

CONTAINING<br>THE ONLY TRUE METHOD OF<br>CALCOLLATRINK NATRIVITRIRSE<br>MADE PLAIN AND EASY.<br>> By John Worsdale, Astronomer, Near the Cathedral, Lincoln.

Published by Messrs. Longman, \& Ca. 47 Paternoster Row,
London ; and may be had of the Author, or/Printer, and all Booksellers in the United Kingdom. m. kexworth, printer, lincoln.

Price £1. 5s. in Boards.

## CONTENTS.

This Work contains an exposition of the Errors of all Ancient and Modern Authors, impartially stated, proving that no Original Works on this department of Astronomy, hape been published in this Kingdom for several Centures past, and that all Modern Publications on Nativities, which have yet been given to the World, are pirated from Ancient Authors, with a developement of their erroneous operations, ard Judgment in Directional Motion, \&c. including the Names of all piratical Authors, who have dishonored this celestial science by their inexplicable principles and practice.

The pristine elements of calculating nativities, and the true Method of delivering Judgment in all cases, are clearly demonstrated in this Work, divested of every fallacious hypothesis, with a concise illustration of the Computations of all mundane directions, and Parallels by direct, rapt, and converse motion, comprising the most correct Rules, and demonstrable Examples for Computing all Arcs of Directions in the zodiac, which are proved in the Calculations of thirty remariable modern nativities, never before published; including the Geniture of the infant duke de bordeaux. All those who are disposed to Study this department of Astronomy, may refer to the exemplary Computations given in full, by attending to which, they will be qualified to Calculate all the Arcs of Directions in any Nativity, with accuracy and expedition, and also ascertain
their various Effects in the different Terms and Constellations, \&c. by which all important Events, during any person's Life, are accurately discovered, and previously ascertained. Many Examples for practice are given in this Work, computed in full, from new astronomical tables, according to the present Ecliptical Obliquity, exemplifying the influence of the Celestial Bodies on Man, comprising the established Method of selecting, and directing the True Apheta, in any Nativity, in Examples of Life and Death. The Precepts are interspersed with copious strictures, practical and scientific, comprehending the Stellar Causes of the retardation, frustration, and acceleration of the Effects of all Primary Directions, with a dissertation on Directional Motion in all its parts, which may be proved by the use of the Celestial Globe, or Spherical Trigonometry. To which are added, concise Rules for delivering Judgment on tee revolutions of kingdoms and states ; including corrbct precepts for computing solar and lunar eclipses, for any number of Years past or to come, with Examples containing the Calculations; and also the Elements of the great Ecclipse of the Sun, on the 15 th of May 1836. New tables of the Poles of the Houses, and those of Declination, Right Ascension, and Ascensional Difference, are given in this Work, and likewise all those new and valuable Tables of Oblique Ascension, computed by the Author, according to the present Obliquity of the Fcliptic, from one to sixty Degrees of Latitude, comprising those Calculated for the principal Cities, and Towns in England, Scotland, France, Ireland, and North America, which were nerer before published in this Kingdom.

Many improvements have been made in all ages, for promoting and advancing useful arts and sciences, which merit the approbation of an impartial community; but in the present age, the divine science of Genethliacal Astronomy has been neglected, and in a great measure discountenanced, in consequence of the numerous errors and notorious contradictions which are recorded in the pirated works of all Authors. Many have applied themselves to this Celestial Study, but have soon been defeated, because they were not able to obtain a competent knowledge of its primitive principles, having nothing to attend to but delusive Theorems, multifarious processes, and inexplicable Problems void of legal demonstration, which have plunged them into a Labyrinth of insurmountable error and confusion. Thus itbecomes evident to every enlightened mind, that this stblime science, as it is now generally studied, and practised, must be considered as a most disgusting and contemptible study, because its advocates and
professors have not produced any of those substantial and indubitable proofs, which are required to place this useful, and interesting branch of sacred literature, high in public estimation; for no modern examples have yet been given, which are deemed sufficient to establish the verity of Stellar power on mankind, neither are there any manifest facts on record, that are competent to convince the unbelievers, cf the truth of Astronomical computations, and predictions; but in this work I presume I have unveiled all those flagrant abuses, and delusive chimeras, with which the Volumes of all piratical Authors abound, and having so dcne by authentic examples founded on facts, which cannot be confuted, I flatter myself that my feeble exertions, will be productive of establishing the truth and utility of this sacred and much injured science, and once more restore it to the summit of its ancient respectability and splendour.

It is well known that this branch of Astronomical literature, was sanctioned and practised in the earliest ages, by the most august and learned personages, whose works exhibit numerous interesting and important truths relative to the effects of Sideral power; but though the laudable and indefatigable researches, of those literary and sci--entificcharacters, were attended with consummate. .success, yet all those who are Students in this department of Actronomy, ought to know that there . . areseyeral works, which if adhered to, will own-stently-mislead them in all their operations and.
judgment. The Authors of the works I allude to, are Gadbury, Coley, Parker, White and Sibly. These pirates have dishonoured this predictive science by the fallacious innovations, and notorious prevarications which pollute their pages; they have multiplied the most flagrant errors in directional motion and judgment, which ought to have been deposited in the confines of oblivion, for it is plain from their pirated works, that they were deficient in Astronomical calculations. The true method of directing a significator to its promittor in Mundo, by direct and converse motion, was unknown to them, because they did not understand the Rapt motion of the Earth, and doctrine of the sphere in all its parts. Their 'Tables and Arcs of directions are all incorrect, and their division of the Heavens are also false, delusive and undemonstrable, which I have proved by the examples given in this work. They have absurdly invented many vague motions of the Celestial Bodies that have no existence, being remote from truth, which the most correct Astronomical computations, and use of the Celestial Globe are incompetent to explain.

A Work entitled, "anillustration of Astrology", was pirated and published by Mr. E. Sibly, about thirty years ago, which has done incalculable injury to this noble soience. In many cases he hasgiven precepts forcomputing directions, which he has abandoned in his operations, he has also extracted most of the Nativities from Gadbury's:
collection; with all the erroneous calculations and judgment of that Author, which have been very ably exposed, and refuted, more than a century ago, by Mr. John Partridge, in his valuable English works called Opus Reformatum, and Defectio Geniturarum, the compilation of those volumes will immortalize his name, and exhibithis superior talents in this department of Astronomy, to generations yet unborn.

The Works of Mr. William Lilly on Horary questions, and on the subsequent mutations of the World, are interesting and of considerable importance to all genuine students in this celestial science, and though the Author was unacquainted with the true method of directional motion in Nativities; and the correct division of the Heavens by duplicate horary times, yet he certainly was the greatest professor of the Mundane, and Horary departments of this science, that ever wrote in the English language; his precepts and judgment prove his abilities to every unprejudiced reader. The Works of Mr. John Partridge, and Mr. William Lilly, are of more value than all others that have been ${ }^{\prime}$ ublished in this Kingdom; but if the industrious Students are disposed to purchase the works of other Authors, which ane al ogether a confused heap of rubbish, they are at liberty to do so, as Booksellers may always be found, who will be very ready and willing to supply their customers with works on Nativities, at enormous prices, if the deluded purchasers think
proper to dispose of their cash for articles that are of no use, or value whatsoever.

About twelve years ago, Mr. Thoma; White published a work called, "The Celestial Intelligencer," which is a wretched compilation of ho:rowed, and stolen trash, collected from the works of most of the pirates I have mentioned. The truth is, his work does not contain fifty pages of his own composition; his Arcs of directions are all notoriously false, and his judgment incoberent and absurd; he has given the most inconsistent examples to prove, that the Planets, after they have passed the Ascendant and Midheaven, return back, contrary to the regular order of nature, and the distance of the Stars from those Angles, he is pleased to stile Arcs of Directions; by these and other ridiculcus, and whimsical notions, the industrious Students are misguided, and continually deceived in their practice, thus when a Man is disposed to transcribe and pirate the works of the living, or the dead, combined with now inventions void of truth, his own inability then becomes manifest to an impartial community and his works will ever record his ignorance and folly.

Mr. James Wilson has lately published a Dictionary of Astrology, in which he hàs given all the fallocious precopts, false terms; and prepestenows inpevations of the transcribers before quoted. The errors and contradictions which he has re-
vived, cught to have been placed in obscurity, and not raked together to deceive the ignorant, and confound the Students in this Science; but I have given my opinion on his Dictionary more. at large in another part of this work, hoping that my impartial admonitions will prove useful tothose who are inclined to adhere to truth alone, founded on authentic examples and experience. :

There are several other Authors who have written on Nativities, but I shall not notice the rubbish they have collected, and impudently foisted on the Public; but it is by no means sufficient for meto say that the works of the Authors I have mentioned are false, without producing satisfactory proofs of the truth of my assertions, which I presume I have done in the course of my calculations; all of which may be proved by the use of the Celestial Globe; for what can be more simple and plain than the examples I have given, or what more easy to be' understood, than those invariable facts, proved by the clearest demonstration. In the compilation of this work, I have received no assistance from any Man living, but I anticipate that succeeding generations will return me gratefal thanks for exposing the errors contained in this noble Science, and particularly those in directional motion. It is notorious to observe the villand which. is practised by rumerous imposters, who traval through the Country, and pretend to calculates Nativities, of which they know nothing; 'these'

Jugiglers, and artful deceivers, who are generally as ignorant as they are impudent, frequently àtempt to perform many things, which are far beyond the extent of human comprehension; In many towns or villages of ncte, some of this scandalous tribe may be found, they often attract the attention of the vulgar, and to carry on their villany without control, pretend to converse with Spirits, and to have Legions of Angels at their command. Many of these detestable impostors, manufacture, and dispose of Charms, Sigils and Lamens, to make their poor deluded clients rich and completely happy, and thereby put their designs of knavery into execution, by which they impose on the credul us, and deceive the ignorant; but all these, and many other species of villany, (too odious, and contemptible to mention,) are by no means connected with the genuine principles of Genethliacal Astronomy, reduced to practice. There may be, and doubtless are some, who understand the primitive rudiments of this celestial science, but those literary characters are at present unknown to me. Every attentive observer may soon discover the numerous abuses practised under the name of this sublime study, which when attended to in its divine purity, is far superior to all the known arts and sciences in the World.

In this Work I have given the primitive elements of calculating Nativities, and the method of delivering judgment in all cases, which are
clearly demonstrated and divested of every falla-
cious hypothesis, with an illustration of the projections of the Mundane Aspects of the significators and promittors in any Geniture, and in all parts of the Heavens, comprising the most correct rules and demonstrable examples for computing all Ares of directions in the Zodiac, which are proved in the calculation of thirty remarkable modern Nativities, according to the doctrine of Ptolemy.

I have also given new Tables of Declination, computed according to the present obliquity of the Ecliptic, with those of right Ascension, and Ascensional difference, including new Tables of the Poles of the Houses, calculated by duplicate horary times; I have likewise given new Tables of oblique Ascension, computed according to the Ecliptical Angle of twenty three degrees, twenty eight minutes, from one to sixty degrees of latitude, among which are given, those calculated for the latitudes of several principal Towns and Cities in England, Scotland, France, Ireland and North America, which were never before published in this Kingdom.

Those who purchase this Work will not require any aid or assistance from any other Author, as I have not omitted any thing that is requisite to be understood, by the attentive practitioner. In erecting the first Figure in this Work, for the Latitude of the City of Lincoln, I have given the true method of placing the proper Signs, Degrees and

Minutes, on the Cusps of all the Houses, and have also given Rules how to place the Planets therein, so that without the least difficulty, a Figure of the Heavens may be truly erected for other Latitudes, according to the same rules and computations from the tables of Oblique Ascension at the end of this Work, as tables of Houses are unnecessary. I have likewise explained the method of calculating the true Geocentric places of the Planets from the Ephemeris, for the time of Birth, and have also given rules and examples in full, for computing the Latitudes, Declinations, Right Ascensions, Semidiurnal, Seminocturnal Arcs, and Ascensional Differences of the Planets, with their diurnal and nocturnal horary times, all of which I have endeavoured to make as plain and as easy as possible, in order that those operations may be perfectly understood by every Student in this science, before he proceeds to compute any Arcs of directions, either in the Zodiac, or in Mundo.

I have given the true computation of the place of the part of Fortune, and the method of directing it from the original Greek Quadripartite of the learned Claudius Ptolemy, which has never been published in the English Language. The Lunar Horoscope can only be directed in the World, having a regular and uniform motion through all the Houses, it is always found to preserve the same space from the Eastern Horizon, whether by day, or night, as the Luminaries are distant from each other; it does not depend on
the Latitude and Declination of the Moon, as those numbers are only required in constituting the Moun's true distance from the Solar place, neither can it claim the horary times of the Moon, for certain and obvious reasons; for if the Moon and part of Fortune, were allowed to have the same Latitude and Declination in all parts of the Heavens, and in all cases, we should then to no purpose, endeavour to explain, what is impossible to be proved by human Literature. The calculation of this important point, as it is given by all Authors presents an entire mass of error and confusion ; but as I have given all its Arcs of Directions in the Genitures calculated in this Work, it would be needless to dwell longer on this subject, which if duly investigated, will doul tless give the greatest satisfaction to all Students in this Celestial Science.

All Authors have given inaccurate methods for computing the Pcles of the Planets, which I have proved by examples in this Work, for when the Student has used his best endearcurs to ascertain his numbers and distances, \&c., under incerriect polar Elevations, his Arcs ci Directicns then become entirely deficient, so that no events can be truly predicted frcm such false creraticns; tut I have made all these suljects as plain as pussill le by my computations; 1 have also instructed the Student, (by the precepts I have recorded,) l,ow to give immediate Judgment on auy Nativity, respecting the propitious and malignant qualities.
of the Celestial bodies, from their different posi tions, and configurations in the Radix; so that when a figure is erected, the Student may examine the precepts I have given, and he will instantly discover, whether that Native, born under the power of those Elementary qualities will obtain Wealth and Preferment, or experience Poverty and Woe. I have likewise given many Ares of Directions wrought in full, both in the Zodiac, and in Mundo, including Mundane Parallels, by Direct, Rapt and Converse Direction, so that the Student may soon become Master of the whole Art of directional Motion, without which, the time cf any important Event during the Life of an individual, cannct be previously pointed out, and truly ascertained. But to instruct the Student still further in these Celestial enquiries, I have also given Rules by which I have explained the nature, power, and effects of all Directions and Parallels in the Zodiac, and in the World; so that when the Student has computed the Ares of Directions in any Geniture, by the examples given, he may then refer to the Precepts, where he will instantly discover the nature of the Events portended by the quality and Effects of the different directions, whether they are good or evil.

The Rules. which I have given for delivering judgment on the Revolutiona of Kingdoms and States, War and Peace, Plenty and Scarcity, \&e. may be depeuded on in all cases, and those who properly attond to them, will be amply rewarded
for their exertions. The method of computing Solar and Lunar Eclipses I have also given in this Work, and have inserted the calculations in full, by a correct method, by which any Student may compute them with ease and accuracy, for any number of Years past, or to come.

In the Nativities calculated in this Work, I have explained the power of Progressions, Annual Revolut.ons and Secondary Directions by examples, so that the Student will be enabled to understand them by little application, and apply them in all cases in the calculation of other Genitures; but though I have recorded the most substantial truths relative to the verity of sideral prediction, which the testimony of many hundreds of respectable characters can substantiate, yet I am aware that the most flagrant and alusive arguments will br: advanced against the utility of this venerable Science, by those, who are always ready to condemn what they are unable to define, or comprehend; if such characters are of a different opinion, and do not believe that the Heavenly Bodies have any influence on Mankind, they ought to avoid every portion of censure, and view those who Study the power, magnitude and motions of the Celestial Orbs, with pity and regret, for it is absurd and unjust to deny the truth of what they never proved; but Alas! in the present Age, when bold Infidelity is making gigantic movements in this once happy Land; even those sacred writings which contain gov's holy word, are frequently
traduced, disregarded, and a considerable portion af odium, and ignominy levelled against them, but sacred and Celestial truth in its purity, will ever reign triumphant over vice, profaneness.and immorality, 'Thuse who demand proot of Astral power on man, may observe, that I have lurnished them with examples, over which contention, and hypocrisy are unable to prevail; if the difference. between the Cause and the Effect is required, the most ample proofs are giventhru $u_{z}$ hout the $W$ ork which will repel every artful insinuation opposed to the Study of Stellar power, it would therefore be inconsistent to attend to arguments advauced by Infidels, Deists, and Atheists, who generally use.their puny efforts, to stifle and traduce visible facts of every description, if those facts appear mysterious to their own comprehension. The untaught vulgar are generally enemies to Celestial truths; their impertinent, and pitiful ribaldry combined with a large portion of low cunning, in a moment proclaim an ignoble origin; but the ignominious conduct of such characters is beneath my notice. It is well known that there are some who remain of opinion, that allowing the time of every important Event of any person's Life, with the period of dissolution, to be previously ascertained with correctness and precision, by Ástronomy, or any laudable Calculations whatsoever, it would prove injurious; and instead of administering comfort and consolation to an afficted mind a perfect and previous knowledge of those Events,
would be productive of unhappiness and misery. Such is the nature and extent of the ridiculous and absurd arguments, which somé, who disbelieve the Occult power of Sideral agency on mankind, are disposed to produce, but the Royal Psalmist was of a different opinion, for his express and humble desire was, to know his end, and the number of his Days, that he might be prepared to meet his God; but the hardened Infidels generally condemn every contemplation of a solemn and instructive nature, and turn aside, and impiously spurn at all admonitions, which exhibit to them the period, when they must bid a final adieu to all alluring vices; then at last on a bed of sickness they appear conscious of their guilt, and wish in vain for the return of a few Years, that they might humbly reconcile themselves to an offended God, and receive spiritual consolation from every divine instruction, but Alas! the number of their Months are with THEE, they must go hence at the time appointed, unto that place, where the wicked cease from troubling, and where their impious Tongues will no more be able to utter daring eloquence, against the irresistable power of the wonderous Works of the most high.

All those who are Students in this department of Astronomy, (in which the infinite Wisdom of the grand Architect of the Universe is so manifestly apparent in all his stupendous designs,) will soon be able to comprehend the primitive rudiments of this noble Science; they will not
meet with any insurmountable difficulties in their practice, when they diligently apply themselves to directional Motion and Judgment, as I have used my best eudeavours to make every thing as plain as possible, by the most familiar examples, The various opinions on fate, and the freedom of the will, are here set at rest for ever, not by noisy arguments and contention destitute of proof, but by a combination of visible, and manifest facts which admit of no human contradiction. Religion in its purity, on which the Law of the Land is established, cannot unfold to human reason, more excellencies of the infinite Wisdom, Glory, and power of him, who is hing of kings, and LORD of LORDS, than a constant contemplation of the influence of those Celestial Bodies, which are the Works of his Hands, and by whose Almighty power, they are, and were created, for the use of mortal Man. Religion teaches us to worship the great Creator in Spirit, and in Truth; but the Study of Celestial Philosophy elevates our finite understanding still more, and displays to us the certain immortality of the Soul, and the boundless joys of eternal felicity, which are objects of the greatest importance; it also exhibits to us the unspeakable Love of the Lord of Hosts to mankind, and in a moment breaks all the forged shackles of Priestcraft, and liberates all those who are slaves to refined Popery ; it exhibits to the rich Man the time when himself, his offispring, and relatives, must seon like shadows, vanish, and be
no more: It teaches Kings, Princes and Emperors, that the silent Tombs wait for the reception of their earthly Tabernacles, which must shortly be dissolved; thus when the understanding of Man is soaring by contemplation above those Orbs of Light, we then reflect, that all Terrestrial objects are of small importance, when compared witheven an imperfect view of those Celestial pleasures, which flow from the favour, mercy and goodness of the Almighty for evermore.

I now conclude, hoping that what I have developed by examples founded on the Basis of Truth, will ultimately prove of essential advantage to all genuine Sons of Urania, for whose Literary advancement I have unveiled and revived, the primitive principles of the venerable Science of Genethliacal Astronomy.

Laudate Deum in sanctitate eius; Laudate cum in firmamento fortitudinis eius.

## TO THE MEMORY <br> OF THE IMMORTAL PTOLEMY.

## BY THE AUTHOR.

Immortal Teacher of this Art divine,
Thy rules on record, most refulgent shine ;
To thee alone we owe what we profess, Though other Sages toil'd without success;
But now we daily prove, that by thy aid, This Art in darkness, is no longer laid; Those Myst'ries now unveil'd, are all as clear As Light that floweth from each glitt'ring Sphere: By thy assistance, we may always find, Important Lessons, for the human mind :
All gloom is now dispell'd, and Man may show, The certain Fate of Mortals here below, As in a Glass we view the human face, So by thy Lectures, all these things we trace; Those who may cavil at this Learning ; stand Amaz'd to see its progress in this Land; Thy precepts just, for ever will impart Truth to each Student in this noble Art, By which all Facts unfolded to our Eyes, Are oft survey'd with wonder and surprise; Through thee, the power of each Star we know, Though far from all observers here below;
Strange then it mustappear, that things now plain,
Should very oft be treated with disdain;
Those Orbs of Light, which roll in order, prove

## xX

That all events on Earth, are from above; Solemn the thought! such contemplation, brings Us near to him, who is the King of Kings; Thou learned Sage, hast taught us to explain, Those Signs on High, which are not set in vain; The tokens lately view'd in yonder sky, Are seldom to be seen by human Eye ; Thou art no more, yet thy immortal Name, Will soar triumphant on the Wings of Fame, And though insulting Feet may on thee tread, Now thou hast long been number'd with the dead; Yet all thy Rules which infidels surprise, Are daily proved in the boundless Skies, Sages unborn, thy learning will adure, Till Sun and Moon and Stars, shall shine no more.

THE TRUE METHOD OF ERECTING A

## 

A Male Child was Born in the City of Lincoln, near the House in which I now live, on the first of Octsber 1817, at for: $y$ five minutes past four o'Clock in the Afternoon; the Latitude of the place of Birth is $53^{\circ} 15^{\prime}$ North. Now in this example as well as all others, the Sun's true Longitude at the time of Birth must be first ascertained, and then his Right Ascension, which must be added to the Right Ascension of the time of Birth, when converted into Degrees and Minutes, and then the true Right Ascension of the Midheaven will be found which is proved by the following computation.

In White's Ephemeris for the Year 1817, ou the fi:st of October, the Sun's place at Noon, is $7^{\circ} 55^{\prime}$ of Libra, and on the second day at Noon, his Longitude is $8^{\circ} 34^{\prime}$ of the same Sign, omitting seconds, the difference is 59', which is the Sun's motion in 24 Hours, but as the time of Birth is 4 H .45 m . after the Noon of the first of October, I now say, if 24 Hours require $59^{\prime}$, then 4 AR . 45x. will give $12^{\prime}$, which added to the Sun's place at the Meridian of $t$ at day $7^{\circ}$ 55', the true Longitude of the Sun at the tinie of Birth will be $8^{\circ} 7^{\prime}$ of Libra.

Now to find the true Right Ascension of the Sun, I look in the Table of Right Ascension in this Work, and in the first column opposite $8^{\circ}$ of Libra, I find $187^{\circ} 21^{\prime}$, and opposite to $9^{\circ}$ of the same Sign, the number is $188^{\circ} 16^{\prime}$, the difference is $56^{\prime}$; then if $1^{\circ}$, or $60^{\prime}$ give $55^{\prime}$, the $7^{\prime}$ of Longitude will ro-
quire $6^{\prime}$, which added to $187^{\circ} 21^{\prime}$, the sum will be $187^{\circ} 27^{\prime}$, which is the Sun's Right Ascension at the time of Birth; I now refer to the Table in this Work, for converting Hours and Minutes into Degrees and Minutes; then consequently 4 H .45 m . will produce $71^{\circ} 15^{\prime}$, which added to the Sun's Right Ascension before found, which is $187^{\circ} \mathbf{2 7}$, and the true Right Ascension of the Midheaven will be $258^{\circ} 42^{\prime}$; now to find the true Degrees and Minutes of the sign corresponding with the above Right Ascension of the Medium Celi, the operation is thus; I look in the Table of Right Ascension, and seek the nearest number which is $258^{\circ} 2^{\prime}$, opposite to $19^{\circ}$ of Sagittary, and even with $20^{\circ}$, of the same sign, Ifind $259^{\circ} 7^{\prime}$, the difference is $1^{\circ} 5^{\prime}$; then if $65^{\prime}$ require $60^{\prime}$, what will the difference between the Right Ascension of the Midheaven, and the Right Ascension of $19^{\circ}$ of Sagittary, (being $40^{\prime}$ ) give? the number thus obtained by proportion, is 37 ', omitting Fractions; so that $19^{\circ} 37 \prime$ of that Sign are on the Midheaven at the time of Birth. Then to the Right Ascension of the Medium Celi $258^{\circ} 42^{\prime}$, I add $30^{\circ}$, which make $288^{\circ} 42^{\prime}$, this number is the oblique Ascension of the eleventh House, and by looking in the Tables of the Poles of Position in this Work, and computing the proportional part for the elevations of the eleventh and third, twelfth and second Houses for the $15^{\prime}$ of Latitude which exceed $53^{\circ}$, the former will become $25^{\circ}$ $20^{\prime}$, and the latter $42^{\circ} 49^{\prime}$; I then look in the Table of Oblique Ascension for the Latitude of $25^{\circ}$, omitting the $20^{\prime}$, and seek the number $288^{\circ} 42^{\prime}$, which as 1 have said before, is the Oblique Ascension of the Eleventh Houle, and the nearest number is $288^{\circ} 8^{\prime}$, opposite to $6^{\circ}$ of Capricorn, and even with $7^{\circ}$ of the same Sign 1 find $289^{\circ} 12^{\prime}$, the difference is $1^{\circ} 4^{\prime}$; I now subtract the Oblique Ascension corresponding with $6^{\circ}$ of Capricorn from the Oblique Ascension of the Eleventh House $288^{\circ} 42^{\prime}$, and the difference is $34^{\prime}$. then if $64^{\prime}$ require $60^{\prime}$, the above $34^{\prime}$, will give $32^{\prime}$; so that $6^{\circ} 32^{\prime}$ of Capricorn must be placed on the cusp of the eleventh House; then to the Oblique Ascension of the eleventh $288^{\circ} 42^{\prime}$, I
again add $30^{\circ}$, and the sum is $318^{\circ} 42^{\prime}$, which is the oblique Ascension of the twelfth, this number I seek in the Table of Oblique Ascension for the Latitudz of $\mathbf{4 3}^{\circ}$, which is the nearest to the required polar elevation, and opposite to $25^{\circ}$ of Capricorn I find $3: 8^{\circ} 6^{\prime}$, and even with $26^{\circ}$ of the same sign, I find $318^{\circ} 58^{\prime}$, the difference is $52^{\prime}$, and the difference between the Oblique Ascension of $25^{\circ}$ of Capricorn, and the Oblique Ascension of the twelfth, $318^{\circ} 42^{\prime}$, is $36^{\prime}$; I now say, if $52^{\prime}$ require $60^{\prime}$, what will $36^{\prime}$ require, the answer will be, $42^{\prime}$, so that $25^{\circ}$ $42^{\prime}$ of Capricorn are to be placed on the cusp of the twelfth House. Now to the Oblique Ascension of the twelfth $318^{\circ}$ $42^{\prime}$, I add $30^{\circ}$, and the sum is $348^{\circ} \subset 2^{\prime}$, which is the Oblique Ascension of the Ascendant, I then refer to the Table of Oblique Ascension for the Latitude of $53^{\circ} 15^{\prime}$, and seek the number $348^{\circ} 42^{\prime}$, and opposite to $1^{\circ}$ of Pisces, 1 find $348^{\circ} 20^{\prime}$ and even with $2^{\circ}$ of the same sign, I find $348^{\circ} 46^{\prime}$, the difference between these numbers is $26^{\prime}$; I then subtract the Oblique Ascension of $1^{\circ}$ of Capricorn, which is $348^{\circ} 20^{\prime}$, from the Oblique Ascension of the Ascendant,being $348^{\circ} 42^{\prime}$, and the difference is $22^{\prime}$, then if $26^{\prime}$ require $60^{\prime}$, the above number, which is $22^{\prime}$ will produce $51^{\prime}$, so that $1^{\circ} 51^{\prime}$ of Pisces must be placed on the cusp of the Ascendant. I then add $30^{\circ}$ more to the Oblique Ascension of the Ascendant as above, which is $348^{\circ} 42^{\prime}$, and the sum will be $378^{\circ} 42^{\prime}$, but as this number exceeds the Circle, I subtract $360^{\circ}$ from it, and the remainder $18^{\circ} 42^{\prime}$ will be the Oblique Ascension of the second, which I look for in the table of Oblique Ascension under the Pole of $43^{\circ}$, and opposite to $2^{\circ}$ of Taurus I find $18^{\circ} 12^{\prime}$, and even with $3^{\circ}$ of that sign stand $18^{\circ} 48^{\prime}$, then by sabtraction the difference becomes $36^{\prime}$, and by subtracting $18^{\circ}$ $12{ }^{\prime}$ from $18^{\circ} 42^{\prime}$ there will remain $30^{\prime}$; therefore if $36^{\prime}$ require $60^{\prime}$, then the difference between the Oblique Ascension of $2^{\circ}$ of Taurus, and the Oblique Ascension of the second, being $30^{\prime}$ as above, will produce $50^{\prime}$, so that $2^{\circ} 50^{\prime}$ of Taurus are to be placed on the cusp of the second ; I then add $30^{\circ}$ more to the Oblique Ascension of the second, and the Ob -

Lique Ascension of the third will be $48^{\circ} 4 y^{\prime}$, this sum I seek for in the Table of Oblique Ascension under the Latitude of $25^{\circ}$, and even will $0^{\circ}$ of Gemini I find $47^{\circ} 66^{\prime}$, and opposite to $1^{\circ}$ of that Sign stand $48^{\circ} 62^{\prime}$, the one number being too little, and the other too much, the difference between them is $56^{\prime}$, then by subtracting the Oblique Ascension of $0^{\circ}$ of Gemini $47^{\circ} 56^{\prime}$ from the Oblique Ascension of the third $48^{\circ}$ $42^{\prime}$, there will remain $46^{\prime}$; I now say, if $56^{\prime}$ require $60^{\prime}$, then $46^{\prime}$ will produce $49^{\prime}$; so that $0^{\circ} 49^{\prime}$ of Gemini must be placed on the Cusp of the third House.

In these computations it must be observed that the Signs, Degrees, and Minutes, occupying the Cusps of the oriental and occidental Houses stand as follow.

| Oriental Houses. | - ' |  | Occidental | Opposite Signs, |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Houses. 10 |  |  | degrees | \& minutes. |

| 1 | 1 | 51 ; | 7 | 1 | 51 m |
| 2 | 2 | 50 ४ | 8 | 2 | 50 m |
| 3 | 0 | 49 II | 9 | 0 |  |

The sign Aries is intercepted in the Ascendant, and Libra in the Seventh; Aquarius is also intercepted in the twelfth, and Leo in the sixth.

The Geocentric Longitudes of the Planets at the time of Birth, are calculated as follow.

The diurnal motion of Saturn in the Ephemeris is $\mathbf{3}^{\prime}$; but as the proportional part for the time of Birth amounts only to seconds; I take the place of that Planet in $0^{\circ} 13^{\prime}$ of Ploces, Retrograde.

The Longitude of Jupiter on the first of October, is $6^{\circ} 41^{\prime}$ of Sagittary, and on the second, his place is $6^{\circ} 51^{\prime}$ of that Sign, then by subtraction his daily Motion is $10^{\prime}$; I now say if 24 Hours require $10^{\prime}$, the time of Birth 4H. 45m. will require

2', which being added to the place of Jupiter on the first of October, his true Longitude at the time of Birth will be $6^{\circ}$ 43' of Sagittary.

By the same method the diurnal motion of Mars will be $20^{\prime}$; for if 24 Hours give $20^{\prime}$, then 4 H . 45 m . will produce $\mathbf{4}^{\prime}$, which added to $20^{\circ} 36^{\prime}$ of Gemini, his Longitude is $20^{\circ} 40^{\prime}$ of that Sign.

The daily motion of Venus by subtraction as in the above Examples, is $1^{\circ} 11^{\prime}$; then if $\mathbf{2 4}$ Hours require $7 \mathbf{1}^{\prime}$; the time of Birth 4H. 45m. will give $14^{\prime}$, which added to $0^{\circ} 4^{\prime}$, the true place of Venus will be $0^{\circ} 18^{\prime}$ of Virgo.
The diurnal motion of Mercury is $27^{7}$; now if 24 Hours give $\mathbf{2 7} \mathbf{7}^{\prime}$, then the time of Birth $\mathbf{4 H} .45 \mathrm{~m}$. will give $3^{\prime}$, which must be subtracted from the place of Mercury on the first of October, because he is Retrograde, and his true Longitude at the time of Birth will be $24^{\circ} 34^{\prime}$ of Libra.

The Longitude of the Moon on the first of October, is $14^{\circ}$ $\mathbf{S 2} 2^{\prime}$ of Gemini, and on the second, her place is $26^{\circ} 28^{\prime}$ of that sign ; now by subtraction, as in all the above examples, her diurnal motion becomes $11^{\circ} 56^{\prime}$; then if 24 hours require $11^{\circ} 56^{\prime}$, what will 4 H .45 m . the time of Birth give? the answer will be $2^{\circ} 22^{\prime}$, which added to $14^{\circ} 32^{\prime}$, the true Longitude of the Moon at the time of Birth will be $16^{\circ} 54^{\prime}$ of Gemini.

The computation of the Latitudes of the Planets, at the time of Birth.

As there is not more than one Minute in the variation of the Latitude of Saturn in the space of six days, and the same with respect to Jupiter's Latitude, I take $1^{\circ} 49^{\prime}$ South for the Latitude of Saturn, and that of Jupiter $0^{\circ} \mathbf{2 8}^{\prime}$ North.

The Latitude of Mars on the first of October is $0^{\circ} 30^{\circ}$ South, and on the seventh of the same Month it is $0^{\circ} 19^{\prime}$ South, the difference is $11^{\prime}$ in six days, therefore by proportion the time of Birth $\mathbf{4 H} .45 \mathrm{~m}$. will not produce any number, so that the Latitude of Mars will be $0^{\circ} 30^{\prime}$ South.

Then by subtraction according to the above method, the
variation of the Latitude of Venus in six days is $\mathbf{1 8}^{\prime}$, therefore 4 II . 45 Mr . will produce nearly one Minute, which must be added to $0^{\circ} 36^{\prime}$, and the Latitude of Venus at the time of Birth will be, $0^{\circ} 3^{\prime}{ }^{\prime}$ North.

