FOR THE YEAR OF HUMAN REDEMPTION

1831,

635569  
76.5.56

BEING THE THIRD AFTER BISSEXTILE; AND THE  
SECOND OF THE REIGN OF HIS PRESENT MAJESTY:

CONTAINING,

AMONGST A GREAT VARIETY OF USEFUL MATTER

THE RISING AND SETTING OF THE SUN AND MOON;  
THE MOON'S CHANGES, SOUTHING, AND AGE;

THE EQUATION OF TIME FOR SETTING CLOCKS AND WATCHES;  
THE RISING AND SETTING OF THE PLANETS; THE ELEMENTS  
OF THEIR ORBITS; OCCULTATIONS; MUTUAL ASPECTS, ETC.

AND

**A correct Tide Table.**

ALSO,

**A TABLE OF TERMS AND THEIR RETURNS;**  
AND A USEFUL CHRONOLOGY OF EVENTS.

TO WHICH ARE ADDED,

**AN ACCOUNT OF THE ECLIPSES,**

WITH ASTROLOGICAL OBSERVATIONS ON THE FOUR QUARTERS  
OF THE YEAR; AND AN ANNUAL

HIEROGLYPHIC ADAPTED TO THE TIMES.

LONDON

PRINTED FOR THE COMPANY OF STATIONERS

By James & Luke G. Hansard & Sons, near Lincoln's-Inn Fields;

AND SOLD BY GEORGE GREENHILL, AT THEIR HALL,  
LUDGATE STREET.

PRICE TWO SHILLINGS AND THREE-PENCE STITCHED.

HAIL, Readers, all! my Message I renew,  
 And, postman-like, come from the Stars to you ;  
 When in their conversation I have been,  
 I'll let you know what I have heard and seen,  
 And in consulting the erratic Stars,  
 Observe who smiles us Peace, who frowns us Wars.

THE depth of Rain which fell at Epping, in Jan. 1829, was .698 of an Inch; and at High Wycombe, for the same period, 1.081 Inch.

LAST QUAR. 5d. 10h. 54m. aftern.

Judging from stellar influence, as regards the pluvial state of our atmosphere, we may expect Rain or Snow about the 5th, 12th, 18th, 23d, 26th and 30th of this Month.

At the top of this column are given

NEW MOON, 14d. 1 h. 36m. morn.

the Depths of Rain for each Month of the Year 1829, as it was taken with proper instruments, at the abovementioned places, viz. Epping in Essex, and High Wycombe in Buckinghamshire.

FIRST QUAR. 21d. 7h. 29m. morn.

Although the science of Meteorology may be said to be in its infancy, yet the labours of Howard and Daniell have done much in promoting an inquiry into this interesting and useful

FULL MOON, 28d. 2h. 33m. morn.

branch of knowledge; and our monthly results have also their use.

# 4 FEBRUARY XXVIII Days.

THE Stars this month do now oppose each other ;  
 We also find they join as oft together :  
 What they intend, let Jove himself relate,  
 Who in his hands doth keep the Keys of Fate.  
 Great Causes ever move Events as great ;  
 This is no month to fight ; but 'tis to treat.

VENUS ♀ will be an Evening Star until October 8; then a Morning Star to the end of the year.

THE slippery paths of Greatness often prove  
 A scourge to such as do Ambition love.  
 There's none exempt from the decrees of Fate,  
 From the poor Peasant to the Royal seat.  
 A great Man bows ; 'tis prudence to do so ;  
 He whom the Fates do drive, can't chuse but go.

VENUS thwarts *Jove*, and so doth *Saturn* too,  
 But smiles on *Sol* and *Mars*! — What's here to do?  
 Apollo holds my pen, lest I should tell;  
 'Ill only say thus much, all is not well.  
 And I could wish my Friends, in Peace or War,  
 Never presume to trust their Foes too far.

THE Earth obeys, and so doth all it's crowd,  
 When the Eternal Power speaks aloud :  
 Great things approach, swift Time prepares the way,  
 And to be done by Hands as great as they :  
 Slowly they move, but certainly they come,  
 As sure as Day before the rising Sun.

# 18 SEPTEMBER XXX Days.

Now comes the Time when *Libra* justly weighs,  
And makes the Nights just equal with the Days;  
Here *Phæbus* stops, and gently doth decline,  
To reassume the Equinoctial Line:  
The Days contract, the lengthen'd Shadows fly,  
The trembling Leaves forsake the Trees, and die.

# 22 NOVEMBER XXX Days.

As a kind Lady, when her Lover's gone,  
Falls sick, and sighs, and languishes alone;  
So the Old Year, just ready to expire,  
Grows faint and cold for want of solar fire;  
Wrapt up in sheets of Snow, at first she lies  
Bedrid with Frost, then, chok'd with Moisture, dies.

# 24 DECEMBER XXXI Days.

THE Year's run out, and doth itself renew;  
But Man's the same, acts as he us'd to do:  
With Beasts of Prey, the Lion, Wolf, and Bear,  
His brutish Nature and his Passions share:  
He blames the Creature, yet turns brute for Pelf,  
All he condemns in them, he doth himself.

*The depth of Rain which fell at Epping, in Dec. 1829, was .351 of an Inch;*

NEW MOON, 4d. 7h. 48m. morn.

*and at High Wycombe, for the same period, .331 of an Inch.*

Rain, and snow at intervals, about the 2d, 8th, 14th, 21st, and 29th days of this Month.

FIRST QU. 12d. 11h. 22m. morn.

It appears from the preceding depths of Rain for 1829, that there fell at *Epping*, in that year, 30.14 inches; and at *High Wycombe*, 29.418 inches.

If the above be divided into quarterly periods, we shall find that in the

FULL MOON, 19d. 5h. 11m. morn.

Winter quarter, or first three months, there fell at the former place 2.338 inches, in the Spring quarter 8.133, in the Summer quarter 16.012! and in the Autumn quarter 3.657 inches: again, at the latter place 3.075, 8.563,

LAST QUAR. 26d. 0h. 11m. morn.

13.925, and 3.919 inches respectively. Hence the unfavourable season for Hay time and Harvest.

My Readers will find the advantage of preserving and comparing these memoranda from year to year.

TABLE of TERMS and RETURNS for the Year 1831.

HILARY TERM begins Jan. 11; ends Jan. 31; and contains 21 days.

ESBOIGN, OR GENERAL RETURN DAYS.

