THE BLAZING STAR;

WITH AN APPENDIX TREATING OF

THE JEWISH KABBALA.

ALSO A TRACT ON

THE PHILOSOPHY OF MR. HERBERT SPENCER,

AND ONE ON

NEW-ENGLAND TRANSCENDENTALISM.

BY

WILLIAM B. GREENE.

BOSTON:
A. WILLIAMS AND CO.
1872.
Entered, according to Act of Congress, in the year 1872,

By WILLIAM B. GREENE,

In the Office of the Librarian of Congress, at Washington.

Boston:
Stereotyped and Printed by Rand, Avery, & Co.
THE BLAZING STAR.

Some men—not all men—see always before them an ideal, a mental picture if you will, of what they ought to be, and are not. Whoso seeks to follow this ideal revealed to the mental vision, whoso seeks to attain to conformity with it, will find it enlarge itself, and remove from him. He that follows it will improve his own moral character; but the ideal will remain always above him and before him, prompting him to new exertions. What is the natural conscience if it be not a condemnation of ourselves as we are, mean, pitiful, weak, and a comparison of ourselves with what we ought to be, wise, powerful, holy?

It is this Ideal of what we ought to be, and are not, that is symbolically pictured in the Blazing Star.

The abject slave on an East-African rice plantation, brutal, ignorant, and a devil-worshipper, sees this Day-Star rising in his heart, and straightway he becomes intellectually of age. For it is the soul, not the body, that attains to the age of discretion. They who see this Star, have attained to their majority: all other persons are minors. Before the rays of this Star, voudouism and devil-worship, whether in refined
societies, or among barbarous peoples, vanish into night; for immersion into the rays of this Star, is the beginning of the baptism of repentance and penance for the remission of sin — and of the penalties of sin.

* * * * *

Whoso beholds this Star acquires faith. Faith is conviction born from the consciousness of aspiration. Faith is the active principle of intellectual progress.

The Blazing Star is the transfigured image of man — the Ideal that removes farther and farther, making always higher and higher claims, until, at the last, it becomes lost in infinity; and faith affirms that this same Blazing Star may be, perhaps, the shadowy, imperfect, and inadequate image of some unknown and invisible God.

Now, if it be true that God and man are in one image or likeness (and the affirmation that they are so is not unplausible) then it is the duty of man to bring out into its full splendor that Divine Image which is latent, on one side, in the complexity of his own nature. This conclusion confirms itself.

You say you will never believe in God until the fact of his existence is proved to you! Then you will never believe in him at all; for, in the face of positive knowledge, faith is no longer possible. Faith affirms in the presence of the unknown. If science should ever demonstrate the existence of God (which it never can) faith would become lost in sight, and men would no longer believe, but know. The reason why science is intrinsically incompetent to either prove or disprove the existence of God, is simply this, that the subject-matter transcends the reach of scien-
tific instruments and processes. The dispute is, there­
fore, not between faith and science, but between faith
and unbelief. Unbelief is a disease, not of the hu­
man understanding, but of the human will, and is
susceptible of cure.

Saint Paul says, "We walk by faith, and not by
sight;" again, "We see through a glass darkly;" and
again, "We are saved by hope, but hope that is
seen is not hope." Do what we will, we are under
the necessity of walking, much more than half our
time, not by sight, but by faith. The better half
of our life upon the earth, and the happier half, is
the part that is spent in advance of positive knowl-
edge.

Science is constantly encroaching on the domains
of faith, by showing that postulates of faith are de­
monstrably correct. But whenever any postulate of
faith is proved, and thus becomes a truth of science,
and no longer a truth of faith, faith immediately
passes again to the front, with the affirmation of a
new, and a higher, postulate. Faith keeps always
well in advance of science.

Legitimate science never arrays itself in a hostile
attitude against genuine faith. Science, it is true,
often successfully refutes dogmas that are alleged to
be of faith; but, in such cases, it is always found,
upon due observation and inquiry, that the dogmas
so refuted were born, not at all of faith, but of politi-
cal or clerical ambition, or of fear, or of self-interest,
or of the presumption of ignorance, or of some other
human passion, — or, perhaps, of sheer stupidity.
Superstition, fanaticism and bigotry are signs and
marks showing that the soul is not yet intellectually of age. They never result from convictions born of the consciousness of aspiration, and are, therefore, never of faith.

Faith does not say, Is there a God? It is doubt that says that. Faith says, Why should there not be a God? Absolute perfection is no natural obstacle to existence, but the contrary. Faith says, Figure to yourself, if you can, that there is no God! You cannot do it.

Faith is the affirmation respecting things unknown, that is implied in the practical recognition of known absurdity as such. Faith is reason denying absurdity in the face of the unknown.

An admissible definition of God must be in the form of a negative pregnant—an affirmation of God as that unknown Absolute and Infinite, which is the reason of the existence of the known finite and relative that we ourselves are.

Faith is from within; it is the outbreaking of human spontaneity; it is force of soul, grandeur of sentiment, magnanimity, generosity, courage. Its formulas are naturally unintelligible in their literal tenor; for, otherwise, they would represent that which is scientifically known, and would not be the mere provisional clothing of that which is not objectively given, but subjectively* projected from the inmost depth of the soul. Man, having an ideal before him of that which he ought to be, and is not, and act-

* That is subject which calls itself Ego, I. That is object which the I contradistinguishes from itself, calling it non-Ego. That is subjective which belongs to the subject; and that objective which belongs to the object.
ing as though he possessed the character he ought to have, but has not, comes, by the very virtue of his aspiration, to possess the character he imagines. Thus the world is leavened. Materialism, the spiritual death which is consequent upon the subordination of the subject to the object in thought, is the very soil from which faith springs; for every thing that stands by itself alone, makes way, through the necessity of the principle of contradictions, for its correlative opposite. Stoicism has always its birth in Sybaritic cities, and among over-civilized and effete peoples. Men learn, through faith, to do always the very thing they are afraid to do, and thus come to fear no longer. Unbelief naturally gives emptiness of heart; and emptiness of heart surprises itself with spontaneity of worship; and spontaneous worship gives the worshipper something of the high nature of that which is worshipped; and, in this way, unbelief transfigures itself, and loses itself in faith. Faith may always be acquired. Whoso is devoid of faith, and desires to have it, may acquire it by living for a few days (sometimes for a few hours only) as though he already possessed it. It is by practical, not theoretical, religion, that men transform their lives. By the practice of faith, man grows strong in faith. The moral coward becomes a moral hero as soon as he acquires faith. Weak women, among the early martyrs, learned by faith to face the wild beasts. When they were thrown to the lions, the lions trembled; for the women were more lion-like than the lions, and the lions knew it.

* * * * *

Man has a threefold nature. He is, therefore, sym-
bolically represented under the similitude of a triangle. Saint Paul says that man is body, soul, and spirit; and Saint Augustin says that he is will, understanding, memory. One philosopher says that man is intelligence, activity, and sensibility; another says that he is sensation, sentiment, cognition; and other philosophers give other formulas. But there exists no extant denial (at the least, none such exists to our knowledge) of the essential triplicity of man's nature.

* * * * *

The Ideal is the invisible Sun which is always on the meridian of the soul. As the ever-revolving earth rises and sets upon the sun, which is steadfast, and not the sun on the earth, so the soul rises or sets on the Ideal; which is what it is whether man behold it or not, and is itself unaffected by man's attitude in respect to it, since it is the fixed centre, and the Day-Star of spiritual existences. It was for this reason that the temples were always opened in the ancient times, for purposes of initiation, at what was mystically called "high noon," although, in point of practical fact, that same "high noon" often occurred at the dead of night. This Day-Star was known in the temples as Bel-samen, the Lord of Heaven,—as Mithras also, or as Osiris, or Apollo, or, more mystically, as Abrasax, and by a thousand other names. In the public worship, it was recognized as the visible sun; but in the esoteric work, after the avenues of the temples were duly guarded against cowans and eavesdroppers, as the Ideal-Man, and as the Star of souls.

* * * * *
The five-rayed Blazing Star—the Pentacle—Abrak—is the special star of the great Aryan (or Indo-Germanic, or Japhetic*) race. [The Shemite knows it not.] This Star—Abrak—is a disguised image or likeness of man. The superior ray represents the head; the horizontal rays, the two arms; and the inferior rays, the two legs. This Star, being unsymmetrical, is capable of being turned upside down. It is our intention to explain, at some future time, the terrible meaning that is presented by the five-rayed Star, when its point is turned downward. Let it suffice to say, here, in passing, that this detestable sign (the inverted Star) execrated by the more intelligent adepts themselves in perverted mysteries, and excluded from their midnight orgies, is the head of the famous goat that plays so important a part in the ceremony of obscene initiations. The two ascending rays are the goat's horns, the horizontal rays are his two ears, and the descending ray is his beard.

* * * * *

* "These are the generations of Noah: Noah was a just man, and perfect in his generations, and Noah walked with the Elohim. And Noah begat three sons, Shem, Ham, and Japhet."—Gen. vi. 9-10.

† The human hand, with the thumb and fingers, is the five-rayed Star; but with the three larger fingers closed, and the thumb and little finger protruding (the common counter-charm to the evil-eye) it is that Star inverted, or the goat's head. The hand with the three larger fingers closed, is the negation of the ternary, and the affirmation of the antagonistic natural forces only. The thumb represents generative power, and the little finger denotes insinuating tact: the hand, therefore, that shows the thumb and little finger only, denotes passion united with address. The thumb is the synthesis of the whole hand. A morally strong man has always a strong thumb; and a weak man, a weak thumb. A long thumb denotes obstinacy. Blessings are conferred with two of the larger fingers, or with all three of them. The thumb and little finger are used in cursing.
The Shemitic race, the equal of the Aryan, and in some respects its superior, knows not Abrak: it sees not that inner light which the Aryan sees, and of which we have all along been speaking. But, instead, the Shemite hears inwardly — as the Aryan does not — mysterious and unspeakable words which it is not lawful for a man to utter. To the Shemite, conscience is not at all a comparison, as it is to the Aryan, of what man makes real in himself, with the ideal always before him of what he ought to so make real, but is, on the contrary, the actual voice of God speaking inwardly to the soul. The Aryan objectivizes all things. He forms conceptions tangible to the imagination; and what he is incompetent to clearly conceive, he discards as unreal. He naturally gives form and expression, through symbolic art, to his inward thought; and, until his thought is expressed in form, it is, to him, as though it existed not. To the Shemite, on the contrary, all visible symbols, whether discernible to the outward or to the inward eye, are worse than worthless. The poetry of the Aryans is objective and descriptive; that of the Shemites is sometimes didactic, sometimes lyrical, but never objective. The Shemite has no plastic and no pictorial art. The religion of the Aryan is that of the revealed Ideal; the religion of the Shemite is that of the revealed Word. The conscience is the essential religious faculty of man; and it is in the divergent natures of the Aryan and Shemitic consciences, that the root of the divergencies of the Aryan and Shemitic religions is to be sought and found. The spirit of the Shemite con-
tinually groans and travails within itself, waiting for the utterance of unspoken words; and it revels in the consciousness of that which it knows to be at once real and inconceivable. When the great wind rent the mountains, and broke the rocks in pieces before Elijah (a Hebrew Shemite) the prophet could not see God in the wind. Neither could he see God in the earthquake that followed the wind, or in the fire that followed the earthquake. But, after the fire, there came “a still small voice;” and, when Elijah heard that, he wrapped his face in his mantle, and went to the mouth of the cave, and stood up before Jehovah. It was the “word” of the Lord that came to the greater Hebrew prophets; and it was only by prophets of lesser note that “visions” were seen in deep sleep, when they were upon their beds. The greater prophets heard in ecstatic trances; but they seldom saw clairvoyantly. It would seem that God is nearer to the Shemite than he is to the Aryan. When the Aryan, bewildered in his reasonings, turns round and says, “There is no God!” the Shemite, hearing him, answers, “God exists. I know him personally. I have talked with him, and he has talked with me.” And the Shemitic affirmation of faith has always carried the day against the Aryan suggestion of doubt. For whenever, in the great march of mankind — humanity — the collective Adam* — from the mystical Eastern gate of Eden,

* Saint Paul, that great Kabbalist, shows clearly (Romans v. 12-19. and 1 Corinthians xlv. 22), that by the word “Adam” is to be understood the original Collective Man. The Collective Man may very well have once existed in a single person, or, rather, in a single couple; and, in fact, tradition informs us that it has twice so existed, — once in Adam and Eve, and once in Noah and his wife.
an Aryan religion has come in contact with a Shemitic religion, the Aryan religion has at once gone to the wall, waned pale, wilted, and subsided.

* * * * *

In the year 606 B.C., Nebuchadnezzar, the Shemitic King of Shemitic-Hamitic Babylon, utterly and definitively defeated Joachim, the Shemitic king of Shemitic Jerusalem, and transplanted the mass of the Jewish people, as captives, to the neighborhood of Babylon.

During their captivity, the chiefs of the Jews, already initiated into the profound mysteries of the Hebrew religion, were further initiated into the occult science of the Chaldeans,—a science of Hamitic origin, akin to that of Tyre and Sidon, and to that which had its mysterious colleges on Mount Gebal.

About seventy years after the fall of Jerusalem, Cyrus, king of the Turanian and Aryan Medes, and of the Aryan Persians, having first turned the Euphrates aside, took Babylon by storm, on the night of a drunken and frantic Chaldean festival. He entered the city by the way of the empty river-bed, bringing with him, as official chaplains of his army, the more illustrious of the Median Magi, and the Aryan chief-priests of Ormuzd.

The captive Jews, who had been all along conspirators in Babylon, and secret allies of the Persians, furnished guides, spies and scouts to the invading Aryan army. After the taking of the city, Cyrus rewarded the Jews with his personal friendship, and sent them back to their own country, with instructions to rebuild Jerusalem; which latter city re-
mained, after its restoration, for several generations, as much from gratitude as policy, a Persian stronghold.

At the solemn conferences that took place in the East of Babylon, near the great Tower, at the time of the Persian conquest, between the Median Magi, the Chaldean soothsayers, the Aryan priests of Ormuzd, and the Hebrew Prophets, the facts were clearly verified, that, on one side, man aspires towards God, and, on the other, that the Supreme condescends to take up his abode, and to utter his oracles, in the secret temple of the human heart. These facts had, it is true, been well known for centuries to the generality of simple and pious men and women in private station, and also to prophets and inspired poets; but they had never before been so verified to the conviction of kings and statesmen, in the presence of concurring and confessing sacerdotal corporations.

At these conferences, the three constituent elements of the universal consciousness of the collective Adam, were severally and respectively represented. The Aryan priests of Ormuzd maintained the claims of the object in thought. The Hamitic-Chaldean soothsayers (Hamitic Egypt had no delegate at the synod) maintained the claims of the human subject. And the Hebrew Prophets from the Holy Land maintained the claims of the relation which subsists between the

---

* "This commandment which I command thee this day, it is not hidden from thee, neither is it far off. It is not in heaven, that thou shouldest say, Who shall go up for us to heaven, and bring it unto us, that we may hear it, and do it. Neither is it beyond the sea, that thou shouldest say, Who shall go over the sea for us, and bring it unto us, that we may hear it, and do it. But the word is very nigh unto thee, in thy mouth, and in thy heart, that thou mayest do it."—Deut. xxx. 11-14.

2
subject and the object in thought. For, where the Aryan sees inwardly, and affirms the reality of the object, and the Shemite hears inwardly, and affirms the reality of the relation between the subject and the object, the Hamite feels inwardly, but very darkly, and affirms the reality of the human subject. *

In these conferences were also verified the foundations of that sublime and universal science, which, six centuries afterwards, was published among adepts, as the Holy Kabbala, and which had been known, but fragmentarily only, and in its essential principles, long before, to men of the stamp of Abraham, Zoroaster, Moses, Solomon king of Jerusalem, and Hiram king of Tyre.

The Orient of Babylon was not intellectually competent to co-ordinate the principles of the Kabbala, and to present the completed synthetic doctrine in a definitive form. There was a necessity that the materials should remain unsystematized until the human intellect could have an opportunity to become sharpened by the practice of Greek metaphysical dialectics. Many Greek words occur in the Zohar, or Book of Splendor; and it is difficult to believe that certain essential passages of the Idra Suta (the third tract in the collection of the lesser Zohar) could have been written by any one unacquainted with Aristotle’s treatise of Metaphysics. † Careful investigators have

* Of course, the synod took no cognizance of the metaphysical distinction of the subject, the object, and the relation, in thought, under its modern abstract form. What we now call the object, was then darkly cognized as the Japhetic characteristic, tendency, and inspiring natural principle; what we call the subject, as the Hamitic characteristic, tendency, and inspiring natural principle; and what we call the relation, as the Shemitic, &c.

† “The thought which is most, is thought concerning that which is most:
decided, from what they regard as internal evidence, that the definitive compilation of the Kabbala dates from some period between the year 200 B.C. and the year 150 of the Christian era. It is the internal form of the Kabbala, however, its substance only, that is systematic: its exposition in words has been left, apparently with deliberate intention, in an exceedingly chaotic state. To the majority of readers, the Kabbala is, as it ought to be, completely unintelligible.

* * * *

At an unknown and remote epoch, it was affirmed, probably by some Hamite, as a postulate of faith, that God and man are in the same likeness or image. It was also affirmed, as a logical consequence of this fundamental affirmation, (1) that, since man is triune, the Supreme is also triune, and (2) that, since man may be denoted by an ascending triangle, the Supreme may be denoted by a descending triangle. The figure in the margin is not at all idolatrous; for it is not, as Abrak is, a disguised image or likeness. It is a reminder only,—a sign or symbol,—not a resemblance. It is a pictorial word, suggesting a thought,—such as were in common and necessary use before the alphabet was invented.

It was also affirmed, perhaps at the same unknown epoch, that the interlacing of the Divine triangle

and mind knows itself through the perception of that which is intelligible; and mind becomes intelligible to itself through reflection and thought: so that intelligence itself becomes intelligible. . . . Thus God possesses in perfection what we possess for a time only. He possesses more than we have stated; for he possesses, in addition, life. The action of intelligence is life; and God is that action."—Aristotle’s Metaphysics, Book xii.
with the human triangle, in the six-rayed Blazing Star, is the authentic symbol of the revelation of God to man, and of the abode of the Supreme in the human heart, as well as of the aspiration of man towards God. Jacob Behmen asserts that the junction of these two triangles is the most significant and mystical figure in nature. The reality denoted by this symbol is neither God nor man: it is distinct from man, before him, and above him, as the human Ideal; and it is apart from God, as one of the Revelations of Himself that the Supreme sees fit to make to man, — as one of the names of Him who, in his own essence, is NAMELESS.

Sometimes the six-rayed Blazing Star is portrayed as a mystic Rose with six leaves. But the ordinary form is that of the two interlacing triangles, with the Divine name inscribed in the middle of the figure. The interlacing triangles are often indicated by a junction of the square and compasses: to which, sometimes, the plumb and the level are added, forming a cross in the centre, and giving a ten-rayed Star, with four of the rays (those formed by the extremities of the plumb and level) occulted. This is the prophetic Star; and the ten rays stand for the ten Kabbalistic Sephiroth. Without a preliminary understanding of the ten Sephiroth, the Kabbala, as a Philosophy of History, and consequently as a Practical Art for the forecasting of future events, cannot be appreciated.
We will do our best at some future time, if occasion offers, to explain these ten rays, ray by ray, from the Kabbalistic point of view.

* * * * *

The ordinary, every-day man or woman, that is to say, the man or woman who has not yet reached perfection,—and who is there that has reached perfection?—may be symbolically represented, if he or she be morally of age, by an equilateral triangle with one angle pointing upward to the Blazing Star. Whoso recognizes the virtue of that Star, at once acknowledges the Divine Law in its threefold applications, and strives after conformity with the Ideal, not according to the spirit only, but also according to the soul and the body.

Man’s duty to himself and to his fellow-man, under the rays of the Blazing Star, is threefold: (1) the achievement of his own Liberty; (2) the definitive establishment of relations of Equality between himself and other men; and (3) the fusion of himself, in the solidarity of Brotherhood, with all human beings who, like himself, recognize the Blazing Star.

Liberty is the power which every human being ought to possess of acting according to the dictates of his own private conscience, under the rays of that Blazing Star which is seen by him, secretly, from the centre of his individual heart.

Equality is the condition that obtains in every society where no special or artificial privilege is granted to any one, or to any set, of its members.

Brotherhood is that strict solidarity between the members of a social body, which causes, under the
rays of the Blazing Star, the welfare of each to be seen as involved in that of every other, and of all, and that of all in that of each.

Liberty is the right of each member against every other member, and against all the members. Equality is the right of every other member, and of all the members, against each member. Liberty and Equality find their harmony in the synthetic principle of Fraternity. **LIBERTY, EQUALITY, FRATERNITY**: this is the mystical triangle that ought to be inscribed on the banners of every truly-constituted social organism.

Liberty alone may lead to anarchy, or to the tyranny of individuals over the mass; but the dangers from Liberty vanish in the presence of Equality. Equality alone may lead to the tyranny of the general mass over individuals or over minorities; but the dangers from Equality vanish in the presence of Liberty. Fraternity is never alone; for it is, in its essence, the synthesis of Liberty and Equality.

* * * * *

**What is it to be a Slave?** It is to have the inward knowledge of that which is great and holy, and to be constrained to do things that are small and base. It is to be a person consciously capable of self-government, and to be, at the same time, subject to the will of another person. It is to be a full-grown person whose actual rights are those of a child only. It is to see the Blazing Star, and not be permitted to follow it.

Slavery is a factitious and arbitrarily-imposed prolongation of the term of moral minority. Paternal
government, actual or constructive, is just and legitimate when exercised over persons who are morally under age; but, to such as know the Blazing Star, it is, when exercised to the confiscation of their initiative, the most infernal of all tyrannies. Paternal government, exercised by the natural father over his own minor children, is tempered by affection, and justifies itself; but paternal government, exercised by usurpers over their natural equals and superiors, is an oppressive wrong, and the most intolerable of all outrages,—at the least, it is so in the estimation of such as have seen the Blazing Star.

It is neither the experience of physical want and privation, nor the fact of subordination to legitimate authority, that makes a man to be a slave; for saints and soldiers suffer hardships, and obey their superiors, and are not slaves. On the contrary, it is by the token of the conscious moral penury which a soul feels when it finds itself helpless and hopeless under the domination of an alien soul,—it is by the sentiment of a confiscated individuality, by the consciousness of being annexed, as a base appendage, to another soul,—it is by the consciousness of being sacrificed to a foreign personality,—it is by the darkening of the moral firmament, and by the occultation of the Blazing Star, through the intervention of an extraneous usurping will,—that a man comes to know that he is a slave. And it is, on the other hand, the insolent, lying hypocrisy, the false professions of morality, the transparently-spurious philanthropy, the limitless and blinding arrogance of self-conceit, under which the usurper half-conceals, half-reveals, his unnatural lust
to wipe out human souls, and to obliterate every individuality except his own,—that gives energy to slaves, and renders conspiracies, risings, strikes, and revolutions, deadly and chronic.

The fundamental right of a man is the right to be himself; and this right is his sovereignty. No man has a right to confiscate the sovereignty of any other man. No man can delegate to another man, or to society, any right which he does not himself possess. A man may wickedly forfeit his sovereignty by the commission of crime; he may perversely turn his back upon the Blazing Star, and abdicate his individuality and his manhood. But no man can rightfully abdicate his sovereignty. It is the duty of every man of sane mind, who supports himself, and is not convicted of crime, to vindicate his essential dignity as rightful sovereign of himself and of every thing that pertains to his individuality. Every able-bodied man has a natural right, and a natural duty, to forcibly repel, and to combine with others to forcibly repel, any and all wrongful invasions of his sovereignty. Society exists for the individual, and not the individual for society. Institutions are made for man, and not man for institutions.

* * * * *

The French Free Masons claim, in their Constitutions, that the formula Liberty, Equality, Fraternity, has been, from the beginning, the device of their order.

The writer of these pages is, and has been for many years, a member of one of the Masonic Lodges (we are told there were a hundred and twenty of them)
that recently planted their banners, under the fire of
the Versailles troops, upon the ramparts in front of
Paris. He knows not by what authority the demon-
stration was made. He supposes, however, that it
was made by the authority of the Paris Lodges only,
and that the consent of the Grand Orient of France
was neither requested nor deemed necessary.

It is easy, at this moment, to apply abusive epithets,
either to the Commune or to its enemies. The Great
Architect of the Universe will, at the proper time,
judge both parties.

The French word *commune* is the equivalent of our
English word *town*. The word *communiste* may de-
note, in French, either (1) an advocate of the doc-
trine that women and property ought to be held in
common, or (2) an upholder of the principle of mu-
nicipal self-government. The Commune of Paris
fought, in its recent great fight, not for a community
of women and goods, but for municipal self-govern-
ment. It was well known, both at Paris and at Ver-
sailles, while the fighting was going on, that M.
Thiers could have made peace with the insurgents,
at any moment, by simply guaranteeing to the city
of Paris an amount of municipal liberty equal to that
which has always been enjoyed by the city of Boston.
This fact, which cannot with any plausibility be de-
nied, and which probably will not be denied, suffices,
of itself alone, to put the merits of the dispute be-
tween the Commune of Paris and the Versailles gov-
ernment, in its true light, and to fully expose the
calumnious misrepresentations of the Versailles party.

We are of the opinion, that, taking fighting as it
rises, the Commune made a passably good fight. We are especially proud of the heroic women with whom the honor of arms has definitively rested.

We, nevertheless, take the liberty to recommend the Commune to be more circumspect, hereafter, in the matter of summary executions. Better things were expected of the Commune than of the Versailles government; for the Commune represents advancing civilization, while the Versailles government represents the commercial, industrial, and financial feudalism of the present and the past. It will never do for men who have seen the Blazing Star, to follow evil examples, and meet murder with murder. The execution of spies and traitors, and the use of petroleum for incendiary purposes,* are perfectly justifiable under the laws of war; but the civilized world does not look with approval, and ought not to look with approval, upon the military execution of priests and other non-combatants. We know (or, at the least, we have been informed) that the Commune offered to exchange the Archbishop of Paris for Blanqui, and that the offer was not accepted. This fact (if it be a fact) consigns the memory of M. Thiers to the execration of posterity; but it does not excuse the Commune.

The existing French Assembly was elected, not at all to govern France, but to consult on the possibilities of a reconciliation between France and Prussia, and also, if advisable, to conclude and authenticate a treaty of peace. The Assembly has, therefore, no

---

* We should like to know whether the Union Army, acting under orders, did, or did not, ever set fire to any thing in the valley of the Shenandoah; and whether shells loaded with incendiary composition were, or were not, thrown from our ships and batteries into the city of Charleston.
lawful governmental powers. When the treaty of peace between France and Prussia was signed, the mandate of the Assembly expired. The government of M. Thiers is a government of usurpers. It has belligerent rights, and it has no other rights. Consequently, every disarmed prisoner of war, male or female, shot in cold blood after a combat, in pursuance of M. Thiers’s policy, whether sentenced or not sentenced by court-martial, is — from a legal point of view — simply a person assassinated. And the moral aspect of the question is coincident with the legal aspect. If the Communists committed excesses (and it seems they were human), they did so in defending themselves, their families, and their homes, against thieves and usurpers. Thiers fought to confiscate the liberties and control the money of the people of Paris; and Paris fought in defence of the natural rights of its own people.

Three times the heroic people of Paris have been cheated out of their Republic: once in the great revolution; afterwards in 1830; and, again, in 1848. To-day the scales are still oscillating, and the result is yet undetermined. In the next great fight, or in the fight after the next, the Republic will prevail. The Blazing Star as Paris sees it, now struggling with obscurantism and secular wrong, tinges the whole horizon of the East with the glories of the coming day. The Kabbalistic synthesis is nearer than it was!

* * * * *

The Shemitic principle and the Japhetic principle are to-day represented in human civilization,—the first by the Israelitish Church, and the second by the
Christian Church. Both of these Churches are true Churches, and therefore neither of them is capable of erring in things essential. The Blazing Star burns in both of them: the junction of the two triangles, one Divine and the other human, — the regeneration of the individual soul, — takes effect in both of them. Yet these two Churches excommunicate each other! Why? Because these Churches are two Churches only, and not three. Because one whole side of the mystical triangle is lacking in modern civilization. Because the Hamitic principle is to-day occulted. Because the Hamitic Church is nowhere visibly organized, and speaking with authority, among men. Because Man, the natural mediator between heaven and earth, is officially absent from the religious organizations of the period.

Now there are three holy cities, — not two of them only: JERUSALEM, ROME, PARIS. But the holiness of Paris is virtual merely as yet. The religion of Humanity reaches higher than the Commune and the International Labor Union seem to think. Paris is Bar-Isis, Paris, PARIS. It is the sacred boat of Isis that bears to-day the destinies of the world.

BROOKLINE, MASS., July, 1871.
APPENDIX.
APPENDIX.

THE KABBALA.

The two kabbalistic* books that are of note are the Jetsirah (the Book of the Creation) and the Zohar. The Zohar is the Book of Splendor,—the book of “the shining ones” of whom it is written, “They that are wise shall shine (זוהר, i-zhr-u) as the shining (ברור, k-zhr) of the firmament.”—Dan. xii. 3.

The Talmud † (the authoritative compendium for doctrine and practice among the orthodox Jews) directs that the theory of the creation (or the contents of the book Jetsirah) shall never be taught to two persons at once; and the explanation of the mystical chariot described by the prophet Ezekiel (or the contents of the book Zohar) not even to one, unless he be a man of approved wisdom, and then by a summary of the chapters only.

The most important, and probably the best authenticated, of the documents forming the collection of the Zohar, are the Siphra de Zeniutha (the Book of Occultations, or of Mysteries), the Idra Rabba (the Greater Assembly), and the Idra Suta (the Smaller Assembly). These three short

* רבי, KABBALAH, that which is received (by tradition).
† The TALMUD is that which is taught (with authority).
treatises are said by experts to contain the whole real substance of the Kabbala; and taken together, in the order just mentioned, they form the collection known as the lesser Zohar. In point of fact, however, the whole substance of the Kabbala is contained in the Zeniutha; for the Idra Rabba and the Idra Suta consist of explanations and developments of the doctrines that are darkly outlined in the Book of Mysteries. The last paragraph of the Zeniutha stands as follows:—

"Thus far, the Book of the King, or of Mysteries, or of Occultations, remains involved and hidden. Happy is that man who goes in and comes out, and learns its paths and its crossways."

