## INTRODUCTION.

. aE original object of the secret rites of freemasonry has been a subject of inquiry for upwards of six hundred years, and the enigros seems not to have been satisfactorily solved. The initiated, as well as those without the pale of the order, are equally ignorant of their Aerivation and import. What mote ith be $f$ is a question as difficult of solution now as when firet propounded by king Henry VI. of England.

The intention of this work is to endesvour to unravel the intricate web in which the myatery is involved, by tracing the order back to its source, and, by showing its intimate connection and similitude to institutions more ancient, put it beyond a doubt, that it aprang from, and is a continuation of the rites and ceremonice observed in those setablishmonts.

Had a work, taken notice of by the Abbe Barruel, fallen into the hands of the editor, he would probably have been saved much trouble in the prosecution of this research.-"We recommend," eays he, "to our reader to peruse the treatise of a most learned and zealous mason, dedicated Deimen die es Verstehen, or To those sho can understand. He leaves no atone unturned throughout antiquity to prove the identity of the ancient mysteries of Eleusias, of the Jews, of the Druides, and of the Egyptians, with thoee of freemesonry,"

In pursuance of this course, it becomes necessary to take a transient view of the dogmas and customs of Egypt in the remotest periods of ite history; for it sppess evident, that this country was ths ealient point from which the religious obeervances of the ancient world commenced.

What are emphatically called the mysteries, is but another name for religion; and an exposition of what they consisted, is of course embraced in zwe subject as forming a parallel with the rites of masonry. Independent of the main design of the work, these topics in themselves poseses great interest as matters of curioeity; which is enhanoed by observing the close afflity which they bear to the practices of the masonic order at the present day.
"Among all the ancient nations which hava been distinguished in history, there is none more worthy of our notice than the kingdom of Egypt. If not the birth-place, it was the early prutector of the aciences; and cherished every apecies of knowledge, which was known or cultivated in remote times. It was the principal source from which the Grecians derived their information; and, after all its windinga and enlargements, we may still trace the etream of our knowledge to the bank of the Nile," (New Edinb, Ency.)

Whatever may be thought of the dootrines of the myoteries, they onforced the principles of morality by the most terrifio scenical repre-
esntations of the tormenta of the wicked on the one hand, and of the moes pleasing spectacles of the happinees of the righteous on the other, in a future life. Theae scenes are faintly copied in royal arch masonry, and the aame morals, in like manner, inculcated.

The writer is not a devotee to the mystic rites of the craft : he is not propared to vindicate the outragee committed by individuala of the order, fnstigated by a fanatical seal for the protection of frivolous ceremonies; nor will he apologive for the use that may have been made of the fraternity to promots the viows of political aspirante. If any improper Infuence in thia respect has been omployed, as is asserted, he doen not hesitate to pronounce it anti-masonic-againat the rules of the order; for both religion, on which itself was originally founded, well as politice, are totatty excluded from the lodge.
Thie most material and beat founded objection that has been brought against masonry, is the oaths which it imposes upon the brethron. They are shocking to the taste of the present age: their continuance was an enormous blunder in the revivers of the order in 1717. They were then no longer neceseary. Masonry contains nothing which at that time rondered ite members amenable to the laws of England.

The false construction put upon these oathe, has implicated the order in the foulest deeds ; and perhaps caused the masonic obligntions to be considered paramount to legal asths administered in courts of law, and thus perverted the course of justice. The only meene, therefore, of avolding this avil, and of wipiog away the stain at present attached to the society, is a tolsl sbendonment of the oathe ,

However desirable this may be to many of the brethren, it is reeisted by others on the sbeurd and superatitious notion, that no alteration can take place in "the ancient land-marks" of the institution; which, like

[^0]the laws of the Medes and Persians, must remain etarnally the mane: when, notwithatanding, within about fifty yean, the old inclosures have been broken down, and the boundaries of the order extended so as to include an immense territory beyond the anoient limits.

After this unqualified reprobation of the oaths, I confidently nssert, that nothing is taught or practised in the lodgea contrary to the atrictess morals. The exporition of the ritual by thoee even who are inimical to the the order, proves the faot. And, ss has been often urged, if there were no othar teatimony, the charsoters of many of those who are known to the members, is a sufficient guarantee that nothing improper would be tolers ted.

If it be said, that a pertial feeling is created among the brethren that operates injuriously to the public good, it may be answered, that the same objection may be urged against all ausociations of individuals, whatever may be their views and intentions.

This partiality, by the way, has been the cause of relieving many in distress, and even ssving the lives of valuable citivens. A case of this kind happened in the American revolutionary war, which is often alluded to by masonic writers. Col. McKenstry was taken prisoner by the Iudians, who were proparing to put him to a cruel desth. In this emergenoy, he gave the masonic sign of distrees, which induced a brother mason, a British offcer, to interfere and save his life.

While this transaction reflecta honor upon the officer es a mason, it st the same time leaves an indelible stain upon his character an a man, which equally sttaches to his ling and government. What I employ savagea as auxiliaries in war, and then stand by and look cooly on, while thoy amuee themselvee in tomahaoking and scalping their prisoners, unleea the latter can give the taliamanic sigaal, and pronounce the Shibboleth of masonry t-But as kinge are considered by their subjects not to be moral agenta, but looked upon as minors or idiots who can do no worong, the prime miniater at the time, Lord North, and his principal advieer, Lord Saokville, munt bear the bulk of the odium.

This rule of masons to grant sid to each other under certain circumstances, was probebly derived from the laws of Egypt, by which, "He who had neglected or refused to save a man's life when attacked, if it were in his power to sesist him, wis punished as rigorously as the assast sin : but if the unfortunste person could not be succoured, the offender wiss at least to be impenched, and penalties where decreed for any neglect of this kind. Thus the subjects were a guard and protection to one anothor; and the whole body of the community united against the desigus of the bad."-(Rollin's Anc. Hist)

Some apology for the awful osthe administered in masonic lodges is perhaps due on the ecore of precedent; which has in all times greetly influenced the oustoms and government of the worid, and sometimes sanctified principles the most absurd and peraicious.

The myaleries were protected by the most severe oaths in Grocee and, Rome, and no doubt, were equally so in Egypt, the place of their
birth. And, moreover, in the two former countries, if not in the latter, revealing the secrets of these mysteries was puniahod with death by the laws.

For this there was a substantial reseon : the greater mysterise taught the doetrine of one Supreme God, and that polytheism was an error; admitting, st the mame time, that the sun, moon, and stars, were minor divinities under the superintendence of the one Supreme. The belief, however, in Hero-Gods wan so angraited on the minds of the ignorant multitude, that it was feared the open promulgation of a doctrine in opposition to that faith would lead to disturbancees in the state that might produce great evil. This myatery consequently was confded only to a choeen fow of the moet intelligent, under the ennction of an oath and the penaltiee of the law.

When freemasonry was first estsblished in England, eoon aftor the ediot of Canute, in the beginning of the eleventh oentury, (as is proeumed,) prohibiting in toto the Drnidical worship, the atrongest oathe were required to bind the initiated to escrecy : for had the real intent of its founders been known, it would doubtleen have cont them their lives.

That Canute was superstitious, and of course vindictive, is ovident from his having made a pilgrimage to Rome, through excenive religious zeal, in 1030 ; and therofore would, no doubt, have puniahed the Druide for an infraction of hin edict with mercileas cruelty.

By the incorporation of the Danes with the nstion, (seys Lingard, in his bistory of England,) the rites of paganism had again mede their appearance in the inland. Canute forbede the worship of the heathen godes, of the sun or moon, of fire or water, of etones or fountains, and of foreata or trees.
This forocious and sanguinary warrior, in 1080, made a pilgrimage to Rome. On the road he visited the most celobrated ohurchees, lesving everywhere proofs of his denotion and liberality. In his return he proceeded immediately to Denmark, but dispatched the Abbot of Tavistock to England with a letter describing the object and issue of his journey. In this letter he mays, "It is long since I bound myeelt by my vow to make this pilgrimage; but I had been hitherto provented by affairs of state, and other impediments. Now, however, I return humble thanka to Almighty God, that he has allowed me to visit the tomb of the blosed apoatles, Peter and Paul, and every holy place within and without the city of Rome, and to honor and venerate them in person. And this I have done, becaume I had lourned from ny teachera, that the apostle St. Peter received from the Lord the great power of binding and loosing with the keys of the kingdom of heaven. On thim nccount I thought it highly useful to solicit his patronage with God."

He concludes his letter as follows: Laatly, I entrest all my bishope, and all the aheriffs, by the fidelity which they owe to me and to God, that the church dues according to the ancient laws, may be paid before my return, namely: the plon-alme, the tithes of cattle of the present
₹ear, the Peter-pence, the tithes of fruit in the middie of August, and the Kirkelot at tie feast of St. Martin, to the pariah church. Should thin be omitted, at my return, I will punish the offender by exacting the whole fine appointed by law. Fare ys well."

Farthermore it may be remarked, that the customs of the times in which I am ondeavouring to nhow that masonry was established zanctioned the most horrible oaths.
"The multiplicity of oaths in the judicial proceeding of the middle ages, (says Dr. Henry, in his History of Great Britain, v. iii, p. 425) had the same effect that it will alwaye have, of diminishing men's veneration for them, and giving occasion for frequent perjury. The legislators of those times employed several devices to prevent this, by swakening the consciences, and keeping alive the religious fears of mankind. With this view, their outhe were couched in the most awful forms of words that could be invented; and these forms were frequently changod, that they might not lose their effect by becoming too familiar."

Many who have written with great sperity against masonry, under talse impreesions of ita geveral tendency, have doubtless been actuated by the purest motivee, whilst others, such as the Abb 6 Barrual and Professor Robinson, have been instigated by the most malignant prejudices I shall take some notice of these two writers in the sequal.

## AN EXPOSITION

## OF THE

## MYSTERIES, \&c.

## CHAPTER L

DOGYAB AND CUBFOME OF THS AKOIENT ROTPTLANB.
Ir will be etterapted in this work to show that the mysteries and ceremonise of the celebrated order of Freemasons sre derived from the religious dogmas and customa of ancient nations, perticularly those of Egypt, where the foundation of the whole maschinery of religious myntories, as far es is known, was frat hid.

In order, therefore, to attain a comprahencive viev of this aubject, it becomes neoessary to be well informed of the ritens, cuastoms, and ceremonies of the ancient inhabitants of that famous country. And as the Abbe Pluche, in his History of the Heavens, han treated more minutely of these topics, and explained them more satiafactorily, than any othar nuthor that has fallon under my observation, I shall commence this volume with extracts from his work.

Critical histories of the fabulous gods of paganism, under the semblance of truth, have been trasemitted from age to age, and been generally recoived as narratives of roal feots. Pluche has unveiled many of these poetical fictions, and pointed out the source from which they were derived.

My limita will not permit me to give the whole of his expositions; but on account of the great merit of the work, with which, it is proaumed, but few American readers are eequainted, I have not confined the selections merely to such parte as have a particuler bearing upon the subject in hand.

As the author is littlo koown in America, I will pive an abstrect of a aketch of hie lile and writingi, contained in La Biographie univerafllg Paris, 1880 ,
Anthony Plache, a celebrated writer, was born at Reims, in 1688 ; and obtained the appointment of Profeseor of Languages in the Univeraity of that city. Two yeare alterwards be peased to the chair of Rhetoric, and wan raised to holy orders. The liashop of Leon, (Clermont ${ }_{2}$ ) becom-
ing acquainted with bis talente, gave him the presidency of the Collegh of his diocese. By his assiduity and acience the institution was much improved; when particular circumstanoes occurred that troubled his tranquillity, and obliged him to relinquish his employ. The Intendent of Rouen confided to him the education of his son, at the request of the celebrated Rollin. The Abbe Plucbe having fulfilled this trust with success, left Rouen for Paris, where be gave, at first, lessons on Geography and History. Through the notice of distinguished authors, bis name soon became celebrated, and he austained that celebrity by his works.

He gave successively to the publie,-first, the Speotacle de la Nature, (Nature Diaplayed), in 9 volumes, 12 mo . This work, equally instructive as agreesble, is written with much clearness and elegance. Second, The Histoire du Ciel, (History of the Heaveng, in 2 vole, 12 mo . In this work is to be found two parte, almoet independent of each other. The firnt contsins learned researches upon the origin of the poetical heaveas This is nearly a complete mythology, founded upon new and ingenious ideas. The second is the hiatory of the opinions of philosophers on the formation of the world. The author here shows the uncertainty of systems the most accredited. Besides a diction noble and well turned, one here finds an erudition that doee not fatigue. As to the ground of the system exposed in the first part, Voltaire cells it, probably with reason, the Fable of Heaven. Third, La Mécanique dea Languee, Paris, 1735, in 12mo. Ho herv proposes a means more short for learning languages. Fourth, Concorde de la Geographie des difierens Ages; Paris, 1764, in 12ma.

## Plan of the Work.

I find myself under the necesaity of oversetting, or unravelling, fables' in order to establish truth. The men most celebrated who have treated of the formation of the heavens and of the earth, or of their matual relations, were pagans, philowophern of different nations, and sacred writers. Those syatoms which have been given by the Egyptians, Phenicians, the Greeks, and Romans, are obsoured by fabulous recitals, and by metamorphoses full of abourdity. Although they were the most ingenions and polished of all people, they formed idess so strange on the government of the heavens, and on the powers which sustain the human species, that there is no need to combat them with argument; they carry their own refutation with thom. But, from the depth of this frightful darkness it is possible to olicit light. Through these fictiona I find a fact, the explication of which showe us what has given birth to fables; it is the development of them. The first fixed point is the aigaification of the names and figures which have served, from the highest antiquity, to characterize the sun, the moon, and the stars, sccording to their differont aituations. The usages of the ancients and the inspection of
nature, will aid us in discovering the sonse, the knowlerige of which will lead un immediately to percoive the enormoun abuse that has been made of the institutions of the firat men, and pleco in auffient light the origin of the Ldolatry of our fathers.

Another effect of this research is to teach us that the same mistake which hes peopled the heavens with chimerioal divinities, has given birth to a multitude of false pretentions on the iofluences of the heavenly bodies, and the errors which still tyrannise over moet minds. If our history of the heavens produce no other benefit than the discovery of the mistakea which have precipitated the human race into errora that diegrace it - the oonsequences of which atill diaturb the repose of society-this will undoubtedly be an advantage sufficiently satisfactory.

My remarks may bo useful to youth, by unveilling to them those fabulous personegea which they hear so often mentioned. I have still greater hopes, perhaps with too muah presumption, that this small easay might be of nome use to teechers thamselvea. I should think myself happy to have aseisted their work, by eome views which they might afterwards improve and proportion to the wants of their disciples. Teachers, however well qualified, generally want leisure to undertake researches of any considerable langth; and the more judicious they are, the more diaggreesble it is to them to be for a long series of years handling fablee almost always absurd or scandalous, without being recompensed for the tiresomenese of these ridiculous stories, by the satisfaction of being able at least to find out the origin of them, I here derive all the branches of idolatry from one and the same root. I endeavour to ahow that the eame mistake has given birth to the gode, goddesses, metamorphoses, auguries, and oraclee. The fables, thus reduced to their true value, will amuse without denger ; and the masters possibly will like and adopt a principle whone great simplicity puts it within the reach of ahildres thomselves.

The chiel benefit I should be glad to reap from my labour would be the facilitating |the study of nature, and oven that of religion, in reatraining the maid study within the bounds of possibility and neosasity, both which are atill of no small extent.

The engravinge accompanying the work areall drawn from the monumenta of antiquity. They are marked as follows :-all those found in Antiguify Sxplained, by Montfacoon, with an M; those collected by Certari, with a C ; those which are on the vase of agete of St, Denyb, with $\mathrm{I}_{\mathrm{V}}$; and those which are taken from the table of Isis, published by Pignorius, with a T.

## Uager Common to All Nations.

Wo are sometimes amazed at the conformity found in many respectes between the practices of the Hebrews and thowe of the nations given
over to the groesest idolatry. Most of the learned, in order to sccount for such a similitude of usagos, say that fales religions only oopied and mimicked the true; and from the conformity of some particulars of mytbology with sacred hiatory, they think themselven suthorized to affirm that the heathens had the communication of the holy scriptures, or must have frequented the company of and imitated the Hebrews,

Other learned men, and among the reat Sir John Maraham, in his Rule of Times, being sensible how much molnown ta, and as it were, separated from other nations, the Hebrews were,-bow much dialiked by those that knew them, -and of couno how little fit they where to serve them as models, and finding, moreover, from a multitude of evident proofs, that the sacrifices, the coremonial, and the vary objeots themselves, of idolatry, were prior to Mosen and the holy eoriptures, they have maintained that the laws and the ceremonies of the Hebrews ware an imitation of the cuatoms of Egypt and the noighbouring nationa, but sdapted to the wonhip of one Gods

## Symbolic Writing.

Ther Egyptians, even the most ancient of them, were sequainted with the signs of the Zodiac. Their monumente, which are known to be of the earliest antiquity, are covered with figures, among which those of the crab and the wild goat, of the balance and the scorpion, of the ram and the bull, of the kid, the lion, the virgin, and the rest are frequently found.

The twelve symbolical namee, which signify the twelve portions, both of the year and the hesvens, were a prodigious help towards regulating the beginninge of sowing, mowing, barvest, and the other works of mankind.

It wha found very convenient, to expose in public a manll figure, or a single letter, to notify the exact time which certain general works were to be begun in common, and when certain feesto were to be celebreted. The use of these figures appeared so convenient, that they by degrees oxtended it to more thinga than the order of the calendar. Several symbols, fit to inform the people of certain truths, by some analogy or relation between the figure and the thing they have a mind to have understood, were devised,

This method of esying or showing one thing, to intimate others, is what induced among the eastern nations the taste of allegories. 'They preserved, for a long time, the method of tasching everything under bymbols, calculated, by a mystarious outeide, to excite curiosity, which

[^2]Tha afterwards recompensed by the estiofaction of having discovered the truthe which they concealed. Pythagoras, who had travelled among the eastern nations, thence brought that cuatom to Italy.

Ham, and thoee of his descendants who came to inhabit the benks of the Nile, and the whole Lower Egypt, first tried to cultivate the earth according to the order of the year, and in the manner used in other countries; but no sooner were they ready to cut down their harvest, in the driset season of the year, and without the lesat appearance of rains but the river swelled, to their great amazement; it flowed on a sudden over its banks, and took from them thoee proviaions which they thought themeelves already eure of. The watere gontinued to rise to the height of twelve, fourteen, or even sizteen cubita, tieovered all the phins, carried away their cattle, and even the inhabitants themealves. The inundation lasted ten or oleven weoks, and oftentimes more.

It in true, the overflowing left on the land o mud which improved it ; but, the difficulty of obtaining a harveat, since the summer, the only time proper for it brought the atorm and the inundation, caused Bam to quit both the lower and the middle Egypt, and retire to the higher. He there founded the city of Thebes, originally called Ammon-no, Ammon's abode. But many, finding it inoonvenient to remove from lower Egypt, which after the retiring of the waters, was throughout the romaining part of the year like a beautiful garden, and a delighttul plaoe to dwill in, endeavoured to fortify thommelves againat the return of the waters.

They observed from one year to another, that the overflowing weas always preceded by an Eteeian (annual) wind, which blowing from north tosouth, about the time of the pesgage of the eun under the atars of the crab, drove the vapours towards the south, and gathered them in the midadle of the country, (Ethiopis, now Nubis and Abywainia) whence the Nile came; which there caused plentiful rains, that swelled the waters of the river, and brought on the inundation of lower Egypt.

