follows the FIGURE at Birth.

The Latitude of the Planets.

$\text{H} 1^{\circ} 41' \text{ N.}$	$\text{♂ } 1^{\circ} 59' \text{ N.}$	$\text{♀ } 0^{\circ} 47' \text{ S.}$
$21 \ 8 \text{ S.}$	$\text{♀ } 1 \ 41 \text{ N.}$	$\text{♂ } 5 \ 9 \text{ S.}$

The Declination of the Planets.

$\text{H } 8^{\circ} 42' \text{ N.}$	$\odot 18^{\circ} 38' \text{ S.}$	$\text{♂ } 17^{\circ} 39' \text{ N.}$
$21 \ 14 \ 37 \text{ S.}$	$\text{♀ } 1 \ 36 \text{ S.}$	
$\text{♂ } 20 \ 33 \text{ N.}$	$\text{♀ } 20 \ 25 \text{ S.}$	

That she will rise in the world is evident from the harmony which prevails among the significations, the \oplus is in H in Δ to the luminaries, and disposed of by ♀ ; ♀ , Lord of the 2d house, also beholds the \oplus ; her titches will chiefly come, I judge, by legacies and gifts of women, because the ♀ is strong, and ♀ is located in the 2d in $*$ to ♂ , who disposes of the Lord of the 2d. I am pretty certain this Lady will have loss, through the position

position of h in 8 to \oplus , and the \odot 's \square to 24 who disposes of the \oplus ; but the Δ aspect of the luminaries to each other and the \oplus , together with \varnothing strong in the second will certainly keep down the evil influence of h .— The time when the native will prosper most is from the present till the 42d year of her age, at which time the D will fall upon the \square of the \odot , and \varnothing the 8 of 24 , and ZodiacaL parallel of h and body of h , at which period her pleasures on this earthly Planet will be nearly at an end; but I do not mean that this native will die at that time, because the ascendant is Hyleg, and death must be considered from that point only, which I shall not meddle with in this place, because this Almanack will most undoubtedly fall into her hands. In this Nativity there is as fine a train of directions as ever I saw, from her 20th year, until the \odot to the \square of h in Mundo begins to shew its effects; so now take a few of the principal directions together, in order as they stand:

\odot ad \square of h in the Zodiac	18° 54'	Ys.	Ms.
Ascendant ad δ of h	20 40	19 7	a fever.
D ad par. of \varnothing in Mundo C.D.	21 51	20 9	
D ad δ of δ in Mundo	22 41	21 7	
\odot ad * 24 in Mundo	22 53	21 9	{ courted to marry.
Ascendant ad * D	24 52	22 6	{ bad a sum of money left her by an aunt.
D ad * \varnothing in Zodiac	27 13		
D ad parallel 24 in Zodiac	27 40		
Mid-heaven ad Δ \varnothing	28 16	26 6	married.
M. C. ad Semi. \square δ	28 28		
M. C. ad Δ of 24	31 47	28 8	
\odot ad * 24 in Zodiac	32 9		
D ad Δ \odot in Mundo	35 40		
\odot ad * \varnothing in Mundo	35 41		
\odot ad \square h in Mundo	37 4		
D ad \square \odot in Zodiac	45 44	42 3	{ illness and fever.

Som.

*Some additional remarks on the Child's Nativity inserted
in my last year's Almanack.*

I now make, says my friend, some additional remarks on the infant mentioned in your last, wherein the ☽ is giver of life, and on the Zodiacal parallel of ♂ in his infantile years, preceded by the * of ♀, which may cause a feverish complaint, &c. but the time when I judge he will depart this life will be at the age of 32 years, or very nigh that time; the directions then operating will be the ☽ to the 8 of the ♀ malefic, followed by the ☐ of ♀ in the Zodiac, succeeded by a violent fixed star, which directions are (I conceive) sufficient to kill in a Nativity attended with the violence of this.

Astrological Observations for the Year 1802.

THE WINTER QUARTER,

Or, The Sun's Transit through ♃, ♚, and ♈.