The Latitude of Mercury on the first day of the above Month is $3^{\circ} 34^{\prime}$ So $t h$, and on the seventh it is $2^{\circ} 33^{\prime}$; the diference then produced is $1^{\circ} 1^{\prime}$ in six days; then if six days or 144 Hours require $\subset 1^{\prime}$, what will 4 H .45 m . the time of Birth require? the answer will be $2^{\prime}$ omitting seconds, which I subtract from $3^{\circ} 34^{\prime}$, and the true Latitude of Mercury will be $3^{\circ} 32^{\prime}$ South.

The difference in the Moon's Latitude between the first and second of October, is by subtraction, $55^{\prime}$; then by the rule of proportion, if 24 Hours require $55^{\prime}$, what will 4 H .45 M . give? the Answer is $11^{\prime}$, which being added to $2^{\circ} 17^{\prime}$, the true Latitude of the Moon will be $\mathbf{2}^{\circ} 28^{\prime}$ North. The Dragon's head at the time of Birth, is $19^{\circ} 56^{\prime}$ of Taurus.

From the new Tables of Declinations contained in this Work, the true Declinations of the Planets are computed, which are more correct than taking them from White's Ephemeris.-The operations are as follow.

The Declination of Saturn is thus calculated.
His Longitude is $0^{\circ} 13^{\prime}$ of Pisces, in which place he has $1^{\circ}$ $49^{\prime}$ South Latitude :-I now refer to the Tables of Declination, and opposite $0^{\circ}$ of Pisces at the bottom of the Table, with $1^{\circ}$ South Latitude, I find $12^{\circ} 24^{\prime}$, and even with $1^{\circ}$ of the same sirn with $1^{\circ}$ South, the number is $12^{\circ} 4^{\prime}$, and the difference $20^{\prime}$; then if $60^{\prime}$ require $20^{\prime}$, what will $13^{\prime}$ of Longitude give? Answer $4^{\prime}$, which subtracted from $12^{\circ} 24^{\prime}$, there will remain $12^{\circ} 20^{\prime}$ :-I now equate for $49^{\prime}$ of Latitude thus :-opposite $0^{\circ}$ of Pisces with $1^{\circ}$ of Latitude 1 find $12^{\circ} 24^{\prime}$, and even with $0^{\circ}$ of the same Sign, with $2^{\circ}$ of Latitude, the corresponding num:ber is $13^{\circ} 20^{\prime}$, thus by subtraction the difference is $56^{\prime}$ :Now if $60^{\prime}$ give $56^{\prime}$, then $49^{\prime}$ of Latitude will produce $46^{\prime}$, which added to $12^{\circ} 20^{\prime}$ as above, the true Declination of Saturn at the time of Birth will be $13^{\circ} 6^{\prime}$ South.

The Declination of Jupiter is computed as follows. The Longitude of Jupiter is $\mathbf{6}^{\circ} \mathbf{4 3 ^ { \prime }}$ of Sagittary, with $0^{\circ} \mathbf{2 8 ^ { \prime }}$ North Latitude;-I now turn to the Tables of Declination, and opposite $6^{\circ}$ of Sagittary with $0^{\circ}$ North Latitude, stand the number $21^{\circ} 20^{\prime}$, and even with $7^{\circ}$ of the same sign under $0^{\circ}$, I find $21^{\circ} 30^{\prime}$; the difference will be $10^{\prime}$ :-Then if $60^{\prime}$ require $10^{\prime}$, what will $43^{\prime}$ of Longitude give? A nswer $\boldsymbol{\jmath}^{\prime}$ which added to $21^{\circ} 20^{\prime}$, and the sum is $21^{\circ} 27^{\prime}$ :-I now compute $f r r$ $28^{\prime}$ of Latitude ; opposite $6^{\circ}$ of Sagittary with $0^{\circ}$ North, I find $21^{\circ} 20^{\prime}$, and even with $6^{\circ}$ of the same sign with $1^{\circ}$ of Latitude, the number is $20^{\circ} 21^{\prime}$; the difference will be $59^{\prime}$, then if $60^{\prime \prime}$ require $59^{\prime}$, what will $28^{\prime}$ of Latitude give? Answer $2 \mathbf{S}^{\prime}$, which I subtract from $21^{\circ} 27^{\prime}$, and the true Declination of Jupiter at the time of Birth is $20^{\circ} 59^{\prime}$ South.

The Declination of Mars is found as follows.
The Longitude of Mars is $20^{\circ} \mathbf{4 0 ^ { \prime }}$ of Gemini, in which place he has $0^{\circ} \mathbf{8 0 ^ { \prime }}$ South Latitude;-I again refer to the Tables of Declination, and opposite $20^{\circ}$ of Gemini with $0^{\circ}$ Sou'h Latitude, the number is $23^{\circ} 5^{\prime}$, and even with $21^{\circ}$ of the same sign, and under the same Latitude I find $23^{\circ} 10^{\prime}$ the difference is $5^{\prime}$ - Now if $60^{\prime}$ give $5^{\prime}$, then $40^{\prime}$ of Longitude will require $3^{\prime}$, which must be added to $23^{\circ} 5^{\prime}$, and the number is $23^{\circ} 8^{\prime}$, I now compute for $30^{\prime}$ of Latitude :-opposite $20^{\circ}$ of Gemini with $0^{\circ}$ of Latitude 1 find $23^{\circ} 5^{\prime}$, and even with $20^{\circ}$ of the same sign, and with $1^{\circ}$ of Latitude stand $22^{\circ} 5^{\prime}$ :-Then by subtraction the difference is $1^{\circ}$ :-I now say, If $60^{\prime}$ require $1^{\circ}$ then $30^{\prime}$ of Latitude will consequently produce $30^{\prime}$, this last number obtained I subtract from $23^{\circ} .8^{\prime}$ as before found, and the true Declination of Mars will be $22^{\circ} 38^{\prime}$ North.

The Calculation of the Sun's Declination.
The Longitude of the Sun is $8^{\circ} 7^{\prime}$ of Libra, I then refer to the Tables of Declination, and even with $8^{\circ}$ of Libra 1 find $3^{\circ} 11^{\prime}$, and under $9^{\circ}$ of the same sign the number is $3^{\circ} 34^{\prime}$ :The difference is $23^{\prime}$ :-Now if $60^{\prime}$ require $23^{\prime}$, then $7^{\prime}$ of Longitude will produce $3^{\prime}$, which added to $3^{\circ} 11^{\prime}$, the sum thence arising will be $3^{\circ} 14^{\prime}$ South, which is the true Declination of $\operatorname{th}$ Sun in the Geniture.

The following is the computation of the Declination of Venus. In the Nativity, the place of Venus is $0^{\circ} 18^{\prime}$ of Virgo, and her Latitude $0^{\circ} \mathbf{5 7}$ ' North :-I again turn to the Tables of Declination, and opposite $0^{\circ}$ of Virgo, with $0^{\circ}$ North Latitude; I find $11^{\circ} 29^{\prime}$. and even with $1^{\circ}$ of the same sign and under the same Latitude, stand $11^{\circ} 8^{\prime}$ :-I now subtract the lesser number from the greater, and the remainder will be $21^{\prime \prime}:-1$ then say, If $60^{\prime}$ give $21^{\prime}$ what will $18^{\prime}$ of Longitude require? the answer will be $\mathbf{6}^{\prime}$, which I subtract from $11^{\circ} 29^{\prime}$, (berause the Declination is decreasing by Latitude, which must be aitended to in all similar cases,) and the remainder will be $11^{\circ}$ $23^{\prime}$ :-I now equate for $37^{\prime}$ of Latitude ; even with $0^{\circ}$ of Virgo with $0^{\circ}$ of Latitude, I find $11^{\circ} 29^{\prime}$, and opposite $0^{\circ}$ of the same sign, with $1^{\circ}$ of Latitude, the number is $12^{\circ} 24^{\prime}$, the difference is $55^{\prime}$ :-Then if $60^{\prime}$ require $55^{\prime}$, the above $37^{\prime}$ of Latitude will produce $34^{\prime}$, which added to $11^{\circ} 23^{\prime}$, then consequently the true Declination of Venus will be $11^{\circ} 57^{\prime}$ North. The Calculation of the Declination of Mercury is thus wrought. The Longitude of Mercury is $24^{\circ} \mathbf{3 4}$ of Libra, in which place he has $3^{\circ} 32^{\prime}$ South Latitude :-I again refer to the Tables of Declination, and opposite $24^{\circ}$ of Libra, with $3^{\circ}$ South Latitude I find $12^{\circ} 6^{\prime}$, and even with $25^{\circ}$ of the same sign with $3^{\circ}$ of Latitude, the number is $12^{\circ} 30^{\prime}$; then by subtraction the difference is $24^{\prime}:-\mathrm{I}$ now say, If $60^{\prime}$ require $24^{\prime}$; what will $34^{\prime}$ of Longitude give? the answer will be $14^{\prime}$, whieh added to $12^{\circ} 6^{\prime}$ the sum will be $12^{\circ} 20^{\prime}$ :-I now equate for $32^{\prime}$ of Latitude :-even with $24^{\circ}$ of Libra with $3^{\circ}$ of Latitude, I find $12^{\circ} 6^{\prime}$, and opposite to $24^{\circ}$ of Libra under $4^{\circ}$ of Latitude, the number is $13^{\circ} 2^{\prime}$; I subtract the lesser number from the greater and the difierence is $56^{\prime}:-$ I then say, If $60^{\prime}$ give $56^{\prime}$ what will $32^{\prime}$ require, the answer is $30^{\prime}$, which added to $12^{\circ} 20^{\prime}$, the sum then obtained, is $12^{\circ} 50^{\prime}$, which is the true South Declination of Mercury.
The computation of the Declination of the Moon, is as follows. The Geocentric longitude of the Moon at the time of Birth
is $16^{\circ} 54^{\prime}$ of Gemini, where she has $2^{\circ} 28^{\prime}$ North latitude Then is the Tables of Declination, even with $16^{\circ}$ of Gemini, with $2^{\circ}$ North latitude, 1 find $24^{\circ} 43^{\prime}$, and opposite $17^{\circ}$ of the same sign, under the same latitude, the number is $24^{\circ} 50^{\circ}$ : the difference is $7^{\prime}$ :-Then if $60^{\prime}$ give $7^{\prime}$, what will $54^{\prime}$ of longitude require? the answer will be $6^{\prime}$, which I add to $24^{\circ}$ $43^{\prime}$, and the sum is $24^{\circ} 49^{\prime}$ : -Thes to obtain the requisite number for $28^{\prime}$ of latitude, I proceed in the same manner as in the operations before wrought ; opposite $16^{\circ}$ of Gemini, with $2^{\circ}$ of latitude, I find $24^{\circ} 43^{\prime}$; and even with $16^{\circ}$ of the same sign, with $4^{\circ}$ of latitude, the number is $25^{\circ} 43^{\prime}$; the difference is $1^{\circ}$ :-Then if $60^{\prime}$ nequire $1^{\circ}$, consequently, $28^{\prime}$ will produce $28^{\prime}$, which I add to $24^{\circ} 49^{\prime}$, and the sum will be $25^{\circ} 17^{\prime}$, which is the true North declination of the Moon, at the time of birth.

The Calculation of the Right Ascensions of the Planets, with their Latitudes.

The longitude of Saturn is $0^{\circ} 13^{\prime}$ of Pisces, where he has $1^{\circ} 49^{\prime}$ South latitude;-I look in the tables of right ascension, under Pisoes, with South latitude, and even with $0^{\circ}$ in the first column, and under $1^{\circ}$ of latitude, I find $332^{\circ} 28^{\prime}$; and opposite $1^{\circ}$, on the left hand, and under $1^{\circ}$ of latitude, 1 find $333^{\circ}$ $25^{\prime}$ the difference is $57^{\prime}$ :-Then if $60^{\prime}$ require $57^{\prime}$, the longitude * of Saturn, $13^{\prime}$, will require $12^{\prime}$, which, added to $332^{\circ} 28^{\prime}$ make $332^{\circ} 40^{\prime}$, being the true right ascension of Saturn, with $1^{\circ}$ South latitude. But to equate for the 49 of latitude, I take the difference between $332^{\circ} 28^{\prime}$, under $1^{\circ}$, and $332^{\circ} 49^{\prime}$, under $2^{\circ}$ of latitude, which is $21^{\prime}$ :-Then, if $60^{\prime}$ require $21^{\prime}$ what will 49 ' require? the answer will be $17^{\prime}$, which, added to $332^{\circ} \mathbf{4 0}$, the true right ascension of Saturn with his latitude will be $332^{\circ} 57^{\prime}$.
The place of Jupiter is $6^{\circ} 43^{\prime}$ of Sagittary, and his latitude 28' North:-In the Tables of Right Ascension under Sagittary North Latitude, and opposite $6^{\circ}$ on the left hand under $0^{\circ}$ of Latitude I find $244^{\circ} 6^{\prime}$, and opposite $7^{\circ}$ under the above $0^{\circ}$ of latitude, I find $245^{\circ} 9^{\prime}$, the difference is $1^{\circ} 3^{\prime}$;-Then if
$60^{\prime}$ require $63^{\prime}$ the above $43^{\prime}$ of Jupiters longitude will require $\mathbf{4 5}^{\prime}$, which added to $244^{\circ} \mathbf{6}^{\prime}$, the Right Ascension of Jupiter without latitude, will be $244^{\circ} 51^{\prime}$ :-I then subtract $244^{\circ}$ $6^{\prime}$ from $244^{\circ} 17^{\prime}$ under $1^{\circ}$ of latitude, and the difference is $11^{\prime}$, then if $60^{\prime}$ require $11^{\prime}$, Jupiter's latitude being $28^{\prime}$ will require $5^{\prime}$, which must be added to $244^{\circ} 51^{\prime}$ and the true Right Ascension of Jupiter will be $244^{\circ} 56^{\prime}$.
The longitude of Mars is $20^{\circ} 40^{\prime}$ of Gemini, and his latitude $0^{\circ} 30^{\prime}$ South, his right Ascension is thus computed. I look in the Tables of Right Ascension, and opposite to $20^{\circ}$ of Ge mini under $0^{\circ}, 1$ find $79^{〔} 7^{\prime}$, and the next number even with $21^{\circ}$, is $80^{\circ} 12^{\prime}$, the difference is $1^{\circ} 5^{\prime}$ :-Then if $60^{\prime}$ give $65^{\prime}$ what will $40^{\prime}$ give? Answer $43^{\prime}$, which added to $79^{\circ} 7^{\prime}$, the sum will be $79^{\circ} 50^{\prime}$ :-the difference between $79^{\circ} 7^{\prime}$ and $79^{\circ}$ $12^{\prime}$ is $5^{\prime}$ :-Then if $60^{\prime}$ require $5^{\prime}$, the above $30^{\prime}$, the latitude of Mars will give $3^{\prime}$, which with the above $79^{\circ} 50^{\prime}$, the true Right Ascension of Mars will be $79^{\circ} 53^{\prime}$.
The Right Ascension of the Sun has been computed, and was fouad to be $187^{\circ} 27^{\prime}$.
Venus is in $0^{\circ} 18^{\prime}$ of $\operatorname{Vir}_{\sim} 0$, with $0^{\circ} 37^{\prime}$ North latitude, the difference between $152^{\circ} 6^{\prime}$ and $153^{\circ} 4^{\prime}$ in the Tables of Right Ascension under Virgo is $58^{\prime}$ :-Then if $60^{\prime}$ give $58^{\prime}$, the longitude of Venus being $18^{\prime}$ will give $\mathbf{1 7}^{\prime}$, which 1 add to $152^{\circ} 6^{\prime}$ and the sum is $152^{\circ} 23^{\prime \prime}$ :-Now for the latitude which is $0^{\circ} 37^{\prime}$, the difference between $152^{\circ} 6^{\prime}$ and $152^{\circ} 27^{\prime}$ under $1^{\circ}$ oflatitude, is $21^{\prime}$ :-Then if $60^{\prime}$ require $21^{\prime}$ what will $37^{\prime}$ give? Answer 13', which I add to $152^{\circ} 23^{\prime}$, and the true Right Ascension of Venus will then become $152^{\circ} 36^{\prime}$.
The place of Mercury is $24^{\circ} 34^{\prime}$ of Libra, Retrograde, and his latitude $3^{\circ} \mathbf{3 2 ^ { \prime }}$ South :-In the Tables of Right Ascension under $3^{\circ}$ South latitude, and even with $24^{\circ}$ on the left hand I find $201^{\circ} 5^{\prime}$, and under the same latitude opposite to $25^{\circ}$ stand $202^{\circ} 2^{\prime}$, by subtraction there remains $57^{\prime}$ :-Then if $60^{\prime}$ rec ${ }_{\xi}$ uire $57^{\prime}$, the remaining minutes of Mercury's longitude being 34', will give $32^{\prime}$, which added to $201^{\mathrm{c}} 5^{\prime}$ the sum will be $201^{\circ} 37^{\prime}$ : The difference between $3^{\circ}$ and $4^{\circ}$ of latitude opposite $24^{\circ}$ of

Libra is $23^{\prime}$ : 一Then if $60^{\prime}$ give $23^{\prime}$, the $32^{\prime}$ of Mercury's Latitude will give 12 ', which I subtract from the above sum $201^{\circ} 37^{\prime}$, because the Right Ascension decreases by South Latitude, and the Right Ascension of Mercury will be $201^{\circ} \mathbf{2 5}$. The longitude of the Moon is $16^{\circ} 54^{\prime}$ of Gemini, where she has $2^{\circ} 28^{\prime}$ North latitude:-Then in the Tables of Right Ascension North latitude, opposite to $16^{\circ}$ to the left hand, and under $2^{\circ}$ of latitude $I$ find $74^{\circ} 33^{\prime}$, and even with $17^{\circ}$ under the same latitude, stand $75^{\circ} 39^{\prime}$, the difference between these numbers is $1^{\circ} 6^{\prime}$ :-Then if $60^{\prime}$ require $66^{\prime}$ what will $54^{\prime}$ give? Answer $59^{\prime}$, which added to $74^{\circ} 33^{\prime}$ the sum is $75^{\circ} 32^{\prime}:-$ Now opposite $16^{\circ}$ and under $2^{\circ}$ of latitude 1 find the number $74^{\circ}$ $33^{\prime}$, and under $3^{\circ}$ of Latitude stand $74^{\circ} 27^{\prime}$, the difference is only $6^{\prime}$ : -Then if $60^{\prime}$ require $6^{\prime}$ what will $28^{\prime}$ require? Answer $3^{\prime}$ (omitting fractions in all cases,) which I subtract from $75^{\circ} 32^{\prime}$, and the Moon's Right Ascension in the Nativity will be $75^{\circ} 29^{\prime}$.

The following is the calculation of the Ascensional Difference of the Planets, by which their Semidiurnal and Seminocturnal Arcs are ascertained, with the Diurnal and Nocturnal horary times at the time of Birth, under the Latitude of $53^{\circ} 15{ }^{\prime}$ North.
The Declination of Saturn is $13^{\circ} 6^{\prime}$, I look for $13^{\circ}$ in the Tables of Ascensional Difference, and even with that number under $53^{\circ}$ of Latitude I find $17^{\circ} 50^{\prime}$, and opposite to $14^{\circ}$ under the same Latitude stand $19^{\circ} 19{ }^{\prime}$, the difference is $1^{\circ}$ $29^{\prime}$ :-Then if $60^{\prime}$ require $89^{\prime}$, the $6^{\prime}$ of Saturn's Declination will give $9^{\prime}$, which 1 add to $17^{\circ} 50^{\prime}$ and the sum is $17^{\circ} 59^{\prime}$ : The difference between $53^{\circ}$ and $54^{\circ}$ of Latitude opposite to $13^{\circ}$ on the left hand is $42^{\prime}$ :-Then if $60^{\prime}$ give $42^{\prime}$ the $15^{\prime}$ of Latitude which exceed $53^{\circ}$, will give $10^{\prime}$, which I add to $17^{\circ}$ 59!, and the ascensional Differerce of Saturn will be $18^{\circ} 9^{\prime}$ : Now having found this number, I subtract it from $90^{\circ}$ because the Declination of Saturn is South, and I then obtain the Semidiurnal Arc of Saturn $71^{\circ} 51^{\prime}$, this number I divide by 6, and $I$ obtain his diurnal horary times $11^{\circ} 58^{\prime}$ :-I then subtract
the Semidiurnal Arc $71^{\circ} 51^{\prime}$ from $180^{\circ}$, and the number remaining, being $108^{\circ} 9^{\prime}$, will then be the correct Seminocturnal Arc of the Planet, which also divided by 6, the nocturnal horary times will be $18^{\circ} 2^{\prime}$.
Jupiter's Declination is $20^{\circ} 59^{\prime}:$-In the Tables of Ascensional Difference as before, I look for $20^{\circ}$ on the left hand, and under $53^{\circ}$ of Latitude even therewith I find $28^{\circ} 53^{\prime}$, and opposite $21^{\circ}$ the number is $30^{\circ} 37^{\prime}$, by subtraction the difference will be $1^{\circ} 44^{\prime}$ :-Then if $60^{\prime}$ give $104^{\prime}$ what will $59^{\prime}$ give? Answer $1^{\circ} 42^{\prime}$, which added to $23^{\circ} 53^{\prime}$, the number is $30^{\circ}$ $35^{\prime}$; the difference between $53^{\circ}$ and $54^{\circ}$ of Latitude opposite $20^{\circ}$ on the left hand I find to be $1^{\circ} 11^{\prime}$ :-Then if $60^{\prime}$ give $71^{\prime}$, the $15^{\prime}$ of Latitude will produce $18^{\prime}$, which added to $30^{\circ}$ $35^{\prime}$, the Ascensional Difference of Jupiter will become $30^{\circ}$ $53^{\prime}$, which I subtract from $90^{\circ}$, because the Declination is South, and Jupiter's Semidiurnal Arc will be $53^{\circ} 7^{\prime}$ which divided by 6 give his diurnal horary times $9^{\circ} 51^{\prime}:$-Then I sabtract the above Semidiurnal Arc $59^{\circ} \mathbf{7}^{\prime}$ from $180^{\circ}$, and the Seminocturnal Arc will be $120^{\circ} 53^{\prime}$, which divided by 6 the nocturnal horary times thus produced will be $20^{\circ} 9^{\prime}$. The Declination of Mars is $22^{\circ} 38^{\prime}$, then in the Tables of Ascensional Difference I observe $22^{\circ}$ and under $53^{\circ}$ the number is $32^{\circ} 25^{\prime}$, and even with $23^{\circ} \mathrm{I}$ find $34^{\circ} 17^{\prime}$, the difference is $1^{\circ} 52^{\prime}$; then if $60^{\prime}$ give $112^{\prime}$, the $38^{\prime}$ of Declination will give $71^{\prime}$ or $1^{\circ} 11^{\prime}$, which $I$ add to $32^{\circ} 25^{\prime}$, and the number will be $33^{\circ} 36^{\prime}$, the difference between $53^{\circ}$ and $54^{\circ}$ even with $22^{\circ}$ on the left hand as in the foregoing Examples, will become $1^{\circ} 22^{\prime}:-I$ now say, if $60^{\prime}$ give $82^{\prime}$ what will $15^{\prime}$ of Latitude give? Answer 20, which being added to $33^{\circ}$ 36', the number thence arising will be the true Ascensional Difference of Mars 33 ${ }^{\circ}$ 56' :-Now as Mars has North Declination, I add the Aseensional Difference thus found to $90^{\circ}$, and the Semidiurnal Arc of Mars will be $123^{\circ} 56^{\prime}$ which I divide by 6 , and I then obtain the diurral horary times $90^{\circ}$ $39^{\prime}$, I new subtract the above Semidiarnal Are from $180^{\circ}$, and the Seminocturnal Arc will be $56^{\circ} 4^{\prime}$, which divided by Gr $^{\prime}$
will give $9^{\circ} 21^{\prime}$, being the nocturnal horary times of Mars.
The Sun's Declination is $3^{\circ} 14^{\prime}$ : Now in the above Tables opposite $3^{\circ}$, and under the elevation of the Pole $53^{\circ}$, 1 find $3^{\circ} 59^{\prime}$, and even with $4^{\circ}$ under the same Latitude, stand $5^{\circ}$ $19^{\prime}$, the difference is $1^{\circ} 20^{\prime}$; then if $60^{\prime}$ give $80^{\prime}$, the $14^{\prime}$ of the Sun's Declination will give 19', which with $3^{\circ} 59$ make $4^{\circ} 18^{\prime}$, then the difference between $53^{\circ}$ and $54^{\circ}$ of Latitude even with $3^{\circ}$ on the left hand, will be $9^{\prime}$ :-therefore if $60^{\prime}$ give $9^{\prime}$, the $15^{\prime}$ above the Latitude of $53^{\circ}$, will produce $2^{\prime}$; which added to $4^{\circ} 18$, make the Ascensional Difference of the Sun, $4^{\circ} 20^{\prime}$, which I stibtract from $90^{\circ}$, because the Sun has South Declination, and his Semidiurnal A re will be $85^{\circ} 40^{\prime}$, this number by being divided by ${ }^{6}$, will give his diurnal horary times, $14^{\circ} 17^{\prime}$; then by subtracting the above Semidiurnal Arc from $180^{\circ}$, there remains the Seminocturnal Arc $94^{\circ} 20^{\prime}$, which I again divide by 6 , and his nocturnal horary times will be $15^{\circ} 43^{\prime}$.
The Declination of Venus is $11^{\circ} 57^{\prime}$; I enter the Tables of Ascensional Difference with $11^{\circ}$ on the left hand, then under $53^{\circ}$, I find $14^{\circ} 57^{\prime}$, and opposite $12^{\circ}$ the number is $16^{\circ} 23^{\prime}$, and the difference $1^{\circ} 26^{\prime}$ : -Now if $60^{\prime}$, give $86^{\prime}$, then $57^{\prime}$ will give $1^{\circ} 22^{\prime}$, which $I$ add to $14^{\circ} 57^{\prime}$, and the number will be $16^{\circ} 19^{\prime}$; then by subtraction, the remaining difference opposite $11^{\circ}$ under $53^{\circ}$ and $54^{\circ}$ will become $34^{\prime}$ :-Thus the proportional part for $15^{\prime}$ of Latitude will be $8^{\prime}$, which $I$ add to $16^{\circ} 19^{\prime}$, and the Ascensional Difference of Venus will be $16^{\circ}$ 27', which being added to $90^{\circ}$, because the Declination is North, will produce her Semidiurnal Arc $106^{\circ} 27^{\prime}$, this number divided by 6 , will give the diurnal horary times $17^{\circ} 44^{\prime}$, and the Seminocturnal Arc by subtraction as before, $73^{\circ} 33^{\prime}$, which again divided by 6 , the nocturnal horary times of Venus will be $12^{\circ} 16^{\prime}$.
The Declination of Mercury being $12^{\circ} 50^{\prime}, 1$ look in the Table even with $12^{\circ}$, and I find $16^{\circ} 23^{\prime}$, under the elevation of the Pole $53^{\circ}$, the next number below is $17^{\circ} 50^{\prime}$, the difference
is $1^{\bullet} 27^{\prime}$; the proportional part obtained as in the foregoing Examples, is $1^{\circ} 12^{\prime}$, which I add to $16^{\circ} 23^{\prime}$, and the number will become $17^{\circ} 35^{\prime}$; the difference between $53^{\circ}$ and $54^{\circ}$, opposite $12^{\circ}$ on the left hand, is $37^{\prime}$;-Then if $60^{\prime}$ give $37^{\prime}$, the $15^{\prime}$ of Latitude will give $9^{\prime}$, which added to $17^{\circ} 35^{\prime}$, will produce the Ascensional Difference of Mercury $17^{\circ} 44^{\prime}:-I$ subtract this number as before, from $90^{\circ}$ because the Declination is South, and the Semidiurnal Arc is $72^{\circ} 16^{\prime}$, and the diurnal horary times $12^{\circ} 3^{\prime}$; consequently the Seminocturnal Arc will be $107^{\circ} 44^{\prime}$, and the Nocturnal horary times $17^{\circ} 57^{\prime}$.
The Moon's Declination is $25^{\circ} 17^{\prime}$;-In the Table opposite $25^{\circ}$ on the left hand, and under $53^{\circ}$ of Latitude $I$ find $38^{\circ} 14^{\prime}$, and opposite $26^{\circ}$ stand $40^{\circ} 20^{\prime}$, the difference is $2^{\circ} 6^{\prime}$ :-then if $60^{\prime}$ give $126^{\prime}$ what will $17^{\prime}$ give? Answer $36^{\prime}$, which I add to $38^{\circ} 14^{\prime}$, and it makes $38^{\circ} 50^{\prime}$; then for the $15^{\prime}$ of Latitude; the difference under the elevation of the Pole of $53^{\circ}$ and $54^{\circ}$ opposite $25^{\circ}$, is $1^{\circ} 45^{\prime}$; then by the rule of proportion, if $60^{\prime}$, give $105^{\prime}$, the $15^{\prime}$ of Latitude which exceed $53^{\circ}$ will give $26^{\prime}$, which added to $38^{\circ} 50^{\prime}$ will produce the Ascensional Difference of the Moon $39^{\circ} 16^{\prime}$ under the Latitude of $53^{\circ} 15^{\prime}$ :Now as the Moon's Latitude is North, I add the Ascensional Difference above computed to $90^{\circ}$, and I make the true Se midiurnal Arc of the Moon $129^{\circ} 16^{\prime}$, which divided by 6 , her diurnal horary times will be $21^{\circ} 33^{\prime}$;-then consequently the above Semidiurnal Arc taken from $180^{\circ}$, the remainder, which is $50^{\circ} 44^{\prime}$ will be the Moon's Seminocturnal Arc, this number $I$ also divide by 6 , and $I$ obtain the nocturnal horary times of the Moon $\mathbf{8}^{\circ} \mathbf{2 7}$.
It is to be observed in all cases, that when a Planet has North Declination, the Ascensional Difference must always be added to $90^{\circ}$, which will produce the Semidiurnal Arc, but when the Declination is South, the Ascensional Difference must then be subtracted from $90^{\circ}$, and the remainder will be the Semidiurnal Arc required.
The only correct Method of computing the Poles of the
Planets, with their Oblique Ascensions, and Oblique De-scensions in the Radix, which ought to be attended to inall Nativities.
The Sun's true Polar Elevation is thus calculated.
As one third part of his Semidiurnal Arc. ..... 2833
Is to his distance from the Medium Celi, ..... 7116
So are thirty Degrees, ..... 300
To the proportional part. ..... 7452
Which must be subtracted from the Right As- cension of the Midheaven, (because the Sun has passed that Angle in the World.) ..... 25842
And the Oblique Descension of the Sun under his own Pole will be.
The Right Ascension of the Sun is. ..... 18727
Subtract his Oblique Descensiọ under his own Pole. ..... 18350
Sun's Ascensional Difference under his own cir- cle of Position. ..... 337
-
Then from Sine with Radius. ..... $337=18,79989$
Subtract Tangent of the Sun's Declination. 3 $14=8,75199$
Tangent of the Sun's Pole ..... $489=10,04790$
The computation of the Moon's Circle of Position.
As one third part of her Seminocturnal Arc. ..... 1654
Is to her distance from the Imum Celi. ..... 313
So are thirty degrees. ..... $30 \quad 0$
To the part proportional. ..... 6 42
Which must be subtracted from the Right As-cension of the Northern Angle, (because theMoon has separated therefrom in Mundo.)
And the Oblique Ascension of the Moon underher own Pole is.\} 7842

tude, most practitioners would allow her to have the same Declination, when it is evident that one point is North, and the other South of the Equator ; and then if we were to allow five degrees of North Latitude to each of those places, it would augment the Declination of the one point, and reduce that of the other. I have plainly stated these observations that the Student may no longer be deluded by those false Rules, which 1 am certain will deceive him in all his calculations.
The true computation of the Part of Fortune in this Nativity.
From the Oblique Descension of the Sun before
calculated. 18350

Subtract the Oblique Ascension of the Moon. 73 o
Remains the distance between the Sun and Moon. 11050
Subtract ninety Degrees. $90 \quad 0$
And the distance of the Part of Fortune from the Medium Celi will be.
Its distance from the Southern Angle as above, subtract from.

And its distance from the ninth becomes.
910
I now add the distance of the Part of Fortune from the ninth to the Oblique Descension of the ninth, being $228^{\circ} 42^{\prime}$, which is found by adding $60^{\circ}$ to the Oblique Descension of the seventh, and the Oblique Descension of the Part of Fortune will be $237^{\circ} 52^{\prime}$, which points to $10^{\circ} 26^{\prime}$ of Sagittary, where its Declination is $22^{\circ} \mathbf{2}^{\prime}$ South ; and its Right Ascension $248^{\circ}$ $49^{\prime}$ : its Ascensional Difference then consequently will be $32^{\circ}$ $49^{\prime}$, that number being subtracted from $90^{\circ}$, leaves its Semidiurnal Arc $57^{\circ} 11^{\prime}$, which divided by 6 , its diurnal horary times become $9^{\circ} 32^{\prime}$ :-I then subtract its Semidiurnal Arc from $180^{\circ}$, and the remainder will be the Seminocturnal Arc $122^{\circ} 49^{\prime}$, which also divided by 6 , will produce its nocturnal
horary times $20^{\circ} 28^{\prime}$. The Pole of the Part of Fortune is never required, because it can only be directed in the Mundane Circle.

In all computations when the Degrees and Minutes of a Planets Longitude exceed those of the House where it claims its position, it must then be placed past the cusp, according to the regular succession of the Signs in the Zodiac; but when the Degrees and Minutes of the Stars Geocentric Longitude. are less than those of the House to which it belongs, then the reverse Rules must be uniformly attended to, without the least variation.

I have not noticed the difference between the Meridian of Greenwich, and that of Lincoln in this Geniture, because it is very small, but when the difference in time is more considerable, then it must be attended to in all Nativities, by adding it to the correct time of Birth if the Longitude be West, and subtracting it if the Longitude be East of the given place of Birth.

From the foregoing Calculations, the true Celestial Figure of Birth, including the requisite numbers for computing all the Arcs of Directions in the Zodiac and Mundo, stand a follow.

the directions are astronomically computed in full, and arranged in progressive orderas follow. Ascendant to the Opposition of Venus in Mundo.