The lesser Zohar is written in a corrupt Hebrew idiom, long ago consigned to utter disuse, called "the Jerusalem dialect." Its three tracts, as we now possess them in the printed editions, are accompanied by Latin translations; and in the light thrown by the text on the translations, and by the translations on the text, with the aid afforded by the internal harmonies of the doctrine expounded, some parts of the expositions (if they may be called expositions) become distinctly intelligible.

There are many treatises in French, Latin, and in other languages, nearly all of them easily accessible, containing general accounts of the kabbalistic doctrine, summaries of the various fragments of the Jetsirah and the Zohar, with explanations of the signs, symbols, and of the language generally, of the Kabbala; giving also practical directions for magical processes, the interpretation of mysteries, the exercise of the prophetic art, and other like matters of interest. Whether the kabbalistic books themselves are harder to understand than the books written to explain them, or the converse, we do not assume to judge: we incline, however, to the suspicion, that, apart from the difficulties of mere language, the commentaries are harder than the text.
The Book of Mysteries opens very obscurely, as follows:

"The Book of Occultations (or of Mysteries) is the book of weighing in the Balance. Before this Balance was, face (the lesser aspect) answered not back to face (the greater aspect). [The Microprosopos looked not back upon the Macroprosopus.] And the ancient * kings (the symbolical kings of Edom, or the worlds that were first created, but could not subsist) were dead, and their sustenance was nowhere found, and the earth was desolate (void, existing potentially only), until the non-cognizable Head prepared vestments of honor, and bestowed them upon that which is longed for in all desires (or until the Holy One assumed the form and nature which involves all natures, and maintains them all). This Balance hanges in the place which exists not. Things which appear not are weighed in it. It is composed of that body which is neither compacted nor seen. In it have ascended, and do now ascend, things which are not, and are, and shall be. Occultation in occultation." — The Zemiutha, chap. i. § 1 to § 9.

The Masora is in every respect the converse of the Kabballa. The Masora is that which was openly delivered by the Rabbi: the Kabballa is that which was secretly and mysteriously received by the disciple.

There was for the Kabballa, as there is for every thing else that grows up under the protection of silence and darkness, a long period of incubation. Symbols presented themselves from time to time to the minds of ingenious men, and went into occult circulation among adepts. Some of these symbols were illustrative pictures addressed to the eye, and others of them were enigmatical stories and descriptions addressed to the ear. Century after century passed away before the doctrine took its systematic and definitive

* קדם, Edom, eastern. Because the morning in the east is anterior to the noon in the south, and to the evening in the west, the word eastern came, from very ancient times, to signify anteriority, whether natural or metaphysical. Thus the phrase, "the eastern kings," denoted either the first kings in point of time, or the principiating kings. The "ancient kings" of the text are principiating kings.
form. When the books came to be written, they were written, not to teach the doctrine, but to furnish such a series of arbitrary mnemonic signs as would enable the initiated reader to hold the whole general theory, divided and subdivided into its constituent parts, in one view before his mind. It is in vain, therefore, that a man opens a kabbalistic book, if he have not beforehand, and without the aid of the book, mastered the whole substance of its contents. The books furnish, not matter of teaching, but enigmatic reminders of information already acquired. Moreover, the kabbalistic writers, aiming to conceal rather than to reveal their doctrine, affect preposterousness of statement.

When Rabbi Simon ben Jochai* read (Gen. iii. 3), “And they heard the voice of the Lord God walking in the garden in the cool of the day,” he refused to believe the things literally stated in the passage. He reasoned thus: “The passage has a meaning; for it was written by the author of the Bereshith;† the literal meaning is not the true one; for the literal meaning is absurd: the passage has, therefore, some occult meaning, and that occult meaning is a proper subject for investigation.” Rabbi Simon and the other kabbalistic writers appear to imitate, in their own expositions, what they suppose to have been the enigmatic method of the author of the Bereshith.

The Zohar is an explanation of the mystic chariot (Merkebah) that is described in the first chapter of Ezekiel. The prophet Ezekiel, when he was among the captives which were by the River Chebar, saw visions of God. These visions were obviously enigmatic. The prophet saw “a fire infolding itself,” and in the midst of it “the likeness of four living creatures.” He saw also “wheels,” the work

* R. Simon ben Jochai is mentioned by several of the kabbalistic writers as the master who reduced the Kabbala to its definitive form.

† The Bereshith (In the beginning) is the first part of the first book of the Hebrew Bible.
of which was, "as it were, a wheel within a wheel." "The rings of the wheels were full of eyes." He saw also "a firmament" over the wheels and the living creatures, and the color thereof was "as the color of the terrible crystal;" and on this covering "was the appearance of a throne of sapphire-stone," and "upon the likeness of the throne was the likeness of the appearance of a Man above upon it." * "And the appearance of the brightness round about it was as the appearance of the bow that is in the cloud in the day of rain," or as the appearance of light when it is passing through transparent crystal.—Ezek. chap. i. We read, furthermore,—but this time it is the prophet Daniel who sees the vision,—"I beheld till the thrones were cast down, and the Ancient of days did sit, whose garment was white as snow, and the hair of his head like pure wool: his throne was like the fiery flame, and his wheels as burning fire." —Dan. vii. 9. A parallel vision is recorded in the Apocalypse, where the meaning is, however, somewhat obscured through the rendering of the term ζωa (zooa, living creatures) by the unfortunate term "beasts." Ezekiel says (x. 20), "This is the living creature that I saw under the God of Israel by the river of Chebar; and I knew that they were the cherubim."

The author of the Zenitha,† having realized the vision of the Merkebah in his imagination, expresses himself in the following extraordinary language: —

"The non-cognizable Head is framed and prepared (or is to be conceived) after the similitude of a skull (1) filled with crystalline dew (2). The covering membrane (3) of this skull is completely transparent, and

* "Then went up Moses and Aaron, Nadab and Abihu, and seventy of the elders of Israel (into the mount). And they saw the God of Israel; and there was under his feet as it were a paved work of a sapphire-stone, and as it were the body of heaven in its clearness." —Exod. xxiv. 9, 10.

† Rabbi Simon indicates very clearly, in the Idra Suta, that he himself was the author of the Zenitha.
closed; and from it hair (4 and 5) like white wool hangs on either side in equilibrium.*

"The supreme (6) Loving-kindness (the forehead of the Macroprosopus) reveals itself to the prayers of that which is below.

"Open Vision (the eyes of the Macroprosopus) slumbering never, but observing continually (7 and 8).

"In the superior aspect (the Macroprosopus) are two apertures (the nostrils), through which the spirit (9) is called forth in all.

"The aspect which is below (10) answers to the aspect of the superior lights.

"'In the beginning, God created the heavens and the earth.' — Gen. i. 1. Six ("shetha) created six ("bara-shih). Upon these (six) depend all things that are below. For that which is below depends upon the influences which are the Head's beard; but the second earth (the actual world) counts not among the six. The existing earth is produced from another earth that bore the curse: as it is written (Gen. v. 21), 'From the ground which the Lord had cursed.'

"'And the earth was without form, and void' (thohu va bohu, a collective potentiality of existence in a potentiality of existence); 'and darkness was upon the face of the deep' (thehom, the Abyss).

— Gen. i. 2.

"Thirteen (below) answer to the thirteen (influences of the beard). Six thousand years (six numerations, or sephirot, of the Microprosopus) answer to the six first (the six of the Macroprosopus). The seventh thousand years (the seventh numeration or sephirot after the third, or Matrona, or Royalty) is apart, and over that which is vehement, and vehement only.

"And all was desolate for twelve hours, — the hours in which the earth was formless and empty. But the vehemency was reconstructed in the thirteenth hour through mercy, and renewed. And all six persisted; for it is written, 'He created;' and afterwards it is written, 'And the earth was:' so that the vehemency was a subsisting reality (although not an actuality, even while existing potentially only)." — The Zenitha, chap. i. § 10 to § 24.

* This figure, or symbol, is offensive to the imagination. It ought to be so. The writers of the Kabbala intentionally select emblems that are absurd, in bad taste, and utterly inadequate. Their emblems are mnemonic signs, or reminders, not illustrations. Apt and beautiful symbols almost always give occasion to idolatrous practices. The Kabbala is so written that the mind of the intelligent adept is repelled by the sign, and passes at once to the consideration of the thing signified.
These extracts are supposed to contain the essence of the Kabbala. We have translated them as we could, feeling our way darkly; and are confident that our interpretation is not very far from right.

What is this Balance which hangs in the place that exists not, bearing in its scales things that are not, and are, and shall be? What is this Supreme Form (or nature) that involves all forms (or natures), and maintains them all? Who are these Kings of Edom that are, but exist not? What are these Living Creatures, these man-headed, lion-headed, ox-headed, and eagle-headed Sphinxes, darkly referred to in the text, and of which the prophet Ezekiel says openly, "I knew that they were the Cherubim"? It is more than possible that we may fail to give adequate answers to these questions. But the plan of our undertaking does not require that our answers should be adequate. The passages of which a rendering has been submitted to the reader mean something; for Simon ben Jochai was the writer of them. Their obvious meanings are manifold, and destroy each other. The statements are obviously, therefore, enigmatic. It shall be our effort to give in a plain way, and in the ordinary language of metaphysics, such necessarily inadequate answers to the above-recited questions, and such partial interpretations of the enigmas contained in the extracts, as will enable us to set forth, in a more or less satisfactory manner, the kabbalistic theory of the Ten Sephiroth. This was the task we assigned to ourselves in the beginning. We shall say very little of those parts of the doctrine that are protected to-day by sworn obligations. Let no initiate be frightened beforehand! We shall also fortify our own expositions with copious extracts from the Idra Rabba and the Idra Suta, in order that our readers may be convinced that we say what the Kabbala says, and are not passing off false coin upon them. Our readers will, necessarily, be few in number;
and for that reason, if for no other, we intend to treat them fairly. The Zohar says,—

"Sometimes two Mekubbalim are found in the same city, and seven in a kingdom: at other times, only one is found in a city, and only two in a whole generation."

Nevertheless, the books of the Kabbala have been continually republished, first by oral tradition from generation to generation, and then by expensive printed edition after expensive printed edition, for the benefit of the few who care for them: so that the doctrine has come down, almost intact, even to the present day.

*The Kabbalistic Balance.*

Man knows himself to be soul and body, spontaneity and fatality, subject and object, spirit and matter.

Spontaneity and fatality — the first regarded as masculine, or initiative; and the second as feminine, or responsive — are the two scales of that Universal Balance in which all things are weighed. It is written in the Zohar,—

"When the Most Holy Elder, hidden in all occultations, willed to create, he made all things in the form of husband and wife, conditioning the existence of opposite sexes. — Idra Suta, § 218. Wisdom (ז"ו, Chochmah) is the Father: Understanding (בינה, Binah) is the Mother. Wisdom and Understanding are weighed in ONE BALANCE, as male and female. — Id. Sut., § 222. All things appear, therefore, in the form of husband and wife: were it otherwise, nothing whatever could subsist. — Id. Sut., § 223. And this Father and Mother are called the house: as it is written (Prov. xxiv. 3), 'Through Wisdom is a house builded, and by Understanding it is established.' — Id. Sut., § 312. The male is a mere half-body: so also the female. — Id. Sut., § 718. Blessings descend not upon mutilated and defective things, but upon that which is complete,—not upon half-things. — Id. Sut., § 723. Half-things neither subsist in eternity, nor receive blessings for eternity." — Id. Sut., § 724.
Heaven and Earth, the State and the Church, the Emperor and the Pope, Liberty and Authority, Revolution and Order, the Law and the Gospel, Private Opinion and Public Opinion, the Intuitive Method and the Inductive Method, Poetry and Prose, Spontaneity and Fatality, Subject and Object, Spirit and Matter, and the like, are weighed, each over against its correlative, in that Universal Balance which is Man and Woman, or rather Husband and Wife.

Sometimes, in examining a kabbalistic couple, we find it difficult to determine which term is husband, and which is wife; but the Kabbala furnishes a test. The Zohar says,—

“All rigors that rise in the male are vehement in the beginning, and relaxed at the end: those, however, that rise in the female, are mild in the beginning, but vehement at the end. — Idra Rabba, § 1026. And, were it not that these are conjoined, the world would not be able to bear them. The Elder of elders, therefore, separates them from each other, and then associates them that they may assuage each other.” — Id. Rab., § 1027.

Applying this test, we judge (with, however, many misgivings) that Heaven is masculine, and the Earth feminine; the State masculine, and the Church feminine; the Emperor masculine, and the Pope feminine; and so on.

The rigor that rises in the male, and that which rises in the female, subsist in the analogy of correlative opposites: Each implies the other, is related to the other; and either, without the other, would be unprovoked, unmeaning, non-existent, and void. Each is, however, a mystery to the other; and each, in affirming itself, excludes the other: so that the two, unassuaged, stand as a subsisting contradiction. This contradiction is resolved when the two are weighed against each other in the Balance, and mutuality takes the place of reciprocal isolation. In the Balance, like repels like, and union is established between contraries. The theory of the Balance is, therefore, the theory of the
reconciliation of contradictions. Now, there cannot be two hills without a valley between them; for, if there be no valley, the hills are not two hills, but the same hill. Absolute contradiction (or the affirmation that the same thing in the same subject both is and is not) is a sign of nullity. If the same thing could be at the same time both true and not true, and in the same sense, it would be useless for man to seek after truth. Kabbalistic contradictions subsist, therefore, never absurdly in a single term, but always in two terms that answer each other: they are always relative, and never absolute. It is only when two affirmations imply each other as well as deny each other, assert each other as well as exclude each other, that we know we are in the presence of a contradiction-pregnant, and on the eve of discovering a third term, in which the two discordant terms will find their synthetic harmony. Furthermore, a single affirmation of a contradiction being given, and not both of them, it is only when the given affirmation, carefully considered, presents its own refutation, and when the refutation, in its turn, re-affirms the original proposition, that we have the promise of a coming synthesis.

The Kabbala affirms that all things are constructed, and held in being, in accordance with the principle of the contradiction-pregnant. "Before the Balance was, face answered not to face, and the earth was void." It follows, therefore, if the Kabbala be true, that the method of contradictions is the authentic method of philosophic and scientific investigation.

We permit ourselves to remark, in this place, that a man ought never to be regarded as being substantially the same thing as a woman, or a woman as substantially the same thing as a man, each existing as the other, but with defect: for men and women are kabbalistic correlatives of each other, not defects of each other; and their essential value consists in their sharp reciprocal contradistinction from each other.
Men and women ought always to be kabbalistically united with each other in synthetic marriage, and never joined in simple partnership. Our women's-rights people are wholly wrong in this particular. Man divorced from woman, religion from science, love from knowledge, force from gentleness, pity from justice, and the converse, are worse than barren: they are destructive. Every kabbalistic couple should be regarded as a true couple, not as two varieties of the same thing. Men and women are analogies of each other, not aspects of each other. The opposing terms of such couples should be contradistinguished, not that a choice may be made between them, not that one may be sacrificed to the other, or subjugated by the other, but that both may be accepted, and the two weighed against each other in the Balance in actual marriage; for, in the kabbalistic marriage, we obtain distinction without antagonism, union without uniformity, order without despotism, and a complete analysis resolved by a complete synthesis. So long as the two terms of a kabbalistic couple stand unreconciled, they are the occasion of sorrow, suffering, want, oppression, and wrong; they are the material itself of evil: but, as soon as they are married, they generate and bring forth harmony and beauty.

We have been able, but under cover of much darkness, to set forth, thus far, the theory of the Kabbalistic Balance. In this Balance the whole doctrine of the Zohar hangs. As we go on with our exposition, the theory will become, by degrees, clearer and clearer.

Harmony subsists by the resolution of contraries. Analogy is either sameness of law with diversity of attributes, or it is diversity of law with sameness of attributes. Analogy is the key that unlocks the secret of the universe. An effort that wastes itself in the void counts not at all. That, and that only, supports, which also resists. He that suffers, grows; he that enjoys, wilts. Prosperity is harder to bear
than adversity. Evil and wrong should provoke pity, not anger. So long as man shall remain progressive in his nature, evil will be a condition of his existence. Evil is necessary. Injustice, hostility, disappointment, want, obscurity, and neglect discipline human spontaneity, and enable it to assert its own.

In disputed questions of faith, the kabbalist espouses both sides of the controversy. To the kabbalist, the doctrine of irresistible grace on the one side, and of man’s responsibility on the other, which arrays the Calvinists against the followers of Arminius, and the converse, is nothing other than a contradiction-pregnant susceptible of strict scientific solution. The first virtue of a wise man is that of entire toleration of opinions. All men know partially and defectively. A few men know both sides of certain special questions. The Supreme, and he only, knows the whole.

The Cherubim.

The word cherub* is complex, technical, and artificial. It is composed arbitrarily of two elements: one signifying the act of carving, or engraving; † and the other signifying multitudinousness. ‡ The cherubim of the tabernacle were not, as might be supposed from the analysis of the word, carved, or graven, images, but were images that had been hammered into shape. It is written (Exod. xxv. 13), —

"Thou shalt make two cherubim of gold; of beaten work shalt thou make them, in the two ends of the mercy-seat."

The cherubim of the temple were, however, of carved work; for it is written (1 Kings vi. 23–29), —

* כּוּרִב, krub, cherub.
† כּוּר, kr. This Hebrew element indicates distinctive marks, gravings, characters; also the act of engraving, and engraving-tools. It is found in the English words carve and engrave. It also indicates all kinds of excavations, incisions, or pits: hence the English word grave.
‡ כּוּר, kr, multitude, abundance.
“And, within the oracle, Solomon made two cherubim of olive-tree, each ten cubits high. . . . And he overlaid the cherubim with gold. And he carved all the walls of the house round about with carved figures of cherubim and palm-trees and open flowers, within and without.”

The following extract from Layard’s “Nineveh” (vol. ii. p. 352) will sufficiently describe the external form of the kabbalistic cherubim:

“Ezekiel saw in his vision the likeness of four living creatures, which had four faces, four wings, and the hands of a man under their wings on their four sides. Their faces were those of a man, a lion, an ox, and an eagle. By them was a wheel, the appearance of which was, as it were, a wheel in the middle of a wheel. It will be observed that the four forms chosen by Ezekiel to illustrate his description—the man, the lion, the bull, and the eagle—are precisely those which are constantly found on Assyrian monuments as religious types.”

The prophet Ezekiel says (x. 8-20), —

“And there appeared in the cherubim the form of a man’s hand under their wings. . . . And every one had four faces: the first face was the face of a cherub (or of an ox: compare i. 10); and the second face was the face of a man; and the third, the face of a lion; and the fourth, the face of an eagle. . . . This is the Living Creature (ךיִּךְ yh) that I saw under the God of Israel by the River Chebar; and I knew that they were the cherubim.”

It is written in the New Testament (Apo. iv. 6, 7), —

“And in the midst of the throne, and round about the throne, were four beasts (ךיִּךְ yh, living creatures), full of eyes before and behind. And the first beast was like a lion, and the second beast like a calf, and the third beast had a face as a man, and the fourth beast was like a flying eagle.”

In art, the evangelist Matthew is usually represented as accompanied by a man; the evangelist Mark, by a lion; the evangelist Luke, by an ox; and the evangelist John, by an eagle. Thus the kabbalistic cherubim are made to stand as symbols of the four Gospels.
The cherubim described as carved upon the walls of the ideal temple (which was never built) had two faces only,—the face of a young lion, and the face of a man.—Ezek. xli. 19. It is probable that the golden calf made by Aaron, and the golden calves set up by King Jeroboam,—one in Beth-el and the other in Dan,—were cherubim.

The general outward aspect of the cherubim is now sufficiently indicated.

The particular four-faced, winged, and flying cherubim of Ezekiel's vision are the kabbalistic cherubim, whose special enigmatic characteristics were probably borrowed by the prophet, as symbols, from the ancient worship of Tyre and Sidon,—a worship akin to that of Babylon, but differing from it by being truer to the primitive Hamitic traditions. We will dwell for a moment on this point. We read (Ezek. xxviii. 11, 16),—

"The word of the Lord came unto me, saying, Son of man, take up a lamentation upon the king of Tyrus, and say unto him, Thus saith the Lord God: Thou sealest up the sum, exact in number, and perfect in coinage. Thou hast been in Eden, the garden of God: every precious stone was thy covering,—the sardius, the topaz, and the diamond; the beryl, the onyx, and the jasper; the sapphire, the emerald, and the carbuncle; and gold. . . . Thou art the anointed cherub that covereth; and I have set thee so. Thou wast upon the holy mountain of God. Thou hast walked up and down in the midst of the stones of fire (or splendor). Thou wast perfect in thy ways from the day that thou wast created, till iniquity was found in thee. By the multitude of thy merchandise thou hast been filled, in the midst of thee, with violence; thou hast sinned: therefore will I cast thee as profane out of the mountain of God; and I will destroy thee, O covering cherub! from the midst of the stones of fire."

Tyre ought certainly to have made common cause, from the beginning, with Jerusalem, against King Nebuchadnezzar, and should never have allowed the two cities to be attacked and overwhelmed in detail. Insanity was epidemic among the kings of the epoch. The king of Tyre
insanely identified, in his own mind, the totality of his people, and also his people's god, with his own person. "This, his power, became his god." In the blind egotism of his insanely assumed godhead, he betrayed Jerusalem to her enemies, and thus broke down the barrier that had separated between King Nebuchadnezzar and himself. After the eyes of the king of Tyre had been fully opened, by the experience of events, to the fatal consequences of his own selfish bad faith, the prophet, with, as it were, an instinctive sense of the proper local coloring, taunted him, and insulted him with deliberate purpose. It is not without a sentiment of bitter and pitiless irony, or without a distinct knowledge that the poisoned shaft would hit, that Ezekiel addresses the king of Tyre by the title, "O covering cherub!"

The breastplate of judgment, suspended from the neck of the Jewish high priest, had, in the first row, a topaz, a sardius, and a carbuncle; it had, in the second row, an emerald, a sapphire, and a diamond; in the third row, a ligure, an agate, and an amethyst; and, in the fourth row, a beryl, an onyx, and a jasper. The precious stones that were "the covering" of the king of Tyre, were, as far as they went, the jewels of the breastplate of judgment. The foundation-stones of the wall of the New Jerusalem are as follows: a jasper, a sapphire, and a chalcedony; an emerald, a sardonyx, and a sardius; a chrysolite, a beryl, and a topaz; a chrysoprasus, a jacinth, and an amethyst. And the twelve gates are twelve pearls. The chief god of Tyre was represented in the Tyrian temple by a perfectly clear emerald as large as a man's two fists. The worship of stones was still extant in Tyre at the time the prophet wrote.

It now remains for us to determine the symbolical signification of these hammered and graven images, and to discover, if we can, why it was that the meaning multitudinousness was made to enter into the very structure of the word cherub.
In modern poetical usage, the cherubim appear as angels. We may, however, dismiss at once this interpretation of the symbol, since it receives no sanction whatever from Scripture. The Living Creatures of the Apocalypse were obviously not angels; for we read (v. 3-10),

"And, when he had taken the book, the four living creatures (καραωνερα) and the four and twenty elders fell down before the Lamb: and they sang a new song, saying, Thou art worthy to take the book, and to open the seals thereof; for thou wast slain, and hast redeemed us to God by thy blood out of every kindred and tongue and people and nation; and hast made us unto our God kings and priests, and we shall reign in the earth."

The words, "Out of every nation, kindred, tongue, and people," give us an intimation that the symbolical Living Creatures mentioned in Scripture are complex beings, and that the individuals of which they are composed are nothing other than men. The indication is confirmed by an inspection of the following among other passages:

"Thou, O God I didst send a plentiful rain, whereby thou didst confirm thine inheritance when it was weary. Thy congregation (יִבְנָעַד, thy Living Creature) hath dwelt therein. — Ps. lxviii. 9, 10.

And the Philistines were gathered together into a troop (יִבְנָעַד, le-chyeh, into a Living Creature) where was a piece of ground full of lentils. — 2 Sam. xxiii. 11. And the troop (יִבְנָעַד, chyeh, the Living Creature) of the Philistines pitched in the valley of Rephaim." — ver. 13.

The books of grammar say that collective nouns, the names of kinds and sorts, do not designate realities; but the books of grammar are not always of authority in matters philosophical. We must divest ourselves of the prejudice which causes us to see in special societies nothing but beings of the mind, mere abstract names, serving to designate aggregations of men. There is something in every constituted society more than the mere aggregate, the mere unity of totality, of the individuals composing it.
state, quoad state, nothing? the church, quoad church, nothing? the army, quoad army, nothing? the work-shop, quoad an organization of industry, nothing? When, in the order of Providence, the organic unity of a particular people is broken, that people finds, to its extreme cost, that a mere aggregation of individuals never suffices to constitute a people. The voice of the majority of a people, or even the voice of all its individual members, may be something very different from that organic voice of the people which is (said to be) the voice of God. To the true philosopher, society is a living creature, endowed with an intelligence and an activity of its own, governed by special laws, which are discoverable by observation, and by observation only; and whose existence is manifested, not under a material aspect, but by the close concert and the mutual interdependence (the solidarity) of all the members of the social body.

The maxim, "The voice of the people is the voice of God," is very ancient. In many of the Semitic countries, the collective people was the occult god of the individual members of the people. The kings of Assyria continually affected to identify themselves with Asshur, the common ancestor of the whole people, and therefore the symbol of the collective people, and the occult god of the people. Louis XIV. said, "I am the state:" the kings of Assyria went farther, and said, "We are Assyria and Asshur." But the claim of the Assyrian kings to divine honors seems to have been always resisted. Self-deification was the form taken by the royal insanity of the period.*

"God standeth in the congregation of the mighty
He judgeth among the gods....
I have said, Ye are gods,
And all of you children of the Most High;
But ye shall die like men,
And fall like one of the princes.
Arise, O God! judge the earth:
For it is thou that shalt inherit all nations." — Ps. lxxxii.
A cherub is a hammered or graven image that is enigmatically representative of a living creature, — of a collective man. A political meeting is a living creature, bearing the likeness of a man; for the mass of the assembly is its body, the moderator is its executive faculty, and the orators and managers are the active intelligence. A nation is a living creature, whose body is composed of the mass of citizens, whose will is organized in the executive element, whose intelligence resides in the legislature, and whose active conscience — that is, whose passions and instinctive tendencies, as tempered down and rendered permanent by the joint action of the memory and the legislative judgment — resides in the judiciary. Because the individuals of a nation become one by thus subsisting in relations of mutual interdependence (of solidarity), because they are thus brought into the form of a collective man, they actually become a collective entity, capable of collective virtue and crime. Nations commit national sins. And it cannot be affirmed that the Social Unity is the result of a social compact; for the actor is always prior to its acts; and the social compact, since it is the act and product of the Social Organization, supposes the prior existence of this Organism. No national constitution can ever be put in operation that does not exist in the order of Providence, or in that of destiny, before it is written on paper.

A mature people has, however, no real personality. It is only while a people is in a condition of mental and moral minority, while it is as yet under age, that it takes to itself a king or an emperor, in order that it may theatrically and fictitiously represent itself in the personality of its executive chief. The madness of a people is correlative with the madness of its rulers. When a people becomes mature, its government becomes impersonal. Self-government, or the government of the organic people, is equivalent to the substitution of responsible administration in the stead of gov-
ernment. "The best government is that which governs least." A true society, although it is a real entity, although it is a Living Creature, is never a person.

One of the two cherubim of the tabernacle was an emblematic representative of the collective body made up of the children of Leah, and the other was a symbol of the collective body made up of the children of Rachel. When the high priest entered, once a year, into the Holy of Holies, and there looked upon the Shechinah enthroned between the cherubim, he saw the symbol of what met his eyes, in its reality, when he came back into the camp.

According to the Hebrew religion, Israel was not, in the desert and in Palestine, as Asshur was in Assyria, the occult god of the people, but was, on the contrary, a mere cherub, having his station under the throne of the God of Israel.*

Israel, to the minds of the inspired prophets, was a very mysterious personage. Israel was the father of the nation. Israel was the nation itself,—the collective child of Israel. Israel was also the spirit that co-ordinated the mass of the people into one organic whole,—into one Living Creature. Israel was Father, Son, and Spirit. In the view of the more inspired of the prophets, Israel, as the Son, as the Israelitish people itself, was a vicarious sacrifice for the nations. It is written (Isa. lii. 13–lili. 11),—

"Behold, my servant shall prosper... Many shall be amazed at the sight of him. His face is marred more than that of other men; And his form is so disfigured as to be scarcely human. So shall he deliver many nations, And kings shall shut their mouths before him... He hath no comeliness to draw attention,

* It is supposed that the setting-up of the golden calf in the desert was an attempt to overthrow the true Hebrew religion, and to substitute the worship of the collective Hebrew people, as a cherubic god, in the stead of the worship of Jehovah.
Nor beauty that men should take pleasure in him.
He is despised and rejected of men;
A man of sorrows, and acquainted with grief.
He was wounded for our transgressions,
And bruised for our iniquities.
For our peace the chastisement was laid upon him,
And by his stripes we are healed.
He shall see the travail of his soul, and be satisfied.
By his knowledge shall my righteous servant justify many;
For he shall bear their iniquities."

Who is this servant that is thus smitten for the welfare of the nations? Let the Scriptures themselves answer.

is written (Isa. xli. 8, 9), —

"But thou, O Israel! art my servant,
Thou, Jacob, whom I have chosen,
The seed of Abraham, my friend,—
Thou whom I have taken from the ends of the earth,
And called from the boundaries thereof,
Saying unto thee, Thou art my servant."

And again (xliv. 1, 2), —

"Hear now, O Jacob, my servant,
And Israel whom I have chosen!
Thus saith Jehovah that made thee,
That formed thee from the womb, and will help thee:
Fear not, O Jacob, my servant,—
Jesurun, whom I have chosen!"

And again (xlix. 3), —

"Thou art my servant,
O Israel! in whom I will be glorified."

