INTRODUCTION.

MESMER was the first who reduced the principles of Animal Magnetism to a system, and he employed it very successfully as an auxiliary of medicine in his extensive practice. This was in 1774. In a few years he was assailed by numerous enemies. The curative effects of animal magnetism excited the jealousy of the medical faculty in Paris; hence the Académie Royale Médecine, in the exercise of its royal prerogative of intolerance decreed: No physician shall declare himself a partisan of animal magnetism under the penalty of being struck from the list of members. In 1745 this same Academy had condemned inoculation as "murderous," "criminal," and "magical." Peruvian bark shared the same fate; also against the circulation of the blood. In 1784 this Academy appointed a committee from their number to examine and report on animal magnetism; but instead of confining their attention to the facts which were laid before them, they sought the cause by which they were produced, and inquired into the existence of the fluid described by Mesmer, but it escaped their research. They could not see, taste, or touch it; they could not collect it in masses, and could neither measure or weigh it; therefore they made a leap in the dark, and concluded that animal magnetism did not exist. How ridiculous would such tests now seem to determine whether the mind exists or not; but it is equally so with regard to animal magnetism. But the decree of the Academy was assailed on all sides, and their sophistry detected by some of the most learned men of Europe, and the science spread in spite of persecution, through France, Germany, Holland, and many members of the Academy became believers and practisers of it, as an auxiliary of medicine; and in 1825, a new commission was appointed to examine and report to the Society on the subject, and in 1831, they reported unanimously in its favor, although when first appointed, several of the committee were opposed to it. In Europe, Cuvier, Laplace, Humboldt, Dugald Stewart, Coleridge, Prof. Kluge and Dr. Elliotson

are advocates of it; and in our own country, Doctors Bartlet of Lowell; Flint and Bayard of Boston; Cutler of N. H.; Cleaveland of R. I.; and Payne and Hoffendahl of Albany, use it with great success in their practice as an auxiliary of medicine; besides the president and professors of Union and other Colleges, and a large number of the most intelligent men in our country are either practical magnetisers or advocates of it.

We are aware that it has numerous opposers. Every new discovery has had opposers, and the more important the discovery, the more numerous were the opposers. Harvey, the discoverer of the circulation of the blood was persecuted by the most learned physician, and they so prejudiced the people against him, that he lost his extensive practice and had to flee his native country. Gallileo was condemned to the inquisition. Fulton was persecuted. But like every other truth it will triumph over opposition, and hold up to shame and contempt, those who oppose it through ignorance and prejudice; as opposers of this and every truth, are among those who never have examined it; for it is the universal result, that every one who carefully examines it, by experiment and observation, becomes convinced of its reality.

Animal magnetism is introduced with success into the hospitals of Paris and London. At Berlin is a professorship of Animal Magnetism in the Medical College. The learned Dr. Kluge now fills that station.

Some charge the whole phenomena of Animal Magnetism to the devil. Admit this, and we must also admit that he is a clever sort of a fellow after all, to thus relieve distress, and reclaim the drunkard from the intoxicating bowl, to become a good member of society: to change hatred into love, so that the subject can pray for his enemies, and be saved from death. Magnetism does all this, and if this is a work of the devil, the poor fellow has heretofore been awfully slandered.

Animal Magnetism like every other blessing has doubtless been abused by some, so has religion.

ELEMENTS. OF ANIMAL MAGNETISM.

CHAPTER I.

DEFINITION OF ANIMAL MAGNETISM.

ANIMAL MAGNETISM is the action of one mind upon another, so as to attract or influence it. We feel it when listening to the eloquence of a celebrated orator. He is the centre of attraction; the audience is held in riveted attention; he conducts them to the battle-field; they hear the roaring cannon, they see the fields strewn with the dead and dying and covered with blood. The result is similar when we listen to the singing of an accomplished musician. But what is more especially understood by animal magnetism, is that power which some possess of so concentrating their attention, and directing their will with such energy, as to put some persons into a magnetic sleep, and frequently to cure or relieve diseases. Its more appropriate name is pneumatology. It is a species of electricity.

CHAPTER II.

ANALOGY BETWEEN NATURAL AND MAGNETIC SOMNAMBULISM.

SEC. I. NATURAL SOMNAMBULISM. A somnambulist mentioned by Gassendi used to rise, dress himself in his sleep, go down to the cellar, and draw wine from a cask. One night he carried on his head a table

covered with decanters, up a very narrow stair-case, and with more dexterity than he could have done when awake.