The foregoing Nativity is that of James, the Son of William Attersall, who was Born in the City of Lincoln. When this Child was about twelve Months ofd, and in good health, ins Parents applied to me for the purpose of receiving my Judgment on its Geniture, which lgave them in few words, as it is my practice in all cases, not to write long Epistles, when short and concise observations are sufficient.
As soon as I had attentively investigated the positions of the Celestial Bodies at the time of Birth, with their various qualities, and configurations, \&c. I was convinced that a violent Death was certain and inevitable, which was not in the power of any human efforts to prevent. I then delivered my impartial Judgment, which was, that dissolution would take place at, or before the Age of two years, and as the Child's Father was then constantly engaged in attending one of the Packets on the River Witham, I considered it a duty incambent on me to admonish its Parents, never to suffer the Child to go on board the Packet, in consequence of the mortal Configurations then fast approaching without relief; they promised to attend to the solemm, and previous warning I had given, and certainly acted according to my request having informed them that Death would take place suddenly, erther ly a fall, or wound from a Horse, and as Horses were (in the ceurse of Business,) frequently taken on board the Packet, I conceived his Death might arise from violence of that nature ; the fact is, the Child was never suffered to go on boand that or any other Packet, agreeable to my advice. But mark the unchangeabie decree of the ominipotent cmenpors, the unfortunate Child was kept as much as possibfe in the flouse, and was not suffered to approach any Herse, nor go on any Navigable Vessel. About ten days prior to its dissolution, I went to the abode of its Parents, and toldid thems that marifest danger was at hand; there were severaf persons present, who replied, that if Death by violence shoakd take place, as I had publicly declared; it could not bo
for mant of sufficient warning On.the day of Death, the Child went into the Street unobserved by any one, and immediately aecompanied several other Children who were playing very near a Horse that was feeding a short distance from the. Door, near the side of the River. The Horse was always. considered to be a very quiet Animal, but in the fatal Hour, he kicked at the Children, yet none were injured, except the unfortunate Child, who received the stroke in its forehead, which proved instantly Mortal ; his Death happened on the 22nd. of September, 1819, near three o'Clock in the Afternoon, Aged one Year, eleven Months, and twenty days. This prediction obtained publicity near a Year' previous to the time of Death, and there are many perzons of respectability ia this place, and its Vicinity, who will prove what I have here asserted to be correct, and beyond the bounds of contradiction, and if any doubts remain as to the verity of what I have related, I request that application may be made to the Parents in this City, who will establish the, truth of what I have re-: corded.
: But though I have given the hostile primary Direetions in this Geniture, with their true computation as far as the orbs of the benign Stars are in operation, (which ought to be strictly regarded in all Nativities,) yet I would not have the, Students to entertain Ideas, that all Children who die in. their infant state, are destroyed by violent Directions to the: giver of Life, \&c ; for those who die in infancy, or before the end of the fifth Year, are generally destroyed by those malignant and destructive positions that are formed in the Heavens at the time of Birth; as Ptolemy clearly informs us, and not. by. Directions, which was the case in this unfortunate Geniture, there are also other sideral causes of the utmost consequence, which have great and manifest power in destroying Life within the above period; for when the significators of Children are weak and afflicted in the Genitures of the Parents, it will require but little violence in the Nativity of the offspring
to cut off Life. The great disproportion in the occult power of the Elementary qualities, with the evil testimonies predominating in the Radix, as well es the Mandane stations of the Stats, with thëir heating, drying, cooling, and möistening qunlities, in the various sighs, and parts of the Heavens in which they are posited; are all subjects which require serieus consideration'; Chiefly wherideath occurs naturally, and must in all eases be attended to, before final Judgment is given, concerning the period of personal extinction.
The A'stral causes that produced the sudden and violent Death of this Child, are plainly visible; the Ascendant is afficted by the Body of Saturn, and Square of the Moon, and Mars in Mundo; the Moon is conjoined with Mars among evil Stars in the Northern Angle, approaching the Terms of Saturn, without any relief, and that Luminary is applying to the Mundane Square of Saturn, by direct motion. The Part of Fortune is afflicted by the opposition of the Moon and Mars ; but I judged the work of 'Mortality to arise chiefly from the uninterrupted communication of those violent rays of Mars and the'Moon from the Imum Celi, to the Sun, who is' the true Aphiheta; or giver of Life, particularly because the Hyleg is neat thè Body of Mercury, and Rapt Parallel of Saturn; and I'shall here observe that Mercury is of the nature of the enemies in the Celestial constitution.
Thus you see all the vital significators were afficted at the time of Birth, and no intervening Rays of a benevolent nature, could break their force, or counteract their fury; for Jupiter is posited near the Heart of the Scorpion, and afflicted by the Quartile of Saturn, and Venus by the opposition of that Malefic, and also by the square of Mars in Mundo, so that all benign infuence was destroyed, and could be of no avail Whatever, in supporting the Life of the Native.
At the return of the Sun to his radical place, on the first of October 1818, we find many furious and alarming motions of the Stars; which augment in a great measure, the Effects of
the other malignant positions in the Radix. At the above time, Saturn was Retrograde, and posited in the Ascandant, in Square to the Meon in the Nativity, and that Luminary and Mars who were in conjunction in the Imum Celi-at.Birth, were conjoined in the Western Angle, on the place of Morcury in the Geniture, who was near the Sun's place in the Nativity. Jupiter was in Square to the Sun's position ia the Radix, and Mercury was in opposition to the radieal Ascendant, having lately separated from the oppositecrays of Saturn. Venus was in a violent part of the :Heavens, and afflicted by the evil Rays of Mercury from zodiacal stations, being at the same time injured by the hostile beams of Sa turn and his Terms. These positions of the Stars are astonishing, and certainly prove the great and manifest power of such motions, when rightly compared with the true places of the superior significators that have dominion in the Geniture. In fine, such furious irradiations were assured testimonies of approaching dissolution by violence, but the Mundape and zodiacal stations of the Stars at the time of Death, were still more remarkable, when compared with the Anaretie positions of the Planets in the Radix ;-there was a new Moon three Days previous to his dissolution, when both the Luminaries were in opposition of Saturn, and also in square to the place of the Moon and Mars in the Natipity. Venus had the Declination of Saturn, and was combust ; the Moqn: was also cadent in the terms of Saturn at the time of Death. and Jupiter was nearly on the radical place of that Malefici. When he received the mortal wound, the Sun was afficted by the opposition of Saturn, who was Retrograde, and under the Earth; such a train of evil testimonies, united with those corresponding positions, and primary Directions of an An巾. retical nature in the Radix, qre worthy of admiration. Theee things every atfentive student ought to attend to, as well as all the powerful-motions of the malignant Stars in the zodiac, and Mundo, with their occult qualities, as they afflict the

Lights, or the mest principal, and superior places of the Luminaries, or their Rulers, with other significators in the Geniture, and also the progressions and powerful secondary Dirsetions then' in operation; for when the corroborating testimonies of the Ememies are violent, and are likewise multiplied at the same time by other applications of an inimical power; witheut any benevolent assistance, they then, (as in this Example,) never fail to destroy Life.
All those hitigious tradncers (who condemn the Study of secondeanses;) may obeerve, that the fate of this Child was clearly visible in the Hearens at the time of Birth, and that no human endeavours could alter, prevent or control the imunctable decree of the most higr. The free will of the Parents was previously used a long time, in a solemn and indefatigable manner for the preservation of their offspring, but in vain, which is well known to the Public. These facts afe too obvious to be denied. The Infidel, the Deist, the Atheist; and the Critic, (whe endeavour to turn every Sacred sutbject into ignominy snd reproach,) may sneer at these remarks, but fet'suel' characters advance what scurrilous arguments they' please, against this Sacred Science, yet they are in their minds' convinced by daily experience, that there is an impending fate, or a somethina that frustrates, defeats, and countertets our actions, and engagements, during Life, lèt 'us endeavour as we may, for in numberless cases we may oldeerve, that when our premeditated projects appear successfalf, and even infallible; aceording to haman reason, yet in the extection of those Acts, sometarng overturus our flattering schendes, and renders our exertions ineffectual. By these mentiflest Tacts we may be convinced, (as an eminent writer owsetves, ' that if all men could arrive at affuence by their curtedt endeavours; more would probably attain to it, than What at present are scen' to do so.
"_ And this should teach us,
There's a Divinity that shapes our ends;
Rough-hew them how we will."

The next is the Nativity of a Lady, who is now living, and in good Health. The estimate time of Birth, (which is given in the following Figure of the Heavens,) was extracted from the written documents of her Parents, and I am induced to believe it is correct, because the benign and hostile Effects of the anteoedent Directions, with their sideral cause, and periods of operation, correspond with the past occurrences of Life. I have computed and arranged the Directions from the Tables contained in this W ork, by which the Riader may observe that the methods I usain calculation, and Judgment, are invariably the same in all Nativities, and may be depended upon without error, when they are properly applied, and rightly understood, accordiag to the Examples 1 have plainly developed in Directional motion, on which the foundation of this Sacred Science depends. The true distance between the Apheta and the Anaretical Promittors, ought first to be computed in all Genitures; for it is certainly contradictory to the established principles of this department of Astronomy, when Judgment is promounced on the Events of the Life of an Individual, (whethergood, or evil, with the time thereof,) from the Effects of subsequent Directions, \&c. at those remote periode, aftor the Prorogator to the mortal train has completed its final course. There are many, who being ignorant of the true motions of the Heavens, mistake the first and chief essential canse which offers itself for consideration, and absurdly attend to those vague, and unintelligible Directions, which were to produce Effects after the Native's Demise; for if those arrogant pretendere to these Astronomical Calculations are unacquainted with the time, and quality of Death, from a true Nativity, when the Native is living, I am confi-, dent, they know notbiug of it after dissolution, though they, may vainly attempt to invent something as the probable cause of personal extinction, when the Native is no mpres ; ;

$7533 \mid 78$ i

The positions of the Planets in this Nativity, are of an unpropitious Nature, and as their various configurations to each other, are also of an inimical power; 1 shall therefore make a few plain observations on their effects, that those, who apply themselves to this Sacred Study, may form a decisive and impartial Judgment on other Genitures, in which similar positions and Directions are frequently apparent, which when diligently attended to, wilt give pleasure and satisfaction to every industrious Student in the noble Science of prognostic Astronomy.
The Celestial Sign Sagittarius occupies the priental Horizon, aid Jupiter Lord of the Ascendant, and significator of the Native, is posited in the Ninth House, cadent, and in his detriment, near violent fixed Stars; he is likewise applying to the square of Saturn in the Western Angle, without any assistance from benign Rays, or propitious terms, either in the Zodiac, or in the World. Mercury who disposes of Jupiter in the Radix, is combust, and besieged between the bodied of the Sun and Mars in the descending part of the Heavens, where the evil power of the Malefic Stars is augmented by the Rapt Motion of the Earth., The Moon and Mars, which are the chief Mortal promittors, are very violently conjoined, and as they approach their subterrancotis positions, they consequently increase their baneful rays to each other ; the part of Fortune is afflicted by the opposition of Saturn, Lord of the second, and its dispositor is weak, and deprived of all his dignities in the Radix ; these positions and violent motions of the Stars, combined with the evil stations of the Satellites of the Luminaries, will (notwithstanding the mundane Sextile of the Sun to the Midheaven, and the Trine of Venus ruler of the supreme Southern Angle to the Ascendant in the World,) always produce sorrows, and many difficulties, with various calamities during the whole period of the Native's Life ; and I shall further observe, that in all Genitures,
(whether Male or Female,) where such hostile positions, and configurations as the above are discovered, those persons will be subject to contempt, and reproach; innumerable troubles, and losses, with dangers to Life will surround them, and in the end they will always descend below the sphere of Life in which they were Born.

There are mariy methods invented for the purpose of ascerd taining the true Hour, and Minute of a Nativity, from the estimate, or given time of Birth. I have tried all the rules, both Ancient and Modern, in an impartial manner, that have been published; and in many hundreds of Nativities which I have calculated, they have generally deceived me in my computations; and Iam certain they will deceive every practitioner who may think proper to rely on such preposterous inventions, which can neither be supported by proof, nor il_ lustrated by proper Examples, and Experience: The trath is, there is but one trueMethod for correcting the given time of any Birth, and that method will never fail, when properly understood, and rightly practised; and when the estimate time does not exceed its reasonable limits. The Method 1 allude to, is the computation of the Arcs of Directions to the Aiscendant and Midheaven, which are the two superior Angles of the Figure, so that when the time of any important Events, (whether good or evil,) ate given, the true time of Birth may be readily discovered, by comparing the Numbers arising from the computed Arcs, with the Years, and Months of the Native's Life, when the corresponding occurrences took place; thus by adjusting the Directions, according to the nature, and power of the promittors, \&c. in the manner above described, the true time of Birth will visibly appear without the least confasion or error, but when the time of any Nativity is truly taken from a corrected Clock, or Watch, no ractification will be required. I have recorded these important subjects in this place, because by the above Method, (whichil daily use iṇ
my practice,) I have proved the time of the foregoing Nativity correct, as will appear from the Nature of the following Directions; the Effects of which perfectly correspond with the periods of the given Events of Life.

At the Age of twenty-seven Years, the Life of the Native was in imminent danger froma lingering Illness, which continued upwards of six months. She also suffered much injury by a fall from a Horse. The Ascendant was then directed to the Opposition of Saturn.

Aged forty-one Years and ten Months, she was not expected to survive the Effects of an intermitting Fever, which attacked her with unusual violence, during several weeks; this Direction at the same time produced several other calás mities, and troubles. The Ascendant at that period was directed to the Opposition of the Sun.

When the Native was nearly fifty-five years of age, she was nfflicted with another violent Illness, accompanied with delirium, and hysteric affections, which according to the opinion of her Medical attendants, had every appearance of terminating ir death; but after two Months severe sickness, she was restored to herformer state of Health. The Effects of the Ascendant to the Opposition of Mercury, were in operation at that period.

These three directions of Saturn, the Sun, and Mercury to the Ascendant, were those which 1 previously selected for the purpose of proving the correctness of the given time of Birth, before I commenced the calculation. The Ascendant is certainly the giver of Life; according to the Rules I. have given in this Work, for selecting the true prorogator in all Genitures, and at the Age of sixty-four Years and ten Months, that Aphetical point will be directed to the opposition of Mars and the Moon, without assistance, the Effecte of which will certainly destroy the Native's Life.

But though I have stated the time of Dissolution, to prove the important use of the true Prorogator, 1 shall observe, that the power of the Anaretic Directions will be considerably increased and accelerated under their horary Circles of position : for before the mortal promittors descend the Western Horizon, the Terms of both the Malefics, and their Parallels under the Motion of the Primum Mobile, set, with two Degrees fifty Minutes of Leo, and consequently precede the deadly train at the age of sixty years and nine months; at which time, Life will be exposed to the most alarming danger by a violent sickness, from which the Native will never perfectly recover. The Mortal disease will be violent palpitations of the Heart, with difficulty of breathing, pains and inflamations in the Breast, and a putrid Fever; such will be the Nature and Effects of the disease, which will terminate the Native's existence in this earthly World.

I have not made any comments on the Events produced by the Effects of those Directions that are Tabulated in th: Geniture, from the time of Birth, to the present period if the Native's Life, except a few of those computed to the Oriental Horizon, having omitted such observations to avoid repetition, as the practitioner will find the Rules for Judg. ment with the Effects of all Directions in any Nativity, progressively arranged in another part of this Publication.

I have calculated all the preceding Ares of Directions in this, and all other Nativities in this Work, from Tabular numbers, being the only true Method, though the Planisphere is used by some, who falsely and impudently affirm, that for accuracy and expedition, it is far superior to any other invention; I have had one of those Instruments in my possession, with all its pretended improvements, several years, and I flatter myself, that I understand its use as well as any of those Teachers. This paltry thing at first sight appears beautiful to behold, in consequence of the earious

Colours with which the Signe and Planets, \&c, are ormax mented; but the more it is attentively surveyed, the more disgusting it appears, with all its visible imperfections; Most Students are disposed to attend to any inventions which appear likely to prove advantageous to their pursuits, but I will ask, Why is so mueh time sacrificed in Map: ping, Colouring, aud Ornamenting a piece of Cardboard, before the Compass, \&o. are applied, and which is good for nothing at last, and why are theStars and Constellations whimsically embellished with most of the Calours, which the understanding of man can devise? Surely this is not the right way to instruct the ingenious Students, but it certainly is the Method which Planispheric Teachers (as they call themselves), adopt to please the Eyes and tease the Pockets of those, to whom they give artful Lessons of improvement, Lessons which I am certain many of the deluded Students will never forget. Some who are advocates for the use of this instrument, gravely say, that it: saves much time and trouble, which is a most notorious and false assertion, for the time taken up in Mapping, Colouring, and Ornamexting, is much more than able calculators require in computing the whole of the Directions in any Geniture whatsoever; and when the Arcs of Directions are nu-. merous in a Nativity, this thing altogether becomes useless, as well as the childish Speculum which is generally, attached to it; I have made these remarks, by which the Reader may observe, that I do not sanction the use of this. Instrument, (which is only a Globe delineated on a Plane,) becauseit is deficient in all those parts where true Calculations are required, though it is astfully contrived to attract the notice of the innocent, and delude the ignorant, and un. wary,

There has been much contention among many who pres tend to calculate Nativities, concerning the power of the. Geprgian Planet, and the other fear, which haye been ror-
ently discovered, I have omitted them in all my computations, being convinced that we have not had any Examples sufficient to prove the existence of their power; for plain and manifest reasons, The true and correct places and Revolutions, \& \& c, of these Planets, are unknown to us at present; so that if we were to notice them in our Calculations. and Judgment, we should soen be eonvinced of our Errors. I know some will say they have discovered many of their Effeets in Nativities, but those who entertain an opinion of that nature, ought to produce aubstantial proofs of their discoveries, which II am certain they are unable to explain, tho' if such persons are inclined to discountenance what I have here stated, I entreat them not to stand any longer at a distance but come forward and publish to the world, the result of their observations, founded on legal examples, and experience.

隹The Reader will observe, that as there was not sufficient room to contain the Characters, Degrees, and Mi nutes of the Moon, Venus, and the Dragon's Head, in the eighth House, in which they claim their true position; the compositor has unavoidably placed them as they now appear in the preceding Figure of Birth

This is the Nativity of Mr. Thomas Willoughby, a young Gentleman, with whom I was acquainted, and owing to his request, and the desire of some of his Friends, when he was in perfect health, I calculated his Geniture, and immediately observed, that there were many Anaretical Directions following each other, in regular succession to the Moon, the giver of Life, which would shew their Mortal Effects, carly in the month of August, 1822, agreeable to the most accurate computations; and which, according to my judgment, would produce personal dissolution, as there were no benevolent directions to give the least support, or assistance to the true Prorogator, when those powerful Directions were in operation. My previous prediction was verified, as the time of Birth was taken with the greatest care. He was born at Hull, in Yorkshire, at the time given in the following Figure; and departed this life on the 26th of July, 1822, at eleven o'clock in the evening, aged twenty-two years, meven months and five daye.

The Tabulated Directions preceding, are those which I computed for this Gentleman two Years before his demise, which several of his Friends now living, well know; but there is something remarkable in the quality of his Death, therefore it is my wish that all Students in this Science may properly attend to the Rules I have laid down in this Work, concerning the nature, and quality of dissolution in any Nativity; for the same Causes will invariably produce the same Effects, when the Heavens are accurately divided by duplicate horary times, and the Arcs of Directions truly calculated, from the new Astronomical Tables contained in this Publication.

The Moon is certajnly the giver of Life in this Nativity, and though the Sun is in an Aphetical position, yet he can by no means claim the prorogatory power, according to the established precepts and Examples which I have given for selecting the true Hyleg. This Gentleman was dangerously indisposed at the Age of Nineteen Years, and I am of opinion that many pretenders to this Science, would have judged inevitable Death at that time, because the Hyleg was then directed to the Square of Saturn in the Zodiac, that promittor being in the eighth House, which is considered to be their favourite killing Mansion in all Genitures. I certainly admit that the Effects of the Direction of the Apheta to the quartile Rays of that Malefic, were of a dangerous nature, but had not power to destroy Life, because when that Direction was in operation, the Moon was received in the terms of Jupiter, and his orbs, and was also directed to his Square, by Converse Motion, she afterwards applied to the Body of Venus in the Zodiae, which must appear evident to the Judgment of those who are masters of directional motion; but though the above Direction of the Moon to Saturn's quartile was deprived of its mortal infuence, yet it clearly shewed the quality of Death; for Venus in Scorpio, indicates poison,
both by position, and Direction, as she is in square to Saturn in the Radix, and both their Directions fall in the Mortal train to the giver of Life; therefore my previous and impartial Judgment was, that the Native's Death would be occasioned, either by the baneful Effects of improper Medicine, or, by poisonous Effuvia, received by respiration into the Lungs, which would corrupt the Blood, and ultimately produce Death, the latter of which was the case, for :Venus, though she cannot save, yet she transmits Saturn's malignant Rays to the Hyleg, and joins at the same time in the Anaretical train of Directions, which clearly prove the nature and quality of Death, as specified above.

The Directions which destroyed the Life of this Native, were the Moon to the Parallel of Mars in Mundo, by the Rapt Motion, followed by the semiquartile of the Sun in the Zodiac, the square of Mercury, in Mundo, by a right Motion, and by a Converse Direction, the Hyleg was directed to the Mundane square of Mars, succeeded by the Parallel of Saturn's Declination, and also by the zodiacal Parallel of Mars ; and though the sun was directed to violent promittors near the same period, which doubtless increased the Effects of the mortal train to the true prorogator, yet he had no power of himself to destroy Life, because the Aphetical dignity is claimed by the other Luminary in this Example; such Directions as the above will always destroy Life in any Nativity in which such corresponding positions, and configurations of the Celestial Bodies, appear to our view, for it is certain that in every Geniture, when the true significator of Life is strongly dignified, and free from the contact of inimical beams, one violent Direction to the Apheta cannot produce dissolution, but when all the vital significators are at the same time united with
baneful Directions, without any assistance from benign rays, \&c. then, and then oaly, the Effects of one Direction of a violent nature to the Hyleg, will cut off Life.

In the secondary Directions, the sun was in square to the moon's place in the Nativity, and the Hyleg was likewise conjoined with saturn, near his station at the time of Birth, and was declining from art opposition to the sun by those motions, which increased the Effects of the corresponding primary Directions to the giver of Life, when they were in operation; and in the Revolutional Figure for the twenty second Year, the moon was posited on the place of mars in the Geniture, and saturn and Jupiter uere in opposition to the Radical position of the Prorogator. Venus was then separating from the opposite place of Saturn at the time of Birth, and mars was in square to mercury, they being both promittors in the mortal train; but in the Progression, the applications of the chief significators were still more violent; for the Luminaries were both afflicted by the stations of the malefics from the superior places, and were also superseded by their terms in those parts of the Heavens where no benign rays could interpose to counteract their baneful powers; and what is more remarkable, that in all these motions, the antecedent parallels of the Declination of the promittors, minutely correspond with the nature and Effects of the primary Directions in the mortal train, which not only prove the truth of the computations, but also confirm the cause of the acceleration, and retardation of the Effects of all those Directions to the giver of Life, which have power to produce the work of mortality.

At the time of his Death, Saturn was on the Ascendant in opposition with the moon giver of Life in the

Nativity, and had descended below the Western Horizon at the time of his departure. The sun was in quartile with saturn, and near the Radical place of that malefic; mercury was then in exact zodiacal square to the place of the Hyleg in the Geniture, and was also in direct opposition to the place of that Luminary in' mundo at the time of Birth; I have thus given a brief illustration of all these corresponding motions of the Planets in their moveable stations, which perfectly represent the plain, and easy method of discovering the difference between the important Causes and Effects in any Geni-: ture, which relate to directional motion, and which when properly understood, will amply compensate every attentive student, for his researches in this department of Astronomy.

The estimate time of the following Geniture, was February $\mathbf{5 t h} 1802,9 \mathrm{H} .40 \mathrm{~m}$. P. M. Latitude $63^{\circ}$ North; it was carefully taken by the Accoucher, who was a Man of the strictest Virtue, and Fidelity, so that owing to his attention in recording the Hour, and Minute of Birth, there is sufficient reason to believe, that the time given is near truth; for it cannot be supposed that a Man, on whose Character and Reputation, the malignant Breath of slander had never blown, would give a false time to deceive the Calculator. The Natives Relatives and Friends, (acting under the polluted Banners of Priestcraft:) are enemies to these Astronomical enquiries, and do not believe that the Celestial P.odies, as second causes, have any influence on the Actions, and affairs of Mankind; so that they at once deny the existence of those things, which they, and their Offspring daily see, and feel, and which are proved to be continually visible by numberless Examples. It must appear ridiculous, and contemptible, in this enlightened Age, when such characters, (not mutilated by the profound Literature they possess,) endeavour to traduce the common rules of Arithmetic, on which the jmmoveable foundation, and admirable structure of this venerable Science depend. How wretched and superficial must the minds of those persons be, who, impiously condemn what they cannot comprehend; they insolently slander the works of the Creator, and treat their power and operation with ridicule and disdain, because they are unable to define the Sideral Causes which forebode, and produce the various, and visible Effects on the Life of Man; thus being foiled in their superficial researches, they then have recourse to visionary Themes, which they adopt to amuse the credulous, and impose on the unlettered part of Mankind. Some of these pitiful deceivers, and licentious impostors pretond to know the state of Mortal Man after dissolution, and impudently affirm that they are qualified to M
ascertain those who are obiects of Divine displeasure: but I ain not disposed to sanction any of those Chimeras which deyrade the human understanding : for how can I depend on the judgment of those, who are unuble to prove one single Fact to the satisfaction of any rational inquirer. It is much to be regretted that many are to be found, who pretend to resolve those Mysteries which relate to a Life immortal, and which the feeble, and finite imagination of Man, is unable to comprehend.

> The Popish Priests, when in their sables clad, Would prove their Trane, but proof cannot be had; With hands unclean, to Metaphors they fy, To solve their Chimeras, beyond the Sky; But all in vain, their Tricks now old and stale, Are disregarded as an idle Tale: O irksome Priestcraft, hide thy guilty head, There is ONE GOD, the Judge of quick and dead.

But though it may be cons:dered that I have made a digression in this place, yet I shall not apologive for so doing, for the well known subiects which I have here introduced, are of recent date, and ought to be faithfully handed down to future Generations. The Study of Genethliacal Astronomy, shews forth the incomprehensible wisdom, power, and glory of ONE OMNIPUTENT CREATOR in his wonderous Works, and is far superior to those debased principles of refined Popery, which are now become a Stalkinghorse, to answer every vile, and nefarious purpose that human reason can devise. Such feigned delusion and detestable dur licity, (being pious Mockery in its odious garb,) are frequently practised by such as are guilty of crimes. not fit to be named. Many of those cold blooded monsterf of iniquity. (who reside near the place where this Native was Born,) are well kuown to the Public, their Names are
already written with human gore, which will not be obliterated by time. We have viewed those immaculate Cannibals, and their Offspring. in the act of devouring the Flesh of their fellow Mortals, and have seen them quaff the blood of innocent and defenceless Orphans. is hese well known facts clearly prove, that there are Beings yet prowling on the Earth in the human form, who have bid adieu to Moiality, humanity, and honesty, having artfully dextroyed those whom they ought to have protected, in open violation of the sacred trust reposed in them. It is notorious to observe, that under the Mask of prostituted Piety, Priestcraft, and hypocritical Friendship. the most atrocious Acts of premeditated Murder, Plunder, and Villany, have been accomplished, which will ever diegrace the human Character, in an enlightened and civilized Nation.

But though we cannot view such diabolical actions as those above recorded without indignation and horror, yet there is a crime of a more heinous Nature committed by those who have yet escaped the hand of the Executioner. The Sacred writings inform us, that the Almighty destroyed two of themost magnificent Cities in the World, by Fire and Brimstone from Heaven, because there were not ten righteous persons to be found therein. All were guilty of the most horrid, unnatural, and detestable Crimes. Those personages who assume the presumptious habit of Piety, and who are now moving in apparent affluence, ought to reflect, that there is an Eye that never slumbereth, and the time is fast approaching, when divine vengeance will overtake them. It is certainly the duty of an Author to expose by every just, and proper means in his power, and in the strongest Language, the Malignancy of a crime of this description, which is making considerable progress in this Nation, with all its horrid, and dreadful consequences. The treacherous and blood thirsty pettifogeser, and the polluted popish priest,
dare not appear before the Bar of an Earthly tribunal, to answer the horrid charges exhibited against them; but they put a period to their existence, and thereby evaded the presence of a Mortal Judge, to appear before HIM WHO IS IMMORTAL ; and who will "Judge the World in righteousness, and the People with Equity".

In taking a view of the Significators of Riches in the foregoing Geniture, we find strong, and powerful testimonies, which show a sufficient portion of Wealth. - The Jord of the secosd, is in his exaltation, angular, and applying by a Mundane sextile to the Cusp of the second, and its dispositor is in the Northern Angle, in his dignities, and in the Cardinal Sign Capricorn, disposed of by Saturn, suler of the Imum Cœli, who is conjoined with: Jupiter above the Earth, and free from all affliction; these positions, without the aid of other concurring testimonies, clearly denote a competent property, which the Native will enjoy, during the short period of Iife.

I shall make a few observations on the Religion of this Native. The general significator of Piety, and Virtue, is Jupiter, who is Retrograde, in his detriment, and afflicted by the Body of the greater Malefic, who is also Retrograde, and afflicting the Ascer. dant. Mercury Lord of the Ninth, is combust of the Sun, in a violent sign, and his dispositor, as well as himself, are deprived of all their powerful Dignities; from which it is plain that the Religion of the Native is a deceitful, vain, and fanciful show, let the Native's pretensions in society be what they may; and as the Ascendant is afflicted by the Mundane square of Mars, united with the baneful rays of Saturn, and Mercury, they instil a considerable portion of pride and insolence into the Native's Mind, which: is further proved by the ruler of the Ascendant applying to the Rapt Parallel of Mars, in the Radix; thus it becomes obvious, that such feigned Religion is a something that wants a name, set forth to pick the pocket of the simple, and to show the Niative's Vanity, Hypocrisy, Insincerity, Superstition alsd Folly.

In this Geniture the Ascendant is the giver of Life, as all the Planets are under the Earth, except Saturn, and Jupiter, and neither of them can claim the Aphetical power; therefore the Eastern Horizon is the point which must be seleated to determing the time of the Native's Death.

The ridiculous, vain, and romantic Hypothesis given by Mr. Wilson, who, in his dictibnary of errors and contradictions, page 311 , says, that both the Luminaries under the Latth, in the Nativity of Philip the 3rd were Hylegiacal, he also infotms us, that the Moon on the Cusp of the third House, was Hyleg in the Nativity of the Child who was drowned, about the age of three years; these Genitures he has selected from Placidus, to prove his groundless opinion, that the Luminaries ander'the Earth are Hyleg in any Geniture, and he further observes, "nor will all the crude formal dogmas of Ptolemy persuade me to the contrary', but he has left the subject in abscurity, without any proofs whatsoever; then in page 308, he mentions the "foolish doctrine of Ptolemy', yet after all the unbecoming insult levelled against the dumb ashes of the dead, he has in page 159 , ( and in direct contradiction to his former assertions, ) affirmed, that "amidst this vast heap of incongruities, I would advise the Student to confine himself chiefly to the Rules laid down by Ptolemy, which are by far the most rational.'’
The learned Cardanstrictly adhered to the genuine principles of Ptolemy, and acknowledged that whenever he deviated from his Doctrine, he was placed in confusion, and error. The precepts delivered by Ptolemy, for selecting the Prorogator, which I-have given in this work, are clearly illustrated by examples, and those who attend to their application, will soon discover the luminous Facts they unfold to the Students in this Science. Mr. Wilson is, I believe, the only Author, who has the effrontery to affirm, that the Luminaries, under the Earth, are Hylegiacal, contrary to the Rules of Ptolemy, and repugnant to Reason, and daily expe-. rience. I have made these remarks that the Student may not be led astray by those fanciful innovations, promulgated to DECEIVE, annor, confound, and mistead all those who adhere to such palse, and delusive Notions. In the pee: ding Geniture, the Student may observe, that both the Luminaries are under the Earth, and at the Age of twenty one years and ten months, the

Sun was directed to the opposition of Saturn, followod by the Moon to the Square of Mars in Mundo, and also by his quartile in the Zodiac, which ought, (if the Luminaries under the Earth are Hylegiacal,) to have given dangerous Sicknesses, and misfortunes, but no such Events took place, as he then enjojed a good state of Health. I could produce more than one hundred examples of a similar nature, to prove, that the Luminaries, when in a subterranean position, cannot possess the Aphetical power to. destroy Life, even when they meet a train of violent Directions, except when the Lights are within the prescribed limits of the Eastern, and Western Horizon, by which they then claim the Hylegiacal Dignity.- Butsome will probably ask, if I allow the Directions of the Luminaries under the Earth, to the baneful configurations of the Malefics, to give dangerous Sicknesses, Accidents, and other misfortunes? I certainly admit that such Directions, when they shew their effects, will produce diseases, troubles, and Losses, \&cc. when the Malefics possess their own Nature in the places where those violent Directions finish their course; but when the reverse takes place, and the obnoxious rays of the Promittors become considerably diminished, by the Terms of the Benefics, \& their directions, then their malignant power becomes weak, and unable to produce any serious injury to the Health, and affairs of the Native, so that in many cases they pass over, and cannot produce any visible effects whatsoever.

I have observed before that the Ascendant is the giver of Life in this Nativity, and therefore in few words I shall inform the Reader, that when that point of the Heavens is directed to the Sesquiquadrate of the Moon in Mundo, at the Age of thirty two years, and eight months, followed by the Mundane square of the Sun, Life will be destroyed, as there is then no benign assistance that can impede the violence of their Anaretical power, for I consider the Luminaries, and also the benevolent Planets in this Geniture to be weak, as well as those parts of the Heavens where they exercise their dominion over Life, but it is not from the

Effects of the above Directions alone that I award this Judgment, but from the combined power of other Motions, which not being remote, co-operate with the destructive positions, and directions of the Mortal Promittors from the Oriental Horizon, and Supreme Southern Angle. Now the Nature and quality of Death must be defined from the active power of those Directions that follow in the train, and as the Sun, and Mars, have considerable dominion in those places, it is certain that the dissolution of the Native will be occasioned by a violent Fever, with pains at the Heart, disorders in the Reins, and Mesentery, and as the Lungs will be considerably affected at the same time, it further shows, that the powerful Effects of such diseases, cannnot be alleviated in the least degree by the most judicious assistance of the Medical practitioner.

The following Nativity is that of Joseph Kent; this Chitd lived with his Parents, in the City of Iincoln, and on the twelfth of July, 1824, in consequence of his not returning home from solool ,at the usual time in the Evening, his Relatives were alarmed for his safety, and applied to me, on the morning of the following day, requesting my Judgment, whether he was living, or dead; they informed me that he was born at Liverpool, on the 6th of June, 1817, at half past eleven at night, and further observed Imight depend that the time of his Birth, was exact, being taken by his Father, (who is now living,) with the greatest care and attention; As soon as I had observed that the" Effects of the mortal Directions to the true Hyleg were then in operation, and that all the secondary significntors of Life were likewise raflicted, both by position, and Direction, without any relief from benefic irradiations, the giver of life being angular, in Pisces, a sign of the watery Trigon, with Satura, \& applying to the Body of that Malefic by a converse Motion, and also to the Zodiacal Parallel, and conjunction of Mars, by a direct Direction; I then delivered my Judgment, that the Child was drowned, and told those who applied to me on this melancholy occasion, that the River, which had been superficially examined, ought to be more diligently explored, which was accordingly done, and the Body was found near the Swivel Bridge, though all signs of Life had disappeared; these facts are well known to the Inhabitants of Lincoln. I have inserted this Nativity with the following directions, \& judgment, which will doubtless be considered as an interesting Example, by all those who are seriously inclined to investigate, and prove the true principles of this Heavenly Science.