But they wanted the means of knowing exaotly the time when it. ehould be neceseary for them to be prepared for the inundation. The flowing of the river beyond its banka happened some daye sooner or later, when the sun was under the stars of the lion. Near the starn of Cancer, though pretty far from the band of the sodine towards the

[^3]south, and s fow weoks after their rising, they see in the morning ance of the most brilliant, if not the largeet star of the whole hesvens, ascencing the horizon. It appeared a Irtile before the riaing of the sun, which had rendered it almost invirible for a month or two before. Tho Egyptians then pitched upon the rining of this magnificant star as the infallible sigu of the sun's pasaing under the atars of Leo, and the beginning of the inundation. That atar becomee the public mark, on which every one was to keep a watohful eya, not to miss the instant of retiring to the higher grounda. An it was meen but a very little time above the horivon, towards the dawning of the aurors, which becoming every instant clearer, soon made it disappear, it seemed to show itself to the Egyptians, merely to warn them of the overfluwing, which soon followed.

They then gave this atar two names, having a very natural relation to the helps they borrowed therefrom. It warned them of the danger, whareupon they called it Theaut or Thayuut, the dog; they called it alno the barker, tho monitor, in Rggptian, Anubis; in Phenician, Hannobech; which by-the-by, shows the analogy there was between these two languages notwithstanding the divarsity of many words, though chiefly in the pronuncintion, which made thom appear quite different. Tho connection of tbis star and the riaing of the river, caused the people to call it commonly the Nile-star, or barely the Nile. In Egyptian and in Hebraw, Sihor ; in Greek, Sairios; in Latin Siriug The Egyptiana gave it beaides, but in latter times, the name of sothin, or Thotes, which if the same with his other name, Thot , the dog, with a different pronunciation.

The inhabitante, retiring into their towns on the warning of tbe northern wind and the dog-star, remsined idle for two months or mare, till the waters were perfeotly drained. Therefore the prudence of the Egyptisns, before the overflowing, chiefly consisted in observing tho termination of the vernal winds, the return of the northerly which began with the summer, and at last the rising of the dogostar, which circumstance was to them the most remarkable point of the heavens.
During their inaction, after the rising of the river beyond its banks, their attention was directed to the observance of the return of tho soutiserly winds, more moderate than thoee of the apring, and which facilitated the flowing of the river towarda the Mediterranean, by the conformity of their blowing with its direction, which is from south to north;" alao to measuring the depth of the river, in order to regulate their husbandry according to the quantity of mud, which was always proportioned to the degree of the increas6.

I will here remark, that the Anubis or Dog-Star, so useful to the ancient Egyptiane, is the Blacing-Star of masonry; and, although the

[^4]craft ars ignorant of its origin as a masonic aymbol, they are actually taught the moral drawn from its original emblematical use.
"The blaxing-star represents that prudence which ought to appear conspicuous in the conduct of every mason ; but is more especially commemorative of the star which appeared in the east, to guide the wise fien of Betitethm, to proclaim the birth and the presence of the Son of God"-(Allyn, p. 17.)

What connection can possibly exist between a star and prudence except allegorically in reference to the caution that was indicated to the Egyptians by the first appearance of this star, which warned them of appronching danger 1

Mr. Converse in his explanation of the intention of this emblem, in his Symbolical Cbart, observes, "Approaching evil is frequently averted by a friendly admonition." Pluche, in a part of his work not quated above, says, "The names given to this public sign, were Anubis, the barker, the giver of advices, or Thaut, the dog." The meaning then that has been handed down to masons of their blacing-atar, completaly identifies it with the Anubis, the dog-star.

The advice given to the ancient Egyptians by this star, was undoubtedly very important to them, but it cannot be of the least advantage to the masons of Europe or America.

As to the allusion to the star that guided the wise men to Bethlehem, every intelligent and candid mason will acknowledge its absurdity; because he must know that the principles and dogmas of freemesonry contained in the ancient myateries, from which it is derived, existed long before the birth of Jesus Chriat.

Webb in his "Monitor" esys, "The Mosaic pavement is emblematic of human life, chequered with good and evil; the beautiful border which surrounds it, those blessings and comforts which surround us, snd which we hope to obtain by a faithful reliance on divine providence. which is hieroglyphically represented by the blazing-star in the centre."

This symbol is peculiarly, if not exclusively, applicable to the Egyptians who inhabited the Delta, who by placing a reliance upon the warning providently given by this star, and in consequence retiring to the high ground with the produce of their agriculture, might enjoy the comforts that surrounded thom.

The same necessity which rendered the Egyptians astronomers, made them also paintera and writers. The inspection of the heavens had taught them at last how to regulate their tillage, so strangely cronsed by that disposition which wes peculiar to Egypt The cuatom of giving symbolical names to the objects that served them as rules, most naturally led them to delineate in a rude manner the figures of these aymbole, in order to inform the nation of the works in common to be done, and of the annual eventa with regard to which it was davgerous to misreckon. This service was performed by a number of persons appointed for that purpose and maintained at the public expense, whose duty it was to study the revolutions and espects of the heavenly bodies, and to communicate the neceseary information to the people.

Suoh is the original of the eacerdotal order mo ancient in Egypt ; the chiof functions of which always ware the study of the heavens and the inspections of the motions of the air. Such is the origin of the famous tower where that company wes lodged, and where the charactara of the moveral works and the symbola of the publio regulation were carofully dolinested. Which symbols appeared in time very mynterious, when the meaning of them was forgotton. That tower, the structure of which has caused so much criticism, was at that time, without any affectation of mystery, called the Labyrinth, that is, the tower, the palaco.

Now, if we would in a reasomable manner unriddle some of the moat umal of the Egyption symbole, we ought to consult the mants of the Egyptian colony. It is there we are naturally to look for the meaning of the figures which were expowed to the eyes of the whole nation assembled.

The bawk and the hoop ware the namee and the symbolical figures given the two winds, the returu whereof the Egyptians were moet conoorned to observe. The hawk eignifiod the Etesian northerly wind, which, in the beginning of the summer, driven the vapours towarde the south, and which covering Fthiopis with thick cloude, there resolvee them into rains, and makes the Nile swell all along its course. Tho hoop, on the contany, signified the southerly wind which promoted the drining of the watern, and the return of which proclaimed the measuring of the lands and the time of nowing. I must here produos some analogy, and some peculiar resemblanco, betwean a hawk and a northeriy, and a hoop and a southarly wind

Naturalists obearve that the havis delights in the north; but that at the return of mild weather, and when she casts her feathers, the makee southward with her winge apreed, and looks towards the place whenco a warm sir comes, which may aseint the falling of her own feethers, and restore her the besuties of youth. In times of the remotest antiquity and even bofore Moses, the Arabiana, who were the neighboure and alliee of the Egyptians, had an ides of the hamk in all reopects like that which naturaliste give us. In the convernation which God had with Job, and in which he shows that it is not man but the Creator, who, by a special providence, has varied all the parts of nature, and to good purpose han regulated the inclinations of snimale: Does the havok, says He to him, by thy wiodom thake her old foathers, to ges rid of them, and atretch her seings towoards the wouth ( (Job, xxxix. 29.) This bird, then, on eccount of the direction of itn flight at the return of the hesta, was the most natural emblem of the annual wind, which blows from north to south about the aummer solatice, and which on eccount of the effecta of this dirsotion wes of so great importance to the Egyptians.

The boop, on the contrary, makes her way from south to north. She livea upon the amall worms, an infinite number of which ere
hatched in the mud of the Nile, (Diod. Sic. Bibliothee. 2ib. 1.) She takes her flight from Ethiopis into Higher Egypt, and from thence towards Memphis, where the Nile divides She always follows the course of the Nile, as it retires within its benks, quite down to the sen. From this method of hers, she whs perfectly fit to charncterize the direction of the mouth wind ${ }^{\text {a }}$.

The warning given by the dog-atar being their moot important coucorn, the Egyptiass from its rising anciontly dated the begioning of their year, and the whole seriea of their feasta. Wherefore, instead of representing it under the form of a star, which might not diatinguiah it from another, they delineated it under the flgure relative to its fanction and name. They called it the star-dog, the door-keoper, the atar which opens or shuts, closing one year, as it were, and opening another. When they had a mind to exprese the renewal of the year, they represented it under the form of a doorkeoper, eary to be distinguished by the attribute of a key; or else they gave it two heeds back to beck; the ane of an old man, which marked the expiring year, and the other of a young one, which denoted the newr.

When the people were to be warned of the time of thiir retreat at the approach of the inundation, inhtead of the two heeds they then put on the shoulders of a human body the head of a dog. The attributes or aubordinate symbols, added thereto, were the explication of the wrarning it gave. It was in order to give the Egyptiana to understand they were to take with them store of provisiona, and repeir with all speed to the high ground, or their raised terrnoes, and there to remain quiet by the water side, that Anubis had on his arm a kettle or porridge pot, zeinge on bis fect, in his right hand or under his arm a large

[^5]feather, and behind him a tortoise or duck, both amphibious animals, which live on the earth and by the water side.

The Egyptians expressed the several increases of their swelling river, by a column marked with one, two, or three lines in form of a croes, and surmounted with a circle, the symbol of God, to characterise providence, which governs this important operation. More commonly, instead of a column, they mado use of a pole terminated like a T , or croesed with one or more transverse pieces. To abridge these remariks, they were often contented with one small cross, which, put upon a veesel or elsewhere, might signify the increase of the water.

It is certain that the Mikias, or colamn marked as above stated, to signify the progress of the water, became in Egypt the ordinary sign of the deliverance from evil. They bung it on the neck of sick persons, and put it into the hand of all beneficial deities. Mr. Gordon, secretary of the mociety for the encouragement of learning, has given us in the seventh plate of his collection, the amulets and preservatives which he has observed in the Egyptism monuments ; many of which are pen fectly like the measure of the Nile.

They painted the devastation made by the overlowing water under the figure of a dragon, of a crocodile, a hippopotamus, or a water monster, which they call Ob , that is, ewolling, an overfowing, and which they aftervarde called Python, the enemy. $t$

Another method of communicating to the peopleinformation respecting the inundation, seems to have been by publicly exposing three veesels or messures, being pitchers of unequal capscities, well known to the people without say proclamation or messengers, which aerved to ehow them the iocrease and diminution of the Nile. Two thingo persuade me that this is the meaning of those vessele or bulging messures, so commonly found in the Egyption monuments. One is the name given them : the otker is the attributes annexed. The name canob or canopus given to these vessels, is grounded on the use made of them. Canob aignifies the fathom of the dragon, the measure of the overflowing. From cane, a perch, \& fathom, a rod, or cane to messure; and from ob, the dragon.

The canopi are very commonly terminsted by one or two crosses.

* $\qquad$ ob. Levit. 20, v. 27.
+ Mount Cassius, to the foot of which the foundation of the Nile extended, a little above tho ancient city of Pelusium, or the modern Damiette, derivee its name from a word which aignifies the bound, or term, of this inundation : and the eandy coast near it was called Cassiobe, for the same reason. And it was because the lake Sirbon, or Sirbonis, which is near it, was atill full of the remains of the inundation when Egypt was quite dry, that it was said Python had gone to die in this lake. It was moreover so full of bitumen and of oily or combustible matters, that it was imagined that Jupitar had thare pierced him with a thunderbolt, whioh filled all the great morass with sulphar.

The top of the vase is also oftentimes surmounted with several birds' hesds, to signify and characterise the several winds which they know, and which either assisted or retarded the increase or the lowering of the waters ; sometimes they put upon the canopus the head of a dog, to aignify the state of the river, or the time of the rising of the dogatar. At another time they put thereon the head of a maid, to mark out the state of the Nile under the eign of the Virgin, and at the approech of the draining or retiring of the water.

It appears that the ancient Egyptians, after they had ascertained the great benefit of the inundation when they were properly prepared for it, changed the name of their Evil Genius, the Water Monster, from ob ${ }^{*}{ }^{*}$ to Python; which had reference to the deadly effects of the miasmata arising from the stagnant waters left upon the low lands after the retiring of the inuadation. "Ovid makee the serpent Python spring from the steans of the mud which the deluge had left upon the earth; and in this he is plainly making an allusion to Typhon, whose name is the bame by a simple transposition. In making Python spring from the alime of the deluge, does not the poet point out thereby the noxious steams which rise in Egypt after the waters of the Nile have subsided 9 In fine, when he says that Apollo slew him with his arrows, does he not conceal, under this emblem, the victory of Orus over Typhon, or at least the triumph of the sunbeams over the vapors of the Nile f" (Mayo's Mith. vol. ii, p . 47.) Python, says Bailey, is derived from pytho, Gr. to putrify. The serpent Python's being alnin by Apollo is thus interpreted : by Python is understood the ruins of waters; but Apollo (that is, the sun) disperaing the vapors by his arrows (that is, his beams), slew this eorpent.

Typhue, a species of continued fever, has the same origin. "It may be ocesaioned (esys Hooper, in his Medical Dict.) by the effluvia arising from either animal or vegetable subetances in a decayed or putrid state; and hevce it is, that in low and marshy countries it is apt to be prevalent, When intense and sultry heat quickly succeeds any great inundation."

The convenience of that language, which rendered itself intelligible to the eyea, and in come sense made animals and even stones themselves to speak, by degrees became more common. It was extended to every thing.t. The nymbolical writing soon served se the rule of

- The dencendants of Africs, in the West Indies, still retain the name of ob, or obi, by whose aid they pretend to magical powers. - EDIT.
+ The custom of conveying moral instruction by symbolical figures has descended to the masons, that is, a show of it is kopt up by them, but without being seriously regarded. The practico is now a mere dead lotter; showing, however, the force of habit in continuing a custom no longer needed. Too much light is now abroad in the world to require the square and compasses to direct men in their duties. The continuance of these old practices, notwithstanding, is of use in pointing out the origin of the institution that observes them.-EDIT.
morale, as well as the regulation of husbandry. It wne mado uns of to perpetuate among the people the knowledge of the most important wruthes, and to inculcate their principal dutiea

The character of the Egyptian writing designed to aignify God, was not a simple flame or bleze, as was the general usage of the east, bat a circle, or rather a sun. They added to the circle, or solar globe, several marks or attributes, which served to characterive so many different perfections. For instance, in order to indicate that the Supreme Being is the author and preserver of life, they annexed to the circle sometimes two points of flame, but more commonly one or two serpents. This animal wna alwaye among the Egyptiana, an in other countries, the symbol of life and health. Not because the serpent makes itself look young again, by every year casting its old akin, but because among most of the Eastern nations, as the Phenicians, Hebrews, Arabians, and others, with the language of whom that of Egypthad an affinity, the word heve or heva equally aignifies the life, and a serpent. The name of him who is, the great name of God, Jov, or Jehovah, thence drawe itio etymology. Heve, or the name of the common mother of mankind, comea likewise from the same word.

Iftre trom thins word that the Latins made their avum, the life, and the apa which in a wish of good bealth.

St. Clement of Alexandris obeerves, that the word heva, whioh is known to signify the life, likewise signifiee a earpent. And it is barely on a double meaning of the word hevi and heva, that the metamorphoeia of Cadmas and Hermione into serpents is grounded (Ovid, Motam) They were of the country of the Hevians.
Macrobius has informed us that the serpent was an emblem of health, salutis draco, spesking of Esculapius. When Moees lifted up a brawon serpent in the wilderness, the sfficted Hebrewe understood that it was a sign of preservation."

To express the wonderful fecundity of providence, they added to the symbolical cirole the figures of the moet fruitful plants, and moet commonly two or three large leaves of the banana-tree.

## The solar year-Oriris.

The year relates to three principal objeete. To the course of the sun, the order of the feasts to each reason, and to the works in common to be dona. Lot us begin with the symbole of the sun.

That luminary, as it was the grandeat object in nature, had aloo its

[^6]peculiar oharactor or mark in the aymbolical writing. It was called Oairis, This word, according to the most judicious and most learned among the ancients," mignified the inspector, the coachman, or the leader, the lisig, the guide, the moderator of the stars, the soul of the world, the governor of nature. From the energy of the terms of whioh it wan composed, it signified in general the governor of the earth, which amounts to the same sanse. And it is because they gave that name and function to the sum, that it was expressed in their writing sometimes by the figure of a man bearing a sceptre, sometimes by that of a coachman carrying a whip, or plainly by an eye.t

They were often contented with setting down the marks of his dignity, such as a sceptre surmounted with an eych or a seeptre with a serpent twined round it, the symbol of life which the sun maintains, or berely the whip and the sceptre united; sometimes the royal cap of Oairis on a throne, with or without a sceptre.

The Egyptians overywhere maw, and eapecially in the place of their religious assemblien, a circle or the figure of the sun. Near the sun, over the head of the Eymbolical figures, were seen sometimes one or two serpents, the aymbol of life, sometirnes certain foliages the symbols of the bounties of nature; sometimes scarabeus's winge the emblem of the variations of the sir. All these thinge being connected with the object of their sdorations, they entertained a sort of veneration for the serpent, which they besidea saw honourably placed in the small chest that was the memorial of the state of the first men, and the other ceremonies whowe meaning began to be lost.

Having already contracted a habit of confounding the Most High with the sun, they by little snd little mistook the symbol itsolf of the oun, the Oairia, the moderator of the year, for a man. Osiris, from the letter or symbolical personage he was before, becoming in the minds of the people s real person, a man who had formerly lived among them, they made his history to relate to the attributes which attended the figure. So soon as Egypt was posseesed with the ridiculous notion that the statues of Oairis, Isis, and Horos, which served to regulate aociety by their respective sigaifications, were monumente of thair founders; that Oairis had lived in Egypt, and hed been interred there, they framed stories agreesble to this belief. For want of a tomb con; taining in reality the body of Hammond or Oxiris, they were contented with a cenotaph, an empty tomb. A vast concourse of people gathered

[^7]near these pretended tombe, and with pomp celebrated an annual feant there. Plutarch often mentions the feests of Oeiris' tomb, and informs us, that when the Egyptians were reprosched with placing in heaven gods whose tombe they showed, their reply was, that the bodies of these gods had been embalmed and interred in Egypt; but that their souls rerided among the stare.

These tombe, though meroly representative, were becoming a necessary part of the ceremonisl. The Crotians, being of Egyptian extraction, had their own feast of Osiris or Jehoy, the feast of their god, and of course the empty tomb was inseparable from that solemnity;

## Death and Resurrection of Osiris.

The suthor here gives a complex figure, copied from the collection of Mountfaucon, and which, he says, is peinted on a mummy at the Austinfriars of La Place dea Victoires, representing the death and resurrection of Oxiris, and the beginning, progress, and end of the inundation of the Nile.

The sign of the lion is tranaformed into a couch, upon which Osiris is laid out as dead; under which are four canopi of various capacities, indicating the state of the Nile at different periods. The first is terminated by the head of the dog-star, which gives warning of the approach of the overflow of the river; the second by the head of the hawk, the symbol or the Etesian wind, which tende to swell the waters ; the third by the head of a Heron, the sign of the south wind, which contributea to propel the water into the Mediterranean ses ; and the fourth by that of the Virgin, which indicatee that when the sun had passed that eign, the inundation would have nearly subaided.

To the above is superaided a large Anubis, who with an emphatio gesture, turning towands Isis who has au empty throne on her head, intimates that the sun, by the aid of the lion, had cleared the difficult pass of the tropic of Cancor, and was now in the sige of the latter, and altho' in a atate of exhaustion, would soon be in a condition to proceed on his way to the South; at the same time, gives to the husbandman the important warning of retiring to avoid the inundation. The empty throne is indicative of its being vacated by the supposed death of Oxiris.

The raising of grand master Hiram, in the third degree of Masonry, by the "grip or paw of the Lion," (the terms used in that operation) who, as the story goes, had been murdered by three follows of the craft, is evidently copied from this fable of the death and resurrection of Osiris. The position of the master Mason, when in the act of raising Hiram, is a facsimile of that of Anubis over the body of Oairis.

Mr. Pluche seems not to have had an adequate conception of the fabled desth of Osiris, and consequently to have miataken the purport of

[^8]the flgures now under conaideration, I therefore offer the foregoing explanation as the result of my inveatigation on the subject.

