10 11 12 13 10 15 10 17 10 10 10 10 10 10 10 10 10 10 10 10 10	777777777777776666666666	18 16 14 12 10 9 77 53 57 53 57 53 52 53 52 54 54 44 44 44 33	444444444445555	$\begin{array}{c} 37\\ 39\\ 41\\ 42\\ 446\\ 48\\ 5^{0}\\ 5^{3}\\ 5^{5}\\ 5^{7}\\ 5^{9}\\ 1\\ 3\\ 5^{7}\\ 8\\ 10\\ 12\\ 14\\ 16\end{array}$	from the peer to the pealant, where they help one they hurt hundreds. Thefe liquors, from their general use at prefent, may be properly termed the bane of the commonwealth, and may be well fuppofed to have deftroyed more of the king's fub- jects than all the wars with France and Spain, have ever to this time. This in- chanting poifon has not only infatuated the loote and focundrel fort, but is allo hugged by men of fashion, some of whom have been endowed with a fplendid genus, and eminent virtues; and what is more furprising, many of the foster fex have been to enamoured with these liquors, that ra- ther than be debarred of their bottle, they would chufe to part with their bed-fellow (fome of them I fay). O monstrum borren- dum ! that both fexes, and those of parts and education, should fuffer this pleasing tyrant to infinuate itself into their focie- ties, not minding the train of evil that lies in ambush at its heels. It is entertained at first oftentimes, under the pretence of being a remedy to palliate fome grief, which hath happened; or difpel fome

	O h	rifes	0 h		Observations.
ע	n	m	a	m	
I	c	33	6	27	tea has different effects on different people,
	2 2	33	6	29	and therefore, though it may be good for
2	2	29		31	fome, it is fometimes hurtful to others;
č	2	27	6	33	being often injurious to fuch as drink of it
-	2		6	35	too frequently, or over liberally dofe them.
6	555555	23		37	felves. By the way fee your tea be good,
7	2	21		39	not adulterated, and the green is ufually
2 3C 56 78	5	19		41	to be preferred; but your. conftitution is
9	5 5 5	17	6	43	the fittest arbitrator. The third part of the
9 10	5	15	6	45	non-naturals that comes, in order to be
c	5	13	6	47	recommended, is exercise and rest, which
12	5	11	6	49	
13	5	- 1	6	51	our health; few equal them, except tem-
14			6	53	perance: for the wife author of Nature
15		- 5	6	55	made nothing in the universe to lie still
16	5	• 4	6	ς6	and be idle: as to the poorer fort of people
17	5	2	6	58	their labour will lerve to make the greatest
lć	5	ю	7	ဴ၀	part of their exercise, if they employ them-
119		58	7	2	felves as they ought; but for others, who
20	4	56	7	4	are not obliged to those ties of labour, there
21		54	7	6	
22	4	52	7	. 8	
	4	50	7	Ĭ0	few physicians have pretended to enjoin,
24	4	49	7 ·	11	
C		47	7	13	much to help fuch or fuch particular dif-
26	54	45	7	15	eafes; but what they have laid down for
27	74	43	7 -		
28	34	-41	7	19	and inconfistent. I would know what

As for reft, you may judge of it from what has been wrote on the other head; but above all, avoid ex- ceflive reft, which is idlenefs, which opens a door to numberlefs infirmities, as that prince of phyficians (Galen) has noted; it lofes time, dulls the mind, nourifhes hu- mours, clouds the brain, prevents thrift, and difpleafes God: in fhort, he that is void of exercife, feldom abounds in ho- nefty. The next thing that requires our attention is fleeping and watching; when we are tired with exercife, we require reft and fleep. I would have offered fome præcognitas touching the phænomena of fleep; but thefe fheets will only allow me to give a bare definition. Sleep then is an interruption or ceffation of our bodily or- gans from action, and our minds from real true thinking. The means by which fleep is produced, are from a plentiful af- cent of the blood to the cerrical and caro- tid

For the YEAR of our LORD, 1802.

THE SECOND PART.

Containing variety of matter in profe and verfe, part neceffary to complete a performance of this kind, part collected or compofed by the author, for the initruction and improvement of British youth, or of those who, in the humble vale of life, have fouls superior to the opportunities given them, to improve in the various branches of science; and conclude g with the kind contributions of his learned and ingenious correspondents, to whom he once more returns his fincere thanks for their favours and generous affiltance in a work defigned at least

"To raife the foul by tender ftrokes of art,

" To wake the genius, and to mend the heart;

" To make mankind in Nature's fludy bold ;---

" Look o'er each fcene, and mark what they behold."