Those who will take the troulle to examine the Rules I have Jaid down in this work, relative to violent Deaths, and apply them in a proper manner in the Nativity of this Child, will immediately' discover, that the obnoxious positions of the Celestial Bodics minutely correspond with the quality of the Native's dissolution. The Moon who claims the Aphetical power is posited between the Bodies of both the Malefics, in the Ascendant, in a Watery Sign, and in that station she is deprived of surficicient support from the Benefics, both of which are afflicted in their radical stations; the giver of Life is in square to the Sun, and Mercury in the Zodiac, and applying to the Mundane quartile of the Sun by Converse Motion, that Luminary being posited in the Northern Angle, among violent Stars, in which place he becomes configurated with Saturn, by a baneful square in the World. The Ascendant is also afflicted oy the quartile of the Sun in Mundo, and the Part of Fortune is in opposition to the Sun and Mercury, and in mundane Square of the Moon, and Mars ir the Nativity; thus we may clearly observe that both the Luminaries, the Ascendant, and Part of Fortume, are all afflicted in this Geniture, which forebode a sudden, and violent Death, by suffocation or drowning, which happened as I have before related.

This Child was drowned at the Age of seven years, one Month, and six days, and the Directions that destroyed Tife, (which shewed their effects at the time of Death,) were the Moon Hylegr, to the Body of Saturn, by Converse Motion, and also the parallet Declination of Mars, and body of that Malefic in the Zodiac, and Mundo; those Directions, with all others may be seen in the preceding Table, and though the giver of Life applied to the sextile of Venus, and trine of Jupiter, yet those applications could not produce any important assistance, because both the benefics were afflieted in the Nativity; for Jupiter is retrograde, near the Heart of the Scorpion, in square of Saturn, and in mundane Parallel with the Sun, and applying to his opposition, Venus is also Retrograde, near the Pleiades, and in exact parallel with Mercury
is Mundo, where she becomes posited in the terms of both the Enemies; thus we may observe that though the apparent benign rays of Jupiter and Venus could not preserve Life, neither by position, or direction, yet owing to their Motions the fary of the Mortal Directions to the Hyleg were retarded for a time in producing their Effects, which will glways be found to occur, wherever such configurations are prevalent in any Geniture whatsoever.

By Secondary Motion the Sun was in conjunction with Mercury, and the Moon the giver of Life, had nearly arrived at the place of the Sun in the Nativity, and was applying to the Square of ker radical position, and likewise to the rays of Mars, the chief mortal promittor in the Genitare, these obnoxious apprications, compared with the violence of the Progression, considerably increase the baneful power of the Anaretical Directions to the Prorogator. In the Revolutional Figure for the seventh Year of the Native's age, the Moon was in a violent part of the Heavens, and separating from the opposite place of Mars in the Nativity; dupiter was also in Square to the place of Mars, and that Malefic was applying to the opposition of his own radical station. Saturn. and Venus were conjoined in a subterranean position, among violent fixed Stars; those Planets, with Mercury, having nearly the same Declination; all these testimonies fully corroborate the Mortal power of the primary Directions to the giver of Life, as well as the correctness of ell the corresponding calculations. At the time he was drowned, the Sun, Jupiter, and Venns were in conjuuction in the watery sign Cancer, and descended below the, Western Horizon, with Castor, and Pollux; they were likewiṣe in Square to Mars, who was separating from the Opposition of his place in the Nativity, and Saturn had then returned to the quartile of his own position at the time of birth. The giver of Lifo was also near the radical Horizon, afflicted by the baneful stations of the Enemies, at the time of his death.

Samuel Portwood was Born at Donington near Spalding Lincolnshire, on the 5th of June 1790, 18H. 55m. P. M. he was the Son of William Portwood, Farmer of that place. In the month of October 1821, this young Man (with whom I was well acquainted, ) applied to me. and gave me the above time of his Birth, requesting me to calculate his Nativity, whioh I performed, and delivered the Figure, and Directions to him including my impartial Judgment thereon; he had a little know, ledge of this Science, which he had obtained from my Books. and Papers, and appeared confident that the given time of his Birth was correct, of which I have no doubt, as the nature of the primary Directions is confirmed by the preceding events of his Life. He told me that he had gained considerably by Land jobbing, and was very lucky, though the Moon, and Saturn, in the Midheaven, he thought, should have given something far different, according to the Works of all those Authors he had read on this Science; he further observed with a smile, that the evil conjunction of the Moon, and Saturn in the Zenith, could do him no harm, because by their different Latitude, they were far distant from each other, and Jupiter was posited in the second House, with the Lion's Heart; I told him that all his observations were founded on error, as other Astral Causes of a different nature, were the Auxiliaries of his success, which would continue but a short time, when Land jobbing, and Life would be no more, for I never knew the least portion of durable good to flow from a Treasury of evil; I also informed him that though he had many Books, Papers, and documents of mine in his possession, which I expected he would peruse to the time of his Death, yet there was one that surpassed all others, on which the following words were written.-"Prepare to meet thy God,for soon thou shalt surely Die."

I quickly discovered that my admonitions were but little regarded, I then told him he was not aware that the Moon was Hyleg, or giver of Life, and would encounter those terrible Anaretical Directions in the Snmmer of 1824, which would cut off Life, to
which he replied, that as the Birth was by Day, the Sun, ho believed was the true Prorogator, because he was posited in the Eleventh House; I informed him that according to the Sun's position, he certainly was not qualified to claim the Aphetical power, which a short time would prove, because that Luminary had not arrived at that part of the Eleventh, where he claims his full, and perfect Hylegiacal Dignity; I further observed that there were other arguments to prove, that the Sun could not be the Prorogator, for if that had been the case, his Direction to the squares of the Moon, and Saturn in the Zodiac, united with the Sextile of Mars, in Signs of long Ascensions, followed by the body of Mercury, and all in Cardinal Signs, would have destroyed Life several Years ago, instead of which, those Directions when they shewed their effects, produced only a dangerous fall from a Cart, with a few bruises, including troubles at the same time. The Figure of Birth with the Directions follow, according to true Astronomical Calculation.

This Native lived at Doningtion, where be was Born, and for some years previous to his Doath, was a writer to Bemjamin Smith, an Atterney at Law, at Horbling mear Folkingham, Lincolnshire. Those who view the malignant conjunetion of the Moons, and SZturn in the Z̈enith, in Square to Mercuny in Condinal Signs, will instantly discover circunstances of a most remarkable Naturé, When in Healch, he witnessed the destruction of the Fioes of a certain individual; he was cut down in the early paxt of Life like a Flower of the Fifld, according to the Jadgmont I had given three Years prior to his domises, the truth of which can ataay time be proved; but though he had obtained ux pecumests which showed that the King of Terrors, was meanty at the Door of his dwelling, to execute his final summons, yet he would not be convinced that the Moon was Hyleg he therefore paid but little attention to my Judgment, strictly, and absurdly depending on the Sun as the right prorogator, which he vainly. Beilieved, promised him Health, and old Age, though that Luminary was certainly the chief mortal Promittor in the Radix, and thus instead of producing long tife to the Native, he ushered in Death at a period but little thought of, and by no means expeoted, according to all hutman appearance. Several unbeliovers in this Science whose true Nativities I have in my Possession, and who are yet living near the same place, must with their Offspring, suffer dere caldaitios, and in a feiw Years, " pas that Boutn from
 had in tembmbiaiod, by Getterations yot wathorrm.

Both ine Lemininaties, and Ascendant are affiteted int the Ractix, atid the Stars that assume the Dominion of the Jigits, and Eentewh Horivon, afe not Dignified, so that they were amable to produce any diurable Prosperity, what they give by the inrpotenice of their power, show Idfe, and every ofject however desirabte, to be Of eliort daration, and had not the raler of the Part of Fortune been Hobig, atid belield by Jupiter with other benigh testimomies, the Natwe woudd have been theolvod in great troubles, and misforturect
the weakness of the Moon the giver of Life, and her afffiction without Auxiliaries, convinced me, that when that Luminary was directed to the Rapt Parallel of the Sun, followed by his Mnndane Square, Converse Motion, with the other vital significators afflicted at the same time by M alefic Directions, the Native would exchange this mortal Life, for a state of immortality; the truth of which was verified, for though the Directions of Jupiter, and Venus are conjoined, yet they could not save, owing to the Terms of the Enemies being united near the Anaretical places; it must also be further observed; that when the Moon was directed to the mundane Square of Jupiter, and also to the Parallels of Venus in Mundo, by Direct, and Converse Motion, their apparent henign power became null, and void, because they were both afflicted by the same Directions of Saturn in' the World, and by Mars also in the subsequent Motions. teis example, (which I have handed down to posterity, with others, for the Instruction of the Students in this Sublime Science, clearly prove, that it is the true Prorogator alone, that must' be strictly attended to in all cases of Life and Death. The Native dicd on the 16th of October. 1824; Aged thirty four Years, four months, and ten days.

By Secondary Direction, the significators of Life, and Death were violently disposed, which may be seen by comparing them with the mortal Directions that were in action at the time of dissolution. The Progression also corresponded with the Effects of the hostile Motions, and concurring Declinations, and Terms; the Moon separated from the quartile of Mars, and applied to the Body of Mercury, and also to the Square of Saturn frome Cardizal Signs, by the other subsequent stations; thus by the preceding applications, Mars had returned to the place of the moderator in the Nativity, and both the luminaries were also in odyoxions places without any relief from beneyolent applications, either in the Zodiac, or in the World. The Revolutional Figure for his thirty fourth Year was violent, the Sun being within the Orbs of a
conjunction with Saturn, and that Malefic was among violent stars conjoined with Venus; the Moon the giver of Life was afflicted by the body of Mars, and had returned to the opposition of her own Radical place, Saturn, Venus, and Mercury having the same declination, and Mars was at the same time posited in the Nadir, in oppos:tion to the place of the Prorogator at the time of Birth, and was also in Mundane Square to the Radical Ascendant

A short time after I had Culculated the Geniturg of this Naive, he reguestet me to make a few obsetvations. op the Natioity athis Daughter, Melicent, who is now fiving at Donington, I therefore eomptied with his request; be told me that the time of her Birth was carefülly taken by timsetf, and might tee depended on as correct; he also sadd that I was welcome to make whet remarks I thought proper upon it, for the benefit of the Science, but owing to his engagements, he had but little time to apply himself to the Study of its principles; he requested me repeatedly, to be as particular as possible in my calculations, relative to the length of Life, for it appeared to him that both the Luminaries contended for the Aphetical Dominion, which is by no means the case, for as the Birth is diurnal, the Sun being in an Hylegiacal station is cortainly the legal, and true Prorogator, and supporter of Life, until his power becomes destroyed by the mortal union, and Directions of the Anaretical Promittors without assistance, which will appear evident from the following display of the Celes.tial Bodies at the time of Birth, united with the Tabulated Arcs of Directions.

|  |  |

This Native's Father, as I have said before, had a little knowledge of this Science; and as he had previously investigated the Geniture of his Daughter, by position, (not being able to compute Directions,) there is no doubt that he observed the Moon was posited in that part of the Heavens, which would have qualified her to receive the Prorogatory Dignity, if the Sun had been posited at a more romote distance from the Zenith; for if the time of Birth had been twenty-five minutes later, then it is certain that the Moon would become the giver of Life, and that no Directions, however Madefic to the Sun, could produce dissolution, though their Effects would be attended with dangerous consequences; these considerations induced him to be more urgent to receive my Judgment; I told him that as he wished to have the Directions computed with accuracy and precision, he might depend that my exertions should be used to give him satisfaction, respecting the length of Life in particular, which he received from me, and which he appeared remarkably anxious to ascertain.

The distance of the Moon from the Meridian, is $35^{\circ} 5^{\prime}$, and her Semidiurnal $\mathrm{Arc}, 73^{\circ} 11^{\prime}$, consequently her distance from the Oriental Horizon, becomes $38^{\circ} 6^{\prime}$, these numbers produce her distance from the Eleventh, $10^{\circ} 41^{\prime}$, and her true Polar Elevation $32^{\circ} 43^{\prime}$, under which her Obliqne Ascension is $218^{\circ}$ 29', these distances manifestly show, that though the Moon is in an Aphetical position, yet according to the given time of Birth, no Malefic Directions to that Luminary can produce Death.

That the Sun is the true Prorogator, or giver of Life in this Nativity, does not admit of any doubt whatever; therefore it is from his Directional Motion, that the length of Life must be ascertained; his true distance from the Zenith, is $37^{\circ} 30^{\prime}$, and his distance from the West, $75^{\circ} 14^{\prime}$, which give his Pole of Position $24^{\circ}$, and his Oblique Descension, $145^{\circ} 18^{\prime}$. Now the first Direction that the Myleg mects with, that will put Life
in danger, is the Parallel of Saturn's Declination, which the Sun encounters in $11^{\circ} 58^{\prime}$ of Virgo, the Oblique. Descension of that point, under the Sun's circle of position, is $166^{\circ} 33^{\prime}$, from that sum the Sun's Oblique Descension under his own Pole being subtracted, the Arc of Direction will be $21^{\circ} 15^{\prime}$; by the same method, the Sun to the zodiacal Parallel of Mars, opposition of Saturn, Body of Mars, Semiquartile of the Moon, with the zodiacal Parallel, and Body of Venus, may be easily, and correctly computed, without much trouble, or difficulty; for by turning to the Tables at the end of this Work, and taking out the proper numbers, and using them according to the given precepts, the Dircetions will then be immediately discovered, not by chance, or any juggling Art, but by the true, and unerring principles of the Noble, and incomparable Science of Astronomy.

From the Nature and Effects of those violent primary Directions to the Prorogator before mentioned, united with the powerful secondary Motions, \&cc., it is evident that they will produce (by their furious velocity,) the greatest dangers to the native's lipe which human aid cannot prevent, at the Age of twenty-five Years, and eleven Months; there are also other Malefic Directions, that will be in operation to the Hyleg, upwards of two years prior to the above period, which will increase the power oi the baneful applications in those Terms, and parts of the Heavens, where the Progressive Directions correspond,

Objection. You inform us in your Work, that the Directions of Jupiter, and Venus, when they are joined in a violent traiu to the giver of Life, will impede the fury of the evil kiffects portended; how is it then that you do not notice the power of Venus in this Nativity, she being in conjunction with Mars, and Opposition of Saturn at the time of Birth, and as her parallel of Declination, and conjunction to the Hyleg follow in Directional Motion, why ought she not to dissolve some part of the evil, and

## whe the Ndtive from flowe dangers to Liff, whiopy yor haw so potitholy yrodicted?

Afsisider. I do affim that the Directions of Jupiten, and Ventss; will dertainly ixpede the power of a violent train of Ditse thionsito the giver of Life, in any Nativity, when they and strong, free from aftretion, and joined with them, elthert in the Zodiaco or in Mundo, but though these are my rules; which will not deceive the practitionier, yet from the same precepts sufficient is recorded to prove, that when the Benefics are unable to produce assistance, in consequence of their impotence, and affiotion in the Radix, or ity those places where the Directions fall, they then show the nature, and quality of the disicase, or Death, which is frequontly of a violent nature ; therefore in this Geniture, though Venus is joined in the train with Saturn, and Mars, and is also afflicted by both Matefics by position, and near violent fixed Stars, she id qualified to produce a considerable portion of Evil, for being dverconde by the Eneries, she will protraet the nature of the caldemity, and produce disedses of the Liver, \&ec, and injury by Modicind; so that she cannot sufficiently counteract the impending violence of the dreadfal train to the giver of Life.

I hisve dmitted seme observations on the Effects of several Directions that come up at an earlier period in Life, some of which will give mjury to Health, but as I do not see any thing remarkable in the Figure, I have not noticed those subjects that appipefr to be of litule adumatagis to the improvemient of the Stadents im this Belencet.

As a further proof of the Truth of these Astronomical Calculafions, I now lay before the public, the Nativity of Mr. Richard White, Hair-Dresser, who resided in Lincoln. On Monday the 8th of September, 1817, he requested me to Calculate his Nativity, which I undertook to convince him of the Truth of this venerable Study, being at the same time aware, that no Man was a greater snemy to this Science than himself, neither could any persons pass more scurrilous reflections, and unbecoming Language on the power of the Celestial Hosts, than himself, and his Relatives. The time of his birth, which be delivered to me from an indisputable document, was April 25th, 1792, 3n. 45m. a m. My previous Judgment on the period of his demise, was truly verified, which is well known to the Public,

By proofs like these, this Noble Science show, The fate of ev'ry Mortal here beiow;
Those Starry Infidels, puff'd up with pride, If they would suffer truti to be their guide, They then by sacred thought, would keep in view, The solemn time, when they must bid adieu To Mortal objects, with all Terrene things, And view the GLORY OF THE KING OF KINGs.

Whicn chis Netive was siztoen. Yeows of Age, the mefered samirely by a violent nerrous Ferver, which continued almoedswo Months, during which time the wases not .expectod to sunine; the Disections of the Ascendant to the Body of the :Sun, and the Hyleg to the Mundane Pawallel of Mars, by Rinect Motion, then elbewed their Effects; for if the distance of Mans with hin Latitude from the Nadir, be subtracted from his Semineaturnal Are, his true distapce from the Western Horison, below the Earth, will be $\mathbf{1}^{\circ} 18$, so that by these numbers, the Paxallel of Mars, by the Motion of the Primum Mobile, may soon be dis* covered, and computed; the above Directions were preceded by the Sun to the Parallel of Mars in Mundo, Converse Direction, and the Rapt Parallel of Saturn, the superior Malefic being conjoined with the giver of Life in the Eastern angle, at the time of Birth.

At the Age of twenty-one Years, and a half, the Native ontored into Business for himself, and was successful in his Profession, according to his station in Life; he also entered into the stato of Matrimony near the same time; the Directions then in operation were the Ascendant to the Body of Mercury, the Part of Fortune to the Trine of Jupiter, the Sun to the Sextile of Venus in the Zodiac, and her Parallel in Mando, by Converse Motion, all of which are benevolent, and agree with those Events; but the influence of the subsequent Directions was retarded, owing to the impotence of the Promittors in the Figure, and the depression of the Pole of the Sun in those places, and Terms, where both the Malefies, (by the frigidity of their nocturnal applications,) projeet their beams with increased power to the significators; it is necessary that these things should be properly considered, and understood by all Students in this incomparable Science, as the acceleration of the Effects of all Directions in the Zodiac, and Mundo, with their retardation, \&cc., chiefly depend on those Motions, and Terms, with whieh they continue in Direotion, by their stationa, and applications through all parts of the Heavens.

As soon as I had observed those Directions above, with their corresponding Effects, Lthen computed the time when the Native's Death might be expected, but in pointing out that solemn period, my Judgment was traduced, by the hardened Infidel, the censorious Crtic, and the Vulgar. The Sun is the giver of Life, and as the position is weak, and both the Benefics, Ascendant, and Iaminaries are all afflicted in the Geniture, I judged that at the Age of thirty-three Years, the Native would depart this Life, as the Hyleg was then directed to the Body of the Moon, Mundane Parallel of Saturn by Converse Direction, and also to the square of the Moon in Murdo, by Converse Motion, succeeded by the Apheta to his own Semiquartile in the Zodiac, and Parallel of Saturn in the World, by Direct Direction, and likewise to the Moon's Parallel in Mundo, by the Rapt Motion, these were the principal Directions that caused his Death, according to the Judgment I publicly delivered seven Years before his demise, the truth of which can at any time be proved; he died on the 18th of April, 1825, at Noon, aged thirty-tbree Years nearly.

I have now stated the Mortal Directions to the Hyleg which cut off Life, and whenever similar Anaretical Directions are observed in other Nativities to the Moderators, without sufficient assistance, they will not fail to destroy. . The Hyleg was directed to the Quartile of Mars in the Zodiac, at the Age of thirty Years, and eight Months, the Effects of which could not produce any sudden, or serious injury to the Native's Life, owing to the powerful Terms of Jupiter, and Venus, in which that Direction completed its course; but as it was near the beginning of the deadly. trnin, it caused a slow Fever, with a gradual diminution of strength, until the Apheta arrived at the Body of the Moon, and though the Direqtions of Jupiter were united to the giver of Life, yet they could not save, for as he was in the .Western Angle at the time of Birth, and afflicted by the Opposition of Saturn, he shew-
ed a diseased Viscera by position, and that an inflamation, and decay of the Lungs, (being that part which Jupiter governs,) would be the cause of the Native's Death.

Those who think proper to examine all the Primary Motions \&c., and compare them with each other, will find that they display their baneful influence in producing dissolution; for when the Polar Elevations of the significators, and Promittors are considered, with their augmented strength as they ascend the superior Angleso it is evident that a sufficient portion of benign aid could not be received by the giver of Life, in his nocturnal istation. The Secondary Directions were also of a violent nature, as well as the positions of the principal rulers in his last Revolution. At the time he died, there was a New Moon in the Zenith, on the place of Saturn in the Nativity, Venus was in conjunction with that Malefic, and Mars was on the radical place of the Sun, the giver of I ife.

The next Geniture in that of Mary Dickimon, this, young Woman lived in the service of Mr, Xathan Clayton, owner of one of the Steam Packets in the City of Limoln. On the fifth of August, 1822, she, (in company with some of her Female Friends, ) came to my House, and requested mied unswet ai few questions on her Nativity; she prodtroed the comet tinuef ber Sirthy,
 had never known any prioof to gines sadinfaction ; phe esked me 3 II could inform her of the time of hor Martings, mat whether olie wim likely to live happy in thet state, to which I answered, that I wat confident she would never enter into the Matrimoninit Union; she said she was sorry that I should sives suck false Judghent whe
 had suhstantial teasois; ( thougha niey were of and smpertant and wh
 Months would be verified; as she way anioters to know what thy delicate reasons were, which caused me to withhold the prituctipl part of my Judgment, I then informed her that something of an awoful nature would occur, before the Month of March, then next ensuing, which would destroy Life. As soon as I had mentioned these things, including my reasons for giving this Judgment, she laughed immoderately, and said, she placed no confidence in my observations; I told her it was with deep regret that I beheld the terrific Astral Causes in her Geniture, the Effects of which were fast approaching, but none of my admonitions had any influence on her Mind; I endeavoured in vain, to inform her, that "Hess: ven is tas book of God," in which we may clearly read the divine ordinances of the MOST HIGH; she said she believed that all things in the Science were guessed at, and if they happened right, it was all by ohance ; but before she left me she said in a jocular way, that as I had given my Judgment on the shortness of her Life, (if she thought proper to believe it,) she wished to be intormed of the quality of Death; I told her it appeared to me, that Drowning would be the cattse of her disolution, at which
sholanghod, and said, that was impossibte, for though Mr. Clayton, (with whom she had linod soverall Yoarg, bal a Stoon Packet, yet as she did not go on Board, she considered herself perfectly safe from any danger of that nature; her remarks were such as ex. ciked pity, rather than cortiempt ; she then left me, and I sow her no more, though I sent some of her Friends about a fortnight afterward, to admonish her of the formidable dangerapproaching, butshe tretated them with deriviva, and endeavoured to depreciate my previous Judgment. As she had engaged to go to a Village near Boston, she went on Board the Packet, and in the act of leaning over the side of the Viessel, she was precipitated into the River, near the town of Bardney, and when taken out, Life was extinct; her Death happened on the 7th of January, 1823, at half past eleven o'Cloek in the Motning, Aged twenty-four Yeass, eleven Months, and six dayg. The awful Figure of the Heavens, at the true time of hor Birll. iucluding the Directions, and Judgment, I howle insetted in the following order.

The foreging Gienethlional display of the Colectial y wies, and Directions, are the same as those that $I$ med whan: hhis anforturate Native applied to mos As socan as I had pieysed tho alarming testimorics that were provalent, and preseated thomonelves in every part of the Heavens, I was then eorvinced thati g.griplemt Doath was apparent, and that there was nething that eould, ppaifiols mitigute the fury of theso inimical eonfigurations, that were:onhjoined with the Andretical Diteetions, in their eorresponding places, and Martan stations. The Asoendant is aflieted by the Body of Mars (who is near the Heart of the Seorpion, ) and also by the Semiquartile of the Sun, and that important Angle is lizewrise oflioted by the Moon's Mundane Sesquiquadrate, to which that Luminary is applying: the two Lights of the World are also in opposition to each other, and Mars, who has just risen at the time of Birth, is afficting the San; and Moon, from obnozitous platees and Terms, arl of which portend a violent Death. The Patt of Frac time claims the prorogatory- Dignity, as a full Moon preceded the Nocturnal Birth, and neither the Ascendant, or any Planet, could claim the Hylegiacal power, the afliction of that Aphetical point by the Opposition of Mars, his Mundane Parallel, and also by the Semiquartile of the Moon, and Sesquiquadrate of the Sup in thè World, are all strong, and additional arguments of a sulden Death by vioterce. Tho position of Jupiter in the Imum Ceelin afflicted by the quartile of Saturn in the Zadiac, and Mundane Square of Mars, applying, has a baneful appearance when compared with the Motions of the other Stars in their Longitudinal plases. Venus is also applying to thit Suquire of \$atritn, therefore tromi these abservations it will plainly appear, that both the benefics are deprived of their natural, and benign qualities, both by position and Direction, and consequently cannot render any support, either to the true Hyleg. of the othot inforior Vital plades, which have co-signification of Life. Some may probably observe, that as the giver of Lífe is in a Mundane Square to Jupiter, abid near the Trine of Venus in the World, the afficiticn of thie Prorogatot in the Genethliacal Constitution is much reduced, and the vio'-
lence thereof considerably dissolved; but those who are inclined to state such insignificant, and puny propositions, know nothing of the true principles of this Science, either by Theory, or Practice. I affirm that the Part of Fortune is the giver of Life, and it was from the Directions of that point to the Body of Suturn, Sesquiquadrate of Mars in Mundo, and Parallel of Saturn in the World, (he being posited in Cancer, a violent Cardinal Sign of the watery Trigon, and in the Western Angle, ) that I foretold the Death of this Native by Drowning, five Munths before that Event took place, which is well known to the Public. The Irue Calculations of those Directions to the Hyleg, or giver of Life, are as follow. The true Pole of the Sun, is thus computed.
As his duplicate nocturnal horary times. ................ 38 0
Are to his distance from the Nadir. . .................... 570
So are thirty Degrees..................................... 30 0

These wrere the Directions that I judged would produce Death, and when they shewed their Effects, I was not disappointed in my expectation, I do not deny that the Ascendant, and Luminaries, were afficted by primary Directions, which succeeded those to the Hyleg that destroyed Life, and which donbtless increased the sudden power of the killing train to the Moderator; but though I have made these observations in this place, yct I positively say, that if the legal Prorogator had not encountered those Mortal Directions, which I have computed in full, the others of an inferior power that followed, could not have destroyed Life. I mention these things that the Students may observe, that no violent Directions can produce Death, except they are made to the true giver of Life, though they will, ( when the Enemies possess their own nature, ) give Sickness, Troubles, and Accidents, according to their power in the Radix, and in the places where tho Promittnss, \&c. have dominion, when the Directions are finished. I trust I shall be excused for making repetition, yet the subject I am now discussing, demands the strictest attention, and ought to be laid down in plain terms, and not left in obscurity. The Students must always remember, that when a sudden Death is visible, they will then discover, that many violent Directions of different denominations, will generally be united with, or near those that are in operation to the Prorogator, though it is from the Anaretical power of the latter alone, that personal extinction is produced.

I conceive I have said sufficient on this Nativity, and hope from the examples preceding, that the Students will readily understand how to judge of all the other Motions, and applications in the Zodiac, and Mundo, whether they are of an hostile, or benign power. In the Native's last Revolution, the Moon was just setting, in square to Mars, and in Opposition to the place of that Malefic, in the Nativity, being am $n$ ng violent fixed Stars, and near the place of the giver of Life in the Radix; she was also applying to the Mundane Squares of Saturn and Jupiter. At the exact time she was Drowned, the Moon, was in the watery Sign Scorpio
in the Western Angle, in opposition to Saturn, and on the Mundane place of the Part of Fortune in the Geniture; Saturn, and Mars, the two Mortal Promittors, were also in quartile to each other, and conveyed their destructive power to the significator of Life, at the time of her expiration.

The time of the Birth of a Female, Born in Iincolnd, was given to me aboat five Years ago, by one of her Relatives, now living; who informed me, that I might rely on the correctness thereof; which was, September 3rd, 1801, 0n. 35m. P. M. From the following Figure of the Heavens, and the Directions; it is well known to many, that I foretold the time of the dissolution of this Native; which clearly demonstrate the essential ${ }^{\text {Psej}}$; power, and sole dominion of the giver of Life, when properly chosen according to the Rules I have given; but though the Sun'is'certainly the Prorogator in this Nativity, yetas some of the Directions that assisted in destroying the Iife of the Native, differ from the general precepts, and as these Examples clearly deyelope the true Terms of the Planets, in the most conspicuous manner, with their saving, and destroying power, I have taken the trouble, by true Calculation, to prove, that the Terms, which ought to be used; are wholly unconnected with any of those degrees in the Signs of the Zodiac, which the pretenders to this Science sanction, and admire without examination. 1 have tried them all in the Calculation of several hundreds of Nativities, as they are erroneously given in the Works, of Ancient, and Modern Pirates, and have discovered, that there is no truth in them whatever; therefore as they are not to be depended on in any Computations, as they are now generally used, all those who rely on their assumed power, which cannot be demonstrated, will remain in a labyrinth of confusion, so long as they suffer any of those false, and ostentatious innovations, to operate as a barrier to their progress in this Celestial Study.

It is extraordinary to observe, with what avidity the Students in general, adhere to the superficial, and preposterous notions, which have been falsely disseminated by various Authors. Many are so ardently attached to Ancient errors, (which the Tables of the Terms of the Planets, and many other spurious inventions, fully explain, ) that they are not inclined to discountenance them, even when Truth makes its brilliant appearance to aid and faciliate them in their researches in the paths of Science. With some it is
a matter of little consequence, whether the instactions they receive from an Author, are true, or false, as they seldom call them in question, if they appear sufficiently prolix, and originate from Ancient Authority; therefore Truth, (which ought to be esteemed as the most essential criterion)does not become their primary object, but is considered as a subject of minor importance; to what use then are false Rules, and fabricated Examples given by Pirates, which apon minute examination, are found to be deficient, and will not stand the test of impartial proof, when opposed to Truth, Reason, and Experience, which I have evinced in this Publication. The injury done to this Science by such Pirates, is incalculable; they have promulgated the most inconsistent, and superfluous Precepts, contrary to the true Motions of the Heavens, which mislead the Students, and cause them to imbibe plausible Chimeras, instead of those profound, and substantial. Theorems, which carmot be refuted. An Author who intends that the Students should receive advantage from his labors, will always make his Rules, and instructions as clear as the natare of the subjects will admit, and deliver his sentiments in a plain, concise, and intelligent manner; for when irrefutable computations,(combined with Judgment which exhibit the true Causes, with their Effects,) are introduced in his Work, the Students will then attend witlr pleasure to the Proofs he has unveiled, by which the most lumi . nous Truths become Publicly corroborated, and established beyond the bounds of contradiction. I hope I have sufficiently explained my instructions, and confirmed the Judgment I have given, not only from authentic demonstration, but also from the most respectable evidence, which neither the wiseacres or sceptics, are able to refute; for it cannot be supposed that any Infidel can be found, who dare deny, or oppose those public, and ocular facts, contained in this Work, which are confirmed, and proved by the testimony of many hundreds of surviving witnesses. With respect to the Terms of the Celestial Bodies, I shall not trouble the Students with additional obserrations thereon, as Examples are far superior to comments, on subjects which require the most serious
attention. I shall now proceed to illustrate, and explain those Terms, with their natural Effects by Directions to the Sun, who is the presiding Moderator, including his power in that part of the Heavens, in which he is posited, as the true giver of Life in this Geniture. The Native died on the 28th of June, 1825; Aged twenty three Years, nine Months, and twenty four Days.

The distance of the Sun from the Meridian, in the preceding Geniture, is eight Degrees, forty-five Minntes, by whioh he claims the Aphefical Dignity, and consequently the time of the Native's dissolutisn, must be obtained from his Progressive Motion to the killing Place; but from his impotent position,(with the affliction' of the other Stars in those stations, which have affinity to Diseases, and Death,)it became apparent to me, that the Native would soon be removed from this state of Mortality, as the whole position; properly considered in all its parts, is too feeble to' support Life, for any considerable length of time; I therefort judged that Fingering Diseases,(during the short period of her existence,) would be produced from so many unfavorable, and conflicting. Causes, none of which were defeated in producing their corresponding Effects. The Hyleg is in Mundank Parallel with Mars, which is a' violent affietion, and collects a considerable augmentation of evil from the Terms of the enemies, by the Rapt Motion, as they decline from the Zenith, which the use of the Celestial Globe will immediately prove; we may also discover the Sun's additional affliction, by his' being conjoined with Saturn, and with Mercury also, who is of the Nature of that Malefic; and as the Hyleg cannot receive any ${ }^{\prime}$ benign applications, when he arrives at the Anaretical Puint, in $5^{\circ}$. $3^{\prime}$ of Libra; where the second Zodiacal Parallel of Mars, and his Terms, (with those of Saturn)are nearly united, I judged that her Personal extinction would take place when that Direction shewed its Effects; as it was followed by the Semiquartiles of Mercury, and Saturn in the Zodiac, \&c. The Part of Fortune was likewise directed to the Mundane Square of Saturn, and the Moon also applied by Converse Motion, to the Quartile of Mars in the Zodiac, at the same time; hence we may observe, that the Sun, Moon, and Part of Fortune were all afflicted by directional Motion, at the time of the Native's Death.