The Archbishop of Bordeaux, states in the thirty-eighth volume of the *Encyclopedia*, edited by Diderot, d'Alembert, &c., the case of a young clergyman who was in the habit of rising during the night in a state of somnambulism, and writing his sermons. When he had finished one page of his manuscript, he would revise it, after having read it aloud. In order to ascertain whether he made any use of his eyes, the Archbishop held a piece of paste-board under his chin to prevent his seeing the paper before him; but he continued to write on without being at all incommoded. Dr. Dwight mentions the case of a somnambulist who every morning on awaking found himself minus a shirt. After thus losing about two dozen, and having no remembrance of what had become of them, his brother slept with him one night, to ascertain, if possible, what he did with his shirts. About twelve o'clock he arose, dressed himself and went out; his brother followed him to a pond, one mile distant; there he undressed himself and took his shirt and thrust it into a hollow log; then bathed; after which he dressed himself, with the exception of his shirt, and returned, undressed himself, and retired to bed. In the morning he awoke as usual and found his shirt missing; he inquired of his brother what had become of it; he told him that if he would follow him he would show it him; they went to the pond and there found it, and all the others, stowed away in the hollow log.

A man in Massachusetts arose in his sleep and threshed out his grain, and then retired to bed; the next day he was much astonished, when he went to his barn for the purpose of threshing his grain, to find it already done.

A girl in Albany is accustomed to rise in her sleep, and sew and do other unfinished work of the preceding day; but has no recollection, when awake, of it.

Dr. Haycock, professor of medicine in Oxford, would give out a text in his sleep, and deliver a good sermon

from it, nor could all the pinching and pulling of his friends prevent him. A volume of sermons, preached in New York a few years since by a young girl, a natural somnambulist, have been published.

Dr. Belden gives the following description of the Springfield somnambulist: One of her fits of somnambulism continued forty-eight hours; many attempts were made in vain to arouse her; a bandage was tied over her eyes, but she read a great variety of cards written and presented to her by different persons, told the time by watches, and wrote short sentences. A second bandage was placed over the other, but apparently without causing any obstruction to the vision. She repeated with great propriety and distinctness several pieces of poetry, some of which she had learned in childhood, but had forgotten, and others which she had merely read several years since; she sung several songs correctly, yet she had never learned to sing, and has never been known to sing when awake. In another fit, I took a large black silk handkerchief, placed between the folds two pieces of cotton batting, and applied it in such a manner that the cotton came directly over the eyes, and completely filled the cavity on each side of the nose. Various names were then written on cards, which she read as soon as they were presented to her. When at Worcester, in one of her somnambulic attacks, she was taught how to play backgammon, and in the sixth game beat Dr. Butler, an experienced player. But she could not even set the men when awake.

Dr. Abercrombie gives the following extraordinary account of a natural somnambulist: "A girl aged seven years slept in an apartment, separated by a very thin wall from one which was frequently occupied by an eminent itinerant fiddler, who often spent the greater part of the night in performing pieces of a very refined description; but this child took no notice of it only as a very disagreeable noise. Six months after, she became sick, and was removed to the house of a benevolent lady, where, after her recovery from a protracted illness, she

was employed as a servant. Some years after, the most beautiful music was often heard in the house during the night. At length the sound was traced to the sleeping room of the girl, who was found fast asleep, but uttering from her lips a sound exactly resembling the sweetest sounds of a small violin. She would first utter sounds precisely resembling the tuning of a violin, and then dashed off into elaborate music, which she performed in a clear and accurate manner, and with a sound exactly resembling the most delicate modulations of that instrument. Soon she imitated the piano, and sung, imitating precisely the voices of several ladies of the family. She was, when awake, a dull awkward girl, and in point of intellect was much inferior to the other servants of the family."

Said S. T. Coleridge, "A young woman of 25, who could neither read nor write, was seized with a nervous fever, during which she talked continually, Latin, Greek, and Hebrew. She had when a child lived with a clergyman, who occasionally read in each of these languages."

SEC. II. MAGNETIC SOMNAMBULISM. M. Delouze in his critical history of Animal Magnetism, gives the following summary of the phenomena of Magnetic Somnambulism. "When magnetism produces somnambulism, the being who is in this condition acquires a prodigious extension in the faculty of sensation; his eyes are shut, his ears are closed; yet he sees and hears better than any one awake. He is under the will of his magnetiser in regard to every thing that cannot hurt him, and he does not feel contrary to his ideas of justice and truth. He recovers the recollection of things he had forgotten when awake. He expresses himself with astonishing facility. When he awakes he forgets all. The magnetic somnambule perceives innumerable relations in all objects, with an extreme rapidity, and in one minute runs through a train of ideas which to us would require many hours. Time seems to vanish before him." "Of all the discoveries which have excited attention, this gives us the most insight into the nature and faculties of man." The

following case was embodied in the report of the commissioners of the French Academy, and read to that learned body in 1831, to which we have referred. On the 18th of March, 1826, M. Petit was set asleep in one minute. A bandage was put over his eyes; one of the gentlemen present, M. Raynal, played a game of cards with M. Petit, and lost it. The latter handled his cards with the greatest dexterity, and without making any mistake. We attempted several times in vain to set him at fault by taking away or changing some of his cards. They also attest other cases, among which was M. Paul, who was put asleep in two minutes by M. Foissac, and read fluently any book presented to him.

