

# Merlinus Liberatus.

AN

## *ALMANACK*

For the Year of our Redemption,  
**1845,**

Being the first after Bissextile;

AND THE

**157th of our deliverance by K. William 3**

*From Popery and Arbitrary Government.*

Wherein are all things fitting and useful for such a Work; as an Ephemeris of the Longitudes, Latitudes, and Southings, of the Planets, with their Configurations, and Aspects; Lunations, Eclipses; Astrological, and other Observations; the rising and setting of the Sun and Moon; Tables of the Tides, Terms, and Holidays at Public Offices; Length and Break, Increase and Decrease, of Days; Judgments of the Eclipses and Seasons. Also a correct Table of the Elements of the Newtonian System; a brief Chronology of English Sovereigns; an Excellent Table for valuing Annuities on Lives, &c.

BY JOHN

PARTRIDGE.

— *Etiam Mortuus loquitur.*

London :

PRINTED FOR THE COMPANY OF STATIONERS,

				☉	☿	♈	♊	♋	♌	
1	morn.	5m 31	3 57	☐	△				*	We are now entering on the year of our Lord 1845, which, as the reader will see on the title-page, is the 157th of our deliverance by King William the Third, from Popery and Arbitrary Government. No true Englishman can contemplate that happy era without emotions of gratitude to Divine Providence. Since then many great changes have taken place, but liberty of conscience on religious subjects has continued to exist, and I trust ever will. Therefore every individual can worship God in the way he considers right,—yea, “Under his own vine and fig-tree, none daring to make him afraid.” Oh! that this was the case with all the nations that surround us; if so, their moral condition would be greatly improved.

				☉	☿	♊	♈	♀	♋	
1	2m52	7m36	3 56							<p>The various aspects in this month show a season of considerable conflict and anxiety. ♂ afflicts ♊ by a ☐, but as the latter is in the ascendant of England, he will greatly ward off the evils of ♂, and, I trust, put down desires for war, which may be hatching in high quarters.</p> <p>The ♂ of ♊ and ♀ promises much good to our nation, in both a religious and political point of view: it also betokens many happy marriages; and therefore it ought to be considered by the ladies as the best planetary position within the range of astrological science.</p>

				☉	☿	♊	♈	♀	♋	
1	2m16	8m 5	3 3	*				*		<p>Saturn darts a quartile ray at ♀ and another at ☉. The former implies some unpleasantness in love affairs, and probably we shall hear of two or three divorces, or legal proceedings for <i>crim. con.</i>, &amp;c. in fashionable life, which will make no little stir in the newspapers at this time. The latter forbodes some gloomy cold weather, which is not at all agreeable in the cheerful month of May, when we expect the flowers to unfold their sweets, and the little birds to warble in the hedges and trees: but instead of these we see the cutting hail and sleet driving along, and hear the north-east wind howl as in winter.</p>

				$\odot$	$\cap$	$\sqcup$	$\delta$	$\gamma$	$\delta$	
1	2 <sup>m</sup> 45	10m38	6 0							Mars is in $\delta$ to $\odot$ this month, and of course is near to the earth, when his influence is strong; therefore we may expect to hear of some dreadful murders committed in various parts of the kingdom, as well as great losses by fire, and injuries sustained by lightning. It will also be apt to stir up strife and contentions amongst those of the highest rank, which a little time will make manifest; and perhaps will turn some into the grave of despair. That man, whether he be poor or rich, who fears his Maker, and acts a conscientious part towards his fellow creatures, is alone on the safe side.

1	sets.	11 m 46	10 21	$\delta$	$\Delta$				<p>Intelligence arrives from several parts of America, acceptable to our merchants. Large preferment is offered to some noted person in the ecclesiastic order. A worthy lady languishes under great affliction and trouble of spirit. Some great man or officer of state is removed by death or otherwise. All these things are calculated to teach us a useful lesson, namely, that all earthly enjoyments are transitory, and to hold them as such, and to consider that our greatest interest is, that while we are in the world, to act a rational part, to attend to our duty, and look towards a future state for permanent enjoyment.</p>

				☉	☿	♊	♈	♀	♋	
1	5a32	1 a 7	16 17				☐			<p>The affairs in Spain wear a somewhat serious aspect; those in Portugal no better. Neither they nor France will be free from troubles, till the Harlot of Babylon is humbled to the dust; and men everywhere worship God as they list. Happily for us, Toleration is well understood in this country: may it never be abused!</p> <p>Several discoveries will be made in the arts and sciences at this time. Meteorological subjects more than ever arrest the attention of intelligent men; and in consequence, in the long run, the farmer and the gardener will be greatly benefited.</p>

# 24 December hath XXXI Days.

Now rugged Winter sounds his horn,  
And *Phæbus* enters Capricorn:  
This year with all its joys and woes,  
Its good and ill, will quickly close!