Mr. Pluche candidly acknowledgea that ho had doubts of his understanding the intention of the picture which he endesvours to expound; for he says, immediately after giving his explanation, "But it would be a rashneas in me to presume to write any longer in Egyptian, when I am not as yet over aure of my skill in reeding it. Lot ua first of all confirm ourselvea therein, and again try the application of our principles to nome other monuments" He sdds, in a note, "We shall in another place explain why this figure is used about a dead body, when we show how the sense of theee symbola came to be perverted."

This he afterwards attempts to do ma follows :-
"Thus being gradually come to sacribing divinity, and offering their worship to the ruler, representing the functions of the sun, they to complete the absurdity, took him for the firat of their kings. Thence this odd mixture of three inconsistent notions, I mean of God, of the Sun, and of a dead man, which the Egyptians perpetually confounded together."

The cause of their thus confounding them is easily accounted for, when the supposed death of Oriris, the sun, and God of the Egyptians, is taken into consideration.

It must be understood that the sun was supposed to be in insurmountable difficulties at both the solatices, which caused as great lamentations as bis victoriea and reappearances afterwards did rejoicinge. What led to these apprehensions when he was in the aummer soletice, is well explained in Reea' Cyclopedia, as follows:-
"Orus or Horus ${ }^{*}$ a famous Deity of Egypt, which, as well as Osiris, was an emblem of the sun. Mecrobius, who informe us why the Greeka gave Horas the name of Apollo, says, in the mysteries (Saturn, lib. 1,) they discover us a secret which ought to be inviolable, that the sun arrived at the upper hemisphere, is called Apollo. Henco we may infer, that this emblematical Deity was no other than the star of day, passing through the eigns of aummer. As Apollo among the Greeks was called the Horus of the Egyptiana, as to his akill both in medicine and divination, he was regarded as the amme pernon, and called by the ancienta Horus-Apollot The Allegory of Horus has been thus explained. The wind Rhamsin makea great ravagea in Egypt in the spring, by raising whirlwinde of burning sands, which suffocate travellers, darken the air, and cover the face of the sun, so as to leave the earth in perfect obscurity. This circumstance represents the death of Osirig, and the reign of Typhon. When the sun approaches the eign of the lion, he changes the atate of the atmoephere, disperses these tempeste, and reatores the northerly winds, which drive before them the malignant vapors, and preserve in Egypt

[^9]coolness and salubrity under a burning sun. This is the triumph of Horus over Typhon, and hia glorious reign. As wome natural philosophers have acknowledged the influence of the moon over the state of the atmoephere, they united her with this god to drive away the usurper from the throne. The priests coneidering Oairis as the father of time, might bestow the name of hie son on Horus, who reigned three months in the year.

Jablonaki, who has interpreted the epithet of Arueri, which the Eggptians gave to Horus, pretends that it gignifien efficacious virtue. Theso expresaions perfectly characterise the phenomena which happened during the reign of this god. It is in summer, in fact, that the sun manifeata all his powers in Egypt, It in then that he swells the watere of the river with rains, exhaled by him in the air and driven againgt the summit of the Abyssinian Mountains; it is then that the husbendman reokons on the treasures of agriculture. It was natural for them to honour him with the name of Arueri, or efficacious virtue, to mark these auspicious effects."-(Severg's Letters in Egypt), eta

The reasons which the inhabitants of northern climates have for lamenting the sbeence of the sun when in the southern hemisphere, is thus beautifully portrayed by Dupuis:-
"We have, in our explanation of the labours of Hercules, considered the sun principally as the potent star, the depository of all the energies of nature, who creates and measuree time by bis march through tbe heavens, and who, taking his departure from the summer soletice or the moet elevated point of his ronte, runs over the course of the twelve eigns in which the celealial bodies move, and with them the difforent periode or revolutions of the stare, nuder the name of Osiria or of Beochus, we shall see this beneficent atar, who, by his heat, in spring, calls forth all the powera of generation; who governs the growth of plante and of trees; who ripons the fruits, and who dispenses to all seeds that active sap which is the soul of vegetation, and is the true character of the Egyptian Osiris and the Greek Bacchns. It is above all in spring-time that this humid generstor developes itself, and circulatea in all the rising productions; and it is this sun, by ita heat that impela its movements and gives it fertility.
"We may distinguish two pointa in the heavens which limit the duration of the creative noction of the eun, and these two pointa are thoee where the night and the dey are of equal length. All the grand work of vegetation, in a great part of northera climates, sppesara to be comprised between these two limits, and its progressive march is found to be in proportion to that of light and heat. Scarcely has the sun, in his ammal route, attained one of these pointa, than an active and prolific force appears to emanate from his rays, and to communicate movement and life to all sublunary bodies, which he bringa to light by a new organiestion. It is then that the rerurrection of the great God takes place, and, with hig, that of all nature. Having arrived at the opposits point, that power eeeras to abandon him, and
nature becomes mensible of his weakness. It is Atys, whowe mutila. tion Cybele deplored I it is Adonis, wounded in the virile perts, of which Venus regretted the lose ; it in Osiris, precipitated in the tomb by Typhon, and whose organs of generation the disconsolate Lais never found.
"What pieture more effectual to render man arrowful than that of the earth when, by the absence of the sun, she finds herself deprived of her attire, of her verdure, of her foliage, and when she offers to our regard only the wreck of plants dried up or turned to putrefistion, of naked trunks, of arid lands without culture, or covered with noow; of rivers overflowed in the fields, or chained in their bed by the ics, or of violent mindes that overturn everything. What has beoome of that happy temperature which the earth enjoyed in the spring and during the summer ! that harmony of the elements, which was in sccord with that of the heavens ? that richnees, that besuty of our fielda loaded with grain and fruite, or enamelled with flowan whose odour perfumed the air, and whoee variegated colors presented a speotacle no ravishing 1 All hes disappeared, and the bappiness of man bas departed with the god, Who, by his presence, embellished our climes; hia retreat has plunged the earth into mourning from which nothing but hil return can free her.
"He was then the orestor of all these benefits, since we are doprived of them by his departurel he was the noul of regetation, dinoe it languished and coesed as soon as he quitted uk, What will be the torm of his flight and of his descent into other regions it he going to replunge nature into the eternal ahsde of ohsos, from whenoe his premonoe hed drawnit ?"
"Such were the inquietudes of these ancisat people, who, ceeing the sun retiring from their climate, feared that it might one day happen that he would abandon them altogether: from thence aroee the feaste of Hope, celebrated at the winter solotice, when they saw this star check his movement, and change his route to return towarde them. But if the hope of his approech was so sensibly felt, what joy would not be experienced when the mun, alresdy remounted towarde the middle of heaven, bad chased before hira the darknew which had encroached upon the lighs and usurped a part of its empire. ${ }^{*}$. Then the equillbrium of the day and the night is re-established, and with it the order of nsture. A new order of thinga as beantiful as the firat reoommencee, and the eartb, rendered fruitful by the heat of the sun, who had renewed

[^10]the vigor of youth, embellishes herself under the rays of the lord." (Abrege de l'Órigine de tous les Cultes, p. 142.)

> The civil year-Isis.

We might here reanonably enough call the order of the feasts the eceleriastical year, since they wero religious assemblies. But this order of the daye appointed for working or for religious purposes being the sule of society, we ahall call it the civil year.

The Eigure of the man, who rules over everything on earth, had been thought the most proper emblem to represent the sun, which enlivens all nature ; and when they wanted a characteristic of the production of the earth, they pitched upon the other sex. The cbanges of nature, the succession of seasona, sand the several productions of the earth, which no doubt were the subject of the common thankegivinge, might easily be expremed by the several dressee given this woman."

When the sacrifice was intended to be made in the day, Lies was dressed in ohtice, but if in the night she was dressed in black. They put a sickle in her hand to denote the time of harvest. When the purpoee

[^11]of a feast was to remind the people of the security afforded by their dwellinge, Isis was crowned with small towers:. To intimate the winter neomonia, the head of Isis was covered with little fillete and with skins sewed together; sometimes with feathers ranged one over the other, or with small shells neally set by cach other生. There were sometimes on the head of Isis a craw-fish or crab, sometimes the horns of a wild goat, sccording as they had a mind to signify either the entering of the sun into the sign cancer, or the feast that was solemnized at his entering into that of capricorn. In Egypt, where the inhabitanta can with certainty judge of the product of the year by the state of the river, they proclsimed a plentiful crop by surrounding Iais with a multitude of breaste ; on the contrary, when the presege of fertility was not favorable, they exposed an Isis with a single breast; thereby to warn the people to make amends for the smalliess of the harvest by the culture of vegetables, or by some other induatry.

All these changes had each ita peculiar meaning, and Iais changed her dress as often as the earth.

Next to the symbolical king, or the emblem of the sun, the Egyptiana had no figure that appeared more frequently in their assamblies than Iris, the symbol of the earth, or rather the sign of the fesste that were Eliccessively characterized by the productions of the earth in each seseon.

In looking for the origin of this woman, they ran into the same mistake which had caused them to take the governor of the earth, the symbol of the sun, for Ammon their common father. Isis was looked upon as his wife: abo partook of the titles of her husband; and being in their opthtón raised to a real person and a considerable power, they invoked her with confidence; they gave her the honornble titles of the Lady, the Queen, the Governeas, the common Mother, the Queen of heaven and earth ${ }^{2}$

What contributed most to seduce the Egyptians was the frequent joining of a creacent or a full moon to the head-dress of Isis. Thence they took occasion to give it out that Osiris' wife, the common mother of the Egyptians, had the moon for her dwelling place.
"It wan formerly a general custom to make sacrifices and public

[^12]prayers upon exivent places, and more erpecially in groved to whelter the people from the hoat of the sun. Whan the Leis which proclaimed the leesta, and whoes figurea were one of the finest parts of the cerremopial, was once become the objeot of it and had bean looked upon as the dispenser of the goods of the earth, of which she still bore the marks; her soveral representations, which only foreboded abundance and joy, becoming moat agreeable to the people, alweys eager and credulous on that heed, the faleo sense attributed to these figures mado them pars for the rurest means of obtaining plentiful harreets. Theee images were worshipped with solemnity and plaoed in the finest woods. Crowis of people flocked to the religious feents of the lovely queen who loeded them with blesainge. No doubt they had everything from her. The coolneen and beauty of the place where ahe was worahipped, had no leea an influence on the astistentes than the attire of the goddees, and instand of calling her the queen of hearen, they often atyled her the queen of the groves.

She also became the queen of herds, Asteroth, the great fish, or queen of firhes, Adirdagal, or by way of excellence the queen of Araalota Appherudoth

The Greaks softened the sound of these words, and gave them the inflection end turn of their own language. The queen of herds became Astarte; that of fishes became Atergatig; and the mother of corn became the Aphrodite of the Cyprians and the Greeks. The name Appherudoth, the mother of harverts, changed into that of Aphrodite, wees no more than an empty sound void of all meaning. But it seemed to the Greeks to be derived from a word in their tongue, which signified the froth of the mae, they theroupon built the wonderful story of the goddesi engendered of the froth of the mea, and euddenly apringing out of tho booom of the watory main, tothe great amazement both of goda and mon.

They reprosented the Amalots Aphrodite, the queen of harrees, holdIng with her loft hand a luag goat's horn, out of which they make cars of corn, vegetables, and fruita to apring. She had a aickle or some other attribute in her right hand; and thus they united without any reason the mark of the opening of the harvest, together with the horn of the wild goat, which signified anciently the end of all harresta, and the begioning of winter. This ie then the plain original of the horn of abundanoe and of the Amalthean gost. That horn being always full, (a privilege it evidently had) could not proceed from a gost which had done some important service to mankind. They contrived that this goat had been nurse to Jupiter. But the god and the nurse are both alike. The one existed as little as the other. This eingle instance is fully sufficient to prove that most of the talee of the poets are little storiee grounded on quibbles of the same kind, and invented only to have something to say upon figures alwaya preeented at cortain feeste, but no looger understood. They made all these flgures eo many tutolar daities.

The common people have at all times and in all countries been fond of quibbles, equivocations, and puns. It the change of figure has often mado several gods of one and the rame symbol diversified, a simple variety of namee, nay, the difference of pronunciation, han more than once produced a like multiplicity. The latia mistaken for the queen of heaven, or for the moon, was called Echet, Hecate, or Achate, the only, the excellent (Inter ignea lana minorte.) Ariong some people of Syrlis, this sime aymbol, by telight inflection of name, was called Achot, the sieder. The same whom they had alroady made the wife of Jehov, or of the sun, or of Jupiter (for these are atill but one) became also his sister.

> - Ego que divum incedo regina, Jovisque

Et soror and conjux
She afterwards became the daughter of the mame Japiter, and then the mother of all the gods. All this medley of statee and genealogies evidently procoeds from the diversity of the attributea and namen given to one and the same symbol.

It not more diffloult to guees, how the mame Diana is sometimes a terrestrial deity, sometimee the moon, and sometimes the queen of kêl. By her first institution she hed a relation to the earth, and marted out her productions. The false interpretation that was given to the crescent and the full moon which ahe bore over her head to proclaim the feasts, caused her to be taken for the moon; and at lant the time during which she remsias invieible, that is, between the last phasis and the return of the new, put it beyond all doubt that ahe wat gone to take as turn in the abode of $A d e=$ or the invisible, that is, to the empire of the dead.

But what contributed moat to the atrange notions people framed to themsolvee of this Tricepe Hecate, which was st the ssme time the earth, the moon, and the wife of Pluto, is this: So soon as the first phasis of the now moon was perceived in the evening, ministers for that purpose wont and prockaimed it in all the croas.waye and public places, and the loast of the neomenia was celebrated either that very evening or the next day, ecoording to the inatitution of places. Whon the secrifice was to be mede at night, they put an owl near the figure that proclaimed it. The Isis then was called Lilith, that in the owl; and this visibly in the origin of that nooturnal lilith of whom so maniy tales have been told. A cock was put in the room thereof, when the macrifice was to be made in the morning. Nothing could poseibly be more simple or more convenient than this practice. But when the deified Isis had onos been looked apon as a woman, or a queen dwelling in the moon, and there governing the hesven in conjunction with Oairis or Adoning the proclamstion of the return of the new moon, which was a thing extremely plain before, assumed s moyntarious and atately air. Hecato
was becorne favisible for many days; her return was expected with caremony. The goddess at leat left the empire of the deed, to come again into the heavens. Imagination had a vast field to explore here, and Hecate never failing to visit succesaively those two Fdistricts, it could not be doubted but she ruled both in hearen and in the invisible abodes. On the other hand, they could not but be sensible of the palpable relation she had to the earth and ite productions, whereof ahe slways bore the several marks either on her heed or in her hands. She then became the threefold Dims (triceps Hecate) which is st one and the same time, the earth, moon, or the lady of heaven, and the queen of hell.

## Ter geminamque Hecaten, tria vinginú ora Diana.

The ancient proclamation of the new phasia, which wes made with a loud voice, to proclaim the beginning of the neomenis, insensibly degenerated into loud shrieks, which they gave out of mere superstition and custom at the entrance of cross streeta. They saluted the goddeas of the dead at her coming out of the horrid mansion. The music and the notions agreed with and suited sech other. But the ancient proclamation of the neomenis was the origin of those devout and meritorious roarings.

## Nocturnis Hecate triviis ululate per urbes.

All the beathen antiquity, after it had confounded the symbol of the new moons and of the feasts relating to the Beveral seasons of the year with the star that regulates society by its phases, ascribed to the moon an universal power over all the productions of the earth, and generally over all the operations of men. They likewise fancied that she was perfectly well acquainted with future things, and that she never appeared without foreboding by certain marks what was to befall husbandmen, families, and whole kingdoms. People have not as yet fully shaken off the persuasion they anciently hed of the influences and presages of the moon.

A like respect wee paid to the Neomenis, or New Moon, by the Hebrewa. Dr. Adam J. Clarke, in his history of the ancient Israelites, gives the following statements in substance of this matter :-
"As the Moon regulates the months, mo does the Sun the year. The division which we make of the year into twelve monthe has no relation to the motion of the moon. But it wes not so with the Hebrews : their montha are lunar, and their name sufficiently shows it They call them Jachin, which comes from Jarac, which signifies the moon.
"The moment in which the conjunction between the sun and moon is made can only be known by estronomical calculation, becsuse she does not then appear ; and as the Hebrews were little skilled in this science, they began their months at the first phasit, or first appearance of the moon, which required no learning to discover. This was an affair in which
greet Sanhedrim ware concerned, and the different phases of the Moon were pariud upon the hall in which they assembled. It belonged to them to choose men of the strictest probity, whom they sent to the tops of the neighbouring mountains, and who no sooner perceived the new Moon, but they esme with sll speed, even on the Sabbath day itself, to acquaint the Senhedrim with it, It was the business of that council to ascertain whether the moon had appeared, and to declare it ; which was done by pronouncing these words, The foust of the new moon, the feast of the new anoon, and all the people were informed of it by the sound of trumpets. To which ceremony David alludes, when he says, Blono up the trumpet in the New Moon, in the time appointed, on our solemn feast day."-Pbalma lxxi, v. 8.

The masonic pillar Jachin, which represents Iais, the figure of whom was exhibited at each neomenis, is undoubtedly derived from Jachin, the name given by the Hebrews to their months,

Bayley rolnten somo curious customs which formarly provailed in regard to the moon.
"The common people," he says, "in some counties of England are accustomed at the prime of the Moon to esy, It is a fine Moon, God bless der; which some imagine to proceed from a blind zeal retained from the ancient Iriah, who worahipped the moon, or from a custom in Scotland, particularly in the Bighlands, where the women make a curtaey to the New Moon; and some English women do still retain a touch of this gentilism, who sitting upon a gate or stile the first night of a moon, eay,

> "All hail to the Moon, all hail to thee, I prithee, good Moon, declare to me, This night who my husband shall be."

In New England, where most of the ancient usages of the mother country have been perpetuated, it is considered an ill omen to obeerve the first appearance of the Moon over the left ahoulder; but when seen over the right, particularly if the beholder has money in his pocket, it is deemed a prestige of good luck. It is not unfrequent, upon such occesions, to prefer a petition for what is most devired, and grest confldence is entertained in its being granted.

Thus it appears that the Moon has been the innocent cause of much superatition from the carliest time to the present day, and that the term "moon atruck," poseseses a legitimate origin.

## Harpocrates.

The Egyptians did not fail to put in places consecrated to the pablic exercises of religion the symbol of the prosperities of their tillage. They pleced a figure, sinking under the burden of the goods ho had reaped, in the assembly of all the feasts that were solemnized after the harveats of corn, wine, fruits, and vegetablea. He carried on his head the natural marks of a plentiful harvest, viz, three pitchers of either wine or beer, surmounted with three loaves, and accompanied with
leaves, vegetablee, and aeveral fruits. The bread, wine, \&c., wherewith they deck his head, lay immediately on the two great horns of a wild goat. They could not possibly mark out in a more simple and less mysterious manner, the perfect plenty which the husbendman enjoge in the beginning of winter, when the sun pesses under the sign Capricorn.

He ia moat oommonly seen with a anggle pitcher instead of thres, and with one goat's horn instead of two ;" or with the circle accompanied with large banans leaves, or with some other symbol. The Greek sculptors, who did not much like these enormons head-dresees, disposed the whole with more comeliness and decorum. They placed the goat's horn in one of the hande of the figure, and made some fruita come out of it.

## Symbolical Oeremonies. Memoriale of Past Events.

The symbolical writing to commonly and usefully employed to teach In a compendious and popular manner the most important truthe for the preserving of good manners, and promoting the good of mankisd, served also from the beginning to preserve the memory of histories, and publicly to expose the object or the motives of the feesta to which some great ovent had given occasiona.