The ECLIPSES of the SUN and MOON, and other Appearances in the Heavens, that will happen in the Year 1802.

IN the annual revolution of that glorious body, the Sar, twice will the dark body of the Moon interpose and hide his light; and twice will the Earth interpose between the Sum at Moon, and deprive her of a borrowed light; they happen in the following order:

The first is an Eclipfe of the Sun, on Thursday, the 14th of March, near 5 o'clock in the morning; therefore invisible, as it happens so long before the Sun is risen; but had it been later, it could not have been visible here, for the Moon's true

Digitized by GOOQIC

latitude

1802.

latitude is fonth, and her parallax will make it more fo, on which account, it will not be vifible in any of these northern parts of the globe; but in the remote fouthern parts, it will be a very great Eclipse, even so as to be both total and central.

The fecond of these Eclipses is a partial one of the Moon, and invisible, upon Friday the 19th of March. The middle of this Eclipse, with respect to London, our metropolis, happens about 11 o'clock in the morning. This Eclipse will be visible in New Zealand, Van Dieman's Land, New Holland, and its eastern coast, called New South Wales, where Botany Bay and Port Jackson are fituated; it will be visible in the Molucca Islands, those of Sunda, Sumatra, Bornea, and Philippina; the kingdom of Siam and China in the East Indies, and quite throughout the Eastern Tartary, in Japan, and Yedso. The Moon will appear a little more than 5 digits eclipsed on her north fide.

The third is an Eclipfe of the Sun, on Saturday the 28th of August, in the morning, and if the air prove clear, will be vifible with us from *junrife* to the End of the Eclipfe; the Beginning cannot be feen here, as that happens before the Sun rifes, and the Middle or greateft Obfcuration is at 19 min. paft 5 o'clock, when the Sun will appear about 5 Digits eclipfed; the End of the Eclipfe will be at 13 min. paft 6 o'clock, apparent time, for the Meridian and Latitude of London. 'The Sun will rife that morning cclipfed at 5 min. paft 5, very near the Middle of the Eclipfe, at London, and parts adjacent. The following Type or Delineation fhews the appearance expected at London, and places adjacent, at the Middle of the Eclipfe, and will very well ferve the whole Kingdom.

The

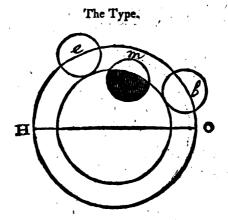

The fourth and last of these Eclipse, is a partial one of the Moon, and if the air be clear, will be visible with us; it happens on Saturday night, the 11th day of September. At the Middle of this Eclipse, the Moon will be vertical on the castern boundary of Congo, in Africa; therefore will be visible to the whole of that continent, as well as to the Island of Madagafcar, and great part of the Indian Sea, the West parts of Afia, and all Europe; but the Moon will rife eclipsed in South America.

Beudes these Eclipses, there happens on Tuesday, the 9th of November, a Transit of the Planet Mercury over the Sun's Disk, and will appear like a black foot in it: it cannot be difcovered by the naked eye, but may plainly be feen by the help of an ordinary Telescope. The Sun rifes with us with Mercnry upon his Difk, and therefore can only be feen (if the Air proves clear) from Sun rife to the End of the Transit, which, at London, will be about noon. The following Type or Delinea-**€**∕**z**00

tion is adapted to London, and fhows the Track of the Planet from the Beginning to the End of the Transit, and will very well ferve the whole Kingdom.

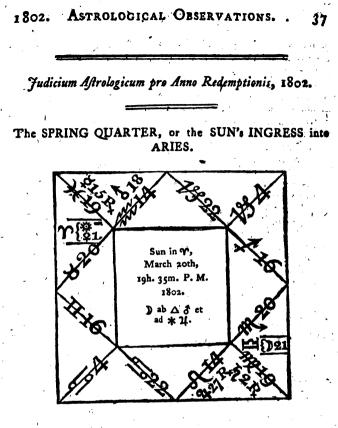

London.

Central Ingress of Mercury Sws rifes	7 25 0 9 14 15 9 15 37	September the 9th, in the morning.
---	------------------------------	--

Note. V, the Sun's upper Limb; I, the Ingress; E, the Egress or going off.

Note. On Thursday, the 21ft of January, at 9 at Night; and Wedne/day, the 17th of February, at 9 at Night; and also on Tuisday, the 13th of April, at half an hour paft 2 in the Morning, the Moon will eclipse the Planet Jupiter, and visible with us, should the Air prove favourable. The famous Conjunction of Jupiter and Saturn happens on Friday, the 16th of July, at 7 in the Morning. These Occultations of Jupiter by the Moon, may (if the Air is clear) be seen by the naked Eye.