The two benevolent planets ♃ and ♀ behold each other with an unfriendly aspect, early in this month; afterwards old ♃ meets ♀ in his night house (♊), at which time ♂ is in □ with ☉, and just entering on ♈, the ascendant of England: these are certainly unfavourable positions; but I hope the fortunate △ of ♃ and ☉ will in a great degree counteract the threatening evils, and that the year will finish peaceably, so far as we at home are concerned. I therefore conclude these monthly remarks, wishing prosperity and happiness to my own native land, its Queen, &c.

### OXFORD TERMS.

Lent Term .....	begins <i>January</i> 14.....	ends <i>March</i> 15.
Easter Term .....	begins <i>April</i> 2.....	ends <i>May</i> 10.
Trinity Term .....	begins <i>May</i> 14.....	ends <i>July</i> 5.
Michaelmas Term.....	begins <i>October</i> 10.....	ends <i>Dec.</i> 17.

The Act is on July 1.

### CAMBRIDGE TERMS.

Lent Term.....	begins <i>January</i> 13.....	ends <i>March</i> 14.
Easter Term.....	begins <i>April</i> 2.....	ends <i>July</i> 4.
Michaelmas Term .....	begins <i>October</i> 10.....	ends <i>Dec.</i> 16.

The Commencement will be July 1.

### ON THE EQUATION OF TIME.

If the sun's apparent motion were regularly forward in the equator at the rate of  $59' 8'' \cdot 3$  every day, the solar days would be all equal; but, as the sun neither moves in the equator, nor in the ecliptic, at a uniform rate, there are two causes that affect the length of a solar day, that is, the length of the interval between two successive solar noons.

The time which is reckoned by a true clock, or by an *imaginary sun* which moves *uniformly* in the equator, is called *mean solar time*. That which is reckoned by the arrival of the real sun on the meridian is called *apparent time*.

The difference between the right ascension of the sun and his mean longitude, converted into time, is the difference between the mean and the apparent time, and is called the *Equation of time*.

There are four times in the year when the mean longitude of the sun and his true right ascension are equal: and at these the true and mean times coincide. These are about April 15th, June 15th, Sept. 1st, and Dec. 24th. But they vary a very little in different years; as is shown in my column of *Clock before ☉*, or *Clock after ☉*, in the Calendar pages. When clocks or watches are regulated by the sun's passage over the meridian, the Equation of time must be applied, or the clock must on any day be set to be as much *before* or *after* the sun at noon, as the number in the proper column suggests.

\* \* The sun's rising and setting are, in common with everything else in my Almanack, now given in *mean solar*, or clock time; so that the times will in all cases be shown by a well-regulated clock.

A Table of the Moon's Age for every Day throughout this Year, whereby, with the help of the next General Tide Table, the times of High Water at all the places mentioned above it are shewn nearly by inspection.

*An Explanation of this and the following Table.*

First, find the month on the head of the Table, and the day in the first column on the left hand, and in the angle of meeting you have the day of the Moon's age, with which enter the following table, and find your said number in the left hand column, and over against it in the other column is the time of High Water at all the places above mentioned, by inspection.—*Example, March 21, I find the Moon to be 13 days old, and over against 13 in the first column I find, 10h. 2m. in the second column, and 1 h. 54m. in the third; which are the times of High Water at all those places mentioned above in the second and third columns, on that day. Et sic de cæteris.*

The ebbing and flowing of the tides are occasioned by the attractive action of the sun and moon upon the waters of the sea; and from the difference as well in the action as in the relative velocities of these luminaries, and the obliquity of the lunar orbit to that of the earth, result all the inequalities which are observed in the tides of open seas. When the actions of the two luminaries are conjoined, as at the new and full moons, the tides are the highest; while, on the contrary, the tides are lowest when those actions are opposed, as at the quarters. The tides at new and full moon are so much the greater, as the sun and moon are nearer the earth, and as their declination is less. But the progress of the tides depends so very considerably on that of the moon, as to show that she exerts the greatest action on the sea. From the existing difference between the tides of new and full moon, and those of the quarters, mathematicians have demonstrated that the moon's action is nearly triple that of the sun, and that the *mass* of the moon is about  $\frac{1}{70}$ th of that of the earth. The modifications and irregularities of the tides in rivers, are often very great, and cannot well be subjected to theory.