	Ex	Re	Ap	W. D.
The fourth day before the day of commencement of Term - - -	Jan. 8	9	10	11 Tuesday.
The fifth day of the Term - - -	15	16	17	18 Tuesday.
The fifteenth day of the Term - - -	25	26	27	28 Friday.
The nineteenth day of the Term - - -	29	30	31	

EASTER TERM begins April 15; ends May 9; and contains 25 days.

	Ex	Re	Ap	W. D.
The fourth day before the day of commencement of Term - - -	April 12	13	14	15 Friday.
The fifth day of the Term - - -	19	20	21	22 Friday.
The fifteenth day of the Term - - -	29	30	M 1	2 Monday.
The nineteenth day of the Term - - -	May 3	4	5	6 Friday.

TRINITY TERM begins May 23; ends June 13; and contains 22 days.

	Ex	Re	Ap	W. D.
The fourth day before the day of commencement of Term - - -	May 20	21	22	23 Monday.
The fifth day of the Term - - -	27	28	29	30 Monday.
The fifteenth day of the Term - - -	June 6	7	8	9 Thursday.
The nineteenth day of the Term - - -	10	11	12	13 Monday.

MICHAELMAS TERM begins Nov. 2; ends Nov. 25; and contains 24 days.

	Ex	Re	Ap	W. D.
The third day before the day of commencement of Term, the fourth day falling on a Sunday - - -	Oct 31	N 1	2	3 Thursday
The sixth day of the Term, the fifth falling on a Sunday - - -	Nov 7	8	9	10 Thursday
The fifteenth day of the Term - - -	16	17	18	19 Saturday.
The twentieth day of the Term, the nineteenth falling on a Sunday - - -	21	22	23	24 Thursday.

\* In the above Table the Terms and Returns are calculated according to what seems to be the meaning of the late Act 1 Will. IV. c. 70. s. 6. It should be observed, however, that a blank is left for the appearance day of the fourth General Return of Hilary Term, which consisting only of twenty-one days, has no quarto day post after that return. It should also be observed, that in the construction of the Act it is doubtful whether Easter Term ends on the eighth or ninth day of May: and also whether Trinity Term begins on the twenty-second or the twenty-third of that month, and ends on the twelfth or thirteenth of June. The Essoigns, &c. therefore of those Terms, as stated in the table, must be understood as subject to the abovementioned doubt.

## COMMON NOTES for the Year 1831.

6		37 10 9	56 6 2	75 1 6	93 16 11	187 13 10
7		34 9 8	51 14 5	68 19 3	86 4 1	172 8 1
8		31 10 3	47 5 5	63 0 7	78 15 8	157 11 4
9		28 12 8	42 19 0	57 5 4	71 11 8	143 3 4
10		25 16 9	38 15 1	51 13 6	64 11 10	129 3 9
11		23 2 6	34 13 8	46 4 11	57 16 1	115 12 2
12		20 9 9	30 14 8	40 19 7	51 4 6	102 8 11
13		17 18 7	26 17 11	35 17 2	44 16 6	89 13 0
14		15 9 0	23 3 6	30 18 0	38 12 6	77 5 3
15		10 14 0	16 1 1	21 8 1	26 15 1	53 10 3
16		6 5 11	9 8 11	12 11 10	15 14 10	31 9 8

These columns will serve to compute the amount of money lodged in Saving Banks, where the interest is now about 3 per cent, and the a cumulation half-yearly. The amount is not subject to the contingency of life, but belongs to the Depositor, if the child die before 14, or 21, the age at which it is intended to draw out the money.

*Example 1.* Suppose a father begins to deposit 1s. per week, or 26s. per half year, when his child is 2 years old. to what will it amount when the child is 21? Opposite the age 2, in col. 1, stands L.50. 14. 5. under L.1 half-yearly.

Hence, to - L.50 14 5

Add its fourth 12 13 7, because 5s.=one-fourth of 1l.

And one-fifth of this 2 10 9 because 1s.=one-fifth of 5s.

The sum - L.55 18 9. is the amount required.

*Example 2.* How much must be deposited half-yearly for three children, o 2, 7, and 12 years of age respectively, that each may have L.200 on becoming 21 years old? L.1 deposited half-yearly from 2 years old, will produce L.50. 14 5. The same from 7 years, will produce L.34 9 8. The same from 12 years, L.20 9. 9. Therefore, as L.50. 14 5. : L.200 :: L.1 : L.3. 18. 10 half-yearly deposit for child two years old.

As L.34. 9. 8. : L.200 :: L.1. : L.5. 14. half-yearly deposit for child 7 years old.

As L.20. 9. 9. : L.200 :: L.1 :: L.9. 15 3. half-yearly deposit for child 12 years old.

Sums actually deposited.  $\left\{ \begin{array}{l} L.3. 18. 10. \times 38 = L.149. 15. 8. \text{ in } 19 \text{ years.} \\ L.5. 14. 0. \times 28 = L.159. 12. 0. \text{ in } 14 \text{ years.} \\ L.9 15. 3. \times 18 = L.175. 14. 6. \text{ in } 9 \text{ years.} \end{array} \right.$

Thus clearly showing the advantage of beginning ear y.

## KINGS and QUEENS, from the CONQUEST.

KINGS Names.	Began their Reign.	Reigned Y. M. D.	Since their Reign.	Buried at
W. Conq.	1066 Oct. 14	20 10 26	744 Sept. 9	Caen, Norm.

NOTE.—That the Moon's Age being observed in the first Column, you find the Time of HIGH WATER at all the Places above mentioned, in the respective Column of Numbers immediately below them. Thus, when the Moon is *One*, or *Sixteen* Days old, it is HIGH WATER at Candado, Dunkirk, Leith, &c. at 26 minutes past 12 o'clock. And so of the rest. The time usually correct within half an hour—As to the Moon's AGE, you find it in the Sixth Column on every left-hand page of the CALENDAR.

A TABLE of the EQUATION of TIME, for regulating Clocks and Watches, for 1831.—*Note*, fa. Clock too fast; *that is*, your Clock, to be set right, must be so much faster than the Sun Dial.—slo. Clock too slow; *that is*, your Clock must be so much slower than the Sun Dial.