It may probably be asked by some, why the giver of Life to the Parallel of Mars in the Zodiac, at the Age of thirteen Years, and eleven Months, followed by his Body at fifteen Years and eight

Months, did not produce Death ; it is evident that no Sickness, or danger, worthy of notice, could possibly take place from those Directions, because the Sextile of Venus, combined with Jupiter's Terms, and his conjunction, by Converse Direction, interposed at the place, and dissolved the apparent violence; but before I conclude this Nativity, I shall make a few additional observations thereon, which may be of use to the Students, if they think proper to attend to them. The old Tables which contain certain Numbers in the signs of the Zodiac, being the supposed Planetary Terms, are all whimsical notions, and void of Truth; the true Terms arise from clear demonstration, they may be discovered by Calculations in every Nativity, and those Calculations fully prove their use and power; the fact is, they are those places where the Benefics. and Malefics claim their greatest influencein the Zodiacal, and Mundane Circles, and are found by adjusting the difference, as the Stars approach to, or decline from the preceding Angle at Birth; thus Mars is $\mathbf{6}^{\circ} \mathbf{2 7}^{\prime}$ from the Meridian, and his distance then taken by proportion from the Eastern Horizon, which he beholds by a Mundane Square applying, his Terms fall in $\mathbf{7}^{\circ} \mathbf{2 3}^{\prime}$ of Libra, and those of Saturn, in $9^{\circ} 41^{\prime}$ of the same Sign. Now in this Nativity, when the Sun was directed to the Zodiacal Parallel of Mars, for Deaih, the old Terms of Venus followed, which by the Ancient Method, ought to have preserved Life, if they were true, and their Effects of sufficient power. With little difficulty it may be proved, that all the twelve Constellations have changed their Ancient places, so that the Sign Aries has now got into Taurus, and the Constellation Taurus, into that of Gemini, and so of all the other signs of the Zodiac. There are many errors, and deficiences in Nativities, which I have not disclosed, that have long been received as absolute Facts, though I have never given credit to any of them, because when I demanded proof, I soon discovered that it was not to be obtained, and as I have lately observed that it would be difficult to turn many from their old favorite path of Error, into that of 'TRUTH, I shall not attempt to perform that office ; however I shall observe, that if the Students think they have not yet labored long enough in their trammels, X
 more pioizily, by proper pructiven amidexpasience. 1

Having stated the Directions which destroyted the Life of this Native, I aball now consider the quality of the Disease, which terminated the Native's existence. Jupiter; who is posited in a cadent station, is weak, and afflicted by the Budies of Mercuryx and Satom, in the fiery sign Leo, near. Cor. Leonis, so that when the giver of Life, arrived at the firs Direetion, which produced Death. Jupiter was directed a farw Degrees afterwards, in the subsequent trein to the Body of Marss and Venus. came also to a coujunnction with Mercury, and Saturn; hut these Directions have na.pawer at any time, to give Death, but Diseases only, from which it is plain, that hath those benevolent Planets, beiout afflicted by furious Directions; prodnced great injury to the internal parts, governed by those benign Stars, and the Signs in which they are positad at Birth, regard being had to those places, where thair: hostile Motions are finished. Jupiter, and Venus, govern the Langes, and Liver, \&c. and being afflicted in the Radix, and by. Direetional Motionlikewise, they al ways prodnee incurable Diseases, and a : wasting of the Flesh; hence it is obrious, that.a Cuspuauption. was therariginate Cause of this Native's disolution.

In Her last Revolution, the Sun, the significator of Lifer was in Square to Saturn in the Zodiac, and in Mundane Square to Mars; the Moon was also in opposition to her own plaee in the Nativity; Mars was likewise in zodiacal Quartile to Jupiter, Mercrry; and ${ }^{\prime}$ Saturn, in the Geriture, and the Moon applied to the Declination of the three superior Planets in the Revolution; an of which aretestimonies of a malignant Nature. At thie time she died; the Moon was among violent fixed Stars, in a snbterranean station, and applied to the Opposition. of Satum, Mercury, and Mars, and ${ }^{3}$ that Luminary at the same time, had rearly the Declination of Saturn, Mercury, and the Sun. Mars, the chief mortal Promittor, was Cadent in the twelfit, in exact Square to his place at Birth, and the Moon was in Quartile to the Prorogator, in the Geniture.
 SE. 40 m . P. M. and wep Drownad in the Foosdyke, nag-Lineqh Ranegraunti, on the 12th of July, 1825, about 9 o'clook in the Morning, Aged sisteen Yeang, eight Months, and thirteen Days,

This young Woman lived in Lincoln when she gave me the above time of her Birth, which she said was true, having been told it was taken with much care. As soon as I beheld the dreadful rypeuswrece of the Collestive Bedies in the Figure of Bith, I was manediately convinoed that in wiolent Death by Whator, was phainly wisthe; for $t$ roust appser exident to those, who have but unte othillin shis noblo, and Sublime istudy, that a more alarming poettion if seldom seen, than that which fatlows; particularly When the Directions ithat destrojed Tifo, are minutely oxamined, with ithose parts of the IVeavens in which they complete their eousies. It is wall kaewn to many respectable parsons in this City, that I Suetidithe time of thit3 Notive's Death, end its quality, whick oertainly were not dificult to perform, whon the proper Preeapts in thit Work are:attended to, by which, wot odity the leugth of Jilith, kat alsothe quality of Death, whether naturga, orviolonts ave coen diseoverad. According to my assual preactice, 1 finst computed the duration'of Lifo, and as the Sum is Hylog, it:appesmed obvious to me, that when he arvivod on the Westera Horizon, followed by everal Directions of a Mortal nature, this Native would be no more, that Direotion of the Apheta to the Whest, being the first that made th appeatanioe in the Anarctical train. Now as mat previons Caderlations, and Judgment liave baen confirmed, it is mmoseitle for prejudies, or any artful Chicanery, to oppose those tuminous Facts, which admit of no refutation. There are cortain dharactens, who vainly magine, that they are quadified to diacever the Hmits of a Man's understameling, bunt when they ineet with those difficuties in Scicnoe, which they bannet comprehond, (not being willing to-ackriowledge thatethets a\%: supheriar to the in in Livenature, )
 every means in their power, to tevel odiens, and gross beuriting $\mathbf{X 2}$
against that, which throws their Talents in the shade, and makes them appear contemptible in the Eyes of the Public. Those whe consider themselves qualified to oppose a Science, ought to understand all its principles, otherwise their arguments, and observations, will soon obtain the ignoming they merit, and the Authors, instead of gaining reputation, will establish their own disgrace to succeeding Generations.

Some have, to their shame, asserted, that this is not a commendable Study, and even those who make much noise concerning PopisH surersition (which is as dangerous as the Tommqhauk in the hand of a.savage, )display their Learned and dogmatical sentiments, against this Divine, and sacred Learning, which our forefathers studied with the greatest diligence, and admiration. I have been told by those, whose Heads are filled with prisstcraft, that no person can perform these things, if he had not an evil Spirit to assist him, o sहame! o shame! are we to be told in this enlightened Age, and in the nineteenth Century, that Astronomical Calculations, the use of the Globe, and the common rules of Arithmetic, are performed by the assistance of beelaebub, who is probably, not a learned Astronomer; how degrading must such simple, and delusive notions appear to every impartial observer. With respect to the dissolution of this young Woman, some learned sciolists, (with affected Jargon,) say, that she died an untimely Death. I never have yet been able to understand the literal meaning of that, which appears to be an Allegorical Theme, or a jarring, and confused misrepresentation of something, which requires plain confirmation; for how can the Death of this Native be considered untimely, when it was visibly apparent in the Heavans, at the moment she came into the World, and which, no human Efforts could alter, or prevent; the word untimely, appears to represent, what happens before its natural time, or in fact, what Mortal Men are disposed thus to stile it; but according to all the researches which have been made in this venerable Study, combined with god's most mowy word, in its purity, it is manifest that, "what-
ever is, is right". The time and quality of every person's Death, are unfolded to us by Secondary Causes, according to the ordinance of the MOST HIGH. How imperious and immoral must those persons be, who pronounce the Death of an individual untimely, merely becaase it is of a violent nature in the Eyes of Mortal Men, though it was decreed in the etrernal mind of the ALMIGHTY, from all Eternity. Many hundreds of such Examples as the above, are continually displaying themselves to us, (if we do not survey them too superficially) as we travel through this Mortal life, to the glorious Mansions of everlasting felicity, all of which prove, the unfring, and immutable decree of that ALMIGHTY CREATOR, who is blessed for evermore.

In this Nativity, the alarming testimonies which indicate a violent Death, are many ; the Moon is afflicted by the Opposition of Mars, from cadent stations, and is also in Square with Mercury, who is of the nature and power of both the Malefics. The Sun, the giver of Iife, is near violent fixed Stars, in the Watery Sign Scorpio, and applying to the Parallel of Saturn's Declination, and also to his Body in the Zodiac, and Mundo; he is likewise afflicted by the Rapt Parallel of Mars, and Mundane Parallel of the Moon, and according to his radical position, as he descends towards the Western Angle, by the Motion of the Primum Mobile; he applies to the Mundane Parallel of Mars, both by Direct, and Converse Motion. The Part of Fortune is also posited in the Watery Sign Cancer, in Mundane Square to Saturn, Venus, and Mercury. Jupiter is afficted by the Opposition of Mars, and also by his Parallel of Declination, and Venus is conjoined with Saturn, and Mercury in a violent part of the Heavens; so that both the Luminaries, and the benefics are afflicted at the time of Birth; all these are configurations of a most malignant Nature, and as all the Celestial Bodies, except Mars, are in Watery Signs, it is evident that Drowning would be the Cause of her Death, which took place at the time I have stated above.

The Sun is the right Prorogator, and the Directions that destroyed Life, were, when he descended on the Cusp of the Seventh House, followed by the Square of the Moon in the Zodiac, and also by the Rapt Parallels of Mercury, Venus, and Saturn; the giver of Life was likewise directed to the Body of Mars in Mundo, by Converse Motion, and liy Direct Direction, he arrived at the Quartile of Mars in the Zodiac, and though the rays of Jupiter, and Venus interposed in these Motions, their feeble power was of no avail, as they were afflicted in the Radix, and were also united in the train of Mortal Directions that cut off Life.

There are some who will doubtless ask, why the Sun, when he was directed to the Body of Saturn, at the Age of eleven Years,
and five Months, followed by the Conjunction of Venus, and Mercury, did notdestroy life, as the Hyleg passed those baneful Directions, in the Zodiac, and in the World. I know this will prove a mystery to many, as the Native did not experience any Sickness, or danger, at that time; there is no doubt that those Directions would have had sufficient strength to have produced considerable danger to Life, but not Death, if their violent power had not been diminished by the other Motions, through which their Effects were defeated; for when the Sun was directed to the Body of Saturn, that Malefic was received in the Terms of Jupiter, therefore as his baneful power was dissolved, he consequently could not transmit any dangerous qualities to the giver of Life; and moreover, at the time when the Apheta arrived at his Body, he was, by Directional Motion, far removed from his radical station, and constituted in the Rays of Jupiter's Quartile in the Zodiac; all these Motions ought to be properly observed by all Students, as they will find in their practice, that it is not merely computing Directions alone, that will make them proficients in this Sublime Science, without diligent Study, and intense application; neither will all the Quadripartites that have yet been translated (or supposed to have been translated,) unveil this, and many other mysteries. It is said these Works were written by Ptolemy, but in the manner in which they are now given to the Public, it is plain to all Students, who think proper to exercise their understanding thereon, that the most they contain, is a large portion of useless home-manufactured-matter, to confuse the practitioners without Examples, or any proofs to show, that what has been written is founded on Truti. I relate these plain Facts, which probably may give offence to some, but that I regard not. The genuine Principles of this Science, as they were taught by Prolemp, are short, and concise; his Original greek quadripartite, in Manuscript, is yet preserved, and has never been Published, though the time may probably arrive, when it will be given to the Public, including a collection of one hundred Modern Nativities, to prove all the Rules by true Calculation, and Judgment; but
with respect to the Quadripartites lataly Published, we have no more proofs of their having been originally written by the immortal ProLemy, than we have of their been composed by the Roman Pontiff.

I have ratier made a digression, but shall now return to my subject; In the Secondary Directions, the Sun applied to the Conjunction of Saturn, and Mercury, and Mundane Square of Mars, the Moon was in Parallel with Mars in the World, and also applied to his zodiacal Parallel, the lesser Malefic, haxing the Declination of the Moon in the Nativity; that Luminary also applied to the hostile stations of the enemies in the Progression; and in the last Revolution, the Moon made application to the Declination of Saturn, and Venas was on her own place, and also on the station of Saturn, and Mercury in the Nativity; Saturn was likewise in Square to the Moon, Jupiter, and Mars in the Radix. At the time she was Drowned, the Moon was applying to the Body of Venus, and Saturn, those Planets being in Quartile to Jupiter, and Mars in the Nativity. The Sun the giver of Life, was in the Watery Sign Cancer, with Castor, and Pollux, separating from the Body of Mars, having the Declination of Saturn, and Mercury; the Moon was also in Square to her own place in the Geniture; hence we may observe all those powerful Motions of the Stars, at those periods, when they were united in obnoxious places, and being joined with the primary Directions, they consequently augmented their power, by various applications, which correctly correspond with the time of Death, and the. quality thereof.

The following Geniture is that of a persen now living; he thas Born in the City of Lincoln, and the estimate time of his Birth was given to me in the Month of 'October, 1824, which was supposed to be correct; but I will not be positive respecting the accuracy "thereof, thaving no occurrences worthy of notice for rectification, without which no Nativity can be truly corrected; but I have reason to believe that there is not much difference between the Estimate, and the true time of Birth. It is well known to several persons now living, that the Father of this Native, (though unacquainted with this Celestial Study,) was anxious to obtain the times of the Births of all his Children, as near as possible, but what induced him to attend to such observations, I know not, as the true principles of this Science were but litte known, or practised at that period. About fifty Years ago, the times of the Births of Children in general, (according to all the information I have been able to obtain,) were seldom ascertained with precision, owing to which, many errors have been committed, for when the Oblique Ascension of the Ascendant, and Right Ascension of the Zenith, are incorrect, (occasioned by a false time of Birth,) they not only alter all the Directions of the two superior Angles to Promittors in Mundo, but likewise cause the greatest errors in all the Mundane Parallels, and in fact, in every Arc of Direction in the Nativity, more or less, in the Zodiac, and in the World, both by Direct, and Converse Motion; but I need not trouble the Reader with a reiteration of remarks, which are manifest to the meanest capacity. The imbecile, and hostile appearances of the Celestial Bodies at the time of this Native's Birth, clearly indicate at one view, that he will never rise in the World above his present station in Life. Mercury represents his Person, Profession, \&c. because he is ruler of the Ascendant, and Medium Coeli, he is conjoined with the Sun, who is in his fall, under the Earth, and that Luminary, who is the general significator of Promotion, \&c. does not receive any assistance from benign applications. The Moon is also in a subterranean Position, in opposition to Jupiter, who is in a cadent station, in his detriment, and in sextile with Saturn, in
signs of long Ascensions, and Venus, who govens the second House is impotent, being posited in the violent Sign Scorpio, in a subterranean place, where she is afflicted by the Square of Mars in the Zodiac, and Mundo, from obscure parts of the Heavens, that Malefic is also applying to the Conjunction of Jupiter, in an obnoxious position, and the ruler of the Part of Fortune is afflicted in the Radix, and deprived of all his Dignities, I could easily explain what all these violent positions, (combined with the Effects of the Directions,) will produce, during the few remaining Years of his Lifo, bat as they exhibit transactions, which every attentive Student in this Science may readily discover, I shall make but few observations thereon, as all the Planets are weak, and none of them dignified at the given time of Birth, neither can those Stars that behold the superior places, produce any benign Effects which will appear in the following Figure of the Heavens.

The Dignity of Hyleg is claimed by the Sun in this Geniture, and if we examine those Directions of an inimical Power, which that Luminary has passed several Years ago, it will become evident that they could not produce any visible Effects, because thair apparent obnoxious qualities were reduced, and counteracted, in proportion as the giver of Life applied to those Mundane placess, where the power of the benefics were most prevalent. The Sun was directed to the zodiacal Parallel of Mass, at the Ags of twentyseven Years, and nine Months, but that Divection could not produce any injury to the Native's Health, because the Hyleg was then directed to the Sextlle of Jupiter in Murndo, by Direct Motion, he also applied to the Terms of bath the benefics, being surrounded by their rays in the mundane Circle, when the Prorogator anived at the Eastern Horizon. At the Age of thirty-six Years sad six months, the Hyleg was directed to the Parallei of Satum's Dectination, but that Direction could not give any Illness, or danger, because the giver of Life applied to the Body of Jupiter, by Converse motion, and was also received in his Terms, where, the raye of Venus, by the Altitude of the San's Circle of position, becartic subsequently conjoined; from which we may observe, that those Directions to mars, and Saturn to the giver of Life, could not produce any indisposition; and when the Sun was directed to the Body of Saturn, many pretenders would judge that the Native would depart this Jife at the time limited by that Direction, but it passed over at the Age of forty-five Years, and one month, and left the Native in good Health, and Spirits; therefore from what has been observed, it is plain, that the Sun to the Body of Saturn could neither kill this Native, or produce any injury to his Life, for the Directions of both the benefics followed, by which the violence of that Direction was impeded; but when the Hyleg is directed to the Body of mars by Converse Direction, united with others which will be in operation at the same time, then this Native will be no more, as the Effects of those Directions will prove mortal, at the Age of fifty-one Years, and two months.

I should not have given this Nativity a place in my Work, if there had not been a whimsical question connected therewith, which I conceive may require an answer. The fact is, a Gentleman now living was Born in the Town of Boston, Lincolnshire, October 3rd, 1778, 16п. 30m. p m, by which it will appear that the Native at Boston, was Born twenty minutes in time, earlier than the Native of Lincoln, and therefore the question is, as there are only twenty Minutes difference between the time of each Birth, will both these persons depart this Jife at the same time.

I have stated the period of the Demise of the Native of Lincoln, in whose Geniture the Sun is certainly the giver of Life, but in the Nativity of the Native Born at Boston, the Sun's Directions cannot produce Death, because he does not claim the office of Prorogator, therefore the Ascendant becomes the giver of Life, and at the Age of sixty-nine Years, and eleven Months, that point of the Heavens will be directed to the Semiquartile of the Sun in Mundo, followed by the Body of Saturn, and Mundane Square of Mars, which will certainly produce dissolution; it is therefore not difficult to prove, that these two persons who were Borm in the same Hour, and but little more than thirty Miles distant from each other, will not depart this Life at the same time, for by true Astronomical Computation, the difference between the Mortal Directions in each Geniture, will be eighteen Years, and nine Months, so that there will be that space of time between the Demise of each Native, I therefore hope that I have given a satisfactory answer to this learned Question, which has occasioned much illiterate disputation.

Mr, G. J. Ping whs Born at the time gizen in the followipg
 two Years, nine Months, and Give Days:

This Gentleman was by Professjon, a Schoolmaster, and resided at Brigg, in the County of Lincoln; at his request I calculated the Directions in his Nativity in the Autumn of 1821, and as both the Luminaries are in Aphetical places, it cannot be difficult to select the proper Moderator, the right of which belongs to the Sun. As soon as I had viewed the different positions and configurations of the Stars in the Radix, I firsh computed the period of dissolution, which all those who Study this Science, ought allways, to ascertain, before any Judgment is given; for if hạt mpst important, and interesting subject, be omitted, the practitioners will frequently wander from one thing to anothere and predict impossi, bilities, apd the times of various, Frents, which, were, to come to pass. when the Native is in his Grave,

I have repeatedly urged the propriety of first selecting the true $H_{y} l$ leg inevery correct Geniture, whether the Native be an Infant; or has advanced to Years of Maturity. The true time of the Birth of a healthy Female Child, named Spalley, (who was Born in the City of Lincoln, February 18th, 1825, 10y. A M.) was given to me far Judgment; it certainly could not be difficult to predict dissolution before the end of the first Year, for both the Luminaries, and Ascendant are afflicted at the time of Birth; the Sun the giver of Life was applying to the Square of Saturn in the Zodiac, and also to the Body of the Moon, \&c. without any assistance; the fact is, this Child died on the 14th, of August, in the same Year, but there are other Causes that produce Death in Infancy, independent of Directions, which I have explained in this Work; I therefore mention this Example to show, that if I had neglected noticing the proper use of the true Apheta, my Judgment would have been crroneous; for some pretenders to this Science declared, that the Child would live to Years of Maturity, and Marry a person of
some Property, and remain happy, and comFortable when both the Ldiminaries were directed to the Sexfilies of saturin, and Mèrcury, trrie of Jupiter in the Zodiac, and Body of Venus, but all this preposterous jargon is totally refuted, by her personal extinction, which took place, according to my previons prediction, before the end of the first Year.

But some will doubtless say, that the Nativity of this Child has nothing to do with the Geniture of Mr. Ping, buit as Yam writing for Public information, I conceive that'nothing ought to be omitted, that will convey genuine Instruction to the Students in this Science; and as the time of the Death of this Child, häs puzzled some Practitoners, so also has the period of the dissolution of Mr. Ping on the same principles defeated the Judgment of those Professors, who are ignorant of the true Doctrine of the Sphere, and Rapt Motion of the Earth; for as the time of Birth is correct, I defy any Man to have previously predicted the true time of his Death by any Rules, except those alone that are detivered lity the immortal Ptolemy, for the Sun is certainly the giver of Life, and does not meet any violent Directions in the Zodiac at the timeof his decease, and therefore if there had not been those in Mundo, of equal Malefic power to have destroyed Life at the time be died, the Native would have been now living, and in good Health; therefore I ought not to be reproved in recording such Examples, as may be deemed beneficial to the Students, if they think proper to receive them; by which they may perfectly understand, (in the most perspichou's madner,) how to apply the established Rules, in all primhry Directiótis, and Judgment.

At the Age of sixteen Years, and nine Months, this Native's Life was exposed to the greatest danger, by a severe Sickness, which continued with unabated violence, for several Weeks. The giver of Life was then directed to the Body of Saturn, by Converse Motion, the Effects of which were of an alarming Nature, and threatened dissolution, but the Hyleg advanced to the Zenith by the Rapt Motion, and entered the Terms of both the benefics, his polar Elevation being constituted in the orbs of Venus, so that the Life of the Native was preserved, and the Effects of that Direction could not produce Death; but as soon as the Apheta was disengaged from those obnoxious Motions he then subsequently applied to other primary Directions of a more furious nature, there being no benign applications sufficient to dissolve any portion of the evil, owing to the weakness of the position in all its parts. The Sun who is Hyleg, is afflicted by the Square of Mars in the Zodiac, and Jupiter is combust, and in Quartile with that Malefic, being near the Body of Saturn; Venus is also in Square to the Moon, and in Sesquiquadrate with Mars in the Zodiac, and Mundo; so that both the Benefics, as well as the giver of Life, were violently afflicted at the time of Birth, which induced me to judge, that when the Sun was directed tothe Parallel of Saturn, by the Rapt Motion, followed by the Mundane Square of Mars, and Parallel of Saturn's Declination, the Life of this Native would be destroyed; he died at the time I had predicted, and though the Directions of Jupiter and Venus were united in the Mortal train to the Prorogator, yet I did not regard their apparent power, which could be of no avail whatsoever, though consequently, by their union, they showed the quality of Death, which must appear plain to every attentive Student in this Science.

By Secondary Motion the Moon was applying to the Squares of Saturn, and Jupiter in the Zodiac, and the Hyleg had nearly the Declination of the superior Malefic; Mars waslikewisein Mundane Square to Venus in the Nativity; and from the Progression, the Malefics afflicted both the Lights in the superior places. In his
last Revolution the Moon applied to the Body of the Sun from an augular position, and Mars occupied the Aseendant at that time, and was in Mundane quartile to both the Luminaries. At the time of his Death, Saturn had arrived at the Square of his place in the Geniture, and Mars had returned to his exact station at the time of Birth, being in Quartile to the place of the giver of Life in the Radix; these stations of the Stars duly considered with the Directions, are of an ominous tendency, as both the Enemies were afflicting all the Vital significators when the Soul took its flight to the immortal abodes of happiness, and Glory.

The next is the Nativity of a young Lady, who whe Betn at Boston, in the County of Lincolin, on the 4 th of May, 1803, at twenty Minutes before eight o'Clock in the Morning; the above time was given by her Friends, who informed me that I might depend on it being exact, as it was taken by a correctod Clock, with the greätest care. This Native died on the 11 th of Mas, 1822, Aged nineteen Years, and seven Days.

Some pretenders to this Sublime Study, made a few observations on the Geniture of this young Lady, when she was living, and took the Ascendant for the giver of Life, though that point of the Heavens cannot be Hyleg, neither can the Sun, Moon, or Part of Fortune claim the Aphetical power; for it is evident, that if the Ascendant had been the true Apheta, the Effects of its Directions to the Semiquartiles of the Sun, and Mercury in Mundo, and Square of Saturn in the World, would certainly have destroyed Life, at the Age of nine Years, and four Months, there being no benign assistance at that period to preserve Life; but the unexpected demise of this Native, has caused those pretenders to witness the full extent of their Error, which has impeached, and invalidated every portion of their sterling Skill, (if they ever possessed any,) in this Science.

There are some who always take the Ascendant for Hyleg, in every Nativity they pretend to Calculate, and by their absurd notions, and ignorance, they endeavor to make the untaught Vulgar believe, that they possess all the sterling Wisdom of the Eastern Sages; they generally inform those who apply to them that they are Born under such, and such a Planet, and that they are abie to discover all the Moles, Marks, or Scars on the person of the Native, and also, that the configurations of various Stars at the time of Birth, give black, dark, grey, or blue Eyes, \&c. \&c. Now I do affirm that all this is complete nonsense, and absurdity, and cannot be too much exposed, being performed for the purpose of deceiving those who apply to such lerrned Sages for Judgment; for you must
observe that most of those talkative Gentlemen are very soon puzzled; therefore from what I have stated, it is evident, that when a person applies to a Professor of this Science, and delivers to him the true time, and place of his, Birth, the Native does not require such pality. Themes to bé sounded in his Eass, which are irrelevant to the Questions proposed to be resolved from the fine time of Birth; for the form and stature, Moles, Marks, and colour of the Eyes, Hair, \&'ćc. \&cc. are wholly unconnected with these Astronomical Calculations, though they are doubtless a refug for ignorance to which most of those Professors, (who know but little of Directional Motion,) generally resort. All the Questions required to be answered from a correct Genitpre, are, the true periods when all important Events, (during the Native's Life,) will come to pass, including their respective qualities, and whether they are good, or evil.

The Dignity of Hyleg in this Geniture is claimed by Venus, who is not only in an Aphetical Place, but receives the proper Prorogatory power from every part of the Heavens, \&c. which entitle her to possess that Dominion. I have computed the Anaretical Directions in full to the true giver of Life, not only to assist the genuine Student in his labors, but also to explain to him the vanity, and absurdity of selecting a false Prorogator, which is done in numberless cases, by which the fallacious Judgment of the Eractitioners is justly held in derision, and the invalidity of their \$kill rendered contemptible to every Scientific observer in this department of Celestial Philosophy.

The Student may observe, that as Venus is the giver of Life, no violent Directions could produce Death; but those alone to which that Planet was directed, for she beholds the Moon by an opposition, and the Horoscope by a Mundane Sextile," and disposes of both the Luminaries at the time of Birth, and also of the preceding Cohjunction; these were the chief reasons which induced me to select that Star for the true Prorogator; I computed the following Directions in full for the Native's Death, which correctly corresponded with the period of that solemn Event.
the polar altitude of venus, is thus calculated.
As her duplicate diurnal horary times. ................... . 2946
Is to her distance from the Zenith........ . . . . . . . . . . . . 2719

Arc of Direction to the Trine in Mundo ..... 395
Subtract the nocturnal horary times of Saturn. ..... 137
Remains the Arc of Direction. ..... 2558
Question.-It appears that you have taken much trouble in computing the Mortal Directions to Venus, as Hyleg in this Nativity, but why should not the Effects of the Ascendant to the Body ot Mars have been sufficient to have destroyed Life at the time she died, with a very small alteration in time, as it came up so near the other Directions, which you have allowed to be the only cause of the Native's Death ?

Answer.-If the Ascendant had been the giver of Life, this Native would háve died in her Infant state, but the Horoscope has nothing to do with Diseases, and Death, in this Nativity; and therefore it is a most pitiful, and absurd notion to mention the Ascendant to the Body of Mars for the Native's demise, as that Direction could not produce any Illness, neither could any visible Accident appear frôm its supposed Malefic power; now I could wish that those who take the Horoscope as the giver of Life in other Genitures, (when it has no right to exercise that Dominion;) to notice, what Effects the Ascendant to the Body of Mars will produce, when the Directions of both the Benefics immediately follow in regular succession to that point in the Mundane Circle. In this Example, when the Ascendant was directed to the Body. of that Malefic, it was succeeded by the Mundane Squares of Jupiter, and Venus, with their Terms, so that the violent power of Mars was dissolved, by which he could not give the least Sickness, or danger. . But the only true Anaretical Directione, weres. Venus Hyleg, to the Parallel of Saturn in Mundo, by the Rapt Motion, and also to the Square of Mars in the Zodiac, with the Parallel of Saturn's Declination, Zodiacal Parallel of the Moon, and Nesquiquadrate of Saturn in the Zodiac, and in Mundo; these were the Directions that destroyed Life, which may be seen progressively arranged in the foregoing Table.

By Secondary Motion the giver of Life was in a violent station, in Quartile to the place of Mars in the Geniture; the Sun and Mars were in Mundane Square, and the Declination of both were nearly the same; the Moon was on the Mundane place of Mars in the Nativity, and in Zodiacal Square to the Apheta in the Geniture. In the Revolutional Figure for the nineteenth Year, the Moon was applying to the Opposition of Saturn, and Mercury, and also to the Declination of Jupiter, Mars, and the Sun; she also applied to the Square of Mars in the Nativity, and had separated from her Radical place. At the time she died, the Hyleg was near her place in the Geniture, and the Moon was likewise in Square to her own radical station, and was also in Quartile to the place of Mars in the Nativity.

Several respectable Gentlemen who reside in Paris, have requested me to publish the Nativity of the Duke of Bordeaux: I have complied with their requests, and have given his Geniture a place in this publication. The time of Birth communicated tod me, is thatiswich I have inserted in the following Figure. Those Scientific persons who, are acquainted with the primitive principles of Stellar power, will acknowledge, that this Nativity is a very remarkable one, when considered in all its parts, which may be proved bythe illustration of the Precepts given in this Work.

At the Baptism of this illustrious Native, who is now living, the late Louis the eighteenth, spoke to the Assemblage as follows. 'Let us invoke for him the protection of the Mother of God, the Queen of the Angels, let us implore her to watch over his Days, to remove far from his Cradle the misfortunes with which it has pleased Providence to affliet hiz Relatives, and to conduct him by a less rugged path, than I have trod to Eternal felicity.'

It will probably appear singular to some, that I have omitted the Computations of all the various Arcs of Directions in this Geniture, and given them in others in a copions manner, throughout the whole of this Work; my paxticular reasons for so doing must ${ }^{\prime}$ remain in obscurity, as I do not wish to give the least offence to: any party; and as: I am not disposed to create discord, or" multiply disputations among those Characters, who are, or may be interested in subjects that are yet in Oblivion, I therefore trust that' I hate not acted improperly in omitting the primary' Directions, and Judgment, having given all the correct numbers that are required to complete the various Calculationss, the sublintity of which cannot fail to elevatid tre miad ef thioe who are inolined to contemplate the infinite Wisdom, and power of the Ounipotent Caeatob, in his wondrous Works:

As several persons will doubtless be disposed to compute the Directions in this Nativity, I have given the true Circles of Positions of the Planets, with their Oblique Ascensions, and Descensions, under their own Poles, whichimmediately follow ; they are accurately Calculated, so that the Practitioners, may, without much difficulty, or trouble, calculate the true Arcs in an accurate, and explanatory manner, which will amply recompense them for their labors, and give sufficient satisfaction.

The primary distance of the Sun from the Horoscope, is $55^{\circ} 9^{\prime}$, and his Seminocturnal Arc $92^{\circ} 39^{\prime}$; his duplicate horary times below the Earth, are $30^{\circ} 52^{\prime}$, and his Pole of Position $24^{\circ} 22^{\prime}$, under which his Oblique Ascenion is $186^{\circ} \mathbf{2 4}^{\prime}$.

The distance of the Moon by her Latitude from the Zenith, is $53^{\circ} 20^{\prime}$, and her double diurnal horary times, $42^{\circ} 46^{\prime}$; her Se. midiurnal Arc is $128^{\circ} 19^{\prime}$; these numbers produce her Pole $26^{\circ}$ $51^{\prime}$, and her true Oblique Ascension $80^{\circ} 15^{\prime}$,

The distance of Saturn from the Western Horizon, is $59^{\circ} 46^{\prime}$, and his double horary times above the Earth, are $30^{\circ} 38^{\prime}$, his Circle of Position will then become $\mathbf{2 2}^{\circ}$, and his Oblique Descension, $11^{\circ} 23^{\prime}$.

Jupiter's distance from the West, is $26^{\circ} 51^{\prime}$, and his duplicate horary times above the Earth, $27^{\circ} 20^{\prime}$; his Semidiurnal Arc is $81^{\circ} 58^{\prime}$, and his Pole $37^{\circ} 26^{\prime}$, consequently his Oblique Descension will be $342^{\circ} 22^{\prime}$.

The distance of Mars from the Northern Angle, is $10^{\circ} 44^{\prime}$, therefore his Seminocturnal Arc is $105^{\circ} 26^{\prime}$, and his double horary times $35^{\circ} 8^{\prime}$; his Pole of Position will then be $6^{\circ} 42^{\prime}$, and his Oblique Ascension $213^{\circ} 41^{\prime}$,

The primary distance of Venus from the Horoscope, is $\mathbf{6}^{\circ} \mathbf{2 0}^{\prime}$, and her duplicate horary times above the Earth $35^{\circ} 4^{\prime}$; her Circle of Position will then be $47^{\circ} 3^{\prime}$, and her Oblique Ascension $127^{\circ} 28^{\prime}$,
$\Rightarrow$ By: Rigeht Ancemions the distatiee of Marcury from atthe Imum Ceplic. is $38^{\circ}$. $53^{\prime}$, apdidiadouhl herary timani $300^{\circ}$ i4 $4^{\prime}$;reonsequently his Seminocturpal, Are in $90^{\circ}$ 111, which will prodace his Circle of Position ; $29^{\circ} \ldots 3^{\prime}$, and his Oblique Ascension $184^{\circ} 3^{\prime}$.

