## INTRODUCTION.

The original object of the secret rites of fremasonry has been a subject of inquiry for upwards of six hundred years, and the enigma stems not to have been satisfactorily solved. The initiated, as well as those without the pale of the order, are equally ignorant of their derivation and import. What mote it be $?$ is a question as difficult of solution now as when first propounded by king Henry VI. of England.

The intention of this work is to endeavor to unravel the intricate web in which the mystery is involved, by tracing the order back to its source, and, by showing its intimate connection and similitude to institutions more ancient, put it beyond a doubt, that it sprang from, and is a continuation of the rites and ceremonies observed in those establishments.

Had a work, taken notice of by the Abbé Barruel, fallen into the hands of the editor, he would probably have been saved much trouble in the prosecution of this research.-"We recommend," says he, " to our reader to peruse the treatise of a most learned and zealous mason, dedicated Demen die es Verstehen, or To those who can understand. He leaves no stone unturned throughout antiquity to prove the identity of the ancient mysteries of Eleusis, of the Jews, of the Druids, and of the Egyptians, with those of freemosonry."

In pursuance of this course, it becomes necessary To take a transient view of the dogmas and customs of Egypt in the retriptest periods of its history; for it appears evident, that this country was the salient point from which the religious observances of the ancient world commenced.

What are emphatically called the mysteries, is but another name for religion; and an exposition of what they consisted, is of course embraced in the subject as forming a parallel with the rites of masonry. Independent of the main design of the work, these topics in themselves possess great interest as matters of curiosity; which is enhanced by observing the close affinity which they bear to the practices of the masonic order at the present day.
"Among all the ancient nations which have been distinguished in history, there is none more worthy of our notice than the kingdom of Egypt. If not the birth-place, it was the early protector of the sciences; and cherished every species of knowledge, which was known or cultivated in remote times. It was the principal source from which the Grecians derived their information; and, after all its windings and enlargements, we inay still trace the stream of our knowledge to the banks of the Nile." (New Edinb. Ency.)
Whatever may be thought of the doctrines of the mysteries, they enforced the principles of morality by the most terrific scenical repre-
sentations of the torments of the wicked on the one hand, and of the most pleasing spectacles of the happiness of the righteous on the other, in a future life. These scenes are faintly copied in royal arch masonry, and the same morals, in like manner, inculcated.

The writer is not a devotee to the mystic rites of the craft: he is not prepared to vindicate the outrages committed by individuals of the order, instigated by a fanatical zeal for the protection of frivolous ceremonies; nor will he apologize for the use that may have been made of the fraternity to promote the views of political aspirants. If any improper influence in this respect has been employed, as is asserted, he does not hesitate to pronounce it anti-masonic-against the rules of the order;' for both religion, on which itself was originally founded, as well as politics, are totally excluded from the lodge.

The most material and best founded objection that has been brought against masonry, is the oaths which it imposes upon the brethren. They are shooking to the taste of the present age: their continuance was an enormous blunder in the revivers of the order in 1717. They were then no longer necessary. Masonry contains nothing which at that time readered its members amenable to the laws of England.

The false construction put upon these oaths, has implicated the order in the foulest deeds; and perhaps caused the masonic obligations to be considered paramount to legal oaths administered in courts of law, and thus perverted the course of justice. The only means, therefore, of avoiding this evil, and of wiping away the stain at present attached to the society, is a total abandonment of the oaths.*

[^0]Howerer desirable this may be to many of the brethren, it is resisted by others on the absurd and superstitious notion, that no alteration can take place in "the ancient land-marks" of the institution; which, like the laws of the Medes and Persiens, must remain eternally the same: when, notwithstanding, within about fifty year, the old inclosures have been broken down, and the boundaries of the order extended so as to include an immense territory beyond the ancient limits.

After this unqualified reprobation of the oaths, I confidently essert, that nothing is taught or practised in the lodges contrary to the strictest morals. The exposition of the ritual by those even who are inimical to the order, proves the fact. And, as has been often urged, if there were $n 0$ other testimony, the characters of many of those who are known to be members, is a sufficient guerantee that nothing improper would be tolerated.

If it be asid, that a partial feeling is created among the brethren that operates injuriously to the public good, it may be answered, that the same objection may be urged sgainst all associations of indiriduals, whatever may be their views and intentions.
This partiality, by the way, has been the cause of relieving many in distress, and even saving the lives of valuable citizens. A case of this kind happened in the American revolutionary war, which is often alluded to by masonic writers. Col. McKenstry was taken prisoner by the Indians, who were preparing to put him to a cruel death. In this emergency, he gave the masonic sign of distress, which induced a brother mason, a British officer, to interfere and save his lifo.

While this transaction reflecta bonor upon the officer as a mason, it at the same time leaves an indelible stein upon his character as a man, which equally attaches to his $k$ ling and government. What 1 employ savages as auxiliaries in war, and then stand by and look coolly 00, while they amuse themselves in tomahavoking and scalping their prieonern, unless the latter can give the talismanic signal, and pronounce the Shibboleth of masonry?-But as kings are considered by their subjects not to be moral agents, but looked upon as minors cridiots who can do no wrong, the prime minister at the time, Lord Herth, and his principal adviser, Lord Sackrille, must bear the bulk of the odium.
This rule of masons to grant aid to each other under certain circumcances, was probably derived from the laws of Egypt, by which, "He who bad neglected or refused to save a man's life when attacked,

[^1]if it ware in his power to assist him, was punished as rigoroualy a the assassin ; but if the unfortunate person could not be succoured the offender was at least to be impeached, and penalties were decreet for any neglect of this kind. Thus the subjects were s guard anc protection to one another; and the whole body of the community united against the designs of the bad."-(Rollin's Ano. Hist.)

Some apology for the awful ouths administered in masonic lodge: is perhaps due on the score of precedent; which has in all time greatly influenced the customs and government of the world, anc sometimes sanctified principles the most absurd and pernicious.

The mysteries were protected by the most aevere oeths in Greece and Rome, and, no doubt, were equally so in Egypt, the place of thei birth. And, moreover, in the two former countries, if not in the latier, revesling the secrets of these mysteries was punished with death by the laws.

For this there was a substantial reason: the greater mysteries taught the doctrine of one Supreme God, and that polytheism was an error: admitting, at the same time, that the sun, moon, and stars, were minor divinities under the superintendence of the one Supreme. The belief, however, in Hero-gods was so engrafted on the minds of the ignorant multitule, that it was feared the open promulgation of a doctrine in opposition to that faith, would lead to disturbances in the state that might produce great evil. This mystery consequently was confided only to a chosen few of the most intelligent, under the sanction of an oath and the penslties of the law.

When freemasonry was first established in England, soon after the edict of Canute, in the beginning of the eleventh century, (as is presumed,) prohibiting in toto the Druidical worship, the strongest oaths were required to bind the initiated to secrecy: for had the real intent of its founders been known, it would doubtless have cost them their lives.

That Canute was superstitious, and of course vindictive, is evident from his having made a pilgrimage toRome, through excessive religious zeal, in 1030; and therefore would, no doubt, have punished the Druids for an infraction of his edict with merciless cruelty.

By the incorporation of the Danes with the nation, (says Lingard, in his History of England,) the rites of paganism had again made their apperance in the island. Canute forbade the worship of the heathen gods, of the sun or moon, of fire or water, of stones or fountains, and of forests or trees.

This ferocious and sanguinary warrior, in 1080 , made a pilgrimage to Rome. On the road he visited the most celebrated churches, leaving everywhere proofs of his devotion and liberality. In his return he proceeded immediately to Denmark, but dispatched the Abbot of Tavistock to England with a letter, describing the object and issue
of his journey. In this letter he ssys, "It is long since I bound myself by my vow to make this pilgrimage; but I had been hitherto prevented by affairs of state, and other impediments. Now, however, I return humble thanks to Almighty God, that he has allowed me to visit the tombs of the blessed aposties, Peter and Paul, and every holy place within and without the city of Rome, and to honor and venerate them in person. And this I have done, because I had learned from any teachers, that the apoatle St. Peter received from the Lord the great power of binding and loosing with the keyz of the kingdom of heaven. On this account I thought it highly useful to solicit his patronage with God."

He concludes his letter as follows: "Lastly, I entreat all my bishops, and all the sheriffs, by the fidelity which they owe to me and to God, that the church dues, according to the ancient laws, may be paid before my return, namely: the plow-alms, the tithes of cattleof the present year, the Peter-pence, the tithes of fruit in the middle of August, and the kirk-shot at the feast of St. Martin, to the parish church. Should this be omitted, at my return, I will punish the offender by exacting the whole fine appointed by law. Fare yewell."

Farthermore it may be remarked, that the customs of the timesin which I am endeavouring to show that masomy was established sanctioned the most horrible oaths.
"The multiplicity of oaths in the judicial proceeding of the middle ages,* (says Dr. Henry, in his History of Great Britain, v. iii, p. 425) had the same effect that it will always have, of diminishing men's veneration for them, and giving occasion for frequent perjury. The legislators of those times employed several devices to prevent this, by awakening the consciences, and keeping alive the religious fears of mankind. With this view, their oaths were couched in the most auful forms of words that could be invented; and these forms were frequently changed, that they might not lose their effect by becoming too familiar."

Many who have written with great asperity against masonry, under false impressions of its general tendency, have doubtless been actuated by the purest motives, whilst others, such as the Abbe Barruel and Professor Robison, have been instigated by the most malignant prejudices. I shall take some notice of these two writers in the sequel.

## AN EXPOSITION

OF TAE

## MYSTERIES, \&c.

## CHAPTER 1.

## DOGYAS AND CUBTOMS OF TEE ANCIENT EGYPTIANS.

Ir will be attempted in this work to show that the mysteries and ceremonies of the celebrated order of Freemasons are derived from the religious dogmas and customs of ancient nations, particularly those of Egypt, where the foundation of the whole machinery of religious mysteries, as far as is known, was first leid.

In order, therefore, to attain a comprehensive view of 'this subject, it becomes necessary to be well informed of the rites, customs, and ceremonies of the ancient inhabitants of that famous country. And as the Abbe Pluche, in his History of the Heavens, has treated more minutely of these topics, and explained them more satisfactorily, than any other suthor that has fallen under my observation, I shall com mence this volume with extracts from his work.

Critical histories of the fabulous gods of paganism, under the semblance of truth, have been transmitted from age to ege, and been generally received as narratives of real facts. Pluche has unveiled many of these poetical fictions, and pointed out the source from which they were derived.
My limits will not permit me to give the whole of his expositions; but on account of the great merit of the work, with which, it is presumed, but few American readers are acquainted, I bave not coofined the selections merely to such parts as have a particular bearing upon the subject in hand.

As the author is litle known in America, I will give an abstract of a sketch of his life and writings, contained in La Biographie Universelle, Paris, 1830.

Anthony Pluche, a celebrated writer, was born at Reims, in 1688; and obtained the appointment of Professor of Lauguages in the University of that city. Two years afterwards he passed to the chair of lhetoric, and was raised to holy orders. The Bishop of Laon, (Clest-
mont,) becoming acquainted with his talents, gave him the presidency of the College of his diocese. By his assiduity and science the institution was much improved; when particular circumstances occurred that troubled his tranquillity, and obliged him to relinquish bis eme ploy. The Intendant of Rouen confided to him the education of his son, at the request of the celebrated Rollin. The Abbe Pluche having fulalled this trust with success, left Rouen for Paris, where he gave, at first, lessons on Geography aad History. Through the notice of distinguished authors, his name soon became celebrated, and he sustained that celebrity by his works.

He gave successively to the public,-first, the Spectacle de la Nature, (Nature Displayed), in 9 volumes, 12 mo . This work, equally instructive as agreeable, is written with much clearness and elegance. Second, The Histoire du Ciel, (History of the Heavens,) in 2 vols. 12 mo . In this work is to be found two parts, slmost independent of each other. The first contains learned researches upon the origin of the poetical heavens. This is nearly a complete mythology, founded upon new and ingenious ideas. The second is the history of the opinions of philosophers on the formation of the world. The author here shows the uncertainty of systems the most accredited. Besides a diction noble and well turned, one here finds an erudition that does not fatigue. As to the ground of the system exposed in the first part, Voltaire calls it, probably with reason, the Fable of Heaven. Third, La Mécanique des Langues, Paris, 1735, in 12 mo . He here proposes a means more short for learning languages. Fourth, Concorde de la Geographie des differens Ages; Paris, 1764, in 12 mo.

## Plan of the Work.

I find myself under the necessity of oversetting, or unravelling, febles, in order to establish truth. The men most celebrated who have treated of the formation of the heavens and of the carth, or of their mutual relations, were pagans, philosophers of different nauions, and sacred writers. Those systems which have been given by the Egyptians, Phenicians, the Greeks, and Romans, are obscured by fabulous recitals, and by metamorphoses full of absurdity. Although they were the most ingenious and polished of all people, they formed ideas so strange on the government of the heavens, and on the powers which'sustain the human species, that there is no need to combat them with argument ; they carry their own refutation with them. But, from the depth of this frightful darkness it is possible to elicit light. Through these fictions I find a fact, the explication of which shows us what has given birth to fables; it is the development of them. The first fixed point is the signification of the names and figures which have served, from the highent entiquity, to characterize the sun, the moon, and the sturs, according to their different situations. The usages of the ancients,
and the inspection of nature, will sid us in discovering the sense, the knowledge of which will lead ue immediately to perceive the enormous abuse that has been mede of the institutions of the firts men, and place in sufficient light the origin of the idolatry of our fathers.

Another effect of thia rewarch is to teaeh an that the same mistake which has peopled the heavens with chimerical divinities, has given birth to a multitude of false pretensions on the influences of the hemvenly bodies, and the errors which still tyrannise over most minds. If our history of the heavens produce no other beaefit than the discovery of the mistakes which have precipitated the buman race into errors thet disgrace it-the consequences of which still disturb the repose of society-his will undoubtedly be an advantage sufficiently satisfactory.

My remarks may be useful to youth, by unveiling to them those fabulous personages which they hear so often mentioned. I have still greater hopes, perhaps with too much presumption, that this small essay might be of some use to teschers themselves. I should think myself happy to have assisted their work, by some views which they might afterwards improve and proportion to the wants of their disciples. Teachers, however well qualified, generally want leisure to undertake resarches of any considerable leagth; and the more judicious they are, the more disagreeable is it to them to be for a long series of years handling fables almost always absurd or scandalous, without being recompensed for the tiresomeness of these ridiculous stories, by the satisfaction of being able at least to find out the origin of them. I here derive all the branches of idolatry from one and the same root. I endeavour to show that the same mistake has given birth to the gods, goddesses, metamorphoses, suguries, and oracles. The fables, thus reduced to their true value, will amuse without danger ; and the masters possibly will like and adopt a principle whose great simplicity puts it within the reach of children themselves.

The chief benefit I should be glad to reap from my labour would be the facilitating the study of nature, and even that of religion, in restraining the said study within the bounds of possibility and necessity, both which are still of no small extent.

The engravings accompanying the work are all drawn from the monuments of antiquity. They are marked as follows :-all those found in Antiquity Explained, by Montfaucon, with an M; those collected by Cartari, with a C; those which are on the vase of agate of St Denys, with a $V$; and those which are taken from the table of Isis, published by Pignorius, with a T.

## Usages Common to All Nations.

We are sometimes amazed at the conformity found in many respecta between the practices of the Hebrews and those of the nations given
over to the grossest idolatry. Most of the learned, in order to socount for such a similitude of usages, say that false seligions only copied and mimicked the true; and from the conformity of some particulars of mythology with sacred history, they think themselves athorised to affirm that the heathens had the communication of the holy scriptures, ot must bave frequented the company of and imitated the Hebrews.

Other learned men, and among the rest Sir John Marshem, in his Rule of Times, being sensible how much unknown to, and as it were, separated from other nations, the Hebrews were,-how much disliked by those that knew them,-and of course how little fit they were to serve them as models, and finding, moreover, from a multitude of evident proofs, that the sacrifices, the ceremonial, and the very objects themselves, of idolatry, were prior to Moses and the holy scriptures, they have maintained that the laws and the ceremonies of the Hebrews were an imitation of the customs of Egypt and the neighbouring nations, but adapted to the worship of one God."

## Symbolical Writing.

Traz Egyptians, even the most ancient of them, were acquainted with the signs of the Zodiac. Their monuments, which are known to be of the earliest antiquity, are covered with figures, among which those of the erab and the wild gont, of the balance and the scorpion, of the ram and the bull, of the kid, the lion, the virgin, and the rest, are frequently found.

The iwelve symbolical names, which signify the twelve portions, both of the year and the heavens, were a prodigious help towards regulating the beginnings of sowing, mowing, harrest, and the other works of mankind.

It was found very convenient, to expose in public a small figure, or a siagle letter, to notify the exact time which certain general works were to be begun in common, and when certain feasts were to be celebrated. The use of these figures appeared so convenient, that they by degrees extended it to more things than the order of the calender. Several symbols, fit to inform the people of certain truths, by some analogy or relation between the figure and the thing they have a mind to have understood, were devised.

This method of saying or showing one thing, to intimate others, is what induced among the eastern netions the taste of allegories. They preserved, for a long time, the method of teaching everything under symbols, calculated, by a mysterious outside, to excite curiosity, whid

[^3]was afterwards recompenced by the satisfaction of having dizcovered the truths which they concealed. Pythagoras, who had travelled among the eastern nations, thence brought that custom to Italy.
$\mathrm{H}_{\mathrm{am}}$, and those of his descendants who came to inhabit the banks of the Nile, and the whole Lower Egypt, first tried to cultivate the earth according to the order of the year, and in the manner used in other countries; but no sooner were they ready to cut down their harvest, in the driest season of the year, and without the least sppearance of rain,* but the river swelled, to their great amazement: it flowed on a sudden over its banks, and took from them those provisions which they thought themselves already sure of. The waters continued to rise to the height of twelve, fourteen, or even sizteen cubits, $\dagger$ covered all the plains, carried away their cattle, and even the inhabitants themselves. The inundation lasted ten or eleven weeks, and oftentimes more.

It is true, the overflowing left on the land a mud which improved it; but, the difficulty of obtaining a harvest, since the summer the only time proper for it, brought the storm and the inundation, caused Hem to quit both the lower and the middle Egypt, and retire to the higher. He there founded the city of Thebes, originally called Am-mun-no, Ammon's abode. But many, finding it inconvenient to remove from lower Egypt, which after the retiring of the waters, was throughout the remaining part of the year like a beautiful garden, and a delightful place to dwell in, endeavoured to fortify themselves against the return of the waters.

They observed from one year to another, that the overflowing was always preceded by an Etesian (annual) wind, which blowing from north to south, about the time of the passage of the sun uuder the stars of the crab, drove the vapours towards the south, and gathered them in the middle of the country, (Ethiopis, now Nubia and Abysinia) whence the Nile came; which there caused plentiful rains, that swelied the waters of the river, and brought on the inundation of lower Egypt.

But they wanted the means of knowing exactly the time when it should be necessary for them to be prepared for the inundation. The flowing of the river beyond its banks happened some days sooner or later, when the sun was under the stars of the lion, Near the stars of Cancer, though pretty far from the band of the zodiac towards the

[^4]south, and a fer weeks after their rising they see in the morning one she most brilliant, if not the largest star of the whole beavens, ascen ing the horimo. In appeared a little before the rising of the su which had rendered it almost invisible for a month or two befor The Egyptians then pitched upon the rising of this magnificent si as the infallible sign of the sun's passing under the stars of Leo, si the begining of the inundation. That star became the public mark, which every one was to keep a watchful eye, not to miss the instant retiring to the higher grounds. As it wes seen but a very littletin above the horizon, towards the dawning of the aurora, which becor ing every instant clearer, soon made it disappear, it seemed to shc itself to the Egyptians, merely to warn them of the overflowin which soon followed.

They then gave this star two names having a very natural relation the helps they borrowed therefrom. It worned tham of the dangen whereupon they called it Thasut or Thayaut, the dog; they called also the barker, the monitor, in Egyptian, Anubis; in Phenician, Ha: nobech; which, by the-by, shows the analogy there was betwer these two languages, notwithstanding the diversity of many word though chiefly in the pronounciation, which made them appear qui different. The connection of this star and the rising of the rive caused the people to call it commonly the Nile-star, or barely tl Nile. In Egyptian and in Hebrew, Sihor; in Greek, Seirio: in Latin, Sirius. The Egyptians gave it besides, but in latter time the name of Sothis or Thotes, which is the same with his other nam Thot, the dog, with a different pronunciation.

The inhabitants, retiring into their towns on the warning of tt northern wind and the dog-star, remained idle for two months or mor till the waters were perfectly drained. Therefore the prudence of it Egyptians, before the overflowing, chiefly consisted in observing th termination of the vernal winds, the return of the northerly which bi gan with the summer, and at last the rising of the dog-star, whic circumstance was to them the most remarkable point of the heavens.

During their inaction, after the rising of the river beyond its bank their attention was directed to the observance of the return of the sout? erly winds, more moderate than those of the spring, and which facilits ted the flowing of the river towards the Mediterranean, by the cor formity of their blowing with its direction, which is from south $t$ north; also to measuring the depth of the river, in order to regulat their husbandry according to the quantity of mud, which was alway proportioned to the degree of the increase.

I will here remark, that the Apubis or Dog-Star, mo ugeful to th ancient Egyptians, is the Blazing-Star of masoury $;$ and, altbough th

[^5]araft are ignorant of its origin as a masonic symbol, they are actually taught the moral drawn from its original emblemstical use.
"The blazing-star represents that prudence which ought to appear conspicuous in the conduct of every mason; but is more especially commemorative of the star which eppeared in the east, to guide the wise men of Bethlehem, to proclaim'the blith and the presence of the Son of God.'" (Allyn, p. 47.)

What connection can possibly exist between a star and prudence, except allegorically in reference to the csution that was indicated to the Egyptians by the first appearance of this star, which warned them of approaching danger?
Mr. Converse, In bis explanation of the intention of this emblem in his Symbolical Chart observes, "Approacbing evil is frequeatly averted by a friendly admonition." Pluche, in a part of his work not quoted above, seys, "The names given to this public sign were Anubis the barker, the giver of advices, or Thant the dog." The meaving then that bas been banded down to masons of their blazing-star, completely idenUfies it with the Anubls the dog-star.

The advice given to the anclent Egyptians by this star was undoubtedly very important to them, but it cannot be of the least advantage to the masons of Europe or America.

As to the allusion to the star that guided the wise men to Bethlehem, every intelligent and candid mason, will acknowledge its absurdity; because be must know, that the princlples and dogmas of freemasonry, contained in the ancient mysteries from which it is derived, axisted long before the birth of Jeaus Cbrist.

Webb. in his "Monitor," says, "The Mosaic pavement is emblematic of buman life, chequered with good and evil; the beautiful border which surrounds it, those blessings and comforts which surround us, and which we bope to obtain by a falthful reliance on divise providence, which Is heroglypbically represented by the blazlog-star in the centre."

This symbol is peculliarly, if not exclusively, applicable to the Eqyptians who inbabited the Delta, who by placing a reliance upon the warning providently given by this star, and in consequence retiring to the high ground with the prodace of their agriculture, might enjoy the comforts that surrounded tharn.

The same necessity which rendered the Egyptians astronomers, made them also painters and writers. The inspection of the heavens had taught them at last how to regulate their tillage, so strangely crossed by that disposition which was peculiar to Egypt. The custom of giving symbolical names to the objects that served them as rules, most naturally led them to delineate in a rude manner the figures of these symbols, in order to inform the nation of the works in common to be done, and of the annual events with regard to which it was dangerous to misreckon. This service was performed by a number of persons appointed for that purpose and maintained at the public expence, whose duty it was to study the revolutions and aspects of che beavealy bodies, and to communicate the necessary information to the people.

Sach is the original of the sacerdotal order so ancient in Egypt; the chief functions of which alwsys were the study of the heavens and the inspections of the motions of the air. Such is the origin of the fmous tower where that company was lodged, and where the characters of the several works and the symbols of the public regulations were carefully delineated. Which symbols appeared in time very mysterious, when the meaning of them wha forgotten. That sower, the structure of which has caused so much criticism, was at that time, without any affectation of mystery, called the Labyrinth, that is, the tower, the palace.

Now, if we would in a ressonsble manner unriddle some of the most usual of the Egyptian symbols, we ought to consult the wants of the Egyptian colony. It is there we are naturally to look for the meaning of the figures which were exposed to the eyes of the whole nation assembled.

The hawk and the hoop were the names and the symbolical figurea given the two winds, the return whereof the Egyptians were most concerned to observe. The hawk signified the Etesian northerly wind, which, in the beginning of the summer, drives the vapours towards the south, and which covering Ethiopia with thick clouds, there rezolves them into rains, and makes the Nile swell all along its course. The hoop, on the contrary, signified the southerly wind which promoted the draining of the waters, and the return of which proclaimed the measuring of the lands and the time of sowing, I must here produce some analogy, and some peculiar resemblance, between a hawk and a northerly, and a hoop and a southerly wind.

Naturalists observe that the hawk delights in the north; but that at the return of mild weather, and when she casts her feathers, she makes southward with her wings spread, and looks towards the place whence a warm air comes, which may assist the falling of her own feathers, and restore her the beauties of youth. In times of the remotest antiquity and even before Moses, the Arabians, who were the neighbours and
' allies of the Egyptians, had an idea of the hawk in all respects like that which naturalists give us. In the conversation which God bad with Job, and in which he shows thast it is not man but the Creator,
who, by a special providence, has varied all the parts of nature, and to good purpose has regulated the inclinations of animals: Does the hawok, says he to him, by thy miodom shake her old feathers, to get rid of them, and atretch her wings tonoards the south ? (Job, 39. 29.) This bird, then, on account of the direction of its fight at the return of the heats, was the most natural emblem of the annual wind, which blows from north to south about the summer solstice, and which on account of the effects of this direction was of so great importance to the Egyptians.

The hoop, on the contrary, makes her way from south to north. She lives upon the small worms, in infinite number of which ase
latched in the mud of the Nile. (Diod. Sic. Bibliothec. lib, 1.) She akes her Aight from Ethiopia into Higher Egypt, and from thence owards Memphis, where the Nile divides. She always follows the course of the Nile, as it retires within its banks, quite down to the en. From this method of hers, she wes perfectly fit to characterize he direction of the south wind.
The warning given by the dog-star being their most important conern, the Egyptians from its rising anciently dated the beginning of beir year, and the whole series of their feasts. Wherefore, instead of epresenting it under the form of a star, which might not distinguish from another, they delineated it under the figure relative to its funcion and name. They called it the star-dog, the door-keeper, the star vhich opens or shuts, closing one year, as it were, and opening anoher. When they had a mind to express the renewal of the year, they epresented it under the form of a door-keeper, easy to be distin;uished by the attribute of a key; or else they gave it two heads back o back; the one of an old man, which marked the expiring yeer, and he other of a young one, which denoted the new.
When the people were to be warned of the time of their retreat at be approech of the inundation, instead of the two heads they then put n the shoulders of a human body the head of a dog. The attributes r subordinate symbols, added thereto, were the explication of the raming it gave. It was in order to give the Egyptians to understand rey were to take with them a store of provisions, and repair with all peed to the high ground, or their raised terraces, and there to remain uiet by the water side, that Anubis had on his arm a kettle or poridge pot, woings on his feet, in his right hand, or under his arm a large

[^6]feather, and behind him a tortoise or duck, both amphibious an which live on the earth and by the water side.

The Egyptians expressed the several increases of their ss river, by a column marked, with one, two, or three lines in foem cross, and surmounted with a circle, the symbol of God, to a terize providence, which governs this important operation. commonly, instead of a column, they made use of a pole term like a T , or crossed with one or more transverse pieces. To a these remarks, they were often contented with one small cross, put upon a vessel or elsewhere, might signify the increase of the

It is certain that the Mikias, or column marked as above । to signify the progress of the water, became in Egypt the ordinan of the deliveranoe from evil. They hung it on the neck of sick pr and put it into the hand of all beneficial deities. Mr Gordon, tary of the society for the encouragement of learning, has giver the seventh plate of his collection, the amulets and preservatives he has observed in the Egyptian monuments ; many of which at fectly like the measure of the Nile.

They painted the devastation made by the overflowing water the figure of a dragon, of a crocodile, a hippopotamus, or a wate ster, which they called $\mathrm{Ob}{ }^{*}$ that is, swelling, an overfiowing which they afterwards called Python, the enemy. $\dagger$.

Another method of communicating to the people information rt ing the inundation, seems to have been by publicly exposing vessels or measures, being pitchers of unequal capacities, well to the people without any proclamation or messengers, which to show them the increase and diminution of the Nile. Two persuade me that this is the meaning of these vessels or bulgin sures, so commonly found in the Egyptian monuments. Ont name given them: the other is the attributes annexed. Thi canob or canopus given to these vessels, is grounded on the ust of them. Canob signifies the fathom of the dragon, the mea the overflowing. From cane, a perch, a fathom, a rod, or c measure ; and from ob, the dragon.

The canopi are very commonly terminated by one or two t
 ob. Levit. 20, v. 27.
$\dagger$ Monnt Cassius, to the foot of which the inandation of the Nile es a Ittle above the ancient city of Pelusiom, or the modern Damletta, Ita name from a word which signlfles the bound, or term, of this inun and the sandy coast near It was called Casaiobe, for the same reason it was because the lake Sirbon, or Sirbonis, which is near It, was 解l the remalns of the inundstion when Egypt was quite dry, that it 1 Python had gone to dle in this lake. It was moreover so full of bitan of olly or combustible mattern, that it was Imagined that Jupiter hi pierced him with a thundarbolt, which flled all the great mond pulphur:,

The top of the vase is also oftentimes surmounted with several birds' heads, to signify and characterise the several winds which they know, and which either assisted or retarded the increase or the lowering of the waters; sometimes they put upon the canopus the head of a dog, to signify the state of the river, or the time of the rising of the dogstar. At another time they put thereon the head of a maid, to mark out the state of the Nile under the sign of the Virgin, and at the approach of the draining or retiring of the water.

It appears that the ancient Egyptians, after they had ascertained the great benefit of the inandation when they were properly prepared for it, changed the name of their Evil Genius, the Water Monster, from ob,* to Python; which had reference to the deadly effects of the miasmata srising from the stagnant waters left upon the low lands after the retiring of the inondation. "Orid makes the serpent Python spring from the steams of the mud whleh the deluge had left upon the earth; and in this he is plainly making making an allusion to Typhon, whose name is the came by a simple transposition. In making Python spring from from the slime of the deluge, does not the poet point out thereby the noxions steams which rise in Egypt after the waters of the Nile have subsided. In fine, when be says that Apollo slew bim with his arrows, does be not conceal, under this emblem, the victory of Orus over Typhon, or at least the triumph of the sunbesms over the vapors of the Nile ?" (Mayo's Mith. vol. ii. p. 47.) Python, says Bailey, is derived from pytho, Gr. to putrify. The eerpent Python's being slain by Apollo is thus interpreted: by Python is understood the ruins of waters; but Apollo (that is, the sun) dispersing the vapors by hie arrows (that is, his beams), slew this serpent.

Typhus, a species of continued fever, has the same origin. "It may be occasioned (says Hooper, in his Medical Dlet.) by the effluvia arising from elther animal or vegetable substances in a decayed or putrid stato; and hence it is , that in low and marshy countries it is apt to be prevalent, when intense and sultry beat quickly succeede any great inundation."

The convenience of that language, which rendered itself intelligible to the eyes, and in some sense made animals and even stones themselves to speak, by degrees became more common. It was extended to every thing. The symbolical writing soon served as the rule of

The descendants of Africa, in the West Indies, still retain the nume of ob, or obt, by whose ald they pretead to mealcal powers.-EDIr.
$\dagger$ The cuatom of conveying moral instruction by symbolical figares has descended to the masons, that is, a show of it if rept up by them, but without belog serlously regarded. The practice is now a mere dead letter; abowing, however, the force of hablt in contlaulng a custom no longer needed Too mach Hght is now abroad in the world to require the square and compassea to direct men in their duties. The continuance of thete old practices, notwfthrtanding, is of use In pointing out the origin of the fiscitution that obeerren them-EDIT.
morals, as well as the regulation of husbandry. It was made use of to perpetrate among the people, the knowledge of the most importno truths, and to inculcate their principal duties. $\uparrow$

The character of the Egyptian writing designed to signify God, weas not a simple flame or blaze, as was the general usage of the east, bot a circle, or rather a sun. They added to the circle, or solar globe, eeveral marks or attributes, which served to characterize so many different perfections. For instance, in order to indicate that the Supreme Being is the author and preserver of life, they annexed to the circle sometimes two points of flame, but more commonly one or two serm pents. This animal was always, among the Egyptians, as in other countries, the symbol of life and health. Not because the serpent makes itself look young again, by every year casting its old skin, bat because among most of the Eastern nations, as the Pheaicians, Hebrews, Arabians, and others, with the language of whom that of Egypt had an affinity, the word heve or heva equally signifies the life, and a serpent. The name of him who is, the great name of God, Jov, or Jehovah, thence draws its etymology. Heve, or the name of the common mother of mankind, comes likewise from the same word.

It is from this word that the Latins made their $\varepsilon$ sum, the life and the ave, which is a wish of good health.

St. Clement of Alexandria, observes, that the word heva, which is known to signify the life, likewise signifies a serpent. And it is barely on a double meaning of the word hevi or heve, that the metamorphosis of Cadmes and Hermione into serpents is grounded, (Ovid, Metam.) They were of the country of the Hevians.

Macrobius has informed us that the serpent was an emblem of health, salutis draco, speaking of Esculapius. When Moses lifted up a brazen serpent in the wilderness, the afflicted Hebrews understood, that it was a sign of preservation.*

To express the wonderful fecundity of providence, they added to the symbolical circle the figures of the most fruitful plants, and most commonly two or three large leaves of the banana-tree.

> The solar year.-Osiris.

The year relates to three principal objects. To the course of the sun, the order of the feasts to each season, and to the works in common to be done. Let us begin with the symbols of the sun.

That luminary, as it was the grandest object in nature, had also its

[^7]peouliar character or mark in the symbolical writing. It was called Oxiris. This word, sccording to the most judicious and most leamed. among the ancients" signified the inspector, the coachman, or the leeder, the king, the gaide, the moderator of the stars, the soul of the norld, the governor of nature. From the energy of the terms of which it was composed, it signified in general the governor of the earth, which amonnts to the same sense. And it is because they gave that name and function to the sun, that it was expressed in their writing tometimes by the figure of a man bearing a sceptre, sometimes by that of a coachman carrying a whip, or planinly by an eye. $\dagger$

They were often contented with setting down the marks of his digoity, such as a sceptre surmounted with an eye, or a sceptre with a serpent twined round it, the symbol of life which the sun maintains, or barely the whip and the sceptre united; sometimes the royal cap of Osiris on a throne, with or without a sceptre.

The Egyptians every where saw, and especially in the place of their religious assemblies, a circle or the figure of the sun. Near the sun, over the head of the symbolical figures, were seen sometimes one or two serpents, the symbol of life, sometimes certain folinges the symbols of the bounties of nature; sometimes scarabeus's wings the emblem of the variations of the air. All these things being connected with the object of their adorations, they entertained a sort of veneration for the terpent, which they besides saw honourably placed in the small chest that mas the memorial of the state of the first men, and the other ceres? monies whose mesaning began to be lost.

Having already contracted a habit of confounding the Most High with the sun, they by little and little mistook the symbol itself of the sun, the Osiris, the moderator of the year, for a man. Osiris, from the letter or symbolical personage he was before, becoming in the minds of the people a real person, a man who had formerly lived smong them, they made his history to relate to the attributes which attended the figure. So soon as Egypt wes possessed with the ridiculous notion, that the statues of Osiris, Isis, and Horus, which served to regulate tociety, by their respective significations, were monuments of their founders; that Osiris had lived in Egypt, and had been interred there, they framed stories agreeable to this belief. For want of a tomb containing in reality the body of Harmmond or Osiris, they were contented with a cenotaph, an empty tomb. A vast concourse of people gathered

[^8]near these pretended tombs, and with pornp celebrated an ammul fount there. Plutarch often mentions the feasts of Osiris' tomb; and isforms us, that when the Egyptians were reproached with placing is heaven gods whose tombs they showed, their reply was, that the bodies of these gods had been embalmed and interred in Egypt; but that their souls resided among the atars.

These tombs, though merely representative, were become anecessary part of the ceremonial. The Cretians, being of Egyptian extraction, had their own feast of Osiris or Jehov, the feast of their god, and of ,course the empty tomb was inseparsble from that solemnity.*

## Dcath and Resurrection of Osiris.

The author here gives a complox figure, copied from the collection of Mountfaucon, and which, be says, is painted on a mummy at the Austinfriar's of La Place des Victoires, representing the death and reaorrection of Osiris, asd the beginning, progress, and end of the inuodation of the Nile.

The sign of the llon is transformed into a couch, upon which Osith in laid out as dead; under which are four camopi of varlous capacilites, finh catiog the state of the Nile at different periods. The Arst is terminatid by the head of the log-star, which gives warning of the approsch of the overfiow of the river; the second by the huad of the hawk, the aymbol of the Etesian wind, which tends to swell the waters; the third by the beed of a Heron, the sign of the south wind, which contribates to propel the waster into the Mediterranean sea; and the fourth by that of the Virgin, which Indicates that when the sun bad passed that sigo, the inundation would have nearly subsided.

To the above is superadded a large A oubis, who with an emphatic gesture, turning towards Isis who has an empty throne on ber beed, intimates theit the sun, by the aid of the lion, had cleared the dificult pass of the troplo of Cancer, and was now in the sign of the latter, and, altho' in a stebe of exhaustlon, would soon be in a condition to proceed on his way to the South; at the same time, gives to the husbandmen the important warntog of retring to avoid the inundation. The emply throne is indicative of the belag vacsted by the supposed death of Osiris.

The raising of grand master Hiram, in the thind degree of Masonry, by The "grip or paw of the Llon," (the terms psed in that operation) who, as the story goes, bad been murdered by three fellows of the craft, is evidently copied from this fable of the death and resurrection of Ociris. The porition of the master Mason, when in the act of raising Hiram, is a fac simile of that of A aubis over the body of Osiris.

Mr . Pluche seems not to have bad an adequate conception of the fabled death of Osiris, and consequently to have mistaken the purport of the

[^9]figures pow under consideration, I therefore offer the foregoing explanation as the result of my Investigation of the subject.

Mr. Pluche candidify acknowledges that be bed doubts of his anderstandIng the fatention of the pletare which he endeavours to exponed; for be sayb, immediately after giving his explanation, "Bat it would be a rasher bess in me to presame to write any longer in Epyptian, when I um not an yot over sure of my skill in reading it. Let us first of all confirm ourselves thereln, and again try the application of oar principles to some other monuments." He adds, in a note, "We shall in another place explain why this figare is ased about a dead body, when we show how the sense of thene symbols came to be perverted."

This he afterwards attempts to do as follows ;-
"Thus being gradually come to ascribing divinity, and offering theie worshlp to the ruler, representing the functions of the sun, they to complote the absurdity, took him for the first of their kings. Thence this odd mixture of three inconsistent notions, I mean of God, of the Sun, and of a deed man, which the Egyptians perpetually confounded togetber.'

The cause of their thus confounding them is easily accounted for, when the suppoeed death of Osiris, the sun, and God of the Egyptians, is taken into consideration.

It most be underitood that the sun was supposed to be in Insurmountable diffenities at both the solstices, which caused as great lamentations as his victories and reappearances afterwards, did rejocings. What led to these apprebonalons whien he was in the summer solstice, is well explained in Rees'e Cyclopedia, as follows:-
"Orus ot Horus, a famous Deity of Egypt, which, as well as Osiris. was an dedeblem of the sun. Macrobius, who lnforms us why the Greeks gave Horus the name of Apollo, says, in the mysterias (Saturn, lib. 1,) \#Hey dlacover us a secret which ought to be inviolable, that the sun arrived \&t the upper bemisphere, is called Apollo. Hence we may infer, that this emblematieal Deity was no other tban the star of day, passing through the stgns of summer. As Apollo among the Greeks was called the Horus of the Egyptians, as to his skill both in Mediciue and divination, he was regarded as the same person, and called by the anclents Horus-Apollo.t The Allegory of Horum has been thus explained. The wind Rhamsin sasked great ravager in Egypt in the spring, by raising whirlwinds of barning sands, which suffocate travellers, darken the air, and cover the face of the Sam, to as to leave the earth in perfect obscurity. This circumstance represents the death of Osiris, and the reign of Typhon W ben the min approsches the uign of the lion, he cbanges the state of the atmosphere, disperses these tempests, and rextores the northerly winds, which drive before them the malignant vapors, and preserve in Egypt coolness and salabrity under a burning sun. This is the triumph of Horua over Typhon, and bis glorious relga. As some natural philosophers have soknowledged the influence of the moon over the state of the atmosphere,

[^10]they united her with this god to drive away the usurper from the throne. The priests considering. Oniris as the father of time, might bestow the name of his son on Horus, who relgned three months in the year.

Jeblonski, who has interpreted the epithet of Arweri, which the EgypHans gave to Horus, pretends that it signifies efficacions virtue, These oxpressions perfectly characterize the phenomens which happened during the reign of this god. It is in summer, in fact, that the sum manifesta all bis powers in Egypt. It is then that he swells the waters of the river with rains, exbaled by him in the air and driven against the summit of the Abyssinian Mountains ; it is then that the busbandman reckons on the treasares of agricuiture. It was natural for them to honour bim with the name of Arueri, or efficacious virtue, to mark these auspicions offects."(Savery's Letters in Egypt), stc.

The ressons which the inhabitants of northern climates have for lamentIng the absence of the sun when in the southern hemiaphere, is thas beautifally portrayed by Dupuis :-

[^11]by Typhon, and whose organs of generation the disconsolate Isis never found.
"What picture more effectual to render man sorrowful than that of the earth when, by the absence of the sun, she finds herself deprived of her attire, of her verdure, of her foliage, and when she offiers to our regard only the wreck of plants dried up or turned to putrefaction, of naked trunks, of arid lands without culture, or covered with snow ; of rivers overflowed in the fields, or chained in their bed by the ice, or of violent winds that overturn everything. What has become of thut happy temperature which the earth enjoyed in the spring and during the summer? that harmony of the elements, which was in accord with that of the heavens? that richness, that beauty of our fields loaded with grain and fruits, or enamelled with flowers whose odour perfumed the air, and whose variegated colors preseated a spectacle so ravishing ? All has disappeared, and the happiness of man has departed with the god, who, by his presence, embellished our climes ; his retreat has plunged the earth into mourning from which nothing but his return can free her.
"He was then the creator of all these benefits, since we are deprived of them by his departure 1 he was the soul of vegetation, since it languished and ceased as soon as he quitted us. What will be the term of his flight and of his descent into other regions? Is he going to replunge nature into the eternal shade of chaos, from whence his presence had drawn it ${ }^{3}$ "
"Suoh were the inquietudes of these ancient people, who, seeing the sun retiring from their climate, feared that it might one day happen that he would abendon them altogether: from thence arose the feasts of Hope, celebrated at the winter solstice, when they saw this star check his movement, and change his route to return towards them. But if the hope of his approech was so sensibly felt, what joy would not be experienced when the sun, already remounted towards the middle of heaven, had chased before him the darkness which had encroached upon the light and usurped a part of its empire.* Then the equilibrium of the day and the night is re-established, and with it the order of nature. A new order of things as beautiful as the first recommences, and the earth, rendered fruitful by the heat of the sun, who had renewed

[^12]the vigor of youth, embellishes herself under the rays of the lord" (Abregè de l'Origine de tous les Cultes, p. 142.)

The civil year-Isis.
We might here reasonably enough call the order of the feasts the ecclesiastical year, since they were religious assemblies. But this order of the days appointed for working or for religious purposes being the vule of society, we shall call it the civil year.

The figure of the man, who rules over everything on earth, had been thought the most proper emblem to represent the sun, which enlivens all nature: and when they wanted a characteristic of the production of the earth, they pitched upon the other sex. The changes of nature, the succession of seasons, and the several productions of the earth, which no doubt were the subject of the common thanksgivings, might easily be expressed by the several dresses given this woman.*

When the sacrifice was intended to be made in the day, Isis was dressed in shhite, but if in the oight she was dressed in black. They put a sickle in her hand to denote the time of harvest. When the purpose of a feast was to remind the people of the security afforded by their

* On comparing the different explanations given by Platarch, and other ancient writers, it will appear that Osiris is the type of the setive, generatlig and beneficent force of nature and the elements; Isla, on the contrary, is the passive force, the power of conceiving and bringing forth into life in the sablanary world. Osiris was particularly adored In the sun, whose rays vivify and Impart new warmoth to the earth, and who on his annual return in the spring, appears to creste anew all organic bodies. Isis was the earth or aublunary nature, in general; or, in a more conflined sense, the soll of Egypt inondated by the Nile, the principle of all fecundity, the goddess of generation and production. United to one amother, Osiris and Isia typify the universal being, the soul of nature, the Pantheus of the Orphic verses, *
"The Egyptisns solemnised, at the new moon of Phamenoth (March,) the entrance of Osiris into the moon, which planet he was belleved to fecuadate that it might in tara fecandate the Earth. (Plat. de Is et os,) Finally, on the 30th, of Rplph, (24th of Jaly) the festival of the Blith of Horas took place, (of Horas the representative of Osiris, the conqueror of Typhon,) in the second great period."-A nthon's Lemp. Class. Dict. Art. Ieis.)

The first conquest of Osiris over Typhon was at the winter solstice, and then the birth of a renewed sun was celebrated; the second conquest, as above stated, was attributed to Horus, Apollo, as before observed, was the name given to the san when in the northern hemisphere, or at least after his pass-沼 the summer solstice.

One of the grand festival days of masons is on the 24 th of June. The canee of this variation from the anclent custom arises from the procession of the equinoxes, wheh has cansed the northern solatice to occur on that day, when the sun is in the sign Cancer; whereas it was in Leo (July 24th) that this solstice took place in snclent times during 2160 years. This is the reacon why the Eggptians convecrated this animal to the sun, while in its fall etrength, and as the forcrunner of the summer solatice, of the rise of the File and its sacceedling overflow, which caused the fortlity of Bgypt.-See "Truth dingra from Fables," by Dr. Constantio.
dwellings, Isis wss crowned with small towers. * To intimate the winter neomenia, the head of Isis was covered with little fillets and with skins sewed together; sometimes with feathers ranged one over the other or with small shells neatly set by each other. $\dagger$ There were sometimes on the head of Isis a craw-fish or crab, sometimes the horns of a wild goat, according as they had a mind to signify either the entering of the sun into the sign cancer, or the fesst that was solemnized at his entering pto that of capricom. In Egypt, where the inhabitants can with ertainty judge of the product of the year by the state of the river, they proclaimed a plentiful crop by surrounding Isis with a multitude of breasts ; on the contrary, when the presage of fertility was not favorsble, they exposed an Isis with a single breast; thereby to wam the people, to make amends for tho smallness of the harvest by the culture of vegetables, or by sone other industry.

All these changes had each its peculiar meaning, and Isis changed her dress as often as the earth.

Next to the symbolical king, or the emblem of the sun, the Egyptians had no figure that appeared more frequently in their assemblies than Ieis, the symbol of the earth, or rather the sign of the feasts that were successively characterized by the productions of the earth in each season.

In looking for the origin of this woman, they ran into the same mistake which had caused them to take the governor of the earth, the symbol of the sun, for Ammon their common father. Isis was looked upon as his wife: she partook of the titles of her husband; and being in their opinion raised to a real person and a considerable power, they invoked her with confidence; they gave her the honorable titles of the Iedy, the Queen, the Governess, the common Mother, the Queen of hesven and earth. $f$

What contributed most to seduce the Egyptians, was 'the frequent joining of a crescent or a full moon to the head-dress of Isis. Thence they took occasion to give it out that Osiris' wife, the common mother of the Egyptians, had the moon for her dwelling place.
"It was formerly a general custom to make sacrifices and public prayers upon eminent places, and more especially in groves to shelter

[^13]the people from the heat of the sun. When the Isis which proclaimed tho feasts, and whose figures were one of the finest parts of the ceremonial, was once become the object of it and had bean looked upon as the dispenser of the goods of the earth, of which she still bore the marks; her eeveral representations, which only foreboded abundance and joy, becoming most agreeable to the people, always eager and credulous on that head, the false sense attributed to these figures made them pasy for the surest means of obtaining plentiful harvests. These images were worshipped with solemnity and placed in the finest woods. Crowds of people flocked to the religious feasts of the lovely queen who loaded them with blessings. No doubt they had everything from hes. The coolness and beauty of the place where she was worshipped, had no less an influence on the assistants than the attire of the goddess, and instead of calling her the queen of heaven, they often styled her the gueen of the groves

She also became the queen of herds Asteroth, the great fish, or queen of fishes, Adirdagal, or by way of excellence the queen of Amalcta Appherudoth.

The Greeks softened the sound of these words, and gave them the inflection and turn of their own language. The queen of herds became Astarte; that of fishes became Atergatis ; and the mother of corn became the Aphrodite of the Cyprians and the Greeks. The name Appherudoth, the mother of harvests, changed into that of Aphrodite, wes no more than an empty sound void of all meaning. But it seeming to the Greeks to be derived from a word in their tongue, which sigaified the froth of the sea, they thereupon built the wonderful story of the goddess engendered of the froth of the sea, and suddenly springing out of the bosom of the watery main, to the great amazement both of gods and men.

They represented the Amalcta Aphrodite, the queen of harvest, holding with her left hand a long goat's horn, out of which they make ears of corn, vegetables, and fruits to spring. She had a sickle or some other attribute in her right hand; and thus they united without any reason the mark of the opening of the harvest, together with the horn of the wild goat, which signified anciently the end of all harvests, and the theginning of winter. This is then the plain original of the hora of abundance, and of the Amalthean goat. That horn being always full, (a privilege it evidently had) could not proceed from a goat which had done some important service to mankind. They contrived that this goat had been nurse to Jupiter. But the god and the nurse are both alike. The one existed as little as the other. This single instance is fully sufficient to prove that most of the tales of the poets are littla stories grounded on quibbles of the same kind, and invented only to have something to say upon figures alvays presented at certain feasts, but no longer, understood. They made all these figures mo many tutsJar deities.
sommon people have at all times and in all countries been fond bles, equivocations, and puns. If the change of figure has ade several gods of one and the same symbol diversified, a simety of names, nay the difference of pronunciation, has more ice produced a like multiplicity. The Isis mistaken for the f heaven, or for the moon, was called Echet, Hecate, or Ahe only, the excellent (Inter ignes luna minores.) Among oople of Syria, the same symbol, by a slight inflection of name, ed Achot, the sister. The same whom they had already made of Jehov, or of the sun, or of Jupiter, (for these are still but came also his sister.

## -Ego quae divum lacedo regina, Jovisque

Et soror and conjux
fterwards became the daughter of the same Jupiter; and then her of all the gods. All this medley of states and genealogies y proceeds from the diversity of the attributes and names given nd the same symbol.
aot more difficult to guess, how the same Diana is sometimes Irial deity, sometimes the moon, and sometimes the queen of 3y her first institution she had a relation to the earth, and marjer productions. The false interpretation that was given to zent and the full moon which she bore over her head to proie feasts, caused her to be taken for the moon; and at last tho ring which she remains invisible, that is, between the last phasis return of the new, put it begond all doubt that she was gone a turn in the abode of Ades, or the invisible, that is to the emthe dead.
what contributed most to the strange notions people framed to ves of this triceps Hecate, which was at the same time the earth, on, and the wife of Pluto, is this. So soon as the first phasis ew moon was perceived in the evening, ministers for that puront and proclaimed it in all the cross-ways and public places, feast of the neomenia was celebrated either that very evening ext day, according to the institution of places. When the ezvas to be made at night, they put au owl near the figure that ned it. The Isis then was called Lizith, that is the owl; and bly is the origin of that nocturnal lilith of whom so many tales en told. A cock was put in the room thereof, when the sacrito be made in the morning. Nothing could possibly be more or more convenient than this practice. But when the deifed I once been looked upon as a woman, or a queen dwelling in n, and there governing the heaven in coujunction with Osiris lis, the proclamation of the return of the nem moon, which was extremely plain before, assumed a mysterious and stately air.

Hecate was become invisible for many days; her retum was expected with ceremony. The goddess at last left the empire of the dead, to come again into the heavens. Imagination had a vast field to explore here, and Hecate never failing to visit successively those two districts, it could not be doubted but she ruled both in heaven and in the invisible sbodes. On the other hand, they could not but be sensible of the palpable relation she had to the earth and its productions, whereof she always bore the several marks either on her head or in her hands. She then became the threefold Diana, (triceps Hecate) which is at one and same time, the earth, the moon or the lady of heaven, and the queen of hell.

## Ter geminamque Hecaten, tria virginis ora Diance

The ancient proclamation of the new phasis, which was made with a loud voice, to proclaim the beginning of the neomenis, insensibly degenerated into loud shrieks, which they gave out of mere superstition and custom at the entrance of cross streets. They saluted the goddess of the dead, at her coming out of the horrid mansions. The music and the notions agreed with and suited each other. But the ancient proclamation of the neomenia was the origin of those devout and meritorious roarings.

## Nocturnis Hecate triviis ululata per urbes.

All the heathen antiquity, after it had confounded the symbol of the new moons and of the feasts relating to the several seasons of the year with the star that regulates society by its phases, ascribed to the moon an universal power over all the productions of the earth, and generally over all the operations of men. They likewise fancied that she was perfectly well aquainted with future things, and that she never appeared without foreboding by certain marks what wes to befall husbandmen, families, and whole kingdoms. People have not as yet fully shaken off the persuasion they anciently had of the influences and presages of the moon.

A like respect was paid to the Neomenia, or New Moon, by the Hebrewn, Dr. Adam Clarke, in his bistory of the ancient Israelites, gives the following statements in substance of this matter :-
${ }^{\text {" }}$ As the Moon regulates the months, so does the Sun the year. The division which wa make of the year into twelve montbs bas no relation to the motion of the moon. But it wes not so with the Hebrews : their months are lonar, and their name sufficiently sbows it. They call them Jechin, which comes from Jarae, which signifies the moon.
"The mocoant in which tbe conjunction between the aun and moon is made can only be kuown by astronomical calculation, because she does not then appear ; and as the Hebrows were little skilled in this sclence, they began their montha at the first phasis, or first appearance of the moon which required ano learning to discover. This was an sflair in which the
rreat Sanindila were concerned, and the difforent phases of the Moop were painted upon the ball in which thay assombled. It belonged to them to choose men of the strictent prodity, whom they sent to the tops of the nefghboaring mountains, and who no sooner perceived the new Moon, but thoy eamo with all speed, even on the Salbath day itwelf, to acquaint the Sauibedrim with it. It was the business of that conncll to escertala whether the moon had appeared, and to declare it ; whlch was done by pronouneing: these words, the foast of the Niee Moon, the feast of the Now Moom, snd all. the people were laformed of it by the sound of trumpets. To which ceremony David allodes, when he eays blow up the Trumpet in the NowSoom, is the time appointed, on our aolemn feast day.-Palms 81, v. 3.'

The masonic pillar Jachin, which represents Ials, the figure of whom tras exhibited at each neomenia, In undoubtedly derived from Jachin, the name given by the Hebrews to their montha.

Bailey rolates some curious customs which formerly prevailed in regard to the moon.
"The common people," he ssys, "in some counties of Eugland are accustomed at the prime of the Moon to say, It is a fina Moon, God bless her a which some imagize to proceed from a blind zeal retained from then anciont Irish, whe worshipped the moon, or from a castom in Scotiand, particularly in the Highland, where the women make a courtesy to theNow Moon; and some English women do still retaln a touch of this gen tlism, who sitting upon a gate or stile the Arst night of a moon, say,
"All hail to the Moon, all hail to thse I prithee, good Moon, declare to mes. This night who my husband aball be."

In Nev England, where most of the ancient usages of the mother coantry have been perpetuated, it is considered an ill omen to observe the first appearance of the Moon over the left ahoulder; but when seen over the right, particuiarly if the beholder has money In bis pocket, it in deemed a. presage of good lack, It is not unfrequent upon such occasions to prefer a patition for what is most desired, and great confldonce is entertained isits being granted.

Thus it appears that the Moon has been the ianocent osuse of much superstition from the earliest time to the present day, and that the torm mon-atrsek," possessea a legitimate origin.

## Harpocrates.

The Egyptians did not fail to put in places consecrated to the public exercises of religion the symbol of the prosperities of their tillage. They placed a figure, sinking under the burden of the goods he had roaped, in the assembly of all the feasts that were solemnized after the harvests of corn, wine, fruits, and vegetsbles. He carried on his head the natural marks of a plentiful harvest, viz. three pitchera of either wine or beer, surmounted with three loaves, and aceormpanied with

Leaves, vegetables, and several fruits. The bread, wine, etc., wherer they deck his head, lay immediately on the two great horns of a goat, They could not possibly mark out in a more aimple and mysterious manner, the perfect plenty which the husbandman en in the beginning of winter, when the sun passes under the Capricorn.

He is mot commonly seen with a single pitcher inatead of 4 and with one goat's horn instead of two ${ }^{\circ}{ }^{\circ}$ or with the circle ace panied with large banana leaves, or with some other symbol. Greek sculptorn, who did not much like these enormous head-dre disposed the whole with more comeliness and decorum. They ph the goat's hom in one of the hands of the figure, and made some $f$ come out of it.

## Symbolical Ceremonies. Memorials of past eventa

The symbolical writing so commonly and usefully employer teach in a compendious and popular manner the most important th for the preserving of good menners, and promoting the good of $I$ kind, served also from the beginning to preserve the memory of tories, and publicly to expose the object or the motives of the $f$ to which some great event had given occasion.

The ancients always opened their festivals and public prayers woes and lamentations for what they had lost; though they were to conclude the same by a general repast, where singing, the soun instruments, and joy succeeded their mourning. Whence it col that the cries usual in the most ancient feasts, even those which in cess of time became expressions of joy, and set forms of acclamat being traced up to the primitive origin, signify nothing but tears expressions of grief addressed to Almighty God. Such were the i io Bacche, hevoe Bacché, io triumphé, io prean. This word, io, $j$ jeroe, hevoe, is the name of God, and signifies the author of lif: that is. Bacché comes from beche, tears. Baccoth signifies lamt tions. The women who lament the death of Adonis in Ezekie called Bacchants, meboccoth, women mourners. Triumphé ec from teroveh, which the western nations pronounced triumphe; 1 being no letter whose pronunciation was more difficult and more vi than the oin. That word triumphe signified groans and sobs. I terwards signified the public prayer, and finally the singing of

[^14]mblies, mat be seen Ps. 89. All these words joined to the 10 of God, were short expressions by which the people excited 1 other to have recourse to God in their distress, and to direct their rers and cries to him. The whole of these was like the Latin and sch expressions, Deo gratias, Dieu mercy, adieu.
he object and motives of this mournful practice are more easy to liscovered among the Egyptians than among the other nations; not because the Egyptians having been less mingled with other peohave mede fewer alterations in their ancient customs; but also tuse their practices being strictly connected with public and certain bols engraved in stone, or carried in ceremony at the feasts, they e better fixed or less disfigured in Egypt then in other parts of the Id. There they lamented with Isis the death of the governor which been taken from them, and killed by a dragon rising from under ground, and by a water-monster. They then rejoiced for the reection of Osiris; but he was no longer the same, and had lost his ngth.
The Egyptians, and most of the eastern nations, had an allegory sicture, which became famous, and which is everywhere met with. epresented the water monster slain, and Osiris restored to life; but re sprang out of the earth hideous figures, who endeavoured to hrone him. They were monstrous giants, one of which had many 18; another pulled up the largest oaks; and a third had in his hands fourth part of a mountain, which he flung against heaven. They re all diwtinguished by some singular attempt, and by frightful nes, the mont known of which were Briareus, Othus, Ephialtes, celedus, Minas, Porphyrion, and Rouach or Rcechus. Osiris got better of them; and Horus, after he had been very much abused Roechus, happily got rid of his pursuits, by appearing before him the janos and clanos of a lion.

- might be thought here to offer a mere fable: but to show that this ure is historical, and that all the personages which compose it are nany symbols, or significant characters, representing the hardships the first men, and in particular the unhappy state of husbandry in ' $\mathrm{pt}_{\text {, }}$ it will be sufficient here to translate the peculiar names given ach of these giants. Briareus signifies the loss of serenity; Othus, divertity of seasons; Ephialtes, great gatherings of clouds; Ence18, the havocks of great overflowing wotert spread; Porphyrion,

Blemed are the people that know tho jogful sound, they ahall walk, $\mathbf{O}$ d , in the light of thy countenanee. For thou art the glory of their ngth; and in thy farour our horn shell be axalted. For the Lord is our moe ; and tha holy one of larael is oor king. How long, Lord, witt thom - thysull fincore?
the earthquikes, or the fracture of the land; Mimas, the great rains and Roechus, the wind. ${ }^{\text {o }}$

As to the figure of Horus, who assumes the head and claws of lion, to rid himself of the wind that ruined all his hopes; it is a sym bol peculiar to the husbandry of the Egyptians.

Thus the necessity of personifying the objects they wanted to paint very soon introduced the use of allegorical pictures, and of fabulou recitals. They at that time could not write otherwise than by delinea ting the figures of the objects intended. But they thought themselve masters of ordering the whole, in the manner they judged the fittest $t$ make an agreeable impression, and to be well nuderstood. The diff culty of conveying the ideas of intellectual things into the mind by th eye, first made them have recourse to symbolical figures : the use s these figures afterwards authorised the taste of fictions. But what we obscure in them was cleared by the simplicity and propriety of th nsmes given each piece. I could produce new instances of this in th fables of Andromeds and Bellerophon, which are pure allegories, th interpretation of which must be deduced from the signification an meaning of the names of all these personages. But this would tak us off too much from that part of the ancient writing and of the publi ceremonies that related to the representation of past disasters, and 1 the regulations of mankind.

Although Mr. Pluche bas actually ahown the cause of the lamentations an after rejoicinge to havo been oecasioned by the lose and subsequent restoratio of Oviris the sun, atill be attributes the allegory to the miafortunes that bs happened to mankind in consoquence of a general flood. Hia remarka upo this bead are omitted.

The ancients not only expressed certain truths by figures delineste on stone ; they also joined to these figures dramatic ceremonie wherein the objects and the names of the actors were significant, an served to recall the memory of things past.

The feast of the ancient state of mankind assumed a more shinin form in Egypt and Syria, by means of the symbolical figures, whic had been multiplied there much more than anywhere else. This feas having become common to all nations, on this account deserves more ample illustration than what has already been said about it. W cannot explain the symbols of it, without casting a useful light upo an infinite number of monuments remaining in our hands, and whic have hitherto been looked upon as unintelligible.

[^15]They carried at this feast a basket or small chest, that contained the monuments of the progresses of husbandry. The chest was neither mysterions nor siguificant in itself. It only served to receive the memoretive symbols of things past.

Fint, they found therein the mark of the weakening of Osiris, and of the loss of fecundity. In cista or capoula reporitum erat Dionysii (Ofiridis) pudendeon. S. Clem. Ales. cohortat, adgentes, p. 6, edit. Oron. From the Phenician word, -ouervah or orvia, pudendum, bey made Orgia, a name given the ancient rural feasts. They were called in Greece Phallica, which has the same meaning. The indiseretion of that symbol gave birth to all sorts of extravagances and licentiousness.

Then came neseme-seeds, heads of poppies, pomegranates, bay-berries, branches of fig-tree, dry stalks, cakes of seversl kinds of corn, alt, carded wool, cakes of honey and of cheese, and finally a child, a serpent, and a winnowing van. See this enumeration in St. Clem. Alecand. and in Potter's Antiquity of Greece, vol. 1, Grecian festivals. The whole was accompanied with a flute, or some other musical inetrament.

The drum or flute, which was inseparable from the celebration of the fearta, was the symbol of gratitude, which on certain days invited men to meet together, to praise God in concert. The small chest, the van, in which they afterwards found so many mysteries (Mystica vansus. Virg. Georgic. See l'Antiq, expliq. and the agate, in the treasury of St. Denys) and the whole representation here enumerated, passed from the Egyptians to the Phenicians, and by their means spread far and wide. Nothing is more commonly found in the monuments of the heathen feasts, than a small chest, a van, a serpent, a human head, and a flute or a drum.

When the feast representing the ancient state of mankind and the progresses of industry was celebrated, both the figure of the earth and that of work obtained several names in different countries. But we find the same purpose and the same relations in all these names. The Lais representing the earth, was called Ceres, Themis, Nemesis, Semele, Mnemosyne, and Adrastia.

We shall beatow an entire article upon the explanation of the symbol of Ceres. The Isis surnamed Nemesis simply signified the earth preserved from the waters. Semele signified the representation of the ancient condition of men; and Mnemosyne is no more than a bare transletion of the same word into Greek. Torches were always carried next to Ceren, or the symbol of the mourning earth, and this caused Isia thus accompanied to be called Themis, Themisto, and Adrastis, which three names signify all the excellency of fire.

A multitude of ancient monuments testify to us the use of the little portable chest, of the van, the child and the serpent. They added to these figures the sorry grains on which they in the beginning had been
obliged to feed, and the marks of the crosses they had been neceasitated to overcome.* (See the antiquities of Greece collected by Dr. Potter, vol. i., and Clem. Alexander, Cohort ad Gent.)

The persons who in the public ceremony carried the chest wherein all these memorials were contained, likewise assumed to themselves significant names, and made a part of the representation. They became actors, end everything concurred with the symbolical pieses to convey certain traths into the minds of the spectators.

The representative child was called simply the child, liber, the beloved son; sometimes the child author of life and subaistence, liber tiater ; sometimes the child of the representation, ben Semeleh; soroepmes Horus, Erichthonius, Harpocrates, Bacchus, Apollo, Icarus. He bore many other names, whereof we shall give an explication, in the particular enumeration of the feasts of the several nations. $\dagger$

It is known from the testimony of Diodorus Siculus, and from the conformity of the Athenian laws with the Egyptians, that the first inhabitants of Attics were an Egyptian colony. We have even several proofs that it originally came from the city of Sais, so famous for its olive-trees. Among the ceremonies which these foreigners brought from Egypt into Greece, they remark the little chest, which according to the custon of their original country, contsined the symbolical figurea of agriculture. Three young Athenian women carried in their feasts a basket, wherein lay a child and a serpent.

[^16]
## Ingmentengue vident esporrectumque checones.*

The three maids that carried this child had names relating to husbendry, the aymbols of which they bore in their hands. They were called Herse, Pandrosos, and Aglasuros. The signification of these mes zuveils the whole obscurity of the enigma. It is enough for us thereby to understand, that it is to the alternative of the rain, the dow, und the fair woeather, that husbendry is indebted for the life it affords mi. Let the imagination of poets wander upon the rest, and, according to their custom, look into a symbol to them become unintelligible, for the matter of en insipid metamorphosis.
In order to render these representations more complete, they did not in Egypt forget, any more than in other places, the necessity the first men had been under of defending their houses and the fruits of the earth from wild beasts. They preserved the memory of this particuler circumstance by a kind of hunting, which they renewed every thrse jears, throughout the east. The same feast was not celebrated every yeer, because wild beasts did not multiply from one year to another 20 as to elerm the neighbourhood. This hunting being only s repreventation, and not much in earnest, it made the sanctity of feasts degenerate into tumultuous ramblingz, which were succeeded by the greatest disorders.
It is trae, they began by a macrifice, and the invocation of the true God; as may be easily proved from their warlike cries, that signified The Lord is the mighty; the Lord is my strength; Jo Saboi,t Dens milt exercitus. The Lord is an host to sac; the Lord is my, guide; Jevov nimi ; Jo nisvi, Dio nisti; Deus vesillum mihi, Deuz mihi, dus etto. Essod. xrii. 15. And Moses built an altar, and called the name of it Jehooah-nisti. It is not time yet to convert the Dionissi, which was ooly a priyer, into a man's name, and of it to make the Dionymus of the Greeks. All words which we find again in the mouth or the Hebrews, because their tongue and religion were originally the mane with that of the other nations. The latter have altered their notions, while the form of prayers still remained the sume.

## Animals become Symbolical.

From the knowledge we now have of the genius and taste of the eestern nations, and chiefly of the Egyptians, for symbolical figures end significant ceremonies, we are authorised to think, that the singu-

[^17]lar prectices observed among them were so many emblems of certain astronomical, moral, and other truths. We mo longer run any risk in saying, that the ram which they reverenced in Thebais and Lybya, the bulls they respected at Memphis and Heliopolis, the kids honoured at Mendes, the lion, the fishes, and other animals which they'worshipped in meveral provinces, were very plain symbols in their first origin. They were no more than the ancient signs of the rodisc, and the different marks of the situations of the sun. They diatinguish the neomemia of one month or of another, by annexing the figure of the celestial animal into which the aun then entered, to the Isis which proclaimed that feast; and instead of a bare picture, they introduced into the feast the animal itself, the living animal relating thereto. The dog being the symbol of the dog-star, which formerly opened the year, they puta living dog at the head of the whole ceremonial of the first neomenia. It is Diodorus who recounts this fact, as having been an eye-witness of it They therefore took the habit of calling these neomenize the feast of the ram, the feast of the bull, of the dog, and of the lion.

## Furneral Symbols and Ceremonies.

There was near the Egyptian towns a certain ground appointed for the coromon burying-place. Diodorus Siculus (Biblioth. 2. 1) informs us how these tombs are regulated, and in an exact description of the burying-place at Memphis, the largest and most frequented of all, relates all that was practised there. According to his recital, the common burying-place was on the other side of the lake called Acherusis, from -acharie, after, and from -ieh, man, comes acharib ultima hominis, the last condition of man, or rather what follows the death of man. They also say acheron, postremum, conditio, ulfima. The dead person was brought to the shore of that lake, and to the foot of a tribunal consisting of several judges, who inquired into his life and conversation. When he had not faithfully observed the llaws, the body was left unburied, and very likely was thrown into a sort of lay-stall, or ditch, called Tartarus. This word may come from the Chaldaic, tarah, pramonitio, doubling the word. Diodorus informs us that there was near a town at a small distance from Memphis, a leaking vessel, into which they incessantly poured Nile water, which could signify nothing but endless tortures and remorses. And this single circumstance gives room to think, that the place where the unburied bodies were thrown was set round with frightul representations.

When no accuser appeared, or he who deposed against the deceased was convicted of falsehood, then they ceased to lament the dead person, and his encomium was made. (Diod.) They, for instance, commended his excellent education, his respect for religion, his equity, moderation, chartity, and other virtues. His birth, which was aup-
oued to be the sme with all mes, was never allowed as ary merit in in. All the ascistants applanded these privises, and congrualated the ecemal on sccourt of his being reedy to enjoy en eternal repone with ne virtices.
There wras on the shore of the lake a wevere and inconruptible watarnas, who by order of the jodges, and never upon any other terms, resived the decessed into his boat. The very higg of Egypt were ented with the same rigour, and were not admitted into the berk ithoat the leave of the judgea, who sometimea deprived even tham I berial. The wmeterman carried the body on the other side of the liee, inito a plein embellished with meadows, brooks, groves, and an se rumal ornaments. This phace was called Elizout, or the Elizien eldes, that is, full setiffaction, an hebitation of repoue, or of jog. bere was at the eutrunce of that abode the figure of a dog, with three eir of jaws, which they called Cerberus. The whole ceremony ended $y$ thrice sprinkling sand over the opening of the vaik wherein they ad pot the corpse, and by bidding him thrice ${ }^{\text {adien. }}$
All these words and practices almost everywhere copied, were so many instructions to the people. They gave them to understand by II these ceremonies, as by so many speeches or very significant symole, that death was followed by an sccount which we were to give of ur life before an inflexible tribunal; bat that, what was indeed dreadil to the wicked, was ouly a pesinge in a happier state for the good. Wherefore death was called the deliverance. Pelitak, or rather, penate, allevintion, delivennce. Wherefore Horace looks upon that cosage as the end of evils.
Levere finchan praxperem laboribus. (Carm. 1. 2. od. 18.) It is kemise called in French le trepas, that is, the pessage to another 6. The boet of transportation was called tranquillity (beri, tranquilese, eerenitac, whence comes barit, Charon's bark, Diod. Sic.), bebuse it carried over none but the just; and on the contrary the watermen infleribly refused those whom the judges had not soquitted, zs called Wrath (Charon, Exod. 15, 7) or the Vengeance.
As to the earth thrown upon the corpse, and the tender adiens of the detions, they were no more than natural duty and a simple expression $f$ their regrets. But they were not contented with paying them by the 2y this honour; they also put st the entrance of the cemetery and rer the door of the deceased's tomb the symbol of the value and eder affection they had for their departed relation. The dog, being of I animals the moat addicted to man, is the natural emblem of friendup and attachment. They gave the figure of the dog three heads or

[^18]throats, to express the three cries they had made over their frien grave, according to the custom which granted that honour to none I good men. Therefore this figure, thus placed near the tomb and a the head of the newly-buried person, signified his having been honou with the lamentations of his family, and with the cries which frien never failed to come and utter over the grave of him whom they malued and cherished for his good qualities. The meaning of 1 symbol is no longer a riddle, after its name has been translated. T1 called it Cerberus, that is in plain terms, the cries of the grave.*

It is neither eesy nor reasonable to pretend to explain all the symb and ceremonies of antiquity, before we are convinced that most of singular figures used on the most solemn occasions were in their $i$ origin no more than significant symbols and instructive ceremonies. is enough, for us that this is true of many of them; which I flatter n self I have shown in this first essay of explanation of the anci writing, since the explication I give of it is simple, plain, and strit connccted both with the common notions and the wants of first men.

The Egyptians, who had contracted a habit of adoring the sun God, as the author of all good, and looked on Osiris as their founc ran headlong into a third abyss. They, from a confused remembrar and an universal custom, knew that this figure of Osiris related to sun, and indeed it was nothing else in its first institution. They sides saw the circle, the character of God, placed frequently enough Osiris' forehead. They then perpetually joined the idea of Hamn with that of the sun, and both these with that of God. They no lon honoured God nor the sun, without singing at the same time the fav of Osiris or Hammon. The one was still inseparably connected : the other ; which made them give out that Hammon or Osiris had b transported into the sun, there to make his residence, and that thence continually protected Egypt, taking a delight in pouring a grea plenty upon the country imhabited by bis offspring than on any ot fand in the universe. Thus being gradually come to ascribing divin and offering their worship to the ruler representing the functions of sun, they, to complete the absurdity, took him for the first of J kings. Thence this odd mixture of three inconsistent notions, I m of God, of the sun, and of a dead man, which the Egyptians per tually confounded together.

> Jehov, Ammon, Neptune, Pluto.

That religion which grossly indulged the self-tove and vanity of Egyptians, easily found farour, and took roots in the minds of

[^19]people. The rest of the symbols took the same turn. They inquired who was the Poseidon, or Neptune: that is, the marine Osiris, tns symbol of the annual return of the fleets; and they made of him a god who delighted in the sea, as Osiris did in the heaven. The funeral Osiris, who declared the anniversary of funerals, had also his own history; and as all the ceremonies belonging to burials, instead of being trken in their true sense, that is, as public instructions upon the state of the just, after death, had by degrees been looked upon as pictures of the real treatment given to the dead under ground and in delightful gerdens; they of Pluto, or of the symbol of the deliverance of the just, made a god, who presided over the abodes of the dead.

The pretended god Neptune, (Herodot, in Euterp.) who became the farourite deity of the maritime nations, was almost unknown to, and hardly worshipped among the Egyptians, who hated the sea, and who, living in plenty of everything, hardly ever went out of their own country, On the contrary, as they were very exact in the outward practice of their religious ceremonies, the funeral anniversaries, which vere frequently repeated, rendered Pluto much more renowned among them.

We often see round the head of the Egyptian Pluto a radiant crown, and round his body a serpent, sometimes accompanied with the signs of the zodiac; which evidently signifies the duration of one sun, that is, of one year. And it is plain here, that the euthor of the Saturnals, who pretended that Pluto and many other gods were originally nothing but the sun, had great reason to think so, since Jupiter, Ammon, Neptone, and Pluto, are in reality no more then the symbol of one solar year diversified according to particular circumstances. They did not guite lose sight of the unity of their origin in making persons of them; for they made them three brothers, who, as they said, had divided the empire of the world between them.

Ham, or Hammon, being commonly called God, Jehov, Jehov-Ammon, the city of Thebes where he had dwelt longest, and which they enciently called Ammon's abode, (Anmonno) was afterwards called the City of God. (Diospolis.)

This word Jehov, in its primitive use, signified the father of lifo, the supreme being. The Greeks translated it by that of Zeus, or Dion, and the Romans by that of Deus; all names having the same sense, it they be not the same sound diversified according to the pronunciation of different people. They sometimes joined to it the name of father, which was but an interpretation of it, and called him Diospiter or Jovpiter. The Ammon, which by a stupid kind of love was confounded with God, and with Osiris or the star moderator of seasons, became the famous Jov-Ammon, or the Jupiter-Ammon, and had always the firss

[^20]honoars paid to him, atter the other symbols had in like manner been converted into so many celestial personages and powerful deities. The resson of this pre-eminence is founded on their having annexed the ides of the founder of their colony to the most brilliant of all their symbols, I mean their Osiris.

## The Establishment of the Laws. Menes.

The rural works not being resumed in Egypt till after the Nile hed quitted the plain, they for this reason gave the public sign of husbandry the name of Moses or Museus (saved from the waters); and on the same account the moons during which Horus Apollo, or husbandry, continued his exercises, went also by the same name.

About the end of antumn, the inhabitants being freed from the works of the field, manufactured in their night-work the line, thread, and cloth, which were some of their chief riches. The sign which was the publication of it took then the name of Linus, which signifies watching, the setting up in the night. (—Lyn, to watch.) The star that lights the night has on this account retained the same name, and so has the matter itself that was manufactured during those watchings.

This sign has evidently given birth to the tales of Linus, Museus, Orpheus, Picus, Gonymede, and many other pretended heroes or legislators, of which it is needless to pretend to determine and fix the chronology and the above.

The custom they had, to publish the several regulations concerning polity, by the several postures of the son of Osiris, caused him to be commonly called Menes, that is, the rute of the people. The Egyptians from this new title took it into their heads that Menes had been their legislator, the author of their polity, the orderer of their year, the founder of their laws. For this reason they put this imaginary founder at the head of all the lists of the kings of their several provinces.

The name of Moses or Museus was very properly given to the public sign of the revival of Husbandry. This word, which signified the drying up, made part of the calendar; it was the summary and the substance of a statute of polity. It was every year in the mouth of the people, after the re-entering of the river within its banks. It was not then a man's name. But if Menes and Museus are but one and the tame thing; if they are only the names of the same sign; what then becomes of the first king of Egypt, the foundation of their history? He, from that moment, loses all bis reality.

Two of the most learned men among the ancients, Eusebius in his evangelical preparation, and St. Clement in his exhortation to the Gentiles, by preserving and handing down to us the ancient set form whereby they incited those that were initiated into the mysteries to imbibe religious sentiments and love work, have helped us to find out exactly what the famous Menes was. The instructions given therein for good
conduct, are addressed to work itself. It is called the son of the atar of the day, because husbandry can do nothing without the sun. Again, it is calledMuseus; because in Egypt, wheace this zet-formcame, husbandry did not resume its operations but till after the retirang of the waters. In short, it is surnamed Menes ${ }^{*}$ in the same setform, that is rule of the people. Therefore, this pretended founder of the Egyptian monarchy has not more reality in him than his fathey Osiris, the encient character of the sun, nor more than Museus, another character of the revival of the tilling of the lands and of the operation of sowing.

## Anubis, Thot, ABsculapiun.

The falsity of the ancient history of Egypt is completely demonstrated by the abuse they farther made of the fourth key of their symbolical writing. It was the figure of a man with a dog 3 head, wearing oft-times a pole with one or two serpents twisted about it. The meaning and intention of the public sign exposed in the assembly at the rising of the dog-star, was to advise the people to run away and give attention to the depth of the inundation, in order to rule their ploaghing accordingly, and to secure their lives and subsistence. The namea given to this public sign were Anubis the barker, the giver of udvices, or Tahaut the dog, or Essculapius the man-dog.t It was still the same meaning or the same public sign; but they were three names for one and the same thing. A sufficient ground for them to derive from thence three personages of their history, the chronology whereof will be still lengthened by this means. They make their demi-god Anubis to reign before Menes, without telling us where. They make Thot or Thasutes, son of Menes, their second king of Egypt. They make him a counsellor to Menes. They ascribe to him the introduction of the letters, the invention of music and dancing, with a great many other fine discoveries; the foundation of which is because the dog-star opened the year, brought along with it a new series of feasts, and appeared at the head of all the letters, or symbolical figures which expressed the annual order. Though esculapius was as yet no more than the sign of the canicular star, the Egyptians made him a third king who had applied himself to the procuring the preservation of his subjects by the study of physic; a notion that had its origin from the preservation of life which was expressed by the serpents twisted about the measure of the Nile. Such is the origin of the serpent of Epidaurus and the very plain reason for which the serpent has always

[^21]been inseparable from the god of physic, to which art both the man and the animal had originally no manner of relation. Several historians quoted by Sir John Marsham in his rule of times (Chronicue Canon) attributed the invention of the letters to Esculapius as well as to Theut. Which was doing them justice, the one not being different from the other. Marsham is most earnestly angry with those who have thus confounded things and altered history, by attributing to esculapius the invention which is the glory of Thaat. This he patches up to the best of his power. But it was very superfluous here to have recourse to means of reconciliation; since Asculapius, or the man-dog, and the Tehaut, or the dog star, as well as Anubis, were no more than the names of one figure that was exposed in the assembly of the people to warn them of the appearance of that star, the rising of which would soon be succeeded by the inundation.*

## The Gods of Egypt communicated to Asia and Europe by the Pheniciaus.

Egypt always was and still is the most fruifful country in the world. The harrest, which is almost certain there, and by much exceeds the wants of the inhabitants, oceasioned great quantities of com to be amassed there, which in barren years were the resource of the Arabians, the Canaanites, the Syrians, and the Greeks. Travellers whom need or curiosity had drawn thither, and the Phenicians especially, who inhabited but a small maritime coast near mount Libanus, and had no granary so certain as Egypt, were all equally struck with the polity that reigned in every part of that beautiful country, with the gentle temper of the inhabitants, the mysterious outside of the ceremomies and feasts, which were with much pomp celebrated there, and finally with the plenty which they looked upon as miraculous in a country where it never rained. The notion they had of that river whose source remsined concealed, and whose overflowings seemed to them contrary to the common course of nature, made them say, that God bimself poured these beneficial waters on Egypt. (Fluvius a Deo missus. Odyss. 4.) The Esyptians represented this marrel by the figure of God, that is, by a sun out of whose mouth a river sprung; $\dagger$ and the

[^22]I as well as the Egyptians everywhere gave it out, that so sinmosperity was the reward of the piety of the inhabitants. Nay sicians perhaps and the Cansanites at first received from the ns and used the symbolical characters among themselves. oduction of the common writing must have caused them to sense without suppressing the figures; so that these symbola ways a part of the ceremonies, and publicly exposed at feasts dy annexed to them the notion or history he thought carried ter likelihood with it. Thus Egypt was the cup wherein the of idolatry lay, and the Phenicians are the people, who, lling all over the world, have presented this fatal cup to ter part of the western mations. For the same reason it is names of the gods and words made use of in the beathen ave so sensible an analogy with the Phenician language.
:llers and merchants, during their sojourn in Egypt, were tedly struck with the outward shew of the feasts and the abun-这 seemed to be the result of them. They did not carry home ltitude of symbols and practices which they understood nothing they seldom failed to look with veneration upon the three or ief symbols which the Bgyptians honoured as beneficial powers, the authors of all the good they enjoyed.
governor, the woman, the child, and the messenger, or the 'sdvices, always appearing in their feasts, though with some ; foreigners used themselves chiefly to these three or four obre most distinguished of the whole worship: and the Phenivhom constant necessity always brought again to the port of ,were the first who made use of the same ceremonial, and celethe same feasts in their own country. The circle of the sun scaied with serpents and foliages, or with large wings to repree intelligence which is the mover of all things, the master of the dispenser of seasons and harvests, though always placed at top noblest symbols, however, less attracted the eyes than did the it figure of the governor of the earth, or the several dresses he mother and the beloved child. Nothing contributed more to lize, as I may say, the idea of God, or rather to make men refer rorship and adorations to beings like ourselves.

Moloch, Baal Adonie, and Achad.

: god, or rather the nigure of the sun, which the Egyptians called $t$ or the governor of the earth, assumed other names in other i. The eastern nations who had adopted him, sud who looked on vemporal advantages as the effect of this devotion, called him sh or Melchom, that is the king; some Baal or Adonai. ir Adowis,
or Hers, an which names signify the Lard, Others ealled his Aeladt which the old inhabitenss of Latian have rendered by stit of Solnaices; and others finally named him Baalshamain or Beelar menst the Lord of the heareses. But it was always the sun which these figures of a king and these names immediately sigaified.

## Dionginas Bacchas,

In the times when things were expressed by symbols, and the several parts of these symbols were varied to be the better understood, fr from being designed to conceal sny mystery, the figure of Horrs changed its name and attribates according to the exigency of the circumstances in which it was employed. The first use it was applied to in certain feasts whs the represcalation of past events. The secood wes the instraction and the regmlations fit for the people.

The representation of the ancient state of mankind coosisted not ouly in the commemorative signs that were carried either upon a winnowing van or in the small chest before mentioned: they joined thereto ceremonies or set forms of prayers regarding the same intention. They in these feasts invoked the name of God with great lamentations. They called him the mighty, the life, the father of life. They implored his assistance against wild bessts, and made show of giving them chase, running hither and thither, as if they were going to attack them. They even did it in good earnest completely armed.

It was the costom to say with a sigh : Let as cry anto the Lord, io terombe, or disterombe. Let us cry before the Lord, or God see otr tears, io Bacche, io Beccoth. Thow art the life, the author of being. Thos art God and the wighty : Jehova, hevan, hevoe, and eloah. They chiefly said in the east: God is the fire and the principle of $W=1 /$ Thos art the fire; life proceeds frow thee; hu-esh: atta esh.g All these words and many others, which were the expressions of grief and sdoration, became so many tites, which the people, without underztanding, gave to this child or imeginary deity. He was then called

[^23]Beochoe, Hevan, Evoe, Dithyrambus, Jao, Eleleus, Ves, Attes. They knew not what all this signified; but they were sure that the god of the feast delighted in all these titles. They never failed to give them him, and thus these expressions became cries of joy, or extravagant roarings.

When people went about pursuing the wild beasts that thwarted the eadeavours of husbandmen, they cried aloud, Lord thou art an host to me, io Sabio. Lord / be my gride, io Nissi, or with a different accent, Dionissi.* Of these warlike cries, which were repeated without being understood, they made the names of Sabasius and Dionysius.

Of all these names that were most used in Italy, was Baccoth. The delicate ear of the Greeks, who could not endure harsh sounds, gave the preference to the name of Dionysius. These several titles (and the series of them was long) gave birth to as many histories. Thus they called this god Dionysius, because he was the son of Jehov or Jupiter, and born at Nyss, an Arabian city. He was named Evius, because, as he was fighting with one of the giants, Jupiter encouraged him in the Greek language, and - But if we now are sure of truth, why should we busy ourselves in enumerating such sorry tales? We ure no way concemed to hear all the nonsense, which the want of understanding these names $\dagger$ has caused to be built upon each of them.

Let us now pass on to the retinue of Bacchus. We shall there find a proof, that Bacchus was no more than a mask or figure, and not any man that ever existed.

When the arts were once invented, the remembrance of the roughness of the first ages, and the comparison of the hardships which mankind had at first experienced, with the conveniences and inventions of latter times, rendered the rural feasts or the feasts of the representation of the ancient state of men, more brisk and lively than all the rest.

One of the most essential points of this feast was then to appear there covered with skins of goats,ł bucks, tigers, and of other tame

[^24]and wild animals. They smeared their faces with blood, to bear the marky of the danger they had run and the victory they had obtained

Instead of a child of metal, mysteriously carried about in a chest, they by degrees contracted a custom of choosing a good fat jolly boy, to play the part of the imaginary god. They in process of time gave him a chariot; and to render the whole more admirable, the pretended tigers offered to draw him, whilst the bucks and goats were jumping and capering round him. The assistants disguised and masked in this manner had names agreeable to what they were doing. They were called Satyrs, a word which signifes men disguised,* or Pauni, that is masks. These etymologies, which are very plain, and strictly connected with what precedes, are still confirmed by the usage which the assistants at these raral feasts observed of consecrating to Bacchus, and of suspending on the tree, under which they had made their last station, the mask of bark or other matter, wherewith they had covered their face, that they might have a share in the ceremony. The feasts of Bacchus have been abolished by the preaching of the gospel; but we see the remains of them among us in our winter rejoicings. It is the same concern, and, with no great difference, the same idolatry. $\dagger$

Those who followed or attended the chariot of Bacchus, were called Bacchants, that is, mourners, because the feast began with woes and complaints, and with frequent invocations on the assistance of God.

The women who carried the small shest or the sacred baskets, or at least a thyrsus, $\ddagger$ (which was sometimes a javelin, in memory of the first chases, sometimes a torch of resiny wood) were called Menades, Thyades, and Bassarides. They were named Menades, which signifies, the women who carry the public signs, because the feasts or the regula-

[^25]tions, and all the sacred figures inseparable from them, were in the ancient language called Mures, that is, regulations. This the Greeks rendered Thismoi. The extravagant attitudes of these mad women, who strove to outvie cach other by the lamentations and representing geatures authorised by custom, were thence called Manic. These women again were called the Thyades, that is vagrant or wandering, when they dispersed themselves in the mountains like so many huntresses. They were called Bassarides or grape-gatherers, because these feasts were celebrated after vintage, and when new wine began to be drinkable.*

After the vagaries and the whole train, at last eppeared an old man upon an ass, who advanced with a sedate countenance, offering wine to the tired youth, and inviting everybody to take some rest. $\dagger$

If anybody should complain that this explication of the origin of the Becchanals does not establish a relation sufficiently sensible between wine and the feasts of Bacchus, who from all antiquity has been looked upon as the inventor and propagator of the vine, whereas we reduce it to the proclamation of a few instructions, which the people stood in need of ; I shall reply, that the feasts of Bacchus and Ceres are everywhere styled among the Greeks and Romans, the feasts of the regulations; because they confusedly remembered, that the purport and intention of the figures of Isis and Horus was to regulate the conduct of the people. And I shall at the same time desire such to take notice of what Horus carries over his head at the solemnity of the Pamylia, or at the beginning of the winter. Among other objects capable of pleasing, there appear three large pitchers of wine. This was the finest part of the ceremonial: and the feasts where this liquor was drunk in plenty could not but be the most brisk and most enlivened of all.

I have considerably abridged the preceding article. That the Bacchus bonoured in the processions here described was not, as the author states, aman that ever lived, is very evident; but that the figure represenuing hlan wai merely a symbol of husbandry, as he endeavours to show, is not wo clear. The festivals were religious thanksgivings, in which grateful ecknowledgments were rendered for the favours received from the hand of divino providence, and the fraage intended to represent the god who was

[^26]supposed to bestow there blessings, was ceremoniously carried in procession. The Bacchanals were similar to the fensts noticed in the memorials of past events, with trifling variations, arising from a difference of taste, and misconceptions in the converance of cuatoms from one country to another.

The Roman Catholic processions of the Host are of the same nature as the above, and no doubt the custom, like most of the practices of the church of Rome, bas been derived from the ancient pagan ceremonies, The catbolic processions, it seems, are conducted with more mystic, solemn pomp than those of the anclents, but the ruffian assaults of the guards or ansistants in this affuir, of persons walking in the streets, who are not even within the pale of tbeir order, for neglecting to fall upon their knees, on the passage of the host, are more outrageous than the extravagancies of their prototype.

The masonic processions are identically the same thing as the Baccha. nals, but got up with more taste and refinament, owing to the influence of civilization. In these are carried, besides other articles, which will hereafter be anumerated, a box or chest, called the lodge, about which much secrecy is pretended, and which is kept covered from the oyes of the profane or uninitiated. The utmost decorum is observed, and no person is annoyed for not paging bomage to the sacred contents of the mysterious chest.

The anthor hirnself, In the next article to the foregoing, has told us who Bacchus really was, and which fully explains the understanding that should be applied to these Bacchanalian processions, as follows:-

The sceptre and empire of heaven and earth fell to the share of Osiris. The chariot, the whip, and the reins were assigned to Apollo; whence it is that we so commonly find in one god the characters of another. The Horus Apollo, who was only related to the rural year or the order of works, was the more casily mistaken for the sun which rules nature, that they put the whip and the attributes of the sun into the hands of the Horus, in order to shorten and abbreviate the marks of the solar year, and of the works suitable to each season. Thus Horus became the same with the Moloch of the Ammonites, the Adonis of Byblos, the Bel of the other Phenician cities, and the radiant Belenus honoured in Gaul. This driver of the chariot, which gives light to the world, is the son of Jupiter ; but the son of Jehov, the son par ercellence, liber, is no other than Horus, Bacchus or Dionysius. Osiris, Horus, Apollo, Bacchus, and the sun, are then confounded. This the author of the Saturnals has sufficiently demonstrated. Virgil himself makes no distinction between Bacchus and Apollo or the sun, when he gives Bacchus and Ceres or Isis the government of the year and the light.

[^27]
## Atlas. The Hyades and Pleiades.

Atias, eccording to the fable, was an ingenious master of astronomy, a doctor who knew nature in general, and gave information about it. Homer gives us Atlas as a very learned god, who knew all the obliquitios of the coasts, and all the depths of the sea. Virgil ascribes to the informations of the great Atlas the knowledge men hed acquired of the moon, the eclipses of the sun, and the whole order of nature. The name exgnifies a support (atlah, support, prop), which gave occasion for the invention of the metamorphosis of the doctor Aclas into a colounn or high mountain, that props up the arch of the heavens.

The Pheticians, in the voyages they repeated every third year to Termbish, that is, to Cadiz and to Boetica (now Andalusis) through the Red Sea, and in carrying on the commerce of all the coar s of Africa, often saw the highest mountain of Msuritania, whose top is generally covered with snow, and seems joined with the heavens. The name of Atlas or column given to that mountain caused the fable of Atlas to be applied to it. They said he was king of Mauritania, a great astrologer and geographer, who at last was by the gods changed into a high mountain, reaching from the earth to the heavens.
The Hyades or Huades, who took their name from the figure V, which they form in the forehead of the celestial bull, and the Pleiades, which are that small platoon of stars so remarkable, near the foregoing. are the most known and the easiest to be distinguished of all the constellations of the zodiac. They particularly were of use to regulate the informations given to the disciples of the priests by means of an Atlas, that is, of a Horus bearing a celestial sphere. Atlas humanized, became the father of the Hyades and Pleiades; and Orion, which rises immediately after them, easily passed in the imagination of the fabulista for a libertine, who incessantly pursues them.
Among the other fables which the Phenician travellers were sufficlently at leisure to devise in their courses, or to recount when they came home, the two finest doubtless are those of the garden of the Hesperides, and of Allas freed by Hercules of the burden of the celestial globe. What can be the origin of the first? Three nymphs placed round a tree that bears golden apples, of which they have the disposition and management; a dragon that watches to interdict the use of and access to this admirable fruit, to any other; a wild goat that browses on the grass at the foot of the tree; or, instead of the goat, a horn of abundance placed either at the foot of the tree or in the hand of one of the three nymphs. This is the picture of the garden of the Hesperides.
The picture is nothing more than the ancient symbol of the rich commerce of which the Phenicians made the preparations in winter. It
was the commerce of Hesperia or of the western countries, particulariy of Spain, whence they drew exquisite wines, rich metals, and that superfine wool which the Syrians dyed in purple. (See Diod.and Strab. or Spect. de la nat., vol. 4, part 2, dialog. 2.) They brought back the finest corn from the coast of Africa; and when they went round the continent through the Red Sea, they exchanged all sorts of iron-ware, knives, and edge-tools, for ebony and other precioue woods, for gold dust, and provisions of all kinds. This branch of their commerce wes the most eateemed of all. It was the chief object that did then take up the thoughts of the Phenicians; nor did they fail to expose the public sign of it in the assemblies. One may easily guess at the meaning of that tree which afforded such precious things. The great dragon that surrounded the tree, turned the mind of the beholders to the subsistence and benefits whereof it was the sign. The capricorn, or barely one horn of this animal placed at the foot of the tree, was the character of the season. The three moons during which the companies were formed, had their name of Hesperides, or Hesperia, as well as all the west, from the word which signifies the good share, the best lot (-esper, 2 Sam. 6, 19).

The public sigv, used upon thls occasion, was doubtless three golden balls, having reference to the three moons, personified by three nymphs, in which the compailes were formed, the figure and colour corresponding with those of the full moon. An allusion may also be made to the gold dust and otber precious articles, the best lot, which the Pbeniclans received in excbange for their merchandise.

The Lombards, the money-lenders of former times, are said to have adopted this sigo for their offices ; and pawnbrokers still use it to designate their profession. I am sensible that some writers conjecture the golden apples of the Hesperides to be nothing more than oranges ; but it is bardly probable that an article of so little value, in a mercantile point of view, should bave given rise to the fable.

Hercules is a name of the san, and his relleving Atlas of bls burden alludes to his dissolving the nnow with which Atas or the mountain of Moritania was loaded.

## Mercury, Hermes, Camillus.

We have now a pretty large number of very famous rien and women, which we, methinks, have an acquired right to strike out of history. We must no longer inquire into their country, antiquity, or genealogy, since we have proved that they all of them are nothing more than the Osiris, the Isis, and the Horus of Egypt ; that is, the three principal keys of the ancient writing, or the symbols of the solar, the civil, and the rural year.

We know a fourth key, viz., the Thot or Taaut, that is the dog. Thence again springs a multitude of kings and gods, of whom we shall in few words find out and explain the names, ranks, and employments.
The Egyptians in after-times, no doubt, made him one of their kings, who had been transported into this fine star. They give him as the son of Menes, and the grandson of Osiris, and ascribe the iuvention of the symbolical characters to him. They say that he was the counsellor of Menes, whom he assisted in the regulation of their feasts. But this fine story had no other foundation than the report that went among the Egyptians of old, that Thot introduced the Manes, and renewed the proclamations. And indeed he opened the year, since that always began at the rising of the dog-star; whence the first of their months had the name of Thot. It was out of mere superstition that the Egyptians forbore calculating exactly the sacred or civil year, when they began to know that, besides the 365 days, there remained a quarter of a day to be added to complete the revolution of a year. Four quarters of a day overlooked, made a whole day in four years' time; and neglecting to intercalate that day at the four years' end, and to reckon 366, instead of 365, their civil year on this account began one dey too soon, und by retrogradation differed a whole day from the calculation of the natural year. The beginning of the sacred year went successively therefore througb every one of the days of the natural year in the space of 365 times four years, which make 1460 years. They fancied they blessed and made all the seasons to prosper, by making them thus enjoy one after another the feast of Isis, which was celebrated along with that of the dog-star; though it was frequently very remote from that constellation: and it was in consequence of the ancient custom of celebrating the feast of Isis, or the renewal of the year at the exact rising of the dog-star, that they afterwards, in whatever season that feast might fall, to be sure, introduced not only the figure of a dog, but even real and live dogs, which always preceded the chariot of Isis (Diod. l. 1) ; a circumstance which I beg my reader to take particular notice of. Thus in after-times they took a special pleasure in introducing a marvellous and mysterious air into everything. The calculation just mentioned, and many others which they had received from the priests their predecessors, were things of the utmost plainness. They, in process of time, mistook them for the durations of the several kings whom they quartered in the dog-star and other celestial bodies. One had lived 1460 years; another had reigned so many thousands of years together. The astronomical observations grounded on several suppositions and combinations of the stars, were one of the chief employments of the priests These calculations, found in the registers of the most laborious among the learned, being always joined with names of men, such as Anubis, Thot, Menes, Osiris, snd others whom they lodged in the stars, passed for the term of the terrestrial life of these gods. Such is indeed the true origin of that antiquity of the Egyptian history, which they trace
back so very high. Their ancient kings are nothing more than the names of the stars; and the pretended duration of their lives is only a supputation of the time necessary to bring again a planet to that point of the heavens from which it had begun its course. Thus they made as wrong a use of their astronomical computations as they had done of their writing.

Let us not, in mentioning the retrogradation of the feast of Isis and the return of that feast at the rising of the dog-star at 1460 years' end, omit one observation, viz., that they looked upon the 1461st year as privileged, as a year of plenty and delights. It was because this so important event, according to them, concurred with the desired Etesian wind, that they expressed the whole by a bird of singular beauty, that raised admiration more than any of the rest, and returned to Egypt after an absence of 1460 years. (Tacit, Annal, 6.) They farther said, that this bird came hither to die upon the altar of the sun, and that out of its ashes there rose a little worm, that gave birth to a bird perfectly like the preceding. They called it Phœenix, which signifies the advantage they pretended was snnexed to the concurrence of the opening of the year with the real rising of the dog-star; I mean the most delightful plenty (——phonek, deliciis abundans, Prov. 26; 21). We then have here again another erublematic figure converted into a wonder which it would have been a crime to doubt of.*

The dog-star has already efforded us two deities, one residing in the fine star near Cancer, under the name of Thot or of Anubis, and very well employed in swelling and sinking the river Nile, the other wholly intent upon physic, and entirely taken up with the care of people's health, under the name of Esculapius. Next to Anubis and Etsculapius, let us now see the Camillus of the Heturians, the Janus of the Latins, the Hermes of the Greeks, and the Mercury of the Phenicians, all of them rising out of the same figure. The observation of the dog-star was not only justly denoted by the figure of a serpent, the symbol of the life it had procured the Egyptians, but having besides procured them abundance, or rather a superabundance of corn, which enabled them to help foreigners and to enrich themselves by the selling of their commodities, the figure of Anubis was often accompanied by a full purse, the sight whereof filled the people with joy; and this procured it the new title of Mercury, which signifies the dealer, or the intriguing, the cunning, or only commerce.

A new proof that Mercury was no more than a symbol of the dogstar, or of the warning of the retreat, and not a man that ever taught

[^28]or invented anything, is that they put into his hand the mark of tue swelling of the Nile, and at his feet the wings, intimsting the necessity of escaping the inundation by a speedy flight.

The mark of the rising of the water was a pole crossed; a very plain symbol indeed, and the serpent twisted round it had, in the hand of this figure, no other meaning than elsewhere. It always signified the life, the subsistance. When double it denoted subsistance in very greet plenty, and such as wes sufficient both for the Egyptians and foreiguers. This pole was terminated with two little wings; the symbol of the wind that regulated the increase of the waters. All which significations were forgotten, and the monitor becoming a god as well as the other figures, they changed his name of Anubis, the barker, into that of Hannadi, the orator. (Hannobeah, Isai. Ivi. 10.) His gesture and the stick he had in his hand helped on this metamorphosis. It was taken for the mark of a leader, an ambassador. Hence the title or gride, of inepector of the roads, of messenger of good news, snd so many the like that were given Mercury, and of which we find a collection in Geraldi's history of the gods. Hence came the roads under his protection, and of placing his statue at the entrance of the highways. Bat what can be the origin of the name of Caduceus given to Mercary's rod?

In the East, any person preferred to honours bore a sceptre ${ }^{*}$ or staft of honour, and sometimes a plate of gold on the forehead called cadosh or caducewe, $\dagger$ signifying a sacred person, (——cadosh sanctus, se

[^29]paratus) to inform the people that he who bore this rod or mark was public man, who might go hither and thither freely, and whose perron was inviolable. Such is the origin of the name given to Mercury' wand. Thus they made the guide of travellers, the interpreter, (interpres, nuncius aacer) and deputy of the gods, of a figure whose office they confusedly knew was to warn people of being gone. Being wholly ignorant of the relation between this long measure and the Nile, it was everywhere converted into an ambassador's staff, thet there might be some connection between the envoy and the wand he carried.

Instead of the measure of the Nile, they very often put into his hand a key, and gave him two faces, one of a young man, the other of a man in years; incompassing the whole with a serpent having his tail in his mouth. The serpent, symbol of life or of time, here signifies the year that makes a perpetual circle, and the revolution of the stars coming again to the point of the heavens from which they began their course the year before. Our door-keeper, who here shuts up the concluding year, and opens the new, is no other than the dog-star, whose rising or disengaging from the rays of the sun pointed out the neve solar year. I say solar, or natural, because it happened for reasons before stated, that the beginning of the sacred year went through every one of the seasons. But they still observed the custom of making the god Anubis, who was the door-keeper of the feasts, to precede the pomp of Isis, which was the first feast of the year ; whence it appears, that the whole was rather astronomical than historical. This undoubtedly is the Janus of the Latins, who had the same attributes with the name of door-keeper. His ordinary companion, good king Picus, with his hawk's head, has so much the air of an Egyptian, that we cannot doubt but that Egypt, not Latium, was the country of both.

Anubis, considered as a symbol, was in reality the rule of the feasts, and the introducer of ail the symbolical figures that were successively shown to the people during the whole year. When a god he was made inventor and regulator of these feasts. Now the solemnities were called the manes, that is, the regulations, the signs, the ensigns, because the figures there presented to the assistants were originally designed to regulate the works of the people. This they made the noblest function of Anubis ; and it was with regard to this frivolous opinion, that the pomp of Isis was alway preceded by a dog. But the neomenim of each season, and the particular feasts that went before, or that followed

[^30]euch harvest, having peculiar names that distinguished them, the general word of mares, ensigns or images, was still the name of the funeral assemblies, which were frequently repeated, and the names of manes, images simaulcres, and dead persons were confounded. Thus Mercury, who opened and shut the manes, (manium dux, ductor eamaris), became the leader of the dead. He conducted the souls with a high hend. The king or the shepherd must indiscriminately follow the troop. He opened the melancholy abodes to them, shut these again without remorse, and took away the key, not permitting any one to escape. (Tum virgam capit. Hac animes ille evocat orco.) This again is whet the Phenicians and the Arcadians meant, when they called him Cyllenius, a word which signifies the shutting, or one that concludes the year, and who finishes for ever the duration of life.