The ancients always opened their feativals and public prayers wits woes and lamentations for what they hed lost; though they were used to conclude the same by a general repast, where sioging, the sound of instrumente, and joy aucceeded their mourning. Whence it comes, that the criea usual in the most ancient feasts, even those which in procesa of time became expreseions of joy, and zet forms of acclamations, being traced up to the primitive origin, signify nothing but teara and expressions of grief addressed to Almighty God. Such were the cries, Io Bacohé, Hevoe Bacché, Io triumphé, Io presn. This word, Ie Jeov, Jevoe, Hevoe, is the name of God, and aignifies the Autber of Life, He that is. Baoche comes from beche, tears. Bacooth agnifien lamenta-trons:- The women who lament the death of Adonis in Exekiel are called Bacchants, mebocooth, women mourners. Triumphé comes from teroweh, which the western nstions pronounced triumphe; there being no letter whose pronunciation wes more difficult and more varied than the oin. That word triumphe signified grosns and sobe. It afterwards signified the public prayter, and finally the singing of the

[^13]assemblies, as may be seen, Ps. Ixxrix.* All these worda joined to the name of God, were ahort expressions by which the people excited each other to have recourae to God in their diotrese, and to direct their prayers and cries to him. The whole of theee was like the Letin and French exprestions, Deo gratias, Dieu mercy, adiau.

The object and motives of this mournful practice are more eary to be discovered among the Egyptians than among the other nations; not only because the Egyptians having been leas mingled with other people, have made fewer alterations in their ancient customa; but also becauso their practioes being atrictly connected with public and certain symbols engraved in stone, or carried in ceremony at the feasta, they were better fixed or less disfigured in Egypt thas in other parts of the world. There they lamented with Isis the death of the governor which had been taken from them, and killed by a dragon riking from under the ground, and by s water-monster. They then rejoiced for the resurrection of Osiris; but he was no longer the same, and had lost his atrength.

The Egyptians, and most of the eastern nations, had an allegory, or picture, which became famous, and which is everywhere met with. It represented the water-monster slain, and Oairis restored to life; but there sprang out of the earth hideous figures, who endeavoured to dethrone him. They were monstrous giantis, one of which had many arms; another pulled up the largeat oaks; and a third had in his hands the fourth part of a mountain, which be flung against heaven. They were all distinguished by some suingular attempt, and by frightful names, the moat known of which were Briareus, Othus, Ephialtee, Enceledus, Mimas, Porphyrion, and Rouach, or Rocchus. Osiris got the better of them; aud Horus, after he had been very much abused by Roechus, happily got rid of his pursuita, by appearing before him with the javes and claves of a lion.

I might be thought here to offer s mere fable; but to ahow that this picture is historical, and that all the pensonagen which compose it are eo many aymbols, or significant characters, representing the bardships of the flrst men, and in particular the unhappy state of husbandry in Egypt, it will be sufficient here to tranalate the peculiar names given to each of theso gianta. Briareus signifies the lows of serenity; Othus, the diversity of reasons; Ephialtes, great gathering of clouds; Enceladus, the havocks of great overfowing watert opread; Porphyrion,

[^14]the carthquakes, or the fracture of the land; Mirase, the great raine; and Roechus, the wind

As to the figure of Horun, who amumes the head and clawn of a lion, to rid himself of the wind that ruined all his hopes; it is a symbol peculiar to the husbandry of the Eegptinas.

Thus the neceselty of parsonifying the objecta they wanted to paint, very soon introduced the nue of allegorical picturee and of fabalous recitala. They at that time coold not write otherwiee than by delineating the figures of the objects intended. But they thought themselves mastern of ordering the whole, in the manuer they judged the fitteat to make an agreable impresion, and to be well underatood. The difflculty of conveying the ideas of intallectual things into the mind by the eye, firat made them have recouree to symbolical figures; the use of these figures afterwards anthorised the tapte of fictions. But what wha obscure in them wan oleared by the slmplicity and propriety of tho namee given esch piece. I could produce new instances of this in the fables of Andromeda and Bellerophon, which are pure allegories, the Interpretation of which must be deduced from the signification and meaning of the names of all these personages. But this would take us off too much from that part of the ancient writing and of the publio ceremonies that related to the representation of peat diessters, and to the regulations of mankind.

Although Mr. Pluche has actually shown the cause of the lamentations and after rejoicings to have been occasioned by the loss and subsequent restoration of Oniris (the Sun), still he attributes the allegory to the miafortunes that had happened to mankind in consequence of a general flood. His remarks upon this head are omitted.

The amcients not only expressed cortain truths by figures delineated on stone; they alao joined to these figures dramatic ceremonies, wherein the objects and the names of the actors were significant, and served to recall the memory of thinga past.

The fesst of the ancient state of mankind assumed a more shining form in Egypt and Syria, by means of che symbolical figures, which had been multiplied there much more than anywhere else. This feast having become common to all nations, on this account deserves a more ample illustration than what has already been said about it. We cannot explain the zymbols of it, without casting a useful light upon an infinite number of monuments remaining in our hande, and which have hitherto been looked upon as unintelligible.

[^15]They carried at this feast a baskat or small chest, that contained the monuments of the progress of husbendry. Tho chest was neither mysterious or significant in itsolf. It only served to receive the memorative aymbols of thinga past.

First, they found therein the mark of the weakening of Osiris, and of the lose of fecundity. In cirta or oapsula reparitum erat Dionynii (Ofridio) pudendum. S. Clem. $\Delta$ lex. cohortat, adgentes, p. 6, edit. Oxon. From the Phenician word-ouervah or orvia, pudendum, they made Qrgia, a name given to the ancient rural feasta. They were called in Greece Phallica, which has the same meaning. The indiscretion of that symbol gave birth to all sorte of extravagances and licentiousness.

Then came sesame-seeds, heads of poppies, pomegranstes, bay-berries, branches of fig-tree, dry stalks, cakes of several kinds of corn, malt, carded wool, cakes of honoy and of cheese, and finally a child, a serpent, and a wionowing ran. See this anumoration in St. Clem. Alexand. and in Potter's Antiquity of Greece, wol. 1, Grecian festivels. The whole was accompanied with a flute, or some other musical instrument.

The drum or flute, which was inseparable from the celebration of the feaste, was the symbol of gratitude, which on certain days invited men to meet together, to praise God in concert. The small chest, the van, in which they afterwards found so many mysteries (Myatica cannus. Virg. Georgic. See IAntiq. expliq, and ihe agate, in the treasury of Sh. Denys) and the whole representation here enumerated, passed from the Egyptians to the Phenicians, and by their means spread far and wide. Nothing is more commonly found in the monuments of the heathen feerts, than a small chest, a van, a serpent, a human head, and a finte or a drum.

When the feast representing the ancient state of mankind and the progress of industry was celebrated, both the figure of the earth and that of work obtained several names in different countries. But wo find the rame purpose and the rame relations in sll these names. The Isis representing the earth, was called Ceres, Themis, Nemesis, Semele, Mriemosyne, and Adrastia.
We shall bestow an entire article upon the explanation of the symbol of Ceres. The Isis surnamed Nemexis simply signified the earth preserved from the waters. Semele signified the representation of the ancient condition of men; and Mnemosyne is no more than a bare tranalation of the same word into Greek. Torches were always carried next to Ceres, or the symbol of the mourning earth, and this caused Isia thus accompanied to be called Themis, Themisto, and Adrastia, which three names signify all the excellency of fire.

A multitude of ancient monumenta testify to us the use of the little portable cheast, of the van, the child, and the serpent. They added to these figures the aorry grains on which they in the beginning had been
obliged to feed, and the marke of the crowen they had been neoendtated to overcome. (See the antiquities of Greece collected by Dr. Potter, vol. i., and Clem. Alexsnder, Cohort ad Geat.)

The persons who in the publio ceremony carried the chest whersin all thees memoriala were contained, likewise assumed to themselvea aignificant names, and made a pert of the representation. They became nctors, and everything concurred with the symbolical pieces to oonvey cartain trutha into the minds of the spectators.

The represontative child wes cslled simply the child, liber, the beloved son; sometimes the child author of life and eubsistence, Ither theter; sometimes the child of the representation, ben Semeled; wometimes Horus, Erichthonius, Harpocrates, Bacchus, Apollo, Icarus. He bore many other names, whereot we shall give an explioztion, in the particular enumeration of the feasts of the eeveral nations. ${ }^{2}$.

It is known from the testimony of Diodorus Siculus, and from the conformity of the Athenian lawe with the Egyptians, that the first inhabitanta of Attica were an Egyptian colony. We have even eeveral proots that it originally came from the city of Sais, so famous for its olive-trees. Among the ceremonies which these foreigners brought from Egypt into Greece, they remark the little chest, which according to the cuatom of their original country, contsined the aymbulical Gigures of agriculture. Three young Athenian women carried in their leests a besket, wherein lay a child and a serpent.

[^16]
## Infantemque vident exporrectumque draconem:

The three maids that carried this child had nemes relating to husbendry, the symbols of which they bore in their hands. They were called Herse, Pandrosos, and Aglauros. The signification of there mames unveils the whole obecurity of the enigme. It in enough for us thereby to understand, that it is to the alternative of the rain, the dew, and the fair woether, that husbandry is indebted for the life it affords us. Let the imagination of poets wander upon the rest, and, according to their custom, look into a symbol to uhem become unintelligible, for the matter of an insipid metamorphosis.

In order to render these representations more oomplete, thoy did not in Egypt forget, any more than in other places, the neceasity the first men had been under of defending their housen and the fruits of the earth from wild beasts. They preserved the memory of this particular circumstance by a kind of hunting, which they renewed every three years, throughout the east. The same feast wea not celebrated overy year, because wild beasts did not multiply from one year to another so an to alarm the neighbourhood. This hunting being only a representation, and not much in earnest, it made the sanctity of feasts degenerate into tumultuous ramblings, which were succeeded by the greatent dieordera.

It is true, they began by a secrifice, and the invocation of the true God: may be easily proved from their warlike cries, that signified The Lord is the mighty; the Lord is my arrength; Jo Saboi;f Deus mihi exercitus. The Lord is an hool to me; the Lord is my guide; Jevov missi; Jo nissi; Dio nissi; Deus vexillum mihi, Deus mihi, dux esto, Exod. xvii. 15. And Moees built an altar, and called the name of it Jehorah-niseni. It is not time yet to convert the Dioniesi, which was only a prayer, into a man's name, end of it to make the Dionysius of the Greeks. All words which we find again in the mouth of the Hebrews, because their tongue and religion were originally the same with that of the other nations. The lattor have altered their notiona, while the form of prayers atill remained the same.

## Animais become Symbolical.

From the knowledge we now have of the genius and tante of the eastarn nations and chiefly of the Egyptisns, for symbolical figures and significant ceremonies, we are authorised to think, that the singne

[^17]lar practices observed among them were so many emblems of certaio autronomical, moral, and other truthe. We no longer run auy risk in eaying, that the ram whioh they reverenced in Thebnis and Lybya, the bulla they respected at Memphis and Holiopolis, the kidn honoured at Mendes, the lion, the fishes, and other animala which they worshipped in eeveral provinces, were very plain symbols in their first origin. They were no more than the ancient signs of the sodiac, and the different marks of the situation of the sun. They distinguiah the neomenis of one month or of another, by annexing the figure of the celestial animal into which the eun then entered, to the Igis which proclaimed that feast; and instead of a bare picture, they introduced into the feast the animal itself, the liviog animal relating thereto. The dog being the eymbol of the dog star, which formerly opened the year, they puts living dog at the head of the whole ceremonial of the first neomenia. It is Diodorus who recounts this fact, as having been an eye-witness of it They therefore took the habit of calling these neomenie the fenst of the ram , the feast of the bull, of the dog, and of the lion.

## Funeral Symbole and Ceremonies.

There were near the Egyptian towne a certain ground appointed for the common burying-place. Diodorus Siculus (Biblioth. 1. 1) informs us how these tombes are regulated, and in an exect description of the burying-place at Memphis, the largeet and most frequented of all, roLstes all that was practioed there. Aooonding to his recital, the common burying-place was on the other side of the leke called Acherusig, from - ackarie, after, and from - ish, man, comee -achariics ullima hominis, the last condition of man, or, rather what follows the desth of man. They aleo ay -acherou, posifermum, conditio, ultima. The dead person was brought to the shore of that lake, and to the foot of a tribunal consisting of several judges, who inquired into his life and conversation. When he had not faithfully observed the laws, the body was left unburied, and very likely was thrown into a eort of lay-stall, or diteb, called Tartarus. This word may come from the Chaldaic, tarah, promonitio, doubling the word. Diodorus informs us that there wes near a town at a amall distance from Memphis, a leaking vessel, into which they incessantly poured Nile water, which could signify nothing but endless tortures and remorses. And this single circumstance gives room to think, that the place where the unburied bodies were thrown was set round with frightful representations.

When no accuser appeared, or he who deposed against the deceased was convicted of falsehood, then they ceased to lament the dead person, and his enconium was made. (Diod.) They, for instance, commended his excellent education, his respect for religion, his equity, moderation, chastity, and other virtues. His birth, which was aub-
poeed to be the same with all men, was never allowed as any merit in him. All the amirtants applanded these praises, and congratulated the deceased on account of his being ready to anjoy an eternal repoee with the virtuous.

There wis on the ahore of the lake a severe and incorruptible waterman, who by order of the judges, and never upon any other terms, received the decessed into his boat. The very king of Egypt were treated with the same rigour, and were not admitted into the bark without the leave of the judgen, who sometimes deprived even them of burial. The waterman carried the body to the other side of the lake, into a plain embellished with meadows, brooks, groves, and all the rural ornaments. This place was called Elizout, or tho Elizian Fields, that is, full satirfaction, an habitation of repose, or of joy. There was at the ontrance of that abode the figure of a dog, with three pair of jawe, which they called Cerberus. The whole ceremony ended by thrice sprinkling sand over the opening of the vault wherein they had put the corpee, and by bidding him thricet adiou.

All these words and practices, almoat everywhere copied, were so meny instructions to the people. They gave them to underatand, by all these ceremonies, as by so many opeeches or very significant sym. bole, that death was followed by an account which we were to give of our life before an inflexible tribunal; but that, what was indeed dreadful to the wicked, wes only a paesage in a happier state for the good. Wherefore desth was called the deliverance. Pelitah, or rather pelouta, allevistion, deliverance. Wherefore Horsce looks upon that paseage as the end of evils.

Levere functum pauperem laboribus. (Carm. 1. 2, Od. 18.) It is likewise called in French le irepas, that is, the passage to another life. The boat of transportation was called tranquillity (beri, tranquilitas, sereni. tas, whence comes bario, Charon'a bark, Diod. Sio.), because it carried over none but the just; and, on the contrary, the waterman who inflexibly refused those whom the judges had not acquitted, was called Wrath (Charom, Exod. xv. 7) or the Vengeance.

As to the earth thrown upon the corpee, and the tender adiens of the relations, they were no more then natural duty and a aimple expression of their regrets. But they were not contented with paying them by the way this honour; they also put at the entrance of the cemetery and over the door of the decessed's tomb the symbol of the value and tonder affection they had for their deperted relation. The dog, being of all animsla the most addicted to man, is the natural emblem of friend. ehip and attachment. They gave the figure of the dog three heads or

[^18]throates, to express the three cries they had made over their friend's grave, scoording to the custom which granted that honour to none but good men. Therefore this figure, thus placed near the tomb and over the heed of the newly-buried person, signified his hasing been honoured with the lamentations of hia family, and with the cries which friends never failed to come and utter over the grave of him whom they had valned and cheriahed for his good qualities. The meaning of thin bymbol is no longer a riddle, after ite name has been translated. They called it Cerberue, that is, in plain terma, the criea of the grave."

It is neither easy nor reasonsble to pretend to explain all the symbols and ceremonies of antiquity, before we are convinced that most of the singular figures used on the most solemn occasiona were in their first origin no more than significant symbole and instructive ceremonies. It is enough for un that this is true of many of them; which I flatter myself I have shown in this first essay of explanation of the ancient writing, since the explication I give of it is simple, plain, and strictly connected both with the common notions and the wants of the first men.

The Egyptinns, who had contraoted a habit of adoring the sun as God, es the author of all good, and looked on Osiris as their founder, ran heedlong into a third ebyse. They, from a confused remembrance, and an universal custom, knew that this figure of Osiris related to the sun, and indeed it was nothing else in its first institution. They besiden sam the circle, the character of God, placed frequently enough on Osiria' forehead. They then perpetually joined the idea of Hammon with that of the sun, and both these with that of God. They no longer honoured God nor the sun, without singing at the same time the favours of Oniris or Hammon. The one wae still inseperably connected with the other; whioh msde them give out that Hammon (or Osiris) had been transported into the sun, there to make his residenoe, and that he thence continually protected Egypt, taking a delight in pouring a greator plenty upon the country inhabited by his offspring than on any other land in the universe. Thus being gradually come to ascribing divinity, and offering their worship to the ruler representing the functions of the sun, they, to complets the absurdity, took him for the firat of their kings. Thence this odd mixture of three inconsiatent notions, I mean of God, of the sun, and of a deed man, which the Egyptians perpetaally confounded together.

## Jehov, Ammon, Neptune, Pluto.

That religibn which groealy indulged the ealf-love and vanity of the Egyptians, easily found favour, and took roots in the minda of the

[^19]people. The reat of the symbols took the same turn. They inquired who was the Poseidon or Neptune : that is, the marine Osiris, the aymbol of the annual return of the fleets; and they made of him a god who dolighted in the ses, as Osiris did in the heaven. The funeral Osiris, who declared the annivereary of funerals, had also his own history; and as all the ceremonies belonged to burials, instead of being taken in their true sense, that is, as public instructions upon the state of the just, after death, had by degress been looked upon as pictures of the real treatment given to the dead under ground and in deligbtful gardens; they of Pluto, or of the symbol of the deliverance of the just, made a god Who preeided over the abodee of the dead.

The pretended god Neptune (Herod. in Euterp.), who became the favourite deity of the maritime nations, was almost unknown to, and hardly worshipped among the Egyptians, who hated the sea, and who, living in plenty of everything, bardly ever went out of their own country. On the contrary, an they were very exact in the outward practioe of their religious ceremonies, the funeral anniversaries, which were frequently repeated, rendered Pluto much more renowned among them.

We often see round the head of the Egyptian Pluto a radiant crown, and round his body a serpent, sometimes accompenied with the signs of the zodino; which evidently signifies the duration of one sun, that is, of one year. And it is plain here, that the author of the Saturnals, who, pretended that Pluto and many other gods were originally nothing but the aun, hed great reason to think so, eince Jupiter, Ammon, Neptune, and Pluto, are in reality no more than the symbol of one solar year, diversified sccording to particular circumatances. They did not quite lose sight of the unity of their origin in making peraons of them; for they nusde them three brothers, who, as they said, had divided the empire of the world between them.

Ham, or Hammon, being commonly called God, Johov, Jehov-Ammon, the city of Thebee, where he had dwelt longest, and which they anciently called Ammon's abode (Ammonno), was afterwarde called the City of God. (Diospolis.)

This word Jehov, in its primitive use, signifled the Father of Life, the Supreme Being. The Greeks translated it by that of Zeus, or Dios? and the Fómans by that of Deus; all names having the same sense, if they be not the same sound diveraified according to the pronunciation of different people. They sometimee joined to it the name of Father, which was but an interpretation of it, and called him Diospiter or Jovpiter. The Ammon, which by a stupid kind of love was confounded with God, and with Oniris, or the star moderator of sessons, became the Gamous Jov-Ammon, or the Jupiter-Ammon, and had alwaye the firnt

[^20]honours paid to him, sfter the other aymbols had in like manner beas converted into so many celeatial personages and powerful deities. The resson of this preeminence is founded on their having annexed the ides of the founder of their colony to the moet brilliant of all their nymbole, I meau their Osiris.