How to set a Clock or Watch by this Table:—*For Example*, Jan. the 1st, I find, by looking into the Table, that a Clock to be right must be 3 Min. 42 Seconds faster than a Sun Dial; *therefore* I set it so much *faster* accordingly. And so of the rest. Twelve o'Clock is the best Time to set a Clock or Watch by a Dial.

*Note*.—A Sun Dial shows Solar or Apparent Time; but a Clock, &c. should be set to Equal or Mean Time, as the Table directs, to go true.

THE following TABLE exhibits at one view the principal ELEMENTS of the PLANETARY SYSTEM.

	Mer.	Venus	Earth	Mars	Vest.	Ceres	Pallas	Jupiter	Saturn	Geor.	Sun
	♂	♀	♁	♂	♄	♀	♀	♃	♄	♅	☉
Mean dist. from Sun, Earth's dist. being 10	4	7	10	15	24	28	28	52	95	192	
Periodic time - - -	days 87	days 224	days 365	days 686	days 1335	days 1681	days 1681	years 12	years 29½	years 83	
Diameters, Earth's diameter 10 -	4	9	10	8	-	-	-	110	100	43	1128
Inclination of orbit to ecliptic -	7°	3° 23'	-	1° 51'	7° 9'	10° 27'	34° 39'	1° 19'	2° 29'	0° 46'	
Place of ascend. node as seen from the Sun	46°	75°	-	48°	103°	81°	172°	99°	112°	73°	
Diameter of Sun seen from planet -	80'	46'	32'	21'	13'	11'	11'	6'	3'	1'	
Times of revolution on axis -	-	23h 30'	23h 56'	24h 40'	-	-	-	9h 52'	10h 16'	-	25d 10h
Days from conj. to conj. or opp. to opp.	115	584	-	780	503	474	466	399	378	369½	
Of which time they retrograde during days	22	42	-	70	83	99	99	120	135	151	
Arcs which they retrograde -	12°	16°	-	18°	13°	12°	12°	9°	6°	4°	
Velocity per second in miles -	30	23	19	15	13	12	11	8	6	4	
Greatest and least apparent diameter -	11" 5"	57" 10"	-	26" 5"	-	-	-	40" 26"	18" 15"	4"	

THE mean diameter of the Earth is about 7,930 miles, and its mean distance from the Sun about 95 millions of miles. Hence, and from the proportional diameters and distances given in the Table, those of any of the planets may be readily found. The diameter of the Moon is about 2,160 miles, and her mean distance from the Earth nearly 240 thousand miles. JUPITER has four moons or satellites, SATURN has seven, and the GEORGIAN, URANUS, or *Herschel's* planet, has six. *Jupiter's satellites* are of great utility in finding the longitudes of places by their eclipses: they likewise exhibit some curious phenomena with regard to light. SATURN is surrounded by a double ring, which usually presents a most interesting appearance when seen through a telescope. Remark also,

- I. The orbit of each planet is an ellipse, (not differing greatly, however, from a circle,) of which the Sun occupies one of the foci.
- II. The areas described about the Sun, by the radius vector of the planet, are proportional to the time employed in describing them.
- III. The squares of the times of the sidereal revolutions of the planets are to each other as the cubes of the mean distances.

Similar laws obtain with respect to the satellites and their primaries.

# Chronology OF REMARKABLE OCCURRENCES.

<i>Years of Christ.</i>		<i>Years since.</i>
1066	WILLIAM (the Norman) conquered England	- 765
1116	First Parliament of Lords and Commons	- 715
1185	Ireland conquered by the English	- 646
1304	Edward I. reduced Scotland	- 527
1369	Wickliff first began the Reformation	- 462
1492	Columbus discovered America	- 339
1584	Virginia discovered by Sir Walter Raleigh	- 247
1603	A great Plague in London; died 56,570	- 228
1605	The Popish Gunpowder Plot, November 5,	- 226
1610	Jupiter's Satellites first discovered	- 221
1611	New Translation of the Bible	- 220
1614	New River brought to London by Sir Hugh Myddleton	- 217
1616	Shakspeare the poet died	- 215
1625	A great Plague in London; died 34,517	- 206
1632	A great Fire on London Bridge, Feb. 11	- 199
1649	King Charles I. beheaded Jan. 30	- 182
1653	Oliver Cromwell made Protector, Dec. 12	- 178
1655	George Fox, the first of the Quakers	- 176
1658	Oliver Cromwell died, Sept. 3	- 173
1660	King Charles II. restored, May 29	- 171
1662	The Royal Society instituted	- 169
1666	The lamentable burning of London, Sept. 2	- 165
1669	The Royal Exchange (built 1667) first opened, Sept. 28	- 162
1670	The Prince of Orange arrived at Whitehall	- 161
1672	Halfpence and Farthings first coined, Aug. 16	- 159
1677	Prince of Orange married to the Princess Mary	- 154
1678	The Popish Plot discovered	- 153
1679	The Habeas Corpus Act passed	- 152
1688	The seven Bishops sent to the Tower, June 8	- 143
1688	Prince of Orange landed at Torbay, Nov. 4	- 143
1688	King James II. abdicated, Dec. 12	- 143
1689	King William and Queen Mary crowned, April 11	- 142
1693	Bank of Eng. established.—Hackney Coaches first licensed	- 138
1704	Gibraltar taken by Sir George Rooke	- 127
1707	England and Scotland united, May 1	- 124
1727	The great Sir Isaac Newton died, March 20	- 104
1727	An Earthquake in several parts of England	- 104
1731	The Latin language abolished as to legal proceedings	- 100
1745	A Rebellion in Scotland	- 86
1746	The Scotch Rebels defeated at Culloden, April 16	- 85
1750	Westminster Bridge finished, cost £.389,500	- 81
1752	The Style and Calendar altered, September 2	- 79
1755	Lisbon destroyed by an Earthquake	- 76
1765	Otaheite discovered.—General Warrants declared illegal	- 66
1770	Blackfriars Bridge finished, cost £.152,840	- 61
1775	War declared against North America, August 23	- 56
1776	The Americans declare themselves Independent	- 55