The following statement was published in the Salem Gazette, in 1836: "Dr. B——, of Providence, operated upon a young lady, during the period of magnetic sleep, who could tell correctly the time by a watch, though enveloped in a cloth, and at the same time having a bandage over her eyes. The doctor had a patient sick, as was believed, of liver complaint, and bade the somnambulist go in spirit to the man's house, (it being one fourth of a mile distant.) Arrived, she, at the Doctor's request, described the house, that there might be no mistake, and then entered. "What do you see?" asked Dr. B. "A man sick." I wish you to tell me what ails him. First look at his head; is it well? "Yes." How do you know? "Because it looks like yours or any other one who is well." Is the liver, heart, &c., well? "Yes," Do you see anything wrong? "Yes, there is an enlargement of the spleen." Several questions were then put to confuse her, and also to ascertain if she knew what the spleen was, and where situated; to all which she gave correct answers. In four days the patient died; a *post mortem* examination was instituted; all the physicians of the city were present, to whom the story of the girl was narrated before commencing operations, and they were requested to examine the body to see if they could discover the diseased spleen from external examination. They, sixteen in

number, declared with one voice that they could not. The body was then opened, and to the astonishment of all present, the girl was right; the spleen weighed fifty-seven ounces; its usual weight being from four to six ounces."

The natural somnambule is impelled by his own imagination, and certain corporeal impressions; the magnetic wholly depends on the will and faculties of his magnetiser. But in all the highest cases of phenomena in magnetic somnambulism, there are cases in natural somnambulism almost identical with them.

The following is extracted from the *Journal de la Meuse* for the 20th September, 1835: "A girl by the name of Arron, when plunged in a state of natural somnambulism, answers with precision the questions put to her; she perceives not only such natural objects as are around her, but also those which are concealed; and, what is still more surprising, objects removed to a very great distance. A physician from Chartres, saw her in an attack and said to her, "Mary, do you know me?" "Yes sir." "Who am I?" "You are a physician."—"Where do I live?" "At Chartres." "Can you see my house?" "Yes." "Is there any company in it?" "Yes; four ladies; one old, two middle aged, and one a young lady." "What do I hold in my hand?" "A small wooden box." "What does it contain?" "Sharp little iron tools." "What do I hold in my hand?" "Some money." "How much?" (She names the sum.) "In what coins?" (She specifies them.) All these answers were perfectly correct.

The following experiments were performed by the writer: June 19th, 1840, put Miss W——, of Albany, into a magnetic somnambulism in 20 minutes; she walked wherever I directed her, either by word or simply willing her. Without any gesture or moving of my lips, she would converse with me or with any other one that I willed. She would tell accurately what was held behind her head; read cards placed on her stomach; sung whenever I willed. June 22d, put her into a magnetic

sleep in 14 minutes. Mr. Lancaster, Mr. Bulgin and several ladies were present. She walked as before; a large black-board was placed before her at the distance of four feet; the different individuals present held various articles behind it, and she told correctly in every instance, what they were; she also read accurately, cards and books held behind the black-board. I went out of the room, after requesting her to notice what I should do, and on my return she stated accurately. She is the natural somnambulist that I have referred to in the first section of this chapter.

CLAIRVOYANCE AT A DISTANCE.—Dr. Arndt, the eminent German physician, relates, that being one day seated near the bed of one of his somnambulists, on a sudden she became agitated, uttered sighs, and as if tormented by some vision, exclaimed, "O heavens! my father! he is dying! he is dying!" A few moments afterwards she awoke, seemed quite cheerful, and recollected nothing of the anxiety she had so recently manifested. She relapsed twice into the same state of magnetic sleep, and each time she was tormented by the same vision. Being asked what had happened to her father, she replied, "he is bathed in blood, he is dying." Soon she awoke and was cheerful as before. Some weeks after, Dr. A. found this lady pensive and sorrowful, she had just received a letter respecting her father, who was distant 450 miles, stating that a serious accident had befallen him. In ascending the stair of his cellar the door had fallen on his breast; a considerable hæmorrhage ensued, and the physicians despaired of his life. Dr. A. had marked the precise time of the preceding scene of the somnambulism of the lady, found that it was exactly on the day and at the hour when the accident happened to her father.