And again (xlii. 1, 7), —

"Behold my servant, whom I uphold;
Mine elect, in whom my soul delighteth!
I have put my spirit upon him:
He shall bring forth judgment to the nations. . . .
He shall not fail, nor be discouraged,
Till he have set justice in the earth;
And distant nations shall wait for his law. . . .
I, Jehovah, have called thee in righteousness,
And will hold thee by the hand,
And will make thee a covenant to the people,
And a light to the nations.”

Perhaps the first authentic instance, in recorded literature, of a complete development of the sentiment of universal good will to man, is the one found in the words (Gen. xii. 3), “And in thee (Abram) shall all the families of the earth be blessed.” Israel always regarded itself as the chosen people, but as chosen to be the Christ of the nations — the instrument through which the law of Jehovah was to go forth to all the families of the earth.

We come now to the turning-point of the Kabbala, — the essence of the Kabbala. And we request the reader to bear in mind, while he is reading what we are about to say, that the writings of Mr. John Locke and of M. Condillac were not to be found on the shelves of the book-stalls in ancient Tyre, Sidon, Babylon, Jerusalem, and Memphis: if they had been found there, the demand for them would probably have been small. We are disposed to defend nothing, and to answer for nothing; for it is our purpose, in this place, to state, to the best of our ability, the extraordinary doctrines of the Kabbala in their simplest form, to explain them as well as we can, and then leave them to defend themselves.

If Asshur, Mizraim, Israel, Gog, Magog, and the like, are to be recognized as covering cherubs, then much more is Adam (the collective-man, Humanity) to be recognized as a superior covering cherub. “Above the heads of the cherubim, Ezekiel saw in his vision the likeness of a firmament, and over the firmament the appearance of a throne, “and on the throne the likeness of the appearance, as it were, of a man.” The Kabbala affirms that the ideal Hu-
manity, the Adam which was from the beginning, before ever the earth was, and who is above, is the First-born of the Ancient of days, and that by him the heavens and the earth were created. The Kabbala affirms, further, that Adam, — the first Adam, Adam Kadmon, — unlike other cherubim, has a distinct personal existence; that he is, in truth, the Mighty God, existing from eternity, anterior to both individual men and the visible worlds, and the efficacious cause through which both man and the universe exist. We will adduce, six or eight pages farther on, some of the reasons brought forward by the Kabbala to sustain its singular statement, that God, as Creator, assumes the form of a man: The Kabbala differs, in almost every respect, from the modern theory of Positivism; but the kabbalists resemble a portion of the positivists in one particular, inasmuch as they set forth their doctrine as “the Religion of Humanity.”

According to the Kabbala, God is known by his names only. Each one of the Hebrew names of God is a special revealed aspect of the Nameless One. Of the Nameless One man knows nothing whatever, save the bare fact that he exists. [This kabbalistic truth has been recently and quite independently rediscovered by Mr. Herbert Spencer, who has published it to the world in the beginning of his book of “First Principles.”] The Scriptures are explicit in affirming that “no man can see God, and live.” Zophar, one of Job’s comforters, inquires, “Canst thou by searching find out God?” St. Paul says of the Supreme, that he dwells in light unapproachable; and that no eye hath seen him, or can see him. John the Baptist testifies, saying, “No man hath seen God at any time: the only-begotten Son, who is in the bosom of the Father, he hath declared him.”

The Nameless One is called, in the Kabbala, אַתִּיקְתָּה (Atiqoth), the Limitless, or Name no name. For that
which is known and named, is known and named, not from its substance, but from its limitations; and scientific men correctly aver, that whatsoever is unlimited, undefined, unclassifiable, is necessarily outside of natural science. Among the names of God which are known to men, the most occult is אֱלֹהֵי הָאֵחָד (אֱלֹהֵי הָאֵחָד, I AM), the Ancient of days, called by the kabbalists כְּתֵר (Kether, the Crown): this is the first sephirah, numeration, or revealed aspect of God. The next in order is designated by the kabbalists as חֵיקָם (Chokmah, Wisdom), the First-born of the Ancient of days, and identified by the kabbalists with the ideal or principiating man, the Adam who is above: this is the second sephirah. The third sephirah is בִּנְחָה (Binah, Understanding), which may be identified with the Greek Logos. Chokmah is masculine; Binah is feminine.

It is written in the Zohar, —

"And the Lord said (Gen. vi. 7), 'I will destroy man whom I have created from the face of the earth; both man and beast, and the creeping thing, and the fowls,' &c. Here a distinction is made between the man who is of the earth, and the man who is above; for the earthly man is not alone indicated in this place, since the earthly man without the heavenly man cannot be. For, without חֵיקָם (Wisdom, the man who is above, the authentic Adam), all things would be occulted. ... If this אדם (Adam) should not exist, there would be no world. ... This Wisdom that is hidden (this true Adam) institutes and corroborates the form of man, that man may be established in his own place. ... This true Adam is the inward form, the spirit. ... And in this inward form, which is seated on the throne, the perfection of all things appears. As it is written (Ezek. i. 26), 'Above the heads of the Living Creatures was the likeness of a throne, ... and on the throne the appearance of a Man,' &c. It is also written (Dan. vii. 13), 'I saw, in the night, visions, and, behold, one like unto the Son of man came with the clouds of heaven, and came unto the Ancient of days. ... And there was given to him dominion and glory, and a kingdom. ... His dominion is an everlasting dominion that shall never pass away, and his kingdom that which shall not be destroyed.'" — Id. Rab., § 1119 to § 1130.
Man, the Form of All Things.

Some men ask, "How can the chasm which separates between perception and the object of perception be bridged over? How can it be made certain, for instance, when men feel and see a tree, that there is a real tree in nature answering to the impressions made upon the senses?" Other men reply to them by asking, "How will you bridge over a chasm that never existed?" Perception is an act of life, containing in itself, synthetically, the perceiver and the thing perceived. When a man perceives a tree, he perceives that he perceives it; and, when he perceives that he is perceiving, he distinguishes between the perceiving subject and the object perceived, but without separating them. The subject and object of perception are weighed over against each other, and synthetically married, in the Kabbalistic Balance; and, when they are taken out of the Balance, the perception ceases to exist.

Outward objects make pictures of themselves on the retina of the eye: but no living subject was ever conscious of any picture on the retina of his own eye; and no living man ever passed, by induction, from the conscious perception of such a picture in his own eye to the affirmation of the outward existence that produced it. If there is no direct communication between the soul and the world, between spirit and matter, perception is impossible. If the soul cannot directly perceive an outward object because the soul is spiritual and the object is material, then the soul cannot (as, in fact, it does not) perceive the picture on the retina of the eye; for that also is material. Neither can the soul perceive a picture of the picture; for that, in like manner, is afflicted with the taint of matter. The same may be said of a pic-
ture of a picture of the picture; and so on to infinity. There is no chasm to be bridged. Perception is direct; and the supposed chasm, if any be supposed, is a mere nothing gratuitously created by the imagination.

What is matter? It is that which affects the senses. It is that which men see, hear, taste, smell, and feel. But to affect the senses is to act: even to affect the sense of touch by mere resistance is to act; for resistance is action. Who knows any thing about the mysterious transcendental substance that is said to underlie all the activities of matter? If it exist at all, it exists not for man; or, at the least, it exists not for man's senses; for (being by its nature inert) it produces no impression upon the senses: it exists, therefore, to man, as a mere abstraction cognizable by the mind. Matter is revealed by its activities only; and, to man, it is force. What is spirit? Spirit is revealed by its activities only: it is force. Matter and spirit are both of them forces. There is no reason why the two should not meet directly, in conjunction; and they do so meet. Every act of sensation shows a direct conjunction of matter and spirit.

Man is the Kabbalistic Balance. The human body is the theatre in which the conjunction and synthesis of the activities of the soul, with the activities of external nature, take effect. When a man feels any thing with the ends of his fingers, does he feel the feeling, or the feeling of the feeling, or the feeling of the feeling of the feeling? or does he feel the thing? He feels the thing.

Things not related to other things exist potentially only. When they come forth from potentiality, they do so by entering into relations. No isolated thing exists actually, or can so exist. The interdependence of existing things upon each other is called their solidarity. All things exist in solidarity; not otherwise. Things may be transmuted in solidarity, — coal may take the form of ashes and gas, water that of ice or of steam, sugar that of alcohol and residue,
and so on, — or material things may subsist, for a time, in a state of abeyance; but if any portion of matter, however inconsiderable, should be literally annihilated, the whole universe would at once collapse back into the aboriginal, doubly-occulted invisible Abyss of potentiality in potentiality (thohu va bohu). All things subsist in ever-changing relations to each other, and not otherwise.

Man is so related to the universe, and the universe is so related to man, that the two are aspects and conditions of each other. Neither can exist without the other. That kabbalistic form of man which is also the form of the universe is nothing other than the adaptation of the universe to the existence of man, and of man to the existence of the universe.

It is the doctrine of the Kabbala, that the universe first* existed in the condition of potentiality in potentiality, afterwards in that of simple potentiality; and that the worlds were brought forth, finally, out of potentiality into actuality in the bond of solidarity, by the appearance, in actuality, of Adam, Humanity, the Collective Man. It is for this reason that the Adam from above is frequently characterized as the Maker of the worlds, or as he by whom the heavens and the earth are created. It is written in the Zohar, —

"Before the Ancient of days had assumed his form, nothing was framed that was then to be framed; and all the worlds were void (existed potentially only)." — Id. Rab., 518.

"Before the Elder of elders assumed his form, he sculptured the Kings, arranged the Kings, and gave proportions to the Kings; but they subsisted not. And this is signified in the words (Gen. xxxvi. 32), 'These are the kings that reigned in the land of Edom before there reigned any king over the children of Israel.' In the land of Edom; that is, in the place which consists wholly in rigor." — Id. Rab., 513, 514.

"Why were the ancient worlds unable to subsist? Because man was

* Logically first, not chronologically; for the evolutions here spoken of take place outside of time.
not yet made. The constitution of man contains all things in its form; and, in accordance with man's form, all things may be disposed and distributed. — *Id. Rab.*, § 523, § 524. It is written (*Ezek.* i. 26), 'And above the firmament that was over the heads of the Living Creatures was the likeness of a throne, as the appearance of a sapphire-stone; and over the likeness of the throne was the likeness as the appearance of a man upon it.' As the appearance of a man, because man includes all forms. As the appearance of a man, because man includes all names. As the appearance of a man, because man includes all mysteries that were spoken and set forth before the creation of those first worlds which subsisted not." — *Id. Rab.*, § 511, § 512.

"These kings that reigned in the land of Edom, the place where all rigor is found, were of feminine constitution. — *Id. Rab.*, 984. And they did not persist: they were not utterly abolished; but they did not persist; for they were from that part where all is feminine, and wherein there is no masculinity at all." — *Id. Rab.*, 991.

"Outside of the constitution of man, nothing subsists. The ancient worlds were not abolished, but were removed out of their own forms until the form of Adam should appear. — *Id. Rab.*, 525, 526. When Adam was made, the ancient worlds were called forth again, but under other names; and were brought into a permanent state through those new names; so that they now appear in their place, but with names other than they had at first." — *Id. Rab.*, 531.

"Before the worlds were made, face answered not to face: and therefore the first worlds were void and waste; for the first worlds were destitute of form. Those worlds appeared, shone, and were extinguished; as, when the red-hot iron on the blacksmith's anvil is smitten with the hammer, sparks blaze forth on every side, shine for an instant, and then go out. They were destroyed, and went out, because the Most Holy Elder had not produced forms, and because the workman was not yet at his work. — *Id. Rab.*, § 420 to § 424. Afterwards the workman applied himself to his work, assuming form. — *Id. Rab.*, § 427. Ancient is the habitation of the Elder of elders; and he sits on the throne of the sparks that he may subjugate them." — *Id. Rab.*, § 40.

It is obvious from the context that these kings of Edom are nothing other than arbitrary kabbalistic signs, or enigmatic symbols, denoting the worlds that were first made, but which subsisted not. Elsewhere, the Zohar speaks, much to the same effect, as follows, of these kings of Edom:
Before the Elders of Elders, the most hidden of hidden things, instituted the forms of the Kings, and of the diadems of diadems, there was neither beginning nor ending. The Elder of Elders, therefore, excavated, and instituted proportions in himself, and spread before himself a veil; and in that veil he sculptured and distributed the kings in their due proportions; but they did not subsist. And this is what is written (Gen. xxxvi. 29): 'These are the kings that reigned in the land of Edom,' &c. And the names were called of all those kings that were sculptured; but not one of them subsisted.' — Id. Rab., § 30 to § 33.

Thus far, the writers of the Zohar have spoken of the influence of the Collective Adam in establishing and maintaining the constitution of the universe. It would appear from other passages that they attribute no mean importance to the influence of individual men and women in sustaining or changing the order of nature. We quote one of these passages:

'R. Simon said to the companions, When that veil was expanded which you saw above us, I beheld all forms appearing in it, and shining in their places. — Id. Rab., § 494. I see those forms shining now above it, waiting for the words of our mouths, that they may be crowned, and each one taken to its place; and, as they are explained by our mouths, they come forward, and are crowned, and are disposed in the order determined by our speech. — Id. Rab., § 501. Blessed are ye in the world to come; for all the words that have come out of your mouths are holy and true, neither declining to the right hand nor to the left.' — Id. Rab., § 504.

This last passage bears upon the kabbalistic theory of magic. To persons ignorant of the fact of universal solidarity, and who deny the immediate contact of spirit with matter, magical changes in the order of society, or in that of the universe, seem, from the very nature of the case, to be impossible. The Mekubbalim have always, nevertheless, justly or unjustly, had the reputation of being magicians and miracle-workers. In magical processes, man first realizes changes in his own body, especially changes in his nervous system; and then through his body, which is itself a part of nature, he affects the order either of human soci-
ety or of the material universe. But, in the solidarity of nature, action and re-action are equal. Man is, therefore, himself the straining and groaning fulcrum whereon he rests his own lever when he exerts magic power. He loses in effort, suffering, or humiliation, all that he gains in supremacy. In realizing the practical fruit of his exertions, he pays for it precisely all that it is materially worth to him. It appears, therefore, that men who work magically are induced to do so by motives of scientific curiosity, of disinterested benevolence, or of wanton and deep-seated malignity, not self-interest. It is reported that such of the kabbalists as have had the reputation of working miracles have all of them died suddenly, and nearly all of them violent deaths. Every exertion of human activity, outside the normal channels of old-fashioned labor, breeds violent and dangerous re-actions. We entertain the suspicion that honest labor is the only genuine magic.

The problem of remunerative labor—which involves the exceptional and world-famous problem of man's will and efficacy, and, consequently, the problems of his freedom, and of his possible merit and demerit, to say nothing of the contradictions inherent in the nature of property (which is a product of labor)—is essentially kabbalistic. It is a special sub-section of the general theory of magic.

It is not difficult to justify the methods of the Kabbala from the standpoint of modern physical science. According to the scientific men, a thing is known when it has been compared with certain other things, distinguished from certain others, and classed as of this or that order. An object is said to be little known when it has little in common with things of which experience has been had, and well known when it has much, &c. A thing is said to be completely known when its community with other things is recognized as complete, and completely unknown when there is no recognized community at all. The scientific method consists
of observation, comparison, induction, verification by experiment, &c. But observations and experiments are acts that take place in time; and, between such acts, intervals frequently occur. Induction is built up from a comparison of the results of observations or of experiments, or both; and such comparison involves an exercise of the memory. Now, upon what solid ground does the scientific man base his confidence in his own mental processes? For example, how does he know that events suggested to him by his memory really occurred? If the human mind testify of herself, her testimony is not valid. The scientific man, obviously, bases his scientific truth and certainty upon principles of whose validity he has no scientific certainty whatever. To that extent, therefore, he is entirely afloat. The scientific man escapes this difficulty by saying that his knowledge is human knowledge, not absolute knowledge; that he accepts his natural faculties for better or worse, studying the laws of their action, and guarding himself, to the best of his ability, against error. He affirms that his postulates and conclusions are true, provided the human faculties he possesses, and the natural processes of reasoning, are trustworthy; not otherwise.

The real method of the Kabbala is identical with the method of modern science. The object investigated by modern science is the world of nature; while that investigated by the kabbalistic philosophy is, primarily, the spiritual world, and afterwards the material world as dependent upon, and affected by, the spiritual world. The objects investigated differ: the method of investigation is the same.

The Kabbala implicitly affirms, as postulates, a conviction of man's existence as a sentient and thinking being; a confidence in the evidence of the senses as verified by the understanding; a conviction that every event must have a cause, and a cause adequate to the effect; and, finally, a confidence in the uniformity of the operations of spirit and
matter, or that the same cause, acting in the same circum-
stances, will always produce the same effect.

The Kabbala claims to be that spontaneous philosophy
which man, *qua* man, naturally affirms now, always has
affirmed, and always will affirm so long as man is man.
The worlds affirmed by the Kabbala are worlds known to
man, — worlds upon which man has set the seal of his own
nature, — worlds related to man, and of which man is the
authentic form. Spinoza says there are an infinite number
of worlds, and that two only of them all are known to man,
— the world of space, and the world of thought. Spinoza is
more knowing than the Kabbala; for the Kabbala knows
nothing of things whereof man is naturally ignorant.
There is nothing in the Kabbala that is not given in the
nature of man.

The Kabbala affirms implicitly, as a postulate, that every
event must have an adequate cause; and that the same
cause, acting in the like circumstances, always produces
like effects. In so affirming, the Kabbala affirms the reality
of the fact of causation. The Kabbala also asserts, by im-
plication, that, naturally admitting the fact of causation,
the human mind instinctively affirms the existence of God
as Creator of the heavens and the earth. God as Creator,
is, according to the Kabbala, God in one of his names, and
that not his highest name. This name (*the Creator*) is
anthropomorphic. Man can conceive of God as he existed
without the worlds, before the creation: he thus forms a
conception of God as the Ancient of days, as the Elder of
elders, — a name higher than that of God as Creator of the
world. The name *Æhïch*, *I AM*, the Elder of elders, which
is the highest given among men, is still anthropomorphic.
If man, by the process of abstraction, take away all ele-
ments of human form from his conception of the Ancient
of days, his thought falls back upon that *real* Nothing
which is the Nameless One, — *Æn-Soph*. When man, in
meditating upon God, soars above God's names, his thought becomes lost; for he meditates upon that which is, but exists not. Man knows nothing, and can conceive of nothing, that is absolutely outside of his own form.

Man was created in the image of God; not in the image of the Nameless One, however, who has no image, but in the image of God as known by his names. We read in the Zohar,—

"Man subsists through that which is analogous to himself, and not otherwise. But what is analogous to man? The Holy Name. Therefore it is written (Gen. ii. 7), 'Jehovah Elohim created man.' Man was created in the full name, which is Jehovah Elohim, and analogous to man.—Id. Rab., § 794, § 795. Man, therefore, is the form that comprehends all things."—Id. Rab., § 799.

The name of God, as Creator of the universe, is, according to the Kabbala, as we have already had occasion to remark, Chokmah, Wisdom. Chokmah is the second sephirah. The kabbalistic conception of Wisdom, the Creator of the worlds, working, as the Second Sephirah, in subordination to the Ancient of days, is supposed to have originated in the following passages of Scripture:—

"The Lord by Wisdom hath founded the earth;
By Understanding hath he established the heavens."

Prov. iii. 19.

"The Lord possessed me (Wisdom) in the beginning of his way,
Before his works of old.
From eternity was I anointed
From the beginning.
Before the earth was.
While the Abyss (Heb. Thehom) was not, was I brought forth;
While the fountains, heavy with waters, were not as yet.
Before the mountains were settled,
Before the hills, was I brought forth;
While as yet he had not made the earth,
Nor the open places, nor the fruitful soil.
When he established the heavens, I was there;"
When he set a circle on the face of the deep;
When he spread the clouds above;
When he strengthened the fountains of the Abyss;
When he gave his decree to the sea,
That the waters should not pass his commandment;
When he laid the foundation of the earth,—
Then was I by him as one brought up with him;
And I was his delight day by day,
Rejoicing always before him,
Rejoicing in the perfection of his earth;
And my delights were with the children of men.”

Prov. viii. 22-31.

Now, since God does all things wisely, and since Wisdom is always the same, God’s method in creation never substantially varies. What men call the unvarying laws of nature, are, in reality, nothing in themselves; for they are mere aspects of God’s unvarying manner of action. The sum of these laws, of these persisting aspects of the divine action, is the Greek Logos; but this sum is not at all the Hebrew Word, or Wisdom. Wisdom is before its own effects, and before the unvarying aspects of its own operations. The Hebrew Word is God himself, as that spontaneous Divine Wisdom, as that Heavenly Man, that Creator of the heavens and the earth, of whose personal workings the impersonal Greek Logos is the ideal resultant and record only.

Force and Law are two different things. The Force of gravitation, for instance, is the mysterious efficacy by which material things naturally approach each other. The Law of gravitation, on the other hand, is this: “The force of gravitation acts always with intensities inversely proportional to the distances which separate gravitating bodies.” Law determines forms, recurrences of phenomena, and the nature of evolutions. Every thing thrives, if it thrive at all, in obedience to the law of its kind. Lily-plants never become transfigured into those that bear roses, or into those
that bear violets; and neither the seeds of the rose, nor those of the violet, ever give birth to lily-plants. The twig of a plum-tree grafted into a peach-tree is fed by the same soil, air, light, and moisture, which feeds the peach-twigs that surround it; but the twig of the plum-tree will always remain true to the law of its kind, will triumph over the necessities of its mere situation, and will always bear plums, just as it would have done if it had remained in its parent tree. The bark, fibres, leaves, fruit, of the plum-twig, are always the bark, fibres, leaves, fruit, of the plum-tree, and never those of the peach-tree.

The Hebrew Word is Force. The Greek Word is Law. The Greek philosophers never suspected their Eternal Logos of possessing personality, and of being a man. The Hebrew Word is a heavenly man,—Adam Kadmon. The attempt to interpret Hebrew mysteries in the light of Greek philosophy has never brought forth any thing other than either nullity or confusion. In matters of high theology, Israel and Javan never understand each other.

The Christian religion, Hamitic-Shemitic in its origin, but generally rejected by the Shemites and Hamites, has become almost exclusively Aryan by adaptation, radical transformation, and adoption. The typical Aryan-Christians—the ultra-protestants—receive their religion at second-hand; but they receive it defectively, since they receive with it neither the key of prophecy, nor the wand of miracles. Many of the original dogmas of Christianity, dogmas akin to those of the Kabbala, have dropped out of modern theology; and dogmas alien to the primitive system have been added. It is matter for surprise that Aryan-Christians, living by a borrowed religion,—a religion whose most essential mysteries are inexplicable from the Aryan standpoint,—should see their way clear, as they do see it, to taunt the Shemites and Hamites with alleged intellectual, moral, and spiritual inferiority.
The Christian religion was, when it was first preached, foolishness to the Greeks, and to the Jews a stumbling-block. The Greeks laughed when they first heard of it. The possibility that the Word should "become flesh" was not in the conditions of their theory. To say that the Eternal Logos had become flesh, was, in the opinion of the philosophers, like saying that the intrinsic nature of the circle had suddenly assumed the form of a square. Christianity presented itself to the cultivated Greek mind, not as a stumbling-block, but as sheer absurdity. With the Jews the case was different. To men like Saul of Tarsus, thoroughly instructed in the occult theology of the Hebrews, Christianity was not foolishness, but, on the contrary, something full of danger to the Jewish state and religion. The new Christian doctrine, from the standpoint of the occult theology, was perfectly logical and consistent. There was no defect whatever in the theory. All turned upon a question of historical fact to be determined by evidence. The Jews said, "Is it true that Jesus was really an incarnation of the Celestial Wisdom of the Maker of the worlds, of the Man who is above?" Christians of the school of St. Paul answered by affirming the resurrection of Jesus from the dead, and his visible ascension into heaven in the presence of then surviving witnesses.* The apostle Paul says,—

"Christ was buried, and rose again the third day according to the scriptures; and was seen of Cephas, then of the twelve: after that, he was seen of above five hundred brethren at once; of whom the greater part remain unto this present, but some are fallen asleep. After that, he was seen of James; then of all the apostles. And, last of all, he was seen of me also, as of one born out of due time.†... If Christ be not risen,

* This answer, though very convincing, is, after all, not precisely to the point. The fact that Jesus rose from the dead does not suffice to prove, of itself alone, the fact of his pre-existence in eternity, as the Maker of the worlds.
† Paul had his theological training under Gamaliel, and under the Mekubalim. He never saw Jesus in the flesh, but saw him in a vision, on the way to Damascus, after the resurrection. He was never subjected, as the other apostles had been, to the human influences of the Grand-Master of the Ideal.
then is our preaching vain, and your faith is also vain. Yea, and we are found false witnesses of God; because we have testified of God that he raised up Christ." — 1 Cor. xv. 4-15.

It was with no reminiscence of the Greek doctrine of the Word which he had learned at Tarsus, but in the distinct apprehension of a doctrine far more profound, — the occult Hebrew doctrine of the Word, — that Paul said (1 Cor. xv. 47), "The first man is of the earth, earthy: the second man is the Lord from heaven." It was in the same high presence that he said, respecting the Lord from heaven, —

"He is the image of the invisible God, the First-born of every creature. For by him were all things created that are in heaven, and that are in earth, visible and invisible, whether they be thrones, or dominions, or principalities, or powers: all things were created by him and for him: and he is before all things, and by him all things consist." — Coloss. i. 15-17.

This enumeration of thrones, dominions, principalities, and powers, and the other salient points of the phraseology, are, all of them, in the highest degree kabbalistic. Perhaps the passage is a lost fragment of the Kabbala, quoted by the apostle, but with an incidental interpretation from his own point of view.

That a man should be raised up who could write as St. Paul wrote is conceivable; but that he should have found communities, scattered all over the Roman empire, ready to receive his letters, and competent to read them understandingly and to fairly appreciate them, is matter for surprise. The fact of his letters being so received and appreciated would appear to prove that the characteristic occult doctrines of the Hebrew theology were widely spread among adepts at the time the apostle wrote.

The great schism in the early Church occurred while Paul was still living. Important elements of the kabbalistic doctrine passed, with Paul's interpretation and appli-
cation of them, into the Apostolic Church of the Gentiles. Many of the Mekubbalim refused, however, to accept Paul's statement that Jesus is the Christ, the incarnation of the Word. The Kabbala refused to abdicate in the presence of the new religion. The Jewish tradition, but in its most moderate form, became the inspiration of the Ebionitic Christians; and the Greek doctrines, associated with other Aryan doctrines from Persia and India, furnished occasion for the rise of the more noted heretical sects.

When the Greek theologians gave Japhetic expression to the original Shemitic-Hamitic dogmas of Christianity, which they did in their discourses, and by means of translations from Syriac into Greek, they unwittingly falsified the system. When they said and wrote that the Son (the Hebrew Chokmah) was made flesh, they tacitly meant to say, and were understood to say, that the Greek Logos (the Hebrew Binah, the impersonal Daughter) was made flesh.* This misapprehension created, from the beginning, a disastrous confusion in Christian theology, of which the effects are distinctly visible at the present day.

In the Catholic theology, which, upon the whole, has remained logical and consistent, Binah has become embodied in the Blessed Virgin full of grace, whose personality is exclusively human. The Catholic Church departs from the early faith, if it depart from it at all, by excess, and not by defect. The Catholic Church teaches all that there is in Christianity. It is not for us to say that it teaches nothing more.

It has become our fixed conviction, from reflection on the inhering nature of the case, from a careful examination of

* Chokmah is Son in respect to the Elder of elders, and Father in respect to individual men and women: in like manner. Binah (Understanding) is Daughter in respect to the Elder of elders, and Mother in respect to, &c. The Zohar says, "Thou shalt call Wisdom thy Father, and Understanding thy Mother." And again: "Wisdom is the Father; Understanding is the Mother; and these two are weighed in one Balance, as male and female."
the opinions expressed by the different writers of the New Testament, and from listening to expositions of the authentic doctrines of the Church, that Paul's theories are radically and disastrously defective. The general system which flows from the theory of divine evolutions, and from the affirmation that the personality of the second sephirah is the personality of Jesus, is a half-interpretation of Christianity, and is not at all adequate to the moral and practical purposes of a sufficient creed. Paul's system (defective in morality, and in internal evidence of its own truth, rather than in the matter of mere logic) is the system usually adopted by Christians affecting utter and unreasoning orthodoxy, and who receive, as such, their belief without rational investigation. The main practical difficulties of Paul's system are these: It is usually held unintelligently by its advocates; it is easily learned by its opponents, who often take its advocates by the flank, and in very unexpected occurrences; it teaches justification by faith without works, that is to say, it makes a substitution of arbitrary justification by the covering-over and non-counting of sin, in the stead of sanctification through amendment of life and the remission of sinfulness; it presents every particular conversion as a special miracle; it presents every supposable fact of damnation as having its cause and origin in the foreknowledge and predetermine counsel of God; it presents the at-one-ment as consisting, on the one side, in the punishment of the innocent, which is an outrage on the moral sentiments, and, on the other side, in the counting of scoundrels as though they were honest men, which is another outrage; it confounds man's reason, by creating an issue between God's word in nature and God's word in scripture; it presents God as the voluntary author of sin; it naturally awakens hostility to Christianity by calling God's justice in question; and it makes atheists among the unconverted. In it, as an exposition of the principles
of Christianity by the Kabbala, the Kabbala spoils Christianity, and Christianity spoils the Kabbala.

The Pauline doctrine against that of the early Gnostics, and the converse; the doctrine of St. Augustin against Manichæism, and the converse; Calvinism against Socinianism, and the converse, — are three forms of one and the same contradiction-pregnant. The same motive — the alleged impossibility of a direct and immediate intercourse, union, and welding of spirit with matter, and of the infinite with the finite — which induced the Gnostics and the Manichæans to deny Christ’s humanity, induces, to-day, the Socinians to deny his divinity. Calvinism refutes Socinianism, and, at the same time, calls it into being, and consolidates it: Socinianism refutes Calvinism; and yet, without Calvinism, Socinianism would have no reason for existing. Calvinism is the masculine term of this kabbalistic couple, and Socinianism is the feminine term. The lofty but peculiar metaphysical doctrine which is expounded in the Gospel of St. John, and in neither of the other Gospels, is the synthetic resolution of the contradiction-pregnant presented by the problem of the personality of Jesus.