*Table of Break of Day, of Sun Rising and Setting, and  
Length of the Day, at and near London.*

	♈	♉	♊	♋	♌	♍	

N. B. In the Calendar Part, you will find the Planets' Southings inserted to several Days in each Month; and by this Table you may easily find their Rising and Setting, by a near, but not correct, approximation. First, find the Longitude for the Day proposed, with which enter this Table, and take out the semidiurnal Arch thereof, which being added to the time of Southing, gives the Setting, but subtracted, the Rising, nearly; i. e. always within a few minutes.

## GEOCENTRIC LATITUDES OF THE PLANETS, In the nearest Degree, for every 5th day of 1845.

NOTE. The Geocentric Longitudes are given in the LEFT HAND Calendar pages.

### GEOCENTRIC LONGITUDES AND LATITUDES OF HERSCHEL'S PLANET.

1845.		Long.	Lat.	1845.		Long.	Lat.
January	1	2° 33'	0° 43'	July	1	10° 11'	0° 43'
February	1	3	28	0	42	10	9
March	1	4	49	0	41	9	25
April	1	6	33	0	41	8	16
May	1	8	11	0	41	7	7
June	1	9	30	0	42	6	25
				Decem.	1	6	25

I give the Longitudes and Latitudes of this Planet accurately; but only once in each month. 1st. Because its geocentric place changes but very slowly. 2dly. Because Herschel's Planet, though a fine astronomical discovery, has no authority among genuine astrologers.

## SOVEREIGNS OF ENGLAND.

## I.—SINCE THE SAXON HEPTARCHY.

	Began their Reigns.	Reigned
EGBERT, first King of England -	827	10
ETHELWOLF, son of Egbert -	837	20
ETHELBALD, son of Ethelwolf -	857	3
ETHELBERT, brother of Ethelbald -	860	5
ETHELFRID, brother of the two last -	866	5
ALFRED the Great, brother of the three last -	871	28
EDWARD the Elder, son of Alfred -	901	24
ATHELSTAN, son of Edward -	925	14½
EDMUND, brother of Athelstan -	940	6½
EDRED, brother of the two last -	947	9
EDWY, son of Edmund -	955	4
EDGAR, brother of Edwy -	959	16
EDWARD the Martyr, son of Edgar -	975	3
ETHELRED, son of Edgar -	978	28
EDMUND Ironside, son of Ethelred -	1016	26
EDWARD the Confessor, brother of Edmund Ironside -	1042	23
HAROLD, son of Earl Godwin -	1065	1