## The Establishment of the Laws. Menes.

The rural works not being resumed in Egypt till after the Nile had quitted the plain, they for this resson gave the public sign of husbandry the name of Moses, or Museus, (ssyed from the waters); and on the same account the moons during which Horus Apollo, or husbandry, continued his exercises, went almo by the aame name.

About the end of autumn, the inhabitants being freed from the worka of the field, manufactured in their night-work the line, thread, and cloth, which were some of their chief riches. The sign which was the publication of it took then the name of Linus, which signifies woatching, the sitting up in the night, (一Lyn, to watch.) The star that lighta the night has on this account retained the same name, and so has the matter iteelf that was manufactured during those watchings.

This sign has evidently given birth to the tales of Linus, Museus, Orpheus, Picus, Ganymede, and many other pretended heroes, or legislators, of which it is needless to pretend to determine and fix the chronology and the above.

The custom they hod, to publish the several regulations concerning polity, by the several postures of the son of Osiris, caused him to be commonly called Menes, that is, the rule of the people. The Egyptians, from thie new title, took it into their heads that Menes had been their legialator, the anthor of their polity, the orderer of their year, the founder of their lawe. For this reeson they put this imsginary founder at the head of all the liate of the kinga of their several provinces.

The name of Moses, or Museus, was very properly given to the publie sign of the revival of Husbandry. This word, which nignified the drying up, made part of the calendar; it was the summary and the substancs of a statute of polity. It was every year in the mouth of the people, after the re-entering of the river within its banks. It was not then a man's name. But if Menes and Museus are but one and the same thing; if they are only the names of the same sign; what then becomes of the first king of Egypt, the foundation of their bistory 1 He, from that moment, loees all his reality.

Two of the mont learned men among the ancients, Eusebius in his Evangelical Preparation, and St. Clement in his Exhortation to the Gentiles, by preserving and handing down to us the ancient set form whereby they incited thoee that were initiated into the mysteries to imbibe religious sentiments and love work, have helped us to find out exactly what the famous Menee was. The instructions given therein for good
conduct, are addressed to work itsell. It in called the son of the atar of the day, because husbsndry can do nothing without the sun. Again, it is called Museus; because in Egypt, whence this eet-form came, husbaudry did not resume its operations but till after the retiring of the waters. In short, it is surnamed Menes* in the same setform, that is rule of the people. Tharefore, this protended founder of the Egyptian monarchy has not more reality in him than his father Oriris, the ancient character of the sun, nor more than Museus, another character of the revival of the tilling of the lands and of the operation of sowing

## Anubit, Thot, Beculapius.

The faleity of the ancient history of Egypt is completaly demonstrated by the abose they farther maile of the fourth key of their nymbolical writing. It was the figure of a man with a dog's head, wearing oft-timee a pole with one or two serpents twisted about it. The meaning and intention of the public sign expoeed in the assembly at the rining of the dog-star, was to advine the people to run away and give attention to the depth of the inundation, in order to rule their ploughing eccordingly, and to secure their lives and subaistence. The named given to this public siga wero Anubis the barker, the giver of advices, or Tahaut the dog, or Axsculapius the man-dog. $\dagger$ It was astill the same meaning or the eame public eiga; but they were three names for one and the same thing. A sufficient ground for them to derive from thence three personages of their history, the chronology whereot will be still lengthened by this means. They make their demi-god Anubis to reign before Menes, without telling us where. They mako Thot or Thasutes, son of Menes, their second kisg of Egypt. They make him a counsellor to Menes. They ascribe to him the introduotion of the letters, the invention of music and dancing, with a great many other fine discoveries; the foundation of which is because the dogatar opened the year, brought along with it a new series of feasts, and appeared at the head of all the letters, or aymbolical figures which expreesed the annual order. Though Fesculapius wes as yet no more than the sign of the canicular atar, the Egyptians made bim a third king who had applied himself to the procuring the preservation of his subjecta by the study of physic; a notion that had its origin from the preservation of life which was expressed by the serpents twisted sbout the measure of the Nile. Such is the origin of the earpent of Epidaurus and the very plain reason for which the serpent has alpays

[^21]been inseparnble from the god of phyio, to which art both the mas and the animal had originally no mannor of relation. Several historians 'quoted by Sir John Marsham in his rule of timee (Chronicus Canon) attributed the invention of the letters to Asculapius as well as to Thaut. Which was doing them justice, the one not being different from the other. Mareham is most earueatly angry with thoee who have thus confounded things and altered history, by attributing to Essenlapius the invention which is the glory of Thaut. Thir he patches up to the best of his power. But it was very superfluous here to have recourse to means of reconcilistion; since Wsculapius, or the man-dog, and the Tehaut, or the dog-star, as well as Anubis, were no more than the names of one flgure that was exposed in the assembly of the people to warn them of the appearance of that star, the rising of which would soon be succeeded by the inundation."

## The Gode of Egypt communicated to Asia and Europe by the . Phenicians.

Egeypt alwaye was end still is the most fruitfol country in the world. The harvest, which is almost certain there, and by much excesda the wants of the inhabitants, occaaioned great quantities of corra to be amsesed there, which in barren years were the resource of the Arabians, the Canaanites, the Syrians, and the Greeks. Travellers whom need or curiosity had drawn thither, and the Phenicians especially, who inhabited but a emall maritime cosst near mount Libanus, and hed no granary so certain as Egypt, were all equally struck with the polity that reigued in every part of that beautiful country, with the gentle temper of ite inhabitants, the mysterious outalde of the ceremonies and feasta, which wore with much pomp celebrated there, and finally with the plenty which they looked upon es miraculous in a country where it never rained. The notion they had of that river whoee source remained concesled, and whose overflowings séemed to them contrary to the common course of nature, made them esy, that God himself poured these beneficial waters on Egypt. (Fluviua a Deo misus. Odyes. 4.) The Egyptians represented this marvel by the figure of God, that is, by as sum out of whose mouth a river sprung ; + and the

[^22]foreiguers as well as the Egyptisns overywhere gave it out, that mo wingular a prosperity was the reward of the piety of the inhabitanta, Nay, the Phenicians perhapes and the Canaanites at flrst received from the Egyptians and used tho symbolical characters among themvelves. The introduction of the common writing must have caused them to lose the sense withont suppressing the figures; so that these symbols being alwaye a part of the coremonies, and publicly exposed at feasts, everybody annexed to them the notion or biatory he thought carried the greater likelihood with it. Thus Egypt was the cup wherein the poison of idolatry lay, and the Phenicians are the people, who, by travelling all over the world, have preeented this fatal cup to the grester part of the western nations. For the eame reeson it is that the names of the gods and words made use of in the heethen feasta, have so sensible an analogy with the Phenician language.

Travellere-and morchanta, during their mojourn in Egypt, were undoubtedly struck with the outward shew of the feastes and the abundance that seemed to be the result of them. They did not carry home this multitude of symbole and practioes which thoy understood nothing of, but they seldom failed to look with venaration upon the three or four chief symbols which the Egyptiane honoured as beneficial powers, and an the authore of all the good they enjoyed.

The governor, the woman, the child, and the messengor, or the giver of advicen, always appearing in their feaste, though with some variety; foreigners used themsolves chiefly to these three or four objects, the moet distinguished of the whole worahip; and the Phenicians, whom constant neceseity alwaye brought agnin to the port of Pharoe, were the firat who made use of the name ceremonial, and calebrated the sanis feasta in their own country. The circle of the sun, accompanied with eerpente and folinges, or with large wings to represent the intelligence which is the mover of all thinge, the master of the sir, the dispenser of geseons and harreats, though always pleced at topof the nobleat aymbols, however, less attracted the eyea than did the brilliant figure of the governor of the earth, or the several drseses given the mother and the beloved child. Nothing contributed more tohumsnize, as I may say, the iden of God, or ratber to make men reforthair worahip and adorstions to beinge like ourselves.

## Moloch, Baal, Adonis, and Achad.

The god, or rather the figure of the aun, which the Egyptians called Osiris, or the governor of the earth, esgumed other names in other pleces. The eastern nations who had adopted hirn, and who looked on. their temporal advantages as the effect of this devotion, called him Moloch or Melchom, that ia the king; some Baal or $\Delta$ donai, or Adonis..
or Hero, all which names agnify the Lord. Others called him Achod 4 which the old inhabitanta of Latium have rendered by that of Solinicus; and othera finally nomed him Bealahamain or Beelsaman ${ }^{f} f$ the Lord of the heavenc. But it was always the sun which these figures of a king and thene namee immedistaly signified.

## Dionyrus Bacehus.

In the timea when thinge were expremed by eymbols, and the several parts of theee symbols wore varied to be the better understood, far Zrom being designed to conceal any mystery, the figure of Horum ohsoged its name and attributee acoording to the exigency of the circumstances in which it was employed. The first une it was applied to in certain feasts was the representation of paet events. The second was the instraction and the regulations fit for the people.

The representation of the ancient state of mankind consisted not only in the commemorative signis that were carried either upon a winnowing van or in a smell cheat before mentioned: they joined thereto ceremonies or set forms of prayers regarding the same intention. They In these fossts invoked the name of God with great lamentations. They called him the mighty, the life, the father of life. They implored his asaistance againot wild beasts, and made show of giving them chase, runniog hither and thither, as if they were going to attack them. They even did it in good earaest, completely armed.

It wes the custom to ssy with a eigh: Let us cry unto the Lord, io terombe, or disterombe. Let us cry before the Lord, or God soe our toares io Baecho, io Becooth. Thow ant the life, the author of being. Thou art God and the mighty: Jehove, hevan, hevoe, and eloak. They chiefly said in the east: God is the fire and the principle of life. Thou art the fre; life procesds from thee; hu eah : atts esh. of All these words and many othera, which were the expreseions of grief and adoration, became so many titles, which the people, without understanding, gave to this child or imaginary deity. He wes then called

[^23]Becchos, Hevan, Evoe, Dithrymbus, Jao, Elelus, Ves, Attee. They knew not what all this signified; but they were sure that the god of the feast delighted in all these titlee. They never failed to give them bim, and thus these expressions became criee of joy, or extravagant roarings.

When people went about pursuing the wild beasts that thwarted the endeavours of husbandmen, they cried aloud, Lord thou art an host to me, io Sabio. Lord/ be my guide, io Niasi, or with a different accent, Dionissif; Of these warlike cries, which were repeated without being understood, they mede the namee of Sebosion and Dionysius.

Of all these pames that were most used in Italy was Baccoth. The delicate ear of the Greeke, who could not endure harsh sounds, gave the preference to the name of Dionysius. Thees several titles (and the series of them was long) gave birth to as many histories. Thua they called this god Diongaius, because he whs the son of Jehov, or Jupiter, and born at Nysa, an Arabian city. He was named Evius, because, as he was fighting with one of the giante, Jupiter encouraged him in the Greak language, tand ——But if we now are sure of truth, why should we busy ourselves in enumerating such sorry tales? We are no way concerned to hear all the nonsense, which the want of understanding these namesfif bas caused to be built upon each of them.

Lot us now pass on to the retinue of Becolus. We shall thare find a proof, that Bacchus was no more than a maak or figure, and not any man that ever existed.

When the arte were once invented, the remembrance of the roughness of the first ages, and the comparison of the bardahipa whioh mankind had at first experienced, with the conveniences and incentions of lattar times, rendered the rural feasts or the fessts of the representation of the ancient state of men, more brisk and lively than all the reat.

One of the most easentisl points of this feast was then to appear there covered with akins of goats'f bucks, tigers, and of other tame

[^24]and wild animale. They smeared their faces with blood, to beer the marks of the danger they had run and the viotory they had obtained.

Inateed of a child of matal, mysteriously carried about in a chesty they by degrees contracted a custom of ohooaing a good fat jolly boy, to play the part of the imaginary god. They in prooees of time gave him a chariot; and to render the whole more wamirable, the pretended tigers offered to draw him, whilet the bucks and goats were jumping and capering round him. The assistanta diaguised and nacaled in thia manner hed namen ngreeable to what they ware doing. Thay were called Setyrs, a word which signifles men diogused," or Fauni, that ig masks. These etymologien, which are very plain, and atrictly connected with what precedes, are atill confirmed by the usage which the asaistante at theae rural feerts observed of consecrating to Bacchus, and of maspending on the tree, under which they had made their last atation, the mank of bark or other matter, wherowith they had covared thair face, that they might have a share in the ceremony. The feests of Bacohus have been aboliahed by the preaching of the goapel; but we seo the remains of them among us in our winter rejoicings. It is the mame concern, and, with no great difference, the same idolatry.t.

Those who followed or attended the chariot of Becokus, were called Bacchants, that is, mourners, besause the feast began with woee and complainte, and with frequent invocations on the assistance of God.

The women who carried the emall chest or the eacred beakets, or at least a thyrsua, $\ddagger$ (which was sometimes a javelia, in memory of the finit chases, sometimes a torch of reainy wood, were called Menades, Thyedee, and Besasrides. They were named Mensdes, which signifies the scomen anho carry the public rignu, because the feaste or the regula-

* Fatur, hidden, disguised: panim, or phanim, facies, prosopa, pareonse, oceilla, maeke. Those panim or hideous masks conld not fail frightening your children. For this reason it is, that fears occasioned by appearances of evil void of reality have been called terreurs paniques, panics terrors. Suoh is evidently the origin of the name given to the god of Mendes, vis. Pan, in whose horns and hair the philosopbers thought they had found a very noble emblem of general nature. Thoee who are fond of these admirable conceptions may look out for them in the allegoric explications of Plutarch, Iamblichus, Peellus, the emperor Julian, and Plato.
+ I have read in an English paper, that anoiently it was not unusual for a wag, on the first of January, to burst into a neighbour's house disguised in an ox's hide, including that of the head with the horna atteched.- Eorr.
$\ddagger$ Thyrus, a rod or lance twisted round with ivy, which was put into the hand of the soldiers of Bacchus, or of those who celebrated his feetivals, Ovid describes them as wound about with vine branohes.

The Jews do at this day carry a sort of Thyrsii, or something like them, in the feaste of Tabernacles, and eepecially in the Honannah Rabba. They are branches of willow, myitle and palm-tree, bound up together with citrons or oranges, which they wave or push in a religious manner towards the four quarters of the world,-(Bailey.)-Eiors.
tions, and all the wacred figurea inseparable from them, were in the ancient languago called Manes, that is, regulations. This the Greekn rendered Thimeci. The extravagant attitudes of thene mad woman, who etrove to outvie each other by the lamentstions and representing gestursa authorised by custom, were thence called Manica. These women agnin were called the Thyaiden that is vagrant or vandering, whon thoy disperned themeslves in the mountains life so many huntrenees. They were called Besearides or grapegatherera, because thees fousta werg celebrated after vintages and whan new wine began to be drinkeble..,

After the vagaries and the whole train, at last appeared an old man upon an ase, who advanced with a eedato countonance, offering wine to the tired youth, and inviting every body to take some resta $t$

If anybody should complain that this explication of the origin of the Becchanale does not establinh a relstion sufficiantly mensible between wine and the feasts of Becchus, who from all antiquity han been looked upon as the inventor and propagator of the vine, whareas we reduce it to the proclamation of a lew instructions, which the people atood in noed of; I shall reply, that the feasta of Bacchus and Cores are overywhore styled among the Greeks and Romans, the feasta of the regulations ; because they confueediy remembered, that the purport and intention of the flgares of Isis and Horus was to regulate the conduct of the people. And I shall at the same time dexire such to take notice of what Horus carries over his head at the solemnity of the Pamylis, or at the beginning of the winter. Among other objects capsble of pleasing, there appear three large pitchers of wine. This was the finest part of the ooremonial : and the foests where this liquor was drunk in plenty oould not but be the most briak and most enlivened of all.

I have considerably abridged the preceding artiale. That the Baceluus honoured in the processions here dencribed was not, as the suthor states, a man that ever lived, is very evident; but that the figure representing him was marely a symbol of husbandry, as he ondeavours to show, is not $s 0$ clear. The feativals were religious thanksgivings, in which grateful acknowledgments were rendered for the favours received from the hand of divine providence, and the image intended to repreaent the god who wha

[^25]supposed to bestow these blessings, was ceremoniously carried in procession. The Bacchanale were similar to the feasts noticed in the memorials of past events, with trifling variations, ariaing from a difference of taste, and misconceptions in the conveyance of customs from one country 0 another.
The Roman Catholic processions of the Hoat are of the same nature as the above, and no doubt the cuatom, like most of the practices of the church of Rome, has been derived from the ancient pagan ceremonies. The catholic processions, it veems, are conducted with more mystic solemn pomp than those of the anciente, but the ruffian assaults of the guarde or assistante in this affair, of persone walking in the streets, who are not even within the pele of their order, for neglecting to fall upon their kneee, on the passage of the host, are more outragsous than the extravagancies of their prototype.

The masonic processions are identically the same thing as the Bacchan nals, but got up with more taste and refinement, owing to the induence of civilization. In these are carried, besides other articles, which will heresifter be enumerated, a box or chest, called the lodge, about whioh much secrecy is pretended, and which is kept covered from the eyes of the profane or uninitisted. The utmost decorum is observed, and no persons is annoyed for not paying homage to the sscred contents of the mysterious chost.

The author himself, in the next article to the foregoing, has told us who Bacchus really wae, and which fully explains the understanding that ahould be applied to these Bacchanalian proceations, ns follows:-

The sceptre and empire of heaven and earth fell to the ahare of Osiris. The chariot, the whip, and the reins were assigned to Apollo ; whence it is that we so commonly find in one god the characters of another. The Horus Apollo, who was only related to the rural year or the order of works, was the more esaily mistaken for the sun which rules nature, that they put the whip and the attributes of the sun into the hands of the Horus, in order to ahorten and abbreviste the marks of the solar year, and of the works suitable to each season. Thus Horus becarne the same with the Moloch of the Ammonites, the Adonis of Byblos, the Bel of the other Phenician cities, and the radiant Bolenus honoured in Gaul. This driver of the chariot, which gives light to the world, is the son of Jupiter; but the son of Jehov, the son, par excellence, liber, is no other than Horus, Bacchus or Dionysius. Osiris, Horua, Apollo, Beoohus, and the sun, are then confounded. This the suthor of the saturnala has sufficiently demonstrated. Virgil himaself makee no distinction between Becohus and Apollo or the sun, when he gives Bsochus and Ceres or Isis the government of the year and the Iight.

[^26]
## Allas. The Hyades and Pleiades.

Atles, according to the fable, was an ingenious master of antronomy, a doctor who know nature in general, and gave information about it. Homer gives us Atlas as a very lesrned god, who knew all the obliquities of the cosst, and all the depths of the wea. Virgil ascribes to the informations of the great Atlas the knowledge men had acquired of the moon, the eclipsee of the sun, and the whole order of nature. The name signifies \& support (atlah, support, prop), which gave occasion for the invention of the metamorphosia of the doctor Atlas into a column or high mountain, thast prope up the arch of the hesvens,

The Phenicians, in the voyages they repeated every third year to Tarshish, that is, to Cadiz and to Boetics (now Andalusis) through the Red Ses) and in carrying on the commerce of all the cossta of Africs, often saw the higheot mountain of Mauritanis, whose top is generally covered with mow, and neems joined with the heavenc. The name of Atlan or column given to that mountain caused the fable of Atlas to be applied to it. They said he wes king of Mauritania, a great estrologer and geographer, who at laat was by the gods changed into a high mountain, reaching from earth to the heavens.

The Hyadee or Huades, who took their name from the figure $\nabla$, which they form in the forehead of the celestial bull, and the Pleiades, which are that amall platoon of stars so remarkable, near the foregoing, are the moet known and the easieat to be distinguiahed of all the constellations of the zodiac. They perticularly were of use to regulate the informations given to the disciples of the priests by means of an Atlan, that is of a Horus bearing a colestial sphere. Atlas humanized, became the father of the Hyades and Pleiades; and Orion, which rises immediately after thico, easily passed in the imagination of the fabulista for s libertine, who incesssntly pursues them.