It seems to be generally assumed by readers of the New Testament, that the sublime parts of St. John’s Gospel are addressed exclusively to the religious sentiment. This is an error. The most transcendently spiritual passages of St. John’s Gospel are precisely the parts of the New Testament which are the most intelligible. This error, and the ordinary natural instinctive antipathy of spiritually-minded persons to pure metaphysics, have conspired to cause the doctrine of St. John’s Gospel to remain occult in the Church.

The doctrine of the Kabbala and that of the New Testament are neither hostile to each other, nor yet the same. If it be deemed requisite to find the effectual point of contact of the two, we must look for it, not where the school of St. Paul places it, but in the theory of the Kabbalistic
Balance. The school of St. John, subsequent both logically and chronologically to that of St. Paul, corrects and completes the doctrine of St. Paul. The theory of Life, as it is expounded by the school of St. John, is the transfiguration of the kabbalistic theory of the Balance. St. John's doctrine carries "its witness in itself;" for the relations of its parts are perfectly logical, and the essential facts on which it is based may be verified, to every requisite extent, by each believer in his own private experience: "If any man will to do God's will, he shall know of the doctrine, whether it be of God." — John vii. 17.

There is nothing new in the morality taught by Jesus. Men were aware of the fact, before Jesus came, that God is the universal Father. David says (Ps. ciii. 13), "Like as a father pitieth his children, so Jehovah pitieth them that fear him." The following passages show plainly that Moses and the prophets recognized God as a Father:

"Do ye thus requite the Lord, O foolish people and unwise? is he not thy Father that hath owned thee? hath he not made thee and established thee? — Deut. xxxii. 6. Doubtless thou art our Father, though Abraham be ignorant of us: thou, O Lord! art our Father; our Redeemer from everlasting is thy name — Isa. lxiii. 16. But now, O Lord! thou art our Father: we are the clay, and thou our potter; and we all are the work of thy hand. — Isa. lxiv. 8. Have we not all one Father? hath not one God created us? — Mal. ii. 10. Zion said, The Lord hath forsaken me, and my Lord hath forgotten me. Can a woman forget her sucking-child, that she should not have compassion on the son of her womb? Yea, they may forget; yet will I not forget thee. — Isa. xlix. 14, 15. As one whom his Mother comforteth, so shall Jehovah comfort you; and ye shall be comforted in Jerusalem." — Isa. lxvi. 13.

We know that it is written in the New Testament, "Ye have heard that it hath been said (in the law), Thou shalt love thy neighbor, and hate thine enemy." But Jesus never spoke those words. They are inexcusably calumnious.
Moses says (Exod. xxiii. 4, 5), —

"If thou meet thine enemy's ox or his ass going astray, thou shalt bring it back to him again; and if thou see the ass of him that hateth thee lying under his burden, and wouldest forbear to help him, thou shalt surely help him."

Solomon says (Prov. xxv. 21, 22), —

"If thine enemy be hungry, give him bread to eat; and, if he be thirsty, give him water to drink: for thou shalt heap coals of fire on his head" (thou shalt cover him with burning shame), "and the Lord will reward thee" (by bringing him to repentance).

The following provisions of the Mosaic law were probably in the mind of the writer of the above-quoted interpolated passage of the New Testament; for we are convinced that the objectionable words are an interpolation: —

"Thou shalt not put forth to thy brother at biting (or interest), —biting of money, biting of victuals, biting of any thing which is susceptible of biting: to a foreigner thou shalt put forth at biting; but to thy brother thou shalt not put forth at biting." —Deut. xxiii. 19, 20.

The modern arbitrary distinctions between interest and usury were unknown to Moses and the prophets. In their view, interest and usury were the same thing. The one and the other were simply that which, in the relation of borrowing and lending, "biteth like a serpent." Moses did not believe in the utility of borrowed capital on which interest is paid, or in the expediency of public debts which mortgage a whole country to strangers.

David says (Ps. xv.), —

"Lord, . . . who shall dwell in thy holy hill? . . . He that lendeth not out his money at biting !"

The precept of "the Law" may be thus paraphrased: —

Unto foreigners thou shalt lend out thy money at usury; But thou shalt not take interest of thy brother:
So shall the nations round about thee be mortgaged unto thee,
And thou shalt not be mortgaged unto them;
And thou shalt have dominion over them,
And they shall not have dominion over thee.

The rich man, who, being in hell, saw Lazarus in Abraham's bosom, is supposed by the commentators — probably because no special offence is charged against him — to have been condemned to punishment for lending money to his brethren at biting, or interest. If the rich man and his relatives had listened effectually to Moses and the prophets, they would not have put out their money at interest to any but aliens from the commonwealth of Israel.

The difference between the new law, as it is now generally interpreted, and the old law, is this: The Christian, by the new law, may "bite" not only Jews and infidels, but also Christians; while, by the old law, Jew must never "bite" Jew.

We would like to ask the sentimentalists who accept all the moral teachings of Jesus, deny all the distinctive doctrines of Christianity, calumniate the Hebrew religion until they suppose they have driven it out of the memory of men, then assume distinctive Hebrew or Greek doctrines as their own,* and finally call themselves liberal "Christians," what they have in their religion that was not also in the religion of the prophet Isaiah, or else in that of Socrates and Plato, centuries before the "Word became flesh." We shall

* Mr. Jacob Norton, a man of very accurate erudition in matters of Hebrew and Masonic literature, has called the writer's attention to the fact, that the equivalent of the English expression, "O our Father!" occurs over and over again in the Hebrew text of the famous "eighteen prayers" that are regularly repeated three times every day by all pious Jews. Furthermore: the learned rabbi, Dr. A. Guinsburg, affirms that these same prayers were regularly recited in the synagogues, and probably in the temple of Jerusalem, long before the time of Christ. The venerable rabbi says he never heard either the antiquity or the authenticity of these prayers called in question, and asserts that it may easily be proved, if necessary, from genuine tradition, and from the internal evidences, that they are as old as he says they are.
probably be obliged to wait some time for an answer. If a man reject the theory of reminiscence, the doctrine of ideas, and the other characteristic teachings of Plato, why should he call himself a Platonist? If a man reject the peculiar features of Christianity which make it to be a special religion, apart from other religions, why should he call himself a Christian? There is no question here of personal moral character, or of the relative truthfulness of various creeds. If a man live by and profess a religion other than Christianity, he is no Christian, even if his religion prove to be better than Christianity. Nothing is ever gained, and often much is lost, in the long-run, by sentimental lying. The distinctive feature of Christianity is the fact—if it be a fact—that "the man Jesus is the Son of the living God with power: two natures in one person."

As soon as the Pauline interpretation of Christianity had passed to the Aryan Gentiles, it gave occasion, in many places, for destructive heresies; and the most fatal of them all was the one which affirmed that Jesus was no real man, but a spiritual phantom only, a divine apparition, capable indeed of communicating God's will to man, but naturally incapable of dying on the cross. What is Christianity without the cross!

St. John, whose main work was subsequent to that of Paul, passed the whole latter part of his life in combating the heresy which denies that the "Son of God" is a real man. This heresy, which is the formal negation of Socinianism, is, obviously, the effectual equivalent of Socinianism, but in another sphere of ideas. St. John says,—

"Many deceivers are entered into the world, who confess not that Jesus Christ is come in the flesh. This is a deceiver, and an Antichrist (2 John 7). Every spirit that confesseth not that Jesus Christ is come in the flesh is not of God. And this is that spirit of Antichrist, whereof ye have heard that it should come; and even now already is it in the world." — 1 John iv. 3.
It is the denial of Christ's humanity, not the denial of his divinity, that is, in John's estimation, "Antichrist." To-day, it would seem that it is the denial of his divinity which is "a deceiver and an Antichrist."

We will now do our best to explain St. John's doctrine, first, in modern metaphysical language, without illustrations and comparisons; and then, afterwards, symbolically, in the express words which, according to John's Gospel, were spoken by the Master himself.

The act of consciousness is the typical act of life; for the life of the consciousness, or conscious life, is the highest form of life known to man. The act of consciousness implies a subject and an object. Without the subject, there is no man, no soul, no life. Without the object, there is nothing upon which the soul may live. Life is the interpenetration and synthesis of activities proceeding from the external world on the one side, and of activities exerted by the soul itself on the other. It is the Ego that lives; but the life of the Ego is dependent upon, and on one side determined by, that in conjunction with which it lives. If the soul live in conjunction with the natural world, it will lead a natural and worldly life; the character of the life being determined, on one side, by the object. If the soul live in conjunction with the spiritual world, it will have its life, on one side, determined by the object, and the life will be spiritual. Now, men live in communion with other men. If, therefore, a man living a mere worldly life meet with a man who is living a spiritual life, the life of the second man may become the objective element of the life of the first man; and thus the first man may, through the life of the second man, begin to lead a spiritual life. The second man may convert the first one. Life is the synthesis of the subject and the object, of the soul and that which is not the soul, of that which is within and that which is without, of liberty and necessity.
Plato defines life to be self-originated motion of the soul, and therefore defines it inadequately,—not altogether wrongly, but inadequately. He says in the Phædrus, "No one will fear to affirm that the power of self-motion forms the essence and the attribute of the soul; for that which receives motion from an exterior cause is not alive, while that which gives motion to itself is alive." Plato recognizes the principle of spontaneity, and ignores the principle of determination: he recognizes the principle of liberty, and ignores the principle of necessity.

Life is complex and synthetic. The interpenetration and synthesis of the activity of the soul with the activity of that which is not the soul, both activities meeting in the body, constitute the fact of life. Without the body, nature is without conjunction with the soul, and the soul without conjunction with nature; for the body is that special portion of external nature, in possible conjunction with all other portions of external nature, that is the counterpart of the soul in the Kabbalistic Balance.

The synthetic conjunction, in the body, of the activities of nature and of the soul, is LIFE.

The facts of our intellectual life, if known to us at all, are made known to us in consciousness; and those of our animal life are made known to us by direct observation. But the facts of our vegetative life are made known to us neither in consciousness nor by direct observation. A man eats consciously, but digests unconsciously. It is a matter of experience, that the vegetative life of the body is sustained by food. According to the theory spontaneously adopted by the great majority of mankind, food is the object, which, taken into the body, is assimilated to the body by the unconscious action of the soul, and made to be a part of the body. Without food, a man will die; and no food will sustain and nourish a body from which the soul is absent. Dead men neither eat nor digest. A few scientific men, it
is true, — and, if we understand him rightly, Mr. Spencer is one of their number, — deny that any spontaneous subject, any soul, really exists; but we are speaking of the common opinion. All reflecting persons may, perhaps, agree that the vegetative life of the body consists mainly and essentially in the assimilation of particles from the surrounding elements, and in the rendering back to the surrounding elements of particles that have formed a portion of the body.

It is lawful for a man, taking the popular opinion as it stands, to speak symbolically, and to say, “Truth is the food of the soul.” It is also lawful for him to run the analogy out into its various ramifications, and to offer the circumstances of the vegetative life of man as illustrations of metaphysical truth. This is what Jesus — who, unlike some of the scientific men, teaches the real existence of the soul — actually does.

Jesus represents himself, in St. John’s Gospel, as living a life apart from that of other men, and one superior to that of other men. He says that God, the Father, is the direct object of his life, and that his life is, therefore, divine-human: divine on the side of the object, and human on the side of the subject. He says, —

“Not that any man hath seen the Father, save he which is of God: he hath seen the Father. — John vi. 46. I know him; for I am from him, and he hath sent me.” — Ch. vii. 29.

If Jesus saw the Father, and knew him, and if no other man, before Jesus came, had ever seen the Father, or ever known him directly, it follows that the life of Jesus differed in kind from that of the persons to whom he addressed the words here quoted. He was God-man and man-God, not, as St. Paul would seem to intimate, by a transfusion of persons, but, on the contrary, by a communion of life. John the Baptist says, —
"No man hath seen God at any time: the only-begotten Son, which is in the bosom of the Father, he hath declared him." — John i. 18.

Jesus lived, according to the texts, on one side in the Father; but he lived also in communion with men. Men, therefore, by making the life of Jesus the objective element of their own lives, could themselves live, through him, in the Father. He says,

"As the living Father hath sent me, and I live by the Father; so he that eateth me, even he shall live by me. — John vi. 57. He that hath seen me hath seen the Father; and how sayest thou, then, Show us the Father? Believest thou not that I am in the Father, and the Father in me?" — Ch. xiv. 9, 10.

Here the force of the symbol becomes manifest. It becomes still more manifest in the following passages:

"The bread of God is he which cometh down from heaven, and giveth life unto the world. — John vi. 33. I am the bread of life: he that cometh to me shall never hunger, and he that believeth on me shall never thirst. — Ch. vi. 35. I am that bread of life. — Ch. vi. 48. I am the living bread which came down from heaven: if any man eat of this bread, he shall live forever." — Ch. vi. 51.

It is useless to multiply passages. The key-word to John's Gospel is this very word Life. It is the doctrine of John's Gospel, that man is naturally mortal; that Jesus was naturally immortal because he "lived by the Father;" and that men obtain immortality by coming, through Christ, to a participation in the life of the Father. Jesus says,

"Ye will not come unto me that ye might have life. — John v. 40. He that believeth on the Son hath everlasting life; and he that believeth not the Son shall not see life. — Ch. iii. 36. Except ye eat the flesh of the Son of man, and drink his blood, ye have no life in you. — Ch. vi. 53. Whoso eateth my flesh, and drinketh my blood, hath eternal life; and I will raise him up at the last day. — Ver. 54. I am the resurrection and the life: he that believeth in me, though he were dead, yet shall he live; and whosoever liveth and believeth in me shall never die. — Ch. xi. 25, 26. Be-
cause I live, ye shall also. At that day ye shall know that I am in my Father, and ye in me, and I in you." — Ch. xiv. 19, 20.

The union of the Son with the Father consisted neither in an assumption on the part of the Son of the Father's person, nor yet in an incarnation of the Father's person in the Son: it consisted in a communion of life.

["Pater omnipotens, æterne Deus: Qui cum unigenito Filio tuo et Spiritu Sancto, unus es Deus, unus es Dominus: non in unius singularitate Personæ, sed in unius Trinitate substantiæ." What is substance? The word denotes an abstraction existing to the mind. Substance is reality of existence. As soon as the meaning of the word substance is rightly apprehended, the theory of the Divine Presence in the sacraments changes its aspect.]

Jesus was "one" with the Father in the same way that the disciples were "one" with each other, and "one" with him. He says,

"I pray that they all may be one; as thou, Father, art in me, and I in thee, that they also may be one in us: that the world may believe that thou hast sent me. And the glory which thou gavest me I have given them; that they may be one, even as we are one: I in them, and thou in me, that they may be made perfect in one. — John xvii. 21-23. Holy Father, keep through thine own name those whom thou hast given me, that they may be one, as we are. — Ver. 11. I and my Father are one. — Ch. x. 30. My Father is greater than I." — Ch. xiv. 28.

From the standpoint of John's Gospel, it is logically inevitable that death must mean death, and not an inferior life; and that life must mean life, and neither prosperity, nor any thing other than simply life. Moreover, damnation must mean simply absolute death, and not an eternal life of misery. When the soul that sinneth dies it ceases to live. It is written,

"He that heareth my word, and believeth on Him that sent me, hath everlasting life, and shall not come into damnation, but is passed from
death unto life. — John v. 24. For God sent not his Son into the world to damn the world, but that the world through him might be saved. He that believeth on him is not damned; but he that believeth not is damned already, because he hath not believed in the name of the only-begotten Son of God. And this is the damnation, that light is come into the world, and men loved darkness rather than light, because their deeds were evil." — Ch. iii. 17-19.

If we look at the visible Church of Christ as it now stands on the rock, and endeavor to account for its existence by following up, in the fatality of their relations, the chain of antecedents and consequents which connect it historically with its beginning, we come to Jesus as the first link of the chain; for beyond him no antecedent belonging to the series can be pointed out. The visible Church, the cherubic form of the spiritual Israel, the magical River of Life, the terrestrial Eden, the Miracle of the Ages, originated eighteen hundred years ago in the spontaneity of Jesus. The personality of Jesus, ever-present in its operative energies, appears to us to-day, in and through the visible Church, just as it did to the early disciples, extrahuman and inexplicable.

What do we care to-day, any of us, for the learned remarks that judicious critics may have to put forward respecting the original intent and application of the Messianic prophecies? Is it not competent to the spirit of Adam Kadmon, the spirit of Humanity, the spirit that rules and interprets the ages, to interpolate, under the words of the prophets, meanings of which the prophets never dreamed? When we hear poetry of like nature and tenor with that which is quoted below chanted in church, we believe every word of it (so long as the organ is playing), just as the servant-maids and the coal-heavers who sit near us believe it. When we go out of the church, and hear the noise of the street, and believe no longer, are we any greater, nobler, better, or even wiser, than we were while we were inside
the building, before the altar, and believing? It is written in the Old Testament,—

"But thou, Beth-lehem Ephratah,
Though thou be little among the thousands of Judah,
Yet out of thee shall he come forth unto me
Who shall be ruler in Israel;
Whose goings-forth have been from of old,—
From the days of eternity."—Mic. v. 2.

"Jehovah himself shall give you a sign:
Behold, a virgin shall conceive,* and bear a son,
And shall call his name Immanuel."—Isa. vii. 14.

"Unto us a child is born;
Unto us a son is given:
And the government shall be upon his shoulder:
And his name shall be called
Wonderful, Counsellor, the Mighty God,
The Everlasting Father, the Prince of Peace."—Isa. ix. 6.

The Sephiroth.—The First Triad.

The ten sephiroth are the ten successive steps, or stages, by which, if we may believe the Kabbala, the name of the Supreme becomes known to men. Each sephirah is a distinct special name and aspect of the Most High.

The Ancient of days (called also the Elder of elders) is the first Sephirah. The Ancient of days is known to the Mekubbalim by many titles. He is called Kether (the Crown); also the Orient (or the Beginning), the Cause of causes, ÄElieh, Black Color, Bottomless Depth, the Fear of the Lord, Light Unapproachable, the Eternal, the White Head, and the like.

The existence of the Ancient of days (as himself) involves, by necessary contradistinction, the existence of that

* Heb.: “Behold, the young woman hath conceived, and shall bear,” &c.
which is not himself. But, exclusively of the Ancient of days, nothing is. That nothing is uncreated; for it stands in the Kabbalistic Balance as the negation—the necessary correlative counterpart, by way of contradiction—of the Ancient of days. That nothing is the aboriginal Abyss. It is written, "The earth was without form, and void; and darkness was on the face of the Abyss."* From that Abyss all created things were drawn forth. The world is created out of nothing. In that aboriginal nothing, the eye of the Ancient of days saw, from the beginning, all things as existing potentially and without forms; even to creatures of whom it was already written, that they should one day array themselves against their Maker, defy his power, and be forgiven. For the Elder of elders "calleth things that are not as yet as though they actually were." The original nothing is the immanent substance of the existing worlds, the uncreated and persistent root of every thing that is not God. While the creatures exist potentially only, they are real, but not actual: it is not until they are brought forth into visibility, through being clothed with form, that they become both real and actual. Whether existing visibly or invisibly, the substance and ground of the creatures, as creatures, is nothing.

It is obvious, from the nature of the case, that the Abyss, the potential world, the original nothing, the possibility of things, must be uncreated. Why? For this reason. If God created the original possibility, that creation of the original possibility was itself possible with God; and a new possibility rises up behind the possibility first considered. This new possibility is a prior condition requisite to the very being of the possibility first considered. If we treat this new possibility (which we have found, on the hypothesis that the original possibility was created, to be prior to that

* בֹּלְחַן, Thehom, the Abyss.
original possibility itself), — if we treat this new possibility as we did the other, still another possibility will rise up behind this new possibility; and so on to infinity. If, therefore, the original possibility was created, that possibility was by no means original; for it must have been preceded by another possibility, and this last by another; and so on.

The possibility of a particular act of creation is a condition logically prior to the creative act itself; for, if the particular creation be impossible, it will never take place. The possibility is not made to be by the very fact of creation; for the particular creation would have remained possible although the actual creation had never taken place. The greater portion of the Abyss, the greater part of the possibilities of things, have, indeed, not yet been realized, and in all probability they never will be. The possibility of an act of creation is, therefore, a condition logically prior to and independent of that act itself; and this reasoning applies as well to the first act of creation as to any other. The possibility of creation, the universe in potentia, the Abyss, therefore, existed before the very first act of creation, and is itself uncreated.

This reasoning, though subtle, and apparently verbal, is supposed to be in reality accurate, logical, and conclusive.

The original nothing was, from the beginning, outside of the Elder of elders, — opposite to him, — other than himself. In it the Elder of elders was reflected as in a mirror. The image of the Elder of elders, eternally reflected in that nothing which was from the beginning, is the Microprosopus. The Elder of elders is the Macroprosopus. It is written in the Zohar, —

"The parts of the Microprosopus (י"אץ, Zair-Aphin, the shorter face or aspect) are distributed and clothed according to the forms of the Most Holy Ancient of days, hidden in all things. — Id. Rab., § 508. . . . These forms of the Microprosopus are, therefore, disposed according to the forms of the Macroprosopus (י"ד, Arik-Aphin, the greater
face or aspect); and the forms of the Microprosopus are extended here and there in human figure and similitude, in order that the spirit hidden in all parts of it may be drawn forth. — *Id. Rab.*, § 510.

"The Elder of elders is called *Arik-Aphin* (long-face, or Macroprosopus); but he who is outside is called *Zoir-Aphin* (short-face, or Microprosopus); in contradistinction from the Silent Holy Elder, the Holiest of the holy (who has no face). And, when the Microprosopus looks back upon the Macroprosopus, all things in it are reduced to order, and its face is lengthened while it is looking; but its face is not always long like that of the Elder of elders. — *Id. Rab.*, § 54, 55.

There is no left-hand side to the occult Elder; for, with him, every thing is on the right." — *Id. Rab.*, § 81

In the above figure, a representation is given of the kabbalistic "answering of face to face."* The superior face denotes that of the non-cognizable Head. "That

* This picture may be found in Eliphas Levi's "Dogma and Ritual of Transcendent Magic," and also in the published "Rituals" of some of the very high Masonic degrees.
which is below answers to that which is above." Above is the Macroprosopus; below, the Microprosopus. The picture denotes a special phase and moment of the Kabbalistic Balance.

It is written in the Zohar, "The Macroprosopus and the Microprosopus are so designated to contradistinguish (רובך, le-kbl-ih) them from the Silen: Holy Elder, the Holiest of the holy (who has no name)." [Le-kbl: according to the opposition; as contradistinguished from.]

The word Kabbala has, therefore, an exoteric and an esoteric signification: used exoterically, it signifies that which is received by tradition; used esoterically, it signifies the weighing in the Balance, the doctrine of oppositions, of contradictions-pregnant.

The theory of the Kabbala is the ancient theory of emanations, but transformed and idealized. It recognizes no material flux. The Kabbala says expressly, "Thought is the source of all that is." The evolution of the universe is a process of thought, not a flow of matter. It is, in one aspect, a poem; in another, it is a logical argument. In every aspect, the universe is a work of art. Reality is adequate to thought; and volition, which is a form of thought, is equivalent to existence. It is written in the Zohar,

"The Holy Elder (the Macroprosopus) is non-manifest. The Microprosopus is either manifest or non-manifest: as manifest, it may be written with letters. — Zenitha, ch. iv. § 1, 2. There are twenty-two occult letters, and twenty-two manifest letters; and the occult and manifest are weighed over against each other in the Balance. — Zen., iv. § 10, 11. . . . (That which is above is male; that below, female:) as it is written, 'The sons of God saw the daughters of men, that they were fair.' — § 16.

"R. Simon said, All things that I have spoken of the Holiest Elder, and all that I have spoken of the Microprosopus, all are the same, all are one; and there is no place here for separation. Blessed be He, and blessed be his Name, for ever and ever. — Id. Sat., § 240. He and his Name are one. — Id. Sat., § 354. This is the sum of the doctrine. The Elder of elders is in the Microprosopus. All was; all is; all shall be. Mutation is not, was not, and shall never be." — Id. Rab., § 920.
From the Ancient of days, who is the first sephirah, nine other sephiroth proceed, making ten in all. "There are ten sephiroth, not nine of them only; ten, and not eleven." The procession, from the Ancient of days, of the nine sephiroth, is thus explained and illustrated in the Zohar:

"The Most Holy Ancient One (blessed be his name!) separates himself, and always more and more. In all things he is separate, yet not fully separate: for all things cohere in him; and he is in all things, and he is all things. He possesses form, and yet he is as though he were formless. He assumes form in order that he may sustain all things; and yet he is without form, since he is nowhere found. As possessing form, he produces nine lights, which shine from him out of the form he has; and these lights shine from him, and emit flames, and are spread abroad on all sides like rays scattered from a lofty beacon-fire. If any one approaches these rays to examine them severally, he finds nothing but the single beacon-fire. So also it is with the Most Holy Ancient One. He is that lofty beacon-fire which is hidden in all occultations. He himself is found nowhere, save in those rays which are spread abroad, revealed, and hidden. And these rays are called the Holy Name; and, because of that Name, all of them are one." — *Id. Sut.* § 41 to § 47.

"Thought is the source of all that is." Thought is the first sephirah, the Ancient of days. Thought implies a subject which thinks, and also an object thought. The thinker and the object thought are weighed over against each other in the Kabbalistic Balance.

God is Intelligent-Cause. He is also self-sufficient; and, as such, he creates himself eternally. As creator, he is the thinker; as created by himself, he is himself the object thought. He is at once the subject and the object of his own thought. He is that which eternally creates, that which is eternally created, and the eternal act of creation; that which eternally thinks, that which is eternally thought, and the eternal act of thinking. His essence involves existence. He is in eternity, and he exists eternally. The Kabbala says, "The Ancient of days (blessed be his name!) exists in three heads, which are one head."
The Supreme, as thinking subject, is called, in the Kab-bala, Chokmah (Wisdom), and is regarded as male. As himself the object of his own thought, he is called Binah (Understanding), and is regarded as female. Binah is the Supreme as objective to himself. "Chokmah is the Father; Binah is the Mother: Chokmah and Binah are weighed in one Balance as male and female." It is written in the Zohar, —

"The Father and the Mother inhere in the Elder, and are his con-formations.—Id. Sat., § 393. The Father and Mother are produced from the Most Holy Elder, belong to him, and in him cohere. Through them the Microprosopus is produced from the Most Holy Elder, and is united with him." —§ 397, 398.

The first three sephiroth are the three constituent elements of the divine self-consciousness. The affirmation of the Supreme as existing in the form of the first triad of the sephiroth is an affirmation of the personality of God; for personality is an aspect of consciousness.

Before the evolution of Chokmah and Binah, the Supreme was devoid of self-consciousness (the form of man), and therefore of volition, which is a product of personal consciousness: consequently, the first worlds persisted not; for the persisting worlds are a product of God’s volition. It is written, "In the beginning, God created (bara, bare) the heavens and the earth; and the earth was tohu va bohu (a contingent potentiality of existence, and in a potentiality of existence, — an occultation that was occulted in still another); and darkness was on the face of the Thehom (the Abyss)." When the Supreme evolved himself into Trinity through becoming self-conscious (we speak here of logical, not chronological, sequence), the worlds passed from double into simple occultation; and the Thehom became a mere potentiality, and no longer a potentiality occulted in another potentiality. And herein is mystery.
A stream of water that should well forth in the Thehom, the Abyss, would spring from nowhere, and would flow nowhere: it would have no status in space; it would exist in the form of infinitely-attenuated spray, mist, or dew. If, however, on the contrary, that same water should well forth in the world of actuality, upon the earth, it would meet with obstacles, would wear for itself a channel, and would become a river, having a certain individuality of its own. So it is with the fact of personality. A person is a living-subject; but if that subject have no object, be weighed against nothing whatever in the Kabbalistic Balance, it will not be truly alive, and will be the mere potentiality of a person.

If it be a fountain of light, and not one of water, that streams forth into the Thehom, the result will be analogous: the light will illuminate nothing,—for there is nothing in the Thehom to be illuminated,—and the light itself will be and remain invisible.

Combining these two figures, we obtain a phrase that has been famous among the Mekubbalim,—"The Dew of Lights."

"This is that manna which is provided for the just in the world to come. On this dew the heavenly saints are fed.—Id. Rab., § 48, 49. By this dew the dead are raised up in the world to come."—§ 45.

The Dew of Lights is the potentiality of the Divine Subject, of the Divine Personality. This is that "Crystalline Dew" which is mentioned in the Zeniutha. It is written,—

"The non-cognizable Head is framed and prepared (or is to be conceived) after the similitude of a skull [Kether] filled with crystalline dew [Chokmah]: the covering membrane [Binah] of this skull is transparent and closed."—Zeniutha, i. § 10.

Chokmah is called by many names; as the Word, First-born, Will, Jah, Amen, What? Thought, Eden, and the like.
Binah is, in like manner, called by many names; as Sister, Wonderful Light, River flowing out of Paradise, Daughter, the House of Wisdom, the Face of the Sun, the Fire consuming itself, and the like.

The Sephiroth.—The Second Triad.

The worlds were brought forth from potentiality into actuality through the volition of the Supreme. But what moved the Supreme (who is complete in himself, to whose perfection nothing is lacking), and induced him to create the worlds? Spontaneous pity moved him, and loving-kindness for the creatures he saw in the Abyss (the Thehom), where they were subsisting potentially only, and without any actuality at all.

Pity or mercy, חסד (Chessed), is the fourth sephirah. Sometimes this sephirah is known also as גדות (Gedulah), greatness, magnificence, generosity. The fourth sephirah is called by many names; as Water, White Fire, White Clothing, El, Abraham, Silver, Michael, the Lion’s Face, and the like.

But pity, standing alone, is barren, is virtual only. Pity implies justice as its correlative opposite. Pity and justice, like wisdom and understanding, are weighed against each other in the Kabbalistic Balance as male and female. The actuality of the one implies the actuality of the other.

Justice, דין (Din), is the fifth sephirah. Sometimes this sephirah is known also as גבורה (Gibborah), rigor, severity. The fifth sephirah is called by many names; as Elohim, Isaac, Red Color, Red Fire, Gold, the Golden Altar, Gabriel, Metatron, the North, Judgment, Fear, Sanctification, Truth, Merit, and the like.