1778	War against France.—1779, D <sup>o</sup> Spain.—1780, D <sup>o</sup> Holland.	
1783	A general Peace — Fiery Meteor passed over Eng. Aug. 18.	48
1784	Establishment of Mail Coaches - - - - -	47
1792	France a Republic.—King of Sweden shot by Ankerstrom	39
1793	King and Queen of France guillotined - - - - -	38
1797	Ireland invaded by the French - - - - -	34
1799	Buonaparte appointed First Consul of the French Republic -	35
1801	Ireland united to England.—A general Peace - - - - -	30
1801-2-4,	The Planets <i>Ceres</i> , <i>Pallas</i> , and <i>Juno</i> , discovered.	
1803	War with France renewed.—1804, Buonaparte made Emperor.	
1805	Battle of Trafalgar, and glorious death of Nelson - - -	26
1807	Copenhagen taken by the English; Treaty of Tilsit; the Portuguese Government emigrated to the Brazils - - -	24
—	Abolition of the Slave Trade - - - - -	24
1812	The Prince Regent assumed his full powers. War between France and Russia; Battle of Borodino; Moscow burnt -	19
1813	America decl. War against Gr. Britain: Alliance of England, &c. against France; Revolution in Holland; Pr. of Orange recalled	18
1814	Severe Frost; Allied Armies invaded France; Capitulation of Paris; Buonaparte abdicated, and conveyed to Elba; Definitive Treaty signed at Paris; Emp. of Russia, King of Prussia, &c. visited London; Peace proclaimed; Centenary Jubilee, &c.	17
1815	Conspiracy in France; Return of Buonaparte; Murat defeated, dethroned, and shot; BATTLE OF WATERLOO; Surrender of Paris to the Allies; Return of Louis XVIII.; Buonaparte exiled to St. Helena, where, on May 5, 1821, he died.—New Mint erected - - -	16
1816	Vauxhall Bridge and 1817 Waterloo Bridge opened	
1819	Southwark Bridge opened - - - - -	12
1820	Jan 23. <i>Died.</i> ] The Duke of Kent, aged 52, and } both buried	
—	— 29. GEORGE III. aged 82 - - - - - } at Windsor	11
—	Thistlewood's Conspiracy.—Regent's Canal opened - - -	11
1821	£.1. & £.2. Notes superseded by Sovereigns and Half Sovereigns.	
1825	South American Independence established - - - - -	6
—	Independence of Hayti acknowledged by France - - -	6
—	June, First stone of the new London Bridge laid - - -	6
1827	Jan. 5, Duke of York died, aged 63; buried at Windsor -	4
—	Oct. Egyptian Fleet destroyed at Navarino - - - - -	4
1828	June, War between Russia and the Porte - - - - -	3
—	Oct 6, <i>Died.</i> ] Queen (dowager) of Wirtemberg, aged 62 -	3
1829	April 13, Catholic Relief Bill passed - - - - -	2
—	Sept. 23. New Post Office opened. - - - - -	2
1830	May, Peace between Russia and the Porte.	
—	June 26, GEORGE IV. died, aged 63; buried at Windsor.	
—	— - Accession of WILLIAM IV. to the Throne of these Realms.	
—	July, Capture of Algiers by the French.	
—	— 24, Parliament dissolved.	
—	— 27, Revolution in France: abdication of Charles X.; the Duke of Orleans declared King; and, Aug. 9, His Accession to the Throne.	

---

AN ACCOUNT OF  
THE ECLIPSES OF THE SUN AND MOON,

*And other Appearances in the Heavens, in the Year 1831 ;  
the result of calculations from the most correct and  
approved Data.*

FROM the known laws that govern the motions of the heavenly bodies, man is able, by a combined calculus founded upon correct physical and mathematical principles, to ascertain with great certainty the different *phenomena* incident to the various periods of the planetary bodies of our Solar system. Accordingly, as respects our Earth, and its attendant Satellite, we can safely predict that there will be *four* Eclipses this year ; that is, *two* of the SUN, or rather Earth, and the same number of the MOON ; when one of the latter luminary, will, in part be visible in this country.

The *first* of these Eclipses is an annular one of the SUN, on *Saturday, February 12th*, in the afternoon ; it begins at 2h. 35m. in latitude  $14^{\circ} 2' N.$  longitude  $125^{\circ} 16' W.$  and ends at 7h. 38m. in latitude  $40^{\circ} 5' N.$  longitude  $36^{\circ} 21' W.$  : the former falling in the *Pacific*, and the latter in the *Atlantic Ocean*.

This eclipse is not only *invisible to England*, but to the whole of *Europe, Asia, and Africa* ; nevertheless, to the continent of *N. America*, and the adjacent waters, it will prove a visible and interesting eclipse. The central shade first touches the surface of our globe, at 3h. 51m. in latitude  $32^{\circ} 17' N.$  longitude  $138^{\circ} 54' W.$  and passing over a small extent of the *Pacific*, it quickly reaches the coast of *California*, near *Cape Colnett*, and crossing the northern part of that peninsula and the Gulf of the same name, it enters *Mexico* near the parallel of  $30^{\circ}$  : sweeping over this country, its course is directed towards *New Orleans*, and on entering the territories of the *United States*, crosses the *Mississippi* a few miles north of that city. In its progress over *Georgia*, the sun attains his greatest elevation ( $43^{\circ} 6' 48''$ ) on the central track ; which falls near *White Bluff River*, in that state ; latitude  $31^{\circ} 47'$ , longitude  $38^{\circ} 14'$ . Here the obscuration is the greatest, and the annulus of light surrounding the dark body of the moon will be about

one-eighth of a digit in breadth : at the same time the apex of the moon's umbra is 5,000 miles distant in space from this spot ; and the same will be in the zenith of that part of the globe which lies about  $5^{\circ}$  N. of the *Gallipago Isles*, where a small indentation takes place on the Sun's upper limb, although the apex of the umbra will be 700 miles nearer this part than where the eclipse is greatest. The central shade now shapes its course more northerly, crosses the *Savannah* into *S. Carolina*, where the sun becomes centrally eclipsed when on the meridian of latitude  $34^{\circ} 54'$ , longitude  $81^{\circ} 29'$ . It thence proceeds nearly in a straight line across *N. Carolina* and *James River*, passes between the towns of *Norfolk* and *Williamsburg*, in *Virginia*, then over *York River*, *Chesapeake Bay*, and the southern promontory of *Maryland*, where it enters the *Atlantic*, skirting the coasts of *Jersey*, *New York*, and *Connecticut*, continuing its course over the *Island of Nantucket*, the town of *Halifax*, in *Nova Scotia*, the *Island of Cape Breton*, and *Newfoundland*. It then again enters the *Northern Ocean*, where it leaves our globe at 6h. 22m. in latitude  $57^{\circ} 50'$  N. longitude  $28^{\circ} 11'$  W.