The people were persuaded, that he invented music, the lyre, wrestling, and all the exercises that form the body, because all these things being inseparably annexed to the ancient feasts, he was thought the regulator of them as well as of the feasts, he of course introduced everything belonging to them.

As to the genealogy of Mercury, it confirms all we have said. He is the son of fair Maia, and grandson of Atlas, Maia is the Pleias or uhe cluster of stars known even by the vulgar, and placed on the back of the ball. The eastern nations called these stars Miahh, which signifies the hundred, the multitude. The Greeks sometimes retained their first nsme, and called them Maia; sometimes translated this word by those of Pleiades and Pleione, which likewise signify the multitude. These so very remarkable stars being most fit to regulate the study of the heavens, and being the first that struck the eye before thg rising of the dog-star, of which they thus became the forerunners; they, together with the Hyades, were the first in the knowledge of which the Egyptian priests took care to instruct their young pupils, in the sphere of Atlas. This symbol being once become a god, all his intructions were embellished with histories as well as he. The stars, that served as a rule to know the others by, became the beloved daughters of doctor Atlas. Maia disengaged herself at that time from the rays of the sun in Gemini, that is, in the month of May, to which the seems to have given her name. The finest star that clears itself a month or somewhat more after from the rays of the sun, is the dog-star, or the Anubis, of which they were pleased to make Maia the mother, because the star of Anubis was the first that succeeded her.

## Dedalus.

It was the custom in Egypt to say, when the dog-star or Anubis was represented with large hawk's wings, that the water would be of a sufficient height, and there would be a certainty of a plentiful harvest. On this occasion Anubis was called Dadalus, which signifies a suff-
cient height, or a sufficient depth. All the ancients agree that Deedalus was an ingenious architect. They ascribe to him the invention of the compasses and the square. They farther add, that to him mankind is indebted for statuary; they even characterize the nature of the progress which this noble art made under him, by circumstances which render the thing very credible. Before Daedalus, and to kis very time, according to Diodorus Siculus, "Statues had their eyes shut, and their hands close to their sides, But Dcedalus taught men how to give them eyes, to separate their legs, and to clear their hands from their body, which procured him the general admiration."

But by misfortune, both the history and the statues with their feet united become the proof of the origin 1 here assign to Dædalus. The compasses and square, of which he is mede the inventor, are no other than the compasses and square that were put into the hands of Anubis or Horus, to warn the husbandmen to be in readiness to measure their lands, to take angles, in order to distinguish them from the lands of others. Thus he was made the inventor of the symbolical instruments they saw in his hands. The statues whose hands and feet are frequently swathed, and which are found in the cabinets of our virtuoso, are no other than the statues of Osiris, Isis, and Horus, such as they were presented to the people at the time of the inundation. There was nothing then to be done, and the inaction was universal. The entire cessation of the rural works could not be better intimsted, than by a Horus swathed or deprived of the use of his feet by the inundation, and using only his arms to point out the measure of the water, a vane to shew the wind, another instrument io take angles, and a hora to proclaim the general surveying.

## The Cabiri of Samothracia,

The three principal figures of the Egyptian ceremonial were carried to Berytus in Phenicia, and thence into several Islands of the Egean sea. Their worship became very famous, especially in Lemnos, and in the island of Samothracia, which lies very near it. They were called there the Cabiri, (—cabirim, potentes,) meaning the powerful gods: and their name of Cabiri, which is Phenician, was as much used in Egypt as in Phenicia itself; which is a standing proof of the mixture of the Phenician terms with the Egyptian language, if the ground of both be not exactly the same.

The figures of these gods being originally designed to make up a certain sense, by a collection of several pieces that very seldom meet together, could not but have a very odd, if not a very ridiculous air in the eyes of such as did not understand their meaning. The foliages, horns, wings, and spheres, so commonly found on the heads of Osiris, Isis and Horus, could not but amaze or raise the laughter of such as were not accustoned to them. Herodotus observes, that the Cabiri, us well as the same figure of Vulcan, were the diversion of

Cambyses, when he entered their temple and that of the forging deity.
They often add to these a fourth god, whom they sometimes call Mercury, sometimes Camilus or Casmilus, which among the Heturians and in Latium signified a minister or a messenger. In all which it is plain, that we again meet with the four principal keys of the ancient Egyptian writing, changed on account of their human figure into so many tutelar and poverful gods.

The names of the Cabiri, with their significations, are thus given in $\Delta$ nthon's Class. Diet. :-"Axieros is said to have stgnafied in Egyptian, the all powerful one;-Axiokersos is made to denote the great foundator; Axeokersa is consequently the grest fecundatrix; and Casmilus be who stands before the deity, or he who bebolda the face of the deity,"
The firat enswers to the Supreme, Intelligence; the second to Osiris the sun; the third to Isis; and the fourth to Anubis.

## Apollo, the Muses, and three Graces.

Notwithstanding the variety which the caprice of private men and the difference of tastes have introduced into the Egyptian ceremonial, and among the signs that served to proclaim whatever was of concern to the public, we find every where the same grounds, because the wanta of all men were the same, and their practices were founded on these wants. After the sense of those emblems had been so far perverted as to change the significant figures into so many deities solely taken up with the care of supplying all the wants of the Egyptians, or of informing them of all their concerns; each province paid special worship to one or the other of the figures. For instance, in some places they honoured Apollo, holding in his hand a lyre. This so very plain a symbol of the feasts, having been taken for a deity presiding over harmony,* the other figures which attended him to denote

[^31]the several circumstances of each season, were taken in a sensa agreeable to the notion they had framed to themselves of Apollo. The nine Isises which proclaimed the menomenix, or the first days of every one of the nine months, during which Egypt is freed from the inundation, bore in their hands symbols peculiar or suitable to each of these months; as for instance, a pair of compasses, a flute, a trumpet, a mask, or other attribute, to denote the feast that preceded the surveying of the lands that had been overflowed, or some other solemnity. All these figures in reality informed men of what they were to do. They had a general confused remembrance that these were their functions. But being once become goddesses, people imagined that they had the superintendence of music, geometry, astronomy, and, all the sciences. They were united in a chorus to the musician Apollo; and instead of seeing in the instruments they bore the peculiar characters of the feasts and works of each month, men took them for the specific marks of all fine and delicate arts, and even helped on this fancy, by adding a part of the emblems. They were called in Egypt the Nine Muses: which signified the nine months rescued from the waters, or from the inundation; an etymology whose exactness is demonstrated in the name of Moses, or Mose, which signifies saved from the waters, disengaged, freed from the waters. Such was the common name they always retained. But the Greeks, among whom this chorus of deities was introduced, gave each of thems a proper name. Those names, if they are taken out of their language, conformably to the ridiculous notions they entertained of these figures, are no manner of information to us, and are not worth our translating. Near the nine Isises that denoted the nine months in which people might go up and down, and act at liberty, appeared also the three Isises, that represented the three months during which the water remained on the plains, and hindered the free correspondence of one city with another. They were drawn sometimes in swathings, and incapable of making any use either of their feet or arms; sometimes half women and half lizards, or half fishes; because men must then remain on the land by the water-side. In fine, (and this last form was more to the liking of the Greeks,) they were represented as the three idile sisters, without any attribute, holding one another by the hand; because they denoted the inaction of the three months of inundation, that succeeded each other without interruption. And as these three months broke off the ordinary corres pondence of one city with another, at a time when they had not as yet raised the magnificent causeways that have since been made; the three Isises prodlaiming the neomeniw of these months of total separation were called Cheritout," that is

[^32]the divorce, the time of the separation. This word had a relative soand with the word charites, which in Greek signifies sometimes the thanksgivings, sometimes the favours, or a courteous behaviour. Which gave occasion to the Greek poets to imagine that these three goddesses presided over gratitude and outward charms.

Notwithstanding all the care every city had taken in the month of Tune to supply itself with necessary provisions, they could not on many occasions do without the assislance of each other, and they had recourse to the conveniency of barks and sails. The bark with its sail was represented in Egypt and Phenicia under a figure of a winged steed. On this account it was that the people of Cadis, wno were originally of Phenician extraction, anciently gave a ship, whether large or small, the name of a horse; * and speaking of their barks, they called them their horees. What can be then the meaning of Pegassus, or the winged horse set by the side of the three Graces and the nine Muses? If these goddesses preside over gratitude and the sciences, our winged horse becomes unintelligible. But if our Charites are the three months' separation, or the interruption of the free correspondence of one city with another, in this case indeed $\mathrm{Pe}-$ gassus comes to our assistance ; and if the nine Muses are the nine figures that publish what is to be done during the nine months in which Egypt is freed from the waters, then indeed the winged horse, that is, the boat, becomes a symbol of the end of navigation, and of the return of the raral works. They therefore gave this figure tho name of Pegassus, which signifies the end of navigation, $\uparrow$ according to the style of the Phenician people testified by Strabo, the convenisecy of navigation.
An Egyptian or Phenician colony, that had all these figures in the ceremonial of its religion, brought them along with it to Phocis in the aeighbourhood of Mount Parnassus and of Delphos. They had for certain no meaning there, being no way related to anything belonging to that country. But they had been long honored, together with their president Apollo, as so many bountiful deitios; which was sufficient to perpetuate the use of these figures, and the pretty stories which had been devised to account for all

- Gaditarorus mercatores ingentibus uti navibus, pauperes parvis, quas ywoes appellent. Strab. geograph. 1. 2. p. 99. edit. Reg.
+ From - pag, cessat, otiatur ; and from - sus, cursor, navis, comes peyasma, navigationis intermissio. The head of a steed put on the shoulders of Jsis, (Pansan, in Aread.) with a fish in one hand and doves in the whar, wrs evidently the proclemation of a feast that opened the navigation Whan the aun left the uign Piees, and brought on the Zephyrs, the gentleness of which was deaoted by she dove.

It will not be improper, in order to strengthen what has been said, to observe, that in the ancient figures the three Graces are often seen ander the conduct of Mercury, because the rising of the dog-star in Egypt is succeeded by the three months of inundation; and the nine Muses under the conduct of Apollo, because Horus, or working, makes its use and benefit of the nine following months.

But why did this Apollo pronounce oracles, and foretell future events? This was his first destination and appointment. Horus served only to inform people by his attributes, of what was to be done or expected according to the winds and years. People never forgot that these figures were the signs and regulations that guided the works of man; but when they were once made gods, instead of looking upon them as convenient indicstions and tokens, whereby perions of great experience regulated the works of the people, and beforehand pointed out to them what was to be done from one month to another, they fancied that these figures were acquainted with future events, and gave information about them.*

The suthor, it appears to me, Is here in error. Apollo was a god, the sun, before the invention of the symbols that indicated his movement in the heavens, and the state of the seasons, which regulated the labourn of man. Nur do I percelve the propriety of naming these symbols Horus, or Apollo, any other appellation would answer equally well. Wben Apollo bad become personified by means of the popular religion that governed the opinions of men st the time, he then, "Instead of being the god from whom emanate fecundity and increase, is a simple shepherd conducting the herds of another. Instead of dying and arising again to life, he is ever young. Instead of scorching the earth and its inhabitants with hls devouriog rase. be darts his fearift arrows from his quiver ot gold. Instead of announcling the future, in the myaterious language ot the planets, he prophasies la his own name. Nor does be any longer direct the harmony of the spheres by notes of bis mystic lyre, he bas now an Iostrument Invented by Mercury and perfected by bimself. The dannes too of the stars cease to be conducted by hira; for he now moves et the bead of the nine muses, the striogs of hir divine cithara, the divi-

[^33]nities who preaide over each of the Uberal arts." (Constant, de la ReEgioa, - Anthon's Class. Dict.)

Niobe.
Niobe, the poets say, proud of her own fruiffulness, insulted Latona, but Apollo punished her by slaying her fourteen children with his arrows. She never could be comforted, and the gods out of compassion changed her into a rock. Latona or the lizard, or the figure which is half woman and half lizard, signifies the retreat of the Egyptians to the higher grounds. $\dagger$

Niobe signifies the sojourn of the enemy, or of the nver overflowing the plain. From - nuah, habitares, to sojourn: and from - ob, exundation, tumer, comes - Nyob, mora exundationis.

The insult Niobe gives Latona is the necessity she lays the Egyptians under of fiying, like amphibious animals, to terraces surrounded with water. The fourteen children of Niobe, are the fourteen cubita that mark the several increases of the Nile. (Strab. 1. 17.) These fourteen cubits are still seen represented by fourteen children dispoesd one above another upon the feet and arms of the figure of the Nile, now standing in the Tuileries.

Niobe, in short, is changed into a stone. Here lies the equivocation. The sojoum of the enemy becomes the preservation of Egypt, shelav. But the same word, disguised by a slight alteration into that of shelaw, eignifies a stone: (- ahelav, salus, shelaw, silex). Understanding no longer what was meant, by the mother of the fourteen childrea, changed into preservation, or become the preservator of Egypt, they metamorphosed her into a rock, and her eyes intc two fountains, that continue to shed tears for the death of her dear family.

The following remarks of Mr. Mackey are ingenious and plansible. If his derivation of Tantalus be correct, it sompletely developes the origin of this celebrated personage.

[^34]${ }^{*}$ Nyobe was the symbol of the Nile; whose fourteen children show that the water of the Nile rose fourteen cubits above the land, which being dried up by the rays of the sun, it was said that Apollo, that is, the sun, slew the fourteen children with his arrows. Ovid reckons up the pedigree of -Nyobe with much precision, and tells us her father's neme was Tantalus.
"The lower part of Egypt, that is, the Delta, was formerly a gulf of the sea, which was filled up in the run of some thousand ages by the sediment brought down by the Nile from Ethiopia. Nyobe then is the daughter of s high country; but Ethiopia, on account of its being a high country, is called in their langusge, Tandalos from Tan, a country, and dalah high. Thus Tantalus, a high country, was the father of Nyobe, a low country-the sediment of the one having produced the other.
"It is farther said, that Tantalus was punished in hell with eternal thirst, while he stood chin deep in water. But do we not know that Tentalus, that is Ethiopia, is an arid country, notwithstanding all the fertilizing water of the Nile runs through it."

Although it rains in Ethiopia for several months almost continually, a portion of year is said to be very dry and sickly.

## Argua.

This explication of the foregoing fable e essists us in the understanding another, which, puerile as it is, has often exercised the greatest poets, and the best painters: I mean the fable of Argus.

Juno, provoked at the conduct of her husband, took from him fair Isis, and having turned her into a heifer, committed her to the vigilance of Argus, who had a hundred eyes, some of which were awake, while the rest slept. But Mercury by his songs Iulled all the eyes of the guardian asleep, and carried off Isis. What can this tale relate to? If Iam not mistaken, the origin of it is this :

Wearing was famous at Athens, in the island Amorgos, and in Colchis, as well as in Egypt.
Isis, the symbol of feasts, when she proclaimed the neomeniæ, and other solemnities of the winter and the spring, was attended by a Horus fit to characterize the kind of work which was to last for six months together. This figure was covered all over with eyes, to mark out the peculiar kind of work which is done by night; and it was because this Horus intimated the necessity of watching to forward the making of cloth, that he was called Argus, which means weavers'

[^35]toork.: The Isis, after having quitted the horns of the wild gost, whereby she denoted the winter, sasumed during the whole spring those of a heifer, because it is properly the passing of the sun, under the sign of the bull, that constitutes in the temperate zone the true beauty of that delightful season. The vernal Isis, the handsome heifer, thus remained several months together under the eyes of Argus, or by the side of the open-eyed Horus, till the latter was removed, and the heifer carried away by Mercury; that is, till the nightly works, spinning and making of cloth, were over, by the rising of the dog-star or Anubis. The people jesting upon these figures, forged tha fable of Isis changed into a heifer, of her guardian Argus, and of the notable exploit of Mercury, who on this account was surnamed Argiphontes, the murderer of Argus. We find in Piarius, that the Egyptians gave also the name of Argus to the peacock that was by the side of Juno or Isis; and in the mythologists, that Juno, after the death of Argua, took the eyes he had about him, and therewith embellished the tail of a bird that was consecrated to her. This peacock placed near Isis, is only an attribute fit to denote the beginning of the nightly works, by an agreaable imitation either of the starry heaven, or rather of a multitude of eyes kept incessantly open. The name of Argus, viz, of weaving, it then went by, is a proof of this, and shows the intention of the ensign.

Cince.
The same Isis, carried into Italy with her several attributes, gave birth to a fable of quite another turn. There she became the sorceress Circe, who with her wand turned men into lions, serpents, birds, swine, and any other figure she was pleased to give them. From what can men imagine stories like this? The mythologists thought she was ar emblem of voluptuousness, that brings men down to the condition of beasts. It wes difficult to say anything more reasonable, when they neglected to inquire into the true origin of these fictions. Circe is ne other than the Egyptian Isis, who sometimes with a measure of the Nile, sometimes with a weaver's beam, a distaff, or a lance, always appeared with some distinction in the public proclamations, She was always accompanied with the figures of Horus and others, that varied from month to month, and often from day to day. She was the principal part of the enigms, to which all the other enigmatic emblems were subordinate. She was everywhere to be met with, and

[^36]had always by her side and under her wand, sometimes a man with a dog's head, sometimes a lion, then a serpent or a tortoise, sometimes a whole child, at another time a child's head upon the body of a se1pent, and successively the enimals of the zodiac, and others, that denoted the return of the different rural works. In a word, she converted all that were near her into several animals. The Isis and her whole attendance was then really a riddle to be found out, an emblem to be explained. But what signifies Circe? Even the wrapper, the enigma (circ, involucrum).
Let us proceed farther. Isis very probably was not called Circe on any other account but that of the circ, or solar circle she commonly wore over her head. That circle was the emblem of the Supreme Being, of whom Isis proclaimed the several feasts. But why was this sun called circ, the enigma? It is because God could not be painted, and a disc was the enigma of God. It was the enigma par excellence, the circ. The place in Italy, to which this Isis with her circle over the hesd was brought and honoured of old, is still called Monte Circello. To proclaim certain feasts or sacrifices, that were celebrated perhaps in the evening, at the rising of the new moon, or in the morning at the rising of some star, or of the planet Venus, when it is admirably splendid, a little before the dawning of Aurora, they put over the head of Isis, instead of the disc of the sun, that of a star, or of the known planet, a crescent, or a full moon. These figures, and the prayers that were sung in the old language at the return of each feast, made them imagine that Circe, by her enchantments, or by some mysterious words, had the power of making the stars and the moon come down upon the earth. It is equally evident, that the several foliages she bore in her hand, or over her head near the figure of the moon or of some other plenet, made the people say that the properties of these plants were admirable ; and that it was from a knowledge of their virtues that Circe was able to make both heaven and earth submit to her power. The Gigure seemed to intimate this, and they believed it. This afterwards became the privilege of common witches; and the people is still persuaded that the sorceresses at their pleasure dispose of heat, cold, hail, and all nature. This figure of Circe, which ignorance from an enigma or popular ensign had converted into a witch that turns men into severel animale, and has the power of displacing the stars, relates very sensioiy to the enigmatic attributes of 1sis, which were a sun, the moon, some stars, certain extraordinary plants, and animals very often of a monstrous kind. The rest of the fable, by its conformity with this interpretation, completes the demonstration of its exactness. Circe, or Inis, was so far really the proclamation of the year, that she put on such clothes and dresses as were agreeable to the four seasons. To announce the beginning of spring, that overspread and enamels the earth with flowert and verdure, she wore carpets of different colours. To denote the beginning of summer, which nourishes us, she bore in her

#### Abstract

hand a basket and a loaf; to proclaim the autumn, she bore a cup; and at the beginning of winter she bore a chafing-dish, or a stove with its foot. These four figures gave birth to the fable mentioned by Homer (Odyss. v. 350), that Circe had four meids, one of which spread the carpets of several colours to receive the guests, the second prepared the table, and put large baskets upon it, the third presented the cups, and the fourth kept up the fire on the hearth.

## Proteus.

Proteus was the sign denoting the exchange of the Egyptian products for flocks, metals, wine, and other commodities which Phenician ships brought into the island of Pharos, the only Egyptian port formerly of safe and easy access. These vessels there took in their provisions of corn, flax, and all the productions of Egypt. The annual retum of those ships to the confines of Egypt, was proclaimed by an Osiris called Neptune. The Egyptians, who hated the sea, did not worship Neptune; but they retained his name, which signifies the arrival of the fleet, and gave it to the borders of Egypt or the seq-coest. This we have from Plutarch. Proteus going to Pharos to supply the marine stceds (the vulgar name for ships or vessels) with everything, can be no other than the sale the Egyptians went to make of their commodities, on the arrival of the Phenician barkg. This is confirmed by the name Proteus, which signifies nothing but the abundance of fruit and the productions of the earth.* From the name Poret or Proteus evidently proceed the French words port and porter, beeause the fruits of the earth were the first object of transportation from one cosst to another. The feigning that Proteus, on his arrival at the port of Pharos, assumed many figures, arose from the variety of the commodities there offiered. for sale by the Egyptians.

## The Syrens.

All Greece and Italy were by degrees filled with colonres and customs originally derived from Egypt or Phenicin; but the ritual, of which Egypt itself had forgotten the meaning so far as to take Osiria and Isis for deities, was infinitely more disflgured among other nations; sad when a single part of the Egyptian religion was anywhere introduced, it grew darker and darker, for want of being connected with the other practices that zerved to compose the whole. The three Isises that proclaimed the feasts during the three months of inundation, being presented to the inhabitants, who seemed to become smphibious by their long dweiling by the water-side, were sometimes half-women

[^37]and half-lizard, or half-women and half-fish. One of them had in her hand an instrument of music rounded at top, and called Sistrum, which was the symbol of the hymns, dances, and of the universal joy that appeared throughout Egypt, when the Nile was of- requisite height. They sung and danced at that time, as is still practised at Cairo, and all over Egypt, on the like occasion. They called the woman that carried the sistrum, the singer of hymins; because her function was to publish the good news, and the hymns of the great feast. This is then the origin of the Syrens on the coast of Naples, whose name signifies to sing hymns. (From — shir hymnus; and from ——ranan, canere.) The figure given to all the three is exactly that of our Isis. The number of the Syren 3 answers to that of the three months of inundation; and the sistrum borne by one of them has, through ignorance, been converted into a looking-glass. As to what is said, that they devoured the strangers that presumed to come too near in order to hear them, this fable is grounded on what was given out, that the three Isises o. the summer were fatal to foreigners, whom the gross and marshy air of Egypt used to carry off, when they exposed themselves too much to it. M. de Maillet, and all travellers, agree that the air of the houses is then suffocating, that no one can bear it, and that everybody has tents on board the boats, to enjoy a little coolness. It is therefore evident, that it was of very great moment to foreigners to avoid the three $\mathbf{S y}$ rens. Let us not leave this matter without observing, that this number of four aymphs for the four seasons, that of three for the moons of each season apart, that of nine for the nine months during which they work in Egypt, their attire, their functions, and names, are things very plain, connected with each other, and equally agreeable both with nature and the monuments. Messieurs Bochart, Huet, le Clerc, and other learned men, have thought upon these several subjects in a very ingenious, and even sometimes very judicious manner. But what they have said of them is destitute of connection. Facts do not favour their opinion; and when they have made a few mythologies accessible by the help of a first key, they cannot lead us any farther without having recourse to a new key, or without wresting the sense of everything. If we use but one single key, and the bare idea of a sign is sufficient to introduce a sense, and some relations between figures so utterly incoherent, is it not becsuse we are indeed srrived at their true original, and have found out the common and general intention from which they sprung?

## The Metamorphoses, and the Phantoms.

After these instances of fables evidently proceeding partly from Egyptian figures and partly from the popular expressions, equivocations, or proverbs occasioned by the sight of these figures; we have acquired a privilege of asserting in general that from the same source, metamorphoses, phantoms, and oracles sprung.

All and every one of the Egyptian figures had been established only to proclaim the feasts and works to come. When they were become so many gods, all these deities had the privilege of foretelling future events; whence it happened, according to Herodotus (In Euterp. num. 32), that Jupiter, Minerva, Apollo, Diana, Mars, and above all Latone, pronounced oracles to the Egyptians. The oracle of Latona became the most notable, because really Latona being originally no other than the Isis, half-woman half-lizard, or the virgin Erigone united to a lizard's body, to mark out the exact height of the increases of the Nile, she was the most consulted of any figure. All eyes were fixed upon this measure. They addressed to Latona every day and every hour. When she was at last made a goddess, the people who consulted her imagined that she knew everything. But we shall treat of this matter upart, as there is nothing in point of which it is so difficult to make men cast off their ancient prejudice, as the predictions of futurity.

The same source from which the oracles sprung, has given birth to phantoms. The gods which men had forged to themselves, being for the most part hideous and monstrous figures, and the apprehension of the evil they were reputed capable of doing, having a greater share in the religion of nations than confidence and the love of justice; men represented to themselves their own deities, and the powers which they dreaded, only under the ideas of figures bristling with serpents, armed with claws or horns, very often with yawning wide-open jaws, and with such an aspect as could not but corrupt the imagination and reason of ohildren. These empty phantoms fostered in them a childish terror, chat lasted as long as their lives.

It is no longer any task to guess at the general origin of metamcrphoses. Egypt is evidently the source of them. A man with a dog, welf, or lion's head; a woman who, instead of feet, has a lizard or a Gsh's tail; a child with the body of a serpent, and other the like figuras iavented to supply the wants we have mentioned, being no longer understood, they imagined as many fables and miraculous changes as there were of these compound figures. This relish for surprising stories became universal in Phenicia, then in Greece, and all the world over. The least equivocation, historical facts abridged, short and proverbial expressions, all in short gave birth to some miraculous transformations.

This would be the proper place to explain the whole series of the metamorphoses, and to recall them severally to their peculiar originals. I even conceive how several of them might be accounted for in a very plain manner. But it is enough for us to know how this odd taste came to take root in Greece and other places. The particular examination of these innumerable extraragancies would become tiresome to my readers; and far from being willing to clog them with a new train of Phenician etymologies, I am really very much afraid of having already tranggressed bounds, though I was indispensably obliged to fel-
low this method. It is with ancient languages as with geometry; they must be made use of when there is necessity ; but it is ridiculous to treat of needless matters, merely for the sake of making a show of erudition and geometrical learning.

## The Genealogy of the Gods.

Though the Egyptians, by introducing great mysteries where there were none, have disfigured history and religion, yet we cannot deny them the glory of good regulations for polity and public order. Whatever was necessary, and must be done in common, was not left to the free-will of private persons, but fixed to a certain time of the year, and proclaimed by public signs.

In the beginning of the spring, or at the return of the first heats, which in Egypt come on in February, they cleansed their goods, houses and stables. Everything in a decayed state being of no use to the Egyptian lands which the Nile sufficiently improved, was consumed by fire.

This general purification was proclaimed by an Isis and a Horus, who had names agreeable to the work of the season. The Horus was called Our ${ }^{*}$ or Ourim, the fire, the fire-brands; and the Isis was called Obs, $\dagger$ or Ops , mould or hoariness. These purifications, which were transmitted from coast to cosst, are still in use all over Europe towards the return of the fair weather in February or March; and the custom of lighting fires in the evening on certain days in the spring for that purpose appointed, is still the amusement of youth in a multitude of cities and villages, where they faithfully observe the old rubric, without knowing the reason of it. Even in Egypt, where the soleran feasts, falling back one day every fourth year, appeared in seasons to which they had no longer any relation, they forgot the motive of the institution of the feast of the fire-brands, but they were always faithful血 the observation of it.

In the evening the inhabitants of Sais began their great feast with an illumination. So soon as the neighbouring towns saw it; they lighted the like fires. Esch did the same one after another, and all Egypt took s part in the feast by a general illumination. (Herodot. in Euterp. n. 50).

The moon of February, besides the visitations of nouses, proclaimed

[^38]two other operations. The one consisted in scouring the cansls and channels of the Nile; and the other, which immediately preceded the harvests, was the decision of law-suits.

The priests, during the year, appeared but seldom in public, except at the times of religious affairs. But they went out in the spring, that is, in February, and met to judge the differences of private persons, that these might afterwards freely go about their respective works.

The scouring of the ditches and canals was proclaimed in the assembly of the neomenia, by an Isis that was called Tite, or Tetis, and by a Horus whose name was Titan, that is, the mud, the raking up of the earth (- tit, canum, lutum."

The assembly of the priests to judge the people was proclaimed by a Horus with a great beard, and a scythe in his hand. He was indifferently called Sudec, Keren, Chiun, and Cheunna, or Saterin; and by an Isis with many breasts, and encompassed with the heads of animals. This Isis was on this occasion called Rhea. The Horus with his great beard denoted the assembly of the ancient men. The scythe in his hand denoted hay-making and the harvest, which immediately followed the assize. They called this figure Sudec or stadic, justus, which means the just; Crone, (——keren, splendour), that is, the glory, the dignity, the majesty; or the crown, that is the circle of the judges; Chiun or Cheunna, which means the assembly of the priests; in short, Soterim, ——oter, juder, soterim or sotrim, judicea and priscipes. Joshua, 1, 10: sometimes erecutores, satellites, or Setrum, which signifies the judges, or the execution of the judgments. $\dagger$

After the decision of the law-suits of private persons,-and while the people were busy about cutting down and threshing the com, the judges continued to hold their sessions, to provide by general regulation for all the exigencies of the state; and it was on account of their being sssembled the rest of the year till the rising of the dog-star in June or July, that the characteristic of the judgments, via. the old man armed with a acythe, remained in his place, till they saw a new Osiris, a new sun, that is, till the new year. We shall see the strange fables to which this particular circumstance gave birth.

They by degrees lost the meaning of these plain figures and names, that were in use at the feasts in which the whole was become an invariable ceremonial. The current or the running writing caused the

[^39]sease of them to be neglected; on the other hand, nothing contributed more to make it forgotten than the custom of not reckoning exactly the sacred year, and of always putting the beginning of it back a whole day every fourth year; so that the feasts and figures relating to the operations of the spring, being placed in autumn or winter, and so of the rest, they no longer understood anything of what this multitude of figures meant. All being taken for so many men and women, whose apotheosis was celebrated, the people assigned to them a genealogy agreesble to the order of their feasts. Osiris and Isis, who began the year, were the two great deities that held the first rank, and from whom they made the secondary gods and goddesses already spoken of, to descend. But from whom shall Osiris snd Isis, that is, Jupiter and his wife, proceed? They, as well as their brothers, Neptune and Pluto, are the children of that venerable old man, who, of all the signs exposed, was what appeared the longest towards the end of the year, and whose place Jupiter afterwards took. According to the primitive order, a new Osiris and a new Isis, or the posted signs of the new year, appeared again in June or July. According to the order of later times, all these figures, it is true, succeeded each other in the same manner, but in seasons and months to which they had no longer any just relation. Thus Sudec, or Cronos, or Saturn, became father of Jupiter and Isis, Saturn, Rhes, Tetis and Titan were their forefathers. The Titens were looked upon as the children of Ur, or Urane, and of Ops. Several genealogists go no farther. Others, as Diodorus, make Urane and Ops the children of Acmon. The Egyptians, in their genealogy, go back even to Vulcan. Now Acmon, the brazier, and Vulcan are but one and the same thing.

Thus all these great personages that have peopled heaven, whom every country flattered themselves with having had for their inhabitants, to whom poets have attributed tragical adventures, and all the accidents of humanity; these great conquerors, the histories of whom our learned men are incessantly sifting, even so far as to penetrate into the political concerns that prompted them to act, prove at last to be, as well as Cancer, Capricorn, the balence, or the sphinx, mere ensigns or public marks and figures posted up to direct the people, and regulate the feasts and public works all the year round.

## Saturn.

Again I find a proof of the same truth in the observations which the fable of Saturn naturally offers to my mind.

Instead of painting him with a scythe, to signify that the sessions of the judges are to be held in the time of harvest and hay-making, we tometimes find him represented with eyes before and behind, (Sunchoniathon in Euseb. prap. Evangel.) some of which are awake, and the others asleep; and with four wings, two of which are spread and two
closed; which marked out the penetration and continuance of the work of the judges, who relieved each other by succesaion night and day, to dispatch the affairs of the people and those of the state, without making any one to linger under prejudicial and destructive delays. A new proof of Saturn's being a judge, or the symbol of justice, whose penetration nothing can escape, is that the poets, and above all, Homer, most commonly calls him the penetrating, the sagacious, the subtle, the quick-sighted Saturn. Agsin it was because Saturn, in its original, signified the execution of the judgments, or the punishment of crimimals, that they usually said, Saturn carried away somebody, and demanded his victim every year. Thence came the opinion they had, that Saturn would be worshipped by the effusion of human blood, and the barberous custom which everywhere spread, making its way from Phenicia into Africa, and theace throughout Europe.

It was because Saturn or Chrone had a necessary relation to the equity of the judgments, that were passed without any respect of persons, that Saturn was said to have reigned with perfect gentleness and integrity. They said farther, that a perpetual spring reigned in bis time, because the sessions of the judges were anciently inseparable from the finest month of the year; such is constantly the month of February in Egypt.

The custom of reckoning 365 days for the year, without intercalating one day at four years' end, by degrees displaced all the feasts, and made people forget that the figures there exposed related to the circumstances of the season.

In imitation of this usage, justice was anciently administered in Europe in the finest of our months, viz. in May. We still find in a multitude of places remains of this custom, in the practice observed by the farmers of the duties and receipts of lords, of setting up branches with their leaves on, or a green arbour before the chief or manorhouse, where the assizes were held formerly, and where executions or criminals were made. But all this preparation is grounded on the circumstance of the season in which justice was administed in remotest antiquity; it was in the finest of our months. The above-mentioned green arbour is still called the May, and the terms of magistrate and majesty seem to be borrowed from the name of the month in which these venerable assemblies were held in Europe.*

We again find a sensible token of the relation Saturn had to the judicial functions of the sacerdotal order, in the disposal of the public treasure and the archives in the temple of Saturn. (Festus et Lil.Greg. Girald. syntagm. 4.) This was an imitation of the method of the

[^40]Egyptians, who anciently put the public treasure and the records of the genealogies of families in the tower or labyrinth under the custody of the priests.

In fine, there is no better proof that people were perfectly ignorant of the sense of the figures mistaken for deified personages, than the notion which the Greeks framed to themselves of Saturn when be wis brought into their country.

The name of Chrone under which he was known to them, very plainly signified the majesty of the judicial assemblies, the crown or circle of the judges. But not knowing what this figure and its intention were, and finding a relation of sound between the name of Chrone and that of Chronos, which among them signified time, they interpreted the whole symbol in that sense. The age of the figure squared with this incomparably well. But what were they to do with the scythe he carries in his hand? Why, he shall use it to cut down everything. Above all, the stones which they msde him to devour in Syria, seemed to distinguish him perfectly well. Time consumes everything, and. preys upon the very stones.

The following judicious remarks, from the Myth. Dict. of W. Howell, B.D., support the hypothesis of Pluche, in regard to the mannerin which names have been appropriated to individual persons that. never had existence.

## Semiramls.

The wonderful actions of Ninus and Semiramis may be read in divers historians, Herodotus, Strabo, Diodorus Siculus, Ctesias, \&c. The accounts are inconsistent and incredible; and indeed what credit can be given to the history of a person, Semiramis, the time of whose life cannot be ascertained within 1535 years? for so great is the difference of the extremes of the following numbers:

According to Syncellus, sbe lived beforn Christ 2177 yeurs, Patavius makes. the term 2060, Helvicui 2248, Eusebius 1984, Mr. Jeckson 1964, ArehbpUsher 1215, Philo Biblius from Seachoniathon 1200, Herodotua aboat 713.

The history of Ninus and Semiramis is in great measure founded upon terms which have been misconstructed; and fictions have been invented in consequence of these mistakes. Under the character of Semiramis we are certainly to understand a people called Semarim, a title assumed by the ancient Babylonians. They were called Semarim from their ensign, which was a dove, expressed Semiramis. It was. used as an object of worship, and esteemed the same as Rhea, the mother of the gods. It wes a common mode of expression to call a tribe-
or a family by the name of its founder; and a nation by the head of the line. People are often spoken of collectively in the singular under such a patronymic. Hence we read in Scripture that Israel abode in tents; that Judah was put to the worst in battle, \&ce. When it was aid that the Ninevite performed any great action, it has been ascribed to a person called Ninus, the supposed founder of Nineveh. But we may be assured, that under the character of Ninus and Ninyas, we are to understand the Ninevites; as by Semiramis is meant a people called Semarim: and the grest actions of these two nations are in the histories of these personages recorded. But writers have rendered the account inconsistent, by limiting what was an historical series on many ages to the life of a single person.

The Ninevites and Semarim did perform all that is attributed to Semiramis and Ninus. They did conquer the Medes, and largely exteaded their dominions. But these events were many ages after the foundation of the two kingdoms.

It is said of this ideal personage, that ohe was exposed among rocks, but delivered and preserved by Simma, a shepherd; and was afterwards married to one Menon : she is likewise said to have constructed the first ship. Now Simma is a personage made out of Sema, or Sapm, the divine token. Menon is the deus Lubus, under which type the Ark was reverenced in many regions ; and as it was the first ship constructed, with which the history of the Dove was closely connected, they have given to Semiramis the merit of building it.

## Sesostris.

The history of this personage has been admitted as credible by the most learned writers and chronologists; though they cannot determine the era of his reign within a thousand years. Notice has been taken under several articles of the supposed conquerors of the earth; and among them of the reputed deities of Egypt, under the name of Osiris, Perseus, \&c. These are supposed, if they ever existed, to have lived in the first ages of the world, when Egypt was in its infant state; and Sesostris is made one of the number. He is by some placed before Orus, and by some after. He is also represented under the different names of Sethos, Sethosis, Sesoothis, Seconthosis, and Sesostris.

Osiris is said to have conquered the whole earth; then Zeus, then Perseus, then Hercules, all nearly of the same degree of antiquity; if we may believe the best mythologists. Myrina comes in for a share of conquest in the time of Orus. After her, Thoules subdues the whole, from the eastern ocean to the great Atlantic ; and as if nothing had been performed before, Sesostris succeeds, and conquers it over again. By comparing the histories of ancient personages together, we may perceive that they bear a manifest similitude to one another,
though they are attributed to different persons. Sesostris was Osiria; the same as Dionysius, Menes, and Noah.

## Origin of Apis and Mnevis.

Nothing could be more convenient or more ingenious than the astronomical language, which immediately characterised each season and the works peculiar to it, by making the governor of the earth enter into the twelve signs of the zodiac, whose names had a just relation to what successively passes upon the earth in the course of a year. Nothing so gross, on the contrary, or so pitiful as the historical sense which the people afterwards annexed to this language; and such is evidently the origin of the ridiculous doctrine of the transmigration of souls, which Pythagoras brought to Italy as a rare discovery.

Generally all the animals of which the stars bear the name, were looked upon with veneration by the Egyptians, ns having been the first retreats of their gods, and as being very possibly appointed for that of their dead parents. People never looked without a religious awe upon those in which they knew Osiris and Isis had resided, such as the ram, the bull, the heifer, the goat, and the lion. Their ancient custom of carrying ceremonially at the feasts of certain seasons, the animal twhose name the house into which the sun entered, went by, disposed the people of certain provinces to honour particularly the animal carried at the feasts that concurred with the conclusion of their harvest.

Chance having produced a calf at Memphis which had some spots nearly in the figure of a circle or crescent, symbols so much reverenced among them, this singularity was taken by them for the characteristic of Osiris and Isis stamped upon the animal which their gods had an affection for: and that this was an apparition of the governor, a visit which the protector of Egypt deigned to make them. This miraculous calf, after having served preferably to any other at the ordinary ceremonial, was lodged in the finest place in Memphis. All his motions were judged prophetical, and the people flocked to him with their offerings. He received the great name of Apis, which means the mighty, the powerful god.

They took great care after his death to replace him with another that had nearly the same spots. When the marks desired were not neat and exsect, they were improved with a pencil.

They even seasonably and after a certain time prevented the indeoency of his death, by leading him in ceremony to a place where they drowned and then interred him very devoutly. This melancholy ceremony was intermixed with torrents of tears, and was emphatically oalled Saropis, or the retreat of Apis (——sur, recedere; - a ar Sor, recestit Apis. Vid. Judic. xri. 20), a name which was efterwards
given to Pluto, the infernal Osiris. After the burial of Apis, his successor was sought for. Thus was this strange devotion perpetuated. A powerful motive contributed greatly to it, viz. it was lucrative.

The inhabitants of Heliopolis, who made a separate dynasty, or a kingdom different from that at Memphis, thought themselves too much in the favour of the sun whose name their capital bore, not to partake of his visits or those of his son. They therefore soon had the sacred ax as well es those of Memphis. They called him Menavis or Mnevis, which is the same thing as Menes the mighty, or the same with Menophis; and in choosing this magnificent name for him, they supposed other qualities and other functions in him no less capable of drawing crowds of people thither.

## Phyton or Typhon.

Osiris being become the common father of the Egyptians, was by degrees looked upon as the principle from which all the good that happened to Egypt sprung ; in like manner, Phyton, when he was become the name of the symbol that signified the havock of waters, was looked upon as an ill-minded spirit, as a principle fond of thwarting, perpetually intent upon crossing and prejudicing them. They made him the principle of all disorder, and charged him with all the physicul evils they could not avoid, and sll the moral evils which they did not care to lay to their own charge. Hence came the doctrine of the two opposite principles, equally powerful, incessantly striving against each other; (Plutarch, de Isid. and Oxir.) and alternately vanquished and victorious. This doctrine, which from the Egyptians was handed down to the Persians, under the names of Oromazes and Arimazes, is altogether different from ours, according to which God, conformably to the adorable views of his providence, employs the ministry of the spirits who have persevered in a spirit of uprightoess, and leaves a certain measure of power to those who are fallen from it.

The aversion of the Egyptians for this Phyton, their imaginary entemy , and according to them incessantly intent upon vexing them, went so far, that they no longer dared to pronounce his name. However, we find it entire in the language of the Hebrews who had dwelt in Egypt, and had contracted the habit of calling by that name the most mischievous of serpents, that is, the esp. (- peteu.) The entire name of Phyton or Python is found again in the most ancient and most celebrated fables of paganism. There we see this terrible monater engaged with the god who enlightens the world, and spreading desolation everywhere.

Nothing has been more celebrated in antiquity than the victory of the sun; nothing more abhorred than Phyton, when, from a painted mouster, he was become a being intent upon doing mischief. The Egyptians, fearing to defile themselves by the bare pronouncing of that
detestable name, retained the letters of it, and converted them into thet of Typhon.*

We have seen how the cross, as well entire as abridged, was the mark of the increase of the Nile, because it was the measure of it. When confined in the hand of Osiris, in the claws of the hawk, or the hand of Horus, it very plainly signified the overflowing of the Nila regulated by the sun, strengthened by the wind, and subject to fixed rales. This cross in their valger writing, as likewise in the ancient 'Hebraic characters, in the Greek, and the Latin alphabet, was the letter Tau.

That the cross or the $T$, suspended by a ring, was taken by the Egyptians for the deliverance from evil, we may assure ourselves by consulting their practices, which are the surest interpretation of the opinion that governed them.

They hung it round the neck of their children, and of their sick people; they applied it to the string orfillets with which they wrapped up their mummies, where we still find it. What can in their ideas signify a T placed near those to whom they wished health and lif, if not the deliverance from the disease and death, which they hoped to obtain by these superstitious practices.

Hence we see how strangely they misapplied those figures, which in their first institution related to the Nile, to husbandry, and to thinge totally foreign to the applications of succeeding times. This very probably is an introductive key wherewith one might strive to explain part of the meaning which the Egyptians of the later times have given to their sacred writing.

This custom of the Egyptians appeared so beneficial and so important, that it was adopted by other nations. The children and the siek most commonly wore a ticket wherein was a T, which they looked upoo as a powerful preservative. In process of time other characters were subsuituted in the room of the letter T, which was at first engraved on this ticket, but of which the other nations understood neither the measing nor the intention. They often put a serpent in it, an Harpocrates, or the object of the devotions in vogue; nay sometimes ridiculoat figures, or even some that were of the utmost indecency. But the name of Amulet (Amolimentum malorum) that was given to this ticket, which signifes the removal of the evil, most naturally represents the intentions of the Egyptians, from whom this practice came.

The above-mentioned practice, we have seen, arose from the instrbment used for measuring the height of the inundation of the Nile, being

[^41]an abridgament of it, and which was consadered the salvation of Egypt. A. like veneration is bestowed upon this figure, that is the cross, by Bomsn Catholics: which, Jibe other customs of the ancients, has probably been adopted by them without understanding its origin, and which they attribute to a different source. A spell, which they no doubt consider more potent, however, is now generally used instead of the cross. This is called gospels, and consists of short passages extracted from the gospels by a priest, which is enclosed in a piece of silk, and tied round the neeks of children, going to bed.

The same superstition prevsils among the Mahometans.
Dr. Hame, in Walpole's memoirs speaking of modern Egypt, says, uThe general ramedy in cases of fever and other kinds of iliness, is a saphie from a priest, which consists of some sentence from the Koran written on a small piece of paper and tied round the patients's neck. This, if the sick man recovers, he carefully preserves by keeping it constantly between his scull-caps, of which he generally wears two or three. Saphies are very commonly used by the Mohammedans, being considered to possess much eflicacy for the body as well as the soul, and occupy the same place in the estimation of the superstitions as did the frontlets of the Jews and the phylacteries of the early Christians." Quoted in Russell's View of Egypt, p. 324, New-York edition.

In regard to the sacred writing of the Egyptians, ${ }^{\text {, }}$ it is not improbable that its characters were originally formed from the figure of the Nilometer, consisting of right angles, and thence considered secred.

## The Egyptian Mysterics.

We must not expect, we are told, that the priests of Isis, orPlutarch, or any other travellers who heard them talk, can be able to give us any information about the true sense and meaning of their symbols. It was a mysterious theology; which they took great care not to divulge. Those who were initiated therein engaged themselves by an oath never to communicate to the people any part of what had been revealed to them. Does not Herodotus often tell us, that he is permitted, upon no aceount whatever, to reveal the names and the honours that were debtined and annexed to certain deities, or what these deities were? The sacret in this point being inviolable, are we to wonder that they have not explained themselves on the grounds which concern us; and can we judge of what they have not revealed?

Let us then see (and this shall be the conclusion of our essay puon the Egyptian religion) what these mysteries so much spoken of were; and, if possible, let us penetrate into these secrets, in spite of the oeilo and bartiers intended to render them inaccessible.

Among the Ancient Egyptian figures, there were some which conld not well be mistaken for celestial gods, and of which it was dimcult to lose the meaning, having, at first, been of infinite use to the people.
6. ~

Such were, for instance, the serpent, the canopus, and the hawk.' We see, therefore, from the interpretation given of them by the grammarian Horapollo, that in the fourth century the Egyptian priests still expressed the life or eternity of their gods by a serpent encompassing them, (Serpentem auream Diis suis circumponent) that they represented the overflowing of the Nile by three pitchers, and denoted the wind by a hawk spreading her wings. Accipiter alis in aere protensis venthan significat.-Ibid. But the people having once forgotten the sense of the sacred uriting, and taken human figures for celestial powers, never gave over inventing histories; and the priests who preserved this writing adapted it to their histories, which render it worthy of contempt, and altogether different from the ancient as to the meaning.

The priests at first retained a part of the primitive explications, Thence comes the mixture of great and little in the Egyptian theology and in the Eleusinian, which was the same. In them, more than anywhere, remained the ancient footsteps of the truths which constituted the principal ground-work of the religion of the patriarchs.

But it would have been dangerous for the Egyptian priest to attempt undeceiving the people and divert them from the pleasing thought that Osiris and Isis were two real personages, and were besides of their country and the protectors of Egypt. This chimera and all the others in appearance were suthorised by the agreement of the monuments with the common phrase. The actions of Osiris and Isis were incessantly mentioned; the people believed what they saw and heard; the perpetual recital of as many historical facts as there were figures and ceremonies exhibited, completed their errors, and rendered them invincible.

If our councils and the most venerable of our bishops have had so much ado to abolish among the people the belief of certain legends unworthy the majesty of our religion, and which were connected with no monument capable of countenancing them, how can we conceive that the Egyptian priests were able to take from a people immersed in ignorance and cupidity the extravagant stories which universal custom offered to their minds on sight of the personages and animals wherewith the places of their assemblies were filled? It is much more notural to think, thet the priests themselves, like the rest, yielded to the persuasion of being under the patronage of their ancestors transported into the stars, and now the moderators of the sun, the moon, and of all nature. The people, in their fanatic enthusiasm, would have torn in pieces any that should have dared to deny the history of Osiris and Isis. Truth was, then, altered and obscured by the very priests. They firat accustomed themselves to these notions because it was dangerous not to comply with them, and afterwards became themselves the most zealous defenders of them. The whole came on by degrees. They first complied with the common language because they could not stem
be torrent; but they studied in private what they could collect of the

Interpretation of the ancient writing. Thus they at once admitted both the popolar storieg and the explications that demolished them: they only took care to require profound secrecy from those whom they would instruct in a more solid manner.

Thus instruction assumed a mysterious and important air, without altering any thing in what the people believed. It only mentioned a more perfect atate, and a kind of knowledge of which none becsme capable till after many trials and efforts which suited not the common sort of men. Thus they avoided exciting the fary of the people.This was already a crying injuatice in those priests to detain truth captive, and to appropriate it exclusively to themselves.

So criminal a disposition could not but occasion a still greater impairing of truth. And really every thing degenerated more and more every day. The probation of the disciples, and the oath of an inviolable secrecy, being very remarkable practices, were perpetuated with great exactness. The ceremonial part easily supports itself in ell religions, and is often embellished rather than diminished, because It is of no importance to the passions, which it never disturbs, and sometimes really indulges. It was not with truth and instraction as with the cercmonial. They were disfigured from age to age, sometimes through the ignorance of the priests, sometimes by their avarice, but principally by their fondness for systematic reveriea, with which the most subtle among them tried to explain the symbolical writing; and of which they were much fonder than of a few plain and over simple truths, which their predecessors were contented to teach them.

Therefore danger and fear first gave birth to the secrecy of the Egyptian instrnctions, and have converted the practices, of the ancient ceremonial of the public religion, into so many mysteries, to the knowledge of which none conld be sdmitted but such as had given proofs of a profound respect for the objects of religion, of a perfection which common men could not attain, and of an unconquerable taciturnity.. But then those who were initiated thought themselves of a class superior to the rest of men, and their condition appeared worthy the envying. The priests being sure of the discretion of their disciples might very well acknowledge to them the grossness of the meaning which the people annexed to these symbols. But their shameful connivance suffered error to get so much ground, that the piety of the initiated themselves sunk into a mere ceremonial; and the small remains of truths, which subsisted amongst so many fabulous stories, remained there stifled as it were, and without any useful effect. The priests themselves out-did the popular superstitions ; and out of custom, and from interested views preserved the preparatory ceremonies, and the religion of silence, that gave the people a high notion of the ministers, snd of their learning.

I have given the literal translation of most of the terms made use of in these mysteries. Neither the Greeks nor the Romans anderstood the mesning of them, because they are Phenician. The very name mystery being also a Phenician word, which signifies a owih, an in-
odlopement, "we are, on this very account, authorized to look out in the Chananean language for the meaning of the other terms made use of in the mysteries. But if the terms used in the Eleusinian feasta shall perfectly concur with the sanse I have ascribed to the piecea that were most in use in the symbolical writing and ceremonies, the result will evidently be, that the figures originally appointed to instruct the people have been converted into so many imaginary gods, and that we have obtained the true original of all these inhabitants of the poetical heaven.

The Ceres of Sicily and Eleusis is no other than the Egyptian Isis, brought into those places by the Phenician merchants, who made themselves rich by transporting the corn of Lower Egypt into the places whither the scarcity of provisions drew them, and generally on the different coasts of the Mediterranean, where they had offices, and establishments. The ceremonial of the rural fessts had in tlfeir hands taken a turn somewhat different. The mother of harvesta there lamented her daughter, instesd of bewailing her husband, as the Egyptian ritual would have it. This excepted, the ground and intention were the same.t
The feasts instituted in honour of Ceres were called Thesmophoria, whose principal parts may be reduced to three, viz., the preparations, the processions, and the autopsia, or the sight of truth.

The preparations, the long enumeration of which may be read in Mearsius, (Gracia Feriata, bad for their object the frugality, chastity, and innocence that were necessary to the worshippers. The processions consisted in the carriage of the sacred baskets, wherein they inclosed a child and a golden serpent, a van, grains, cakes, and all the other symbols of which we have made the enumeration in another place.

If in the feasts of Ceres or Isis, men carried to an extravagant excess the form of the geatures and situations, the scrupulous recitals of the set-forms of prayers, the length of the vigils, outward purity, abstinence, the forbearance of all pleastres, and the shunning all manner of distraction; it is because the whole of religion was redaced to these outward practices. Those who observed them knew neither the motive nor the purport or destination of them. It was no

[^42]longer any but an artificial devotion, or the skeleton of the ancient religion. But any upright unprejudiced mind will easily discern in them the intentions of the first founders, who knew the full value of tule, the beanty of order, and the benefit of recollection.

A long description of all the parifications and-other ceremonies that filled up the first of the nine days of devotion consecrated to Ceres mould have tired out my readers, and is no part of my plan, which chiefly aims at obtaining the origin of these establishments. It will be the same with the long procession formerly made from Athens to Eleusis, and with the several marches peculiar to each of the nine Elays. The Greeks had built the particulars of this minute ceremonial upon the little adventures that composed the wonderful story of the migration of Ceres into their country.

But this my reader is acquainted with. What was carried in the feasts of Ceres at Eleusis, is the same that was carried in the feasts of Isis. Let us, therefore, pass on to the explication of the autopsia, or the manifestation of truth, which was in a manner the last act of this representation, and was the whole purport of the mysteries. After a horrid darkness, lightnings, thunder claps, and an imitation of what is most shocking in nature, the serenity which at last succeeded, discovered four personages magnificently dressed, and whose habits were all mysterious.

The most brilliant of all, and who was especially called the Hicrophant, or the expounder of sacred things, was dressed so as to represent the being that governs the universe. The second was the flambeat' bearer, and had relation to the sun. The third, who was called the adorer, and who kept near an altar, represented the moon. The fourth was called the messenger of the gods, or Mercury, which corresponds to the Egyptian Anubis, with his dog's head and measure of the Nile, accompanied by two serpents, and is nothing but the wholesome advice which the dog-star wisely gives to men, to make off, at the increase of the waters, and thereby secure their subsistence.

Nothing could be better contrived than these magnificent ceremonies whereby the Egyptians incessantly recalled to the minds of the assistants the belief of the first men concerning the judgment of God, and the hopes which are to quiet the minds of the just at the approach of death.

What an indestructible tradition attended with constant practices had been able to preserve of the ancient doctrine, proved at last so *ery opposite to the popular notions, that the priests thought themeelves under the necessity of using much circamspection, and of having recourse not only to the trial of their disciples, but also to the oath of secrecy. The reason of the priests themselves went astray in This labyrinth of obscure signs and mysterious practices. Then came on systems. One looked out among all this apparatus of ceremonies and fables for a complete set of physics.

Another tried to find out a complete body of moral and instructive maxims, under the colour of the most scandalous fables. Others

Imagined nney had found the most profound metaphysica theremNor does the simplicity of the Egyptian appcar by much so shocining as the sublime nonsense of a Platonic, who sees Monades and Triades every where; who, in a figure of Isis exposed in the middle of an assembly of husbandmen, finds the archetype world, the intellectual world, and the sensible world; or who seeks in the feet of a goat the picture of universal nature; or who finds out in the horn of an ox the efficacy of the impressions of his imaginary genii.

Thus the learned, from a habit of diving into matters, and of looking out for extraordinary explications, have perplexed a subject of itself very simple.

A few regular assemblies excepted, in which by public anthority were preserved some footsteps of truth together with some ancient customs, the whole went on from bad to worse, from the liberty of embellishments and interpretations. The gods were multiplied in the popular discourses as much as the symbols, and even in proportion to the different names given one and the same symbol. Oftentimes the minutest equivocations, proceeding from a variety in the prononciation, the diversity of dresses of the same figure, nay, a bare change of place, a trifle added or retrenched, gave birth to a new god.

We may see in Plutarch's treatise, but above all in Eusebins's Evangelical Preparation, the strange variety of adventures and cm ployments which the Africans, the Phenicians, and the Pbrygians attributed to the same gods. The celestial court was not the same in Egypt as in Greece. In Eggpt it wes Osiris that gave light to the world. In Greece Osiris or Jupiter was freed from that care. The eceptre and the thunderbolt were left to him, but the chariot of the day was given to Horus or Apollo, who in his quality of symbol of the rural works bore by way of abbreviation the marks of the situation of the sun, or the characteristic of the season.

Jupiter could neither do everything nor be everywhere. Lientenants were then given him, each with separate districts. Every thing assumed a settled form. The histories of the gods were composed; and by attributing to them what each nation in particular was pleased to pablish on their account; by adding thereto the histories of the ministers of the temples, and those of the kings who had favoured their worship; but chielly by excusing the disorders of women on account of the pretended disguises of these gods possessed with their charms; they formed that monstrous lump of mythology, in which it is no wonder that we find no sense, no coherency, no order of place or time, nor any kind of regard either to reason or good manners. Though the major part of these fabuloús recitals be utterly extravagant, yet as they have made part of the strange theology of our forefathers, men have at all times endeavoured to find out the true origin of them. I have ventured my owu conjectures on the same sabject; because they appeared to me to amount nearly to a certainty, and the whole might be unravelled with no less decency than benefis. It is no longer so with regard to the minute particulars of these extra-
18. The collection of them would be the matter of very Iargo ; and there is indeed no subject npon which it will be mort o set bounds to one's knowledge.
uregoing article has been very much curtailed as it is intended a full account of the ancient myateries from biahop WarDivine Legation of Moses: in which the subject is treated of large, and in some respect evidently with a better ander$g$ of it than the Abbe Pluche poaseased.
orrors exhibited at the commencement of the ceremonydwere 1 to represent the condition of the wicked in another life, and ing scene pourtrayed the abode of the blessed; the miseries of $s$ and the happiness of Elysium were contrasted; and being iced by holy priests, in whom the valgar in barbarous ages mplicit confidence, to be a true picture of what actually takea I a future state ${ }_{i}$ of existence, must have produced a most 11 effect.
scene is imitated in the royal arch degree of masonry, origiith the same view as the archetype; and as in the original es, it forms the last act or degree of ancient masonry. The ttes are kept in the dark by being hoodwinked; thunder and ig are represented by the firing of pistols, rolling camon balls, a the conclusion, the aspirants are brought to light, and preto what is called the grand council, consisting of three per3 denominated high priest, king, and the holy scribe; on whoes ions some hundred dollars are expended, in order duly to prem em to sustain the exalted characters allotted to them. These re the principal persons of the drams. The fourth, and next ity, is styled the captain of the host; "who is siationed at the tand of the grand council, and whose duty is, to receive their and see them duly executed."
bigh priest corresponds with the hierophant of the mysteries, If with the flambeau bearer, the sun, who was deemed the king svernor of the world; the holy scribe with Inis, the adorer, the attribute holy applied to him ; and the captain of the host, nubis Hermes or Mercury, the messenger of the gods. The y of these institutions cannot be mistaken.

## The Auguries.

readerg, ever so little conversant in ancient history, may remember soften seen the Romans, the Sabines, the Hetrurians, the Greeks nny other nstions, very careful in never attempting any important凝ing, without previously consulting the birds, and drawing able or ill consequences, sometimes from the number and lind of rds that traversed the air, sometimes from the quarter whemod egan their flight, and the different course they took. We may
likewise remember, that in order not to be obliged to wait long fors ${ }^{\prime}$ bird which chance may not immediately offer, the priests of the falso deities bad introdnced the custom of the sacred chickens, brought into the middle of the assembly of the people in a cage, for the magistrates gravely to observe their ways and motion. They had reduced into an art, and referred to constant and settled rules, all the consequences to be drawn with regard to faturity, from the seyeral methods in which these whimsical animals let fall or swallowed the food offered to them. Have not the priests of paganism, either out of interested views, or from an infatuation for these chimerical rules, a thousand times spoiled or put a stop to the most important and best concerted undertakings, out of regard to a fowl that had refused her meat? Augustus and many other persons of understanding, have without any fatal consequences despised the chickens and divination. But when the generals in the times of the republic had miscarried in any enterprise, the priest and prople cast the whole blame of it on the heedlessness with which the sacred chickens had been consulted, and more commonly still, on the general's having preferred his own forecast to that of these fowls. Nor can one indeed without some indignation, see these dangerous sillinesses continue in the highest esteem and credit among people full of magnanimity, and the greatest genius seemingly making serions apologles for them.

Tully has handed to us a good saying of Cato, who declared that one of the most surprising things to him was, how one soothsayer conld look another in the face without laughing. 1 do not doubt but this judicions orator, when he was discharging his functions as a priest of the auguries, was always ready to change his countenance whenever he bappened to sce any of his colleagues walking with a grave stately air, and lifting up the augural staff. He was perfectly sensible of the vanity of these practices. Aftet having observed in the second book of divination, that the Romans had never been concerned in a matter of greater consequence than that of the quarrel between Cæsar and Pompey, he freely confesses, that the augurs, aruspices, and oracles, had never been more frequently consulted; but that the answers, whose number was endless, had not been followed by the events they foretold, or else had been succeeded by such as were quite contrary. However, Tully, notwithstanding this confession, which wholly demolished the art of prediction, yetout of politic views defends the practice of it. He preferred leaving thepeople in theirerror, to the risk of provoking them, by endeavouring to free them from a pernicious and criminal superstition.*

Anciently, or at the time of the institution of the symbols, men,

[^43]before sowing, or planting, osed to say ; let us first onnoull the birds. For was there any thing better onderstood, People were satisfied, when they had observed this custom with care. These birds signified the winds, the observation and course of which determined the propriety of rural works. Bat men, in process of time, very envnestly invoked the birds themselves.

The cock commonly placed by the sife of Horus and Anubis or Mercury, very plainly signilled what was to be done in the morning, as the owl marked out the assemblies that were to be held in the evening. Cocks were then made so many new monitors foretelling futurity; and the owl acquired in this matter a talent which many people earnestly contend she is still possessed of. When this bird, which is an enemy to light, happens to shriek as she passes by the windur of a sick person, where she perceives it, you never can beat it out of their head, that this shrieking, is a foreboding of his end.

> Origin and Falsehood of the Sibyls.

Ir is from a sensible abuse in astronomy or of the custom of consulting certain stars, that the oracles of the Sibyls were introduced. Harvest has always been the great object of the desires and attention of all nations. In order therefore to regulate the manuring of their lands, their ploughing, sowing, and the other operations of concern to the bulk of society, men had their eyes fixed on the virgin that bears the ear of com, and which is the mark of the time of harvest. They observed How far the sun was remote from it and on this account they generally ased to consult and have recourse to thevirgin ; a language as reasonable as the practice expressed by it. They at first gave this constellation the name Shibyl Ergone* the reddening sar of corn, because it ia exactly the circumstance for which men wait to begin their harvest, and becanse their crop ripens when the son draws near this collection o? stars.

They afterwards called it sometimes Sibyl, sometimes Erigone. This name Erigone rendered in Greek by that of Erytra, which corresponds to it, and signifies red, gave birth to the Egyptian Sibyl. There was certainly an advantage in consuiting her, and her answers were very just to regulate husbandry so long as she was taken for What she was, that is, for a cluster of stars under which the sun placed himself at the time which brought on harvest, and reddened the ear of corn. And because the Egyptian harvest did not fall under that sign, but under the Ram or the Bull, it is, that Egypt flocked to the oracles of Ammon or of Apis, and had so particular an affection for Isis with the horns of a heifar, the ancient proclamation of their harvest; whereas all the east consulted the Erytrean Sibyl, in order to be asscred

[^44]of a plentiful crop. This language became the matter of fablen. Out mald changed from a sign to a prophetess, had no doubt the most perfect knowledge of futurity, since people came from all parts to ask bee questions. The excessive wickedness of manind at lastobliged herto quit their abodes, to go, and in the hesvens take possession of the plase due to her. Many countries assumed to themselves the honor of having given birth to this sibyl: nor wonld it be a hard matter to find sevea instead of one. All the current predictions, among which eome strokes of the prophecies addressed to the Hebrews, are found, in time passed for the answers of these sibyls.*

The American reader should be aware that the term corn is used in : England as a generic term for all beeds that grow in ears. The French word, here translated corn, is ble. which signifles grain, wheat; ble de Terquie or d' Indie, means maize, Indian corn. Wheat, as it ripens, pdts on a reddish hue; which is not the case with Indian corn, althongh red ears are sometimes found among it. Grain, in English, seems the most proper term, for the genus of the different species.

In masonic lodges, the master is stationed in the east, representiog Osiris the sun; and the senior warden in the west, representing Isis of Virgo, the sign of harvest; his duty is to pay the craft their wagea, which alludea metaphorically to the reward the husbandman receiven in the produce of his labor, when the sun arrives at this sign. Thls is indicated by a painting representing a sheaf of wheat, which is huas back of this officer's chair. The pass word of the fellow-craft, at this station, to entitle bim to pay, is shibboleth, the reddening ear of ehosk. Can any thing more conclusively point out the astronomical cast of free-masonry.

It must have been at a remote period when the Egyptian harvest 00cured, as above stated, during the passage of the sun, either under the sign of the ram or the bull.

Volney, in his travels in Egypt and Syria, observes:
"As the sun approaches the tropic of Capricorn, the winds becomes variable and tempestuous; they most usually blow from the north, the north-west, and west, in which points they continue during the months of December, January, and February, which is the winterseason in Egypt, as well as with us. The vapour of the Mediterranean condensed by the coldness of the atmosphere, descends in mista and rains."

## Conjuration.

I am still to inquire into the origin of an art far moreimportant than all the foregoing. This is necromancy, the art of calling up the spirite

[^45]the deed, and of making them speak, "The reader will not bo discened here to find the key of the occult langagees, and to be acelainted how magicians went about asking questions of hell, and sversing with the devila.
A respect for the human body whicn was believed to be deatined fon setter state to come, and one day to rise from the dust, induced thi st nations to inter the dead in a decent manner, and always to join this melancholy ceremony, wishes and prayers, which were expres us or a profession of their expectation.
Funeral assemblies were the most frequent, because men died every $y$, and these meetings were repeated on every anniversary. They re not only the most common, but also the most regular.
Every thing was simple in the ancient frasts. Men met upon some sh and remarkable place. They made there a small pit, wherein to nsume the entrails of the victims by fire. They made the blood to w into the same pit. Part of the fiesh was presented to the ministers the sacrifice. They boiled the rest of the offering immolated, and $t$ it, sitting near-the fire. By degrees they swerved from this simicity.
What had been approved on some important occasion, afterwards used into custom, and became a law. The number, the characters, Id the histories of the objects which men took for gods, afterwards ve birth to a thousand varieties, which appeared very important rites id neceseary precantions. Whoever ahould have neglected one single int of the ceremonial prescribed, had nothing less than the plague or mine to espprehend. Whenever the gods in thatcase were contented ith only sending a transitory tempest or some furions beast among tem, the fault was reckoned very cheaply atoned for. Each feast havg its proper service and decorations had a peculiar name. It was not us with the foneral assemblies: nothing was changed in them. They are void of joy and decoration, Men went on with practising what ul ever been done. The families in interring their dead, wers customed to a common rubric which was perpetual. It is then in e service of the funerals especially, that we may again find the incipal of the usages of primitive antiquity. At these solemnities ey continued to make a ditch, to pour out wine, oil, honey, milk or some ber liquors in use, to shed the blood of the victims, t to roast their flegh, eat it in common sitring round the pit or hearth, and discoursing of e virtues of him they came to lament. These asemblies continued to ar the name given to all solemn convenings.

[^46]While the other feasts, on account of the diversity of the ceremonicom were called Saturnalis, Dionisisca, Palilia, etc. the funeral aesemblien were simply called the Manes,* that is, the covering or regulation. That the Manes and the dead became two synonymous words, or wenp indifferontly used, one for another. And as the things which gate names to the feasts, were generally become the objects of an extravaganis Worship; the Manes or the doad became likewise the object reverenced in the faneral ceremonies. The strange facility with which the minute parts of the universe were deifled, is a hint to us how the custom wha introduced of directing prayers, vows, and religious worship to the: dead whom they had loved, whose praises were celebrated, and who; were thought to enjoy the most refined knowledge, after they had, together with their body, cast off the frailties of humanity.
The ancient sacrifices were not only eucharistical. In the times when the Most High was as yet worshipped, they werelooked upon as an alliance contracted with him, and whereby they engaged themselves to be faithful to him. I shall here mention neither the reasons nor any instances of it. The former are palpable, and the scripture abounds with the latter.

All nations, when they sacrificed either to the gods they had framed to themselves, or to the dead whose memory was dear to them, thought they entered into an alliance, conversed, and familiarly eat with them. But this familiarity engrossed their thoughts most particularly in the funeral assemblies, in which they were as yet full of the memory of the persons whom they had tenderly loved, and who, as they thought, took always a great part in the concerns of their family and country.

We have heretofore observed, how cupidity and ignorance having rendered all men indifferent as to justice, had led them astray as to the object of their worship, and had afterwards converted every part of it into so many means of being relieved of in their illness, instracted in faturity, and provided all proper means to succeed in all their an' dertakings. Every object in nature spoke to them. The birds in the heaven, the serpents and other animals on the earth, a simple rod in the band of their minister, and all the instruments of religion, were so many oracles and prophetical signs. They read the stars, and the gods spoke or revealed their intentions to them from one end of nature to the other. This covetousness and gross religion, which applied to the gods merely to ask them questions in mattera of interest, was no less inquisitive and thought it had a right to be still better served in the foneral sacrifices than in all the rest. Men in these ceremonies thought theg had to deal with affectionate gods, which, on account of the concern they still had in the prosperity of their family, conld not but inform them in time, of whatever might be of service or detrimental to them. The whole apparatus of the funerals was then again interpreted in

[^47]ame manner, as that of the other feasts, and the whole was cona into so many methods of divination.
e ceremonies of the Manes, though they were but the bare pracof the assemblies of the primitive times, being, in every respect ent from those obseryed in the other feasts, appeared so many ent methods of conversing with the dead, and of obtaining the d information from them. Who then could doubt but it was in familiarly to converse with their ancient friends, that men sat round a pit, into which they had thrown the oil, the flour, and ood of the victim they had killed to their honor? How conld it abted, but that this pit so different from the altars set up and ng towards heaven, was a suitable ceremony, aud peculiarly ging to the dead? The dead evidently took pleasure in these $i_{8}$, -and especially in what was poured into the pit for them. tless:they came to consume the honey and the liquors which veared from thence; and if their friends were contented with offering liquorsonly, no doubt it was because their condition as dend is would not admit of gross foods. Men were then so extratly credulous as to believe that the phantoms came to drink and tnously to relish these liquors, while their relations feasted on the If the sacrifice aronnd the pit. After the repast in common en the dead and the living, came the interrogation, or particular. g up of the sou, for which the sacrifice was appointed, and who , explain her mind. Every body is sensible that an inconvenience led the ceremony, it being to be apprehended that the dead might labout the ditch, to get a share in this effusion which they were so greedy of, and leave nothing for the dear soul, for whom the feast lesigned. This was provided againgt. The relations made two s. In one they threw in wine, honey, water and flour, to amuse snerality of the dead: in the other they poured out the blood of ctim then to be eaten in common by the family. They sat upon ink of the latter, and with their swords near them, they kept off a sight of these instruments, the crowd of dead who had no conin their affairs. They on the contrary invited and called up by ume the deceased, whom they had a mind to cheer and consult. desired him to draw near. The dead seeing that there was there zurity for them, flocked and swarmed round the ditch, the access ich was free, and politely abandoned the other to the privileged who had a right to the offering, and who knew the botiom of the 3 about which she was to be consulted.
e questions made by the living were distinct and easy to be under-- The answers, on the contrary, though very certain, were nei10 quick, nor so easy to be unravelled. But the priests who had toughtin their labyrinth how to understand the voice of the gods the, era of the planets, the language of the birds, the serpents nnd the $3 t$ instruments, casily understood the dead, and became their Interirs. Thoy reduced it into an art, whose most necessary point what best suited the condition of the dead, Fas silence
silence and darkness. They retiral into the deeper caves: they fasted. and lay upon the skins of the sacrificed beasts. When they waked or after a watch, which was fitter to turn their brains than to reveal hidden things to them, they gave for answers the thought or dream Which had mostaffected them. Or they opened certain books appointed for that use: : and the first woords which offered at the opening of them, were precisely those of the prophecy expected: or in short, the priest and sometimes the person himself who came toconsult, took care, at going out of the cave, to listen with attention to the very first words he could possibly hear, from what part noever they proceeded, and they were to him in lieu of an answer. These words for certain had no manner of relation or connexion with the business in hand; but they were turned so many ways, and the sense of them so violently wrested, that they must needs have givenway some small matter. Commonly enough they had ia appearance some relation to it. They mometimes, instead of the foregoing methods, had recourse to what they called sortes, vis: a number of tickets on which there were some words written at random, or some verses already current or newly coined. These tickets being thrown into an arn, they were atirred very well together, and the first ticket that was drawn was gravely given to the distressed family, as the means to make them easy. Methods of divination were multiplied without end. The whole of religion was almost converted into so many methods of knowing faturity. See the dissertation of Vandale upon the heathen oracles. See the history of the oracles. This matter has been sufficiently treated upon by the learned: it would ba needleas to resume it.

It is evident that the practices above mentioned were extremely fit every where to spread this extravagant persuasion, which is still preeerved among the people, that we may converse with the dead, and that they often come to give us advices.

If I can again supply my readers with the proofs of this custom, or rather of this perverse abuse of the funeral ceremonies, I shall, methinks, bave sufficiently shown, that the opiaions of men upon the gods, the dead, and the answers that may be obtained from either of them, are nothing but a literal and gross interpretation made of very plain sigas, and of still plainer ceremonies, whose purport was to express certain trutbs, and to fulfll certain duties.

Because all nations fiocked to high places, there to shed the blood of the victims into a trench, and to converse with a dead person, by Keeping off others by the sight of a sword, it is, that scripture so often, and in so express a manner, forbids the Israclites to assemble upon Aigh places, or, (which was frequently the same thing) to bold their essembly near the blood, or to eat sitting round any pit sprinkled with the blood of the victims. The seventy interpreters knowing per-

[^48]fectly that this was. what drew the people to the high places, having very well translated this passage of Leviticus, xix. 26, and other the The by these words - ye shall not go snd eat upon the mountains. Here to eat is the same thing as to sacrifice.

In concluding my extracts and remarks on the interesting works of the Abbe Pluche, I will take some notice of what he says of the dog days; whioh are continually recorded in Almanacs, when probably meither the authors nor readers, know any tbing of their origin or the propriety or use of their being retained in such registers.

According to our author, the rising of the dog-star was generally eccompanied with what the Egyptians called the Etesian northern wind that continued to blow for about forty days in succession. When this wind failed to occur-at this period, or was; too light to be of use in oansing the swelling of the Nile to a sufficient height, a general sadness of the people ensued. The probability, therefore, is, that while the inhabitants remained idle on the high ground, watching the progress of the inundation, these forty days were pessed very much in fasting and other acts of devotion to gain the favour of their godsin this respect. Indeed the anthor relates a story that prevailed among the Cretians, that corroborates this opinion; which is, that through the displeasure of the gods, this wind was not permitted to blow for a considerable time; "but after repeated sacrifices, the gods at length granted the return of the Etesian wind, and its constant blowing, during the forty days that followed the rising of the dog star, called the dog-days which again brought abundance upon the earth." The people hesays in another place "were warned to observe the dog-days."

Volney remarks that, "about the end of July, during all the month of August, and half of September, the winds in Egypt remain conetantly in the north, snd are moderate ; brisker in the day, bowever, and weaker at night."

The dog-dsys, in calendars oalculated for the United States, are generally noted as coramencing on the 30th of July, and ending on the tenth of September, making forty-two days.

It is highly probable that the Roman Catholic Lent has grown out of this ancient custom inregard to the dog-days; sccommodated however, In respect to the time of its observance, to the circumstances of countries differently situated to that of Egypt. Such an essential change in the

[^49]usual habit of living, is, no doubt, very detrimental to health, and probably causes the premature death of thousands annually. The requirement of abstinence from meat on Fridays and Saturdays, is founded upon the same principle. A'breach of this role of the polition religious church of Rome, is placed in the list of damning sins, in a ritual issued, even under thereign of the Emperor Napoleon, with his signature attached, ordering its observance by ofll Catholics throughout his dominions. Thus the fastings and mortifications originally got up to appease the fickle and vindictive gods of paganism, have, without the least propriety or reason, been incorporated into the systems of some sects of professed Christians.
By this establishment the catholic is required to abstain from eating meat for forty days, except by special indulgence granted by a priest.

Those therefore, to whom it is inconvenient to pay for indulgences, are under the necessity of restricting themselves to fish and vegetable diet during the above term.

I will here observe, that personages which Mr. Pluche declares to be mythological never having had existence, will be considered by other writers, quoted in this work, as real historical persons. Some of his hypotheses in other respects, may also be contrary to the doctrines of authors here cited. I shall generally pass such diacrepancies without comment, learing the reader to form his own opinion.

To Abbe Pluche's account of Egypt, I will add a few extracts from a recent and very valuable work, entitled," A View of Ancient and Modern Egypt, by the Rev. Michael Russell, L. L. D.

## Literature and Science of the Ancient Eyyptians.

' In Egypt the use of the hieroglyph was not entirely superseded by the invention of an alphabet. For many purposes connected with religion, and even with the more solemn occupations of civil life, the emblematical style of composition continued to enjoy a preference ; on a principle similar to that which disposesthe Jew to perform his worship in Hebrew, and the Roman Catholic in Latin. There appears also to have been a mixed language used by the priests, partaking at once of hieroglyphics and of alphabetical characters; which, in allusion to the class of men by whom it was employed, was denominated hieratic. Hence, in process of time, the Egyptians found themselves in possession of three different modes of communication-the hieroglyphic, properly so called, the hieratic, and the demotic or common. This distinction is clearly recognized in the following well-known passage extracted from the works of Clemens Alexandrinus.

Those who are educated among the Egyptians, says be, learn first of all the method of writing called the epistolographic; secondly, the hierstic, which the sacred scribes employ; and, lastly, the most myaterious description, the hieroglyphic, of which there are two linds, -tha one denoting objects, in a direct manner, by means of the initial sounds of words; the other is symbolical. Of the symbolical signs one class
ropresents objects by exhibiting a likeness or pieture; another, by a metaphorical or less complete resemblance; and a third, by means of certsin allegorical enigmas. Thus,-to give an example of the three methods in the symbolicsl divieion, -when they wish to represent an object by the first, they fix upon a distant resemblance; such as a circle, when they want to indicate the sun, and a crescent when their purpose is to denote the moon. The second, or metaphorical, allows a considerable freedom in selecting the emblem, and may be such as only suggests the object by anslogous qualities. For instance, when they reeord the praises of kings in their theological fables, they exhibit them in connection with figurative alluaions which shadow forth their good actions and benign dispositions. In this case the representation is not direct bat metaphorical Of the third method of symbolical writing the following will serve as an example:-They assimilate the oblique course of the planeta to the body of a serpent, but that of the sun to the figare of a acarabmus.

In reference to the knowledge actually acquired of the literature of ancient Egypt by means of the late discoveries in hieroglyphics, we are not entitled to speak in boastful or very confident language. The wasting hand of time, which has rendered its effects visible even on the Pyramids, has entírely destroyed the more perishable materiale to which the sages of Thebes sad the magicians of Memphis may have committed the science of their several generations. We know, too, that the bigotry of ignorance and of superstition accomplished, in many cases, what the fluod of years had permitted to escape; for which reason we must not estimate the extent of acquirement among the wise men of Egypt by the scanty remains of their labours which have been caaually repened from accident and violence. From Diodoras Siculus we receive the information that in the tomb of Osymandias were deposited twenty thoussnd volumes,-a number which is reduced by Manetho to three thousand five hundred and twenty-five,-all of which, on account of their antiquity, or the importance of their subjects, were ascribed to Thoth or Hermes, who, it ie well known, united in his character the intelligence of a divinity with the patriotism of a faithful minister.

Of these works, which unquestionably belong to a very remote antiquity, we have a short sccount supplied by a Christian bishop, Clemens of Alexandria, who appears to have devoted much attention to the learning of the ancient Egyptians. "In that country," he tells us, " every individual cultivates a different branch of philosophy, -an arrangement which applies chiefly to their holy ceremonies. In such processions the singer occupies the first place, carrying in his hands an instrument of music. He is said to be obliged to learn two of the booke of Hermes; one of which contains hymns addressed to the gods, and the other the rules by which a prince ought to govern. Next comes the Horoscopus, holding a clock and the branch of a palm-tree, which are the symbols of atrology. He must be completely master of the four books of Hermes whioh treat of that science. One of these explaing the order of the fixed stars; the second, the motion and phasea of the sun and moon; the other
two determine the times of their periodical rising. Then follows the Hierogrammatist, or acced scribe, with two feathers on his head, and a book and raler in his hand, to which are added the instruments of writing, some ink, and a reed. He must know what are called hieroglyphics, and those branches of science which belong to cosmography, geography, and astronomy, especially the laws of the sun, moon, and five planets; he must be acquainted with the territorial distribution of Egypt, the course of the Nile, the furniture of the temples and of all consecrated places. After these is an officer denominated Stolistes, who bears a square-rule as the emblem of justice, and the cup of libations. His charge includes everything which belongs to the education of youth, as well as to sacrifices, first-fruits, hymns, prayers, religious pomps, festivals, and commemorations; the rules for which are contained in ten books. This functionary is succeeded by ons called the prophet, who diaplays in his bosom a jar or veesel, meant for carrying water,-a aymbol thought to represent the deity, but which, more probably, had a referonce to the sacred charscter of the Nile. He is attended by persons bearing bread cut into alices. The duty of the prophet [as president of the mysteries, sccording to Volney's citation of this passage] made it necessary for him to be perfectly acquainted with the ten books called sacerdotal, and which trest of the laws of the gods, and of the whole discipline of the prieathood. He slso presidea over the distribation of the sacred revenue; that is, the income arising from the performance of pious rites, and dedicated to the support of religious institations. Hence, there are forly-two books of Hermes, the knowledge of which is absolutely necessary; of these, thirty-six, contsining the whole philoeophy of the Egyptians, are carefully studied by the persons we have mentioned; and the remsining six are learned by the Pastophori, or inferior priests, as they belong to anatomy, to nosology, to instruments of surgery, to pharmacy, to the diseases of the eye, and to the maladies of women." (Clemen. Alexandrin. Strom. lib. vi. p. 633.)

This distribution of the sciences does not enable us to determine either the principles on which they were founded or the extent to which they were pursued. We possess a better criterion in the perfection to which the people of Egypt, at a very early period, had carried some of those arts which have a close dependence upon acientific deductions. The prodigies of Thebes could not have been accomplished by a nation ignorant of mathematics and chemistry; nor could the pyramide, the obelisks, and the monolithic temples, which stil! meet the eye of the traveller in almoal every spot between Elephantine and the mouths of the Nile, have been raised without the aid of such mechanical powers as have their origin in the calculations of philosophy.-(See p. 138, Harper's Ed.)

Here we have the archetype of masonic processions, on festival days and other important occasions. I shall hereafter give a detailed account of those which took place in London, on laying the corner stone and on the dedication of Freemasons' Hall. We see here also the original of the equare rule, as a mesonio symbol. It was, in Egypt, an emblem of
jastice, because it was the means by which was ascertained the boundaries of lands that had been obseured or carried away by the inundation. We here moreover recognise the holy or aacred scribe of a royal arch ohapter, with a book snd ruler in his hand. The original book, containing the laws of Egypt relating to sacrifices and other matters appertaining to religion, not having been preserved, masonry anbatitutes for it the Bible, which is opened at the beginning of the gospel of St. John, and with the square and compasses laid thereon, is ceremonislly carried in the processions.

The jar or vessel apoken of, was undoubtedly one of the Cannopi which indicated the different heights of the Nile, and for this reason soquired a sanctity among the people, The three pitchers carried in masonic processions no doubt originally allvded to the Egyptian cannopi.

As to the learning, so much bossted by the craf, and which seems to bo claimed by them as an inheritance from their predecessors, it is to be foared, that it rerasins huried in the tomb of Osymandias. The hymas or odes and songs, as well as prayers are retained in great abundance, and compose an essential part of the masonic ceremonies.

Attributing the suthorship of twenty thousand, or even three thousand Ifve handred and twenty-five volumes, to Thoth or Hermes, is an evidence of his being a fictitious character, and corroborates the opinion of Plucheon she eubject. Jamblichus, however, puts this matter beyond controversy; he says: "Hermes, the god who presides over language, was formerly wery properly considered as common to all priests; and the power who proaddes over the true science concerning the gods is one and the same in the whole of things.

Hence our ancestors dedicated the inventions of their wisdom to this dolly, inscribing all their own worilings with the name of Hermes. (Taylor's trans, p. 17.)

Volney, who, in his Ruins, quotes part of the foregoing extract from Clomens, observes, that Mercury [who is the same as Hermes] is the Jenns of the Romans, the Guianese of the Indians, and it is remarkable that Yanus and Guisnese are synonymous. In short, it appears that these books are the sonree of all that has been transmitted to us by the Greeks and Latins in every science, even in alchymy, necromancy, etc. What is most to be regretted in their loss is that part which related to the principles of medicine and diet, in which the Egyptians appear to have made considerable progress and useful observations.

## Remains of the Ancient Arts in various parts of Europe.

Dendera, which is commonly identified with the ancient Tentyra, presents some very striking examples of that sumptuous architecture which the people of Egypt laviahed upon their places of worship. The gateway in particular whioh leads to the templo of Isis has excited universal admiration. Eech front, as well as the interior, is covered with moulptured hieroglyphics, which are executed with s richness, a precision, elegance of form, and variety of ornament, surpaseing in many respeots
the similar edifices which are found at Thehes and Philoe. The height is forty-two feet, the width thirty-thres feet, and the depth reventeen.
"Advancing along the brick ruins," seys Dr. Richardson, "we came to an elegant gateway or propylon, which is also of sandatone, neatly hewn, and completely covered with sculpture and hieroglyphics remarkably well cat. Immediately over the centre of the door-way is the beantiful Egyptian ornament nsually called the globe, with serpent and wings, emblematical of the glorious bun poised in the airy firmament of heaven, supported and directed in his course by the eternal wisdom of the Deity. The sublime phraseology of Scripture, 'the Sun of Righteousness shall rise with healing on his wings, could not be more emphatically or more accurately represented to the human eye than by this elegant device. The temple itself still retains all its original magnificence. The centaries which have elapsed since the ers of its foundation have scarcely affected it in any important part, and have impressed upon it no greater appearance of age than servea to render it more venerable and impoaing."* To Mr. Hamilton, who had seen innumerable monnments of the same kind throughout the Thebaid, it seemed as if he were now witnessing the highest degree of architectural excellence that had ever been attained on the borders of the Nile. Here were concentrated the united labours of ages, and the laat effort of human art and industry, in that uniform line of construction which had been adopted in the earliest times.

The portico consists of twenty-four columns, in three rows ; each above twenty-two feet in circumference, thirty-two feet high, and covered with hieroglyphics. On the front, Isis is in general the principsl figure to whom offerings are msde. On the architrave sre represented two processions of mes and women bringing to their goddess, and to Osiris, who is sitting behind her, globes encompassed with cows' horns, mitred snakes, lotue flowers, vases, little bosts, graduated staffs, and other instrumenta of their emblematical worship. The interior of the pronsos is adorned with sculptures, most of them preserving part of the paint with which they have been covered. Those on the ceiling are peculiarly rich and varied, all illuatrative of the onion between the astronomical and religious creeds of the sncient Egyptian; yet, though each separate figure is well preserved and perfectly intelligible, we must be more intimately

[^50]zequainted with the real principles of the sciences, ss they were then tanght, before we can undertake to explain the signs in which they were embodied.

The sekos, or interior of the temple, consists of several apartments, all the walls and ceilings of which are in the same way covered with religions and astronomical representations.

The rooms have been lighted by mwall perpendicular holes cut in the colling, and, where it was possible to introduce them, by oblique ones in the sides. But some idea might be formed of the perpetual gloom in which the apartments on the ground-flour of the sekos must have been baried, from the fact, that where no sidelight could be introduced, all they reoeived was communicated from the apartment above; so that notwithotending the clondless sky and the brilliant colours on the walls, We place must have been always well calculated for the mybterions practioes of the religion to which it was conseacrated. On one corner of the roof there was a chapel or temple twenty feet square, consisting of twelve columns, exactly similar in figare and proportions to those of the pronaos. The use to which it may have been applied must probably remsin one of the secrets connected with the nystical and sometimes ernel service in which the priests of Isis were employed.

Towards the eastern end of the roof are two separate sets of apartments, one on the north and the other on the south side of it.

The ceiling of the next room is divided into two compartments by a stgure of Lisis in very high relief. In one of them is the circular zodiac; in the other a variety of bosts with four or five human figares in each; one of whom is in the att of spearing a large egg, while others are etemping with their feet npon the victims of their fury, among which are eeveral human beings. Near this scene a large lion, supported by four dog-headed figures, each carrying a knife, may be regarded as an additionsl type of the sanguinary purposes for which the apartment was nosd. The walls of the third room are covered with the several representations of a person,-first at the point of death lying on a conch; thes stretched out lifeless upon a bier; and finally being embalmed.

The weatern wall of the great temple is particularly interesting for the extreme elgance of the sculpture.

Hers are frequent representations of men who seem prepared for elaughter, or just going to be put to death. On these occasions, one or more appear, with their hands and legs tied to the trunk of a tree, in the sooet painful and diatorted attitudes.

In a amall chapel behind the temple, the cow and the hawk eeem to have been particularly worshipped, sa priests are frequently seen meeling before them, presenting sacrifioes and offerings. In the centre of the ceiling is the same front face of Isis in high relief, illuminated, as it were, by a body of rays isaning from the mouth of the same long Agure, which, in the other temples, sppears to encircle the heavenly bodies. About two hundred yards eastward from this chspel is a propylon of small dimensions, resembling in form that which conducts to the great temple, and, like it, built is a line with the wall which sar-
rounds the sacred enclosure. Among the sculptures on it, which appear of the same style, but less finished than those on the large temple, little more is worthy of notice than the frequent exhibition of human slaughter by men or by lions. Still farther towards the east, there is another propylon, equally well preserved with the reat, about forty feet in height, and twenty feet square at the bsse. Among the sacred figures on this building is an Isis pointing with a reed to a graduated staff held by another figure of the same deity, from which are suspended scales containing water snimals, the whole group being an emblem of her influence over the Nile in regulating its periodical inundations.-Ibid, p. 166.

The sigas of the zodiac portrayed in the centre of the roof of Free-masons'-hall, London, are in sccordance with the astronomical decorations of the ancient temples of Egypt. Celestial and terrestrial globes also compose a part of the masonic emblems.

The author seems not to be aware that the Isis, pointing with a reed to a graduated staff, was directiog the attention of the Egyptians to the nilometer, or measure of the inundation, so important to their wellbeing. This measure, in after times, as before noticed, becames an ensign of office, Mercury's wand, and as such has been adopted by masonry,

The cruelty supposed to be connected with the Egyptisn mode of worship, as indicated by the appearance of persons under torture, the reader will find in the sequel, were nothing more than sham represeatations of the punishments said to be inflicted upon the wicked in another life. The contrast displayed in the death of a virtuous character, carefully embalmed, clearly points out the intention of these representations. The apartments where those awful figures wore portrayed were, no doubt, the first into which candidates for initiation inso the myateries were introduced.

## CHAPTER II.

## ORIGIS, NATURT, ASD OBJECT OF THE ANOIENT MYSTERIES, ABETDGED FBOM DISEOP WABURTON'S DIVINE LEGATION; WITE NOTES AND EEMARES, FOLNTING OUT THEIE IDENTITY WITE FBEEMASONBY, ETG.

Ir is proper to premise that the anthor uniformly refers to the works of the writers which be quotes, and generally gives the parsages in the original language in which they were written. His quotations from the Theid, the Metamorphosis of Epuleins, and some other works, given in the Latin language, are here rendered into English. A few Greek passages in his work are also given in translation, and all Greek terms are put in Roman characters, for the benefit of the general reader.

An abetract of the author's remarks, introductory to his treatise on the Mysteries, is first given, as follows:-

So inseparable, in antiquity, were the ideas of lato-giving and religion, Shat Plutarch, speaking of the preference of atheism to superstition, unposes no other eatablishment of divine worship than what was the work of the legialator. "How much happier would it have been," says he, " for the Carthagenians, had their flrat law-giver been like Critiap ae Diogoras, who believed neither gods nor demons, rather than such an ono as enjoined their public sacrifices to Saturn."

But here it will be necessary to remind the reader of this previons truth, that there never was in any age of the world, from the most early accounts of time to this present hour, any civil-policied nation or people who had a religion, of which the chief foundation and aupport was not the doctrine of a future state of rewards and punishments ; the Jewish people only excepted. This, I presume, our adversarice will not desy. Mr. Bayle, the indulgent foster father of infidelity, confesses it Ia the fullest manner, and with the ntmost ingenvity; "all the religions of the world, whether true or false, turn npon this grand pivol, that there is an invisible fudje, who punishes and rewards, after this life, the actions of men, both of thought and deed. From thence it is supposed. the principal use of religion is derived," and thinks it was the utility of thet doctrine which set the magistrate upon inventing a religion for the tate. "It is the principal motive that incited those who invented it." (Dict. Crit. and Hist. Art. Spinozs Rem. E.)

The Egyptians were the first people who perfected civil policy, and natablished religion: they were the first, too, who deified their kings, lav-givers, and public benefactors. This was a practice invented by them, who, in process of time, tsught the rest of the world their mystery.

The attributes and qualities assigned to their gods always corresponded with the nature and genius of the government. If this was
gentle, beuign, compassionate, and forgiving, goodness and mercy wero most essential to the deity ; but if severe, inexorable, captions, or unequal, the very gods were tyrants, and expiations, atonements, lustratione, and bloody sacrifices composed the system of religions worship.

> Goda partlal, changetal, passionate, unjust, Whose attributes were rage, revenge, and lust, Such as the soula of cowardi might concelve, And formed like tyrants, tyrants would belleve.

The first step the legialator took was to pretend a miksion and revelation from some god, by whose command and direction he had framed the policy he would establish. In a word, there is hardly an old lawgiver on record bat what thus pretended to revelation and the divina assistance.

The universal custom of the ancient world was to make gods and prophets of their first kings and law-givers. Hence it is that Plato makes legislation to bave come from God, and not from man.

Aristotle, in his maxims for setting ap and supporting a tyranny, lays this down for one "to seem extremely attached to the worship of the goda, for that men have no apprehension of injustice ficm such as they take to be religious, and to have a high sense of Providence.* Nor will the people be apt to run into plots and conspiracies against those whom they believe the gods will in turn fight for and support." And here it is worth noting that, anciently, tyrants, as well as law-givers, gave all encouragement to religion, and endeavoured to establish their irregular wills, not by convincing men that there was no just nor nujust in actions, but by persuading them that the privilege of divine right exempted the tyrant from all moral obligation.

Porphyry quotes an express law of Draco's concerning the mode of divine worship. "Let the gods and our own country heroes be publicly worshipped, according to the established rites; when privately, according to every man's abilities, with terms of the greatest regard and reverence; with the first fruits of their labours, and with annual libations." Andocides quotes another of Solon, which provides for the due and regular celebration of the Eleusinian Mysteries. Athenmus does the same. And how considerable a part these were of divine worship, and of what importance to the very essence of religion, we shall see hereafter.

The second step the legislstors took to propagste and establish rellgion, was to make the genersl doctrine of a providence, with which they prefaced and introduced their laws, the great sanction of their institutes.

Thus Zaleuous begins his prefsce: "Every inhabitant, whether of town or country, should first of all be firmly persuaded of the being and existence of the gods ; which belief he will readily be indaced to enter-

[^51]tain when he contemplates the beavens, regards the world, and observes the disposition, order, and harmony of the universe; which can neither be the work of blind chance, nor of man. These gods are to be worshipped as the cause of all the real good we evjoy. Every one, thorefore, should so purify and possess his mind, as to haveit clear of all kinds of evil, being persuaded that God is not honoured by a wicked person, nor acceptably served, like miserable man, with samptuous ceremonies, or taken with costly sacrifices, but with virtue only, and a conatant dioposition to good and just actions."

And much in the same fashion does Charondes introduce his laws.
In imitation of this practice, Plato likewise, and Cicero, both preface their laws with the sanctions of religion. And though these two great men were not, strietly speaking, law-givers in form, yet we are not to suppose that what they wrote in this ecience was like the dreams of the sophista, for the amusement of the idle and carions. They were both well practised in affairs, and deeply conversant in human nature, and they formed their speculative institutes on the plan, and in the spirit and views of ancient legislation, the foundation of Plato's being the Attic Laws, and the foundation of Cicero's the Twelve Tables.

Plato makes it the necessary introduction to his laws, to eatablish the being and providence of the gode by a law against acrilege. And he explains what he means by sacrilege in the following words :- "Either the denial of the being of the gods, or, if that be owned, the denial of their providence over men; or, thirdly, the teaching, that they are flexible, and easy to be cajoled by prayer* and sscrifice." And sfter-wards:-"It is not of small consequence, that what we here reason about the gods, should by all means be made probable, as that they are, and that they are good, and that their concern for justice takes place of ald olher human considerations. For this, in our opinion, seems to be the noblest and best preface that can be made to a body of lawa. In compliancy with this declaration, Cicero's preface to his laws is conceived in the following terms:-"Let our citizens then be first of all firmly permaded of the government and dominion of the gods, that they are the lords and masters of the world; that all thinga are disposed by their power, discretion, and providence; and that the whole race of mankind: is in the highest manner indebted to them; that they are intimately acquainted with overy one's state and condition; that they know what he does, what he thinks, with what disposition of mind, and with what dogree of piety he performs the acts and offices of religion; and that, mocordingly, they make a distinction between good and evil."

And then follow the laws themselves, the first of which is conceived in these words :-" Let those who approach the gode be pure and undefiled; let their offerings be seasoned with piety, and all ostentation of pontp.

[^52]omilted; the god himself will be his own avenger on transgressors. Let the gods, and thoee who were ever reckoned in the namber of celestials, be worshipped; and those, likewise, whom their merits have raised to hesven, such as Hercules, Bacchus, Ahsculspins, Castor, Pollux, and Romulus. And let chapels be erected in honour to those qualities, by whose sid mortals arrive thither, such as reason, virtue, piety, and good faith."-De Legg. lib. ii. c. 8.

## Institution of the Mysteries.

The next step the legislator took was to support and affirm the general doctrine of a providence, which he had delivered in his lawa, by a very circumstantial and popular method of inculeating the belief of a future state of rewards and punishments.
'This was the institation of the mysteries, the most sacred part of pagan religion, and artfully framed to strike deeply and forcibly into the minds and imaginstions of the people.

I propose, therefore, to give a full and distinct account of this whole matter ; and the rather because it is a thing little known or attended to. The ancients who wrote expressly on the mysteries, such as Melanthius, Menander, Hicesius, Sotades, and others, not being come down to us, Bo that the modern writers on this anbject are altogether in the dark -0ncerning their origin and end, not excepting Meursius himself, to whom, however, I am much indebted for abridging my labour in the manch of those pessages of antiquity which make mention of the Eleusinian Mysteries, snd for bringing the grester part of them together under one view--(Elensinia: five de Cereris Eleasinge sacro.)

To avoid ambiguity, it will be proper to explain the term. Each of the pagan gods had, besides the public and open, a secret worship psid unto him, to which none were sdmitted but those who had been selected by preparatery ceremonies, called initiation. This secret worship was termed the Mysteries.

But though every god had, besides his open worship, the secret likawise, yet this latter did not everywhere attend the former, but only there, where he was the patron god, or in principal esteem. Thus, when in consequence of that intercommunity of paganism, which will be explained hereafter, one nation adopted the gods of another, they did not always take in at the same time the secret worship or mysteries of of that god, so, in Rome the public and open worship of Bacchus was in uee long before his mysteries were admittsd. But, on the other hand, again, the worship of the strange god was sometimes introduced only for the sake of his mynteries, as, in the same city, that of Inis and Osiris. Thus stood the case in general; the partionlar exceptions to it will be seen in the sequel of this diseertation.

The first and original mysteries, of which we have any sure account, were those of Isis and Osiria in Egypt, from whence they were derived to the Greeks, under the presidency of various gods, as the institutor thought mont for his purpose. Zoroaster brought them into Persia, Cadmus and Inachus into Greece at large, Orpheus into Thrace, Me-
lampus into Argis, Trophonius into Boeotia, Minos into Crete, Cinyras Into Cyprus, and Erechtheus into Athens. And sa in Egypt they were to Isis and Oeiris, 80 in Asia they were to Mithras, in Samothrace to the mother of the gods, in Boantis to Bacchus, in Cyprus to Venus, in Crete to Jupiter, in Athens to Ceres and Proserpino, in Amphisss to Castor and Pollinx, in Lemnos to Vulcsn, and so to others in other places, the number of which was incredible.

But their end, as well as nature, was the same in all-to teach the doctrine of a future state. In this Origen and Celsus agree, the two most learned writers of their several parties. The first, minding his adversary of the difference between the future life promised by Christianity, and That tsught in paganism, bids him compsre the Christian with what all the sects of philosophy, and all the mysteries among Greeks and Barbarians, taught concerning it; and Celsus, in his turn, endeavouring to show that Chriatianity had no advantage over Pagnnism in the efficacy of stronger sanctions, expresses himself to this parpose:-"But now, sfter all, just as you believe eternal punishmenta, so do the ministers of the sacred rites, snd those who initiate into and preside in the mysteries."

And that nothing very heterodox was taught in the mysteries concerning a future state, I collect from the answer Origon makes to Celsus, who had preferred what was taught in the mysteries of Bacohus on that point, to what the Christian religion revealed concerning it.-Lib, iv. p. 167.

They continued long in religious reverence; some were more famoas and more extensive than others, to which many secidents occurred. The most noted were the Orphio, the Bacchic, the Eleusinisn, the Samothracian, the Cabiric, and the Mithriac.

Earipides makes Bacchus say, in his tragedy of that name, that the Orgies were celebrated by all foreign nations, and that he came to introduce them among the Greeks. And it is not improbable but several barbarous nationa might have learned them from the Egyptians long before they came into Greece. The Druids of Britain who had, as soell as the Brachmans of India, divers of their religious ries from thence, celebrated the Orgies of Bacchus, as we learn from Dyonisius, the African. And Strabo, having quoted Artemidorous for a fabulous story, subjoins, "But what he saye of Ceres and Proserpine is more credible, namely, that there is an island near Britain, where they perform the aame rites to thoue two goddestes as are used in Samothrace." (Strabonis Geor. lib. iv.) But of all the mysteries, those which bore that name, by way of eminence, the Elcusinian, celebrated at Athens in honour of Ceres, were by far the most renowned, and, in process of time, eclipsed, and, as it were, swallowed up the rest, Their neighbours round about very early practised these mysteries to the neglect of their own; in a little time sil Greece and Asia Minor were initiated into them, and at length they spresd over the whole Roman empire, and even beyond the limits of it. "I insist not (asys Tully) on those sacred and angust rites of Eleuris, where, from the remotest regions, men come to be initiated." And we are told in ZZosismus, that "these most holy rites were then so extensive, as to take
in the whole race of mankind." Aristidus calls Eleusis the common temple of the earth. And Pausanias says, the rites performed there as much excelled all other rites, instituted for the promotion of piety, as the gods excelled the heroes.

How this happened is to be accounted for from the nature of the State which gave birth to theee mysteries. Athens was a city, the most devoted to religion of any upon the face of the earth. On this account their poet Sophocles calls it the sacred bvilding of the gode, in allusion to its foundation. Nor was it a less compliment St. Paul intended to pay the Athenians, when he said, "Ye men of Athens, I perceive that In all things ye are too superstitious." (Acts, xvii. 22.) And Josephus tells us, that they were universally esteemed the most religions people of Greece. Hence, in these matters, Athens became the pattern and standard to the rest of the world.

In discoursing, therefore, of the mysteries in general, we shsil be forced to take our ideas of them chiefly from what we find practised in the Eleaginian. Nor need we fear to be mistaken; the end of all being the same, and all having their common original from Egypt.

To begin with the general purpose and dasign of their institution. This will be understood, by showing what they communicated promicouously to all.

To support the dootrine of a providence which, they taught, governed the world, they enforced the belief of a future state of rewards and ponishments by all kinds of methods. But as this did not quite clear up the intricate ways of providence, they added the doctrine of a metempaychosis, or the bellef of a prior state, as we learn from Cicero and Porphyry, the latter of whom informs us, that it was taught in the mysteries of the Persian Mithras. This was an ingenious solution, invented by the Egyptian lawgivera, to remove all doubts concerning the moral attributes of God, and so, consequently to estsblish the belief of his providence from a future state. For the lawgiver knew how preosrions that belief was, while the moral attributes of God remained doubtful and uncertain.

In cultivating the docirine of a fature life, it was taught, that the iniliated would be bappier in that state than all other mortals; that while the souls of the profane, at their leaving the body, stuck fast in mire and filth, and remained in darkness, the souls of the initiated winged their flight directly to the happy islands, and the habitations of the gods. This promise was as necessary for the support of the Mysteries, as the Mysteries were for the support of the doetrine. But now, lest it should be mistaken, that initiation alone, or any other means than a virtucus life, entitled men to this fature happiness, the Mysteries openly proclsimed it as their chief business to reatore the soul to its original purity. "It was the end snd design of initiation, says Plato, to restore the nonl to that state, from whence it fell, as from ita native seat of parfection." They contrived that everything should tend to show the necessity of virtue. as appears from Epictetus. "Thus the mysteries became useful, thus we seize the true spirit of them, whem we begin to
apprehend that every thing therein were instituted by the ancients, for instruction and amendment of life.". Porphyry gives ns some of thoee morsl precepts, which were enforced in the mysteries, as to honour their parents, to offer up fruits to the gods, and to forbear cruelty to animals. In pursuance of this scheme, it wes required in the aspirsnt to the Mysteries, that he shonld be of a clear and unblemished character, and free even from the suspicion of any notorious crime. (Libanius Decl. six.) To come to the truth, he was severely interrogated by the priest or hierophant, impressing him with the same sense of his obligation to conceal nothing, as is now done at the Roman confessional.