The synthesis of mercy and justice in the Kabbalistic Balance is Beauty. Beauty, תפארת (Tiphareth), is the sixth sephirah. This sephirah has many names; as Yel-
low and Green Colors, Sun, Rising Sun, Shaddai, High Priest, the World to Come, the Husband of the Church, Holy King, Terrible, and the like.

Woman is justice: man is mercy. Marriage, the synthetic union of the two, is Tiphareth,—beauty; and marriage is always beautiful when the woman is just to the man, and the man is magnanimous to the woman. Woman is fatality: man is spontaneity, liberty. Fatality and liberty, the two aspects of human life, naturally contradict each other, deny each other, and exclude each other; but when liberty, as against fatality, takes the form of Magnanimity,—the fourth sephirah,—and fatality, as against liberty, takes the form of Justice,—the fifth sephirah,—then Beauty,—the sixth sephirah—immediately comes into being as the sabbath of rest for the two.

It will be observed that the figure on the 79th page is in the form of the Blazing Star. The points of the star are represented by the opposing crowns and by the angles of the elbows. The Cubical Stone and the Blazing Star are equivalent symbols: each face of the stone answers to a point of the star.

The two sephiroth, Mercy and Eigor, are denoted in the picture by the hair parted in the middle, and “hanging in equilibrium.” Sometimes Beauty is denoted by the forehead, and sometimes by the beard. All the sephiroth are denoted in the Balance by parts and adjuncts of the Head only; for it is written,—

“The scripture says, ‘Lord, revive thy work in the midst of the years.’ This is said of the Ancient of days. What is this ‘work’? Microprosopus.—Id. Rab., § 738. But nothing is revealed of the Holy Elder save the head only; for he is the Head of all heads.” — Id. Suf., § 57.

We will quote some of the passages of the Zohar in which the sephiroth are spoken of as denoted by the lips, beard, forehead, and the like of the Macroprosopus:
"The beard hides not the lips, which are red and rosy. As it is written, 'His lips are like roses.' — Cant. v. 13. The lips mutter Severity; they mutter Wisdom. To them pertain good and evil, life and death. — Id. Sut., § 678–680. In the book of dissertations of B. Jebha, the elder, it is affirmed and stated that the beard of the Macroprosopus begins at the supreme Benignity. And so it is written (1 Chron. xxix. 11), 'Thine, O Lord! is the greatness (Gedulah) and the power (Gihborah) and the beauty (Tipheareth),' &c. This affirmation is correct. These things are so, and thus begin. — Id. Sut., § 663, 664. The forehead of the Macroprosopus is called Well-pleasedness. — Id. Sut., § 87. When it is unveiled, loving-kindness is found in all worlds, and all prayers are accepted, and the face of the Microprosopus is illuminated from above, and all things appear in mercy. — § 90, 91. And all judgments are turned aside, and mercy is found in their stead. — § 93. Also the Gehenna fire withdraws into its place, and sinners have a respite. — § 94.

"Certainly, so far as the Elder of elders, the White Head, discloses his forehead, great mercies are found everywhere; but, when that forehead is covered, the Microprosopus is clothed with unmitigated judgments, and, if it be lawful so to speak, mercy becomes judgment. — Id. Rab., § 678–680. The forehead of the Microprosopus is the forehead of the visitation of sinners. When that forehead is uncovered, there is a rising-up of the judgments of the Lord against such as blush not for their evil works. This forehead is rosy-red; but it becomes as white as snow whenever the forehead of the Elder of elders is uncovered before it in the hour called the time of loving-kindness for all. — Id. Sut., § 496–499. When the forehead of the Macroprosopus is unveiled, it quenches the fire of the forehead of the Microprosopus while this second forehead is inspecting the sins of the world that blushes not for its works. As it is written (Jer. iii. 3), 'Thou hast an harlot's forehead, and refuseth to be ashamed.' " — Id. Rab., § 592, 593.

Pity, mercy, magnanimity, generosity,—the fourth sephirah,—is active, spontaneous, and free. Commiseration, a human passion which (because it is a passion) counts not among the sephiroth, is responsive and female, or subsists in instinctive re-action and communication, and therefore belongs to the order of fatality. Pity is distinctively human. Dumb animals sometimes commiserate each other; but no dumb animal ever yet experienced the sentiment of spontaneous pity.
Pity belongs to the soul: commiseration and compassion belong to the body. Pity is indefectible; but commiseration and compassion turn easily into jealousy, envy, and hatred. The same principle of instinctive sympathy which impels us to aid those who, through suffering, are more unhappy than we are, causes us to conspire against all superiority that imparts to others a happiness we do not possess. We never envy the trees for their tallness; but we envy the natural advantages of other men: this is because we live in sympathetic relations of action and re-action with men; while, between ourselves and the trees, no real social bond exists.

The soul and the body, the spiritual man and the animal man, liberty and fatality, are weighed over against each other in the Kabbalistic Balance. The apostle Paul says,—

"The flesh lusteth against the spirit, and the spirit against the flesh; and these are contrary the one to the other. — Gal. v. 17. They that are according to the flesh do mind the things of the flesh; and they that are according to the spirit, the things of the spirit: for to be carnally-minded is death; but to be spiritually-minded is life and peace. — Rom. viii. 5, 6. I delight in the law of God after the inward man; but I see another law in my members warring against the law of my mind, and bringing me into captivity to the law of sin which is in my members." *— Rom. vii. 22, 23.

The first experience, by an individual man, of the sentiment of magnanimous mercy, is usually coincident with his first act of real and effectual self-consciousness; and it is through an act of consciousness that the war between the law of the mind and the law of the members is brought to an end, and replaced by peace. Pitiless men are men who have not yet outgrown the thraldom of mere animal exist-

* St. Paul is very quick to discern a contradiction in the Balance; but he frequently fails to perceive the synthesis. It is for this reason that his writings, though powerful to produce conviction of sin, are less potent than those of St. John in effecting conversions.
ence; men who have, in fact, a certain consciousness, such as the animals have, but, as yet, know nothing of that spiritual consciousness of which we have spoken. The first experience of the sentiment of spontaneous pity marks a critical epoch in the history of individual men. It is the first round in the ladder of spiritual religion. St. Paul places charity—not alms-giving, but pity, mercy, generosity—above faith and hope. He says, "Though I bestow all my goods to feed the poor, and though I give my body to be burned, and have not charity, it profiteth me nothing." And again: "And now abideth faith, hope, charity, these three; but the greatest of these is charity." The day and the hour in which an individual man first knows the sentiment of true charity is always remembered. No man was ever born again (and no people was ever born again) without being consciously aware of the spiritual transformation, and without retaining a distinct recollection of the event.

The Sephiroth.—The Third Triad.

The first triad—thought, wisdom, understanding—is intellectual. The second triad—mercy, justice, beauty—is moral and spiritual. The third triad is physical, or dynamic.

The seventh sephirah, the first term of the physical or dynamic triad, is called not only נפש (Netsech, Victory), but also Jehovah Sabaoth, Eternity, Moses, JACHIN (or the name of the right-hand column in the porch of Solomon's temple), &c. Let us stop with Jachin. The word Jachin signifies "Force that establishes." Jachin is energy.

The eighth sephirah, the second term in the physical triad, or חסד (Hod, Glory), is also called Elohim Sabaoth, Aaron, King's Daughter, the Old Serpent, BOAZ (or the name of the left-hand column in the porch of Solomon's
Let us stop this time with Boaz. The word Boaz signifies "Strength of endurance." Boaz is strength.

Netsech and Hod, Victory and Glory, Jachin and Boaz, are energy and strength. The Kabbala says, —

"By Netsech and Hod (Victory and Glory) force is multiplied. All powers born in the universe flow from these two. They are called the armies of the Eternal."

We may illustrate the weighing of these two correlatives over against each other in the Kabbalistic Balance by instancing the natural working of any material machine; of a locomotive steam-engine, for example. If the steam be not utilized in the locomotive, but is allowed to disseminate itself in space, it will spread itself on every side, exert itself nowhere, and will fail to reveal itself as force. On the other hand, so long as the machine is unactuated by the steam, the materials of which it is composed will remain inert, and no motion will be originated. The true working-power of a locomotive steam-engine is a synthetic result, a joint product of the energy (Jachin) furnished by the steam, and of the resisting strength (Boaz) of the materials entering into the composition of the machine.

The ninth sephirah, רשות (Tesod, Foundation), is the synthesis of Jachin and Boaz, of energy and strength: it is working-power.*

The third triad, the physical or dynamic triad, is, therefore, energy, strength, working-power. The Kabbala says (Idra Rabba, § 600), "The forehead of the Microprosopus is Netsech (Victory)." We suspect that Netsech and Hod, Jachin and Boaz, energy and strength, are denoted by the

* The useful effect, or "working-power," of a machine, is the fraction that expresses the amount of work performed as compared with the power applied. The power applied is expressed by unity. Thus, if the machine perform two-thirds of the work applied to it, one-third of the power applied is lost by friction, and two-thirds is the useful effect of the machine. — Baker's Mechanics.
two eyes of the Microprosopus; but we have never yet been able to find the express passage of the Zohar that would confirm our suspicion. We do not fully understand the following extracts, but give them, nevertheless, in the hope that the reader may be able to make out their meaning: —

"In the Microprosopus there is a right eye and a left eye; and these two are of diverse colors. But the eye of the Macroprosopus is not all on the left; for both eyes are one eye, and both are on the right. For this reason, they are not two eyes, but one eye. And this eye, which is the eye of observations, is always open; but the eyes of the Microprosopus are not always open, and they have eyelids to protect them. — *Id. Rab.*, § 149–152.

"The children of Israel said (Exod. xvii. 7), 'Is the Lord among us, or not?' This question makes a distinction between the Microprosopus, who is called Tetragrammaton (and is with men), and the Macroprosopus, who is called ידIFICATE (Non Ens). — *Id. Rab.*, § 83.

"It is written (Ps. xlv. 24), 'Awake! why sleepest thou, O Lord?' And again (2 Kings xix. 16), 'Open, Lord, thine eyes, and see.' The eye of the Macroprosopus is always opened for good; but sometimes the eyes of the Microprosopus are opened for evil. Woe to him upon whom those eyes so open that they are seen mixed with red, and with the redness glaring as an adversary upon him who beholds it! Who shall escape from those eyes? — *Id. Rab.*, § 153–155.

"The eyes of the White Head are not like other eyes; for they have neither eyelids nor eyebrows over them. — *Id. Rab.*, § 112. Now, whatsoever worketh through mercy needs neither a covering upon the eye, nor yet eyebrows; much less does the White Head require eyelids and eyebrows. — *Id. Rab.*, § 115. For the White Head sleeps never, and requires no protection for its eyes. — *Id. Rab.*, § 113. Nothing is over the eye of the White Head to protect it; for itself protects all things, and watches all things; and, by reason of the inspection of this eye, all things consist. If this eye should be shut for a single instant, nothing whatever would subsist. — *Id. Rab.*, § 135, 136. If the superior eye should not look on the inferior eye, the world would cease to be. — *Id. Rab.*, § 142.

"The black color in the eyes of the Microprosopus is like that of the Stone which comes forth out of the Abyss into the great sea once in a thousand years. When that Stone appears, there are storms and tempests in the sea, and the voice of the waves is lifted up; and that voice is heard by the great fish, who is Leviathan. — *Id. Rab.*, § 632, 633.
"When sins are multiplied in the world, and the Sanctuary is profaned; when the male dwells far from the female; when the robust Serpent begins to raise himself up,—woe to the world that nourishes itself from the then existing justice! In those days, executioners and tormentors are given to the world, and many just men are taken out of it. Why? Because the male is separated from the female,—justice from judgment."—Id. Sut., § 367-369.

The ninth sephirah is called by many names; as the Covenant of the Lord, the Covenant of Circumcision, the Member of the Covenant, El Chai, the Redeeming Angel, the Fountain of the Water of Life, the Tree of Knowledge of Good and Evil, Mount Zion, Leviathan, the Lord upon the Ark of the Covenant, the Column of Peace, Time, the Gate of Tears, and the like.

The Sephiroth. — Matrona.

The tenth sephirah, מלכות (Melcuth, Royalty), is known by many names, among which the following may be mentioned: the Wife of the Microprosopus, the Earth, the Moon, the End, the Spouse, the Church of Israel, the Virgin of Israel, the House of David, the Temple of the King, the Ark of the Covenant, the Coping Stone, Shechina, the Book of Life, and the like. The upper part of this wife of the Microprosopus is called Leah, the wife of Israel: the lower part is called Rachel, the wife of Jacob. Melcuth, or Matrona, is actuality. Things that exist in the first nine sephiroth only, are potential, invisible, and have no subsistence outside of the world of pure emanation. Things that exist in all of the ten sephiroth are actual and visible. Matrona lends visibility and actuality to that which, without her aid, would exist virtually only.

We will explain the nature of this tenth sephirah, not in our own words, which might prove inadequate, but in the words of the Idra Suta itself: —
"The Microprosopus is formed in the analogy of man; and in him the disposition of the sexes, as male and female, begins at the back. — § 945. For, in one and the same body, this man (the Microprosopus) is both male and female. — § 949. Thus the Microprosopus is a man and a woman, who adhere to each other by their backs; having four arms and four legs (two of each in front belonging to the man, and two behind belonging to the woman). — § 997. The female head, which is at the back of the male head, is completely hidden under the hair of the Microprosopus (this hair serving as a thick veil)." — § 948.

In Plato's dialogue of the "Banquet," Socrates describes the first men as being endowed, each of them, with four arms, four legs, two faces, &c. It was a common belief, in the times of remote antiquity, that the first men were created male-female.

The masculine term of a contradiction-pregnant is impulsive and initiative: the feminine term is responsive and resistant. If these two are conjoined, back to back, so that they face away from each other, the lines of their actions will be in opposite directions, and the two terms will reciprocally annul each other. This is the equilibrium of negation and living-death. Now, since the happiness of every creature is in the exercise of its natural activities, the complete equilibrium of negation between two living creatures is nothing other than the perfected unhappiness, the entire misery, of both of them. In such equilibrium, each annuls every faculty, capacity, and activity of the other. When, however, the two terms are brought, on the contrary, face to face, each faculty or capacity of the one gives the means and the occasion for the development of a correlative faculty or capacity in the other; and then the equilibrium of synthesis takes the place of the equilibrium of reciprocal negation, and happiness takes the place of misery. Actions determined by imperfect equilibrium of negation are usually half-actions,—each one contradicting its antecedent and its consequent, like the strokes of a pendulum:
every one of them involves disorder and suffering. An imperfect equilibrium of synthesis is, on the contrary, a condition of progressive improvement or deterioration. Every man carries on his back the burden of the fatality which inheres in his own nature. When he brings that burden to the front, by obtaining a distinct understanding of it, and by deliberately accepting himself for better or worse, the fatality of his nature becomes to him a basis of actuality, on which he may build up the structure of his own destiny. Evil is incompleteness, especially incompleteness of action. None but men of integrity are happy. It is only by integrity of action that men become whole. Holiness is wholeness, integrity: wilful lack of integrity is sin.

It is the doctrine of the Kabbala, that the woman, as originally conjoined with the man, back to back, in one complex person, is necessarily evil; because misplaced, if for no other reason. When the man and the woman are separated from each other, the woman ceases to be evil. The woman becomes positively good as soon as she is brought into communication, face to face, with the man. The Idra Suta says, —

"The voice of the woman (as conjoined back to back with the man), turpitude; the hair of this woman, turpitude; the legs of this woman, turpitude; the hands of this woman, turpitude; the foot of this woman, turpitude. — § 965. When the male and female elements were to be separated, an ecstatic (magnetic) trance fell upon the Microprosopus, and the female part was severed from his back, and hidden until the time when she was to be brought to the male. — § 1028. Meanwhile malignant spirits, authors of disorder, were coming into being: but, before they were finished, Matrona came in her true form, and sat down before them, and the creation of them ceased, so that they were not finished; because the Matron sat down with the Holy King (the sixth sephirah), and associated with him face to face." — § 1035, 1036.

We learn from the first chapter of Genesis, that Adam was made, on the sixth day of the creation, not as a single person or as a single pair, but as a collective multitude of
individuals. It is written, "In the image of God created he him; male and female created he them. And God blessed them, and said unto them," &c. The Kabbala says that each Adamic individual was male-female, composed of a man and a woman conjoined back to back, and therefore incapable of associating with each other. It was in this fact of the non-association of the man and the woman that Adam's original "loneliness" consisted.

At the end of the sixth day, "God saw every thing he had made; and, behold, it was very good." But a change took place on the sabbath of rest; for, farther on, we read (ch. ii. 18), "The Lord God said, It is not good that Adam should be alone." That which is not good is evil. Evil was therefore in the world before Eve ate the apple; yea, before Eve existed as a separated person. And it was as a remedy for already existing evil that the original Adam was split lengthwise, along the part where the back now is, and made to be מָן (Ish, man) and נָשָׁה (Ishah, woman).

The Idra Rabba says, —

"When the Elder of elders wills to separate the male and female elements, he causes an ecstasy to fall upon the Microprosopus, and severs the woman from his back. He then completes all her conformations, and hides her until the day in which she is to be brought to the male. And this is what is written (Gen. ii. 21), 'And the Lord God caused a deep sleep to fall upon Adam,'" &c. — § 1026-1030.

R. Simon says, —

"In no day of my life have I omitted the three feasts; and, on account of them, I had no occasion to fast on the sabbath days. I had no occasion to fast on other days, much less on the sabbath; for whose correctly conducts himself respecting those three feasts is an adept in perfect truth. The first feast is Matrona (the tenth sephirah); the second is the Holy King (the sixth sephirah); and the third is the Most Holy Elder, hidden in all occultations (the first sephirah)."

* The ending of the Lord's Prayer, as it is printed in the Protestant Bibles, — "For thine is the kingdom (Royalty, Matrona), and the power (Netsech, the seventh sephirah), and the glory (Hod, the eighth sephirah)," — is distinctly kabbalistic, and possibly an interpolation of some early commentator: it is neither printed in the Catholic Bibles, nor sung in the Catholic churches.
Matrona, as separated from the Microprosopus, is represented in the emblematic picture by the small conical figure at the bottom, beneath the band.

It now devolves upon us to explain the signification of the serpent which forms the framing of the picture. This serpent represents the force of fatality, and holds his tail in his mouth to denote eternity and the eternally-recurring circulation of antecedents and consequents. It is written in the Zeniutha:

"The vehemency (the realm of Matrona) was real, but within the limitations of the formlessness and emptiness and darkness that were on the face of the Abyss, and thus only. Excavation of excavations under the form of a serpent, far extended here and there. His tail is in his head. (With him, the ending is at the beginning; for he holds his tail in his mouth, and forms a circle.) He carries his head around the back (of Matrona). He is full of wrath, and observes. He is hidden and revealed in one of the thousand shorter days (in one of the numerations of the Microprosopus). He was changed in his slaying, and came forth other, and castrate. As it is written (Ps. lxxiv. 13), 'Thou breakest the heads of the dragons in the waters.' Two heads there were; but one only remains." — Ch. i. § 23–31.

The Ten Sephiroth.

The tabular list of the ten sephiroth, their names being given in plain English, is as follows:

(1) Thought.
(3) Understanding. (2) Wisdom.
(6) Beauty.
(8) Strength. (7) Energy.
(9) Working-Power.
(10) Actuality.
Energy, Mercy, and Wisdom are the right-hand column, the pillar of Jachin, and the three aspects of the masculine principle.

Strength, Justice, and Understanding are the left-hand column, the pillar of Boaz, and the three aspects of the feminine principle.

The synthetic sephiroth, four in number, Actuality, Working-Power, Beauty, and Thought, form the famous middle column, which is known as a Tree of Life.

In the Greater Assembly, the companions were so seated that they became an emblematic figure of the three columns of the sephiroth. We read in the Idra Rabba,

"R. Simon said to the companions, How long shall we remain sitting here as a sole column? (or remain unorganized.) — § 1. Then the companions that were before R. Simon were numbered; and there were found present R. Eliezar, who was R. Simon’s son; R. Abba; R. Jehudah; R. Jose, son of Jacob; R. Isaac; R. Chiskia, son of Raf; R. Chiya; R. Jose; and R. Jesa. (Nine in all, and, including R. Simon, ten, — the number of the sephiroth.) — § 7. So they gave their hands to R. Simon, and raised their fingers on high (they made the signs), and then entered into the field, and sat down among the trees (in the valley that stretches due E. and W. under the canopy of heaven). — § 8. R. Simon called R. Eliezar, his son, and directed him to sit down before him, with R. Abba on the opposite side. And he said, We are now a type of all things: thus far the columns are made firm. — § 13. . . . Before the companions went out of this field, three of them died, — R. Jose, R. Chiskia, and R. Jesa. [Ten went in, and only seven came out.]

The companions were seated in the relative positions indicated by the figure in the margin. R. Simon sat in the first place (that of the Crown), and the serving-brother in the tenth place (that of Matrona, Royalty). The beginning was in the ending: 1 was 10; for he who was master of them all was also the servant of them all. They sat as three triads of triads, with an appendix (10); and the appendix was the sabbath of rest for them all. R. Simon sat facing the companions, and the compan-
ions sat facing R. Simon. To show that the three triads were one triad, we draw a diagonal line from 2 to 8, and that line will pass through 6: that is to say, in order to form one triad of the three triads, we take the subjective term of the intellectual triad, or 2, Wisdom, as male; the objective term of the physical triad, or 8, Strength, as female; and the synthetic term of the moral and synthetic triad, or 6, Beauty, as the junction of the two,—and we obtain the formula,—

WISDOM, STRENGTH, AND BEAUTY;

a formula not unknown to such as know the acacia.

If we bring down the first triad (1, 2, and 3) so that it shall become interlaced with the second triad, the two will form a Blazing Star, resting on its lower point, which is 6, Beauty. The first six sephiroth are the six points of the Blazing Star. On some occasions, the middle column is regarded as ending at 6, Beauty, and as bearing the Blazing Star for its ornamented capital; or, which is the same thing, as bearing the Cubical Stone. The middle column, as ending with Beauty, and as bearing the Cubical Stone, is called the Column of Beauty. It is also called the short column, because it comprises in its shaft the sephiroth 10, 9, and 6, and nothing higher; and the twisted column, because it is the synthesis of Jachin and Boaz, inclining first towards the one, and then towards the other, so as to be twisted as well as short. To denote its perfection and spotlessness, it is said to be made of clear white marble.

By the explanation of them in the light of the sephiroth (numerations or powers), which are intelligible principles, the הַרִּוחַ (Tholodoth, lists of generations) mentioned in the Bereshith become available for the forecasting of the destinies of nations, churches, and other human institutions; for the tholodoth give, in their serial order, the successive
steps of the development of principles embodied in social organizations. We will illustrate this matter by examples. If we study the existing situation of France, and remember the recent consecutive steps by which she became what she now is, we obtain several characteristic terms of a special series. We may then look into the Beresliith to find that special series. Applying the existing situation of France to the term in the series of the Bereshith to which it corresponds, we are furnished, in the next term of the series of the Bereshith, with an indication of the organic posture which France will next assume. Through this process we may obtain results characterized by a very notable degree of accuracy. The present writer has not qualified himself, by careful practice of this method, to prophesy the future of the French nation. He will state, however, for the satisfaction of the reader, that there is an extant kabbalistic prophecy, grounded on principles substantially identical with those here mentioned, that promises, for the month of November, 1879, the establishment of a universal empire, under the inspiration of France; France to be subjected, before 1879, to a process analogous with that of natural death and spiritual resurrection. This empire will be at once political and religious; will be founded on the principle of universal peace, and on a rational solution of the questions (such as those of property and labor, of women’s rights, and the like) which now agitate society. It will hold the “keys of the East,” and will last 354 years and 4 months without material alteration. We give this prophecy for what it is worth. We disapprove generally, and on principle, all prophecies that specify “times and hours.”

The names mentioned by the Bereshith in the several lists of the generations are not at all names of men, but are names of phases of organic development. All these names are significant in Hebrew. For example, the name
Cain signifies possession, property.* The name Abel signifies vacuity, emptiness, and, in contradistinction from that of Cain, non-possession, pauperism.† The murder of Abel by Cain is the subordination of capital by labor, and the consequent destruction of capital; for in the peculiar phase of primitive socialism denoted by the family of Cain, and whose beginning, course, and ending were known by authentic tradition to the writers of the Bereshith, it was the laborer who was the proprietor, and it was the capitalist who lived on the crumbs that fell from the laborer's table. Cain, the proprietor, was himself a tiller of the soil, and his children were the inventors of the mechanic arts. Abel, on the other hand, was a priest; and the priesthood, in the early days, comprised all professional men who did not work with their hands, and all general directors of industry. When Cain slew Abel, he rendered the social synthesis impossible: he destroyed that which had been created to make him, Cain, rich. Seth signifies stability, basis, and, in the social sphere, order.‡ Seth is despotism—is the political and social structure that was built up, as it respects its chief corner-stone, upon the dead body of the pauper Abel.§

Adam was never "perfect in his generations:" he never walked truly with the Elohim. At first, Cain and Abel were in the earth, without Seth; and, afterwards, Cain and Seth were in it, without Abel. Always one whole side of the mystical triangle was lacking. It became necessary,

* And Adam knew Eve his wife; and she conceived, and bare ḫp (Kin, or Cain, acquisition); and she said, ḥw (Kenithl, I have acquired) a man with Jehovah. — Gen. iv. 1.

† ḥe-bel, empty breath, vanity.

‡ And Adam knew his wife again; and she bare a son, and called his name ṣḥ (Sheth, appointed, founded); because God has appointed to me, she said (sḥ Sheth-li), another seed instead of Abel, whom Cain slew. — Gen. iv 25.

§ Seth and Satan are different forms of the same word.
therefore, in the plan of Divine Providence, that the primitive humanity should be drowned out.

Noah was "a just man, and perfect in his generations; and Noah walked with the Elohim. And Noah begat three sons, Shem, Ham, and Japhet." Ham is the new Cain, and Japhet is the new Abel.

The times have changed. To-day it is Abel that slays Cain, capital that robs labor. Seth reigns to-day, as he did before the flood; but he founds his sovereignty to-day, not upon the tyranny of labor, but upon the tyranny of capital.

The list of the generations from Adam to Lamech—Adam, Cain, Enoch, Irad, Mehujael, Methusael, Lamech—gives a perfect series of seven terms. Lamech lived 777 years. "All the days of Lamech were seven hundred seventy and seven years; and he died." The generations from Seth to Noah, including Seth and Noah, give a perfect series of nine terms, or a triad of triads.

The numbers three, seven, and nine, are holy numbers.

The generations of Japhet, from Gomer to Tiras, form a regular series of seven terms. The generations of Ham, from Cush (Asiatic Ethiopia) to Nimrod (Babylon), give a series of seven terms. The generations of Ham, through Misraim (Egypt) to Philistim, give a triad of triads.

Matthew says (chap. i. ver. 17), "All the generations from Abraham to David are fourteen (2 × 7) generations; and from David unto the carrying-away into Babylon are fourteen (2 × 7) generations; and from the carrying-away into Babylon unto Christ are fourteen (2 × 7) generations." There were in all, therefore, from Abraham to Christ, forty-two (6 × 7) generations. This summing-up agrees neither with Matthew's own list of names, nor with the Old-Testament record; but it shows the influence, upon the evangelist's mind, of the Old-Testament philosophy of numbers. If we take the list given by Luke, and count from Christ, through Joseph, to Isaac, we find fifty-four (6 × 9) gener-
ations. Adding to these six series of nines the series of nines from Abraham, through Arphaxad, to Shem, and the series of nines from Noah, through Seth, to Adam, we have just eight series of nines. According to Luke, therefore, Jesus was born at the end of the eighth epoch of nines, in a grand logical series of nines, or triad of triads, commencing at the foundation of human society. According to Matthew, he was born at the end of the sixth series of sevens, in a grand logical series of sevens, commencing with Abraham.

We had occasion to mention, a moment ago, but without indorsing them, certain prophetic intimations respecting the destinies of France, and the establishment, in the year 1879, of a universal empire. We have no exact knowledge of the process, in its details, by which the special results were obtained, but are informed that the prophecy is grounded, generally, on the interpretation of a Sabean series of 7's, not given in the Bereshith, or given in it, if at all, under some disguised form. The series is as follows: 1. Saturn; 2. Venus; 3. Jupiter; 4. Mercury; 5. Mars; 6. Luna; 7. Sol: which is the series, but read backward, of the planets that govern the characteristics, and the order of succession, of the seven days of the week; for Saturday is Saturn's day, Friday is Venus's (or Friga's) day, Thursday is Jupiter's (or Thor's) day; and so on.

The prophecy in question turns, like other prophecies of similar nature, on the observed fact, that history continually repeats itself; going through one completed revolution of events after another, each revolution being the reproduction, not by the way of identity, but by the way of analogy, of the revolutions that preceded it. Human evolutions take effect in upward spiral movements, and in ever-recurring circles that rise continually one above another, as circles succeed each other in the winding stairways on the outside of the terraced, mound-shaped temples of remote antiquity.
It is the serpent, — the order of fatality which is without admixture of liberty, — not human history, that gnaws its own tail, and reproduces itself in ever-recurring identical circles. Human history repeats itself, but always on higher and higher planes.

The true religion that exists now, always has existed, and always will exist, among men: but it has presented itself, in ever-recurring circles, under higher and higher forms; and men have interpreted it differently, according to their varying intellectual and moral capacities, and according to the progressive spirit of the different ages. Christ is the Lamb that was slain from the foundation of the world. No true religious institution is ever abolished by the new institution that replaces it; for the new institution is the old institution itself, but transfigured and glorified. Christianity is the rejuvenation and glorification of the Hebrew religion; just as the Hebrew religion was the transfiguration and rejuvenation of the Hamitic religions which preceded it, and had their seats in Egypt and Babylon. Christianity came to fulfill the law and the prophets, not to destroy them. An approaching rejuvenation of the Christian religion is clearly foretold in the New Testament. The second coming of Jesus, and his reign of a thousand years upon the earth, are written beforehand with letters of light in the books of the Christian dispensation. The prophecies of the Old Testament, foretelling the end of the Jewish Church and the establishment of a new one, are darkness itself when compared with the promises of glory contained in the Apocalypse of St. John.