As the annular eclipse will extend, at a mean, about 55 miles on each side of the central track, it may be inferred that the whole body of the Moon will appear on the disc of the Sun, as seen from the towns of *Petersburg*, *Richmond*, *Williamsburg*, *Norfolk*, *Dover*, *Salem*, besides some others in the *United States* that are situated within the said limits. This eclipse will also be very large at *Dumfries*, *Washington*, *Baltimore*, *Philadelphia*, *Burlington*, *Trenton*, *Amboy*, *New York*, *New London*, *Providence*, *Taunton*, *Boston*, &c. It will also be visible to *Hudson's Bay*, *Labrador*, *East* and *West Florida*, the *Gulf of Mexico*, *Cuba*, and the *West India Islands*, &c.

The second Eclipse is of the Moon, on *Saturday* afternoon, *February 26th* ; the latter part of which may be expected to be visible in *England*. The lunar disc first enters the real umbra of the Earth, at 3h. 14m. 26s. arrives at its maximum of obscuration at 4h. 42m. 39s. when the Moon will be  $8^{\circ} 16' 37''$  eclipsed ; her lower limb leaves the horizon of *Greenwich* at 5h. 18m. 34s. ; she then exhibits a partial disc of light equal to  $5^d 24' 4''$ , agreeably to the annexed

delineation ; and will gradually recover her wonted brightness, as she ascends the azure vault of heaven, when at 6h. 10m 52s. the circle is again complete, and the eclipse ends.

At *Paris*, this Eclipse begins at 3h. 24m. The middle takes place at 4h. 52m. and the end at 6h. 20m. according to the meridian of the French Observatory.

The Moon rises, when the eclipse begins, to a part of the *Black Sea*, the *Arabian Gulf*, and to the Island of *Madagascar*; and the Eclipse will be partly visible to *Italy*, *Germany*, *Sweden*, *France* and *Spain*; but to the whole of *Asia*, and *Notasia*, with the numerous islands lying between these two continents, it will be visible from the beginning to the end. At the time of the Moon's rising at *Greenwich*, she will be vertical over the *Gulf of Siam*; latitude  $9^{\circ} 16' 24''$  N. longitude  $100^{\circ} 18' 56''$  E.

The next, or *third*, is a total Eclipse of the SUN, on *Sunday*, August 7th, in the afternoon, but invisible to us and all *Europe*, and I may say *Asia*, *Africa*, and *America*, its appearance being principally confined to those parts of *Australasia* and *Polynesia* which lie in the southern hemisphere.

The first impression made by the Moon upon the disc of the Sun will be at his rising, in latitude  $13^{\circ} 41'$  S. longitude  $158^{\circ} 47'$  E.; and at the last, when setting, in latitude  $35^{\circ} 15'$  S. longitude  $111^{\circ} 35'$  West. On the ingress of the *penumbra* it very rapidly extends itself over that part of the *Pacific*

and the adjacent Isles, when shortly after its entrance on the coast of *Notasia*, the centre of the *umbra* first touches the earth in latitude  $29^{\circ} 6' S.$  longitude  $146^{\circ} 55' E.$ ; this happens about 400 statute miles from *Paramatta*, and 430 from *Botany Bay*, bearing nearly NW. by N.; at the former place the Sun will be  $10\frac{1}{2}$  digits obscured.

The central shade, after leaving the *Australian* continent, enters the *Pacific*, and passing very near or over *Norfolk Island*, soon arrives at that point of its curvilinear tract, where the Sun will suffer a total Eclipse at noon-day; which falls in latitude  $26^{\circ} 23' S.$  longitude  $156^{\circ} 2' W.$  It now traverses these waters in a southward direction, and makes its exit in latitude  $50^{\circ} 9' S.$  longitude  $103^{\circ} 4\frac{1}{2}' W.$  The general Eclipse begins at 7h. 41m. 26s.; total darkness at 8h. 50m. 14s.; the end of total darkness at 11h. 29m. 24s. and the end of the Eclipse at 12h. 38m. 12s. or 38m. 12s. after midnight.

The Sun attains the greatest elevation on the central track, in latitude  $24^{\circ} 34' S.$  longitude  $160^{\circ} 45' W.$  where the Moon's semi-diameter exceeds that of the Sun  $31''$ . Here, if the observer be stationary, the duration of total darkness would be only 1m. 45s.—if he be subject to the orbicular motion of the Earth, the duration of total darkness would be 1m. 52s.; but if he partake of both the orbicular and rotatory motions of the globe, he will see the Sun totally obscured 3m. 13s.

This Eclipse will be visible to *New Caledonia*, *New Zealand*, the *Friendly* and *Society Isles*, besides several others in their vicinity.

The *fourth* and last Eclipse of this year, is a partial one of the Moon, on *Tuesday, August 23d*, in the morning; and as the Moon will be under our horizon at the time, of course it will be *invisible* to us.

This Eclipse begins at 8h. 40m. 38s. The middle takes place at 9h. 56m. 55s. the  $\oslash$  at 10h. 5m. 10s. and the end at 11h. 13m. 11s.; digits eclipsed on the northern part of the moon's disc  $5^{\circ} 48' 17''$ .

The Moon rises at the beginning to some parts of *Notasia*, *N. Guinea*, the *Ladrone Isles*, and *Kamtchatka*; and sets to *Labrador*, *Newfoundland*, and the extremity of *South America*.

It will be partly visible to *Japan*, the *Philippine* and *Sunda Islands*; likewise to the western parts of *Notasia* and *New Guinea*, and the eastern parts of *China*, where the Moon will rise during the Eclipse; on the contrary, she will set whilst passing through the Earth's shadow to the greater portion of *South America*, the *United States*, and the whole of the *West India Islands*. But to *Van Diemen's Land*, the eastern parts of *Notasia*, to *New Zealand*, the *Friendly Society*, and *Sandwich Isles*, with the western coast of *North* and *South America*, the Eclipse will be wholly visible.

#### AN ACCOUNT OF THE MOST

#### REMARKABLE LUNAR OCCULTATIONS, APPULSES,

*And other Celestial Configurations that may be expected to happen within the period of the present Year.*

I now come to the consideration of other *phenomena* arising from the variable motions of the Moon, and her projected position in the direction of a visual line emanating from the surface of the Earth; in which those of the occultations of the Stars seem to merit particular attention, not only as immediately regards Geography and Astronomy; but in a philosophical point of view they are likely to prove useful, when nicely observed, by extending our knowledge relative to the refrangibility of the rays of light, &c.