As appesrs from the repartee which Plutarch records, in his Laconic Apothegms of Lysander, when he went to be initiated in the Samothracian mysteries, " he was required by the hierophant, to confess every wicked act that he had committed during his whole life."

Why initiation into these mysteries is called, inquiring of the oracles, will be seen afterwards.

Hence it was, that when Nero, sfter the marder of his mother, took a journey into Greece, and had a mind to be present at the celebration of the Elensinian mysteries, the consciousness of his parricide deterred him from attempting it. (Sueton. Vits Neron. cap. 34.) On the same socount, the good Emperor M. Antoninus, when he would purge himself to the world of the death of A vidius Cassius, chose to be initisted into the Eleusinian myateries, it being notorious that none were admitted into them who laboured under the just suspicion of any heinous immorality. This was originally a fundsmental condftion of initiation, observed in common by all the mysteries.

Daring the celebration of the mysteries, they were enjoined the greatest purity, sod highest elevation of mind. "When you sacrifice or pray, says Epictetus in Arrian, go with a prepared purity of mind, and with diapositions so previously disposed, as are required of you when you approach the sncient rites and mysteries." And Proclus tells us that the mysteries and the initiations drew the souls of men from a material, sensual, and merely humsn life, and joined them in communion with the gods. Nor was a lesa degree of purity required of the initiated for their fature conduct. They were obliged by solemn engagements to commence a new lile of strictest piety and virtue; into which they were ontered by a severe course of penance, proper to parge the mind of itanatural defilements. Gregory Nazianzen tells us, " that no one could be initiated into the myateries of Mithras, till he had undergone all sorts of mortifying trials, and had approved himself holy and impassible." The consideration of all this made Tertullian say, that, in the mysteries, "trath herself took on every shape, to oppose and combat truth." (Omnia sdversus veritatem, de ipss veritate constructa esse. Apol. csp. 47.) And Austin, "that the devil hurried sway deluded sonls to their destraction, when he promised to purify them by those ceremonies, called initiations.

The initiated, under this discipline, and with these promises, ware esteemed the only happy men. Aristophanes, who spesks the sense of
the people, makes them exult and triumph after this manner:-"On ne only does the sun dispense his blessings; we only receive pleasure from his beams; we, who are initiated, and perform towards strangers and citizens all acts of piety and justice." And Sophocles, to the same purpose, "Life, ouly is to be had there; all other places are full of misery and evil." "Happy, ssys Euripides, is the man who hath been initiated into the greater mysteries, and leads a life of piety and religion." And the longer any one bad been initiated, the more honourable they deemed him. It was even scandalous not to be initiated, and however virtuous the person otherwise appeared, he became suspicious to the people, as was the case of Socrates, and, in after-times, of Demonax. No wonder, then, if the superior advantages of the initiated, both here and hereafter, should make the myateries universally aspired to. And, indeed, they soon grew as comprehensive in the numbers they embraced, as in the regions and countries to which they extended. Men, women, and children, ran to be initiated. Thus Apuleins describes the state of the mysteries even in his time: "There was an influx of a crowd of those who had been initiated in the sacred rites of the goddess, consisting of men and women of every degree and of every age, resplendent with the pure whileness of linen garmente."

The pagans, we see, seemed to think initiation as necessary as the Christians did baptism. And the custom of initiating children appears, from a passage of Terence, to have been general.

Nay, they had even the same superstition in the administration of it which some Christians had of bsptism, to defer it to the approach of death; so the hosest farmer Trygaus in the Psx of Aristopbanes;
" I mast be initiated before I die."
The occasion of this solicitude, is told us by the scholiast on the Rane of the rame poet. "The Athenians believed, that he who was initiated and inatructed in the mysteries, would obtain divine honours after death; and, therefore, all ran to be initiated. Their fondnesa for it became so great, that at such times as the public treasury was low, the magistrate would have recourse to the mysteries, as a fund to supply the exigences of the state. "Aristogiton, says the commentator on Hesmogenes, in a great scarcity of public money, procured a law, that in Athens, every one should pay a certain sum for his initistion."

Every thing in these rights was mysteriously conducted and under the most solemn obligations to secrecy.* Which, how it could sgree to our representation of the mysteries, as an institution for the use of the people, we shall now endeavour to show.

They were hidden and kept secret for two reasons:-
First-Nothing excites our curiosity like that which retires from our observation, and seems to forbid our search. Of this opinion you will find the learned Syneaius, where he says, "the people will despise what is

[^53]easy and intelligible, and, therefore, they mnst always be provided with something wonderful and mysterious in religion, to hit their taste and stimulate their curiosity." And, again, "the ignorance of the mysteries preserve their veneration ; for which reason they are entrusted to the cover of night."

On these principles the mysteries were framed. They were kept secret, to excite curiosity ; they were celebrated in the night, to impress veneration and religious horror $\dagger$ And they were performed with variety of shows and representations, (of which more hereafter) to fix and perpetuate those impreasions. Hitherto, then, the Mysteries are to be considered as invented not to deter, but to invite the curiosity of the people. But

Secondly-They were kept eecret from a necessity of teaching the initiated some things improper to be communicated to all. The learned Varro, in a fragment of his book of religions, preserved by St. Augustin, tells ua that "there were many truths, which it was inconvenient for the state to be generally known ; and many things, which, though false, if socs expedient the people should believe; and that, therefore, the Greeks shut op their mysteries in the silence of their sacred inclosures."

Now to reconcile this seeming contradiction, of supposing the mysteries to be instituted to invite the people into them, and at the same time to keep them from the people's knowledge, we are to observe, that in the Eleusinian rites there were two mysteries, the great and the less. The end of the less must be referred to what we said of the institutor's intention to invite the people into them; and of the greater, to his intention of keeping some truths from the people's lnowledge. Nor is this said without sufficient warrant; untiquity is very express for this distinction. We are told that the lessec mysteriea were only a kind of preparatory purification for the greater, and might be easily communicated to all. That four years was the usual time of probation for those greater mysteries; in which, as Clemens Alexsndrinus expressly informs us, the secrets were deposited.

However, as it is very certain that both the greater and lesser mys* teries were instituted for the benefit of the state, it follows that the doctines tanght in both were equally for the service of society, only with this difference, some without inconvenience might be taught promiseuously, others could not.

On the whole, the secret in the lesser mysteries was some hidden rikes and shows to be kept from the open view of the people, only to invile their curiosity; and the secret in the greater, some hidden doctrinse to be kept from the people's knowledge for the very contrary purpose. For the thows common both to the greater and lesser mysteries were only designed to engage the attention and raise their devotion.

But it may be worth while to inquire more particularly into the hidden doctrincs of the greater mysteries, for so religiously was the

[^54]secret kept, that the thing seems atill to lie involved in darkness. Wa shall, therefore, prooeed cautiously, and try, from the obscure hints dropped up and down in antiquity.
"Pandere res alts terra et caligine merssa."
Lay open things hidden in the deep earth and in obscurity-
To begin with a passage of Clemens Alexsndrinus. "After theas, (namely, lustrations), are the lesser mysteries, in which is laid the foundations of the hidden doctrines, and preparations for what is to come afterwarde."

But there was one insuperable obstacle to a life of purity aud holiness; the vicious examples of their gods. Ego homuneio boe non facerem? (Could not 1, a sorry fellow, be permitted to do this thing) ${ }^{*}$ was the abeolving formula, whenever anyone was resolved to give a loose to his passions. And the licentions rites, in the open worship of their gode, gave still greater encouragement to these conclusions, Plato, in hie book of laws, forbids drinking to excess; unless, says he, during the feast of Bacchus, and in honour of that god. And Aristotle, in his politics, having blamed all lewd and obscene images and pictures, excepts those of the gods which religion had sanctified.

Now the mysteries professed to exact nothing difficult of the initiated which they would not assist him to perform. It was necessary, then, to remedy this evil; which they did by striking at the root of it. So that, such of the initiated as were judged capable, were made acquainted with the whole delusion. The mystagogue taught them, that Jupiter, Mercury, Bacchus, Venus, Mars, and the whole rabble of licentious deities, were only dead mortals, subject in life to the same passions and infirmities with themselves; but, having been on other accounts benefactors to mankind, grateful posterity had deified them, and, with their virtues, had indiscreetly canonized their vices. $\dagger$ The fabulous gods being thus routed, the supreme cause of all things naturally took their place. Him they were tanght to consider as the creator of the universe, who pervaded all things by his virtue, and governed all by his providence. But here it must be observed, that the discovery of this supreme cause was made consistent with the notion of

[^55]local tutelary deities, beings superior to men, and inferior to God, and by him set over the several parts of his creation. This was an opinion universally holden by antiquity, and never brought into question by any theist. What the aporreta overthrew was the vulgar polytheism, tha worship of dead men. From this time the initiated had the title of Epoptes, by which was meant one that sees things as they are, and woithout disguise; whereas, before he was aslled Mystes, which has a contrary sigaification.

But besides the prevention of vice, the detection of the national gods had another important use, which was to excite men to heroic virtue, by showing them what honours the benefactors of nations had acquired by the free exercize of it. And this, as will be shown hereafter, was the chief reason why princes, statesmen, and leaders of colonies and armies all aspired to be partakers of the greater mysteries.

Thus we see how what was tanght aud required in the lesser mysteries became the foundation of instruction in the greater; the obligation to a good life there made it necessary to remove the errors of vulgar polytheism here, and the doctrine of a providence taught previously in thoee facilitated the reception of the sole cause of all things when finally revesled in these. Such were the truths which Varro, as quoted above, tells us it was expedient for the people to know.* He supposed, indeed, the error of valgar polytheism to be so inveterate, that it was not to be expelled without throwing society into convulsions. But Plato spoke out; he owned it to be "difficalt to find the father and creator of the universe, and, when found, impossible to discover him to sll the world." - (In Timmo.)

Besides, there was another reason why the institutors of the mysterles, who were law givers, should be for keeping this truth a secret. They had had, themselves, the chief hand in the rise of vulgar polytheism. They contrived it for the sake of the state, and to keep the people in swe, under a greater veneration for their laws. This polytheism the poots had depraved, by inventing or recording vicious stories of the gods and heroes, which the lav givera were willing to have stifled. And they were only such stoties that, in their opinion, ss may be seen in Plato, made Polytheism hurtful to the state.

That this accounts for the secret in the greater mysteries is no precarious hypothesis, raised merely on conjecture, I shall now endeavour to show.

First, from the clear evidence of antiqnity, which expressly informs us of theee two particulars. That the errors of polytheism were

cotemporary. The abbe was deceived by Cicero, in whom he appeared to place implicit confidence; but he ahonld have remembered that Cicero had been initisted into the Eleusinan mysteries, and, therefore, no doubt, felt under restraint when speaking of them. Besides, he had four characters to sustain; that of a philooopher, a statemman, a lawyer, and an augur or priest; in the due support of which his popularity was, more or less, involved. A striking instance of the iucompatibility with each other of the first and last mentioned of these characters is exhibited by him, in the passage jast quoted above and that before cited, in which he says," Let the gode, and those who were ever reckoned in the number of the celestiuls, be worshipped; and those likewise, whom their merits have raised to heaven, such as Hercules, Bacchus, Esculapins, Pollux, and Romulus." Here the angur aud the philoeopher are at complete issue. Two sentimente more directly in opposition could not be entertained; and it is sarprising the bishop did not notice their total contrariety.

What hath been said will let us into tho meaning of Plutarch's hint, in the following words of his tract concerning the cessing of oracles. "As to the mysteries, in whose representations the true nature of demons is clearly and accurately held forth, a sacred ailence, to nse an expression of Herodotus, is to be observed."

Thus far in detection of polytheism. With regard to the doctrine of the unity, Clemens Alexsndrinus informs ns, that the Egyptian mystagogues taught it amongst their greater secrets. "The Egyptians," says he, "did not use to revesl their mysteries indiscriminately to all, nor expose their traths concerning their gods to the profane, but to thoce only who were to succeed to the administration of the state; and to such of the priests as were most approved, by their education, learning, and quality."

But, to come to the Grecian mysteries. Chrysippus, as quoted by the author of the Etymol. magnam, apeaks to this parpose. "And Chrysippus eays, that the secret doctrines concerning divine matters aro rightly called Teletai, for that these are the last things the initiated ahould bo informed of; the soul, having gained an able support, and being possessed of her desires (that is, the mistress of herself), can keep silent before the uninitisted snd profane." To the same parpose, Clemens: "The doctrines delivered in the grester mysteries are concerning the universe. Here all instruction ends. Things are seen as they are; and nature, and the things of nature, are given to becomprehended."

Strabo having said that mature dictated to men the institution of the mysteries, as well as the other rites of religion, gives this remarkable resson fur his assertion, "that the secret celebration of the mysteries preserves the majesty due to the divinity, and, at the same time, initales its nalure, which hides itself from our senses."* A plain intimation of

[^57]the nature of the secret. And had there been any ambignity, he presently removes it, where, speaking of the different faculties exercised in the different ritex of religion, he makes philosophy to be the object of the mysteries. Plutarch expressly rays, that the firat cause of all things is communicated to those who approach the temple of Isit with pridence and sanetity. By which words he means, the necessary qualifications for initiation.

We find Galen intimating, not obscurely, that the doctrine of the divine dature was taught in those very myoteries. In his excellent tract Of the use of the parts of the human body, he has these words:- "The study, therefore, of the use of the parts, is not only of service to the mere physician, bat of much greater to him who joins philosophy to the art of healing; and, in order to perfect himself in this mystery, labours to investigate the universal nature. They who iniliate themselves here, whether private men or bodies, will find, in my opinion, nobler iustruction than in the rites either of Eleasis or Samothrace. A clear implication, that to lead men thither was their special business.

But this eeems to have been so well known to the learned in the time of Eusebius, that where this writer takes occasion to observe, that the Hebrews were the only people whose object, in their public and national worship, was the god of the universe, he euits his whole expression, by one continued metapkor, to the usuages of the mysteries. "For the Hebrew people alone," вays he, "was reserved the honour of being initiated into the knowledge of God, the creator of all things, and of beling instructed in the practice of true piety towards him Where, Epopteia, which signifies the inspection of the secret; Theopis, the contemplation of it; and Demiourgos, the creator, the subject of it, are all words appropriated to the secret of the greater mysteries. I am persuaded this learned writer had his ore on some particular passage of ecripture ; probably on the 45th chapter of Isaish, where the prophet, foretelling the conquest of Cyrus, and the exaltation of bis empire, apostrophises the God of Iarael in this manner, "Verily thou art a God chat hidest thyself, 0 God of Larael the Saviour." This was said with great propriety of the creator of all things, the subject of the Aporreta or secret, In all the myateries throughout the Gentile world ; and particularly of those of Mithras, in the country which was the acene of the prophecy. That this is the true sense of this obscure passage, appears from the following words of the same chapter, where God himself addresseth the Jewish people:-"I have not spoken in secret, in a dart place of the earth; I said not unto the seed of Jacob, seek ye me in vain." This was said, to show that he was taught amonget them in a different way from that participation of his nature to a few select Gentiles, in their mysteries; colebrated in secret. and in dark subterraneous places; which not being done in order to give him glory, by promoting his public and general worship, was done in vain.

This naturally leads us to the explanation of those oracles of Apollo, quoted by Eusebius from Porphyry; the sense of which neither those ancient writers, nor our Sir John Marsham seem rightly to have under-
stood. The first is in these words, "The way to the knowledge of the divine nature is extremely rugged, and of dificult ascent. The entrance is sccured by braven gates, opening to the adventurer; and the roads to bo pawsed through, inpossible to be described. These, to the vast benefit of mankind, were first marked out by the Egyptisnas."

The second is as follows :-
"True wisdom was the lot only of the Chaldeans and Hebrews, who worship the governor of the world, the self-existent deity, with pare and holy rites."

Marsham, supposing after Eurebius, that the same thing was apoken of in both the oracles, says, "Certainly there can be no controversy, that, as the religious belief of the Hebrews in One Supreme Being, whes esteemed very correct, the same belief by the Egyptisns was equally eetimable." And again,-"The truth is, Apollo was little consistent with himself; because in the one oracle, the Egyptians are said to be the first; and in the other, the Chaldeans and Hebrews the only people who knew the true Cod." But they are perfectly consistent ; they treat of different things: the first, of the knowoledge of the true God; and the second of his public soorship.

I will only observe, that the frights and terrors to which the initiated were exposed, gave birth to all those metaphorical terme of difficulty and danger so constantly employed by the Greek writers, whenever thoy apeak of the oommunication of the true God.

Thomas Taylor, in a note to his translation of Jamblichus on the mysteries of the Egyptians, Chaldeans, and Assyrians, has rendered the foregoing oracle in verse, agreeable to the original; which he introduces as follows:-

Most historians gire the palm of antiquity to the Egyptians. And Lucian, in lib. De Des, says, "That the Egyptians are said to be the first among men that had a conception of the gode, and a knowledge of secred concerns. They were sho the first that had a knowledge of sacred names." Conformably to this, also, an oracle of A pollo, quoted by Eusebius, says that the Egyptisus were the first that disclosed by infinite actions the path that leads to the gods. The oracle is as follows:-

- "The path by which to delty wa oltmb,
Is arduous, rougk, inembile, sublime;
And the atrong, masty geted, through which we pass
In our Arst course, aro bound with chalus of bras.
Those men the Arat who of Eggptan bleth
Drank the fair water of Niloulo earth,
Disolosed by actlone Infolte this road,
Avd many path to God Pheniclanes showed.
This road the Asoyriana polnted out to view.
And tata the Lydiana and Chaldeana nnew."-p. 295.

Mr. Taylor has substituted Lydians for Hebrews, under a suspicion, as he says, that either Aristobolos, well known for interpolating the writ. ings of the Heathens, or Ensebins, had frandulently inserted the latter-

Means are taken to produce a like terror, as apoken of above, in candidates for royal arch masoary. They are advised that "it will be necessary for them to pass through many trials, and to travel in rough and rugged ways, to prove their fidelity." The gates alluded to in the oracle of Apollo, which secure the entrance to the knowledge of the divine nature, are actually represented in the acenery of this degree. The true rame of the Supreme Being ia affected to be communicated; and in an addrese to him are the following expreseions:- "Teach us, we pray thee, the true reverence of thy great, mighty, and terrible name."

In a German work, by C. L. Reinhold, entitled The Hebren Myateries, or the oldest religious Freemasonry, it is affirmed "that the whole Mosaio religion was an initiation into mysteries, the principal forms and regulations of which were borrowed by Moses from the secrets of the old Egyptians."

Josephus, to the same purpose, says that "that high and sublime knoroledge, which the Gentiles with difficulty attained, in the rare and temporary calebration of their mysteries, was habitually taught to the Jews at all times. So that the body politic seems, as itwere, one great assembly, constantly kept together, for the celebration of some sacred mysteries."

The two great mysterions secrets of the Egyptians, it has been seen, were the existence of one Supreme Being, implying the error of polytheism, and a future state of rewards and panishments for acts committed in this life. The former of which only, it sppesis, was taught to tho Jews. This is likewise communicated to the masons of the royal arch degree, and is the only secret of the order.

It is true it was formerly enjoined apon the Jews to observe certain rites and ceremonies, which were then adapted to their peculiar circumstances, but which, by the coming of Christ, were rendered vain and uselees, and were accordingly abrogated by the new dispensation.* For instance, they were taught that a person became defiled by touching a human corpse, and their priests were absolutely prohibited from doing it. So, at interments of their dead, those who enter the cemetery wash their hands on retiring, bowls of water and napkins being provided for the purpose.

The idea of defilement by touching human dead bodies was slso a pagan doctrine, for which Jamblichus givea the following reasons :-
"It is not lswful to touch human dead bodies when the soul has left them, since a vestige, inage, or representation of divine life, is extinguiahed in the body by death. But it is no longer unholy to touch other dead borlies, because they did not participate of a more divine life.' To other gods, therefore, who are pure from matter, our not touching dead bodies is edapted; but to those gods who preside over animals, and are proximately connected with them, invocation through animals is properly masde."-(Taylor's Trans. p. 275.)

[^58]As to the mystery of obtaining remission of sins, by the performance of certain mystic rites, as is customary with the Jews at this time, on what are called atonement days, the secret is fully known to Roman Catholic priests, and practised upon by them with equal auccess.

In " A brief Examination of the Rev. Mr. Warburton's Divine Legation of Moses," London, 1742, are the following remarks :-
"We have no profame records that can reach, by many hundred years, so high as the ancient atate and constitution of the religion and priestbood of Egypt, in and before the days of Noses. But as the Mosaio constitntion itself was sccommodated to the natural temper and bias of a people perfectly Egyptianised, and who knew nothing but the language, religion, lavs, and customs of Egypt; and as this poople could nevar be brought off from the religion and customs to which they had been paturalised, the history of Moses and the prophets gives one almost as juat and adequate a notion of the religion, priesthood, and worship of Egypt, as if their own history had been handed down to us. Of thio we need no other, or more anthentic, authority than our learned author's own concessions, who hes granted as much in this respect as could have been desired. And though Moses attempted, in his law, to reform the religion of Egypt, with regard to their symbolicsl polytheism, or siderial worship by images, yet this could never be effected; but the gross of the people still continued in the symbolical worship of Egypt, except when restrained from it by force and compalsion under some of their kings. But they immediately fell back again to the same sort of religion and worship, as soon as that restriction and legal persecution were relaxed or taken off."

Thus, I think it appears that the Aporretta, in the greater mysteries, were the detection of the origin of vulgar polytheiam; * and the discovery of the doctrine of the unity.

I will venture to go further, and give the very history repeated, and the very hymn sang, on these occasions, to the initiated; in the first of Which was delivered the true origin and progress of volgar polytheism, and, in the other, the unity of the deity.

For it appears to me that the celebrated fragment of Sanchoniatho, the Phenician, translated by Philo Byblius, and preserved by Eusebius, containing a genealogical account of the first ages, is that history, an is

[^59]int to be read to the initiated, in the celebration of the Egyptian nenician mysteries; the purpose of it being to inform us that opular gods (whose chronicle is there given according to their tions) were only dead men deified.
as this curious and anthentic record (for such we shall find it t only serves to illastrate the subject we are now upon, but will se to support what is said heresfter of the rise, progress, and order several species of ancient idolatry, it may not be improper to give extract of it in this place.
glls us, then, that, " of the first two mortals, Protogonus and ANon :ter of whom was the anthor of seeking and procuring food from rees), were begotten Genos and Genea. These, in the time of roughts, stretched their hands upwards to the sun, whom they :d as a god, and sole ruler of the heavens. From these, after two e generations, came Upsouranios and his brother Onsons. One 3 invented the art of building cottages of reeds and rashes; the be art of making garments of the skins of wild beasts. In their iolent tempests of wind and rain having rabbed the large branches. orest-trees agsinst one another, they took fire, and burnt up the-

Of the bare trunks of trees, they first made vessels to pass the ; they consecrated two pillars to fire and wind, and then uffered sacrifices to them as to gods." And here let it be observed thet rship of the elements and heavenly bodies is traly represented ag$t$ Epecies of idolatry.
er many generations came Chrysor, and he likewise invented hings userul to civil life; for which, after his decesse, he was sped as a god. Then flourished Ourauvs and his eister Ge , who and offered sacrifices to their father Upeistos, when he had been pieces by wild bessts. Afterwards Crooos consecrated Muth, , and was himself consecrated by his subjects." And this is as upresented to be the second species of idolatry-the worship of on.
oes on, and eays that "Ouranos was the inventor of the Bastylia, of animated stones, framed with great art. And that Taantus. allegoric figures, characters, and images of the celestial gods and ts." In which is delivered the third species of idolatry, statue ite worship. For by the animated stones is meant stones cut man shape; brute, unformed stones being, before this invention, sted and adored. As, by Taatus's invention of allegoric figares, uated (what was truly the fact) the origin of brute worship from of hieroglyphics.
is a very short and imperfect extract of the fragment; many ars, to avoid tedionsness, are omitted, which would much suptat we are upon, particularly a minute detail of the principal arts ! for the use of civil life. But what has been selected on this ill afford a good comment to a colebrated paseage of Cicero. in this section on another occasion. As the two important docaught in secret, were the detection of polytheism and the discovery
of the unity, so the two capital doctrines, taught more openly, were the origin of society with the arta of life, and the existence of the soul after death in a atate of reward or punishments.

The fragment explains what Tully meant by men's being drawn by the mysteries from an irrational and savage life, and tamed, as it were, and broken to humanity. It was, we see, by the information given them conceroing the origin of society, and the inventors of the arts of life, and the rewards they received from grateful posterity, for making themselves benefactors to mankind.

The reasons which induce me to think this fragment the very history marrated to the Epoptai, in the celebration of the greater mysteries, are these:-

First, it bears an exact conformity with what the ancients tell os that history contained in general, pamely, an instruction that all the national gods, as well as those majorum, such as Hypsistus, Oranas, and Cronos, as those minorum gentium were only dead men deified; together with a recommendation of the sdyantages of civil life above the state of nature, and an excitement to the most considerable of the initiated (the summatibus viris, as Macrobius calls them) ts procureit. And thees two - ends are served together, in the history of the rise and progress of idolatry as delivered in this fragment.

Again, in order to recommend civil life, and to excite men to promote its advantages, a lively picture is given of his miserable condition, and how obnoxious he was, in that state, to the rage of all the elements, and how imperfectly, while he continued in it, he could, with all his industry, fence against them by food of acorns, by cottages of reeds, and by coats of skins: a matter the mysteriea thought so necessary to bo impressed, that we find, by Diodorus Siculus, there was a scenical reprasentation of this state exhibited in their shows.* And what stronger excitement had heroic minds then to be taught, as they are in this fragment, that public benefits to their fellow-creatures were rewarded with immortality.

My second reason for supposing it to be that very history, is our being told, that Sanchoniatho transeribed the account from secret records, kept in the penetralis of the temples, and written in a sacred sacerdotal character, called the Ammonean, from the place where they were fint deposited; which, as Marsham reasonably supposes, was Ammonno, or Thebes, in Egypt; a kind of writing employed, (as we have shown -elsewhere) by the hierophants of the mysterise.

But, lastly, we are told, that when this genealogical history camo into the hands of a certain son of Thabion, the first hierophant on record amongst the Phenicians, he, after having corrupted it with allegoriea,

[^60]and intermired physical and cosmical affections with historical, that is, made the one significative of the other, delivered it to the prophets of the orgies, and the hierophants of the mysteries, who left it to their saccessors. So that now wo have an express testimony for the fact here advanced, that this was the very history read to the Epoptai in the celebration of the greater mysteries.

But one thing is too remarkable to pass by unobserved; and that is, Sanchoniatho's account of the corruption of this history with allegories and physical affections, by one of his own countrymen; and of its delivery, in that state, to the Egyptians, for Isiris is the same as Osiris, who corrupted it still more. That the pagan mythology was, indeed, thus corrupted, I have shown at large, in several parts of this work; but I believe, not so early as is here pretended; which makes me suspect that Sanchoniatho lived in a later age than his interpreter, Philo, assigns to him. And what confirms me in this suspicion, is that mark of national vanity and partiality, common to after-times, in making the raysteries of his own country original, and conveyed from Phenicis to Egypt. Whereas it is very certain, they came first from Egypt. But of thin, elsewhere. However, let the reader take notice, that the question concerning the antiquity of Sanchoniatho does not at all affect our inference concerning the nature and use of this history.

A criticispa of that very knowing and sagacious writer, father Simon of the Oratory, will show the reader how groundleas the euspicions of loarned men are concerning the genuineness of this fragment. Father Simon imagines that Porphyry forged the history of Sauchoniatho, under the name of a translation by Philo Byblius; and conjectures, his purpose in so doing was to support paganism; by taking from it, its mythology and allegories, which the Chriatian writers perpetually objeated to it. "He would make it appear, to answer the objections that were made on all sidee upon this, that their theology was a pure mythology-they go back to the times which bsd preceded the allegories and the fictions of the escrificers." (Bib. Crit. v. i. p. 140.) But this learned man totally mistakes the caee. The Christians objected to vulgar paganism, that the stories told of their gods were immoral. To this their priests and philosophers replied, that these stories were only mythological allegories, which veiled all the great truths of theology, ethics, and physics. The Christians said, this could not be; for that the tories of the gods had a substantial foundstion in fact, these gods belng only dead men deified, who in life, had like passions and infirmities with others. For the truth of which they appealed to such writers as Senchoniatho, who had given the history both of their mortal and immortsl atations and conditions. How then could so acute an advernary as Porphyry, deeply engaged in this controversy, so far mistake the state of the question, and grounds of his defence, ss to forge a book in support of his cause, which totally overthrew it?

The Rev. James Anderson, D.D. published, in 1723, the first book on masonry with the sanction of the grand lodge of Eagland. The come
mencement of his work bears a strong resemblance to the foregoing fragment. Instead, however, of permitting the first inhabitants of the world to gain knowledge gradually by the sid of experience, he makes them finished artizans from the begitning. This was necessary for his purpose, which was to show the original eetablishment of the freemason society. As his account throws much light upon the early history of man, and the amazing progress of thearts and sciences in the first stages of human existence, and is, moreover, greatly relied apon by masona, I will here give a short abstract of it.
"The Almighty Architect," ssys the Dr, "having created all things according to geometry, last of all formed Adam, and engraved on his hoart the same noble science, which Adam soon discovered by surveying his earthly paradise, and fabricating an arbour as a convenient ahelter from heat, etc. When expelled from his lovely arbour, he resided in the most convenient sbodes of the land of Eden, where he could be best secured from cold, heat, winds, rains,tempests, and wild beasts, till his sons grew up to form a lodge; whom he tanght geomelry and the great use of it in archilecture; without which the children of men must have lived like brutes, in woods, dens, caves, etc. ; or at best in poor huts of mud, or arbours made of branches of trees, etc. * . * Tubal Kain wrought in metals, Jubal elevated music, and Jabal extended his tents.

Adam was succeeded in the grand direction of the eraft by Seth, Enock, Kainan, Mahalaleel, and Jared, whose son Enoch was expert and bright, both in the acience and in the art, and being a prophet, he foretold the destruction of the earth for sin, first hy water, and afterwards by fire. Therefore Enoch erected two large pillars, the one of atone and tho other of brick, whereon he engraved the abridgment of the arts and sciences, principally geometry and mazonry.

At last, when the world's deatruction drew nigh, God commanded Nosh to build the great ark or floating castle, and his three sons amsisted, like a depuly and two wardens. That edifice, though of wood only, was fabricated by geometry as nicely as any stone-building, like trae shipbuilding at this day, a curious and large piecs of architectare, and finished when Noah entered into his six hundredth year; aboard which he and his threessons and their four wives psssed, and having received the cargo of animals by God's direction, they were saved in the ark, while the rest perished in the flood for their immorality and unbelief, And so from these masons, or four grand officers, the whole present race of mankind are descended.

After the flood Noah and his three sons, having preserved the knowledge of the arts and sciences, commonicated it to their growing offspring. And it came to pass, as they journeyed from the Eavt towards the West, they found a plain in the land of Shinar, and dwelt there together, as Noachidar, of sons of Noah, which was the first name of masons, according to some old traditions. When Peleg was born there to Heber, after the flood one hundred and one years, father Noah partitioned the earth, ordering them to disperse and take possession, but from a foar of the consequences of eeparation, they resolved to keep together.

Nimrod, the son of Cush, the eldest son of Ham, wes at the head of those that would not disperse, or, if they must separate, they resolved to transmit their memorial illustrious to all future ages, and so employed th.emselves under grand master Nimrod,* in the large and fertile valo of Shinar, along the banks of the Tygris, in building a stately tower and city, the largest work that ever the world saw, sind soon filled the vale with pplendid edifices. But they over built it, and knew not when to desist till their vanity provoked their Maker to coufound their grand design, by confounding their speech. Hence the city was called Babel, confusion,

Thus they were forced to disperse, about fifty-three years after they began to build, or after the flood one hondred and fifty-four years, wheu the general migration from Shinar commenced. They went off at varions times, and travelled North, Sonth, East, and West, with their mighty skill, and found the good use of it in settling their colonies.

But Nimrod went forth no farther than into the land of Assyria, and founded the first grest empire at his capital Nineveh, where he long reigned. Under him flourished many learned mathematicians, whose unccessors were long afterwards called Chaldees and Magians, and though meny of them turned image-worshippers, yet even that idolatry occasloned an improvement in the arts of designing, for Ninus, king of Nineveh or Aksyria, ordered his best artista to frame the statue of Baal, that wes worshipped in a gorgeous temple.

This history of Dr. Anderson is the only authority that masonry can produce to substantiate the extraordinary antiquity which it claims. The specimen I have given of it is sufficient for the reader to form an opinion of its authencity, as well as its resemblance to the fragment of Senchonistho. Nimrod, Bel, Basl, and Belus are supposed by mythologists to be the aame person. We will tarn to Warburton.

We now come to the hymn celebrating the unity of the godhead, which was sung in the Eleusian mysteries by the hierophant, habited like the Creator. $\dagger$ And this I tako to be the little orphic poem quoted by Clemens Alexandrinus and Eusebius, which begins thus:-"I will declare a secret to the Initated, but let the doors be shut against the profane. But thon, O Musmus, the offspring of bright Selene, attend carefully to my song, for I shall deliver the truth without diaguise. Suffer not therefore, thy former prejudices to debar thee of that happy life which the knowledge of these sublime traths will procure unto thee, but carefully contemplate this divine oracle, and preserve it in purity of mind and heart. Go on, in the right way, and see the sole governor of the world i $\ddagger$ he is one, and of himself alone, and to that one all things owo

[^61]their being. He operates throngh all, was never seen by mortal eyes, but does himself see every one."

The reasons which support my conjecture are these:-1. We learn from the scholiast on Aristophanes and others, that hymns were sung in the mysteries. 2. Orpheus, as we have said, first brought the mysteries from Egypt into Thrace, and even religion itself; hence it was called Thresceia, as being supposed the invention of the Thracian. 8. The verses, which go under the name of Orphens, aro, at least, more ancient than Plato and Herodotus, though since interpolated. It was the common opinion that they were genuine, and those who doubted of that yet gave them to the earliest Pythagoreans. (Laertius in Vita Pythag. and Suidas.) 4. The subject of them are the mysteries, under the seversl titles of Thronismoi metrooi teletai ieros, logos and eis ado Katabasi. 5. Paussnies tells us, that Orpheus's hymns were sung in the rites of Ceres, in preference to Homer's, though more elegant, for the reasons given above. 6. This hymn is sddressed to Mussens, his discipie, who was ssid, though falsely, to institute the mysteries at Athens, as his master had done in Thrace, and begins with the formuls used by the mystagogue on that occssion, warning the profane to keep at distance, and in the fourth line mentions that new life or regeneration, to which the initiated were tanght to aspire. 7. No other original, than the singing the hymns of Orpheas in the Elensinian mysteries, can be well imagined of that popular opinion, mentioned by Theodoret, that Orpheus instituted those mysteries, when the Athenians had such certain records of another founder. 8. We sre told that one article of the Athenians' charge against Diagoras for revealing the myataries, was his making the Orphio speech, or hymn, the subject of his common conversation. 9. But lastly, the account which Clemens gives of this hymb, seems to put the matter out of question. His words are these:-"But the Thracisn mystagogue, who was at the same time a poet, Orpheus, the son of Oeager, after he hed opened the mysteries, and sung the whole theology of idols, recants all he had said, and introduceth truth. The sacreds then truly begin, though late, and thus he enters upon the matter." To understand the force of this passage we are to know that the mystagogue explained the representations in the mysteries, where, ss we learn from Apuleius, the supernal and infermal gods passed in review. To each of these they sung a hymn, which Clemens calls the theology of inages, or idols. These are yet to be seen amongst the works ascribed to Orpheus. When all this was over then came the Aporetta, delivered in the hymn in question. And, after that, the essembly was dismissed, with these two barbarous words, kogz omphax, which shows the mysteries not to have been originally Greek. The learned Mr. Le Clerc well observes, that this zeems to be only an ill pronunciation of kots and omphels, which, he tells us, signify in the Phenician tongue, watch and abstain from evil.*

[^62]Thus the reader sees the end and use both of the greater and less mystories, and that, as well in what they hid as what they divulged, all aimed at the benefit of the state. To this end they were to draw in as masy as they could to their genersl participation, which they did by epreading abroad the doctrine of a providence, and a future state, atid how mach happier the initiated would be, and what superior felicities they were entitled to in another life. It was on this account that antiquity is so full and express in this part. But then they were to make those they had got in as virtoous as they could, which they provided for by discovering, to such as were capable of the secret, the whole delusion of polytheism. Now this being supposed the shaking foundations, was to be done with all poesible circumspection, and under the most tremendous seal of secrecy. (See cap. xx. of Meursins' Eleusinis.) For they taught, the gods themselves punished the reveslers of the secret, and not them only, but the hearers of it too. (Apul. Met. lib. xi.) Nor did they altogether trust to that neither, for, more effectually to carb an nugovernable curiosity, the state decreed capital punishments against the betrayers of the mysteries, and inflicted them with merciless severity. (Si quia arcanae mysteria Cereris sac̀ra vulgasset, lege morti addicebstur.)

The case of Diagoras, the Melian, is too remarkable to be omitted. This man had revealed the Orphio and Elnsinian mysteries; and so pessed with the people for an atheist; which at once confirms what hath been said of the object of the secret doctrines, and of the mischief that would attend an indiscreet communication of them. He likervise, dissuaded his friends from being initiated into these rites; the consequence of which was, that the city of Athens proscribed him, and set a price upon his head. While Socrates, who preached up the latter part of this doctrine (and was likewise a reputed atheist), and Epicurus, who tanght the former (and was a real one) were suffered, because they delivered their opinions only as points of philonophic speculation, amongat their followers, to live a long time unmolested. And this, perhaps, was the reason why Socrates declined being initiated.* Which, as it appeared a singular affectation, exposed him to much censure. But it was foreborne with his usual prudence. He remembered that Eschylus, on a mere imagination of his having given a hint in his ecenes of something in the mysteries, had like to have been torn in pieces on the stage by the people, and only escaped by an appeal to the areopagus; which venerable conrt acquitted him of that dsngerous imputation, on his proving that he had never been initiated. The famous Euhemerus, who assumed the same office of hierophant to the people at large, with more boldness than Socrates, and more temperance than Epicurus, employed another expedient to screen him-

[^63]self from the laws, though he fell, and perhaps deservedly, under the same imputation of atheism. He gave a fabulous relation of a voyage to the imaginary island of Panchas, a kind of ancient Utopia; where, in a temple of Jupiter, he found a genealogical record, which discovered to him the births and deaths of the greater gods; and, in short, everything that the hierophant revealed to the initiated on this subject. Thus he too avoided the suspicion of a betrayer of the mysteries.

This, therefore, is the reason why so little is to be met with concerning the Aporreta. Varro and Cicero, the two most inquisitive persons in antiquity, affording but a glimmering light. The first giving us a short acconat of the cause ouly of the secreb, without mentioning the doctrine; and the other, a hint of the doctrine, without mentioning the cause.

But now a remarkable exception to all we have been saying concerning the secrecy of the myateries, obtrudes itself upon us, in the case of the Cretans; who, as Diodoras Siculus assures us, celebrated their mysteries openly, and taught their sporrets without reserve. His words are these: "At Cnossus in Crete, it was provided for, by an ancient law, that these mysteriee should be shown openly to all; and that those things, which in other places were delivered in secret, should be hid from none who were desirous of knowing them." But, as contrary as this searns to the principles delivered sbore, it will be found, on attentive reflection, altogether to confirm them. We have shown, that the great secret was the deteotion of polytheism; which was done by teaching the original of the gods; their birth from mortals; and their advancement to diviue honour, for benefits done to their country, or mankind. But it is to be observed, that the Cretans proclaimed this to all the world, by ahowing, and boasting of the tomb of Jupiter himself, the Father of gods and men. How then could they tell that es a eecret in their mysteries, whiah they told to everyone out of them? Nor is it less remarksble that the Cretans themselves, as Diodorus, in the same place, tells u8, gave this very circumstance of their celebratIng the myateries openly as a proof of their being the first who had consecrated dead mortals. "These are the old stories which the Cretans tell of their gods, who, they pretend to say, were born amongst them. And they urge this as an invincible reason to prove that the adoration, the worship, and the mysteries of these gods were first dorived from Crete to the reat of the world, for, whereas, amongst the Athenians, those most illustrious mystories of all, called the Elcusinian, those of Samothrace, and those of the Ciconians in Thrace, of Orphens's institution, are all celebrated in secret; yet in Crete"-and so on as above. For it seems the Cretans were prond of their invention, and used this method to proclaim and perpetuate the notice of it. So when Pythagoras, as Porphyry informs ns, had been initiated into the Cretian mysteries, and had continued in the Idean cave three times nine days, they wrote this epigram on the tomb of Jupiter, Zan, twhom men call Jupiler, liex here deceased.

It was this which so much exasperated the other Grecians against them, and gave birth to the common proverb of Kretes asi pseystai, the Cretans are eternal liars. For nothing could more affront these superstitious idolatera than asserting the fact, or more diaplease the politic protectors of the mysteries, than the divalging it.

The mysteries then being of to great service to the atate, we shall not be aurprised to hear the wisest of the ancients speaking highly in their commendation; and their best lawgivers and reformers providing carefully for their eupport. "Ceres (says Isocrates) hath mada the $\Delta$ thenians two presents of the greatest consequence: corn, which brought us out of a state of brutality; and the mysteries, which teach the initiated to entertain the most agreeable expectations tonching death and eternity." And Plato introduceth Socrates speaking after this manner: "In my opinion, those who established the mysteries, whoever they were, were well skilled in human nature. For in these rites it was of old signifed to the aspirant, that those who died without being initiated, atuck fast in mire and filth; but that he who was puriged and initisted, at his death should have his habitation 'with the Gods.'" And Tully thought them of such use to eociety, for preserving, and propagating the doctrine of a future state of rewards and punishments, that in the law where he forbids nocturnal sacrifices offered by women, be makes an expresg exception for the Mysteries of Ceres, as well as for the escrifices to the good goddess.

Aristides ssid, the welfare of Greece was secured by the Eleusinian mysteries alone! Indeed, the Greeks seemed to place thoir chief happiness in them. So Euripides makey Hercules say, "I was blest when I got a sight of the mysteries;" and it was a proverbial speech, when any one thought himself in the highest degree happy, to say, I seem as if I had been initiated in the higher mysteries.

But now, such is the fate of human things, these mysteries, venerable as they were in their first institution, did, it must be owned, in course of time, degenerate; and those very provisions made by the State to enable the mysteries to obtain the end of their establishment became the very means of defeating it. For we can nssign no burer cause of the horrid abuses and corruptions of the mysteries (besides time, which natarally end fatally depraves and vitistes all things) than the season in which they were represonted, snd the profound silence in which they were buried. For night gave opportunity to wicked men to attempt evil actions, and aecrecy, encouragement to repeat them; and the invioIable nature of that secrecy, which encouraged abuses, kept them from the magistrate's knowledge mo long, till it was too late to reform them. In a word, we mnst own that theme mysteries, so powerful in their first institation for the promotion of virtue and knowledge, became in time horribly subservient to the gratification of lust and revenge. (Wisdom of Sol. xiv. 23, 24.) Nor will this appear at all strange, sfter what thath been said sbove. A like corruption, from the same cause, crept even into the charch, during the purest ages of it. The primitive Christians, in imitation, perhaps, of these pagan rites, or from the same kind
of spirit, bad a custom of celebrating vigils in the night, which, at first, were performed with all becoming sanctity; but, in a little time, they were so overrun with abuses, that it was necessary to abolish them.

And the same remedy, Cicero tells us, Diagoudus, the Theban, was forced to apply to the disorders of the mysteries.

However, this was not the only, though the most powerful canse of the depravation of the mysteries. Another, doubtless, was their being sometimes under the patronage of those deities who were supposed to inspire and preside over sensual passions-such 28 Bacchus, Venas, and Cupid-for these had all their mysteries; and where was the wonder, If the initiated should be sometimes inclined to give a loore to vices, in which the patron god was supposed to delight? And, in this case, the bidden doctrine came too late to put a stop to the disorder. However, it is remarkable, and confirms what hath been said concerning the origin of the mysteries, and of their being invented to perpetuate the doctrine of a foture state, that the doctrine continued to be taught even in the most debauched celebrations of the myateriea of Cupid and Bacchus. Nay, even that very flagitious part of the mysterious rites when at worst, the carrying the kleis and phallos, in procession, was introduced but under pretence of their being emblems of the mystical regeneration and new life, into which the initiated had engaged themselves to enter.

The last cause to which one may ascribe their corruption was the Hierophant's withdrawing the mysteries from the care and inspection of the civil magistrate, whose original institution they were. But, in aftertimes, it would happen that a little priest, who had borne an inferior share in these rites, would leave his society and country, and set up for himself, and in a clandestine manner, without the allowance or knowledge of the magistrate, institute and celebrate the mysteries in private conventicles. From rites so managed, it is easy to believe many enormities would arise. This was the original of those horrid impieties committed in the mysteries of Bacchos at Rome, of which the historian Livy has given so circumstantial an account; for, in the beginning of his story, he tells us the mischief was occasioned by one of these priests bringing the mysteries into Etruria on his own head, uncommissioned by his superiors in Greece, from whom he learnt them; and nosuthorised by the State into which he had introduced them. The words of Livy show that the mysteries were, in their own nature, a very different affair, and invented for the improvement of knowledge and virtue. "A Greek of mean extraction," says he, "a little priest and soothsayer, came first into Etruria, without any skill or wisdom in mysterious ritea, many eorts of which, that most improve people have brought in amongst na , for the cultare and perfection both of mind and body."

What Livy means by the cultare of the body will be seen hereafler, when we come to speak of the probationary and toilsome trials undergone by those aspirants to the myateries, called the soldiers of Mithras.

However, it is very true that in Greece itself the mysteries became abominably abused; a proof of which we have oven in the conduct of their contic writers, who frequently lay the scene of their subject-such as
the rape of a young girl, and the like-at the celebration of a religious mystery ; and from that mystery denominate the comedy. And, in the time of Cicero, the terms mysteries and abominations were almost synonymous. The Academic having said they had secrets and mysteries, Lucullus replies, "Qum funt tandem ista musteriag ant our celatis, quasi turpe aliquid, veatram sententiam?" What, after all, are theso mysteriea 9 or why conceal your purpose, as if it included soruething base. However, in spite of sll occasions and opportunities, some of the mysteries, as particularly the Eleusinian, continued for many ages pure and undefiled. The two capital corruptions of the mysteries were magic and inspurities. Yet, so late as the age of Apollonius Tyan, the Eleusinian kept 80 clear of the first imputation, that the hierophant refused to initiate that impostor, because he was a magician. And, indeed, their long continued immunity, both from one and the other corruption, will not appear extraordinary, if we consider that, by a law of Solon, the Senate was always to meet the day after the celebration of these mysteries, to see that nothing had been done amiss during the performance. (Andoc. Orat.) So that these were the very last that submitted to the common fate of all human institutionh.

And here the fathers will hardly escape the censure of those who will not allow high provocation to be an excuse for an unfair representation of an adversary. They will hardly escape censure for accustoming themselves to speak of the mysteries as gross impieties and immoralities, in their sery original.* Clemens Alexandrinus, in a heat of zeal, breaks out, "Let him be accursed, who first infected the world with these impostures, whether it was Dardanus - or - \&c. These I make no scruple to call wicked authors of impious fables; the fathers of an execrable superstition, who, by this institution, sowed in human life the seods of vice and corruption." But the wisest and best of the pagan world invariably hold that the masteries were instituted pure, and proposed the noblest end by the worthiest means.

The truth of the matter was this: the fathers bore a secret grudge to the mysteries for their injurinus treatment of Christianity on its first appearance in the world. We are to observe that atheiem, by which whs meant a contempt of the gods, was reckoned, in the mysteries amongst the greatest crimes. So in the aixth book of the Eneid (of which more hereafter), the hottest seats in Tartarus are allotted to the atheist-such as Seimoneus, Tityus, and the Titans, \&c. Now, the

[^64]Christians, for their contempt of the national gode, were, on their first appearance, deemed atheists by the people; and so branded by the mystagogue, as we find in Lucian, and exposed amongt the rest in Tartarus, in their solemn shows and repreventations. This may be gathered from a remarkable passage in Origen, where Celsus thus addresses his advereary:-
"Butnow, as you, good man, believe eternal punishments, even so do the interpreters of these holy mysteries, the mystagogues and initistors. You threaten others with them; these, on the contrary, threaten you."

This, without doubt, was what sharpened the fathers agaibst the mysteries; and they were notalways tender in loading what they did not approve. But here comes in the strange part of the story-that, after this, they should so studiously and formally transfer the terms, phrases, rites, ceremonies, and discipline of these odious mysteries, into. our holy religion, and thereby very early vitiate and deprave what a pagan writer (Marcellinus) could see and acknowledge to be absolnta et simplex (perfect and pure) as it came out of the hands of its author. Sure, then, it was some more than ordinary veneration the people had for these mysteries, that could incline the fathers of the church to so fatal a counsel. However, the thing is notorious, and the effects have been severely felt.

The reader will not bo displeased to find here an exact account of this whole matter, extracted from a very curious dissertation of a great and unexceptionable writer, Is. Cassubon, in his sixteenth Exer. on the Annals of Baronius,-[Bishop W. has given the remarks of Casaubon in the original Latin, of which the following is a translation]:-
"When the fathers found it to be an easier way of bripging over minds corrupted by superstition to the love of the truth, they first adopted many terms used in their rites; and after thus treating of several heads of the true doctrines, they iurther adopted some of their ceremoniea; that they might seem to be saying, as Psul said to the Gentiles,-' Whom ye ignorantly worship the same do I declare unto you!' Thence it came that the fathers called the sacraments by the same names as were used to describe the (pagan) myateries, as mueseis, teletas, teleiosei, epopteias, or epopseias, telesteria, and sometimes, but more rarely, orgies. The Eachariot they emphatically denominsted the mystery of mysteries: and also, by antonomy, the mystery, or in the plaral, the mysteries. And you may everywhere read in the writings of the fathers, when treating of the holy communion. the words phrieta, mysteria, or aporreton, mysterion, referring to those that were to be divalged and those that were not. So the Greek verb myesthai in the ancient writing is often employed to signify the becoming a partaker of the Lord's Supper; and the term myesin for the act itself, and mystes for the priest, who is also called mystagogon and hierotelestes. In the Greek liturgies and elsowhere hiera telete, and eryphia kai epiphobos telete (the hidden and ewful myatery) means the Eucharist.
"And as certain degrees were used in the pagan rites, 0 in like manner Dlonysias divides the whole tradition of the sacraments into three acts,
distinguished by their seasons and ceremonies. The first was Catharsis, the purgation, or purification, the second the myestis or initiation, and the third, teleosis or the consummation, which they also frequently called epopsian, or the revered. Tully had before affirmed that the Athenian mysteries brought to the dying better hopes. On their part, the fathers maintained, that the mysteries of Christ breught certain aalvation and eternal life to those who worthily partook of them; and that for those who contemned them there was no salvation; and they did not ecruple to say that the end and ultimate fruit of the sacraments was deification, when they knew that the anthors of those vain superstitions had dared to promise the same honour to their initiates. And, therefore, you may read in the fathere that the end of the holy mystagogies was deification, and that those who faithfully received them should in the life to come be gods. Athanasias has used the verb theopoiesthai (to deity) in the same sense, and subsequeutly confirmed it by saying, 'that by partaking of the spirit we are united to the God-head.' Of the symbols of the eacraments by which those ceremonies are celebrated, it is not here the place to treat; but that which is called a symbol of faith is various in its kinds, and they serve as tokens or tests by which the faithful may recognizs each other. And we show that the bame were used in the pagan mysteries. The formula pronounced by the deacons, 'Depart hence all ye catachumens, all ye possessed and uninitiated,' corresponds with the 'procul este profani' of the pagans. Many rites of the pagans wete performed in the night, and Guadentius has the expression 'splendidissima sox vigiliarum.' the brightest night of the vigils. And as to what we have said of the silence observed by the pagans in their secret devotions, the ancient Christians so far approved, that they exceeded all their mysteries in that observance. And as Seneca has observed, the most holy of the sacred rites were only known to the initiated; and Jamblichus on the philosophy of the Pythagoreans has distinguished between the aporreta which could not be carried abroad, and the exphora, which might; so the ancient Christians distinguished their whole doctrines into those which might be divalged to all (the exphora) and the aporreta, or arcana, which were not rashly to be disclosed. Their dogmas, says Basiliue, they kept secret, their preaching was puhlic. And Cbrisostom, treating of those who were baptized for the dead, sayb, 'I verily desire to relate the matter fully, but I dare not be particular, because of the uninitiated.' They uake a difficalty for us in the interpretation, and oblige us either to speak without precision, or else to disclose what they should not be informed of; and as the pagans used the terms exorcheisthai ta mysteria, touching those who divalged the mysteries, so Dionysius says, 'See that you do not disclose, nor slightly reverence the mysteries, and everywhere in Aujustinus, you will read of the sacrament known to the faithful.' And thus (in Johannem, tract xvi.) 'all the catachumens already believe in Christ, but Christ does not trust them;' and if we ahould ask one of them whether he eat the flesh of the Son of man, he would not understand what we meant; and again, "The catachumens are ignorant of what the Christians receive." Let them blush that theyare iguorant."

We have observed above, that the fathers gave very easy credit to what was reported of the abominatione in the nysteries; and the easier, perhaps, on account of the secrecy with which they were celebrated. The asme affectation of secrecy in the Christian rites, and the same language in speaking of them, withont donbt procured as easy credit to those calumnies of murder and incest, charged upon them by the pagana. Nay, what is still more remarksble, those very epecific enormities in which their own myateries were then known to offend, they objected to in the Christians.
"A catachumen is a candidate for baptism, or a person who prepares himself for receiving it. Towards the end of the first century, Christians were divided into two orders, distinguished by the dames of believers and calachumens. The latter, as contra-distinguished from the former, were such as had not yet been dedicated to God and Christ by baptiam, and were, therefore, admitted neither to the public prayers, nor to the holy communion, nor to the ecclesiastical assemblies. As they were not allowed to assist at the celebration of the eucharist, the dcacon dismissed them, after sermon, with this formula, proclaimed threo times, "Tle catachumeni missa est."-(Rees.) "Missa is derived from mitto, to send. Missa has been used for missio. Ite missa est or missio est. You may all return home,"-(Bsiley.)
"Quod norunt fideles, what the faithful know. These words, or, as expressed in Greek, isasin oi pemuemenoi, forms what masy be called the watchword of the secret, and occar constantly in the fathers. Thus St. Chrysostom, for instance,-in whose writings Casaubon remarked the recorrence of this phrase at least fifty times, in speaking of the tongue (comment in Psalm 153), rays, ${ }^{1}$ Reflect that this is the member with which we receive the tremendous sacrifice-the faithful know what I speak of.' Hardly less frequent is the occurrence of the same phrase in St. Augustin, who seldom ventures to intimate the eucharist in any other way than by the words Quod norunt fideles."-(Travels in search of I Peligion, Phils. ed. p. 82.)

This precantion needs no apology when referring to religious rites, which if exposed, would subject its votaries to punishment. "It was," says the same writer, "in the third century, when the followers of Christ were most severely tried by the fires of persecution, that the discipline of secrecy, with respect to this (the Eucharist) and the other mysteries, was most strictly observed." "A faithful concealment (says 'Tertullian, is due to all mysteries from the very nature and constitution of them. How much more must it be due to such mysteries as, if they were once discnvered, could not escape immediate punishment from the hands of man."-(Ibid, p. 78.)

The persecuted, when they obtained the majority, became the persecutors, and the Druids of England were under the same necessity of concealing their dogmas and rites as the Christians formerly hed been. But what excuse have the masons of the present day for making a mystery of the same rites when not in danger of persecution?

There can be no pretext for retaining a secret, when the causo that
gave it birth no longer exists. Besides, the masons do not profoss the doctrines of paganism, they merely repeat the ceremonies, parrot-liko, without any regard to or knowledge of the original intention.

That the mysteriea were invented, established, and supported by lawgivers, may be seen.

From the place of their original; which was Egypt. This Herod. otus, Diodorus, and Plutarch, who collect from ancient testimonies, expressly affirm; and in this all antiquity concurs; the Elusinian myeterizs, particularly, retaining the very Egyptian gods in whose honour they were celebrated; Ceres and Triptolemus being only two other names for Isis and Osiris.*

Hence it is, that the universal nature, or the first cause, the object of all the mysteries, yet disguised under diverse names, speaking of herself in Apuleius, concludes the enumeration of her various mystic rites, in these words-' The Egyptians, akilled in ancient learning, worshipping me by ceremonies perfoctly appropriate, call me by my truename, queen Tris."

But the similitude between the rites practised, and the doctrines tanght in the Grecian and Egyptian mysteries, would be slone suffcient to point up to their originsl: such as the secrecy required of the initiated; which, ss we shall see hereafter, peculigrly characterised the Egyptian teaching; such as the doctrines taught of a metemsychosis, and a future state of rewards and punishments, which the Greek writers agree to have been first set abroach by the Egyptiansi† such ss abstinence enjoined from domestic fowl, fish, and beans (see Porphyrius De Abetin.) the peculiar superstition of the Egyptians ; buch as the Ritual composed in hieroglyphics, an invention of the Egyptians. But it would be endless to reokon up all the particulars in which the Egyptian and Grecian mysteries agree; it shall suffice to say, that they were in all things the same.

Again; nothing bat the supposition of this common original to all the Grecian mysteries can clear up and reconcile the disputer which arose mongst the Grecian stales and cities concerning the first rise of the mysteries ; every one claiming to be original to the rest. Thus Thrace protended that they came first from thence; Crete contested the honour with those barbarians; and Athens claimed it from both. And at that time, when they had forgotten the true original, it was impossible to settle and adjust their differences; for each could prove that he did not borrow from others; and, at the same time, seeing a

[^65]It is now submitted to the reader whether it be not fairly proved that the mysteries were invented by the legislator to affirm and establish the general doatrine of a providence, by inculcating the belief of a future state of rewards and punishments. Indeed, if we may believe a certain ancient, who appears to have been well verged in these matters, they gained their end, by clearing up all doubts concerning the righteous government of the gods. (Sopater in Divis. Quest.)

It seems of very little importance to determine whether the mysteriea were the invention of civil legislators, or of the sacerdotal order. And, in fact, in Egypt, where they were firet estsblished, the priesthood and the legislators formed but ove body. This was also the case in Britain, where the Druids performed the offices of priests, and were at the same time the makers of the laws.

Tytler, in his Elements of general History, in the chapter on Egypt, says, "The fanctions of the sovereign were partly civil, and partly religious. The king had the chief regulation of all that regarded the gods, and the priests, considered as his deputies, filled all the offices of state. They were both the legistators and the civil Jndges, they impoeed and levied the taxea, and regulated weights and measurea."

The title of Basileus (king) given to one of the officers in the celebrstions of the mysteries, who is decorated with a crown, has donbtless caused the supposition that this character was the representative of civil temporsl power. Whereas the crown wes originally the ensign of divinity. "In the remotest antiquity the crown wes only given to gode." Leo, the Egyptian, sayb, it was Isis who first wore s crown, and that it congisted of ears of corn [grain] the use whereof she first taught men.
"In this most authors agree, that the crown originally was rather a religious than a civil ornament; rather one of the pontificalis than the nregalia; tbat it only became common to kinge, as the ancient kinge wero prieata as wall as princes, and that the modern princes are entitled to it in their ecclesiastical capacity rather than their tomporal."- (Rees's Cyeh.)

The author cites no authority for his assertion that, "A magistrate, entitied Basileus, or king, presided in the Eleusinian mysteries." Bat, the says, "Lysias informs us that this hing was to offer up the publio prayers, according to their country rites, and to see that nothing impious or immoral crept into the celebration."

Lysias, it appears, was noticed by Cicero as an orstor of some repnte, but he is little known as an suthor, and he seems, in this case, to have indulged hia fancy in one of bis popular orations, without possessing an absolute knorledge of the trath of his declaration, for there is no evidence of his having been initiated into the mysteries. He was, no doubt, deceived by the title given to one of the officers in these celebrations, which was very likely to be generally known.

Besides, the bichop has shown above that, "By a law of Solon, the Senate was always to meet the day after the celebration of these mysteries, to see that nothing had been done amiss daring the performance." Now, if there were a magistrate appointed by the king, bearing his titlo,
siding in theso celebrations as his representative, what need sere be for the meeting of the senate for the purpose here stated. lichus, who, by-the-by, was a Pagan priest, and appears to be aly vereed in the metaphysical science of the gods, has clearly d who this Basileus of the mysteries was. In speaking of the eme, he says, " prior to truly existing beings and total princire is one god, prior to the first god and king, immoveable, and n the solitede of his own unity. Who is father of hiraself, gotten, is father alone, and is truly good."-(See Taylor's 801.)
riginal of that part of the passage particularly alluded to is i ton proton Theon kai Basileus, which Gale properly translates, im primo Deo, et rege [sole.] That is, prior to the first god ,the san. For it is well known that the sun was the first object ion among all the ancient nations, and he was styled the king or of the world.
lapreme God, alluded to by Jamblichus, was called in Egypt, f whom Plutarch ssys, "The unbegotton Kneph was celebrated "xtraordinary degree of veneration by the Egyptian Thebans," arther proof of the erroneous opinion formed by our author on ct, an appeal may be made to the practice of royal arch masonry, leem conclusive in this and similar cases. Here the hierophank riest is the presiding offioer, and the kiag holds the second rank, des only in the absence of the former. And the idea that this an ever the representative of an earthly monarch was never sd by mneons. No civil power har ever exercised any authority dga, and although some of the royal family of England, and thar coontries have become members of the fraternity, they ilse other men, on the ground of perfect equality. In short, the plod king, personates Usiris, the sun, one of the divinities celethe mysteries, the second person in the pagan trinity. vethy of remark, and perhaps here is the most proper place to that masonry conforms to the practice of the Egyptians, in pro-- alaves a participation of its mystic rites. It excludes also all o possess any bodily defect. That a benevolent society, as tho nstitution is, should make a misfortune of this kind the canse ig admisxion to its social and friendly communion, admita of no ou; no mason can give a plausible reason for it.
1 outrage againat humanity. Any one who, in fighting the liberty and his country, should have lost a leg or an arm in ict, wonld in vain apply for admission into this society. Every a sworn not to be present at the initiation of a person thus situe is bound down with the adsmantine chains of precedent which perverted the plainest principles of justice and common sense. t believe there is a single mason who would not wish to getrid le, but the fraternity entertain a religions horror against defaoald land marks."-The oaths, therefore, engeadered in days of and euperatition, most remain the same to the end of time.

Thin circumatance alone is a strong proof of the origin of the order. The practice arises from a atupid adherence to the religious customs and observances of the ancient Egyptians. The mysteries, it has been seen, were deemed a sacred institution, and the most rigid investigation of character, and the severest trials were imposed upon the aspirants to its benefits. "No person," says De Pauw (in his Phil. Diss. on the Egypt and Chinese), "who was born with any remarkable bodily imperfection, could be consecrated in Egypt, and the very animals, when deformed, where never used either for Bacrifice or in symbolical worship."

The Levites among the Jews were auhjected to the same rigid disci pline; mo one that had the least bodily blemish could be admitted into the sacerdotal order.
"As to the admittance of the Levites into the ministry, birth alone did not give it to them; they were likewise obliged to receive a bort of consecration. Take the Levites from among the children of Isrsel, ssys God to Moses, and cleanse them. And thus shalt thon do unto them, to cleanse them; sprinkle water of purifying upon them, and let them shave all their flesh, and let them wash their clothes, snd so make themselvesclean. Then let them take a young bullock, etc, (Numbers, viii.v.6.)

Nor was any Levite permitted to exercise his functions till after ho had served a sort of novitiate for five yeara, in which he carefully learned all that related to his ministry.
"From considering their order, we proceed to consider the manner in which the priests were chosen, and the defects which excluded them from the priesthood. Among the defects of body, which rendered them unworthy of the sacerdotal functions, the Jews reckon up fifty which are common to men and other animals, and ninety which are peculiar to men alone. The priest whose birth was polluted with say profaneness, was clothed in black, and sent without the verge of the priests' court, but he who was chosen by the judges appointed for that purpose, was clothed in white, sad joined himself to the other priests. And I know not whether St. John does not allude to this custom when he says, "He that overcometh, the same shall be clothed in white raiment; and I will not blot his name out of the book of life." (Rev. iii. v. 5.) They whose birth was pure, but who had some defect of body, lived in thoes appartments of the temple wherein the stores of wood were kept, and were obliged to aplit, and prepare it for geeping up the fire of the altar." (Rev. Adam Clarke's Hist. Anc. 1sraelites. Burlington Edit.-p. 273,279.)

There is a remarkable similarity in the institutions of the Egyptians, Jews and Freemasons. The probation of four years was reqnired after initiation into the lesser mysteries, before the candidate could be admitted to a participation of the greater. An entered apprentice in tho lodge of Freemasons had formerly to serve seven years in that grade before he could be advanced. This extra time, however, arose from the necessity of adapting the rules of the order to the cralt of masonry; it being the usual period required for apprentices in that and other meohanical trades. The members of the inasonic fraternity also " formarly wore white during lodge-hours, but at present the white apron aloae re-msins."-(Smith.)

## CHAPTER III.

AN EXAMINATION OF VIRGIL'S SIXTH BOOK OF THE ENEID; IN WHICH TT 13 BHOWN, THAT THE ALLEGORICAL DESCENT OF ENEAS INTO HELL, 18 NO OTHER TGAN AN ENIGXATIOAL REPEESESTATIOX UF BIS INITIATION ISTO TEE MYBTERIES.

We have seen in general, how fond and tenacions ancient paganism was of this extraordinary rise, as of an institution supremely useful both to society and religion. But this will be seen more fully in what I now proceed to lay before the reader ; an examination of two celebrated pieces of antiquity, the famous Sixth Book of Virgil's Eneid, and the Metamorphosis of Apuleius. The first of which will show us of what use the mysteries were esteemed to society; and the second, of what neo to religion.

An inquiry into Eness' adventure to the shades, will have this farther edvantage, the instructing us in the ahows and rapresentations of the nysteries ; a patt of their history, which the form of this discourse upoa chem bath not yet enabled us to give. So that nothing will be now wanting tos a perfect knowledge of this most extraordinary and important institution.

For the descent of Virgil's hero into the infernal regions, I presume, waa no other than a figurative description of an initiation; and partioularly, a very exact picture of the spectacles in the Eleusinian mysteries; where everything was done in show and machinery; and where a representation of the history of Ceres afforded opportunity of bringing in Che acenes of heaven, hell, elyaium, purgatory, and what ever related to the future state of men and heroes.

As the Eneid is in the style of ancient legislation, it would be hard to think that so great a master in his art should overlook \& doctrine, which, we have shown, was the foundstion and support of ancient politica; namely, a future state of rewards and puniehments. Accordingly he hath given us a complete system of it, in imitation of his modela, which were Plato's vision of Erus, and Tully's dream of Scipio. Again, su the lawgiver took care to support this doctrine by a very extraordinary inatitution, snd to commemorste it by a rite, which had all the allurement of upectacle, and afforded matter for the utmost embellishments of poetry, we cannot but confess a description of such a scene would add targely to the grace and elegance of his work; and must conclude he would be invited to attempt it. Accordingly, he hath done this likewise, in the allegorical descent of Eneas into hell; which is no other than an enigmatical representation of his initiation into the mysteries.

Virgil was to represent a perfoct lawgiver, in the person of Eacas;
now, initiation into the mysteries was what sanctified his character and ennobled his function. Hence we find all the ancient heroes and lawgivers were, in fact, initiated.

Another reason for the hero's initiation, was the important instructions he received in matters that concerned his office.

A third resson for his initiation, was the curtom of seeking support and inspiration from the god who presided in the mysteries.

A fourth reason for his initistion, was the circumstance in which the poet has placed him, unsettled in his affairs, and anxious about his future fortune. Now, amongst the uses of initiation, the advice and direction of the oracle was not the least. And an oracular bureau was so necessary an appendix to some of the mysteries, as particularly the Samothrscisu, that Plutarch, speaking of Lysander's initiation, there expresses it by a word that signifies consulting the oracle; on this account, Jason, Orpheus, Hercules, Castor, and (as Macrobius says) Tarquinius Prisces, were everyone of them initiated into those mysteries.

All this the poet seems clearly to have intimated in the speech of Anchisen to his son:
"Carry with you to Italy the choiserst of the youth8, the stoutest hearts. In Latium you have to subdue a hardy race, rugged in manners. But first, my son, viait Pluto's infernal mansions, and, in quest of an interview with me, cross the deep floods of Avernus."

A fifth resson was the conforming to the old popular tradition, which ssid, that several other heroes of the Trojan times, such as Agamemnoo and Ulysses, had been initiated.

A sixth, and principal was, that Augustun, who was shadowed in the person of Eneas, had been initiated into the Eleusinian mysteries. (Suet. Oct. cap. xciii.)

While the mysteries were confined to Egypt, their native coentry, and while the Grecian lawgivers went thither to be initiated, as a kind of designation to their office, the ceremony would be natorally described in terms highly allegorical. This was, in part, owing to the genius of the Egyptian manners; in part, to the humour of travellers ; but moat of all, to the policy of lawgivers; who, returning home, to civilize a barbarons people, by laws and arts, found it useful and necessary (in order to support their own characters, and to establish the fundamental principle of a future state) to represent that initiation, in which they saw the state of departed mortals in machinery, as an actual descent into hell. This way of speaking was used by Orpheus, Bacchus, and others; and continued even after the myateries were introduced into Greece, sa appears by the fables of Hercules, Castor, Pollux, and Theseus's descent into hell. But the allegory was generally so circumstanced as to discover the truth concealed under it. So Orpheus is said to go hell by the power of his harp: that is, in quality of lawgiver; the harp being the Enown symbol of his laws, by which he humanised a rude and barbarous people. So again, in the livea of Hercules and Bacchus, we have the true history, and the fable founded on it, blended and recorded together. For we sre told, that they were in fact initiated into the

Eleusinian mysteries ; and that it was just hefore their descent into hell, as an aid and security in that desperate undertaking. Which, in plain speech, was no more, than that they conld not rafely see the shows, till they had been initiated. The same may be said of what is told us of Theseus's adventure. Near Eleusis there was a well, called Callichorus; and, adjoining to that, a stone, on which, as the tradition went, Cereg at dovon, sad and weary, on her coming to Eleusis. Hence the stone was named Agelastus, the melancholy stone. On which account it was deemed unlawful for the initiated to ait thereon. "For Ceres, (says Clemens) wandering about in search of her daughter Proserpine, when she came to Eleusis, grew weary, and sat down melancholy on the side of a well. So thst, to this very day, it is unlawful for the initiated to eit down there, lest they, who are now become perfect, should seem to imitate her in her desolate condition." Now let us see what they tell us concerning Theseus's descent into hell. "There is also s stone," says the scholiast on Aristophanes, "called by the Athenians, Agelastus; on which, they say. Theseus sat when he was meditating his descent into hell. Hence the stons bad its name. Or, perhaps, because Ceres sat there weeping, when she sought Proserpine." All this seems plainly to intimate, that the descent of Thesens was his entrance into the Elensinisu myateries. Which entrance, as we shall see hereafter, was a frandulent intrusion.

Both Euripides and Aristophanes seem to confirm our interpretation of these descents into hell. Euripides, in his Hercules furene, brings the hero, just come from hell, to suecour his family, and destroy the tyrant Lycus. Juno, in revenge, persecutes him with the furies; and he, in his transport, kills his wife and children, whom he mistakes for his enemies. When he comes to himself, he is comforted by his friend Theseus; who would excuse his excesses by the criminal examples of the gods; a consideration, which, as I have observed above, greatly encouraged the people in their irregularities; and was therefore obviated nithe myateries, by the detection of the vulgar errors of polytheism. Now Euripides seems plainly enough to have told us what he thought of the fabulous descenta into hell, by making Herenles reply, like one jast come from the celebration of the mysteries, and entrusted with the oporreta. "The examples," bays he, "which you bring of the gods, ere nothing to the purpose. I cannot think them guilty of the crimes imputed to them. I cannot apprehend, how one god can be the sovereign of another god. A god, who is truly so, stands in need of no one. Rejeet we then these idle fables, which the poets teach concerning them." A secret, which we must suppose, Theseus had not yet learnt.

The comic poet, in his Frogs, tells us as plainly what he too understond. to be the ancient heroes' descent into hell, by the equipage, which he gives to Bacchus, when he brings him in, inquiring the way of Hercules. It was the custom, at the celebration of the Eleusinian mysteries, na we are told by the scholiast on the place, to have what was wanted in those rites, carried upon asses. Henco the proverb, Asinus portat mysteria; accordingly tho poet introduces Bacchus, followed by bis buffoon servant,

Xanthius, bearing a bundle in like manner, and riding on an ans. And lest the meaning of this should be mistaken, Xanthius, on Hercules's telling Bacchas, that the inhabitants of Elysiam were inilialed, puts in, and says, "And I am the ass carrying mystories." This was so broad a hint, that it aeems to have awakened the old scholiast; who, when he comes to that place, where the chorus of the initiated * appears, tells us, we are not to underatand this scene as really lying in the Elysian fields, but in the Eleusinian mysteries.

Here then, as was the case in many other of the ancient fables, the pornp of expression betrayed willing posterity into the marvellous. Bat why need we wonder at this in the genius of more ancient times, which delighted to tell the commonest thing in a highly figurative manner, when a writer of so late an age as Apulging, either in imitation of antiquity, or perhaps in compliance to the received phraseology of the mysteries, describes his initiation in the same manner: "I approach to the confines of death, and having trod on the threshold of Proserpine, I returned from it, being carried through all the elements. At midnight I saw the sun shining with a splendid light; and I manifestly drew near to the gods beneath, and the gods above, and proximately adored them."

Eneas could not have described bis night's journey to his companions, after he had been let out of the ivory gate, in properer terms, had it been indeed to be understood as a journey into hell.

Thus, we see, Virgil was obliged to have his hero initiated; and that he had the authority of fabulous antiquity to call his initiation a descent into hell. And surely he made use of his advantages with great judgment; for such a fiction animates the relation, which, delivered out of allegory, had been too cold and flat for epic poetry.

Had an old poem, under the name of Orpheus, entitled, "A descent into hell," been now extant, it would, perhaps, have shown us, that no more was meant than Orpheus's initiation; and that the idea of this sixth book was taken from thence.

But further, it was customary for the poets of the Augustan age to exercise themselves on the subject of the mysteries, as appeare from Cicero, who desires Atticus, then at Athens, and initiated, to send to Chilius, a poet of eminence, an account of the Eleusinisn mysteries; in order, as it would seem, to insert into some poem he was then writing. Thus it appears, that both the ancient and modern poets afforded Virgil a pattern for this famous episode.

Even Servius esw thus far into Virgil's desigo, as to say, that many things were delivered according to the profound learning of the Egyptian theology. And we have shown that the doctrines taught in the ansteries, were invented by that people. But though I say this was our poet's general design, I would not be supposed to think he followed no other guides. Several of the circumstances are borrowed

[^66]from Homer; and several of the philooophic notions from Plato; some of which will be taken notice of, in their place.

The grest manager in this affair is the sibyl; and, as a virgin, she enstaina two principal and distinct parta; that of the inspired priestess, to pronounce the oracle; and that of hierophant, to conduct the initiated through the whols celebration.*

For, as we have observed, the initiated had a guide or conductor, called Hierophantes, Mystagogos, indifferently of either sex, who was to instruct him in the preparatory ceremonies, and lead him through, and explain to him, all the shows and representations of the mysteries. Hence Virgil calls the sibyl Magna Sacerdos, and Docta Comes, words of equivalent signification. And as the femsle mystsgogue, as well as the male, was devoted to a single life, so was the Cumasen Sibyl, whom he calls Casta Sibylla. Another reason why a priestess is given to conduct him is, because Proserpine presides in this whole affair. And the name of the priestess in the Eleusinian mysteries shows that she properly belonged to Proserpine, though she was called the priestess of Ceres. "The ancients," says Porphyrius, "called the priestesses of Ceres, Meliseai (bees), as being the ministers or hierophants of the subterraneous goddess, and Proserpine herself, Melitodes.

It was for this rosson that these female hierophants were called Melissai, as in well obsorved by the Schol. on Pind. in Pyth. the bee being, among the ancients, the symbol of chastity. $\dagger$

## Quod nec concubitu indulgent, nee corpora aegnes <br> In Venerem eolvunt.

The first instruction the priesteas gives Eneas, is to search for the golden bough, eacred to Proserpine.

Under this branch is ooncesled the woreath of myrtle, with which the iniliated were crowned, at the celebration of the mysteries.-(Schol. Aristoph. Ravis.)

The golden bough is said to be racred to Prosarpine, and so we are told was the myrtle ; Proserpine only ia mentioned all the way; partly because the initiation is described as an actual descent into hell, but princlpally because, when the rites of the mysteries wore performed, Ceres and Proserpine were equally involked, but when the shotos were represented, then Proserpine alone presided. Now this book is a reprecentation of the shows of the myateries. The quality of this golden bough, with its lento vimine, admirably deecribes the tender branches of myrile. But the reader may ask, why is this myrtle-branch represented to be of gold? Not merely for the sake of the marvellous, he may be assured. A goldeu bough was literally part of the eacred equipage in the shows of the mystaries. For the branch, which was sometimes

[^67]wreathed into a croton, and woon on the head, was, at other times, carried in the hand. Clemens Alexandrinus tells ns, from Dionysius Thrax, the grammarian, that it was an Egyptian custom to hold a branch in the act of adoration. And of what kind these branches were, Apuleius tells us, in his description of a proceseion of the initiated in the mysteries of Isis:-" A third advanced bearing a palm branch of thin gill leaves, and also the Mercurial Caduceus." The golden branch, then, and the caduceus were related. And accordingly Virgil makes the former do the usual office of the latter, in affording a free paseage into the regions of the dead. Again, Apuleius, describing the fifth person in the procession, says, "A fifth (besring) \& golden van foll of golden boughs." So that a golden bough, we see, was an important implement, and of a very complicated intention, in the shows of the mysteries.

Eneas having now possessed himself of the golden bongh, a paspport as necessary to his descent as a myrtle crown to initistion,

He is then led to the opening of the descent:-
"Here stood a cave profound and hideons, with a wide yawning month, stony, fenced by a black lake and gloomy woods."

And his reception is thus described:-
"The ground beneath their feet began to ramble, the mountain tope to quake, and dogs were seen to howl through the shade of the woods at the approach of the goddess."

How similar is all this to the fine description of the poet Clandinn, where, professedly and without diaguiso, he apeaks of the tremendous entry into these myatic rites:-
"Now I see the shrines shake upon their tottering bases, and lightnings, announcing the deity's approach, shed a vivid glare around. Now a loud warring is heard from the depths of the earth, and the Cecropian termple re-echoes, and Eleusia raises her holy torches, the anakes of Triptolemus hiss, and lift their acaly necks, rabbed by their curved yokes. So afar, the three-fold Hecate bursts forth."-(De Raptu Proserpins.)

Both these descriptions agree exactly with the relations of the ancient Greek writers on this subject. Dion Crysostom, spesking of initistion into the mysteries, gives us this general idea of it:-Just so it is, ss when one leads a Greek or barbarian to be initiated in a certain mystic dome, excelling in beanty snd magaificence, where he sees many mystic sights, and hears in the same manner a multitude of voices, whers darkness and light alternately affect his zenses, and a thousend other uncommon things present themselves befors him.
"The ritual of initiation was read sloud, and hymns wers sung in honour of Ceres.-Soon after a hollow sound was heard, and the earth seemed to groan beneath our feet; we heard thunder, and percoived by the glare of the lightning phantoms and spectres wandering in darkness, and filling the holy places with howlinga that chilled us with terror, and groans that rent our hearts." -(Travels of Anacharsis.)
"This happy moment (de l'antopsis) was introduced, says Dupnis, by fightful mosnes, by alternate fear and joy, by light and darknes, by
the glimmerings of light, by the terrible noise of thunder, which was imitated, and by the apparitions of spectres, of magical illusions, which atrack the eyes and ears all at once." (See Moore's Epicurean.)

De Panw, in his Philosophical Dissertation on the Egyptian and Chinese, observes, "Were it true, as some have pretended, that certsin mysteries were celebrated in apartments of the labyrinth, it would not have been difficult to produce noise there as violent as thunder. Pliny assures us, that the re-percussion of the air in that edifice, merely on opening the doors, which probably acting as suckers, caused others to shut. According to the common report thunder was imitated in Greece, by rolling stones in versels of copper. The initiated were to be terrified, and this was done effectually in the mysteries of Mithra." Vol. i., p. 305.

If Virgil copied solely from initiations in the Eleusinian mysteries, the tomples of Ceres would seem to have been constructed on a plan similar to that of the Egyptian labyrinth; for in the sixth book of the Eneid, v. 126, are the following lines:-

> Now, with a furious blast, the hundred doors Ope of themselves ; a rusbing wiriwind rosza Within the cave, and Sibyl's voice restores.

Similar delusions are practised in royal arch masonry, where thuoder Is imitated by rolling cannon balls, etc.

The poet next relstes the fanatic agitation of the mystagogue, on this oocstion.
"Procul, 0 procul, este, profani, etc. Hence, far hence, 0 ye profene, exclaims the prophetess, and begone from all the grove.* This rid, she furiously plunged into the open cave."

So again, Claudian, where he counterfeits, in his own person, the raptures and astonishment of the initiared, and throws himself, as it ware, like the sibyl, in the middle of the scene.
${ }^{4}$ Away, ye profane,-now fury has expelled human feelings from my breset." The affectation of fury or madness, as we are told by Strabo, (iib. x.) was an inseparable circumstance of the mysteries.

The "Procul, 0 procul este, profani" of the sibyl, is a literal translation of the formula used by the mystagogue, at the opening of the mysteries,

> "Ekaz, ekas eite, bebeloi."

But now the poet, intending to accompany his hero through all the mysterious rites of his initiation, and conscious of the impated impiety in bringing them out to open day; stope ehort in his narration, and breaks ont into this solemn apology,

Dii, quibus in imperium est animarum, etc.
"Ye gods, to whom the empire of ghosts belongs, and ye silent

- Whon about to open a chapter of rogni aroh masoas, the high prieat aeye, "If there heny pervon proeent, who is not a rogal arch maons, ho is requested to retire."-Ber-nand.-Edfi.
shades, and Chaos, and Phlegethon, places where silence reigns around in the realms of night ! permit me to atter the secrets I have heard; may I have your divine permission to disclose thinga buried in deep earth and darkness."

Claudias, who, as we have observed, professes openly to treat of the Eleusinian mysteries, at a time when they were in little veneration; yet, in compliance to old custom, excuses his undertalting in the same manner:-

Dii, quibus in numeram, etc.
Had the revealing the mysteries been as penal at Rome as it was in Greece, Virgil had never ventared on this part of his poem. Bat yet it was esteemed impious.

He therefore does it covertly, and makes this apology to such as ssw into his meaving.

The hero and his guide now enter on their journey.
"They advanced under the solitary night through the shade, and through the desolate halls and empty realms of Pluto; their progress resembling a journey in woods by the precarions glimmering moon under a faint malignant light, when Jupiter hath wrapped up the heavens in shade, and sable night hath stripped objects of colour."

This description will receive much light from a paesage in Lacian'a dialogae of the tyrant. As a company made up of every condition of life, are voyaging together to the other world, Mycillus breals out, and says:-"Bless us! how dark it is ! where is the fair Megillus? who can tell in this aituation, whether Simmiche or Phryna be the handsomer? overything is alike, and of the same colour; there is no room for rivalling of beauties. My old cloak, which but now presented to your eyes so irregular a figure, is become as honourable a garb as his majesty's purple. They are, indeed, both vanished,* and retired together under the samo cover. But my friend, the Cynic, where are you? give me your hand: you are initiated in the Eleusinian mysteries. Tell me now, do you not think this very like the blind march they make there 8 Oh, extremoly; and see, herecomes one of the Furies, as I guess by her equipage, her torch, and her terrible looks."

The Sibyl, on their approsch to the moath of the cave, had advised Eneas to csll up all his courage, as being to undergo the severest trials.
"Do you, Eneas, boldly march forward, and snatch your sword froun its shesth; now is the time for fortitude, now for firmness of resolution."

[^68]These trials were of two sorts-the encountering real labours and diffculties, and the being exposed to imaginary and false terrors. This latter was spbmitted to by all the initiated in general; the other was reserved for chiefs and leaders. On which account Virgil describes them both in their order, as they were both to be undergone by his hero. The first in these words:-
"Before the very courts and in the opening jaws of hell, grief and tormenting cares have fixed their conches, and pale disesses, repining age, fear, and famine, forms terrible to view (terribiles visuformæ) and. death and toil; then aleep that is akin to death, and crimioal joys of the mind; and in the opposite threshold murderous war, the iron bed chambers of the furies, and frantic discord."

To understand the force of this description it will be necessary to transcribe the account the ancients have left us of the probationary trials in the mysteries of Mithras, whose participstion was more particularly aspired to by chiefs and lesders of armies, whence those initiated were commonly called the soldiers of Mithras. "No one," says Nonnus, "could be initiated into these mysteries till he had passed gradually through the probationary labours, by which he was to acquire a certsin epathe and sanctity. There were eighty degrees of these labours, from lote to grester, and when the aspirant has gone through thom all, he is initiated. These labours are-to pans through fire, to endure cold, honger, and thirst, to undergo much journeyings, and, in a word, every toll of this nature."

They exercised the candidates, says Dopuis, in his "Recherches sur lea Initiations," many days, to cross by swimming, a largo extent of water; they threw thom into it, and it was with great difficulty that thoy extricated themselves. They applied a sword and fire to their bodies; they made them pass over flames. The aspirants were often in considerable danger, and Pythagoras, we are told, nearly lost his life in the trials.

In tracing the early connections of spectacles with the ceremonies of religion, Voltaire esys, "The truly grand tragedies, the imposing and terrible representations, were the sacred mysteries, which were celelrated in the greatest temples in the world, in presence of the mitiated only; is was there that the habits, the decorations, the maohinery were proper to the subject, and the subject was the present and future life,"

Volney shows the origin of these ceremonies. "The Egyptians," says Porphery, "employ every year a talisman in remembrance of the world; at the summer solstice, they mark their houses, flocks, and troes with red, supposing that on that day the whole world had been set on flro. It was also at the same period that they celebrated the pyrrhic or fire dance." And this illastrates the origin of purification by fire and water, for having denominated the tropic of Cancer, gate of heaven and of heat or celestial fire, and that of Capricom, gate of deluge or of water, it was imagined that the spirits or souls who passed through these gates in their way to and from heaven, were ecorched or bathed; hence the
baptism of Mithra, and the paseage through the flimes, observed throughout the East long before Moses. Ruins, p. 238.

Ancient masonry has alightly imitsted these trials, particularly in the third and royal arch degrees. The Druids who esiablished it were, perhape, fearful that, by carrying the joke too far, their practices might come to the kjowledge of the government, which would probably have led to the destruction of the order. For, for men, whose professed object was merely to teach the mechanical art of masonry, to be engaged in the performance of such extravagances as were practised in the ancient mysteries, would certainly have alarmed even tho initiated themselves, a great portion of whom, who were carried no farther than the third degree, doubtless retained their attachment to the Christian religion. They knew not what was meant by the ceremonies; they were pleased, however, with the shows.

But the inventors of modern degrees of the order, without any regard to religion, keeping, however, for the most part, within the pale of Christianity, have indalged their imaginations to an unbounded axtent. They could have been influenced by no other motives than the pleasure of exercising their wit in experiments upon human credulity,

The following specimens will show that the ancient models have served as the ground work upon which the new superstructure has beet resred, which, by the by, slready extends fifty stories above the old fabric.
In the degree called Chevalier de l'Orient, or knight of the East, the master says to the junior general, cause Zerubbabel to undergo the seventy trisls, which I reduce to three, namely, first that of the body; second, that of his courage; third, that of his mind. After which, perhaps, he may merit the favour which he demands.- (Bernard.)

The following is taken from the Abbe Barruel, but whoee book, being replete with faleehoods against masonry, renders the account justly entitled to suspicion. It relates to initiations in the degree of Knight of Kadosh, "or," as he says, "the regenerated Man."
"Adepts have told me that no physical srt is spared; that there is no machinery, spectres, terrors, etc., which are not employed to try tho constanoy of the candidate. We are told by Mr. Monjoy, that the Doke of Orleans was obliged to sacend, and then throw himself off a ladder. A deep cave, or rather precipice, whence a narrow tower rises to the sumrit of the lodge, having no avenue to it but by subterraneons passages replete with horror, is the place where the candidate is absadoned to himself, tied hand and foot. In this situation he finds himself raised from the ground by machines making the most frightful noise. He slowly ascends this dark vault, and then suddenly falls, as if he were not supported by any thing. Thus mounting and falling alternstely, he must carefully avoid showing any sign of fear."

Perbaps, on sccount of the high rank of the Duke of Orieans, he was thonght entitled to greater perils and trials than common men. Bernard gives this degree, and, slthough a ladder is required to be ascended, and the candidate is prohibited to retum the same way, yet nonuch hazards as here related are spoken of.

The description of the ceremonies in the degree of knights of the White Eagle or Pelican, as reported to Carile, exceeds, in terrors and awfulness, even Barruel's account of those in the knight of Kadosh. It must have been got up by persons intimately ecqusinted with the prectices of the holy Inquisition, particularly in regard to Auto-da-fes. I will give a short extract from it.

## Second Point of Reception.

The apartment for the preparation, and for this reception, is made as terrifying as possible, to resemble the tormenta of hell. It has seeen chandeliers, with grey burning flambeaus, whose mouths represent death's-heads with cross-bones. The walls are hang with tapestry, painted with flames and figures of the damned.

The door is opened by a brother appointed to guard it, to whom each gives the report of a perfect mason, and the pass-word Emanuel. The candidate is instructed to say, " I am one of the brothers, who seek the noord lost, by the aid of the new law, and the three columns of masonry." At these words, the guard takes his sash and apron from him, saying these marks of decoration are not humble enough to qualify him to find it, and that he must pass through much more vigorous trials, He then covers bim with a black cloth, so that he can see nothing, telliog him that he must be conducted to the darkest of places, from which the word must come forth triumphant, to the glory of masonry, and that he must abandon all self-confidence. In this condition he is conducted into an apartment in which there is a steep descent, up and down which he is directed to travel. After which, he is conducted to the door, and the black cloth is removed. Before him stand three figures dressed as devils. He is then ordered to parade the room three times, in memory of the mysterious descent into the dark places, which lasted three days. He is then led to the door of the apartment, covered with the black cloth, and told that the horrors through which he has passed are as nothing in comparison with those through which he has to pass: therefore be is cautioned to summon all his fortitude to meet the dreadful scene. After farther mancouvering of this sort, the candidate is reported to the master by the deacon as a Knight of the Eagle, who, after penetrating the deepest places, hopes to procure the lost 100 rd , as the fruit of his reeearch, and to become a perfect mason, fc.

On turning to Bernard's description of this degree, I find he agrees in substance with Carlile. He says, "On the hangings of the third apartment mast be represented, in transparent psintings, all the horrors which we attach to the idea of hell; ench es human figures and monsters with convulsed muscles, engulfed in flames, \&c., \&c. On each side of the door is a humsn skeleton, with an arrow in his hand, \&o."

Virgil has msde the sufferings in the other world, preparatory to admission into Elysium, se related by Anchises to Ences, to correapond with the trials to which candidates were subjected in the myateries. Bishop Warburton refers to that part of the poem which describes the nature and end of purgatory, but does not quote the passage.

Anchises seys, " Kven when, with the last beams of light their lifo is gone, yet not every ill, nor all corporeal staina are quite removed from the unbsppy beinga, and it is absolately unavoidable that many vicious habits, which have long grown up with the soul, should be strangely confirmed and riveted therein. Therefore are they afflicted with paing, and pay the penalties of their former ills. Some, hung on high, are spread out to whiten in the empty winds; in others, the gailt not done away is washed out in a vast watery abyse, or burned away in fire. We have aach of us a demon, from whom we suffer, till length of time, after the fixed period is elspsed, hath done away the inherent stains, and hath left celestial resson pure from all irregular passions, and the soul, that spark of heavenly fire, in its original purity and brightness simple and unmixed: then ars we conveyed into Elysiom, and we, who are the happy few, possess the fields of bliss."-(Davidson's Trans.)

The second sort of trial were the imaginary terrors of the mysteries; and these Virgil deacribes next. And to distingaish them from the real labours preceding, he separates the two accounts by that fine circumstance of the tres of dreams, which introduces the latter.
"In the midst a gloomy olm displays its boaghs and aged armas; which seat vain dreamn are said to haunt, and under every lesf they dwell. Besides many monstrous epectres of various forms; in the gato Centaura, and double-formed Scylas, Briareus with his hundred handa, and the enormous snake of Lerna hissing dreadful, and Chimera armed with flames; Gorgones, Harpes, and the form of Geryon's three-bodied ghost."

These terribiles vise forms are the same which Pletho, in the place quoted sbove, calls allokota taz morphas phasmata, as seen in the entrance of the myateries, and which Celans tells us were likewise presented in the Baechic rites.

But it is ressonable to suppose that, though these thinge had the use here assigued to them, it was some circumstance in the recondite physiology of the East which preferred them to this station. We are to consider then this dark entrance into the mysteries as a representation of the Chaos thus characterised:-
"They advanced under the solitary night through the desolate halls and empty realms of Pluto."

And amongst the several powers involed by the poet, at his entrance on this scens, Chsos is one.

Now, s fragment of Berosus, preserved by George Syncellus, describes the ancient Chaos, aecording to the physiology of the Chaldeans, in this manner:-" There was a time," they say, "when all was water and darkness; and these gave birth and habitation to monstrous animals of mixed forms and apecies. For there were men with two wings, others with four, and some again with double faces. Some had the horns of gosts, some their lega, and some the legs of horses; others had the hind-parts of horses and the fore-parts of men, like the hippocentanre. There were bulls with human heads, doge with four bodies ending in

Gishes, horses with dogs' heads; snd men, and other oreatures with the heads and bodies of horses and with the tails of fishes. And a numberof animals, whose bodies were a monstrous compound of the dissimilar parts of beasts of various kinds. Together with these, were fishes, Reptiles, serpents, and other creatores, which by a reciprocal translation of the parts to one another, became all portentously deformed; the pictures and representations of which were hang up in the temple of Belus. A woman ruled over the whole, whose name was Omoroes, in the Chaldee tongue Thalsth, which signifies the sea; and, in the courte of connexion, the moon." This account seems to have been exactly copied In the mysteries, as appears from the description of the poet.

The canine figures have a considerable station in this region of monsters: And he tells us, "And doge were seen to howl through the shade of the woods," which Pletho explains in his scholis on the magic oracles of Zoroaster. "It is the custom in the celebration of the mysteries, to present before many of the initiated, phantasms of a conine figure, and other monstrones shapes and appearances."

The woman, whose name coincides with that of the moon, was the Hecate of the Greeka, who is invoked by Eness on this occasion.
"By mystic sounds invoking Hecate, powerful both in heaven and. hall." Hence terrifying visions were called Hecatea.

The ancients cslled Hecate, diva triformis. And Scaliger observes that the word thalath, which Syncellus, or Berosus, says was equivalent to the moon, signifies tria.

And now we soon find the hero in a fright, "Here Eneas, disconcerted with sudden fear, graspe his sword, and presents tho naked point to each approaching shade."

With these affections the ancients represent the initisted as posseesed on his first entrance into these holy rites. "Entering now inta the mystic dome (gaya Themistias) he is filled with horror and amazement. He is seized with solicitude and a total perplexity; he is unable to move a step forward, snd at a loss to find the entrance to that road which is to leed him to the place he aspires to-till the prophet or conductor, laying opeu the vestibule of the temple." To the same purpose Proclus: "As in the most holy mysteries, before the scene of the mystic visions, there is a terror infused over the minds of the initiated, $00^{n}$, \&c.
The adventarers come now to the banks of Cocytus. Eness is surprised at the crowd of ghosts which hover round it, and appear impaBent for a passage. His guide tells him they are those who have not had the rites of sepalture performed to their manes, and so are doomed to wander up and down for a hundred years, before they be permitted to cross the river.

We are not to think this old notion took its rise from the valgar superatition. It was one of the wisest contrivances of ancient polities, and came originally from Egypt, the fountain-head of legislation. Those profound masters of wisdom, in projecting for the common good, found nothing would more contribute to the safety of their fellow-citizens than
the public and solemn interment of the desd; as, without this provision, private murders might be easily and eecurely committed. They therefore introduced the custom of pompous funeral rites; and, as Herodotut and Diodoras tell ns, were of all people the moet circumstantially ceremonions in the observance of them. To secure these by the forso of religion, as well as civil custom, they taught that the deceased could not retire to a place of rest till they were performed. The notion spread so wide, and fixed its roots so deep, that the aubstance of the superatition remaine even to this day, in most civilised countries. By so effectual a method did the legislature gain its end, the secarity of the citizen.

Mr, Bayle cries out, "What injustice is this! was it the fanit of these souls that their bodies were not interred ?', But not knowing the origin of this opinion, nor seeing its use, he ascribes that to the blindness of religion which was the iesue of wise policy.

The next thing observable is the ferryman, Charon; and he, the learned well know, was a substantial Egyptisn; and as an ingenious writer says, fairly existing in this world.--(Blackoell's Life of Homer.) The caso was plainly thus: the Egyptians, like the rest of mankind, in their descriptions of the othor world, used to copy from something they were well acquainted with in this. In their funeral rites, which, as we observed, was a matter of greater moment with them than with any other people, they used to carry their dead over the Nile, and through the marsh of Achernsia, and there put them into subterraneous caverns; the ferryman employed in this business being, in their language, called Charon. Now, in their myeteries, the description of the passage into the other world was borrowed, as was natural, from the circumstances of their funersl rites. And it might be essily proved, if there were occasion, that they thomselves transferred these realities into the nythos, and not the Greeks, as later writers generally imagine.

Eneas having crossed the river, add come into the proper regions of the dead, the first apparition that occurs is the dog Cerberus; "Hage Cerberus makes those realms resound with barking from his triple jaws, stretched at his enormons length in a den that frouts the gate."

This is plainly one of the phantoms of the mysteries, which Pletho tells above, was in the shape of a dog kunode tina. And in the fable of Hercules'a descent into hell, which, we have shown, signified no more than his initiation into the myateries, it is said to have been, amonget other things, for fetching up the dog Cerberus.

The prophetese, to appease his rage, gives him a medicated cake, which casta him into a slumber; "Flinga to him a soporific calie of honey and medicated grains"-(medicatis frugibus.)

In the mysteries of Trophonins (who was said to be nursed by Ceres, that is to derive his rites from the Eleusinian, ) the initiated carried the same sort of medicated cakes to appease the serpents he met with in his passage. Tertullian, who gives all mysteries to the devil, and makes him the author of what is done there, mentions the offering up of these cskes, celebrat et panis oblationem. This in question was of poppy-boed,
made up with honey; and so I understand medicatis frugibue, here, on the aathority of the poet himself, who, in the fourth book. makea the priestess of Venus prepare the same treat for the dragon who guarded the Hesperian fruit.

But without doubt, the images which the juice of poppy presents to the fancy, was oue reason why this drug had a place in the ceremonial of the shows; not improbably, it was given to some at least of the initiated, to sid the impression of those mystic visions which passed before them.* For that something like this was done, that is, giving medicated drughts to the aspirants, we are informed by Plutarch; who speaks of a shrub called Leucophyllus nsed in the celebration of the mysteries of Hecate, which driyen men into a kind of frenzy, and makes them confeas all the wickedness they had done or intended. And confession was one necessary preparative for initistion. $\dagger$

The regiona, according to Virgil's geography, are divided into three parta, Purgatory, Tartarus, sud Elysium.

The myateries divided them in the same manner. So Plato, where he speaks of what was taught in the mysteries, talks of souls sticking fast in mire and filth, and remaining in darkness, till a long series of years had purged and purified them; and Celsus, in Origen says, that the mysteries taught the doctrine of eternal punishments.

Of all the three states this of Tartarus only was eternal. There was, indeed, another, in the ancient pagan theology, which had the same reLetion to Elysium that Tartarus had to Purgatory, the extreme of rewerd, as Tartaras of punishment. But then this state was not in the infernal regions, but in Heaven. Neither was it the lot of common humanity, but reserved for heroes and dsemons; beings, of an order superior to men, such as Herculee, Bacchns, eto., who became gods on

[^69]their admission into that atate, where the elernity was in in consequence of their defication.

And here it is to our purpose to obeerve, that the virtues and vices which atock these three divisions with inhsbitants, are such as more Immediately affect society. A plain proof that the poet followed the views of the legislator, the institutor of the mysteries.

Purgatory, the first division, is inhabited by auicides, extravagant lovers, and ambitious warriors; and in a word, by all those who had indulged the violence of the passions; which made them rather miserable than wielsed. It is remarkable that amongst these we find one of the initiated; "Polybetes devoted to Ceres." This was agreeable to the pablic doctrine of the mysteries, which taught that initiation with virtue procured men great sdvantages over others in a fatare state; but that without virtus, it was of no service.

Of all these disorders, the poet hath more distinctly marked ont the misery of suicide.

Here he keeps close to the mysteries, which not only forbade suicide, but taught on what account it was criminal. "That which is asid In the mysteries (says Plato) concerning these matters of man's being placed in a certsin watch or station, which it is unlawful to fly from, or forsake, is a profound doctrine, and not easily fathomed."- (Phsed. p. 62. Ber. ed. tom. 1.

Hitherto all goes well. But what most we aay to the poet's putting new-born infants and men falsely condemned into his purgatory? For though the faith and inquisition of modern Rome send many of both sorts into a place of punishment, yet the genius of ancient paganism had a gentler aspect. It is, indeed, difficult to tell what these inmates have to do here. Let us consider the case of the infants ; and if we find it can only be cleared up by the general view of things here offered, this will be considered as another argument for the truta of our interpretation.
"Forthwith are heard voices, lond wailings, and weeping ghosta of Infants, in the first opening of the gate; whom, beresved of sweet life out of the course of nature, and anatched from the breast, in a bleck ubjoyous day cut off, and buried in an untimely grave."

These appear to have bean the cries and lamentings that, Proclus tells na, wers heard in the myateries. So that we only want to know the original of so extraordinary a circumatance; which I take to have been juat such another provision of the lawgiver for the security of infancy, as that about funeral ritea was for the adult. For nothing could more engage parents in the care and preservation of their young than so terrible a doctrine. Nor are we to imagine, that their natural fondness needed no inforcement or support; for that most degenerato and horrid practice among the ancients, of exposing infante, was univer1 as ; ; and had almost erased morality and instinct. St. Paul seems to

[^70]have had this in his eye when he accused the pagan world of being without natural affection. It needed therefore the strongest and eeverest chack; and I am well persuaded it occasioned this counterplot of the magistrate, in order to give instinct fair play, and call back banished nature. Nothing, indeed, could be more worthy of his care; for the destruction of children, Periclea finely observed of youth, is like catting off the spring from the year. Accordingly we are told by Diodorus, that the Egyptians had e law against this unnatural practice, which law he numbers amongat the singularities of that people. "They are obliged, says he, to bring up all their children, in order to render the country populous, this being esteemed the best means of making states flourishing and happy." And Tacitus speaks of the prohibition as no less singular amongst the Jews.

Here again Mr. Bsyle is much scandalised: "The firat thing which occurred, on the entrance into the other world, was the station assigned to infants, who cried and lamented without cessing; and next to that, the station of men unjustly condemned to death. Now what could be more shocking or scandalous than the puniahment of those little crear tures, who had yet committed no sin, or those persons whose innocence hed been oppressed by calumny?" The first difficulty is already cleared up; the aecond shall be considered by and by. Bnt it is no wonder Mr. Bayle could not digest this doctrine of the infants; for I am much mistaken, if it did not stick with Plato himeelf; who, relating the Vision of Erus, the Pamphylian, concerning the diatribution of rewards and punishments in another life, when he comes to the condition of infants, passes it over in these words:- "But of children who died in their infancy, he reported certain other thinge not soorthy to be remembered. Erus's account of what he esw in another world wes a summary of what the Egyptions taught in their mysteries concerning that matter. And I make no doubt but tho thing not worthy to be remembered, was the doctrive of infants in purgatory; which appears to have given Plato mpeh scandal, who did not, at that time at íeast, reflect upon its original and use.

But now, as to the falsely condemned, we mnst seek another solution:
"Next to those are such as had been condemned to death by false sccusatios. Nor yet were these seats aseigned them without destinstion and appointment, or without the sentence of a jadge. Minos, as inquisitor, shakes their urn: he convokes the council of the silent chades, and examines their lives and crimes."