Among the other fablea which the Phenician travellers were suffciently at leisure to dovise in their courees, or to recount when they came home, the two finest doubtless are thoee of the garden of the Heaperides, and of Atlas freed by Hercules of the burden of the celestial globe. What can be the origin of the first I Three nymphs placed round a tree that bears golden apples, of which they have the dispoeition and management; a dragon that watches to interdict the use of and socess to this admirable fruit, to any other; a wild goat that browtes on the grass at the foot of the tree ; or, inatead of the goat, a horn of abundance placed either at the foot of the tree or in the hand of one of the three Dymphs. This in the picture of the garden of the Hesperides.
The picture is nothing more than the ancient aymbol of the rich coramerce of which the Phenicians made the preparations in winter. It
was the commerce of Hesperia or of the western councries, particularly of Spain, whence they drew exquiaite wines, rich metals, and that superfine wool which the Syrians dyed in purple. (See Diod, and Strab. or Spect. de la nat., vol 4, part 2, dialog. 2) They brought back the finest corn from the coest of Afrioa; and when they went round the continent through the Red Sen, they exchanged all sorts of iron-ware, knives, and edge-tools, for sbony and other precious woods, for gold duat, and provimions of all kinds. This branoh of their commarce was the most esteemed of all. It wis the chief object that did then take up the thoughts of the Pheniciana; nor did they fail to oxpoee the publec rign of it in the nesembliee. One may eacily guem at the meaning of that tree which afforded such precions thinga. The great dragon that surrounded the tree, turned the mind of the beholders to the aubsisence and benefits whereof it was the sign. The capricorn, or barely one horn of thin animal pleced at the foot of the tree, wis the obaracter of the seseon. The three moons during which the companies were formed, had their name of Heeperidee, or Heaperis, as well as all the weot, from the word which signifies the good thare, the best lot (- esper, 2 Sam. 6, 19).

The publio sign, used upon this cocsaion, wes doubtlees three goldea balls, having reference to the three moons, personifled by three nympons, in which the companies were formed, the ligure and colour correeponding with thoee of the full moon. An alluxion may aleo be made to the gold dust and other precions articles, the beet lot, which the Pheniciana recoived in exchange for their morchsodise.

The Lomberde, the money-lenders of former times, are seid to have sdopted this sign for their ofloee; and pawnbrokers still use it to deeignate their profeselon. I am semsible that some writers conjecture the golden apples of the Heesperides to be nothing more than oranges; but it In hardly probable that an arlicle of so little value, in a mercentile point of viem, ahould have given rise to the fable.

Hercules is as name of the sun, and his rolieving Atian of his burden anludee to his diesolving the snow with whioh Athas or the mountain of Moritanis was losded.

## Mercury, Hermes, Claminus.

We have now a protty large number of very famous men snd women, Which wo, mothinke, have sn sequired right to strike out of history. We mut no longer inquire into their country, antiquity, or genealogy, since we have proved that they all of them are nothing more than the Oniris, the Isis, and the Horua of Egypt; that is, the three principal keys of the anciont writing, or the symbols of the solar, the civil, and the rural year.

Wo know a fourth key, vis, the Thot or Thent, that is the dog. Thence again epringe a multitude of kings and gods of whom we shall in fow words find out and explain the names, ranks, and employments.

The Egyptians in after-times, no doubt, made him one of their kings, who had been transported into this fine star. They gire him as the son of Menes, and the graodson of Osiris, and ascribe the invention of the symbolical charscters to him. They say that he was the counsellor of Menes, whom he sseister in the regulation of their feasts. But thia fine story had no other foundation than the report that went among the Eegptians of old, that Thot introduced the Manes, and renewed the proclamatione. And indeed he opened the year, ninco that always began at the rising of the dog-star; whence the firat of their monthe had the name of Thot. It was out of mere superatition that the Egyptians forbore calculating exsotly the sacred or civil year, when they began to know that, besidee the 865 days, there remeined a quartor of a day to be added to complete the revolution of a year. Four quartere of a dey overlooked, made a whole day in four years' time; and neglecting to intercalate that day at tho four years' end, and to reckon 866 instead of 305, their civil year on this eccount began one day too soon, and by retrogradation differed a whole day from the calculation of the natural year. The beginning of the sacred year went sucosesively therefore through every one of the daya of the natural year in the epace of 865 timen four yeers, which make 1480 years. They fancied they bleased and made all the measons to prosper, by making them thus enjoy one efter another the feast of Isis, which was celebrated along with that of the dog-star; though it was frequently very remote from that constelletion: and it was in consequence of the ancient custom of celebrating the feast of lisis, or the renewal of the year at the exsct rising of the dogetar, that they afterwards, in whatover menson that feast might fall, to be sure, introduced not only the figure of a dog, but even real and Hire dogs, which always preceded the chariot of Isis (Diod. l. 1) ; E circumetance which I beg my reeder to take particular notioe of. Thus in after-times they took s special plesaure in introducing a marvellous and mysterious air into overything. The calculation just mentioned, and many others which they had reoeived from the priesta their predeceseros, were things of the utmost plainnese. They, in process of time, mistook them for the durations of the several kinge whom they quar tered in the dog-btar and other celestial bodies. One had lived 1460 years ; another had reigned so many thousend of years together. The astronomical observations grounded on several suppositiona and corcbinations of the stars, were one of the chief employmeuts of the priesta. These calculations, found in the registers of the most laborious among the learned, being slwaye joined with names of men, such as Anubis Thot, Menes, Oairis, and others whom they lodged in thits stars, passed for the term of the terrestrial life of these gods. Such is indeed the true origin of that antiquity of the Egyptian history, which they traoe
beck so very high. Their ancient kinge are nothing more than the namen of the stars; and the protended duration of their liven is only esupputation of the time noossary to bring agein a planet to that point of the beavens from which it hed began its course. Thus they made es wrong a use of their atronomical somputations as they had done of their writing.

Letusnot, in mentioning theretrogradation of the fesat of Ievis and the return of that feast at the rising of the dog-star at 1460 years' ead, omit oneoberrration, vis, that they looked upon the 1461st yoar as privileged, ase a year of plenty and delighta. It was because this so important ovent, mocording to them, concurred with the deeired Eteriso wind, that they expressed the whole by a bird of singular beauty, that reised edmiration more than any of the rest, and returned to Egypt after an absence of 1460 jears. (Tacif. Anal, 6.) They farther eaid, that this bird came hithor to die upon the altar of the sun, and that out of Ita ashea there rose a little worm, that gave birth to a bird perfectily like the preceding. They called it Phoenir, which signifies the advantago they pretended.was annexed to the concurrence of the opening of the year with the real rising of the dogstar; I mean the moet delightful plenty (——phonek, deliciis abwhdans, Prov. $26 ; 21$ ). We then have here again another emblematio figure converted into a wonder which it would have been a crime to doubt of."

The dog-star has already afforded us two deities, one residing in the fine etar near Cancer, under the name of Thot or of Anubis, and very well employed in awelling and sinking the Nile, the other wholly intent upon phyaic, and ontirely taken up with the care of people's health, under the name of Fesculapius. Next to Anubis and Fisculapius, lot us dow sos the Camillus of the Heturians, the Janus of the Leting, the Hermoe of the Greeks, and the Meroury of the Phenicians, all of them rising out of the same figure. The observation of the dog-star weas not only justly denoted by the figure of a serpent, the symbol of the life it had procured the Egyptians, but having beniden procured them abundanoe, or rather a supersbundance of corn, which enabled them to help foreigners and to enrich thomselves by the aelling of their commoditien, the figure of Anubis was ofton eccompanied by a full puree, the sight whereof flled the people with joy; and this procured it the new title of Mercury, which sigailies the dealer, or the intriguing, the cunning, or only commerce.

A new proof that Meroury wis no more than a symbol of the dog. star, or of the warning of the retreat, and not a man that ever taught

[^27]of Invented anything, is that they put into hia hend the mark of tho awelling of the Nile, and at his feet the wioges intimating the neocenity of enonping the inundation by a apeedy flight.

The mark of the riaing of the water was a pole orowed; a very plain symbol indeed, end the eerpent twisted round it had, in the hand of this figure, no other meaning than eisewhers. It alwaye nignified the life, the subsistance. When double it denoted subsistance in very great plenty, and auch an whe ruffleient both for the Egyptians and foreiguers. Thia pole was terminated with two little wingo ; the symbol of the wind that regulated the increase of the waters. All which sigsifications were forgotter, and the monitor becoming a god as well as the other figures, they changed his name of Asubie, the barker, into that of Hannedi, the orator. (Hantobeak, Isai Ivi 10). His gestare and the atick he had in his hand helped on this metamorphonin. Is was taiten for the mark of a leeder, an ambessador. Hence the titlo of gride, of inspector of the roade, of messonger of good news, and no many the like that were given Meroury, and of which we find a colleotion in Geraldi's history of the gode. Hence came the roads under hia proteotion, and of plecing his statue at the entrance of tho highwayn But what cas be the origin of the name of Caducens given to Mercury's rod 1

In the Fest, any person preferred to honours bore a meeptro ${ }^{\circ}$ or ataff of honour, and sometimes a plate of gold on the forshend called eadoal or cadicestet signifying a macred permon (—_andoth, annctus, se

[^28]paratus) to inform the people that he who bore this rod or mark was a publio man, who might go hither and thither freely, and whoee person was inviolable. Such is the origin of the name given to Mercury'e wand. Thus they made the guide of travellers, the interproter, (interpres, nuncius sacer) and deputy of the gods, of s figure whoso offloe they confusedly knew whs to waru people of being gone. Being wholly ignorant of the relstion between this long meesure and the Nile, it was everywhere converted into an ambensador's staff, that thero might be nome conneotion between the envoy and the wand he carried.

Instead of the mearure of the Nile, they very often put into his hand a key, and gave him two faces, one a young man, the other of s man in years ; incompassing the whole with a eerpent having his tail in his mouth. The serpent, symbol of life or of time, here signifiee the year that makes a perpetual circle, and the revolution of the atara coming again to the point of the heavens from which they began their couree the year belore. Our doorkeeper, who here shuts up the concluding year, and opens the now, in no other than the dogetar, whoee rising or disengaging from the rays of the sun pointed out the new solar year. I say solar, or natural, becauss it happened for reasons before atsted, that the beginning of the sacred year went through every one of the seasons. But they atill observed the custom of making the god Anubis, who was the door-keeper of the feasta, to precede the pomp of Isie, which was the first feast of the year; whence it appeare, that the whole was rather astronomical than historical. This undoubtedly is the Janue of the Latins, who had the same attributes with the name of doorkeoper. His ordinary companion, good king Picus, with his hawk's heed, han so much the sir of an Egyptian, that we cannot doubt but that Eigypt, not Latium, was the country of both.

Anubis, considered as a symbol, was in reality the rule of the feesta, and the introducer of all the symbolical figures that were nuecesaively shown to the people during the whole year. When a god he was made Inventor and regulator of these fessts. Now the solemnitiea were called the manes, that is, the regulations, the signe, the enrigne, because the figures there presented to the assintanta were originally deaigaed to regulate the works of the people. This they made the noblent funotion of Anubis; and it whe with regard to thin frivolous opinion, that tho pomp of Ieias was alwaye preceded by a dog. But the neomenise of esch season, and the particular feasta that want before, or that followed
are Nelcam Adonai ; which probably have tho same rigniffcation an the words engraved on the plate worn by the Jewish high priest, Adonai or Adonis, meaning Lord. This degreo will hereafter be particularly noticed.

The mitro wora by the high priest of masoary, in the royal aroh degree fswarrounded with the worde: Holineas to the Lord.-EDES.
each harveat, having peculiar names that distinguished them, the general word of nianes, ensigns or images, wes atill the name of the funeral sasemblies, which wore frequently repeated, and the namee of manes, images, nimaulcrea, and dead persons were confounded. Thus Mercary, who opened and shut the manes (manium dux, ductor enimarums) became the leader of the dead. He conducted the soula with a high hand. The king or the ahepherd must indiecriminately follow the troop. He opened the melancholy sbodes to them, shut these again without remorse, and took away the key, not permitting any one to escape. (Tum sirgam capit. Hac animee ille evocat oreo.) This again is what the Phenicians and the Arcadians meant, when they called him Cyllenius, a word which sigaifies the ahutting, or one that concludes the year, and who finishes for ever the duration of life.

The people were peranaded, that be invented music, the lyre, wrestling, and all the exercises that form the body, because all theee thinga being inseparably annezed to the ancient feasts, he was thought the regulator of them as well as of the fensta, he of course introduced everything belonging to them.

As to the genealogy of Mercury, it conffrms all wo have said. Ho Is the eon of fair Mais, and grandeon of Atlen. Maia is the Pleias or the cluster of stars known even by the vulgar, and plsoed on the beck of the bull. The esstern nations called these stars Meeab, which eignifles the bundred, the multitude. The Greeke nometimes retained their first name, and called them Main; mometimee translated this word by thoee of Pleiadea and Pleione, which likewise signify the multitude. These so very retaarkable stars being most fit to regulate the stady of the heavens, and being the first that strack the oye bofore the riaing of the dogetar, of which they thus became the forerunnera; they, together with the Hyades, were the first in the knowledge of which the Egyptian prieste took care to instruct their young pupils, in the sphere of Atlas. This eymbol being onoe become a god, all hia inetructions were embelliahed with histories as well ss he. The aters, that served as a rule to know the others by, became the beloved daughters of doctor Atlas. Maia dieengaged herself at that time fsom the raye of the sun in Germini, that in, in the month of May, to which she seems to have given her namo. The fineat ntar that olearn itwolf a month or somewhat more after from the rays of the sun, is the dog-star, or the Anubis, of which they were pleased to make Mais the mother, because the atar of Anubia whe the first that sucoeeded her.

## Dadalus.

It wha the curtom in Egypt to my, when the dogetar or Anubis wes represented with large hawk's winge, that the water would be of a vufficient height, and thero would be a certainty of a plentiful harvent On this ocoesion Anubis wia called Dwdalnes, whioh vigaifiee asufficiant
height, or a sufficient dopth. All the ancienta agree thint Dmdalan was an ingenious architect. They ascribe to him the invention of the compasers and the square. They farther add, that to him mankind is indebted for statuary; they even chareoterize the nsture of the progren which this noble art made under hira, by circumstancen which render the thing very credible. Before Deedalue, and to his very time, according to Diodorua Siculus, "Statues had their oges shut, and their hands close to their sidee, but Dasdslus taught men how to give thom oyes, to separate their lege, and to clear their hands from their body, which procured him the general admiration."

But by minfortune, both the history and the statuea with their feet united become the proof of the origin I here seaign to Daddalus. The compestes and square, of which he is made the inventor, are no other than the compesses and equare that were put into the hande of Anubir or Horus, to warn the huabandmen to be in readinees to mesaurs their lande, to take angles, in order to distinguish them from the lande of otherr. Thus he was made the inventor of the symbolical instruments they saw in his hands. The statues, whowe hands and feet are frequently swathed, and which are found in the cabinets of our virtuoso, are no other than the statuee of Osiris, Inis, and Horus, such an they were preeented to the people at the time of the inundation. There was nothing then to be done, and the inaction was univeraal. The entire cesaation of the rural works could not be better intimated than by a Horus swathed or deprived of the use of his feet by the inundation, and uning only his arms to point out the measure of the water, a vane to show the wind, snother instrument to take angles, and a horn to proalaim the general surveying.

## The Cabiri of Samothracia.

The three principal figuree of the Egyptian cerremonial were carried to Berytus in Phenicis, and thence into several Islands of the Agean see. Their worahip became very famous, eapecially in Lemnoes, and in the ialend of Samothracia, which lien very near it. They were called there the Cabiri, ( - cabirim, potentes,) meaning the powerful gods: and their name of Cabiri, which is Phenician, was as much used in Egypt as in Phenicia iteolf; which is a standing proof of the mirture of the Phenician terms with the Egyptian language, if the ground of both be not exactly the same.

The figures of these gode being originally designed to make up a oertain sense, by a collection of several pieces that very seldom meet together, could not but have a very odd, if not a very ridiculous air in the eyes of such as did not understand their meaning. The foliages, horns, wings, and spheres, so commonly found on the heeds of Osiris, Isis, aud Horus, could not but amaze or raise the laughter of euch as were not accustomed to them. Herodotus observes, that the Cabiri, as well as the same figure of Yulcan, were the diveraion of

Cambyses, when he entered their temple and that of the forging deity.

They often add to these a fourth god, whom they sometimes call Mercurg, sometimes Camilus or Camilus, which among the Heturians and in Lstium signified a minister or a meesenger. In all which it is plain that we again meet with the four principal keys of the ancient Egyptian writiog, changed on account of their human figure into mo many tutelar and pororfful gode.

The names of the Cabiri, with their significations, are thus given in Anthon's Class. Dict. :- "Axieroe is said to have nignified, in Egyptiai, the all powerful one;-Axiokersoe is made to denote the great founda-tor;-Axeokersa is consequently the great fecuadatrix; and Caemilus, ho who stands before the deity, or he who beholds the face of the doity."

The first answers to the Supreme Intelligence; the second to Osiris the ano the third to Iain; and the fourth to Anubia

## Apollo, the Muses, and three Gracts.

Notwithatanding the variety which the caprice of private men and the difference of tastes have introduced into the Egyptian ceremonial, and among the sigus that served to proclaim whaterer was of concern to the public, we find every where the same grounds, because the wanta of all men were the same, and their practices were founded on these wants. After the sense of those emblems had been so far perverted as to change the aigrificant figures into so many deities solely taken up with the care of supplying all the wanta of the Egyptians, or of inforning them of all their concerns; each provioce paid epecial Worahip to one or the other of the figures. For instance, in some places they honoured Apollo, holding in his hand a lyre. This so wery plain a symbol of the feasts, having been taken for a deity presiding over harmony, "the other figures which attended him to denote

[^29]the severnal circumatances of each season, were tabon in a mense agreesble to the notion they had framed to themselvee of Apollo. The nine Isisee whioh proclaimed the menomenisy, or the firat daya of every one of the nine months, during which Egypt is freed from the inundation, bore in their hands aymbols peculiar or suitable to eeoh of these montha; as for instance, s peir of comperses, a flute, a trumpet, a mank, or other attribate, to denote the feant that prooeded the curveying of the lands that had been overflowed, or some other solemnity. All these figures in reality informed men of what they were to do. They had a general confuned remembranoe that theee were their funotions. But being once beoome goddesees, people imagined that they has the superintendence of music, geometry, astronomy, and all the scienoea. They were united in a chorus to the mumician Apollo; and insteed of eeeing in the instruments they bore the peculiar charncters of the feasta and worka of each month, men took them for the specifio marks of all fine and delicste arta, and even holpod on this fanoy, by edding a part of the omblems. They were oalled in Egypt the Nine Muses: which signified the nine months rescued from the woaterts or from the inundation; an etymology whoee axactnces is demonstrated in the name of Moese, or Mose, which nignifiee oaved from the woaters, divengaged, freed from the soatera. Such was the common name they always retained. But the Greeks, among whom this chorus of deitice was introduced, gave each of them a proper name. Thoee names, if they are taken out of their language, conformsbly to the ridiculous notions they entertained of these figures, are no manner of information to us, and are not worth our tranalating. Near the nine Isises that denoted the nine monthe in which people might go up and down, and act at liberty, appeared also the three Inises that represented the three monthe during which the water remained on the plains, and hindered the free correapondenoe of one city with another. They were drawn sometimes in awathinge, and incapable of making any use either of their feet or arms; sometimes halt women and half lizardes, or half fishes; beosuse men must then remain on the land by the water-side. In fine (and this last form was more to the liking of the Greeks) they were repreeented as the three idle sisters, without any attribute, holding one another by the hand; because they denoted the inaction of the three monthe of inundstion, that sucoseded each other without interruption. And as these three monthes broke off the ordinary correepondence of one city with another, at a time when they bad not an yet raised the magoifioent causeways that have since been made ; the three Isises proclaiming the neomenis of these month of total separation were called Cheritouct," that is

[^30]the divores, the time of the separation. Thin word had a relative sound with the word charites, which in Greek signifies sometimes the thankagivings, sometimes the favoury, or a cosrteout behaviour. Which gave occasion to the Greek poets to imagine that thene three goddessea presided over gratitudo and outward charmas.