CHAPTER III.

USES OF ANIMAL MAGNETISM.

When an individual is in somnambulism, sensibility is destroyed, and the most painful surgical operations have been performed, and the patient remained the whole time in a state of perfect unconsciousness. "The most painful chronic diseases, as well as numerous spasmodic nervous affections have been either perfectly cured or relieved by its application. And it frequently restores the patient when medicine fails. Says Deluze, magnetism often assuages a fever; and is a sovereign remedy for enlargement of the glands, and has wrought astonishing cures in scrofulous complaints; ulcers which have exhausted the resources of medicine, have been cured by magnetism. A woman who had an ulcer ten years was cured in thirty-five sittings. There have been over sixty cases of paralysis cured by magnetism in France. Rheumatic affections are usually speedily cured by it. It is a certain remedy for tic douloureux. Continues Deluze: a young lady of twenty had attacks of epilepsy ever since she was nine years old, and had been unsuccessfully treated by the most able physicians. It is three months since she had recourse to magnetism.—From the first month her attacks became weaker and less frequent; at the end of the second they entirely disappeared, and she now enjoys perfect health." Dr. Cutter of Nashua, N. H. gives the following account in a letter to T. C. Hartshorn, of Providence, dated—

NASHUA, N. H. Nov. 22, 1837.

Tic Douloureux.—"I was called to see Miss E. M. of this town. The disease was confined to the right side of the face. I proposed magnetism, she assented. After sleeping a short time I awoke her and the pain was gone, and has not returned."

A little girl ten years of age, daughter of Mr. Mayer

of Albany, had had convulsion fits for several days, and was given over by the physicians, who said that she could not live twenty-four hours; as the last means her father sent for the Rev. Mr. Garfield, a magnetiser, to try magnetism on her. When he arrived, the girl was insensible, and her frame much convulsed; he commenced magnetizing her; in a few minutes she was perfectly calm, and went into a tranquil slumber and slept well during the night; the next morning she awoke and conversed with those around her; her fits had ceased; after that she was magnetised several times, and in five days she was well.

Dr. J. W. Robbins of Uxbridge, Mass., thus states, "One individual was affected with dyspepsia, had a craving appetite for fruits and aliments which were sure to distress her. When in magnetic sleep, I enjoined upon her in the most impressive manner not to indulge herself in their use. The day following, having procured an apple, she wished to eat it, but found herself under the control of a mysterious influence which rendered it morally impossible. I next tried the experiment with regard to tea; I willed that every attempt to take the least quantity should be followed by nausea. All her succeeding attempts to take tea was followed by distressing sickness; and it is now several months, yet those habits remain corrected. I tried the experiment of interdicting the use of both tea and coffee with equal success; the same with the use of snuff." Another gentleman states that an inveterate attachment to tobacco in its various shapes, has been entirely destroyed, though the patient, a medical student, knew nothing of the cause of it, while in the ordinary state. In another individual a spirit of charitable feeling was induced towards an individual who had rendered himself an object of the patient's hatred and indignation. Thus far the spirit of forgiveness prevails, although the patient is ignorant of the cause. Other experiments have been made to excite cheerfulness, hope, &c., successfully. It may be applied to every bad habit with equal success.

A materialist in Albany, when he saw the astonishing phenomena of magnetic somnambulism exhibited in his own daughter, exclaimed, "I have been deceived, the soul is not material, it is an immortal spirit. I see ample proofs of it before me." Therefore this science is not only of vast importance as an auxiliary of medicine; but also as a corrector of evil habits, and a promoter of Christianity.

EFFECTS OF ANIMAL MAGNETISM ON SUPERSTITION.—Animal Magnetism throws considerable light on many of the mystic rites and ceremonies of the ancients; it unseals the door of the heathen temple, and strips the priest before his altar of all his supernatural attributes; it explains a variety of extraordinary facts which the historians of all ages have recorded, and connects them with each as effects which are identical and dependent on the operation of the same cause. It affords, too, a satisfactory explanation of the curious facts connected with sorcery and witchcraft, which during the middle ages excited the apprehensions of the vulgar, imposed on the credulity of the learned, and led to those horrible persecutions which prevailed throughout Europe. Prosper Alpinus states that frictions during ablution were among the secret remedies of the Egyptian priests:

"The mystery of Oracles, the prophetic ravings of the Sybils, are explicable on the same principle." Josephus was frequently in somnambulism. Among the ancient oriental nations, the treatment and cure of diseases by the application of the hands is universally attested. Jarchas informs us that he saw almost every description of disease cured in this way by the Indian sages. "In looking over the trials of those unfortunate persons who were condemned for witchcraft, it is impossible to escape the conviction that the sorcerers or wizards exercised a truly magnetic influence over their credulous disciples." "The affected persons exhibited several of the phenomena of somnambulism, and it is not surprising that in that age of darkness, effects so extraordinary were ascribed to the devil."