This designment appears both iniquitous and absurd. The falsely
and the vicious cuatoms of more civilised nations. The Arablans, particularly, Iving much in astats of naturs, whers men's wants are few, and consequently where therefs mall temptation to thle monatural crime, yet wero beoome 10 prone to it, that their lawgiver Mahomet foand it neceasary to exact an otth of the Arablan women, not to destroy their childrea. Tha form of this oath is given us by Gagnier, in hls aotos on Abelfsde's Life of Mahomet, and it is in these words:-"Yon will ansoclato nothing with God; nor Indalgo anger ; nor deatroy your ahlldren; nor be disobedlent to the Apostide of God, in that whioh ie just."
accused are not only in a place of punishment, but, being first delivered under this single predicsment, they are afterwards dietinguished into two sorts ; soms as blameable, others as innocent. To clear up this confusion, it will be necessary to transcribe an old atory, told by Plato in his Gorgias:-"This law, concerning mortals, was enacted in the time of Saturn, and is yet, and ever will be, in force, amongst the gods; that he who had lived a just and pious life, should at his death be carried into the islands of the bleseed, and there poseses all kinds of happiness, untainted with the evils of mortality; but that he who bad lived unjustly sad impioualy should be thrust into a place of punishment, the prison of divine justice, called Tartarus. Now, the judges, with whom the execution of this law was entrusted, were, in the time of Satarn, and under the infancy of Jove's government, living men, sitting in judgment on the living, and passing sentence on them upon the day of their decsaze. This gave occasion to unjust judgments; on which acconnt, Pluto, and those to whom the care of the happy ialands was committed, went to Jupiter, and told hirn that men camo to them wrongfally judged, both when acquitted and when condemned. To which the father of the gods thus replied:-'I will pat a stop to this evil.' These wrong judgments are partly occssioned by the corporeal covering of the persons judged; for they are tried while living. Now, many have their corrupt minds hid under a fair outside, adorned with birth and richea; and, when they come to their trial, have witnesses at hand to testify for their good life and conversation. This perverts the process, and blinds the eyem of justice. Besides, the judges themselves are encumbered with the same corporeal covering; and eyes and eare, and an impenetrable tegument of flesh, hinder the miad from s free exertion of its faculties. All these, an well their own covering as the covering of those they judge, are bans and obstacles to right judgment. In the first place, then, says he, we are to provide thit the foreknowledge which they now have of tho day of doath be taken away, and this shall be given in charge to Prometheus; and then provide that they who come to judgment be quito naked; for from henceforth they shall not be tried till they come into the other world. And as they are to be thus atripped, it is but fit thair judges should await them there in the same condition; that, at the arrival of every inhabitant, soul nasy look on soul, and all family relstion, and every worldly ornament being dropped and left behind, righteous judgment may at length take place. I, therefore, who foressw all these things before you felt them, have taken care to constitnte my own sons the judges. Two of them, Minos and Rhadamanthus, are Asiaties; the third, Escus, an Europesn. These, when they die, shall have their tribunal erected in the shades, just in that part of the highway where the two roads divide; the one leading to the happy islands, the other to Tartarus, Rhadamanthus shall judge the Asistics, and Escus the Europeans; but to Minos I give the superior sathority of hearing appesls, when anything obecure or difficult shall perplex the others' judgments; that everyoue may have his abode assigned him with the utmost equity."

The matter now hegins to clear up, and we see plainly that the cireamstance of the falsely condemned alludes to this old fable; so that by falso damnati crimine mortis, if it be the true reading, Virgil did not mean, as one would suppose, men Ealsely condemned, but wrongfully judged, whether to acquittal or conviction; bat condemnation being oftenest the sentence of justice, the greater part is put figuratively for the whole.

One difficulty remains, and that, to confess the truth, hath erisen rather from a mistake of Virgil than of his reader. We find theme people, yet unjadged, already fixed with other criminals in the assigned district of purgatory. Bat they are misplaced, through an overaight of the poet, which, had he lived to perfect the Eneid, he would probably have corrected; for the fable tella na they should be stationed on the borders of the three divisions, in that part of the high road that divides Itsolf in two, which lead to Tartaras and Elynium, thus described by the poet:
"This is the place where the path divides in two: the right is that which Jeads to great Pluto's walls, by this our way to Elysium lies; bat the left carries on the panishments of the wicked, and conveys to carsed Tartsrus."
It only remains to consider the origin or moral of the fable, which, I think, wes this:-It was an Egyptian custom, as we are told by Diodorus Siculus, for judges to sit on every man's life, at his interment; to arsmine his past actions, and to condemn and acquit according to the evidence before them. These judges were of the priesthood; and so, it In probable, taught, like the priests of the church of Rome, that their leorees were ratified in the other world. Partiality and corruption would, in time, pervert their sontence, and opite and favour prevail over joutice. As this might scandalise the people, it would be found necessary to teach that the sentence which influenced every one's final doom wss reserved for a future judicature. However, the priest took care that all should not go out of his hande; and when he could be no longer judge, be contrived to find his account in turaing evidence; as may be Been by the singular cast of this ancient inscription:-"I, Sextus Anicius, pontiff, certify that this man has lived honestly ; may his sonl rest in pesoe." (Fabius Celsus Inscript. Antiq, lib. iii.)

Eneas, having paseed this first division, comes now on the confines of Tartarus, and is instructed in what relates to the orimes and punishments of the inhabitants.

It is remarkable that Eness is led through the regions of Pargatory and Elysium; but he only sees the sights of Tartarus at a distance, and this could not be otherwise in the shows of the mysteries, for very obvious reasons.

Among the criminals destined to eternal punishment, in this division, are those who had siuned so secretly as to escape the animadversion of the magistrate.

And it was principally on account of such crimes that the legislator enforced the dootrine of a futare state of punishment.

The infringere of the daties of imperfect obligation, which cionl lame cannot reach; such as those without natural affoction to brothors, doty to parents, protection to clients, or charity to the poor.*

The invadere and violators of the holy mysteries, held out in the person of Thesens, make the last class of offenders.
"There site, and to eternity shall sit, the unhappy Thesens; and Phlegyas, must wretched, is a monitor to all, and with loud voice proclaims through the shade: Warned by my example, learn righteousness, and not to contemn the gods,"

The fable says that Thesens and his friend Pirithous formed a deesign to steal Proserpine from hell; but, being taken in the fact, Pirithous was thrown to the dog Cerberus, and Thesens kept in chains, till he was delivered by Hercules; which, without doubt, means the death of one, and the imprisonment of the other, for their clandestine intrusion into the mysteries. We have alresdy offered several ressous to show that the descent of Theseus into hell wes a violation of the mysterios; to which we may add what the ancients tell us of the duration of hin imprisonment, which was four years; the interim between the belebrations of the greater mysteries.
But when Virgil comes to describe these showz, which were sapposed to be a true representation of what was done and suffered in hell, Theseus is put among the damned, that being his station in the other world.
This will remind the learned reader of a atory told by Livy. "The Athenians," aays he, "drew upon themselves a war with Philip on a very elight occasion, and at a time when nothing remained of thair ancient fortune but their high spirit. Two young Acarnanians, during the dsys of initiation, themselves uninitiated, and ignorant of all that related to that secret worship, entered the temple of Ceres along with the crowd. Their discourse soon betrayed them, as making some abeard inquiries into what they esw; so, being brought before the president of the mysteries, although it was evident they had entered ignorantly and without design, they were put to death, as guilty of a most abominable crime."

The office Theseas is put upon, of admonishing his hearere againat impiety, could not, sure, be discharged in these shows by any one so weil as by him who represented the violator of them. But the crition, nnconseious of say such design, considered the task the poot has imposed on Theseus, of perpetually sounding in the ears of the damned this admonition, "Warned by my example, learn righteousness, and not to contemn the gods," an a very impertinent employment. For, though it wes a sentence of great truth and dignity, it was presched to very little purpose amonget thuse to whom there was no room for pardon or remission.
Even Scarron hath not neglected to urge this objection against

[^71]it:* and it must be owned that, according to the common ideas of Eneas's descent inte hell, the objection is not easily got over.

Bat suppose Virgil to be here relating the admonitory maxims delivered during the celebration of these mystic showe, and nothing could be more just or useful ; for then the discourse was addressed to the vast multitude of living spectators. Nor is it a mere supposition that such discourses made part of these representations. Aristides expressly esys, that in no place were more astonishing words pronounced or aung, than in these mysterics; the reason, he tella us, was, that the sounds and the sights might mutually assist each other in making an impression on the minds of the initisted. Bur, from apsasage in Pindar, I conclude, that in these shows, from whence men took their ideas of the infernal regions, it was customary for each offender as he passed by, in machinery, to make an admonition against his own crime. "It is reported," says Pindsr, "that Ixion, by the decrees of the gods, while he is incessantly tarning round his rapid wheel, calls out upon mortals to this effect-that they should be always at hand to repay a benefactor for the kindness he had done them." Where the word Brotoi, living men, seems plainly to show that the speech was at first made before men in this worid.

The poet closes the catalogue of the damned with these words :Aual omnes immane nefte, auroquo potiti;
For the ancients thought that an action was sanctified by the success; which they esteemed a mark of favour and approbation of heaven. As this was a very pernicions opicion, it was necessary to teach that the tmperial villain who trampled on his country, and the baffled plotter who expired on a gibbet, were equally the oljects of divine vengeance.

Eneas has now passed through Tarlarus ; and here end the lesser myztories.

The hero advances to the borders of Elysinm, and here he undergoes the lustration:
"Eneas springs forward to the entry, sprinkles his body with fresh water, and fixes the bongh in the fronting portal."
"Being now about to undergo the lustration, says Sopater, which immediately precedes initiation into the greater mysteries, they called me happy."

Accordingly, Kness now enters on the greater mysteries, and comes to the abodes of the blessed :
"They csme at length to the regions of eternal joy, delightful green retrests, and blessed abodes in groves where happiness abounds. Hers the air they breathe is more free and enlarged, and clothes the fielde With radiant light: here the happy inhabitants know their own eun and their own etars."

These two so different scenes explain what Aristides meant, when he called the shows of the Elensinian mysteries, that most shocking, and at the sume time, most ravishing representation.

[^72]The initisted, who till now only bore the name of Mystai, are called Epoptai, and this new vision, Autopsia, "The Autopsia, or the seeing with their oun eyes, says Psellus, is when he who is initisted beholds the divine lights."

In these very circumstances Themistins describes the initiated, when just entered upon this scene, "It being thoroughly parified, he now disoloses to the initiated a region all over illuminated, and ahining with a divine splendour. This which was all over illuminated, and which the priest had thoroughly purified was agalma, an image. The reason of tranaferring what is ssid of the illumination of the image, to the illuminsof the regicn, is, becanse this image represented the appearances of the divine Being, in one large, uniform, extensive light. This, Jamblichus ssys, was without figure. To this image, the following lines in the oracles of Zoraster allude :
"Invoke not the self-conspicuous image of nature, for thou muat not behold these things before thy body be purified by initiation." This autopton agalma was only a diffusive shining light, as the name partly declares; and the sight of this divine splendour was what the mysteries called autopsia.

The cloud and thick darkness are dispersed; and the mind emerges, as it were, into day, full of light and cheerfulness, as before of disconsolate obscurity.

Pletho tells us with what these clouds were accompanied, namely, thunder and lightning, snd other mateoric appearances. He says, they were symbols, but not of the nature of the deity: and this wes true; for the symbol of that was the autopton agalme which followed; hence, as we see above, it was withoul figure.

Let me observe, that the lines, "Here the air they breathe is more free and enlarged, and clothes the fields with radisnt light; here the happy inhabitants know their own aun and their own stars," are in the very langusge of those who profess to tell us what they saw at their initiation into the greater mysteries. "At midoight 1 saw the suil shining with a splendid light," says Apuleins on that occesion.

Dupuis, speaking of the myateries, says, "They discovered the origin of the soul, its fall to the earth through the spheres and the elements, and its return to the place of its origin: here was the most metaphysical part, and which could not be understood by the generality of the initiated, but of which they gave them the aight by figures and allegorical apecters." - (Bee Moore'a Epic.)

Thomas Taylor, a modern writer, and I believe atill living, in a Diseertion on the Eleusinian and Bacchi Mysteries, contenda for the reality of the descent of the gods through magical evocation; and he quotes the authority of ancient authors in proot of the fact.

Mr . Taylor possesses great erndition; has translated the commentaries of Proclus, and the works of Jamblichus and Apuleius; is a thorough convert to the Platonic philosophy, and an enthusiastio sdmirer of the rites of Ceres and Bacchus; "In the composition of which, he ssys, we
may discern the traces of exalled visdom and recondite theology; of a theology the most venerable for ite antiquity, and the most admirable for its excellence snd reality,"

Plato, says he, in the Phoedrus, thus describes the felicity of the virtuous sonl prior to its descent, in a beautiful allusion to the arcane vision of the mysteries :
"But it was then lawful to survey the most splendid beanty, when wo obtained together with that blessed choir, this happy vision and contemplation. And we indeed enjoyed this blessed spectacle together with Jupiter, bat others in conjanction with some other god; at the eamo time being initiated in those mysteries, which it is lawful to call the most blessed of all mysteries. And these divine Orgies were celebrated by us, while we possessed the proper integrity of our nature, and ware freed from the molestations of evil which awaited us in a succeeding period of time. Likewise in consequence of this divine initiation we became spectatora of entire, simple, immoveable, and blessed visions, resident in a pure light; and were ourselves pare and immaculate and liberated from this surrounding vestment, which we denominate body, and to which we are now bound like an oyster to its shell." Upon this beantiful passage Proclus obeerves, in Theol. Plat. Lib, 4. p. 193, "That initiation and inspection are symbolsof ineffable silence, and of union with mystical nstures, through intelligible visions !"

Now, from all this, it may be inferred, that the most sublime part of epoptia, or inspection, consisted in beholding the gods themselves inwasted with a resplendent light; and that this was syrobolical of those transporting visions, which the virtuons soul will constantly enjoy in a future state, and of which it is able to gain some ravishing glimpses, oven while connected with the cumbrous vestment of the body.

Bat that this was actuslly the case, is evident from the following unequivocal testimony of Proclus in Plat. Repub. p. 380.
${ }^{46}$ In all initiations and mysteries, the gods exhibit many forms of themselves and appear in a variety of ahapes ; and sometimes indeed, an configured light of themselves is held forth to the view, sometimes this light is figured according to a human form, and sometimes it proceeds \#nto a different shape." This doctrine, too, of divine appearances in the mysteries, is clearly confirmed by Plotinns, Envead i. lib. 6. p. 55. and Ennead 9. lib. 6. p. 700. And in short, that magical evocation formed a part of the sacerdotal office in the mysteries, and that this was universslly believed by all antiquity, long betore the ers of the latter Platonists, is plain from the teatimony of Hippocrates, or at least Democritus, in his treatise de Morbo. Sacro. p. 86. For speaking of those who attompt to cure disease by magio, he observes:
"If they profess themeelves able to draw down the moon, to obscure the sun, to produce atormy and pleasant weather, as likewise showers of rain, and heats, and to render the sea and the earth barren, and to accomplish svery thing else of this kind, whether they derive this knowledge from the mysteries or from some other institation or meditation, they appear to me to be impions from the study of such concerns." From
all which it is easy to see how egregiously Dr. Warburton was mistaken when, in his Divine Legation, he asserts "that the light beheld in the mysteries was nothing more than an illuminsted image which the priesta had thoroughly puritied."

But he is likewiee no less mistaken in transferring the injunction given in one of the magic oracles of Zoroaster, to the business of the Eleusinian mysteries, and in perverting the meaning of the Oracle's admonition. For thas the Oracle speaks:
"Invoke not the self-conspicuous image of nature, for you must not behold these thinge before your body has received the purification necessary to initiation." Upon which he observes, "that the self-conepicuous image was only a diffusive shining light, as the name partly declares." But this is a piece of gross ignorance, from which be might have been freed by an attentive perusal of Proclus on the Timeus of Plato, for in these truly divine commentaries we learn, "that the moon is the self-conspicuous image of fontal nature." - In Tim, p. 260.

Theurgic magic is still adhered to by the church of Rome, and forms a part of the sacerdotal office. By which means, it is believed, that the real presence of the Saviour is manifested in the eucharist.

Masonry adopte the same principle. In the royal aroh degree, the autopton agalma is exhibited in an illuminated bush: the candidate for iuitiation is ordered to put off his shoes, being told that the place where he stands is holy ground. In fact one of the characters personates the deity, and announces his actual appearance.

The more we examine the pagan system of religion the more shall we be convinced that the rites and ceremonies of masonry, as well as those of the Catholic church, are derived from that ancient institation.

Virgil, by leaving his master, and copying the amisble paintings of Elysium, as they were represented in the mysteries, hath artfully avoided a fault too justly objected to Homer, of giving so dark and joyleas a landscape of the fortunata nemora, as could raise no desire or sppetite for them: his favourite hero himself, who possessed them, telling Ulisses, that he had rather be a day labourer above, than command in the regiona of the dead. Such a representation defesta the very intent of the law-giver in propagating the doctrines of a future state. Nay, to mortify every excitment to nuble actions, the Greek poet makes reputation, fame, and glory, the great apur to virtue in the pagan bystem, to be visionary and impertinent. On the contrary, Virgil, whose aim in this poem wes the good of society, makes the love of glory so strong a passion in the other world, that the Sibyl's promise to Palinurus, that his name should only be affixed to a promontory, rejoices his shade even in the regions of the unhsppy.

It wes this ungracious description of Elysium, and the licentious storics of the gods, both so pernicious to society, that made Pluto banish Homer out of his republic.

But to return. The poet having deycribed the olimate of the happy regigns, speake next of the amusement of its inhabitants.
"Some exercise their limbs on the grasey plains, in sports contend, and wrestle on the yellow sand."

Besides the obvious allusion in these lines to the philosophy of Plato, concerning the duration of the passions, it seems to have a more secret one to what he had all the way in his eye, the Eleasinian Mysteries, whose celebration was accompanied by the Grecian games. On which account, too, perhaps it was that, in the disposition of his work, his fifth book is employed in the games as a prelndo to the descent in the sixth.

The first place in these happy regions is assigned to the lawgivers end those who brought mankind from a state of nature into society.

At the head of these is Orpheus, the most renowned of the Europesr. lewgivers, but better known under the character of poet: for the first lawe being written in messure, to allure men to learn them, and when learnt to retain them, the fable would have it that, by the furce of harmony, Orpheas softened the savage inhabitants of Thrace.

But he has the first place because he was not only a legislator but the bringer of the mysteries into that part of Europe.

The noxt is allotted to patriots, and those who died for the service of their country.

The third to virtuous and pious priests. For it was of principal nse to society, that religious men should lead holy lives; snd that they should teach nothing of the gods but what was agreesble to the divine nature.

The last place is given to the inventors of arts mechsnical and liberal. The order is exact and beantiful. The first class is of those who found society, heroes and lawgivers; the second, of those who supported it, patriots and holy priests ; and the third, of those who adorned it, the inventors of the arts of life, and the recorders of worthy mysteries.

Virgil bas all along closely followed the doctrine of the mysteries, which carefully taught that virtus only could entitle men to happiness; and that rites, coremonies, luatrations, and sacrifices would nut supply the want of it.

Nor has he been less studious in copying their shows and representations; in which the figures of those heroes and heroines, who were most celebrated in the writinge of the ancient Greek suthors, passed in procession.-(Aristid.)

But notwithstanding this entire ennformity between the poct's scenes and those represented in the mysteries, something is still wanting to complete the identification; and that is, the fanous secret of the mysteries, the unity of the godhead, of which so much hath been said above. Had Virgil neglected to give ue this characteristio mark, though, even then, we could not but eay, his intention was to represent an initiation, yet we must have been forced to own he had not done it with the utmost art. But he was too good a psinter to leave any thing ambiguous; and hath, therofore, concluded his hero's initiation, as was the custom, with instructing him in the Aporreta, or the doctrine of the unity. Till this was done, the initisted was not arived to the highest stege of
perfection ; nor, in the fallest sense, intilled to the appellation of Epoptea. Muscus, therefore, who had been lierophant at Athens, takes the plsce of the Sibyl, as it was the custom to have different guides in different parts of the celebration, and is made to conduct him to the recess where his father's shade opens to him the hidden doctrine of perfection, in thees sublime words:-
"First, then, the divine spirit within sustains the heavens, the earth, and watery plains, the moon's enlightened orb, and shining stars; and the eternal mind, diffused through all the parts of nature, actuates the whole stupendous frame and mingles with the vest body of the universe. Thence proceed the race of men and beasts, the vital principles of the flying kind, and the monsters which the ocean breeds under its smooth crystal plain."

This was no other than the doctrine of the old Egyptians, as we are assured by Plato; who says they taught that Jupiter was the apirit which pervadeth all things.

We have shown how easily the Greek philosophy corrupted this principle into what is now called Spinozism. Here Virgil has proved his judgment to great advantage. Nothing was more abhorrent from the mysteries than Spinoziam, sa it overturned the doctrine of a fature state of rewards and punishments, which the mysteries so carefully inculcated; and yot the principle itself, of which Spinozism was the abuse, was cherished there, as it wes the consequence of the doctrine of the unity, the grand sacret of the mysteries. Virgil, therefore, deliven the principle with great caution, and pure and free of the abuse: though he understood the nature of Spinozism, and his fourth Georgic, whero he delivers it, sppears to have been infected with it.

The doctrine of the unity of the godhead, here contended by the author to be taught by Virgil, and as being the doctrine of the old Egyptians, must not be understood as oppssed to the belief in the triplicity of the Supreme Being, an opinion universally held by the anciant world. Different nstions expressed this triplicity by various names, to which they also assigned different attributes.
"The philosophers of all nations (says Rameey, in a Diseertation on the Theory and Mythology of the Pagans) seem to have had some idea, more or less confused, of the triplicity of the Supreme Unity. Plato upeaks of the three forms of the Divinity, which he calls Apathos, Logos, and Pryche; the sovereign good, which is the principle of deity; the isteltigence, which drew the plan of the world; and the energy, which executed it."

An erroneous easignment is here made, by Ramsey, of the attributes or powern of the persons composing this trinity. Agathos, the sovereign good, is the intelligence, which drew the plan of the world; Logos, or Word, is the energy which execated It ; and Psyche is bat another name for Isis, indicating the productions of the earth, which gives a finish and besuty to the whole creation. Thisis agreesble to the masonic trinity, which is denominated Wisdom, Stren th, and Beauty.

Fontenelle give the following curious anecdote of a response from the Oracle of Serapis:-
"Thulis, a king of Egypt, who, as is said, gave the name of Thule to the iale now called Iceland; his eropire resching thither, was of large extent; and, being puffed up with pride, he went to the Oracie of Serapis, and thus spake to it:-Thou that art the god of fire, and who governest the course of the heavens, tell me the truth; was there ever, or will there ever be, one so puissant as myself? The oracle answered him thus:- First God, then the Word and Spirit, all united in one, whoee power can never end. Go hence immediately, 0 mortall whose life is always uncertain.' And Thulis at his going thence, had his throst cut." (Suidas.) History Oracles, p. 9, London, 1688.

The Greek inscription on the great obelisk at Rome, says Chateanbrian, was to this effect:-"The Mighty God; Begotton of God; and the All-resplendent Apollo, the Spirit."-(SeeKnapp's Spirit, Mas. p. 102.)

The idea of the pagan trinity, according to Volney's opinion, was founded on the three modes of action of the sun, in the three seasons of the year. The aun thus characterieed, "Is, says he, no other than the threc-eyed Jupiter, eye and sun being expressed by the ssme word in most of the ancient languages in Asia. This is the origin of all the trinitary system subtilised by Pythagoras and Plato, and totally disGigured by their interpreters."-(Ruins, p. 159.)

Although innovations appear to have been introduced in the administration of the rites of the lesser mysteries, in Greece and Rome, particularly in the latter, still it does not appear that women, as our author supposes, were even sdmitted to participate in the celebrations of the greater mysteries; much less to act as hierophants, to expound what were called the sacred secrets therein contained. This would have been too great a departure from the original, and, moreover, exposed the secrets to too great hazard. "In Egypt the office of the priesthood is in every instance confined to the men; there are no priestesses in the service of male or female deities."-(See Bedoe's Herodotus.) And here it may be worthy of remart, that the freemssons have adhered closely to their prototype, by the total exclusion of females from their order.

Women and children, as we have soen, were freely admitted to the trilling shows and representations of the lesser mysteries, sad here, it seams, women sometimes took the lead, and presided at the celebrations.

Virgil has made this distinction as pointed as possible, in the duties he assigns to the Sibyl. When she arrives in sight of Elysinm, where the greater mysteries commences, her command ceases, and she resigns her office to Musseus. She was an utter stranger to the country, and applies to him for instruction. Eness, while under her guidence, could only view at a distance, like Moses upon Moant Piggah, the hsppy regions of the blessed:-

[^73]The love of horses which they had, alire,
And care of chariots, after death survise.
Some cheerful couls were feasting on the plaln:
Some did the song, and aome the cholr, maintsin
Beneath a laurel whade, where mighty 1'o
Mounts ap to woods above, and hides his head below.
To these the Blbyl thut her speech eddresad,
And firat to him eurrounded by the rest-
(Tow'ring his height, and ample was hid breast)-
"Say, happy souls ! divine Munzus ! say,
Whers llven Anchlsen, and twhere lies owr way
To find the bero, for whose only sake
We sought the dark gbodes, and cross'd the bitter lake ${ }^{\prime \prime}$
To this the sacred poet thus replied:
${ }^{*}$ In no fix'd place the happy soule reside.
In groves wo live, and lie on monay beds,
By cryital strearas, that murmur through the mende:
But pass yon easy hille, and thence deacend;
The path conducte you to your joursey's end."
This said, he led them up the mountain's brow,
And ahows them all the shining flelds below:
They wind the hill, and thro' the blessfol meadows go.
(Dryden's Trass.)

The mysleries did not teach the doctrine of the unity for mere apectslation; but, as we ssid before, to obviate certain miechiefa of polytheism and to support the belief of a providence. Now, as a future state of rewards and pnnishments did not quite remove the objections to its inequalities here, they added to it the doctrines of the metempsychosis, or the belief of a prior state. (Vid Porph, de Abst. 1. iv. sect. 16. et Cie Fragm. ex lib. de Philosuphia.) And this, likewise, our poet has bsen carefal to record. For after having revealed the great secret of the unity, he goes on to speak of the metempsychosis, or transmigration, in this manner :-
" All these souls whom you see, after they have rolled away a thonsand years, are summoned forth by the god, in a grest body, to the river Lethe, to the intent that, losing memory of the past, they may revisit the upper regions, and again become willing to return into bodies."

And thence takes occasion to explain the nature and use of purgatory, which, in our hero's passage through that region, had not been done. This aforda him, too, an opportunity for that noble episode, the procession of the hero's posterity, which passes in review before him. And with this the scene closes.

In attending the hero's progreas through the three estates of tho dead, wy have shown, from some ancient anthor, at almost every step, the exact conformity of his adventures to those of the initiated in the mysteries. We shall now collect these scattered lights to a point, which will, I am persuaded, throw such a lustre on this interpretation as to make the truth of it irresistible. To this purpose, I shall have nothing to do but to transcribe a passage from an ancient writer, preserved by Stobsens, which professes to explain the exact conformity botween death, or a real descent to the infernal regions, and initiation, whero the repre-
sentation of those regions was exhibited. His words are these :-" The mind is affected and agitated in death, just as it is in initiation into tho grand myateries. And word answers to word as well as thing to thing; for Teleytan is to die, and Teleisthai, to be initiated. The first stage if nothing but errors snd uncertainties; laborious toanderings; a rude and fearful march through night and durkness. And now arrived on the verge of death and initiation, every thing wears a dreadfol aspect; it is all horror, trembling, and affrightment. But this scenc once over, a mi $/ a-$ culous and divine light displays itsolf; and shining plains and flowery meadows open on all hands before them. Here they are entertained with hymns and dances, with the sublime doctrines of sacred knowledge, and with reverend and holy visions. And now, become perfect and ini. tiated, they are free and no longer under restzaints; but crowned and triumphant. they walk up and down the regions of the blessed; conversewith pure and holy men; and celebrate the sacred mysteries at pleasure."

The Son of Sirach, who waa full of Grecian ideas, and hath embellished his admirable work of Ecclesiasticus with a grest deal of Gentile learning, hath plainly alluded, though in few words, to these circuinstances of initiation, where encoursging men to seek after wisdom, he ayys:-At first she will walk with him by erooked ways, and bring fear and dread upon him, and torment him with her diecipline, until she may truat her sonl, and try him by her laws. Then will she return thestraight way unto him, and comfort him, and show him her secrets."(Chsp. iv. 17, 18.)

The conjecture of the author, that an allusion is here made to circumetances attending initiations into the mysteries, is corroborated, or, I might ssy, confirmed by masonry; for a known practice in the onerenders it pretty certain that the same existed in the other.

In the royal arch degree, after the candidates have taken the required oeth, they are told that they were now obligated and roceived as royal arch masons, but as this degree was infinitely more important than any of the preoeding, it was necessary for them (as beford noticed) to pasy through nany trials, and travel in rough and rugged ways to prore their fidelity, before they could be entruated with the more important secrets of this degree. They are further told, that though they could not discover the path they were to travel, they were under the direction of a faithful guide, who would "bring the blind by a way they know not, and led them in paths they had not known; who would make darkness light before them, and crooked things straight; who would do these things, and not forsake them." (Isaiah, 42, v. 16.)-Bernard.

The progress finished, and every thing over, Eneas and his guide arelet out again to the upper regions, through the ivory gate of dreams. A circumstance borrowed from Homer, and very happily applied to this subject; for, as Euripides elegantly expresses it, "A dream is the lesser mysteries of death."

But, besides this of ivory, there was another of horn. Through the
1 first issued false visions ; and through the latter, true.

Servins, with the spirit of a rank grammarian, who seldom finds any thing to stop at but a solecism in expression, says very readily, "Volt antem intelligi, falas esse omnia ques dixit. He wonld have you understand by this, that all he has been saying is false and groundless." Other critics give the same solution. Rnsens, one of the best, may speak for them all; "when, therefore, Virgil eends Eneas forth through the ivory gate, he clearly indicates that whatever be has said in regard to the infernal regions, is to be reckoned among the fables."

This interpretation is strengthened by Virgil's being an Epicurean; and making the same conclusion in his mecond Georgic :
"Felix, qui potuit cognoscere causas,
Atque metus omnes el inezorabile fatam
Subjecit pedibus, etrepitumque Acherontis avari ["
"Happy is he who can know the causes of things, and tread under foot all fear, inexorable fate, and tho noise of greedy Acheron."

But Virgil wrote, not for the amusoment of women and childron over a winter's fire, in the taste of the Milesian fables, but for the use of men and citizens, to instruct them in the daties of humanity and society. The purpose, therefore, of such a writer, when he trests of a fature state, must be to make the doctrine intereating to hia reader, and useful in civil life; Virgil hath done the firat, by bringing his hero to it through the most perilous achievement; and the second, by sppropriating the rewards and puniehments of that state to virtue and to vice only.

The trath is, the difficulty can never be gotten over, but by supposing the descent to signify an initiation into the mysteries. This will unriddle the enigma, and restore the poet to himself. And if this was Virgil's meaning, it is to be presumed he would give some private mark to ascertain it, for which no place was so proper as the conclunion. He has, therefore, with a beanty of invention peculiar to himeelf, made this fine improvement on Homer's atory of the two gates; and imagioing that of horn for true visions, and that of ivory for fales, insinumtes by the first the reality of another state; and by the second, the ahadowy repreaentations of it in the shows of the mysteries; so that, not the things objected to Eneas, but the scenes of them only were false; sa they lay not in hell but in the temple of Ceres.

But though the visions which isuced from the ivory gate were unsubstantial, as being only representative, yet I make no question, bat the ivory gate itself was real. It appears, indeed, to be no other thap
1 that sumptuous door of the temple, through which the initisted came cout, when the celebration was over. This temple was of an immense bigness. ${ }^{*}$

[^74]And now, having occasionally, and by parts only, said so much of these things, it will not be amiss, in conclation, to give one general and concise ides of the whole. I suppose the sabstance of the celebration to be a kind of drama of the history of Ceres, which afforded opportunity to represent the three particulars, about which the mysteries were principsily concerned ; the rise and establishment of civil society; the doctriae of a future state of rewards and punishments; the error of polytheism, and the principle of the unity.

But here let it be observed, that the secrets of the mysteries were unfolded both by words and actions; of which Aristidee, quoted above, gives the resson; "That 80 the sounds and sights might mutually assist each other in making an impreseion on the minds of the initiated." The error of polytheism, therefore, was as well exposed by the dark wanderings In the subterraneous passages through which the initiated begen his course, as by the information given him by the hiarophant; and the truth of the wnity as strongly illustrated by ths autopton agalma the self seen image, the diffusive shining light, as by the hymn of Orpheus, or the speceh of Anchises.

On the whole, if I be not greatly deceived, the viow in whioh I place this famons epinode not only clesra up a number of difficultiea inexplicable on any other scheme, but likewles ennobles, and gives a gracefal finiahing to the whole poem, for now the episode is seen to be an essential part of the main subject, which is the erection of a civil policy and a religion. For custom had made initiation into the mysteries a necesaery preparalive to that ardnous undertaking.

To conclude, the principles here sssumed, in explaining this famous postical fiction, are, I presume, such as give solidity, as well as light, to what is deduced from them; and are, perhaps, the only principles from virich any thing reasonsble can be deduced in a plece of criticism of this nature. For from what I have shown was tanght and represented in the mysteries, I infer that Eneen's descent into hell signifies an initiation ; because of the exaot conformity, in all circumstances, between what Virgil relutes of his hero's adventure, and what antiquity delivers concerning the ahowe and doctrines of those mysteries into which heroes were wont to be initiated.

The view taken by bishop Warbarton of the parport of the sixth book of the Eneid, was new, and calculated to excite the deep attention of the loarned world. Accordingly various opinions were entertained for and against the correctness of the position assumed by him. Among the

[^75]cricies who entered the lists in opposition to the anthor, wes the cele. brated historian Gibbon. And this, he says, was hie first publication in English. His remarks on the subject are contained in the third volume of his miscellaneous work, which he introduces as follows :-
"The allegorical interpretation which the biahop of Gloncester has given of the sixth book of the Eneid, seeme to have been very favourably received by the public. Many writers, both st home and abroad, have mentioned it with approbation, or at least with esteem; and I have more than once heard it alleged, in the conversation of scholars, as an ingenions improvement on the plain and obvious aense of Virgil. As such, it is not undeserving the notice of a candid critic ; nor can the inquiry he void of entertainment, whilst Virgil is our coustant theme.
"I shall readily sllow, what I believe may in general be true, that the mysteries exhibited a thestrical representation of all that was believed or imagined of the lower world ; that the aspirant was conducted through the mimio scenes of Erebus, Tartarue, and Elysium; and thata warm enthusiast, in doscribing these awful spectacles, might express himeelf as if he had actually visited the infernal regions. It is not sarprising that the copy was like the original; but it still ramains undetermined, whether Virgil intended to describe the original or the copy."

If the copy was a true representation of the original, of what consequence is it which the poet took as his sampler? But, as it wes more easy to procure a correct description of the spectscles exhibited in the tomple of the Eleusinian Ceres, than of what takes place in the regions below, it is most prohable Virgil chose the former. Besides, it may be remarked, that the description of the infernal regions was doubtless first matured in the mysteries. No author, it is presumed, had, before their establishment, ever given anything like s detailed account of such place. They therefore, properly speaking, are the original, and the parallel is to be found in Virgil's description of Eneas's deacent.

Mr. Voltaire shows great fickleness in his opinion on this sabject; sometimes giving it in favour of Warburton's hypothesis, and at others the contrary. Spesking of the Eleusinian myateries (tome xvi. p. 162), he says:-
"The mysterious ceremonies of Ceres were an imitation of those of Isis. Those who had committed crimes confessed and expiated them. They fasted, they parified themselves, and gave slms. All the ceremonies were held secret, under the religious sanction of an oath, to render them more venerable. The mysteries were celebrated in the night, to inspire a holy horror. They represented a kind of tragedy, in which the spectacle exposed to view the happiness of the just and the torments of the wicked. The greatest men of antiquity, the Platos, the Ciceros, have eulogised these mysteries, which had not then degenerated from their primative purity.
"Very learned men have supposed that the sisth book of the Eneid was a description of what passed in these secret and celebrated shows." Again, he says, "The sixth book of the Eneid is only a description of the mysteries of Isis and the Eleusinian Ceres."

He afterwards recants this opinion, and says, "I think I see a description of the Eleusinian Ceres, in Claudian's poem on the Rape of Proserpine, masch clearer than I can see any in the sixth book of the Eneid. Virgil lived under a prince who joined to all his other bad qualities that of wishing to paes for a religions character; who was probably initiated in these mysteries himself, the better thereby to impose upon the people, and who would not have tolerated what would have been pretended to be such decided profanation."

Why, Augustus was the hero of the poem; it was for his honour and glory that the poet laboured. He was, says our author, shadowed in tie person of Eneas ; snd would not, therefore, probably lave been very scrupulous sbout s vague exposition of the mysteries, while it tended to its own glorification.
"Clandian, (says Warburton,) professes openly to treat of the Eleulinisn mysteries, at a time when they were in little veneration." It is not strange, therefore, that Mr. Voltaire should see a description of the Eleusinian Ceres, in Claudian's poem, much clearer than in the sixth book of the Eneid; the author of which evidently not intending that his objoct should be generally known.

Voltaire seems frequently to have written off-hand, without anbjecting himself to the tronble of rigid scrutiny; and, indeed, he wrote so much, and upon such a variety of topics, that it would appear impossible that he, ahould bestow atrict atteution to them all. In the present case, his first impressions appear to have been founded on the opinions of the learned men he alludes to, and he probably adopted a contrary belief in lite manner, without an attentive examination of the subject.

Bishop Warburton was probably occupied many years in the composition of his learned work; he had thoroughly studied the subject, and it is confidently believed that this application of the sixth book of the Eneid to the mysteries will atend the test of the most severe criticism.

The Abbe Barthelemi, in an article on the mysteries, in his "Travels of Anscharsis," quotes the Encid in a descriptign of them, as if no question then existed in regard to Virgil's views,

## CIIAPTER IV.

TEE HETAYORPEOS1S OF APCLEICE: ASD THE AYOUR OF CEFID AYD FZICRE

Thus far concerning the use of the mysteries to society. How ersontial they were esteemed to religion, we may understand by tho Metamorphosis of Apuleius ; a book, indeed, which from its very fint appearance hath passed for a trivial fable. Capitolinus, in the life of Clodius Albinus, where he speake of that kind of tales which diseoncert the gravity of philoophers, tells us that Severas could not bear with patience the honours the Senate had conferred on Albinus; especially their distingaishing him with the title of learned, who was grown old in the study of old-wives fables, such as the Mrilesian-Panic tales of his countryman and favourite, Apuleios.

The writer of the Metamorphosis, however, was one of the gravest and most virtuons, as well as most learned philoeophers of his age. Albinss appesre to haye gone further into the true character of this work, than his rival Severus. And if we may bolieve Marcus Aurelius, who calls Albinus "A man of experience, of demare life, and grave morals," he was not a man to be taken with such trilling amusements as Milesian fables. His fondness, therefore, for the Metamorphosis of Apuleius shows that he considered it in another light. And who so likely to be let into the sathor's true design, as Albinus, who lived very near his time, and was of Adrametum, in the neighbourhood of Carthage, where Apuleius scyourned and studied, and was distinguished with pablic honours? The work is indeed of a different charactor from what some ancients have represented, and even from what modern critics have pretended to discover of it. Those ancients, who stack in the outside, considered it, without refinement, as and idle fable; the moderns who could not reconcile. a worls of that nature to the gravity of the author's character, havesupposed it a thing of more importance, and no less than a general satire on the vices of those times.

But this is far chort of the matter. The anthor's main parpose wes not to satirise the specifle vices of his age, though to enliven his fable, and for the better carrying on his story, he hath employed many circumstances of this kind, but to recommend Pagan religion, as the only cure for all vices whatsoever.

To give what we have to eay its proper force, we mast consider the real character of the writer. Apuleius, of Madaura in Africa, was a devoted Platonist ; and, like the Platonists of that age, an inveterato
enemy to Christianity. His zeal for the honour of philosophy is seen in the solemn affirmation, when convened before a court of justice, "I have never derogated ought from the honour of philosophy, which is more precious to me than life." His superstitions attachment to the religion of his country is seen in his immoderate fondsess for the mysteries. He was initiated, an he tells us, into almost all of them; and in some, bore the most distinguished offices. In his apology before the proconsul of Africa, he says, "Will you have me relato what kind of things thoee were, which wrapped up in a napkin, I confided to the house of Pontianus? You shall be allowed. I have been initiated in Greece into many mysteries. I carefully guard certain of their signs and tokens which have been committed to me by the priests. I say nothing unnaval, nothing unknown. Ye who are present know what thing it is of father Bacchns Symmistæ which you keep concealed at home, and cilontly venerate apart from the profane. But I, as I have said, through love of trath, and duty to the goda, have learnt numerons mysteries, and very many rites, and various ceremonies. Nor do I make up this for the occasion: but it is about three years ago that shortly after my arrival at Oea, in a public discourse on the Majesty of Aesculapine, I made some declaration, and enumerated whatever mysteries I knew. That discourse is very celebrated; is geners!ly read; is in the bands of everybody,-commended to the pions people of Oen, not so much by my eloquence, as by the mention of Arsculapins. Can it then appear strange to any body who has any knowledge of religion, that a man versed in so many mysteries of the gods should keep certain holy trifles in his house? I am accustomed wherever I go to take with me the image of some god packed up among my books, and on fentivals to workhip it with incense and wine, and sometimes with sacrifices."
His great devotion to Paganism, therefore, must neede have been attended with equal aversion to Christianity; and it is more than probable, that the oration he speaks of as made in honour of Asculapins, was in the number of those invectives, at that time so well received by the enemies of our holy faith. For, not to insist on the success of his oration, which hetellsus, wasin every body's hands, a thing common to discourges on subjects that engage the public attention, but rarely the fortune of such stale wase as panegyrics on a god long worn into an cotablishment; not, 1 ssy, to insist upon this, we may observe that Zirsoulapins was one of those ancient heroes who were employed, by the defenders of Paganlsm, to oppose to Jeans ; and the circumstances of Fiscolapius's story made him the fittest of any in fabulous antiquity for that purpose.

Having seen what there wes in the common passion of his rect, and his own fond mode of saperstition, to indispose Apuleias to Christianity, let usinquire what private provocation he might have to prejudice him against It; for, a privato provocation, I am persuaded, he had; occasioned by a personal injury done him by one of his profession; which, I suppose, did not a little contribate to exsaperate his bigotry. He had married a rich widow, agsinst the will of ber first husband's relations; who en-
deavoured to set sside the marriage on pretence of his employing sorcery and enchantments to engage her affections. Of this, he was judicially accueed by his wifo's brother-in-Isw, Licinins AEmilianus, before the Proconsal of Africa. Now his accuser, if I am not much mistaken, was a Christian, though this intereating circumstance hath ascaped his commentatora.

Now irreligion and atheism, we know, was the nsme Christianity at that time went by, for having dared to renounce the whole family of the gentile gods in a lump. Amilianus had mado such clear work, thet there wes not so much es an anointed atone, or a tree adorned with consecrated gariands, to be found throughout his whole farm. That the stheism of A\&milianus was of this sort, and no ocurtly or philosophic impiety, appears from his character and station. He was either a fine gentleman or a profound inquirer into nature-characters indeed which are sometimes found to be above religion-bat a mewe rustic in his life and manners Now plain umpolished men in such a statiou are nover withoat some religion or other; when we find AEmilisnus, therefore, not of the establishisd, we must needs conclude him to be a sectany and a Christian. His neglect of his country gods was not a mere negative affront; of forgetfulness. He gloried in being their despiser; and took Kindly the name of Mezentius, as a title of honour,- (alteram, quod libentius audit, ob deorum contemptum, Merentius,) which I woald consider as a further mark of a Christian convict. He even held it in an abomination so much as to pat his hand to his lips, (according to the mode of adoration in those timea, when he passed by a heathen temple; (nefas habet adorandi gratia manum labris admovere, the most characteristic mark of a primitive confessor, by which he could never be mistaken; nor, one would think, so long overlooked.

The aversion, therefore, which Apuleins had contracted to his Christian accuser, and we see, by his apology, it was in no ordinary degree, would without doabt increase his prejudice to that religion. I am persuaded he gave the character of the Baker's wife, in his Golden Ass, for no other reason than to outrage ourholy faith. He draws her, stained with all the vices that could fall to the share of \& woman; and then, to finiuh all, he makes her a Christian.

Let us see now how this would influence his writings. There was nothing the philosophers of that time had more at heart, especially the Plstonists and Pythagoreans, than the support of sinking Paganiam. This service, ss hath been occasionally remarked they performed in various ways and manners; some by allegorizing their theology; some by spiritualizing their philosophy; and soms, as Jamblicus and Philostratus, by writing the liven of their heroes to oppose to that of Christ; others sgain, as Pophyry, with this viaw, collected their oracles, or as Melanthins, Meander, Hicecius, and Sotades, wrote descriptive encominms on their Mysteries. Which laet, as we shall now show, wes the province undertaked by Apuleins; his Metamorphosis being nothing else bat one continued recommendetion of them.

But let us inquire into the motives our author might bave for enter-
lag at all into the defence of Paganiem: His reasona for choosing this topic of defence, the recommendation of the mysteries.

As to his defence of paganiem in general, we may observe, that works of this kind were very much in fashion, especially amongst the philosophers of our author's eect. He was, as we have seen, most superstitionsly devoted to pagan worship; and, he bore a personal spite and prejudice to the Christian profession.

As to making the defence of the mysteries his choice, still stronger reasons may be assigned. These were the rites to which he wes so peouliarly devoted, that he had contrived to be initiated into all the myzteries of notes in the Roman world; and in several of them had borne the moat distinguished offices. The mysteries being at this time become eatremely corrupt, and consequently, in discredit, needed an able and esalous apologist: both of which qualities met eminently in Apuleins. The corraptions were of two kinds, debaucheries and magic, Their debancheries we have taken notice of, sbove; their magic will be considered hereafter. But, our author's close attachment to mysterions rites was, without question, the very thing that occasioned all those suapicions and reports, which ended in an accossation of magic: and, considering what hath been said of the corrupt state of the mysteries, the reader will not wonder at it.

Such then being the general character of the mysteries, and of this their great devotee, notning was more natural than his projecting their defance; which, at the eame time that it concurred to the aupport of paganiem in general, would vindicate his own credit, together with an fastitution of which he was bu immoderately fond. And the following considerations are sufficient to show, that the Metamorphosis was written after his Apology : for, his accusers never once mention the fable of the golden ass to support their charge of magic, though they were in great want of proofe, and this lay so ready for their purpose. He poiitively asoorts, before the tribunal of Maximus Clauding, that he had never given the least occasion to suspect him of magic: "Nusquam passus sum vel exiguaru suspicionem magise consiatere."

Now antiquity considered initiation into the mysteries at a delivery from a living death of vice, brutality, and misery, and the beginning of a new life of virtue, reason, and happiness. This therefore, was the very circumstance which our anthor chose for the subject of his recommendation.

And as in the mysteries, their moral and divine truths were represented in ahows and allegories, mo, in order to comply with this mothod of instruction, and in imitation of the ancient masters of wisdom, who borrowed their manner of tesching from thence, he hath artfully insinuated his doctrine in an agreeable fable ; and the fittest one could conceive for his purpose, as will be seen when we come to examine it.

The foundstion of this allegory was a Milesian fable, a species of polite triffing then much in vogae, and not very unlike the modern Arabian cales. To allure his readers, therefore, with the promiee of a fashionable work, he intoduces his Metamorphosis in this manner: "And I too will deliver to you various fables in this Milesian style, and delight your
ears in a gentle whisper; " plainly intimating that there was something of more coneequence at bottom. Bat they took him at his word, and never troubled their heads about a forther mesning. The outside engaged all their attention, and sufficiently dolighted them; as we may gather from the early title it boro, of Asinus Aureus:* unloss we will rather suppose it to have been bestowed by the few intelligent readers in the secret; for, in spite of the anthor, a secret it wes, and eo all along continued.

Upon one of these popular fables, he chose to engraft his instruction: tsking a celebrated tale from the collections of one Lucins of Patra; who relates his transformation into an ass, and his adventures under that shape. Lacian has epitomised this story, as Apuleins soems to have paraphrased it; and the sabject being a metamorphosis, it admirably fitted his purpoee; ss the metempesychosis to which that supenstition belongs was one of the fundamental doctrines of the mynteries.

The fahle opens with the representation of a young man, personated by himself, sonvible of the sdivantages of virtue and piety, but immoderately fond of pleasure, and as curions of magic. He gives a looso to his vicious appetite, and the crimes and follies into which they lead him soon ends in his transformation to a brute.

This contrivance of the introductory part is artful ; and finely insinustes the great moral of the piece, that brutality attends vice as its puniahment; and punishment by actusl transformation was keeping op to the popular opinion.

St. Austin permitted himself to doubt whether Apuleius's account of his change into sn ass was not a true relation. I shall say nothing to this extravagant doubt, bat only observe, that it appears from bence, that 8t. Austin esteemed Apuleias a profligate in his manners, and addicted to the superstitions of magic.

But to proceed with his plan. Having now shown himself thoronghly bratalized by his crimes, he goes on to represent at large the miearies of that condition, in a long detail of his misadventures, in the conrse of which he fell, by turns, under the dominion of every vicions paesion; though the incidents are chiefly confined to the mischiefs of unlawfil Jove, and this, with mach judgment, as one of the principal onds of the mysteries was to curb and subdue this inordinance, which brings moro goveral and lasting misery upon mankind than all the other. And as it was the great moral of his piece to show that pure religion, such as a Platonic philosopher esteemed pare, was the only remedy for haman corruption ; so, to prevent the abuse or mistake of this capital principle. he takes care to inform us, that an attachment to superstitious and corrupt religion does but plange the wretched victim into still greater miseries. This he finely illustrates, in the history of his edventares with the begging prieste of Cybele, whose enormities are related in the

[^76]and ninth books, and whose corrupt mysteries are intended as a to the pure rites of Isis, with which, in a very studied descripI enconium he concludes the Fable.
e mean time, matters growing from bad to worse, and Lacius I deeper and deeper into the sink of vice, his affairs come to a For this is one great besuty in the conduct of the fable, that hange of station, while he remains a brute, makes his condition re wretched and deplorable. And being now about to perpetrate the most shocking enormities, Nature, though so deeply brutalvolts; he abhors the idea of his projected crime; he evades his ; he flies to the sea-shore; and, in this solitude, begins to reflect riously on his loat condition. This is finely imagined, for we e men, even after a whole life of horrors, come suddenly to themin the hideous aspect of some monster vice too frightfal even for sned conscience to endure. Nor is it with less judgment that thor makes these beginnings of reformation contirmed by solihen the unhappy victim of pleasure hath broken loose from the ions and partakers of his follies.
now, a more intimate acquaintance of his hopeless state obliges fly to heaven for relief. The moon is in full splendour, and the lence of the night inspires him with sentiments of religion. sen purifies himself in the manner prescribed by Pythagoras, the sher most addicted to initiations of all the early sages ; as Apuf all the Jater; and so makes his prayer to the moon or Isis, inher by her eeveral names of the Eleusinian Ceres, the celestial Diana and Proserpine, when betaking himself to repose, the to him in a dream, under that ahining image so mnch epoken le mystics, as representing the divine nature in general.* e several symbolic attributes, [as described by Apuleias, but here [] the lucid round, the snakes, the ears of corn, and the sistrum, It the tutelar deities of the Hecatæan, Bacchic, Eleusinian and ysteries. That is, the mystic rites in general, for whose sake the was invented. As the black Palla in which she is wrapped, lered with a silver moon and stars, denotes the time in which steries were celebrated, namely, in the dead of night ; which was :ant and inseparable a circumstance, that the author calls initiactis aocietas. $\dagger$

[^77]"Bchold, Lucius, I, moved by thy prayers, am present with thee; I, who sin nsture, the parent of things, the queen of all the elements, the primordial progeny of ages, the Supreme of Divinities, the sovereign of the spirits of the dead, the first of the celestials, and the uniform roserablance of gods and goddesses. I who rale by my nod the lamisous summits of the heavens, the salubrious breezee of the sea, and the deplorable silences of the realms beneath; and whose one divinity the whole orb of the earth venerates under a manifold form, by differeat rites, and a variety of appellations. Hence the primogenial Phrygians csll me Pessinuotics, the mother of the gods; the Attic Aborigines, Cecropisn Minerva; the floating Cyprians, Paphian Venus; the arrowbearing Cretans, Diana Dictynna; the three-tongued Sicilians, Btygian Proserpine; and the Eleusinisns, the sncient goddess Ceres. Some also call me Juno, others Bellona, othera Hecate, and others Rhamnuuda, And those who are illuminated by the incipient rays of that divinity, the sun, when he rises, viz., the Ethiopian, the Arii, and Egyptians skilled in ancient learning, worshipping me by ceremonies perfectly appropriate, call me by my true name, Queen Isis." I'his was exactly sdapted to the design of the mysteries; and preparatory to the communication of the aporreta. It had likewise this further use, to patch up and recommend the pagan religions; by showing that their Polythesim consisted in nothing else then ingiving the Supreme God various names, merely expressive of his various attributes. This was the fashionable colouring, which, after the appearance of Christianity, the advocates of paganiam euployed to blanch their idolatry. I will ooly observe further that the words, the Egyptians worshipping me widh cercmonies perfectly appropriate, insinuate what was trae, that all mysterious worship came first from Egypt; this people having penetrated furthest into the nature of the gods; as the cailing her who ropresents the mysteries in general rerum natura parens, shows plsinly what were the aporreta of them all.

Parent Nature then reveala to Luciua the means of his recovery. Her festival was on the following day; when there was to be a procesaion of her volaries. The prieat who led it up, would have a chaplet of ross in his hand, which had the virtue to restore him to his former shape. But as breaking through a habit of vice is, of all things, the mot difficult, she adds encouragements to her promises, "nor shonld yoo fear anything pertaining to my concerns as difficult. For in this very same moment of time in which I come to you, being there also present, I order my priest in a dream to do those thinga which are to be doos hereafter." Alloding to what was taught in the mysteries, that, the sssistance of Heaven was always present to second the efforts of virtus. But in retorn for the favour of relessing him from his brutal ehspo, that is, of reforming his mannern by initiation, she tells him she expected the service of his whole lifs; and this, the mysteries required. Nor should his service go unrewarded, for he should have a place in Elysium hereafter; and this, too, the mysteries promised.

Lacius is at length confirmed in his resolution of aspiring to a life of
virtue. And on this change of his dispositions, and entire conquest of his passions, the author finely represents sll nature as putting on s now face of cheerfulness and gaiety. "All things likewise, independent of my peculiar joy, seemed to me to exalt with such great hilarity that I might have thought that cattle of every kind, every house, and even the day itself, rejoiced with a serene countenance." And to enjoy Nature, in these her best conditions, was the boasted privilege of the Iribiated, as we may see from a choras in the Frogs of Aristophanes.

And now the procession, in honour of Isis, begins. Where, by the way, we must observe, that the two first days of the celebration of the Eleosinian mysteries are plainly described; the one called agymos, from the multitude assembled; the other alase mystai, from the procession made to the sea-shore. "There was an influx of a crowd of those who had been initiated in the sacred rites of the goddess, resplendent with the pure whitnese of linen garments. In the next place, the imagee of the gode, carried by the priests of Isis, proceeded, not disdaining to walk with the feet of men ; this terriffically raising a canine hesd; but that beling the messenger of the infernal gods, and of those in the realms beneath, with an erect face, partly black, and partly of a goldeu colour, bearing in his left band a caduceus, and shaking in his right hand leanohes of the flouriahing palm tree; whose footsteps, a crow, in an ereot position, immediately followed. This crow was the prolific reecmblance of the sll-parent goddess, and was carried on the shoulders of one of the blessed servants of this divinity and who acted the part of a mimie as he walked; another carried a cista or chest, containing arcana, and perfectly concealing the mystic symbols of a magnificent religion. And another bore in his happy bosom the venerable effigies of the Supreme Divinity, which was not similar to any cattle, bird, or wild beast, nor even to man; but being venerable for the subtilty by which it was invented, and also for its novelty, was an ineffable indication of a more subbime religion, and which was to be concealed with the greatest silence." The priest or hierophant of the rites leads up the train of the initisted with a garland of roees in hia hand. Lucias approaches, devours the roses, nd is according to the promise of the goddess, restored to his netural form, by which, as we have said, no more was meant than a change of manuers from vice to virtue. And this the author plainly intimates by making the goddess thus address him under his bratal form, "Immediately divest yourself of the hide of that worat of beasts, and which for some time since has been to me detestable." For an ass was so far from being detestable, that it was employed in the celebration of her rites; and was ever found in the retinne of Osiris or Bacahus,

[^78]The griand pleinly represer.ss that mivich the appirants were crowned -ith at thair iaitiation; jast as the rivtes of the roses desigas the myteries. At this tranotormation be bed been told, that roser were to rostore him to homanity,* mo that admidts all his siventures, he had still this remedy in view.

Our suthor proceed to tell mis, that the peoplo woodered at this isstantaneoos metamorphois. "The people admire, and the religioas venerate so evident an indieation of the power of the Sopreme Divinity, and the magnificenco and facility of my restocrition." For the mysterien boatted the power of giving a maddea and entire change to the mind and affections. And the advocatea of paganimm against Christianity noed to opposo this bosat to the real and miraculoras efficacy of graco.

As soon as Lacins had recovered the integrity of his nature by initis. tion, the pricat covers bim, naked as ho was, with a linen garment. $A$ habit alwayn bestowed npon the aupirant, an his sdmiscion to the myt teries; the rationale of which, Aproleins himmelf giveas us in his apology. $\dagger$ When all was over, the priest scooets his penitent in the following manner. "O Lacins! you have at length arrived at the port of quiet and the altar of pity, having endured many and varions labours, and great tempeste of fortane, and been tomed about by mighty waves of calsuity. Assame now a more joyful countemanco, and more adapted to that while garment which you wear. Attond the pomp of yoor saviour goddess with triumphant stope. Let the irreligious see, let then see and acknonoledge their error. Behold Lucius, rejoicing in the providence of the grest Isis, and freed from his pristine miseries, triumphe in his own fortune. $\ddagger$

[^79]Here the moral of the fable is delivered in plain terms; and, in this moral, all we have advanced, concerning the purpoee of the work, fully confirmed. It is expressly declared, that vice and inordinate curiosity were the causes of Lacius's disastera; from which the only relief was initiation into the mysteries. Whereby the author would insinuate that nothing was more abhorent from those holy rites than debauchery and snagic; the two enormities they were then commonly suspected to encourage.

It hath been obeerved above, that, by Lucius's return to bis proper form, was meant his initiation; and accordingly, that return is called, es initiation was, the being born again,-ut renatus quodammodo, andsua providentia quodsmmodo renatos; but this was only to the lesser, not the greater mysteries. The first was to purify the mind: hence it was called by the ancient, kakies aphairesin, a separation from evil: the second was to enlighten it, when purified, and to bring it to the knowledge of divine secrets. Hence they named the one Katharsin, and the other Teleiothta, pisrification and perfection.* The first is here repregented in the incident of Lucius's being restored to humanity by the use of rows. The second, as the matter of chief importance, the anthor treate more ciroumetantially.

He begina with making the prieat take occasion, from the benefit already received, to press Lacius to enter into the greater mysteries of Inia

But at the same time makes him inform the candidate, that nothing was to be precipitated; for that not only many previous rites and ceremonies, concerning religious diet, and abstinence from profane food, were to be observed; but that the aspirants to these higher mysteries were to wait for a call.

The author, by the doabts and apprehensiona which retarded his initiation, first gives us to understand, that the highest degree of sanctity wes required of those who entered into the mysteries.

These difficalties being aurmounted, he is initiated with the sceustomed ceremonies. He then makes his prayer, in which the grand eporrela of the mysteries is still more plainly referred to.
"Thon, 0 boly and perpetual Saviour of the buman race, being always munificent in cherishing mortal, dost employ the sweet affection of a mother in the misfortunes of the miserable. Nor is there any day or night, or even a slender moment of time, which passes anattended by thy benevolent interpositions. Thou protectest men both by ses and land, and disporsing the storms of life, dost extend thy salutary right hand, by which thou drawest bels the inextricably twisted thread of

[^80]the Fates, and dost mitigate the tempests of inclement fortune, and restrain the noxious courses of the stars. The supernal gods reverence thee, and those in the realms beneath attentively observe thy nod. Thou rollest the sphere of the universe round the steady poles, does illuminate the sun, govern the world, and tread on the dark realms of Tartarus. The stars move responsive to thy command,* the gods rejoice in thy divinity, the hours and seasons return by thy appointment, and the elements reverence thy decree. By thy nod blasts of wind blow, the clouds are nourished, seeds germinste, and blossoms increses. Birds swiftly pass through the tracks of the air, wild beasts wandering on the mountains, serpents concealed in the ground, and the enormous monsters that awim in the sea, are terrified at the majesty which inveats thy divinity, etc."

The affair thns over, the anthor, in the next place, takee oocasion, agreeably to his real practice and opinions, to recommend a multiplicily of initialions. He tells us how Isis connselled him to enter into the mysteries of Osiris; how, after that she invited him to a third initistion, and then rewarded him for his aceumulated piety with an abundance of temporal blessings.

All this considered, we can no longer donbt but that the trae design of his work was to recommend initiation into the mysteries, in oppoaitiou to the new religion. We see the catastrophe of the piece, the whole Eleventh Book entirely tsken ap with it; and composed with the greatest serionsness and superstition.

And, surely, nothing conld be better conceived, to recommend the mysteries, than the idea of such a plan, or better contrived than his execution of it, in which he omits no circumstance that might be plausibly opposed to Christisnity; or that he might be recommended, with advantage, to the magistrate's favour; as where he telle us, that in these rites, they prayed for the prosperity of all orders in the Stato, ""For the great Emperor, the eenate, the equestrian order, and for all the Roman people."

This interpretation will throw new light on every part of the golden ass. But I have been so long on the subject, that I have only time to give one instance; and this, chiefly because it reflects it back again on the general interpretation of the fable.

> The Amour of Cupid and Psyche.

In the fifth snd sixth book is the long episode of Cupid and Psyche,t visibly allegorical throughout; and entirely foreign to all the reat of the work, considered as a mere Milesian fable; but very spplicable to the writer's purpose, if he had that moral to inculcate which we have here assigned him.

[^81]There was no man, though he regarded the Golden Ass as a thing of mere amusement, but saw that the story of Cupid and Payche was a philosophic allegory of the progress of the soul to perfection in the possesion of divine love and the reward of immortality. ${ }^{\circ}$ Now we have ahown at large, that the professed end of the myateries was to restore the soul to its original rectitude, and to encourage good men with the promises of happiness in another life. The fable, therefore, of Cupid and Psyche, in the filth and sixth books, was the fineet and most artful preparative for the subject of the eleventh, which treats of tbe mysteries,

Bat if we look more nearly into this beautiful fable, we shall find that besides its general purpose, it has one more particular. We have observed that the corrupt state of the mysteries, in the time of Apuleins, whas one principal reason of his undertaking their spology. These corraptions were of two kinds debaucheries and magie. Their debaucheries have been taken notice of above. Their magic was of three sorts; The magic of invocation or necromaricy; the magio of transformation, or metamorphosia ; and the magio of divine commanication under a visible appesrance or theurgy. The shows of the mysteries seem to have given birth to the first, the doctrine of the metempsychosis tanght therein to the second, and the $\Delta$ porreta concerning the divine nature, to the third. The abomination of the two first sorts wes seen, by all, and frankly given up es criminal; but the fanatic Platonists and Pythagoreans of the latter nges, espousing the third, occasioned it to be held in credit and reverence. So that, as Heliodorus tells us, the Egyptian priests, (between whose philosophy and fanatic Platonism there was at this time a kind of coalition,) affected to distinguish the magio of necromancy and the magic of thewrgy, sccounting the first infamous and wicked; but the last very fair and even commendable. For now both those fanatics had their phillasophic mysteries, the rites of which consisted in the practice of this thewrgic magic. These were the mysteries, to observe it by the way, of which the Eunperor Julian was so fond, that he placed his principal folicity, as the Christians did his principal crime, in their celebration.

Bat our anthor, who had imbibed his Platonism not at the muddy streams of those late enthusiasts, but at the pure fountain-hesd of the Academy itself, well understood how nuch this superstition, with all its plansible pretences, had polluted the mysteries ; and, therefore, as in the course of the adventures of his golden ass, he had stigmatized the two

[^82]other kinds of magic, he composed this celebrated tale, hitherto $n 0$ little understood, to expose the magio of theurgy. It is, as we said, a philosophic allegory, delivered in the adventures of Psyche, or the soul, whose various labours and traverses in this progreas, are all represented as the effects of her indiscreet passion for that species of magic called Theargy.

To onderstand this, we must observe, that the enthusiastio Platonists, in their pursuit of the Supreme Good, the union with the Deity, made the sompletion and perfection of it to consist in the thenrgic vision of the Aatopton Aglams or the self-seen image, that is, seen by the splendour of its own light. Now the story tells us, there were three sisters, the youngest of whom was called Poyche; by which we are to understand, the three precipilate souls, the sensitive, the animal, and the rational; or, in other worde, sense, appetite, and reason: that the beanty of Peyche was so divine, that men forsook the altars of the gods to follow and worship her according to the ancient aphorism.

Nullum Numen abest, si sit Prudentia.
No Deity is roanting, if Prudence is consulted.
She is contracted to, and possesses the celestial Capid or divine love, invisibly. In the mean time her sisters, envions of her superior enjoymente, take advantage of the god's inviaibility to perplex her with a thousand doubts and scruples, which end in exciting her curiosily to get a sight of her lover. By which the adthor seems to insinuate that they are the irrogular passions and appetites which stir up men's curiosity to this species of magio, the theurgic vision. Payche is deluded by them, and against the express injunction of the god who calls it sacrilega curiositas, attempts this forbidden sight. She succeeds, and is undone. Disine love forsakea her: the scones of pleasure vanish: and she finds herself forlorn and abandoned; surrounded by miseries, and persued with the vengeance of Heaven. In this diatress she comes to the temples of Ceres and Juno, and seeks protection of those deities ; by which is meant, the having recourse to their mysteries, against the evile and disasters of life; as is plainly marked by the reason given for her application:- "Not willing to omit any even doubtful means of bettering my condition." They both deny admittance to her; intimating that the purer mysteries discouraged all kind of magic, even the most specious. In a word, after a long and severe repentance and penance, in which the author seems to have shadowed the trials and laboura undergone by the aspirants to the mysteries, she is pardoned and restored to the favour of Heaven. She is put again into poseession of Divine Love, and rewarded with the pranogative of immortality.

There are many other circumstances in this fine allegory eqnally serving to the end here explained; as there are others which allude to divers beautiful platonic notions, foreign to the present discourse. It is enough that we have pointed to its chief and peculiar parpose; which it was impoesible to see while the nature and design of the whole fable lay undiscovered.

Before I totally dismiss this matter it msy not be improper to observs,
that both Virgil and Apuleins have represented the genvine mysteries, as rites of perfect sanotity and purity; and recommended only such to their countrymen; while they expose impure snd impious rites to the public aversion; for it was their purpore to stigmatize the reigning corruptions and to recommend the ancient sanctity. On the contrary, a man attached by his office to the recommendation of the mysteries, as then practised, was to do the beat he could, when deprived of the benefit of this distinction; and was to endeavour to give fair colours to the foulest things. This was the case of Jamblichns. His friend Porphyry had some scruples on this head. He doubts whether those rites could come from the gods, which admitted anch a mixture of lewdness and imparity. Such a mixture Jamblichus confesses, but at the same time endesvours to account for their divine original, by showing that they are only the emblems of naturel truths, or a kind of moral purgation of the inordinate passions.

Hitherto we have considered the legislator's care in perpetuating the doctrine of a future stste. And if I bave been longer than ordinary on this head, my excuse is, that the topic was new, and the doctrine itself, which is the main subject of the present inquiry, much interested in it.

Theurgy.
Thetirgy is compounded of Theos, God, and argon, work, and signifies magic operating by divine or celestial means, or the power of doing extraordinary and supernatural things by lawful means, as prayer, invocation of God, etc., called by eome white magic.-Bailey.
"The wisest of the pagan world, and their greatest philosophere, held Thetirgic magic in the highest esteem. Theurgy was, according to them, a divine art, which served only to advance the mind of man to the highest perfection, and render the eoul more pure; and they who by means of this magic had the happiness to arrive at what they called Autopsia, or Intuition, a state wherein they enjoyed intimate intercourse with the gods, believed themselves invested with all their power, and were persuaded that nothing to them was impossible. Towards this state of perfection all those aspired who made profession of that sort of magic ; but then it laid them under severe regulations. None conld be priest of this order but a man of unblemished morals, and all who joined with him in his operations were bound to strict purity; they were not allowed to have any commerce with women; to eat any kind of animal food, nor to defile themselves by the touch of a dead body. The philosophers, and persons of the greatest virtue, thought it their hobour to be initiated into the mysteries of this sort of magic."-Mayo's Myth. v. 1. p. 277.

Thomas Taylor, in a note to his translation of Jamblichus, observes: -"This art of divine works is called theurgy, in which Pythagoras was initiated among the Syrians, as we are informed by Jamblichus in his life of that philosopher. Proclus was also akilled in this art, as may be eeen in his life by Marinus. Peellas, in his MS. treatise on Demone,
says, "that magio formed the last part of the sacerdotal science;' in which place by magic he doubtiess means that kind of it which is denominated theurgy. And that theurgy was employed by the ancients in their mysteries, I have fully proved in my treatise on the Eleusinian and Bacchic mysteries. This theurgy, is doubtless the same as the magic of Zoroaster, which Plato in hin first Alcibiades says, consisted in the worship of the gods."
"The emperor Julian allades to this theargical art, in the following extracta from his Arguments against the Christians, preserved by Cyril:

- For the inspiration which arrives to men from the gods is rare, and eacista but in a few. Nor is it easy for every man to partake of this, nor at every time. It has ceased among the Hebrews, nor is it preserved to the present time among the Egyptians. Spontaneous oracles, also, are seen to yield to temporal periods. This, however, our philanthropio lord and father Jupiter underatanding, that we might not be entirely deprived of commanion with the gods, has given us observation through sacred arts, by which we have at hand sufficient assistanoe." (p. $348,347$.

This art was professed by the early masons, as appears by an examination of one of the brotherhood of King Henry VI. It is, as before observed, a fundamental doctrine of the Roman Catholio church.
"The priests of Egypt, Persia, India, etc., pretended to bind the gods to their idols, and to make them descend from heaven at their pleasure; they threatened the sun and moon to revesl the secret mysteries, to shaks the heavens, etc." (Eusebius, Prep. Evang. p. 188, and Jamb. do Myat. Egypt.-See Ruine, p. 286.)

## CHAPTER IV.

## 1 SKETCR OF TEE LIFE AND DOCTBINES OF PTTHAGORA8, TEE TOUNDE量 OF THE SECT OF ANOIENT PHILOSOPHERS THAT BOKE HIS NAME. ALEO THE DOCTEINEA AND CDBTUNS OF TRE DBULDB, TRE PRIESTS OP THE ANOIENT BKITONE.

Notwithstanding Pythagoras died, at least fifteen hundred years before be institation of the Freemesons' society, ho is hailed by the fraternity s a brother mason. Both Cross and Webb, in treating of masonic emlems, among which they include a diagram of the forty-seventh uroblem of Euclid, hold the following language:-
"This wis an invention of our ancient friend and brother, the grest ?ythagoras, who, in his travels through Asia, Africa, and Europe, was nitiated into several orders of priesthood, and raited to the sublime degres $f$ master-mason. This wise philosopher euriched his mind abundantly n a general knowledge of things, and more especially in geometry or nasonry ; on this subject he drew ont many problems and theorems," etc.
The appellation of grandtather of freemasons would perhaps apply anch more appropriately to Pythagorsa, than that of brother; for he robably was the father of Draidism, and this was the father of the nasonic society; which It made use of as a mere cloak to cover its rolipions observances, with no special regard to the improvement of the raft. The idea however of a connection between Pythagoras and maonry, must have been handed down in tradition by the old Druidical aasons; which is a strong evidence, that the secreta and ceremonies of aasonry are derived from the ancient Egyptian mysteries through the 2ythagorean school.
Upon this supposition, of the trath of which I have no doubt, it becomes mportant to give some account of this celebrated philosopher, whose aemory is so deservedly venerated by the masonic order.
The best arranged account of his life and doctrines, that I have met rith, is contained in Rees's Cyclopedis; I therefore make the following betract from that work.

Pythagoras was of Samos, the son of a lapidary, and the papil of herecydes, and flourished, says Bayle, abont five hundred years before 'hrist, in the time of Tarquin, the last king of Rome, and not in Numa's
time, an many authors have supposed.-(See Cicero Tus. Ques. Iib. ib. cap. 1.

Posterity has been very liberal to this philosopher, in bestowing upon him all such inventions as others had neglected to olsim, particularly in music; for there is scareely any part of it, as a bcience, with which he has not been invested by hia generous followers in biography.

Musical ratios have been assigned to him, with the method of determining the gravity or ecuteness of sounds by the greater or less degres of velocity in the vibration of strings; the addition of an eighth to the lyre (Pliny, lib. ii. cap. 2); the harmony of the apheres (Plato); and the Greek musical notation (Boethius). His right, indeed, to nome of these discoveries has been dispated by several authors, who have given them to others with as little reason, perhaps, as they have been before bestowed upon him.

After musical ratios were discovered and reduced to numbers, they wore made, by Pythagoras and his followera, the type of order and just proportion in all things; hence virtae, friendship, good government, celestial motion, the human sonl, and God himself were harmony.

This discovery gave birth to varions species of music, far more etrange and inconceivable than chromatic and enharmonic ; such as divine music, mundane music, elementary music, and many other divisions and sub-divisions, apon which Zarlino, Kircher, and almost all the old writers, never fail to expstiste with wonderfal complacence.* It is perhaps, equally to the credit and advantage of music and philosophy, that they have loug descended from these heights, and taken their proper and separate stations upon earth; that we no longer admit of musio that cannot be heard, or of philosophy that cannot be understood.

Master Thomas Mace, author of a most delectable book, callod "Masio's Monument," would have been an excellent Pythagorean; for he maintains that the mystery of the Trinity is perspicuously made plain by the connection of the three harmonical concords, 1, 3, 5; that music and divinity are nearly allied; and that the contemplation of concord and discord, of the nature of the octave and unison, will so strengthen a man's faith, "that he shall never after degenerate into that grose subbesatical sin of atheism."

Pythagoras is said by the writers of hie life, to have regarded musio as something celestial and divine, and to have had such an opinion of its power over the human affections, that according to the Egyptian syatem, he ordered his disciples to be waked every morning, and lulled to sleep every night, by sweet sounds. He likewise considered it as greatly conducive to health, and made use of it in disorders of the body, as well as in those of the mind. His biographera pretend to tell us what

[^83]kind of musio he applied upon these occasions. Grave and solemn, we may be certain; and vocal, bay they, was preferred to instramental, and the lyre to the flute, not only for its decency and gravity, bat because instruction could be conveyed to the mind, by means of articulation in singing, st the same time as the ear was delighted by sweet sounds.

In perusing the livt of illustrious men who have sprang from the sohool of Pythagoras, it appears that the love and cultivation of musio was so much a part of their discipline, that almost every one of them left a treatise behind him upon the subject.

The first journey of Pythagoras from the Grecian island was probably into Egypt, which was celebrated in his time for that kind of wisdom which best suited his geains and temper. In his way thither, Jamblichus asserts that he visited Phosnecia, and conversed with the prophets and philosophers that were the successors of Mochus the Physiologist.

While he was in Egypt, he was introduced by the recommendation of Polycrates, tyrant* of Samos, to Amasia, king of Egypt, a distinguished patron of literary men, and thus obtained access to the colleges of the priests. Having found it difficult to gain this privilege, he performed many severe and troublesome preliminary ceremonies, and even sub. mitted to circumcision, a prescribed condition of his admisaion. He passed twenty-two years in Egypt, availing himself of all poseible means of information with regard to the recondite doctrines of the Egyptian priests, as well as their astronomy and geometry, and Egyptian learaing in its most anlimited extent.

After his retrun from Egypt to his native island, he wished to communicate the benefit of his researches and studies to his fellow-citizens, and with this view he sttempted to institute s school for their instruction in the elements of science; proposing to adopt the Egyptisn mode of teaching, and to communicate his doctrines under symbolical form. Bat the Samians were either too stupid or too indolent to profit by his instructions. Although he was obliged to relinquish his design, he did not altogether abandon it. In order to engage the attention of his countrymen by some other means, he repaired to Delos; and after presenting an offering of cakes to Apollo, he their received, or pretented to receive, moral dogmas from the priestesa, which he aflerwards delivered to his disciples under the charscter of divine precepts. With the same views he also visited the island of Crete, so celebrated in mythological history; fhere he was conducted by the Corybantes, or priests of Cybele, into the cave of mount Ida, in which Jupiter is said to have been buried. Here he conversed with Epimenides, an eminent pretender to prophetic powers, and was by him initiated into the most sacred mysteries of Greece. About the same time he visited Sparta and Elis, and was present during the celebration of the Ulympic games,

[^84]where he is said to have exhibited a golden thigh to Absris, in order to convince him that he was Apollo. Besides other places which he visited daring his stay in Greece, he repsired to Phlins, where he first assumed the appellation of philosopher. Having thus added to the stores of learning which he had previously accumulated, snd acquired a kind of authority which was calculated to command respect, he retarned to Samos, and made a second attempt, more succesful than his first, to establish a school of philosophy. In a semi-circular kind of building, which the Samians had used as a place of resort for public business, be delivered, with an assumed authority of a ascred nature, popular precepts of morslity; and he also provided himself with a secret cave, into which he retired with his istimate friends and professed disciples, and here he gave his followers daily instructions, accompanied with a considerable parade of mystery, in the more abstruse parts of philosophy. His fame, and the multitude of his followers, increased. What he failed to accomplish by mere force of learning and ability, he efficeted by conceeling his doctrines under the veil of mysterious symbols, and issuing forth his precepts as responsea from a divine oracle. About the beginning of the fifty-ninth Olympiad, Pythagoras, desirous of escaping the tyranical government exercieed in his native island, by Syloson, the brother of Polycrates, left Samos, and, as we have already hinted, passed over into I Ialy, and attempted to establiah his school among the colonies of Magna Gracis. It is prubsble, that, in order to obtsin credit with the populace, he sbout this time pretended to possess a power of performing miracles, and practised many arts of imposture. The first place at which he arrived in Italy was Crotona, a city in the bay of Tarentum, the inhabitants of which were very corrupt in their manners. But such were his reputation and infuence, that he was treated with great respect, and people of all classes assembled to hear his discourses; insomuch that the manners of the citizens were soon totally changed from great luxury and licentiousness to strict aobricty and frugality. It is said that six hundred (some say two thousand) persons were prevailed upon to submit to the strict discipline which he required and to thmw their effects into a common stock for the benefit of the whole fraternity. The influence of his philosophy extended from Crotons to many other cities of Magna Gracia, and obtained for Pythagorss from his followers a degree of respect little short of adoration. If he had contented himself with delivering doctrines of philoeophy and precepts of practical wisdom, he might probably have continued his labours, without moleste tion, to the end of his life. But he manifested a strong propensity towards the political innovations; and he employed his inflaence in urging the people to the strenuous aseortion of their rights, against the encroachment of their tyrranical governors. This course of conduot raised against him a very powerful opposition, which he was unable to resist and contend against, and which obliged him to retire to Metapontum. Here he found himself still snrrounded with enemies, snd was under a necessity of seeking sa asylum in the temple of the Muses, where, not boing supplied by his friends with sufficient food, he perished with
hunger.* The time of his death is uncertain; but according to the Chronicon of Eusebius, he died in the third year of the sixty-eighth Olympiad, B.C. 506, after having lived, according to the most probable statement of his birth, to the age of eighty years. After his death his followers paid a superstitions respect to his memory. They erected stastues in honour of him, convarted his house at Crotona into a temple of Ceres, the street in which it stood was called the Musetun, and appealed to him as a divinity, swearing by his name.

It appears, from the history of this philosopher, that, with all his talents and lesrning, he owed much of his celebrity and authority to imposture. His whole manner of life confirms this opinion. Clothed in a long white robe with a flowing beard, and, as some say, with a golden crown on his head, he preserved among the people, and in the presence of his disciples, a ccmmanding gravity and majesty of aspect, Ho recurred to musio for promoting the tranquillity of his mind, frequently singing, for this purpose, hymns of Thales, Hesiod, and Homer. He ligd such an entire command over himself, that he whe never seen to express, in his countenanoe, grief, joy; or anger. He refrained from animal food, and confined himself to a frugal vegetable diet, excluding from his simple bill of fare, for mystical ressons, pulse or beans. By this artificial demeanour, Pythagoras appeared among the vulgar as a being of an order superior to the common condition of humanity, and persuaded them that he had received his doctrine from heaven. Pythagoras married Theano of Crotons, or, as some say, of Crete, by whom he had two sons, Telaugas and Mnesarchus, who, after his death, took the charge of his school. Whether this philosopher left behind him any writingg, has been a subject of diapate. Many works have been enumerated under his name by Luertins, Jamblichus, and Pliny; but it is the declared opinion of Plutarch, Josephus, Lucian, and others, that there were no genuine works of Pythagoras extant; and it appears highly probable, from the pains which he took to confine his doctripe to his own school daring his life, that he never committed his philosophical system to writing, and that the pieses to which his name was affixed at an early period, were written by some of his followers, npion. the principles imbibed in his school. The famous golden verses attributed to Pythagoras, and illustrated with a commentary by Herocles, were not written by our philosopher, but are to be ascribed to Epicharmus, or Empedocles. They may, bowever, be considered as a brief anmmary of his popular doctrines.

His method of instruction, formed upon the Egyptian model, was "exoteric," and "esoteric," that is, public and private. Those auditors,

[^85]who sttended his pablic lectures, did not properly belong to his sohoo, but followed their nsual mode of living. His select disciples, called his companions and friends, were auch as submitted to a peculiar plan of discipline, and were admitted by a long course of inatruction, into all the mysteries of his esoteric doctrine.*
Proviously to the admisaion of any person into this fraternity, Pythagoras examined his features and external appearance; inquired how he had been accustomed to behave towards his parenta snd friends; marked his manner of laughing, conversing, and keeping silence ; snd observed what passions he wag most inclined to indalge; with what kind of company he chose to asooiate; how he passed his leisure moments ; and what incidents appearea to excite in him the strongest emotions of joy or sorrow. Nor after this examinstion was any one admitted into his wociety, till he was fally perrasded of the docility of his disposition, the gentleness of his manners, his power of retsining in silance whet he was tanght, and, in fine, his capacity of becoming a true philosophar. After the first probationary sdmiesion, the fortitude and self-command of the candidate were put to the trial by a long course of aevere abotinence and rigorous exercise. The course of abstinence and self-denial comprehended food and drink, and clothing, all which were of the moet plain and simple kind, and the exercises prescribed were such as could not be performed withont pain and fatigue. To tesch them humility and industry, he exposed them, for three years, to a continued course of contradiction, ridicule and contempt, among their fellows. $\dagger$ In order to

[^86]restrain the powerfal passion of avarice, he required his disciples to aubmit to voluntary poverty; he deprived them of all command over their own property, by casting the ponsessions of each individual into a comran stock, to be distributed by proper officers as occasion required. After this sequestration of their goods, they lived together on a footing of perfect equality, and ast down together daily at a common table. If anyone afterwards repented of the connection, he was at liberty to depart, and might reclaim, from the genersl fund, his whole contribution. That his disciples might acquire a habit of entire docility, Pytbagoras enjoined opon them, from their first admizaion, a long term of silence, called echemythia. This initistory silence, which probably consisted in refrainiug from speech, not only during the hours of instruction, but through the whole term of initiation, continued from two to five years, according to the propensity discovered by the pupil towards conceit and loquacity. With regard to himsolf, this was a judicioud expedient, as it checked impertinent curiosity, and prevented every inconvenience of contradiction. Accordingly his disciples silenced all doubts and refated all objections, by appealing to his anthority. Autos epha, ipse dixit, decided every dispute. Moreover, during the yeara of initiation, the disciples were prohibited from seeing their master, or hearing his lectures, except from behind a curtain,* or receiving inatructions from some inferior preceptor.

To the members of the esoteric school (who were called gyeisoi emiletai, genaine disciples) belonged the peculiar privilege of receiving a full explanation of the whole doctrine of Pythagoras, which was delivered to others in brief precepts and dogmas, under the concealment of bymbols. Disciples of this class were permitted to tske minutes of their mastar's lectures in writing, as well as to propose questions, and offer remarks, upon every subject of discourse. These were particularly distinguished by the apellation of the "Pythagoreans," they were also called "Mathematicians," from the studies upon which they entered immediately after their initiation. After having made a sufficient progress in geometrical science, they proceeded to the study of nature, the inveatigation of primary principles, and the knowledge of god. Those who pursued these sublime speculations were called "Theorists," and those who devoted themselves more particularly to Theology, were styled

[^87]Sabastileoi religions. Others, according to their abilities and inclingtions, were engaged in the study of morals, economics, and policy ; and were afterwards employed in managing the affairs of the fraternity, or sent into the cities of Greece, to instruct them in the principles of government, or assist them in the institation of laws.

The brethren of the Pythagorean college at Crotona called coniobion, coenobium, about six hundred in number, lived together as in one family with their wives and children, and the whole business of the society wan conducted with the most perfect regularity. Every day commenced with a deliberation upon the manner in which it should be apent, and concluded with a retrospect of the events which had occurred, and of the basiness that had been transscted. They rose before the sun, that they might do him homage; after which they repeated select verses from Homer and other poets, and made use of masic, both vocal and instrumental, to enliven their spirits and fit them for the business of the day. They then employed seversl hours in the study of science. Theee were succeeded by an interval of leisure, which was commonly spent in a solitary walk for the purpose of contemplation. The next portion of the day was allotted to converastion. The hour immediately before dinner was filled up with various kinds of athletio exercises. Their dinnar consisted chicfly of bread, honey, and water; for after they were perfectly initiated, they wholly denied themselves the use of wine. The remainder of the day was devoted to civil and domestio affairs, conversation, bathing sud religious ceremonies.

The " exoteric disciples of Pythagoras were taught after the Egyptian manner, by images and symboln, obsoure and almost unintelligible to those who were not initiated into the mysteries of the school ; and thoee who were edmitted to this privilege were under the strictest obligation of silence with regard to the recondite doctrines of their master. The wisdom of Pythagoras, that it might not pass into the ears of the vulgar, was committed chielly to memory; and when they found it necessary to make use of writing, they took care not to suffer their minutes to pass beyond the limits of the school.*
1.Clemens observes, that the two orders above described correspond very

[^88]exsetly to those among the Hebrews; for in the echoole of the prophets there were two classes, viz: the bons of the prophets, who were the scholars; and the doctors or masters, who were sleo called perfecti; and among the Levites, the novices, or tyros, who had their quinquennial exercises, by way of preparation. Lastly, even among the proselytes there were two orders: exoterici, or proselytes of the gate; snd intrinseci, or perfecti, proselytes of the covenant. He adds, it is highly probable, that Pythagoras himself had been a proselyte of the gate, if not of the covenant.

After the dissolution of the assembly of Pythagoras's disciples by the faction of Cylo, a man of wealth and distinction at Crotona, it was thought necessary by Lysis and Archippan, in order to preserve the Pythagorean doctrine from oblivion, to reduce it to a aystematic summary; at the same time, however, strongly enjoining their children to preserve these memoirs secret, and to transmit them in confidence to their posterity. From this time books began to multiply among the followers of Pythagoras, till at length, in the time of Plato, Philolaus exposed the Pythagoresn records for ssle, and Archytas of Tarentum gave Plato a copy of his commentaries upon the aphorisms and precepts of his master. Of the imperfect records of the Pythagorean philosophy left by Lysis, Archytas, and others, nothing has escaped the wreck of time, except perhaps sundry fragments collected by the diligence of Stobasus, concerning the authenticity of which there are some grounds for suapicion; and which, if admittgd as genuine, will only exhibit an imperfect view of the moral and political dootrine of Pythagoras under the disguise of symbolical and enigmatical language. The strict injunction of secrecy, which was given by oath to the initiated Pythagoreans has effectually prevented any original records of their doctrine concerning Nature and God from passing down to poaterity. On this head we are to rely entirely for information, and inded concerning the whole doctrine of Pythagoras, upon Plato and his followers. Plato himself, while he enriched his system with atores from the magazine of Pythagoras, accommodated the Pythagorean doctrines, as he also did those of his master Socrates, to his own system, and thus gave an imperfect, and, we may suppose, in many particulars a false representation of the doctrines of the Samian philosopher. It was further corrupted by the followers of Plato, even in the old academy, and afterwarde in the Alexandrian school. To which wo may add, that the doctrine of Pythagoras itself, probably in its original state, and certainly in every form under which it has been transmitted to us , was observed, not only by symbolical, but by mathematical langaage, which is rather adapted to perplex than to illuatrate metaphysiesl conceptions. In this fault Pythagoras was afterwards imitated by Plato, Ariatotle, sud others.*

[^89]We extract from Bracker the following faint delineation of the Pythagorean philosophy: The end of philoeophy is to free the mind from those incumbrances which hinder its progress towards perfection, and to raise it to the contemplation of immatable trath, and the knowledge of divine and spiritual objects. This effect most be produced by easy stepa, lest the mind, hitherto conversapt only with sensible things, should revolt at the change. The first atep towards wisdon is the study of mathematics, a science which contemplates objects that lie in the middle way between corporeal and incorporeal beinga, and as it were on the confines of both, and which most advantageoualy inures the mind to contemplation.

The monad, or unity, is that quantity which, being deprived of all number, remains fixed; whence called monad from to menein. It is the fountain of all number. The duad is imperfect and passive, and the cause of increase and divlsion. The triad, compoeed of the monad and duad, partakes of the nature of both. The totrad, tetractys, or quaternion number, is the most perfect. The decad, which is the sum of the four former, comprehends all arithmetical and musical proportions.

According to some writers, the monad denotes the active principle in nature, or God: the dusd, the passive principle, or matter : the trisd, the word formed by the union of the two former; and the tetractys, the perfection of nature. Some have understood by this mysterious number the four elements; others, the four faculties of the human mind; others, the four csidinal virtues; and others have been so absurd as to muppose that Pythagoras made use of this number to express the nams of God, in reference to the word-[Gehovah,] by which that name is expressed in the Hebrew langaage. But every attempt to unfold this mystery has hitherto been unsuccessful.

Next to numbers, music hsd the chief place in the preparatory exercises of the Pythagorean zchool, by means of which the mind was to be raised above the dominion of the passions, and inured to contemplation. Pythagorss considered music, not only as an art to be judged of by the ear, but as a science to be reduced to mathomatical principles and proportions.

It was said of Pythagoras by his followers, who hesitated at no eseartion, however improbable, whioh might seem to exalt their mastor'a fame, that he was the only mortal so far favoured by the gods as to be permitted to hesr the celeatial masic of the spberss. Pythagoras applied music to the cure of diseases, both bodily and mental. It was, as we have seen, the custom of his school, to compose their minds for reet in the evening, and to prepare themselves for action in the morning, by suitable sirs, which they performed upon the late, or other stringed instruments. The music was, however, always accompanied with veree, so that it may be doubted, whether the effect was to be ascribed more

[^90]to the musician or to the poet. It is said of Clinius, a Pythagoresn, that whenever he perceived himself inclined to anger, spleen, or other restless passions, he took up his late, and that it never failed to restore the tranquillity of his mind. Of Pythagorns himself, it is related, that he checked a young man, who in the midst of his revels was meditating some act of Bacchanalian madness, by ordering the masician, who had inflemed his passions by Phrygian airs, to change the music on a sudden into the slow and solemn Doric mood. If the stories which are related by the ancients concerning the wonderfal effiects of their music are to be eredited, we must acknowledge we are atrangers to the method by which these effeets were produced.

Besides arithmetic and music, Pythagorss cultivated geometry, which ne had learned in Egypt; but he greatly improved it, by inveatigating many new theroems, and by digesting its principles, in an order more perfectly systematical than had before been done. Several Grecians ebout the time of Pythagoras, spplied themselves to mathematical learning, particularly Thales in Ionia. But Pythagoras seems to have done more than any other philonopher of this period towards reducing geometry to a regular science. His definition of a point is, a monad or unity with position. He taught that a geometrical point corresponds to anity in arithmetic, a line to two, a auperficies to three, a solid to föur. Of the geometrical theorems ascribed to Pythagoras, the following are the principal; that the interior angles of every trisagle are together equal to two right angles; that the only polygons which fill up the whole apace about a given point, are the equilateral triangle, the square, and the hexagon ; the fr8t to be taken six times, the second four times, and the third three times; and that, in rectangular triangles, the square of the side which subtends the right angle is equal to the two squares of the sides which contain the right angle. Upon the invention of this later proposition (Elucid, 1. i. prop. 47,) Plutarch says, that Pythagoras offered an ox, others, an hecatomb, to the gods. But this story is thought by Cicero inconsistent with the institutions of Pythagoras, Which, as he supposes, did not admit of animal sacrifices.

Theoretical philosophy, which treate of nature and ite origin, was the highest object of study of the Pythagorean school, and included all those profound mysteries, which those who have been ambitious to report what Pythagoras said behind the curtain, have ondeavoured to unfold. Upon this subject, nothing can be advanced with certainty, especially respecting theology, the doctrine of which Pythagoras, after the manaer of the Egyptian priesta, was peculiarly careful to hide under the veil of symbols, probably through fear of disturbing the popalar superatitions, The ancients have not, however, left us withont some grounds of conjecture.

With respect to God, Pythagoras appears to have taught, that be is the Universal Mrind, diffused through all thinge, the souree of all snimal life, the proper and intrinsic cause of all motion, in substance similar to light, in nature like truth, the first principle of the oniverse, incapsble of pain, Invisible, incorraptible, and only to be comprehended by the mind.

The region of the sir was supposed by the Pythagoreans to be foll of spirits, demons, and heroes, who cause sickness or health to a man or beast, and communicate, at their plessure, by means of dreams, and other instruments of divinstion, the knowledge of future events. That Pythagoras himself held this opinion csanot be doubted, if it be true, as his biographers relate, that he profersed to cure dieesses by incantations. It is probsble that he derived it from the Egyptians, among whom it was believed many diseases were caused by demoniacal possessions.

The doctrine of the Pythagoreans, reapecting the nature of brute animals, and metempsychooia, the tranamigration of souls, were tho foundation of their abstinence from animal food, and of the exclusion of animal sacrifices from their religious ceremonies.

This doctrine Pythagoras probably learned in Egypt, where it what commonly taught. Nor is there any sufficient reason for underatanding it, as eome have done, symbolically.

The precept prohibiting the use of besus, is one of the mysteries which the ancient Pythagoreans never disclosed, and which modern ingennity has in vain sttompted to discover. Pythagorean precepts of more value sre such as these: Discourse not of Pythagorean doctrines without light. Above all things govern your tongue. Quit not your station without the commsnd of your general. Remember that the paths of virtue and of vice resemble the letter $\mathbf{Y}$. To this aymbol Persius refars, when he Beys,
"There hee the Samain Y's inctruetive make
Polated the rend thy doabtfal foot should take
There warn'd thy rav and yet anpractis'd youth,
To tread the rioing right-hand path of truth."
(Bruker's Hibh. Philos. by Enfeld, vol. 1. b, c. 13.)
After the death of Pythagoras, the care and education of his children, and the charge of his school, devolved upon Aristasus of Erotons, who, having taught the doctrine of Pythagoras thirty-nine years, was succeeded by Mnesarchus, the son of Pythagoras. Pythagoresn schools were afterwards conducted in Heraclia by Clinias and Philolaus; at Metapontum by Theorides and Eurytas ; and at Tarentum by Archytas, who is said to have been the eighth in suecession from Pythagoras. The first person who divulged the Pythagorean doctrine was Philolsus.

The symbolical use of the letter $\mathbf{Y}$ has reference to the old fable, before noticed, of the trivia or triple path, that is, where the rosd to the infernal regions divides into two, the one leading to Elysium, and the other to Tartarus. This letter was a very appropriate symbol to mark out these roads; the disproportion of the two strokes which form it, being indicative of the comparative numbers to be accommodated in the two courses; that is, of the righteons and the wicked. St. Matthew, no doubt, makes allnsion to the common ides entertained upon this sukject when he says:-
"Enter ye in at the straight gate: for wide is the gate, and broad is the way, that leadeth to deetruction, and many there be that go in
thereat: because straight ia the gate, and narrow is the way, which leadeth unto life ; and few there be that find it."(vii. 13.)
${ }^{4}$ It is surprising, says Bayle, that a philosopher so skilfal es Pythagoras, in astronomy, in geometry, and in other parts of the mathematics, should be pleased to deliver his most beautiful precepts under the veil of enigmas. This veil was so thick, that the interpreters have found in it ample matter for conjectare. This symbolio method was very mach used in the East, and in Egypt. It is from thence withont doubt Pythagoras has derived it. He retumed from his travels laden with the opoils of the erudition of all the countries he had visited. It is pretended that his tetractya is the same thing as the name tetragrammaton, a name imeffable and full of mystery, sccording to the Rabbins. Others will have it, that this tetractys, this grest object of vencration and of oaths, is nothing more than a mysterions manner of dogmatizing by numbers. Bat let us not forget, that Pythagoras and his succeasors had two ways of tesching, one for the initiated, snd one for strangers and the profane. The first was clear and unveiled, the second was symbolis and enig-mationl."-(Dict.)
It is somewhat remarkable, that a difierence of opinion should exist mong the learned in regard to the mesning which Pythagorasintended to convey to his pupils of the ssoleric class, by the word Telractys, for a appears pretty evident, that he used it enigmatically as synonymous with geometry. And so Bailey, who seems to have known more of anEquity than any other of his day, defines it. He says, "Tolractys in ancient geometry, signified a point, a line, a surface, a solid." Hutchinson, in his "Spirits of Masonry," gives the same definition. He says, "The Pythagorie tetractics [tetracty日] were a point," etc., as above.

The ancient Druidical Freemasons were taught, as reported by Proherd, that there are four principles in masonry, which are specified agreeably to the above definition of tetractys.

These four principles contained in the tetractys or geometry, comprehemd the entire of physical nature, and on this account the enigms of the perfection of the number four has been erected.
A"writer on masonry (see Carlile, p. 99) observes, "t that the Pythegoreans affirmed the tetractys, or number four, to be the sum and completion of all things, as comprising the four great principles both of arithmetio and geometry. In the centre of a masonio lodge, within an irradiation or blazing star, is inscribed the letter $G$, denoting the groct and glorious science of geometry, as cultivated by our ancient and wnerable masters," And adde, "whilst each of those our bymbols rediprocally serves to illustrate the rest, there is one sense, in which they sfold to the decided pre-eminence of the great central emblem, whose mared initial character, surrounded by a blaze of glory, recalls our mhads from the work to the architect, from the science to its mystery."

The Egyptians invented geometry, and they found it of such infinite importance, that they in a manner deified the science. Hence the great rapect paid to its initial in masonry. It is, in fact, made to indicate the Supteme Being, who, according to the Pythagorean doctring, सas
mysteriously involved in the physical principles of nature. Geometry is painted as a lady, with a sallow face, clad in a green mantle, fringed with silver, and holding a silver wand (the Nilometer) in her right hand.

- Bailey.

The Eleusinian mysteries were regularly celebrated every fith year that is, after a revolution of four years. The Olympic games took place at the same time, the name of which originated from their being first celebrated near the city of Olympia. Hence the Olympiad, an epoch of four years; all arising, evidently, from the perfection attributsd to the number four.

## The Custons and Religious Dogmas of the Druids of England, extracted from the History of Great Britian, by Robert Henry, D.D.

When the Romans first invaded Britain, under Julius Cassar, the inhabitants of it were famous, even among foreign nations, for their superior knowledge of the principles, and the great zeal for the rites od their religion.

To say nothing here of the profite which the Druids derived from the administration of justice, the practice of physic, and teaching the sciences, (which were all in their hands,) they certainly received great emoluments from those whom they instructed in the principles and sinitiated into the mysteries of their theology; especially from sach of them as were of high rank, and came from foreign conntries.

Nothing can be affirmed with certainty concerning the precive number of the British Druids, though, in general, we have reason to believo that they were very numerous. Both the Gauls and the. Britons of these times were much addicted to superstition; and among a supentitious people there will always be many priests. Besides this, they entertsin an opinion, as we are told by Strabo, which was highly favourable to the increase of the priestly order. They were fally persasded, that the greater number of Draids they had in their conntry, thoy would obtain the more plentiful harvest, and the greater abundance of all things. Nas, we are directly informed by Casar, that great numben of people, sllured by the honours and privileges which they enjoyed, embraced the diacipline of the Draids of their own accord, and that many more were dedicated to it by their parents. Upon the whole, therefore, we shall probably not be very muoh mistaken, if we suppose that the British Druida bore as great a proportion in number to the row of the people, as the clergy in popish countries bear to the laity in the present age.

The Druids, as well as the Gymnosophists of Indla, the Magi of Persia, the Chaldeans of Assyria, snd all the other priests of antiquity, had two sets of religious doctrines and opinions, which were very dif ferent from one snother. The one of these systems they communicatod only to the iniliated, who were admitted into their oton order, and at their admission were solemnly sworn to keep that system of doctrines a profound secret from all the rest of mankind. Beeides this, they took several other precautions to prevent these seoret doctrines from transpis-

They taught their disciples, as we are told by Mela, in the most zate places, such as caves of the earth, or the deepest recesses of the kest forests, that they might not be overheard by any who were not iated. They never committed any of these doctrines to writing, for they should thereby become public. Nay, so jealous were some ers of these ancient priests on this head, that they made it an inlable rule never to communicate any of these secret doctrines to nen, lest they should blab them. The other system of religions trinee sud opinions were made public, being adapted to the capsaities I superstitious humours of the people, and calculated to promote the our and opulence of the priesthood.
t cannot be expected, that we should be able to give a minnte detail the secret doctrines of the Druids. The Greeks and Roman writers, a whom alone we can receive information, were not perfectly acinted with them, and, therefore, they have left us only some general ts and probable conjectures about them, with which we must be tented. The secret doctrines of our Druids were much the same h those of the Gymnosophists and Brachmans of India, the Magi of sia, the Chaldeans of Assyria, the priesta of Egypt, and of all the or priests of antiquity. All these are frequently joined together by lent anthors, as entertaining the same opinions in religion and philoso5 which might be easily confirmed by an induction of particulars. $s$ truth is, there is hardly anything more surprising in the history of akind, than the similitade, or rather identity, of the opinions, instions, and manners of these orders of ancient priests, though they id under such different climates, and at so great a distance from one ther, without intercourse or commnnication. This amounts to a aonstration, that all these opinions and institutions flowed originally In one foontain. The secret doctrines of the Draids, and of sll these grent orders of priests, were more agreesble to primitive tradition I right resson, than their public doctrines; as they were not under rtemptation, in their private schools, to conceal or disguise the trath. a not improbable that they still retained, in secret, the great doctrins one God, the creator and governor of the universe. This, which I originally the belief of all the orders of priesta which we have ntioned, was retained by some of them long after the period we are - considering, (that is from the first invesion of Eugland by the nans under Julius Casar, fifty-five years before the Christian era, to arrival of the Saxons, A.D. 449,) and might, therefore, be known to Druids at this period. This is one of the doctrines which the ichmsns of Indis are sworn to keep secret:-"That there is one God, creator of heaven and earth." Cresar acquaints us, that they tanght Ir disciples many thinga about the natare and perfections of God. ne writers are of opinion, and have taken much learned psins to prove, $t$ our Druids, as well as the other orders of ancient priests, taught ir disciples many thinge concerning the creation of the world-the mation of man-his primitive innocenca and felicity-and his fall 0 gailt and misery-the creation of angels-their rebellion and ex-
pulsion out of Heaven-the universal deluge, and the final destruction of this world by fire; and that their doctrines on all these subjecta were not very different from those which are contained in the writinga of Moses, and other parts of Scripture. There is abundant evidence that the Druids taught the doctrine of the immortality of the souls of men; and Mela tells us, that this was one of their doctrines which they were permitted to publish, for political rather than religious reasons, "There is one thing which they teach their disciples, which hath been made known to the common people, in order to render them more brave and fearless; viz., "that souls are immortal, and there is another life after the present." Cæsar and Diodorns say, that the Druids taught the Pythagorean doctrine of the transmigration of soals into other bodies. This was perhaps their public doctrine on this subject, as being most level to the gross conceptions of the vulgar. But others mepresent them as teaching that the soul after death ascended into some higher orb, and enjoyed a more sublime felicity. This was probably their privato doctrine and real sentiments,*

But however agreeable to trath and reason the secret doctrines of the Druids might be, they were of no benefit to the bulk of mankind, from whom they were carefully concesled. For these artfal priests, for their own mercenary ends, had embraced a maxim, which hath unhappily survived them, that ignorance was the mother of derotion, and that the common people were incapable of comprehending rational principles, or of being influenced by rational motives; and that thoy were, therefore, to be fed with the coarser food of superstitious fables This is the reason assigned by Strabo, for the fabulous theology of the ancients. "It is not possible to bring women, and the common herd of mankind to religion, piety, and virtue, by the pure and aimple dictates of reason. It is necessary to call in the aids of auperstition, which must be nourished by fables and portents of various kinds. With this view, therefore, were all the fables of ancient theology invented, to awaken superstitions terrora in the minds of the ignorsnt multitude." As the Druids had the same ends in view with the other priests of antiquity, it is highly probable that their public theology was of the same complexion with theirs; consisting of a thnusand mythological fables, coocerning the genealogies, attribates, offices, and actions of their gods; the various superstitious methods of appeasing their anger, gaining their favour, and discovering their will. This farrago of fables was couched in verse full of figures and metaphors, and was delivered by the Druids

[^91]from little eminences (of which there are many still remaining) to the surrounding anultitudes. With this fabulous divinity, these poetical declaimers intermixed moral precepte, for the regulation of the lives and manuers of their hearers; and were peculiarly warm in exhorting them to abstain from doing any hurt or injury to one another; and to fight valiantly in defence of their country. These pathetic declamations are asid to have made great impression on the minds of the people, inspiring them with a supreme veneration for their gods, an ardent love to their country, an undaunted courage and sovereigu contempt of death. The secret and public theology of the Druids, together with their systern of morals and philosophy, had swelled to such an enormous size, in the beginning of this period, that their disciples employed no less than twenty years in making themselves masters of all their different branches, and in getting by heart that infinite multitude of verses in which they were contained.

The sun seems to have been both the most ancient and most universal object of idolstrous worship; insomnch, that perhaps there never was any nation of idolators which did not pay some homage to this glorions Iominary. He was worshipped by the ancient Britons with great devotion, in many places, under the various names of Bel, Belinus, Belatucardus, Apolio, Grannius, eto., all which names in their language were expresaive of the natare and propertiea of that visible fountain of light and hest. To this illustrious object of idolatrous worship, those famous circles of stones, of which there are not a few still remaining, seem to have been chiefly dedicated; where the Druids kept the sacred fire, ${ }^{*}$ the wombol of this divinity, and from whence, as being situated on eminencee, bhey had a full view of the heavenly bodies.