## II.—SINCE THE CONQUEST.

	Began their Reigns.	Reigned Y. M. D.
WILLIAM I, son of the Duke of Normandy -	1066 Dec. 25.	20 8 15
WILLIAM II, son of William I -	1087 Sept. 26.	12 10 7
HENRY I, brother of William II -	1100 Aug. 5.	35 3 27
STEPHEN, nephew of Henry I -	1135 Dec. 26.	18 10 0
HENRY II, cousin of Stephen -	1154 Dec. 19.	34 6 18
RICHARD I, son of Henry II -	1189 Sept. 3.	9 7 3
JOHN, brother of Richard I -	1199 May 27.	17 4 23
HENRY III, son of John -	1216 Oct. 28.	56 0 19
EDWARD I, son of Henry III -	1272 Nov. 20.	37 7 17
EDWARD II, son of Edward I -	1307 July 8.	19 6 12
EDWARD III, son of Edward II -	1327 Jan. 25.	50 4 27
RICHARD II, grandson of Edward III -	1377 June 22.	22 3 7
HENRY IV, cousin of Richard II -	1399 Sept. 30.	13 5 20
HENRY V, son of Henry IV -	1413 Mar. 21.	9 5 10
HENRY VI, son of Henry V. dep. 1461; died 1471 -	1422 Sept. 1.	38 6 3
EDWARD IV, cousin of Henry VI -	1461 Mar. 4.	22 1 5
EDWARD V, son of Edward IV -	1483 April 9.	0 2 16
RICHARD III, uncle of Edward V -	1483 June 26.	2 1 26
HENRY VII, cousin of Richard III -	1485 Aug. 22.	23 7 3
HENRY VIII, son of Henry VII -	1509 April 22.	37 9 6
EDWARD VI, son of Henry VIII -	1547 Jan. 28.	6 5 9
MARY I, daughter of Henry VIII -	1553 July 6.	5 4 11
ELIZABETH, sister of Mary -	1558 Nov. 17.	44 4 7
JAMES I, second cousin of Elizabeth -	1603 Mar. 24.	22 0 3
CHARLES I, son of James I -	1625 Mar. 27.	23 10 3
CHARLES II, son of Charles I* -	1649 Jan. 30.	36 0 7
JAMES II, brother of Charles II -	1685 Feb. 6.	3 10 5
WILLIAM III and Mary, daughter of James II -	1689 Feb. 13.	13 0 20
ANNE, sister of Mary, and daughter of James -	1702 Mar. 8.	12 4 24
GEORGE I, great grandson of James I -	1714 Aug. 1.	12 10 10
GEORGE II, son of George I -	1727 June 11.	33 4 14
GEORGE III, grandson of George II -	1760 Oct. 25.	59 3 4
GEORGE IV, son of George III -	1820 Jan. 29.	10 4 28
WILLIAM IV, brother of George IV -	1830 June 26.	6 11 25
VICTORIA, niece of William IV -	1837 June 20.	VivatReg

The three longest Reigns were those of HENRY III, EDWARD III, and GEORGE III: the next longest, that of ELIZABETH.

\* The COMMONWEALTH, under CROMWELL and his Son, lasted from January 30, 1649, to May 29, 1660: or, 11Y. 3M. 29D.

Right Hon. Sir N. C. Tindal, L. C. J.;
Sir Tho. Coltman; Right Hon. Thomas Erskine; Sir W. H. Maule,
and Sir Cresswell Cresswell.

## IV.—EXCHEQUER.

Sir Frederick Pollock.
Right Hon. Sir J. Parke; Sir E. H. Alderson; Sir J. Gurney; Sir R. M. Rolfe.

## V.—BANKRUPTCY COURT.

Sir J. L. Knight Bruce, Judge.

C. F. Williams, J. H. Merivale, J. Evans, J. S. M. Fonblanque,	} Commissioners.
R. G. C. Fane, and E. Holroyd, Esqrs.	
Mr. Serjeant Lawes and William Barber, Esq. Registrar.	

Attorney-General.—Sir W. Follett.

Solicitor General.—Sir F. Thesiger.

*At the Bank.* The only Holidays in the Dividend Offices are Good Friday and Christmas Day. In the Stock Offices, May 1st and November 1st, are observed in addition; and when those days fall on Sunday, the Holiday is kept on Monday.

*At the Exchequer, Treasury, and East India House,* Good Friday and Christmas Day are the only Holidays observed.

*At the Custom House, the Stamp Office, and the several Public Dock Companies,* by 3 & 4 Wm. IV. cap. 51, the Holidays are Christmas Day, Good Friday, any days appointed by Her Majesty's Proclamation for a General Fast, or General Thanksgiving, and the day of celebration of her Majesty's birth-day.

*In the Courts of Common Law, and their appertaining Offices,* no Holidays are allowed except Sundays, Christmas Day, and the three following days, and Monday and Tuesday in Easter Week.

*A TABLE of the Value of an Annuity of £100 on a single Life, from birth to 90 years old, as fixed by the Legacy Act.*

## TRANSFER DAYS AT THE BANK, &amp;c.

*Dividends payable.*

April 8, Oct 13	Bank Stock 7 per Cent.		
Jan. 8, July 8	Consolidated 5 per Cent. Ann.		
April 8, Oct. 13	Reduced 3 per Cent. Ann.		Days of transfer for all Stocks at the Bank of England, are Tuesday, Wed- nesday, Thurs- day, and Friday.
Jan. 8, July 8	Three and a half per Cent. Ann.		
April 8, Oct. 13	Four per Cent. Ann.		
Jan. 8, July 8	Four per Cent. New Ann.		
April 8, Oct. 13	Five per Cent. Ann. 1797.		
Jan. 8, July 8	Long Ann. to January 1860		
April 8, Oct. 13	Imperial 3 per Cent. Ann.		
Jan. 8, July 8	Three per Cent. Ann. 1726		
April 8, Oct. 13	Life Ann., if transferred between Jan 5 and April 4, between July 5 and October 9		
Jan. 8, July 8	Ditto if transferred between April 5 and July 4, or between Oct. 10 and Jan. 4		