Persons in somnambulism, as we have shown, are deprived of sensation; this in those times was considered a sure sign of witchcraft, and multitudes were murdered with no other proof against them. Increase Mather thus states about the New England witches: "They did mutually with the touch cure each other, and foretold when another fit was coming on, and it happened accordingly; their eyes in the fits were fast closed." Animal Magnetism explains the phenomena of Irving's prophetesses. Those persons who fall at camp meetings are in somnambulism, and fully explain those phenomena that they exhibit, which have so long excited astonishment. "The somnambulic faculty of clairvoyance, or the power of seeing events passing at a distant place, affords a solution of the mystery of what in the north of Scotland is called *second sight*." Therefore a general knowledge of animal magnetism will banish superstition of every description from the globe.—The superstitious through ignorance attribute natural appearances to supernatural causes.

"*Mesmerism and Surgery*.—At the invitation of Dr. Homer Bostwick, of No. 75 Chambers-st., we witnessed Saturday, a surgical operation upon a patient in the state of Mesmeric Sleep. The operation was performed at No. 152 Church-st., and consisted in the removal of an adipose tumor from the back. The patient was a colored woman named Emeline Brown, a servant in the family of the Rev. Dr. Higbee. She was magnetized by Daniel Oltz, of No. 80 Chambers-st., assisted by E. J. Pike. After the patient had been thrown into the proper state, Mr. Oltz left the room, but Mr. Pike remained and held her hand during the operation. The object of this, as we understood, was to insure her continuance in a state of perfect unconsciousness. Only five minutes were occupied in magnetizing the patient. She sat in a chair, her head thrown forward and resting on a table. There was every indication of a state of perfect unconsciousness.

"Dr. Bostwick, before commencing the operation, sta-

ted that he had been entirely skeptical on the subject, but had desired in this instance to subject the claims of magnetism to a practical test. Mr. Oltz, the magnetizer, had not known the patient until some three days previously, and had magnetized her only some four or five times, at Dr. Bostwick's request. Mr. Pike had never seen her previous to the time fixed for the experiment.

"The magnetizer having pronounced the patient in the proper state, Doctor Bostwick (assisted by Doctors Samuel R. Childs and John Stearns,) proceeded with the operation. He first made an incision about eight inches in length across the tumor, and then proceeded to remove it by the usual process. The operation lasted three minutes, and required no small amount of cutting. We stood within two feet of the patient, and watched her narrowly. There was no muscular twitching and no manifestation whatever of sensibility to pain, or even of consciousness. A physician examined the pulse and said it was quite natural, though somewhat feebler, perhaps, than usual. A dead body could not have exhibited stronger insensibility to pain. The tumor weighed ten ounces. The wound did not bleed near as profusely as such wounds do when the patient is in a natural state. The whole operation of removing the tumor and dressing the wound occupied just half an hour.

"The wound having been dressed and the garments of the patient adjusted, Mr. Oltz awoke her by a few passes, which occupied less than a minute. Her appearance was much like that of a person suddenly aroused from ordinary sleep. Questions were put to her implying that the operation had not been performed, and that she would have to be magnetized again. She said she would rather submit to the operation at once in the natural state than wait any longer. She was asked if she did not know that the tumor had been removed. She replied in the negative, and with every appearance of perfect simplicity and integrity, declared that she had

felt no pain and was wholly ignorant of whatever had transpired during her sleep.

"There were present as witnesses, including several Reporters for the Press, some dozen persons. Among them we name the following gentlemen:—Dr. Eleazer Parmly; Edward A. Lawrence, from the Rooms of the Home Missionary Society, J. R. S. Van Vleet, from the Office of the Courier and Enquirer; E. A. Buffum, Reporter for the Herald; Dr. H. H. Sherwood; Dr. Edward Spring; Oliver Johnson, Assistant Editor of the Tribune. There were others whose names we did not learn.

We have no comment to make upon the facts thus stated, except to express our perfect conviction that there were no collusions. In fact we see not how deception could have been possible under the circumstances. The most obstinate skepticism *must* yield in the presence of facts like these."—*N. Y. Tribune*.

CHAPTER IV.

PROCESSES.