As the moon appeared next in lustre and utility to the sun, there can be no doubt that this radiant queen of heaven obtained a very early and very large share in the idolatrons veneration of mankind. The Gavis and Britons seem to have psid the same kind of worship to the moon as to the sun, and it hath been observed, that the circular temples dedicated to these two luminaries were of the same construction, and commonly contiguous. But a great number of the gods of Gaul and Britain, as well as of Greece and Rome, had been men, victorious princes, wise legisletors, inventors of useful arts, etc.

They worshipped also several female divinities or goddesses; as Andraste, who is supposed to have been the aame with Venus or Diana; Minervs, Ceres, Proserpine, etc. Nay, into such an abyss of superstition and idolatry were they sunk, that, sccording to Gildas, they had s greater number of gods than the Egyptians ; and there was hardly a river, lake, moantain, or wood, which was not supposed to have some divinitios or genil residing in them.

[^92]As it hath always been one end of religions worship to obtain certain favours from the objects of it, so prayers and sapplications for these favoure have always made a part of the religious worship of all nations, and in particular of that of the ancient Britons. When in danger, they implored the protection of their gods; prayora were intermixed with their praises, accompanied theirsscrifices, and attended every act of their religion. It seems, indeed, to have been the constant, invariable practice of all nations, the Jews not excepted, whenever they presented any offerings or sacrifices to their gods, to put up prayers to tham to be propitions to the persons by whom and for whom the offerings or secrificen were preeented; and to grant them suoh particular favours as they desired. Ofierings of verious kinds constituted an important part of the religion of the ancient Britons. This was a mode of worship which the Druids very much encoursged, and their sacred places were crowded with thoee pioca gifts.

Mankind in all ages, and in every conntry, have betrayed a conacionsnees of gailt, and dread of puxishment from superior beings on that account. In consequence of this, they have employed various means to expiate the guilt of which they were conscions, and to escape the punishment of which they were afraid. The means which have been most univerally employed by mankind for these ends, were sacrifices of living creatures to their offended gods; which constituted a very essential part of the religion of the ancient Britons, and of almost all other ancient nations. The animaln which were sacrificed by them, as well as by other nations, were such as they used for their own food; which being very palatable and nourishing to themselves, they imagined would be no less agreeable to their gods. These victims were examined by the Druids with grest care, to see that they were the most perfect and beautiful in their several kinds; after which they were killed, with varioos ceremonies, by priesta sppointed for that purpose. On some cocanions the victims were consumed entirely by fire upon the altar; but more commonly they were divided into three parts, one of which was consumed upon the altar, another fell to the share of the pricsts who oftciated; and on the third, the person who bought the eacrifice feanted with his friends.

It had been well if our British ancestors had confined themselven to the sacrificing of oxen, sheep, gouts, and other animals; but we havo undoubted evidence that they proceeded to the most horrid lengths of cruelty in their superatition, and offered human victims to their gods. It had unhappily become an article in the Druidical creed, "That nothing but the life of man could atone for the life of man." In consequence of thie maxim their altars stresmed with haman blood, and great number of wretched men fell a sacrifice to their barbarous superstition. They are said indeed to have preferred such as had been guilty of theft, robbery, and other crimes, as most acceptable to their gods ; but when there was a scarcity of criminals, they made no scruple to supply their place with innocent persons. These dreadful sacrifices were offered by the Druids for the public, at the eve of a dangerous war, or in the time
of any national calamity ; and for particular persons of high rank, when they were afflicted with any dangerous disease. By such acts of cruelty did the ancient Britons endeavour to svert the displeasure and gain the favour of their gods.

It seems to have been one article in the creed of the ancient Britons and of all the other nations of antiquity, that the gods whom they worshipped had the government of the world and the direction of future eventa in their hands; and that they were not unwilling, upon proper application, to discover these events to their pions worshippers. "The gods (cays Amianus), either from the benignity of their own natures and their love to mankind, or because men have merited this fayour from them, take a pleasure in discovering impending events by various indications." This belief gave rise to astrology, augary, magic, lots, and an inficite maltitude of rellgions rites and ceremonies, by which deluded mortals -hoped to discover the counsels of Heaven, with regard to themselves and their undertskings. We learn from Pliny, that the ancient Britons were groatly addicted to divination, and excelled so mnch in the practice of all its arts, that they might have given a lesson to the Persians themtalven.

The British sovereigns at this period had not much authority either in the making or executing the laws, which are the principal acts of government in peaceful times. In that great relaxation of political union and civil government which prevailed in times of peace, their religion seems to have been the chief bond of union among the British tribes and natlons ; and the Druids, who were the ministers of that religion, appear to have professed the sole anthority of making, explaining, and executing the laws; an anthority to which the clergy of the church of Rome long and eagerly aspired, but never fully obtained. One great reason of the superior success of the Druids in their ambitious schemes was this: the laws among the ancient Britons, and some other ancient nations, were not considered as the decrees of their princes, but as the commands of their gods; and the Druids were supposed to be the only persons to Thom the gods communicated the knowledge of their commands, and consequently the only persons who could declare and explain them to the people. The violations of the laws were not considered as crimes againat the prince or state, but as sins against Heaven; for which the Druids, as ministers of Hesven, had alone the right of taking vengeance. All these important prerogatives of declaring, explaining, and executing the laws, the Druida enjoyed and exercised in their full extent. "All controversies, says Cressar, both pablio and private, are determined by the Druids. If any crime is committed, or any murder perpetrated; if any dieputes ariee about the division of inheritances, or the boundaries of arates, they alone have the right to pronounce sentence ; and they are the only dispensers botk of rewards and punishments. These ghostly fudgee had one engine which contribnted much to procure submission to their decisions. This was the sentence of excommunication or interdict, which they pronounced against particular persons, or whole tribes, when they refused to submit to their decrees. The interdicte of the Druids
were no less dreadful than those of the Popes, when their pow ita greatest height. The unhappy persons agsinst whom they minated, were not only excluded from all sacrifices and religic but they were held in universal detestation, as impious and abo their company was avoided as dangerous and contaminating; it declarad incapable of any trust or honour, pat out of the pro the laws, and exposed to injuries of every kind.* A conditi must have rendered life intolerable, and have brought the mc tory spirits to submiseion.

The first day of May was a great annual festival, in honour o or thes sun. On this dsy prodigious fires were kindled in all th places, and on the tops of all their cairns, and many sacrifices wa to that glorious luminary, which now began to shine upon ti great warmth and lustre. Of this festival there are still some remaining, both in Ireland and in the Highlands of Scotland, v first of May is called Beltain, that is, the fire of Bel, or Belinus summer-dsy and the first of November, were likewise annual the one to implore the friendly influences of heaven upon thi and the other to return thanks for the favourable seasons and $t$ of the earth; as well as to pay their yearly contribntions to the of their religion, Nay, it is even probable, that all their gods desses, their sacred groves, their hallowed hills, lakes, and-1 had their several anniversary festivals; so that the Druidish was perhaps as much crowded with holidays as the popish one sent. On these festivals, after the sppointed eacrifices and oth devotion were finished, the rest of the time was spent in feasting dancing, and all kinds of diversions.
It was an article in the Druidical croed, "That it was ur build temples to the gode, or to worship them within walls a roofs." All their places of worship therefore were in the ope generally on eminences, from whence they had a full view of the bodies, to whom much of their adoration was directed. But, might not be too much incommoded by the winds and rains, by the viow of exteraal objects, or disturbed by the intrusion

[^93]Jowed feet, when they were instructing their disciples, or performing their religious rites, they made choice of the deepest recesses of groves and woods for their sacred places. These groves were planted, for that parpoes, in the moet proper situations, and with those trees in which they most delighted. The chief of theae wss a strong and spreading oak, for which tree the Druids had a very high and superstitious veneration. These sacred groves were watered by some consecrated fountain or river, aud surrounded by a ditch or mound, to prevent the intrusion of impropet persona,* In the centre of the grove wes a circular area, inclosed with one or two rows of large stones, set perpendicalarly in the earth, which conetituted the temple, within which the sltar stood on which the sacrifices were offered. In some of their most magnificent temples, as perticularly in that of Stone-henge, they had laid stones of prodigious weight on the tops of the standing pillars, which formed a find of cirole aloft in the sir, and added much to the grandear of the whole.

The British Druids were in the zenith of their power and glory at this period, enjoying an almost absoluts authority over the minds and persons of their own countrymen, and being greatly admired and resorted to by etrangers. But as the Romans gained ground in this island, the power of the Druids gradually declined, until it was quite destroyed; for that victorious people, contrary to their asaal policy, discovered everywhere a very great animosity against the persons and religion of the Druids. They deprived the Druids of all authority in civil matters, and ahowed them no mercy when they found them tranegressing the laws, or concersed in any revolt.

Such of the Druids as did not think fit to submit to the Romesn government, and comply with the Roman rites, fled into Caledonis, Ireland, and the lesser British isles, where they supported their anthority for some time longer. Many of them retired into the isle of Anglesey, which was a kind of little world of their own; and where the Arch Druid of Britain fo thought to have had his stated residence. But they did not long remain undistorbed in this retirement. For Suetonius Paulinus, who was Governor of Britain under Nero, A.D. 61, observing that the isle of Anglessy was the great seat of disaffection to the Roman government, and the asylum of all who were forming plots against it, determined to nabdue it. Having conducted his army to the ialand, and defeated the Britons who attempted to defend it, though they were animated by the presence and prayers and the exhortations of a great multitude of Iruids and Druidesses, he made a very cruel use of his victory. Not content with cutting down their sacred groves, demolishing their temples, overturning their altars, he burned many of them in the fires, which they had kindled for sacrificing the Roman prisoners, if the Britons had gained the victory. So many of the Druids perished on this occssion, and the

* Whare (ays maconry) did our anclent brethrea moet, before lodgea wert trectedi Answor. Upon holy ground, or the highest hill, or the lowest vale, or any other wecret pleoe ; the bottor io guard against cowing and anemias." - Edit.
unfortunste revolt under Boadicla, Queen of the Iceni, which hsppened soon after, that they were never able to make any considerable figare after this period.

But though the dominion of the Draids in South Britain was destroyed at this time, many of their superstitious practices continued much longer. Nay, so deeply rooted were these principles in the minds of the people, both of Ganl and Britain, that they not only baffled all the power of tho Romans, but they even resisted the caperior power and divine light of the gospel for a long time after they had embraced the Christien religion. This is the reason that we meet with so many edicts of emperors, and canons of councils, in the sixth, seventh, and eighth centaries, agains the worship of the sun, moon, moontains, rivers, lakea, and trees This superstition continued even longer in Britain than in some other countries, having been revived first by the saxons, and afterwards by the Danes. It is a sufficient proof of this that so late as the eleventh century, in the reign of Canate, it was found neoesssry to make the following law against the heathenish superstitions: "We strictly dischergs and forbid all our subjects to worship the gods of the gentiles ; that is to say, the sun, moon, fires, rivers, fountains, hills or trees, and wood of any kind."

Extract from Dr. Lingard's History of England,

[^94]With bracelets; they wore their hair very short, and their beards remarksbly long.
"The Druids had one chief, or Arch-druid, in every nation, who acted an high-priest, or pontifex maximus. They had absolnte sathority over the rest; and commanded, decreed, punished, etc., at pleasare. He was slected from amonget the most eminent Druids, by a plarality of votes.
"Thoy worshipped the Suprems Being under the name of Esus, or FHass:* and the aymbol of the oak; and had no other temple than a wood or a grove, where all their religious rites were performed. Nor wes any permon admitted to enter that aacred recess, unless he carried with him a chain, in token of his absolute dependence on the Deity.

The conascrated groves, in which they performed their religious rites, ware fenced round with stones, to prevent any pereons entering except through the passages left open for that purpose, and which were guarded by oome inferior Druids, to prevent any stranger from intruding into their mysteries. These groves were of different forms ; some quite cirvular, others oblong, and more or less capacious as the votaries in the distriots to which they belonged were more or less numerous."

In the chain carried by the ancient Britons, in the performance of their religious rites, is to be seen the archetye of the cable-tow, or tow-rope, morn about the neck of the aspirant to masonic secrete, which is the subject of mach ridienle smong the uninitiated profane, and, indeed, the fraternity themselves do not seem to be aware of its true import. They are not conscious that this hamble badge is a testimony of their beliof in God, their dependence on him, and their solemn obligations to devote themselves to his will and service.

The candidate for masonic instruction should be looked upon as an motatored, wild man of the woods; a mere child of nature, unregenerated and deatitute of any knowledge of the true God, as well as the comveniences and comforts of civilized life. For this reason, he is exhibited blindfolded, "neither naked nor clothed," but aboat halfway botween both.

Here also may be seen the type of the masonic tiler, an inferior officer, with a drawn sword, to gustd the lodge from the impertinent intrusion of cowans, or rather covins, and eavesdroppers. It will not be pretended that a sword is needed in this case; it is a mere ensigu of office, In conformity to the Dradical custom.

[^95]The following extracts from Hame's History of England, will account for the slow introduction of Claristianity among the ancient Britions:-
"The most memorable event which distinguished the reign of this great prince [Ethelbert] was the introduction of the Christian religioa among the English Saxons. The superstition of the Germans, particularly that of the Saxons, was of the grosesest and most barbarous kind, and being founded on traditionary tales received from their ancestors, not reduced to any system, nor sapported by political institutions like that of the Druids, it seems to have made little impreesion on ite votaries, and to have easily resgined its place to the now doctrine promulgated to them.
"On the contrary, the constant hostillies which the Baxong maintained sgainst the Britions, would naturally indispose them for receiving the Christian faith, when preached to them by such invetarate enemies.
"The Saxons, though they had been long eettled in the island, seem not as yet, [early part of the ninth centary,] to have been moch improved beyond their German anceators, either in arts, civility, knowledge, humanity, justice, or obedience to the laws. Even Christisnity, though it opened the way to connections between them and the more polished states of Europe, had not hitherto been very effectual in banishing their ignorance, or softening their barbarous manners. As they received that doctrine through the corrupted channels of Fome, it carried along with it a great mixture of credulity and superstition, equally deatructive to the understanding and to morala. The reverence toward saints and reliques, seems to have almost supplented the adorstion of the Supreme Being. Monestic ubservances were esteemed more meritorious than the sctive virtues; the knowledge of natural canses was neglected, from the universal belief of miraculous interposition and judgmente ; bounty to the church atoned for every violence against sociery; and the remorses for cruelty, murder, treachery, assassination, and the more robust vices, were appessed, not by amendment of life, but by penances, servility to the monks, and an abject and illiberal devotion. * * * The ecclesiastics, in those days of ignorance, [middle of the ninth century, made rapid advance in the acquisition of power and grandeur, and in inculcating the most absurd and most interested doctrines. Not content with the donations of land made them by the Saxon princes and nobles, they had cast a wishfal sye on a vast revenue, which they claimed as belonging to them, by a racred and indefeasible title. However little versed in the Scriptures, they had been able to discover, that, under the Jewish law, s tenth of all the produce of land was conferred on the prieathood; and, forgetting what they themeelves taught, that the moral part only was obligatory on Christians, they insisted that this donation conveyed a perpetwal property, inherent, by divine right, in thoee who officiated at the altar. During some centuries, the whole ecope of sermons and homilies was directed to this purpose; and ope would have imagined, from the general tenor
of these discourses, thast all the practical parts of Christianity were comprised in the exact and faithful payment of the tithes to the clergy, Encoaraged by their success in inculcating these doctrines, they ventured farther than they were warranted, even by the Levitical lsw, and pretended to draw the tenth of all industry, merchandize, wages of labourers, and pay of soldiers; nay, some canonists went so far as to affirm, that the clergy were entitled to the tithe of the profits made by courtesans in the exercise of their profeseion."

## Slavery in England.

As slaves are not admitted into the society of Freemasons, it may be interesting to some of our resders, unacquainted with the fact, to know the vast extent of the evils of slavery in Eingland at the time when this institution is supposed to have been established, and the great proportion of the inhabitants, particularly of the mechanical and labouring olassee, that were consequently excluded from a participation in its charitable and benevolent purposes. I therefore give the following extract from Dr. Heary's History of the different ranks of people in Britain, from the arrival of the Ssxons, A.D. 449, to the landing of William, duke of Normandy, 1066.

The lowest order of peple among the Anglo-Sarons and the other nations of Britain, in this period, were slaves, who with their wives and ohildren were the property of their mssters. Besides those who were netive alaves, or slaves by birth, others frequently fell into this wretched etate by various means, as by an ill run at play, by the fate of war,
) or by forfeiting their freedom by their crimes, or even by contracting dobts which they were not able to pay. These unhappy people, who were very numerous, formed an article, both of internal and foreign trude; only if the slave whas a Christian, he was not be sold to a Jep or a Pagan; or, if he belonged to the same nation with his master, he was not to be sold beyond the seen Slaven were, however, of various Kinds, among the Anglo-Samons, employed in varions works, and were not all in an equal state of thraldom. Some of them were called villani, or villains, because they dwelt at the villages belonging to their masters, and performed the servile laboure of oultivating their lande, to which they were annezed, and transferred with these lands from one owner to another. Others were domeatic alaves, and performed various offices about the houses and families of their masters. Some of these domeatic elaves of the king and the nobility were taught the mechanio arts, which they practised for the benefit of their owners; and the greatest number of the mechanics of those times eeem to have been in a state of servitude. Slaves were not supposed to have any family or relations who sustained any loss by their death; and, therefore, when one of them was killed by his master, no mulet was paid, because the master was supposed to be the only loser; when slain by another, his price or manbote was paid to his master. In a word, slaves of the fowest order were considered merely ss animals of burden and parts of their owners' living atook. In the lawa of Wales it is expressly
said :-" That a master hath the same right to his alavea as to his cattle."

The horrors of this cruel servitude were gradually mitigated; and many of those unhappy wretches wore raised from this abject state to the privileges of bumanity. The introduction of Christianity contributed not a little, both to mlleviats the weight of servitude and diminish the number of slaves. By the canons of the church, which were in those times incorporated with the laws of the land, and of the eame anthority, Chriatians were commanded to sllow their slaves certain portions of time to work for their own benefit, by which they acquired property,-the bishops had authority to regulate the quantity of work to be done by slaves, -and to take care that no man need his slave harshly but as a fellow-Chriatian. The bishope and elergy recommended the manumission of slaves as a most charitable and meritorious action; and in order to set the example, they procured a law to be made, that all English slaves of every bishop should be set at liberty at bis death, and that every other bishop and abbot in the kingdom should set three slaves at liberty. But after all these mitigations of the severities of slavery, and diminutions of the number of slaves, the yoke of servitude was still very heary, and the grestest part of the labourers, mechanics, and common people groaned under that yoke at the conolusion of this period.

The sext class or rank of people in Britain, in this period, was cortposed of those who were called frilazin, who had been alaves, but had either purchased, or by some other means obtsined their liberty. Though these were in reality free-men, they were not considered as of the same rank and dignity with those who had been born free; but were still in a more ignoble and dependent conditien, either on their former masters, or on some new patrons. This custom the Anglo-Saxons seemed to have derived from their ancestors in Germany, among whom thoee who had been made free did not differ much in point of dignity or importanoe in the state from those who continued in servitade. Thin distinction, between those who had been made free and those who enjoyed freedom by descent from a long race of freemen, still prevails in many parts of Germany, and particularly in the original seats of the Anglo-Saxons. Many of the inhabitants of towns and cities in England, in this period, seem to have been of this class of men, who were in a kind of middle state, between slaves and freemen.

The third class or rank of people in Britsin, in the period we are now considering, consisted of those who were completely free, and descended from a long race of freemen. This numerous and respeotable body of men, who were called ceorls, cunstitued a middle class, between the labourers and mechanics, who were generally slaves, or deacended from slaves on the one hand, and the nobility on the other. They might go where they plessed, and pursue any way of life that was most agreeable to their humonr.-vol. iif., p. 320 .
In the time of the Anglo-Saxon rule, says Dr. Lingard, not less than two-thirds of the population of Britain existed in a state of sisvery;
and the sale and puschase of slaves publioly provailed during the whols of this period. These unhappy men were sold like cattle in the market. The Northnmbrians, like the savages of Africs, are said to have carried off, not only their own countrymen, but even their friends and relatives, and to have sold them as slaves in the ports of the continent. The men of Bristol were the last to abandon this nefarious traffic. Their egents travelled into every part of the country; they were instructed to give the highest price for females in a state of pregnancy; and the slave shipe regularly sailed from that port to Ireland, where they were seoure of a ready and profitable market.

## CHAPTER V.

## OPINIONS AND OBSERVATIONS OF LEABEED WRETERS ON FREEMABONRT, WHO ARE IN YOLL OOMMUSION WITH TEE ORDER.

Most of those writers on masonry who belong to the craft, either through ignorance or design, have mystified the subject in such a manner as to render it not only unintelligible, bat absolutely forbidding.

The opinions, therefore, of those of the order who have written with candour, and with a view of eliciting the truth, so far as they deemed consistent with their obligations, are entitled to great consideration. Such are the writings from which the following extracts are made; or, at least, the passages selected generally bear that character.

> From " The Spirit of Masonry" by William Hutchinson. Carliale, (England) 1802.

I am induced to believe the name of mason has its derivation from a language, in which it implies a strong indication, or diatinction, of the nature of the society; and that it has no relation to architects.

The titles of masous and masonry most probably were derived from the Greek langusge, as the Greek idiom is adopted by the Druids, as is shown in many instances in the course of this work. When they committed anything to writing they used the Greek alphabet, and I am bold to aesert the most perfect remains of the Druidical rites and caremonies are preserved in the caremonials of masons that are to be found existing among mankind. My brethren may be able to trace them with greater exactness than I am at liberty to explain to the public. The original names may probably be derived from or corrupted of Myaterion, res arcana, mysteries, and Myates, sacris initialus mystis-those initiated to sacred mysteries,*

There is no doubt that our ceremonies and mysteries were derived from the rites, ceremonies, and institutions of the ancients, and some of them from the remotest ages.

The ancient masonic record [the examination of a freemsaon by Henry

[^96]VI.] says, that masons knew the way of gaining an understanding of Abrac. On this word all commentators (which I have yet read) on the subject of masonry have confessed themselves at a loss.

Abrac, or Abracar, wan a name which Basilides, a religious of the second centary, gave to God, who he said was the suthor of threehundred and six(y-five.

The suthor of this superatition is ssid to have lived in the time of Adrian, and that it had its name after Abrasan, or Arbaxas, the denomimation which Basilides gave to the Deity.-He called him the SupromeGod, and ascribed to him seven subordinate powers or angels, who presided over the heavens:-and also, sccording to the number of the ddys in the year, he held that three hundred and sixty-five virtues, powers, or intelligences, existed as the emanations of God; the value, or numerical distinctions of the lettera in the word, according to the ancient Greek numerals, made $365-$ A $\quad$ B $\quad$ B $\quad$ P

With antiquaries, Abraxas is an antique gem or stone, with the word: abraxas engraven on it. There are a great many kinds of them, of various figures and aizes, mostly as old as the third century. Personsprofesaing the religions principles of Basilides, wore this gem with great veneration, as an amulat; from whose virtues, and the protection of: the Deity, to whom it was consecrated, and with whose name it was inscribed, the wearer presumed he derived health, prosperity, and safety.

In the British Museum is a beryl stone, the form of an egg. The head is in csmio, and reversed in taglio. The head is supposed to represent the image of the Crestor, under the denomination of Jupiter Ammon :-the sun and moon on the reverse, the Osiria and Isis of theEgyptians; and were nsed hieroglyphically to represent the omnipotence, omnipresence, and eternity of God. The star seems to be used as a point only, but is an emblem of prudence, the third emanation of theBagifidian divine person.

In church history, Abrax is noted as a mystical term, expreesing the Supreme God; under whom the Basilidians supposed three hundred and sixty-five dependent deities; it was the principle of the gnostic blerarchy; whence sprang their multitudes of Thmons. From Abrazas proceeded their primoganial mind; from the primoganial mind, the logos or word; from the logos, the Phroncesis or prudence ; from phronesis, Sophia and Dynamis, or wisdom and strength; from these two proceeded: principalities, powers, and angels; and from these, other angels, of the number of three hundred and sixty-five, who were supposed to have the government of so many celestial orbs committed to their care. The Gnostics were a sect of Christians hsving particular tenets of faith; theyassumed their name to express that new knowledge and extraordinary light to which they made pretensions; the word gnostic implying an enlightened person.

Jupiter Ammon was worshipped under the symbol of the sun. He was painted with horns, becsuse with the astronomers the sign Aries in
the zodiac is the beginning of the year; when the sun enters into the house of Aries, he commences his annual conrse. Heat, in the Hebrew tongue is Hammah, and in the prophet Isaiah Hammamin is given as a name of such images. The error of depicting him with horns grew from the doubtful signification of the Hebrew word, which at once expresses heat, splendour, or brightness, and also horns.

The sun was sleo worshipped by the house of Judah, under the name of Tamuz, for Tamuz, ssith Hierom, was Adonis, and Adonis is generally interpreted the sun, from the Hebrew word Adan signifying dominus, the same as Besl, or Moloch, formerly did the lord or prince of the plasets. The month which we call June, was by the Hebrews called Tamua; and the entrance of the san into the sign cancer was in Jews' astronomy termed Tekupha Tamuz, the revolution of Tamux. About the time of our Saviour, the Jews held it unlawful to pronounce that eesential name of God, Jevohah; and instead thereof, read Adonai, to prevent the heathen blaspheming that holy nsme by the adoption of the name of Jove, etc., to the idols. Concerning Adonis, whom some ancient writers call Osiris, there are two things remarksble. The death, or lose of Adonis, and the finding of him again; as there was great lamentation at his loss, so was there great joy at his finding. By the death or loos of Adonis, we are to nuderstand the departure of the sun; by his finding again, the return of that lnminary. Now he seemeth to depart twice in the year; first, when he is in the tropic of cancer, in the farthest degree northward; and, secondly, when he is in the tropic of capricorn, in the fartheat degree sonthward. Hence we may noto, that the Egyptians celebrated their Adonia in the month of November, when the sun began to be farthest southward, and the house of Judah theirs in the month of June, when the sun wes farthest northward; yet both were for the eame reasons. Some muthors say, that thit lamentation was performed over an image in the night season; and when they had sufficiently lamented, a candle was brought into the room, which ceremony might mystically denote the retarn of the ean, then the priest with a soft voice muttered this form of words, "Trut ye in God, for out of pains salvation is come to us."-Godvyn's Moves and Aaron.

Our anoient record, which I have mentioned, brings us positive ovidence of the Pythagorean doctrine, and Basilidian principles, making the foundation of our religious and moral rules.

As the servants of one God, our predecessors professed the temple, wherein the deity approved to be served, was not the work of men's hands. In this the Druids copied after them; the universe, they confessed, was filled with his presence, and he was not hidden from the most distant quarters of crestion; they looked up towards the heavensas his throne, and wheresoever under the sun they worshipped they regarded themselvee .as being in the dwelling plece of the Divinity, from whose eye nothing was concealed. The ancients not only refrained from building temples, but even held it otterly unlawful; because they thought no temple specious enough for the sun, the great symbol of the deity. "Mundur uni-
ecraus est templum soliswn was their maxim; they thought it profane to set limita to the infinity of the Deity; when in later ages they built temples, they left them open to the heavens, and anroofed.

As we derived many of our mysteries and moral principles from the doctrines of Pythagoras, who had acquired his learning in Egypt, and others from the Phosnecians, who had received the Egyptian theology in an early age, it is not to be wondered that we shonld sdopt Egyptian symbols to represent or express the attribates of the Divinity.
The third emanation of Abrax, in the Gnostic hierarchy, was Phronessis, the emblem of Prudence, which is the first and most exalted object that demsnds our sttention in the Lodgs. It fs placed in the centre, ever to be preasont to the eye of the mason, that his heart may be attentive to hor dictatee, and steadfast in her laws;-for prudence is the rule of all virtues;-prudence is the path which leads to every degree of propriety; -pradence is the channel whence self-approbation flowe for ever;-she loade us forth to worthy actions, and as a Blasing Star, enlighteneth us shroagh the dreary and darksome paths of this life. $\dagger$

That innocence should be the professed principle of a mason, oocasions no aetonishment, whon we coneider that the discovery of the Deity lesda us to the knowledge of those maxime wherewith he may be well pleased. The very ides of a God is succeeded with the belief that he can approve of nothing that is evil; and when first our predeceseors professed themsolvee servants of the Architect of the worid, as an indispensable duty, they profesed invocence, and pat on a white raiment, as a type and tharacteristic of their conviction, and of their being devoted to his will. The Druids wers apparelled in white, at the time of their sacriflces and solemn offices. The Egyptian priosta of Oeiris wore snow-white cotton in the service of Ceres [1sis], under whom was eymbolized the gift of Providence in the fruits of the earth-and the Grecian priests aleo pat on white.

Every degree of sin strikes the rational mind of man with some feelings of self-condemnation. Under such conviction, who could call apon, -or olaim the presence of a Divinity, whose demonstration is good works? Hence are men naturally led to conceive that such Divinity will accept only of works of righteonenese. Standing forth for the approbation of beaven, the servants of the first revcaled God bound themselves to maxims of purity and virtue; and as masons, we regard the principles of those who were the first worshippers of the trus God ; we imitate their spparel, and assame the badge of innocence.

In this pretension of the author, that the predecessors of the freemasons

[^97]were the first to discover the true God, sa sllusion is evidently made ts the Egyptians, who seem to have been great boasters in this respect.
"The most ancient of the profane historians, and he who speaks in the moet learned manner of the religion of the Egyptians, is Herodotas. The Egyptians, accorrding to him, are the first peoplo in the world who knew the names of the twelos great gode, and from thom the Greeks had learned them. They, too, aro the first who arected altars to the gode, made representations of them, raised temples to them, and had prients for their service, exaluding wholly the other sex from the priesthood. Never was any people, continues he, more religions. They even had two sorts of writing, the one common, and the other sacred; and this last in set apart solely for the mysteries of religion. Their prients ahass their whole body every third dsy. Clothed in linen, with sandals mesdo of the plat pspirus, they were not allowed to wear other apparel, nor other covering for the feet. They are obliged to bathe thomselves in cold water twice a dsy, and as often by night. So acrupulously exact must the priests be in the choice of the victims whioh thoy are to offer to their gods, that they sre puniahed with death if they offor up any Which have not the qualitien requisite."-Mayo's Myth. v. 11. p. 27.

The colour of white's being made s symbol of purity and innocsnco probably owes its origin to the following absurd notions of the snoienta:
$\because$ As the constellations of summer accompanied the season of long, warm and unclouded days, and that of fruits, and harvests, they were considersd an the powers of light, fecundity, and creation, and by a transition from a physical to a moral sense, they became genii, angels of science, of benificence, of purity and virtue: and as the constellations of winter were connected with long vights and polar fogs, they were the genii of darknees, of destruction, of death, and, by transition, angels of ignoranoe, of wickedness, of sin and vice.
"Now, as the earthly states, the greater part despotic, had alrendy their monarchs, and as the sun was apparently the monarch of the skies, the summer hemisphere, empire of light, and its constellations, a people of white angols, had for king an enlightened God, a creator intelligent and good. And as every rebel faction must have its chief, the heaven of winter, the subterraneous empire of darkness and woe, and its atsers, a people of black angels, giants or demons, had for their chief a malignant gemins, whose character was applied by different persons to the constellation which to them was the most remarkable."-Ruins, p. 144-5,
"The priests, says Dupois, elothe themselves in white, a colour assigned to Aromaze or the god of light."

The superstition, or rather affectation in regard to this colour, is still retained among some Christian sects, whose priesta cover themselves with this pagan outward show of purity.

It is somewhat remarkable that white, as an emblem of purity and innocence, should have descended to the aborigines of America. The prophet, who accompanied Black Hawk and other chiefo to Washington as hostages for the faithfal performance of the treaty made with their astion (1883), thus addressed the President of the United States:-

[^98]In this country [England] under the Draids, the first pinciples of our profession most assuredly were taught and exercised.

We are bold to say, that if we trace the sntiquity of masonry on operative principles, and derive such prinoiples from the building of Solomon's Temple, we may as well claim all the professions which Hiram excelled in.

Assuredly the secrets revesled to ns were for other uses than what relate to labouring up masses of stone; and our society as it now stands is an aseociation on religious and charitable principles, which principles were instituted and arose upon the knowledge of God.

We ground a judgment of the nature of our profession on our ceremonials, and flatter ourselves every mason will be convinced that they have no relation to building and architecture, bnt are emblematical, and imply moral, and epiritual, and religions tenets. It appears self-evident, that the situation of the Lodge, and its several parta, are copied after the Tabernacle and Temple, and are representative of the universe, implying that the universe is the temple in which the Deity is everywhere present;* our mode of teaching the principles of our profession, is derived from the Druids; our maxims of morality, from Pythagoras; our chief emblems originally from Egypt: to Basilides we owe the science of Abrax and the characters of those emanations of the Deity which we have adopted, and which are so necessary for the maintenance of a moral society.

Our lodges are not now appropriated to worship and religious ceremonies; we meet as a social societs, inclined to acts of benevolence, and suffer the more sacred offises to rest unperformed. Whether this neglect is to our honour, we presume not to determine; in our present etate, profeseing ourselves free and accepted masons, we are totally eevered from architects, and are become a set of men working in the duties of charity, good offices, and brotherly love.

From the ancient rites and ceremonies which we have laid before yon, it will be easy for you to trace the origin of our own rites, and to disoover the foundations on which our society is formed.

We have explained to you, that the structure of the Lodge is a pattern of the universe, and that the first entry of a mason represente the first worship of the true God. We bave retained the Egyption symbols of the sun and moon, ss the emblems of God's power, eternity, omnipresence, and benevolence ; and thereby we signify, that we are the children of light, and that the first foundation of our profession is the Knowledge and adoration of slmighty Mesouraneo, who seateth himself in the centre of the heavens:-we derive from the Druids many

[^99]of the Ammonisn rites ; and have saved from oblivion many of their religious rites, in our initiation to the first degree of mesonry, which otherFise would have slept in eternity. These we soem to have mixed and tempered with the principles of the Essenes, who are a sect as ancient as the departure of the children of Israel out of Egypt. The philosophy of the Egpytians, and the manners, principles, and customs of the Hebrews, were introduced to this land by the Phoenicians, and make a pert of our profession, so far sas they are adapted to the worship of Nature's great Author, unpolluted by idolatry.

We hold our grand festival on the day of St John, which is midsummer day; in which we celebrate that season when the sun is in its greateat altitude, and in the midst of its prolific powers-the great type of the omnipotence of the Deity.

We are not to search for our antiquity in the mythology of Greeee or Rome, we advance into remoter ages. Religion was the original and constituent principle; a recognition of the Deity first distinguished us from the rest of mankind ; our predecessors searched for the divine eseenco in wonders displayed on the face of nstare-they discovered supreme wisdom in the order of the universe-in the stellary aysem they traced the power, in the sessons and their changes the bounty, and in soimal life the benevolence of God; every argament brought with it conviction, and every object confirmation, that all the wonders diaplayed to the eye of man, were only to be produced by some superlative being, and maintained by his superintendeucy. It wha from such conviction, that men began to class themselves in religious societies.

I may ventare to assert, it was the only consequence which could enace whilst men were looking up to the Divinity through his works, that they would conclade the sun was the region where, in celestial glory, the Deity reposed.

We discover in the Ammonian and Egyptian rites, the most perfect remains of thoee originals to whom our society refers. We are told they esteemed the soul of man to be an emanation of the Supreme, and a spirit detached from the seraphic bands, which filled the solar mansions, and surrounded the throne of majeaty. They looked up to this grand luminary as the native realm from whence they were sent on this earthly pilgrimage, sad to which they should, in the end, returo; the figure of the sun was at once a memorial of their divine origin, a badge of the religions faith they profeesed, and a monitor of those priociples which should conduct and ensure their restoration. How soon, or to what axtreme, sapertition and bigotry debsed this emblem, is a research painful and unprofitable.

We masons have adopted three particular characteristica, eecrecy, charity, and brotherly love. Our sonse of these great duties has been explained, and of what especial import they are to masons, or to men who have separated themselves from the rest of mantind, and profeased they are servants of Him tho ruleth in the midot of heaven.

If our ceremonies mean not the matter which has been expressed; if they imply not the moral and religious principles which we have enden-
voared to unveil; it may be asked of you, masons, what they do imply, import, or indicate?

## Genius of Matonry.

Samuel L. Knapp, Esq., in a work entitled "The Genins of Masonry, or a defence of the Order," in taking notice of the late discoveries made by Champollion and others, of the hidden wisdom of the Egyptians, by ascertaining a clue to the understanding of their hieroglyphice, observes:
"These distinguished men who have embarked with so much of that seal which is necessary for the accomplishment of any great object, will, we trast, be permitted to entirely draw the veil of Isia which has covered her mysterien so long that the world began to despair of over seeing the glories it concealed. Behind this veil of Isis I have long thought was concealed our masonic birth. I now fully believe it. There was the aradle of masonry : no matter by what name it was called: no matter by whom it wes enjoyed."-p. 99.

> An Ahiman Rezon;*

By brother Frederick Dalcho, M.D., Charleston, B. C., 1807. Containing extracts from an Oration delivered by him, before the grend lodge of Sonth Carolina, 1801; from which the following is taken.

In the earliest sge of man, when the humen mind, untainted by the vices and prejudices of later times, unshackled by the terrors and ansthemss of contending sectsries, and the machinstions of bigotted priesta and the God of natare received the homage of the world, and the worship of his adorable name constituted the principal employment of him to whom the myateries of nature were first revealed. After the deluge, fi: wroship of the Most Eigh was obscured by the clouds of imagery, and defiled by idolatry.

In many of the ancient nations of the east, their religions rights were enveloped by the priests, in allegories, emblems, hieroglyphics, and mystic deviees, which none could understand but those of their own order. From these ancient examples, the mysteries of the craft have been wisely concesled from the valgar; and under cover of various well sdapted eymbols, is conveyed to the enlightened freemason an uniform and well connected system of morality.

I am of opinion that the ancient society of free and accepted masons. wes never a body of architects; that is, they were not, originally, embodied for the purposes of building, but were aseocinted for moral and religious purposes. It must be evident to every freemsson, that the situation of the lodge and its seversl parts are copied after the Tabernacle and Temple; and represent the universe as the temple in which the Deity is overywhere present. Our manner of teaching the principles of our myatic profession is derived from the Druids, who worahip one supreme

[^100]God, immense snd infinite; our maxims of morality from Pythagorsa, who taught the duties we owe to God as our creator, and to man as our fellow creature; many of our emblems are originally from Egypt; the science of Abrax, and the characters of thomemanations of the Deity, which we have sdopted, are derived from Basilides.

The word Msson is derived from the Greek, and, literary, meens a member of a religious sect, or one who is profesedly devoted to the worship of the Deity.*

As humanity ever springs from true religion, every religious sect, which scknowledges the Supreme Being, are equally respected by the order. Peligions disputes are banished from our societies, as tonding to sap the foundations of friendship, and to undermins the baris of the best institutions. The great book of nature is revealed to our eyes ; and the univaral religion of her God is what we profess as freemasons.

Dr. Dalcho published s second edition of his Ahiman Rezon, with additions and explanatory notes, in 1822. And it may not be improper to state, that previously to this period he had taken clerical orders, which parhaps caused him to examine the masonic institution more critically than he had done, to ascertsin if it contained anything inconsistent with his sacerdotal functions. At any rate, a change in his opinions on some points, seems to have taken place, which are set forth in his ex planatory notes, from which the following extracts are taken.

## Origin of Freomasonry.

The principles of our order are coeval with the creation. Founded upon the laws of nature and the commands of God, nothing had precodence of them in time. The origin of the society, however, as an institation distinct from other sasociations, is involved in impenetrable obscurity. And notwithstanding the learning and zeal of many industrious masons, it will, I fear, for ever remain unknown. Various indeed have been the speculations on this subject, and great has been the labour expended by many " good men and true" to prove that every man of note, from Adam down to the present day, were freemasons. But such round assertions are beneath the dignity of the order, and would not be urged by men of letters. Neither Adam, nor Noah, nor Nimrod, nor Moses, nor Jobhua, nor David, uor Solomon, nor Hiram, nor St. John the Baptist, nor St. John the Evangelist, belonged to the masonic order, however congenial their principles msy have been., It is unwise to ansert more then we can prove, and to srgue against probability. Hypothesis in history is sbsurd. There is no record, ascred or profane, to induce ns to believe that these holy and distioguished men were freemasons, and our araditions do not go back to their days. To assert that they were freemasons, may " make the vulgar stare," but will rather excite the contempt than the admiration of the wise. If St. John was a freemason,

[^101]then it isinposcible that Solomon should have been one, beceuse his lodges conld not have been dedicated to St . John, who was not born until a thousand yeara sfber the firat temple was built, therefore, there would have been in St. John's day, what there was not in Solomon's, whioh would be contrary to our known priaciples. And beeidea, if both these personagee were freemasons, then we have the evidence that Solomon was the greater mason of the two, and our lodges should be dedicated to him, instead of St. John. But if Solomon was a freernason, then there could not have been a freemsan in the world, from the day of the creation down to the building of the temple, as must be evident to every muster mason.

The excellence of our institation depends apon its usefalness, and not its antiquity. It is sufficient for us to know, that the origin of the institution is so remote, that the date is lost in the lapse of ages, and can now only be indistinctly traced by occasional recorde, and the traditions of the order.

Dr. Priestly, in his remarks on Mr. Dapuis' Origin of all Religions, clases the freemssons and Gypeies together. He affirms that, "they have formed themselves into a body, though of a very heterogeneons kind, but are not able to give any rational acconnt of their origin." (Institutes of Moses, page 386.) The philosopher has certainly placed us in bad company, by classing us with these vagrants; bat his inference is nevertheless true. The purposes for which our institution was originally organized, are now as unknown as the date of ita origin. Whether it: was designed for architectaral purposes, for the improvement of the arts and sciences, or for the premervation of revealed religion, by significant aymbola and impressive rites, in an idolatrous and barbaroue age, cannot now be cacertained. Perhaps all these objects gave rise or perfection to the institution.

When the Hindoos claim for thoir Shastras an antiquity of more than two millions of years; when the Chaldeans boast of obeervations of the stars for more than four hundred and seventy thousand years, and Manetho Sebennyta, the high priest of Heliopolis, claime for the Egyptians a national existence of nearly fifty-four thousand years, who wonld hesitate to pronounce them all fabulous? Let freemasons, then, give up the vain boastings which igoorance has foisted into the order, and relinquish a fabulous antiquity rather than sacrifice common sense. Let us trace our principles to Adam, or even to God himself, with reverence be it spoken, but let us not excite the pity of the wise, by calling Adam a freemsson. This will not lessen the dignity or importance of the institution, but rather add to its celebrity by giving it a reasonable origin.

Mr. Clinch supposes freemasonry was introduced into Europe by means of the Gypsies. (See Anthologia Hibernica, for April, 1794, p. 280.)

Although this is a very ridiculous supposition, it is highly probsble that the leaders of the first emigranta of this tribe from Egypt, had been initiated into the lesser mysteries, and perhaps copied in part from them the forms of the oath which they administer to their initiates.
"Every person who was not guilty of some publio crime, could obtain admisiou to the lenser myateries. Those vagabonda called Egyptian priests in Greece and Italy, required cousiderable sums for initiations; and the Gypaies practive similar mummeries to obtain monoy."(Da Pasw's Egypt, vol. il., p. 42.)

The customs of the latter, and the oath which they impose upon each other, has been preserved by Bailey; from which, as a curious antique, I make the following extract:-
"The Gypaies derive their origin and name from the Egyptians, a people heretofore very famous for astronomy, natural magic, the art of divination, etc., and therefore, are great pretenders to fortune-lelling.

It is the custom of these vagrants to swear all that are adroftted into their fraternity, by a form and articles annexed to it, administered by the principal Maunder or roguish Strowler, and which they generally observe ioviolably. The manner of admitting a new member, together with the said oath and articles, are as follows:
"The name of the person is first demanded, and a nick-name is then given him in its stead, by which he is ever after called, and in time, his other name is quits forgotten. Then standing up in the middle of the fraternity, and directing his face to the Dimber-Damber, or prince of the gang, he awesrs, in this manner, as is dictated to him by one of the motest experienced:
" . I. Crank-Cuffin, do ewear to be a true brother, and will in all thinge obey the commands of the great Tawney Prince, and keep his connsel, sind not divalge the secrets of my brethren.
" 'I will never leave nor forsake this company, bot observe and keep all the times of appointments, either by day or by night, in any place whatsoever.
" I will not teach any one to cant; nor will I disclose aught of our nryateries to them, slthough they flog me to daath.
" I I will take my prince's part against all that shall oppose him, or any of us according to the utmost of my ability; nor will I suffer him, or any belonging to us, to be abused by any strange Abrams, Rufflers, Hookers, etc., but will defend him or them as much as I can against all other outlyers whatever.
" I will not conceal aught I win out of Libkins, or from the Ruffmans; but will preserve it for the use of the compsny. ${ }^{\prime \prime}$

The canters have, it seems, a tradition, that from the three first articlea of the oath, the first founders of a certain boastful, worshipful fraternity, who pretend to derive their origin from the earliest times, borrowed of them both the hint and form of their establishment; end that their pretended derisation from the first Adam, is a forgery, it being only from the first Adam-Tiler.

The same author has given the meaning of the cant terms here ased as follows;-Abrams; shabby beggars. Rufflers; notorious rogues. Hookers; petty thieves. Libkin; a house to lie in. Ruffmana; the woods or bushes. Adam-Tiler; the comrado of a pickpocket, who receives stolen goods or money and acours off with them.

## Festival of St. John the Evangeliat.

In every country where freemasonry is encouraged, their annivereary festival is celebrated with great ceremony. It is a day set apart by the brotherhood, to worship the Sapreme Architect of hesven and earth; to implore his blessings apon the great family of mankind; and to partake of the feast of brotherly affection. All who can apare a day from their necessary svocations, ahould join in this celebration. The freemssons of South Carolins have chosen St. John the Evengelist's dey as their anniversary.

The annual featival of the order is celebrated in some places on St. John the Baptist's day (June 24), and in others on St, John the Evangolist's day (Dec. 27). The latter has been preferred in South Carolina, on account of the heat of the climste. Bat why either of them should be choeen in preference to any other day is, perhaps, difficuit to explain. I know of no connection between these eminent "Ssints and Servants" of God, and the lodge of freemasons. I nozv write as a minister of that God to whose honour and glory my life is devoted, and to whom I must, ore long, give an account of my stewardt hip. I think I run no hazard of contradiction in ssying that if either of these most holy men were now pormitted to revisit the earth, they would greatly wonder at finding their bamee enrolled as patrons of an institution of which they had never heard. And there can be no question of the fact, that if they were now to apply for admisaion into any of our lodges, they would be utterly incapable of "working their way in."

The annusl masonic festival in England, is held " on the anniversary of the feast of St. John the Baptist, or of St. George, or on such other day as the grand master may sppoint." Their reasons for selecting these days are sufnciently expressive of their opinions. The fesst of St. John the Baptist occurs on the 24th June, when, in that climate the weather is not too warm for a public procesaion; and St. George, whose anniversary is held April 23rd, is the patron Saint of England. This, to me, is clear evidence that the anniversary of St. John was not selected becsuse they deem him to have been a freemason.

I am, however, of opinion, that we act wisoly in taking St. John the Evangelist for the patron of our order. He is worthy of jmitation, both in his principles and conduct. But, as it has been well ssid of old, Amicus Plato, Amicus Socrates, sed magis amica veritas; so I may truly say, that I highly venerate the masonic institution, under the fulleat persussion that, where its principles are acknowledged, and its lawa and precepts obeyed, it comes nesrest to the Christian religion, in ita moral effects and influence, of any institution with which I am acquainted. At the same time, I hold truth to be too sacredly connected with my office and character, to allow me to approve of the custom, now generslly adopted, of dedicating our lodges "to God and the holy St. John," as joint parrons of the society. I hold it to be irreverent, to unite the name of any created being with the uncreated Godhead. The name of God is surely sufficiently honourable and powerful as the patron of ourinstitution.
without the sddition of any other. If the lodge be dedicated to God, let it be dedicated to him alone. He can bless all our "work begun, continued, and ending" in Him, without the asaistance of St. John. But, if it be necessary to have St. John, lot ns take him alone, as our tutelary head, or nnite with him any of the old worthias, asually connidered as masons.

It is a well known fact, an before observed, that the early Christiane very judiciously adopted, not only the festival days of the pagans, bat even their mander of celebrating them. This was doubtlees done with the view of rendering the change in the new religion leas perceptible, and consequently less shocking to the prejudices of thowe who adhered to the ancient institution. Among the principal fentivals of the Ragana were those of the solstices and equinoxes,

De Pauw, in his Pbilos. Diss, on the Egyptians and Chinese, observee, that "Besides the Sabbath, which the Egyptians seam to have observed very regularly, they had a fixed festival at each new moon; one at the eammer and the other at the winter solstice, as well as the vernal and autumnal equinoxes. All others except that at the rising of Sirlus wera ohangeable, and dependant on certain combinations, knownto the prieats only, who transforred them arbitrarily, whenever they occurred on the neomenis, the equinox, or the solstice."-Vol. ii., p. 159.
"The festival of the 2oth of December. (says Higgins, in his Celtio Druids, p. 165,) was celebrated by the Druids in Britain and Ireladd, with grest fires lighted on the tops of the hills. This festival wes repeated on the twelifh day, or on what we call Epiphany. In some parts the fires are still continoed. The evergreens, and particularly the misaletoe, which are used all over the country, and even in London, in this festival, betray its Draldical origin.
"On the 25th of December, at the first moment of the day, througboat all the ancient world, the birth-day of the god Sol was celebrated. This was the moment when, after the supposed winter solstice, and the loweat point of his degradatiou below our hemisphere, he began to increase, and gradually to ascend. At this moment, in all the ancient regions, his birth-day was lept; from India to the ultims Thule, these ceremonies partook of the anme character; and everywhere the god was feigned to be born, and his featival was celebrated with great rejoicings."

The fires on the hille are emblematical of the power and ardour of the sun, when he should have ascended to the upper regions, which he wis then approaching: snd the evergreens are typioal of the effect that would be produced in the vegetable kingdom by such an uvent.

What possible allusion can the display of evergreens at Christmas have unless that here suggested? The custom is undoubtedly borrowed from the Druids, and is continued without the least applicability to the Christian religion. Masonic lodges, moreover, are decorated in this manner on the 27th of December, which is corroborative of the opinion here adranced.

The Roman and Episcopal churchee still retain an astronomical cast, as is apparent both in their fized and moveable feasts. "The principal of the muveable feasts is Euster, which goveros the rest. Easter was an idol or goddess of the Saxons, in honour of whom sacrifices were offered about the time of year which is now observed by the church in commemoration of our Saviour's resurrection. It is kept on the first Sunday after the full moon succeeding the vernal equinox." (Bailey.)

The birth days of the two St . Johns, it appears, are fixed by the framere of the charch ritual, at the periods of the solatices. These of course were observed as festival-days by the Druidical masons; and as they were celebrated openly with pompous processions, eto., it became necessary for them to use overy precaution to prevent a discovery of the real cause of these demonstrations of joy. With this view they appropristed the names of the fensts or feativale that had been assumed for them by the Catholic Church. But while they ostensibly honoured the two St. Johns, they were mentally paying homage to their favourite divinity, the sun.

## Signs and Symbole,

Illustrated and explained, in a course of Lectures on Freernasonry. By George Oliver, Vicar of Clee, \&c.-Grimsby, 1826.
Uader what denomination soever our Science has been known in the world; under what form soever it may have been practised, it has alwaya been underswod to have a distinct reference to the worship of God and the moral culture of man.

Thecharacteristic propensity of a people, the state of their progress from barbariem to civilization; their intelleotual attainmente, the character of their government or their intercourse with other nations, might and did create eome distinction in the ceremonial, hat the great eseentials, broadly struck out by the Cabiric priesta, did never vary.

In a word, the mysteries were the only vehislee of religion throughout the whole idolatrous world; and it is probable that the very name of religion might have been obliterated from amongst them, but for the support it received by the periodical celebrations, which preserved all the forms and ceremonies, rites and practices of divine worship; and the varieties of custom in this particular constituted the sole difference betwixt the masonry (ehall I so call it ?) of different nation. Wheresoever the mysteries were introduced, they retained their primitive form, adspted to the customs and nasges of the national religion: and if varied in aome animportant points, it was to commemorate cortain extraordinary performances of the tutelary deities, or to perpetuate some remarksble circumstance attending their first institution in a particular country. Hence the same, or similar ceremonies, which wers applied to Oviris and Isis in Egypt, the great sonrce of secret and mysterious rites, (Lacian de Dea Syr, were celebrated in Greese, in honour of Bacchus and Rhes; at Elensis, they were applied to Ceres and Proserpine; in Tyre and Cyprus, to Adonis and Vonns; in Persis, to Mithras and Mithra; in India, to Maha Deva and Sita; in Britain, to Ha and Ceridwen; ia

Seandinavia, to Odin and Frea ; and in Mexioo, to Tlaloc and the Great Mother; for these appear to be but different names for the deities, and most probably referred to Noah and the Ark. They were all originally the name system.

They uned as mote siguificant amblems, the Theological Ladder-the triple support of the universal lodge, called by masons, wisdom, strength, and beauty; the point within a circle, and many other legitimate emblems of masonry; they used the same form of government-the aame syatem of secresy, allegory, and aymbolical instraction; all tending to the same point, the practice of moral virtac. None were admitred without provious probation and initiation ; the candidates were hound by solems oaths; united by inviaible ties; taught by aymbols; distinguiahed by xigns and tokens ; aud, impelled by a conscientions adherence to the rules of the order, they professed to practice the most rigid morality; justice towards men, and piety to the gods.

If primitive mssonry was s system of light, the initisted heathen equally paid divine honours to the sun, ss the source of light, by clrcamambulating in the course of that luminary, during the ceremony of initiation.

Did the intitated refer to the four elements? They were portrayed by certain prismatic colours. White represented the air; Blue the water: Purple the earth; and Crimson the fire.

The Zodiac was considered as the great aseembly of the troelve gods; the sun being supreme, and the planets his attendants.

The emblems which masons now make use of as the seoret repositotories of their treasures of morality, were adopted by the ancients in very early times, as sigas and symbols; and were oven subatituted for alphsbetical charactere.
The triangle, now called a trowel, was an emblem of very extennive spplication, and was much revered by ancient nations as containing the greatest and most abstruse mysteries. It signilied equally the Deity, Creation, and Fire.

## On the Name of the Deily.

The great pame of the deity, which is termed by Josephus, incommunicable, is said to be preserved in the system of freemasonry. Calmet observes," when we pronounce Jehovah, we follow the crowd; for we do not know distinctly the manner wherein this proper and incommunicable name of God should be pronounced, which is written with $\mathrm{Iod}, \mathrm{Hi}, \mathrm{Vau}, \mathrm{Hi}$, and comes from the verb haiah, "he has been." The ancients have expressed it differently. Sanchonisthon writes Jevo; Diodorus the Sicilian, Mecrobius, St. Clemens Alexsndrius, St. Jerom, and Origen, pronounce Iso." etc.

The Tetragrammaton was preserved and transmitted by the Espenea. It was always communicated in a whisper (R. Tarphon, apud. Ten. Idol., psge 895), and under sach a disguised form, that while its component parts were universally known, the connected whole was an incommonicablemystery. They uned, in common with the Jewiah nation
the ancient and significant symbol by which this name was deaigoated, Fis. three jods, with the point kamets placed underneath, thas, express the equality of the three persons of which they believe the godhead to be composed. This holy name they held in the uimost veneration. Calmet says, they beliove the name of God to inolude all things. "He who pronounces it, say thay, shakes hesven and earth, and inspires the very angels with astonishment and torror. There ia a eovereign authority un his name; it governa the world by ita power."

The letter schin, ${ }^{2}$ l) was adopted as a mysterious amblem to designate the Tetragrammaton; and hence this letter was supposed to comprehend many valuable qualitiee. It was, therefore, deeply engraven by the Jews on their phylacteries, both before and behind, to induce the protection of the omnipresent deity it represented. Another symbol
was an equilateral triangle, illuminated with a singlo jod.

initial letter jod, "denotes the thought, the idea of God. It is a Ray of Light, asy the enraptured cabbalists, which darts a lustre too transcendent to be contemplated by mortal eye; it is a point at which thought panes, and imagination itaelf grows giddy and confounded. Man, says M. Basmage, citing the rabbies, may lawfully roll his thoughts from one end of heaven to the other, but they cannot approach that inaccessible Light, that primitive existence contained in the letter Jod."-(Maur. Ind. Ant, vol. iv.)

The chief varieties of his sacred name among the inhabitants of different nations, were Jsh, and Bel or Baal, and On or Om. The first of these, as we have just seen, had many fuctuations. Jupiter, Jove, Evohe, etc., were but corruptions of Jah or Jehovah. Ino whe pronounced by she oracle of Apollo, to be the first and greateat of the deities.-(Macrob. Saturn. 1. 18.)

The compounds of the second name Bel, are of great variety. Belue, was used by the Chaldeane; and the deity known smong the avcient Celtas, by the name of Bul or Bel-enus, which title, by the modern suthors, is identified with Apollo.

The third variation was On. Under this appellation the deity was worahipped by the Egyptians; and they professed to believe that he was eternal, and the fountain of light and IIfe; but according to their groas conceptions, being necesaarily visible, the sun was adored as hin representative, and was, most probably, the saine se Osiris. They knew the general purport of the name and little more. If they believed On to be the living and eternal God, they allowed the same attributea to the sun, which they undoubtedly worshipped as the Lord of the creation. Oannes was the god of the Chaldeans; sad Drag-On of the Philistines, both of which are derivations of the same name. On was evidently the same deity as the Hebrew Jehovah; and wes introduced anonggt the Greeks by Plato, who acknowledges his eternity and incomprehensibility in the9o
buildings, come through the mouth of a lion." (Bryant's Plagoos of Egypt, p. 86, nole.)

The eagle was sacred to the sun in many countries, particularly in some parts of Egypt, Groece, and Persie. In our Sariptarea the king of Babylon is termed an Eagle. It wes repated to have fed Jupiter with nectar in the Cretan cave, and was certainly an emblem of his dominioo. With the British Druids it formed a symbol of their Supreme God; is was embroidered on the consecrated standard of the Mexican prinees; and the common onsign of the Roman legions was a golden eagle. Indeed the pecaliar property which this noble hird posseeses of beholding with impunity the undiminished vigour of the sun's meridian rayn, wonld naturally procure for it an emblematical distinction.

The man, or idol in human ahape, was worahipped all over the world ; for which custom this reason has been essigned by Porphiry, when charged with worshipping God ander tho figure of a man. Hio allowed the deity to be invisible, but thought him well represented in that form; not because he is like him in external shape, but becanso that which is divine is rstional. (Porph. in Easeb. de prope evan. 1 iii., c. 7.)

The Chernbim, sccording to the suthor, consiat of the figures of a man, an ox, a lion, and an eagle; which combination he represents ae awfully secred and sublime, ovidently with the view of heighteoing the mystical importance of royal arch masonry, whoee armorial exuigns it composes.

Dr, Rees remarks, that "Cherab, or Cherubim, in Hebrew, in sometimes taken for a calf or an ox. In Syriac and Caldee, the word cherub signifies to till or plough, which is the work of oxen. Aceording to Grotius, the Cherubin were figures resembling a calf. Bochart and spencer think they were similar to an ox. The figure of the Cherubim was not elways uniform, since they are differently deseribed in the shapes of men, eagles, oxen, lions, and a composition of all these figures put together.* After all the suggestions and conjecturee of learned persons, it still remains to be determined what these emblematio figures were intended to represent."

They form a part of the machinery of pagan worship, each figure being aymbelical of the great object of adoration, the sun. This Mr. Oliver himself has fully shown.

Thus it appears that the masonic Cherubim, composing its arms, coosists of representations of the sun under various figures, conformsble to the fanciful superatitions notions of ancient nations.
"Ye inhalitants of India! in vain you cover yourself with the reil of mystery; the hawk of your god Vichenou is but one of the thoomand

[^102]emblems of the sun in Egypt; and your incarnations of a god in the fish, the boar, the lion, the tortoipe, and all his monstrous adventures, are only the metamorposes of the sun, who, passing through the signs of the twelve animals, was supposed to ssume their figares, and perform their astronomical functions. People of Japan 1 your bull whioh breake the mundane egg, is only the bull of the zodiac, which in former times opened the seanons, the age of creation, the vernal equinox. It is the same bull Apis which Egypt adored, and which your ancestors, O Jewish rabbins ! worshipped in the golden calf. This is still your bal!, followers of Zoroaster ! which escrified in the symbolical mysteries of Mythra, poured out his blood which fertilived the earth." Ruins, p. 188.

The supporters of the armorial ensigns of royal arch masonry, accordIng to Cross'a chart, sre two figures representing the god Pan; who may be considered as one of the most sncient divinities of paganism.
"Orphens asys that Pan signifies universal nature, proceeding from the divine mind, of which the heaven, earth, sea, and the eternal fire, are so many members. He was generally represented with the body and head of a man, and the lower part were those of a goat."-Bailey.

## On the Mysterious Darkness of the Third Degree.

In the ancient mysteries, the Epoptes, or perfectly initiated aspirants, were reputed to have attained a state of pure and ineffable Light, and pronounced safe under the protection of the celeatial gods (Diod. Sic. Bibl., 1, v. c. 3); while the unhappy multitade who had not undergone the parifying ceremonies, were declered reprobate; said to wander in all the obscurity of darkness, to be deprived of the divine favour, and doomed to a perpetual residence in the infernal regione, amidst a cheerless and overwhelming contamioation. (Plato Phedone.-Arist. Eleusinis et apud Stobsam. Serm. 189, etc. Schol. Arist. Ranis.)

During the Persian initiations, this doctrine was enforced ex cathedra, (from the desk or pulpit). The Archimagus informed the oandidate, at the moment of illumination, that the divine lights were displayed before him (Psell. in Schol. in Orac. Zorosst.); and after explaining the nature and purport of the mysteries in general, ho tsught that the universe was governed by a good and evil power, who were perpetually engaged in contest with each other, and as each in turn provailed, the world was charsoterised by a corresponding succeasion of happiness and misery; that uninitiated and immoral men were votaries of the evil power, and the virtuous initiated of the good; and that at the end of the world, oech, with his followers, will go into a separste abode; the lattor with Fasdan shall ascend, by mesna of a ladder, to a state of eternal light, where exiats unalloyed happiness and the purest pleasures; the former with Ahriman, shall be planged into an sbode of darkness, where they shall suffer an eternity of disquietude and misery, in a desolate place o punishment situated on the shore of a stinking river, the waters of which are black as pitch and cold as ice. Here the mouls of the uninitisted
eternally float. Dark columos of smoke ascend from this stremm, the Inside of which is full of serpents, scorpions, and venomous reptiles. (Hyde, de relig, vet. Pers. p. 899.)

Tho multitude, being thus ampeed with fables, and terrified with denunciations, were effectually involved in uncertainty, and directed to patha where error only could be found; for every proceeding was mysterious, and overy mythological doctrine shrouded under a correeponding symbol. These allegorical fablea becoming popular, the simple rites of primitivo worship soon aneumed a new and more imposing form, and religion was at length enveloped in a veil so thick and impervious as to render tho interpretation of their symbolical imagery extremoly difficult and uncertain. The alender thread of trath being intimately bleaded and confused with en incongruous mass of error, the elncidetion was a tack so complicated and forbidding, that few had the courage to undertake it; and men were rather fnolined to bow implicitly to popolar tradition, than be at the paina to reconcile truth with itself, and eeparate, with a nice and delicate hand, the particles of genuine knowledge from the cumbrons web of allegory and superstition in which they wore intervoven.

It is an extraordinary fact, that there Is scarcely a fingle ceremony in freemasonry, bat we find its corresponding rite in ono or other of the idolatrous mysteriee; and the coincidence csn only be accounted for by supposing that these mysteries were derived from masonry. Yet, however they might assimilate in caremonial observances, an essential difference existed in the fundamental princlples of the respective institutions. ${ }^{*}$

In all the ancient mysteries, before an arpirant could claim to participate in the higher secrets of the institation, he was placed within the Pastos, or Bed, or Cofin; or, in other words, was snljected to a solitary confinement for a prescribed period of time, that he might reflect seriously, in seclusion and darkess, on what he was about to undertake;

[^103]and be reduced to a proper atate of mind for the reception of great and important traths, by a course of fasting and mortification. This aras the symbolical death of the mysteries, and his deliverancs from confinement was the act of regenerstion, or beiog born again; or, as it was also termed, being raised from the dsad. Clement of Alexandria tells un, that in the formulary used by one who had been Initisted, he was taught to say, "I have descended into the bed chamber." The ceremony here alluded to was doubtless the same as the descent into Hades ; and I sm inclined to think, that when the exirant entered into the mystic cell, he was directed to lay himself down upon the bsd, which shadowed out the tomb or coffin of the Great Father. This process was equivalent to his entering into the infornal ship: and whilo stretched upon the holy oonch, in imitation of his figurative deceased prototype, he was said to bo wrapped in the deep sleep of death. His resurrection from the bod was his reatoration to life, or his regeneration into a now world; and it was virtually the same as his return from Hades, or his omerging from the gloomy cavern, or his liberation from the womb of the ship-goddese.* (Fab. Pag. Idol. b. v. c. 7.)

The candidate was made to undergo these changes in acenic repreeontation; and was placed under the Pastos in perfect darzneas, generally for the apace of three days and nights. The time of this sulitary confinemont however varied in different pations. In Britsin nins daye and nights was the specified period; (W. Arch. I'ri. 50 apud Dav. Draids. p. 404.) in Greece, three times nine days; (Porph. vit. Pyth.); while in Persis it extended to fifty days and nigbts of darkness, went of reet, and fasting ! ( Porph. de Abetin. c. vi. 8. 18.) To explain the nature of these places of penance and mortification, I need not carry you to dietant ehores; the remains in our own country are both numerons and open to public inspection; I have no doubt the Britiah Cromlech was the very identical vehicle of preparation for the Draidical mysteries.

A celebrated piece of antiquity was recontly standing near Msidstone, called Kit's Cotti House. Thia was a dark chamber of probation; for

[^104]Kit is no other that Ked, or Ceridwen, the British Ceres ; and Cotti or Cetti meant an Ark or Chest; hence the compoued word referred to the Ark of the dilavisn god Noah, whose mysterions rites were celebrated In Britain; and Ceridwen was either the consort of Noah, or the Ark itself; symbolically the great mother of mankind.

The Phallus was the grons Symbol under which Nosh or the great father of the mystorios was worshipped, and it was usually repreeented by a pyramidal stone.

Coninidences like these are too atriking to be overlooked ; particularly when we consider that the initiations formed a most important and efsential part of religious worship; and no person could hold any dignified appointment as a priest, or legislator, without pasing through these forms, which incladed, as an indispensable preliminary rite, the solitary confinement of the darkened Pastos.

On the Thres Pillars, Wisdom, Strength, and Beauty.
In the Britioh and other mysteries, these three pillars represented tho great emblematical Triad of the Deity, as with us they refer to the throe principal officers of the lodge. Weahall find however that the symbolical meaning was the same in both. It is a fact, that in Britain, the Adytum or lodge was actually supported by three stones or pillars, which were supposed to convey a regenerating purity to the aspirant, after having endured the ceremony of initiation in sll ita accustomed formalities. The delivery from between them was termed a now birth. (Hanes Taliesen, c. iii,-Dav. Druids, p. 230.) The corresponding pillars of the Hindu mythology were also known by the names of wisdom, strength, and beauty, and placed in the esst, west, and south, crowned with three human heads. They jointly refer to the creator, who was said to have planned the great work by hie infinite wisdom ; executed it by his strength; and to have adorned it with all its beauty and usefulnese for the benefit of man. These united powers were not overlooked in the myateries, for we find them represented in the solemn ceremony of initiation, by the three presiding Brahmins or Hierophants. The chief Brahmin sat in the east, high exalted on a brilliant throne, clad in a flowing robe of azure, thickly sparkled with golden stars, and bearing in his hand a magical rod; thus aymbolizing Brahma, the creator of the world. His two compeers, elad in robes of equal magnificence, occupied corresponding situations of distinction. The representstive of Vishnu, the setting sun, was placed on an exalted throne in the west; and he who personates Siva, the meridian sun, occupied a splendid throne in the south. The masonic lodge, bounded only by the extreme points of the compass, the highest heavens and the lowest depthe of the central abyss, is said to be supported by three pillars, wisdom, strength, and beauty. In Jike manner the Persians, who termed their emblematical Mithratic cave or lodge, the Empyrean, feigned it to be supported by three intelligences, Ormisda, Mithrs, and Mithras, who were usually denominated, from certain charscteristics which they were supposed individually to possess, eternity, fecundity, and authority. (Vid. Kamsay's Travels of Cyrus,
and dimertation thereto annexed.) Similar to thin wera the forms of the Egyptian Deity, designated by the attribates of wiedom, power, and goodness: (Plut, de Isid. and Osir. p. 373.) And the sovereign good, intellect, and energy of the Platonists, which were also regarded as the respective pronerties of the divine Triad. (Plat, in Timmo.)

It is remarkable that every mysterious syatem practised on the habitable globe, contsined this Triad of deity. The oracle in Damascus asserta that " throughout the world a Triad shines forth, which resolves itaelf into a Monad ;" and the uniform symbol of this three-fold Deity, was an equilateral trianglo; the precise form occupied by our pillars of wiedom, strength, and beauty. In the myeterien of India, Brahma-Vishnu-Siva, were considered as a tri-une god, distinguished by the Ignificant appellation of Tri-murti.* Brahma was ssid to be the oreator Viehna, the preserver, and Siva, the judge or destroyer. In the east, as the pillar of wisdom, this deity was called Brahma ; in the west, as the pillar of strength, Vishnn; and in the south, as the pillar of beautv, Siva : snd hence in the Indian initiations, as we have just observed, the representative of Brahms was aested in the east ; that of Viehnu in the west; and that of Siva in the aouth. A very remarkable coincidence in the practice of ancient masoary.

## On the Point soithin a Circle.

The tribes contiguons to Judea, placed a jod (,) in the centre of a circle, as a symbol of the Deity surrounded by eternity, of which he was said to be the inscratable author, the ornament, and support. The Samothraciaus had a great veneration for the circle, which they considered as consecrated by the universal presence of the deity; and hence rings aro distributed to the initisted, $\dagger$ as amulets poesessed of the power of averting danger. (Plin. Nat. Hist. 1. xxxiii. c. i.) The Chisese used a symbol which bore a great resemblance to that which is the subject of this lecture. The circle was bounded north and south by two serpents, equivalent to the two perpendicular parallel lines of the masonic aymbol; and was emblematical of the universe, protected and supported equally by the power and wisdom of the creator. The Hindus believed that the Supreme Being was correctly represented by a perfect sphere, withont beginning and without end. (Holwel. Hist. Events.) The first settlers in Egypt tranmitted to their posterity an exact copy of our point within a circle, expressed in emblematical language. The widely extended universe was represented as a circle of boundless light, in the centre of which the deity was ssid to dwell: or, in other words, the circle was symbolical of his eternity.

The point within the circle afterwards became a noiversal emblem to denote the temple of the deity, and was referred to the planctary circle, in the centre of which was fixed the sun, as the universal god and father

[^105]of natare; for the whole circle of beaven was called God; (Cicero. de Nat. Deor. 1.) Pythagoras esteemed them the central fire, the aupernal mansion of Jove ; (Stob. Phys.-Arjatot. de Calo, 1. il.) and he called it Mesouraneo, becanse the most excellent body ought to have the mostaxcellent place, i,e. the centre. (Plat. Simplio.) And Servius telle as it was believed that the centre of the temple was the peouliar residence of the deity : the exterior decorations being merely ornamental. (Sery. Georg. 3.) Hence the astronomionsl character need to denote or represent the sun, is a point within a circle; because that fgare is the sycubol of perfection. The most perfect metal, gold, is also designated in chymistry by the same character.

With this reference, the point within a circle was an emblem of groat importance amongat the British Druids. Their temples were cirenler: many of them with a single stone erected in the centre; their solemn processions were all arranged in the same form; their weapons of war, the circular shield with a central boes, the spear with a hollow globe as its end, etc., all partaking of this general principle: and withouts circle it wes thought impossible to obtain the favour of the guds. The rites of divination could not be securely and anccessfully performed unlees the operator was protected within the consecrated periphery of a magical circle. The plant vervsin was supposed to possess the virtue of preventing the effects of fascination, if gathered ritually with an iron instrument, at the rising of the dog-star, accompanied with the essential ceremony of describing a circle, on the turf, the circuraference of which shall be equally distant from the plant, before it be taken up. (Borl. Ant. Corn., p. 91, from Pliny.)

Specimens of British temples founded on the principle of a point within a circle, sre atill in existenee to demonstrate the truth of the theory.

The body of the temple at Claseernisa, in the island of Lewis, sacred to the sun and the elements, will illustrate the principle before as. This curious Celtic temple wes constructed on geometrical and astronomical principles, in the form of a cross and a circle. The circle consisted of tweive upright stones, in allusion to the solar year, or the twelve signa of the Zodise; the east, west, sud sonth are marked by three stones mach, placed without the circle, in direct lines, pointing to each of those guarters ; and towards the north is a doable row of twice nineteen stones, forming two perpendicular parallel lines, with a single elevated stone as the entrance. In the centre of the circle stands, high exalted above the rest, the gigantic representative of the Deity, to which the adoration of his worshippers was peculiarly directed. (Olaus Magnus, apud Borl, Ant. of Cora., p. 193; Toland. Druids, vol. 1. p. 90.

This extraordinary symbol was also used by the ancient inhabitants of Scandinavia; and had an undoubted reference to the hall of Odin, or the Zodiac ; which, the Edda informs us, contained twelve seats disponed in the form of a circle, for the principal gods, besides an elevated throne in the centre for Odin, as the representative of the great father.
It is remarkable that in all the ancient syatems of mythology, the

Great Father, or the male generative principle, was uniformly mymbolised by a point within a vircle. This emblem was placed by the Scandinavian priesta and poets, on the central summit of a rainbow, which was fabled to be a bridge leading from oarth to Heaven; the emblem, therefore, represented Valhall, or the supernal palace of the chief celestial deity. It is said in the Edda, that this bridge "is all on fire; for the giants of the mountains would climb up to heaven by it, if it were eary for any one to walk over it." The palace thus elevated was no other than the celestial oystem, illuminated by a central son, whose repreeentative on earth was Thor, a god depicted by Versten on with a crowned hesd placed in the centre of twelve bright stars, ex; ressive of the san's annual course through the Zodisoal Signs. (Res. of Dec. Int. p. 74.)

## Circumambulation.

The author, in conclusion of his coarse of lectures, among other remarks, observes :-
" It was an ancient cuatom to use circumambulation during the performance of religious ceremonies. In Greece, while the sacrifice was in the set of consuming, the priests and people walked in procession round the sitar thrice, singing the sacred hymn, which was divided into three parts, the Strophe, the Antistrophe, and the Epode. While the first part was chanted, they circumambulated in a direction from east to west, emblematical of the apparent motion of the heavenly bodies; at the commencement of the second part, they changed their course, and proceeded from west to east, pointing out their real motion; and during the performance of Epode, they remained stationary around the sltar, a symbol of the stability of the earth, waiting for some propitious omen which might snnounce the divine acceptance of the sacrifice.

In Britain, the devotfonal exercises of the insular sanctuary were conducted on a similar principle. Ceremonisl processions moved round it, regulated by the mystical numbers, and observing the course of the sun; sometimes moving alowly and with solemn gravity, chanting the aacred hymn to Hu ; at others, the devotess advanced with grest rapidity, using impassioned gestures, and saluting each other with secret signe. This was termed, "the myslical dance of the Druids." The circular movement was intended to symbolise the motion of the earth, and to give an idea of God's immensity, which fills the universe.

- The foundation stone of every magnificent edifice was usually laid in the north-east ; whish accounts in a rational manner for the general disposition of a newly-initiated candidate when, enlightened but uninstructed, he is accounted to be in the most superficial part of masonry. This stone, to which some portion of secret influence was formerly attributed, is directed in Alet's Bitual to be " solid, angalar, of sbout a foor square, and laid in the north-east."

It was incnmbent on the anthor, in the first plsce, to acenunt in a rational manner for the origin of the custom of laying the foundation
tone of buildings in the north-aat. As the whole machinery of the religion from which masonry is derived was founded on the movemente of the heavenly bodies, there is doubtless an astromomical reason for thia practice.

Now, we are told by Mr. Bryant, quoted by our author, that the "Egyptian astronomers tanght that the creation of the world took plsoe at the precies period of time when the sun rose in Leo." And admitsting that this notion was got up when that constellation was situated in the north-east et the rising of the san, this circumstance would naturally, In sccordance with the Egyptian mode of wordhip, induce the custom of commencing magnificent edlfices at the north-east corner, in imitation of that glorions laminary, believed by the Egyptisns to be the Supreme Architect of the world. This, among a superatitious people, would be deemed s certain means of insaring their atability and usefulness.

Mr. Oliver has bestowed great labour in his researches into the original meaning and intention of the ancient pagan symbols, and shed much light upon the subject. But by endavouring to place freemasonry, or something like it, before the pagan mysteries, he has thrown a veil of darkness over the inveatigation, tending to bewilder his readers who have any wish to sarrive at truth in this inquiry. By this course he expects to clear freemasonry from the imputation of having descended from what he considers a vitiated source, and, on the contrary, to show it to be derived from a pure institution, of which in bis opinion, the mysteriea are a corruption.

In this way he thinks to connect Christisaity with ancient masonry, and consequently show that he, as a minister of the gospel, may without impropriety ally himself to the order. There is no need of this fastidiousness, Ancient masonry is a pure moral institution, but hes no connection or relation whatever with Christianity. Its original dogmas are totally different; bat these at present are not regarded, nor even known to the craft, who perform the ceremonies for mere suciability and pastime.

## THE SECRET DISCIPLINE,

## Afentioned in ancient Ecclesiasticl History explained.

A small but learned work, bearing this title, has lataly been issued from the press, in this city, under a fictitious signature, edited by Samuel L. Knapp, Esq.

This suthor adduces many authorities, in addition to those before cited In this volume, which go to prove that the fathers of the church adopted the terms and ceremoniea used in the ancient mysteries.

The following are extracta from the work: -
St. Cyril, Bishop of Alexandris, in 412 , in his seventh book against Julian, declares, "These mysteries are so profound and so exalted, that they can be comprehended only by these who are enlightoned. I shall
not therefore attempt to speak of what is most admirable in them, lest by discovering thom to the uninitiated I should offend against the injunction not to give what is holy to the impure, nor to cast pearls before such as cannot estimate their worth." And elsewhere, "I should say much more if I were not afraid of being heard by those who are uninitiated; because men are apt to deride what they do not underatand; and the ignorant, not being aware of the weakness of their minds, condemn what they ought most to venerate."

Theodoret, Bishop of Cyzicus, in Syria, 420, in the first of his three dialogues, that enticled "The Immutable," introduces Orthodoxus, speaking thus- "answer me, if you please, in mystical and obscure terms, for, perhaps, there are persons present who are not initiated in the mysteries." And in his preface to Ezekiel, tracing up the eecret discipline to the commencement of the Christian era, sayb, "these mysteries are so augrut that we ought to keep them with the greatest caution."

To show that these mystories were retained under ecolesiastical sanction to a still later period, I refer to the Seal of the ancient Abbey of Arbroath, in Seotland, and to the expianation given of it by the Rev. Charles Cordinet, in his "Description of the Ruins of North Britain," 2 vols. 4to.

**The figures sculptured on the seal marked INITILATION, evidently represent (eays ho) some formidable ceremony in a sacred place where a pontiff preailes in atale; one hand on his breast expressive of seriousness,
the other stretohed out at s right angle, holding e rod and eross, the badge of high office, while he makes some awful appeal respecting a suppliant, who, in a loose robe, blindfolded, with seeming terror kneels before the steps of an altar, while sevaral attendants with drawn awords brandigh them over his head." Mr. Cordinet intimates the resemblance of these figuree to an engraving which mado the frontiepieee to a book about freemasonry: and then adds, that both bring to remembrance a description which Plutarch, in his famons esasy "De Osiris," gives of the engraying of a sesl which the priesta of Ieis used in their solemnities, -namely, that of a man kneeling with hie hands bownd, a knife at his throas, etc. "And (says he) it is not a little remarkable, which is more to the present parpoee, in how many particulams the mysterious fate of Osiris, as recorded by the above celebrated author, corresponds with the account of Hiram; a strong insinuation that the annals of the latter, however mutilsted and defaced, have somehow or other been descended from the Eleusinian Mysteries, and that the Masonic rites of initiation into a lodge, are a faint aketch, an imperfect opitome, of the angust ceremonies whioh took place st initiation into the secrets whioh hallowed the primeval fanes: and this high origin, when discerned, may have been at the bottom of that general respect which men of learning heve avowed for them.

This subject, as an amusing research into sntiquity, may be resumed; it only remains at present to specify that, Hiram coming forth in hallowed dignity of character from within the veil of the sametuary; violated in the open temple of the world by the ignorant and profane; concealed for a time in awful secreoy; the want of his presence pathetically deplored; the ardent solicitude with which he is eought for; the acclamation of joy at finding him again; and consequent discovery of the word, almost of itself developes the eecret which the personification had involved."

It does indeed develope the secret, that the Hiram of masonry is subatituted for Osiris, one of the pagan gods of the mysteries. Mr. Cordinet understanda what is meant by the lost word, which is declared in the royal arch degree, to be recovered, and provea to be the Logos, the second person of the ancient trinity, the lost sun.
"The rod and cross, the badge of high office," held by the pontiff, is precisely a copy of the messure of the Nile, which was originally pat into the hands of a figure of Anubie, to indicate the rise of the inundation upon which mainly depended the sabsistance, or temporal salvation of Egypt.

This pole or rod aftervards obtained, esye Pluche, the name of Cadreces, or Mercury's wand, and was borne as a sceptre or slaff of honour, indicating a sacred person. The figure(10), a anbalistic number, supposed, ssys, Builey, "to conjoin the virtus of all numbers," marked upon this copy, shows its original to have been a measure. Mr. Oliver obeerves, that "the amount of the points contained in the Pythagorean circles, is exactly ten, which is the consummation of all things."

## CHAPTER VI.

## AF DYGUIEY HMTO THR OHIOIN AND HISTOBY OF FBEEMAGOARY,

*The spirit of innovation had seised all the Brethren. No man can give a tolerable account of the origin, history, or object of the Order, and it appeared to all as a lost or forgotten mystery. The symbols seemed to be equally susceptible of every interpretation, and none of theso seemed entitled to any decided preference."-Profeseor Robison.

Proofs of the existence of the society of freemasons at certain remote periods, added to the oecurrence of events that would naturally tend to create it, will point out its origin with sufficient accuraoy for the present anquiry. No regalar history of the order is attainable at this time, nor is it essential to our purpose.

It is highly probable, as asserted by Dr. Anderson, that many valuable dooaments relating to the society, were destroyed at the revolution of the order in 1717, by some acrupulous brethren, for fear that an improper use might be made of them.

I shall endesvour to show that the British Druids instituted this aociety, and the first consideration will be to point out the period when they were in a condition that required a resort to such seoret means for the preservation and continuance of their religious rites.

We have seen that their open worship was entirely prohibited by the edict of Canute, who reigned from 1015 to 1085. Within those periods, therefore, this edict was issued: by which the very existence of the Draids in England was put at hazsrd.* Cat off from their favourite devotional retreat, no means was left them but to devise some mode to evade the ecrutinizing eye of the ministers of the law.
"Abont the beginning of the fifth century, (eays Lawrie,) Theodosius the Great prohibited, and almost totally extinguished the pagan theology in the Roman empire (Gibbon); and the myateries of Eleusis suffered In the general devastation. (Zosim. Hist.) It is probable, however, that these mysteries were secrelly celebrated, in spits of the severe ediots of Theodosins; and that they were partly continued during the dark ages, though etripped of their original purity and eplendour : we are certain, at least, that many rites of the pagan religion were performed, under the dissembled names of convivial meetings, long after the publication of

[^106]the emperor's edict. (Gibbon.) And Peellna informs us, that the mysteries of Ceres subsisted in Athens till the oighth centary of the Christian era, and were never totally suppressed." (p, 28.)

A similar course would naturally suggest itself to the Druids: that such a course was adopted, and that they fixed on the oraft of masonry, as a cloak under which we ecreen their myatic ceremonies and dogmas, will, it is believed, appear so ovident in the sequel as to lesve no room for doabt upon the subject.

Daring the reign of Canute, therefore, it may fairly be presumed the femous freemason society was first established.

The conquest of Eigland, by William, duke of Normandy, oocurred in 1066, and it is highly'probable that msny of the artisans who were induced by him to emigrats from France to England, were initiated into the order of freemssons, and greatly contributed to raine its fame as an operative masonic institution. "King William, (caya Dr. Anderson,) brought many expert masons from France. He died in Normandy, in 1087. ${ }^{n}$

It is probable that many of these masons were attached to the Druid. ical religion, as the rites of Druidism are said to have been openly practiced in France, upwards of a hundred years after the edict of Canute prohibiting them in England.

The condition and character of the people of England, at the time of the Conquest, is thas portrayed by Guthrie:
"With regard to the manners of the Anglo-Saxons, we can say little, but that they were in general a rude, uncultivated people, ignorant or letters, unskilful in the mechanical arte, untsmed to submismion under law and government, addicted to intemperance, riot, and disorder. Even so late as the time of Canute, they sold their children and kindred into foreign parts.
"Their beet quality was their military courage, which yet was not supported by discipline or conduct. Even the Norman historians, notwithstanding the low state of the arta in their own country, speak of them as barbarous, when they mention the invasion of the duke of Normandy. Conquest placed the people in a aituation to recoive alowly from abroad the rudiments of science sad cultivation, and to correct thetr rough and Ilcentious manners.
" He (William) introduced the Norman laws and language. He built the stone equare tower at London; bridled the country with forts, and disarmed the old inhabitants ; in short he attempted every messure possible to obliterate even the traces of the Anglo-Saxon constitution ; though at his coronation, he took the same oath that had been taken by the anclent Saxon kings." Great advancement however in the art of building it seems, soon followed this event. Dr. Henry, in his "History of the Necessary Arts in Britain, from 1066 to 1216," esya:
"Architecture, in all its branches, received as great improvernents in this period as agriculture. The trath is, that the twelfth century may very properly be called the age of architecture, in which the raga for bnilding was more violent in England than at any other time.

* The great and general improvements that were made in the fabrics of houses and churches in the first years of this centary, are thus deecribed by a contemporary writer: "The new cathedrals and innomerable churches that: were built in all parts, together with the many magnificent coistors and monasteries, and other apartments of monks, that were then erected, afford a sufficient proof of the great felicity of England in the reign of Henry 1. ${ }^{\prime \prime}$

Henry I. was the third son of William, and ascended the throne in 1100 ; only thirty-forr years after the Conquest. To enable him to carry on such extensive works in srchitectare, required that his subjects ahould hare been previously instructed by his predecessors. Under the patronage, therefore, of King Willism, there is the strongest rasson to believe, the masonic society was fostered and protected. And although the principal parpose of the leading members of the institution was the preservation of their religious rites, yet attention was required to be given by them to the ostensible object of the eatablishment. Through this means, there is no reason to doubt that architecture wes improved to a greater eatent in England, at this time, than it would have been but for this adventitions circumstance.

The mere craftemsi, however, knew nothing of the secret views of his superiors. The symbols made use of in the lodge were unintelligible to him. But he was pleased with the tinsel show of the representations ; and when he was found sufficiently intelligent, and wea thought worthy to be trusted, he was raised to the aublime degree of Holy Royal Arch, and gained the honorary appellation of companion. Here, if duly attentive to the aymbols and ceremonies, he might make some progress towards discovering the hidden soheme upon which freemesonry was founded.

Lawrie observes, "The pripciples of the order were even imported Into Scotland,* where they continued for many ages in their primitive simplicity, long after they had been extinguished in the continontal kingdoms. What those causes were which continued the societies of freemasons longer in Britsin that in other countries, it may not perhape be easy to determine; but as the fact itself is unquestionably true, it must have arisen either from favourable circumetances in the political state of Britain, which did not exist in the other governments of Europe, or from the superior policy by which the British masons elnded the suspicions of their enemiee, and the superior prudence with which they maintained the primitive simplicity and respectability of the order. In this mander did freemasonry flourish in Britain when it was completely ebolished in every other part of the world."
"That freemasonry was introduced into Scotland by those arehitects who built the abbey of Kilwinning, is manifest, not only from those anthentic documents by which the existence of the Kilwinaing lodge has been traced back as far as the end of the fifteenth century, but by other collateral argumeuts, whioh amount almost to \& demonatration.

[^107]"In every coantry where the temporal and aplitual juriseliction of the Pope was colknowledged, there was a continual demand, particulariy during the twelfth century, for religions mtructares, and consequentiy for operative masons, proportional to the piety of the inhabitants and the opulence of their ecolesinatical establishments; and there was no kingdom in Enrope where the zeal of the inhabitants for popery wra more ardent, where the kinge and the nobles were more liberal to the clergy, and where, of consequence, the church was more richly endowed, than Is Beotland.* The demand, therefore, for elegent cathedrals and Ingonilone artists, must have been proportionately greater than in other coontries, and that demand conld be supplied only from the trading asooiathon on the continent. We are anthorised, therefore, to conclude, that those numerous and elegant ruins which still adom the villages of 8 cotland, were orected by forsign masons, who introduced into this faland the customs of their order.
"It is a carions fact, that in one of those towns where there is an elogant abbey, which was buiit in the twelfth centary, the author of thia history has often heard that it was erected by a company of industrions men who spoke in a foreign lenguage, and lived separately from the townspeople. And stories are still told abont their petty quarrele with the Inhabitanta.
"It was probably abont this time, also, that freemasonry was introduoed into England; but whether the English received it from the Sootch masons at Kilwinning, or from other brethren who had arrived from the continent, there is no method of determining. The fraternity in England however, maintain that Bt. Alban was the first that brought masonry to Britsin, about the end of the third century; that the brethren received a charter from King Athelstane, and that his brother Edvin enmmoned all the lodges to meet at York, which formed the first grand lodge of England, in 926. But these are merely assertions, not only incapable of proof from anthentic history, but inconsistent also with seversl historical eventa which rest upon indubitable evidence. (See Dr. Plot's Nat. Hist, of Staffordshire, chap. viii., pp. 816-318.) In support of these opinions. indeed, it is alleged, that no other lodge ban laid claim to greater antiquity than that of York, and that itajuriediotion over the other lodges in Eogland lias been invariably acknowledged by the whole fraternity. Bat this argument only proves that York was the birth-place of freemesonry in England. It bringsno additional evidence in support of the improbable stories about St. Alban, Athelstane, and Edwin. If the antiquity of freemssonry in Britain can be defended only by the forgery of silly and uninteresting stories, it doen not deeerve to be defended at all. Thoee who invent and propagate sach talen do not surely consider that they bring diecredit upon their order by the warmth of their zeal; snd that by supporting what is false, they dobar thinking men from believing what is true."

Mr. Lawrie has made it appear very probable that the churches erected

[^108]in Scotland in the twolfth centary, were built by foreign masons. Indeed, the want of akill in the natives is a sufficient evidence of the fact. Bat this is no proof that they belonged to the freemsson society. And the diseolution of the trading associations on the continent, of which he speaks, es soon as the rage for charch ballding had cassed, while froemasonry held its ground in Eingland, is conclasive that there was no connection between them.

But evon admitting that the foreign masons who built the abbey of Eilwinning wers freemasons, the presamption would be, that they had been initiated in England; and there is no evidence that the secrets of the society were commanicated to the Sootoh. They could be of no poasible advantage to operative masons, and the people of Scotland appear to have been thoronghly imbued with popery to embrace them in a religious point of view. Besides, if these foreigners were freemasons, and had admitted into their soclety a portion of the inhabitants of the places where they were employed, it is not probable that the petty quarrels mentioned by Lawrie would have occurred.

The case was different in England, where Druidism had been revived by the Daniah emigrants, sfter its conqueat by that nation.

Upon the whole, there is no conclusive evidence that freemssonty wras established in Scotland till after its reorganisation in England, in 1717. The mason associations in that country before this period, appear to be no other than common trade companies, such as those Incorporated in London.

They had a chief or grand master, with deputies in the different counties, all appointed by the ling, though sometimes by consent of the craft. The master was atyled the patron, protector, judge, or master of the masons of Scotlend; and the craft styled themselves "free of the masons and hammermen." Lawrie cites the following:-
"In the Privy Seal-book of Scotlend there is a letter dated at Holy-rood-house, 25th Sept., 1590, and granted by King James VI., "to Patrick Copland of Udaught, for using and exercieing the office of Wardanrie over the art and craft of masonrie, over all the boundis of Aberdeen, Banff, and Kinesrdine, to had warden and juatice courts within the bonodis, and there to miniater justice.'" Lawrie also obeerves, that "in the year 1645, a particular jurisdiction for masona was eetablished In Erance, All differences which related to the art of bailding were decided by particalar judges, who were called overseers of the art of masonry ; and several cousellors were appointed for pleadIng the causes which were referred to their decision. This institution has auch a striking resemblance to the warden courts which existed in Scotland in the sixteenth centary, that it must have derivod its origin from these. In both of them those essoses only were decided which related to masonry, and overseers were chosen in both for bringing these causes to $s$ decision."

There is nothing of freemasonry in all this; there is nothing of Druidiam, the very spirit and soul of the order, to be seen in it.-There inevery reason to believe that freemasonry was first eatabliahed in Engo

Jend, and that there it remsined till the famous moeting of the brotherhood, at the Apple Tree tavern, in 1717, when it took to wing, and vigited all parta of the civilized world.

In fact, there whas no casse for its institution in any orher country than Eogland, where the odict of Canute had compelled the Druids to rolinquish their religion altogether, or practise its rites and ceromonies covertly.
"As the Draids (says Hutchinson) were a sect of religious peculiar to Ganl and Britain, it may not be improper to cast our eyes on the ceremonies they used : their antiqnity and pecaliar atation render is probable some of their rites and institutions might be retained in forming the ceremonies of our society. In so modern an era as 1140, they were reduced to a regular body of religiona in France, and built a colloge in the city of Orlesps. They were heretofore one of the two eatates of Fracce, to whom were committed the care of providing secrifices, of prescribing the laws for worship, and deciding controversies concerning rights and properties," etc.-(8pirit of Mas. p. 37.)

As, therefore, it does not appear that Druidism at any time was under a positive legal restraint except in England, it may be reasonably inferred that its offspring, freemasonry, existed nowhere else till the period sbove stated.
"All the brethren on the continent agree in saying that freemasonry was imported from Great Britsin, about the beginaing of this [the eighteenth] sentary, and in the form of a moystical society."-(Robison's Proofs, p. 893.)

Robison, in speaking of freemasonry in Germany, obeerves, "Though no man could pretend that he understood the true meaning of freemasonry, its origin, its history, or its real aim, all saw that the interpretations of its hieroglyphics, and the rituals of the new degrees imported from France, were quite gratuitous. It appears, therefore, that the safest thing for them was an appeal to the birth-plece of masonry. They sent to London for instructions. There theyl earned that nothing was acknowledged for genuine, unsophisticated masonry but the three degrees; and that the mother lodge of London alone could, by her instructions, prevent the most dangerous schisms and innovations. Many lodges, therefore, applied for patents and instructions. Patents were eanily made out, snd most willingly sent to the zealons brethren; and these were thankfally received and paid for. But instruction was not eo eaky a matter.
${ }^{4}$ They afterwards sent a deputation to Old Aberdeen, Scotland, to inquire after the caves where their venerable mysteries were known, and where their treasures were hid. They had, they thought, merited some confidence, for they had remitted annual contributions to their unknown superiors to the amount of some thousands of dollars. But, alas ! their smbessedors found the freemasons of Old Aberdeen ignorant of all this, and equally eager to learn from the ambasaadors what was the true origin and meaning of freemssonry, of which they knew nothing but the aimple tale of old Hiram."

Mr. Ward, in his Anti-Masonic Review, v. I. p. 345, quotea the folowing from a French work, entitled " Wasais sur is Franche Magonnerie," by J. L. Laurens, which shows very condusively that the freemason soclety originated in England. Mr. Lsurens says:-
"Impossible as it is to determine the prooine era of the eatablishment of freemasonry in Europe, so easy it is to show In what manner and by what means it apread and propagated itself. Many reasons concur to make us believe that the Engliah brought it Into Earope; and that they bave given it the exterior form, and the different namee by which we know it at this day. Independent of the historical monuments, which prove that long before the 14th century it was known in Englend, It appears indisputable that is that country of Europe it has been furnished, if I msy so express myself, with the form in which it hes come to us. There is not a doubt that the names Franche-Magonneris and Erancs-maçons are purely of English origin. Freemasomsy-fresmason; that is to say, maçonnerio libre, magons libres, litorally rendered into French, have produced those strange terms, a manner of apeaking far enough removed both from our customs and the genins of our langnage: for it is certein if what we understind by freemasonry and freemasons had received in France, or in any other country besides England, any name whatever, that name could not have had so characteriatic a mark of the English tongue. A slight knowledge of the principal languages of Europe, and especially to know that in English the adjective commonly precedea the noun, is enough in order to become convinced that these names have been formed by the genius of the English tongue."

After criticising the masonic word lodge at some length, he goes 00 to say :-" I might forther push the inventigation of the terms of English etymology peculiar to freemesonry, did I not fear to enter upon details which I am not permitted to publish. The usages and practicee of the lodges in what concerne only the exterior of froemesonry, present some points of resemblance not less striking; and it is this intimate rolation with the peculiar character of the English people, that I cite in support of my proposition.
"What is the origin of that wearisome quantity of healths, with which the masonic entertninmenta were formerly bardened, which have been the occasion of so much sarcasm against freemasonry, and which a good taste has now winely reformed? Is not thia iromoderate nee of a castom, innocent in itself, an image of the too-often repested toast, which so much distinguishes English Clubs? The love of good cheor, the profusion, the lengthening out of the feast, the intemperate drinking, which are contrary to French nobriety, and which reason and decency have long since banished to the taverna of London, to which they legitimately belong, can these have any relation to the object of masonic fellowship, of which they are at best only a despicable parody ? The grossaess of these practioes, introduced into Frances with freemasonry, is too nearly alfied to the taste of the English nation, not to be attributed to their invention.
"Tho nature of the cuntoms conneoted with froemasonry, its pecu-
liar name, the moet of the worde that exprese the matters which make up its exterior form, aro precisely conformed to the taste and pecultar geninu of the Engilsh, and prove that in Engiand it began to have being as a society."

After further argument Arom the geographical position, fres instituHions, and molsncholy temperament of the English, Mons. Laurens edds:-"all these obeervationsincline us to believe, that it is from England freemasonry comes to us as it exists now; that is to say, dressed In this whimsical fashion, which almostentirely disguisenit, and ecarc ly permits us to discover it in the precious allegory of the Egyptian philosophy. "-p. 215.

The allegories of the Egyptian mysteries required to be disguised, to prevent the real purport of masonry being discovered. The ides of the anthor, that the English first established freemasonry is very correot, but insccurately expresed: they did not bring it into Earope; they manufactured it themselves at home, from what be calls "the precioua allegory of the Egyptian philosophy."

I will now produce nuch proofs of the long standing of the eociety of freemasons in England, as have survived the wreck of time.

## Examination of a Mason, by King Menry VI.

One of the doctrines referred to by freemasons in proof of their antiquity, and which is considered as more decisive than any other, is a paper said to have been found in the Bodleian library, in 1696, and supposed to have been written in about the year 1436. It purports to be an examination of one of the brotherhood by King Heary VI.

Although there are suepicious circumstauces attending this manssoript in regard to Its authenticity, yet it appears to possese an internal ovidence of genuineness. The objections to it are, that it was first printed at Frankfort, in Germany, as late as 1748, and is accompanied with annotations attributed to the learned John Locke, a moet absurd supposition, tending to cast a doabt apon the original document itself. The annotations never emsnated from the philosophical mind of Locke. They were written by a zealous mason saperstitiously credulous in the mysteries of the craft, or intending to impose upon the eredulity of others. Locke was not a mason, and if he had been, he would not have given countenance to the absurdities set forth in this manusoript.

It would seem, that the Frankfort editor had heard of the learned John Locke, and in order to give the greater respectability to the record, he singles him out as a proper person to write a commentary upon it. But not having a auffioient knowledge of English characters to select a suitable person to be addressod by Locke on the occasion, he directs his letter, enclosing the record and comments, to the Rt. Hon. * * *, Earl of ***; and for fasr of detection by what is technically called an alibi, he dates the letter, without giving the place from whenoe it was written, May 6, 1696. The address continued to be thus printed in coples issued in Eagland as lets as 1764, when Dermott first pub-

Liohed his Ahimen Rezon. Since that period, eome Elaglish editor, to rid the document of this awkward appesrance, subetituted for the blanks Thomas Pembroke. Hatchinson gives this amendment in 1772. Where did he obtsin the information? The parties concerned, however, were all defanct, and there was no means of dotecting the fraud. Bat, although the connecting of the name of John Locke in this effair, is evldently a forgery, atill that does not dentroy the validity of the record, which accords in every respest with Drajdical masonry.

This paper in said to have been found in the deak of a decassed brother at Frankfort, bat how it came into his poasession is not accounted for. If believed to be authentic, it would no doubt be highly prized by a superatitious mason, and preserved with great care. Everything, at the time of its aupposed discovery in 1696, relating to the origin and perport of masonry, was kept a profonnd necret; and this document went to expose both. It is, therefore, not a little surprising that the fraternity should ever have acknowledged its authenticity. The pride of antiquity seems in this case to have prevailed over disoretion, for all masonic writers ciaim it as genuine. The suthor of a work entitled Annales Maçonnique, speaking of this document, ssys, "We ought to value this piece the more, because it is an historical monument of the dawn of the fifteenth century, a time when we march through a vast wilderness. So the thirsty traveller, finding an onexpected fountain in the desert, rests and refreshes himself, and quits it only with painful regret."-(See Anti-Mas. Review, vol. ii., p. 28.)

I shall give the whole of this curions document. In copying it, however, I have changed the ancient orthography to the present, and corrected, secording to the aunotations, the errors it contains in respect to persons and places.

The title of the paper is, "Certain questions, with answers to the same, concerning the mystery of masonry, written by King Heary the Sixth; and faithfully copied by me, John Leylande, antiquarius, by command of his highness."

They are as follows:-
What mote it be ?-It is the knowledge of nature and the power of ita various operations; particularly, the akill of reckoning, of weights and messures, of constructing dwellings and buildings of all kinds, and the true manner of forming all things for the use of man.

Where did it begin ?-It began with the frat men of the east, who were before the firat men of the weet, and coming weaterly, it hath brought with it all comforts to the wild and comfortless.

Who brought it to the west?-The Phenicians, who boing groat merchants, came first from the esst into Phenicia, for the convenience of commerce, both esast and west, by the Red and Mediterranean neas.

How came it into England ?-Pythagoras, a Grecian, travelled to acquire knowledge in Egypt and Syria, and in every other land where the Phenicians had planted manonry; and gaining admittance into all lodges of masons, he learned mach, and returned and dwelt in Grecia Magaa, growing and beooming mighty wiee, and greatly reucwned.

Here he formed a great lodge at Crotona, and made many masons, some of whom travelled into France, and there made many more, from whence, is process of time, the art pessed into England.

Do masons discover their arts to others?-Pythagoras, when he travelled to gain knowledge, was first made [initiated] and then taught; this course should rightly be applied to all others. Nevertheless masons have alway, from time to time, communicated to mankind auch of their necrote as might be generally usefol; they have kept back such only as might be hurtful if tanght to improper persons, or such as would not be boneficial without the necessary teaching joined thereto In the lodge; or such as do bind the brethren more strongly, by the grofita and convenience aceraing to the fraternity therefrom.

What arts have the masons taught mankind?-The srts of agriculture, astronomy, arithmetic, music, poetry, chemistry,* government and religion.

How doee it happen that masons are better teschers than other men? -They only have the art of finding new arts, which the first mason roceived from God, by which they discover what arta they please, and the true way of teaching the same. What other men find out is only by chance, and therefore but of little value, I trow.

What do the masone conceal and hide?-They conceal the art of finding new arts, and that for their own protit and praise. They conceal the srt of keeping secrets, that so the world may hide nothing from them. Thay conceal the art of soonder-toorking and fortelling things to come, that oo the aame art may not be naed by the wicked to a bad end; they also conceal the art of changing, the way of obtaining the faculty of Abrac, the skill of becoming good and perfect without the aid of hops or fear, and the universal language of masons.

Will you teach tre the same arts?-You shall be taught if you be worthy, and able to learn.

Do all masons know more than other men ?-Not so. They only have a right and opportunity to know more than other men, but many fail from want of capacity, and many more from want of industry, which is very necessary for gaining all knowledge.

Are masoas better men than others?-Some masons are not so virtnous as some other men; but for the moet part they are better thea they would be if they were uot masons.

Do masons love one another mightily, as is said ?-Yea, verily, and that cannot be otherwise; for the better men are, the more they love one another.
"Our celebrated annotator, says Hutchinson, has taken no notice of the masons having the art of working miracles, and foreseying thinga to come." This circumatance alone renders it sufficiently evident that Locke was not the annotator, for such a bold assumption would not have

[^109]eacaped his observation and severe animadyersion. The annotator was doubtless fearful of involving the craft in dificulty by tunching upon this subject; although he might have cited the mysteriee in eupport of the pretention.

The universal language of masons, so much vannted of, extends no further than to e few words, signs, and gripa, by which they can communicate to each other that they are masons, and have been initiated into certain degrees. They may also learu a cypher that is given in the royal arch, but which not one in a thousand takes the pains to acquire, and if obtsined, can be of no masonic uee, that is, to communicate any secrets of the craft, for mssons are probibited from committing theee to writing, printing, carving, or engraving.