The *first* Occultation of note that will happen this year is of the fixed Star *Aldebaran*, on *January 23d*, in the evening. The *Immersion* may be expected to take place about  $1\frac{3}{4}$ h. after the moon has passed the meridian of *Greenwich*, that is, at 9h. 46m. 40s. when the star is  $8^{\circ} 32'$  west of the moon's vertex; and the *Emersion* at 10h. 18m. 37s. the star appearing at  $66^{\circ} 28'$  from the said point, as is shown in the annexed delineation.

The next visible Occultation of the same Star is on the 15th of *April*, in the afternoon, when the *Immersion* takes

place at 4h. 50m. 29s. and the *Emer-  
sion* at 5h. 54m. the moon bearing  
nearly SW. and SW. by W.  $\frac{1}{2}$  W.  
respectively ; having an altitude in the  
former instance of about  $48^{\circ}$ . The  
Star will be  $30^{\circ} 58'$  from the Moon's  
vertex at *Immersion*, and  $112^{\circ} 46'$  at  
*Emersion*, agreeably to the accom-  
panying Diagram.

The *third* Occultation which I shall notice in this place,  
is of the Planet *Jupiter*, on *June* 2d, early in the morning,  
soon after the Moon has risen, when the central *Immer-  
sion* takes place at 1h. 8m. 40s. and the *Emersion* at  
2h. 13m. 51s. The planet will (when nearest) be  $5' 53''$   
south of the Moon's centre. All the Satellites may be  
expected to be visible at the time ; and they will be eclipsed  
in the following order : viz. first the 4th, then the 2d, next  
the planet, then the 1st satellite, and lastly the 3d. On the  
9th of the same month, the Moon again eclipses *Aldebaran*,  
but the *phenomenon* happens too near the Sun to be visible.

On the 3d of *August*, in the morning, there will be another  
Occultation of *Aldebaran* ; and though it happens when the  
Sun is above the horizon, yet it may  
be readily seen with a telescope.  
The *Immersion* is at 6h. 23m. 15s.  
and the *Emersion* at 7h. 16m. 5s. ;  
the Moon bearing nearly SSE. alti-  
tude  $52\frac{1}{2}^{\circ}$ . The star disappears at I,  
 $49^{\circ} 58'$ , and re-appears at E,  $55^{\circ} 35'$   
from the highest point *v*, of the Moon's  
limb, according to the annexed Type.

On the 30th, the Moon will again eclipse the above-  
mentioned Star, but the *Immersion* is expected to take place  
shortly after the moon sets at *Greenwich*.

On the 24th *October*, early in the  
morning, *Aldebaran* will again be hid  
by the Moon. The star immerses at I,  
 $62^{\circ} 57'$ , and emerges at E,  $55^{\circ} 11'$  from  
the lowest point of the Moon's border,  
agreeably to the Type. The Star disap-  
pears at 1h. 14m. 18s. and re-appears at  
2h. 20m. 27s. The Moon culminates  
about 15 minutes after the emersion.

On the 25th *November*, P. M. the star *Regulus*, in the constellation *Leo*, called also *Cor Leonis*, or the Lion's Heart, is eclipsed by the Moon on the parallel of *Greenwich*; but the Moon will not rise at the Observatory till about the time of *Emersion*, and therefore for this reason the phenomenon will be invisible to us.

The next visible Occultation of note is one of the Planet *Saturn*, on *November 27th*, A. M.; the *Immersion* will be at 4h. 46m. 13s. and the *Emersion* at 5h. 54m. 36s. The appearance will be as shown in the annexed delineation, where the Planet will come into view from behind the dark part of the Moon, at E,  $78^{\circ} 20'$  from v. In observing this Occultation, the young astronomer will not fail to notice the wonderful Ring which surrounds this planet, and which is now becoming very eccentric: its major axis is to its minor as 22 to 1, having at the same time its southern side illuminated.

The last time this year that the Moon will eclipse *Aldebaran*, will be on the 17th *December*, at night: *Immersion* at 11 h. 8 m. 38 s. and the *Emersion* at 11 h. 43 m. 38 s. The Star will disappear at I,  $50^{\circ} 23'$  east of the Moon's lower limb, and re-appear at E, only  $4'$  in arc west of the same.

The last of these Lunar Occultations which I shall notice this year, is one of *Regulus*, on *December 23d*, in the morning: *Immersion* at 7h. 40m. 32s.; *Emersion* at 8h. 41m. 23s.; and which takes place at  $74^{\circ} 57'$  and  $70^{\circ} 28'$  from the upper and lower limb of the Moon respectively. At the nearest approach, the star will be only  $18''$  in arc south of the Moon's centre.

*Note.*—The instants of the preceding Eclipses, Occultations, &c. are given in apparent time, and for the meridian of the Royal Observatory, when not otherwise expressed.

I now hasten to inform my astronomical readers when the Planetary Bodies are in the most favourable situations for telescopic observation.

MERCURY will be visible in the evenings, on or about *January 11th, May 3d, August 31st, and December 25th.* Again in the mornings of *February 20th, June 20th, and October 12th.* On *November 13th,* this planet will be eclipsed by the Sun; the  $\odot$  happening near the  $\oslash$  when  $\oslash$  is in the superior part of its orbit. But next year, in *May,* the planet will come to a  $\odot$  with the Sun, at the same node, when in the inferior part of its orbit, having at the same time a latitude less than the semi diameter of the Sun; consequently  $\oslash$  will be seen to pass over the disc of that luminary. A correct account, and delineation of this Transit, will be given in my Almanack of that year.

Near the end of last year VENUS arrived at her superior  $\odot$ , and will not reach her greatest elongation till the 30th *July*; and though a striking object in the evenings of the Spring and Summer months, yet she will be too far from the Earth for common telescopes, until *August, and September,* when she may be observed with advantage, and the same from the latter end of *October* to the end of the year. Her greatest brightness will be about *September 2d, and November 13th.*

MARS will not be in  $\oslash$  to the Sun this year. On *May 31st,*  $\odot \oslash \oslash$ , the latter about 49' north of the former.