Judicina

THIS Quarter takes its beginning on Sunday the 21ft day of March, at 35 min. paft 7 in the Morning, at which Time the Heavens will appear as in the above Figure fet for this Ingrefs. Here feems, from this Figure, an Appearance of Treaties offered; and frequent mellengers fent from one country to another; and there is fome talk of Negociations for Peace going forward— I with it fuccefs; but I am doubtful of a general Peace being concluded; for, at the Commencement of this Quarter, here is an 3 of 3 and 4; and an 3 of 5 and §; and 5 afflicting 4 in the 5th Houfe; from all which we cannot pronounce 28

exael

nounce any Thing but Broils and Contentions (as has certainly been the Café for a long Time back) between the different Powers of Furope, ef ecially those contending in Arms. Mars fill feens to thake his bloody Flag, therefore I should not won 'er if we should hear of military Actions b th by Sea and Land. It appears that Ruffia and the reft of the Northern Powers, may be at Peace with England; but the Turks, as well as France and her Connections, feems as if they were still to fuffer :--- I hope England may remain internally tranquil. The great Conjunction of Salurn and Jupiter is approaching very fast; but they have been in a Platique Aspect ever fince the beginning of last September, therefore its Influences have been abioad in the World for fome Time; a d its banefui Eff ets have been feverely feit both by us and other Nations: its partil Conjunction falls in the Afcendant of France, and to polited as to effect, in a great Degree, all those States and Kingdoms that are connected with France, and those Countries all, that are at War with that Nation. This Afpect flirs up Semition, Tumults; and Di content in the Minds of Men; it alfo thews miferable Complaints among the Poor in general; and alto for want of Money and want of Trade, amongst the Middling Sort of People. The Turks feem to be fpirited up to action seai ft a particular Power, but the Stars beiprak them no good Success; they will have Work enough upon their Hands.

The SUN's ENTRANCE into the tropical Sign CANCER, which introduces the SUMMER QUARTER.

THIS Quarter begins on *Thurf ay*. the 22d day of *June*, when the Sum enters the above-mention d tropical S gn, which I find will be at 27 min. paft 5 in the morning; at the fame Time 21 deg. of \varkappa culminate, and the 20th deg. of \mathfrak{B} afcends: the Θ is in the 12th Houfe, \mathfrak{P} and \mathfrak{P} in the 1it, \mathfrak{P} and b in the 3d, the Planet \mathfrak{F} on the Cufp of the 11th, the \mathfrak{D} in the 10th in Δ of \mathfrak{P} , and next applying to the Δ of \mathfrak{F} ; thus frand the Face of the Heavens at this Ingrefs. Mars at this Time is got into \mathfrak{P} , his domal Dignities, and Homofcope of England, which denotes Refolution, and fome Succefs to attend our National Affairs. In this Quarter f lls the grand *Conjunction of Saturn* and *Jupiter*, in the earthly Sign \mathfrak{M} ; the

.

exact Time will be on the 16th of July, at 7 in the Morning; it forebodes many Commotions and Troubles, with Defolations of every Kind. And to render this Conjunction the more powerful, there follows it an Eclipfe of the Sun, in the very Sign and Degree thereof, which thews the lamentable Death, or pittiful End of fome certain great Man, with a Scarcity of the Fruits of the Earth, and I am rather afraid fome Diforder among Cattle—I hope our Nation and Country may be free; but as folde of thete Things will fail upon France, and we cannot expect but to fhare, in fome Degree, in the malignant Influences of thefe Configurations (whill we are at War), for no fmall trivial Matters will fucceed this important Conjunction.

The SUN's ENTRANCE into LIBRA, which introduces the AUTUMNAL QUARTER.

This Quarter begins on Thursday, the 23d day of September, at 8 min, pait 7 at Night, when 9 deg. of 8 afcends, and 16 deg. of by is on the M. C. The D ab of Q, ad * of d. The two grand superior Planets, Saturn and Jupiter, are i the 6th House, within 7 deg. of each other, and both in my; & is in I, the Ascendant of London; and in a I to theie Planets; which thews the Affairs of this Quarter to be various, and of high Concernment to us, as well as to fome other Countries. I fear some Loffes and Disappointments to befall the Honourab e City of London in its Trade and Traffic. These Planetary Configurations also denote Infurrections, popular Murmungs, and Augmentations of Wars, Tumults. and other Commotion ; Fire and Robberies by Land; ftrange and unufual Difeates in the Body of Man: it also fignifies Diffimulation in Treaties; Dulnefs in the Magistracy; Herefies in the Clergy and Church; with Alterations in Privileges, Laws, and Cultoms.