The next is the Geniture of a Gentleman, who was Born pear Boston, October 7th, 1789, 13н. 0M. P M; and died on the 15th of August, 1814, aged twenty-four Years, ten Months, and seven Days,

This Native had acquired considerable knowledge tu titr tuepartment of Astronomy, which the Astral significators of Science, \&c. exhibit in the following Figure of his Birth. His noble and excellent qualifications, and pious demeanour were such, that all those who had the pleasure of his acquaintance, soon became convinced of his superior Talents in Literature, which, combined with a dignified Mind, free from Pride, and ostentation, truly adom the character of the Scholar, and the Gentleman. He was not much attached to the sports of the Field, yet he sometimes accompanied my Father in Shooting, and Coursing, in the Jordships of Helpringham, Hale, Heckington, Swaton, Scredington, Spanby, and Donington, \&c. \&c. He computed the Moon's Direction to the quartile of Saturn in the Zodiac, in his own Geniture, (that Luminary being the giver of Iife, and observed, that he believed it was a baneful Direction, as Saturn was in the eighth House, and posited in the Watery sign Pisces, he therefore told my Father that he anticipated considerable danger to his Life by Water, when the Effects of that Direction were in operation, but his Judgment in this case was founded on the false principles of the old School, for it is not the lord of the Eighth, nor Planets posited in the Eighth, that can produce Death, but the true Anareta only, which will always be found to perform that office; hence it is of no consequence where the destroying Star is stationed at the time of Birth, neither isit of any importance what Mansion of Heaven it governs in the Radix, for it will always retain its nwn destructive power, except its influence becomes defeated by other Motions, which may be visibly discovered by its Progressive movements, at the period when the giver of Life comes in contact with its Malefic Directions, joined with others of a similar nature in the Zodiac, and Mundo; for if the Hyleg be not then assisted by benefic Rays, and

## 192 CELESTIAE PHILOSOPHY,

if the power of the $\Delta$ nareta be not countercted at the same time by Directions, or Terms of a reverse denomibation, then consequen $\$$ ly diveolution will take place, in definnce of all human exertions; but the Examples I have given in this Work, will doubtien be deemed sufficient to eatablinh the verity of theer obervations.

This Native was Married twice, the first Matrimonial Union took place under the Effectes of the Direction of the Moon to the Trine of the Sun.in the Zodiac; and his Marriage to his second Wife was solermized, whenithe Moon was directedto ithe Sextile of Jupiter in Mttrido; by Direbl Motion: At tha' Aige of twenty: $:$ three Years and on Month, the Hyleg was directed to the Square of Saturn in the Zodiac, at which time, "according to the Native's. Judgment, he expected his tife would be exposed to the greatest danger by Water, but no dargerous Accident of any kiad took place, for the Moon was then directed to the Rapt Parrallel of Venus, and her Terms, which destroyed the apparent dangerous Effectg of that single. Direction; but though it had not power to destroy Life; yet it produced a lingering disease, which continued until the time of his Death. The Mortal Directions which I previously computed, were, the Apheta to the Parallel of Mars in the Zodiac, the Semiquartile of Saturn in the World, by Converse Motion, and Square of that Malefic in Mundo, by Direct Direction, succeeded by the Hyleg to the Semiquartile of Saturn in the Zodiac, by Converse Motion, and Sesquiquadrate of Mercury in the Zodiac, and Parallel of that promittor in Mundo, by Direct, and Converse Motion; these were the Directions which I allowed for his Death, and though the Moon the giver of Life, was directed to the Sextile of Jupiter in the Zodiac, which appeared to dissolve a large portion of the violence of the above train of Directions, yet his benign qualities were wholly destroyed, for he was directed at the same time to the Rapt Parallel of Saturn, he also ascended to the Body of Mars, and applied to the opposition of Saturn, so that he could produce no assistance, for being thus overcome by the power of the Enemies, he specified the nature of the disease that destroyed Life, which was a Consumption, and though every human effort was used for the recovery of the Native, yet all exertions proved ineffectual, as it was not in the power of the most learned Physician, to subdue the progress of that dreadful disease, which terminated the Mortal existence of this valuable member of society

In the Secondary Directions, the Sun was applying to the Square of Mars, and the Moon had nearly obtained the Declination of the Sun; the applications from the Progression, were of an inimical power. [n his last Revolution, the Hyleg, was posited on the place of Saturn in the Nativity, the Sun, and Mercury were also in Quartile to that Malefic from Cardinal Signs, and at the time he died, Saturn was posited in the Oriental Horizon, in Opposition to Venus, there was likewise a new Moon a few- Hours before his Death, which was celebrated in a violent part of the Heavens, and boththe Luminaries were at the same time conjoined with Mars in the Radical Ascendant, and in Quartile to the place of the Hyleg in the Geniture.
da a further confirmation of the potwer, and important use of the true Proogator, and that the Angles cannot be computed to Directions in the Zodiac, I have inserted the following Nativity, which is trat of a young Man, who was Born in the City of Pinicoln, March $11 \mathrm{tb}, 1802,20 \mathrm{H} .12 \mathrm{M}$. P. M. and died on the 2nd. of June, 1823, Agad twenty-one Years, tivo Monlhs, and twerity-one Dayt.

When thir Native whe eligheces Yewof Ayo, he give me the above time of his Bith, which lie wild wescorully takea by his Grandfathet, who remafneif confident that the atimete time coudd
 as I had viewed the Figure of the Heaveriss I tolat the rfative I had rather not make any observations thereon; he asked me why I took so little notice of it, and further observed, that he did not wish to give me trouble, without remuncratinn; I told him that the whole Position, (when properly considered in all its parts,) was of a violent nature, and indicated severe afflictions, and short Life, but when I delivered this impartial Judgment, and that the twenty-first Year of his Age would prove fatal, he appeared not to place confidence in what I related, being at that time in a good state of Health; he said there were many learned Men in this Nation who did not sanction this Study, and if the art of Calculating Nativities was to be depended on without error, it appeared extraordinary that the Truth of the Science was not publicly developed beiore the nineteenth Century. I told him I had no doubt that there were many persons of high respectability, who, having received a liberal Education, studied this Scienes in or private manner,being perfectly satisfied with its trutb, and utility, and I was also well convinced, that there were others that appeared to be rich and pious, who $t_{i}$ aduced, and condemned these Astronomical enquiries, and at the same time applied themselves closely to the Study and Practice of other Arts of a detestable nature, which are too abominable for description; the sanguine actions of some of those beings, who are frequently bedecked in the Robes of innocence, will never be forgotten, as hy their command, the notorious candibals, (on the verge of the Sepulchre,) received directions to .finish
their last unmerciful EEPash on the sithered limbs of dying individuals. The Native asked me what my opinion was, respopting Deaf, agd D Dumb Peeples as:some of both Sexes frequently visit the City of Lincoly, and appone to relata-strange things, concerning the Fortune of these who apply tothem for advice; I told hin they were all knavers and Waffoonds, and that I was sorty to observe,many repedtalale Persons hiecame the dupes of such notarious inpostorss, as some of them. coud hear, and speak as ocoassionrequites; but 4 always abserved that those who Possess superipr Talentsio Learoing never notice suph Beings, but view their vile, and artful pretensions wilih the contoppt they merit. But the Deaf, and Dumb, are not the only aharaeters who impose on the credulous, for there are others, who, being deptitute of shame, are now Publishing the refuse of sererd-disgraoeful Arts, which ought to be trealed with unuiversal contequpt, ip thise eqlightened Age.

> TEE MAGTCIAN of THE NTNETEENTH'GENTURY, DTSSECTED.
> Reader behold! the Sage Magsiciat 4 bien,
> To show his Arts, with wonder, pad surprise

> To dupe his Readors, with romantic pranars;
> He aims at Cash, and if his Works will sell,
> The Pirate is conceal $d$, and all is well;
> The learned Writer, hides his proper Napve;
> Which prowes he's not quite destitute of Shame;
> He lays hais Bait, with ipvocating Arts,
> To show what glyostif secrexs he imparts:
> Falsehood for truta, he's not asham'd to tell,
> Because we know not where the sage dees dwell;
> From all the dege fesearcaiss he has made,
> He's in the dark, and carries on his Trade;
> Arm'd hy deception, he, with sapient care, Brings Anecdotes to make the vulgar stare. 2E2

Romances oft, the thoughtless mind engage, More than the Truth, in this our learned Age; Deceit and Guile are mask'd,-Mark well the Man; Then you'll discover the impostors plan; By Rites he'll teach you, without fear, or dread, To hold Nocturnal converse with the dead;
Thus through his Visions, he's dispos'd to stuin;
His learned Pages, for the sake of Gain;
By tricks like these, his knavash efforts show,
What wit, and learned Parts can sometimes do:
His talismans, (those wondrous things of note,):
With all their force, were never worth a Groat;
There's Geomancy, which some say, excel
All other Wonders, if its manag'd well;
His puny schemes, to every Man of sense,
Declare at once, the Pirates impudence;
All those alluring Arts, to puzzle Youth, He has reviv'd, without a word of Truth;
Come candid Readers, now behold the Snare
Is laid to take your Cash, therefore beware;
For all these things are nothing more, or less,
Than vile deceit, in its polluted dress;
PROOFS I DEMAND, but nothing can obtain,
Except ocd stories, insolent, and Vain;
Some Students may, (without much care, imbibe
Tle ghostly visions of this learned Tribe;
When HONEST PARTRIDGE wrote, he took a view r $_{r}$
And gave Examples of this Tearned Crew;
He stiles their Practice,. 'cheating tricks', and then,
Proclaims them villains, and dishonest Men;
Now Straggling Members, spread those forged Lies;
Which in their tender conscience, they despise;
I therefore trust, the Students will disdain,
Those groundless Arts, which I've exposed plain;
Alarm'd at trute, the Pious Jugglers fly,
Which soon discover all their VILLANY.

208 CELESTIAL PHILOSOPHY,

As there are several Pretenders to this Science, who consider themselves able to direct the Angles to the Aspects of the Stars in the Zodiac, contrary to the true Motions of the Heavens, I could wish to be informed, how they would proceed to make the Square of Mars, by their Method, correspond with the time of this Native's decease; though I believe it would not be difficult to anticipate what they would bring forth, as a plausible Cause of this Native's Sickness, and Death; they certainly must be convinced, (if they know any thing relative to the true Doctrine of the Sphere,) that such Motions as they consider to be right, are certainly wholly undemonstrable, which the use of the Celestial Globe will evidently Prove; for it must appear obvious to those who are acquainted with the true Method of Directional Motion, that in the preceding Geniture, thereis but one true Method, by which the Ascendant can be directed to the Square of Mars, and that is, by directing the Zenith to the Body of that Planet; for when that Direction is finished, which is when Mars ascends exactly on the Meridian, then, and then only, the Ascendant will come to the true Quartile of that Star; in the World; not by any vain, and imaginary Movements, but by those unerring, and demonstrable Motions of the Heavens, which become visibly apparent to those observers, who, by diligence, and delight, contemplate the regular harmony, and Effects of the Celestial Bodies, in their different stations, in all parts of the Heavens.

In the Geniture of this unfortunate young Man, the Ascendant is the giver of Life, and the Directions which I computed for his Death, were, the Horoscope to the Square of Mars in Mundo, followed by the Body of the Moon, which will destroy Life in any Geniture, when the Hyleg is not supported by benevolent Directions, which is the case in this Example. At the time of his Death, the Moon was directed to the Sesquiquadrate of Saturn in Mundo, by Converse Motion, and also to the Square of that Malefic in the Zodiac, by Converse Direction, followed by her own. Semiquartile in the World, and the Sun to the Parallel of

Saturn"s Declination; and though these violeni Directions Frave no power to destrog Life, yet, being joined with those which wele the true Cause of dissolution, they increased their Mortal pobiverIt would be unpecessary were I to point out the hature of thè conn: flicting diseases, which terminated his Mortal career,' as that must appear plain to all those, who are but superficially censersant io this Sublime speculation.

In computing the Secondary Blifections, the Eluminaties were: in Conjuaction, and both the Malefics afficted the Eastem; and Western Angles, by an Opposition ; Jupiter was in the Aseentantsin conjuaction with Saturn, and in Opposition to Mars; whers" the Lights, at the time of the Progression, became afflieted by ther. subsequent inimical Motions, below the Earth; the Mbow way int. Quartile to her own place in the Nativity; and was dikewise in the same violent Aspect with the Sun in the Mnndane Circle; the: three saperior Planets, having nearly the sane Declinations Inthe Revolutional Figure for his twenty-first Year; the Moons and ${ }^{\text {F }}$ Mars, the Mostal Promittors, were in Conjunction with the' Sunn? and Saturn was near the Ascendant; the Moon was likewise in' al' $^{\prime \prime}$ Mundane Square to her radical place: At the time he-died; that Luminary was near the Zodiacal; and: Mindane Aquare of theSan, and applied to the obnoxious Rays of Statarn, and' Mars; frow malignant stations, and Terms; the Moon also appitied to the " place of the Sun in the Radix, and Satnm wnas in Syuare to the place of Mars in the Geniture, and that Mortal Promittor (by,primary. Direction,) was in Quartile to the Zodiacal position of. Saturn and Jupiter, in the. Nativity,

 Dàjs.

In: thite Nathity; it may seem:doubtfuditorsone, whiat Staronghs:

 ture is: Dintrallsand therefors: theie' Sums' by being posited! in the-

 Now as Mercury is posited in the Ascendant, he may appear to claim the Aphetical influence, and more particularly, because he seems to dispose of the preceding new Moon, which happened in the twenty-eighth Degree of Virgo, in the Dignitics of Mercury ; therefore there is no doubt, that some would select that Star, to represent the Aphetical Office, but the Horoscope advocates would take the Ascendant for Hyleg, and thas, by directing that point of the Heavens to the Body of Mercriry, for the Native's Death, with a little alteration in Time, they wrould become culpable in adhering to those inconsistencies, which cannot be adjusted without confusion; and thus by adopting this absurd practice, they would then direct their supposed Prorogators to each other, (without the power of a proper Anareta, as the apparent cause of the Native's Death.

The above Method of selecting the significator of Life, is nothing more than presisting in errors, and rejecting Truth, which will show the Practitioners, as they advance in this Study, that they will never be able to perform any Computation worthy of notice, so long as they adhere to such grounclless notions; for in this Nativity, it is impossible for the Ascendaut to be Hyleg, neither can Mercury, or Venus, possess any portion of Vital influence; but the

## 212 CELESTIAL PHILOSOPHY,

true Aphetical power, belongs to Saturn alone, he having the proper' Dignities, to qualify him to receive, and support that office; for if the Latitude of the Moon be properly considered, at the time of the preceding Conjunction of the Luminaries; it will then appear evident, that she was in Square to Saturn, and disposed of him at that time; and in the Nativity, was also in reception with that Planet, as the true giver of Life, having each of them nearly the same Parallel of Declination; the Hyleg was also in Quartile with the Sun in the Geniture, and occupied the proper Aphetical place in the Heavens; so. that I did not discover any difficulty in selecting the proper Apheta, which I positively affirm, belongs to Saturn in this Nativity, which is proved by the quality of the Native's Death, and the Directions that were the true Causes thereof.

There can be no difficulty in defining the quality of this Native' Death, for all the Celestial Bodies afflict each other by alarming configurations; the Sun is of the nature of the enemies, being in Square to Saturn, from Cardinal Signs, and cadent places; he is in opposition to Jupiter, and that Planet is afflicted by the Quartile of Saturn in the Zodiac, and Mundo, and likewise by the Parallel of Mars' Declination; the Moon is in a Mundane Square to the Ascendant, and is afflicted by the Quartile of Mercury, and Zodiacal Parallel of Saturn, and that Planet, being the Prorogator, is posited in the watery Sign Cancer, in the Ninth House, which with other additional, and malignant testimonies, prove in the clearest manner, that Drowning would be the cause of the Native's Death,

Hence we have sufficient arguments to confirm the violence of the Native's dissolution, and the Anaretical Directions, demonstrate the time thereof, in the plainest manner; for at the period of his Death, Saturn, the giver of Life, was directed to the Parallel of Mars, by the Motion of the Primum Mobile, and also to the Semiquartile of that Malefic in Mundo, by Direct Direction, with the Square of Mercury in the Zodiao, which is of the nature of the Malefics, followed by eight others, without any benevolent assistance, to diminish their destructive power; it is also worthy of observation, that the Sun, Moon, Ascendant, and Part of Fortune, were all afflicted by violent Directions, united with the Mortal train to the Hyleg: the first Direction for Death, was six Months deficient in shewing its Effeots, but the Figure I have given, is computed according to the estimate time, so that if it was two Minutes earlier, that Direction to the Apheta, (at the head of the Mortal train,) would correctly correspond with the time when he departed this Life; all the others follow in regular order, which may be seen in the Table of Directions.

In computing the other Motions, it will be found, that Saturn, the giver of Life, had descended below the Western Horizou by

Secondary Direction, and was in Square to Mercury in the Zodiac; the two Luminaries were in obnoxious places, and Terms; the Moon also applied to the radical place of Mars; and in Mundo. was configurated with Saturn, Mars, and Mercury in the Progression from the superior $\Lambda$ ngles. In the Revolutional Figure for the sixteenth Year of the Native's Age, both the Malefics had nearly the same Declination; Saturn was in Opposition to his place in the Geniture, and received the hostile rays of the Sun from a violent part of the Heavens, and Mercury was on the place of Mars in the Nativity. At the time he was Drowned, (which was January 5th, 1814, at seven o'Clock in the Morning.) the Moon was near the Cusp of the Western Angle, applying to the Square of Mars, and oprosition of the Sun; the Apheta was conjoined with the Sun in the East, united with the Parallel of Mercury's Declination, he being in Zodiacal Quartile to Mars in the Geniture; the Moon was in Mundane Square to her place in the Nativity, and applied to the Zodiacal position of the Apheta at the time of Birth.
.MisyAmelia Farrow, was Bom in Lincoln, on the 2nd of March, 1799; at 6н, 45м. A. M; and departed this Life, on the 4th of October, 1824 ; Aged twenty-five Years, seven Months, and two Days.

The above time was given to me by the Native, a few Years before her Death, which she said was taken with the greatest care, by her Parents. ' I first observed, that the Sun was the giver of Life, and at the Age of seventeen, eighteen; and nineteen, he was directed to the Squares of Satnin, and the Moon in the Zodiac, from violent Cardinal Signs, the Effects of which,' I judged, produced considerable danger to her Life, by Sicknéss, \&c'; she said in the Years I mentioned, she was violently indisposed, and was not expected to live; but those Directions, though "they certainly were of a dangerous natiure, could not destroy Life. I will therefore prove to the : Students, (in as plain a manner as possible, and in few words,) the true Causës which defeated those apparent Mortal Directions, from executing the work of Mortality.

It is evident that nothing worthy of notice can be performed in this noble Science, without such Directions as are accurately computed, by which, the time, and quality of all important Events, are previously known; but though these Facts admit of no refutation, yet there are other subjects of considerable importance, which the Students ought to know, if they are not too learned to receive instruction. The Sun (to whom the Dignity of Hyleg belongs,) is strong. and free from affliction in this Geniture, he is in conjunction, and Mundane Parallel with Venus, aud near her Parallel of Declination; he is also applying to the Sextile of Jupiter in the Zodiac, and is received in the Terms of that benefic, as he ascends the Eastern Horizon, by which his powerful influence (as Prorogator,) is considerably augmented; now as Saturn, and the Moon, are in Opposition to cach other, from Cardinal Signs, it clearly shows the apparent fury of their Quartiles, when the Hyleg was directed to them in the Eastern Angle; for when the Sun came to
the Squares of Saturn, and the Moon, he was then directed to the Sextile of Jupiter in Mundo, by Converse Motion, and also to the Quartile of that benefic in the Zodiac, by Converse Direction; and it must be further observed, that when those two Malefic Directiong were in operation, Saturn was directed to the Sextile of Jupiter in the World, by Converse Motion, and also to the trine of that benefic, by Direct. Direction; the Moon was allso directed to the Mundane Trine of Jupiter, by Converse Motion, neap the samé period. Hence it is plain, that: the places of all the violent Promit 4 tors, and their Directions, must always be strictly regarded, well as those of the Significators; for when the Promittora are unable to execute their -Mortal Effects, owiht to benign Directions, and Terms, to which they are joined, they then only produce diseases, \&c ; so that when the giver of Life, in this Geniture, was directed to the Quartiles of Saturn, and the Moon, in theZodiac, those $t$ wo Promittors, then received the power of both the benefics, by Directional Motion, to which they were united in the Mundand Circle. From these remarks, the Students may observe, that the time of Death ought not to be pronounced, when the Hyleg meets with Malefic Directions, until they have properly examined the intervention of all the benefic rays, and those places in the Heavens,' where the Promittors arrive at that time; for if their violent power be defeated, by other Motions, so that their influence becomes of a reverse quality, Life will be preserved ; but when they retain their awn destructive power, without alteration, or diminution, the Native will then be removed from the land of the Living.

## THE DIRECTION\& CONTINUED.

ARC. TIME.

The Directions that destroyed the Life of this Native, were, the Sun Hyleg, to the Parallels of Mars in Mundo, by Direct, and Converse Motion, and also to the Zodiacal Parallel of Mercury, and Bodies of the Moon, and Mars, with the Parallel of Mars' Declination, the Mundane Square of Saturn, and Quartile of the Moon in the World, by Direct Direction; and though the rays of Jupiter interposed in the Mortal train, he was unable to abate the influence thereof, being afflicted by the furious Directions of the Malefics at the time of Death, hy which his benevolent qualities were destroyed, both in strength, and operation, so that he could not render any assistance to proserve Life, though he properly specified the quality of Death, of which I need not make any comments, having (in preceding Examples,) stated the nature of the Mortal diseases, produced by that Star, when his power was overcome by obnoxious rays.

By secondary Direction, the Hyleg applied to the Square of Saturn, and the Moon was nearly in Quartile with the Sun from Cardinal Signs, and sabterranean positions. In her last Revolution, the Moon separated from the Body of the Sun, and applied to the Opposition of Mars, who afflicted the Horoscope by his opposite rays; Saturn was then in Square to Mercury, being posited on the place of Jupiter, and Mars in the Nativity. At the time sbe died, the Moon was applying to the Quartiles of Saturn, and Mars, both of which were ir. Square to the true significator of Life, in the Genitare.

My observations are founded on Truth, and will ever remain irrefutable; but there are many noisy pretenders to this Science, who believe themselves able to perform wonders, and in fact,' if wonders are to be executed by long Epistles, with a host of whimsicalchimeras, and sentevces without meaning, I have no doubt that such characters may be esteemed superior to their contemporaries; $\mathbf{l}$ will therefore give the following true time of a Female's Birth, that thry mayerect a Figure, and pronounce Judgment
thereon. The Native was Born near Lincoln, on the 29th of May, 1797, at $7 \mathrm{f} .20 \mathrm{~m}, \mathrm{P} \mathrm{M}$; and at the time ofmy writing this, (which is, November 3rd, 1825,) she is in a good state of Health. The Sun is the giver of Life, and has passed the Bodies of Satum, Mercury, and Mars, with their old Terms, and the Moon at the same time was directed to those Promittors by Converse Direction; now if those learned Gentlemen in this Science, are able to prove by true Astronomical demonstration, why those Directions did not destroy life, and when the Native's dissolution will take place, I shall then acknowledge that they are acquainted with some of the true principles of this Sublime, and incomparable Study.

\[

\]

The next is the Nativity of a Child, that was Born near Donington, in the County of Lincoln, on the 6th of September, 1814, at 7n. 10m. P.M; and died July 4th, 1825, Aged ten Years, and tei Monthss nearly.

The stations of the Stars in this Geniture, plainly show the shoit duration of the Native's Life; for their qualities in the different parts of the Heavens, are malignant, and impotent, which, with the Radical affliction of the Prorogator, produced an ill stale of Health, during the time she lived; and though the most judicious means were used for her recovery, I judged, that in a few Years, she would exchange this transitory Life, for a glorious immortality, as all the vital significators are afflicted in the Zodiac, and in the World, without assistance, which show the rapid approach of Death, in the early part of Iife.

This Native died by Directions to the Hyleg, and not by the violence of the position; and in selecting the true Aphetical significator, I have no doubt that some would take their favorite point, the Ascendant; but I shall endeavor to undeceive such persons by this Example; for as neither of the Luminaries are in an Aphetical position, the true significator of Life, is Jupiter. who has the proper Dignities to claim that power, according to the true principles of the mamortal Ptolemy: for that Star is in an Aphetical place, and disposed of the preceding full Moon, and at the time of Birth, was ruler of the Part of Fortune, being conjoined with the Sun, and in exact Trine to the Moon in Mundo, and also in Opposition to the Ascendant. The following is the Figure of Birth, with the Directions, which produced the Terminus Vita.

> _She foll, Like some fair Lilly, or a Poppy green. Which from its Parent Root, the Blast hath rent.'

$\begin{array}{llll}21 & 22 & 23 & 9\end{array}$
213312314

I calculated this Nativity in the Month of November, 1821, and foretold the time of her Death, which is well known to many. It is probable that some may object to my selecting Jupiter, as the true significator of Life, because he is under the Earth, and under the rays of the Sun also, which, (to those who consider themsolves learned in this Science,) may appear contrary to my rules, and practice. I do aftirm that the Luminaries, \&cc. when in a subterranean.location, cannot exercise the Hylegiacal power, except when they are within the proper limits of the Eastern, and Western Horizon. Now if the Latitude, and Declination of Jupiter, are taken into consideration, his distance from the Western Angle, will be found to qualify him to become the true Apheta ; the authenticity of which, may be proved by those who think proper to compute the true Motions, and distances, according to the Examples I have given in this Work.

In the preeeding Table, the Reader will observe, that there:are twelve Directions to the Hyleg, which formed the Mortal train, in regular suceession; the Body of Mercury, and the Terms of Saturn, were first encountered by the Apheta, which shewed the time of Death; and as Mercury is.in Zodiacal, and Mundane Sesquiquadrate with Saturn, and also in Quarties to the Moon, and near the Body of Mars, and his Terms, he consequently became of the nature of both the Enemies. The Hyleg was directed to the Sextile of Venus in the Zodiac, which were united with the Directions for dissolution, but her rays could not render the least assistance, though their union shewed the quality of the lingering disease, by which the Native's Life was destroyed.

The Sun was conjoined with Jupiter, Mars, and Mercury, by Secondary Direction, and Saturn afflicted the Horoscope, in which position he communicated his violent power to the Luminaries, and Benefics in the Progression. In the Revolutional Figure for the tenth Year, the Moon was in a violent Sign, and in a cadentstation, having separated from the Quartile of Mars, she then applied to the

Square of Saturn in the Zodiac ; Mercury was in Opposition to the Ascendant, and the three superiors had nearly the same Parallel of Declination; Saturn was also on the place of the Moon in the Nativity, in which position he was in Quartile with the Sun, and in Square to the Radical place of that Luminary. At the time she died, the Sun, Mars, and Mercury, were in Conjunction; the Moon was also afflicted, and the Hyleg received the malignant power of Saturn, and Mars, in the Mundane Circle, all which confirm the verity of these important Calculations, and the baneful Effects of the primary Motions, particularly when their rays are projected in an uniform manner, from Nocturnal applications, to the true significator of Life.

The next is the Geniture of Eliza Ingraham, who lived at Billingborough, near Folkingham, Lincolnshire; she was Born on the 2nd of August, 1771, at 21 H .55 M. P. M.

The time of this Birth was lately given to me, by one of thè Native's Female Relatives, now living, who requested me to state the period, when any particular Event would take place; I was also desired to ascertain, whether the Native was likely to Travel, or take long Voyages, ard, if she would be fortunate, or unfortunate, in general, during Life. As soon as I had examined the violent positions of the Celestial Bodies, and the Mortal Directions in Infancy, I immediately told her, I was confident, that her relation was dead, and that she died before the end of the sixth Year; the answer which 1 received, was, that my Judgment was true, and, that she departed this Life, at the time I mentioned. I then asked, what induced her to try to deceive me, by false questions, as I was not disposed to waste my time, to satisfy her curiosity; she said, her chief motive was, because she wished to be convinced of the truth of the Science, and, that she had now sufficiently proved the accuracy of my Judgment; she said she had always been an unbeliever, and considered the Science to be a false, and groundless Study; but was now of a different opinion, and firmly believed in its truth, when practised by skilful Professors. I usked her, if she could put me in possession of the time of her own Geniture, she answered in the affirmative, and produced the true time thereof, written by her late Father. I then computed the Directions of the Hyleg, to all the mortal Promittors, (which were seven in number,) and, that she might not any longer consider these Astronomicel Computations, as imaginary whims, and vain delusions, I informed her, that before the end of the Month of June, 1832, she would then, no longer remain an inhahitant of this Earthly World.

In this Nativity the Sun is the giver of Life, and as he was surrounded by the formidable irradiations of Saturn, Mars, and the Moon, without any assistance from Jupiter, or Venus, I peremptorily affirmed, that the Child died, when the giver of Life was directed to the Zodiacal Parallel of Saturn, followed by six others that were joined in the deadly train, which I have inserted in the preceding Table. The position of Mercury, conld not produce any injury to Life, because the Terms of Jupiter, immediately suceeeded his Radical station, but the rapidity of the subsequent Directions of the Moon, and Mars in the Zodiac, and Mando, shewed, that the quality of Death was a putrid Fever, which soon destroyed the Native's Life. If the Students think proper to attend to these Examples, and first select the Hyleg in their Cakculations, they will be able to discover all premeditated deception, which may be arffully brought in action to traduce, and dishonor this Celestial Science. This Nativity was given to me, after the Native had been forty-six Years in her Grave.

In computing the other Motions of the Stars which have superior dominion in those places, where the interjacent rays of the Promittors form their union with the true significator of Life, it will plainly appear, that their Effects were powerfully increased in the ascending part of the Heavens, by whieh their violence was collected from both the superior Angles, according to their progressive Movements above the Earth. In the Native's last Revolution, Saturn was in the Ascendant, in Square to Jupiter, and Mars, from Cardinal Signs, and Angular stations; Venus was combust of the Sun, and the Moon applied to her own Radical place; and likewise to the Quartile of the Sun, the true Prorogator. All these violent applications, when compared with the Primary Motions, plainly prove their Effects, in conveying additional power to those Directions, which produced the Native's Death.

The following Nativity is that of Mr. John Ward, who was Born at Scotter, near Wragby, in the County of Lincoln, Ocwber 23rd, 1791, at 6H. 48m. P. M, and died on the 7th of May, 1809, Aged seventeen Years, six Months, and fouirteen Days.

The Celestial Bodies in this Geniture, exhibit a remarkable appearance of violence, for they are all under the Earth, except Saturn, who is in the twelfth Honse, by his Latitude, Retrograde, and in Opposition to Mercury, Jupiter, Venus, and the Sun, from violent Constellations, and places: the Moon is applying by a Converse Motion, to the Body of Mars, who is in the Nadir, near the Heart of the Lion, that Malefic being one of the Mortai Promittors in the Directions for dissolution.

The Death of this Native was occasioned by his drinking cold stagnated Water from a Ditch, which I have reasons to judge, (from the whole position,) was considerably impregnated with Animal matter of a poisonous quality, from the Effects of which, he languished a considerable time in severe affliction, before his personal extinction took place.

The Horoscope is the $\Lambda$ pheta in this Nativity, and the Directions that destroyed Life, were, the Semiquartile of Saturn in the World, the Mundane Square of Mars, and Sesquiquadrate of the Sun, their true Astronomical Computations, are performed as follow.

The Right Ascension of the Mediam Coeli, is, $310^{\circ} 12^{\prime}$, which sabtracted from the Right Ascension of Saturn, with the Circle, $374^{\circ} 15^{\prime}$, his distance from the Zenith will be, $64^{\circ}{ }^{\circ} 3^{\prime}$, from which suhtracting his triplicate diumal horary times, $47^{\circ} 6^{\prime}$, the Arc of Direction, of the Ascendant to the Semiquartile of Saturn in Mundo, will be $1 \boldsymbol{6}^{\circ} \mathbf{5 7}$.

The Horoscope's Direction to the Mandane Square of Mars, is ascertained, by subtracting the Right Ascension of the Nadir, $130^{\circ}$ 12 ', from the Right Ascension of Mars, with his Latitude, $148^{\circ} 42^{\prime}$, and the Direction's Arc then becomes, $18^{\circ} 30^{\prime}$.

The Right Ascension of the Imum Coeli, is, $130^{\circ} 12^{\prime}$, and that of the Sun, $208^{\circ} 12^{\prime}$, by subtraction, the distance of the Sun from the Northern Angle, is, $78^{\circ} 0^{\prime}$, from which bis treble nocturnal horary times, $53^{\circ} 0^{\prime}$, being subtracted, the Arc of Direction of the Ascendant to the Mundane Sesquiquadrate of the Sum, will be, $25^{\circ} 0^{\prime}$.

The Effects of these Directions to the giver of Iife, were the true Cause of the Native's Death, and in consequence of the violence of the position, the Directions of the Benefics could not give any support to the Aphetical point ; the Sun's Direction to the Quartile of Mars in the Zodiac, was united with those to the Hyleg, that produced his demise ; bat their combined power whas retarded for a time, owing to the stations of the Promittors, as they slowly approached the Anaretical places, in those subterranean parts of the Heavens, where their mortal rays became in contact with the true significalor of Life.

In arjusting the Secondary Directions, and comparing them with the other motions of the Stars in their Genethliacal stations, wo find the Moon posited in the Western Angle, in opposition to Mercury, and the Sun, and applying to the Quartile of Mars, in the Radix, who was separating from his own place at the time of Birth, and near the Moon's plaee in the Nativity. In the Revolutuonal Figure for the seventeenth year of his age, the Moon was in Opposition to the Radieal Ascendant, and Mars was near the Moon's place in the Geniture; these configurations of the Stars, when their Declinations are considered, with the Progression, \&c. evidently show their violence, as they assume the most formidable appearanee, in uniting their power with the mortal primary Directions. At the time the Native died, the Moon was in Square to the superior Malefic, and Jupiter was in Opposition to Mars ; Venus was likewise in opposition with Saturn, by which the Benefics were afflicted by both the Malefics, at the time of Death.

The neaxt is the Nativity af: Mry Greogre Colding, of aNorth Hyckham, . near Lincoln; he wom barnon the ideth of Augnest,
 eight years, ten manthe, and sixteen days.

I was, personally acguainted with this Native, at fow years before his, death, his hanesty, and integrity, complined with every inestimable virtue, which constitute the humpn charanter, are far beyond the limits of my feeble pawer to , deseribo.. In the narly part of his.life, he mroved in a respectable station, but wefore his dissolution, he was placed in adverse circumstances, yot his firmness of mind, probity, and fidelity, remained the same; and though the mas insulted by the vulgar, and treated with, unbecoming insplanae, by ignoble persons, yet he was always unmoved, and in that maidet pf all his difficulties, and WRONGS, he possessed that christian fortitude, which enabled him calmly to view those :atorms af affliction, (the effects of which, he was unable to mitigate,) with a serene, and smiling countenance.

Testators should, by wills, or deeds, employ, Honest Trustees, who never will annoy The Orphan's Rights; but then, if they too late, Those Reptiles in Sheeps clothing, nominate, The die is cast, they'll oft embezzle all, Whether the sums in CASH, are great or small. With house, and lavd, (the vulgar often say,) Kuavish Trustees, can never run away; I'll grant the fact, but what the Lands produce, They very oft convert, to their own use; Stealing the rents, and profits of the same, Thereby possessing a most roguish name. All public courts, the guilty robbers fear, And with reluctance, in the same appear ; The injur'd heirs, there, all their Rights obtain, And leave the Robbers in wemorse, and pain ;

Excuses then, will be of no avail,
 The Law declares this тиuTH, which none deny, There is no WRONG, without a,REMEDY.