There are various methods practiced by different magnetizers. But we think the following preferable:

If you wish to put a person into the magnetic sleep, cause him to sit as easy as possible in an easy chair, with his head reclined back, and require him to be perfectly quiet; sit down before him, place your knees beside his; then take his thumbs in such a manner that the inside of your thumbs will touch the inside of his. Concentrate your attention, and will him to sleep; after holding him thus about ten minutes, slowly raise your hands with the palms turned outward to his head, then

over the head from right to left; if the pain is occasioned by the stomach, next place your hand on it and proceed as with the head. If the head-ache is accompanied with cold feet, after holding the hand on the head for a short time, draw the hands slowly from the head downwards, along the sides, to the knees; soon the head will be relieved and the feet become warm. If the pain has existed for years it is chronic and must have a prolonged treatment.

In rheumatism, if local, place your hand where pain is felt, hold it for fifteen or twenty minutes, then pass your hand lightly to the extremity of the feet, and thus continue for ten minutes; but if the limbs are generally affected, make passes at a short distance from them to their extremities, for an hour or more; if the disease is chronic repeat the operation daily until the relief is complete; and so of every chronic disease. Says Deluze, "I have seen a fit of the gout, so violent that the patient could not put his foot to the earth, relieved by one sitting and cured by three, and the pains have not returned for eighteen months. I have also seen a somnambulist in fifteen days cure her magnetizer, who for a long time suffered with the gout in the knees and feet. For this purpose she merely employed passes along the legs, continuing them each day for a quarter of an hour. When the gout has mounted to the head or chest, magnetism readily brings it down to the feet, and then draws it off at the extremities."

We mean by pass, simply passing the hand or moving them as we have stated.

For tooth-ache hold the hand on the part affected for a few minutes, then pass the ends of the fingers slightly over the cheek from right to left.

"In biles, magnetise when the inflammation begins."
"For a felon, make passes along the arm as far as the extremity of the finger, and then concentrate the action, and then draw it off from the end."

It is not pretended that magnetism cures all diseases; some are beyond its reach; but it is a valuable auxiliary

turning the palms inward let them descend to his shoulders, and let them remain there five minutes; then let your hands descend with the fingers pointed towards the arms, at the distance of two or three inches from them to the extremities of his fingers; let your hands then ascend, sweeping them off to the right and the left, to their extent, palms outward as before; raise them as high as the head, then descend as before; thus continue from five to ten minutes, and lastly, lay the right hand upon the pit of the stomach. Remember that unless you keep your attention fixed, your will steady and unwavering, your efforts will be vain. The operation is principally intellectual; many make no use of the manipulations, and produce all the effects by the mere energy of the will, at a distance from the patient; but still the movements of the hands give some assistance in producing the magnetic current; the downward motions are magnetic, the upward are not. Some persons are much more susceptible of the magnetic influence than others; hence some require a longer time in being put into the magnetic sleep than others; in some cases the processes are shortened, in others they must be lengthened. There are some persons upon whom magnetism has no sensible effects. Another very successful method is, to take the patient by one hand and place the other hand on the head and exert the will as in the preceding case.

But a comparative few that are put into magnetic sleep become somnambulists. If a person in this sleep will answer the questions of his magnetiser, he is in somnambulism. To awaken the patient from magnetic sleep make upward motions with your hands before his face, willing him to awake, and he immediately awakes.

ITS APPLICATION TO DISEASES.—The magnetic sleep is highly restorative, and always should be resorted to when the complaint is general; but when there is simply a local pain or disease, there is no necessity for it. For head-ache place your hand upon the part affected and exercise a constant and benevolent desire to relieve pain; and after holding it there a few minutes pass it lightly

quickly recovered from the fainting, as though she had been awakened from a dream, and from that moment she gradually recovered." Says Dr. Elliotson of London, one of the most eminent physicians in the British empire, "I know of no certain cure for epilepsy but magnetism, I have cured several by it." Says Baron Dupotet, "in many acute diseases, medicine should be used with magnetism."

To cure a person of any bad habit, as intemperance, he must be put into the magnetic sleep and then the magnetizer must will with energy that the least participation in intoxicating drinks, snuff, tobacco, opium, or whatever it may be, should cause nausea, and he will be forever unable to partake the interdicted articles; unless in another magnetic sleep the magnetizer should remove the interdiction. It may be equally well applied to anger, revenge, and every evil passion. Hence the philanthropist, by a practical knowledge of this agent has his means for relieving suffering humanity increased a thousand fold; and many frightful maladies, and infidelity, will take their flight before its bright rays from our globe.

Note. A person cannot be magnetized when under the influence of any stimulating drink, food, or any excitement.

CHAPTER V.

PRECAUTIONS.