THIS Quarter begins on *Tuesday*, the 22d of December, at 2 min. past 6 in the morning, 1801; at which time the first degree of ♉ is on the Mid. Cœli, and 4 deg. of ♈ ascend in the East.—At this ingress there is a 6° of ♀, ♀ and ♈ in the ascendant or first house, in the celestial sign ♈, besides the approaching conjunction of the two grand superiors, *Saturn* and *Jupiter* in *Virgo*; in this figure they are in the 9th house, and within one degree only of their partial conjunction, which will not exactly take place until the 16th day of *July* following, and then at 7 in the morning. The influence of this great 6 has been in force ever since the beginning of last *September*, when their platique aspect took place, and will be much more so from the beginning of this quarter.—This conjunction of the superiors, ♁ and ♉, falls in the ascendant of *France*, and particularly that of *Paris*, its capital: It falls in a ☐ to the horoscope of *Spain*, and in 8 of the ascendants of *Portugal* and *Egypt*; and I am sorry to add, it is in a ☐ aspect of the ascendant of the city of *London*.—These countries and places will feel its baneful effects and powerful influences, and I firmly believe every other

other country too, that is connected or at war with *France*: It will stir up seditions, tumults, and discontents in the minds of men; it shews miserable complaints among the poor in general, both for want of money and want of trade; it signifies wars, feuds, and intestine divisions; it also denotes consumptions, tedious and continued agues, and diseases of that kind; and perhaps much snow and wet.

THE SPRING QUARTER,

Or, The Sun's Transit through ♀, ♀, and ♀.

THIS Quarter begins on *Sunday*, the 21st of *March*, at 35 min. past 7 in the morning, at which time 20 degrees of ♀ ascend in the East and 22 degrees of ♀ are on the M. C. The ♀ ab Δ ♂ et ad * ♀.—Here seems now an appearance of Treaties offered, and frequent Messengers sent from one Court to another, and a talk of Negotiations for Peace; I wish it success, but I am doubtful, for if we consider the last ingress, which was violent, and on examination of this I do not find it much better, for here is an ♀ of ♂ and ♀, and an ♀ of ♀ and ♀, and ♀ still afflicting ♀, we cannot pronounce any thing but broils and contentions (as has now been the case) between the different Powers of *Europe*, especially those contending in arms.—*Mars* still shakes his bloody flag, therefore you may expect to hear of military actions both by sea and land. It appears that *Russia*, &c. may be the least afflicted by these configurations, as the ♂ of ♀ and ♀ fall in a *trine* aspect to the ascendant of *Russia*, which is friendly. The *Turks* seem as if they were to suffer. I hope *Great Britain* will remain internally tranquil.

THE SUMMER QUARTER,

Or, The Sun's Transit through ☽, ☽, and ☽.

THIS Quarter begins on *Thursday*, the 22d of *June*, at 27 min. past 5 in the morning, when 21 degrees of ☽ culminate, and the 20th degree of ☽ ascends in the East: Here ♀ and ♀ are conjoined in the ascendant, and ♀ and

h and 24 the same in the 3d house, and δ , in φ the ascendant of *England*; the D in Δ a of ϱ ad Δ ϱ .—The configurations of the Planets at this ingress, taken together, are nearly similar and in a piece with the preceding quarters, excepting the planet δ , whose situation in the figure denotes resolution and success to attend our national affairs.—In this quarter falls the δ of h and 24 , and what is remarkable, the Eclipse of the *Sun* following it falls in the very sign and degree thereof, which seems to denote, among other things, the sickness or death of some great man, with a scarcity of the fruits of the earth; it forebodes many commotions and troubles, with devastations of every kinds, and will render the effects of the δ of the two superior planets more powerful, for I judge no small or trivial matters (let them be what they may) to succeed this important conjunction of *Saturn* and *Jupiter*.

THE AUTUMNAL QUARTER,

Or, *The Sun's Transit through ♈, ♉, and ♌.*

THIS Quarter begins on *Thursday*, the 23d of *September*, at 8 min. past 7 at night, when 9 deg. of ϱ ascend, and 16 deg. of φ are on the M. C. The D ab \square ϱ ad \ast δ .—The two grand superiors, *Saturn* and *Jupiter* are in the 6th house, within 7 degrees of each other, and *Mars* in II , *London's* ascendant, in a square aspect of them, which shews the affairs of this quarter to be various and of high concernment both to us as well as to *France*, *Spain*, and *Holland*, and the whole of *Europe*.—Many reports again fly abroad, as if some Treaty for a general Peace were in agitation, and people glady embrace that intelligence, but time will discover all things, for I still fear it will be but like a vapour or tale that is told.—I hope the Honourable City of *London* prospers in her trade and traffick—I fear also mortalities among men and cattle—I expect this will chiefly fall upon *France*.—May God preserve our King and Country.