The preceding Directions are computed according to Astronomical principles, and those three Arcs to the Angles, which I have here selected, prove the correctness of the time of Birth; as they accurately correspond with those Events of the Native's life, which they produced at those periods, when their Effects were in operation.

At the Age of eighteen Years, and four Months, the Ascendant was directed to the Body of Saturn; at that time he suffered severely from the Effects of a dangerous fall; he was also much afflicted with a violent cough, and pleurisy, which continued several Months before his health was re-established.

The Horoscope was directed to the Square of Mars in Mundo, at the Age of twenty-seven Years, and three Month3, which was the cause of a sudden, and alarming sickness; and as the power of the Promittor was increased by the rays of the Sun, and Mercury, the baneful Effects of that Direction produced the greatest danger in Life, by a violent Fever, with pains in the Head, and Breast, and difficulty in breathing, \&c.; but after he had remained in that afflicted state, during twelve Days, he perfectly recovered, to the astonishment of his Medical Attendants.

The Ascendant arrived by Direction, at the Opposition of the Sun, (or the Mediun Ceeli to the Mundare Square of that Luminary,) at the age of sixty Years, and ten Months; the Effects of which, produced great difficulties, and troubles; he was then afflicted by an intermitting Fever, with injury to the Eyes, and also with acute pains in the Breast and Abdomen; those who attended him, believed that his recovery was impossible, but though this Direction was armed with direful fury, owing to many existing causes, which must appear plain to every attentive Student, its Effects could not destroy Life, because the Ascendant is not Hyleg, and therefore, though it was unable to produce Death, yet, after he recovered from its malevolent power, he nevir enjoyed a good state of Health any more, during the remaining Years of his fuife.

The Moon is the Apbeta, or giver of Life, and the time of Death must be discovered by her directional Motton to throse Promittors, which have power to produce dissolution.' At the Age of fiftyeight Years, and eight Months, the Prorogator was directed to the Square of Saturn in the Zodiac, but that Direction could not produce any Sickness, or danger to the Native's Health, even though it was joined with the Sun's Parallel in the World, by Converse Direction; for the Trine of Jupiter, and Quartile of Venus in the Zodiac, immediately followed, united with the Trine of Venus in the Zudiac, and Mundo, by Converse Motion; but when the Moon was directed to the Opposition of Mars in Mundo, by Converse Direction, and also to the Square of Saturn in the World, by Direct Metion, succeeded by the Trine of the San in the Zodiac, and Parallel of Mercury in Mundo, by Converse Direction, (those two Promittors being of the nature of the Enemies in this Geniture,) I judged, that be could not survive the Effects of those Directions, particularly, because the Hyleg was sabsequently directed to the Opposition of Mars in the Zodiac, by Converse Motion, and to the Parallel of the Sun in Mundo, by Direct Direction, with the Quartile of Saturn in the Zodiac, by Converse Motion. These Directions formed the mortal train to the giver of Life, and thougb the rays of the Benefics interposed. yet they could not save, being weak, and surrounded by the obnoxious Directions, and stations of the Malefics. The Native died of an inflamation of the Bowela, at the time 1 had previously predicted, from which it is evident, that the Effects of the above Directions to the true Hyleg, were the original cause of his Death.

By Secondary Direction, the Moon was in Opposition to Saturn; from the Fastern; and Western Angles, both being in Cardinal signs, and that Laminary was in Opposition to her own place in the Nativity. In his last Revolution, the Moon was applying to the Square of Saturn, and Opposition of Mars, by Converse Direction, Mars being in the West, in Opposition to the place of Saturn in the Geniture; the Moon had returned to her own station at the time
of Birth, and Saturn was in an Angular position, in Conjunction with Jupitar. At the time he died, the Moon was in Quartile to: the Sun, and applied to the Square of her own Radical place; Saturn was near the station of Mars in the Radix, and the latter Malefic was applying to the Quaride of Saturn's place at the time of Birth; all these Motions, and applicatious of the Stars, shew their powerful, and bapeful influence, in giving assistance to thoee Primany Directions to the Hyleg, which destroyed the Life of the Native.

The primitive Priaciples of this Science, are regularly taught by the Author of this Work, by whom, any Person may have any Nativity calculated with expedition, on immediate application.

John Davison was Born near Hull, on the 21st of July, 1808, at 6H. 48m. P. M. and was drowned, September 26th, 1825 ; Aged seventeen Years, two Months, and four Days.

I have observed that those persons, in whose Genitures, the Stars are unfortunately posited, generally disregard, and treat with levity, and contempt, all human admonition ; and instead of receiving the warnings displayed by the Celestial Messengers, with fortitude, and composure, they impiously condemn them in the most insulting, and ignominious terms of disapprobation. It is out of my power to relate the abuse, levelled against the Heaveniy Hosts, as Secondary Causes by those, who are unbelievers ; though the most notorious Infidels feel their powerful influence, at those periods, appointed by the Most Higr, during the tine they inhabit this Terrestrial Globe.

This Native in company with five others, attended a Marriage, in the Church of Cardney, near Lincoln; and in attempting to cross the River Witham, in a small Boat, one of them, regardless of danger, shaked the Boat with considerable violence, which occasioned Water to flow over the sides; in this situation, as the Boat was fast filling, they all went to the stern, by which it instantly upset, and they were all precipitated into the Water; two others of the Names of Dent, and Kennington, (each about twenty years of age,) were drowned with this Native; the other three were saved with the greatest difficulty. The time of this Native's Birth was given to me by his Parents, who are now living. The following Figure of the Heavens, and Directions, exemplify the Tarminus Fita, with the quality of Death.

There cannot be stronger testimonies of a violent Death, in any Genitare, than in this under consideration. The learned and immortal Prolemy, has, in his precepts, clearly defined the cause, and quality of Death in all cases, whether violent, or natural, and, he plainly informs us how to select the rulers of Death, in any Nativity, which are chiefly to be regarded; for, if the Laminaries are in the superior Angles, and afflicted by the Malefics in violent Signs, and Terms without assistance; and at the same time, if the Benefics are found in obnoxious places, and afflicted by Position, and are also inimically joined in the Directions for dissolution, then, when such testimonies prevail, a violent Death is evidently foreboded, which is always pointed out by the Effects of the Mortal Directions, when they are in operation to the giver of Life; the first of which ascertains the true period of dissolution, (when benevolent rays do not precede,) and those that follow, indicate the quality thereof; thus when remarkable, and violent Deaths happen, we always find both the Malefics ruling the Anaretic places, and assuming power, and superior dominion over the Luminaries, and afficting them at the same time in the Radix, as well as in the subsequent train of the Mortal Directions, which was the case in this Nativity.

Those who adhere to the infallible precepts, (contained in this Work,)for defining the Apheta, will find, that in the Geniture of this unfortunate young Man, the Sun claims the dominion of Prorogator, and, at the time of Death, that Luminary was directed to the Quartile of Saturn, in the World, Converso Motion ; succeeded by the Hyleg to the Body of Mars, in the Zodiac, Converse Direction; the giver of Life, also subsequently arrived at the West; Scmiquartile of Mars, in Mundo, by a right Motion; Rapt Parallel of Mercury ; and Parallel of Mars, in the World, Converse Direction; followed by many other direful Motions to the significator of Life. Some may probably say, that the two foremost Directions, in the Mortal train, are only Converse, and have not aufficient power to
produce dissolution; to this I answer, that both those Malevolent Motions, were formed from Angles, and Signs of the Watery Trigon, and, under those circumstances, they became equal to the formidable efficacy of any direct Aspect, and, were qualified with others, to portend Death by Drowning. The foregoing Motions of the Celestial Bodies, were preceded by the giver of Life, to the Zodiacal Parallel of Mercury, who is of the nature of Saturn, in the Radix; and, when this Direction was completed, that Star was received in the Orbs, and Terms of Mars; but, as the Promittor woas retrograde, and declining to the Occidental Horizon, it was retarded in shewing its Effects, until the other Motions of the Stars displayed their ominous, and inimical power to the Sun, the legal Prorogator of Life.

In computing the Secondary Motion, we find, the Apheta was Angular, and applying to the Zodiacal Quartile of Saturn; and, that Luminary was in Mundane Square to his position, in the Geniture. In the Revolutional Figure, the Moon had just separated from the Square of Mars, in the Zodiac, and was exactly in the same Aspect with Saturn, in the World. At the time he was Drowned, the Moon was posited in a Watery Sign, beholding the greater Malefic, by hostile applications; she likewise applied to the Mundane Parallel of Mercury, who was of the nature of the Malcvolents ; and both the Benefics were extremely afflicted by the Conjunction of Mars, which correspond with the Directions, and gave additional violence to the other stations, and configurations of the Planets in the Geniture.

#### Abstract

The following is the Nativity of Charlotte, Daughter of the late Mr. William Booth, Schoolmaster, at Brant Broughton, near Grantham, Lincolnshire. This Gentleman was an eminent Mathematician, and a good Astronomer. The time of Birth, taken, and given by himself, was April 29th 1780, 7в. 12m. P. M. She died on the 2nd of August, 1818, aged thirty-eight years, three months, and three days, (according to my previous Calculation,) which will appear evident from the following Figure of the Heavens, at the time of Birth, and the Anaretical Directions, which are correctly computed, according to the unerring priaciples of Astronamy.

This Native was Married to a Centleman far above her station in Life, which is plainly visible in the Heavens. An honorable connexion was formed at the Age of twenty-six Years, and two Months, under the Effects of the Diroction of the Midheaven to the Trine of the Sun, in the World, he being ruler of the Tenth, and posited in the Wostern Angle, which is the Husband'n Ascendant. At the Age of :wenty-six Years, and eleven Months, the Horoecope came by Direction to the Sextile of Jupiter, in Mundo, which may be proved by the use of the Celestial Globe; and as Jupiter was in a Cardinal Sign, disposed of by Venus, lady of the Husband's Ascendant, and was also in the Radix, in a Mundane Sextile to the Medium Cerli, the supreme Angle of Dignity, and Promotion; and was likewise in Trine to Venus in the Eighth, which is the Husband's second, with Mercury lord of the Eighth, in Sextile to Venus, lady of the seventh; these Radical positions, united with the efficacy of the primary Directions in operation, from the Age of twenty-six Years, and two Months, until twentysix Years, and eleven Months, were proper to produce a respectable, and Wealthy Marriage. She was Married to a Gentleman of considerable Property, on the sixth of May, 1807, Aged twenty-seven Years, and six Days.

The Sun, in this Geniture, is the undoubted Apheta, or giver of Life; and, at the Age of thirty-eight Years, and two Months, that Icuminary came to the Parallel of Mars, in Mundo, by Direct Direction, followed by the Opposition of Saturn, in the Zodiac, with Aldebaran, and also to the Parallel of Saturn, in the World, by a right Motion; these were the Directions which I judged would produce Dissolution, the truth of which was verified, though she lived one Month, and three Days, beyond the period pointed out by the first Direction in the train for Death.

But some will ask, why I have not noticed the Direction of the Ascendant to the Body of Saturn, it being in operation with those of the Sun, which I have allowed for Death? to such inquiries, 2k2

I shall only say, that the true Hyleg alone, in every Geniture, must be directed for Death, its time, and quality ; the Direction of the IIoroscope to the Body of Saturn, might augment the fury of the other Directions to the Prorogator, yet, it was of its own natuie, wholly unqualified to produce Death, or any serious or alarming Indisposition; but being united with those that compose the Anaretic train, it doubtless gave some additional assistance to the Effects of the Mortal Directions to the Hyleg before mentioned, when they were in operation. The Horosoope Advocates may believe this if they please, for it is an established fact, that the most violent, and malignant Directions to the Ascendant, can never destroy Life, when the Luminaries, \&c ; are in the proper Aphetical places, and claim the Prorogatory power; though evil Directions to the Horoscope may, (without others of a violent nature,) produce Sickness, and Accidents, with various troubles, \&o. These things are manifestly apparent to every Practitioner; but before I proceed further, I shall make some observations on the Directions of the Sun to the Body of Mars in the Zodiac, and in the World, which were followed by the Opposition of Saturn, in Mundo, as'1 shall probably be asked why they did not destroy life,' before the Age of thirty-eight Years, and two Months. The Sun certainly passed those Directions without causing the Death of the Native; and I am convinced, that many pretenders to this Science, would judge inevitable Dissolution, in similar instances, from such apparent violence ; but in this case, those Directions were not Anaretic, and therefore were not anned with a sufficient portion of inimical power to destroy Life; neither were they able to produce any dangerous Sickness, or Accidents, so as to put Life in jeopardy; because when the same Directions were finished, those Malefic Promittors were received in the Orbs, Terms,and Directions of the Benevolents, which deprived them of part of their own natural, and violent influence, and power. The preceding Directions were followed by the Sun to the Parallel of Mars, in the Zodiac, the Effects of which, assisted by the Direction of the Horoscope to the

Opposition of that Maleftc, could not prove Mortal, because the Hyleg was succeeded by the Square of Venus, in Mundo, Converse Direction, and Parallel of that Star in the World, by Converse Motion; and Saturn, and Mars, were likewise conjoined with benign Direetions, by the Motion of the Primum Mobile, by which a large portion of the evil was dissolved, which must be constantly, and particularly attended to, in all similar Calculations, and Judgment.

But thnugh the Directions before quoted, had not sufficient power to destroy Life, owing to the causes above assigned; yet, when they shewed their Effects, the Native experienced a lingering Illness, with which she was afflicted for more than a Year previous to her dissolution; the rays of Venus falling in by Direction at thatime of Death, were unable to sexe, against the evil train then in operation that suceeeded, though they described the nature of the affliction, or quality of the Mortal disease, which was a disorder of the Stomach, and Liver. The use of Medical skill was of no avail, neither was human assistance able to alleviate her lingering afflictions; but Death puta final period to her Earthly sufferings, at the Age before recorded.

There may probably he some difficulties arise among practitioners, concerning the nature, and power of those Directions that are Anaretic, and those that are not; for in all cases, the Rules of the immortal Ptolemy, are substantial; he tells us in plain lan: guage, that Directions of the Hyleg to the Bodies, and other destructive rays of Saturn, and Mars, \&ic ; do not always destroy Life; he also informs us, that when the Apheta is at any time directed to the Malefics, or their furious beams, the evil though apparently great, is much abated, if the enemies at the same time, do not possess their own natural, and violent power; for if they are then in the Terms of the benevolent Stars, and are directed to the Bencfics, either in the Zodiac, or Mundo, they cannot destroy Life; though they may be qualified to produce long, and lingering
diseases, which may be considered as the forc-runners of Death; so that when the practitioners have (as they suppose, computed a violent train of Directions to the Prorogator, they then absurdly judge Death from their Effectes, without consulting other sideral causes of the greatest importance, previous to giving final Judgment; for if the Benefic Direotions intervene to break the train, or if the Malefios, \&c, as I have before observed be directed at the same time in peculiar parts of the Heavens, to the Bodies, or rays of Jupiter, or Venus, or their Terms, life will be preserved, notwithstanding the apparent fury, and violence of the Directions.

The Revolutional Figure for the Native's thirty-eighth Year, contained the greatest testimonies of violence; for Saturn was posited exactly on the Radical place of the Moon, and Jupiter had nearly returned to the Square of his own place in the Nativity, where he was afflicted by the hostile beams of Mars, from Cardinal Signs. Mars was likewise in Quartile to the Radical place of Jupiter at Birth, and the Moon, in the Revolution, was applying to the Body of Satum. Mercury was also near the Conjunction of Mars in the Geniture, and likewise near the Square of the Moon in the Revolution. By Secondary Motion, the Moon was in Square to the Sun, in the World, and the Hyleg was also afflicted by both the Malefics, having then the Declination of the Moon. Saturn had also returned to his opposite place at Birth, and Mercury was likewise applying to the Opposition of Saturn, and had his Declination also; the Sun had passed the Opposition of Saturn, and applied to the Body of Mars; and in the Progression, that Malefic was posited on the place of the Moon in the Revolution, who was afflicted hy the violent rays of Satara; the Sun having at the same time gained the Declination of Saturn, was likewise in Square to the Moon in the Nativity. On the Morning of Death, there was a New Moon in nine Degrees, thirteen Minutes of Leo, in Square to the place of the Sun at Birth; and what is most remarkable, Venus, (whose primary Directions
interposed in the train of Death, but could not save,) was in Conjunction with Mars, and in Opposition of Satum at the time of Dissolution; these things duly comsidered, not only prove the Verity of the Compatations, but also the great, and important nse of Revolutions, and Secondary Directions. \&o, when properily attended to at those periods, and in all cases, when Anartical Directions are in operation to the true Prorogator, or giver of life.

The following Nativity is that of a Female Child, who was Born on the 20th. of September 1803, at half past eleven o'Clock at Night; and was Drowned at the Age of six Years, five Months, and sixteen days. The Figure of the Heavens, with the Mortal. Directions, pmbve, that the true Hyleg alone, must (in all cases,) be directed for Death, its time, and quality.

In this Geniture, both the Laminaries are under the Earth, and all the other Planets are likewise posited in a Subterranean position, so that the Horoscope claims the Aphetical power. Now as the time of Birth was correctly taken by an adjusted Clock, I think all those who absurdly suppose that the Angles may be directed to Aspects in the Zodiac, will doubtless be convinced of their Error, for it is evident that there can be no such Directions, according to the true Doctrine of the Sphere, which has been before observed. I have in numerous Examples, proved the absurdity of such whimsical notions; and if any advocates are now to be found, who are disposed to rely on the Effects of Directions in the Zodiac, to the Angles, I must inform them from the highest Authority, and the most substantial proof, that no such Directions have been in Existence, according to the true Motions of the Heavens, since the beginning of the World.

In every Nativity, all the true Ares of Directions to the vital significators, whether of a benevolent nature, or of a Malefic power, ought to be computed, which fall within the Orbs, and Terms of the Erratics, after the arrival of the true Prorogator, at the foremost in the Mortal train, (as in this case,) according to the Doctrine of the immortal Ptolemy, which he has clearly demonstrated in his Original Greek Quadripartite; for if all the Mortal Directions are not truly wrought, which precede, as well as those that follow, or unite in the Anaretic train, the Siadent will not be able to distinguish those that destroy Life, from others, which shew the nature, and quality of Death; for it is not always the first Malefic Direction to the Hyleg which destroys Life, though it is generally the case; for it sometimes happens, that when the giver of Jife has anrived at the first Direction in the beginning of those hostile primary Motions, whioh threaten dissolution, Life is preserved by other benign Rays, Orbs, and Terms, in which the Prorogator, assuming the powerful Aphetical Dignity,: is surrounded in the Zodiac, and in Mundo. Those benevolent Directions, (whether Converse, or Direct,) formed from the superior places, and Angles, \&c. will dissolve a considerable portion of the evil; so that no materi. al injury to Life is experienced; but when the giver of Life arrives at the next Malefic Direction in the train, then Death will ensue, because the power of those preceding Directions, (though of a benevolent nature, ) is destroyed, and can afford no assistance to the true Prorogator, and particularly when other vital significators are afflicted by violent primary Directions, at, or near the same period.

There are many testimonies in this Geniture, which clearly portend a violent Death. The Sun is conjoined with Saturn, in the Imum Cerli, and Venus is united with them in that Angle. The Moon is in the Watery Sign Scorpio, in Sextile with the Sun, Saturn, and Venus; and as those rays are formed from Signs of long Ascension, they are of the nature, and power of a Square in this case. Mercury is in Conjunction with Mars, in the Nativity,
and both are transmitting violent, and obnoxious qualities to Jupiter, who is also afflicted by the Parallel of Saturn's Declination; and the prevailing evil testimonies are considerably increased, in consequence of all the Planet's being Angular; the Moon excepted, and under the Earth at the time of Birth, and in those violent Signs, and places, which give Death by Drowning; for Ptalemy informs us, that when the Moon is in moist Signs, and evilly configurated with the San, and Saturn in obnoxious places, (the benevolent Stars being afflicted at the same time;) then. Death will occur by Suffocation, and Drowning; and thus it happened in the present instance,

The Disections that destroyed this Native's Life, were the Ascendant Hyleg, to the Squares of Saturn, and the Sun in Mundo, according to true, and natural Motion; and it is evident, that no other Directions could destroy Life. The Horoscope was separating from the Sesquiquadrate of the Moon, in Mundo, but was not free from the Effects of that inimical, and previous application at the time of Birth. Some will say, that the Ascendaut is afflicted by the Squares of Saturn, and Mercury, in the Zodiac, and ought not their rays to be estecmed of sufficient power to destroy Life? Ta, this I answer, the Native lived past the expiration of the fifth Year; and therefore she died by Directions. In the counse of all my practice, I have neier seen any Zodiacal Squares of the Malefics to the Ascendant, destroy Life, when that point of the Heavens was the true prorogatub..

But as I do not wish to sanction any project, nor rely on any Rules, and Precepts, which cannot be proved by Reason, and demonstrated by Truth; I will now prove to the Reader, (if he is not wilfully blind,) that when Mars, and Mercury arrive at the Cusp of the Northern Angle, then is the Ascendant directed to their true Squares in Mundo; this Motion may be instantly proved by the Celestial Globe, to the satisfaction of all those who wish to inquire after Truth, and adhere to Reason in all their operations; for it must be impossible for the Ascendant in this case, to be
directed to the Squares of Mars, and Mercury, by two distinct, and separate Motions; indeed if that was the case, we should have very small Arcs of Directions in one operation, and in the other, very large ones; but I do positively say, that the true Arc of Direction, of the Ascendant to the Square of Mars, in Mundo, in this Geniture, is $29^{\circ} 2^{\prime}$; and that of Mercury $29^{\circ} 5^{\prime}$; and if we subtract the correct distance of Mars from the Northern Angle, $29^{\circ} \mathbf{2}^{\prime}$ from his duplicate nocturnal horiry times $33^{\circ} 32^{\prime}$, we shall find, the true distance of Mars from the Cusp of the fifth to be $4^{\circ} 3^{\prime}$; by which it appears plain, that both Mars and Mercury, were nearly in a Mundane Trine to the Oriental Horizon, at the time of Birth.

In the Native's last Revolution, Saturn was nearly on the place of the Moon in the Geniture; and that Luminary was likewise in Square to her place in the Nativity, and applying to the Qaartile of Saturn, in the Revolution; and as her Declination was then decreasing, she consequently applied to the Zodiacal Parallels of all the Planets, in the Radix; the union of such violent testimonies, whenever they are found to correspond with the nature of the Progressions, Lunations, and Secondary Motion, \&c.; always increase the violent, and dangerous Effects of the hostile primary Directions, to the Aphetiral place. 'By Secondary Motion, Saturn was found in the Midhearen, conjoined with Venus, in Mundane Opposition to his position, in the Radis; he was also on the Solar place, in the Revolution. At the time of Death, the Sun was found in Opposition to Venus, and Saturn, at Birth; the latter Star was in Zodiacal Quartile with Venus at the time of expiration, and on the place of the lesser Malefic, in the Revolution, in Opposition to his own Mundane station in the Geniture; the. Moon was unpropitiously irradiated by Mercury, and Mars in the Nativity, and the latter Star was in direct Opposition with Jupiter, in the Geniture ; and Jupiter was in ar hostile dspect with Mars, and Mercury, in the Radical Constitution. Such evil, and violent Motions of the Stars, when agreeing with the Effects of the malignant primary Directions in operation to the Hyleg, always increase their fury, and produce sudden Dissolution.

The next Geniture which I shall give to the Public, is that of Elizabeth Thompeon, who was Born near Hull, on the lith of November, 1810, $\mathbf{7 H}_{\mathrm{H}} .5_{\mathrm{M}} . \mathrm{P}$ M; and departed this Life, on the 3rd of December, 1824, Aged fourteen Years, and twenty-one Days.

This Native's Father, who is now living, gave me the above time of Birth, which he informed me, was taken by himself, by a well regulated Clock, so that the Nativity is not skeptical, but strictly correct.

The Immortal Ptolemy, that illustrious Master of Genethliacal Astronomy, \&c.; informs us in plain terms, without the least ambiguity, that the most important subject, which ought first to engage our serious attention, in all Genitures, is the doctaine or the space of life; for it would be aain, and inconsistent to give Judgment, concerning the time of Prosperity, Adversity, Sickness, \&c.; with other occurrences at distant periods in the Life of an Individual, when malevolent Directions to the proper Apheta, are qualified to produce dissolution, in the early part of Life. In the following Nativity, I believe many pretenders to this Sublime Study, would absurdly take the Ascendant as the Prorogator, or giver of Life; but according to the Precepts given in this Work, for setecting the Hyleg, which will alvoays be found certain, and infallible, it may easily be discovered, that the Part of Fortune claims the Aphetical power, as a full Moon preceded the Nocturnal Birth, and none of the Planets are in the Prorogatory places, which will appear evident, from the following Figure of the Heavens; and the Mortal Directions, to that powerful Mundane configuration, correspond with the period of personal extinction.

In the foregoing Nativity, the Lunar Horoscope is in exact Semiquartile with the Sun, which forcible; and inimical Aspect, combined with the impotent stations, and cenfigurations of other vital significators, were evident testimonies of short Iife: and that the Native would experience lingering diseages, during the transitory period of her existence, is clearly foreboded hy the cadent positions, and affictions of the superior Stars, in the Genitures.

In this original work, I have inserted the correct Computation of the Part of Fortune, with the arrangement of some of its Directions, which are precisely wrought in full, in page 128, 129, and 130 ; and without the least deviation from these precepts, which must be constantly attended to in every Geniture: the distance of the Part of Fortune from the Occidental Horizon, in this Nativity, is $7^{\circ} 44^{\prime}$, by which position, that Mundane point, claims the Prorogatory power; and the Directions that destroyed the Life of this Native, were, the Part of Fortune to the Square of Mars, in the World, and Mundane Semiquartile of Saturn, without the least portion of benevolent assistance; the latter Anaretical Direction was several degrees distant from the first, which produced Death; but I wish every Student in this incomparable Science, to notice, that when similar Nativities are observed, two destructive Directions to the Apheta, (even when they are far remote,) without sufficient benign aid, will never fail to cause dissolution.

It is worthy of remark, that both the benevolents were afflicted by Direction, at the time of Death; Jupiter was directed to the Opposition of Saturn, and Venus arrived on the place of that Malefic; the hostile prevalence of those Stars, at the time of expiration, united with the violent nature, and power of the Anare. tical Directions, apparently point out the Mortal disease, to be a Consumption.

In the Native's last Revolution, the Prorogater was in Quartile with Saturn, in the World, and the Moon applied to the Declinations of the Sun, and Suturn, and Zodiacal Semiqnartile of the 2 U 2
greater Malefic. Mars, the chief Mortal Promittor, in the primary Directions, who was Angular in the Geniture, was then descending below the Western Horizon, in Opposition to the Horoscope, and communicated deadly qualities to the Moon; while Venus occupied the place of Saturn, in the Radix. By Secondary Direction. the Part of Fortane, the significator of Tife, was in Square with Mars, in the Mundane Circle; and the Moon applied to the obnoxious rays of that Malevolent, in a subterranean position: but in the Progression, the affiction of the Lunar Horoscope, was still more striking. She departed this Life, when the diurnal Luminary made Oriental appearance, and consequently the Hyleg was then conjoined with the Moon; it also approached the Mundane Quartile of Mars. The proximity of these direful configurations, to the Moderator, produced the greatest degree of inauspicious influence.

The subsequent Geniture is that of Sabina Dayles, who was Born near Boston, Lincolnshire, on the 19th of February, 1816, 23i. 11m. P M; and died at Lincoln, June 2nd 1826, Aged ten Years, three Months, and twelve Days.

The Sun is certainly the true Hyleg, or giver of Life, and it would be preposterous to foretel the time of Death from Directions to any other significator; though 1 am convinced, there are some who would in this, and similar Nativities, neglect the austral position of that Luminary, and improperly allow the Horoscope to claim that momentous Dominion, and attempt to ascertain the period of the Native's dissolution from inimical Aspects to that Angle.

It is extraordinary to observe the contradictory, and unintelligible information given by various Authors, both Ancient, and Modern, who have written on the Doctrine of Nativities; but in one essential point, the vague assertions, and exorbitant Tenacity, with which the generality of writers agree, is still more notoriously confused, and that essential point, is in selecting the Moderator. Those who have written on this subject, vainly endeavor to dilucidate, and eren alter, and oppose the incontrovertible precepts of that luminous character, the immortal ptolemy, by which, they have absurdly invented the most sophistical, and injudicious Examples; which Examples are adhered to by many to this time, and are considered preferable to the primitive Method of ascertaining the Prorogator, which the Author above quoted, has faithfully, and clearly elucidated in his Original Greek Quadripartite.

From the positions, and Directions in the preceding Geniture, there are several subjects worthy of observation, particularly the shortness of her Life, and the nature of the disease which terminated her existence. At the Age of three Years, and five Months, the Sun, the Prorogator, or giver of Life, arrived at the Quartile of the Moon, in the Zodiac; (succeeded by the Apheta to the Rapt Paral'lel of Saturn,) at that time she experienced a dangerous Illness, whith remained with considerable Vehemence for several Weeks. and no hopes were entertained of her recovery; but as the Hyleg was in Mundane Sextile with Venus, and subsequently applied to the Zodiacal Trine of Jupiter, those malevolent Directions had not sufficient power to produce dissolution.

At the time of Death, the Aphetical point was directed to the Parallel of Saturn in Mundo, by a right Motion, followed by the Body of Mercury in the Zodiac, Semiquartile of Mars in the World, Direct Direction, Parallel of Saturn in Mundo, Converse Motion, and Conjunction of that Malefic, by Converse Direction; these Mortal Directions produced personal Expiration at the Age before mentioned ; and though the Zodiacal Sextile of Venus succeeded, that Aspect was unable to yield any assistance, because it was more than seven Degrees distant from the killing place: and the Promittor was violently afficted when this Direction was completed. The Sun to the Body of Mercury, being the second Direction in the Mortal train, most wonderfully points out the quality of Death; for notwithstanding the Trine of that Star with Jupiter, he beholds the Moon by a violent Square, and is also in the Terms of Saturn; he therefore is of a mischievous nature, and power: Mercury thus afflicted in the Geniture, and also near the obnoxious Aspects of the Enemies at the time of dissolution, and in Pisces a Sign of the Watery Trigon, evidently describes the Mortal disease; which was occasioned by Water in the Brain.

The Revolutional Figare for the tenth Year, was very inimical, and violent, for the giver of Life was applying to the Square of 2X

Saturn in the Zodiac, and Mars was on the radical place of Jupiter, and in Zodiacal Quartile with Saturn, in the Nativity. At the time of Death, the Apheta was applying to the Conjunction of Saturn, in a violent part of the Heavens; and the Moon was in direct Opposition with Mars. The Progression was also as dangerous as the other Motions, and stations of the Stars; for Saturn, and Mars were unpropitiously configurated with the Sun, in the Mundane Circle. By Secondary Motion, the Prorogator was near the Uccidental Horizon, in Square to Mars in the World, and in Parallel with Mercury in Mundo; and Mars was on the Mundane place of Saturn in the Geniture: all these obnoxious irradiations, being combined with the Anaretical primary Directions to the Hyleg, greatly augmented the sulden, and furious union of their violent Beams, which not being counteracted by benign applications, always produce in similar cases, certain, and inevitable dissolution.

Elizabeth Gilliatt was Born at Lincoln, October 18th 1798, 12H. 28m. P M; and departed this Life, August jth 1819, Aged twenty Years, nine Months, and seventeen Days.

This Celestial Science is founded on Reason, and Truth, and may be proved by all; but those who are disposed to deny its Utility, and Authenticity, soon disgrace their Arguments by their vague, and contradictory observations. All their wire drawn Texts, and disreputable Exclamations, when displayed in hostile array against the primitive principles of this prophetic Science, become instantly vanguished by the narration of one established Fact. In attempting to state the Fallacy of this Celestial Study, those who wantonly abuse the Works of the Creator, ought to produce public, and substantial Truths to support their assertions, without which, their bigoted Ideas will ever become disreputable, and contemptible. Such characters vainly believe, that they posiess univer. sal Wisdom, and will by no means allow, that any Man can possibly excel them in Literature; but when they are finally defeated, they then attempt to proclaim a visionary victory by immode. hate passion, and abusive language, \&c. How ummanly, base, and wretched, must the mind of those Men be, who attempt to traduce a Science, the true principles of which, they are wholly unable to define, or comprehend. A man may deliver his opinion on any subject, either in the negative, or affirmative, but that will by no means establish the validity of his Judgment, except he is able (by the aid of Truth, and Reason,) to confirm his remarks, and support his Animadversions, without fraud, or decention.

## 310

When this Native was in the most perfect state of Health, I was requested by her Father, to make some observations on her Geniture; and from the Estimate time of Birth, (as it was recorded in an Ancient family document,) which is inserted in the preceding Figure, I was perfectly satisfied, that the Moon was Hyleg, and as the Native had not been exposed to any violent Indisposition, to put Life in danger, I was confident, that the Directions of the Moon to the Parallei of Mars in Mundo, Direct Motion; Semiquartile of Mars in the World, Converse Direction; Quartile of Mercury in Mundo, Converse Motion ; Sesquiquadrate of that Star in the World Direct Direction; Parallel of Mars in the Zodiac; Sesquiquadrate of Saturn in Mundo, and Zodiac; and Sesquiquadrate of the Sun in the Zodiac, had not shewed their Effects, and as they were not twelve Months distant at the time I finished the Computations; the Judgment which I delivered in few words, was, that before the end of her twenty-first Year, she would leave this World for a better, however her Father believed in nothing I had said, and passed several absurd, and unhandsome ohservations on my Calculations, and Judgment; but Alas!

> The destin'd Victim did resign her Breath, By that due Summong from relentless Death.

The Mortal disease according to the positions, and Directions preceding, was a disorder of the Lungs, which occasioned a rapid wasting of the Flesh, accompanied with a slow nervous Fever. There are some who will probably ask, why the rays of Jupiter did not save Life, as the Moon to his Square in Mundo, was united with those Directions, which I allowed for Death; it is true the Direction of Jupiter follows, but as he was at that time deprived of his benevolent qualities, he could not render sufficient assistance to the giver of Life; his subsequent Directions being void of relief, were of no avail, though they certainly specified the nature, and original cause of the Native's dissolution.