JUPITER will be well situated for observation during the Summer quarter: opposition to the Sun, *August 10th.* This Planet still has very considerable southern declination.

SATURN is in  $\odot$  with the Earth, on *February 17th.* Therefore during the Winter, and early part of the Spring, this Planet, and its surprising Ring, will be interesting objects with the telescope. The plane of this ring will pass through the Earth in 1832, when the inhabitants of the Boreal hemisphere of Saturn will begin to receive the benefit of its reflected light: but more on this head in my next year's Almanack.

URANUS will be in opposition to the Sun *August 5th*; its longitude  $12^{\circ} 29'$  of  $\text{♊}$ , and latitude  $42'$  south.

Of the Four new Planets, VESTA, JUNO, PALLAS, and CERES.

It appears that only two of these Planets come in 8 to the Sun this year, viz. *Pallas* and *Ceres*. Their meridional passage, and declination, at and near these times, will be found as below for the Royal Observatory.

		Southing.		Declination.	
		h. m. s.			
1831 :	Pallas.	Bef.	Midn.	North.	
July - 20	- -	0	21 13	18° 57' 48"	
21	- -	0	26 1	18 52 8	
8 22	- -	0	30 48	18 46 14	
23	- -	0	35 54	18 40 42	
24	- -	0	40 18	18 33 40	
		Ceres.		Aft. Midn. South.	
Aug. 2	- -	0	24 56	29 0 33	
3	- -	0	20 13	29 6 28	
8 4	- -	0	15 27	29 12 19	
5	- -	0	10 40	29 17 58	
6	- -	0	5 51	29 23 32	

Pallas will be only a few minutes north of the stars, marked  $\alpha$  and  $\delta$ , in the constellation Sagitta.

This planet will be in a blank part of the heavens : passes the meridian nearly with  $\zeta$  Capricorni, about 8° south of that star.

*Judicium Astrologicum, pro Anno 1831.*

VOX CÆLORUM, VOX DEI: *The Voice of the Heavens is the Voice of God.—He speaketh in all the Changes of the Seasons, and of the Times.*

COURTEOUS READER,

A FEW years ago, a hoary-headed stranger, supposed to be under the Divine afflatus, stood, in open day, at the Exchange of *Astracan*, and, with a voice of authority, delivered himself nearly to the following effect :

“ Before the year 1900, there shall be great desolation in *Hungary, Poland, Germany, France*, and other regions of the West ; but above all other nations, *Italy* shall be made a wilderness, her cities burnt, her wealth plundered by *Tartars, Arabians, and Turks*, who will put great numbers to the sword, especially worldly-minded ecclesiastics, few of whom shall escape. Then shall arise in *England* a man of obscure birth, but of divine knowledge and wisdom, who shall be highly beloved of God and man, whose heart

shall be like a shining lamp ; and his tongue shall utter wonderful things ; he shall proclaim the laws of Jesus, freed from corruptions and errors, he shall reform all Christian churches, and utterly abolish the use of images. He will also convince the *Jews* of their infidelity, and chase away the darkness of superstition from the earth. *Spain* and *Portugal* will break their yokes.

“ Foreign Princes shall send their ambassadors to the King of *Great Britain*, and to this Holy Person ; for he shall be at his right hand ; and they shall enter into leagues, and mighty armies shall be raised in the North, which shall chase the Turks back again, and recover the wealth they had taken. Then shall this virtuous Englishman be proclaimed the great pastor of the church, and a mighty army shall exterminate the Turks from *Palestine*, and crown him in *Jerusalem*, which shall be the seat of this new patriarch, and his successors to the end of time. Then shall the eyes of the *Jews* be opened, and they shall acknowledge Jesus for the true Messiah.”

I have no room for comment, and therefore must leave that to the taste and temper of my Readers ; concluding, as usual, with an HIEROGLYPHICAL FIGURE alluding to forthcoming Events of these remarkable Times.

AN ASTROLOGICAL *Judgment of the Four Quarters of the Year* 1831, *from the Influx and Influences of the PLANETARY ORBS, with respect to the Affairs of the World. And First—*

*Of the WINTER QUARTER, called the Brumal Ingress.*

FROM accurate computations of the orbital motion of the Earth, I find that this Quarter will begin on *Wednesday, December 22d, 1830*, at 7h. 8m. 4s. in the morning; at which time we have 24 lord of the ascendant, and 3d house, near the cusp of the 2d; of which 12 is lord. This latter planet is also retrograde in the 8th, and at the same time forms a  $\Delta$  aspect with *Sol* and *Venus*, his dispositors in the first house. At this ingress the situation of  $\text{♂}$  is rather remarkable; for he is not only lord of the *Imum Cæli*, but also in his own domal dignity, the ascendant of *England*. Hence, when we consider the nature of this anarctic promittor, with his position in the horoscope, as regards the other infortunes; it may be inferred that something of an hostile nature is thereby pointed out. And as the ascendant of *Portugal, France, and Germany*, behold the celestial combatants by an unfavourable aspect, augments the danger to these and other places and countries under the fiery trigon, by stirring up conspiracies; denoting further, the burning of places, the sinking of ships, mortal accidents, and other superlative troubles. It also looks as if the political affairs in some of those Countries had taken a turn not in accordance with the views of our Government. As great events are said to have the superior planets for their significators, we contemplate with consternation the probable effects of these infuriating rencontres of the celestial bodies. The leaders in those conflicts against national freedom, which are thus prefigured to the intelligent Astrologer, may not, however, have it in their power to detail the result of their labours in the laconic manner of Cæsar—"Veni! vidi! vici!—*I came! saw! and conquered!*"

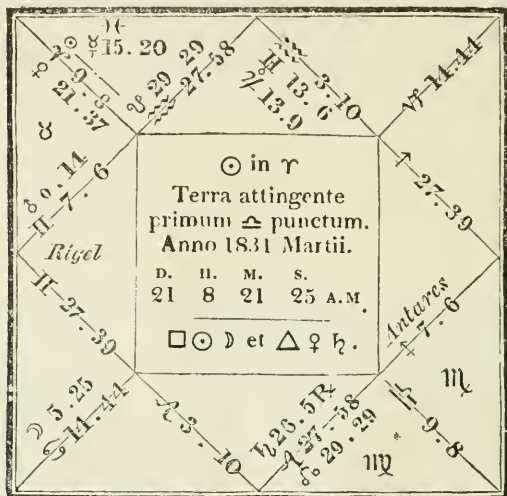

Happy at all times, but particularly in times pregnant with calamity, is the man who lives and acts as under the all-seeing eye of the beneficent Father of All! Amidst the moral distractions, the war of elements, the crush of states, by which for a moment he may be appalled, he may—

When thunders roar, and vivid lightnings play,  
And the firm souls of heroes feel dismay;  
He may serene behold the dreadful blaze,  
While Monarchs quake, and trembling Nations gaze.