Says Baron Dupotet, "I am anxious to impress on the minds of those who may feel inclined to try the experiment, that the operation is not always unattended with danger; for I have known instances of many who in endeavoring to induce the magnetic phenomena, have

of medicine, and every physician should be familiar with its principles ; and a general knowledge of them would relieve many of the ills of life, and preserve multitudes from untimely graves. Says Baron Dupotet, " the value of such a discovery as animal magnetism is to be estimated, not by the evils to which its unskilful application may give rise, but by the positive good which may be derived from it. Already we have seen that during the state of magnetic insensibility the most painful surgical operations may be performed, and the patient remain the whole time in a state of perfect unconsciousness. Is this not a boon to suffering humanity ? This is not all ; the most obstinate and painful chronic diseases have been relieved and perfectly cured by its application. It was the successful treatment and cure of diseases which had notoriously resisted every other remedy, which compelled the rudest and most inveterate of our antagonists to recognize the influence of magnetism ; and when these facts were demonstrated beyond all reasonable controversy, it remained for them to seek in the umbrage of their imagination the solution of the mystery. In epilepsy, hysteria, neuralgia, chronic rheumatism, head ache, I know of no remedy so immediate and availing. How often have I seen the victim of pain writhing in the most acute agony, sink under its influence into a state of the most placid composure ! How often have I heard thanksgivings and prayers breathed in gratitude to the Creator for the relief which the afflicted have hereby experienced ! At Gronigen, a girl nineteen years old was suffering under hysterical spasms, which sometimes continued forty-eight hours ; after being magnetised half an hour a day for three weeks, recovered." " A lady residing in London, after a violent attack of fever, under which she was suffering in December and January last, was affected by convulsions of every kind, but mostly by fainting, which often lasted two hours, and it was difficult to bring her to herself. I was present one day when the fainting was coming on, and tried to make application of magnetism ; I had scarcely begun to operate, when she

placed themselves in a very painful position, and the person operated on in a very alarming state. Of course animal magnetism, like every other science, has its own laws, and these should be diligently studied before any individual attempts to practice it. M. de S. C., a retired officer, having heard a vague report of animal magnetism, attempted to make the experiment upon his own daughter, although she complained of no illness. He merely wished to ascertain whether he could make her feel the magnetic sensations. With this view, and without being aware of the extent of mischief he was provoking, he laid his hand on the stomach of his daughter and obeyed the magnetic injunctions. After a few moments of magnetization, she experienced spasmodic attacks, and shortly was siezed with violent convulsions; and her father, not knowing how to calm them, only increased their intensity, and she thus remained for a week."

Says M. de Puysegur, "a young lady of Nantes, of distinguished birth, when on a visit to her relative, the Marquis de B., was indulging with the rest of the company in passing sundry jokes upon magnetism. Her uncle, M. de B., who outstepped, by his sarcastic remarks, every one present, and was gesticulating with great freedom, began to direct his pretended influence upon his niece, when they both set about magnetizing each other as fast as they could. At first the young lady laughed very heartily, but it was soon discovered that this laughter was any thing but natural; and she was gradually losing her reason; she followed her magnetizer every where, and yielded to his sole influence. The spectators attempted to separate them, but this only provoked dreadful convulsions. Her magnetizer felt extraordinary sensations; the lady remained in that alarming state several days." But if convulsions do occur, the magnetizer by being calm and firm can soon quell them, by making passes at a short distance from the patient, and directing the energy of his will to soothing or calming them. An experienced magnetizer rarely ever induces convulsions, and if he should he can speedily remove

CHAPTER VII

CONCLUSION.

The phenomena of somnambulism are similar "to the unclouding of the mind previous to death. Thus does the study of animal magnetism assume a peculiar sacred interest; it is the unveiling to us our spiritual nature, and leads us onward even to the verge of eternity." It also demonstrates that all thoughts are in themselves imperishable, and will at one view crowd upon us when separated from our clay tenements. "Do we understand the connection between our bodies and souls? No. Let proud philosophy, therefore, descend from her throne of bigotry and intolerance, and with a spirit of humility, prepare to investigate these solemn mysteries. I know of no study so exalting to the human mind, none so deeply interesting to all who are capable of reflecting on their destiny."

"To practice magnetism successfully," says M. de Puysegur, "you must have *an active will to do good; a firm belief in your power, and an active confidence in employing it.*"

Let us thank heaven that the exercise of an agent so useful, and sublime as that of animal magnetism, demanding only singleness of faith, purity of intention, and a development of a natural sentiment, which connects us with the sufferings of our fellow men, and inspires us with the desire and the hope of relieving them." The female tract distributor, who understands magnetism, has an additional power of doing good, and can be an angel of mercy to multitudes of the poor and suffering in our cities. If the immortal Howard had understood it, how much more good he might have accomplished, what sparkling gems it would have added to his crown: what new joys would have filled his heart.

them. In magnetizing for the relief of any local pain, there is no danger; so that any one can attempt it with impunity. In nearly all cases where there have been convulsions, they have occurred when attempts were made through mere curiosity, to excite the magnetic phenomena. Women can magnetize equally as well as men; all nurses should be magnetizers.