If the above-sketched theory be valid, the destinies of the Christian Church will be a transformed analogical reproduction, point for point, of the destinies of the Hebrew Church; just as the destinies of the Hebrew (or Shemitic) Church were an analogical reproduction, point for point, of the destinies of the Hamitic Church which preceded it. Tra-
cing the analogies, comparing them, and verifying the accuracy of their sequence in the order of the series, we find ourselves—or, at the least, we appear to find ourselves: who knows?—to be living in a period analogically resembling the times just preceding the Jewish captivity. We are to look, therefore, for the appearance, in the immediate future, of a transfigured Nebuchadnezzar at the head of a transfigured Chaldean empire, and for an approaching captivity of the Church in some transfigured Babylon; the Church to be delivered in due time from captivity, and restored to its former seat (but shorn of its initiative) by some transfigured Cyrus at the head of an army of transfigured Medes and Persians.

This same series of the seven planets, read, not backward, but forward, in the direct order of the days of the week, is evil and disastrous; for its progress is not then upward and onward, but distinctly downward. In it every planet (except Sol, who stands always in the seventh place, or in the house of redemption) is afflicted, and sheds deleterious influence.

This series of evil begins with Luna, whose portrait is given in the margin.* The picture represents the boat of the moon, with the "Torch-bearer" sailing in it, under the rays of the detestable inverted five-pointed star. The star is not before the

* The pictures here reproduced may be found in the books of Eliphaz Levi. They were communicated to the writer, with several others of like character, by that enthusiastic student of kabbalistic Masonry, the Hon. Charles Levi Woodbury. The Latin of the inscriptions, and especially the bad Latin of some of them, and several other indications, lead us to believe that the pictures have come down to us with many supposed improvements. The writer is alone responsible for the explanations given in the text: no such explanations came with the pictures as he received them.
figure, to serve, detestable though it be, as an ideal of life and conduct, but is vertically above it, as an unseen compres- sive power. The wings denote initiative faculty. The "Torch-bearer" is a law to himself: he follows no ideal, but carries his own incendiary light. Obstinate, suspicious, and self-sufficient, he dreads nothing so much as the possibility that he may convict himself, before wit- nesses, of lack of almighty power. Utterly selfish, and acting always on the maxim, "Self-preservation is the first law of nature," he passes like water, and without noticing the transitions, from one iniquity to another, and wanes and waxes and changes as the moon waxes and changes; for it is under the moon's malign aspect that this lunatic lives and moves. He is ignorant of himself, but knows darkly the things that are not himself, and calumniates them. In all things he is perverse.

When many "Torch-bearers" are placed in the same field of action, they form self-interested cliques and rings that come into antagonism with each other. All of them ac- knowingledging that "might makes right," supremacy naturally gravitates into the hands of violent desperadoes, and the weaker parties become fags and slaves of the stronger. The portrait of "Nembroud," the typical desperado, will be found on the opposite page.* He bears the crown, to denote his authority; and the sword, to denote the source of his authority. This typical king of spades bears also a shield, with a device on it, which is the Tower of Babel; and this device denotes the ultimate futility of all his undertakings.

The fags and slaves of Nembroud learn, in the experience of their abject condition, the vices that are appropriate to

* France was in the hands of lunatics when Nembroud-Bonaparte throttled her: we speak here of the great Napoleon, not the little one. The lesser Bonaparte was not Nembroud, but Acham, whose portrait will be given a little farther on.
fags and slaves. They become reticent, forecasting, treacherous, and cunning; and the distinct consciousness of their own inherent villany forces itself upon them. Through the fact of this consciousness the star of their villany passes from its occult position overhead, and places itself in front as an accepted ideal of life and conduct. They were knaves before they were fags and slaves; but, as expert fags and slaves, they become conscious and politic knaves.

The portrait of "Tharthac," the typical politic knave, is given below, in the margin.

When Baron Nembroud establishes his power with a high hand, the serf Tharthac escapes to some free city, sets up a banking-house, and ruins Nembroud by lending him money at usurious rates of interest on securities deposited in the free city. For Nembroud cannot carry on his pillaging expeditions without that very assistance of Tharthac which ruins him, Nembroud: therefore Nembroud detests Tharthac. Genuine nobles and aristocrats always hate successful business-men who deal in money. But Tharthac, no matter how rich he may become, or what high titles he may achieve, can never be a real aristocrat, or substitute himself in the place of Nembroud; for genuine nobility always originates in highway robbery, armed pillage, and the power of the
sword,—never in usurious gains, fraudulent commerce, shoddy-contracts, perversion of public funds, and the power of the strong-box.*

When his Majesty the Emperor Nembroud is engaged in foreign wars, Tharthac-Talleyrand, Tharthac-Fouché, and their like, work themselves into his confidence, and become his trusted ministers.

Nembroud never fails to be betrayed at the critical moment. This fact is placed beyond doubt by the almost unvarying testimony of history. The knaves held in subjection by Nembroud, and the knaves who have acted as his instruments, join hands with the knaves and desperadoes who are his avowed and official enemies. Nembroud's armies become demoralized by the defection, and are defeated at the end in every encounter, as Napoleon I. and Sardanapalus, and their like, stand ready to testify. New rulers are raised up; and a new order of things is inaugurated,—one not based precisely on violence, or precisely on fraud, but rather on a happy synthetic combination of violence with fraud.

The portrait of "Acham," the representative of legalized scoundrelism, and the legitimate defender of frauds (interests) organized into institutions, is given on the opposite page. Acham seems, from his attitude in the picture, to be all right; and he would be all right, were it not for the presence of the little devil that holds up his train.†

"Nahema" (sometimes wrongly taken for "Lilith," who is Satan's wife) ‡ is the representative of the special wide-

---

* It was under the Orleans dynasty, which is his authentic embodiment, that Tharthac shone, with transcendent splendor, in the realm of France.

† Napoleon III. was Nembroud-Acham: M. Thiers is Tharthac-Acham.

‡ According to the Kabbala, there are three ch of devils: the first is named Thohu; the second, Bohu; and the third, Thehom. The seven tabernacles, or hells, are seven deadly vices. Samah, the Angel of Death, rules over the whole. Samah, evil desire, Satan, and the serpent that seduced Eve, are the same thing. Samah's wife is called the Strumpet: he and she, united, are called the Beast. This Strumpet is the Talmudic Lilith.
spread, all-pervading, and inevitable corruption that eats out the heart of iniquitous and falsely-refined societies. She seduces Acham, leads him astray, and causes him to destroy himself by his own folly. She reigned triumphantly in the times of the regency in France, was the principal ornament of the court circles of Napoleon III., and graced the banqueting-table of Belshazzar when he was slain in his own palace by the Medes and Persians. Her mighty deeds are everywhere spoken of in history. Her portrait will be found in the margin.

“Nabam,” the personage whose portrait is given on the next page, is the gentleman in the clerk’s office, with whom we, all of us, whether collective peoples or individual men and women, will have to settle our accounts, Saturday night, for the week’s work. Nabam is Saturn, Nahema is Venus, Acham is Jupiter, Tharthac is Mercury, Nembroud is Mars, and the Light-bearer is the Moon; and all of them, as here depicted, are shining with malignant aspect. And thus ends the eventful history of the life and adventures of “Mr. Badman.”

The characteristics of the planets, as afflicted, are here
given in some detail, and their normal characteristics are analogous to those stated, but opposite. If the reader desires a more full account of the characteristics of the several planets, he may find it in any good book of astrology.

Conclusion.

Thus far we have been able, and with no little difficulty, to trace, in a very superficial manner, the deep doctrine of the Kabbala. Our exposition is wholly inadequate, and perhaps, in some minor points, incorrect; for the texts we have interpreted are very dark. We trust, however, that what we have said will suffice to break the ten seals of the lesser Zohar, and to make it an open book.
THE

FACTS OF CONSCIOUSNESS,

AND

THE PHILOSOPHY OF MR. HERBERT SPENCER.
What is consciousness? It is the state which the Ego is in when it perceives that it is perceiving.

Certain French physiologists inform us, that when we see an outward object, say a tree for example, we take cognizance of it, not with the whole brain, but with one only of the two hemispheres into which the brain is found, upon inspection, to be divided. They say, furthermore, that, as soon as the one half of the brain begins to take cognizance of the outward object, the other half begins to take cognizance of the act of the first half. Thus, according to this scheme, man perceives with one half of the brain, and with the other half becomes conscious of the perception. This theory is unsatisfactory. It is partially confirmed by authentic cases recorded of men and women paralyzed in one half of the body, and consequently in one half of the brain, who retain the faculty of perception, but speak from themselves, not as I, but in the third person only, as he or she, showing that they
have lost the sentiment of their own personality. We have, however, never heard of any special case where a man was inwardly conscious, or professed himself to be inwardly conscious, that he perceived with one half of his brain, and perceived the perception with the other. Besides, the theory is not properly verified; and there are very few scientific men, if indeed any, who would assign to it a rank higher than that of a mere hypothesis dealing with mental machinery only, and the manner of its working, but saying nothing of the inward force that perceives. Let us take it, therefore, for what it appears to be worth, and pass to the consideration of other and equally plausible hypotheses.

Many psychologists affirm that there is in the nature of ideas, cognitions, notions, and perceptions, an inhering necessity for such a concatenation or association of each with all the others, as will account, among other things, for the observed facts of consciousness. Spinoza says, "We clearly understand why the mind from the thought of one thing immediately falls into the thought of another, which has no resemblance to the first. For example: from the thought of the word *pomum*, a Roman immediately thinks of a certain fruit,—an apple, which has no resemblance to the articulate sound, nor any thing in common with it, save that the body of the man was often affected at once by the two things, the word and the apple; he having often heard the word *pomum* when seeing the fruit it signified. It is in this way that thoughts of one thing lead to thoughts of another, according as custom or habit orders the
imagination of the thing in the body. A soldier, for instance, when he sees the foot-prints of a horse in the sand, from thoughts of the horse immediately falls into thoughts of the rider of the horse, thence into thoughts of war, &c.; whilst a peasant, from such foot-prints, forthwith falls into thoughts of fields, ploughs, &c.: that is, each in his own way, and as he is wont to connect the images of things, passes from one thought into another of this or that complexion." The following affirmations, or the substance of them, are frequently met with in philosophical writings, though seldom, if ever, under a distinct form of statement. They are suggested to us at this time by scattered enunciations and illustrations found in the books of Mr. Herbert Spencer: — Since every mental state is involved, by the accidental circumstances of its occurrence, with every other mental state, it follows that each state suggests every other state, and that all the states form a connected series, in which each term implies, and is implied by, all the other terms. Thus all the mental states form one complex whole, a unity of totality, so thoroughly united, that the whole exists in each part, and each part in the whole. This inter-relation between mental states, by which the mind, in reviewing them, is able to pass regularly from one to another, is consciousness; and the organic sum-total of all the mental states, actual and potential, of any individual who calls himself Ego, is precisely that entity which the individual designates as Ego.

This theory is also unsatisfactory. The affirmation that the mental states, taken together, of any individ-
ual man, make up an organic unity of totality, of which the destruction of any one part would involve the destruction of the whole, is not unplausible; but the affirmation, that this organic unity of totality is what the individual cognizes as Ego, awakens doubt. The Ego cognizes itself as perceiver, and not as a mass of perceptions. Such is the fact as shown by authentic observation in consciousness. We speak from the facts of our own consciousness; and the reader knows better than we do whether the facts of his consciousness are like those of ours.

Men, generally, when they enter a shop where articles are made by machinery, distinguish between themselves and the machinery, and also between themselves and the working of the machinery; cognizing the machinery, and the working of the machinery, as things perceived, and cognizing themselves (but without giving special definiteness to their notion of themselves) as perceivers. In like manner, meditative men (and such men are not met with every day), when they inspect the working of their own minds, distinguish between themselves and their mental states, and also between themselves and the mechanism, and the working of the mechanism, of their own minds; cognizing their mental states, the mechanism of their own minds, and the workings of that mechanism, as things perceived; while they cognize themselves, on the contrary, not as things perceived, but as perceivers. It follows from what is here said, that facts of direct and authentic observation, which every intelligent observer is competent to verify for himself, go to confirm our definition of consciousness as we
have given it, and to show that consciousness is, as we have said, "the state the Ego is in when it perceives that it is perceiving;" and to explode the counter definition, that "consciousness is the inter-relation between mental states, by which the mind, in reviewing them, is enabled to pass from any one of them to any or all of the others." The same facts go to show that the Ego, which is revealed to itself as a perceiver, is not at all that organic sum-total of mental states which is revealed to it as something that it perceives, and from which, as such, it contradistinguishes itself. Authentic observation teaches us that the Ego is conscious of itself, always as perceiver, and never as thing perceived.

This false and utterly untenable theory, that "consciousness is that inter-relation between mental states, by which the mind, in reviewing them, is enabled to pass from any one of them to any or all of the others," is the one intentionally set forth, if we understand him rightly, by Mr. Herbert Spencer, in his book entitled "First Principles of a New System of Philosophy." Mr. Spencer gives no definition of the

* Mr. Spencer says (Principles of Psychology, p. 500), "Considered as an internal perception, the current illusion respecting the will consists in supposing that at each moment the Ego is something more than the aggregate of feelings and ideas, actual and nascent, which then exists."

Speaking of a voluntary action, he says, "But the entire group of psychical states which constituted the antecedent of the action also constituted himself" — that is, constituted the man, or actor — "at that moment, constituted his psychical self; that is, as distinguished from his physical self. It is alike true that he determined the action, and that the aggregate of his feelings and ideas determined it: since, during its existence, this aggregate constituted his then state of consciousness; that is, himself." — Psy., p. 501.

And again: "The composite psychical state which excites the action is
word consciousness; in fact, he gives no philosophical definition of any thing whatever: but he allows his notion, such as it is, of consciousness, to be gathered from a comparison of scattered sentences. Mr. Spencer's book may be authority in matters of physical science; we are not competent to express any opinion on this head: but why he should have characterized it as a treatise of philosophy, we know not. According to Mr. Spencer, the expressions mental state and state of consciousness are equivalent in meaning. We will, in a moment, quote texts of his wherein he intimates as much. But he ought to know, and doubtless does know, that the word mind is exceedingly comprehensive; while the word consciousness, on the contrary, is somewhat exclusive. The mind has many (so-called) faculties; as attention, memory, imagination, and the like, among which consciousness counts as one only. Every state of consciousness is a mental state; but there are many mental states that are not at all states of consciousness.

Mr. Spencer says, "Consciousness implies perpetual change, and the perpetual establishment of relations between its successive phases. To be known at all, every mental affection must be known as such or such; as like these foregoing ones, or unlike those: if it is at the same time the Ego which is said to will the action. Naturally enough, then, the subject of such psychical changes says that he wills the action; since, psychically considered, he is at that moment nothing more than the composite state of consciousness by which the action is excited." — Psy., p. 501.

We quote these extracts from the Principles of Psychology, instead of reciting passages from the First Principles of Philosophy; for it is our aim to show that Mr. Spencer's doctrine is one and the same in his different books. Our quotations from the First Principles of Philosophy will be given, not in the footnotes, but in the text.
not thought of in connection with others, not distinguished or identified by comparison with others, it is not recognized, is not a state of consciousness at all." — *First Principles*, p. 63. That is to say, consciousness, objectively considered, appears in a series of successive states, every one of which is contradistinguished from every other, although each one of them implies, and is implied by, the others.* Mr. Spencer goes on to ask, in this connection, a very suggestive question, as follows: "What shall we say of these successive ideas and impressions that constitute consciousness?" The word *constitute* is a strong one. Our successive states of consciousness constitute, in the sense of giving origin to them, the contents of the field of memory and imagination that is spread before our inward vision; but they no more constitute consciousness than the successive phases of the moon constitute the moon. Our successive observations of the moon give us such pictures as we can make for ourselves, in imagination, of that satellite of the earth; but our imaginative picture of the moon, and its inherent constitution, are two different things. Consciousness is the immediate knowledge that the *Ego* has of itself as perceiving agent; and that knowledge is consciousness so long only as it is immediate. A past act of consciousness is no longer an act of consciousness; for it has become a fact of memory. When the *Ego* perceives a fact of memory, it perceives consciously; but the consciousness is in the present

* "Every element of that aggregate of activities constituting a consciousness is known as belonging to consciousness only by its cohesion with the rest." — *Psych.*, p. 161.
perception, not in the past one. The act of consciousness is always present. When the Ego knows knowingly, it is itself the knowing subject; the thing that it contradistinguishes from itself as non-Ego, and thing known, is the object; the immediate knowledge which the subject has of the object is the relation between the two: subject, object, and relation — not successive states — constitute consciousness. In the lax, improper, ordinary, unphilosophical, and indefinite use of the word consciousness, our whole life of memory and imagination is characterized as a life of consciousness: and we are said to be conscious of things when we remember them, or imagine them only; that is, when we are conscious, not of the things, but of some former states of consciousness now existing in memory, in which states we were conscious of the things, or of something vaguely analogous to them. We are personally acquainted with blockheads who say they are conscious of their own immortality. Much latitude must be allowed to native stupidity, to torpidity of brain, and to restless frivolity; but, from Mr. Spencer, better things than these were expected. Mr. Spencer says again, "The personality of which each is conscious, and of which the existence is to each a fact beyond all others the most certain, is yet a thing which cannot truly be known at all: knowledge of it is forbidden by the nature of thought."—F. P., p. 66. We are confident that the case is not at all so desperate as it is here represented. We will trust ourselves to make a few feeble remarks on this point.

In consciousness, the Ego always knows itself as sub-
ject, the object as object, and the relation as relation.*

The Ego is never conscious of itself as object: and, when it considers itself as object, it does so, not in consciousness (although it may do it consciously), but by means of representations that it objectively makes of itself to itself in memory and imagination; which representations are almost always (probably always) more or less deceptive. Again: the Ego is never conscious of the object as subject; but, when it affirms that an object (say another Ego) is also subject in some other system of consciousness, it does so on the strength of reasoning by induction, basing its affirmations on congruities and incongruities presented to it objectively by facts of memory and imagination. Finally, there are very few men (and Mr. Spencer does not appear to be of the select number) that have made themselves competent, by long self-training and by painful reflection, to distinguish clearly between the subject and object in consciousness. All men, however, appear to be competent to perceive the relation that holds both object and subject in solution. All men are, apparently, conscious of the act of immediate knowing; which act is the relation between the subject and the object, and implies, to discerning persons, but to discerning persons only, both the subject and the object. By what word is this relation

* "To say that a state of consciousness has considerable continuity, is to say that it is a distinct element of consciousness; which is the same thing as being known or felt." — Psy., p. 479.

Every state of consciousness is a systematic whole, composed of three elements, and no more, — subject, object, relation. One state of consciousness differs from another by reason of a difference in the objects, and, consequently, in the relations; but the subject is always the same.
designated in common language? Obviously, it is not called *relation*; for, if the ordinary mind could compass the notion of relation in consciousness, it would be aware, which it is not, of the contradistinction between the subject and the object. The relation is sometimes called by persons advanced in the art of reflection, but who have not yet attained to distinct self-consciousness, immediate knowledge; and sometimes it is called, but more vaguely, intuition. But what is the *common* word used by everybody to designate this special thing that everybody appears to know? In the English language, the clearly apprehended relation between the subject and the object — apprehended, however, not as a relation, but as something given in itself — is called *life*. If any man will analyze the immediate intuition he has of his own life, he will find it resolve itself into an intuition of himself as knower, an intuition of some object known, and an intuition of the act of knowing; that is, he will find he has been analyzing the fact of his own consciousness. Few men have any clear knowledge of themselves as subject: but every man knows that he is alive; every man has an intuition, in consciousness, of his own life. Men are not conscious, and we are forward to confess it, of the life of the body. Consciousness, or immediate intuition, says nothing to man about the circulation of the blood, the functions of the liver, or the movements of digestion. If men know any thing about the life of the body, or know even the bare fact of the body’s life, they know it scientifically only, as they know any other physiological fact, and derive their knowledge from observa-
tion and induction.* It is the life of the soul, and that life only, which is immediately perceived in consciousness. What is the life of the soul? Observation in consciousness teaches us that it is a life of intelligence; that it consists mainly in immediate knowing: for if we feel, or will, we know that we feel, and know that we will. More careful and somewhat painful observation teaches us that there is not only a life of the soul, but also something that is alive,—a knower. This knower perceives itself as subject, never as object, and as an intelligence; and this immediate perception, or intuition, of active and spontaneous intelligence, is the only adequate knowledge the soul has of the fact of intelligence. If the soul attribute intelligence to other beings, it does so by induction only, and in the light of its intuitive notion of intelligence. The soul also perceives itself as one in the strictest sense of the word unity. It has also intuitions of identity and diversity. We might continue this enumeration through a detailed list of a thousand and one other intuitions, all of them unscientific in the sense that they are above science, and conditions without which science would be impossible. Such is the genesis of first truths.

* "Life is the continuous adjustment of internal relations to external relations." — *Psyce.*, p. 399. This appears to be a partial description of the circumstances and manifestations of life, rather than a definition of life itself. If the remarks in our text are well founded, life is the spontaneous activity of a real subject: therefore, since there is no subject without an object, all life is subjective-objective. In intellectual life, consciousness is actual: in the lower forms of life, it is, perhaps, potential only. Mr. Spencer will never accept these last statements: for the affirmation of the spontaneity of the subject—that is, of the reality of the subject—is the negation of his peculiar theory of the persistency of force; that is to say, of his absolute and systematic materialism.
Why, then, does Mr. Spencer say that our own personality, the thing of which (by his confession) we are more certain than we are of any other, is a thing not truly known at all? Why does he say that the very nature of thought forbids all knowledge by us of our own selves? What does he mean by thought? Mr. Spencer has trained himself to the methods of physical science; but, as it would appear, he has not trained himself to habits of observation in consciousness. The *Ego* is conscious of a multitude of things as objects, and contradistinguishes them from each other, notes their peculiar characteristics, classifies them, and obtains vivid imaginative representations of them. This contradistinction of objects from each other, this noting of their peculiarities, this classification of them, this obtaining of vivid representations of them in imagination, is what Mr. Spencer calls *thought*. According to him, the knowledge the *Ego* has of itself as subject is no knowledge at all, and has no place in the realm of thought, because it is not objective knowledge. In point of fact (and to that extent Mr. Spencer is in the right), the *Ego* is for itself, so far as conscious knowledge is concerned, alone of its kind: it knows itself as subject, not as object, and knows no other subject directly: it has nothing with which it can compare itself, and render vivid, by similitude or contrast, the utterly inadequate notion that it forms of itself in imagination; and it classifies itself as altogether outside of all classification.* Mr. Spencer may, therefore, very well

* “Under its subjective aspect, psychology is a totally unique science, independent of, and antithetically opposed to, all other sciences whatever. The thoughts and feelings that constitute a consciousness (?) and are absolutely
affirm that the *Ego* does not know itself in the same way that it knows objects, since it knows itself as subject, and not as object; also that it does not come by induction to a knowledge of itself as it does to a knowledge of the facts of physical science, since it knows itself directly, and not by induction, as subject: but he talks absurdly when he says that "the thing of which we are conscious, the thing of which we are the most certain," is a thing "that we do not truly know at all." He may put away a caterpillar, transfixed with a pin, in its proper place in his glass cabinet, as something identified, thoroughly known, and duly labelled: nevertheless, Mr. Spencer's soul, which is always with him, as a thing outside of all classification, is better known to him, although not objectively known, not picturable in his imagination, than any dead and dried-up object in his whole collection.*

We submit the following syllogism (if it may be called one) to the reader, for purposes of illustration: "That which is known to the subject is objective: sometimes the *Ego* becomes known to itself; therefore the subject is sometimes its own object." This

Inaccessible to any but the possessor of that consciousness, form an existence that has no place among the existences with which the rest of the sciences deal." — Psy., 140.

* "To know any thing is to distinguish it as such or such; to class it as of this or that order. An object is said to be but little known when it is alien to objects of which we have had experience; and it is said to be well known when there is a great community of attributes between it and objects of which we have had experience. Hence, by implication, an object is completely known when this recognized community is complete, and completely unknown when there is no recognized community at all." — Psy., p. 148.
is a mere sophistical catch of words. For the subject
is known to itself in consciousness, always as subject,
and never as object. It is, therefore, not true that
every thing known to the subject is objective. All
this, we take it, is very plain: nevertheless, ingenious
and subtle thinkers, adopting the vocabulary of their
own language for ontological authority, and using the
rules of syntax for dialectics, have brought them­selves to believe, through this same verbal catch,
that the subject is, in consciousness, its own object.
Victor Cousin, who ought to have known better, and
did know better, forgot himself in listening to his
own talk, as was his not unfrequent custom, and af­
ffirmed the subject to be its own object; thus deliver­ing himself over, bound hand and foot, to the tender
mercies of Sir W. Hamilton, who stood ready to
attend to his case, and did attend to it. Jouffroy,
a disciple of Cousin, talked so bewilderingly in his
books about consciousness, simply because the spec­tator in the pit of a theatre sees the actor who is on
the stage, that his readers came to doubt whether
they were the actor on the stage, or the spectator in
the pit, or the spectator on the stage, or the actor
in the pit, or whether they were both in the pit and
on the stage, or neither in the pit nor on the stage.
Pierre Leroux effectually attended to Jouffroy’s case.

Mr. Mansel, as quoted by Mr. Spencer, says, “Con­
sciousness is impossible except in the form of a rela­tion. There must be a subject, or person conscious,
and an object, or thing of which he is conscious.
There can be no consciousness without the union of
these two factors; and, in that union, each exists only
as it is related to the other. The subject is subject only so far as it is conscious of an object; the object is object only so far as it is apprehended by a subject; and the destruction of either is the destruction of consciousness itself.” — F. P., p. 78. This is the truth, but not the whole truth. We have not had the good fortune to read any of Sir W. Hamilton’s writings, and know them at second-hand only, and from extracts quoted into other books. We are nevertheless confident that the foregoing is a correct statement of Hamilton’s doctrine. We subscribe to it in all its parts: we might wish to add to it; but we would not alter a word of it.

Mr. Spencer quotes also from Mr. Mansel the following sentences of a different tenor, and without any expression of disapprobation: “The very conception of consciousness, in whatever mode it may be manifested, necessarily implies distinction between one object and another. To be conscious, we must be conscious of something; and that something can only be known as that which it is by being distinguished from that which it is not.” — F. P., p. 76. Mr. Spencer draws attention to six of these words by putting them in Italics, indicating that they contain the really important part of the statement. They are, in fact, important, and for two reasons: first, because the affirmation covered by these words is the only one in the whole statement that is distinctly false; and, secondly, because they show that — let him know what he may about mind in general — Mr. Spencer knows very little about consciousness in particular. In the act of consciousness, as such, the
distinction is never between one object and another, as Mr. Mansel affirms, and Mr. Spencer intimates, but always between the subject and the object; which is something very different. Speaking for himself, and quoting neither Hamilton nor Mansel, Mr. Spencer says, "Every complete act of consciousness, besides distinction and relation, also implies likeness. Before it can become an idea, or constitute a piece of knowledge, a mental state must not only be known as separate in kind from certain foregoing states to which it is known as related by succession, but it must further be known as of the same kind with certain other foregoing states." — F. P., p. 79. Pourquoi? Mr. Spencer begins with the mention of consciousness, and goes on to talk about the general action of the mind. For him, an "act of consciousness" and a "mental state" are the same thing. Nothing can be known, according to him, that cannot be objectively distinguished from something else that is objectively known, and also "likened" to some certain other thing that is objectively known; nothing, he intimates, can become "a piece of knowledge" until it has become a fact of memory. There is no method of acquiring knowledge except the one used by naturalists in the prosecution of physical investigations; and therefore that which is known immediately, by infallible intuition, is not known at all. We are now prepared to take cognizance, without astonishment, of the following remarkable sentence: "It may readily be shown that a cognition of self, properly so called, is absolutely negatived by the laws of thought."—F. P., p. 65. These are no mere verbal
cavils. Mr. Spencer ignores, not only in his definitions (such as they are) and in his first principles, the whole spiritual nature of man, but he does the same thing in his extended expositions. His entire doctrine is a thinly-disguised system of materialism; and the ostentatious arguments against materialism, in his treatise on Psychology, are simply sophistical and misleading, being based on mistaken presentations of the question.* It is, of course, impossible for us to quote Mr. Spencer's extended expositions: the space at our disposal allows of nothing of the kind. We refer the reader to Mr. Spencer's books.

We quote one other passage as conclusive: "The mental act in which self is known implies a perceiving subject and a perceived object. If, then, the object perceived is self, what is the subject that perceives? or, if it be the true self that thinks, what other self can it be that is thought of? Clearly a true cognition of self implies a state in which the knower and the known are one,—in which the subject and object are identified; and this Mr. Mansel rightly holds to be the annihilation of both." — F. P., p. 65. There is your verbal catch for you! Neither Cousin nor Jouffroy ever perpetrated any thing more exquisite than this piece of reasoning. Who told Mr. Spencer that the object perceived in consciousness is self? Self is the

* "Those who wish to see materialism refuted by philosophic reasoning, and not by appeals to vulgar prejudice, may be referred to the latter portion of Mr. Spencer's lately-published volume on Psychology." — Letter of March 1, 1871, to the New-York World, from Mr. John Fiske of Harvard University.
subject perceived. The subject and the object are never identified in consciousness. "The subject is subject only so far as it is conscious of an object." To be conscious of an object is to consciously perceive that object: therefore, when the subject is conscious of an object as object, it is also, and in the same act, always conscious of itself as subject. Observation in consciousness is the only evidence to be adduced on this point. If the subject attempt to cognize itself directly as object, consciousness is at once lost, and remains lost until the subject again cognizes some object as object. Attempts of the subject to cognize itself directly as object are utterly futile: they, moreover, often occasion a dangerous disorganization of the nervous system, and, if persisted in, may provoke abnormal trances, perhaps ending in death. In the full act of consciousness, the subject, the object, and the relation, all three of them, become known to the subject,—the subject as subject, the object as object, and the relation as relation.

Mr. Spencer says, again, "In brief, a thing cannot at the same instant be both subject and object of thought; and yet the substance of mind must be this before it can be known." — _Psyche_, p. 148. Since, according to Mr. Spencer, the subject cannot know itself as subject, and since, certainly, as Mr. Spencer acknowledges, it cannot know itself as object, we respectfully inquire upon what grounds Mr. Spencer affirms that there is any subject at all. A philosophy that ignores the human soul is usually characterized as a materialistic philosophy, just as a philosophy that ignores God is characterized as an atheistic philoso-
The facts being patent, why does Mr. Fiske defend Mr. Spencer from the imputation of materialism?