Jan. 8, July 8	East India Stock, Ten and a Half per Cent. Tuesday, Thurs- day, and Saturday	
April 8, Oct. 13	South Sea Stock, Three and a Half per Cent. Monday, Wed- nesday, and Friday.	
Jan. 8, July 8	Three per Cent. Old South Sea Ann., Monday, Wednesday, and Friday	
April 8, Oct. 13	Three per Cent. New South Sea Ann., Tuesday, Thursday, and Saturday	
Jan. 8, July 8	Three per Cent. Ann. 1751, Tuesday and Thursday.	

Tickets for preparing the Transfer of Stock must be given in at the respective Offices before One o'Clock—at the India House before Two o'Clock.

Private Transfers may be made at other times than as above, the Books not being shut for the Dividends, by paying

At the Bank and India House 2s. 6d. extra for each Transfer.  
At the South Sea House . . . 3s. 6d. ditto.

Transfers at the Bank must be executed by half-past 2 o'Clock—at the India House by 3 o'clock—at the South Sea House by 2 o'Clock, on Saturdays by 1.

Expense of Transfer in Bank Stock for £25 and under, 9s., above that sum 12s.  
India Stock for £10 . . . £1 10s. . . . £1 11s.  
South S. Stock if under £100, 9s. 6d . . . . 12s.

Powers of Attorney for the Sale or Transfer of Stock must be deposited at the Bank, &c., for examination, one day before they can be acted upon;—if for receiving Dividends, it is sufficient to present them at the time the first Dividend becomes payable.

The expense of a power of Attorney is £1 1s. 6d. for each Stock separately; but for Bank, India, and South Sea Stock, £1 11s. 6d.; and when required to be made out on the same day, half-past twelve o'clock is the latest time for receiving orders. —The boxes for receiving Powers of Attorney for Sale close at 2 o'clock.

All Probates of Wills, Letters of Administration, and other proofs of decease, are required to be left at the Bank, &c. for Registration from two to three clear days, exclusive of holidays.

Stock cannot be added to any Account (whether single or joint) in which the decease of the individual Party, or of any one or more of a joint party, has taken place; and it is also essential to have the decease proved as soon as practicable. Powers of Attorney previously granted become void.

The unaltered possession of £500 or upwards, Bank Stock for 6 months clear will entitle the Proprietor to a Vote.

The unalterable possession of East India Stock for One Year clear, to the annexed different amounts or upwards, entitles the proprietor to the Vote or Votes respectively  
subjoined . . . . .

£1000 to 1 Vote.  
£3000 to 2 Votes.  
£6000 to 3 Votes.  
£10000 to 4 Votes.

ON THE

## ECLIPSES OF THE SUN AND MOON,

THAT WILL HAPPEN THIS YEAR,

1845.

WITHIN the limits of the present year, the two great luminaries of heaven will be four times eclipsed. They will happen in the following order, according to our best Tables of the Celestial Motions.

The first of these Eclipses is a partial and visible one of the Sun, in the morning of Tuesday the 6th of May. At London, and parts adjacent, the Eclipse will begin at 31<sup>m</sup> past 8; the greatest obscuration 37<sup>m</sup> past 9, when, according to the annexed type, the Sun will be Eclipsed on the north limb 4 digits 38'; and the Eclipse will end at 47<sup>m</sup> after 10 in the forenoon. *Note*: v is the vertical point of the Sun, B the place on his periphery where the Eclipse begins, and E where it ends.

The next, or second of these Eclipses, is a total one of the Moon, early in the afternoon of Wednesday, the 21st of May, and consequently invisible to us in these parts of the world; the Eclipse beginning at 17<sup>m</sup> past 2, and ending at 31<sup>m</sup> past 5.

The third is an annular Eclipse of the Sun, in the night of Thursday the 30th of October, and invisible in these parts. The ecliptical conjunction of the Sun and Moon will take place at 42<sup>m</sup> past 11 o'clock, P.M.