Notwithstanding all the care every city had taken in the month of June to supply iteolf with neceesary provisions, they could not on many occasions do without the asoistance of each other, and they had recourno to the conveniency of barke and maile. The bark with its eail was represented in Egypt and Phenicia under a figure of a winged steed. On this acconnt it was that the people of Cadis, who were originally of Phenician extraction, snciently gave a ship, whether large or mall, the name of a horse; and speaking of their barkn, they called them their horses. What can be then the meaning of Peganu, or the winged horse set by fthe side of the three Gracen and the nine Muses? If these goddessee preside over gratitude and the rciences, our winged horses becomes unintelligible. But if our Charites are the three months' separation, or the interruption of the free correspondence of one city with another, in this case indeed Pe gasna comes to our aspiatance; and if the nine Muses are the nine figures that publish what is to be, done during the nine months in which Egypt is freed from the waters, then indeed the winged horse, that is, the boet, becomes a kymbol of the ond of navigation, and of the return of the rural works. They therefore gave this figure the mame of Pegasus, which signifies the end of ravigation, $t$ according to the style of the Phenician people testified by Strabo, the conveniency of mavigation.

An Egyptian or Phenician colony, that had all thene figures in the coremonial of ita religion, brought them along with it to Phocis in the neighbourhood of Mount Parneesur and of Delphos. They had for oertain no meaning there, being no way related to anything belonging to that country. But they had been long honored, together with their president Apollo, as to many bountiful deities; whieh was auffioient to perpetuate the use of these figures, and the protty stories which had bsean devised to account for all.

[^31]It will not be improper, in order to strengthen what has been said, to observe, that the ancient figures of the three Graces are often seen under the conduct of Mercury, because the rising of the dogstar in Egypt is succeeded by the three months of inundation; and the nine Muses, under the conduct of Apollo, because Horus, or working, makee its une and benefit of the nine following months.

But why did this Apollo pronounce oracles, and forstell future events 1 This was his first destination and appointment. Horus served only to inform people by his attributes, of what was to done or expected sccording to the winds and years. People never forgot that theee fgures were the signs and regulations that guided the works of man; but when they were once made gods, insteed of looking upon them as convenient indications and tokens, whereby peraons of grest experience regulated the works of the people, and beforehand pointed out to them what wae to be done from one month to another, they fascied that these figuren were acquainted with future eventa, and gave information about them.

The author, it appears to me, is here in error. Apollo was a god, the tun, before the invention of the symbols that indicated his movement in the heavens, and the state of the seasons, which regulated the labours of man . Nor do I perceive the propriety of naming these aymbols Horue, or Apollo, any other appellation would answer equally well. When Apollo had become personified by meana of the popular roligion that governed the opinions of men at the time, he then, "Instead of being the god from whom emanate fecundity and increase, is a simple'ehepherd conducting the berds of another. Instead of dying and ariaing again to life, he is ever young. Instead of scorching the earth and ite inhabitants with his devouring rays, he darts his fearful srrows from his quiver of gold. Instead of announcing the future, in the mysterious language of the planets, he prophecies in his own name. Nor does he any longer direot the harmony of the apheres by notes of hin mystic lyre, he has now an instrument invented by Mercury and perfected by himself. The dances too of the atars cesse to be conducted by him; for he now moves at the heed of the nine mumes, the atrings of hin divine cithars, the divi-

[^32]nitien who proside over each of the liberal arta" (Constant, do is Re-ligion.-Anthon'a Clmas Dict.)

Niobe.
Niobe, the poets nay, proud of her own fraitfulnems, insulted Latons, but Apollo puniahed her by alaying her fourteen children with his arrown. She never could be comforted, and the gode out of compassion changed her into a rock. Latona or the lizard, or the figure which is half woman and hall lizard, sigoifiea the retreat of the Egyptians to the higher grounda. ${ }^{*}$

Niobe eignifiee the sojourn of the enemy, or of the river overflowing the plain. From - nuah, habitarem, to mojoum : and from -ob, exundation, tumer, comes-Nyob, mora exundstionia.

The insult Niobe gives Letons is the necessity she lays the Egyptians under of fying, like amphibious animsle, to terraces surrounded with water. The fourteen criddren of Niobe, are the fourleen cubits that mark the several increases of the Nile, (Strab. 1. 17.) These fourteen eubits are ntill seen repremented by fourteen children dispoeed one above another upon the feet and arms of the figure of the Nile, now standing in the Tullerien.

Niobe, in ahort, is changed into a stone. Here liea the equivocation. The sojourn of the enemy becomes the preservation of Egypt, shelav, But the same word, dieguised by salight alteration into that of ahelave, signifies a stone: (-ahelav, ealus, -ahelavo, vilex). Underatanding no longer what was meant, by the mother of the fourteen children, changed into prevervation, or become the preservator of Egypt, they metamorphosed her into a rock, and her eyes into two fountinis, that continue to ahed tears for the death of her dear lamily.

The following romarks of Mr. Mackey aro ingenious and pleusible, I his derivation of Tentalus be correot, it completely develope the origin of this celobrated personage.

[^33]"Nyobe was the symbol of the Nile; whose fourteen exildren show that the water of the Nile roee fourteen cubite above the land, which being dried up by the rays of the sun, it was said that Apollo, thast is, the sun, slew the fourteen children with his srrows. Ovid reckons up the pedigree of Nyobe with much precision, and tells us her father's name was Tantalus.
"The lower part of Egypt, that is, the Delta, was formerly a gulf of the sea, which was filled up in the run of some thoussad ages by the sediment brought down by the Nile from Ethiopin Nyobe then is the daugbter of a high country; but Ethiopia, on account of its being a high oountry, is called in their language, Tandalos, from Tan, a country, sad dalal high. Thue Tentalus, a high country, was the father of Nyobe, a low country-the sediment of the one having produced the other.
"It is farther said, that Tantalus was punished in hell with eternal thirst, while he stood chin deep in water. But we do not know that Tantalus, that is Ethiopis, is an arid country, notwithatanding all the fertilizing water of the Nile runs through it",

Altbough it rains in Ethiopis for several months almost continually. a portion of the year ia said to be very dry and sickly.

## Argus.

This explication of the foregoing fable *assists us in the understanding snother, which, puerile as it is, has often exercised the greatest poets, and the best painters: I mean the fablo of Argus.

Juno, provoked at the conduct of her husband, took from him fair Isis, and having turned her into a heifer, committed her to the vigilance of Argus, who had s hundred eyes, some of which were awake, while the reat slept. But Mercury by his songe lulled all the eyes of the guardian anleep, and carried off Isis. What oan this tale relate to ? If I am not mistaken, the origin of it is this:

Weaving whs famous at Athens, in the ialand Amorgoe, and in Colohis, as well as in Egypt.

Isis, the symbol of fesate, when she proclaimed the neomenise, and other molemnities of the winter and the spring, was attended by a Horus fit to characterize the kind of work which was to lest for six months together. This figure was covered all over with syee, to mark out the peculiar kind of work which in done by night; and it was because this Horus intimated the necessity of watching to forward the making of cloth, that he was called Argus, which means noeavers'

[^34]work* The Isis, after having quitted the horns of the wild goat, whereby the denoted the winter, assumed during the whole spring those of a heifer, because it is properly the passing of the aun, under the rign of the bull, that constitutes in the temperate zone the true beauty of that delightful seeson. The vernal Inis, the handsome beifer, thue remained several months together under the eyee of Argus, or by the side of the open-eyed Horus, till the latter wam removed and the heifer carried away by Mercury; that is, till the nightly worke, spinning and making of cloth, were over, by the rising of the dog-atar or Anubis. The people jeeting upon theme figuree forged the fable of Isis changed into a heifer, of her guardian Argus, and of the nutable exploit of Mercury, who on thin account was surnamed Argiphontes, the murderer of Argus. We find in Piariue, that the Egyptians gave also the name of Argus to the peacock that whas by the side of Juno or Isis ; and in the mythologists, that Juno, after the death of Argus, took the eyes he had about him, and therewith embellished the tail of a bird that was consecrated to her. This pescock placed near Inis, is only an attribute fit to denote the begianing of the nightly worke, by an agreesble imitation either of the starry heavon, or rather of a multitude of eyes kept incessantly open. The name of Argus, vis, of meaving, it then went by, is a proof of this, and showe the intantion of the easign.

## Circh.

The asme Isis, carried into Italy with her severni attributes, gave birth to a fable of quits another turn. There she became the soroereas Circe, who with hor wand turned men into lions, eerpents, birds, ewine, and any other figure she was pleased to give them. From what can men imagine storiea like this if The mythologista thought she was an emblem of voluptuoumess, that briags ruen down to the condition of beasta. It was difficult to eay anything more reasonable, when they neglected to inquire into the true origin of these fictions. Circe is no other than the Egyptian Isis, who sometioues with a measure of the Nile, sometimes with a weaver's beam, a distaff, or a lance, alway appeared with some distinction in the public proolamations. She was always accompanied with the figures of Horus and others, that varied from month to month, and often from day to day. She was the principal part of the enigma, to which all the other enigmatic emblems were subordinate. She was everywhere to be met with, and

[^35]had always by her side and under her wand, somotimes a man with a dog's head, sometimes a lion, then a serpent or a tortoise, sometimes a whole ohild, at another time a child's head upon the body of a aorpent, and nucceseively the animals of the sodiao, and othera, that denoted the return of the different rural works. In a word, she converted all that were near har into several animals. The Isia and her whole attendance whe then really a riddle to be found out, an emblem to be explained. But what aigaifien Ciroe ? Even the wrapper, the enigma (circ. involucrum).

Let us proosed farther. Isis very probebly was not called Circo on any other aocount but that of the circ, or solar circle she commonly wore over har head. That cirole wha the emblem of the Supreme Being, of whom Isis proclaimed the several feasta. But why was thia aun called circ, the onigma I It is because God oould not be painted, and a disc was the enigma of God. It was the enigms par exeellence, the cirs. The place in Italy, to which this Iais with her circle over the head was brought and honoured of old, is atill called Monte Circello. To proclain certain feasta or aacrifices, that were celebrated perhaps in the evening, at the rising of the new moon, or in the morning at the riaing of mome atar, or of the planet Vonus, when it is admirably aplendid, a little before the dawning of Aurora, they put over the hoed of Isis, instead of the disc of the sun, that of a star, or of the known planet, a crescent, or a full moon. These figures, and the prayers that were sung in the old language st the return of each feeat, mede them imagine that Circe, by her enchantmenta, or by some myaterious worde, had the power of malding the stars and the moon come down upon the earth. It is equally evident, that the several foliages ohe bore in her hand, or over her head near the figure of the moon or of some other planet, made the people say that the properties of these plante were admirable; and that it was from a knowledge of their virtues that Circe was able to mske both heaven and earth submit to her power. The Ggure seered to intimate this, and they believed it. This afterwards became the privilege of common witches ; and the people is still persuxded that the sorceresess at their plesaure dispose of hest, cold, hail, and all nature. This figure of Circe, which igaorance from an enigma or popular onsign had converted into a witch that turns mon into several animals, and has the power of diaplacing the stars, relstea very senaibly to the enigmatio attributes of Iris, which were a sun, the moon, some stars, certain extraordinnry plante, and animala very often of a monstrous kind. The rest of the fable, by its conformity with this interpretation, completea the demonstration of its exactness. Circe, or Isis, was no far really the proclamation of the year, that ahe put on auch clother and drosses as were agreeable to the four seasons. To announce the beginning of apring, that overspread and enamels the earth with flowers and verdure, she wore carpets of different coloura. To denote the beginning of summer, which nouriahes us, she bore in her
hand a beaket and a loaf; to proclain the autumn, she bore a cup, and at the beginning of winter she bore a chafing-diah, or a stove with ite foot. These four figures gave birth to the fable mentioned by Homer (Odyss. v. 850) tbat Circe had four maids, one of which spread the carpets of several colours to receive the guests, the second prepared the table and put large baskets upon it, the third preeented the cups, and the fourth kept up the fire on the hearth.

## Proleus.

Proteus was the sign denoting the exchange of the Egyptian products for flocks, metale, wine, and other commodities which Phenician ships brought into the island of Pharos, the only Egyptian port formerly of nafe and eary access. These vessela there took in their provisions of corn, flar, and all the productions of Egypt. The annual return of those shipe to the confines of Egypt was proclairacd by an Osiris called Neptune. The Egyptians, who hated the sea, did not worship Neptune; but they retained his name, which signifiea the arrival of the Fect, and gave it to the borders of Egypt or the men-coast. This we bave from Plutarch. Proteus going to Pharos to supply the marine ateeds (the vulgar name for ships or veesela) with evergthing, can be no other than the sale the Egyptians went to make of their commodities, on the arrival of the Phenician barks. This is confirmed by the name Proteus, which eignifles nothing but the abundance of fruit and the productions of the earth." From the name Poret or Proteus evidently proceed the French words port and porter, because the fruits of the earth were the firat object of transportation from one cosst to another. The feigning that Proteus, on his arrival at the port of Pharos, sssumed many figures, arose from the variety of the commodities there offered for sale by the Egyptians.

## The Syrens.

All Greeca and Italy were by degrees filled with colonies and customs originsily derived from Egypt or Phenicis; but the ritual, of which Egypt itself had forgotten the meaning so far en to take Osirin and Isis for deities, was infinitely more disfigured among other nations; and when a siogle part of the Egyptian religion was anywhere introduced, it grew darker and darker, for want of being connected with the other practices that served to compose the whole. The three Ieises that proclaimed the feasts during the three months of inundation, being presented to the inhabitants, who seemed to become amphibious by their long dwelling by the water-side, were sometimes half-women and half-lizard, or half-momen and half-fish. One of them had in ber hend an instrument of music rounded at top, and called Sistrum, which

[^36]was the symbol of the hymns, dances, and of the univereal joy that appeared throughout Egypt, when the Nile wan of requiaite height. They sung and danced at that time, as is still practised at Cairo, and all over Egypt, on the like occumion. They called the woman that carried the sistrum the singer of hymne; because her function was to publish the good news, and the hymns of the great feast. This is then the origin of the Syrens on the coast of Naples, whow neme aignifies to oing hymns. (From-shir hymnus; and from -ranan, canere.) The figure given to all the three in exactly that of our Isis. The number of the Syrens answers to that of the three months of inundation; and the aistrum borne by one of them has, through ignorance, been converted into a looking-glass. As to what is said, that they devoured the strangere that presumed to come too near in order to hear them, this fable is grounded on what was given out, that the three Isises of the summer were fatal to foreigners, whom the gross and marshy air of Egypt used to carry off, when they exposed themselves too much to it. M. de Maillet, and all travellerg, agree that the sir of the housea is then auffocating, that no one can bear it, and that everybody has tenta on board the bosta, to enjoy a little coolness. It is therefore evident, that it was of very great moment to foreigners to avoid the three Syrens. Lot us not leave this matter without observing, that this number of four nympha for the four sessons, that of three for the moons of each eeason apart, that of nine for the nine months during which they work in Egypt, their attire, their functions, and namees, are things very plain, connected with each other, and equally agreeable both with nsture and the monuments. Messieurs Bochart, Huet, Le Clere, and other learned men, have thought upon these several subjects in a very ingenious, and even sometimes very judicious manner. But what they have said of them is destitute of connection. Facts do not favour their opinion ; and when they have made a few mythologies accesaible by the belp of a first key, they cannot lead us any farther without having recourse to a new key, or without wreating the sense of everything. It We use but one single key, and the bare idea of a siga is sufficient to introduce a sense, and some relations between figurea no utterly incoherent, is it not because we are indeed arrived at their true original, and have found out the common and general intention from which thoy eprung 1

## The Metamorphove, and the Phantoms.

After theee instances of fables evidently proceeding partly from Egyptian figures and partly from the popular expressions, equivocations, or proverbs occasioned by the sight of thene figures; we bave acquired a privilege of asserting in general that from the same source, metamorphoses, phantoms, and oraclea sprung.

UII and every one of the Egyptian figares hed been established only to proclaim the fearta and works to come. When they were become so many gods, all thees deition had the privilege of foretelling future events; whence it happened, according to Herodotus (In Buterp, numb. 52), that Jupiter, Minerva, Apollo, Diana, Mars, and above all Latona, pronounced oraoles to the Egyptians. The oracle of Latons becsme the moat notable, because really latons being originally no other than the Inia, half-woman, hali-lizard, or the virgin Erigone united to a lizard's body, to mark out the exact height of the increasee of the Nile, she was the moat consulted of any figure. All eyes were fixed upon this measure. They addresed to Latona every day and every hour. When she was at lant made a goddees, the people who consulted her imagined that ahe lnew everything. But we shall treat of this matter apart, as there is nothing in point of which it is so difficult to make men cast off their ancient prejudice, sa the predictions of futurity.

The same source from which the oracles sprung, has given birth to phantoms. The gods which men had forged to themselves, being for the moat part hideous and monstrous figures, and the apprebension of the ovil they were reputed capable of doing, having a greater share in the religion of nations than confldence and the love of justice; men represented to themselves their own deities, and the powers which they dresded, only under the ideas of figuree bristling with serpenta, armed with clawn or horna, very often with yawning wide-open jaws, and with wach an aspect as could not but corrupt the imagination and resson of children. These ompty phantoms fortered in them a childish terror, that lanted as long as their lives.

It is no longer any task to guess at the general origin of metamorphoeses. Egypt is evidently the source of them. A man with a doge wolf, or lion's hend; s womsn who, instead of feet, has a lisard or a fiah's tail ; a child with the body of a serpent, and other the like figures invented to supply the wants wo bave mentioned, being no longer underatood, they imagined as many fablea and miraculous changes at there were of these compound figures. This relish for surprixing stories became univeral in Phenicia, then in Greece, and all the world over. The least equivocation, historical facte abridged, short and proverbial expressiona, all in short gave birth to nome miraculous transformatione.

This would be the proper place to explain the whole series of the motamorphoses, and to recall them severally to their peculiar originals. I even conceive how reveral of them might be sccounted for in a very plain manner. But it is enough for us to know how this odd taste came to take root in Greece snd other places. The perticular examination of these innumerable extravagancies would become tiresome to my readera; and far from being willing to clog them with a new train of Phenician etymologies, I am really very much afraid of having already trangreesed bounds, though I was indispennably obliged to fal-
low thin method. It is with ancient languages as with geometry; they must be made use of when there is necessity; but it is ridiculous to treat of needlese matters, merely for the sake of making a ahow of erudition and geometrical learning.

## The Genealogy of the Gods.

Though the Esyptians, by introducing great mysteriee where there were none, have disflgured history and religion, yet we cannot deny them the glory of good regulationa for polity and public order. Whatever was necessary, and must be done in common, was not loft to the free will of private persons, but fixed to a cortain time of the year, and proclaimed by public signa,

In the beginning of the spring, or at the return of the first heaty, which in Egypt come on in February, they cleansed their goode, housen and stables, Everything in a decayed state being of no use to the Eggptian lands which the Nile sufficiently improved, was consumed by fire.