## John Guillin.

In a work, entitled "The Display of Eeraldry," by John Guillim, it Ga stated that the company of masons, being otherwise termed frcemasons, of ancient standing and good reckoning, by means of affable and kind meetings, divers times did frequent this mutual assembly in tho time of King Henry VI., in the twelfth year of his reign, 1484.

## Elias Ashmole.

Ashmole, in his diary, p. 15, says, "I was made a freemason at Warington, in Lenceshire, 16th of October, 1646.-On March the 10th, 1682, Ireceived a summons to appear at a lodge, to be held the next day, st Mason's hall, in London. March 11th, I accordingly altended, where I was the senior fellow among them, it being nearly 35 years elince I had been admitted into the fraternity. We all dined at the EHalf-moon Tavern, where we partook of a sumptnons dinner, at the exspense of the new sccepted mason.

Lawrie, in recording this anecdota, says, "This gentleman was the colebrated antiquary who founded the Ashmolean museum at Oxford. Fin attachment to the fraternity is evident from his dilligent inquiries Into its origin and history, and his long and frequent attendance upon Its meetinge.-See Diary, p. 66."

Robert Plott, LL.D., keeper of the Anhmolean museum, etc., ssys, in this Nataral History of Staffordshire (1686), that, "They have a custom in Staffordshire of admitting men into the society of freemasons; that in the moorlands of this conntry seems to be of greater request than anywhere else, though 1 find the custom spread more or less all over the mation; for here I found persons of the most eminent quality, that did not disdsin to be of this fellowship; nor indeed need they, were it of that antiquity and honour that is pretended in a large parchment volume they have among them, contsining the history and rules of the oraft of meeonry, which is there deduced not only from Bacred Writ, but profane story, "eto-(Freemss. Poc. Comp. p. 192; Antl-Mas. Review, *ol. ii., p. 384.)

Now Regulations.
According to a copy of the old conetitutions, says Anderson, a general
noombly and feest was held on 8t. John's day, 27th Docomber, 1668, when Honry Jermyn, Fharl of St. Albans, wat'olectod grand mestor, who appointed Sir John Denham his deputy, and Mr. (afterwarde Sir) Ohristopher Wren and John Webb his wardens. At thia essembly the following regulations, among others, were made:-
"That no parson of what degree soever, bo nade or acceptod a free mason, unless in a rogular lodge, whereof ona to be a mester or woarden in that limit or division where soch lodge is lsopt, and another to bo a eraftoman in the trads of free masonry."

This regulation shows clearly that the society was not confined to operatives. It shows also, that it was at this time in a very disorderly condition.
"That, for the future, the fraternity of freemasons shall be regalated and governed by one grand master, and as many wardens as the society shall think fit to appoint at the annual general assembly."

It appears by this, that at the period here spoken of, whatever may have been the case formerly, the freemssons had no grand mester, and that each lodge regulated its own affisirs.
"That no person shall be accepted, unleas he be twonty-one years old, or more."

It is evident that this regulstion wes an innovation, and thet previously apprentices were entered at the usual age at which they are taken in other trades.

Bir Christopher Wred, says Anderson, was chosen grand master is 1698. He then enumeratee the pablic buildings that were erected by freemasons, under his superintendence, and adds, " some few years aftor this, Sir Christopher neglected the office of grand master, yet the old lodge near St. Paul's, and a few others, continued their stated meetings."

Previonaly to this period, the government "enacted the bailding of fify new churches in the suburbs of Lrondon," to supply the places of thoee consumed at the great fire in London, in 1666, and Sir Christupher Wren, an eminent architeot, wess sppointed one of the commissioners to superintend the construction of these edifices.

It is highly probable that Wren was at this time master or preeident of the company of operative masons of London, and may perhaps have been a member of the freemasons' society, but that the latter, as a body, was employed to construct pablic works is not probable. It was nos acknowledged by the government as a company of architects, and, what ever may have been its standing in the time of the Druids, it was as this period in little repute.

Anderson gives the following account of the revolution of the order which took place at this period. "In 1716, the few louges in London, finding themselves neglected by Bir Christopher Wren, thought fit to sement under a grand master as the centre of union and harmony." It here appears that the order made in 1663, in regard to a grand master, hisd become neglected. These lodges wers those "that met, lat, at the Goose and Gridiron Ale-house In St Paul's churohyard; 2nd, at the

Crown Ale-house, in Parker's-lane; 3rd, at the Apple-tree Tavern, in Charles-street, Covent-garden; 4th, at the Rummar and Grapes Tavern, in Channel-row, Westminster.
"The members of these lodges and some old brothers met at the said Apple-tree, and having pot into the ohair the oldest master mason, they conutituted themselpes a grand lodge, pro tempore in due form, and forthwith revived the quarterly communication of the officers of lodges, called the grand lodge, and resolved to holl the annual assembly and feast; and then to choose a grand mastar from among themselves, till shey should have the honour of a noble brother at their head.
"Accordingly, on St. John Baptist's day [the 24th June, the summer soletice,] 1717, the assembly and feast of the fres and accepted masons was held at the aforessid Gooee and Gridiron Ale-house."

The freemasons, at this time, seem to have rummaged their old rocords, and found ont what the society formerly was, and come to a determination to revive old, Druidical, Hiram masonry:

At this assembly, "Mr. Anthony Sayre, gentleman, was elected grand mester of masons, who being forthwith invested with the badges of offioe and power, and installed, was duly congratulated by the assembly, who paid him the homage. Capt. Joseph Elliot, and Mr. Jacob Lamball, carpenter, were appointed grand wardens."

The brethren did not weit long before a noble brother condencended to be placed at their head; for on the 24th of June, 1721, the Duke of Montague was elected, and accepted the office of grand master of masons. From that time to the present, a nobleman or a prince has constantly preaided over the lodges of England. The society soon became fashionable. The brilliant processions and luxurious feasta now got up, which had for a long time been neglected, added to the sublime mysteries and searets held ont to the initiated, allured the young, the gay, and the inquisitive to the standard of the order, which now sssumed such an imposing appearance as caused it to apresd with astonishing rapidity over Europe, Asia, and America. The year 1717 forms an important epoch in the history of freemasonry. It had till then been, for souse eentaries, slmost exclusively in the hands of mere craftsmen, who knew not what to make of it. Druidism being extinot, the religious cement Which had bound them together was dibsolved, and the incorporated company of masons, no doubt, rendered its combination in respect to that profession inefficient.

As operative masons, the incorporated company would naturally take the lead of a society not sanctioned by the laws, the utility of whose myotic rites could not be eatimated after the religion which gave them birth was no longer known.

Dermott mentions eight persons, among whom is the Rev. Dr. Desagoliers, who was elected grand master in 1719, as the authors of this remarksble revolution. At this revival, the ostensible ground apon which the society was originally founded, the craft of manonry, as though in derision of the pretension, was utterly absadoned, and no longer considered as a recommendation for admiesion into the order.

The society, however, keope up a show of reepect to the cran by marching in processions, to lay the corner-atome of masonic halls, and other public edflices. This was an ancient religious custom, having no reference to the art of building.

## Incorporation of Masone in London.

Masons No. 30.-By the arms granted this soclety by William Hanckestow, Clarencieux-king-st-arms, 0 in the year 1477, it appeara to be of considerable antiquity; however, it was only incorporated by Letterg Patent of the 29 th of Charles II., Sept. 17, anno 1677, by the name of the master, wardens, assistants, and commonalty of the company of masons of the city of London.

They consist of a master, two wardens, twenty-two assistanta, and seventy livery men, whoee fine of admission is five pounds. They have is amall but convenient hall in Mason-alley, Beringhall-street.

Their armorial ensigns are asure on a cheyron between three castlies argent, a pair of compssses somewhat extended of the firat. Crest a castle of the second.-(Mailland's History of London, from its Foundation to 1756.)

This incorporation of course included the operatives of the freemesons, who in their society make use of the same armorial bearinge, which, it is very probsble, originally belonged to them.

To what period the pagan ritex, under the name of Druidism, were sustsined in different parts of Europe, is uncertain; but that they were not concealed, nnder the title of freemasonry, in any other quarter than Britain, is evident from the chartera of all lodges on the Continent emanating from either the grand lodge of England or that of Scotland. The latter, however, was not inatituted till 1736.

The grand lodge of Ireland wes formed in 1730. And in 1788, a charter for a lodge was obtained for Boston. So, it is seen, that Americs was not far behind in availing itself of the earliest opportunity to become a partaker in the advantages resulting from a knowledge of this zoonderful secret.

To suppose, as some writers have done, that the freemasons' society first sprang up in 1717 ; that such a mass of curions ceremonies, bearing

[^110]on their very front the most palpable marks of remote antiquity, was then, for the first time, concocted by doctora of divinity and other leamed men, is, to my mind, preposterous.

Freemasonry is bassed on Sabeism, the worship of the atars; but, as before obeerved, its original intention has long since been lost sight of and sbandoned. Modern masons not ouly continue the ceremonies of ancient masonry, consisting of seven degrees, which relate exclusively to pagan rites, but have added thereto about fifty others. These are founded partly upon pagan mysteries, and partly upon Jewish and Christian doctrines; forming altogether an incoherent medley of opposite principles. The partiesns, however, of opposing sects seam to be reconciled to it, not stopping to inquire into the meaning of the symbols, or willing to be deceived by the false explication given of thera, congregate together in great harmony. And, althongh the ceremonies relate wholly to religion, either Pagan, Jewish, or Christian, diecusaion on the subject is absolutely prohibited in the lodge.

## OHAPTER VIL

## ATALTSIS OT FRETMASOSEYY *

## Introduction.

I sball now proceed to anslyee Freemsaonry. And as I conceive it to be no other than the forms and ceremonies of the ancient Pagan religion; that is, Sabeism, or the worahip of the atars, the following remarks of Volney, on the natural causes whioh led to thin species of worship, will not be amise :
" The unsnimons testimony of all ancient monuments, presents us a methodical and complicated aystem, that of the wornhip of all the stars, adored sometimes in their proper forms, zometimes under figurative emblems and symbols; and this wornhip was the effect of the knowledge men had acquired in physics, and was derived immedistely from the first canses of the social state, that is, from the neceesities and arts of the first degree which are among the elements of nociety.
" Indeed, as soon as men began to unite in sooiety, it became necossary for them to multiply the meens of eubeistence, and consequently to attend to agriculture; agriculture to be carried on with success, requires the observatiou and knowledge of the heavens. It was necessary to know the periodical return of the same operations of nature, and the same phenomena in the skies ; indeed, to go so far as to ascertain the duration and succession of the nessons and the months of the year. It was indispensible to know, in the first place, the course of the sun, who in his zodiacal revolutions, shows himself the first and supreme agent of the whole creation ; then, of the moon, who, by her phases and periods, regulates and distributes time ; then of the stars, and even planete, which, by their appearance and disappearance on the horizon and noctumal hemisphere, marked the minutest divisions; finally, it was necessary to form a whole system of astronomy, or a calendar; and from these works there naturally followed a new manner of considering these predominant and governing powers. Having observed that the productions of the

[^111]earth had a regalar and constant relation with the heavenly bodies; that the rise, growth, and decline of each plant kept paoe with the appearance, elevation, and declination of the same star, or group of stars: in short, that the languor or activity of vegetation seemed to depend on celestial infiuences, men drew from thence an ides of action, of power in those beings, superior to earthly bodies; and the stars dispensing plenty or scarcity, became powers, genii, gods, anthors of good and evil.
${ }^{4}$ As the state of society had already introduced a regular hierarchy of ranks, employments, and conditions, men, continuing to reason by comparison, carried their new notions into their theology, and formed a complicated system of gradual divinities, in whioh the sun, as first god, wes a military ohief, a political king; the moon was his wife, and queen; the planete were servants, bearers of commands, mossengers; and the multitude of stars were a nation, an army of heroes, genii, whose office was to govern the world under the orders of their chiefe; and all the Individuals had names, functions, attributes drawn from their relations and influences; ${ }^{*}$ and even sexes, from the gender of their appellations. $\dagger$
"If it be saked to what people this system is to be attribated, we shall answer that the same monaments, supported by nasaimous tradiHions, attribute it to the first tribes of Egypt; and when resson finds in that conntry all the circumstances which could lead to such a system; when it finds there a zone of eky, bordering on the tropic, equally free from the rains of the equator and the foge of the north; when it finds there a central point of the sphere of the ancients, a salubrious climate, a great, but manageable, river, a soil fertile without labour or art, and placed between two seas which communicste with the richest oountries, it conceives that the inhabitant of the Nile, addicted to agrionltare from the nature of his soil, to geometry from the annual necessity of measuring his lands, to coramerce from the facility of communications, to astronomy from the state of his sky always open to observation, must have been the first to pass from the savage to the social state, and consequently to attain the physical and moral sciences necessary to civilized life.
"It was, then, on the borders of the apper Nile, among a black race of men, that was organised the complicated system of the worship of the stara convidered in relation to the productions of the earth and the labours of agricultare; and this first worship, characterised by their adoration under their own forms and natural attributes, was a simple procoeding of the human mind; but in a short time, the multiplicity of

[^112]the objects of their relations, and the reciproeal minfoeoo, having complicated the ideas, and the signs that represented them, there followed a confasion as singular in its cause as pernicions fo ita effects."

It has been safficiently made to appear, it is believod, that the $80-$ ciety of Freemasont has existed in England for upwards of six hundred years. How far iter principles and objecta wrere generally understood by its members in the early stage of its establishment, is unknown. But. judging from the enigmatical manner in which its ritual, as handed down to us, is explained, we may conclude that the brethren, particularly the craftsmen of the three first degrees, were kept as clooely hoodwinked in respect to its true import, after, as they were before their initiation. The personal safety of its founders required this course. Hence the swful oatha exacted of them to keep secret the ritea and ceremonies in which they were permitted to partiolpato.

These ceremonies were manufactured for the occasion; and were so obscurely framed as to be rendered incomprehensible to all those not intrusted with the eecret object of the institution. Besides artifice was made nse of to mislead the brethren, answera to questions propounded being often given that have no relation to their true interpretation. In short, freemasonry is allegorical throughout, and is an imitation of the astronomical worship of the Egyptians, Hiram being eabetituted for Osiris. There are occasional departares from the original, to accommodate it to the craft or trade of masonry, which, as before observed, is a mere finesse to cover the real desigo. There, otherwise, would have been no necessity for dividing the aubject matter of the three first degrees, which may be considered as substituted for the ceremonies and secrets of the lesser mysteries; and that of the royal arch and its appendages, for those of the greater. It may, however, have been the policy of the Druids, to deal out their mysteries in emall parcels, to try the good faith of their pupils by degrees, and to stop ahort, or proceed with them accordingly.

No account of the secret praotices of masonry had been given to the public, till after its revival in 1717. The frst writers who undertook to expose them, were Pricbard, in 1730; Master Key to the Door of Freemasonry, in 1768 ; and Jachin snd Boaz, in 1776. As material al, terations in the ritasl have been made sinoe the report of Prichardwhatever msy be asid of "old land marks," in making this analysis I shall rely chiefly upon him and the two following expositions for an explanation of the three firt degrees, which was the extent of thair fabours, although the author of Master Key, signs himself "A Member of Royal Arch."

On the revival of the institution, the surviving heire of the mystery, no doubt, gave to the society as far as recollected, the very words and ceremonies as delivered to them; and which Prichard testifies under oath to be truly reported by him.

This expose particularly indicates the order to be of ancient date. After perusing it, it would seem impossible to believe that men of learning, talents, and atanding in soclety, would, in the eighteenth centary
of the Christian era, seriously form do nowo suoh a medley, void of the leest claim to wit or rationality, except in reference to the scientifio worship of the hesvenly bodies and other physical powers of natare. According to Prichard, many of the queations and answers are in verse, which aufficiently indicate their Druidical formation; the sense of whioh, however, has been changed to prose, thareby rendering the dialogue more conformable to the present taste, and at the eame time divesting It of ite Druidical dress.

In adapting this parody of the mysteries to the uninformed state of the initiated to the three first degrees of masonry, although a trinity is acknowledged under the title of wisdom, atrength and beauty, atill the true first person is kept out of view.
"The maintainers of the Egyptian philosophy held that the Suprems Being, the infinitely perfeot and happy, was not the craator of the world, nor the alone independent Being. The' Supreme Being, who resides in the immensity of space, which they call peteroma or fullnees, produced from himself, say they, other immortal and spiritual natures, styled by them 鹿ons, who filled the residence of the Deity with beings similar to themselves."-(Key to the New Testament.-Hutchinson, p. 86.)

This Divinity is spoken of by Jamblichus, under the name of Ehmoph or Knoph. He says, that "This Gad is an intellect, itself intellectually perceiving itself, and converling intellections to itself; and is to be worshipped through ailence alone."-(Taylor's Trans. Jam. p. 202.)

Although this god was secretly acknowledged by the philosophers and learned prieste of Egypt, he was utterly unknown to the common people; and this is supposed to be the case with the mason of the three first degrees. But when he arrives at the holy royal arch, the discovery is made known to him. This is the awful Divinity, on coming into whose presence the shocking exhibitions of thunder, lightning, etc., produce such excessive trepidstion and fear. This is the Wisdom, the first person of the Egyptian trinity; Osiris, the sun, the Strength, the Demiurgus or supposed maker of the world, is the second permon; and Isis the moon, the Beauty of masonry, is the third. But ag the first person is not revealed to the initiates of the minor degrees, tha trinity for these grades is made up wholly of visible, physical powers, adapted to the gross conceptions of the unenlightened, vis., Oairis, Isis, and Oras ; that is, the sun, moon, and Orion.

To prevent that satiety arising from the perasal of long rituals, particularly those in which the reader has no faith, I shall contine myeolf to as fow items in that respect as is consistent with the necessary developmont of the subject. This analysis is not intended as a regular aposed of the ceremonies ot masonry.

After these prelimidary remarks, I commence with the

## Monner of Opening a Lodge, and Preparing a Candidate for Iniliation; taken from Jachin and Boas.

Mesonry throughout is in the catechetical form, in the eame manner
as instruction is given to novices in all other rellgions. The mester, before opening the lodge, demands of the officens their various stations and duties (which will sppear in what are called Lectures, further on), endlog with thoee of the mester, whose station is in the east, becanse the sun rises in the east to open the day, so the meater stands in theeast to open his lodge, and set the men to work.

After the conclusion of this ceremony the master puts on his hat, and declares the lodge to be opened, in the name of holy St. John, forbidding all cursing, swearing, whispering, and all profane discourse whatover. He then gives three knooks upon the table, and puts on his hat, the brethren being uncovered. Provided a candidate hes received the approval of the lodge for admittance, the master aske if the gentloman proposed last lodge-night is ready to be made; and on being answered in the affirmative, he orders the wardens to go out and prepare the person, who is generally waiting in a room at some distance from the lodge room by himself, being left there by his friend who proposed him. He is conducted into snother room, which is totally dark; and then aaked, whether he is conscious of having the vocation neceseary to be recolved? On answering yes, he is asked his name, sumame, and profession. When he has anewered these questions, whatever he has about him made of metal is taken awsy, as buckles, buttons, rings, etc., and even the money in his pocket. Then they uncover his right knee and put his left foot with his shoe on into a slipper (this is not practised in every lodge, some only slipping the heel of the shoe down), hoodwink him with a handkerchief, and leave him to his reflection for about half an hour. The chamber is also guarded within and without by some of the brethren, who have drawn swords in their hands. The person who propoeed the candidate stays in the room with him, but they are not permitted to converse together.

During this silence, and while the candidste is preparing, the brethren in the lodge are patting every thing in order for his reception there; euch as drawing the annexed figare [omitted] on the floor at the upper pert of the room, which is generally done with chalk and charcoal intermixed. It is drawn oast and west. The Master stands in the east, with the square hanging to his breast, the holy bible opened at the gospel of St. John, and three lighted tapers are placed in the form of a triangle in the midst of the drawing on the floor.

The proposer then goes and knocks three times st the door of the apartment in which the ceremouny is to be performed. The Master answers within by three strokes with the hammer, and the Junior warden asks, who comes there? The candidate answers (after another who prompts him), "One who begs to receive part of the beneflt of this Right Worshipful Lodge, dedicated to St. John, as many brothers and fellows have done before me." The doors are then opened, and the senior and junior wardens, or their assistants, receive him, one on the right, and the other on the left, and conduct him blindfolded three times round the drawing on the floor, and bring him op to the foot of it, with his face to the master, the brethren ranging themselves on esch side,
and maling a confused nolse, by striking on the attribates of the order, which they carry in their bands.*

In some lodges the candidates are led nine times round; but as this is very tiresome to the person who is to undergo the operation, his patience being pretty well tried by being blinded so long beforehand, it is very justly omitted.

## Apprentice's Degrec.

I commence this degree with Prishard's report, called, "Masonry Dissected," as inserted in the Antimasonic Review, which Mr. Ward, the editor, informs me, he printed from a manuscript copy. It is evidently an abridgment of the original, for it opens with the examingtion of an apprentice previously initiated. It contains, however, enough for the present purpose. An attestation to the trath of the statement is prefised to the document, as follows:
"Samuel Prichard maketh oath, that the copy hereunto sinexed is a true and genuine copy in every particular. Jur. 18 Die Oct. 1730, Corsm me R, Hopkins."

1 shall not confine myself to any one of the bookg on the subject in regular order, but take the questions and answers, or the parport of them, from either, as may best buit my purpose.

Question.-From whence came you? Answer.-From the Holy Lodge of St. John. [Why the Druids gave this name to the lodge will be explained in the sequel.] What recommendations brought you from thence? -The recommendation which I brought from the right worshipful brothers and fellows of the right worshipful and holy lodge of St. John, from whence I came, and greet you thrice heartily well.

What do you come here to do ? -
Not to do my own proper will,
But to sabdue my paealone still; The raler of masonry in band to take, Asd dally progress therelin to mako.
Are you a mason?-I am so taken and accepted to be 'mong brothers and follows. Where were you made a mason?-In a just and perfoot lodge. What makes a lodge ? - Five. Masons are deceived by the rasen given for this number making a lodge. "The ancient cheology (as before observed) being nothing more thas a nystem of physics, a picture of the operstions of nature, wrapped up in mystorious allegories and enigmatical symbols," a solution of the enigmg mast be sought for from that source.
"The Egyptians represent the world by the number five, being that of the elements, which, ssys Diodorns, are, earth, wator, sir, fire, and berar or spiritus (they are the same amongst the Indians); and accord7ifg to the mystica, in Macrobius, they are the supreme God or primum : mobile, the intelligence or meus born of him, the soul of the world -hileh proceeds from him, the celestial sphorse and all things terres-

- Thla enatom is mot obeerved In all Lodges.
trial. Henoe, adds, Plutarch, the analogy between the Greek penta, five, and Pan, all." (See Rains, p. 236.)

What makes a juat and perfect Lodge ?-Sever. This is in consequence of its being formed by the union of thres and four; which, as before observed, rendera this namber superiatively perfect.

Masonry tesches that the above numbers are required to make a lodge, because man has five senses, and there are seven liberal sciences, and much ridiculous parade is made in the definition of these sciences, which are thua arranged:-Grammar, rhetoric, logic, arithmetic, geometry, music, and astronomy. What doth geometry teach ?-The art of measuring, whereby the Egyptians found out their own land, or the same quantity which they had before the overflowing of the Nile. -How were you prepared to be made a mason?-I was neither naked nor clothed, barefoot nor shod; deprived of all metal; hoodwinked, with a cable-tow about my neck, when I was led to the door of the lodge, in a halting moving posture. This preparation, as before noticod, is in conformity to the ancient usage in the mysteries; it in a seenical representation of the forlorn condition of man in a state of nature. The rope ebout the neck of the candidate, like the chain required by the Druids to be carried by their followers in the performance of their sacred rites, was, as before stated, in testimony of hie submission to the will of God. [See Mayo's Myth, v. ii., p. 220.

How got you admittance?-By thres grest knocks. Who received you ?-A junior warden. How did he dispose of yon i-He carried me up to the north-east part of the lodge, and brought me back again to the west, and delivered me to the senior warden. (Why the candidate begins his labours at the north-east part of the lodge has already been explained.)

Where did our ancient brethren meet before lodges were erectsd ?Upon holy ground, or the highest hill or lowest vale, or in the vale of Jchaehaphat, or any other secret place; the better to guard against cowans* and enemies, either ascending or descending, that the brethrea might have timely notice of their approsch to prevent being surprised.

These ancient brethren were Druids ; and the places mentioned aro such as they used to assemble at, before the edict of Canute entiraly prohibited their public meetings. In consequence of which Druidism was changed into freemasonry, and lodges erected. It cannot bo ahown that a lodge of masons aver held a meeting for the performance of thair mystic rites, axcept in a close room, properly tiled. The groves and other places where the Druids essembled for worship were consecrated to some divinity, and considered holy ground. The vale of Jehoahaphas Ia here introduced as a mere juggle. It is a valley near Jerusalem, where, or in Jerusalem iteelf, a lodge of freemasone never beld a meet-

[^113]ing. The following extract from Holwell's Mythol. Diot. will show the reasons given by the ancients for worahipping the gods upon high hills or mountains:-

## High Places.

Many of old worahipped upon hills, and on the tope of high mountains, imagining that they thereby obtained a nearer communication with heaven. Strabo esys ( $\mathrm{I}, 15$ ) that the Persiane always performed their worship upon hills. (Some nations, instead of an image worshipped the hill as the deity. Max. Tyr. Dissert. 8. v. Appian. de bello Mithridatico.) In Japan most of their temples at this day are upon emolsences; sod often upon the ascent of high mountains ; commanding fine views, with groves and rivolets of olear water; for they say, that the gode are extremely delighted with auch high and plessant spots. (Kampfer's Japan. ii., b. 6.) This practice in early times was almost universal ; and every mountain was esteemed holy. The people who prosecuted this method of worship enjoyed a soothing infatuation, which flattered the gloom of superstition. The eminences to which they retired were lonely and silent, and seemed to be happily circamstanced for contemplation and prayer. They who frequented them were raised above the lower world; and fanoied that they were brought into the vieinity of the powers of the air, and of the deity who resided in the higher regions. But the chief excellence for which they wero frequented, was the Omphi, interpreted Thiea cledon, vox divins, being a particular revelation from heaven. In short, they were looked upon as the peculiar places where God delivered his oracles.

Many times when a reformation smong the Jews was introduoed by some of the wiser and better princes, it is atill lamented by the sacred writer (1 Kings xxii.) that the high places were not taken avooy ; the peoplo still offerod, and burnt incense on tho high places.

The lodge is described as extending in length from east to west ; in breadth from north to south; as high as the heavens ; as deep as from the aurface to the centre; and eupported by three large columns or pillars, named Wisdom, Strength, and Beauty.
"Our institution is ssid to be supported by wisdom, atrength, and beanty; and becsuse it is necessary that there should bo wisdom to contrive, strength to sapport, and beauty to adorn, all great and important undertakings. Its dimensions are onlimited and ita covering no leas than the canopy of heaven. To this object the mason's mind is continuslly directed, and thither he hopes at last to arrive, by the aid of the theological Ladder, whioh Jacob, in his virion, ssw secending from earth to heaven; the three principal rounde of which are denominated faith, hope, and charity." (W ebb.)

It is evident from the foregoing, that a masonio lodge is supposed to represent the world; upon which plan the ancient pagan temples were formed. The flooring of the lodge is Intended to resemble the face of the earth, and the prinolpal coremonies perforined in it are an imitation
of the movements of tho heavealy bodies, partieniariy of that great laminary the Ban, the god of Egypt.

The Rov. R. Taylor, in his locture on masonry, very ingeniously solvea the snigms of the three principal ronnds of the aforesaid theological, or rather astronomical Iedder, thus:
"Faith is the Genins of Spring; Hope of Sammer; and Charity of Antamn.-Faith, in Spring, beeanse feith and works must always come togother--Hope, of summer, because from that point the sus looks vertically down apon the seede which heve been committed in faith to the fertilizing woinb of the earth.-Charity, of antumn, becsuse then the $\operatorname{man}$ empties his comacopis into our desiring lape-Faith is the eastern pillar; charity the weatern; and hope the key stone of this royal arch."-This theological ladder has soven rounds, nod is enigmatically described in the degree called Knight of Ksiosh, which I shall hereaftor notics. It marks the course of the san through the seven signs of the zodiec, commencing at the vernal oquinox, and ending at the antumnal, both incluaive. The semicircle made by the san in peasing these aigne forms the celebrated royal arch; and a mason to attain the degree so called, must pase throagh the seven gradea of the order. The three principal steps above noticed allude to the equinoxes and the northern solstice.

Why should the master represent the pillar of eisdom, and be stationed in the esst? As the san rises in the east to open and adorn the day, so rises (at these words the master rises, the worshipful master in the east to open and adorn his lodge, and set the craft to work. Why should the senior warden represent the pillar of strength f As the sun sets in the west, to close the day, so stands the senior warden in the west, to close the lodge, and dismiss the men from labour, paying thom their wages. The junior warden represents the pillar of beauty, because he stands in the south, at high twelve at noon, which is the glory and beanty of the day, to call men off from labour to refreahment, and to see that they come on again in due time.

The above arrangement is evidently deceptive. Wisdom, applicable to the true God, who, sccording to pagan theology, resides in the immensity of spacs, is kept out of view, and Osiris, the sun, is substituted in his plsce. Strength, which is required for labour, at the opening of the day, and is applicable to the sun, is transferred to its close, when men are callod from labour. The senior warden properly personates Isis, indicating the productions of the earth in the fall, which ornsments and besutifies the creation. The sun, moon, and Orus or Orion, (which lies direotly over the equstor, form the wisdom, strength and beauty of the three first degrees; and they also composed the vulgar trinity of the Egyptians.

The two prinofpal pillars are called Jachin and Boas, and are supposed to be placed at the equinoctial, points; Boacz in the east, and Jachin in the west; the former on the left hand, and the latter on the right, to the inhabitants of the northern hemisphere, the seat of masonry. "The equinoctial polnts are called pillars, because the great semicircle, or uppar hemolsphere, doth seem to rest apon them," (B. Teylor.)

In the degree of perfect master, these two plllars are said to be fixed erosswoys. It is soked, are you a perfect master? Ans. I have seen the circle and the square enclosing the two colomns. What do the columns represent ? Jachin and Bosz, through which I must have passed to arrive at the degree of perfect master. What have you done in entering the lodge? I came to the altar, worked as an entered apprentice, fallow-oraft, and master, to cross the two columns. "Now (says Teylor) what are cross ways but two waye of which one crosese the other? These cross ways, Boas and Jachin, are the equincotial points, at which the line of the ecliptic oroeses the line of the equator-that is, the sum in his apparent path, the ecliptio, comes to shine directly over the line of the equator: this he does in spring and autumn, and only then."

The fellow-craft is said to receive his wages in the middle chamber, st which he arrives by seven winding atalre, pessing the two pillars of Boaz and Jachin. This is emblematieal of the seven circular stages, made by the sun in his tour round those imaginary columns. The emerg: ing of the sun from the lower hemisphere on the 21st of March, and his return on the 27th of September, may, in figurative language be denominated his riving and setting in regard to our hemisphere. Thus Osiris, the sum, sets the husbandmen to work on his rising at the former period, and Isis, the emblem of harvest, paye them in the fruits of the earth, on his return to the latter.

The figure in the following page is that by which the symbol of harvest in represented in mythology; tho torch, however, was peculiar to Ceres.

So the master of the lodge, who stands in the east, representing the sun, rises and seta his men to whrk; and the senior warden, who stands in the west, representing Isis, pays them their wages. To render this personification of Isis perfectly plain, a painting of a sheaf of wheat is hung on the back of the senior warden's seat."

It is also worthy of remark, that as the pagans constructed their tem. ples in a manner to represent the world, they wou!d naturally, for that parpose, imagine the world to be divided into three departments or chambers; the upper, the middle, snd the lower. The middle chamber world of course include the autumnal equinox: and on the arrival of the gun at that point of the heavens, the labourer, the hosbandman, is paid his wages in the fruits of the earth.

Freemasons hall, in London, is a partial imitation of a pagan temple. "In the centre of the roof of this magnificent hall, eays Smith, a splendid sun is reprevented, surrounded with the twelve signs of the zodiac."

[^114]And ho odds "The solentific freemason only knows the reason why thi san is thes pleosd in the centre of this besutifal hall."

How fs the lodge aituated? Due east and west, because all churche sad chapole are or ought to be so.

All pagan temples were so situated in consequence of the sun's bein; the univeraal objeet of worship. "The Egyptians, Chaldeans, Indian Persians, and Chinese, all pleced their temples fronting the east, to re ceive the firme rays of the san. Hence the worship of the sun has bee the religion of the aneient people from which theee, [the present race are deecondod "-Tytlert' Blem. of Hist.

It is true this custom continued long after the cause which produced it, ceased to be respected. Preston, in his illustrations of masonry, in giving a description of St. Paul's Cathedral, ssys, "A strict regard to the situation of this edifice, due east and west, has given it an oblique appearence in respect to Ludgges-atroet in front." This building wan finiohed in 1696. Its architect, Sir Christopher Wren, in a letter dated 1707, addressed to a joint commissioner with himself for building churches to supply the places of those deatroyed hy the conflagration of 1666, observes, "As to the situation of the churches, I should propose they be brought forward as far as possible into the larger and more open atreets. Nor are we, I think, too nicely to observe east or weat in the position, unless it falls out properly." (See Anderson's Const. of Freemasonry.)

Have you any ornaments in your lodge i Yeb, the masonic pavement, the blasing star, and the indented or tessled border. The Mosaic pavement is the flooring of the lodge. This points ont the diversities of objects which decorate and adorn the creation, the animate as well as the inenimate parts thereof. "The same divine hand which hath blessed us with the sights of his glorious work in the heavens, he hath aleo spread the earth with a beautiful carpet : he hath wrought it in various colours, fruits and flowers, pastures and mesds, he hath wrought it as it were, in mosaic work, giving a pleasing variety to the eye of man."-Smith.

The blasing star in the centre indicates that prudence which ought to appear conspicuous in tho conduct of every mason. The indented or tesaled border refers us to the planets, which in their various revolutions form a beautiful border of akirt work round that grand luminary the aun. The furniture of the lodge is the volume of the racred lane, the compass, and the equare.

The origin of what is called mosaic work, as well as the term by which it is designated, appears to be lost through the lapse of time.
${ }^{4}$ The ancients, especially the Greeks, says Bailey, adorned their floors, pavements of temples, palaces, etc., with mossic, or rather musaic work. A. work composed of many atones, or rather mattere of different colours, so disposed as to represent divers shapes and ornaments, birds, etc." Dr. Bees observes, "The critica are divided as to the origin and reason of the name mosaic." Ho then gives unsatiofactory hypotheses of several writere on the anbject, and concludes by asying, "mosaio appears to have taken its origin from paving :" leaving the queation as to the proprity of thus denominating any kind of paving unsolved. This matter having eluded the researches of the learned for so many ages, it is with diffidence I offer the following remsrks:-
*T The rural works, ssys Pluche, not being resumed in Egypt till after the Nile had quitted the plain, they for this reason gave the public sign of Thusbandry the name of Moses or Musens, saved from the waters; and on the same account, the nine moons during which Horus, Apollo, or husbandry continued his exercises, went by the same uame." Hence, as we have seen, originsted the fable of the vine muses. "Isis, says the same $\rightarrow$ writer, was so far the proclamation of the year, that she put on such
alothes and dremes as wore agreeable to the four seanons. To announco the beginning of spring, that overspreads and enamels the earth with flowers and verdure, sha wore carpets of difforent colours," eto.

Now, what could be more appropriate then to denominate the variegated and beantiful frose of the earth in Egype, during the nine months that bore the name of Moses or Mnsens, mosaic or musaic work, and to give the same appellation to its imitation ?

The Egyptians and ocher ancient nations held high hills, groves, otc. In superstitious veneration; and although, when more civilized, in order to shelter themselves from the weather, thoy quitted these favourite retreats, and worehipped their gods in tempies, still it was natural that they should endeavour to imitate the scenes which they venerated, and had been sccustomed to conternplate in their former devotions. With this view then, they decorated their temples so as, in some messure, to resemble the works of ereation, ss exhibited in the places where they before assembled for religious worship. And the name Mosaic or Musaic would naturally ocour to them 38 proper to be given to this ornamental work, intended to reprement the faoe of the earth during the nine mosalc months.

How many principles are there in masonry? Foar : point, line, superfices, and solid. Point, the centre, round which the master cannot orr ; line, length without breadth; solid comprehends the whole, (Pritchard.) This as before observed, is the definition of the ecience of geometry.

4 Point within a Circle.
"In all regular, well constituted lodges, there is a point within a circle, which is bounded north and south by two parallel lines, one representing Moses, the other king Solomon. On the upper part of this circle resta the volume of the acred law, which supports Jacob's ladder, the tup of which resches to heaven.* In going round this circle we must necessarily touch on both these parallel lines, and on the sacred volume, and while a mason leesp himself thus circumscribed he cannot err."Carlile.

Althongh our ancient brethren dedicated their lodges to king Solomon, yet masons profesging Christianity, dedicate theirs to St. John the Baptist and St. John the Evangelist, who were eminent patrons of ma-

[^115]sonry ; and since their time there is represented in every regular and well governed lodge, a point within a circle; the point representing an individual brother, the circle representing the boundary line of his duty to God and man, beyond which he is never to suffer his passions, prejudices, or interent, to betray him on any occssion. This circle is embroidered by two perpendicular parallel lines, representing St. John the Baptist, and St. John the Evangelist, who were perfect parallels in Christianity as well as masonry ; and upon the vertex resta the book of Holy Scriptures, which point out the whole duty of man. In going round the circle, we necessarily touch upon these two lines, as well as upon the Holy Scriptures; and while a mason keepe himself thas circumscribed, it is impossible that he ahould materially err. (Webb.)

That expositors of masonry should differ in their interpretation of this figure, is not surprising. It is an astronomical enigma, the sense of which was probsbly lost sight of during the centaries in which the effairs of the lodge, with very few exceptions, were in the hands of ignorant craftsmen.

The sclution of the symbol I take to be as follows:-The point in the centre represents the Supreme Being; the circle indicates the snnual circuit of the sun; and the parallel lines mark out the solstices within which that circuit is limited. The mason, by subjecting himself to due bounds, in imitation of that glorious luminary, will not wander from the - path of duty. The device is ingenious, and its meaning ought to be restored in the lodge to its original intention.

The assertion that lodges were formerly dedicated to Solomon, is gratnitous, and I believe will not admit of proof. I am not sensible of any historical document that substantiates the fact. We know very little of masorry prior to the revival of the order in 1717. And we
learn by the earliest report of its practices that tho old masons hailod from the holy lodge of St. John. It is evident, as bofore observed, that the Draida ndopted the names of their eolstitial feativals, which had been asenmed for them by the Christians, calling them St. Johns' days; and it is highly ${ }^{\text {robable }}$ that they resorted to the same finesses to delude their enemies, as well as thoss of the fraternity who were not fully initiated into their mysteries, in dedicating their lodges to thene geints.

This artifice of introducing the St. Johns among the symbols of mssonry, hes pat the cralt to their wits to invent a plaxible story to meet the casse, and they have come, it is presumed, to an erroneous conclusion, that this was done br Christian masons.

What do you learn by being a gentleman mason? Secrecy, morality, and good fellowship. What do you learn by being an operative mason? To hew, square, and mould stone ; lay a level and raise a perpendicular. Have you seen your master to-day? Yes. How was he clothed? In $a$ yellow jacket and blue pair of breeches. (The master is the compasses, the yellow Jacket is the brane body, and the blue breeches are the steol points.) How old are you? Under seven. ("Denoting he had not passed master." Or raiker that ho had not passed to the fellow-craft's degree, seven years being formerly the torm of an apprenticeship in freemssonry as in other trades.)

The five last questions and answers are from Prichard, and from the simplicity of the dialogae, it may be concluded the original language and facta have not been perverted, and consequently that there wero accepted gentleman masons, that is not of the craft from the foundation of the institution.

## Fellow-Craft's Degree.

Are you a fellow-craft? I am. Why were you made a fellow-craft? For the rake of the letter $G$. What does the letter $G$ denote? Geometry, or the fifth acience. In another part of the same degree, $G$ is said to denote " the grand architect and contriver of the aniveree."* On being farther questioned, the respondent replies, by letters four and science five this $G$ aright doth stand, in a due art and proportion. You have your answer, friend. (N.B. Four letters are Boaz, fifth science, geometry.)

[^116](Prichard.) The importance bestowed upon geometry, the fift science, according to masonic classification, may be saother rasson why five should compose a lodge.

How did you attain to this degree?-By the benefit of a grip and pass-word. The name of the grip is Jachin; that of the pass-word Shibboleth, which denotes plenty, and is represented by a sheaf of wheat surpended near a water-ford. (Allyn.) Did you ever work? Yes, in the building of the temple. Where did you receive your wages? In the middle chamber, which I entered through the porch, by seven soinding stairs, where I discovered two great oolumns or pillsrs. The name of the one on the left hand is Boaz, and denotes strength, that on the right, Jachin, which denotea to establish; and when combined, atability; for God said, in strength will I establish this, mine house, to atand firm for ever. The house of God is the universe, which is doubt1 less established upon principles that will suatain it for ever. The pillars Boaz and Jachin are imaginary prope, standing at the two equinoxes east and west, to support the world. Henoe it may be remarked, that the pillar representing Boax, or the sun, is properly said to denote strength, wheress in the apprentice's degree it is made to denote wisdom. Jachin. eignifying Isis the moon, was a necessary appendage to the creation, and perhape may be applied metaphorically, to establish.
"The sun is the creator and father, the moon the mother of all things. These two deities govern, produce, and nourish everything connected with the visible universe. The sun is the third Demiurgas, the supreme creative intelligence under the third form : incarnate he becomes Osiris, the anthor of all good, and it is he that completes the Egyptian trinity." (Anthon's Class Dict.)

Osiris, the sun, by his genial influence in the spring season, prepares the earth for cultivation, gives life to its various productions, and consequently enables the huabandman to commence his labours. Isis, the teeming mother, who personifies the earth as well as moon, nourishes during the summer the seeds committed to her hosom, and in the fall season rewards the lsbourer.

The pillars of Boaz and Jachin are described to be eighteen cubits high, stvelve in circumference, and four in diameter.

The eighteen cubits refer to the inuodation of the Nile, being the bighest elevation it is known to have atisined. The twelve cubits relate to the twelve sigus of the zodiac, through which the sun passes; snd the four cubits have reference to the tetractys, which comprehends the grinciples of geometry, point, line, superfices, and solid.

The pillara are adorned with two large chapiters, which are ornamented with net work, denoting unity; lily-work, denoting peace; and pomegranates, which, from the exuberance of their seeds, denote plenty. It is only the pillar of Jachin, which represents Ieia, the emblem of herveat, that is decorated with pomegranates in the figures of these
columns among the masonic symbole. They are farther adorned with two globes, one celeatial, the other terrestial.

The display of globes, like most of the customs of masonry, may bo traced to Egypt. Dr. Bichardson, as recorded in a former part of this work, in describing the gateway or porch leading to the temple of Ieis, in Tentyra, says "Immediately over the centre of the doorvocy, is the beautiful Egyptian ornament nsually called the globe, with serpents and wings, emblematical of the glorions enn poised in the siry firmament of hesven, supported and directed in hir coarso by the eternal wisdom of the Deity."

Foltaire, however, is of opinion that this globe indicated the Supreme Being; he asye, "It may be remarked, that the globe placed over the door of the temple of Memphis, represented the naity of the divine nature, under the name of Koef."-(Eavres-T. 16, p. 100.)

The candidate having learned the grip, token, and pase-word (Shibboleth, plenty,) of the fellow-craf, reoeives his wages, and passes the pillar of Jachin, He is then placed in the sonth-esst part of the lodge, and thus sddressed by the master:-
" Brother, masonry being a progressive seience, when you were made an entered apprentice, you were placed in the north-east part of the lodgo, to show that you were newly admitted. You are now placed in the mouth-east part, to mark the progress you have made in the science."

Thus the candidate commences his labours at that point where the sun is aupposed firat to have risen at the period of the creation, and by pursuing the course of that lumionary till he has completed the circuit, becomes then worthy of the master's degree.

Master Mason's Degree.
The degree of master mason follows that of fellow-craft. As it contalos the story of the murder of Hiram upon which the entire fabric of masonry is erected; the very gist of the order, to which all other considerations are sabordinate; which meets no at every turn through all the varied scenes of the institution, it becomes neecessary to possess a due knowledge of the original upon which it is founded. This is the fable of Osiris and Isis; which I, therefore, place as an introductory preface to the nraster's degree. I take the fable from L'Origine de tons les Cultes, par Dupuis.

## Explanation of the travels of Isis, or the Moon.

The moon was associated, by the ancient Egyptians, with the sun in the general administration of the world, and it is she who represents the character of Isis in the sacred fable, known by the title of the history of Osiris and Isis. The first men who inhabited Egypt, says Diodorous of Sicily, struck with the grandeur of the heavens, and the admirable order of the universe, thonght they perceived two primary and eternal
canasee, or two grand divinities, and they called one of them, or the sun, Osiris ; and the other, or moon, Isis.

The denomination of Inie, given to the moon, is confirmed by Porphyry and other anthors; whence we draw a necessary conclusion, that the courses or journeyings of Iais are no other than the courses of the moon; and as the regions of the hesvens are those she traverses in her monthly revolutions, we will there fix the scene of her adventure.

This conclusion is justified by the passage from Cheremon, where this learned Egyptian tells u8, that the Egyptians explained the fable of Osiris and Isis, es well as all other secred fables, by the celestial bodies, by the phases of the moon, by the inorease and dimination of her light, by the divieion of time and of the heavens into two parts, by the pararatellons or the stars which rise and set in espect with the signs. It is upon this principle we have explained the poem of the Twelve Labours of Hereales; we shall follow the same principle in the explication of the Legend of Ieis; of which we shall give also a comparative teble, with those presented by the heavens, at the moment when the san hes departed from our hemisphere, and left to the moon, then at her full, the empire over long nights, up to the moment when he returne again to our regions.

Let us take then Isis at the epoch of the death of Osiris, her husband, and let ns follow her stepe, from the moment when sho is deprived of him, up to that when he returns to her from hell ; or, to drop the figure, from the moment when the sun has passed into the soathern or interior regions of the world, up to that when he repasses conqueror into the northera or superior hemisphere.

Platarch supposee that Oniris, after his travels, belng on his return through Egypt, wan invited to a repast by Typhon, his brother and rival. The latter pul him to death and threw his body into the Nile. The san, bsys Plutarch, then occupled the sign Scorpio, and the moon was full; she was then in che sigo oppoeite to Scorpio, that in to say, to Taurus, whioh lent its forms to the ann of the apring equinox or to Osiris; for at that distant period, Taurus wes the sign whish anawered to the spring equinox. As soon as Isis was informed of the death of the unfortanate Oxirib, whom all the ancients had denominated the sarne god as the sun, whon she learned that the genins of darknees had shot him up in a coffis, she commenced asearch after his body. Uncertain of the route she ought to pursue, unessy, agitated, her heart lecerated with grief, in mourning garb, she interrogatee coery ons she meste. Bhe is informed by some young children that the coflin which containg the body of her husbend, had been carried by the watera out to see and thence to Biblos, whore it was stopped; and wea now reposing upon a glant, which had immediately put forth a superb stalk. The coffin was es enveloped, as to bear the appearance of being but a part of it. The king of the country, astoniohed at the beanty of the bush, had it out, and made of it a column for his palace, without perceiving the coffin whioh had become incorporated with the trunk Isis, actuated by a divine Impulse, arrives at Blblos; bathed in tears, the reate hervelf near a foun-
tain, where she remained overwhelmed wilh grief, eppaking to no one until the arrival of some of the queen's women. She salutes them politely, and commencee dressing their hair in such a manner as to spread In it, as well as over their whole body, the odour of an exquisite perfume.

The queen learning from her women what had happened, and perceiving the exquisite odour of the ambrosia, desired to know this stranger. She invitea Isís to her palace, attacbed her to her honsehold, and placed her ss nurse to her son. The goddess then made herself known, and densanded that the precious column should be given to her.

She drew from it easily tho body of her husband, by disengaging the cofin from the branches which covered it; these ohe found to be oflight texture, which she perfumed with essences; she sent to the king and queen this envelope of strange boughs, which was deposited at Biblos, in the temple of Isis. Sho then embariced and returned to Egypt, to Oros her son, and deposited the body in a secluded place. Typhon having gone that night to the chase, finde the coffin, recognized the corpoo, and cuta it into fourteen pieces,* which he ecattered here and there.

The goddess seeing this, returned to collect these dispersed fragments ; she interred each part in the place where it was found. Of all the parts of the body of Osiris, those of propagation weery the only ones Ieis conld not find. She subatituted for them the phallus, which wan the image of them, and which was conseorated in the myateries.

This is the preciee Egyptian legend concerning Isis, which has not been handed down to us without much mutilation, and which make part of a sacred poem upon Osiria, Isis, and Typhon, their enemy.

Notwithstanding the immense deficiencies discoverable in thls allegorical history, it will not be difficult for ns to trace a perfect correspondence between the principal features of this ascred fable which remsin to us, and the representations which the heavens offer, at the different epochs of the movements of the two great atars which regnlate the course of the seasons; the periodical march of vegetation, the division of time, and the succession of days and nights. We will now proceed as in the poem on Hercules, to bring together these different representations, those which are presented by the fable, as well as those exhibited by the heavens. Wo will divide them into twelve parts.

[^117][Here follows a critical comparison between the wanderinge of Lsis in search of the dead body of Osiris, and the courses of the moon in the hearens; bat as the fable alone answers the parpose here intended, I omit the comparative representations. The foregoing note, however, is drawn from the part omitted. The anthor concludes as follows:-]

A conformity so complete, and one which bears so many points of resemblance between the representations of the legend and those of the heavens, and which, matilated as the legend or this sacred history may be, is so well sustained from one end to the other, as not to permit us to doubt that the astronomical priest who composed it, did nothing more then write down the courses of the moon in the heavens, under the title of the wanderings of Isis; especially when it is known that Isis is the name given to the moon in Egypt. We have, in our explanation, only made use of the method laid down for us by Cheremon to analyse these sacred fables, and especially that of Oairis and Isis, which he said was relative to the increases and diminations of the light of the moon at the eaperior and inferior hemlspheres, and to the stars in aspect with the signs, otherwise called paranatellons. The learned men of Egypt have themselven traced out the plan which we have adopted.

Here we have then an ancient queen of Egypt and an ancient ling, whose imaginary adventures have been deacribed in the form of history, but who, however, as the Hercules of the Greeks, are only physical beings, and the two principal agents of nature. We are led to judge, by these examplea, of the sllegoric character of antiquity, and to consider how much we should be on our gased against traditions which place phybical beinga as characters in history.

It is important not to lose sight of the fact, that formerly the history of the heavens, and particularly of the sun, was written under the form of a bistory of men, and thas the people, almost universally, received it as auch, and looked upon the hero as a man. The tombs of the gods Were shown, as if they had really existed; feasts were celebrated, the object of which seemed to be to renew every year the grief which had been occasioned by their loss.

Such was the tomb of Osiris, covered under those enormons masees, known by the name of Pyramids, which the Egyptians raised to the star which givea us light. One of these has its forr fronts facing the four cardinal points of the world. Esch of these fronts, is one hundred and ten fathoms wide at its base, and the four form as many equilateral triangles. The perpendicular height is seventy-seven fathoms, according to the messurement given by Chazelles, of the Academy of Sciences. It resulta from these dimensions, and the latitude under which this pyramid is erected, that fourtsen daya before the spring equinox, the precise period at which the Persians celebrated the revival of nature, the sun would cesse to cast a shade at mid-dsy, and would not again cast it till fourteen days after the fall equinox. Then the day or the eun would be found in the parallel or circle of southern declengion which answera to five degrees fifteen minutes; this would happen twice a year, once before the spring equinox, and once after the fall equinox.

The san would then appear exactly at mid-day npon the snmmit of thle pyramid. Then his majeatio disk would appear for somo moments, placed upon this Immense pedestal and to rest upon it, while his worshippers, on their knees st ita base, extending their view along the inclined plane of the northern side of the pyramid, would contemplete the great Osiris, as well whon he desconded into the darkness of the tomb, as when he arose from it triumphant.* The same might be eaid of the fall moon of the equinoxes, when it takes place in this parallel.

It would seem that the Egyptiane, always grand in their conceptions, had executed a project the boldest that wes over imagined, of giving a pedestal to the sun and moon, or to Osiris and Isis, at mid-day for tho one, and at midnight for the other, when they arrived in that part of the heavens near to which passes the line which separates the northorn from the southera hemiephere, the empire of good from that of eoil, the region of light from that of darkness. They wished that the ahade should dieappear from all the fronts of the pyramid at mid-day, doring the whole time that the sun eojourned in the luminons hemisphere, and that the northern front ahould be again covered with shade when night began to attain her supremsey in our hemisphere, that ia, at the moment when Osiris descended into the tomb or into hell. The tomb of Ogiris was covered with shade nearly six months ; after which light surrounded it entirely at mid-day, as soon as Oairis, returning from hell, regained his ompire in passing into the luminous hemisphere. Then he had returned to Isis and to the god of spting, Orus, who had at length conquered the genius of darkness and of winter. What a sablime ides ! In the centre of the pyramid is a vault, which is gaid to be the tomb of an ancient king. This king is the husband of Iris, the famons Osiris, this beneficent king whom the people believed to have reigned formerly over Egypt, while the priesta and learned men saw in him the powerful planet which governs the world and enriches it with his benefits. And, in fact, would they have ever gone to so great an expense if this tomb had not been reputed to contain the precious remains of Osiris, which his wife bad collected, and which she conflded, say they, to the priests, to be interred at the same time that they decreed to him divibe honours? Can we suppose that there was any other object among a people who spared nothing to give all pomp and magnificence to their worship, and whose greatest luxury wha a religious luxury? $\dagger$ It is thus that the

[^118]Babylonians, who worshipped the san under the name of Belus, raised him $a$ tomb which was bid by an immense pyramid; for as soon as the powerful planet which animates nature became personified, and in the escred fictions was made to be born, to die, and to riee again, imitative worship, which sought to retracs his adventares, plased tombs beside their temples.

Thus is shown that of Jupiter, in Crete; of Mithra, in Persia; of Hercules, in Cadis; of the Coachman, the Celestial Bear, of Meduss, of the Plesiden, etc., in Greece. These varions tombs prove nothing for the historical existence of the feigned personages to whom the mystic spirit of the ancients had consecrated them.

They show, aleo, the place where Hercules burned himself up, and we have shown that Hercules was on other than the sun peraonified in the neared allegories; at the same time that we have proved that the adventares of the queen Isis were those of the moon, sung by her worshippers.

I now proceed with the

## Mastor Mason's Degrec.

This degree, as before observed, is chiefly occupied in the pretended assessingtion of Hiram Abiff,*

The temple of Solomon, like the temples of the Egyptians and other nations of the east, is said to have been constructed with a view to a representation of the world in miniature; thereby the better to adapt it to the popular prejudice in favour of performing religions rites in places whene the operations of nature were exhibited befors the worshippers. This temple, therefore, was well adspted for those astronomical allusions which composed the mystic rites of the ancients; and was for this reason probably seleoted, by the Druids, as an appropriate placein which to lay the scens of masonic mysteries,

The equinoxes and solatices are called the gates of heaven through which the aun pasees. It was only at the latter, however, that any obstructions were believed to occar to his free egrese and regreese. The ecene, therefore, of the death of Hiram, who takee the pert of Osiris, as now acted in the lodges, is not a close imitation of the original, which hes been lost sight of, but is sufficiently so to show from whence the oopy is derived.

Are you a master mason?-I am; try me; prove me; disprove me,

[^119]If you oun. Where were you peesed master?-In a perfect lodge of mastors. What makes a perfect lodge of masters?- Thres. Why do three make a lodge? Because there were thres grased Masons in buildiny tho world. (Mester Koy, and Jachin and Boax.)

Here the Kneph, Oairis, and Isis of the Egyptians ; the Agathoo, Logos, and Payche of the Platonists; and the Wisdom, Strength, and Beanty of masonry, are too clearly indicatod to admit of misinterproter tion.
From whence came you?-From the east? Where are you going! -To the west. For what parpose?-To search for that which was lose What was that which was lost?-The mester mason's word. How wu it lost?-By three great knocks, or the death of our master Biram. Where do you hope to find it?-With a centre. What is a centre?A point within 4 eircle, from which every part of the circumference is equally distant. Why with a centre?-Because, from that point, po mestor mason can err.

The sllusion here to Oairis, the sun, is very plain: and, when found, it is evident he must be on the imaginary circle made by his annoal course, unless he shonld deviate from the order of natare. And the point in the centre of that oircele, according to the meaning evidently intended, it is equally certsio, would be fonnd in its proper place.

The story of Hiram is as follows:-
At the building of Solomon's temple, fifteen fellow-craits, perceiving that the work was nearly finished, and not having received the master! word, grew impatient, and agreed to extort it from their master Hirmm the first opportanity they could find of meeting him alone, that they might pase for masters in other countries, and receive wages as such; but before they could accomplish their scheme, twelve of them recanted. The other three, being of a more determined character, persisted in their design : their names were Jubela, Jubelo, and Jabelum.
Hiram having entered the temple at twolve st noon, an was his custom, to pay his devotion to God, the three assaseins placed themselves as tho esst, west, and sooth doors; Hiram hsving finished his prayer, oame to the east door, which was gasrded by Jubela, who demanded of him ths master's grip and word in a resolute inanner; he received for answer from Hirsm, that it was not customary to ask it in such a strain; that he himself did not receive it so. He told him farther, that it was not in his power alone to reveal it, except in the presence of Solomon, and Hiram, king of Tyre. Jubela being disatisfied with this answer, struck him acrose the throat with a twenty-foor inch gange. Hiram then fer to the south door, where he received aimilar treatment from Jabelo; and thence to the west door, where he was struck on his head by Jabelom, with s gavel or setting meul, which occasioned his desth. (Jachin and Boaz.)

Carrile plecee the conspirators at the east, north, and sonth entrancee of the temple, and makes Hiram receive the finiahing atroke at the eas door; whereas, to render the parallel in strict accordance as an allegory of the death of Oirio, Hiram should expire at the north or wouth gato of
door. The story is badly conceived, se there is no pretext for conflining the word to Solomon and the two Hirams, nor for requiring that it should not be communicatel except in the presence of the three. Besides, socording to masonic tradition, there were at the sarme time 3,800 master masons employed on the temple, who mnst, of course, have been farnished with the master's word. To make out the parody, however, it was necessary thas Hiram be pat to death, sad a cause must be invented to procure it; and although the one fixed upon for the purpose appears very mal d propos, it seems to be satisfactory to the arsft.

It may be remarked, however, that Solomon and the two Hirams are here intended to repreeent the trinily in unity, and, therefore, it may be supposed, could not act meparately.

How did the ruffians dispose of the body?-They carried it out at the soest door (according to the apparrent course of the sun) and hid it till twelve o'clock the next night, when they met by agreement, and buried it on the alde of a hill, in a grave six feet. perpendicular, dug due east and weat; and stuck down a sprig of cassia* to mark the place.

Master Hiram not coming to view the workmen as usual, king Solomon caused search to be made for him in and abont the temple; which proving ineffectual, he ordered the roll of workmen to be called, when it was found that thres were missing, namely, Jubela, Jubelo, add Jubelum. The twelve fellow-crafts who had recanted, then went to Solomon with wbite aprons and gloves, emblems of their innocence, and ibtormed him of everything relating to the affair, as far as they know, and offered their asaistance to discover the three othera who had abeconded.

Solomon then ordered twelve truety follow-orafts to be selected, and sent three east, three west, three north, and three sonth, in search of Hiram. Elder Bernard gives fifteen as the number eelected for this parpose, and adds, "In some lodges they send only twelve, when their own lectures say fifteen were sent." The Elder was not aware of the vast importsnce of confining the number to precisely twelve. Those who were deputed for this service represented the twelve signs of the zodisc; one of whom would be sure to find their grand master Hiram, the personification of Osiris the sun.

The party that took a westerly course, fell in with a way-faring man, near the cosst of Jopps, who, on being interrogated, informed them thas he had seen three men pass that morning, whom, from their appesrance, he took to be workmen from the temple. They had been seeking for a psssage to Ethiopia, and not being able to obtain it, had tarned back into the country. This party then returned, and made their report to Solomon. Of the three who steered an easterly course, one, being weary, sat down at the brow of a hill to reat and refresh himself; and in rising, he caught hold of a twig, which coming easily up, excited his suspicions; and perceiving the ground to have been recently broken, he hailed his companions, and on eearching, they found the body of their grand master Hiram, decently buried in a handsome grave, six feet east

[^120]and weat, and alx feet perpondicular ; and its covering was green mose and turf, which surprised them: whereupon they exclaimed, muscus domat Dei gratia*, which, sccording to masonry, in thanks be unto God, our master has got a masy house. So they covered him elosely, and rent and acquainted king Solomon.

In regard to the conspirators, it shall suffice here to say that, according to the story, they were discovered, arrested, and executed. "Jubelum's body was severed in two, and scattersd in sonth and north."-(Jachin and Boaz.)

After which, Solomon ordered twelve crafts to take up the body of Hiram, in order that it might be interred in a solemn manner in the sanctum sanctorum; he also told them, if they could not find a keynword about him, It was loot; for there were only three in the world to whom It was known; and nnless they were present it could not be delivered; and Hiram being dead, it consequently was lost. Bat the first sign and word that were made and epokon at his raising should he the master's word ever after. The twelve crafts went and cleared the rubbish, and found their master in a mangled condition, having lain fourteen days, upon which they lifted up their hauds above their heads and exclaimed, 0 Lord my God I They failed in their attempts to raise the body, either by the grip of the apprentice, or that of the follow-craft, the flesh cleaving from the bone: upoo which they all raised their hands, and exclaimed, 0 Lord my God 1 I fear the master's word is forever lost; was there no help for the widow's son?

King Solomon then ordered a lodge of master masons to be summoned, and said, I will go myself in person, and try to raise the body by the master's grip or lion's paws. Some eay, by the strong grip or lion's paw. (Bernard.) By means of this grip the body of grand mester Hiram wes raised. $\dagger$ (See next page.)

If this affair would admit of serious criticism, upon the supposition that this word was a mere name, term, or phrase, it might be asked what was the use in seeking for that which, when found, could not be mado use of, unless the finders turned traitora, and exposed itunlewfully. Tho atory, as before observed, wants plausibility.

This word, however, is not a name, it is the personified Logos, the key stone of the arch, the absence of which rendered the structure incomplete.

That Solomon and the two Hirams are made to personate the pagan trinity is evident from the following: -

Master.-Whatsupports ourlodge? Ans. Three pillars. Pray what are their names, brother? - Wisdom, Strength, and Beauly. What do they represent ? -Thres grand masters; Solomon, king of Larael ; Hiram, king

[^121]of Tyre; and Hiram Abiff; the three grand masters in the building of Bolomon's temple. And we were before told, there were three grand Masons in building the world;-of which Solomon's temple was an epitome.

THE BAIBMG OF OSIBIS, THE PGOTOTYPE OF HIRAM. (BEE PAGE 15.)
The names Jubela, Jubelo, Jubelum, given to the pretended assagsins of Hiram, I take to be a play upon the word Jubilum, the Latin term answering to Jubilee. They were of course formed at the time freemasonry was first established. The inflections of this word will giva Jubili, Jubilo, Jubilum. Tbat a slight variation should have taken place in their pronunciation, will not appear surprising, when it is considered that they bave been handed down orally, by illiterate men, through many ages. Jubilum is derived from jubeo, to appoint; it also signifies to bid, order, charge, or command. Now, these reputed assassing are represented as demanding, in an imperions and anthoritative tone, of grand master Hiram, the master's grip and word; and their names were probably given in allasion to this circumstance, being appropriate to the character assumed for them.

Besides the relation which the story of Hiram bears to that of Osiris, there is a singular fanoy set forth in ancient astronomy in regard to the reputed murderers of Chrisna, which contains a atrict analogy to the
supposed asmanination of Hiram-Chrinas, anong the Hindoos, is the enme as Ostris with the Egyptiana, and is worshipped by them in like masoner. Nothing could be more explanatory of the fable of Hiram than this astronomical notion; which is given In Mackey's mythological as tronomy, as followe:-
"The stories which have been the result of the particular method mada ure of by ancient historians to express the various changes of the canatellations and seasons of the year, and the canses of thoee changes, may be worth our while to exsmine.
"The Elohim, the Decans, or the Symbols which presided over the thirty-six subdivisions of the zodisc, or, more properly speaking, of the gear, each month having three, were those gods whose care it was to regulate the weather in the different seasons, and who were supposed to vary it according to thoir will.
"These Decans or Elohim are the gods, of whom it is said, the Almighty created the universe. They arranged the order of the zodiac. The Elohum of the summer were gods of a benevolent disposition: they made the daye long, and londed the sun's head with topas. While the *hree wretchea that presided in the winter, at the extreme end of the year, hid in the realms below, were, with the constellation to which they belong, cut off from the reat of the zodisc; and, as they were mising, would, consequently, be scoused of bringing Chrisna into those troublem which at last ended in his desth.*"

Eleven is one of the numbers aingled out to make s lodge, which like the rest, must have an astronomical allasion; and there is little doobt that it refers to the fancifal notion just detailed in regard to the defection of one of the great gods composing the zodiac, with his attendant satellites, the Decans, or Elohim. In consequence of this treachery, bat eleven of these great chiefs remained faithful to their lord, the supreme ruler, the sun. This circumatance would bo eufficient to cause the com: memoration of that number, in the manner it is done in masonry.

It may be remarlsed, that the lamentations uttered for the death of grand master Hirsm, is in exsct accordance with the customs of the Egyptiane in their celebrations of the fabled death of Osiris the sum; of the Phenicians, for the loss of Adonis; and of the Greeks, in their mystic rites of the Eleusinian Ceres.

It is through the instrumentality of Leo, that Osiris, the sun, is relievel from his perilous condition. The strong pase of the lion wrests him from the clutches of Typhon, and places him in his wonted course. Anubis, the dog-star, is the herald of this event. Here we see the srohetype d the raising of grand master Hiram, by the " atrong gripe or lion's paw."

In short, the attentive reader must have perceived that the story of Hiram is only snother version, like those of Adonis and Astarte, and of Ceres and Proserpine, of the fable of Osiris and Isis. The likenem

[^122]chroughout is so exact as not to admit of doubt. The search for the body of Hiram ; the inquiries made of a wayfaring man, and the intelligence received; the sitting down of one of the party to rest and refresh himself, and the hint conveyed by the sprig over the grave; the body of Firam remaining fourteen days in the grave prepared by the asseasing before it was discovered, all have sllusion to, and comport with, the allegory of Osiris and Isis. The condition even in which the grave of Eiram is found, covered with green moss and turf, corresponds very much with that in which Isis found the coffin of Osiris.

Again, the cutting up and scatlering the parts of the body of Jubelum is a fac simile of the treatment which the body of Osiris is said to have received. By the way, the oath imposed upon the master mason, very Jikely grew out of the fable of Typhon's murder of Osirle, and afterwarda cutting ap the body into fourtean pieces, and scallering them hither and thither on the plains of Egypt.

## Select Master's Degrse.

Mr. Cole, Editor of "The Freemasons" Library," says, "There are, I am bold to assert, but four dogrees in ancient freemasonry. Thim opinion accorde, not only with the sentiments of the oldest and best Informed masons, with whom I have conversed, but is also agreeable to written and printed documents; some of the latter of which are almost as old as the art of printing iteelf." The intermediate degrees between the master's and that of royal arch, which he considers the fourth, which have, he says, within a fow years past, been manufactured into degrees, are merely elucidatory of the second, third, and fourth. Why, Mr. Cole need not have gone farther back into antiquity than to $\mathbf{1 7 5 0}$, to learn that, at that time, but three degrees of masonry were known to the world. The party who styled themselves ancient masons, about this time, discovered the royal arch among the archives of the order, as has been shown above; but which those called moderns were strangers to, and did not then acknowledgo.

The division of masonry into degrees is entirely arbitrary, and, sinoe operative masonry is no longer taught in the lodge, unnecessary. The reasons which governed in the administration of the pagan rites, which concesled from the initistes of the lesser mysteries the aporetta or grand secret, which was communicated to those of the greater, are inapplicable to masonry. For that secret, the existence of one Supreme God, and the error of polytheism, is now openly taught amongst all nations where freemasonry is established. The affectation, therefore, of confining this knowledge to the companions of the royal arch, is at this time extremely absurd.

What Mr. Cole advances, however, in regard to the connection in the matter of the several degrees which he notices, is evidently very correct; and the same might be said of the two first degrees, which are merely preparatory to the third. Still, I am inclined to believe that the fonnders of the order divided its secrets or ceremonies originally into stivon grades. It was incumbent upon them to move alowly, and to
manage the subjects with whom they had to deal with much cantion, for fear of a disclosare. Besides seven stops seem nectesary to complate the roands of the holy royal arch, the graod desideratam of masonry.

Of the mark snd pass-masters' degrees there is nothing worthy of notice, excepting one eircurastance in that of the latter; Which is, tho electing of a newly initiated member, on the night of his admistion, to prealde, pro tempors, as master of the lodge; and then for the brethren to exercise their wit at his expence, by expoeing his ignorance of the duties of the office imposed npon him; finally knooking of his lest, and dragging him from the master's chalr.

This, as has been noticed above, is in perfeot accord with the customs of the Pythagorean echool, which treated novitiatea in like manner.

In regard to the select master's degree, Mr. Cole obeervee, "Wo know of no degree in masonry that has a more needful, or more ime portant connection with snother, than the ssiect with the royal arch. It fills up a chasm, which overy intelligent mason has observed, and without it it seems difficult, if not impoesible, to comprehend clearly some of the mysteriee that belong to the sugust degree of royal arob. Indsed, such is the nature of the degree, that wo cannot feel freedom to sllade remotely to its secrets." And Mr. Croses remarks, "Withont this degree, the history of the royal arch cannot be complete. It rationally accounts for the concealment and preservation of those essentiale of the craft, which were brought to light at the erection of the eecond temple, and which lay concealed from the masonic eye 470 years."

The fact is, the grand omnific (all-creating) lost word, it will be seen in the sequel, was eventually found in a vault ander the raine of Solomon's temple; and the dificulty was rationally to account for the manoer in which it got there. This, therefore, is the grand object of the select master's degree; and at the same time so to locate the word as symbolically to represent its archetype, the sun $208 t$ in the inferiot hemisphere. For this purpose, a history of the order was manufactured by its founders, of which the following is a sketch:

The three grand masters, at the building of the temple, entered inta a solemn agreement not to confer the master's degree until the temple should be completed, that all three must be present when it ahould be conferred, and if either should be taken away by death prior to the firmhing of the temple, the master's degree should be lost.

After this wioe arrangement, lest the knowledge of the arts and sorences, together with the patterns and valuable models which were contained in the temple, should be loat, they agreed to baild a secret vault under ground, leading from Solomon's most retired spartment, adur tosst course, and ending onder the sanctum sanctorum of the temple, to be divided into nine separate arches. The ninth arch was to be the place for holding the grand coancil, and also for a deposit of a true copy of all those thinge which were contained in the sanctum sanctoruna above.

Atter the ninth arch was completed, the three grand masters deposjted therein those thinga which were important to the oraft, such. as- the
of the covenant, a pot of manna, the rod of Aaron, the book of the , ete.
rior to the completion of the temple, grand master Hiram Abif was sssinated, and by his death the master's word wes lost. The two gs were willing to do all in their power to preserve the sacred rd, and as they could rot communicate it to any, by reason of death of Hiram, thay agreed to place it in the secret vault, that if
other treasures were ever brought to light, the Word might be od also.
The cll-creating or omnific Word was deposited in the royal vault, 3 term used in this degree,) as is said, in three languages, J sh , Bel, which are all names of the sun. The direction of the arches, from ; to west, is following the spparent conree of that luminary; the al vault, therefore, is a symbol of the lower regions, in which thesan,
King and governor of the world, was supposed to be lost; who, nder the name of Osiris, persecuted by Typhon and the tyrants of the was put to death, shut up in a dark tomb, amblem of the hemiere of winter; and afterwards, ascending from the inferior zone todis the zenith of heaven, arose again from the desd triumphant over giants and the angels of destruction."-[Ruins, p. 139.]
The nine arches have an astronomical allusion in regard to the latie of the place where the scene is intended to be laid.
Iackey accounts for the origin of the mysterious numbers among erent nations in the following manner:-"In the Asiatic Researches 1.8, p. 289, we are told, that 'seven was formerly a favourite and unate namber smong the Hindus; eight among the Budhists; and s formerly in the west, and in the north of Asia. Nine was held a red and mystical number in the northern parts of the continent, from ins to the extremity of the west.' And why? Becsuse the people re lived under the same elevation of the pole. They all saw the st Dial of the Deity from the same point of view;-they all saw the 3 from the ninth slage of the worid, that is, the ninth climate, from ich, it would be seen sa a pyramid with nine stepe; while from the tude of 32 , the eighth atage of the world, it would be seen as a cone syramid with eight ateps. At Delhi, in Iatitude 28, which is in the enth atage, or climate, the pole was represented by a cone of seven x. Hence, we find, the canse whioh induced the sncients, in the ve latitudes, to venerate the numbers 7-8-9, was astro-geogi aphical; I hence also we see the impousibility of making the astronomical nums of a large empire agree with one capital.
'According to Herodotus, the Tower of Babel, which was in the latie of 32 degrees, had a road-way up on the outside, which went eight es round in its ascent, so as to give the whole the appesarsice of ht'towers, one above another. These were no doubt intended to rmemorate the eight revolutions of the pole, which repremented a yent coiled eight times round a mountain. Besides the eight volved wer of Babel, in the latitude of 32 degrees, we find at Pekin, a Tower Porcelain ten stories high, thereby indicsting its latitude to be 4 :
degrees; for in that situation, the north pole is so far elevated above the horizon ss to admit ton volves of the serpent.
"Again. in Egypt, we find the statue of Plato with a serpent coiled dix times ronnd him, which represents the six volvee of the pole of the ecliptic round the soath pole of the earch; which showa that the statae munt have been erected at or near Thebes or Elephantine. Thus we see, that from Pekin to Elephantine, the men of learning agrea in coupling the histories of their countries with that of the heavens. ${ }^{n}$ [Mytho. Astro. part 1st, p. 68 ]

I am induced to add the following curfous remarlss of the asme writer, sa, in eome measure, explanatory of the preoeding.
"The stories of the Pagans concerning the asconsion of their gode Into heaven, and their deacent into hell, have produced in the minds of modern Earopeans the moet abeurd notions, -ach as never entered the minds of the first astronomers, who divided the hesvens into three grand divieions, in the most simple manner imagianble. They observed towards the north, that a circuit in the heavens always appeared above the horizon: this they denominated one great empire; and as there is a point in the middle of it which is slways stationary, this they made the seat of that empire, and subjected it to the government of a monarch, who oould from his throne, that is the pole, behold all the nations of the earth, both by night and by day."
"They could not but be sensible of that part of the vest concave that is for ever hid from our sight, surrounding the south pole; this was distinguished as another grand division, and called the pit, in contra-distinction from the opposite, which was called the mountain. $\dagger$ Hence among the ancienta arose the epithets of Helion and Acheron, which meant nearly the same; as Meli-on is the sun in his highest, which the Greeks pronounce Heli-os, that is, Elios, the most high. Acheron is generally translated hell. It is compounded of Achar the last state or condition, and On, the sun. Achar-on, therefore signifies the last stato or condition of the sun, alluding to his annusl disappearance in those constellations which were in the neighbourhood of the sonth pole.
" We ree, by the precession of the equinoctial pointa, that while one sign is sinking into the bottomless pit, another sign is ascending into heaven, that is, rikiog up towarde the pole. And as the inhabitants of the earth are insensible of its motion, they thooght the pole of heaven revolved round that of the earth, describing a figure like a serpent coiled eight times; which would seem like a ladder with eight rounds, reaching from the eaith op to the pole, that is, the throne of Jove. Up this ladder then the gods, that is, the signs of the zodiac, ascended and de-scended."-[Myth. Astr. part 1, p. 65.]

[^123]
## Most Exeellent Master's Degres.

This degree is introduced in masonic bools as follows:-
"None but the meritorious and praiseworthy, none bat thoos who throagh diligence and industry have advanced far towards perfection, none but thowe who have been seated in the oriental chair by the unanimous suffrages of their brethren, can be admitted to this degree of masonry.
"In its original establishment, when the tempie of Jerusalem wan finished, and the fraternity celebrated the cope-stone with great joy, it is demonstrable that none but those who had proved themselves to be complete masters of their profession were admitted to this honour; and indeed the dnties incumbent on every mason, who is sccepted and acknowledged as a most excellent master, are such es render it indiepensable that he should have a correot knowledge of all the preceding degrees."

This degree contains a detsil of the ceremony in the celebration of the passsgo of the oun through the first calestial gate, the winter solstice, that is the twenty-fifth day of December, which, as we have seen, was commemorated as the birthday of the god Sol. The sun was the key or cope-stone required to complete (or rather to form) the arch; and this raised by masons, is a symbol of that made by the sun in the hesvens, and is commemorstive of the commencement of his return to the upper hemisphere, in which that arch is formed. This degree, in some measure, anticipates the subject of the royal arch, in which the story of the finding of the lost sun, logos or woord, is consummeted.

For the purpose of opening the lodge, the brethren assemble round the altar, and form a circle, lesving a space for the master. All then kneel and join hands, and the master reads the following pessages from ecripture:-
"Pealm xxiv. The earth is the Lord's and the fallness thereof; the world, and they that dwell therein. For he hath founded it upon the eeas, and eatablished it upon the floods. Who shall ascend into the hill of the Lord? or who shall stand in bis holy place? He that hath clean hands, and a pure heart; who hath not lifted up his soul unto vanity, nor aworn deceitfully. He shall receive the blessing from the Lord, and righteonsmess from the God of his salvation. This is the generation of them that seek him, that seek thy face, 0 Jacob. Selah, Lift up your heads, 0 ye gates, and be ye lift up, ye everlasting doors, and the King of Glory shall come in. Who is this King of Glory? The Lord, strong and mighty; the Lord, mighty in battle. Lift up vour heads, $O$ ye gates, even lift them up ye everlasting doors, and the King of Glory shall come in. Who is this King of Glory? The Lord of Hosts, he is the King of Glory. Selah."
" 2 Chron. vi. Then said Solomon, the Lord hath eaid that he wonld dwell in the thick darkness. But I have built a house of habitation for thee, and a place for thy dwelling for ever. And the king turned his face, and blessed the whole congregation of Iaracl."

As the master reads the words, "lift up your heade, 0 ye gates," each brother raisee his head; and as he continnes, "and the king of glory shall come in," he steps slong a few stope towards the epace left tor him in the circle.

The foregoing passage from the Pualmu in very appropriste to the objeot of commemoration in this ceremony. For, although the Psalmint alladed to the true God, the language made nse of would equally apply to the Pagan god, the sun. The Abbe Pluche observes, as before noticed, that the tongue and religion of the Hebrews were originally the same as the Egyptiana : and, notwithstanding the variations which afterwarde took place between them, "the forms of prayer remained the seme." So in this case, the expreasions, the hill of the Lord; the king of glory ; the Lord mighty in battle, may be spplied to the course of the ann; the veneration in which he was held, and his wars and viotorise over Typhon, the genius of evil. King, moreover, was one of the pecaliar titles bestowed apon Oiris the sun. He was denominated, says Pluche, " the leader, the king, the moderator of the atars, the sonl of the world, the governor of nature." Besides, the term made use of above, Hazis or Hesus, and translated Lord, is a pagan name of the Deity, and answers, esys the same author, to the Warts or Mars of the Sabines and Latins.
So the idea in Chronicles, of the Lord's dwelling in derkness, might anciently, among the Pagana, have alluded to the sun, in the lower hemisphere, or enveloped in clonde for a time, in the tropic of Cancer.

The reading being ended, the manter kseels, and joins hands with the others, which oloses the circle. They then rise, disengage their hands, and lift them up above their heads; cast up their oyes, and then soffer their hands to fall by their sidea.
This sign, it may be presumed, is intended to exprese admiration and gratitude for the return of the sun.
After some further ceremonies, the menior warden demands of the most excellent, if this be not the day set apart for the celebration of the cope-stone? Which being ascertained to be the fact, the bretbren form a procession double file, and march six times round the lodge, ageinst the coarse of the sun, singing the following song:-
All hall to the morning, that bide wr refoice;
The temple's coropleted, exalt high each vuices
The cope-stone is fioisbed-our labour is oter,
The sound of the gavel shall hail us no morso
Coropantors, assemble on this joyfol day,
The occasion is glorious, the key-stone to lay;
Fuldiled is the promine, by the ancient of dayt, ${ }^{\circ}$
To bring forth the cope-atone, with shouting and pralec,
Thy windom inspired the great Institution:
Thy atrength shall support is till nature oxpires
And when the creation ahall tall into ruln,
Its deauty shall rise through the midat of the fire

- The key-stone is now brought forward, and two pillars or columns are set up, and an arch placed on them, made of plank, in imitation of blook work; in the centre of which is a mortice left for the reception of a keyatone, which the master takes, and, placing it in the arch, drives it down, by giving it sic raps with his gavel.

The ark, which all this time had been oarried-round by four of the brethren, is now put upon the altar, and a pot of incense placed on it.

The members all kneel, and while in this attitude the master reads the following passage of Scripture:-2 Chron. vii. 1, 4. "Now when Solomon had made an end of praying, the fire came down from heaven, and consumed the burnt offering and the sacrifioes ; and the glory of the Lord filled the house, and the priests could not enter into the house of the Lord, because the glory of the Lord bad filled the Lord's house. And when all the children of Israel saw how the fire came down, and the glory of the Lord upon the house, they bowed themselves with their faces to the ground upon the pavement, and worshipped and praised the Lord, saying, for he is good, for his mercy endureth for ever."

As the master reads the last clause of the above extract, a brother tonches a piece of gum camphor to a candle, and throws it into the pot of incense, of the same combnstible matter, which stands on the altar before the kneeling brethren, which immediately ignites and makes a very brilliant light.

Here the emblem of the restoration of the lost sun, is too plain to be miataken. The resder may recollect the account, given in a formor
part of this work, of a aimilar ceremony in the anolent myoteries; in which, after great lamentstion for the loes of Adonis or Osiris, the stm, there was also great joy at his finding. "It is nald, that this lamentation was performed over an image in the night meason; and when they had sufficiently lamented, a candle wes brought into the room, which oeremony might mystically denote the return of the san ; then the priest with a soft voice, muttered this form of words, "Trust ye in God, for out of paine saloation is come unto us.' "

After tho above, the brethren all repent in concert the words, "For he is good, for his meroy ondareth for ever," six times, each time bowing their heads low towards the floor.*

The mombers then balance six times as in opening, rise and balance six times more, and the lodge is closed.

Anclent freemasonry could have no connection with the Hebrem Seripturen, any farther than they contained sentimants and oxpressions in common use among other nations. Or if the founders of the institution adopted pessages of scripture, they perverted them to auit their own pecnliar views. We have seen that the pronpect of the raturn of the sun to the northern hemisphere, caused great rejoicings among the ancient pagan nations; and the expression, "For he is good, for his mercy epdureth for ever," is peculiarly applicable to that circumstance.

The sentiment conveyed in the first verse of the foregoing song, calling upon the brotherhood to rejoice in consequence of having arrived at the ond of their labours, is well illustrated in the following extract from Bryant's mythology, (vol. iii. p. 38.) which alludee to a fact noticed above.
" Part of the ceremony in the Eleusinian mysteriea was a night scene, attended with tears and lamentations, on account of eome person who was supposed to have been lost; but at the close a priest used to present himself to the people who were mourning, and bid them to be of good courage, for the Deity whom they lamented as lost, was preserved; and that they would now have some comfort, some respite after all their labour, To which was added, I have escaped a calamity, and met with a better portion. This is the same rite as that which was called in Cansan,

[^124]the death and revival of Adonis or Thamus, who was tho Osiris and Thamas of Egypt."

Again the same anthor observes, (vol. 3. p. 179) "The principal rites in Egypt were confessedly for a person loat, and consigned for a time to darkness; who was at last found. This person I have mentioned to have been described under the character of Obiris. Hence these exclamations at the fesst of Inis: Rurekamen Sugcharomen. [We have found him, and we rejoice together.]
"AfterOsiris had been reputed for some time lost, it wasa oustom among the Egyptians to go in quest of him; and the process, as deecribed by Platarch, wes very remarkable; upon the nineteenth of the month, the Egyptians go down at night to the sea, at which time the priests and supporters (the Paterm) carry the sacred vehicle. In this is a golden vessel in the form of a ahip, or boat, into whioh they pour some of the river water. Upon this being performed, a shont of joy is raised, and Oriris is supposed to be found. ${ }^{n}$

The blaze of the gum-camphor of masonry seems more appropriate than the above, to typify the restoration of the lost man.

The last verse of the song cited sbove, contains s besutiful allusion to the masonic trinity; and at the same time forcibly conveys the ides that the writer meant, by the eatablishment of the great institution, the creation of the world, planned by infiaite wisdom, sapported by atrength, and sdorned by besuty.

## Jubilee at Rome.

The church of Rome practices a rite very similar to that of the masonic order in laying the cope-stone. It is called the Jubilee, sud the manner of performing it, says Bsiley, is es follows:-
"The Pope goes to 8t. Peter's church to open what they call the holy gate, knocking at it three times with a golden hammer, reposting the 19th verse of the 118th pesalm, "Open to mo the gates of righteoneneas, and I will go unto them and praise the Lord." At this time the masong break down the wall, and the pope kneels before it, while the penitentiaries of St . Peter wash him with holy water, then taking up the croas, he begins to sing the $T e$ Deum, and enters the ohuroh, the clergy following him.
is In the mean time the cardinal legatea are eent to open the three other holy gates, with the same ceremonies, in the churches of St. John of Lateran, St, Panl, and St. Mary the Greater. This is performed at the first vespers of Christmas eve, and the next morning the pope gives his benediction to the people in the Jubilee form. When the holy year Is eoding, they shnt the gates again in the following manner; the pope, after he has blessed the atones and mortar, lays the first stone, and leaves there twelve boxes of gold and silver medals.
"Formerly much people resorted from all parts to Rome, to enjoy the Benefits of the jabilee, but now-a-days but fow, except those who dwoll in Italy, the Pope allowing them to observe the Jubilee in their own country, granting the same benefits as if they came to Bome."

There can be no possible meaning in this eeremoay, unlees an mutronomical bearing be attributed to it, by considering the foar ratea as symbols of the equinoctial and soletitial points, which by the pagans were denominated gatee of heaven; and throagh which sonls were mapposed to pass to arrive at the manaions of blias. And as the popes hofd the keys of these gates, it is kind in them occesionally to open them, In order to admit a fow at loest of their own flook.

The twelve boxes of medsin deposited by his holiness, are emblematical of the twolve sigus of the zodiac; which he, perhaps, considera, so reating places on his celestial turnpike.

This farce is still continued at Rome, of whioh a late traveller in Italy gives the following account:-

## Closing the holy door.

At four o'olock on the day of the Jubilee, the sound of trumpete wea heard; in the midat of a procession which iesued from the church, per sing through the holy door, was his holinese the pope, clothed in white robes, and wearing a golden mitre. He seated himeelf on his shitip throne, and remained quiet for a minate or two. He then deecended from his throve and performed some caremonies or mummeries. I siocerely pitied the poor old man; he looked the piotare of death, and had been raised from his bed to personate St. Peter; he appesred to sink under the weight of his robes; his cumbrous miltre oppreseed his aobing head; he raised his heavy eyes and held up his skinny fingers, and seemed to say,-"How painful are hypocrisy, folly, and frand, to a siak and dying man." The cardinals came about him in a fawning manner, and changed for him a part of his dress. At the closing of the holy door, we were somewhat dissppointed. We beheld only the feeble pattering of an impotant old man. He blessed the golden trowel and its handle of mother-of-pesrl; he blessed the mortar and the bricks. He contrived to lay three bricks in the holy doorway, asing his holy mortar sparingly as though it were lip-salve. The door-way being then cloeed, a white satin cartain, decorated with a croas in golden embroidery, was drawn over it. The holy father, with as much theatrical jeaticulation as he was capable of, gave hie bleseing, which concluded the farce of closing the holy door.

The opening and closing of the holy gates or doors must be an annual ceromony, and therefore differs from what is generally called the Jubilee.

Jubilees were formerly celebrated by the Jews every fiftieth year. Pope Sextus IV. in 1475, appointed it to be held every twenty-fift year, to give a greater chance for every person to receive the benefit of It once in his life. They afterwards became more frequent, and the popes granted them as often as the-church, or themselves, had occasion for them. There is uaually ove at the inauguration of a new pope, At these Jubilees the pope grants full pardon to all sinners who are present at their celebration.-See Rees ${ }^{\circ}$ Cycl.

We hase seen in the masonio ceremonles a constant roiteration of the
number three, and sometimes thrioe repeated, which is called giving the grand honours of masonry. There must have been some canse or reason for this custom, now unknown. And I will ventare to say that (as suggested by the author of the Defence of Ereemasonry, before noticed), fts origiaal intention was in honour and out of reverence to the anclent trinity. The practice seems to be kept up by the oharch of Rome, which goes to corroborate this opinion. One of the rules established by the reverend mother abbees of the Ursaline Convent at Charlestown, as reported by Miss Reed, one of the novices in that institution, is, "before entering the room to give three knocks on the door, accompsnied with some religious ejeculation, and wait until they are anowered by three from within." The mason will see that this is an exact copy of his rules and practice.

The reader has observed that the number aix, in the degree under sonsideration, is particulerly respected. In the opening seenes of initiations, not noticed above, the candidate is prepared with a rope wound six times round his body, and is then conduoted to the door of the lodge, agsinst which he gives six distinct knocks, which are avswered by the same namber from within; and when edmitted, he is walked six times round the lodge, moving with the sun. On the contrary, the brethran more advanced, form a procession, as mbove stated, and march six times round the lodge, against the course of the san. Masons from habit pese through these ceremonies, without atopping to examine into their meaning and original intention.

The Druids also paid grest veneration to the number six. "As to what remaine, zays Mayo,-vol. If. p. 289, reapecting the superstitions of the Druids, I know not what was the foundation of the religious respect which they had for the number six; but it is certain they preferred it to all other numbers. It was the eixth day of the moon that they performed their principal ceremonies of religion, and that they began the year. They went six in number to gather the misseltoo; knd in monuments now extant, we often find six of these priests together."

In every movement of the masonic order we discover traits of ita derivation from a religion founded on astronomy. The Egyptians worshipped astronomy. They were the first people known to have acquired a knowledge of it. Their priests, shut up in the labyrinth, had ngthing else to do but to study the movementa of the heavenly bodies, and they sommunicated their discoverica in ench a manner as to be incomprehensible to the common people.

So in masonry; the novice fs marched round the lodge in conformity to the apparent movement of the sun; but afterwards the direction of the proceasion is reversed, showing that this appearauce is produced by the sotual movement of the earth, from west to east, round the man. But this explanation is not given, and consequently the perport of tho ceremony is not understood by the brethren.

Making the processions six times round the lodge is in honour of the ifx benevolent divinities of the upper hemisphere. Volney, in treating
of the notions the Perrians had of the fatare world, and that p is pleced under the equator, with this singular attribato, that in bleseed cast no ahade, observes, "Thero is on this sabject a pan Platarch no intereating and oxplanatory of the whole of this ayste we ohall cite It entire; having obeerved that the theory of good a had at all times ocenpied the attention of nataralista and theo he adds:-"Many suppote there sre two gode of opposite incli one delighting in good, the other in evil ; the first of these is cal ticularly by the name of God, the second by that of Genius or Zoroaster has denominated them Oromaze and Ahrimanes, and I that of whatever falls under the cogoizanoe of our sensen, ligh best representative of the one, and darkness and ignorance of th He adds that Mithra is an intermediate being, and it is for thin that the Persisas call Mithra the Mediator or intercessor.

- The Porsians aleo asy that Oromaze was born or formed oul parest light ; Ahrimanee, on the contrary, out of the thickest de that Oromaze made aix gode as good as himself, and Ahrimanes to them six wicked oues. That afterwarda Oromase trebled: (Hermes tri-megistas), and removed to a distance remote fn earth; that he there formed stare, and among others, Syrius, wi placed in the heavens as a guard and sentinel. He made also i four other gods, whom he inclosed in an egg; but Ahrimanes cre equal number who cracked the egg, and from that moment go evil were mixed (in the noiverse). But Ahrimanes is one da; conquered, and the earth to be made equal and smooth, that $i$ may live happy."

## Royal Arch Degree.

The roysl arch degree seems not to have been known to w called modern masons ss late as about 1750 . That portion of freemasons who met at the famous Apple Tree tavern, in 17 formed the society upon somewhat new principles; that is, so $f_{i}$ admit into fellowship indiscriminstely respectable individusls of fessions, were denominated by the non-adherents to this plan 1 masons. Thie affisir caused the division of the masonic society it parties, which contipued till 1818, pearly ode hundred years. ; rivalry ocossioned by this schism, masonry, it is presumed, is indebted to the great celebrity it has obtsined in the world.

It appears that the nonconformists to this new scheme, who con themselves the orthodox party, by rummaging among the old ret the order, first diacovered the royal arch degree, which had pi lain dormant for centuries. During which time, it would appe society had been confined almoot exclutively to operative mason continued the ceremonies only of the apprentice, fellow-craft or jc man, and master mason, these being deemed sppropriste u oecupation.

This fact Dermott proves, by the production of an answer of Syencer, one of the grand secretaries of a lodgo of modern mal
en application of W. C., \& petitioner from Ireland ; whioh is as fole Jows:-
"Your being au anclent mason, you are not entitled to any of oor oharity. The ancient masons have a lodge at the Eive Bolls in the Strand, and their secretary's name is Dermott.-Our society is neither arch, royal arch, nor ancient, so that you have no right to pertake of our charity."
"Such," says Dermott, "was the character given of them by their own grand secretary, about fourteen years ago."-Dermott published his book in 1764.

If the knowledge communicated in this degree had not been recovered, the loss to the society would have been incalculable, provided its value be not overrrated in the following eatimation of it by manonic writers:-

Webb says :-"This degree is indescribably more angust, sublime, and important, than all which precede it; and is the anmmit and perfection of ancient masonry. It impresses on our minds a belief of the being and existence of a Supreme Deity, without begianing of days or end of yesrs; and ieminds us of the reverence due to his holy name." Dermott calls it the root, heart, and marrow of masonry.

Cole sdopts the following sentiment of a brother meson:-"In the B. A. [royal arch] mason's degree I beheld myself exalted to the topof Pisgah, an extensive scene opened to my view of the glory snd goodnees of the M. E. H. P. [most excellent high prieat] of our salvation. I dug deep for hidden treasures, foond them, and regained the omnifio word."
"If we pase on to the royal arch," says the Rev. G. Oliver, in his Lectures on Freemasonry, "we receive a wonderful accession of knowledge, and find everything made perfect; for thlo is the ne plue ultra of masonry, and can never be exceeded by any hnman inatitution."

By the manner in which this aubject is treated, it would seem that a mason is aupposed to be ignorant of the existence of the one Supreme Being till adnitted into the royal aroh. This arisee from copying after an institution eatablished when this doctrine was not tanght io the common people. Polytheiam was the prevailing rellgion. The one Supreme was revealed only to a select number who were initiated inte the greater mysteriee, the royal arch of the ancients.

The members of this degree are denominated companions, and are "entitled to a foll explanstion of the mysteries of the order;" whereas, in the former degrees they are recognised by the common farailiar appellation of brothers, and kept in a state of profound ignorance of the sublime secret which is dieoloeed in this ohapter. This accords with the custom of Pythagoras, who thus distinguished his pupils. After a probation of five years, as before stated, they were admitted into the presence of the preceptor, alled his companions, and permitted freely to converse with him. Previonsly to the expiration of this term, he delivered his instructions to them from behind a soreen.

The royal aroh degres owes ite title to the imaginary arch made in the heavens by the course of king Osiris, the sun, from the vernal to the
autumnal equinox. The signs through whioh be pesses in forming the semicircle, including those of the equinozes, being seven, the numbi of gredee or stope required to be taken by the meson to eutitle him to the honoure of this degree.

Thin order is called a ohapter, which requiren nine officers; the pre dipal of which are thres, who compose what is called the grand counci, and one denominated captain of the host.

There le, or ahould be, when convenient, an orgen in the room in $\alpha$ which the chapter is held. The companiona onter the chapter in procession. At the entrance each gives the sign of sorrow, which is dons by bowing the heed and body, placing the right bavd ou the forebeed, Thls sign is ropested an they approsch the altar. Thoy then plaos thet scoptres in their left hends, with the right on the left bresat, and mubs the following declaration :-In the beginning was the word ; and the word was with God; and the word was God. The sign of sorrow is now given the third time, and each sdrances to his proper place. They ero $s 0$ arranged as to form an arch or semicircle.- Carlile.]

The sorrow here expressed, is an imitation of that of the ancienta for the Joss of the word, logob, or Oairis, pereonated by Hiram. The use of the organ agrees with the ancient manner of celebrating the orgies, and is in accordance with the custom of the Pytbagoresen school. The semioirole formed by the companions confirms my opinion in regard to the name of thia degree.

The grand council aonsists of the most excellent high priest, king, and holy scribe. The high priest is dreased in a white robe, with a breast-plate of cut glass, consisting of twelve pieces [to represent the twelve signs of the zodiac], an apron and a mitre. The king weara a ecarlet robe, apron and crown. The mitre and crown are generally made of pasteboard; sometimes they are made of most aplendid matorisis, gold and silver volvet; but these are kept for public occasions Tho mitre has the words Holiness to the Lord, in gold letters, acroes the forehoad. The acribe wears s purple robe, apron and turban.

The colour of the robes worn by the respective members of the grand council, the reader may be assared, has not been fixed upon through the mere fancy of the masonic order. There must be a mytbological arthority to aanction it.-The ancient aatrologers, eays the most learned ot the Jews (Maimonides), haviog oonsecrated to each planet a colour, an animal, a tree, a metal, a fruit, a plant, formed from them all a figure or representation of the star, taking care to select for the purpose a proper moment, a fortunate dsy, such as the conjunction or some olher favourable aspect; they conceived that by their (magio) ceremonies they coald introdace into those figares or idola the influences of the superiar beings after which they were modelled. These were the idols that the

- Chaldean Babeanas adored; and in the performance of their worship they were obliged to be dressed in the proper colour-T.Thus, the antrologers, by their practices, introduced idolatry, deairous of being regaried 20 the dispensers of the favours of heaven.
' The Egyptians, says Porphyry, call Kneph the intelligenoe, or affiit cause (of the univeree). They represent him under the form of an in deep bluc, (the colour of the sky,) having in his hand a sceptre, elt round his body, and a amall bonnet-royal of light feathers on his d , to denote how very aubtle and fugacious the iden of that being Upon which I shall obeerve that Kneph, in Hebrew, aignifles a wing, ather, and that this colour of sky blue is to be found in the majority he Indian gods, and is, under the name of sarayan, one of their most inguished epitheta,-See Ruins, p. 230-234. ?orphyry, I presume, is mistaken in supposing this god dressed in bluo, ye Kneph; for as he was the Supreme God of the Egyptians, hia per dreess would be white.
${ }^{1}$ The Roman Catholic cerdinals (says Mr. Back, in his Theol. Dict.) ss in scarlet, to signify that they ought to be ready to shed their xd for the faith and charch, when the defence and honour of either nire it." This, I imagine, is a mere conjecture, and not founded in - The custom, has doubtless, an astronomical bearing. The pope, gala days, is clothed in a white robe, wearing a golden mitre, and fa ied on his white throne; and as the cardinslosare escond in rank, like king in the royal arch, their appropriate colour is, no doubt, scarlet. The habit required for the person representing the sun, in the Dyoniimysteries, says Taylor, is thus described in the Orphic versee prered by Macrobeus in the first book of his Saturnalia, cep. 18.

He who desirse in pomp of sacred dress The san's resplendent body to express, Should first a vell eseumo of purple bright, Like filr white beams combli'd with fiery Hight
On hlaright thoulder, next, a mule's brosd bide, Widely diverilied with apotted pride Ehould hang, an lmage of the pole divins, And diedal stars, whose orbe eternal shine. A golden splendid zone, thon, o or the Feat Ho nest should throw, and blod it roand his breast; In mighty token, how with goldea light, The rising sus, from earth's last bounds and night Budden emerges, and, with matohleas force, Darts through old Ocens'e billowis in hls coarte. A boundless spleador henos, onshrin'd in dew, Plays on bie whrlpoole, gloriona to tho view; While his circumineent waters apread abroad, Fuli in the presence of the ridiant god: But Ocean's oircle, Like a sone of light, The run's wide boocen girds, and eharms the wond'ring sight. Elens, and Bac. Mysk p. 160,

The officers and companions of the chapter being stationed, the high st says, Compsulons, I am about to open a chapter of royal arch ons, and will thank you for your attention and assistance. If thore by person present who is not a royal arch mason, he is requested to re. Companion captain of the host, the first care of congregated ions ?-Csptaln. To see the tabernacle duly guarded. High prient. end to that part of your daty. The captain of the boat stations the
guard at the ontaide of the door, gives him his ordera, clowes the and makes an alarm of three times three, on the inaide, to asc that the guard is on his poet; the guard answers by nine correspo raps; the exptain then gives one, and the goard does the same thon reports that the chapter is duly goarded, by a companion degree at the onter avenue, with a drawn swerd in his hand. Thi priest then gives two raps with his gavel, and asks the following tions:-Captain of the hoet, are you a royal arch mason?-I am, am. How shall I know you to be a royal aroh mason?-By three three. He thus proceeds, as is done in the other degrees, to di the stations and duties of the oficers of the chapter; which follows :-

The captain of the host is atationed at the right hand of the conncil, to receive their orders, and see them duly executed.

The atation of the princinal sojourner is at the left hand of the council, to bring the blind by a way they kaow not, to lead th patha they have not known, to make darkness light before then arooked things straight.*

The duties of the two lest mentioned officers, in the ancient teries, appertain to one character, Mercury, who was the messeny the gods, and the conductor of sonls to the other world, throug dark regions below.

The royal arch, like the grester mysteries, contains a scenical : sentation of a journey from this world to the next. In the way as guarded passes, called vails, emblematical of the equinuxes and sol allegorically denominated gates of heaven, through which lies the course.

Three of the officers atstioned at theee passes, are called granc ters of the first, second, and third vail, who require certein toker pass-words of the candidates on their admission through them. fourth officer is styled royal arch eaptain. He is atationed at the vail, or entrance of the sanctum sanctorum, to goard the sami eee that none pass but such ss are duly qualified, and have the pass-words and signet of truth. The colours of their seversi b. are, the first blue, the second parple, the third red, and the white; which have the eame astronomioal reference as the dresses

[^125]grand council. The white banner, as masonry aseerts, in emblematical of that purity of heart, and rectitnde of conduct, whioh in esseantial to obtain admiasion into the divine sanctum eanctorum abore.

In the duty assigned to the royal atch captain, there is evidently an ellusion to that required of the "severe and incorraptible boatman, Cheroa," who was prohibited from transporting souls acroes the lake or river Acheron to the Elysian fielde, the heaven of the ancients, without the signet of the jadges, who were appointed to examine into the oharacters of the deceased, and to allow or withhold their permission eecordingly. - "To arrive at Tartarus, or Elysium, souls were obliged to cross the rivers Styx and Acheron, in the boat of the ferryman Charon, and to pass through the gates of hom or ivory, guarded by the dog Carberus." (Ruins, p. 148.)

Nine companions must be present at the opening of a royal arch chapter. Not more nor less than thres are permitted to take this degree et the same time. The candidates are prepared by tying a bandage over their eyes, and coiling a rope seven times round the body of each, which anites them together, with three feet of alack rope between them.

Thus prepared, they are led into the royal arch chapter; which, they weotd, is dedicated to enlighten those that are in darknees, and to show Forth the way, the fruth, and the life.

On entering the chapter they pass under what is called a living arch, which is formed by a number of companions arranging themselves on both sides of the door, each joining hande with the one opposite to himoolf. The conductor ssyy, stoop low, brothers; remember that he that hambleth himself shall be exalted; stoop low, brothers, stoop low; we are about to enter the arch; which is raised up for him, but lowered when the candidates come under it. They seldom pass the first pair of bands without being obliged to support themselves on their hands and knees. Their progress may well be imagined to be very slow; for, notwithstanding their humble condition, they are under the necessity of sastaining on their backs nearly the whole weight of the living arch ebove. The conductor, to encourage them, calls out occasionally, stoop low, brothers, stoop low! If they go too slow to suit the companions, it is not unusual for some one to apply a sharp point to their bodies, to arge them on; after they have endured this humilisting exercise as long sa auits the covenience of the companions, they pass from under the - tiving aroh.

The reader will readily perceive that this scene ls an imitation of the trials of the greater mysteries; and, although a faint one, the likepess is too apparent to be mistaken. It was anciently a religious rite, (and the ceremony bas outlived the principle that produced it.

Having got through the sroh, the candidstes are conducted once round the chapter, snd directed to kneel at the altar to receive the obligation. The principal sojourner then thus addresses them:-Brethren, as you advance in masonry, your obligation becomes mare binding. You are now kneeling at the altar for the eeventh time, and about to take a eolemn oath or obligation: If you are willing to proceed, say after me:-
I. A. B., of my own free will and accord, in preeenes of Almighty 6 and this chapter of royal arch masons, orected to God, and dedicates Zerubbabel, do hereby, eto. At the conclusion of the oath, the ew detes kise tho book seven times.

Here the farco of dedication to St. John, which was originally inten sa aheer hoax upon the mystics of the minor degrees, is no longert thaned. I shall hereafter endeavour to analyze the nsme of Zerubbe

The candidater are now conducted once round the chapter, directed to kneel; while the sojoumer reads a prayer. (See We Monitor, p. 184.)

After prayer, the prinoipal eojourner says, "Companions, arioo, follow me."
He conducts them once round the chapter, during which time reade from Exodus, iil, 1-6.
"Now Moses kept the flock of Jethro, his father-in-law, the pr of Midian; and he led the flock to the back side of the desert, and ea to the mountain of God, even Horeb. And the angel of the Lord peared unto him in a flame of fire, out of the midst of the bush; and looked, and behold the bush burned with fire, and the bugh was consumed."