The fourth, and last, is a partial and visible Eclipse of the Moon, late in the night of Thursday the 13th, and early in the morning of Friday, the 14th of November. The annexed representation for London, will serve, without sensible error, any part of Great Britain. At London, Royston, and Cambridge, the Moon will touch the conical shadow of the earth, and the Eclipse will begin at 10<sup>m</sup> past 11 at night; the middle will be at 11<sup>m</sup> before 1 in the following morning, when the Moon will be eclipsed

on the north limb 11 digits 2'; and the Eclipse will end at 28<sup>m</sup> after 2 o'clock, mean solar time.

## ON THE LUNAR OCCULTATIONS.

On the 18th of October the Moon will occult  $\epsilon$  Tauri, a star of the fourth magnitude; when the immersion will happen at 49<sup>m</sup> past 7, and the emersion at 43<sup>m</sup> past 8 o'clock in the evening.

On the 15th of November the Moon will again occult  $\epsilon$  Tauri: the immersion will take place at 22<sup>m</sup> past 6, and the emersion at 6<sup>m</sup> after 7, in the morning. *Note*: a telescope of some sort will be necessary to see the above occultations.

## CELESTIAL PHENOMENA.

*A Transit of the Planet Mercury over the Sun's Disc, partly Visible in England.*

☿. This interesting phenomenon will take place on Thursday the 8th of May. The first contact of the limbs of the Sun and Mercury will be at 18<sup>m</sup> past 4 in the afternoon, and the last contact will be at 50<sup>m</sup> past 10 at night. The middle of the transit will be at 34<sup>m</sup> past 7, about the time of the setting of the Sun's upper limb, as shown at *m* in the annexed type, when the planet's distance from the Sun's centre will be 9' 13". Also observe that *v* is the point on the Sun's limb where the transit begins, being 58° 6' from *v*, the Sun's vertex. *v* represents the place of Mercury on the solar disc at 5 o'clock; *vi*, at 6; and *vii*, at 7 o'clock.

*Note*: a telescope with a dark glass, or a dark glass held between the observer's eye and the Sun, will be necessary on this occasion.

☿. Mercury, this year, will be visible in the mornings, about an hour before Sun-rise, on or near the 4th of February and the 27th of September; and in the evenings, about an hour after Sun-set, on or near the 1st of January, the 17th of April, and the 9th of December.

♀. Venus, during this year, will be unfavourably situated for observation: the best time for seeing her will be in the mornings of January, and in the evenings of November and December.

♂. Mars will appear in the mornings during the first six months, after which he may be seen in the evenings. He will be near the earth in the month of August, when his large ruddy orb will attract attention.

♃. Jupiter may be seen in the evenings of January and February, and also in the evenings of the autumn months. He will be in opposition to the Sun in October: and from that time to the end of the year, his belts and satellites may be viewed to advantage by means of even a moderate-sized telescope.

♄. Saturn will be seen in the mornings, in conjunction with Mars, at the beginning of June. He will be in opposition to the Sun in August. On the 20th of December this planet will be in conjunction with Venus, and may be observed for several evenings about that time in the neighbourhood of that splendid star,

## ON GENETHLIACAL ASTROLOGY.

These twin children were born within ten minutes of each other. The time of the birth of the first, named Edward, (whose figure I have not room to insert,) was born at five minutes before midnight, and died of convulsive fits at the age of nine months. The other, whose geniture I have here given, with the arcs of directions, lived until the age of four years and six months, and was then destroyed by a loaded waggon, which passed over him, and killed him on the spot.

The time of the birth of each was taken with great care, and therefore the most important subject for inquiry is, why the life of him who was first-born should be of so short duration, while his brother survived him nearly four years. All those who know but little of this department of Astronomy, will soon observe, that at five minutes before midnight, the stations of the celestial bodies were more violent in producing *early* dissolution, than they were after the Sun had passed the northern angle; for at the moment of the birth of Edward, the part of fortune, (which is certainly the true giver of life,) was afflicted by the mundane squares of the Moon and Mars, while the ascendant was also afflicted by the baneful squares of the Sun and Saturn, in the world: the other testimonies of short life I need not mention, as they must appear obvious to all those who are disposed to study the genuine principles of this noble science.