Materialism naturally gives birth to a system of morality that is more practised than praised. To call a man a materialist is to give him a bad name. Nevertheless, a man should never desert, or be ashamed of, his own colors: if he is a materialist, both he and his friends ought either to say so, or to say nothing on the subject. The conscientious materialists, and their first disciples, are usually estimable and well-meaning men. It is not they, but the promiscuous and more practical adherents to their doctrines, who professedly put Mammon above God, and to-day organize the religion of the legislative lobbies and political caucuses, the religion of the Bonapartes, of the Rothschilds, and of Shoddy; the religion of the great manufacturing centres; the religion of Wall Street, State Street, and the wharves; the religion of the English plutocracy; the religion of interested philanthropy and of despotic charity; in short, the religion of the special corrupt and corrupting tendencies of the nineteenth century, against the religion of Him who said, “It is easier for a camel to go through the eye of a needle than for a rich man to enter the kingdom of heaven.” Materialism is the philosophy, not of sensuality, but of the power and course of this world. Sensuality is a law to itself, and asks no sanction from philosophy. Jesus made a whip of small cords, and drove the money-changers out of his Father’s temple; but to-day, in many of the Boston and New-York churches, the money-
Changes drive Jesus out of his own temple. If materialism is true, then the religion of Mammon is true, and the religion of the New Testament is an enthusiastic error. Jesus said, "For judgment I am come into the world. . . . Now is the judgment of this world; now is the prince of this world cast out. . . . The prince of this world cometh, and hath nothing in me. . . . If the world hate you, ye know that it hated me before it hated you. If ye were of the world, ye know that the world would love its own; but because ye are not of the world, but I have chosen you out of the world, therefore the world hateth you. . . . The world cannot receive the Comforter, the Spirit of truth, because it seeth him not, neither knoweth him: but ye know him; for he dwelleth with you, and shall be in you. . . . Peace I leave with you; my peace I give unto you: not as the world giveth give I unto you." The style of the New Testament, as a relief from the style of Mr. Spencer, is absolutely refreshing. It is consoling to think that the spirit of the nineteenth century is the spirit of the nineteenth century only; while the spirit of Christ is of yesterday, to-day, and forever.

In reading the first part of Mr. Spencer's book, we learn that his professed method is one of elimination, and not one of synthesis. He has no faith in the reconciliation of contradictions, or rather no accurate knowledge of the theory of such reconciliation. When he is in the presence of a contradiction, he expunges every thing on either side that conflicts with any thing on the other. The residuum, which he presents as something large and comprehensive, is, usual-
ly, a fact, not of knowledge, but of ignorance, and yet a fact which implies that there is something to be known, — a fact so vague, so abstract, and so indefinite, that few persons would care whether it is verifiable, or the contrary. He says, "We have to compare all opinions of the same genus; to set aside, as more or less discrediting one another, those various special and concrete elements in which such opinions disagree; to observe what remains after the discordant constituents have been eliminated; and to find for this remaining constituent that abstract expression which holds true throughout its divergent modifications." — F. P., p. 127. Again: after enumerating several special systems of philosophy, he says, "That which remains as the common element in these conceptions of philosophy, after the elimination of their discordant elements, is knowledge of the highest degree of generality." — F. P., p. 131. The Italics are Mr. Spencer's. This method is essentially Oriental, — between three and four thousand years behind the times, and perhaps derived from the sages of Benares. Fortunately for himself and for his readers, Mr. Spencer is, on almost all occasions where matters of natural science are concerned, utterly false to his own method.

In the publisher's advertisement, printed at the end of the book, the following sentences are quoted from "The National Quarterly Review:" "It was reserved for Herbert Spencer to discover the fundamental and all-comprehensive law which is found to explain alike the phenomena of man's history and those of external nature. This sublime discovery,
that the universe is in a continuous process of evolution from the homogeneous to the heterogeneous, with which only Newton's law of gravitation is at all worthy to be compared, underlies not only physics, but also history. It reveals the law to which social changes conform." In point of fact, the statement that the process of evolution is from the homogeneous to the heterogeneous is the true culminating point of Mr. Spencer's book. This law, however, is not obtainable by Mr. Spencer's method of elimination and exhaustion. It is the resolution by synthesis, and not by elimination, of a special contradiction. It is an old and well-known Hegelian formula, used frequently by Proudhon, and somewhat modified in the enunciation by Mr. Spencer, but not improved by the modification. Besides, the Hegelians do not claim it as originating with themselves,—at the least, they ought not to claim it. It is, in all appearance, cabalistic; and we should not be in the least surprised to find it in the Zohar, or Book of Splendor.

Mr. Spencer is, however, in matters that would seem to require an observation by the mind of its own operations, usually true to his own method. In the presence of a psychological contradiction, he never thinks of observing the facts in his own mind, but immediately tabulates what is said on the one side and the other of the question, strikes out the discordant terms, and takes the worthless residuum for a statement of final and general truth. When Hamilton uses astonishing phrases, such as, "the conditionally unlimited," "the unconditionally unlimited," and bewildering terms, such as "the unthinka-
ble," it is very easy to find common words to express all that is true and expressible in them, leaving the strange terms and phrases themselves to perform their only proper purpose,—that of amazing the groundlings. But this is not Mr. Spencer's method. Besides, the faculty of tall talking did not die with Hamilton.* When Sir W. Hamilton, yielding to the proclivities of his mental constitution, simply "squirts," Mr. Spencer, with some strange sextant that he has, takes the altitude of the "squirt;" and he also takes the amplitude, and determines the orientation of the same, by means of some strange azimuth compass that he uses. If nobody "squirts" on the opposite side of the question, Hamilton's

* "If by the phrase, 'substance of mind,' is to be understood mind as qualitatively differentiated in each portion that is inseparable by introspection, but seems homogeneous and undecomposable, then we do know something about the substance of mind, and may eventually know more." — Psy.c., p. 146. The style of the first half of this passage appears to be neither "qualitatively nor quantitatively differentiable" from that of some of our more learned female-suffrage ladies: it is a style to be avoided.

Again: "We call that person a materialist who maintains the metaphysical thesis, that the objective reality which underlies and causes the phenomenal manifestations of consciousness is identical with the objective reality which underlies and causes the phenomenal manifestations of matter; and who, furthermore, insists upon calling this single objective reality and common cause of the two sets of phenomena by the name of matter." — Mr. Fiske's Letter of March 1 to the New-York World. We take off our hat in the presence of this stupendous definition of materialism. Mr. Fiske fires these hard phrases at Dr. McCosh; and we place ourselves beyond reach of the explosion, with the remark, "Let the hardest fend off!" But why does Mr. Fiske say, "The objective reality which underlies and causes the phenomenal manifestations of consciousness," — if any one knows what that may mean,—instead of saying, as he ought, "the subjective reality"? It is hardly fair to insinuate, by a mere catch of words, a denial of the real existence of the subject, and then to conclude the whole question by a captious definition. Better things than these were expected from Mr. Fiske.
“squirt” goes bodily into Mr. Spencer’s residuum of truth, since there accidentally happens to be nothing to offset and cancel it. It is not Hamilton’s meaning that goes into the residuum; for Spencer never, when the question is one of consciousness, or of observation in consciousness, catches Hamilton’s meaning: but it is the phenomenal “squirt” itself, regarded as an observable and classifiable object of investigation, that goes in. Hamilton seems to have done more than all other writers taken together for the bedevilling of what Mr. Spencer calls his “new system of philosophy.” If Mr. Spencer’s conclusions depend for their scientific vitality upon the premises and arguments by which he supports them, their hold upon life is frail enough. For instance, Mr. Spencer says, “If it can be shown that the persistence of force is not a datum of consciousness, . . . then, indeed, it will be shown that the theory of evolution has not the high warrant claimed for it.”—*F. P.*, p. 553. It is lawful to think and to affirm, that the theory of the persistence of force is not at all “a datum of consciousness;” and also that the theory of evolution may be true, but for reasons other than those assigned by Mr. Spencer. Mr. Spencer says also, “The sole truth that transcends experience by underlying it is the persistence of force.”—*F. P.*, p. 192. This is a remarkable statement; but it excites in us no surprise. How does Mr. Spencer, or anybody else, know how many truths there are that nobody as yet knows anything about? We have the boldness to affirm, that the theory of the persistence of force, as it is presented
by Mr. Spencer,* is distinctly not true. He says, again, "Deeper than demonstration, deeper than definite cognition, deep as the very nature of mind, is the postulate at which we have arrived. Its authority transcends all other whatever; for not only is it given in the constitution of our own consciousness, but it is impossible to imagine a consciousness so constituted as not to give it." — F. P., p. 192. The postulate here triumphantly celebrated, and nowhere proved, is that of the persistence of force. The Italics are ours: we might also have given exclamation-marks; but there is no call for them. It is a pity that so much eloquence is so utterly wasted.

Kreeshna says in the "Bhagvat Geeta," "At the end of the formation, at the end of the day of Brahma, all things, O son of Koontee! return into my primordial source; and, at the beginning of another formation, I create them all again. I plant myself in my own virtue, and create again and again this assemblage of beings, this whole, from the power of Nature without power." The Laws of Menu speak to the same purpose, saying, "On the coming-forth of that day, all things proceed from invisibility to visibility: so, on the approach of night, they are all dissolved away into that which is called invisible." Mr. Spencer says, "A philosophy is self-convicted of inadequacy if it does not formulate the whole series of changes passed through by every existence in its passage from the imperceptible to the perceptible, and again from the perceptible to the imperceptible." —

* Mr. Spencer’s theory of the “persistence of force,” and the ordinary theory of the “conservation of force,” are two different things.
F. P., p. 541. If the philosophies can stand this statement, we can. He says also, "If, as we have seen reason to think, there is an alternation of evolution and dissolution in the totality of things; if, as we are obliged to infer from the persistence of force, the arrival at either limit of this vast rhythm bring about the conditions under which a counter-movement commences; if we are hence compelled to entertain the conception of evolutions that have filled an immeasurable past, and evolutions that will fill an immeasurable future,—we can no longer contemplate the visible creation as having a definite beginning or end, or as being isolated. It becomes unified with all existence before and after; and the force which the universe presents falls into the same category with its space and time, as admitting of no limitation in thought." — F. P., p. 551. Personally, we know not which statement to prefer,—that of Kreeshna, or that of Mr. Herbert Spencer. We therefore deny neither of them. We might quote passages from the physics of the ancient Stoics, and also from the speculations of Spinoza, analogous to passages that might be quoted from Spencer; but, in doing so, we should transgress the limits we have set for ourselves. We cast no doubts on the originality of Mr. Spencer: we suppose he worked out his conclusions for himself. We merely remark, that we find little or nothing in his book of "First Principles" that we have not read elsewhere, and many years ago.

If, instead of eliminating the discordant elements from the printed opinions of representative Englishmen, to obtain a residuum of possible truth, Mr.
Spencer had applied himself to the observation of facts, we think he would have confirmed the knowledge the Ego has of itself, and also the knowledge it has of first truths, somewhat in the manner following, — only, of course, Mr. Spencer would have done his work much better for himself than we can do it for him:

How do we obtain our knowledge of time? We look at any mass of matter that is in motion, — as, for example, at the hand of a clock, — and we say, It is not now where it was; and, during its motion, time has elapsed. But if the I which makes the affirmation be the same with the thoughts, and not a higher persisting something transcending them, the I that looked at the clock some time ago is not the same I that looks at the clock now; for the thoughts and perceptions have changed, else there would be nothing on which to predicate the affirmation of a lapse of time. If there be not something in man which does not fall into time, something transcending time, then man has no knowledge of time: for the knowledge of time does not consist in a knowledge of one event, and a knowledge of another event; but it consists in a knowledge of that relation between events which is time. And this knowledge is never possessed except by something to which both events are present; for, otherwise, how can the relation between them be perceived? If a first fact fall in time, and a second fact fall in time, the I must exist independently of time, else it can make no comparison; and, without a comparison, it will be incapable of obtaining any notion of time. All the facts of our memory are equally
present to us: a fact that happened ten years ago is as present to the I as a fact that happened yesterday. Time is not a relation of the I to the facts of memory; but it is a relation of order and succession that these facts have among themselves. The I, therefore, transcends time, and is in eternity, although all its acts take place in time. Eternity is not time indefinitely extended; it is not a succession of an infinite number of moments; it is not time at all: for time and eternity exclude each other. Eternity is a never-beginning, never-ending, never-changing now.

The recollection of the earliest event of my life that has left its trace in my memory brings with it the conviction that I have remained identical to myself ever since the event took place. My body may have changed once in every seven years; but that which I call Ego, I, is the same I now that it was then. Not only does this act of memory bring with it the conviction of my identity; it brings also the conviction that I have persisted through many changes; that the I has persisted through a certain lapse of time: but the I only is given as identical; its thoughts, feelings, volitions, desires, &c., vary at every moment. The identity is given as belonging to the I alone, and as apart from the succession of the thoughts, feelings, volitions, and desires; for if the I were not, in itself, independently of its acts, identical, then the first thought or desire would belong to one person, and the second thought or desire would belong to another person.* But our inward experience teaches us that

* "Either the Ego, which is supposed to determine or will the action, is present in consciousness, or it is not. If it is not present in consciousness,
all our acts have been acts of the same person, of the same identical I. The I does not persist because the thoughts succeed each other; for the persistence of the I is a necessary prior condition, without which the thoughts could not succeed each other. Succession is one element only of duration: in order that duration may be possible, there must be an identity to bind the discrete elements of succession to each other. A thing endures when it remains unchanged while something with which it is related undergoes continual alteration. Remove the identity which persists through the changes, and the continual alteration will remain; but the duration will have vanished. . . . Etc.

We have, therefore, as results of observation in consciousness, and from an inspection of the nature of our memory, a conviction of the reality of the Ego, and of its unity and identity; also the intuitions of time, duration, and eternity; and a door open through which we may pass to a multitude of other intuitions of first truths. At the least, we obtain by this method results that may be discussed. In our opinion, we may obtain by it results that can be clothed with as high a degree of certainty as is compatible

it is something of which we are unconscious,—something, therefore, of whose existence we neither have, nor can have, any evidence. If it is present in consciousness, then, as it is ever present, it can be at each moment nothing other than the state of consciousness, simple or compound, passing at that moment." — Psyce, p. 501. Mr. Spencer will not admit that it is possible for the Ego to be present in consciousness as subject: if present at all, it must, according to him, be present as transitory (or, as he says, "passing") object or relation! Mr. Spencer would confer a favor by stating from what source, according to him, the Ego gathers its sentiment of its own identity. We are at a loss to know what it is in man, according to Mr. Spencer, that may possibly be immortal.
with the essential limitations and relativeness of our knowing faculty,—results that are exact, special, definite, and satisfactory, and therefore not at all like the results of Mr. Spencer's method, which are vague, indefinite, abstract, usually negative, of the highest degree of generality, and therefore in the highest degree useless. We are, we confess, no more certain of the validity of the first truths of which we have been speaking than we are of that of the axioms of geometry. Our claims are modest; and we stand ready to prove, by Mr. Spencer's method,—not by ours,—that it is a matter of no little doubt whether the three angles of any plane triangle, taken together, are, or are not, equal to two right angles. As to the reality of the Ego, it is to us a fact (to use the language of Mr. Spencer) "more certain than any other." And we think we have succeeded in showing that we know it, at the least, as certainly as we know any other.

One word in conclusion. We think we find intimations, in the New Testament, of some of the things we have been trying to say. But we bring forward this point with great diffidence; for the texts are mysterious, perhaps obscure, and it is possible that we may misinterpret them. Our Lord says (John xiv. 3), "I go and prepare a place for you: I will come again, and receive you unto myself; that where I am ye may be also." He does not say, Where I was before I was made flesh; neither does he say, Where I shall be after I shall be glorified; but he says, Where I am. Immediately after, he says, "Whither I go ye know, and the way ye know;" and, when the disciples disclaimed such knowledge,
he said, "I am the way, the truth, and the life: no man cometh unto the Father but by me." Our Lord seems to identify his beatitude, and the beatitude he promises to the disciples, with the condition of transcendency in which he is; for he says again (chap. xvii. 24), "I will that they also whom Thou hast given me be with me where I am; that they may behold my glory which thou hast given me: for thou lovedst me before the foundation of the world." We know not how our surmise may strike the reader; but the supposition seems rational to us, that our Lord possessed from infancy, and constantly through his life, that clear consciousness of his own essence, as something transcending time, which only one out of multitudes of ordinary men have ever, and which that one has transiently and very seldom. It is written (John viii. 57-59), "The Jews said unto Jesus, Thou art not yet fifty years old, and hast thou seen Abraham? Jesus said unto them, Verily, verily, I say unto you, Before Abraham was, I am. Then took they up stones to cast at him; but Jesus hid himself, and went out of the temple." It is not to be supposed that Jesus intended to arrogate to himself the incommunicable name, or that he, in words, identified himself with the Father; for, if he had done so, he would have violated the express law of the Almighty as given by Moses, and the Jews would have been acting in the line of their duty when they took up stones to cast at him. We suppose, therefore, that our Lord, when he said these things, spoke as a man, and that his words may be quoted in confirmation of some of the statements we have made.
NOTE.

Prof. T. H. Huxley, LL.D., F.R.S., says, in his lecture on the "Physical Basis of Life," —

"I take it to be demonstrable that it is utterly impossible to prove that any thing whatever may not be the effect of a material and necessary cause, and that human logic is equally incompetent to prove that any act is really spontaneous. A really spontaneous act is one which, by the assumption, has no cause; and the attempt to prove such a negative as this, is, on the face of the matter, absurd. And, while it is thus a physical impossibility to demonstrate that any given phenomenon is not the effect of a material cause, any one who is acquainted with the history of science will admit that its progress has, in all ages, meant, and now more than ever means, the extension of the province of what we now call matter and causation, and the concomitant gradual banishment from all regions of human thought of what we call spirit and spontaneity."

Descartes said, "I think: therefore I am." If the Ego thinks, the thinking is a spontaneous act, and this act has a cause; for the Ego which thinks is the efficient cause of its own thinking. There is no call here for what Mr. Huxley designates as "human logic;" for these affirmations are to be proved, if proved at all, by observation and experience in consciousness, which is not exactly "human logic." It is not pretended that the soul acts without conjunction with the body in thinking, or that spirit acts without being in relations with matter. Every act of thinking is, on one side, spontaneous; and, on the other, determined. The fact of spontaneity is proved by observation in consciousness; and the fact of determination is proved by the ordinary processes of natural science. Nei-
ther fact is proved by mere "logic." Every act of LIFE is at once subjective and objective, spontaneous and determined. Every act of LIFE is a synthesis of liberty and fatality.

If the progress of physical science means, and has meant, as Mr. Huxley intimates, the gradual banishment from men's thoughts of the conceptions of spontaneity and spirit, it is obvious that physical science naturally falls short of the truth, and requires to be supplemented by metaphysical science.

Mr. Huxley says, furthermore, —

"Fact I know, and Law I know; but what is this Necessity, save an empty shadow of my own mind's throwing? But if it is certain that we can have no knowledge of the nature of either matter or spirit, and that the notion of necessity is something illegitimately thrust into the perfectly-legitimate conception of law, the materialistic position, that there is nothing in the world but matter, force, and necessity, is as utterly void of justification as the most baseless of theological dogmas."

Mr. Huxley, Mr. Spencer, Mr. John Fiske of Harvard University, and their associates, systematically — although, of course, unintentionally — misrepresent the "materialistic position." The materialistic formula is "Matter, force, chance;" not "Matter, force, necessity." A man who affirms the fact of necessity is no longer a consistent Materialist, but is on the broad road to Spirituality. The pantheistic Idealists, who deny the very existence of matter, affirm, all of them, so far as we know them, the fact of necessity. Mr. Huxley, Mr. Spencer, and the rest, deny the fact of necessity, and suppose, in so doing, that they prove their system to be not materialistic. They are mistaken.

Mr. Huxley says in another place, —

"In itself it is of little moment whether we express the phenomena of matter in terms of spirit, or the phenomena of spirit in terms of matter. Matter may be regarded as a form of thought; thought may be regarded as a property of matter: each statement has a certain relative truth. But, with a view to the progress of science, the materialistic terminology is in every way to be preferred."

We apprehend that Mr. Huxley would find it advantageous, in treating contradictions-pregnant, to accept both terms of the con-
tradictions in their full force, and weigh them against each other, to obtain synthetic results. By the process he follows, which is that of subjugating one term to the other, of sacrificing one term for the other, he arrives at no synthesis whatever. The fact of life is essentially complex and synthetic; and it escapes Mr. Huxley's investigations at every turn.

TRANSCENDENTALISM.
To

RALPH WALDO EMERSON

The Following Pages

ARE RESPECTFULLY INSCRIBED

BY THE AUTHOR.
Transcendentalism is that form of philosophy which sinks God and nature in man. God, man, and nature, in their relations (if indeed the absolute God may be said ever to be in relations), are the objects of all philosophy; but, in different theories, greater or less prominence is given to one or the other of these three, and thus systems are formed. Pantheism sinks man and nature in God; materialism sinks God and man in the universe; transcendentalism sinks God and nature in man. In other words, some, in philosophizing, take their point of departure in God alone, and are inevitably conducted to pantheism; others take their point of departure in nature alone, and are led to materialism; others start with man alone, and end in transcendentalism.

It is by no means difficult to deny in words the actual existence of the outward universe. I may say, for example, that the paper on which I write has no more outward existence than the thoughts I refrain from expressing. When I say I perceive an outwardly existing tree, I may be mistaken; what I call
a tree may have no outward existence, but may, on the contrary, be created in my perception. Who knows that a thing which appears red to me may not appear blue to my neighbor? If so, then is color something which I lend to the object. But why stop at color? Perhaps hardness and weight have no existence save that which the mind gives. "Whether Nature enjoy a substantial existence without," says Mr. Emerson, — the profoundest metaphysician, after Jonathan Edwards, which this country has ever produced, — "or is only in the apocalypse of the mind, it is alike useful and alike venerable to me. Be it what it may, it is ideal to me so long as I cannot try the accuracy of my senses." "What differs it to me," he asks on another page, "whether Orion be up there in heaven, or some god paint the image in the firmament of the soul?"

Fabre d'Olivet believed the outward universe to be so dependent upon the individual soul, that we may properly be said to create it ourselves. He thought that we ourselves produce all forms and the world, and that we may create whatever we will, isolatedly and instantaneously. In truth, if all outward things depend for their being, and manner of existence, upon ourselves and upon our inward states, a change in those states involves a change in outward nature. If we discover, therefore, the connection of our thoughts and feelings with outward nature, the whole universe is in our power; and we may, by a modification of ourselves, change the world from its present state into what we all wish it might become. This thought gives the foundation for a system of magic. Mr.
Alcott (an accomplished adept in pantheistic theosophy) thinks the world would be what it ought to be were he only as holy as he should be: he also considers himself personally responsible for the obliquity of the earth's axis. A friend once told me, while we watched large flakes of snow as they were slowly falling, that, could we but attain to the right spiritual attitude, we should be able to look on outward nature, and say, "I snow, I rain." In the eighth number of "The Dial" we find a beautiful poem touching upon this theory, from which we make an extract:

"All is but as it seems,—
The round, green earth,
With river and glen;
The din and mirth
Of the busy, busy men;
The world's great fever,
Throbbing forever:
The creed of the sage,
The hope of the age,
All things we cherish,
All that live and all that perish,—
These are but inner dreams.

The great world goeth on
To thy dreaming;
To thee alone
Hearts are making their moan,
Eyes are streaming.
Thine is the white moon turning night to day;
Thine is the dark wood sleeping in her ray;
Thee the winter chills;
Thee the spring-time thrills:
All things nod to thee;
All things come to see.
If thou art dreaming on:
If thy dream should break,
And thou shouldst awake,
All things would be gone.*

Nothing is if thou art not.
Thou art under, over all;
Thou dost hold and cover all;
Thou art Atlas, thou art Jove;
The mightiest truth
Hath all its youth
From thy enveloping thought."

In this extract the poet makes man to be the only real existence, and outward nature to be a mere phenomenon dependent upon him. Man is represented as existing really, actually, absolutely; but nature as an accident, an appearance, a consequent upon the existence of the human soul. Thus is the universe sunk, swallowed up, in man. The concluding seven lines of the extract are an example of the transcendental theology, an example of the swallowing-up of God himself in man.

Materialism affirms that man is the result of organ-

* The following lines, from Shelley, are to the same point: —

"Earth and ocean,
Space, and the isles of life and light that gem
The sapphire floods of interstellar air;
This firmament pavilioned upon chaos,
Whose outwall, bastioned impregnable
Against the escape of boldest thoughts, repels them
As Calpe the Atlantic clouds; this whole
Of suns and worlds and men and beasts and flowers,
With all the silent or tempestuous workings
By which they have been, are, or cease to be,—
Is but a vision: all that it inherits
Are motes of a sick eye, bubbles, and dreams;
Thought is its cradle and its grave."
ization, and denies the existence of separate and individual souls, thus sinking man in nature: it also identifies God with the active powers of the universe. As Pantheism sinks man and nature in God, so materialism sinks God and man in the universe. Our transcendentalists are, by no means, always consistent. Sometimes they express themselves in a way that leaves us in doubt whether they are not, at bottom, materialists. For example, the poem from which the foregoing extracts are quoted is followed by another, from the same author, but of clearly opposite tenor. We quote a few lines:

“Dost thou dream that thou art free,
Making, destroying all that thou dost see,
In the unfettered might of thy soul’s liberty?
Lo! an atom crushes thee;
One nerve tortures and maddens thee;
One drop of blood is death to thee.
THE MIGHTY VOICE OF NATURE
IS THY PARENT, NOT THY CREATURE;
IS NO PUPIL, BUT THY TEACHER:
AND THE WORLD WOULD STILL MOVE ON
WERE THY SOUL FOREVER FLOWN.
For while thou dreamest on, infolded
In Nature’s wide embrace,
All thy life is daily moulded
By her informing grace;
And time and space must reign
And rule o’er thee forever,
And the outworld lift its chain
From off thy spirit never.”

Here the soul is evidently sunk in Nature: it is, to use a mathematical expression, considered as a func-
tion of the universe. — But we ought not to have separated these passages; for the poet aims to show that transcendentalism and materialism, liberty and fatality, are two sides of one truth.

Having spoken thus far of some of the peculiar characteristics of the transcendental school of philosophy, we shall now take occasion to say a few words concerning its origin and development. But here it will be necessary to treat of the philosophy of Kant, a subject not easily handled. The fundamental postulate of the philosopher of Königsberg may, however, initiate the reader into the whole system. Here it is, as near as we recollect it: —

“If any truth be present to the mind with a conviction of its universality and necessity, that truth was derived to the mind from its own operations, and does not rest upon observation and experience:

“And, conversely, if any truth be present to the mind with a conviction of its contingency, that truth was derived to the mind from observation and experience, and not from the operations of the mind itself.”

For example, we know that every effect must have its cause; and this truth lies in the mind with a conviction of its universality and necessity: this truth is derived, therefore, not from observation and experience, but from the operations of the mind itself; it is born, not from outward nature, but in and from the mind itself. In other words, to express ourselves after the manner of the Scotch school, we are forced by the very constitution of our being to admit this truth; so that the recognition of the principle of
causation may be said to be a law of our intellectual natures.

On the other hand, we say, We know the sun will rise to-morrow; but we are not absolutely certain of the fact. This second truth lies, therefore, in our minds, with a conviction of its contingency, and not of its necessity; and is, consequently, not derived from a law of our intellectual natures, but from observation and experience.

By every fact of experience, a revelation is made to the soul, not only of the idea which it has appropriated to itself, but also of those conditions of the external world, and of its own nature, which rendered that acquisition possible. For example, when we perceive moonlight, it is necessary (1) that there should be something out of us to produce the effect of moonlight upon our sensibility, and also (2) certain internal faculties which are responsive to the influences of moonlight. Without the outward object there is no perception, and without the inward faculties there is likewise no perception: for the moon shines upon the trees as well as upon me; but the trees perceive nothing, being devoid of the perceiving faculty. Again: the idea I have of moonshine might have been made to be other than it is by a change, either, first, in the outward object; or, second, in my perceiving faculty. Had the moonshine been different, it would have produced a different effect upon my sensibility, and, consequently, the idea would have been different; had my perceiving faculty been different, the influence or effect of the moonshine would have been different, and the idea
resulting would likewise have been different. All this is plain. Now, the faculties of the mind are supposed to be permanent, and to always operate in the same manner: therefore the truths given by the faculties, where nothing from the external word intervenes, are universal and necessary. But the outward world is given as always changing: therefore the truths given by observation and experience alone, are always contingent. Perhaps we can make this plainer by an illustration.

A nail-machine is composed of a pair of strong shears, which are made to do their work sometimes by steam, sometimes by water-power. A man stands before the machine, and inserts the end of an iron plate between the two blades of the shears when they open: when the shears shut, they cut off a nail from this plate; and this nail depends for its size and shape upon the form of the shears. Let us suppose the machine to be in operation, and the plate to be inserted. The machine says, I perceive something hard, black, cold: what is this something I perceive? In answer, the shears close, and the nail is cut off, and rattles away into the box. Ah, ha! says the machine, I now begin to see into the mystery of the impressions of which I was conscious a moment ago. It was a tenpenny-nail that produced the impressions,—a long and four-sided substance, sharp at one end, and flat at the other. By this time the shears close again; and the machine says, Another tenpenny-nail, by all that is glorious! This acquisition of knowledge is beginning to be interesting. I must know a little more of the philosophy of
this business. So the machine goes on to soliloquize. Listen! —

I have now, says the machine, in my experience, memory, or nail-box, several tenpenny-nails. These were undoubtedly acquired from the external world, and are all that I have as yet acquired from that world. Therefore, if aught beside tenpenny-nails exist in the external world, I have no conception of such existence; and that world is, consequently, for me, a collection of tenpenny-nails. The following appear, therefore, to be unvarying laws of actual existence: (1) All things are long and four-sided; and (2) all things are sharp at one end, and flat at the other.