The SUN's ENTRANCE into CAPRICORN, which introduces the WINTER QUARTER.

THIS Quarter enters when the Sun comes to the Southern Tropic, making our Days the Shorteft, which this Year happens on Wedneiday, the 22d day of December, at 51 min. paft 11 o'clock

調査により

Enigmas answered.

11 o'clock in the Morning; at this Solar Ingress, we find Saturn and Jupiter in a Square Aspect of Mars, which is of a rugged hoftile Import. It is to be feared a general Peace is not so near at hand as might be wished; yet from other succeeding Configurations, there appears to be something coming forward, that will be brought upon the Carpet, concerning some general Propositions for a Peace: I wish it may succeed.

A GENERAL

SEASON.

٨n

A GENERAL ANSWER to the ENIGMAS, &c. By Mr. BENJAMIN KEMP, of Farnifield.

ADVICE TO A YOUNG GENTLEMAN.

Edwin, this most important leffon learn, E'er yet you good from evil can difcern. Your youthful steps to rectitude incline, And ever follow Virtue's facred LINE. 1 Enig. Ah! shun the midnight Bows and Rattling dice, 2 Re. 2En. And eve y known infidious Art of vice. 4 Enig. This easly CONQUEST, labour to procure, 2 Cha. Which future peace and FORTUNE may infure; 1 Cba. For co feious guilt carefs'd, will, in its turn, More fiere, more SAVAGE, than an OVEN burn; 1 Re. 3 Enig. More horrid than the nightly foreech owl's cry: This inward foe will every blifs deftroy. Then shun this monster, and true wildom prize, And you'll to peace and future honours rife.

A Kind of ANSWER to the ENIGMAS, CHARADES, and REBUSSES, by Way of a WISH.

By Mr. RICHARD EDMOND, of Fimber, Yorksbire.

I took Seafon's Riddles one day in my hand,

I perused each Line with much care;

But something there was which put me to a stand,

'Ti'l I found what was brought from afar.

I with my friend Kemp had both courage and skill, To catch all the Rui's in this land;

And with them Mr. Waring his Oven would fill, And fo roalt them all at command.

They are Sarage vermin, although they are fmall, As any that's under the fun;

And if A full Conquest was made of them all,

I should thick that great fervice was done.

If they will proceed, and deitroy the whole breed, Without either lot or controul,

Their good Fortune I'll praife, to the end of my days, And drink their good health in a Bowl. 1802.

An ANSWER to the QUERY, addressed to Mr. JOHN COLES, of Weedon, by Weston.

By Mr. JOHN SAVAGE, Green's Norton.

The ark's true dimensions, as true as I'm able, And concife as possible, down I will table; Learn'd Cumberland fays, 'cording to the Hebrew, A cubit is inches just twenty and two, Hence the length is five hundred and forty-fev'n feet, The breadth ninety-one, and two inches complete; The height fifty-four, and eight in hes likewife, Each room eighteen feet high, if equal in fize.

An ANSWER to the QUERY, by Mr. DAVID LEWIS.

According to the Lord Bishop of Peterborough's Scripture Tables, a cubit is 21,888 inches; the Ark was in length 300 of these cubits, equal to 547 feet 2,4 inches; the breadth was 50 cubits, equal to 54 feet 2,4 inches; the height was 30 cubits, equal to 54 feet 8,64 inches. These three numbers multiplied togetner, gives 2730781,9008 cubic feet; but as the Ark is supposed to have a roof, rising like the deck of a ship, of a cubit high in the middle, there must be added to the above 24952,32 feet, the folid content of the roof, which makes a total of 2755734.2208 solid feet in the Ark. To find its tonnage, a cubit foot of wate weighs 62,5 pounda avoirdupois, by this divide 2240 the pounds in a ton, and it will give 35,84 feet; by which we find the Ark was 76889,9 tons. Dr. Arbuthnot makes it 4172,1 tons more than the ab ve.

True Anfwers were fent to the Enigmas, &c., by Mr. John Coles, Mr. John Savage, Mr. John Offer, Devize; and feveral others, which we have not room to infert.

NEW

The

NEW ENIGMAS, &c. for the Year 1802.

FIRST ENIGMA, by Mr. BENJAMIN KEMP, of Farnifield.