In the course of my experience, I have seldom observed more testimonies for a violent death, than those which appear in this nativity, for the Sun is afflicted by the body of Saturn, in the terms of Mars, while the Moon receives the baneful rays of that malefic by an opposition: but the time of dissolution is from the direction of the part of fortune (which is Hyleg) to the square of the Moon in the world, while all the other violent motions truly indicate the quality of the Native's personal extinction, and the more particularly in this case, because all the vital signifiers are afflicted at the same period, which always produce a violent death.

☞ To meet the wishes of several of my readers, I have given the Table of Houses at large, (in the form it used occasionally to appear in the early copies of this Almanack,) and in consequence I have been obliged to abridge the account of the eclipses and other

A TABLE of HOUSES for the Latitude of  $51^{\circ} 32' N.$ , according to the DOCTRINE of PTOLEMY. Serving the City of LONDON, &c.

astronomical matters considerably. It will be advisable for those of our friends who feel interested in this table, to preserve this year's almanack, for I do not intend to repeat the table next year, but merely to insert a synopsis of it in one page.

## THE WINTER QUARTER.

*Judicium Astrologicum, pro Anno 1845; 'or an Astrological Judgment upon the four Quarterly Ingresses of the present year; and first, of the Brumal Ingress, or Winter Quarter.*

ACCORDING to my usual plan, I commence with this quarter, as the whole of it, excepting ten days, falls within the new year. This division of the year commences when the Sun enters the solstitial sign, Capricorn, which I find he does on Saturday, the 21st of December, 1844, at 31<sup>m</sup> past 4 o'clock in the afternoon, when the 10th degree of ♄ is ascending in the east, and the 6th degree of ♋ is on the mid-heaven, or due south. From the situation of the planets at this ingress, I am led to think that this will prove rather a sickly quarter; when melancholy and nervous affections, tooth-ache, gout, rheumatism, and consumptions, are likely to be prevalent complaints, especially in the early part of this gloomy season. Jupiter enters ♃ on the 19th of January, which indicates something favourable to our nation. I hope our Parliament assembled, will feel the influences of this benevolent star.

## THE SPRING QUARTER,

*Or the Sun's Transit through Aries, Taurus, and Gemini.*

Advancing Spring profusely spreads around  
Flowers of all hues, with sweetest fragrance crown'd;  
Where'er she treads, love gladdens every plain,  
Delight, on tip-toe, hears the lucid train,  
Sweet Hope, with conscious brow, before her flies,  
Anticipating wealth from Summer skies.

“For lo! the Winter is past, the rain is over and gone. The flowers appear on the earth, the time of the singing of birds is come, and the voice of the turtle is heard in our land.”

THIS delightful quarter takes place when the bright orb of day enters the equinoctial sign Aries, which happens, this year, on Thursday, the 20th of March, at 44<sup>m</sup> past 5 in the afternoon, when the 25th degree of ♈ occupies the mid-heaven, and the 26th degree of ♊ is on the cusp of the ascendant. Though birds may sing and flowers blow, and nature thus smile in every direction, yet in mundane affairs

things wear a different aspect. There will be wars and conflicts abroad during this quarter, probably in India; while at home we shall have contentions with regard to political and religious matters.

### THE SUMMER QUARTER,

*Or the Sun's Transit through Cancer, Leo, and Virgo.*

THIS quarter takes place on Saturday, the 21st of June, at 42<sup>m</sup> past 2 o'clock in the afternoon, when 28 degrees of ♈ will ascend in the east. At this time there do not appear to be any very remarkable planetary aspects that will affect Great Britain; however, ♂ and ♃ are within orbs of their unfriendly conjunction: ♂ also is near the earth at this time, and therefore we may expect to hear of wars and bloodshed in divers regions; and at home, some awful murders, and damages sustained by the breaking out of fires, as well as from lightning and hail.

### THE AUTUMN QUARTER,

*Or the Sun's Transit through Libra, Scorpio, and Sagittarius.*

THIS quarter commences when the Sun touches the first scruple of the equinoctial sign Libra, which, according to astronomical calculation, he will do on Tuesday, the 23rd of September, at 53<sup>m</sup> past 4 in the morning, when the 20th degree of ♍ will ascend, and the 17th degree of ♏ will be on the cusp of the 10th house, or mid-heaven. The planets are so distributed in the different mundane houses, as to lead me to think that this will be a quarter of much anxiety and conflict, though I trust the wonder-working hand of Providence is bringing about a better state of things in our own country. Let us, my friends, live in hope, and exercise patience.

FINIS.