CHAPTER VI.

EXPERIMENTS.

Says Baron Dupotet. "A large marble pestle, after being magnetized, was wholly immersed in muriatic acid, in which it was kept until the acid had reduced the mass to about one half of its original size, it was then drawn out, well cleansed, and presented to the somnambulist, who fell asleep as soon as he had touched the whole mass of marble." There is an analogy between animal magnetism and electricity, because if the magnetizer places himself on an insulated glass stool, he can magnetize with double power, and if the hand of the magnetizer is on the head of the magnetized, and the hand of the latter touches the head of the magnetizer, that moment he experiences a shock like that of electricity; also if a natural magnet be held near the hand of a person in magnetic sleep, it follows the magnet. A bottle of magnetized water put to the feet of a person with cold feet, will warm them. Magnetized water is very beneficial to persons in ill health.

APPENDIX.

MAGNETIC AND CLAIRVOYANT TREATMENT OF INSANITY.

In 1847, Dr. Barker, of South Adams, Mass., cured Miss Potter, of that place, of insanity, by magnetism. The following statements on insanity were made on the evening of June 11th, 1848, by S. G. Grooms, of Troy, N. Y., while in the clairvoyant state.

Insanity, or Disease of the Mind.—Physicians are often ignorant of its cause. There are portions of the brain that cannot bear the least pressure, without derangement, or fits. The organs of Destructiveness and Combativeness are the most easily affected. When there is an equilibrium of the circulation of the blood, there will be no derangement: lack of circulation is the first cause of insanity; then a portion of the serum does not become blood. A bruise becomes bad blood, and pleurisy is produced by thick blood.

Different organs become deranged, as Eventuality, Constructiveness, Secretiveness, and Acquisitiveness; when the last-named organ and Color are deranged, the person thus affected will steal articles of a certain color. The physician's first object should be, to ascertain what organ is affected. If Mirthfulness is disordered, excite Veneration. Try to draw the surplus blood from the brain toward the extremities, by magnetic passes.

Insane persons ought never to be opposed. Follow them in their views, as if they were sane, by small portions, in due season. Examine the patient's hands and feet; when they are warm, and animal heat is equalized with moderate perspiration, and the system is open, the health of the person is good.

TREATMENT.—*For Nervous Derangement.*—After bleeding the patient a little, give the following medicine to strengthen the nerves. Take tincture of iron, (made by pouring boiling water upon iron, or boiling a piece of iron in water,) with skull cap and a little castor, (from the beaver,) and assafoetida, and make a tea of this mixture. Or sulphate of iron, one ounce; rectified spirits, two pints. Another mode is: take ammoniate of iron, four ounces; proof spirits, one pint: digest and strain.

For Mental Derangement.—Reduce the patient by dieting, and not permit him to eat food that makes blood. The following articles are appropriate, namely: crackers, rice, and molasses;

and avoid stimulants. A person of strong, robust constitution, and red face, needs bleeding. Palsy is produced by a similar cause as insanity. Never let the insane know that you think them insane, as it makes them worse; and also eyeing them with suspicion does the same. The reason why their best friends prove their worst enemies is, because they eye them closely, which horrifies the insane and increases their malady, and begets in them extreme hatred toward their friends. Insane persons should be talked with as if they were sane and rational. They ought to see frequent change of scenery, the oftener the better; and in extreme cases, let pictures in the room be changed hourly.

Persons that become insane by fixing their thoughts constantly on one thing, are hard to cure. Any person confined in a white glass globe, would become insane in six hours. Long and intense thinking on one subject will render any person more or less insane.

The doctrine of election causes more insanity than any other one subject, because it leads its believers to doubt and melancholy, and finally to despair. Universalists are rarely insane, as they are buoyed up by hope, and are often cheerful; but Universalism is a passport without a signature: a robe not in the fashion of the robe of righteousness. All insane persons are costive. Typhus fever is a species of insanity. The nerves of voluntary and involuntary motion are opposite; if the one class are unusually active, the other are proportionally inactive.

In addition to the other remedies, give a tincture of Cayenne and alcohol, and use the warm bath, with friction, by rubbing the patient with a wet woollen cloth.

If the foregoing treatment was observed in the insane hospitals, in one week three-fourths of the patients would be cured.