A haggard pair of uncouth birth. By blows fevere first brought me forth. I, offspring of the conteft, fell, Caught in a black and difmal cell: From thence fet free, by curious art, I now begin to act my part. While Phœnix like I am fupply'd, From where my ancestors have dy'd. Am deem'd an universal friend, And on all parties do attend. Yet to reftrain my wonted rage, I'm pent, like Mars, in Vulcan's cage; For should 1 once my freedom gain, 'Tis hard my fury to reftrain. My prone career admits no bounds. But deals destruction, death, and wounds. Until at length a deadly foe, To me oppos'd, my rage lays low. Conquered, I faint, grow weak and die; Ingenuous bards fay what am I.

SECOND ENIGMA, by Mr. JOHN COLES,

Ye fons of enigmatic fame,

Who ftrange myft'ries can tell ; Attend, while I defcribe my name, And myfelf to you reveal.

When I hold my gentle peaceful reign, What blooming fweets abound; What verdure decks each grove and plain, And beauty clothes the ground.

Digitized by Google

4t

The carol fongfters of the grove, In tuneful accents fing, And proclaim their gratitude and love, To Nature's boundlefs king.

In the earth fometimes you may me fee, To which the flocks and herds retreat,

With pleafure, joy, and extacy,

To allay their thirst and parching heat.

In glitt'ring chariots I may be found, In which the great and noble ride;

And traverse the country around, With great attendance at their fide.

In fome ingenions works of art, I likewife do refide;

And with wond'rous skill act my part, And all their motions guide.

In the feat of war, I too am found, . Where thund'ring cannons roar,

Where flaught'red millions frew the ground, And plains are flain'd with crimfon gore.

Thus far, dear gents, to you my name, In feeble verfe I've fhewn; So hope next year, you'll it proclaim, And to the world let it be known.

The THIRD ENIGMA, by Mr. WILLIAM BOYER.

Since it is in mode for to defcribe one's birth, Then we like most forung from old mother earth. Did I fay we? yes, fure ! not I, 'Tho' we are one combined family. We, like most nations, have a king and queen, To keep due order, and our court from ipleen; We're often comp'ny for the iplendid great, The fashion'd beau, and those of low estate;

FIRST REBUS, by Mr. LAMBERT BOWDEN.

The greateft foe to all mankind; A heathen goddefs bring to mind. A prieft of Bacchus next find out; What you delight in without doubt; A fort of fruit that's known full well, The drink of gods, as poet's tell. Lafly, be pleafed to explain, A king that did in Ifrael reign. Bring down the mitials, join the fame, A precious ftone you then will name.

SECOND REBUS, by Mr. Edward Wilson, of York,

One half of what farmers can work alone, Th' half of a meafure, by ev'ry one known 3 Connected aright to you will appear, A name in these pages seen ev'ry year.

FIRST CHARADE, by Poor Bos, of Whaplade.

My first, you may eafy behold, When Grimalkin's intent on her prey; Or the Mifer fits over gold,

To guard it by night and by day.

At night fhould he happen to wake, To count o'er his ill gott n pelf; My fecond, from his pock the takes, To it keeps it as fafe as himfelf.

My whole, is part of the beau's pride, Hangs daugling half way to his knee; I'm as often at force ladies fide, With my first, hung in chains you may fee.

Digitized by Google

SECOND

SECOND CHARADE, by Mr. G. SIM-N, of Thingdon.

My first oft dims the azure sky, And foars above the mountains high, When pains attack the human frame; Connect my whole, and you may view, What numbers oft too frequent do.

THIRD CHARADE, by Mr. JOHN SMITH.

My first's a room in saverns found; My fecond wears a crown; My whole is a difcordant found, And eke a market-town.

A QUERY, by Mr. JOHN SAVAGE, of Green's Norton, Northamptonsbire.

The fituation of things at the prefent moment, hath induced me to write the following Query, with a request for an illustration on each verfe.

Did Solemon and Ifaiab write the two following verfes from experience or prophecy? Prov.ch. 11. v. 26. "He that withholdeth "corn, the people shall curfe him: but a bleffing shall be upon "the head of him that selleth it."—Again, Isaiah ch. 5. v. 8. "Woe unto them that join house to house; that lay field to "field, till there be no place, that they may be placed alone in "the midft of the earth."

The Author, HENRY SEASON, humbly thanks all his Contributors, and begs their Letters may be fent, as ufual, directed for him, at Stationers'-Hall, LONDON (Poft paid), by the mitidle of April at fartheft, with Anfwers to whatever they fend; otherwife they cannot be received or ufed. Mr. Paul/on's Letter, of Arnold, near Nottingbam, came fafe to hand; as did Mr. Lewis's Letter of the 27th of August, 1800; but the latter too late to be noticed.

FINIS.

Printed for the COMPANY of STATIONERS, By C. Woodrall, No. 22, Paternofter-Row, London.