With respect to the atmospheric influence on the state of our health during this quarter; my opinion is that Saturnine complaints will be very common, and in many cases extremely obstinate, especially where the patient has plenty of ready rhino for the doctor!

*Of the VERNAL or SPRING Quarter.*

This agreeable Quarter of the year, wherein animated nature, under the vivifying influence of the solar heat, exhibits to the eye and to the mind unspeakable pleasure and delight; begins on *Monday, March 21st*, at 21m. 25s after 8 o'clock in the morning; when the face of the heavens, as regards the planetary bodies, will be found to correspond with the following SCHEME, or Radix of the year.

*SCHEMA CÆLI ingressu Solis in Arietis.*

At this Ingress we find ♀ is lord of the ascendant, and ♀ that of the southern angle; ♀ is in her detriment, with ♄ and ♃ peregrine.

Amongst the signs most worthy to be investigated, there appears a manifest clashing of all degrees and interests. High and low, oppressor and oppressed, good and bad—all appear in great consternation and doubt. Never, perhaps, was discord more strongly portrayed. Not that I am afraid that all this applies to *Great Britain*: yet, unless our intermeddling policy be changed, I apprehend that we shall not be exempt from some share in the commotions foretold. About this time we may expect the secret will be divulged, from which we shall know whether *France* or *England* is the grand point where some new ascendancy is to

be attempted. From the complex nature of the omens, it is difficult to say, notwithstanding late events, which is most to be implicated.

Those emissaries in the garb of sanctity, denominated in Scripture "wolves in sheep's clothing," are busy and mischievous; beware therefore of intrigue and guile. Remember, that to the Pharisees it was said, "This people draweth nigh unto me with their mouths, and honoureth me with their lips; but their heart is far from me; but in vain do they worship me, teaching for doctrines the commandments of men." God's judgments will fall, sooner or later, upon the Gentile apostatized church, and all who plead for, or hanker after corruption. I do not yet see my way clearly into *all* these matters; but if I am not under a mistake, of the three woes which have long hung, as though by a cobweb, over the greater part of Christendom, the first, viz. *the sword*, will be the proper punishment of "the lust of the eye;" the second, viz. *the pestilence*, the punishment of "the pride of life;" and the third, viz. *the famine*, the punishment of "the lust of the flesh." Inquire into these subjects, courteous Reader, and year after year, compare your cogitations with my declarations, and see who makes the greatest advance. Light is, notwithstanding, springing up all around; the Western horizon is as bright as the East; and when Folly and Bigotry are gone to sleep with the moles and the bats, Knowledge and Virtue will be duly prized, and men, instead of shutting their ears to the voice of Truth, will listen to her instructions, and exult in the sound.

---

*Of the ESTIVAL, or SUMMER Quarter.*

THIS division of the year is known to commence in our hemisphere at the moment when the sun attains its greatest northern declination; which happens in the present instance on *Wednesday, June 22d*, at 5h. 38m. 18s. in the morning; at which time ♈ occupies the ascendant, ♋ and ♌ the 2d, ♍ the 5th, ♎ and ♏ the 8th, ♐ the 11th, and sol the 12th mundane houses of heaven. These positions, with others of a like nature, seem to indicate more trouble to ruling Powers, and a want of cordiality amongst those who possess influence. Much more unanimity amongst the people than amongst their leaders is manifest; and temperate remonstrances from them have tended greatly to improve the popular cause. A dungeon scene is also very strikingly connected with the horoscope of this quarter; but some reserve on this point seems necessary. The Heavens at this time would also appear to signify that great endeavours are made for the regulating of divers disorders that have lately happened, and quieting the minds of discontented people in various countries. These are very aptly signified by the angular position of the Moon with Saturn and Jupiter at the present ingress.

*Of the AUTUMN Quarter.*

THE entrance of the Sun into ♌, or the Earth into ♎; which is the beginning of this division of the year, takes place on *Friday, September 23d*, at 7h. 45m. 51s. in the afternoon; at which time there are several important configurations of the planets; such as ☿ of ☉ with ♀ and ♂, ♀ and ♂, ♃ and ☿; △ ♀ ☿; ♀ ☿ ♀. I also find the ☉, ♀, ♀, ♂ and ♃, all congregated in the 6th mundane house, which has for its cusp the ascendant of *Turkey, Greece, Austria, Portugal*, with the cities of *Paris, Lisbon, Vienna, Frankfort, and Antwerp*; which, according to *Salmon*, forebodes great troubles to the people of those parts. Besides, if we are to believe the ancient astrologers, we have here assembled the representatives of all sorts of people, a truly magpie-parliament, as must be the case where such a conflict of interests are concerned. Verily! it looks like a violent commotion or mob; and it will be well for those in power under ♌, to have an eye to this state of things.

Rome, tottering long, laden with Error's store,  
Soon, soon shall fall, and head the world no more.

Yes, the pillars of corrupt priesthood are mouldering with the dry-rot, and a mighty desolation is at hand. "White, black, and grey, with all their trumpery, of cowls and hoods, reliques and beads," must soon be packing. In those days, said *Hildegardus*, referring to our truly portentous times, a senseless priesthood shall prevail, proud, greedy, and subtle, without faith, eating and trading upon the sins of the people, holding a foolish order of devotion under the feigned cloak of beggary, humble in semblance but proud, lovers of the world, sellers of pardons; but when their cup of iniquity is full to the brim, destruction cometh like a whirlwind, and they shall sink under the bitter blast of the day of visitation. Thus, also, the author of *Catastrophe Mundi*, cent. xix.

"The pope, priests, masses, and their gods of wood,  
"Their idol temples too wherein they stood,  
"With all that hatred pageantry, shall come  
"By God's just judgment to eternal doom."

Mahometanism, Popery, Juggernaut, and the Goddess of Ignorance, have reigned long enough; better times are at hand, and *Great Britain* is assuredly destined to take her full share in bringing about the change.

FINIS.