By the time this resding is ended, the candidates have arrived in it of a representation of the burning bush, placed in a corner of the chap when the principal eojourner directs them to halt, and slips op bandage from their eyes.

A companion who performe this part of the scene, vize, personat Deity, stepe behind the burning bush, and calls ont vehemently, "Mot Moses ! ${ }^{1 "}$ The principal вojourner answers for tae candidates, "日 an I."

The companion behind the bush exclaims atill more vehemen - Draw not nigh hither; put off thy shoea from thy feet, for the pl where thou standest is holy ground. [Their shoes are now taken $c$ I sm the God of thy fathers, the God of Abraham, the God of Isanc, the God of Jacob.'

The principal sojourner then directs them to kneel down and ec their faces, and asys, "And Moses hid his face, for he was afraid to l upon God.'

The principal sojourner then says to the candidates, 'Arise and low me,' and leads them three times round the chapter, during wh time he reads from 2 Chron. c. 35-v. 11-20,

The terror in which the initiated into the ancient mysteries . thrown, by the counterfeiting of thunder, lightaing, etc., is here im ted. This occurs after the words, "and brake down the wall of Je salem;" the companions then make a tremendons noise, by firing piot clashing swords, overturning chairs, rolling cannon balle across the fil etc. The candidates being blindfolded, mast of course be surprised t terrified at such a ecene.

In the meantime, the candidates are thrown down, bound, 1 dragged ont into the preparation room, and the door closed. On be
bronght again into the chapter, they pass under the living areh. This is formed on one eide of the hall or chapter; on the other side is what is called the rugged road, which is generally made of blocks of wood, old chairs, benches, etc. The conductor consoles the candidates, by obeerving, this is the way many great and good men have travelled hefore you; never deeming it derogatory to their dignity to level themselves with the fraternity. I have often travelled thia road from Babylon to Jerusalem, and generally find it rough and ragged. However, I think I never ssw it much smoother than it is at the present time.

By this time, the candidates have stumbled over the ragged road, and arrived agsin at the entrance of the living arch. The conductor eays, companions there is a very difficult and dangerons pan shead, تhich Iles directly in onr way. Before we sttempt to pass it, we must kneel down end pray.

Bundry prayers and paasages of scriptare are recited before the rogged path is got rid of. There are clauses in one of them, which make it appear that it was originally addressed to the oun when in the lower hemisphere, imploring hia retarn to the opper regions, as follows :-
"Hear my prayer, 0 Lord I give ear to my supplications: for the enemy hath persecuted my sonl: he hath made me to dwell in darkness. Therefore is my spirit overwhelmed within me ; my heart within me is desolate. Hear me speedily, O Lord I my apirit fuileth: hide not thy face from $m e$, leat I be like unto them that go down into the pit. Cause me to hear thy loving kindness in the morning; for in thee do I truat. Bring my monl out of tronble. And of thy mercy cut off my enemies; for I am thy servant."

The most appropriate prayor, an regarda the mysteries of masonry, is, perhaps, that recorded by Dermott, which is used in the lodge of Jewish rreemasons.
"O Lord, excellent art thou in thy truth, and there ie nothing great In comparison to thee; for thine ia the praise, from all the works of thy hands, for evermore.
"Enlighten 08, we beseech thee, in the true knowledge of masonry; by the sorrows of Adsm, thy first-made man; by the blood of Abel, the holy one; by the righteouspess of Seth, in whom thou srt well plessed; and by thy covenant with Nosh, in whose architectare thou Was pleased to save the seed of thy beloved; number us not among those that know not thy statates, nor the divine mysteries of the secret Cabala.*
"But grant, we beseech theo, that the ruler of this lodge may be endued with knowledge and wisdom, to instruct us and explain his wecret mysteries, as our holy brother Moses $\dagger$ did, in his lodge, to Aeron,

[^126]to Eleasar, and Ithamar, the sons of Aaron, and the seventy of Istael.
"And grant that we may understand, learn, and keep all th tntes and commandments of the Lord, and this holy mystery, pu undefiled unto our lives' end. Amen, Lord."

The candidatee after having passed the four vails, by giving th and pass-words appropriated to esoh, are admitted into the prese the grand council, by means of a signet, being a triangular piece of with the word $Z o r-u b b a-b e l$ engraved upon it.

I have had the curioolty to look into the derivation and meat the word Zer-abberbel. $A s$ it is a compounded word, some of it poands are of coarse abbrevisted. Zer, it is Iikely, is a contract worah, which means east, brightnees: ubbs is probshly a corrup $a b b a$, father, which the Deity is sometimes styled ; and bel is well | to mean the sun, or lord. Zerubbabel is defined, dispersion of coni

What could more clearly point out the glorious luminary o rieing in the east, and diapersing the clonds and darknese? H ought, of course, to entitle the bearer to admittance into the ac sanctorum.

Finally, the grand council, being astisfied as to the pretensions ondidates, directs them to repair to the north-west coruer of the of the old temple, and commence removing the rabbish, to lo foundation of the new. (The reader will remember, that it was north-west that the Deity was supposed to have commenced bis tions in the erection of the world.) While thus engaged, they di a secret vault, in which is found the key stone of the arch; whi the by, had already been put in its place, in the preceding degree. a second descent of one of the party, he discovers a small box or standing on a pedeatal, carionely wrought and overlaid with gol involuntarily found his hand raised to guard his eyes from the i: light and heat reflected from it. This proved to be the ark, cont the lost word, logos, or san; which acconuts for the intense ligl

[^127]

The Candidates passing under the Living Arch; aiso, the descent of a Companton into the rualt of Nine Arches.
heat reflected from it.* It contained also, the book of the law-Aaroh rod-a pot of manns, and a ley to the ineffiable characters of this degra

This ark of masonry is but a copy of the old myateriona cheat of the ancient Egyptians; which, among other monuments of the ancies state of mankind, contained "scorns, heads of poppies, bay-berries, branches of fig-tree," etc.; which, like the manns of the Jews, ano said to have served as their main sustenance in the early ages of the world.

Although the masons pretend to inherit Aaron's rod, in their handa al has lost its mirseulous powers. And as to the book of the law, by which modern masons, at lesst, mean the law of Moser, it was not in the Jowinh ark; for, according to 1 Kings, c. 8, v. 9," There was nothing in the ark save the two tables of stone."

The following questions and answers ocerr, in what is called lectores, after the ceremonies of initiation are passed; which are, in fact, atatoments of what had been before detailed. I have endeavoured to aroid repetitions, by previously omitting pert of what takes place at initiatioss

After receiving the obligation, what was asid to you? We were told that we were now obligsted and received as royal arch masons, but as this degree was infinitely more important than any of the preceding, it was necessary for us to pass throngh many trisls, and to travel in rough and rugged ways, to prove our fidelity, before we could be entrusted with the more important secrets of this degree. We were further told, that, though we could not discover the path we wers to travel, we were under the direction of a faithful guide, who would bring the blind by a way they know not, and lead them in paths they had not known; who would make darkness light befory them, and crooked thinge straight; who would do these things, and not forsake them. (See Isa. 42, v, 16.) Follow your leader and fear no danger. Let your advance be by seven solemn steps, and at each atep you must halt and make obeisance, with the awe and reverence suited to this grand and solemn occasion, for every step brings you nesrer to the sacred nsme of God.

The following remarks of Plato, in his "Pbæsdon, or Dislogue on the Immortality of the Soul," will tend to explain the inference intended to be drawn from the above passage, by showing the idea entertained by the ancients in regard to the difficalties to be encountered in the journey to the other world; to which the extract from Isaiah is here made to apply.
"If the soul Is Immortal, it stands in need of cultivation and improve-

[^128]mont, not only in the time that we call the time of life, bat for the future, or what we call the time of eternity. For if you think justly upon this point, you will find it very dangerous to neglect the eoal. Were death the diesolution of the whole man, it would be a great advantage to the wioked after death, to be rid at once of their body, their sonl, and their vices. But forammuch as the soal is immortal, the only way to avoid those evils and obtain salvation, is to become good and wise. For it carries nothing along with it but its good or bad actions, and its virtues or vices, which are the cause of its eternal happiness or eisery, commenoing from the first minute of its arrival in the other world. And it is said, that after the death of every individual perion, the demon or genius that was partner with it, and conducted it during life, Jeads it to a certain place, where all the dead are obliged to appoar in order to be judged, and from thence are conducted by a gaide to the world below. And after they have there received their good or bad deeerts, and continned there their sppointed time, another conductor brings them back to this life, after several revolutions of ages. Now thia road is not a plain road, else there would be no occasion for guides, and nobody miss their way. But there are several by-ways and croesways, as I conjecture from the method of their sacrifices and religious ceremonies. So that a temperate wise soul follows its gaide, and is not ignorant of what happens to it; but the soul that is nailed to its body. that is inflamed with the love of it, and has bean long its alave, afler much struggling and suffering in this visible world, is at last dragged along againet ite will by the demon allotted for its gride. And when it arrives at that fatal rendezvous of all souls, if it has been guilty of any impurity, or polluted with murder, or has committed any of those atrocioun crimes that desperate and loat eouls are commonly guilty of, the other sonls abhor it and avoid ita company. It finds neither companion nor guide, bat wanders in a fearfal solitnde and horrible desert; till after a certain time, neosesity drags it into the mansiona it deserve.. Whereas the temperate and pure soul has the gods themselves for its guides and conductors, and goes to cohabit with them in the mansions of pleasure prepared for it."

What further was eaid to you? The high prieet firet read the following peessge (Exodus, vi. 2, 3)-"And God spuke nnto Moees, and gaid unto him, I am the Lord, and I appeared unto Abrahem, unto Iseec, and anto Jacob, by the nsme of God Almighty, bat by my name Jehovah was I not known to them."

He then informed us that the pame of Deity, the divine Logos, or word, to which reference is had in John (1, v. 1-5) "In the beginning was the word [Logos], and the word was with God, and the word was God; the same was in the beginning with God: all things were made by him, and without him wes not any thing made that was made; in him was life, and the life was the light of men: and the light shineth In darkness, and the darkness comprehended it not." That this Logos, or word, was anciently written only in these secred chsraoten (showing bem), and thes preedrved from one generation to another. That this

Wen the true mesonio word, which was lost in the death of Biram AM and was reatored at the building of tho temple, in the menner we hel at that time ausisted to represent.

Here the whole mystery of masonry in unveiled; here in a candid confession of what the masons had been so long in search of, Fhich provee to be the lost Logos, the aecond person in the pagan trinity. Logoa is the aame as Osiris, the sonp, considered as the Derniargus, the maker of the world, under the direction of the Saprome Being.

It has been asserted by Dr. Prieetly and others, that the above pesasge in John is an interpolation ; and the use here made of it, by an institution derived from paganiam, corroborates tho faot.
"Thooe who believe that the Logos was the personifieation of the divine intellect, or of the divine attrihates of wisdom, power, ato., traco this doctrine to the anolent Platoniate; from whom, as they concelve, it was adopted by the Ohristian fathers." "* "In the writinge of Plato, Logoe has two acceptations, vis., thowe of speech, and of reason, such as is found in man. But when this philonopher apeaks of nous of Logus, es something distinct from the Divine Being himself, as a power or property belonging to him, and all divine powers and properties being substance, it would be very natural and easy to transform this divine power into a substantial person; and this we shall find to have been the case with respect to the lattor Platonists, agreeably to one of the Platovic maxims, vis., that being and energy are the same thing."(Rees' Cyol.)
"Never any philowophy was so fasbionable as that of Plato during the first agos of the church. The Pagans intereated themeelves amongin all the different eects of philosophers, bat the conformity whioh Plato's was found to have with religion, made almost all the knowing Christians of that sect. Thence came the mighty eateem they had of Plato; they looked upon him as a sort of prophet who had foretold many important points of Christianity, especially that of the holy Trinity: nay, they went so far es to take bis worke for commenta on the earipture; and to conceive the nature of the Word, as be conceived it. He reprosented God so elevated above his creatures, that he did not believe that they were immedistely made by his hands; and therefore he put between them and him this Word, as a degree hy which the actions of God might pess down to them; the Christians had the like lidea of Jesces Christ; and this masy perhape be the reason why no heresy has been more generally received and msintained with greater heat than Arrianism.

This Platonism then (which seems to honour the Chriatian religioo by countenancing it) was very full of notions about Demons; and thenoe they easily passed fnto that opinion which the old Christians hed of oracles.

Plato said that Demons were of a middle nature, between God and man; that they were the aerial genii appointed to hold a commeree between God and us; that although they were near us, yet we could not see them; that they penetratedinto all our thoughts; that they had
a love for the good, and a hatred for the had; and that It was for their honoar thet such variety of sacrifices, and so many different ceremonies were appointed; but it does not at all appear that Plato acknowledged any evil demons, to which might be altribnted the managoment of the illusions of oracles. Plutareh, notwithatanding, esaures ua that Plato was not ignorant of them ; and amongst the Platonic philosophers, the thing is out of doubt. Ensebiue, in his Evangelical Preparatione, recites a great number of pasaages out of Porphyrius, where that Pagen philosopher assures us, that evil demons are the anthors of enchantments, philtres, and witch-crafts ; that they choat our oyes with spectree, phantoms, and apparitions; that lying is eesential to their natare; that they raise in us the greater part of our pasgions; and that they have an ambition to pass with ue for gods; that their serial and spiritual bodleo are nourished with suffamigations, and with the blood and fat of sacrifices; and that it is only thees that employ themselves in giving oracles, and to whom this tank so fall of frand is asaigned: in short, at the hemd of this troop of evil demons he places Hecale and Sorapis.

Jamblichus, another Platonist, has said as much. And the groaleet part of these things being true, the Christians received them all with joy, and have added to them beeides a little of their own, as, for example, that the demons atole from the writings of the prophete some knowledge of the things to come, and so got honour by it in their oraclea.

This system of the ancient Christians had this advantage, that it discovered to the Pagans, by their own principles, the original of their false worship, and the source of those errons which they always embraoed. They were persuaded that there was something supernatural in their oracles; and the Christians, who were always disputing againgt them, did not desire to confate this opinion. Thus by demons (which both parties believed to be concerned in the oracles) they explicated all that was supernatural in them. They scknowledged indeed that this sort of ordinary miracles were wrought in the Pagan religion, but then they ruined this advantage again, by imputing them to such authore as ovil spirits. And this way of convincing wea more ohort and easy than to contradict the mirscle itself, by a long train of inquiriee and arguments. Thus I have given you the manner how that opinion whioh the first agee of the churoh had of the Pagan oraoles, was grounded. I might, to the three reasons whioh I have already brought, add a fuarth of no less authority perhape than those; that is, that in the supposition of orsales being given by demons, there is something mirsonlons; and if we consider the humour of mankind a little, we shall find how mnoh we are taken with anything that is miraoulons. But I do not intend to onlarge myself on this reflection; for those that think apon it will easily believe me, and those that do not, will perhape give it no credit, nots, withotanding all my arguments.

The physical propertiea of the sun are plainly set forth in the extrach from John.- The language is in the mystic style of the Platonic sohooland not in the plain, simple manner of the gospol writers ; but notwithetanding, if puc in the shape of intertogetory, "What is that whioh con-
tains the prinolplee that produce life, and is at the ame time the lighe of men $?^{\circ p}$ It would not form a conundrum diffioult of solation.-" Tho Hght ahineth in darkness, and the darkness comprehended it mokn" alludes to a time past, when the sun was enveloped with clonds in either of the tropies; and his extrication and triumph over Typhon, the prines of darkness, was the very cause of the celebration bere imitated by the masons.

Beoides, it is esid, "That was the true light, which lighteth every man that cometh into the world." Now, this oould not properly be said of Chrlot, as it would not apply to those who never heard of hie name; bat is very applicable to the san, which lighteth every one in all parts of the earth.

Mr. Dupuis, taking for granted that the sbove passages are genving that is, actually written by St. John, makes great account of them, as well be might, to prove that Christ and the sun are the same, and 000sequently that Ohristisnity iesun-worship. Ho eays,
"The theology of Orpheus taught that light, the most sncient and the most sublime of all beings, is God, that ineccessible God who envelopes all things in his subetance, and who is called reason (conseil), light and life. Theee theological ideas bave been copied by the evasgelist John, when he said 'That the life wes the light, and the lighs wae the life, and that the light was the Word, or the reason, and the wisdom of God,'"

Again, "The Guebres atill at this day reverence the light as the most beantiful attribute of the divivity. 'Fire, asy they, produced the light, and the light is God." This is the ethereal fire, in which anolant theology placed the substance of the divinity, or universal soul of the world, from whence emanstes light and life, or, to use the expressions of the Christians, the Logos, or the word, which lighteth every man thet cometh into the world, and giveth life to all beings."

But, adroitting the passages above quoted from St. John's gospel, to be interpolations, as I believe has been made evident, the argament of Dupuis, on this head, falls to the ground.

There is much confusion, aiter all, is regard to the omnific word. Whether this was oreated by the original founders of the order, for the purpose of deception, or has been introduced by modern masons, is utknown. After declering the Logos to be the recovered long loet word, another compound name, intended to bear the same import, is anbetstated in its place.

This the English masons call Jao-Bul-On, and the American mesons Jah-Bah-Lan. They both say the word is compounded of the names of Deity in three langusges, Hebrew, Chaldean, and Syriao; leaving Egypt, the mother of the mysteries, from which mesonry is derived, out of the question, although 0 n , which composes part of the componnd word used by English mesons, was one of the names of the Deity peonliar to that country.

Neither Buh nor Lun, it is believed, was ever the name of a Deity in any language; and although the sun was worshipped under the sym-
bolical figure of the ball, either on sccount of his great use in agriculture, or because the celestial sign of the bull was formerly in the vernal equinoz at the opening of the year; yet it is evident that the bull was Hooked upon merely as a symbol, and not as actually constituting the name of the Supreme Being. Wherese Jah-Bel-On, were permanent nsmes, universally, and st all times bestowed upon the Deity, by one or other of the nations above mentioned.
"The ohief varieties of this sscred name [of God] amongst the inhabitants of different nstions (says Oliver,) were Jah-Bel or Baal, and On or Om."
"Bel or Basl, (esya Mayo,) was the eame god with Moloch. Their names, both of which signify the king, the lord, are titles applicable to the sun."

It is not permitted to utter this omnific word above the breath, and thrse companions are required to perform it, each pronouncing a ayliable alternstely. And admitting Jah-bol-on to be the word, one would any Jah, another Bel, and the third On ; and then interchaogeably until each had pronoanced the whole compound. A similar superstition prevails among the Jews, in regard to what is called the Tetragammaton, or word of four letters, whioh, in Hebrew, compose the name Jehovah. The Jews, however, are not permitted to pronounce this name, even by dividing the syllables in the manner of the companions of royal arch masonry.

The very attribute given to the lost word, onmific, (all creating,) indicaten the Demiurgas, the Creator of the world, which, as before observed, was believed by the sacients to be the sun.

It was of no importance to inveetigate the comporition of the omnifio word of masonry, any further then to show that in all the movements of the order, the san is kept constantly in view; and that the loat master mason's word meant nothing bat the lost influence of that luminary, when in his greatest northern, or southern declination.

But to return to the lecture: it is atated by the candidatee, that the high priest placed crowns upon their heads, and told them they were now invested with all the important secrets of this degree, crowned and received as worthy companions, royal arch masons.

This custom, it has been ohown, is not without authority, or precedent, in the ascient mysteries.

I will repeat, from Dupuis, the purport and end of the mysteries :"The mystagogues make darknese and light succeseively to appear before the syes of the initiates. Night the most obacure, accompanied with frightful opectres, is replaced by a brilliant day, whoee light environs the statue of the divinity. This eanctuary is approached with trembling, where all was prepared to exhibit the spectecle of Tartarus and Elysium. It is in this late stage that the initiated, boing uiltimately inducted, perceives the picture of beantiful prsiries enlightened by a elear aly ; there he hears harmonious voloes, and the charming songa of the sacred choirs. It is then that, beoome absolutely free and disfranchised from all evil, he mixes with the crowd of the initiates, and when
his head belng crowned with flowers, he colebrates the holy orgies win them.
"Thus the ancionts represented here below, in thoir initiations, that which would, they said, ove day happen to souls when thoy should be disengaged from bodies, and drawn from the obecuse prieon in which deasiny had enchained them in uniting them to terrestrial mattor."(Orig. de tons les Cultes, p. 501.)

As this orowning is the olooing ceremony of initistions into the mysteries, so is its imitation in the royal aroh inoluded in the last act of the drama of ancient freemasonry.

The following addresa, copied from Webb's Freemason's Monitor, is delivered to the newly initiated companion:-
"Worthy companion, by the consent and assistance of the members of this ohapter, yon are now exalted to the aublime and honoarable degree of a royal arch mason. Having attained this degree, you have arived at the sammit and perfection of ancient masonry, and are consequently entitled to a full explanation of the myateries of the order.
"The rites and mysteries developed in this degree have been handod down through a chosen few, unchanged by time, and uncontrolled by prejadice; and we expect and truat they will be regarded by you with the same veneration, and trausmitted with the seme eorapolons purlty to your succeseors.
"No one can reflect on the ceremonies of gaining admission into thin place, without being forcibly strack with the important leanons which they teach.
"Here we are necesasrily led to contemplate with gratitude and admiration the secred source from whence all earthly comforts flow; here we find additional inducensents to continue steadfast and immoveable in the discharge of our reopective duties ; and here we are boand, by the mont solemnities, to promote aoch other's welfare, and corroct each other's failing ${ }^{9}$, by advice, sdmonition, and reproof."

I shall conclade the notice of this chapter with a fev remarks on the Jewel and Badge of the order. The following is an abridgment of a description given by Carlile :-

The jewel is composed of two interseoting triangles, surrounding another triangle, with the sun in the centre, an emblem of the Deity.*

T, which is the royal arch mason's badge ; by which the wearer aso knowledges himself the servant of the true God.

The T, it has been seen, is the flgure of the old Egyptian Nilometer, used to ascertain the height of the inundstion, on which depended tht sabsistence, the llife of the inhabitents. The Nilometer, in consequenos, became the symbol of life, health, and prosperity; and was suppoeed to

[^129]possess the power of averting evil. It was, therefore, in an abbrevisted form, suspended to the necks of the sick ss an amnlet or charm.*

Thus has originated the badge of roysl arch masorry ; its triple form, as uanal, relates to the Egyptian trinity.

It is generally conceded by masonic writert, that apoient masonry oloses with the royal arch. In an edition of "The Illostrations of Masoury," by the late Mr. Preston, pablished in London, 1829, the editor, Mr. Oliver, anthor of the lectures from whlch quotations have been made above, observes:-
"All degrees beyond the roysl aroh ought to be carsfally separated from genuine mssonry, as they are moetly founded on vaguo and uncertaln traditions, which posess not the shadow of anthority to recommend them to our notice."

The additional degrees, including those considered logitimate, amount to upwards of fifty. These are fonnded, partly upon astronomical principles, agreeing with the ancient worship of the Egyptians ; and partly upon the Hebrew and Christian doctrines; of two or three of which a slight notice will be taken.

It may be remarked in general, that many of the degrees of knights are founded on the Christian knighthoods, got up In the time of the crusades, in the twelfth century; and that the ceremonies thereof are an imitation of those superatitious eatablishments. A former grand high priest of the chapters in the state of New York, informs me that he Initiated a French gentleman into the degree of knight of Malta, who told him he was a member of the ancient order of that name, and that the ceremonies were very similar.

At the time those old knighthoods were founded, "Superstition mingled in every publio and private action of life; In the holy wars, it sanctified the profession of arms; and the order of chivalry was assimilated in ita righta and privilegos to the ssored orders of pricethood. The bath and the white garment of the novice were an indeoent copy of the regeneration of baptism; his sword, which he offered on the altar, was bleseed by the ministers of religion; his solemn reception was precoded by fasts and vigils; and he was created a knight in the name of God, of St. George, and of St. Miohael the archangel."-(Rees's Cyol.)

## Order of Bigh Priesthood.

The ancient priests of Egypt, and the Druide of Gaul and Britain, of course, officiated in the administration of the mysterice. Soon after Druidism was extinct, it is probable, the royal aroh was neglected, and lay dormant for several centuries. On ita revival, about the middle of the eighteenth centary, it was found that priesta, or persons to officisto as such, were necessary to preside in this chapter. Accordingly they were chosen from the laity among the brethren, or from saah olergymen

[^130]as had joined themelves to the order ; and there were doctors of divinity among the first promoters of the revival, or revolution of the society.

Here the Engliah olergy had an opportunity, which they did not neglect, to mould the oeremonies connected with the order of priesthood to auit their purpose. The odions tithes-aystem is openly adrocated, and the avful fate of Korah, Dathan, and Abiram, held out as the dos punishment of all those who ehould dare to resist it.

The following remarls apon this subject are abstracted from Croos and Webb:-

This order appertsins to the office of high priest of a royal sroh chapter: it should uot be conferred when a less namber than three high priesta are present. Whenever the ceremony is performed in due and ample form, the assistance of at least nine high priests are requirito. A convention notified to meet at the time of any commnnication of the grand chapter, will afford the beat opportunity of conferring this important and exalted degree of masonry, with appropriate solemnity.

The reading of the following passages of scripture compoees a part of the ceremonies appertaining to this order.

The first passage read is the 14th chapter of Genesis, relating to the successful expedition of Abram against certain kings, and on his retarn, giving to Melchisedec tithes of all he had obtained. A refersoco is then made to Hebrew 7, v. 1-6; wherein it is said. "This Melchisedec, king of Salem, which is king of peace, wre without father, without roother, withont descent; hering neither beginning of dayd nor end of life; but abideth a priest continually. Now consider how great thio man wes, unto whom even the patriarch Abraham gave the tenth of the spoils. And verily they that are of the sons of Lovi, whe receive the office of the priesthood, have a commendment to take tither of the people, according to the law, that is, of their brethren."

Now, this alludes particularly to the Levitical law, and had a specin reference to that portion of the tribe of Levi who were admitted into the sacerdotal order, sod is totally inspplicable to the Christisn dispensation. It was a peace-offering of St, Paul, the author of the book of Hebrewa, to the Jewish priests, to prevent their persecation: for sursly the apostle did not pretend to the right of demanding tithee of the Christian laity of his day; for he bosats of having been no charge to them, labouring for his own support. The English clergy, howevet, claim the benefit of this law, and have duped the masons into an acknowledgement of their pretensions.

The next pasosge cited is Numbers, 16, v. 1-33; which gives the horrid catastrophe of Korth and company, for resisting Moses and Aaron. This example is evidenily adduced to deter the laity of Eng: land from opposing the tithes-claimere, the would-be legitimate heirs ol the cons of Levi, who receive the office of the priesthood.

Moses here aconses the body of the Levites of seeking the priesthood, and asks, "What is Aaron, that ye murmur against him ?" Which shows that tithes were the bone of contention even in the time of Moss, the priesthood obtsining s greater sharo, in proportion to their numbers,
than the rest of the tribe. The pessage concluden as follows:-"And it came to pass, as he (Moses) had made an ond of speaking all these words, that the ground clave saunder that was under them: and the oarth opened her month and owallowed them up, and the houves, and all the men that appertained unto Korab, and all their gooda. Thoy, and all that appertained to them, went down alive into the pit, and the earth closed upon them; and they perisbed from among the congregation."

The American masons ought, at least, to have so modified the ordbnation of priesta into the order, as to render it consietent with republicsn institutions, and not given the lesst countenance to the iniquibons exaction of clerical tithes.

It may be ssid, that there is no immediate cause of alarm on this head; yet the reiterated admission of such a claim, by a numerous, respectable soolety, may in time be the means of rendering it popaler. It may be remarlsed, that Christian clergymen who are inducted into this order, assume the duties of pagan priests, and of course perform ceremonies appropriate to the worship of the heavenly bodies, all the host of heaven. This, to be sure, may be done very innocently, es they are not necessarily diverted from the integrity of their faith; and, moreover, are probably not aware of the real import of the rites and ceremonies in which they perticipate.

After the election of a candidate to the office of high priest, he is thus addressed by the grand high priest:-"You are appointed chaplain to this chapter, and I now invest you with this circular jowel, the badge of your office. It is emblenatical of eternity, and reminds us that here is not our abiding place," otc. Now, we have seen, that a circle, owing to its ligare, wus esteemed by the ancients, $n$ symbol of their god, the sun.
"Let the mitre, with which you are invested, remind you of the dignity of the office you snstain, snd its inecription impreas upon your mind a sense of your dependence npon God," eto.-The inseription upon it is holiness to the Lord: the same as that which surrounds the mitre of the hierophant of the mysteriea, and aleo that of the Boman pontiff.
"The breast-plate, with which you are decorated, is in imitation of that upon which were engraved the names of the twelve tribes, and worn by the high prieat of Israel," eto,-The breast-plate is the same as that worn by the hierophants of Egypt, which had desoribed upon it the twelve signa of the zodinc.*
"The various colours of the robee you wear, are emblematical of every grace and virtue which can adorn and beantify the human mind."The various colore of the robes of the high prieat are aymbolical of

[^131]the reanone, when the son is in the different constollations of the sodie -"Ye priesta! (eny Volney, alluding to Catholic priesta, yoo wem hla [the ean's] emblems all over your bodies; yoar toneure is th diak of the eun, your stole is hie sodine, your roearies are aymbola d the atars and planets. Ye pontifits and prelates! your mitre, your iob sier, yoar manile, are those of Osiris." - [Ruins, p. 139.)

Although, after the extinction of Droidism, it was necessary fir masonry io create an order of priests to officiate in the royal arch chap. ter as ropresentatives of the delty, still it is evident that the Englid clergy, who undoubtedly took a principal part in arranging the cerrmonief appropriated to initiations into the order, have managed the effair to suit their own siniter purposes. They made ap a medley, compounded of Paganiem, Jewism, and Christianity. Little of anciast masoory is to be seen in it, excepting the dreee of the high prict, which le parely of pagan origin. And here it may be proper to remark, that although it has been shown, that the prayers of the ancient pagans and those of the Jews were conched in the same terms, the nbjecte to whom they wera addresed only being changed, neverthelem it may be doabted that the frequent introduction of texts of ecriptarein the ceremonies, is in atriot conformity to original masoary. Two dootors of divinity, Diesanguliera and Anderson, were engaged in the oolleotion, or forming anew, of the ceremonies, and had it in their power to monld them at will.

Whother innovations, In this reepeot, were made or not upon thin occasion, is of no consequence any farther than thereby to give an impression that masonry might havo some connection with the Jevibish religion. These obeervations are, therefore, made to guard against anch a conclusion.

Knight of the Eagle and Sovereign Prince of Rose-Croix de Heroden.
This degree is a parody on the royal srch; and, as such, tends to confirm our interpretation of the parport of that chspter.- Here the lost word is Jesus of Nazareth, instesd of Hiram.
The timo and circamstances attending the losing of the word aro thus stated :-
The moment when the vail of the temple was rent; when darkues and consternation covered the earth; when the stars disappeared, and the lamp of day was darkened; when the implements of masonry were lost, and the cubic atone sweated blood and water; that was the moment when the great Masonic Word was lost.

Nevertheless, says the master, we will endeavour to recover it, and, addressing the candidste for initiation, asya, are you dieposed to follow un? Answer--Yes, I am. Master,-Brother wardens, make the candidate travel for thirty-three years, to learn the beautiee of the new lav. The junior warden then conducta the candidate thirty-three times round the lodge without stopping. (Bernard reduces the number to seven.) The candidate is now conducted to the darkest of places, from which the word must come forth triumphant, to the glory and adrantage of
masonry. He is then ordered to parside the room three times, in memory of the mysterions descent, which lasted three days.

After some farther ceremony, the mester questions the candidate as follows,-

From whence came you?-From Judea, Which way did yon come? -By Nazareth. Who conducted you?-Raphael. Of what tribe are you descended ?-The tribe of Judah.

What do these four initial lettera, I. N. R. I., elignify? Jesus Navaronus, Rex Judmorum. (Jesus of Nazareth, King of the Jenos.)

Master. My brethren, what happiness ! the word is recovered; give him the light. The vall is taken off, and all the brethren clap their hands three times, and give three huzzas.-(Carlile.)

The master asys to the candidate, approach, my brother, I will communicate to you our perfect mysteries. I congratulate you on the recovery of the word, which entitles you to this degree of perfect masonry, I shall make no comment or eulogium on it. Ita sublimity will be duly appreciated by you. The Impression which, no doubt, it has made on your mind, will convince you that you were not deceived when you were informed that the ultimatusm of masonic perfection was to be acquired by this degree. It certainly will be a source of very considerable satisfaction to you, that your merit alone has ontitled you to it.

The above is a mere sketch of this degree: ita scenery, some parts of which has siready been notioed, is very imposing. In the representation of the infernal regions, the awful eights of the greater mysteries aremore closely copied than is done in the royal arch. Whether the inventors of the order expected any serious effects to be prodaced by It, or whether It was got up for amusement, and to show the ingenvity of its projectors, Is uncertain. But it is pretty evident that such exhibitions introduced amidst acenes of merriment and recreation, would not tend to make a wery strong impression.

## Knight of Kadosh.

Chapter of the grand Inspectors of Lodgee, grand elected Knights of Kadosh, or the White and Black Eagle. The ohief is entitled Grand Commander.

Although this degree is not recognized in ancient masonry, it has, nevertheless, such a decided astronomical bearing as to render it probsble that it is derived from the Egyptisn rites, I will, therefore, attempt to give an explication of its enigmatical allusions.

When a reception into this degree is made, the grand commander remains alone in the ohamber, and must be so situated that the candidate cannot see him, as he is not to know who initisted him. A part of this obligation is, that he will never declare to any ote who received him or sasioted at his reception to this aublime degree. This is sheer affectation, and intended for no other purpoee than to impress upon the candidate the arfulnese of the mysteries in which he is about to be instructed. It is, however, an imitation of an ancient custom. Warburston says; ${ }^{4}$, A, pasesge in Elanaplus seeme to sey, that it was nolawful to
reveal the name of the hierophant " And Pythagoras, it has been soem gave his lessona from behind a screen to his newly entered pupils.

The saluting sign of Knights of Kadooh is, to hold the aword in th left hand, and place the right hand on the red cross which covers at heart. The question, Are you Kadooh ? is answered by placing th right hand on the forehead, ${ }^{*}$ and saying, Yes, I am.

The monnting of what is called the mysterious Ledder, is the ma distinguished ceremony in this degree It is thus represented:-

[^132]This ladder is an astronomical riddle, founded on the progress of the erun through the seven signs of the zodiac, namely from Aries to Libra Inclusive.

In expounding this riddie, I shall avail mysolf of the solution, by Dapais, of the fable of Hercules, one of the names of the sun, whone pretended laboure are shown to be a mere allegory of the course of that Inminary.

Whether the names given to the stepe of the ladder, have a mesning In any language, or are here uned arbitrarily, I know not. I give them as published by Bernard, with the significations annexed.

Previously to the candidate's mounting the ladder, he is tanght to prononnce the names of the seven stepe, and is sworn to observe the infanctions pretended to be indicated thereby. After he has pronounced the last word, in the seventh step, the Grand Commender says, "By the seven conditions and by the power that is transmitted to me, which I have acquired by my discretion, my untired travels, zeal, fervour, and eonstancy, I recoive you Grand Inspector of all lodges, Grand Eilect Knight Templar, and to take rank among the Knights of Kadoah, or White and Black Eagle, which wo bear the name of: I deslre yon not to forget it. It is indispenseble for you, my brother, to mount the mysterious ladder, which you see there; it will serve to instruct you in the mysteries of our order, and it is absolutely necessary that you should have a true knowledge of it." The candidate then ascends the ladder. When he is on the eeventh or highest step, and has prononnced the three laet worde, the ladder is lowered and the candidate passes over it, becanse he cannot retire the same way, as he would in sach case be obliged to go back, againat which he has taken an obligation. He then reads the worde at the bottom of the ladder, ne plus ultra.

It has been the custom of the manufacturers of masonic degrees to entitle the last, for the time beling, the ne plas ultrs; which, being succeeded by others, the latter, like more of the last words of Mr. Baxter, throw the former into the back ground. So the the Grand Commander, In addressing the candidate, calls "Thisorder the last degree of masonry." The attention, therefore, of the candidate, when arrived at the top of the ladder in directed to the ne plas altra below.

The candidato's retiring by a different way from that by which he ascended, is in imitation of the course of the san. The following fancifal deacription of the laws which govern the stellary syatem, is given by
: Mackey. (p. 189).
"In the oblong zodiac of Tentyra, enoh of the twelve aigna is divided into three parte of ten degrees, and each part is represented by a human figure, (with attribntes expressive of his functions,) called a Decan; and as esoh sign of the zodise has three of these, the first of each was called a powerfal lesder of three. To this company of thirty-six Decans they attributed the management of the seasons. These were the powers whose functions were more durable than those of the tweive eodiacal constellations, which are still found to alter their position every 2,000 years, relative to the season; and to move, in that time, through a speoe
of thirty degrees from the equinoctial points. Noteo the more pownd and constant gods, called the Decans, or Elolm; thoss of that rank wil are fixed at the equator, are still supposed to compel the sun to twelve hours a day all the world over; and thowe at the oppoeite pat of the equator, conetantly propel the san the same way through the dominiens, that is, thoso at the spring node will not eoffer the scmit pass out of their palace the same way by which he entered; bat cula him to move on to the sign more northward. This fo known to beth constant order of the sun, moon, and planets."

First Step of the Myaterious Ladder.
The name desigating the first step, is Iredakah, which in defad righteousuess.

This, I spprehend, hesan allueion to the sun in the vernal equinox, ly the month of March, when the days and nights are equal all ovar the world, and when the sun, after having been long in the southern hemis phere, passes the line, in order to dispense his favours equally to the north; which is doing justice to all, agreeably to the above definition.

Second Step.
The second step is Shor-laban, (white ox, Gguratively.) This is the only step, the definition of which is literally true; which, as it might lead to an intarpretation of the meaning of the mysterious ladder, is tha falsely denominated figurative.

Taurus, the bull, is the second sign of the zodiac, into which the sum onters on the 21st of April. His entry into this sigu is marked by tho setting of Orion, who, in mythologicsl langusge, is ssid to be in low with the Pleiades ; and by the rising of the latter.

Third Step.
The third step is called Mothok, (sweetoess.)
The third sign of the zodiac is Jemini, into which the sun enters is the mild, ples-ant month of May. "' Canst thon hinder the sweet iofluences of Pleiades or loose the bands of Orion.'-(Job.) Now, the Pleiades were denominated by the Romane, Vergilia, from their formerly rising when the spring commenced; and their sweet influences blesed the year by the beginning of spring."-(Identity of the Hebrew and Druidical religions.)

Fourth Step.
The fourth step is Emunah (truth in disguise.)
The fourth sign is Cancer, into which the sun enters in the month $d$ June. Egypt, at this period, is enveloped in clonde and dust, by whioh means the sun is obscured or disgoised; and which Giguratively may to denominated trath.

> Fijth Step.

The fith step is Hamal saggi, (great labour,) advancement to the practice of Heaven.

The firth eign is Leo, or that of the celestial lion, called the lion of Nemes, under which the san passea in July.-The great laboor and difficulties to which the sun was supposed to be subjected in pasping this sign, have before come under notice: which, also, is in perfect acoord with the fable of the eminent exploit of Herculea in killing the hon of Nemea.

The emn, when in the sign Leo, is on his advance towardo the equator where the nncients aupposed heaven to be sitnated.

## Sixth Step.

The sixth step is Sabbal, (a burden, or patience.)
The sixth sign through which the sun passes is Virgo, marked by the total disappesrance of the celeatisal Hydra, called the hydrs of Lerna, from whose head epringe up the great dog and the orab.

Hercules deatroys the hydra of Lerna, but is annoyed in his operation by a sea-crab, which bit him in the foot. Appolodorous says, that whenaver Hercules lopped off one of the monster's heads, two othere sprang up in the place of it, so that this labour would have been endlees, bad he zot ordered his companion Iolas to sear the blood with fire, and thereby jut a stop to their reproduction; and thus was that event actually reoresented in a flne pisture in the temple of Delphi.-(Mayo.)

## Seventh Step.

The seventh step is named Gemulah, Binah, Tebunah, (retribution, ntelligence, pradence.)
The seventh sign is Libra, into which the sun enters at the comnencement of autumn, indicated by the riaing of the celestial Centanr, he same that treated Hercules with hospitality. This constellation is epresented in the besvens with a flask fall of wine, and a thyrsus, ornamented with branches of lesves and grapes, the symbol of the producJons of the season.
The sun has now arrived at the autumnal equinox, bringing in his train the fraits of the earth; and retribution is made to the husbandman, in proportion to his intelligence and prudence.
The allegory is certainly beautiful, and the mysterious ladder is well worthy to be called the ne plus ultra of masonry.

Since preparing the above, my attention has been drawn to a learned article on the same sabject, in a work, before noticed, by the Rev. G. Oliver, which confirms my conjecture that the ladder composed a part of the machinery of the mysteries, and consequently has a legitimate standing in masonry. It probably constituted a component part of the royal arch degree, illustrating the eeven steps regnired to consummate that exalted grade. -The following is a sketch of this article :-

The ladder with seven stepa, was ueed in the Indian mysteries to designate the approsch of the eoul to perfection. The steps were usually denominated gates. The meaning is undoubtedly the asme; for it is obsarvable that Jacob, in referring to the lower atave of his ladder, exclaimed, "this is the house of God, and the gate of heaven." Here

We find the notion of ascending to heaven by meanin of the practiond moral virtne, depicted by the Hebrew patriarchs, and by a remote idd trous nation, under the idea of a ladder. These gates were eaid to la composed of different metala, of gradually incressing purity : the upp most stave, which constituted the summit of perfoction, and opened a way to the residence of the celestial deities, was composed of the pa imperishable substance of gold, and was under the protection of ther most high god, the sun.

The ascent to the summit of the paridisaical mount of God, by meas of a pyramid consisting of seven stepe, was an old notion, certainly ertertsined before the vision of Jacob; for it prevailed amongat the Merican savages*; and the original settlers on the vaat continent of Ameria could have no knowledge of this vision, elther by tradition or persood experiface.

In these mysteries, during the ceremony of initiation, the candideto
Ca. the on. sh An Ba por 4 In fib the was pased successively through seven dark and winding caverns; which progrese was mystically denominated, the secent of the ledder. Each cavern terminated in a narrow stone orifice, which formed an ear trance into its successor. Through these gates of purification, the mostified aspirant was compelled to squeeze his body with considerable labour; and when he had attained the summit, he was sald to havo passed through the tranamigration of the apherea, to have accomplishod the sscent of the soul, and to merit the favour of the celeetial deitice.

In the Persian mysteries, the candidate, by as similar process, whe passed through reven spacious caverns, connected by winding passage, each opening with a narrow portal, and each the scene of some perilona adventure, to try his courage and fortitude before he was admitted into the splendid Sacellum, which being illuminated with a thousand torches reflected every shade and colour, from rich gems and amnleta, with which the walls were copiously bedecked. The dangerons progreen was denominated, sscending the ladder of perfection.
From this doctrine has arisen the tale of Rustam, who was the Persian Hercules, and Dive Sepid, or the White Giant.-(Fab. Pag. Idol v. iii. p., 328.)
"Cai-Caus, the auccessor of Cai-Cobab, the first monarch of the Caianian dypasty, is instigated by the eong of a minstrel to attompt the conquest of Mazenderana, which is celebrated as a perfect earthly Paradise."

This celestial abode refers the splendid sacellum of the Persian Epoptas, which was an emblematical representation of heaven.
"Cai-Caus fails in his enterprise; for the sacred country is guarded by the White Giant, who swites him and all his troops with blindnees, and makes them his prisoners"

This is a literal account of the first stage of initiation, which in the myateries always commences with darkness. In those of Britain, the candidate is designated as a blind man. And the captivity of Cal-
tia

Caus and his Persians in the oavern, under the rigid guardianahip of the Dive, la but a figurative representation of the oandidate'a inclosare under the Pastos; and this place of penance in the Celtic mysteries, which had many oeremonies in common with those of Perias, (Borl. Ant. of Comi, b. ii. c. 22,) wes said to be guarded by the gigantic deity Buanawr, armed with a drawn sword, who is represented as a most powerful and vindietive being, capable in his fary of making heaven, oarth, and hell to tremble.-(Dav. Notes on Taliein's Cad Goddeu.) In the Gothic mysteries, the eame place of captivity and penance is fabled to be guarded by Heimdall, whose trumpet emits so loud a blast, that the sound is heard through all the worlds.-(Edda Fab.)
"In this emergency the king sends a messenger to Zaul, the father of the hero Rustam, bogging his immediate asegistance. For the greater despatch, Ruatam takes the shorter, though more dangerous road, and departe alone, mounted on his charger Rakesh."

Here Rastam enters upon the dreadful and dangerous buainese of initiation, mounted, asya the legend, upon the oharger Rakesh, or more properly Rakshi, This was a horrible winged animal, whose common Sood is asid to have been serpents and dragons. Now these reptiles, together with monsters oompounded of two or more animals, were the ordiaary machinery used in the mysteries to prove the courage and forcitude of the espirant, during his progress through the seven stages of regeneration.
"The conrse which he chooses is styled the roed of the seven stages, and at each of the Irst six he meets with a different adventare, by which his persevering courage is severely tried."

At esch of the seven stages the candidate really encountered many dangers; and vanquished a mallitude of Divea, dragons, and enohantors who in enocession opposed his progreas to perfection.-(Shah name, in Bichardeon's Diseert. East. Nat.) Being pantomimically enacted during the process of initiation, and the reiterated attacha prosecuted with unrelenting severity, instances have occurred where the poor affrigbted wretch hes absolutely expired through excese of fear.
"Hsving at length, however, fought his way to the seventh, he discovers his prinoe and the captive Persians; when he leerns from CaiCaus, that nothing will reatore his sight but the application of three drope of blood from this heart of the White Giant."

The aymbolical three drope of blood, had its counterpart in all the myateries of the ancient world; for the number three was ineffable, and the conservator of many virtues. In Britsin, the erablem wes three drops of water; in Mexico, as in this legend, three drops of blood; in India, it was a bolt composed of three triple threads; in China, the chree strokes of the letter $\mathbf{Y}$, otc., etc.
"Upon this, he attaoks his formidable enemy in the Cavern where he was accustomed to dwell; and having torn out his heart, after an obstinate combat, he infuses the preseribed three drops into the oyee of Cai-Caus, who immediately regains his powers of vision."

In this tale we have the theological ledder connected with the systens
of Persian initiation tranaferred from mythology to romance: and the coincidence is sufficiently striking to imprese the most ordinary obeerm with the etrict propriety of the application. The cendidate oomes al conqueror, and is regularig restored to light, after having given fill proof of his conrage and fortitude, by gurmounting all oppoaing danger Father Angelo, who wout out as a missionary into the East about lot says, that jn the midst of a vast plain between Shiras and Shuster, in saw a quadrangular monument of stupendous size, which was said b hsve been erected in memory of this great enterprize of the hero Rustan The fact is, that this quadrangular inolosure was an ancient place d initiation; and from a confused remembrance of the acenes of mind sdventure which were represented within ite seven secret caverns, the fabulous labours of Rastam has doubtless their origin.

Here the anthor has evidently mistaken the copy for the archetypa The soenes of mimic adventure allnded to, undoubtedly originated fria the fabulous labours of Rastam, the Persian Hercules. It has bean shown that Hercules was one of the names by which the sun was deals nated, $\%$ and that the perilous adventares attributed to a fabulous character to whom the name was given, was a mere allegory on the progree of that luminary through the eigns of the zodiac; of which the tale of Rustam is another version.

## The order of Noachiles, or Chevaliers Prussian.

This order, there is reason to believe, was instituted by the ancieol Prussians. It claims priority over that of the freemasons of England The author of an exposé of the ritual of that institution, which will by noticed below, gives just fifty-three years between the periode of the two establishments; and says, "This tradition is firmly believed." It corroboration of this fact, Dr. Andernon observes, "The first name o Masons, sccording to some old traditions, was Noachidse."

The ceremonies of the Noachites seem to have served in somk measure as a model opon which those of freemasonry are founded. Although the scene of the establishment of this order is laid at the Tower of Babel, instead of the Temple of Solomon, the oraft of masoary, as in the freemasons' society, is made use of to cover the real desiga a the institution, the maintaining of religious dogmas, if not the recovery of independence.

The following remarks, in Guthrie's sketch of history of the ancienl Prusis and Poland, will tend to show at what time this institution was probably formed.

Speaking of Poland, he seys," From this period [830] for some cenb tries we have no very certain records of the history of Poland. The sitle of duke was retained till the year 999, when Boleslaus (the 1.) as sumed the title of king, and conquered Moravia, Prussia, and Bohemia, making them tributary to Poland."

[^133]Of Prussia_-"The ancient history of Pruesia, like that of other Kingdomes, is lost in the clonds of flction and romance. Theinhabitants appear to have been a brave and warlike people. They wers descended from the Solavoniana, and refused to submit to the neighbouring prinoes, who, on protence of converting them to Christianity, wanted to reduce them to alavery. They made a noble stand against the kings of Polend; one of whom, Bolealaus IV., they defeated and killed in 1163. They continued Pagans till the time of the latter crassdes, about the year 1227."

From the foregoing statements, it appears that the eway of Poland over Prussia, obtained In 999, was not of long duration; and it is reesonable to conjecture, that soon after the conqueet, the people of Prussia established the order of Nomohites. It was evidently a military Institution, and undoubtedly intended as a rallying point, to operate, as occasions might occar, for the recovary of the oivil and religioas liberties of the nation.

Admitting that the society of Noachites was founded in the year 1000, whioh is probable, and provided the foregoing tradition be correct, the establishment of freemasonry in England woold have occurred abont the middle of the eleventh centary, which is as late as it is likely to have been neglected, after the edict of Canute prohibiting the open worship of the Druide.

Bernard, in his account of this order, esys," The grand master-goneral of the order, whoee title is chevalier grand commander, is Frederic William, king of Prusels. His ancestors, for three hundred yegrs, have been protectors of this order. The knighta ware formerly known by the name of Noachitea.
"The Noachites, now called Prussian Chevaliers, are descended from Pelog, the grand arehitect of the tower of Babel, their origin being more ancient than that of the masons descended from Hiram.-The knights aseembled on the night of the fall moon in the month of March, [the vernal equinox] in a secret plece, to hold their lodges; and they osnnot initiate a candidate into the mysteries of this order anless by the light of the moon."

Great innovations have been introduced into the oeremonies of this order. I have a copy of its ritnal, which, from Its antiquity and Draidical style, may be prosumed genuine. It was repriated from a London copy, by John Holt, Now York, 1768. As a cariosity, and as bearing a relationship to the ancient mysteries, I will give an abstract of it.

The order conslats of two degree, called Minor and Major ; and the officers form what mesonically may be tormed a Chapter, to which the other members are not admitted. This chapter comports with the royal arch of freemasonry; for here the secret word, Belus, is revealed, which, the resder is aware, is the same us Oniria, personated by Biram. The exponnder of the order appears to have committed an error, in giving this word at the opening of the minor's degree; because it in exsprealy said afterwards, that it was unknown to all bat oficors.

Minor's Degres.

Examiner.-When did Masonry begin? Beopondent.-About hnndred and fifty-foor years after Noah's flood. at the building d Babel's tower. Who was grand mastar there ? Nimrod, callod by mesons Belus. [Not Peleg, as modern masons have it.] Whers win the first lodge held 9-In a pleasant plain of Babylon, cafled Shies, m the banks of the river Tigris.

In what manner were you made ?-I wes led to a door, where a man atood with a drawn sword in his hand, who anked my friend what ho wanted. What did your friend reply ?-To have me made a mene Did he admit you?-Yes, he struck the door with his eword, upe which it instantly flow open; may friend then led me by the hand intos very dark room, aod then the door was shat. What oncoeeded thin?My friend then said with a lond voice,

Hore stande a candidato for masonry,
Who faln would know our art and myntery : Bhow blm the light by whloh we work, and thea Perhape ho'll learn the art, liko othar men.
Upon this a door flow open, and discovered a room extromely light, od of which casese three men with drawn swords, one of whom said, dellw your friend to us. Upon this my friend delivered me into their care, and I was ughered into the lodge, one walking before, and one ou each side, and my friend in the rear. Thus was I brought out of darknea Into light.

What was đone after this ?-I was atripped naked, in order that an the lodge might be well assured they were not impoeed npon by a woman. What was then done? The maater clothed me with the badge of innocence. (This is a loose whito garment, generally made of fine linen, and sometimes of silk.) He then took me by the right hand, and placed me in the centre of the brethren; he then ordered mo to kneel down on both my knees, and held to my throat the point of s wword which he had in his hand, and then addressed me as follows:-
"Sir,-You are now going to be admitted a member of this andeok and honourable fraternity, and it is expeoted that you will lay youmeld under the aubsequent obligation.
"You shall not reveal to any person or personn, eithor by word of mouth, or your own hand writing, or cause to be revenled in any manver whatever, any part or parts, point or points, or any traditions, which have been, are now, or shall hereafter be held as a secret among manoca,

[^134]unlegs to an honest man, who you know is a mason, or to the master or wardens of any regular Lodge.
"And as it was always esteomed by the masons of old, that to swear by the sword was the most binding of all obligations, 80 we do insist and require you solemnly to kiss the edge of this sword presented to your throat, es a signifiation of your full consent to, and approbation of, the above particulars.
"Your well performing this injunction, will make you ever esteemed by this venerable body, as the contrary will render you guilty of a breach of the most sacred band of humsa society, and consequently degrade you from the character of a man of honour, which every mason ought to preserve more carefully than his life,"*

Are you desirous of knowing the Major's secrets?-Yes. Bx. Your good behaviour alone will not obtain them.
B. By that elone they could not be obtatn'd,
Bat I Dy that a Goliden Bignet grald'd;
Whot will admit me into that degree,
That I may Work amoag the Kajors Free.

What is that signot?-A ring. Ex. Produce it? B. Behold it here. (Showing the ring.)

Ex. Attend, my brethron, all that roend mo stand,
While I obey great Bolac' dread commend. Our brother bere, npon examination, Desires I'11 placs Hm to a higher station. A. Minor'a oharseter hea well masintein'd And saswer'd all thlays well ; by whilh hote gatned The Signet rare, which Belus did ordala For such es conid the Minor's art attain, That they may to the tow'r repalr, and be Feoelv'd to work among the Majore Fres. ${ }^{\text {'The }}$ then my will and plessure that he may Begle to work and enter into pay.

## Ceremony of Inetallment of Officart.

Where were you installed? In the observatory. How high wat it? On the top of the tower. How got you there ? By a winding ascent. In what manner were you installed ? I first passed the Minor's examination, and then the Major's; sfter whioh Belus informed me the brethren had unanimously agreed to elect me into the office of which he invested me with the badge. Have the officers a aecret word? Yes, How did you receive it?-

On my twro znees he ordertd me to knoels
Before the could the pocret word revenis
A word to all bat offcert unknown,
Because we dive it when we are alone:
The word is Belus, bs it known to thee,
'Twas that great ming gavo birth to Masonry.

## Ceremonies obsorved in laying the foundation stons of Freemason'a Hall, London, 1775; and its dedication, in 1776.

The similarity of practices in masonry and the encient rites of Bacchas, is fully exemplified in these ceremonies. The Caducens or magical wand of Mercury, the mysterious chest, and the thres pitchers, containing corn, wios, and oil, ere sppropriately used. This will appear by the following short abstract of the transaction on those oocaslons an published by smith.
"The first stone of the masons' hall was laid by the Rt. Hon. Robert Edward Lord Peter, baron of Writtle, grand master of the masona of Englend, accompanied by the worshipful Rowland Holt, etce.

About twelve o'clock the procession arrived, and continned three times round the ground, where the hall was to be erected. The grand master then depoefted the foundation stone with the usual formsilities. After which the deputy grand master presented the square to the grand master, when his lurdship tried the corners of the stone, and then roturned it to the depnty, who gave it to the architect. The sonior grand warden nest presented the level to the grand master, who therswith tried the atone horizontally, and returned it as before. The janier grand warden then presented the plumb-rule to the grand mester, who applied it properly, and returned it as before. His lordship then strack the stone three times with a mallet, on which the grand treasurer waved his wand, and the brethern jolsed in the grand honours of masonry. (This is done by clapping hands three times three.)* The following anthem wes then sung:-

> To Hesven'a high Arohiteot all pralse, All pralse, all gratitade be given, Who deignad the human sool to ralat, By myatic secrets, sprung from heaver. Choruc. Tbrice repeated.
> Bound aloud the great Johovah's pralee, To hlm the dome, tho termple raies.

[^136]An oration was then pronounced; at conclusion of which, the grand treasurar agsin waved his wand, and the grand honoura wero given as before. A grand piece of masic was then performed by the instrnments, and an ode on masonry rehearsed; after which the procession was resumed, and continued three times roand as before.

The whole ceremony wes condacted with the grestest order and decorum. The grand master and the rest of the brethren then proceeded through the city in proceasion in their carriagee, without exposing any of the insignis of the order, to Leathersellers-hall, where an elegant entortainment was provided, and the evening concladed with great joy and festivity."

## Dedication of the Hall, in 1776.

At half past twelve the procession entered the hall in the following order:-

Grand Tiler, with a drawn aword-four tilers, carrying the lodge [the mysterious chest,] covered with white satin-master of the seventh lodge, carrying two ailver pitchers, containing wine and oll-the master of the sixth lodge, carrying a gold pitcher, containing corn-the first light carried by the maater of the fifth lodge-architect, carrying square, level, and plumb-rule-master of the fourth lodge, carrying the bible, comparses, and square, on a velvet cushion-grand chsplain,-grand secretary, with the bag, (purporting to contain private papers appertaining to the affairs of the lodge-a mere formality)-grand treasurer, with the staff (wand,)-second light, carried by the master of the third lodge -the third light, carried by master of the second lodge-mater of the eenior lodge, carrying the book of constitutions-grand sword-bearer, carrying the sword of state-grand master.

On the procession reaching the grand master'z chair, the brethren who formed it were proclsimed, and from that atation walked round the hall three tirmes. The lodge was then placed in the centre of the hall, and the three lights, with one gold and two silver pitchers, contafoing corn, wine, and oil, were placed thereon; the bible, compasses, square, and book of constitutions, on a velvet cushion, belng placed on a pedestal, the foundation stone anthem was sung.

His lordahip then expressed his approbation of the architect's conduct, and commended the proper officers to receive back the implements which had been delivered him at laying the foundation atone. A solemn piece of music was next performed, during which the ladies, and thoee who were not masons, retired. The grand master thon ordered the hall to be tiled, on which the lodge [the little chest] wes uncovered, and the grand secretary informed the grand master that it was the desire of the society to have the hall dedicated to masonry; on which the grand master commanded the grand officers to asgist in that eeremony, during which the organ kept playing solemn musio. The grand officers then walked round the lodge in procession three tímos, stopping each time for the ceremony of dedication; when the grand master in solemn form declared the hall dedicated to masonry, to virtue, and to universel
charity and benevolonce; whloh beling penelalmed, the grand honoun were given an before: the lodgo was then covered, and the ladies iots duoed, amidat the acelemation of the brethren; next a grand antbea Was sung. An oration on masonry was then delivered by William Dod, LLL.D., grand chaplain."

As the method of disposing of the corn, wine, and ofl, is not statod is the foregoing account, I will subjoin the oustom in this respect, whet is obworved at laying the foondation atone of publio structaree, and ed the dedication of masona' halls, as given by Webb and others.
"The gold and silver veseels are presented to the grand master, asd ho, according to ancient ceremony, pours the corn, the wine, and the of, which they contain, on the stone, baying.
"May the all-bounteons Aathor of Natare bless the inhsbitants of this plase with all the neoessaries, conveniences, and comforts of lifit assist in the erection and completion of this building; protect the wortmen againat every acoident, and long preserve this stracture from docay; and grant to us all, in needed aupply, the corn of nourishment, the wine of refreahment, and the oil of joy.
"Amen I Bo mote it bo! Amen g'
"He then atrikes the atone thrice with the mallet, and the pabla honours of mesonry are given."

In the dedication of masons halla, the corn, wine, and oll, are poared apon the lodge, that is, ue before observed, the little myoterions ohest, Aaron, or ark.

The prosessions three times round the foundation, and the hall whes finiahed; the three lights; the elapping hands three times; strikiog the stone thrice, eto., are in conformity to the customs of the ancients; which wss done by them in reverence of the deity, and in acknowledgment of their belief in the triplicity of his nature or attributes.
${ }^{4}$ The Druid prieat, in their worship, looked towards the sun-they retained many of the Ammonian ritea,-they are said to have mada mystical processions rouud their consecrated firee sumwise before thay proceeled to sscrifice."-[Hutchinson, p. 69.]

In short, the agreement of the foregoing customs of masons with tha obeervances of the ancients on similar occasions, will appear evident from the following historical fects :-
"We lesrn from Festus, that the Etrurisns had books concerning the ceremonies obeerved at the founding of cities, altars, temples, walls, and gates. Plutaroh tella us, that Rumulue, before he laid the foundation of Rome, sent for men from Etruria, who informed him in sll the panetilioe of eeremony which he was to observe. According to Dionycios, they began with offering a sacrifice. They then dug a diteh, inte Which they threw the firit fruits of all the things that served for humas

* nourishment; at the same time they consulted the goda, to know if the enterprise would be acceptable to them, snd if they approved of the day chowen to begin the work. They then chalked out the boundaries by $t$ ecore of white oarth, which they called Terra pura. While they wert
forming the boundsry, they stopped at certain intarvaln to renew the sacrifices. In these sacrifices they invoked, besides the gods of the eountry, the gods to whoee protsction the new clty wes recommended, which wss done secretly, becanse it was necessary that the tatelar gode should be unknown to the valgar. In fine, so much regarded wes the day on which a city wes founded, that they kept up the memory of ft by an anniversary festival.

Among the Romane, when they were to build a temple, the Auruspices were employed to choose the place where, and time when, they bhould begin the work. This place was parifled with grest care; they oven encircled it with 1 Illets and garlands. The Vestals, acoompanied with young boys and girls, washed this spot of ground with water, pure and clean, and the priest expiated it by a solemn sacrifico. Then he touched the stone that wes first to be laid in the foundation, which wes bound with a fillet; when the people, suimsted with enthusisatic zeal, threw it in with some pieces of money or metal which had never paseed through the furnsce. When the edifice was finished, there was alco a consecration of it, with grand ceremonies, wherein the priest, or, in his absence, some of his college presided.-(Mayo's Myth. vol. 1, p. 141 and 297.)
"The same anthor, in treating of the fastivals and procesaions of the Egyptisns, observes :- 'The Hebrews, who derived from the Egyptiana that fatal propensity which they had towards idolstry, imitated them but too often, not only in the solemnity of thegolden calf, but also in the ceremony of their processions. The prophet Amos upbraide them for having led about in the wilderness, the tabernacle of the god Moloch, the image of their idol, and the star of the god Rempham. St. Slephen, in the Acts of the Apostles, taxes them with the same piece of idolatry. -Several other people practised the same ceremonies, whether they had learned them from the Egyptians, ss is very probsble, or had invented them themselves."-(Vol. 1, p. 308.)

In regard to sacrifices. Harwood, in his Grecian Antiquities, bays,"When the fruits of the earth were the only food of men, care was taken to reserve a certain portion for the gods. The same custom was obearved when they began to feed upon the fieah of animals. Bometimes water was poured on the altar or the head of the viotims, sometimes honey or oil; but in general they were sprinkled with wine, and then the wood of the fig tree, the myrtle, or the vine, were barnt opon the altar,-There was acarce any sacrifice withont corn or bread, and more particularly barley, as it was the first sort of corn used by the Greeks, after the diet of acorns was given up."-(p. 146.)

Althongh masonry coples the customs of the ancient nations, it must not be supposed that there is any idolatry conneoted with it. It is merely an idie imitation of their rites and ceremonies, withont any reference to the original import of them.

Antimasonic Wrilerz.
The Abbe Barruel and Professor Robison, by thalr mallgnant and

## Antitangen whation

falso allegations againat the masonic accioty, have so far prejudiesd the minds of a portion of the reeding pablic, as to cause a belief that frew mesoary was boatile to christisnity, to good order, and to civil gosen-ment- This calumny wes founded solely upon the aid given by the freemneons of France to the revolation of government in that coontry. A revolatioo which certainly, in its commencement, mot with the appor. bation of every friend of liberty throaghout the civilised world.
Both thewo writers wero ultra royalista Barruel was a French Jenit priest, who, on the breaking out of the revalution in France, fled to Englend, where he pablished his phillipio against repablicanism and froemmonry, under the title of "Memoirs, illustrating the history of Jacobinism." Robison was Profeseor of nataral philosophy, aed eseretary to the Royal Society of Edinbargh. His attack on memery and free governmente, is entitiled "Proofs of Conspiracy agaiost all the religions and governmente of Earope, carried on in the necret metting: of Freemesons, Illaminati and Resding Societiea"

These writers purane the common, heokneyed course of aristoersoy egaidst liberty, by ealumniating and vilifying its eupporters. No arime is too infamous to be laid to the charge of the most talented and virtsona of men. This disiogenuous coarse shows the turpitade of the cune they esponse. It is most bsse to divert the reeder from prisciples to men, sed, by faloo allegations against them, to prejudice him against their prind: plea. Many an unsuspecting rosider has saffered his mind to be parverted by this flagitions mode of argoment.

Barruel makes the following charge against the order of masona :${ }^{4}$ I saw masons, till then the most reserved, who freely and openly de clared, 'Yes, at length the grand object of freemasonry is accomplished, equality and liberty; all men are equal and brothers; all men are fres [Monstrous.] That was the whole sabatance of our doctrine, the objed of our wishes, the whole of our grand secret. Sach was the langongg I heard fall from the most zeslous masons, from thooe whom I haveson decorated with all the insignia of the deepest masonry, and who enjoyod the rights of venerable, to preside over lodges. I have heard them orpress themselves in this manner before those whom masons would call the profane (uninitiated,) withont requiring the smallest seerecy, eithe from the men or women present. They ssid it in a tove as if thef wished all France should be acquainted with this glorious achievemed of masonry.-(Vol. ii., p. 149.-Hartford ed. 1799.)

Barruel also extracts the following sentiments, from Condoreth "Progress of the human mind," as worthy of reprobation. Condoreok, spesking of the secret associations which existed in France, previously to the revolution, bays, "They were the associstions of thoee generod men who dare examine the fonndations of all power or authority, ad who revealed to the people the great traths, that their liborty is is aliensble; that no prescription can exist in behalf of tyranny; that mo convention can irrevocsbly sabject a nation to any particular family; that magistrates, whatever may be their tities, fanctions or powers, an ouly the officers, and not the masters of the people; that the people al
ways preserve the right of revoking those powers emanating from them slone, whether they judge it has been abused, or consider it to be useSese to continue them. In short, that the people have the right of puniahing the abuse as well an of revoling the power."
"Thas we see (says Barruel) Condorcet tracing back the germ at lesst of all the principles of the Fronch revolation to these secret associations which he represents as the benefactors of nations."

Had not masons a right, equally with other citizens, to take part in the glorious cause of freeing their conntry from despotism? Wse it not their daty, and would they not be infamons not to have doneso? The American masona were es zealous, I beliove, in the canse of their country in our revolution as other men, and have never, to my knowledge, as a distinct class, been reproached for it.

The French revolution, however objectionsble its course in some atages of its progress, and however unfortunate its termination, was holy and just. Its projectors and the Freach people as a nation, are no more responaible for the astrocities of Robespierre, than are the society of massons for the murder of Morgan.

But how were the enormities complained of produced? By the combination of the deapots of Earope for the parpoee of reducing the Erench zation to its former state of bondage. Among the means employed, a civil war was fomented in La Vendee, comprehending three departments of the ropublic, and money was furnished to the rebels against their country, by Eogland, to prosecute this nefarious warfare.

Besides, almant all the nobility and clergy of France were in oppogition to the canse of liberty, and carrying on every possible intrigue to reinstate the monarchy. They were sensible of the benefits reeulting to them from the services of an enslaved people, and they wished to bring them back to their former dehased state.

Thus was the French nation situated : surrounded by external foes, end harraseed by those within; to kill or to be killed became the only alternative, and acts were committed, under the sway of Robespierre, that tarnished the glorious csuse in which they were ongaged.

But, after all, it is a pretty well ascertsined fect, that Robeapierre was in the interest of the powers combined against France, which casused him to disgrace the revolation in the msnner he did.

If any country ever had canse to revolationise its government, it was Erance, under the anoient regime. Where America had one just complaint against the abuses of government, France had a handred: is would require a volume to enumerate them. I have not a list before me, but one was so degrading to the character of man, that it made a strong impression upon my mind when examining the catalogue. It Was this: in some places, in certain seasons of the year, the peassnts, by the law called the Gabelle, were obliged, in turn, to beat the ponds and brooks all night, to prevent the seignenr or lord of the manor and familly's being distorbed by the croaking of the frogs.

By this single example the debased state of the people of Franoe may -easily be imagived.

The horron of the Bestile, the famous prison et Paris, is prett underatood. A Mr. Oaritet, well known in the city of New Yori booksoller, informed me, that ho had been omployed as a clerk: of the offices of government in Paris, and that he had allod up har of letters de caches, migned in blank by the king. Theve letters orders to the keoper of the Bentile, to receive under hie oharge th sons named in them; and which might be obtained for a few gu by sny influential charscter. Thue were persons thrown into thig i place, withont trial and without any charge of orime. One ms loased from it, on itd demolition, had suffered confinement for years, and wats entirely ignorant of the canse of his imprisonment.

In the mean time the king, good ensy sool, wae enjoying the eures of the table and the chase, unmindfal of the sufferings of $h$ low men, inflicted through his instramentality. In feot, wheteve be asid of Loaia XVI., it is very evident that he was a complete mand, and vary little endowed with the active virtucs.

Thomas Pains, in hia "Rights of Man," in answer to Edmund B attsck on the French revolution, observes, "t Through the whole 4 Burke's book, I do not observe that the Beastile is mentioned more once, and that with a kind of implication as if he wes sorry it is I down, and wiahed it was built up again. 'We have rebuilt Nou says he, and tenanted the mansion; and we have prisons almost asi as the Bastile who dare to belie the Queen of France.'
"Not one glance of compreesion, not one commiserating refle that I can find thronghout his book, has be bestowed on thooe lingered out the moot wretehed of lives, a life withont hope, is most misersble of prisons. It is painful to behold a man employin talenta to corrupt himself. Nature has been kinder to Mr. Burke he has been to her. He is not affected by the reality of distress ton his heart, but by the ahowy resemblanee of it striking his imagioHe pities the plamage, but forgets the dying bird. Accustomed t the aristocratioal hand that hath purloined him from himeelf, $h$ generates into a composition of art, and the genvine coul of nator askee him. His hero or his heroine muet be a tragedy-victim, ex in ahow, and not the real prisoner of misery, sliding into death is silence of a dungeon."

Mr. Barke, for his apostacy from the whig cause, and writir philippic against the Fronch revolution, received from the Britiah of the people's money, a pension of fifteen handred pounds ate (Six thousand six hundred and sixty dollars.)
By this work, saya Joel Barlow, in a note to his "Conspiracy of Ki "Ho (Burke) conjured up a war, in which at least two millions, fellow oreatnres must be sacrificed to his nuecoountable passion. Is the condition of human nature, that the greatest crlmes have ua gone unpunished. It appears to me that history does not furn greater one than this of Mr. Burke; and yet all the consolation we can draw from the detection, is to leave the man to hila own n tions, and expose his conduct to the execration of posterity."

Many misstatements have been publiohed, oharging the legislatares of France in the time of the revolution, with an open avowal of infidelity to the Christian religion, and with persecnting the elergy, with a view of prejudicing mankind against their cause. All this has been grounded upon s elagle expression of Anscharsis Cloots, one of the essembly, which received, however, no conntenance from the other members. Robespierre, who, above all others, deserves the severest censure, professed the greatest regard for religion, and introduced to the aseembly a long report, expressly upon that sabject, which was received with approbation.

The following extract from the History of the Revolution, by M. Rebaut de St. Etienne, will correct the errors that have been circulated respecting the treatment of the prieets. Habant was a protestant clergyman, a member of the National Assembly, and a man of firat-rate character and talents.- Ho says,
"The oath required of the clergy wes one of the pretexts used for endeavouring to create one of those quartels which are termed schisms, and in which men eeparate into parties, and then fight, for the aske of abstract questions which they do not understand. The National Assembly had given the title of Civil Constitution of the Clergy, to what was nothing but its organisation. It should seem that the Assembly wonld have done better in not engaging in this sffair, since each profession and each professor can arrange themselves agreeably to their own mode of proceeding, saving the superintending power of the government. It tan the hasard of reviving, under one form, a body which it had destroyed under another. But priesta maintain sach a fast hold of all temporal affairs, and attach themeelvea so clowely to the interest of the government, that it is difficult to separate them from these affairs and these interests; and, take the matter op in what ehape you will, the priesthood still meets you at every corner; this creates a degree of embarrasement in every country, where the eovereign, be it what is may, hath a sorious inclination to be mester.
"The National Assembly, then, having organieed the olergy, sccordIng to the principles of the French constitution, required of the priests the oath, which had been taken by evrey citizen, to support the conatitution; but ft required, at the esme time, that they should swear to

- maintain the civil constitution of the clergy. Of all the military mes who have taken, and broken, the civic onth, not one ever thought of saying, that Heaven was injured by the military organisation; their pretext hath been, that they had already taken an oath to the king, which rendered the latter null and of no effeot. Bat priests are in the habit of identifying themselves with God, and whoever offends them, offends hesven. Accordingly, certsin subtle minds soon discovered the means of cresting a achinm, in aseerting, that this constitution was a spiritual affair, nay more, that it was another rellgion; that to require such an oath was a reatraint of the freedom of consoience, that it whs putting prieets to the tortare, and expoeing them to suffer martyrdom. They even desired desth, and that they might be led to execution, well asoured that the National Convention woold never do any mech thing.
"There was foand in the kingdom a condderable number of wer meaning prrsons, who imagined, that their ooneclences had received material it jury by this new organisation of the clergy; for what mea moet believ $\mathrm{a}_{\text {, is }}$ is, very often, what they least undenstand. Meanwhil the nonjuring priests wero obliged to quit thetr pariahes, and penslow were allotted to them; bat they endeevoured to preserve their infloesm over their parishioners, and to interest them in their fiavour, by all thom mesne which continually lie within the reeoh of thowe to whom ma have committed the government of their reason. This division ingqual the enemies of the constitution with the hope, that the Frenoh migu be soduced into a civil war for the sake of the priesthood, since then would not go to war for the sake of the nobility, which, In truth, hel no abstract ideas to present to the sabtle minds of the discontented. The courtiers and the friends of privileges, on a sudden became devout; they were devout even at court; nay, they were devout even at Worms and at Coblents. But the citizens of Paris, even such as were least ob lightened, did not become the dupes of thia mummery; now witboal Paris, there can be no civil war."- (Lond. ed., p. 200.)

Mr. Robison maintains the same tyrannical doctrines ws Barrael; in support of which he quotes the arguments of ons of the kings of Frames in vindication of his claime to power.
"Hear, asys he, what opinion was entertained of the sages of Frane by their Prince, the father of Louis XVI, the unfortunste martyrd monarchy: 'By the principles of our new philoeophers the throne no longer wears the splendour of divinity. They maintain that it aroes from violence, and that by the samo juatice that force erected it, forte may again shake it, and overturn it. The people can never give up their power. They only let it out for their own advantage, and alwayi retained the right to rescind the contract, and resume it whenever their personal adpantage, their only rule of conduct, requires it. Our philoosphera teach in public what our passions suggest only in secret." Thea follows the ressoning of Louis, intended to show this doctrine to be heretical and sbsurd; and Rohison adds, "This opinion of a princeil unpolished indeed, and homely, bat it is jusl."- (p. 343.)

The author attempta, without a shadow of proof, to connect freomasoary with the Order of Illuminati; and then, by calumniating the latter, to disparage the former. But in this ho has miserably friled; for, after all that has been said against the society of Illuminati, it appears to have been instituted for the sole parpose of lessening the evile which result from the want of information, by enlightening the pablie mind, and diffusing nselal knowledge among all classes of the commanity.

To suppose, an the author pretends, that this society, composed of men of the first respectability and standing, wishes to deatroy sll order and government, is too prepostarous for a moment's consideration.

The order is said to have been founded in Gernasny, about the year 1757 ; and Dr. Adam Weishaupt, profeasor of Canon Law in the walverrity of Ingoletedt, wes the proprietor.

The eatimer gives Dr. Weishaupt's prospectus of his views, by which the resder may form his own opinion of the merits of his scheme.
"The ordor of Illuminati appears as an acceseory to freemseonry. It is in the lodges of freemasons that the Minervals are found, and there they are prepared for Illumination. They must have previously obtained the three Eaglish degrees. The founder saye more,-that his doctrines are the only true freemasonry. He was the chief promoter of the Eclectic System. This he urged as the best method for getting information of all the explanations which have been given of the masonic mysteries. He was also a 8triet Observanz, and an adept Rosyorucian. The result of all his knowledge is worthy of particular remark, and shall therefore be given at large.
"I declare, says he, and I challenge all mankind to contradict my deolaration, that no man can give any account of the order of freemasonry, of its origin, of its history, of its object, nor any explanation of its mysteries and symbols, which does not leave the mind in total uncertainty on all these points. Every man is entitled, therefore, to give an explanation of the symbols, and any system of the doctrines, that he can render palatable. Hence have sprung up that variety of syatem, which, for twenty years have divided the order. The simple tale of the English, snd the fifty degrees of the French, and the knights of Baron Hunde, are equally authentic, and have equally had the support of intelligent sud zealous brethren. These systems are in fact but one. They have all sprang from the blue lodge of three degrees; take these for their standard, and found on these all the improvements by whioh each syatem is afterwards suited to the particular object which it keeps in view. There is no man, nor system, in the world, which can show by undoubted succession that it should stand at the head of the order. Our ignorance in this particular frets me. Do but consider our short history of one handred and twenty years.- Who will show me the mother lodge? Those of London we have discovered to be self-erected in 1716, [1717.] Ask for their archives. They tell you they were burnt. They have nothing but the wretched eophistications of the Englishman Anderson and the Frenchman Desagailiers. Where is the lodge of York, which pretends to the priority, with their king Bouden, and the arcbives that he brought from the East ? These too are all burnt. What is tha chapter of Old Aberdeen, and its holy clericate? Did we not find it unknown, and the mason lodges there the most ignorsant of all the ignorant, gaping for instruction from oar deputies? Did we not find the same thing at London? And have not their miseionarioe been among ne, prying into our myeteries, and eager to learn from us what is true freemasonry? It is in vain, therefore, to appeal to judges; they are no where to be found; all olsim for themselves the eooptre of the order ; all indeed are on an equal footing. They obtained followers, not from their authenticity, but from their conduciveness to the end which thay proposed, and from the importance of that and. It is by this sosle that we must measure the mad and wicked explanations of the Rosyeracians, the Exorcists, and Cabalists. These are rejected by all good masons,
becanse incompatible with social happiness. Only such systems an ${ }^{\text {p }}$ moto this are retained. But alas, they are all sadiy deflcient, becin they leave na nnder the dominion of political and religious prejodion and they are as inefficient as the sleepy done of an ordinary sermon. ${ }^{\text {a }}$

- Bat I have contrived an explanation which has every advantage; finviting to Christians of overy communion; gradually frees them fra all religious prejudices; cultivates the social virtues; and animates bsa by a great, a feasible, and speedy prospect of universal happines, a a atete of liberty and moral equality, freed from the obstsoles whidsh ordination, rank, and riches, continually throw in our way. My erly tion is accurate, and complete, my meana are effectaal, and irreiins. Our secret association works in a way that nothing oan withstand, man shall soon be free and happy.
-This is the great object held out by this association; and the meas of attaining it is Illamination, enlightening the naderatanding by to sun of reason, which will dispel the cloude of anperatition and of prjudice. The proficients in this order are therefore justly named that Illuminated. And of all Illuminstion which haman resson can giv, none is comparable to the discovery of what we are, our nature, our obligations, what happiness we are capable of, and what are the meana ol attaining it. In comparison with this, the most brilliant sciences as but amusements for the idle and luxurious. To ft man by Illuminatica for active virtue, to engage him to it by the strongest motives, to rendar the attainment of it easy and certain, by finding employment for every talent, and by placing every talent in Its proper aphere of action, 60 that all, without feeling any extraordinary effort, and in conjunction with and completion of ordinary business, shall arge forward, with united power, the general task. This indeed will be an employment suited to noblo patures, grand in its views, and delightful in ita exercise.
"And what is this general happiness? Taz eappisess of the sunu sace. Is it not distreasing to a generons mind, after contemplatiog what human nature is capable of, to see how litule we enjoy ? When we look at this goodly world, and see that every man may be happy, bet that the happiness of one depends on the conduct of another; when we see the wicked so powerful, sad the good so weak; and that it is vain to etrive, singly and alone, against the general current of vice and oppression; the wish naturally arises in the miod, that it were poesible to form a durable combination of the most worthy persons, who should work together in removing the obstacles to human bappiness, become terriblo to the wicked, and give their aid to all the good without distinction, and shonld by the most powerful means, first fetter, and by fattering, lesseo

[^137]vice; means whioh at the same time should promote virtue, by rendering the inclination to rectitade, hitherto too feeble, more powerful and engaging. Would not such an associstion be a blessing to the world?

- But where are the proper persons, the good, the generous, and the eccomplished, to be foond ? and how, and by what strong motives, are thay to be induced to engage in a tesk so vast, so incessant, so difficult, end so laborious? This association must be gradual. There are some such persons to be found in every society. Such noble minds will be engaged by the heart-warming object. The first task of the association must therefore be to form the young members. As these multiply and advance, they become the apostles of beneficence, and the work is now on foot, and advanoee with a speed increasing every dsy. The alightest observation ehows that nothing will so much contribute to increase the zeal of members as secret nnion. Wo see with what keennese and zeal the frivolous business of freemasonry is conducted, by persons knit together by the secrecy of their union. It is needless to inquire into the canses of this zeal which secreay produces. It is an univeral fact, confirmed by the history of every age. Let this circomstance of our constitution therefore be directed to this noble parpose, and then sll the objections urged against it by jealous tyranny and effrighted superstition will vanish. The order will thus work ailently, and securely; and though the generous benefactors of the haman race are thus deprived of the applanse of the world, they have the noble plessure of seeking their work prosper in their hands.'
"The candidate, before hia admission, is required to peruse and sign the following oath:"
${ }^{4}$ I, N. N., heraby bind myself, by my honour and good name, forswearing all mental reservation, never to reveal, by hint, word, writing, or in any manner whatevar, even to my most trasted friend, any thing that shall now be said or done to me respecting my wished-for reception, and this whether my reception shall follow or not; I being previously assured that it shall contain nothing contrary to religion, the state, nor good manners. I promise, that I ehall make no intelligible extract from any papers which shall be shown me now or during my noviciate. All this I swear, as I am, and ag I hope to continue, a man of honour.'
"The arbsnity of this protestation must agreeably impress the mind of a person who recollects the dreadfal imprecations which he made at his reception into the different ranks of freemssonry."

The difference in the style of the osth, administered in the two orders, must be attributed to the castoms of the times in which they were formed.

Mr. Robison, after bestowing the most vuigar abuse upon the learned and amisble Dr. Priestly, adds, "But I do not suppose that he has yot attained his acmé of illuminatism. His genins has been cramped by British prejudices. Thisneed notsway his mind any longer. He is now in that 'rare Lemporio (et loci) felicitate, ubi sentire quas velis, et quae sentias dicers licit.'"That is, he now erjoys the rere felicity of time and place (America)
where it it lawfil to think what one pleases, and to speak what on thinks.

The liberty of epeech which we claim in this coaratry, must be very grating to the feelinga of a man possessing the principles of Robisoc. He would have no person, except the mean eulogists of power, like himsolf, permitted to utter his sentiments.
"Does Dr. Priestly think (eaye he) that the British will pert more easily than their neighbours in France with their property and honours secured by ages of peaceable ponesasion, protected by law, asd sequiesced in by all who wish and hope that their own descendenta masy reap tha fruits of their honesty indostry."-(p.867.)

The following deed of the ferocions robber, William of Normandy, will serve as a general example of the manner in which the Brition nobility obtained their property. It is taken from the National Portrit Gallery, London, 1829.

Francis Ratodon Hastinge, Marquis of Hastinge, K.B. The faraily of Rawdon is of great antiquity, and of Norman extraction. But the Eaglish pedigree is deduced from Paulln, or Panlinus Boydon, who conmanded a body of archers, in the army of Willinm, at the battle of Hastings. For this eervice he received from the Conqueror a grant of lands in the West Riding of Yorkehire, near Leeds. The tenure wis by grand aergeantry; and the condition, that of preeanting to the king and his successors a cross-bow sud arrow, whenever any of them should come to hunt there. Of the title deed conveying these manorial righta, Weever, in his "Funeral Monuments," gives the following as a faithful transcript:

T, William Kyog, the therd yere of my relga,
Give to thee Paulyn Roydon, Hope and Hopotowes,
With all the boonds both up and downe,
From heaven to jerthe, from yerthe to hat,
For thee and thyne there to dwel,
As tinly as this king-right is mys :
For acrosu-bow add an arrow,
When I eal come to hunt on yarrow, And in token that thla thing foreoth, I bit the whyt wax with my tooth, Beforo Meg, Mand, and Margery, And my third wonne Henry.
The armorial bearing is that of fess between three pheons, or arrowheads, with this motto, - Et nos groque tela sparainus: We too have scattered our arrows. The following statement exhibits the amount drawn annually from the hard earnings of the people, to sapport the profligate luxury of the nobility and clergy of Great Briteln.

Nise British Pickings,-Expressed in British Pourds.

$$
467,511
$$

Which added to the aforesaid sum of $3,732,386$
Amounts to the sum of............ .. $£ 4,199,847$
Which will maintain 88,997 families, at $£ 50$ \& year and upwards esch family.

Here we see the honest industry by which the privileged orders acquire their property. By livings are to be undorstood parishee, in which corates are located by the bishope, and from which the latter receive every tenth snimal, sheaf of wheat, etc., which are raised therein; whilst the famished curates, who actually do all the service, in reading prayers, sermons, etc., receive but sixty or seventy pounds a year. This is English Christianity, bat it is not the religion of Christ.

I will add to thees notable instances of acquiring wealth, in England, by honest industry, a late communication from a writer in Liverpool to an editor of a paper in New. York. After giving a list of the presenk Cabinet and other officers of state, he asys:- "American notions of economy will be shocked, when I add that for the privilege of being mis-governed by theae gentlemen, the tax-ridden, charch-rate, and tythe-striken people of England, Scotland, and Ireland must pay the enormons yearly sum of six hundred thousand dollars! Yes, the mere salaries to the members of the goverament-1 say nothing of the fees, perquisites, peculation and patronage-amount to this cum. Nor is this all: suppoaing the members of the government ramsin in office only a weel-a day-an hour-nearly every one of them is entitled to a rotiring pansion, varging from ono-half to one-third of his eslary. Thus

Lord Brougham, atter a Chanoollorship of font years, receives a peosion of twenty-five thousand dollars a year for lifel-The Dake of Welling ton, who has obtained grants, amounting to upwardes of five millioasd dollars, allows his mother to draw a amall pension frem the country.
"These things are worth knowing, in csse any attempt shoald bn made-as made it one day will be-to trammel the free institutions of Amenca with the trappings of royalty. If you are wies, romain a you are-blessed with s chesp government, and a correotive control over it."

For opposing these outrageons impositions, is Dr. Priestly abused, by this defender of the oppressions and degradation to which the peoplo of Europesn monarchies are subjeoted.
"The Assembly, says Robison, bad given the illumination wro whoop-' Pesce with cottagee, but war with palaces.' A potvoir rovoIutionaire is mentioned, which supersedes all narrow thoughts, all tim of morality. Lequinio pabliehee the most deteetable book that orex issued from a printing press, Les Prejuges vaincus, contationg all the principles, and expressed in the very words of Illuminatian -(p. 817.)

Any pretence of regard for the ties of morality, by Mr. Robison, atier having vindicated the most tyrannical and pernicions dootrines, is adding insult to injary.

There was never a more moral and humane sentiment proclaimed by any government in the world, than that quoted above. What animosity existed between the people of France and those of other countriee? None at all. The crowned heads, supported by the privileged orders of Earope, had combined againat France, with a view of destroying her free institutions, and thereby secure their own ill-gotten power and emoInments. They alone were her cuemies.

Lequinio and Robison were antipodes to each other in principle. While the one wished to destroy prejudices, the other endesvoured to cultivate and support them.

Lequinio was a member of the National Convention of France, and published the book in question, Prejudices Fanquished or Destroyed, in 1794. It has not, to my knowledge, been tranalated into English, not have I a copy of the original before me. It was, however, favourably noticed by a Britioh Review, at the time of its publication; from which the following sentiments are extracted. These will show the tenor of the work, and enable the reader to determine which book, that of Robison or Lequinio, is entitled to the epithet detestable.

Of Prejudices. "Prejudices arise ont of ignorance and the want of reflection; these are the bases on which the syatem of despotiem is erected, and it is the master piece of art in a tyrant, to perpetuate the stupidity of a nation, in order to perpetuate its slavery and hia own dominion. If the maltitade knew how to think, would they be dupes to phantoms, ghosts, hobgobling, gpirits, etc., as they have been at all times, and in all nations? What is nobility, for example, to a man who thlaks? What are all those abstract beings, children of an exalted
fmagination, which bave no existence but in a vulgar credulity, and who sease to have a being as soon as we cease to believe in them.
". The grestest, the most absurd, and the most foolish of all prejudices, is that very prejudice which induces men to believe that they are necessary for their happiness, and for the very exiatence of society.

Or Krsce.-"Kings have ever been tyrante, more or less despotio, more or less cruel, more or less unjust, but equally amitten with a love of power, intoxicated by the spirit of domination, forgetful that they were men, anxious to place themselves on a level with gods, and averse to recollect that all their power and authority was derived from the very nations whom they oppressed.
"It may easily be perceived, that by the word tyrant, I do not mean solely those monsters of the human race, such as Nero, Caligula, Charles IX., etc., my definition extends to almost all kinge, past aud present; I do not even except that king of France so often vaunted as the 'good Henry;' (Henry IV.) although less cruel than most of his predecessors, ho was sssuredily no less despotic, and thought no less than they that all France was deatined for his plessure and his glory; if an innovator during his reign had dared to have recalled the memory of their inalienable rights to the minds of the people, he would have been crushed under the weight of the royal authority. Let auy one recollect the game laws enacted by thin monarch, and then ask himself if he were really a good king. By an article of his ordonance on this subject, it was decreed that every pessant found with a gan in his hand near a thicket, should be stripped naked and beaten with rods around it. It was thus that the life of mas was sscrificed to the repose and the existence of hares and partridges, destined for the plessures of a prince, more culpable, perhaps, in respect to this barbarous law, than any of his predecessors, because, educated among the indigent and unfortunate, he ought never to have permitted any other sentiments than those of gentleness and humanity to penetrate into his mind.
"What should a king be, if he were as he ought? A man covered with a paper jacket, on which is written, (De par la nation et la loi.) 'By order of the people and the law;' the heraid of the nation, the proclaimer of its ordere, and nothing more. It is ridicalous enough to see royalty propagated from father to son, like the king's avil ; it ia etill more ridiculous to see nations so deceived by being accustomed to alavery, an to become servile idolators of that power by which they are oppressed, without once recollecting that it is their own.

Or Wab.-"Who is that perverse and ever execrable man, who first invented the murderous art of war, and that famous science of tactics, which coneista in the best means of masaacreing whole nations? One creature may essassinate another in a moment of passion, and, however barbarous this act really is, and however much it may be repugnant to the senaibility of a good man, yet he can conceive it; but for two men, in cool blood, to think of assassinating one anotber, or thousands of men of assassinating other thousands, with whom they are atterly unconnected, and can have no quarrel or even difference with, of this hecan form noides.
"O shame to the haman species 1 Nations, blind and raseop, will you never awake? What? shall not an individual whom you ham placed upon the throne, and whom you have overwhelmed with yout bounties, be astisfied with consuming the frrit of your sweat and of yout toils, in the bosom of indolence and voluptaonaness, and with laying your industry and your fortune under contribation I And shall he wial to dispose of your very existence? must you be the instrumente of his anger and his vengeance, of hio ambition and his mad desires?
"He wiohea to conquer a province, that ia to may, to usarp the domirion over a country, snd pillage the inhabitanta; and it is to aesist this andacious robbery, of which you will enjoy no lacrative portion, that you are about to desolate the territories of a people who never offondd you, to burn their villages, and to spread death and desolation over theit fields; while in this attempt you expose yourselves to excessive fatigum, to continual privations, sad even to death itself; or, what is etill wona, to wounds which bat prolong a miserable existence $I^{\text {" }}$

A philsnthropist, a man who wishee to promote the general happinea of his fellow men, can see nothing detestable in the foregoing sentimente of Lequinio. But professor Robison, sa well ss the Abbe Barruel, hed his own private intereats to subserve. He possessed a lucrative office in the University of Edingburgh; which he could neither have obtalod nor held, had he adrocated the causo of oppressed humanity. Thos, unhsppily for mankind, it becomes the intereat of the learned in moorrchies, to support the power of tyrants.
Barruel held a place, perhape, equally lucrative in the church; and although the republic, as has been seen, exercleed much forbearance and generosity towards the noDjuring priesta, he did not poesess aufficient liberality of soul to make the least eacrifice for the benefit of the astion under its embarrassed situation. He would neither take the oath of allegiance to the ropublic, nor retire apon a moderate pension.

I ehall now make some remarks on the calumnies that have been iodustriously spread thonghout the world against the French revolution, And althongh none can reflect without detestation on the tyranny and cruelties of Robespierre, and some others who obtsined power in the course of that revolation, I ahall be able to show that these are inferior in atrocity to the barbarities which took place in the American revolutionary war.
It should be remembered, also, that a great part of the enormities which occurred in Frasce, were perpetrated by the mob. The people, driven to madness by the intriguee of their internal foes, gave a locee to their fory, whioh the government could not control.
It wes the policy of kings and their adherents, to stigmatise the actos in the French revolution, as well es the just principles upon which it wa founded. Hence the ory of awful, horrible, detestable, revolution, was echoed from court to court thronghoat Earope; and, without correet informastion, relying upon the roports of the corrupt pressee of the enemien of Rrance. The same cry, I am sorry to say, was reverberated by a portion of the press, from the repabliona shores of America.

The same course was pursued to scandalise the Anoeriesa revolation; and Earope was filled with the lies which were deily issued from "Rivington's lying Gazette," printed in New York, whes io poseeseion of the British.

Which is moot criminal, it may be asked, to robel agsingt oners country, against a nation, or to rebel against one man, s ling, who arrogantly claims the right to govern a country, becauso one of his anceators, in a former age, like William the Norman, or Canute the Dane, compelled the people of that country, by force of arms, to submit to his authority?

The grand and nltimate object of these writere was to bring the French revolation into diarepute among the people of Earope, in order to check its progress in other countries. And to effect this, no mesns were thought too vile to be resorted to. The principle of liberty itself, as though mankind were anworthy of enjoying it, was to be calamniated and denounced. "The French officers and soldiers, syys Robison, who retarned from Americs, imported the American principles, and in overy company found fond hearers who listened with delight and regret to their fascinating tale of American independence. During the war the minister was obliged to allow the Parisians to amuse themselves with theatrical entertainmenta, where every extravagance of the Americans was applanded as a noble struggle for native freedom. All wished for a taste of that liberty and equality which they were allowed to applaud on the stage; but as soon as they came from the theatro into the street, they found themselves under all their former restraints. The sweet charm had fonnd ite way into their hearta, and all the Iuxaries of France beesme as dull as common lifo does to a fond girl when ahe lays down her novel.
"In this irritable atate of mind a spark was snfficient for kindling a flame. To import this dangerous delicacy of American growth, France had expended many millions, and wes drowned in debt."

The suthor then states sundry circumstances, either true or falee, to prove that the Illaminati and Freemssons took a part in the revolution of France; and says, "After all these particulars, can any person have a donbt that the order of Illuminati formeriy interfered in the French revolation, and contributed greatly to its progrese ?" He at the same time acknowledges that, "There is no denying the insolence and oppression of the crown, and the nobles, nor the misery and alavery of the people, nor that there were sufficient provocation and cause for a total change of measures and of prisciples."

But he finds fanlt with "The rapidity with which one oplnion was declared in every corner, and that opioion as quickly ohanged;" as though it were to be expected that a whole people, who had jast barst the bonds which had held them enchained for centories, shonld simultaneocsly sdopt the same opinions in regard to the mannar of securing their future libertiea.
"In 1789, or the beghuning of 1790 , s manifesto was ment from the grand National Lodge of Freemasons (so it is entitled) at Paris, signed
by the duke of Orlesps as grand Master, addressed and eont to th Lodges in all tho respectable cities in Earope, exorting them to unih for the support of the French Revolution, to gain its friends, defenden and dopendents; and eccording to their opportanities, and the practior bility of the thing, to kindie and propagate the spirit of revolatia through all laods. This in s moot Important article, and deeerves a veg serious attention. I got it first of all in a work written by L. A. Hok mann, Vienna, 1795.
"The anthor says, "That every thing he advances in theee memorandums is consistent with his own personal knowledge, und that ho in ready to give convincing proofs of them to any respectabie person who will apply to him personally. He has already given such convincing docaments to the Emperor, and to several Princes, that many of the machinationsoccasonoed by this manifesto have been detected and stoppod; and he would have no scraple at laying the whole before the pablin, did it not unevoidably involve several worthy persons who had suffered themselves to be misled, and heartily repented of their arrors. He is natarally (being a Catholic) very severe on the Protestants (and indeed he has much reason), and by this has drawn on himself many bitter retorts. He hes however defended himself against all thst are of any consequence to his good name and veracity, in a manner that fully coar vinces any impartial reader, and turne to the confusion of the slanderers

Hoffmann eays, "that he eaw some of those manifests; that they were not all of one tenor, some being addressed to friends, of whose eupport they were alroady assured. One very importent artiole of their contents is earneat exhortations to eatablish in every quarter secret echools of politicsl education, and schools for the public education of the children of the people, under the direction of well-principled masters; and offer of peonniary assistance for this purpose, and for the, encouragement of writers in favour of the Revolotion, and for idemnifying the patriotio booksellers who suffer by their endeavours to sappress pablications which have an opposite tendency."

There is nothing in all this bat what common pradence would dictate. Shall monarchs end their satellitea be applanded for exerting every mesns to secuure their power, and to prevent the spread of liberal political opinions; and shall the friends of liberty be reproached for using the same means for the aupport and security of free governments?

From what is ssid of Hoffmann, here spoken of, it is probable he kus a worthless charsoter, on whose word no relisnce could be placed. Hin complaints against the Protestants were, doubtleas, that they favourod the rovolution, which, in the eyes of Professor Robison, would be soffcient to justify every abuse. He was, no doubt, rewarded for his baso officiousneas.
"I conclude," says Mr. Robison," this article (on the French Revoldtion) with an extract or two from the proceedings of the National Atsembly and Convention, which make it evident that their prisciples and their practice are precisely those of the Illuminati, on a great scale.
"On the 19th of November, 1792, it was deorsed, "That the Convoo-
tion, in the name of the Frenoh nation, tenders help and fraternity to all people who would recover their liberty.
"On the 21st of November the President of the Convention said to the pretended deputies of the Duchy of Savoy, "Representatives of an independent people, important to mankind was the day when the National Convention of France pronounced its sentence, 'Royal dignity is abolished.' From that day many nations will in fature recton the ers of their political existence. From the beginning of civil establishmente Kings have been in opposition to their nations-bat now they riee ap to annihilate Kings. Reason, when she darta her rays into every corner, lays open eternal truths-she alone ensbles us to pass sentence on despots, hitherto the scarecrow of other nations,"
"But the most distinct exhibition of principle is to be seen in a report from the diplomatic committee, who were commissioned to deliberate on the conduct which France wss to hold with other nations. On this report was founded the decree of the 15th of December, 1798. The reporter addresses the Convention as follows:-
"t The Committces of Finance and War ask in the beginning, What is the object of the war which we have taken in hand? Without all doubt the object is the annihilation of all privileges, war with the palaces, and peace with the cottages. These are the principles on which your declaration of war is founded. All tyrany, all privilege, must be trested as an enemy in the countries where we set our foot. This is the genaine result of our principles. But it is not with Kings alone that we wage war-were these our sole enemies, we should only have to bring down ten or twelve heads. We have to fight with all their accomplices, with the privileged orders, who devour and have oppressed the people during many centuries.
" 4 We must, therefore, declare ourselves for a revolationary power in all the countries into which we enter-(Lroud spplause from the As-aembly)-nor need we put on the cloak of bumavity -we disdain such little arts. We must clothe ourselves with all the brilliancy of reason, and all the force of the nation. We need not mask our principles-the despots know them already. The first thing we must do is to ring the alarm bell for insurrection. We must, in a solemn manner, let the people see the banishment of their tyrants and privileged castes-otherwise, the people, accustomed to their fetters, will not be able to break their bonds. It will effect nothing, merely to excite a rising of the peoplethis would ouly be giving them words instead of standing by them.
" 'And since, in this manner, we ourselves are the Revolutionary Administration, all that is againat the rights of the people must be overthrown at our entry-we must display our principles by actually destroying all tyranny; and our generals, after having chased away the tyrants and their satellites, must proclaim to the people that they have brought them happiness; and then, on the spot, they must supprees tithes, feudal rights, and every species of servitude.
" - But we shall have done nothing if we stop here. Aristooracy still domineers-We mnot, therefore, suppress all suthoritiee exiating in the
hande of the upper olesees. When the revolutionary anthority appesa there must nothing of the old establishment remain. A popalar eywen must be introducod-every office must be occupied by new functionaris -and the sanscalottes* most everywhere have \& share in the adminis tration.
" Still nothing is done, till we declare alond the preoision of orr principles to such as want only a half freedom. We must say to them -if you think of compromiaing with the privileged castes, we canoot suffer euch dealings with tyrants-they are our enemies, and wa mus treat them as enemles, because they are neither for liberty nor equality. Show yourselves disposed to recelve a free constitation-and the Convention will not ouly stand by you, bat will give you permanent soppor; we will defend you against the vengeance of your tyrants, againat beir attacks, end against their return. Therefore abolish from among you the nobles-sud every ecclesiastical and military incorporation. They are incompatible with equality. Henceforward you are citivens, ill equal in rights-equally called upon to rule, to defend, and to aerre your country. The agents of the French Repablic will instruct and assist yeu in forming a free constitation, and assure you of happinea and fraternity.?
"This report wes loudly applauded, and a decree formed in prociss conformity to its principles. Both were ordered to be translated into all languages, and copies to be furniahed to their geuerals, with orden to have them carefully diapersed in the countries which they invaded,"

The reader is sware, that the principal powers of Earope hisd combined for the purpose of putting down the French Republic, and restoring the anciont regime; and still they complained of these retalistory measures.

What course did the American revolutionists take, under similar dircamstances? In the confederation of the American States, in 1781, the 11th article says, "Canada, acceding to the confederation, and joioing the measures of the United States, shall be admitted into the Union," An army wes sent into Cansda, for the purpose of inducing and siding the people of that province to assert and maintain their independence.

Let us see how the government of the United States treated this revolationary principle in later times. The following is an extract of

[^138]a speech delivered by Heary Clay, in the House of Representatives, in 1818, in favour of acknowledging the independence of the provincee of Ls Plata, in South Americs:-
"I maintain," sald he, "that an oppresed people are anthorised, whenever they can, to rise and break their fetters. This was the great principle of the English revolation. It was the great principle of our own. We must, therefore, pass sentence of condemuation upon the founders of our liberty-say that they were rebels, traitors-and that we are, at this moment, legisiating without competent powers, before we can condemin the cause of Spanish America. Our revolation was mainly directed against the theory of tyranny. We had suffered comparatively but little-we had in some respects been kindly treated - bat our intrepid intelligent fathere saw, in the usurpations of the power to levy an inconsidersble tax, the long train of oppresive sots that was to follow. They rose-they breasted the storm-they conquered, and left us the glorions legacy of freedom. Spanish America, for centuries, has been doomed to the prectical effects of an odious tyranny. If we were jostified, she is more than jastified. ${ }^{n}$

The sentiments of Mr. Clay were responded to by Congress, and La Plata was declared by our government free and independent.

The French revolution was hailed with joy by the friends of liberty in England, as appests by the following document. Mr. Robison statea, that while his book was printing, he obtsined a work then just published in Paris. It confirms, says he, all that I have said respecting the use made of the freemason lodges. It gives a particular account of the formation of the Jacobin Club, by the Club Breton. The author writes: We may judge of what the duke of Orloans could do in other places, by what he did during hie atay in Eugland. He gained over so his interest Lord Stanhope and Dr. Price, two of the most respectable members of the Revolution Society. This society even sent to the Assembly an ostenaible letter, in which are the following paesages:
"The Society congratulates the National Aseembly of France on the Revolation which han taken place in that conntry. It cannot but earnestly wish for the happy conclusion of so important a Revolation, and, at the eame time, exprese the extreme satisfaction which it feels in reflecting on the glorious example which France has given to the world.
"The Society resolves unsoimonsly to invite sll the people of England to establish Societies through the kingdom, to support the principles of the Revolution, to form correspondences between themselves, and by these means to establish a great concerted Union of all the true Friends of Liberty."

Accordingly (eays the French anthor) this was executed, and Jscobin Clabs were Getabliehed in several cities of England, Scotland, and Ireland.

The following passagee are quoted by Mr. Robison from a vindication published by Profesoor Weishaupt, against the charges brought against him, by those who wished to retain the mass of the people in a stato of *asalago:
"All men," esys he, "are sulject to errors, and tho best man in be who beet concosls them. I have never been guilty of such vicen ex follies: (as he had been sccused of) for proof, I appeal to the whols tenor of my life, which my reputation, and my strugglee with hotili asbale, had brought completely into public view long before the inat tation of this Order, without abstiog sony thing of thet flattering rogur which was paid to me by the first persons of my country and its neight bonrhood; a regard well evinced by their confidence in me as the bet instruotor of their children.
${ }^{4}$ It is well known that I have made the chair which I occupied in the University of Ingolstadt, the resort of the first class of the German yonth.