By Secondary Direction, the Luminaries were in Conjunction in a subterranean position; and both the Malefics were in Mundane

Quartile, from the Eastern, and Southern Angles ; and in violent configuration with the Moon in the Nativity; the giver of Life was also in Square to her place in the Geniture. In the Native's last Revolutional Figure, the Hyleg was in Mundane, and Zodiacal Quartile with Saturn ; and the Sun was making application to the Body of Mars; the greater Malefic was likewise on the place of Mars in the Radix: and in the Progression, the Luminaries were surrounded by hostile rays, as they approached the superior Angles, and could receive no assistance from benevolent irradiations. At the time of Death, the Moon had the Declination of the lesser Malefic, and was applying to the Opposition of the Sun; she was also in Square with Mars in the Revolution. Mars was in Zodiacal Quartile with Mercury, and on his own Mundane position in the Nativity. Those who will take the trouble to make observations of this kind, and reduce them to practice as occasion requires, will find, that such hostile Motions as I have here investigated, will, when compared with the nature, and Effects of the superior primary Directions, augment their operations; and particularly when they are conjoined, and correspond with those Motions, which are productive of Death; therefore from what has been recorded, the young Students will, I have no doubt attend to the foregoing observations, which may soon be understood by all those who are inclined to occupy their leisure Hours in these Calculations.

The next, and last Nativity, is that of a young Gentleman, who is now living, and in good Health; and as this Geniture has been delivered into the hands of some ignorant impostors, who impudently affirm, that he is to Marry at the Age of twenty-five Years, and also obtain considerable Wealth at the Age of thirty-eight: I have therefore Published this Nativity, that the community may notice the deceit, and villany practised by illiterate pretenders, who go about the Conntry for the purpose of aeceiving the igno. rant. The time of Birth inserted in the Celestial Figure, was given to me by the Native's Parents, by whom I was requested to Calculate this Geniture. The Figure of Heaven, with the Directions computed from the Astronomical Tables contained in this Work, are as follow.

In this Nativity, the Horoscope is excluded from the Dominion of Hyleg, in consequence of the positinn of Jupiter, who is in an Aphetical place, and properly qualified for that Uffice: for he is in Zodiacal Trine with the Moon, and beholds her by a Parallel of Declination, and is inMundane, and Zodiacal Sextile with the Sun, and ruler of the Part of Fortune in the Radical Constitution; it is therefore evident, that Jupiter is the legal significator of Life. Now I do assert, that when the Prorogator is directed to the Quartile of the Moon in the Zodiac, and Parallel of the Sun in Mundo, by the Rapt Motion, the true Arcs of those Directions will be completely finished, and it is from their Effects, followed by many others of an obnoxious nature, and power, that I predict the dissolution of this Native : the first Direction above mentioned ascertains the period of that solemn Event, to take place, at the Age of thirtytwo Years, and four Months, I am an enemy to long Epistles being wrought on any Geniture, therefore the best way is always to come at once to the point, and deliver an impartial Judgment on every Event of importance through Life without the least evasion; for when Men produce vague remarks where few words are sufficient, it only tends to shew their igncrance, and establish their disgrace. Those notorious impostors who have pretended to Calculate this Nativity, and who have predicted considerable Wealth at the Age of thirty-eight Years, may now observe, by my Computations, and Judgment, founded on the genuine principles of astronomy, that long before that period arrives, the Native will "pass that Bourn from whence no Travellers return".

At the Age of twelve Years, and seven Months, the Hyleg was directed to the Square of the Moon in the World, by a right Motion, the Effect of which, was productive of a severe Indisposition; and although several other inimical Directions were subsequently in operation to the Prorogator; the application of the Aphetical point to the Rays of Venus, saved the Life of the Native at that period.

At the time the Mortal primary Directions to the Hyleg will shew their Effects, the benevolent Planet Venus, cannot render any relief to the giver of Life. The Directions of Jupiter to the Rapt Parallel of Venus; and to the Trine of Venus in Mundo, and in the Zodiac, Converse Motion, will be of no avail, in consequence of the presence of the Enemies, with which Venus will be unfavorably conjoined by the Rapt Motion of the Earth.

If we carefully examine the nature of the second Direction in the Mortal train, and properly regard the affliction of the lesser Benefic, with the Rays of Saturn in the Radix, and likewise in directional Motion; we may easily foresee, that the Native's Death will be occasioned by a violent Fever, preceded, and attended with a rapid Consumption.

I believe it would not be interesting to the Reader, if 1 was to discuss all those testimonies which forebode advancement according to the Native's station in Life; lut as his demise is not many Years distant, it would be of no importance to make observations on those subjects; though I shall here notice, that the Direction of the Midheaven to the Sextile of Jupiter in the World, will most certuinly produce Marriage, and Prosperity, \&c. at the Age of twenty eight Years, and a half. Was this Native destined for a longer Life, I should make copious remarks on the various sideral configurations and Directions, \&c; but as that is not the case, I shall decline delivering any other occurrences on his few remaining Years; because when the spirit of the dead has abandoned its lifeless Clay which imprisoned it, all Terrestrial Wealth, and Happiness, vanish like a shadow, and are no more.

I have now concluded the thirty remarkable Nativities which I promised to give to the Public ; and have endeavored to make every subject as easy as possible: the Computations of all the Arcs of Directions are made by true, and natural Motion, which may be proved by the use of the Celestial Globe, or Spherical Trigonometry. I shall now proceed with the subsequent part of the Celestial Philosophy, according to the announcement previously given to the Public.

## THE EFPECTS OF DIRECTIONS.

The Sun, Moon, Ascendant, or Midheaven, directed to the Conjunction, Square, or Opposition of Saturn, indicates loss of Reputation, Office, and Estate: severe Illnesses, and Accidents of various denominations, according to the Signs, and positions of the significestor, and promittor; which must be properly attended to in every Nativity.

The Sun, Moon, Ascendant, or Midheaven, directed to the Sextile, or Trine of Saturn, shews advantage by the means of okderly persons, or a legacy is bequeathed; and the Native is suocessful in every undertaking. This is to be understood when those Aspects are not augmented, or diminished, by Signs of long, or short Ascension.

The Sun, Moon, Ascendant, or Midheaven, directed to the Conjunction, Sextile or Trine of Jupiter, forebodes respectability, advancement, Honor, and Wealth: the Native is fortunate in all affairs, and Marriage is frequently Solemnized.

The Sun, Moon, Ascendant, or Midheaven, directed to the Square, or Opposition of Jupiter, portends troubles, and vexations, quarrels, and contentions; and loss of Estate by the means of ecclesiastical characters.

The Sun, Moon, Ascendant, or Midheaven, directed to the Conjunction, Square, or Opposition of Mars, are malevolent Directions, and denote manifold disputations, and commotions; scandal, disgrace, and loss of substance: Illnesses of various denominations, and sometimes Accidents.

The Sun, Moon, Ascendant, or Midheaven, directed to the Sextile, or Trine of Mars, gives Honar, and Preferment by Chemistry, or martial employment. In a Feminine Geniture, Marriage frequently occurs.

The Moon, or Ascendant, directed to the Conjunction, Square, or Opposition of the Sun, denotes Indisposition, and injury to the Eyes; many perplexities, and losses: the Native is suddenly deprived of Dignity, and Office, and credit, or Reputation is materially injured. The Midheaven to the Body of the Sun is a propitious Direction, and gives any Native Honor, and Promotion, according to the sphere of life, which must be impartially investigated in all cases.

The Moon, Ascendant, or Midheaven, directed to the Sextile, or Trine of the Sun, will be productive of happiness, Honor, Wealth, popularity, and renown, and sometimes Marriage.

The Moon, Ascendant, or Midheaven, directed to the Square, or Opposition of Venus, are unpropitious Directions; and forehode troubles, and controversies; the Native also obtains disrespect from $\mathrm{Fe}-$ males. The Direction of the Sun to the Square of Venus, is indicative of vexations, and difficulties, by various ways, and means.

The Sun, Moon, Ascendant, or Midheaven, directed to the Conjunction, Sextile, or Trine of Venus, foreshews Honor, and Promotion; the Native is very fortunate in every engagement; and the Matrimonial Union is frequently Solemnized, under the operation of any of these Directions.

The Moon, Ascendant, or Midheaven, directed to the Square, or Opposition of Mercury, denotes many accusations, contentions, troubles, disappointments, and losses, as well as Indisposition; the Native's undertakings are unsuccessful on all occasions. The Sun directed to the Square of Mercury, indicates vexations, and difficulties, in every Geniture.

The Sun, Moon, Ascendant, or Midheaven, directed to the Body, Sextile, or Trine of Mercury, gives an inclination to the Study of Arts, and Sciences; the Native is admired foringeniiity, and learning, and is successful in most undertalings; these Directions also indicate

Travelling; but when Mercury is afflicted in the Geniture, the Conjunction of that Planet to any of the above places, is productive of perplexities, and losses on all occasions.

The Sun, or Ascendant, directed to the Conjunction, Square, or Opposition of the Moon, are very inimical Directions, causing many troubles, difficulties, and losses; any of these Directions put the Life of the Native in considerable jeopardy, either by Indisposition, or Accident. The Midheaven to the Body of the Moon frequently produces Travelling, Marriage, and Prosperity.

The Sun, Ascendant, or Midheaven, directed to the Sextile, or Trine of the Moon, denotes Travelling, comfort, and happiness, with an augmentation of Honor, and Wealth: the Matrimonial Union is generally Solemnized, under the Effects of any of these Directions.

The Part of Fortune directed to any benevolent Aspect, produces an augmentation of Honor, and Riches; but to malevolent Rays, trotules, and a considerable diminution of Wealth.

The Sun, Moon, Ascendant, Midheaven, or Part of Fortune directed to the Quintile, or Biquintile of any Planet, denotes the Native to prosper in every undertaking; the Semiquartile, or Sesquiquadrate, is of a malevolent nature, and power.

The Luminaries directed to their own Sextiles, or to any Parallel of the Benefics, either in the Zodiac, or in the World, will consequently be productive of good Effects in the affairs of any Native: but the Directions of the Lights to their own Semiquartiles, or Squares, or to any Parallel of the Malevolents, denote troubles, and obstacles, and impair Health.

I have briefly explained the Effects of all Directions, which when compared with the remarks on the Nativities given in this Work, in Examples of Life, and Death, the Student may readily comprehend every portion of their influence in all parts of the Heavens, and in all cases whatsoever.

I have allowed malevolent Directions formed to the Sun, Moon, Ascendant, Midheaven, or Part of Fortune, to be productive of tronbles, and losses, \&c: in addition to which, I shall notice in this place, that the Hyleg directed to a violent train of unpropitious Aspects, (without sufficient aid from the benefics,) will, in every Nativity, produce inevitable dissolution, either natural, or violent; according to the positions, and configurations of the Celestial Bodies, at the time of Birth, combined with the prevalence of the Anaretical places, and Directions, which has been previously observed. From what I have here mentioned, every Student in this Science, will consequently predict the time of all Momentous Events, from the nature, and power of each Direction.

## the established metmod of selecting the true hyleg,

 IN ANY GENITURE.In order to make the Aphetical places easy to be understood, I shall observe, that they commence with five degrees past the Cusp of the Second House, in the Ascendant; and extend as far as five degrees above the Horizon: the Eleventh House, and centre of that House, the whole of the Tenth, Ninth, and five degrees beyond the latter House, are also Aphetical places; and five degrees past the Cusp of the Eighth, in the Seventh, as far as five degrees past the Occidental Horizon, below the Earth, are likewise Prorogatory places. And among these again are preferred, asstronger, and more powerful, first they which are in the Zenith, then they in the East, next to those, they in the succeedant to the Midheaven, then the West, and lastly, they which precede the Midheaven: for whatsnever House of the twelve above the Earth, hath no configuration with the Horoscope is not proper to be taken; and that in a subterranean place, is unqualified for suck a Dominion, except what come in to light with the Ascendant.

The Aphetaz, or significators of Life, are five; and those are the Sum, Moon. Ascendant, Part of Fortune, and that Planet who hath most Dignities in the place of the Sun, Moon, Horoscope, and Part of Fortune, in the Figure of Birth; and in the place of the

Conjunction, or Opposition of the Luminaries, preceding the Gani$t_{\text {are, }}$ in which this regularity must be observed.

In a diurnal Nativity, the Sun shall be preferred if he is in an Aphetical place; but if he be not, let the Moon ; if she be not, that Planet shall be accepted that hath most titles of Dominion in the place of the Sun, the preceding Conjunction, and the Horoscope; (and in a Prorggatory place also,) that is, when he hath Dominion three ways or more, in one of the mentioned places, for all the ways of Dominion are five; but if there be none such, the Horoscope shall be taken as the true significator of Life.

By night, the Moon shall be preferred if she be in an Aphetical place; but if she be not, the Sun shall, if he be: if neither of the Luminaries should be so qualified, then take that Planet who hath most Dignities in the place of the Moon, the preceding full Moon, and the Part of Fortune, and in an Aphetical place: if there be none such, the Horoscope shall be taken if a Conjunetion preceded, but if it was a full Moon, the Part of Fortune shall be allowed that Dominion, when found in an Aphetical place.
on the revolutions of kingdoms and states, \&c.
When any grand Mutations have come to pass, that are visible tothe World, and in which the unbelievers are more or less involved, they then say, 'God does all these things,' which I by no means deny; but I ask, how does he perform, and bring to pass such eyents, which are considered so miraculous to the wisdom of Mortal Men? for it is certain, that all things on Earth, are dependant on the Heavens, and occult power of the Celestial Bodies, which are secondary causes to execute the divine will, and eternal decree of the great creator, which I have proved to the most licentious Infidel.

All those who at present deny the existence of Stellar power, and who impiously slander the Works of the Almighty, will, (should they survive a few revolving Years,) be perfectly convinced of their Error; for in the Years 1820, and 1821, were observed in the Heavens many appearances of an extraordinary, and formidable na. ture, which cannot happen again for many Centuries to come. The Mundane power of such appearances will become manifest for a long period of time, and will be visible in many parts of the World.

But as the celestial bodies are the representatives of kinadoms and states, I must request the ingenious practitioner to pay the strictest attention to those wonderful Celestial Congresses, which were visible on the 17th 18th and 19th of April 1821; on those days, Saturn, Jupiter, Mars, the Sun, Venus, and Mercury, were all conjoined in the sign aries. Now reader pause, and consider these things in solitude, and do not hastily, and wantonly condemn, what I am certain you can never understand; for $I$ do positively say, that this great meeting in the Heavens, does most assuredly forebode a succession of many memorable events of the greatest magnitude in foreign realms. I dare not presume to offer my impartial Judgment on all the direful effects of those Celestial Congresses : what the influence of such remarkable
meetings of the Heavenly Bodies, hereafter will be, must be let for Time to determine. If the young Students are inclined to receive some information on this subject, they may read the names of those Kingdoms, Cities, and Countries, which are governed by the four Gardinal points, including those seated under Gemini, aint LTirbo, with the opposite Signs; and then they may instartly make their Judgment final, and see every subsequent occurrence befbre them, though yet in the womb of time. The Mundane influence of these Celestial appearances, will extend their irresistible power with unbounded fury to remote reatins for many Years: 'Iromid WARS, ${ }^{\circ}$ dISSENTIONS, 'IUMULTS, VIOLENCE, IMPRISONMENTS, assassinations, sudden deatirs, with incurable pestilential Fevers, and disorders of the Lungs, will be experienced in Foreign nations, with the Death of Men in high Authority, and power ; dreal'ful Thunder, and Lightnings, will be prevalent in many places, with awful conflagrations, and likewise high Winds, Fides, and violent Hurricanes, with many Shipwrecks, and unfortunate Navigations : great alterations in the Weather.for a long period of time; the Waters in the Rivers willl be diminished at intervals, and Springs dried up, so that C'itlle in several places will receive great injury for want of Water; in consequence of which, will follow incurable diseases among. them in several Places: these droughts of long continuriace, will at certain periods be succeeded, as well as preceded, BY UNCOMMON WET WEATHER, which will cause GREAT INNUNdations; Frost, Snow, and intense cold will abound in their Seasons, which will frequently prove injurious to the Seeds, and Fruits of the Earth; excessive heat, succeeded by very sudden transitions of immoderate cold, will very often be severelyfelt in several places, during many subsequent Years : but as I have no authority to state where these direful calamities will fall, I must with reluctance remain silent; however I hope, and trus ${ }^{2}$, that from what I have here stated, every industrious Student, will be enabled to form a correct Judgment on the long continucd Effects of those dreadful Celestial appearances, which were so remarkably posited at the periods beforementioned.

It frequently occurs, that the Congresses of several of the Planels in some predominating Signs, and places, do not immediately shew their ominous Effects, but many Years elapses before they become manifestly apparent. In the Month of March 1789, the Sun, Saturn, Mars, Venus, and Mercury, were all conjoined in the Sign Pisces, and in the same Year, the Revolution in France broke out, which circumstance, and many subsequent hostilities in that Kingdom, were evidently foreboded from the Effects of the above Conjunction of five Planets in the Constellation of the Watery Triplicity : and whenever similar appearances of the Heavenly Bodies are observed, (the Sun being properly united,) they always produce commotions, and Revolutions, or a change of state in those places, governed by the Signs, and their opposites, which has been before observed : but Peace and Plenty, may certainly be predicted when those Congresses of the Planets have completed their formidable efficacy, or become disjoined by the rapidity of the inferior Stars. I might expatiate upon thesc subjects, but I believe sufficient has been mentioned by which any attentive Student in this Science, may precisely comprehend the manifold, and subséquent Effects of every extraordinary meeting of the Celestial Bodies.

## CORRECT PRECEPTS FOR COMPUTING TBE ECLIPSES OF THE SUN,

 AND MOON,to calculate an eclipse of the moon.

1. Find by Astronomical Tables, the true Time of the Ecliptic opposition, or full Moon, when an Eclipse is expected to happen: and let that Time be reduced to apparent Time, by increasing, or diminishing the same, by the equation of Time, as occasion requires. To which Time, viz. the true Ecliptic apposition of the Sun, and Moon; find the Moon's true Latitude, and her Hourly Motion in Latitude. Also, the Mogn's Hourly Motion in Longitude, in order to find the Hourly Motion of the Moon from the Sun in Longitude. Find the Moon's Horizontal Parallax, and her Șemidiameter; the Sun's Hourly Motion, and Semidiameter being found before. The Sun's Horizontal Parallax may always be taken at $\mathbf{9}^{\mathbf{\prime \prime}}$.
2. Find the Angle of Inclination of the Axis of the Moon's way, with the (Northern) Axis of the Ecliptic; which is to the right hand, if the Moon has North Latitude ascending, or South Latitiude descending; otherwise, if the Moon has North Lutitude descending, or South Latitude ascending, the Angle lies to the left hand of the Axis of the Ecliptic.

## RULE.

To the co-arith. of log. Sine of the Moon's Hourly Motion from the Sun, add the log. Sine of the Moon's Hourly Motion in Latitude, the sum is the Tangent of the Angle required.
3. To find the nearest approach of the Centres of the Moon, and Earth's Shadow.

RULE.
To the co. sine of the Argle of the Moon's Inclination, add the log. sine of the Moon's true Latitude, (at the Ecliptic opposition,) and the sum will be the $\log$. sine of the nearest approach of the Centres of the Moon, and Earth's Shadow.
$3 A 2$
4. Then from the sum of the Horizontal Parallaxes of the Sun, and Moon, subtract the Semidiameter of the Sun, the remainder is the apparent Semidiameter of the Earth's Shadow, which must be increased by $5 \mathbf{0}^{\prime \prime}$, on account of the Earth's Atmosphere.

To the Semidiameter of the Earth's Shadow, thus found and increased, add the Senidiameter of the Moon; and if that sum is more than the nearest approach of their Centres, the Moon will be Eclipsed at that Time; but if otherwise, she will not be Eclipsed.
5. The Moon being found Eclipsed; then from the sum of the Semidiameters of the Moon, and Earth's Shadow, subtract the nearest approach of their Ceutres, and the remainder is the partdeficient.

Note. If the parts deficient are less than the Moon's apparent diameter, it shews the Eclipse will not be totul; but if they be equal, then the Eclijse will be total without continuance; but if the parts deficient be more than the Moon's apparent diameter, then the Eclipse will be total with continuance.

> The Analogy to find the Digits Eclipsed.
ts the Semidiameter of the Moon : 6 Digits, or 360 : : part deficient : Digits Eclipsed. or

To the co-arith of logistical log. of the Moon's Semidiameter, add the logistical log. of parts deficient; the sum will be the logistical log. of the Digits Eclipsed.
6. With the argument of Latitude (longitude ) in Orbit-correct longitude $\Omega$ ). found at the 'lime of the true Ecliptic opposition, take out the Moon's reduction from her proper Orbit bo the Lecliptic, which equation is to be doubled, and turned into Time, by the Moon's Hourly Motion from the Sun; and you will have the Time between the true Syzygy and the mean Eclipse, or greatest Obscuration; which is to be added to, or subtracted from the Time of the true Fcliptic Opposition, according as ihe Moon is yet short of, or
past the next Node, and you will have the Time of the greatest Obscuration, or middle of the Eclipse.
7. To find the scruples of Incidence, or Motion of half duration.

From the square of the sum of the Serhidiameters, of the Moon, and Earth's Shadow; in seconds; deduct the square of the nearest áproach of their Centres in seconds; the square root of what remains, will be the Motion of Semiduration, in seconds of a Degree.

## To find the time thondof, say,

As the Honrly Motion of the Moon from the Sun : is to 1 Hour, or $\ddot{6} 0$ Minutes in Time : $\because$ so st the Motion of Semiduration : to the Time of Sendiduration; which being subtracted from, and add.: ed to the Time of the greatest Obscuration, will give the Time of the Beginning, and End of the Moon's Eclipse:
8. To find the Scruples of half total Darkness in a totad Eclipse of the Moon, and thence the continuance, Boginning, and:End of total Durkiness. .
bule.
From the square of the difference of the. Sermidiameiters of 'the: Moon and Earth's Shadow, in seconds of a degree, dedinet the qquare: of the nearest approach of their Centres, in soconds of a degree; the: square root of what ręmains, will be the ,Motion of : Siemiduration,: in total Darkness, in second; of a degree, which turned into Time, by the Hourly Motion of the Moon from the Sun, aniat strtitacted. from the middle of the Eclipse, gives the Time of Immersion of beginning of total Darkness; and idded to the Time of the middle of the Eclipse, gives the Time of Emersion or End of totad Darknesss:
N. B. If the Trme found is mean Time, it must be reduced to the apparent Time, by the Equation of Time:

And if the given place be not that for 'which the Tabless"aré made, the allowanoe must be made for the difference of'Meridians:
EXAMPLE.A Computation of a total Eclipse of the Moon, December3rd 1797, for the Meridian of the Royal Observatory at Green-wich.

## to COMPUTE ECLIPSES OF TEE SUN.

## PRECEPTS.

1. By Astronomical Tables find the time of the true Ecliptic Conjunction, or new Moon, when an Eclipse is expected to happen. From the Horizontal Parallax of the Moon, subtract the Horizontal Parallax of the Sun, the remainder will be the Semidiameter of the Earth's Disk. Jikewise, to the Semidiameter of the Sun, add the Semidiameter of the Moon, the sum of which, will be the Semidiameter of the Moon's Penumbra.
2. To the Semidiameter of the Earth's Disk, add the Semidiameter of the Moon's Penumbra, and if the sum exceeds the nearest approach of their Centres, (found like the nearest approach of the Centres of the Moon and Earth's Shadow, in an Eclipse of the Moon,) the Sun will be Eclipsed in some part of the Earth: but otherwise no Eclipse of the Sun can happen.
3. The Sun being found Eclipsed in some part of the Eiarth, the Beginning, Middle, and End of the general and also central Eclipse, (with respect to the whole Earth,) may be found in like manner as is before directed, for finding the Boginning, Middle, and End of an Eclipse of the Moon.

To Calculate an Eclipse of the Sun for any particular place given, by Parallaxes.

1. Having found by Astronomical Tables, the true Ecliptic Conjunction of the Sun and Moon, together with their places in the Ecliptic; compute the Moon's true Latitude, with all the other requisites, adapted to the particular place given.

Find also, the Moon's Horizontal Parallax, her apparent Semidiameter, and Hourly Motion in Longitude and Latitude, as also the Sun's apparent Semidiameter, and Hourly Motion.
2. To the apparent Time of the true Conjunction of the Sun and Moon, compute the Parallax of the Moon from the Sun, in Longitude.
3. To half an Hour, an Hour or more, (as the said Parallax is small or great,) before or after the true Conjunction, according as the Moon is in the Eastern, or Western Quadrant of the Ecliptic, compute again the Parallax of the Moon from the Sun in Longitude; by which means, (from the true,) you will have the visible half, Hourly, \&cc. Motion of the Moon from the Sun.

Note. To Compute the Parallaxes of the Moon in Longitude, and Latitude, in Solar Eclipses.

For the Moon's Parallax in Longitude.
The Equatorial Horixontal Parallax of the Moon, is first to be reduced from the Sphere to the Spheroid for the Latitude of the place.

To the Sine of the Horizontal Parallax, add the Sine of the Altitude of the Nonagesimal degree of the Ecliptic, and the Sine of the distance of the Sun, (or Monn's visible distance, from the Nonagesimal degree, and their sum will be the Sine of the Moon's Parallax in Longitude,

Note. The Moon's Parallax in Longitude is to be added, or subtracted to the Moon's true place, as the Sun is to the East, or West of the Nonagesimal degreo.

## For the Moon's Parallax in Latitude.

To the Sine of the Moon's Horizontal Parallax, add the Co-sine of the Altitude of the Nonagesimal degree of the Ecliptic, and the sum will be the Sine of the Moon's Parailax in Latitude.

Note. The Moon's Parallax in Latitude always depress her Southward, in Northern Latitudes without the Tropicks; that is diminish her true North Jatitude, and increase her true South Latitude.

Now say, As the visible Motion of a © : is to the Time taken : : $s 0$ is the Parallax of the Moon fram the Sun in Longitude
at the Time of the true Conjunction : to the Interval of the true and visible Conjunction, which added to, or subtracted from, the Time of the true Conjunction, according as the Moon is to the East, or West of the Nonagesimal degree, will give the Time of the visible Conjanction of the Sun and Moon.
4. To which time, compute again the true places of the Sun and Moon, with the Parallax of the ) á $\odot$ in Longitude and Latitude, and so find the apparent or visible place of the Moon, in respect of the Sun; and also the Moon's visible Latitude.
5. To ten or fifteen Minutes (more or less,) before or after the visible Conjunction, as the Moon's visible Latitude is found to be increasing, or decreasing, compute the visible Longitude of the ) a © ; with her visible Latitude. Now say, As the Sine of the visible Motion of ) a $\odot$ in Longitude, in the Time taken : is to Radius : : so is the Tangent of the difference of visible Latitudes (between the visible Conjunction and Time taken) : to the Tangent of the Angle of the visible way of the Moon with the Ecliptic at the Time of the visible Conjunction. And, as Radius : is to the Sine of the visible Latitude of the Moon at the visible Conjunction : : so is the Sine of the Angle of the visible way of the Moon with the Ecliptic at that Time : to the Sine of the Motion seen from the visible Conjunction, to the greatest Obscuration.

And, : : so is the Co-sine of that Angle : to the Sine of the visible distance of the Centres of the Sun and Moon at the Time of the greatest Obscuration, that is, their nearest visible distance.

Note. If this distance be less than the Semidiameter of the Moon's Penumbra, the Sun will be Eclipsed at that place; but otherwise not.

Note. If the Moon's place be more than the place of the Nonagesimal degree, according to the order of the Signs, then she is East of the Nonagesimal degree, and the Parallax in Longitude adds.

But if it is the contrary, she is to the West of the Nonagesimal degrec, and the Parallax in Longitude subtracts.
6. The Sun being found Eclipsed; from the Semidiameter of the Penumbra, subtract the nearest visible distance of the Centres of the Sun and Moon, the remainder will be the part deficient; from which the Digits Eclipsed may be found.
7. Now say, As the visible Motion of the Moon from the Sun in the Time before taken, (before or after the visible Conjunction,) : is to that Time : : so is the Motion seen from the visible Conjunction, to the greatest Obscuration : to the Interval in Time, which being added to, or subtracted from the Time of the visible Conjunc$t_{i o n}$ (as the visible Latitude is decreasing or increasing) gives the Time of the greatest Obscuration, or the middle of the Eclipse.
8. To the Semidiameter of the Penumbra, add and subtract the nearest visible distance of the Centres of the Sun and Moon,

To the Logistical log. of that sum, add the Logistical log. of their difference; divide that sum by two, and you will have the Logistical log. of the visible Motion of Sumiduration in Minutes and seconds of a degree.
9. Now say, As the Sine of the visible Motion of the Moon from the Sun in Lougitude for an Hour, or more, before the visible Conjunction, : is to Radius : : so is the Tangent of the difference of visible Latitude in that Time : to the Tangent of the Angle of the visible way of the Moon with the Ecliptic, from the Beginning of the Eclipse to the visible Conjunction.

And, as Radius : is to the Sine of the visible Motion of Semiduration : : so is the Co-sine of that Angle : to the Sine of the visible Motion in Longitude from the Beginning of the Eclipse to the greatest Obscuration, or middle of the Eclipse.
10. Likewise, As the visible Motion of the Moon from the Sun, in Longitude in the Hour, (or more,) before the risible Conjunction
: is to 1 hour, (or more,) : : so is the Motion in Longitude seen from the Beginning of the Eclipse to the greatest Obscuration : to the Time of Incidence; which sabtract from the Time of the greatest Obscuration, gives the Time of the Beginning of the Eclipse.

By the like proportions, (from the visible Jongitude of the Moos from the Sun in consequence with her visible Latitude for an $H_{p o u r}^{r}$ or more, after the visible Corjunction,) you may find the Time of Emergence, and so the Ead of the Eclipse.

## ESAMPLE

Computation of the Solar Eclipse, which happened April 1st 1764, from Tables, agreeing very near with Mayer's Tables of 1770.

For the Maridian of Greenwich, and Latitude $51^{\circ} 30^{\prime}$,
E. M. s.

## An observation.

Instead of the Sines in these operations, as there is trouble to obtain them to seconds, (except you have Tables that has them to seconds,) you may use Shakerly's Logistical Log. and then remember to make the first Figure the Index: but then the Co-sines and Tangets must be had from their proper Tables.

As the Moon is to the West of the Nonagesimal Degree at the true Ecliptic Conjunction, the visible Conjunction of course nnust follow; and as her Parahax in Longitude a $\odot$ is $=2^{\prime} 33^{\prime \prime}$, the visible Conjunction must fall about eight, or ten Minutes after the true Conjunction.

## The Requisites for Greenwich.

Eight Minutes after Time of the true Conjunction. 10․ 29m. 2s.

[^11]

The true Method of Computing the Direction of the Sun to the Zodiacal Sextile of Venus, by Oblique Ascension, in the first Nativity in this Work. Pole of the Sun $48^{\circ} 9^{\prime}$. The Sextile of Venus falls in $0^{\circ} 18^{\prime \prime} \mathrm{m}$. In the Tables of Oblique Ascension under $48^{\circ}$, and even with $0^{\circ}$ of 8 , I find $14^{\circ} 52^{\prime}$, and opposite $1^{\circ}$ of that Sign, the number is $15^{\circ} 24^{\prime}$, the difference is $32^{\prime}$. I now say, if $60^{\prime}$ give $32^{\prime}$, what w $1 \mathrm{ll} 18^{\prime}$ require? Answer $10^{\prime}$, which must be added to $14^{\circ} 52^{\prime}$, and the Oblique Ascension of the Opposition of the said Aspect, under the Pole of $48^{\circ}$ is, $15^{\circ} 2^{\prime}$. I now equate for the $9^{\prime}$ which exceed $48^{\circ}$. Opposite $i^{\circ}$ of $\boldsymbol{\gamma}$ in the Tables of Oblique Ascension, under $48^{\circ}$, the number is $14^{\circ} 52^{\prime}$, and even with the same degrees of that $\operatorname{Sign}$, under $49^{\circ}$, I find, $14^{\circ} 23^{\prime}$, by subtraction there remains $29^{\prime}$ : then if $60^{\prime}$ give $29^{\prime}$, what will $9^{\prime}$ produce? Answer $4^{\prime}$, which 1 deduct from $15^{\circ} 2^{\prime}$ above computed, and the remainder is the Oblique Ascension of the Opposite place of the Sextile of Venus, (ander the Pole of the Sun,) $14^{\circ} 58^{\prime}$, from which $I$ subtract the Oblique Ascension of the Sun's Opposition, and the remainder is the Arc of Direction $11^{\circ} 8^{\prime}$.

The ingenious practitioner may, in any Geniture, compute all the Directions to the Sun in ter Zodiac, from the Tables of Oblique Ascension contained in this Work, with ease, and accuracy, by proceeding with the operations in a similar manner to the single Precept I have here given; (which is quite sufficient for exemplification,) whereby every Arc of Direction may be discovered with readiness in all cases, and which will amply compensate all those who are Students in this incomparable Science.

John Worsdale, Lincoln.
October 11th 1828.

## THE END.

[^12]
## ERRATA.

In the Author's address to the Reader, soveral mispointings are omitted.
Page 4, line 3, read with $0^{\circ}$ of Gemini , instead of will $0^{\circ}$ of Gemini.

- 8, line SO, read difference instead of difierence.

14, line 21, read Declination instead of Latitude.
15, the lest line but two, read separated instead of seperated.

- 55, line 14, read inflammations instead of inflamations. 68, 67, and 68, the Head-lines incorrect.
-69, line 8, read Accotrcheur instead of Accoucher.
From Page 101 to Page 108, the Head-lines incorrect
Page 113. The Direction of the Sun to the Opposition of Mars in the Zodiac, Converse Motion, should be 17riss. 9mo. and not l7fes. 6mo. In the same Page, the Midheaven to the Square of Mercury in Mundo, should be 20d. 36m. and not 2CD. 26m.
Page 144, line 10, read Tomahawk instead of Tommahauk.
-160. The Sun to the Parallel of Jupiter in Mundo, Direct Motion, should be 9ybs. 6mo. and not 8ras. 6mo.; and the Sun to the Semiquartile of Mars in the Zodiac, should be 9yRs. 9mo. and not 8yRs. 9mo.
Page 168, line 21, read Directions of Mars, and not Directions to Mars. In the Figure of Birth, Page 213, the $\oplus$ is omilted. It falls near the Cusp of the fifth House.
Page 246. The Midheaven to the Opposition of Mats in Mundo, should be 18yns. 11mo. and not 48yns. 11mo.
Page 256. The Moon to the Parallel of Saturn in Mundo, Converse Direction, should be 29 d .55 m . and not 25 D .55 m .
In the Figure of Birth, Page 306, there should be $21^{\circ} 8^{\prime}$ g on the Cusp of the twelfth House, and not $\boldsymbol{2}^{\circ} \boldsymbol{8}^{\prime}$ of that Sign.