But stop! says the machine—let us beware of hasty inductions. An idea strikes me! About these same nails: I am not so clear that they were not formed by the concurrent action of two agents. Perhaps the material was furnished by external nature; while the form resulted from the law of my nature, the constitution of my shears, of my own nail-making being. The following conclusion, at least, cannot be shaken: I may look upon every nail from two distinct points of view,—first as to its material, and second as to its form. The material undoubtedly comes from without, and is variable: some nails are of brass, some are of iron; but the form is invariable, and comes from within. All my nails must be long and four-sided, and that universally and necessarily; but the material may vary, being sometimes brass, sometimes iron. This is plain: for I acquire all my nails according to the law of my nail-making being; that
is, translating from scientific into popular language, according to the form of my shears. After mature deliberation, I think I may take the following postulate as the foundation of all my ulterior philosophy:

Whatever I may find in my nail-box, whether nails or whatever else relating to nails, if I am convinced that it is what it is necessarily, and must be as it is universally, that same thing, whatever it is, was not derived to my nail-box from external nature, but finds the reason of its existence in the formation and shape of my shears:

And, conversely, whatever I may find in that same nail-box, which is neither necessary nor universal, but variable and contingent, has its origin, and the reason of its existence, not in the formation and shape of my shears, but in the external world.

Having relieved itself of this postulate, the machine continues its meditations in silence.

The difference between the postulate of the nail-machine and that of the Königsberg philosopher is by no means great. Let us use them both in endeavoring to get at clearer conceptions of the position of our transcendental friends.

Do we not see all material objects under the relations of space? Is not space a necessary and universal form of all our sensible perceptions? But what says the postulate? The notion of space cannot come from the external world; for, if it did, it would not be attended with the conviction of universality and necessity with which it is attended. The notion of space comes, then, from the mind, and not at all from the outward world. (We speak as a Kantian.)
Space, then, has no outward existence; and the supposition that it has is mere hypothesis. We may treat time in the same manner; for time is the medium in which, universally and necessarily, we perceive events. Sensible objects and events are the iron, brass, the material of ideas—space and time are the form impressed by the shears. After all, what can we make of time and space? Simply this. Time and space are the intellectual spectacles through which we look on outward nature: they have no outward existence, but are media, perhaps distorting media, which we spread before our eyes whenever we look on the outward. (We give the Kantian statement.) But if space and time are mere media, perhaps distorting media, through which we perceive outward nature, all our sensible perceptions may be erroneous; and, if no new method of acquiring knowledge can be discovered, we may as well doubt of every thing. What shall we do, then? This is the question asked by several of our transcendentalists. The first course which presents itself to the mind is that of endeavoring to eliminate the elements of space and time from all our perceptions: but this is evidently impossible; for perception, divested of its form, becomes no perception at all, and vanishes. Space and time must, therefore, be transcended.

To follow a transcendental writer, we must not endeavor to find the logical connection of his sentences; for there is no such logical connection, and the writer himself never intended there should be. Many transcendental compositions read better backwards than they do forwards. We ought rather to
transcend space and time (if indeed we can), and follow the writer there. A transcendentalist never reasons: he describes what he sees from his own point of view. So the word “transcendentalism” relates not so much to a system of doctrines as it does to a point of view; from which, nevertheless, a system of doctrines may be visible. This explains to us why so many, notwithstanding their desire, have been unable to read the writings of the new school. They have tried to find a system of doctrines where they ought to have looked for a point of view.

But to return to our postulate. We see everything as existing under the law of cause and effect. The fact of causation is universal and necessary; for every fact of experience gives us, on one side, its material, which comes from the out-world; and, on the other, its form, which comes always, in part, from the law of causation. Let the reader turn for a moment to the postulate of the nail-machine. He will find that every truth which lies in the mind with a conviction of its universality and necessity is derived to the mind from its own operations, and that it does not rest at all on observation and experience. But does not the truth, that every effect must have its cause, lie in the mind with a conviction of its universality and necessity? The consequence is clear. The law of causation is a distorting medium through which we look upon the out-world; and we have no legitimate authority for affirming that the external world is in any way subjected to that law. It is true that we are forced to look upon nature under that relation; but the necessity of the case arises, not from
the fact of the reality of the law of causation (we speak as a Kantian), but from the constitution of our nature. But here all positive knowledge is annihilated. An idea is good and valid, if we may have any confidence in these forms of the soul; but what is the relation of the form of the shears to the outward object independent of the machine? Who shall infer from the inward to the outward?

The system of Kant is one vast scepticism: admit the fatal postulate, and there is no dodging the conclusion. Our transcendentalists have not been unfaithful to the thought of their master. They mend the theory of Kant by carrying it out, and affirming (with the master) that the form of thought, and (against the master) that the thing thought of, are both of inward (subjective) origin.

Transcendentalism affirms that the soul creates all things,—man, the universe, all forms, all changes,—and that this wonderful power is possessed by each individual soul. But it may be asked, Will there not, then, be necessarily a confusion, a mixture of universes, arising from the conflict of the creative energies of distinct souls? This difficulty may be made to vanish. Suppose, for a moment, that I have a magical power over some great public building,—the City Hall, for example; suppose every one of its parts, by a pre-existing harmony, to be made obedient to my will, so that when I will the windows to open and shut, the doors to turn on their hinges, &c., they immediately do it: would not this City Hall, thus immediately obedient to my will, be a new body with which I am invested? Suppose I have power
over a dog in the moon, so that he barks, runs, wags his tail, according to the action of my will: am I not existing "in this dim spot which men call earth," and also, at the same time, in "the orbed maiden whom mortals call the moon"? In the first case, I exist as a man; in the second, as an animal of the canine species. Without doubt, I may have millions of bodies; there is no difficulty in the matter: all that I operate upon by immediate magical power, by magia, to use the phrase of Jacob Behmen, is to me a body. So I may be in this world a man, and in the moon a dog: yet am I not two, but one; for one soul animates the two bodies. But mark! While I am immersed in things of time and sense, paying no regard to the soul, which is under and behind all, I think the man who is now moving about, trading and travelling on earth, to be myself; and only after deep thought, fasting, and meditation, do I find that I am also a dog. But here mysteries thicken. I am not only both a man and a dog: I am also neither a man nor a dog; for I am the soul that speaks through both. "What we commonly call man," says Mr. Emerson, "the eating, drinking, planting, counting man, does not, as we know him, represent himself, but misrepresents himself. Him we do not respect; but the soul, whose organ he is, would he let it appear through his action, would make our knees bend." The man, therefore, who has attained to right knowledge, is aware that there is no such thing as an individual soul. There is but one soul, which is the "Over-Soul;" and this one Soul is the animating principle of all bodies. When I am thoughtless,
and immersed in things which are seen, I mistake the person who is now writing these sentences for myself: but, when I am wise, this illusion vanishes like the mists of the morning; and then I know that what I thought to be myself was only one of my manifestations, only a mode of my existence. It is I who bark in the dog, grow in the tree, and murmur in the passing brook. Think not, my brother, that thou art diverse and alien from myself; it is only while we dwell in the outward appearance that we are two: when we consider the depths of our being, we are found to be the same; for the same self, the same vital principle, animates us both. (We speak as a transcendentalist.) I create the universe; and thou also, my brother, createst the same; for we create, not two universes, but one; for we two have but one soul: there is but one creative energy; which is above, and under, and through all.

This is no new theory. This doctrine was well known in the East before history began. No man can tell when it arose; for it is, perhaps, as old as thought itself. "Rich," say the Vedas, "is that universal self whom thou worshippest as the soul." We should strive, therefore, to disentangle ourselves from the world of matter, from the bonds of time and space, that we may take our stand at once in the "Over-Soul," which we are, did we but know it. We are the Over-Soul; and we come to our own native home when we attain to our true point of view, where the whole universe is seen to be our body. Then do we know of a truth that it is we who think, love, laugh, bark, growl, run, crawl, rain, snow, &c., &c. Mr.
Emerson has given a beautiful expression to this thought:—

"There is no great and no small
To the Soul that maketh all:
And, where it cometh, all things are;
And it cometh everywhere."

"There is one mind," says Mr. Emerson in his Essay on History, "common to all individual men. Every man is an inlet to the same, and to all of the same. He that is once admitted to the right of reason is made a freeman of the whole estate. What Plato has thought, he may think; what a saint has felt, he may feel; what at any time has befallen any man, he can understand. Who hath access to this universal Mind is a party to all that is or can be done; for this is the only and sovereign Agent."

It may easily be seen that this amounts to an identification of man with God. Yet this system is by no means pantheistic: perhaps, indeed, we may be permitted to coin a new term, and call it human pantheism. Pantheism sinks man in God,—makes him to be a phenomenon of the divine existence; but this system, so far from being an absorption of humanity in God, is an absorption of God in the human soul. A pantheistic friend once explained to me the difference between his system and that of the transcendentalists. "I hold myself," he said, "to be a leaf, blown about by the winds of change and circumstance, and holding to the extreme end of one of the branches of the tree of universal existence; but these gentlemen (referring to the transcendentalists) think themselves to be some of the sap."
Let us go up higher, and examine this doctrine as it manifested itself in the Oriental world; let us examine it in its bearings upon the problem of the soul’s future existence. It is written in the Vedas, “The soul should be known; that is, it should be distinguished from Nature: for then it will not return; it will not return.” In this passage, under a form peculiar to the East, we find the enunciation of one of the fundamental problems of philosophy (that of the immortality of the soul) with the indication of a solution. It is the general belief of the Orientals, that the soul of a dying man, after leaving this present body, will be born again into the world under some new form. A man, in his next body, may be a man, a horse, or a dog; and this re-birth, whether in the old or under a new form, is the return of the soul. The expiation of certain crimes consists, according to the description in the laws of Menu, in the soul’s living a thousand successive lives in the bodies of a thousand different spiders. The prospect, therefore, is by no means agreeable; and we cannot wonder that the whole force of the Oriental mind should have been directed to the discovery of some means whereby the return of the soul might be avoided.

In all ages of the world there have been philosophers who held that the soul builds the body; that is, that the character and form of the body are dependent on the character of the soul. The diametrically opposite doctrine is, indeed, more fashionable at this time: for many of our phrenologists and other materialists believe that it is the body which builds the soul; that is, that the soul is a function of (depend-
ent upon) some portion of the organism, — say the brain, for example. An appeal is made, in both cases, to observation and experience. The phrenologist, from an examination of the skull, will give a pretty shrewd guess as to the character of its owner: the idealist, on the contrary, will call our attention to the fact that the indulgence of certain passions alters the conformation of the face and the expression of the figure. The idealist says that the man who acquires the disposition of a fox will begin to look like a fox; will begin to become a fox as far as such a transformation is compatible with human nature. It is in the nature of spirit, says the idealist, to express itself in some form; and, as we are all rendered free at death, why should we not, in the next birth, take the form best adapted to express our inward natures? Why should not the man who is, in heart, a fox, take in the next birth the outward form of a fox? Why should not a fierce, bloody man be born the next time as a bull-dog? and a woman, who has no desire except for dress and display, be born as a peacock? Are their souls immortal? Yea, perhaps; but their present desires may remain with them, for their happiness or misery, throughout eternity. Conversely, a man of pure and angelic character begins inevitably to present a pure and angelic appearance; the countenance becomes placid, the manner sedate; and the soul of the man transforms his body till it becomes as angelic as is compatible with its present relations: and, when it assumes a new form after death, what shall prevent it from assuming the one most appropriate to its nature?
Our transcendentalists hold, not only that the soul builds the body, but that it builds all things,—God, the universe, other men, &c. "In the order of thought," says Mr. Emerson, "the materialist takes his departure from the external world, and esteems a man as one product of that. The idealist takes his departure from his consciousness, and reckons the world as an appearance. . . . The experience of the idealist inclines him to behold the procession of facts you call the world as flowing perpetually outward from an invisible unsounded centre in himself, centre alike of him and of them, and necessitating him to regard all things as having a subjective or relative value, relative to that aforesaid unknown centre of him." A little thought will convince the reader that the theory, that the soul builds the body, is as plausible and as probable as the other doctrine, that the body builds the soul. In short, subjective-idealism is just as true as materialism; and we may add, just as false. As is evident, if we start with man alone, our reasonings will leave us, at the end, in transcendentalism (subjective-idealism); and, if we take our departure in nature alone, we end, of necessity, in materialism; both partial, exclusive, and inadequate systems. The fact is, the body builds the soul, and the soul builds the body; but (we will permit ourselves to add) it is God who builds both.

What reasoning, what train of thought, lay in the minds of the writers of the Vedas when they explained the method to be followed by men desirous of avoiding a return into this evil mansion of pain? Why did they suppose that a distinction of the soul
from Nature, by the exercise of thought, would be sufficient to overcome the necessity for a return? We will endeavor to give an answer to these questions. But it will be necessary to explain beforehand some of the peculiarities of the Oriental philosophy, and to fix the meaning of several unusual terms and phrases, in order that the reader may readily understand the somewhat obscure texts we shall find it necessary to quote. By means of these definitions, we trust we shall be able to set forth in a clear light the true nature both of transcendentalism and of Aryan Orientalism, and also to show that the two are really one.

The invisible world, or world of potential existences, of the Orientals, is precisely what Jacob Behmen, John Pordage, the Gnostics, and other Western theosophists, designate as the abyss. Now, in order to describe or illustrate the meaning of the words, the abyss, or the thing they designate, we must have recourse to the reader’s own imagination; for the transcendental philosophy proceeds from within outwards, from the thought and imagination to the existing fact, and not conversely. Let the reader, therefore, suppose, in thought, this visible universe to be broken. Let all the qualities by which we distinguish the differences subsisting among the different bodies of Nature be imagined as ceasing to manifest themselves. Let all properties, all activities in Nature, be figured as re-entering into themselves. Let all that by which each manifests its own proper existence fall back into the virtual state, so that all properties, all activities, exist no longer in act, but only in the power
of acting. Like a circle that contracts more and more till it vanishes in its own centre, let all extensions contract into — into what, O ye Powers! Let all qualities derived from extension, or which are manifested to us through extension, enter again into themselves. Let, in short, all properties of things be only in potentiality * of manifestation. When all outward things are thus conceived as existing in potentiality of manifestation, man also must be conceived as having ceased from all actual existence,† and must be figured (if figured at all) as having re-entered the potential state. In fact, how does man act? how does he manifest himself? He moves, eats, drinks, thinks, wills, remembers, hopes, loves, desires, &c. But can a man eat without eating something? or can he drink

* What is potential existence? What is actual existence? What is the difference between potential and actual existence? A thing exists potentially, or in potentia, when it is possible only. This same thing exists actually when it has not only this possible (potential) existence, but also a real existence in actu.

† What is the difference in signification between the terms essence and existence? Essence is pure being, without efflux or manifestation. Existence involves outgoing, or manifestation. The soul of man, and every other substance, according to the foundation of its being, according to its centre or root, is; but according to its outgoings, manifestations, or operations, it exists. A thing is when in potentia, or when possessing only a possible existence; but it exists when it has not only its root of substance or being, but also an actual manifestation.

The foregoing definition of the word essence is the one given by Swedenborg, the Gnostics, and other theosophers, and is not at all the same with the one given by the schoolmen. The scholastic definition of the term, the one adopted by Spinoza, who scorns the gnosis, is as follows:—

Essence is that without which a particular thing cannot be what it is. A clock and a turnspit may be constructed of like materials; but it is essential to a clock that it should mark the regular divisions of time: if a clock lose its capability of keeping time, it ceases to be a clock, although it may still be utilized for communicating an irregular movement of rotation.
if he do not drink something? Can he move without moving through some space, or moving something; viz., his body? Can he love, hope, desire, think, without thinking, hoping, loving, desiring something? When all things are in the potential state, this something, which is necessary to all his actions, is withdrawn: and, as man cannot act or manifest himself without the concurrence of this something, he must also himself cease from all action, all manifestation; he must himself, in like manner, re-enter the potential state. Conceive, if you can, that you are removed in some distant region of space where nothing can come into contact with you; where the light of the stars of heaven is extinguished; where the undulations of the all-pervading ether cease to operate; where all motion, all change, all springing sources, have re-entered into themselves: conceive, also, your memory to be so blotted out that the voices of the past sound no longer: conceive that no fact remains present to the mind on which to base an inference in regard to the future. Would you live, act, think, or desire? Of what would you think? or what would you desire? All these objects of thought and desire have entered, according to the supposition, into the potential state, and manifest themselves no longer to you. Evidently you have entered, as far as is possible this side the gates of death, into the potential state, into the invisible world, into the abyss.

When we thus conceive this universe to be broken, to have returned into its original essence, but non-existence; when we conceive man also to have ceased from all actual existence,—we shall perceive all our
representations, humanity, the outward world, ourselves, all thought, all desire, re-entering into each other, so as to exist thenceforth only in germ, only in potentiality of existence. Man and the universe will be effaced together; all things will enter the potential state simultaneously: for the human intelligence reflects the universe; and the re-entering of the universe into the potential state will be marked by the smooth surface of the mirror (the mind of man), which gives thenceforth no reflection, which marks thenceforth no change.

Thus beings become one being in potentiality of manifestation. Yet, when we say one being, our words must not be taken with too much strictness. Nature and man have re-entered into themselves, and all things exist only in potentia: they have become one being, insomuch as each is now a cause existing in potentiality of operation; one being, inasmuch as these causes are undistinguishable the one from the other, since all that can effect a distinction is swallowed up in the abyss of potentiality. But they are many beings, inasmuch as they are the potentiality of a world involving diversity and change.

This one being, this world in potentia, is the abyss of Jacob Behmen, the invisible world of the Orientals.

"I am," says Kreesna in the Bhagvat Geeta, "that which is the seed of all things in nature; and there is nothing, whether animate or inanimate, which is without me. But what, O Arjoon! hast thou to do with this manifold wisdom? I planted the universe with a single portion, and stood still. [The son of Pandoo then beheld within the mighty compound being, within the body of the God of gods, standing together, the whole universe, divided
forth into its vast variety.] I see thyself, says Arjoon, on all sides, of infinite shape, formed with abundant arms and bellies and mouths and eyes; but I can neither discover thy beginning, thy middle, nor again thy end, O universal Lord, form of the universe!"

The following extract from the Laws of Menu is clear, and shows the distinction between the potential and actual worlds; the first being the substance and seed of the latter, and the latter being the former drawn out into actual relations:

"They who are acquainted with day and night know that a day of Brahma is a thousand revolutions of the Yoogs, and that his night extendeth for a thousand more. On the coming-forth of that day, all things proceed from invisibility to visibility: so, on the approach of night, they are all dissolved away into that which is called invisible. The universe even, having existed, is again dissolved; and now again, on the approach of day, by divine necessity, it is reproduced. That which, upon the dissolution of all things else, is not destroyed, is superior and of another nature from that visibility: it is invisible and eternal. He who is thus called Invisible and Incorruptible is even he who is called the Supreme Abode; which men, having once obtained, they never more return to the earth: that is my mansion. That Supreme Being is to be obtained by him that worshippeth no other gods. In him is included all Nature; by him all things are spread abroad."

We give a few more extracts from the "Bhagvat Geeta:"

"The great Brahm," says Kreesna, "is my womb. In it I place my fetus, and from it is the production of all Nature. . . . I am generation and dissolution; the place where all things are re-posted, and the inexhaustible seed of all Nature. I am sunshine, and I am rain. I now draw in, and I now let out. I am death and immortality. I am entity and non-entity. . . . The ignorant,
being unacquainted with my supreme nature, which is superior to all things, and exempt from decay, believe me, who am invisible; to exist in the visible form under which they see me. . . . I am the creation and the dissolution of the whole universe. There is not any thing greater than I; and all things hang on me, even as precious gems on a string. I am moisture in the water, light in the sun and moon, invocation in the Vedas, sound in the firmament, human nature in mankind. In all things I am life, and I am zeal in the zealous; and know, O Arjoon! that I am the eternal seed of all Nature. . . . I will now tell thee what is Gnea, or the object of wisdom; from which understanding thou wilt enjoy immortality. This is that which has no beginning, and is separate, even Brahm, who can neither be called sat (ens) nor asat (non-ens). Unattached, it containeth all things; and, without quality, it partaketh of every quality. It is undivided; yet in all things it standeth divided. It is wisdom,—that which is the object of wisdom, and that which is to be obtained by wisdom."

We may illustrate this doctrine still further by commenting on the following extract from Dupuis. That author says,—

"Amid the shadows of a dark night, when the heavens are covered with a thick cloud, when all bodies have disappeared from our eyes, and we seem to dwell alone with ourselves and with the black shadows which surround us, what is then the measure of our existence? How much does it differ from an entire annihilation, especially when memory and thought do not surround us with the images of objects which the day revealed to us? All is dead to us; and we ourselves are, in a certain manner, dead to Nature. What can give us life, and draw our soul from this mortal weakness which chains down its activity in the shadows of chaos? A single ray of light can restore us to ourselves, and to Nature, which seemed so far removed from us. Behold the principle of our true existence, without which our life would be but the sentiment of a prolonged ennui. It is this need of light, it is its creative energy, which has been felt by all men; for they have seen nothing more
frightful than its absence. Behold their first Divinity, whose brilliant splendor, sparkling forth from the bosom of chaos, caused to proceed thence man and the universe, according to the theological principles of Orpheus and of Moses."

The thought here expressed is simple; but its power is inexhaustible. We need not dwell on the view of the nature of life which is so clearly and beautifully expressed; for we shall have much to say of it hereafter. But we would ask Dupuis, Is there nothing but light which can expel this obscure gloom? is there nothing but light which can deliver man from this nugatory abyss of potential existence? How much is involved in the expression, "especially when memory and thought do not surround us with the images of objects which the day revealed to us"? A single ray of light would indeed restore us to reality; to communion with nature; but would not the remembrance of a single object seen in the day awaken the soul to a real life, though not to an immediate communion with nature? While we are in this state of darkness and of silence, this state of dreaming without dreams, the whole expanse, if we may so speak, of memory, is spread before the inner eye, but without form, and, as it were, void. No distinct image is present to the mind; and all our conceptions lie in the memory and imagination (which is another form, or rather a modification of memory), in the mere potentiality of existence as actual conceptions. If we begin to act mentally, if we begin to form to ourselves a picture or conception, the facts of memory rise up before us; and, taking the isolated parts, we bring them together, —perhaps in new forms by the
exercise of imagination, perhaps in the reproduction of some well-known collocation by the exercise of simple memory.

This vast and apparently empty (as in the case supposed by Dupuis) expanse of memory, which stretches out before the inward eye when we seem to cease from all thought, is as the invisible or potential world, as the abyss. This empty expanse, containing the germ of all our conceptions, is a similitude, a correspondency, of the invisible world of the Orientals. But the invisible world is the seed of all nature; while the vacant expanse, or world, of memory and imagination, is finite, and the seed of the conceptions of the individual man only. The whole universe is contained, in potentia, in the abyss: in like manner, in this field of memory are contained potentially all those elements which go to make up the conceptions formed by the mind when it enters into operation.

According to the Oriental theology as perfected by Sakyamuni (and Buddhism is the only Indian doctrine that has profoundly influenced the current of thought in Western Asia and in Europe), a man must, in this world, crucify every affection, every tendency, and endeavor to be, at the moment of death, in the state described in the quotation from Dupuis: thus, and thus only, can he escape the return, the necessity of transmigrating. "At the end of life," says Kreeshna, who is the Abyss, "he who, having abandoned his mortal frame, departeth thinking only of me, without doubt goeth unto me; or else, if he think not of me, but of other things, whatever nature he shall thus call upon at the end of life, when
he shall quit his mortal frame, *he shall go into it.*”

When a man dies who is without affection, whose mind is fixed upon the Abyss, upon the universal unity of indifference, he will not take any form (for he has no particular character or tendency), but will at once enter into the potential state. But this re-entrance into the potential state seems to be annihilation (though the essence of the soul subsists) rather than immortality. Kreeshna is the Abyss; and the highest state of future happiness held out by the “Bhagvat Geeta” consists in a return into Kreeshna. In this state of essence without existence we should indeed be free from the danger of migration, for we should be thenceforth free from all relations whatever; but no future life is compatible with such an order of being. We should like to know how our transcendentalists answer the objections brought against the doctrine of the “Bhagvat Geeta.” Their whole desire is to re-enter into themselves; to be absolved from all dependency upon any thing which is not themselves. How do they escape the Abyss? How do they avoid a return into Kreeshna, into “the Supreme Abode”? Their only argument for immortality is the metaphysical one, derived from the fact of the soul’s simplicity: but this proves only that the soul’s being is imperishable; it proves nothing in relation to a future life.

Here are some intimations of the rule of conduct which ought to be followed by the aspirant after immersion in Kreeshna:

“Those men of regulated lives,” says Kreeshna, “whose sins are done away, being freed from contending passions, enjoy me.”
... He, O Arjoon! who, from conviction, acknowledgesth my divine birth and actions, doth not, upon his quitting his mortal frame, enter into another; for he entereth into me. ... They who serve me with adoration, I am in them, and they in me.* ... Wise men who have abandoned all thought of the fruit which is produced from their actions are freed from the chains of birth, and go to the regions of eternal happiness. ... A man is said to be confirmed in wisdom when he forsaketh every desire which entereth into his heart, and of himself is happy, and contented in himself. ... The wisdom of that man is established, who, in all things, is without affection; and, having received either good or evil, neither rejoiceth at the one, nor is cast down by the other. His wisdom is confirmed, when, like a tortoise, he can draw in all his members, and restrain them from their wonted purposes. The hungry man loseth every object but the gratification of his appetite; and, when he is become acquainted with the Supreme, he loseth even that. ... The man whose passions enter his heart as the waters run into the unswellling, passive ocean, obtaineth happiness. ... The man whose mind is led astray by the pride of self-sufficiency thinketh that he himself is the executor of all those actions which are performed by the principles of his constitution; but the man who is acquainted with the two distinctions of cause and effect will give himself no trouble. ... The man who, employed in the practice of works, is of a purified soul and a subdued spirit, and whose soul is the universal soul, is not (injuriously) affected by so being."

* See St. John’s Gospel, ch. xiv. 20, and ch. xvii. 21. Recent investigators profess themselves able to show that the Bhagvat Geeta is of much later origin than has heretofore been supposed. It appears, now, to be probable, not that the writers of the New Testament were influenced by the Bhagvat Geeta, but that the writer of the Bhagvat Geeta was influenced (not in this passage only, but in many others) by the style of St. John’s Gospel. The substance, however, of the philosophic doctrines of the Bhagvat Geeta may be traced back among the Buddhists, to a date more than seven hundred years before the coming of our Lord.

This pamphlet was written in 1845 or 1846; and the author, at that time, supposed the Bhagvat Geeta to be a very ancient book.
"This whole world was spread abroad by me," says Kreeehna, "in my invisible form. All things depend on me, and I am not dependent upon them. Behold my divine connection. My creative spirit is the keeper of all things, not the dependent. Understand that all things rest in me, as the mighty air, which paseeth everywhere, resteth in the ethereal space. At the end of the formation, at the end of the day of Brahma, all things, O son of Koontee! return into my primordial source; and, at the beginning of another formation, I create them all again. I plant myself in my own virtue, and create, again and again, this assemblage of beings, this whole, from the power of Nature without power. Those works confine not me; because I am like one that sitteth aloof, uninterested in those works. By my supervision, Nature produceth both the movable and the immovable. It is from this source, O Arjoon! that the universe resolveth."

Buddhism, as it seems to us, is the true conclusion, and the logical halting-place, for all these speculations. The Buddhists teach that the universe is brought into the possession of such existence as it has through the disintegration of the Aboriginal Nothing by means of another subsequent nothing. The first Nothing is the Abyss of potentiality: the subsequent nothing is error. The world commences by the fact that essences lost in the indifference of mere potential being, become deluded into a belief of their own and each other's existence. Their error gradually becomes stronger and stronger; and at the same time, by reason of their error, the universe appears to thicken and harden little by little, and to seemingly pass into actuality. But this actuality is not reality; it is mere grossness of error; it is maya, illusion. The universe is nothing. Man's body, and the worlds, exist only in erroneous supposition. The reality of
the worlds is only such as is given in the formula, actuality = 0 × 0. Evil, sorrow, and pain have their abiding-place nowhere but in actual worlds. The actual universe is therefore the substance of evil, if evil can properly be said to have any substance. The way of salvation is therefore plain. It is the path of knowledge; for knowledge destroys error, and, consequently, the visible universe which is founded in error, as light dispels darkness. The perception of visible things is a mistaken prejudice, bred from unreasoning habit. As man progresses in knowledge, error diminishes, and the world and himself recede towards potential existence; and, when man becomes perfect in knowledge, error is abolished, and man, and the world so far as it concerns man, re-enter the abyss together, and cease to exist.

The Buddhists designate the original nothing by the word nirvana: va, to blow; nir, out. The soul attains beatitude when it reaches nirvana; when it becomes like the flame of a candle that has been blown out; when it becomes defunct, extinct, nothing. It comes from nothing, it is nothing, and it goes to nothing.

We have nothing to say in praise or dispraise of Buddhism; but we will conclude our remarks by observing that its doctrines, though transcendentally spiritual, are not at all the Christian doctrines which proclaim the existence of a living God, and a future of eternal life for the human soul, but, on the contrary, their distinct negation.

It is estimated that there are in the world more than three hundred and fifteen million adherents of
the Buddhist faith: the Christians, counting all denominations, are supposed to number less than half as many. Buddhism is the religion of the vast countries between the Himalaya Mountains and the boundaries of Siberia, of the majority of the people in the great empire of China, the religion of the empire and people of Japan, of the States in and near the peninsula of Farther India, and of many of the islands south and east of Farther India. It is hard to believe that the most widely diffused religion in the world, and the one which, after Christianity, is the most spiritual of any, the most favorable to civilization, the most effectually moral, and the one that has awakened in its missionaries the greatest enthusiasm, followed by the greatest amount of self-denial and self-sacrifice, is a religion professedly founded on speculative atheism; but such appears to be the established fact.

The Buddhist theory denies that there is any true God other than the impersonal aboriginal Abyss which is the one ground of all visible things. The counter-theory affirms the self-consciousness of the Supreme, and teaches that the personality of God is a necessary condition, without which the Abyss cannot be. Shall He who is the author of all consciousness, and of all life, be Himself devoid of self-consciousness, and not alive!