- The tenor of my life has been the opposite of every thing that in vile; and no man can lay any such thing to my charge. I have reaca to rejoice that these writinge have sppeared; they are a vindicationd the Order and of my conduct. I can, and must declare to God,-endI do it now in the most solemn manner,-that in my whole life I never saw or heard of the so much condemned secret writings; and in particular, respecting these abominsble means, such as poisoning, abortios, etc., was it ever known to me in any case, that any of my frienda a acquaintances ever even thought of them, advised them, or mado my nse of them.
'It was the fall conviction of what could be done, if every man wen placed in the office for which he was fitted by nature and a proper edecation, which first suggested to me the plan of Illumination.
${ }^{4}$ I am prond to be known to the world as the founder of the Order ol Illuminati: and I repeat my wish to have for my epitaph,

> 'Hic ritus ent Phaethon, currus auriga paterni,
> "Quem ti non tenuit, magnis tamen eacidit ausis."
"This is the resting place of Pbaston, son of Apollo; he failed to guido the chariot of the son, and fell-yet nobly fell, so lofty the attempt"

It is reproachful to humsn nature, that men respectable for their so quirements, and of good standing in society, abould be induced throogh self-interest, to use every possible means by calumpy and falsehood to destroy the character snd usefulness of persons like professor Weighuopt who exert thoir talents with a view of bettering the condition of ther fellow meu. And it is to be lamented that many of thoee for whow benefit such philanthropista labour, join in the hue and cry againet them

The following appropriate language is applied to the writinge d Messrs. Barrnel and Robison, in an address of De Witt Clinton, par grand master of the State of New York, at the installation of Steposa Vsn Rensselser, as grand master of the lodges of this State, September, 1825:-
"Oor fraternity has suffered onder the treatment of well-menming friends, who have undesignedly inflicted more iojuries upon it thas its most viralent onemies. The absurd acconats of its origin and history, in most of the books that treat of it, have proceeded from onthaden
operating on oredolity and the love of the marveloas. An imbecile friend oftes does more injury than an avowed foe. The calumnies of Barruel and Robison, who laboured to connect our society with the Illuminati and to represent it as inimical to social order and good government, have bean consigned to everlasting contempt, while exaggereted and extravagant friendly acoounts and representations continnally stare us in the face, and mortify our intelleotual diserimination, by ridioulous olaims to unlimited antijuity. Nor ought it to be forgotten, that genuine masonry is adulterated by sophistications and interpolationa foreign from the simplicity and sublimity of ita natare. To this magnificent Temple of the Corinthian order, there have been sdded Gothio erections, which disfigure its beauty and derange its symmetry. The adoption in some oasee of frivolone pageantry and fantsatic mummery, equally revolting to good taste and gonuine masonry, has exposed us to much animadversion; but our institution, clothed with celeatial virtuo, and armed with the panoply of truth, has defied all the atorms of open violence, and resisted all the attactrs of insidious impoatore ; and it will equally trinmph over the errors of miaguided friendship, whiob, like the tranait of a planet over the diak of the aun, may produce a momentary obecuration, but will ingtantly leave it in the full radiance of its glory."-Freemason's Library, p. 388.)

## Horrors of the American Revolution, etc.

The revolution of France was agreesble to the will, doubtlees, of ninety-nine out of a hundred of its inhabitants. The republic was the rule of the people; the Frenoh citizens, therefore, who resisted it, were rebels, were traitors to their country. And although the severitiea exercised towards them in many cases, can by no means be justified, yet reproaches against the republic, on the acore of oruelty, come with a very ill grace from its enemios.

In proof of which, I will call to remembrance some of the apalling soenes of the American revolutionary war, ahowing how rebels to a king were treated by his myrmidons ; which ought to be often recurred to, and held up to the eternal execration of posterity. This would be more becoming Americans than to dwell upon the horrors of the Fredch revolation, relying on the garbled accounts of its domestic and foreign foes. For this purpose I shall give the following indubitable facts.

The policy of the British government evidently was to waote away the small number of troope which Ameries had raised, and to detor others from entering into the war, by the inhuman means here detailed.

Extracts from Mrs. Warnor's Bistory of the American Revolation (V. lii, p. 34).
"Many of the captured Americans were sent to Great Britsin, where they were for a time treated with almost every severity short of death. Some of them were transported to the East Indies; others pat to menial services on board their ships. But after some time had elapsed, thoee in general who were conveyed to England, might be deemed happy, when their sufferinge wers compared with thoee of thair counrytmen
who perished on board the prison ships in Amorian, moder the ep Britiah commanders of renown, and who, in many reapecta, werecivi and polite.
" No time will wipe off the stigma that is left on the names of Clin and Howe, when posterity lool over the calculations, and find during aix years of their command in New York, eleven thoos Americans died on board the Jersey, a single prison ship, static before that city for the reception of thoee victims of despair. Nor the proportion amaller of those who periahed in their jails, dunget and prison hulks.
" It in true that in England, the language of government hold up the American prisonere as rebels, traitors, insurgents, and pirates; this did not prevent the compasaionate heart from the exerciso of benign virtues of charity and brotherly kindnese. The lenient hen many individuals was atretohed out for their rolief. While their sonr were thas softened, their brethren in America, in the neighbourhoo parents, children, and the most affectionate partnera, not being permil to receive from them the neceesery rolief, were dying by thona amidet famioe, filth, and disease."

In epeaking of the ravages of the British on the borders of the al of Connecticut, under the command of the traitor Arnold, Mrs. Was obeerves:-
"Now London was more seriously attacked; and sfter a short ; brave reeistance, plundered and burnt. As soon the the tha hat rendered, a number of soldiers entered the garrison. The offieer y headed the party inquired who commanded it? The valiant Colo Ledyard atepped forward, and replied with ease and gallantry, "Id but you do now;" and at the same time delivered his eword to a Brif officer. The barbarons ruffian, instead of receiving his submission I the generous victor, immediately stabbed the brave American. I was his desth the only sacrifice made in that place to the wanton $v$ geance of the foes of America. Several other officers of merit sessssinated, after the surrender of the town; while their more helpl connexions experienced the usual cruel fate of cities captured by humsn conquerors."-(Vol. iii. po 90.)

Fort Griswold, above alluded to, was probably defonded with as mi bravery as was exhibited on any occasion during our revolution war. The whole garrison, with the exception of oue who secre himself, were finhumanely butchered. Those who had been wound during the action, were crammed into carts, and precipitated down 1 steep hill on which the fort stands among the rocka below ; where th who were not instantly killed, were left to perish. This is the man: in which Britich officers reward bravery in an enemy. The statem here made I have from an eye witnees, Thomas Herttell, Esq., ${ }^{[ }$ vill subelantlato the facts, if denied. Mr. Herttell was in sje of the fort at the time of the action, and learnt all the particel soon after.

The following ascount of the treatment and nofferings of the $\Delta$ merle
prisoners on board of the Jersey prison ship, is taken from the recently pablished Narrative of the Rev. Mr. Androb, of Berkley, Massachueeta:
"We were asptured, on the 27th of August, by the Solebay Frigate, and eafoly stowed away in the old Jersey prison ship at New-York. This was an old 64 gan ship, whioh through age had become anfit for farther actual service. Her dark and filthy external appearance perfectly corresponded with the death and despair that reigned within; and nothing conld be more foreiga from the trath than to paint her with colourn flying, or any dircomstance or appendage to plaase the eye. She was moored about three quarters of a mile to the eastward of Brooklyn Ferry, near a tide mill on the Long Ialand shore. The nearest distance to land was sbout twenty rods. And doubtless no other ship in the British navy ever proved the means of the deetriction of eo meny human beings. It is compated that no lees than eleven thonsand American seamen perished in her. But after it was known that it was next to cortain death to confine a prisoner there, the inhumanity and wickednesa of dolog it was about the same as if he had been taken into the city and deliberately shot on some poblic equare. But 18 if mercy had fled from the earth, here we were doomed to dwell; and never, while I was on board, did any Howard, or angel of pity, appear to inquire into, or alleviato our wose. Once or twice, by the order of a stranger on the quarter deck, a bag of apples wrere hurled promiscuously into the midat of hundreds of prisonera crowded together thick as they conld stand; life and limbs were endangered by the saramble. This, inatead of compassion, was a cruel sport. When I sew it abont to commence, I fled to the most distant part of the ship. On the commencement of the first evening, wo were driven down to darkness between decks secured by iron gratinge and armed soldiory. And now a acene of horror, whioh bsffies all description, presented itself. On every side wrotched, deopoading shapes of men could be seen. Around the well room an armed guard were forcing up the prisoners to the winchee, to olear the ship of water and prevent her cinking, and little else could be heard but matual execrations, reprosches, and lnsults. During this operation there was a emall dim light admitted below, but it served to make darknees more visible, and horror more terrific.
"Whon I became an inmate of this span abode of suffering, despair, and death, there were about four hundred prisoners on board, but in a short time they smounted to twelve handred. And in proportion to our numbers the mortality increased. All the moot deadly disesses were presed into the sarvice of the ling of terrors, but his prime ministers were dysentery, small pox, and yellow fever. There were two hospital ohips near the Old Jersey, but thoee were soon so crowded with the sick that thoy could receive no more. The consequence was, that the diseased and the healthy woremingied together in the main ship. In a short time we had two hundred or more sick and dying, lodged in the fore part of the lower gan deck, whare all the prisonern were confloed at night. Uttor dorangement was a common symptom of yellow fover, and to fnareses the horror of the darknese that ahrouded ns, (for wo
were allowed so Iighte betwixt decks,) tha voice of warning moell bo hearu, "Talso beed to yourselves. There ina mad-mannstalloing throwh the ship with a lonife is hir hand.' I momotimen farail tho anen acorpre in the morning, by whose whe I ley down et night At mother timesp would beocone deranged, and sttempt in daricness to rime, asd atmallo over the bodies that every where eovered the deck. In this ease I hed to hold him in his plsce br main strength. In epite of my effirts hy would comptimes ries, and then I had to close in vith hin, trip ap his heels, and lay him again upoo the deck. Whilo so mang fero ick with raging fever, there was a lond ery for water, bet mome could be had except on the upper deck, and bat ono allowed to awcend at a time. The suffering thea from the rage of thinst, during the night, wis very grow, Nor wea it at all times naio to go up. Proroked by the coutinmal an for leave to secend, when there was already oee on dock, the mentry would pash them beck with his bayonet. By one of these threth, which was more spitafil and violent than common, I had a nartow ow cape of my life. Is the morning the hatehways were thrown open and we were allowed to mecend, all at onee, and reminin on the oppor donk during the day. Bat the frrst object that met our vier in the sworning was a most appalling spectecle. A boet londed with dead bodies, exer veyed them to the Long Ialend shoro, where they were alightly coverd with sand. I sometimes need to stand to count the namber of tian the shovel was filled with sand to cover a dead body, and certain I an that a few high tides or torrente of rain most have disisterred thea; and had they not been remored, I should eappose the shors, oven mon, would be covered with huge piles of bones of American seamen. There were probably four hundred on board who had never had tho emall pas: soure, perhape, might have been saved by inoculation. Bat homanity whe wanting to try even this experiment. Let our disemes be what it would, we were absandoned to our fato.
"Now and then an American physician was brought in as a captive, but if he coold obtain his parole ho lef the ship, nor conld re moch blame him for this. For his own death wes next to certain, and hin success in saring others by medicine in our vituation, was small. I remember only two American physicians who tarried on boends fer days. No English physicians, or any one from the city, ever, to my knowledge, came near us. There were thirtoen of the crew, to which 1 belonged, but in a short time all but three or four were deed. The most healthy and vigorous were seized first with the fever, and died in a few hours. For them there seemed to be no mercy. My constitating was less muscular and plethoric, and I escaped the fover longer than my of the thirteen, except one, aud the first onset was lese violent. There is one palliating circumstance as to the inhumanity of the British, whin ought to be mentioned. The prisonera were furnished with bockso and brushes to cleanse the ship, and with vinegar to esprinkle her inaide. Bat their indolence and their despair wan such that they would not nee them, or but rarely. And, indeed, at this time, the encoaragement to do it wes emall. For the whole ohip, from her keel to the leffrall, wan
affectad, and contained pentilence enfficient to desolate a world; and death were wrought into her timbers. At the time I left. is to be presumed a more flthy, contagious, and deadly abode and beings, never existed among Christianized people."
following is extrected from an accoant of the war, hy an English n, William Gordon, D.D.:-
sat complaints are made of the horrid usage the Americans met ter they were captared. The garison of Fort W ashington surd by capitalation to General Howe, the 16th of November. The rere, that the fort shonld be sarrondered, the troops be considered rs of war, and that the American officers should keep their bagnd side arms. These articles were signed and aftorwards pubin the New-York papers. Major Williams, of Rawling's rifie at, in doing his duty that day, fell into the hands of the enemy. sughty, imperions deportment of the officers, and the insolent ty of the soldiers of the British armv, aoon dispelled his hopes of reated with lenity, Many of the Amorican officers were plundered baggage, and robbed of their eide arme, hats, cockadea, eto., lerwiee groasly ill-treated. The fourth day of their captivity, ge, Molntire and himself, all wounded officers, were pat into one n dirt cart, and dragged through the city of Now York, an objecta ion, reviled as rebels, and treated with the ntmost contempt. ho cart they were set down at the door of an old waste house, asins of Hamden Hall, near Bridewell. The privates in the coldon of the year were olosely confined in charches, sugar houses, ter open buildings, whioh edmitted all kind of westher, and were 3d to the severest kind of persecntion that ever unfortunate capffered. Officers were invulted and often struck for attempting to he misersble privates some relief.
jor Williams verily believed, that not loss than fifteen hundred re perished in the course of a fow weeks in the city of New York, it thie dreadful mortality waa principally owing to the want of ins and extreme cold."-(Vol. II., p. 487.)
xtract from Goo. Ethan Allen's narrative of his capture and treat$y$ the British, in the American revolutionary war :-
oxt invite the reader to a retrospective aight and consideration of efal scene of inhumanity exercised by Gen. Sir William Howe, iarmy under his command, towards the prisoners taken on Long on the 27th of August, 1776; sundry of whom were, in an inand barbarous manoer, murdered after they had surrendered rma ; partioularly a Gon. Woodholl, of the militia, who wes to plecea with ontlasese, by the light hornemen, and a Captain Iof the Continental army, who was thrast through with a bayowhich wound he died intently.
2dry others were hanged up by the neck till they were dead, five limb of a white oak tree, and withoat any resson aselgned except sy were fighting in defonce of the only blewing worth preserving; deed, those who had the misfortone to fall into thoir hands at

Fort Weshington, in the month of November following, met with bot very littlo better usage, except that they wore reserved from immedin death to famish and die with hunger; in fine, the word robol wis thought, by the enemy, sufficient to sanctify whatever craelties then were plessed to inflict, death itself not excepted; bot to pess over perticulars, which would ewell my narrative far beyond my deaign.
"The private soldiers who were brought to Now York, were crowld into churches, and onvironed with slavish Hesian guards, a people of a strange language, who were sent to America, for no other dengr bs cruclty and desolation. I have gone into the churches, and aesa ser dry of the prisoners in the agonies of death, in consequence of very hanger, and others speechless, and near death, biting pieces of chips; others pleading for God's sake, for something to oat, and at the tine time shivering with cold. Hollow grosns ealuted my ears, and deapt seemed to be imprinted on every of their countemances. The filth $d$ these ohurches, in consequence of the fluxes, was almost beyond do scription. I have seen in one of them seven dead, at the same tims, lying among the excrements of their bodies.
"It was a common practice of the enemy, to convey the deed from these filthy places in carta, to be slightly buried; and I have sean whole gangs of tories making derision, and exulting over the dead, saying, 'there goes another load of d-d rebels.' I have obsearved the Brition soldiers to be fall of their insulting jokes, and vaunting on those oessions; bat they appeared to me leas malignant than tories.
"The provisions dealt out to the prisoners, were by no means anscient for the support of life. It was deficient in quantity, and much more eo in quality. The prisoners often presented me with a sample of ther bread, which was dsmaged to that degree, that it was loathoome, and unfit to be eaten. Their allowance of meat (as they told me) was quita trifling, and of the besest sort. I never saw any of it, but was informed, bad as it was, it was swailowed slmost as quick as they got hold of it I saw some of them sacking bones after they were speechless; othen who could yet speak, and had the use of their resson, urged mo in the strongest and most pathetic manner, to use my interest in their bebalf; - for you plainly see,' said they, 'that we are devoted to death and det truction;' and, after I had examined more particularly into their traly deplorable condition, and had become more fully apprized of the eambtial facts, I was persuaded that it was a premeditated and syotematien plan of the British council, to destroy the youths of our land, with s view thereby to deter the country, and make it anbmit to their der potism ; but that I could not do them any material sarvico, and thet, by any public attempt for that purpoee, I might endangor mysoll by frequenting places the most nanseous and contagious that could be cocceived of. I refrained going into the charches, but frequently 000 versed with euch of the prisonera as were admitted to come out into the yerd, and found that the systematical usage atill continned. The guard would often drive me away, with thelr fixed bayonets,
"Tho integrity of these suffering prisoners, is hardly exedibla.

Many hundreds, I am confident, submitted to death, rather than enlist in the Britigh eervice, whiob, I am informed, they most gonerally were preseed to do."
"The success of the American arms at Princeton had a mighty effect on Gen. Howe and his council. Their obdursoy and death-designing malevolence, in some measure, abated or was suspended. The prisoners who were condemned to the most wretohed and cruelest of deathe, and who survived to this period, were immediately ordered to be sent within the American linee for exchange. Several of them, however, fell dead in the atreets of New York, as they attempted to walk to the vessels in the harboar for their intended embarkation. Moat of the residue, who resched their homes, having reoeived their death wound, could not be restored by the assistance of physicians and friends; bat, like their brother prisoners, fell a eacrifice to the relentlees and scientifio barbarity of Britain. I took as muoh pains as my oircumstances would admit of, to inform myself not only of mattera of faot, bat likewise of the very design and aims of Gon. Howe and his council. The lattor of which I predicated on the former, and submit it to the candid pablic." - (See Moore's Memoir, p. 157.)

## Jowrnal of Congress.

The following is an abstract of a report made to Congress, by the Bosrd of War, Jennary, 1778.
"It appears that the general sllowance of provisions for each prisoner per day, does not exceed four onnces of meat and the same quantity of bread, and oftimes mach less, and frequently so damaged as not to be eatable; although the professed allowance is from eight to ten onnces; and that the prieoners have been treated in general, officers not excepted, with a oruelty scarce to be paralleled, and with the most studied and illiberal insalt.
"That it has been a common practice with the enemy, on a prisoner's being first captured, to keep him three, forr, and even five days without a morsel of provisions of any kind, and then to tempt him to onlist with the new levies, in order to ssve his life:- that there are numerous instances of prisoners of war perishing in all the agonies of hanger:-that, being generally stript of what clothes they have when taken, they have suffered greatly for want thereof during their confinement."

The British prisoners, on the contrary, were treated with the greatest humanity, as sppesre by the following resolution of Congrees, passed January 27, 1776:
"Resolved, That the committee of finpection of Esopas, or Kingston, bs directed to supply the prisoners there with necessary clothing, and also provide them with lodginga and provisions, not exceeding the rations allowed to privates in the continental army, on the most reasonable terms they can."

But the worst is not yet told. The most horrible, the most appelllog to civilised homanity, is the employment of savages as auxiliaries
in war, and then paythg them a etipuiated price for the cealpe of mas, women and children. This wea done in the Ameriona rovolutionary war. A graduated priee was fixed upon by British commanders for the scalps of soldiers, farmers, women and ohildron.

The lato Col. Willet, who was second in command, et a period d the war, of $A$ body of Amerioss troops statioped at Fort Stanwioks, al the hesd of the Mohawk river, and hearing one day the firing of mraked in the wooda edjacent to the fort, he issued out with a party of the garrison and soon met a little girl rauniog with a baskot of blackberriee in ber hand, -on advaneing fortber he found her companion tomahariked and sealped. He afterwards overtiok a party of Indiens, some of whom he killed, and mado prisoners of othere; on one of whom he found un official paper, signed by a Britieh officer, stating the amount that wa paid for the varions scalps se above enumeratod.
He sent this document to Gov. Livingeton of Jersey, who then coertemplated to write a history of the war; but which he did not ncownplish, and the paper, perhape, has never beea pablished.
This statement was made by Col. Wlllet, a short time before hin desth, in the office of the Recorder of this city, in the presence of $M$. Riker the Recorder, Gen. Lamb, and several others, among whom wis my*elf.

Even in the last war of America with England, at the taking of Little York, in Upper Canada, a woman's scalp, with long hair, wna found in the council chamber, hanging behind the Speaker'e chair, alongside the mace. This must have been a signal to the Indians to propare for profitable employment.
This fact is officially atated by Gen. Dearborn and Commodore Ohauncey.
The ecalp agent in this war resided at Malden, and was well known to a friend of mine, the late Dr. Le Baron, United States' apothecarygeneral; who told me that the office and daty of its incumbent were notorions, and admitted of no doabt. After, however, the American government had taken into pay some Indian tribea, and a retaliation was apprehended, a council of war of British officers was convened at Kingston, when it was determined to pay the Indians in fatare for prisoners brought to the camp alive, instead of ecslpe.
The legielature of New York passed an act granting a bounty on wolvee' heads, on acconnt of the depredations made by them on the sheep of the farmere. This was a justifiable mode of warfare againet wolves ; but the British government, it is believed, stands pre-eminent without a parallel among natione, in paying a bounty on human ecalpe.

And, however barbarous were the pative executioners of its vengeanco, they never violated the ohastity of females that fell into their power, as the British soldiers were permitted to do, at aundry places during the laat war ; and they were led aleo to expect an opportunity to commit the same outrage at New Orleans, as appears by the watchword, beanty and booty, givea out on the night of the attack.
I will make as ahort extrect from the Memoirs of Willism Sampeon,

Wiq., as an oxample of the menner in which kinga treat rebein to their aernmed anthority, in case they do not sucosed in ridding themsolvea of it.
"I remained in Dablin until the 16th of Aprif, when the terrop became no atrocions that humanity could no longer endure it. In every quarter of the metropolis, the shrioka and groans of the tortured were to be heard, and that, through all hours of the dsy and night, Men were taken at random without procees or aceneation, and tortured at the plessure of the lowest dregs of the commanity. Bloody theatres were opened by these self-constitnted inquisitors, and new and unheard of machines were invented for their disbolical purposea.* Unhappily, in every country, history is but the record of black crimee ; but if ever thie history comes to be fairly written, whatever has yet been held up to the execration of mankind, will fade before it. For it had not happened befure, in any country or in any age, to inflict tortare and to offer bribes at the same moment. In this bloody reign, the coward and the traitor were anre of wealth and power; the brave and the loyal to suffer death or torture. The very mansion of the viceroy was peopled with salaried denouncera, kept in seoret, and led ont only for parposes of desth. Some of them, atruck with remorse, have since published their own orimes, and some have been hanged by their employers. Men were hang up until their tongues started from their mouths, and let down to receive freah offers of bribe to betray their neighbour or discover themselves. If they neither knew nor would dieoover anything, thees intervals of relaxation were followed by new and more poignant infliotions. And when that courage, which is the noble attribute of my unhappy countrymen, spurned in the midst of agony at the tempter and the bribe, the neareat and the tendereat relatives were often brought to witnese these horrors; that out of their feelinge might be extorted some denuncistion, true or false, which the virtue of the enfferer had withheld."

Among other means of torture made nse of for the above purpoee, I am told by an Irish gentloman, who now holds a reapectable office in our republic, that cape made of pitch mixed with powder were not unfrequently placed npon the heads of these unfortanate victims, and then set on fire.

Unfortunate Poland, like Ireland, mado a breve but ineffectual effort to shake off the despotiam with which it is oppressed; and the following statement shows the humanity of its conquerors:-
"Poland fell, neither from the valoar nor from the number of her enemies; she fell from their all-pervading intrigued and the power of their gold. There was treachery in the midet of har camp, and in the bosom of her councils; and to this foe, no citadel was ever imprognable. Hor fall was followed by greater outrages apon civilisation and hamanity than have ever been perpetrated in modern ages. Wareaw immediately became a pandemonium of meseacre, rapine, and cruelty, of which not half the horrors have been breathed or written. The Rassian prisoners were liberated, and revange added its fury to the tide of their pessions.

Fathers and husbande, pinioned for the dangeon and the gallows, wit newed the dishonour of their deaghters sad wives. The eleeping infint attracted no compaesion, and kneeling children were not epared. Similar acenee occurred in all the principal cities of the kingdom. Of the milltary and civil offcers, grest numbers were shot or hanged : hundrede of others wore chained together and marched off to the mines of Siberis Some, howover, eacaped, and are fagitives in England, Franes, and the United 8tatea. An English traveller who has very recently paseed throagh Poland, mot on its northern frontior some handrede of Poles, many of them apparently of the higher cless of the popalation, ohained five abreest to an iron bar, and marching to hard labour for lifo, in mines where tho light of day never enters. But one of the latest means omployed for the deatruction of the Polish people fs the exportation of children. The imperial nkesea for this measure spread terror and desolation throughout the kingdom. Entire schools of children have been eieesed, and harried off in caravans to the interior of Russia, without being allowod a sight of their parents; and parents, whoee natural yearninge over their little ones impelled them to attompt their reacue, were immediately delivored over to the military tribunal, to be tried for insubordination. But a peculiarly diabolical feature of this ukase remsins to be doveloped. Is only mentions orphan children, yet it defines theee to be either ohildrea without fathers, though having fortunes, or thoeo having fathers bat in indigent elrcumstances. Thus the two branches of this definition aro made to embrace nearly the whole yonthful popalation. The comminsaries of police in the cities, and the commissaries d'arrondisemens in tho provinces, wore ordered to invite all parents, having families in distres, to send in declaratious to that effect, that they might obtain relief from the government. Many, buffering from the prevailing misery of the country, were seduced by this apparently benevolent offer to do so. The children of all these came within the regulation of the akase, and ware speedily torn from their arms. An eye witness has asoured na that out of 450 children of the first division transported, scarcoly 115 resched Bobruysk alive. They were compelled to walk the moment they aromed the frontiers; and when any were anable, from sickness or fatigue, to proceed farther, they were abandoned, with a portion of bread and waterSeveral persons recently arrived from Siberia, have fallen in with the corpses of rasiy of these aufortunate innocents, stretohed beelde the breed of which they could not avail themselves. The next stop was to soino all the male children of the parochisl schools, and by this means, and that of the recent military consoription, the population of brave bat mehappy Poland has alresdy been reduced to half its former number."

## Eixtracts from Foreign Paperz.

The whole province of Lithuania was traversed in different direotloos by the Russian troope, who barnt the towns and villages, masesored tho prisoners, and killed even the women spd ohildren.
"Three of the confederates of Dxiewicki, who hes poisoned himedf, have been shot at Werssw in the public place of execation, withoat the
wsile. They all died with a dipplay of conrage and firmnees, hoping that their deaths might be useful to their unhappy country. Olkowski, in particular, showed great self-command. While on his way to execution, he gathered up a handful of the soil, and exclaimed, © For this we have fought, and for this we are willing to diel" The tombs of these young heroes have become objects of veneration to the people, who strew flowers and garlands upon them. Many woman have compromised themselvee. A young lady, named Helen Nowakowaka, has received 200 stripes for having sent provisions to some unfortunate insurgente who were dying of hunger in the woods. The horrible punishment was inflicted in one of the barracks of Lablin, to the sound of military music; and to render it more severe, they afterwards shaved her head, and confined her in a convent, and no one can tell when she will be relessed. The wife of Orlowska had been condemned to receive 500 stripas for having sheltered one of her relations. She entreated that her punishment might be inflicted publicly at Wareaw, in order that it might inflame the courage of the patriots. This favour, however, being denied her, on the day her sentence was to hare been execnted she was found dead in her prison, having forced pins into her bosom." (The Polonaise.)
"Gallicia, of all the provinces of Poland, seems to be anffering under the most cruel persecutions, and that at the hands of the cold-blooded diplomate, Metternich. Count George Tyskiewies, though an old man, has been confined in a subterradean cell for more than a year; bis wifo, who went to Vienns to supplicate the late emperor, was received by him just before his death, but repulsed by Metternich. Colonel Lariski is attached to a wall by an iron bar in another dungeon, do."

We see nothing in revolutionary France like the crueities I have detailed. Many rebels and traiturs to the republic were executed, but there was no torture, no protracted sufferings.

And shall the autocrat of Rassia, and his miserable slaves, the instruments of his vengeance;-shall the government of Eugland, and thoee who approve and support it, exclsim againat the horrora of the Freach revolution? And will the present generation in Amerios, forgetful of the consideration due to themselves, and the toils and sufferings of their virtuous fathers in purchasing their liberties at so dear a rate, bestow all their sympathies upon the sufferings of a few crowned heads, and others impudently styling themselvea noble,-who are the enemies of freedom, and whose sole aim is to support rank and privileges, at the expense of the degradation and misery of the rest of mankind, with whom they have no feelings in common.

Above all, while frreligion is arged against France as the cause of crualties in her revolutionary struggle, let not the profession of piety in other nations sanctify the commission of deeds infinitely more atrocious, for well might the Frenoh exclaim, in the language of a Bcotch marehal, "If we sre sinners, our enemies are na saints."

It is, moreover, worthy of remark, that the atrocities imputable to France, were committed during the away of Robespierre, who professed as great regard to religion as did the monarohs that comblned against
the ropablic, under a pretence of preserving it. Ho denounced the Moderates, commonly called the Gironde party, for want of faith $h$ Christianity, the most prominent characters of whiah were Condorce, Briesot, Lafayette. Thomas Payne, \&c. Beligion, in faot, has been the hobby-horse of tyrants in all ages and in all countries, and mankind have been too earlly gulled by their hollow pretansions. In the pructices of monarchs professing Chriatianity, we do not percaive the humble, charitable, forgiving apirit resommended by its benevolent founder. These virtues, they seem to think, do not properly belong to them. They mnst be arrogast, proud, and vindictive; and the moest appropriate enaignas of thoir escutoheon would be a bloody oroes, eupportod br deathe-heads and croas-bones.

$$
\text { An Abatract of " } \Delta \text { Defence of Masonry." }
$$

Ocoasioesd by a Pamphlet celled "Masonry Dieectad." London, 1750.
This pamphlet is written by Bamnel Prichard, and made uso of in this volume.- The Defence was publiehed by Dr. Anderson, and appended to his "History of the Constitation of Freemesons." The anthor, though probably a member of the masonic society, would wiah to malso it appear that he drew all his information of it from the work he pretende to snswer.
"I was exceedingly pleased," sayy he, "to find the Dissector lay the original scene of masonry in the Kast, a country always famocs for symbolical learning supported by secrecy. I could not avoid imano diately thinking of the Egyptiens, who concealed the chief mysterica of their religion under signs and symbols, called hieruglyphics.
"Pytbagoras, by travelling into Egypt, became instructed in the myteries of that nation; and here he laid the foundation of all his symbolical learning. The eeveral writers that have mentioned this phllosopher, and given an account of his sect and institutions, have convinced me fally, that freemasonry, as pablished by the Dissectoc, is very nearly allied to the old Pythagorean discipline; from whence, I am persuaded, it may in some circumstanoes very justly claim its descent:" Here the author details some of the leading doctrinee and customs of the Pythagoreans, in proof of his opinion; which have been before noticed. After mentioning eome other seets whose practices corresponds, he says, in many particulars with those of the rraternity, he sdds, "The lest instance I shall mention, is that of the Druids of our own nation, who were the only priesta of the anoiont Britons. In thetr solemnities they were clothed in white, and their ceromonies always ended with a good feast."
"The number three is frequently mentioned in the Diseection, and I find that the ancients, both Greeks and Latins, profemed a groet veneration for that number. Theocritus thas introduoes s person whe dealt in secret arts :-

[^139]"Whether this fancy owes its original to the esteem the Pythagoreang and other philosophers had for the number three, on account of their triad or trinity, or to its aptness to signify the power of all the gods, who were divided into three classes, celestial, tarreatrisl, and infernal, I shall leave to be determined by others.
"The gods had a particular eateem for this number, as Virgil asseris:
"' Numero Deus impare gandet,' Unequal numbers please the gods. The sons of Saturn, among whom the world was divided, were three; and for the same reason we resd of Jupiter's Fulraen trifidam, or threeforked thanderbolt, and Neptane's trident, with several other tokens of the veneration they bore to this particular number.
"A particular ceremony belonging to the oath, as declared by the Dissector, bears a near relation to a form of swearing among the anciente, mentioned by a learned author. The parson who took the osth was to be upon his bare knees, with a naked sword pointed to his throat, invoking the aun, moon, and stara to be witnesses to the trath of what he swore. (Alex. ab Alexandro, Lib. V., cap. 10.)
"Theascident by which the body of Master Hiram was found after his death, seems to allude, in some circumstances, to a beantiful passage in the sixth book of Virgil's Eneid." The anthor here recitea the story of the golden bougb, as being a necessery pessport for Eness's descent fnto the infernal regions, and adds:-
"Anchises, the great preserver of the Trojan name, could not have been discovered but by the help of a bough, which was plucked with great ease from the tree; nor, it seems, could Hiram, the grand master of masonry, have been found out but by the direction of a ahrub, which, esss the Disector, came easily up. The principal cause of Eneas's descent into the shades, was to inquire of his father the secrets of the fates, which should sometime be fulfiled among his posterity. The occasion of the brethren searching so diligently for their master was, it seems, to receive from him the secret word of masonry, which should be delivered down to their fraternity in after ages. This remarksble verse follows:-
"The body of your friend lies near you, dead. Alss you know not how !-This was Misenus, that was murdered and buried, Monte sub aerio, under a high hill, as, says the Diepector, Master Hiram was.
"But thare is another story in Virgil, that stands in a nearer rclation to the case of Hiram, and the accident by which he is asid to have been discovered, which is this:-Priamus, king of Troy, in the beginning of the Trojan war, committed his son Polydorus to the care of Polymnestor, king of Thrace, and sent him with a great sum of money ; but after Troy was taken, the Thracisn, for the sake of the money, killed the young prinoe, and privately baried him. Eneas coming into that conntry, and accidentally plucking ap a shrub that was near him on the side of a hill, discovered the murdered body of Polydorus. Eneid III.
"By Dryden-

## Rotyerucian Degres.

I have lately noticed that some writers (and partioularly Willia Stone, Elsq., who ia the author of a very intereating work on freemas have conjectured that this institution sprang from the famous soci Bosycrucians; I will, therefore, here add a abort account of that as tion, as well as of the masonic degree founded upon it.
"The Rosyorucians, that is to say, brothers of the Rosy-Croas, sasys Bailey, s sect or cabal of hermetical phillosophers, who bound t melves together by a solemn secret, which they swore inviolably t serve, and obliged themselves, at their admission into the order, atrict observance of certain established rules. Their chief was a Ge gentleman, educated in a monastery, where having learned the langu he travelled to the Holy Land, Anno 1878, snd being at Damescus falling sick, he had the conversation of some Arabs and other ori philosophers, by whom he is supposed to be initiated into this myste art. At his retarn into Germany, he formed a society, and comn cated to them the secrets he had brought with him ont of the East
"They pretended to know all sciences, and especially medicin which they publighed themselves the restorers; they also pretende be masters of abandance of important secrets, and among others th the philosopber's stone; sll of which they affirmed they had rece by tradition from the ancient Egyptians, Chaldeans, the Magi, Gymnosophists. They pretended to protract the period of humas by means of certain nostrums, snd even to restore youth. They tended to know all things. They are also cslled the invisible Brot because they have made no appearance, but have kept themselves in uito for many years.
"This society is frequently signified by the letters F.R.C., Fr, Rorus Coeti, it being pretended that the matter of the philosop. stone is dew, concocted and exhaled."

The myatical importanca which this society had obtained, rend it a fit subjeot for the manufacturere of masonic degrees to foum order upon, which, therefore, was not neglected.

The Rosycrucian degree seems, in Carliale'n report, to be confoat with that of the Knights of the Kagle, and Sovereign Prince of H Crose, before noticed. The aubject of both is the death and resurroc
of the Saviour. The master bears the same title in oech. In the latter he is said allegorically to represent the person of Wisdom and Perfection, which gives him the title of most wise and perfect master. The wardens are atyled most excellent and perfect. The other officers, most puissant and perfect brothers. The brethren are called most respectsble and perfect masons. The allegory of the pelican forns \& part of both degrees. The Jewel of that of the Ronycrucian is a triangle formed by a compass and a quarter of a circle. In the centre is a cross, upon which is a rose, and upon the quarter of the circle is a pelican, bleeding to feed her young. The Jewel is tlied to a black rose, and pendant to a black collar, in the firet point, and to a crimson in the socond.

The decorations of the lodge, in the principal apartment, are, first, s triangular altar on saven steps. Behind it is a large transparency, with a cross and a rose psinted on its middle, and this inscription over it, "Jesus of Nazareth, the King of the Jews." Broken columns are visible on one side of the transparency, and a tomb on the other in the east, with three large lights in the west.-Jam satis.

The Roaycracian mocisty is of a very diferent cast from that of ancient freemazonry, which bears the most palpable marlas of a descent from an institation established anterior to the Chriatian era.

In concluding my work, I repeat that the freemasona' bociety was founded for the purpose of concealing tho rites of the ancient psgan religion, under the cover of operative masonry; and that, although the religion is extinct, its ceremonials remain, and clearly develop the origin of the institution. Sabeism, or the worship of the stars, is conepicuous in every grade of the order. The frequent quotstions from the Bible betray its religious cast, and, moreover, confirm what has before been advanced, that the forms of prayer, and consequently other acts of devotion among the Pagans and Hebrews, were delivered in the same torms, though applied to different objects.

The ceremonies of masonry, however, by no means impeach the morality it inculcates, which is unexceptionable, whatever may have been the conduct of some of its deluded members, impelled by a fanatical zeal for the preservation of its supposed secrets, or whatever innovations may have been introdnced by aspiring political demagognes, adverse to the established principles of the order. But at the same time, it must be confessed, that its moral precepts are conveyed in a style mal apropos at the present day. Moral sction can now he taught Without the aid of the Moraio or Masaic pavement, the tesselated border, the aquare, the compass, the bee-hive, the plumb-line, \&c. And as to any useful art or science, about which great parade ie still made in masonic books, nothing of the kind is now practised in lodges. Among the ancient ignorant operative masons, a little instraction in the rudiments of lesrning, inclading rough architecture, were, no doabt, given; but operative freemasonry hes been abandoned for upwards of one handred years, and no more of it remains to the order than tho arecord of its former practice.

I will close the volume with the following apposit remarks of Dupuis,
applied to the original school, from which masooury reseived ita lespoos. The sattor, after giving a spooisn of the extravagant and absard cosmogonies of difierent nations, observes:-
"We will not parsoe farther the parallal of all the phillosophical opinions which sech of the myetagogues has delivered in his own manner. We confine ourselves to this example, which is sufficient to give an ides of the allegorical genins of the anciont asgee of the east, and to justify the use whioh we have mede of the philoeophical dogmas that are known to us, to diacover the sense of these monstrous fictions of oriental mysticism. Thls manner of instrating men, or, rather, of imposing upon them under the pretext of instruction, if ss far removed from our customs as hleroglypties are from our writing, sad as the style of the seored soience to from the philooophy of our days. Butsuoh was the lenguage that was held to the initiates, saye the author of the Phenician cosmogony, in order to exoite in mortals astonishment and admiration."

[^0]:    * "At the verv threshold of our mysteries, an osth of secrecy, extremely minute in all its details, and tremendous in its sanctions, has from time immemorlal been exacted of every candidate. It is not to be supposed that anch an oath hed no foundation at first. It would argue a profigacy incredible, to Invent one so sacred and inviolable merely for the sake of swearing it. Not does auch a solemnity comport with the design or practices of any sstoclation of architects whatever. For what is there, or what could there ever have been, in the art of building, or in the whole circle of acience merely, that could require or even warrant so appalling an oblIgation? Neither does it agree with the present state of the inetitution; for masoury harbors no treasorif nor blasjhemies. Its designs st the present day are not only innocent, bat laudable. It requires us to fear God and promote the happlaess of man. The Inventors of thls osth, thes, must have most unpardonably triffed with then awfol solemnity of such an engagement, if, at the time of lits institution, them did not exicta cause, proportionate, at least in some degree, to the precanalisas used ageinat its violation. (Vld.-The way to words by things, or an attexy at the retrieval of the ancient Celtic, in a volume of tracts in the library Hervard College). What this cause was, we can determine only by probatid conjecture. But we may presume that it must have originated io soest great personal danger, if not death, apprehended to members of the ingltap thon from the populace, if their secreta were leid open to the world. Ened eneson by reflecting on these hints, will ustisfy his own mind, that at tiv

[^1]:    Hent eoratitation of our fraternity, its great object wes NOT solely the advanceseat of the arts, still less of architectare slone."-(Greenleaf" s Brlef Inquis triot the Origin and Principles of Freemasonry.)

[^2]:    - The middle or dark ages are described as comprohending the thousand Jears from the taking of Rome by the Goths, in the middle of the fifth century, to the taking of Constantinople, by the Turks, in the middle of the fineenth cantury,-Edit.

[^3]:    - Great nse is made of the Bible, in the ceremonies of masonry: which masy be acconnted for by the conformity in the cuatoms of the Hebrewa with thone of more ancient nations, from which the masonic order is derived.BDIT:

[^4]:    - Never does it rain in the Delts, (Lower Egypt,) in the summer, and but rarely and in small quantities during the whole course of the yearFolney's Travels.-Edit.
    - In the time of Herodotus, alizteen cublto were necessary, or at least afteen, to overflow the Delts. The same number was sufficient in the time of the Romans. Before the time of Petronius, says Btrabo, pleaty wea not known in the Delts, unless the NHI rose to fourteen cubits.-Dbia. (Emrs.)

[^5]:    * See Plutarch de Isid. and, Mairis. ; also M. De Mallet's description Egypt.

[^6]:    * A paesage in Shakspeare's Hamlet seems evidently to allude to the hawk ad hoop, or hoopoe, of Egyph Hamlet says, "My uncle-father and aunttother are deceived." G. "In what, my lord?" Ham. "I am but mad orth-north-west: When the wind is moutberly I know a hawk from a handIW." Thomas Capell, editor of the Oxford edition of Shakspeare, changes sadsaw to hernshaw, which renders the pasage intelligible. Hernsbaw, r hern, is but enother name for heron, of which there are various species; ie turted or crowned heron is also denominated hoopoe. This kiad is very tre in Europe, but in Africs they associate in great numbers. They feed pon worms, and in Egypt follow, as above stated, the retreat of the Nile. ee Rees's Cycl.
    Hamlet, though felgaing madness, yet clalms suffleient sanity to distinaiab a hawk from a hernshaw, when the wind is noutherly-that is, In the me of the migration of the istter to the north, and when the former is not - be seen.

    If it be said that Shakapeare was not probably acqualnted with the custoran C Chese migrating blrds of Egypt, I answer, that several of the works of Plupees, who givee a particular acconat of that country, vere tranalated into Sofoinh by Thomes North, in about the middle of the sirteenth ceantory, and no doubt were known to Shakepeere, whose Hamlet was furt publiabed. A 1596.-EDIT

[^7]:    "In one of the modern degrees of masonry, entitled "The Brazen Serpent" the jewel is a serpent entwined apon a cross pole, in form of a $T$, aboest which are the Hebrew characters-which aigulfy, one who shall live. The covered word is John Ralph, the founder of thls degree. The sacred woed is Moses. This degree has reference to the delliverapce of the laraelites frum captivity. (Benard.)-EDit.

[^8]:    - Plutarch de Inid, and Isirid, and Macrob. Dax and princepa, moderator louninum, rellquoram, mens mundi, and emperatio.
    $t$ "Eye snd son are expressed by the seme word in most of the anclent languages ol Asls." (Rulns p. 159.)

    This is one of the embleras of masonry called the all seelng eye, and sald to zepresent the true God; Fheress it is notbing more than a symbol of the sum made use of by the encient Fgyptinng, and from them descended to the masoen.-Edit.

[^9]:    * The colfin of Hiram has a plece among the emblementical Agorea of amasonry.-Edit.

[^10]:    - Apthors write thia ssme differently: in the Greek, from which it seems to be copied, the flrst letter, omega, is aspirated, -Edit.
    $\dagger^{46}$ Orus was more particularly Osiris in his second state, and theroforo repreested by the Bgyptians as a chIId."-(Holwell's Myth.)-Rdit.

[^11]:    "We have, in our explanation of the Iabours of Hercules, considered the sun principally as the potent star, the depository of all the energies of nature, who creates and measures time by his march through the heavens, and who, taking his departure from the summer solstice or the most elevated point of his route, runs over the course of the twelve signs in which the celestial bodies move, and with them the different periods or revolutions of the stars, under the name of Osiris or of Bacchus, we shall see this beneficent star, who, by his heat, in spring, calls forth all the powers of generation; who governs the growth of plants and of trees; who ripens the fruits, and who dispenses to all geeds that active sap which is the soul of vegetation, and is the true character of the Egyptian Osiris and the Greek Bacchus. It is above all in spring-time that his humid generator developes itself, and circulates in all the rising productions ; and it is this sun, by its heat that impels its movements and gives it fertility.
    "We may distinguish two points in the beavens which limit the duration of the creative action of the sun, and these two points are those where the night and the day are of equal length. All the grand work of vegetation, in a great a art of northern climates, appears to be comprised between these two limits, and its progressive march is found to be in proportion to that of light and heat. Scarcely has the sun, in his annual route, attained one of these points, than an active and prolific force appears to emanate from his reys, and to communicate movement and life to all sublunary bodies, which he brings to light by a new organization. It is then that the resurrection of the great God takes place, and, with his, that of all nature. Having arrived at the opposite point, that power seems to sbandon him, and nature becomes sensible of his weakness. It is Atys, whose mutiletion Cybele deplored ! it is Adonis, wounded in the virile parts, of which Venus regretted the loss; it is Osiris, precipitated in the tomb

[^12]:    - I will bere remark, thet all the talk put into the moath of masonic candidetea about "Wanting light and more Hight," relates to a physical and mot to a mental benefft ; it has reference to the light of the sun. In fact, on takfog the bandege from the syes of a candidate the blaze of many tapers ia amhibited before him in satisfaction of his desires, with this declaration of the master, "Aod God said let there be light, and there was light." Thete ceremonies aro emblematical of the sun's return to the northern hemiaphere - EDPr.

[^13]:    - It is a little remarkable, that one of the significations given to tower, is Migh AEAD-DRESS,-EDIT.
    $\dagger$ This in Mosaic work, and was no doabt intended to represent in saticipaHion the variegated face of the earth In the approaching sesson, after the sun hed changed his course to return to the northern hemisphere - BDIT.
    $\ddagger$ The Roman Catholics seem to have borrowed from the Egyptians the ctyle of thetr address to the Virgin Mary, which is as follows:-
    "Holy Mary-Haly Mother of God-Mother moat amlable-Mystical rose -Tower of David-Tower of Ivory-Gate of Heaven-Morning star-Queed of Angels-Queen of Virgins-Queen of all Saints," etc-Bits

[^14]:    * Cromil masonic chart represeata two cornicopis or goatt horns, an piteher; three, bowevor, of the latter, at before obeerved, aro used in ceremopien-Edit,

[^15]:    - The anthor gives in potes the originals of the above names, whioh as smitted.

[^16]:    - Every royal arch ehapter of zaseons is eapplied with a similar chest; to which great consequence is affoetedly attached. It contains, berides othore teatimonials of times past, something resombling, and which is declared to be, mannas, the food upon which the laraelites are said to have subtisted during their wanderings in the wilderness.

    Among the emblems of mesonry are likewise the akeleton or akull of the human head, as well as the figure of a merpent. But the original intention of theve aymbole is probably now unknown to the fraternity.
    "The Jewi also had, at the east end of every achool or aynagogue, a chent called Aaron, or ark, in which was locked up the pentatanch in manusoript, written on vellam in aquare characters, which, by express command, was to be delivered to such only as were found to be seise among them."-(Coleots Disq. on Mesonry, p. 72.)

    It is probablo that this chest aleo contained memorials of the wretehed atate of the laratites while in the wildersess. The lettern above mentioned were probably the same as the royal arch ineffabie ebaracters, which cossist of right anglea in varioun attitudes, with the addition of a dot.- Edit.

    + The author makes this child the symbol of work: and ne the ann bore the name of Apollo, or Horue Apollo. when in the sorthera hemispbere, which ie the time for carrying on the labourt of huabendry in thic rogion, there may be a propriety in the application.-Edic.

[^17]:    - Ond Metome of Briehthenias.
    + Mabl, with, perhape, some variationa in the pronumciation, is a common expremon with coastry people, to set doga apou cattle. Edit.

[^18]:    - The castom of throwing thrice and upon the corpse is nat becone niverial. IEjecto ter polsere Horst Cerse 1, 1, O2. 28.
    + Magna masees ler moee sooavit. Bevid, 6.

[^19]:    Troen eeri or eri, which has the seme menee as in Fresel, from --ber, the vault, the grape -apier.

[^20]:    ! - They sometimen changed this word iato that of zen which somes from izan and za0, to live, which makes the same sacas.

[^21]:    - Harken thon, O Menes Museus, son of the star of day.
    + From aish man, and from -caleph dog comes -acaleph the man-dog. The Greeks call bim astrokuon, the star-dog.

[^22]:    * Erculapius wat nometimes represented either standing, or sitting on a throne, bolding in one hand a staff, and grasping with the other tha head of a serpent : at his feet a dog lay extended. On some encient monumenta we see him with one hand applied to his beard, and having in the other a knotted ataff encireled by a serpent-Anton's Clas. Dict.-Edit.
    | For thia reason it was that they gave God or the sun among other titlen that of pheob, Phabus, or Phoibos, which significa the mouth of Ob, that is the sossees of the overflowing, from the two words, phebe os the month and - - the awelling, the overlowing $;$ is tha ancient name they gavo so the Nile overflowiag ita beake.

[^23]:    - See the name of Hero in that sense in the interpretation of the obelisk of Remesses in Ammian Mareellin, or in Maraham's rule of times From that Aero the Latins made their heras and hera, the lord, the lady. The Philintipes eslled him the lord of men, marnax, from the word maras, which eigaifina the master, and from as, which sigaitien man. And this comes to the sence of the forzgoing names.

    I Achad waicss, and by a noftened pronunciation, adad, one the amly. The ancient kinge of Syris, who etyled themeelven his childrea, at memed the name of Bersidad, won of God. See Macrob. SahnirnaL

    * Domines collorms.
     Strabo, 1. 10 .

[^24]:    - The aupplications in Mesonry are similar to the above. In the degree of royal arch, the following ejaculations are uttered :- "Lord I cry unto thee: make haste unto me; give ear unto my voice. Mine eyes are unto thee, $\mathbf{O}$ God the Lont; in thee is my trast; leave not my soul destitate. I cried unto thee, $\mathbf{O}$ Lord: I said, thou art my refuge, and my portion in the land of the Hilag. Atwenl nato my cry: for 1 em brought very low: deliver mee from my persecutors, for they are stronger than I. Hear my prayer, 0 Lord; give ear to my fupplications: in thy falthfulness answer mee and in thy righteonanets." (Webb.)-EDIT.
    $\dagger$ These fables may be seen in the hymns attributed to Orphens and Homer; in the poeme of Hesiod and Orid; in the hymns of Callimachus; In the mytholegien of Noel le Comte, and others.
    *This is what the Latins expressed by Thyseos inducere: to form cho rusen of people iressed like gosts and rams,_-thissim hirci et arietes. Genes. 30. 35

[^25]:    - Fatur, hidden, disgulsed : panim, or phanim, facies, prosopa, personse, oscills, masks. Those panlm or bideous masks could not fail frightening your children. For this reason it is, that fears occasioned by appearances of evil vold of reality have been called terreurs paniques, panick terrors. Such is evidently the origin of the name given to the god of Mendes, viz. Pan, in whose horns and hair the philosophers thought they had found a very noble emblem of general nature. Those who are fond of these admirable conceptions may look oat for them in the allegoric expllcations of Plutarch, Iambllchus, Psellas, the emperor Jullath, and Plato.
    $\dagger$ I have read in an English paper, that anciently it was not urusual for a wag, on the first of January, to burst fato a nelghbour's house disguised in an ox's hide, Including that of the bead with the horns attached.- EDIT.
    $\ddagger$ Thyrsus, a rod or lance twisted round with Ivy, which was put into the hand of the soldiers of Bacchus, or of those who celebrated his festivals. Ovid describes them as wound about with vine branches.

    The Jews do at this day carry a sort of Thyrsil, or something like them, in the feasts of Tabernacles, and especially in the Hosannah Rabba. They aro branches of twillow, myrtle sad palm-tree, bound up together with citrons or oranges, which they wave or puah in a religlous manser towerds the fous quarters of the world.-(Balley.)-BDIT.

[^26]:    - After the virgins, followed a company of men carrying poles, at the end of which were fastened phalloi. The heads of these men were crowned with ivy and violets, and thelr faces covered with other herbs. They marched slaging songs apon the occasion of the festival.-Anthon's Lemp. Class. Dict.-EDIT,
    + Tbat pando Silenus asello.
    "It waa the custom, at the celebration of the Eleusinian mystorles, as we are told by the Scholiast on the place, to have what was wanted in those rites cariled upon Asses. Hence the proverb, Asinus portat mysteria," Warb. Div. Leg.-Edit.

[^27]:    - Vos, o clarisslma mund

    Lamina, labentem coelo que ducitis annum, Liber et alma Ceres.-Georgic L.

[^28]:    - Bailey obeerves that "a Phcenix, hieroglyphically, was pictured to signify a reformstion," which corroborates our author's hypothesis, for there was e complete reformation of the culendar, secording to the Kgyptian caloulation,' at the und of the above-mentioned period.-Edrs.

[^29]:    - The proof of thie is frequently met with in Seripture. When the tribes marrasured at seeing the priesthood settled in the family of Aaron, the cbiefs of the tribes reoeived orders to bring their sceptres into the tabernacle. The meptre of Lavi borne by Aaron was found in bloom the next day; and the geripture obwervee, that the other chiifin took back their meeptres or staves of cesemand.
    $\dagger$ A similar plate decorated the chief priest of the Israelites. The highpriest wore a plate of gold apon his forehead, on which were engraven these, two words, Kndesch Layhovah, that is Holy to the Lord. It was tied with a purple or blue ribbon to his tisra, which was made of linen, like those of the other prients, and was only diatinguished from them by this plate and ntbon. There was in every aynnagogue a sort of minister, who read the prayers, directed the reading of the law, and preached. He wes called Chazan, that is, Inspector or Blohop.-See Dr. A. Clark's Hist. Israel, p. 286-7.

    There is a degree m masonry called "a Chapter of the grand Inspector of Lodges, or Grand Elected Knights of Kadosh," who seem to have borrowed thoir titie and functions as Inspectors from those of the Egyptian Mercury. The badge borne by Mercury sppears to be aljuded to by the manacr of anwrerjog the question "Are you Kadoah ?" up on which the person questioned places his hand upon his forehead and ssys, "Yes, I am." The sacred words

[^30]:    are Neksm Adonai; which probably have the same signification as the words engraved on the plate worn by the Jewish high-priest, Adonai or Adonis, meaning Lord. This degree will hereafter be particularly noticed.

    The mitre worn by the high-prleat of masonry, ia the royal arch degree If surrounded with the words Holiuess to the Lurd-EDIr.

[^31]:    - The author, it seems, was not sensible of the propriety of this title; but none could be more approprlate for the inhabltanu of the northern climates to bestow upon Apollo, the sun of the upper hemisphere. Dupuis, as before noticed, as well described the complaints that would returally occur. in consequence of the absence of the sun in the winter season: "What has bocome of the happy temperature which the earth enjoyed in the summer? that barmony of the elements which accorded with that of the heavens? that richness, that besuty of our fields," etc.
    Apollo restored this happy state of thloga, and might, therefore, very peoperly be styled a deity presiding over harmony. "The god of the san became also the god of masic by a natural allasion to the movements Cl the planets snd the mysterlous harmony of the spheres." (Anthon's Clas. Dict.)-Edit.

[^32]:    * From - charat, abcingere, comes cheritout rapudium, scissio, the interruption of commerce. See the word Cheritont. Isai. 50, 1; and Deut. $24,1$.

[^33]:    - Possibly this has procured Horns-Apollo the tille of Prean or Preana, revelator, the interpreter of hidden things, the oracle. It is the same name Pharoah gave Joseph in his tongue. He called him (Geses, 41, 45;) tasphat pasausch, the interpreter of sacred things. These Egyptian words have a vat relation with the two of the Phenician language which signify the same thing-to observe to percelve and - tsahm, to hide.

[^34]:    \$The figures of Anabis and Isls are sometimes attended by a tortolse, a duck, or an amphibious lizand. The natare of these animsla is to ireep within resch both of the land and water, which are frequently aecessary to them, and to get to higher ground as the water rises. This was the aymbol borne by the Egyptian Isls at the approach of the overfiow, and she was then called Leto or Latona, which is the name of the amphibious llzard. This Iste, having the head and shoulders of a woman, with the pawo, body and tail of a leto or lizard, is found in the monuments of antiquity.

[^35]:    *That of the Argonauts, which is shown pretty conelosively by Dupuis coutrary to our author's explication, to be purely axtronomical_Edit.

[^36]:    - $\qquad$ argoth or argos, opus teritisum, the wesvers work. Thence are derived the worde _ ergon, opws ourgla, generally uned to exprean all hinds of work, that of apianing and making of cloth being the mont common.

[^54]:    $\dagger$ Euripidos, in the Becohsntes, pet IL. makei Bacchus eay, that the orgeries, were gelobrated in the night, beeanse darkness has nomething solemn and angast in it, and proper to fill the mind with sacred horror.

[^55]:    - Terance, Ean. act. ili, BG. V.-Eioripides puts this argament into the months of several of his speakers, up and down his tragedies. Helon, in the fourth not of the Trodan Dames, Eays, "How could I resiat a goddess whom Juplter himaelf obeys "" Ion, in his play of tbst narae, In the latter end of the first act, speaki to the pame parpose; and In the fitth not of Hercules Furens, Thesus comforts his friend by the eramples of the crimes of the gods. 8oe Iktewiso his Hyppolitus, set it. sc. Ii. The learned and Ingenious Mr. Seward, In his tract of the conformily between popery and paganism, has taken notlee of a dificult passge in this tragedy, which he has very buly explained, on the syatem here delivered of the detaction of Polytheism in the sored mysterles.
    t When St. Austh (Civ. del, Hb. IL., cap. 7, 8) had quoted tho Ego homunico hoo non facerem, to show what ralschlef thewe storiee did to the morals of the people, he makes the dofenders of paganisun reply, that it wan true, but then these thinge were only taught ta the fables of the poets, which an attention to the mysterles would rectify. This the father cannot deay; but observes, however, that in the then oorrupt stats of the myateries, the remedy was become part of the disease. Nolo dlcere iule mysiles quam lata theatrica esse turpiora.

[^56]:    - These two were the trutha which the pontifex Scexvola, eald were to be kept bid from the people. "It is recorded in books that Scavola, 2 rery learned pontif, argued that three zinds of gode had been hande. 1 down to us, one by the poets, another by the philiosophers, the third by the rulern of the state. The first kind bes says is worthlese -the second not sutublo for commonwealchs, because it contains certain things, the knowledge of which to prefulliciat to the people. What, then, are thoge thingo whiob are prejudleial to the raultitude? "Thoee," he says, "that Hercules, Epeulaping, Cestor, Yullux, sro not duds, but were mea who departed human life.-Auguatin de Civil. Dci. lib. iv. cap. 2i.

[^57]:    - Here Btrabo takes in ell that lacaid, both of the gode, and of nature, in the two preseding passages from Chrysippus and Clemens jand showa that by nature is not matat the cosmical but theological matore.

[^58]:    - "But notwithstanding be (Chriat) obtained a more excellent ministry, by bow much also he is the medfstor of a better covenant, which was estabilohed apon better promises. For if chat first covensat had been fanitiess, thes should no place bave bean sought for the recond."-(Hebrewe Flil. 6-7.)

[^59]:    - What hath bean sald will give light to a strange story told by Thucydides, Pintarch, and others, of a debauch and night ramble of Alciblades, juat bolore his expedttion to Syracuse. In which, they eay, he revealed to, and acted over with his companions, the mystories of Cores; that he asumed the oflioe of the hlerophant, and called nome of thoae he initiated Myatal, and othera Epoptal; and that, lastly; they bsoke all the statues of Hermes. Theve are mentloned as distinct actions, and unconnected with one another. But now we mee thelr relation, and how one arose from the other; for Alcibladea baving ravealed the origia of polythelom, and the doctrine of the unlty, to his companlops, nothing was more natural than for men, heated with wine, to run forth in a kind of relligions fory, and break the statuea of their ldols. For, what bo acted over, was the groater myiteries, as appeara from Plataroh's calling them the myoterles of Ceres, and from Alcibiades calling some Epoptal, the name of thoee who particlpated of the greater myiteries.

[^60]:    - Wo here see the origln of the forlorn condition in which the candidate for masonle honoure is placed, when prepared for initlation; who "neither naked nor clothed, barefoot nor atod, deprived of all metals, hoodwinked, with a cable-tow about his neok, is led to the door of the lodge, is a halting moving posturc." Hia belog hoodwinked is emblematical of the uninformed state of those not initiated Jnto the myateries; and the rope about hie neok is In token of ble sabmisalon to the IIVine wIII, es wiII hereafter be shown from the cutoms of the Draids.-Edit.

[^61]:    - Nimrod signiflee rebel, the name that the Ieraelltes gave hicn, bot hila friende called htm Belus, lord.
    + A pasage in Porphyry abows what kind of personage the Creator was represented by, and that is was, ilite all the rost, of Egyptian orlginal, and introduced into these eecret mysterles for the reason above explained.
    tThat is, his repretontacipe; jut how he could be habited the the Creator, who was never zeen by mortal eyex, it is diminailt to imagine.-Edit.

[^62]:    ${ }^{*}$ In closing a royal arch chopter, the high priest eays, ${ }^{4}$ may we Invariably praotice all thoee duties out of the cbapter, whleh aro loculcated in it. Responce; so mote is be. Amen." (Bernard.)-Edit.

[^63]:    * ${ }^{6}$ Bome onllghtened permona did not belleve that to be virtnous there was any necessity for such an association. Diogenes was once advieed to contrach the aacred engagement; bat be answered, "Pstrecion, the notorioas robber, obtained initiation; Epaminondse and Agesilaus never sollelted It; is it possible I sbould beliere that the former will enjoy the bliss of the Elytian fields, while the latter shall bedragged throwgh the mire of the imfernal ahadea."-(Travela of Anachar.)-Edit.

[^64]:    - What hath been aaid above ahown that M. Le Clero hath gone into the other exreme, when he contende (Bibj. Univ. tom. Fl. p. 73) that the myateriea were not corrapted at all. I can conceire no resaon for hia paradox; but an it favoured an acousation against the fathers, who bave much insluted on the corraption of them. "The hathers have sald that all Kindn of lewdnese were committed in the myeteries; but whatever they may asy, it it not credible that all Greece, however corrupt it may have been, has ever consented that the women and giris should proatituto themselves in the myateries. But zome Chriatian suthort have found no dificulty in saying a thousand thinga little conformable to truth to defame faganim; es though thero were mone but pagans againat whom they could Ulecharge their calumaies."-Dibl. Univ. trom. vh, p, 120.

[^65]:    - Mr. Le Clerc owns that PIntarch, Dlodorne, and Theodoret have all anid this, Fet, the better to support his schems in the interpretation of the history of Ceres, ho hai thought it to contradict them. Yet ho in anotber place, could soe that Astart wne certaligly Isia es Adode wia Oairls; and thls, merely from the ldeatity of their caremanies.
    $\uparrow$ Timmus the Locraln, in his book of the soul of the world, spesking of the mecesity of inculeatiog the dootrine of futare puilshments, calls them Timopial renaf, forelgn torments; by which name both Latia and Greek writert generally mean Egyptian, where the aubject is religion,

[^66]:    - The rescmblance between the practices of masonry and those of the areieat myateries, is too atriking not to bo noticed. Here we have the chorus of the initiated $;$ in masonry, we obserye the apprentice's, the fellow orsft's, and the mater mason's chorvs or aong; that is, AOnge idspied to each degree.-Edü.

[^67]:    - Thla remark can apply onily to the adon and reprecentations of the Leveer myteties, at the conclualon of which the office of femals hierophant onds, it we can judge by the duty imposed upon the aibyl by Virgil, as will appear further on.-Edif.
    $\dagger$ Tho bee, or rather bee-hive, emong the masonic symbols, io consldered an emblem of findeatry, for which there is probably some aathority in antiquity.-Edib.

[^68]:    - The original has a peculiar eloganos. Haphane gar ampho, ste., alludes to the meient Grcek notions concernigg the frat matter, which they called aphanes, Invilible, as belog without the qualliles of form and colour. The investing matter with these qualities, was the production of bodies, the ts Phainomens; their divolution, a roturn to a state of loviaibillis,-ele Haphenea chorel ia dialuomene, as the pretended Merc. Trimmer. bai It, cap. Xi, Matter, in thie state of faviaiblity, was, by the earlier Greeka, called Hades. Afterwards, the state itnelf was so called; and at length it eame to algoify the abode of departed sptrits; heace nome of the Orphio odes, which Wore sung in the mysteries, bore the title of o eld Adoy Katabeals, a desoent Into the mapiony of the dead, a ilttle equlvalent to Tenatia and Hiferoe Logos.

[^69]:    - Tbis practice obtaina In a modera degree of masonry, denominated Le Petit Architect. A portion is given to the candidate, which, he is told, is a part of the heart of waster Hiram, preserved ever mine his assanination; which evory fait//ul mazon mey receive, but that it cannot remain in the body of one whole perfured. After the eandidste has awallowed the dose, the master thusaddreasea'him, "Brother, one thing you came here to learn is, that you ought never to refuse to confess gour faulle; obatinaley ought be banlohed from the heart of every good mason." - Edif.
    + What wers called the secret ceremonien of the gods, atye Fontenelle, were without doubt the best artificea the prieats could iavent to keep peopie in the dark; and yet they could not so well bide the Juggle, but that the cheat would be suspected by many persons; and, therefore, they contrived among tbemselven to eatablioh oertain myoterien which sbould eagage those who were ibitinted into them to an invilable segrecy. Those who were inithated also gave further security for their discretion; for they wars obliged to make a conforilon to their prieats of all the moat private actions of their lives; 60 that by thia means they became alaves to thelr prieate, that their oton -secrets might be kept.

    It was upon thly eort of confeasion that a Lacedemonian, who wha going to be Inltiated into the mysteries of Samothrace, spoke roundly thus to the priest; if I have committed any crimes, surely the gods are not ignorant of them.

    Another answered almost after the same manner; is to you or to God we ought to condess our crimes $P$ It is to God, says the prient. Well then retire thon, answered the Lacedemonian, and I will corfesa them to God. These Lecedemonians were not very foll of the spirit of derotion.-(Hist. of Oracles, p. 114, London, 1688.)-Edet.

[^70]:    © We rany well judge It to beso, when we Ind It amongat the Chinese (ses M. Polos 2b. 22. cap. 26.) and the Arablans, the two people lest corrupted by forelga minnars;

[^71]:    - So tho law of the Twoire Talles: Patronns ai clienti frauden fecerit, sacer asts.

[^72]:    - Cotte sentence, eat boune et belle, Mais en Enfer de qual sert elle ?

[^73]:    The ohief beheld thelr chariots from afar, Thetr shining arms, and coursers trained to war. Their lances fox'd in oarth-their ateede around, Free from thelr harness, grase the flow'ry ground.

[^74]:    * Ancient sathore Inform ua that the foativals of Ceres acmetimes bronght to Biansis thirty thousand of the Initisted, withoat including thoee who came only from motives of curlosity. These were not present at all the ceremonlen. To the more secret, no doubt, wero only admitted tho nmall pumbor of novicee who every year received the last seal of intiation, and some of thone who had received lt long befors. Behind the temple, on the western elde, is itill to be peen a terrace, cut in the rook

[^75]:    inelf, and ralsed oight or nine feet above the floor of the temple. Ita langth is about g70 feat, and ita breadth in some places i4. At the northern and is to be seen the remalns of a chapel, to go ap into which thare wers asveral rtope.

    I coajecture that on thle terrace was exhibited the ecenery; that it was divided legthwise fato three great galleries, the two frat of which represented the region of trial, and that of the infernal ahadea; and the third, covered with earth, prenented groves and meadowa to the view of the initiated, who from thenoe went up finto the ohapel, where there eyes were dazziod by the splendour of the statute of the goddess. (Travele of Auacharsle.)-Edit.

[^76]:    - From the beginning of one of Pliny'e epistles, I suspect thatAurcar was the common Hile given to the Milesian and such Ilze tales as atrollers used to tell for a plece of money to the ribble in a circle. Pliny's worde are theso-ancom para at sooipo awresn fabolam. 1. II. Ep. 20.

[^77]:    midorous says, that for a man to dream that Ceres Proserpine, or Bacchus 0 him , betokens eome extraordinary good fortune to happen to him. This Ilviastion by dreams was apparently founded on the common opinion of the jes attending initiation into the mysteries. The anciont Onirocritics were not on the srblirary fancies of the impostors who professed that art, but on the and saperatitions of the times, and with a priaclpal reference to the Egyptian phics and musteries.
    pile meetings are nocturnsl, and the aprons of the fraternity are generally ted with figures of the asm, moon. and seven atars, or plasets; whloh showa princlpal deaign of the fastitution was something very deferent from the cal occupation of masonry. They show, Indeed, that it whe founded on , the worship of the stare,-Edlf.

[^78]:    - I have given a more fall account of this procesalon, from the work of Apalelus, than is copled by Warbarton. In the processions of the London masons, beforg notiosd, at laying the foundstion stone, and the dedication of Freumasons' hall, In 1775 avd 1776, among other thinga were oarried, three pitchers, oontaining corn, Fine, and oll; the blble; wand or caduceur $;$ a cista or chest, here called the lodge, teo. After the ceremony of lsying the foundation stone, "the brethron proceeded throagh the city in procession, withoat exposing any of the insignias of the order:" Bmith_-Edit.

[^79]:    - The modern mesoale degrea of Roes-Cromesems to allnds to this ridicaloes concelt regarding the virtue of roees, The following dialogue takes pleoe betwest the mastor and sentor warden:-"Do jou know the Pelicasa ? - I do.- What does is drnify t-Among us it la a symbol of the Saviour of the world, and of hla perfect hanas fty. What is the object of the degree of Knights of the Roee-Croes ?-To lend pa to respect the decrese of the Moet High, who le sble to reiestavep his image on on." To relnstamp is hero intenided to aigalfy the reatoration to a former atate; which in oxnetly what ocearred to Lucius, when in his astine condition, by the eatlige of now. Tho Pellicsn la a Roman Catholle aymbol of the Baviour, arieing from the fablo that this bird perforated Ita breast, and suffers its young to feed opon the blood inging therefrom.

    Tho Saviour, in the ritual of the Catholie Church, is thua sdresaed: "O Pellowas
    

    The degree of Rose-Crose was invented in France, a Koman Catholle country.Edif.
    $t^{44}$ Wool, the excretion of the most aluggish body belonging to the herd, was for that reason, pronounced, by Orphous and Pythagora, to be a prafare ralment. But fiax, truly the moet cleanly of the beat producuione of the earth, not only clothed and valled the most holy priesis of Egyph, but was unod alao to cover the ascred utensila." Apul. p. 64.
    \$"Whillat the apron with which we (mesona) sre clothed indicater a dlapodition of bnocence, and belieu not the wearer's heart, let the ignornnt derile and nooff om: superior to the ridicule and malics of the wicked, we will enfold ourselves in the gart of our own Firtue; and anfe in our self-approving consclence, stand ummored against the persecusione of adversity.
    "The ralment which truly implies the innocence of the heart, is a badge more

[^80]:    honourable than ever was devised by kioge; the Roman engle, with all the ordens of zolghthood, are theremnto inforior. - Builth.
    *- Eormerly masons uned to be clothed in while during Lodge hours, whloh practios to still followed in many lodger in Germany, France, and Halland; bat in England, the white spron to only rerouinlog." IDid-Edit.
    *The masonio "Degree of Perfection, or the grand elect, perfect and meblame mason," It misy be prosumed, is entitled to the appeliation of Teleciotha.-Ealt.

[^81]:    - Respondent cidera. This, I sappoee, relates to the music of the spheres. The Image is noble and aublime. It la taken from the consent in the lyrs, to answer to and obey the hand of the master who had put them into tume.
    + In order to a due anderatanding of the mble, it la necessary to know the naturo of the obarmeters upon which is is fonnded. "Psyche, (Greek, the soul or life) a god-

[^82]:    deas by which the ancienta aeem to meen the buman soul. She was represented with the wigge of a butterfy on her shoulderi, to intlmate by the aimbleness of that orestere, the sctivity, asture and properties of the sonl."-(Bailey.) Acoording to ancient mythology, thera were two cuplds, one born of Venus, snd begotten by Jupiter. the Inciter of celentlal love; the other, the son of Erebus and Nox, the author of terrestrial amours.-Edit.

    - The amour of Cu pid and Payche was a sabject whioh lay in common amongot the Platonic writeris. And every one feahioned this agreesble fiction according to the doctrines be had to convey under it. By thle means it conld not become famous. The remaining monuments of anolent soulptare convince us thst it wan very famous; in which nothing is so common an the figures of Cupid and Payche in the various eir crumatances of their adventures.

[^83]:    - The terms socred and profane musio, are atill rotained, appropristing grave and plaintive tones to the former, and gay and lively to the Iatter. On this aocount, it is reported that Weeley, the founder of the Methodist sect, declared that the Devil ohould not have all the best tunes, and accordingly, he introduced into bis churoh service the raont aprightly sirn, which are atill in use among hil followers, hariog, It is aild, the most happy offect.-Edif.

[^84]:    - The name tyrant, as at flrot used, merely dealgnated the ohlef magistrate of a plave; the Greeks in old time, aslled the rupreme governor of every city e tyrant or Etag. Belley.-Edic.

[^85]:    * Anoblus affirms that Pythagoras was burled alfve in a temple; others state that ho was alain in attempting to make hle encape. It can herdiy be doubted that his death was violent, and that, with all his cautlon to prenerve himself, he fell a martyr to his generous offorts to undecelve mankind. An ill constructian was put upon the nulon of the Pythagoreans, and it proved very fatal to them. That sooisty of atudents being looied upon as a Botion which conopired agalast the otate, pixty of them were destroged, and the reat went into banishment.-1Megesig, by the Rev. B. Thylor.-Edil.

[^86]:    - Masong, who have taken only the three Arat degrees of the order, are taught only What may be called the exoteric dootrine of masonry, and this in an obscure symbollcal mannor, not intended to be folly underiood. In this grade, they call each other brother. They were formerly, that le, in the time of the Draide, not permitted to advanoe further, watil they had convinced their auperions that confidence might by pleced in them, and that they were worthy of receiving the esoteric principles of the order. When risied to the mublime degree of royal arch, they addresa one anothar by the appellation of companion. And then, no doubt, fin ancient times, the whole etcret of manoary, that is, tha doctrine of Druidiem, WaN oloarly exponed.

    Dermoti, after making noms remarits on the conduct of certain persone, who, it soems, were diesatisfed at not having boen simitted to the royal arch degree, ssya, "To thls I will add the oplolon our soorshingl brother, Dr. Fioeld D'Aselgrey, priated In tho year 1444. Some of the fraternity, evys he, have expressed an coesainows at this matter's being kept a searet from them, since they had already paseed through the urnal degrees of probstion; bat I cannot help being of opinion that they bave no right to ayy such benefit mitll they make a proper application, and are rocelved with due formality; and as it is an orgentred body of men, who have peamed tho chalr, and given mindeniable proafs of thelr akill is architecture, It canmot be treated with too much reveresice."

    Now, Dr, Fileld mast bave been senelble, that arobitecture was not taight in the lodge fin his day. This ridiculous parade, therefore, ebout skill in this art, is a mere excuse for the obverrance of as sncient oustom, the reenon for whloh was unknown. Edif.
    $\dagger$ Thie is initated in the past master's degres of manomy. The newly initisted moraber, perfeoty ignorant of the mode of proceedinge in a lodge, is, againat hla will, plaoed to the chafr of the mastar as a preaidlog offloer; and "tha fortaned worthiptal fi made the butt for every worthy brother to exercige hir wit upon."

    This onstom, It would apposr, has doecended from the Druids, the ancient echookmatess of England, to the wiverstiles and colloges, over of Americe, where thow

[^87]:    of the freshmen, or newly entored class, are made the batt and ridicule of the highor clasese for twelse monthe. The latter are ampowered to direet the former to periorm any ernand they with; cas order them to repair to their roome, asd there lecture them for their awkwardnese, ignorance, ato. Thle practioo was doablises introduood upon the principle of Pythagoras, to inculcto Awmilty; but when exordied upon a raw, difdent, country boy, it muat prove extremely diccounging and opprosilvo. Tho custom, however, It is selid, has gone into dianso. Con. Eristua Root, of Delhi, in this Btate, by a revolute refual to mibmit to this diselpltoo, has the honour, an I am to formed by a graduate of Dertmouth collego, of pattlag an end to this rile practice in that instiftution, - Edide.

    - There in an affectation of thla sort, as before obearved, in thas masonio degreen of "Knight of the Eagle" and "Kyight of Kadoth," in which the candidats lo not permititod to 260 tho perrom who initiates blm-Edit.

[^88]:    - The principal and most efficacious of their doctrines, the Pytbgoreans committed to memory, and commonicated them to thelr aucoesona me mysteriex from the gode; and If at any time there were any extrancous, or, an I may esy, prafane pervons among them, thay signified their meaning by symbols.
    Hence Lysis reproving Hipparchne for communleating the discourse to uninitiated persona, void of mathematics and theory, ailth, it is reported that you teach philowophy in public to all that come, which Pythagoram woald not do. If you are changed, I ohall rejoice: if not, you are dead to mo: for we ought to remember that it is piour, wocording to the direction of diveise and human exertatlons, that the goods of coisdom ought not to be communicaied to those whoee gond ie not purifed so much as in dream. It is not lawful to bestow on avery one that whith was acquired with wo much labour, nor to roveal the myiteries of the Eleusinlas goddess to protane persons. They who do both these, are alike unjust and irrellgions. It is good to consider withlu ourwalves how much time was employed in taklog away the apots that wore in our breaste, that afver five rears we might be made capable of his [Pythagorsa's] diecourtet.-Jambllohus. Quoted in T. 8tanley'o History of Phllooophy. London, 1666. p. 376.-Edit,

[^89]:    * Moderatas saith, that the Pythagorio philosophy came al last to be extlagulehed; Arst, becauve it wan enigmatical; next because the writinge were in the Diorio dialeot, which is obecure, by which menns the doctrinee dellivered in it were not anderstood, and moreover, because they who published them were not Pythegoreana, Betides, Plato, Aristotle and otheri, as the Py thagoreana affrm, vencled the

[^90]:    best of tham as their 0 wn , changing only some few thinge in them, but the more valear and trivial, and whatsoever wea aftorwarde ievented by envious and calsmnions per sons, to cant a contempt upon the Pythagorean school, they collected and delirared asproper to that zeot.-(Porphyry, p. 30 ; Stanley, p. 383. )- $E d i$

[^91]:    - Man in placed, according to their (the Druids') doctrine, says Dr, Lingard, in Mt history of England, in the circle of courset; good and eril are placed before him for his velection. If he prefer the former, death transmits him from the earth into the circle of felicity; but if he prefer the latter, death returns him to the circle of cowsies: he is made to do penance for a time in the body of a beast or reptlle; and then permitted to re-sasume the form of man. According to the predominance of vioe or virtue in his diaposition, a repetition of his probstion may be necessary; but after a certain aumber of tranamigrations his offences will be explated, hia passions cubdned, and the circle of felicity will recelve bim among ito inbabitants.- Edif.

[^92]:    - Like the anclent Jsws and Peraisng, the Dralds had a eacred, Ineztingainhablefirs, Which was preserved with the grestest care. At Klldare (Iraland), It way guarded trom the mont remote antigulty, by en order of Druldessea, who wera succeeded in ister times by an order of Chriatiag Nuna,"-(Eiggins'a Celtio Drulds, p, 283.)-Edtt.

[^93]:    - Here doubtles is the nource of the soverity ald to ve exjoined upon 1 larocaerhood towanis baoksilding or contamecious members; but the tolen the age hes, no doubt, left the tbreats held out in this case a mere dead lett expel their mambers for immoral conduct, and so do all other roligions nocl have a practice, however, in thie regard, that sppeara reprehensible, which is in their registern the names of all thone who have had the misfortune to from the order. Thistends to fix an indellble stigms apon the character a ing brother, prejudicial not only to himpalf, but to his family connections. I taining namee of dellnquents mould never be permitted to go beyond the: Jodge-room.-Edit.

    I sm inclined to think the suthor has mistaken the cause of these DI and that they were originslly the signals for a general purification, mentioned in which every thing anblect to docay, for the benefit of health, was consut on the Arat of February in Egypt. Thoy were called the foetival of the $\Lambda$ Which name probably became changed, in consequeace of the origin and the cuatom havigg been lont-Ede4;

[^94]:    "To the veneration which the British Draids derived from their sacerdotal character, must be added the respect which the repatation of knowledge never fails to extort from the ignorant. They professed to be the repositories of a sacred science, far above the comprehension of the valgar; and their schools were opened to none bat the sons of illustrious families. Such was their fame, that the Druids of Ganl, to attain the perfection of the institute, did not disdain to stady under their British brethren. They professed to be acquainted with the natare, the power, snd the providence of Divinity; with the figure, sise, formstion, and final destruction of the earth; with the stars, their poeition and motions, and their supposed influence over human affairs. They practised the art of divination and magic. Three of their anciens astrologers were able, it is said, to foretel whatever should happen before the day of doom. To medicine also they had pretensions; but their knowledge was principally confined to the use of the miseltoe, vervin, savin, and trefoil; and even the efficacy of these simples was attributod not the nature of the plants, but to the influence of prayers and incantations."

    ## From the Edinburgh Eneyclopedia.

    "The garmente of the Druids were remarkably Iong; and, when employed in religious ceremonies, they always wore a white surplice. They generally carried a wand in their hands, and wore a kind of omament encased in gold, about their necks, called the Drwid'e mgg. Their necks were likewise decorated with gold chains, and their hands and arms

[^95]:    - "Horas, tays Pluche, asomed the easque and backler, when leries or recralty ware intended. He was then called Harits, that ls, the mighty, the formidable, (violenter, Job xv. 20.) The 8yrians nottened this word and pronornced Hazis. We tad tha same word Adsts of Acenss, waed to algnify the terrible in war. "The Lord atrong and mighty, the Lord mighty in Dallle.' Ps. Ixiv. 8. Others pronoanoed it Without suplration, and said Ares; others with a very barah and rough asplration, and pronounced marets. Thls figure of Horas in a warlike drest, became the god of ommbets. He evideatly is the Asie of the inhabitans of Edense, the Hearus of the
    

[^96]:    - The Engllah word mason has a very simple origin; it comes from magon, French; "From mass, an old word which sigulfies hoveie; thus a mason is a person who make bouses."-(French Enc) The awkard connection which architecture is made to bear towards the mysterles Involved in freemasonry, te easily acconated for on the suppoaition, which la undoubtedig a fact, that the Druide made use of the crat of mavary merely as a cover to their mystio worahip.

[^97]:    *The maxim of the ancients, "That the whole woorld was the tensple of the race," dows not indicate that they looked apon the nun as the aymbol of the Deity, but an the Delty itself.
    † It is a diffcult task for masons to make out anything respecting this blazing star, that bas the least semblance of reaton. They find It among the symbole, but are not -ware how it came there, and endearour to make the best of it thoy posilbly can. The reader will recollect that it is Aaubla the dog-star, who warned tho Egyptians to retire from the plain with thetr produce, to avold the destructive effects of the inundatios.

[^98]:    "Father I have come this day clothed in whits (pointing to his Ieather doublet ) in order to prove that my intentions are of the most pacific nature. and (raising his hands to heaven) I call upon the Great Spirit of myself and forefathers to witness the purity of my heart on this occasion."

[^99]:    - Thls wha a pegan princlple, mecording to the author's own abowing above. The stot ls, the tabernacle, as well as the temple of Solomon, appears to have been constructed upon the anme plan as the temples of the ancients.

[^100]:    *The book of conetitution in urvally denominated, Ahman Rexon: which is a oor. raption $r_{4}$ three Hebrew worde, achi mase ratrom, which signilies the thoughts, or opialons, of a true and falthfal brother.

[^101]:    * The author here adopts Hatchlnoon's conjecture, ppon truit, which has been zhown to be errancous.

[^102]:    - At the end of the planetary system, the mystagogue preaents we with a pletere of the fixed beaveng, and tho four celsotial igurea which were placed at the four eormett of heaven, according to the setrological scheme. Theso four figuree were the lioe, the bull, the man (Aquarius, and the eagle, which divide the whole zodlee lato foer parta of three signa onch, in the points of the sphere called fised and nolid. The birn which correapond to thaes ars called royal atore.-(Dapuls, p. 057.)- Eithe,

[^103]:    *The euthor, In the commencament of hie work, waye:-" One Important queation, which appears to have been almost wholly neglected by masonle writers, is, whether freemasorary be a servile imitation of cortain crroraonied in tho ancient idolatrous mysteries, as is asserted by some writers, or whether it be the great original from which the myateries themeelvee were derivedt On this inquiry f bave bestowed much deIlberate consideration ; for it found it imposaible to bo matistied with prectiring a acience derived from the polluted dregi of Idolatry." And, he comes to the conolvilon, that freemasongy is, "ta realliy, the original inatitution from which all the myateries were derived." And adds, "We have ample teatimoay to establiah the fact, that the myotertes of all nations were originally the anme, and diversided only by the socidental elrexmatances of local altuation and political economy." That an esionsifal differemce ensts between the sncient myoteries and freemsonory, wants evidence. The whole of blshop Warburton's disertailon on the subject of the former, goes to dtaprove the assertion. However erroneous both may be in a theological point of view they agrod In moral principles, and ara unexcoptionable. And that any institution called freemasoory, or having a relation theroto, oxisted aaterior to that which is termed tic mypteriet, is a gratuitoun essamption, without a eladow of proof. The mysteries, cuder the name of freemsaonry, were firat introduoed in the eloventh centary of the Chriatian era. The reveread suthor, it is ovidont, insteal of having eny qualtas of conseiance on the sabjoct, whe endenvouring to satiafy the acruples which might aries fon the minds of eome of hlalose liberal partahloners.

[^104]:    - Thita is axactly fmitated in the third degres of masonry : where the candldate pecsonated Ais figurative deceased protolype, Hiram. Of thig Mr. Oliver is fally awaro, yot, with ali chls pluful mummery before him, he, ws wo have eoen above, kays :- "In the third degree, the vell is removed; wo sre sdmitted to the Aoly of holics i we viow the chersbim, [the ox, the lion, oto.] In all their brightneas; and are bleased with a foretatic of heaven, through the resurrection of the dead." Voltalro, in speaking of tho Elensinlen myateries, asys "Tbls pare religion oonaiated ia theacknowledgment of one 8upremo God, of his providenoe, and of his juation. That whlch dititgwred these myateriea was, if we can belleve Tertullan, the ceremony of regracration. It was nocoesary that the initiated should appear to be reauscilated; it was the aymbol of the now ilfo be was sbout to ombrace. The blerophant ralsed over him the sacred knife; they feign to strike him, and he also felgas to tall dead ; after which he appeara to be reauscitated. There is still anong the freemasons a rembant of this ancleat veremony."- (Guvres, tome 16, p. 166.) The whole of this nonvense growi ont of the fabled death of the san. "It is he, [the swo] that, under the name of Oairis, perseouted by Typhon snd by tha tyranis of the eur, whe peut to dcath, shets wp in a dark tomb, embiem of the hemisphere of winter; and atterwards, eacending from the Inforior sone towards the seniths of heaven, arote again from the dead, triumphant over the glante and the sogele of deatraction." (Hulos, D. 139.)

[^105]:    e "The word murtf, or form, is oxactly rynonymous with eidolon; and in a secondary sense mesos an image; but in lie primary acceptation, it denotes any shape or appearanco natumed by a celestial being." (Wifford in Asiat. Res, yol. If. p. 359. )
    

[^106]:    - It appeare that paguniem exieted at this time not oniy In England, bat in moat of the other atates of Europe. Dr. Llagard, apeaking of Oleve, Klog of Norway, eyys «Thas prince wae e seatons Chriatian; but hle rellgioce Innovstions Irritacod abe fselonsy of the pagan priestos and ha was murdered in an Ineurreotlon of his sublection [in 1028].

[^107]:    - A.D. 1140. Vid. Statiatioal Account of Scotland, ToL xi. Pariah of KLlwinniag; Or, Edinburgh Magaslna for Aprli, 1802, p. 236.

[^108]:    ©The church pomensed abont ans-halfof the property in the $\mathbf{x}$ ingdom. Robertaon': ${ }^{6}$ Elath of Scotinad.

[^109]:    - It has been objected, that the word chymistry was not In use in the time of Hensy V1.- It appearance, however, In this documont may be sccounted for. by suppoding that the Franlifort editor mabetituted it for sichymy.-Edif.

[^110]:    - Kingl-at-arms are officass of great antiquity, and enciently of great anthoritys they direct the heralds, preaide at their chaptern, and have the fartediction of armowryr There are three in number, Garter, Norroy, and Cleranetenx.-Beiley.

[^111]:    - The anthor of "The Mater Key to the Door of Freemaconry," hes judiclonaly remarked, "that the word free was edded to masonry by the society, beoarus nove but the freeborn were admitted into it." And for a very obvious reason, for thare could be no eafety in confidigg secrets to alaves, which might at any time bo oxtortod from them by thetr masters. Besidse, thla wea in conformity wita the rale established fo the Egptian mysteries.

[^112]:    - A protty Alr description of a masoaia lodge, with the worahipful master at the hend, personitylog the sun, taking his plase In the oast: surrounded by the senlog warden, who wets the part of the moon; the Junlor warden, who taken that of Orion, wad the otber arbeordluate ofiloers and privates, all under the command of their chlef, the worahipfal magter.-Edit.
    $t$ According as the gonder of the object was in the langusfe of the aation masoulins or femialoe, the divinity who bore Its name was male or female. This the Capadoclanas colled the moon god, and the ame goddees; a clrommatance whioh gives to the enme belage a perpetral varlaty in anolent mythology.

[^113]:    - Cowan seems to be a corruption of Covin, Fhioh the author of The Secres D6eipline, fc., noticed above, subatifuted for it. This word in thue defined by Wobeteri -"Covin (Qa, Arablo-to defrand). Mare probably this word belongs to some wibl
     meetiog.

[^114]:    - Henry O'Brien, A. B., in slate work entitled: "Phomocian Iraland," Dubiln, 183s, after trasting of come other pagan divinities, any: $-{ }^{4}$ Bat our declelon on the word albbol, a name by which the Irimh, as well as almost all other mations, dealgosted and rorabipped Cybele, must be gulded altogethor by another principle. Fur hers I at once recognize the Syriac character as derived from aibola, an atar of corn, under which guise the Phoenecisne ued to worship the earth se the mother of all harvesta, and vogetableo. All bations, therefore, by ove common consent, repreaented Cybele halding In ber rignt hand aome ears of corn" [whant]. (p. 107.)-Now, Cybelo has been Rlown to be bat another name for Isla.

[^115]:    * 4 In the fectitions cavee, which prieats everywhere copstracted, they celebrated myaterles which consisted, says Origen againat Colans, in imitatiog the motion of tbe stars, the planets, and the heavens. The inltiated took the mame of coastallations, and assumed the figure of animals. In the cave of Milkra was a ledder of seven stipt, ropresenting the seven apheres of the planets, by means of which sowls accended and descended; this is prechely the ledder in Jeoob's vislon; which showi that at that epooh the whole syatem was formed. There la in the rogal library, a raperb valume of pletures of the Indian gods, In which the ladder is represented with the souls of mea owend.ling it. See Balley's Anclent Aatronomy." (Ruins, p- 230.) Iapprehead that the anthor lamintaken ln regard to the stepe of this allegorical ladder. The apheroe of the plensta being mere fmaglangy Hies, and not wo well adapted an tho permanent conatelistions. And, in order to Imitate the swa, the principer object of the pagan relligions coramonies, these would naturally be fixed upon for the porpone. The eatore in the scenical representations in the cave of Mithra, by taking the zams of constallations, and asaming the figurt of animale, corrobarate this opinion.

[^116]:    - It has been seen, that by the doctring of the Pythagoreans, as well ne that of mssonry, the Supreme Being is often confounded with geometry as contalning the principles of the material world. Thle is in conformity to the source from which both derive their origin. "The gecret doctrina ol the Egyptinn priseta, like that of the Brahmina of Iadla and the Magi of Perais, presents Italif noder the double form at a Thrological and Cormogonical system. It had for a basis, a apecies of panthcism, at one moment more physical, at enother more intellectusl in its character, and at times agaln combining both of these attributes; $n$ personfifation of the powers of naturo more or less identifed with the powers of mind, and conceived in a polnt of view having reference to a myoterious anity in which the Deity wad tho universe were blended together." -(Profesaor Anthon's Class, Dict.)

[^117]:    - This in, fnto as many parta as thereare days botween the fall moon and the new. Thls circumstance, says Plutarch, has reforence to the gradual atrolnution of the Innary light, during the fourteen days that follow the foll moon. The moon at the end of fourtoen daye enters Taurus, and becomea nnited to the sun, from whom she colleots fire apon her disk, during the fourteen days which follow. She is then found overy-month if conjunction with him in the auperior parts of the aigns. The equinoclial year finlahes at the momont when the sua and moon are fonnd unilted with Orion, or the atar of Orus, a constellation placed ander Tanrus, whloh unitea itwolf to the Neomenle of Spring. The moon renews heruelf in Taurus, and a fow days afver Is aeen in the form of a crascent, is the following slgn, that te, Gomini, the home of Mercury. Then Orion, united to the san, in the attitade of a formildable warrior, procipliatee Bcorplo, hif rival, Into the shadez of aight; for he zete every time Orion sppeari above the horison. The day beoomes lengthened, and the germas of ovil are by degrese deatroyed. It is thes tbat the poet Nonans pletures to in Typhon conquered at the end of winter, when the ann arrivee in Taurus, and whan Orion mounta fnto tho hatvess with him.

[^118]:    * Here wo find an explanation of the time that it is ald tho body of grand mastar Silram roposed in the tomb before it was discovered, and ralsed by Eing Solomons "Which," eays Bernard, "it is said, bed lain there fouricen days; some say fittean." To have anfered the body of Hiram to have remsined in this romb fiftees days, would have marred the original dealga: it would bare entirely dentroyed the antronomical allusion Intended by the incarcertition.-Edit.
    $\dagger$ This seems to me to be the ranat reasonable conjecture that has appeared reapeotIng the motives which caused the erectlea of those stupendous monuments, the pyrnmides. On the sabject of the $\mathrm{S}_{\mathrm{ph}} \mathrm{ynx}$, which has aliso caused great speculation th regard to Its origin and purport, the author of the "Identity of the Druldieal and Hebrew Religione," givee the followlog solation :-"The Bplyyx wa a roprosentatioa of the signs Lao and Virgo joived together, in commemoration of the inundation of the
    

[^119]:    of astronomical mystic reverence for the three signs, Cancer, Leo, and Virgo." M. Malletet is of the same oploion. (See Anthon's Class. Dlen.) The great pitility of the overilowing of the Nile to Egypt, which wat conaidered a providantial occurrance, was soficient, among a superstitions people, to asuse fts commemoration in thia manner.-Edit

    - There io no proprlety in the addition of Abiff or Ablf to the name of Hiram. In the original Hebrew from which it is taken, the afils ta Abbl, the possealive caes of Abla; ; which aignilles father, and Aguratively, a superior. Hta proper addrees, thers fore, is my father, or, in court style, my lord In this sense, It is equivalent to Adonle, Bael, cr Osirlo, all names of the sun. And as Soloman's tempis was bollt mo as to imitate the world, the grand arohiteet was very properly entitied,

[^120]:    *"Cansia, my friendes did not grow aboat Jernamlom."-(Dr. Dalcha.)

[^121]:    - The Latin tonguo seems to have bean famillar to the Hebrew mseons of king Solomon's temple.
    $\dagger$ The sutbor of the Secret Discoptine, two., before notioed, remarks on the pas*rord of this degree, thast, "By a slogular lapswe linguac, the moderas have subetituted Twial Cain in the third degree for Tymboscin, to be entornbed. This in the nuciant Catechesio Arcasi, was the pass-word, from the symbolioal reprecentation of the otate of death, to the restored and undying existence."

[^122]:     gtice, when Typhon and the robel sogele gala the dominlan, seems to be put to deall by thens; but who soon after is born sgaln, end rises into the vanit of hesven whent ta relgna,-Rwin, p. 165 -Edit.

[^123]:    - Thls notion doubtless gave rise to the oustom of aymbollsing the Deity by a cirela with a dot is fis centre. -tdit.
    $\dagger$ An sllusion to thls ides seems to be made In the expreasions "Who shall ancend to the AII of the Lond $\mathrm{I}^{\prime \prime}$ or M Colo, In his Freemssons' Library, han it, "ccale the elownt of God."

[^124]:    - The companions of royal arob, previously to giviag the grand onniffe word, balance three timea three, with thelr hands jolned, bringling them down on thelr knees nine timet, making a pause between esch three.-Slmilar customs provail in China at this day, which no doubt are derived from the same sonrce as those of masonry. The following extract from the Chinese Courier, published at Canton, Nov. 1832, evtabHahes this fact. "Peking His Sisjesty, a faw days ago, when worshlpping and offering sacrilies on the altar of Hwoang $T c$, the Yellow Empenor, and divinc originator of agricwilware, drank the 'cup of bliss, nnd performed the grand ceremony of thrict Inceling, and nine timea pubting his forehead to the grownd. It seems ha did not much 1lke It. for be has censured the mastor of the oeremonies for givlog the words, Aneel-knock;-kneel-knock;-kneel-knock, too slowly. He complains also, that the man who read the prayar had but a poor voice, and commande that noother be chosen wha hen atrong, clear voics, and is perfoctly soquainted with this detail of rites and ceremonies. On the 13th of Mcy, the Emperor went in person to the sltar of the Black Dragon to pray for rain : and appointed aelect Budh prients, whith eeveral princee and kinge, to form two partiea, and alternately lodge at tho temple, to contiowe their swpplicatione aill reín showld be graneld.

[^125]:    e In the lower degrees, the duty of messanger, as wall as that of regulat conducting the ceremonies, is performed by wo officers who are denominated d These, ilke the reot of the masonio drams, I find to be eatronomical characters enclent Egyptians, eaya the satrologer Juilua Firmicus, (Astron. Lib. 2, c. 4,) each algn of the zodiso Into three sections; and each section was under the d of an imaginary being whom they called Lecan, or chlef of ten: so that ther chree decans in a month, and thirty-six in a year. Now, theme deckns, who wi called gods, (Theol,) regulated the destinles of mankind,-sand were placed I larly in certaln atari." (Ruins, p. 237.) In the course of time, a triaing varh the orthography of the name of these oficars, admitting of Iftela or none in t nunciation, hes taken place. The duties of the deosns snd those of the deac auficient)y allied to Identify them, "Among the Greeke, those youths who the tabled ware called dacowof, deacona; that in ministers, attendents," (C Dlot.)

[^126]:    - Cabal or Cabala in a pecret scienoe, protesed by the Hebrew Rabblas, eoncerning the allegoricsi interpretation of the blble,-Edit.
    $t$ In the proface to the Mlahns, we fied tble tradition of the Jowe, explafaed as follows:-God not only delivered the law to Moosa on Mount 8lani, bat the explansthon of it Likewise; Then Moses camo down from the mount ead entered lato big teats

[^127]:    Aaron went to visilt him: and Mones acqualated Aaron with the laws ho had F from God, together with the explanation of them; after this Aaron placed his the right hand of Moses, and Eleazar and Ithamar, the sons of Aaron, were ad to whom Moses repeated what he bad jut before told to Aaron: these being the onis on the right hand, the other on the Ieft hand of Moses; the acventy e Larael, who composed the Banhedrim, came In ; and Moses again declared th lawa to them, with the interpretation of them, as he had done before to Aas his sons. Lastly, all who pleased of the common people were iavited to ent Moses instruc od thom likewlee in the same manner as the reat: so that Aaror foer times what Moses hed been taught by God upon Mount Sinai, Eleazar anc mar thrne times, the seventy idere twice, and the people once. Moses afte reduced the laws which he had reccived into writing, but not the enplanal them ; these be thought it rufficient to truat to the memories of the above-mex pertons, who, being perfectly instruoted in them, delivered them to their ch and theae again to theirs from age to agt.

    - This oircumatance, as well se that of the pass-word, Rabbonl, befing the : the moat escollent master's degree ae in this, ahows, as nodioed by Mg, Cole, th mate condection between the I wo degrees.

[^128]:    - The god of day, personilied in the ascred allegorion, was subjected to all the destinles of man ; he bad hie cradio and hla tomb, ander the pamen of Herculea, Baochas, Oalris, ete. He wai in tafant at the sinter solutios, at the moment whem the day began to Increase; It was onder this form that his imago was oxposed in tho ancient tomples, thero to recelve the homage of his sdorers. 'Becauso then, asyo Macrobeus, tho day belig the shortent, this god seemed to be bat a feeble child. This is the cbild of the rayeteries, ho whoas image the Egyptlana drew from the bottom of their sanctasries every year on a fixed day:' (Oriciae de toun les Cultes, p. 313.) Here lo the triginal of the drawing rip, from benesth the fonndation of Solomon'e tomple, of the ominifc (all-oreatiog) word, logos, or tuas.

[^129]:    - Or nather a daity italf.

[^130]:    - The lotter T (Tau) whe uned by captains and horalds, and signed on their asmes, who romained alive atter a batlle; as the lotiar Thets $(\Theta)$ was used as a mark of death, 60 Wes T of Hfs.-(Bsiley.)

[^131]:    - Voiney, in taking notioe of soms customs of the Hobrewn, whlch are also striotly masonic, obeerves:-"In vain did Mosss proveribe the worship of the aymbole whleh protailed in lower kigpt and Pheniela; in vain did ho wiab to blot from hif roilgion every thing which hed relation to the stars; many trilta call thera to mind in aplite of ell he has done." Ho cltes an instances, "The neven Juminaries or plapets of the great candlestioiz; the twelve stones or algas in the urim of the bigh priest, and the cast of the two equinoxes, entrazoes and gates of the two hemispheres."

[^132]:    - In the East, any person preferred to hosours, bore a sceptre or zteff of honon and aometimes a plate of gold on the forehosd, called Cedosh, or Cadnceus, e grify is:ored person. (8ee supran)

[^133]:    - Onirk, Bacchas, Cronus, Futo, and Heroulas, are all equally the sum,-(Mabet Dis. on the Myet. of the Uabiri, V. 1, R. 17.)

[^134]:    - Nimrod, which sigrillea a rebel In the Jewish and Chaldsan Iangeage, wat tha name given him by Moses; but in Chaldes he was aslled Belns, whloh idgnitiod loen; and afterwards wis worihipped at a god by many nations, under the namo of Bet, ef Bas1, and bocame the Becohns of the anelente, or Bar Chas, the non of Chps,
    $\dagger$ This is a ebeer hoax upon the order. Tho real Inteniion, as la tho mynteries and treemasoary, is to represent man in E stats of nature, bofore the arte, and partionterty that of making clothing, were Invented. The candidats bafore lofitation is lookod
    

[^135]:    - The freemsons, et the rovival of the order in 271t, would kave deae wen te have sdopted this outh, instead of thowe of Hirtm-mesoary,-Bdit.

[^136]:    - On Ingligg the forndation of the Royal Indrmary of Ealnburgh, in 1738, sooh of the brethera in thalr turas gave three strokes nipon the cornar atoos with an lron mallot, whioh was ruopeeded by thres clarions of the trumpet, three hursea, wad thre elapt of hands,-(Sise Lawrio, p. 155.)-Edit.

[^137]:    - Dr. Weishanpt hat made a declaration rather too bold is the opening of bie verws In respeet to freemseoner. He roight poedbly be jastifisble In exylog that the origh of the order had not been discovered; but that It cannot be, remains to be proved He, bowovar, had not, perhaps, perused the German work, noticed to the introdnetlos of thly volume; the author of whlch, I will ronture to ay, had found the right clae to lead to a development of tbe aecret. Whether it condectod htm to a renah satisfactory to hla readert, or whether hle book fell lafo the hands of those "t who eno nudaratands" I know not.

[^138]:    * Sansculotte IIternlly means whthout rmall clothes. It wan bestowed in derivica by the well dressed royalists upon the republicans of France ; who scknowledged its applicability, and asumed the cerm, saying our condition Is the result of the iniquiton ystem of government, which has hitherto been conducted for the beneft of a fow, ts the $d \epsilon_{b}$ radation snd dubsuement of the great mass of the people. The French repablicans were also styled Jaoobios, whioh arose merely from the circumbtance of theit meetings veing held in a monastery formerly belonging to an order of monka thim denominated. And this nazue, in foreign conntries, has been made to raean comething swfully atrocious. The apostate, Cheetham, attempted to play thla pitifal game, in styling the repablicane of New York, Marthlogmen, In connequence of their meedteg it a house liept by Abraham Martilng Buch contomptale resorts show the bueseis of the oeseo.intanded to be beacltod by them.

[^139]:    "Thrice, thrice I poor, and thrice repeat my charms!
    Verbeque ter dixti: Thrioe he repeats the words, (Ovid.)
    The colors in thrie kroots oulta." (Virg.)