This general purification was proclaimed by an Teis and a Horus, who had names agreeable to the work of the monson. The Horus was called Our ${ }^{*}$ or Ourim, the fire, the fire-brands; and the Isis was called Obs,t or Ops, mould or hoariness. These purifiontions, whioh were transmitted from coast to cosest, are atill in use all over Europe towards the return of the fair weather in February or March; and the oustom of lighting fires in the evening on oertain daya in the spring for that purpose appointed, is atill the amusement of youth in a multitude of citiee and villages, where they faithfully obeerve the old rubric, without knowing the reason of it. Even in Egypt, where the solemn feasts, falling back one day every fourth year, appeared in seasons to which they had no longer any relation, they forgot the motive of the inatitution of the feast of the fire-brands, but they were alwaye fithful in the observation of it.

In the evening the inhabitants of Sain began their grast feast with an Illumination. So soon es the neighbouring towns esw it, they lighted the like fires. Each did the seme one after another, and all Egypt took a part in the feast by a general illumination. (Herodot. in Buterp. n. 50).

The moon of February, benidee the risitations of housea, procleimed
*
-owr, whence the Latins derived their word oner or per, the spring. They had also their Febras, that is theirgeneral purificationa in the month of February, which had its name from thence.

+ From -abash, putreacere, mucidu*m fieri, comes - obs, mucor, petruda. - obsu pherwdob, the rotten oorn. Joel, L. 17.
two other operations. The one consisted in scouring the eanals and channels of the Nile; and the other, which immediately preceded the hervests, was the decision of lew-suits.

The prieste, during the year, appeared but seldom in public, except at the times of religious affaire. But they went out in the spring, that in, in February, and met to judge the differencee of private permons, that these might afterwarde freely go about their respective works.

The scouring of the ditches and canals was proclaimed in the sesembly of the neomenia, by an Isis that was called Tite, or Totis, and by s Horus whose name was Titan, that in, the mud, the raking up of the earth (- tit, canum, lutum."

The assembly of the priesta to judge the people wes proclaimed by a Horus with a great beard, and a soythe in bis hand. He was indff. ferently called Sudec, Keren, Chiun, and Cheunns, or Saterin; and by an lais with many breaste, and encompassed with the heads of animals. This Isis was on this ocosaion called Rhea The Horus with his great beard denoted the sasembly of the ancient men. The scylhe in his hand denoted hay-making and the harvest, which immediatoly followed the asaize. They called this figure Nudec or adic, justus, which means the just; Crone, (—Keren, splendour), thas in, the glory, the dignity, the majenty / or the crown, that in the circle of the judgee; Chiun or Cheunna, which mesns the assembly of the prieste; in short, Soterim, -aoter, judex, solerim or sotrim, judicas and priscipes. Joshus, 1, 10 : sometimes, executoret, actollites, or Setrum, which aignilies the judgee, or the execution of the judyments.t

After the decision of the law-eruita of private persone, and while the people were busy sbout cutting down and threebing the corn, the judgea contioued to hold thair seasions, to provide by general regulation for all the exigencies of the state; and it wes on account of their being esembled the rest of the year till the riaing of the dog-star in June or July, that the characteristio of the judgments, viz the old man armed with a soythe, ramained in his place, till they asw a new Oairis, a new sun, that ia, till the new year. We ahall see the strange fables to Which this particular circumstance geve birth.

They by degrees lost the meaning of these plain figures and names, that were in use at the feasta in which the whole was become an invarisble ceremonial. The current or the running writing caused the

[^37]sense of them to be neglected; on the other hand, nothing contributed more to make it forgotten than the custom of not reckoning exeotly the secred year, and of always putting the beginning of it back a whole day overy fourth year; so that the feasta and figures relating to thr operations of the spring, being plsced in autumn or winter, and so of the reet, they no longer understood anything of what this multitude of Gigurea meent. All being taken for so many men and women, whone apothoocis wha celebrated, the people argigned to them a genealogy agreeable to the order of their fessta, Osiris and Isis, who began the year, were the two great deities that held the first rank, and from whom they made the secondery gods and goddeeseas already spoken of, to descend. But from whom shall Osiris and Isia, that is, Jupiter and his wife, 'prooeed i They, as well as their brothere, Neptune and Pluto, are the ohildren of that venerable old man, who, of all the sigus exponed, was what appeared the longest towards the end of the year, and whose place Jupiter afterwards took. According to the prinitive order, a new Oxiris and a new Isis, or the posted signs of the new year, appeared again in June or July. According to the order of later times, all thees figures, it in trae, succeeded each other in the same manner, but in moseons and monthes to which they had no longer any just relstion. Thus Sudeo, or Cronos, or Saturn, became Father of Jupiter and Inis. Saturn, Rhee, Tetis and Titan were their forefathers. The Titans wers booked upon as the children of Ur, or Urane, and of Opus. Soveral genealogists go no farther. Others, as Diodorus, make Urane and Ops the children of Aomon. The Egyptians, in their genealogy, go beck oven to Vulcan. Now Aoman, the brasier, and Vulcan, are but one and the same thing.

Thus all the great personagee that have peopled heeven, whom overy country filttered themselves with having had for their inhabitanta, to whom poeta have attributed tragical adventures, and all tho acoidants of humanity; theso great conquerors, the histories of whom our losmed men are inceseantly sifting, even so far as to penetrate into the political concarns that prompted them to sct, prove at last to be, as well as Cancer, Capricorn, the balance, or the ephinc, mere eneigns or publio marks and figures poated up to dirset the people, and regulate the feesta and publio worke all the year round.

## Salsyn.

Agein I find a proof of the sametruth in the obasrrations which the fable of Saturn naturally offers to my mind.

Instead of painting him with a scythe, to signify that the sessions of the judges are to be held in the time of harvest and hay-making, we sometimes find him represented with eyes before and behind, (Sanchoniathon in Busco. prap, Brangel.) some of which are awake, and the others saleep; and with four wings, two of which are spread and two
eloeed; which marked out the penetration and continuance of the work of the judges, who rolieved each other by succession night and day, to dispatch the affairs of the people and thoee of the state, without making any one to lingor under prejudicial and deatructive delays. A new proof of Saturn's being a judge, or the symbol of justioe, whose penetration nothing can eacape, is that the poete, and above all, Homer, most commonly calls him the penetrating, the sagacious, the subtle, the quick-sighted Saturn. Again it was because Saturn, in its original, signified the ceceution of the judgments, or the puniohment of crimimale, that they usually said Saturn carried away somebody, and demanded his victim every year. Thence came the opinion they had, that Seturn would be worahipped by the effusion of human blood, and the barbarous custom which evergwhere apread, making its way from Phenicis into Africa, and thence throughout Europe.

It was because Saturn or Chrone had a necessary relation to the equity of the judgmente, that were passed without any respect of persons, that Saturn was said to have reigned with perfoct gentlenses and integrity. They said farther, that a parpetual apring reigned in his time, because the sessions of the judgee were anciently insepsarsble from the fineat month of the year ; such is constantly the month of February in Egypt.

The custom of reckoning 865 days for the year, without intercalating one day at four years' end, by degrees displaced all the feaste, and made people forget that the figures there exposed related to the circomstances of the season.

In imitation of this usage, justice was anciently administered in Earope in the finest of our months, vis, in May. We still find in a multitude of placss remains of this custom, in the practice observed by the farmers of the dutiea and receipta of lordes, of setting up branches with their leavea on, or a green arbour before the chief or manorhouse, where the esaizes were held formerly, and where executions of criminals were made. But all this preparation is grounded on the circumetance of the geason in which justice wea administered in remotent untiquity; it was in the fineat of our montha. The above-mentioned green arbour is still called the May, and the term of magistrate and majeaty seem to be borrowed from the neme of the month in which these venerable assemblies were held in Europe.*

We again find a sensible token of the relation Saturn bad to the judicial functions of the secerdotal order, in the disposal of the publio tressure and the archives in the temple of Saturn. (Festus ef Lil. Greg. Givald. syntagm. 4.) This was an imitation of the method of the

[^38]Egyptians, who anciently put the public treasure and the records of the genealogies of families in the tower or labyrinth under the cuatody of the priests,

In fine, there is no better proof that people were perfectly ignorant of the sense of the figures mistaken for deified personages, than the notion which the Greeks framed to themselves of Saturn when he was brought into their country.

The name of Chrone under which he was known to them, very plainly signified the majesty of the judicial assemblies, the crown or circle of the judges. But not knowing what this figure and ite intention were, and finding a relation of sound between the name of Cbrone and that of Chronos, which among them signified time, they interpreted the whole symbol in that sense. The age of the figure squared with this incomparably well. But what were they to do with the soythe he carries in bis hand! Why, he ahall use it to cut down everything. Above all, the stones which they made him to devour in Syris, seemed to distinguish him perfectly well. Time consumee everything, and praya upon the very stones.

The following judicious remarks, from the Myth. Dict. of W. Howell, B.D., support the hypothesis of Plnche, in regard to the manner in which names have been appropristed to individual persons that never had existance.

## Semiramis.

The wonderful setions of Ninus and Semiramis may be read in divers historians, Herodotus, Strabo, Diodorus Siculus, Ctesias, \&a. The accounta are inconsistent and incredible ; and indeed what credit cen be given to the hiatory of a person, Semiramis, the time of whoee life cannot be secertained within 1535 yeara ? for so great is the differenoe of the extremes of the following numbers :

According to Syncellus, she lived before Christ 2177 years. Patavius makes the term 2060, Helvicus 2248, Eusebias 1984, M1r. Jackson 1984, Archbp. Usher 1215, Philo Biblius from Sanchoniathon 1200, Herodotus about 713 .

The history of Ninus and Semiramis is in great messure founded upon terme which have been misconstracted; and fictions have been invented in consequence of these mistakes. Under the character of Semiramis we are certainly to understand a people called Semarim, a title assumed by the ancient Babyloniana. They were called Semarim from their ensign, which was a dove, expresed Semiramis. It was ueed as an object of worship, and eateemed the same as Rhes, the mother of the gods. It was a common mode of expression to call a tribe
er a family by the name of its founder; and a nation by the head of the line. People are often apoken of collectively in the siogular under such a patronymic. Hence wo read in Scripture that Israel abode in tente ; that Judah was put to the worst in battle, \&o. When it was asid that the Ninsvite performed any great action, it has been ascribed to a person called Ninus, the rupposed founder of Nineveh. But we may bo asaured, that under the character of Ninue and Ninyns, we are to understand the Ninevites ; na by Semiramin is meant a people called Semerim : and the great actions of these two nations are in the histories of theee pernonages recorded. But writera have rendered the account inconaistant, by limiting what was an historical seriee of many ages to the life of s aingle person.

The Ninevites and Semarim did perform all that is attributed to Semiramis and Ninus, They did conquer the Medes, and largaly extended their dominions. But these events were many ages after the foundation of the two kingdoma,

It is asid of thin ideal personage, that she was exposed among rocks, but delivered and proserved by Simma, a shopherd ; and was afterwards married to one Menon : she is likewine said to have construoted the first ahip. Now Simma is a perwonage made out of Sema, or Samas, the divine token. Menon is the deus Lunus, under which type the ark was reverenced in many regions; and as it was the first ship conetructed, with which the history of the Dove wes clonely connected, they have given to Semiramis the merit of building it,

## Sepostris.

The history of this personage has been admitted as credible by the moet learned writern and chronologists; though they cannot determine the era of his reign within a thousand years. Notice has been taken under several srticles of the supposed conquerors of the earth; and smong them of the reputed deitiee of Egypt, under the name of Osiria, Derseus, acc. These are supposed, if they ever existed, to have lived in the first ages of the world, when Egypt was in its infant stste ; and Besostris is made one of the number. He is by some placed before Orus, and by some after. He is also represented under the different names of Sothos, Sethosis, Sesoothis, Seconthonis, and Seavotris

Osiris is asid to have conquered the whole earth'; then Zeus, then Porneus, then Hercules, all nearly of the same degree of antiquity, if we may believe the best mythologists. Myrina comes in for a ahare of conquest in the time of Orus. After her, Thoules subdues the whole, from the castern ocean to the great Atlantio and; an if nothing hed been performed before, Sesostris mucceeds, and conquers it over again. By comparing the histories of ancient peraonages together, we may perceive that they bear a manifeat similitude to ono another,
though they are attributed to different persons. Sesoetris was Odiris; the same as Dionyeius, Mones, and Noah.

## Origin of Apie and Mnevior.

Nothing could be more convenient or more ingenious than the natronomical language, whioh immediately cbaraoterieed esch meason and the workn peculiar to it, by making the governor of the earth enter into the twelve signs of the sodisc, whose names had a just relation to what succesively paeses upon the earth in the coures of a year. Nothing mo groes, on the contrary, or so pitiful an the historical sense which the people afterwarde annoxed to this language; and such is evidently the origin of the ridiculous doctrine of the transmigration of souls, which Pythagores brought to Italy as a rare disoovery.

Generally all the snimale of which the stara bear the name, were looked upon with veneration by the Egyptians, as having boen the first retrants of their gode, and as being very posaibly appointed for that of their dead parents. People never looked without a religious awe upon those in which they knew Osiris and Lais had resided, such an the ram, the bull, the heifer, the goat, and the lion. Their ancient custom of carrying ceremonially st the feestr of certain beanons, the animal whose name the house into which the sun ontered, went by, disposed the people of certain provincea to honour particularly the animal carried at the feagta that concurred with the conclusion of their harvest.

Chance having produced a calf at Memphis which had some spots nearly in the figure of a circle or craseant, symbols so much reverenced among them, this singularity was taken by them for the characteristic of Oairis and Isis atamped upon the animal which their gods had an affection for: and that this wan an apparition of the governor, a viait which the protector of Egypt deigned to make them. This mirnculous calf, after having served proferably to any other at the ordinary coremonial, was lodged in the fineet plece in Memphis, All his motions were judged prophetical, and the people flocked to him with their offerings He received the great name of $A$ pis, which means the mighty, the powerful god.

They took grest care after his desth to replace him with another that had nearly the same spote. When the marics denired were not neat and exact, they were improved by a pencil.

They even measonably and after a certain time prevented the indecency of his death, by leading him in oeremony to a place where they drowned and then interred him very devoutly. This mclancholy oeremony was intermixed with torrents of tears, and was emphatically called Sarapie, or the rotreat of Apis (- surf, reoerdere; - asr abir recesvit Apis. Vid. Judia xvi. 20), a name which was afterwards
given to Pluto the infernal Osiris, After the burial of Apis, his maccessor was sought for. Thus was this strange devotion perpetuated. A powerful motive contributed greetly to it, viz, it was lucrative.

The inhabitante of Heliopolis, who made a separate dynasty, or a king iom different from that at Memphis, thought themselven too much in the favour of the sun whose name their capital bore, not to partake of bis vinits or those of his son. They therefore soon had the sacred ox as well as those of Memphis. They called him Menavis or Mnevis, which in the mame thing as Menes the mighty, or the same with Menophis ; and in choosing this magnificent name for him, they supposed other qualities and other function in him no lees capable of drawing crowde of people thithor.

## Phyton or Typhon.

Oxiris being become the common father of the Egyptians, whs by degrees looked upon as the principle from which all the good that happened to Egypt sprung ; in like manner, Phyton, when he was become the name of the symbol that signified the havoc of waters, was looked upon as an ill-minded spirit, as a principle fond of thwarting perpetually intent upon crosaing and prejudicing them. They made him the principle of all disonder, and charged bim with all the phyeical evils they could not avoid, and all the moral evils which they did not care to lay to their own charge. Hence came the dootrine of the two opposite privciples, equally powerful, inceasantly striving against each other; (Plutareh, de Ird, and Orir.) and altornataly vanquished and victorious. This doctrine, which from the Egyptians was handed down to the Peraians, under the names of Oromases and Arimases, is altogether different from ours, according to which God, conformably to the adorable views of his providence, employs the ministry of the mpirita who have persevered in a epirit of uprightnea, and leavea a certain messure of power to thoee who are fallen from it

The aversion of the Egyptians for this Phyton, their imaginary enemy, and according to them incessantly intent apon vexing them, went so far, that they no longer dared to pronounce his name. However, we find it entire in the lapguage of the Hebrews who hed dwelt in Egypt, and had contracted the habit of calling by that name the moot mischievous of serpente, that is, the sep. (- peter.) The ontire name of Phyton or Python in found again in the most ancient and moat celebrated fables of paganism. There we see this terrible monster cagaged with the god who enlightena the world, and spreading desolation everywhere.

Nothing has bean more celebrated in antiquity than the victory of the sun; nothing more abhorred than Phyton, when, from a peinted monster, he was becorce a being intent upon doing minohiel. The Egyptians, fearing to defile themselves by the bare pronouncing of that
deteatable name, rotained the letters of it, and converted them into that of Typhon."

We have neen how the cross, as woll entire as sbridged, was the mark of the increase of the Nilo, because it was the measure of it. When confined in the hands of Oairis, in the claws of the hawk, or the hand of Horus, it very plainly signiffed the overflowing of the Nile regulated by the zun, strengthened by the wiad, and subject to fired mules. This oromin in thoir vulgar writing, as likewise in the ancieat Hebraic characters, in the Greek, and the Iatin alphabet, was the letter Thu.

That the crows or the T, suspended by a ring, was taken by the Egyptians for the deliverance from evil, we may assure ourselves by consulting their practices, which are the surest interpretation of the opinion that governed thom.

They hung it round the neok of their children, and of their sick people; they applied it to the string or fillets with which they wrapped up their mummies, where we still find it What can in their ideas eignify a T pleoed near to those whom they wished health and life, it not the deliveranos from the diveese and death, which they hoped to obtain by these eaperstitious practioes.

Hence we see how strangely they minapplied those figures, which in their first inatitution related to the Nile, to husbandry, and to things totslly foreiga to the applications of rucoeeding times. This very probably is an introductive key wherewith one might strive to explain part of the meaning which the Egyptians of the later times have given to their asared writing.

The custom of the Egyptians appoared so beneficial and so important, that it wis adopted by other nations. The children and the sick mont commonly wore a ticket whersin wis a $T$, which they looked upon an a powerful preservative. In prooses of time other characters were subatituted in the room of the lettar $T$, which wes at first engraved on this ticket, but of which the other nations understood neither the meaning nor the intention. Thoy often put a eerpent in it, an Harpocrates, or the object of the devotions in vogue; nay sometimes ridiculoun figures, or eren some that were of the utmont indecency. But the name of Amulet ( 4 molinentum malorum) that was given to thin ticket, which signifiea the removal of the evil, most naturally represente the initentions of the Egyptians, from whom this practice came.

The above-meationed practios, ws have eeen, arose from the instrument used for measuring the height of the inundation of the Nile, being

[^39]an abridgement of it, and which was considered the salvatinn of Egypt. A like veneration io bestowed upon this figure, that is the crosa, by Roman Catholics: which, like other customs of the ancients, han probsbly been adopted by them without underotanding its origin, and which they attribute to a different source. A spell, which they no doubt consider more potent, however, is now generally used instead of the crose. This is called gospels, and consists of short pesaggea extracted from the gospela by a priest, which is enclosed in a piece of ailk, and tied round the necke of children, going to bed.

The same superatition prevails among the Mahometane.
Dr. Hume, in Walpole's memoirs speaking of modern Egypt, says, "The general remedy in cases of fever and other kinds of illness, is a ssphie from a priest, which consista of some santence from the Koran written on a amall piece of paper and tied round the patient's neck. This, if the sick man recovers, be carefully preserves by keeping it constantly between his scull-caps, of which he generally wears two or three. Ssphies are very commonly used by the Mohammedans, being considered to possess much efficacy for the body as well as the soul, and occupy the same place in the estimation of the muperstitious as did the frontlets of the Jews and the phylnctaries of the early Christians," Quoted in Russell's View of Egypt, p. 324, New-York edition.

In regard to the eacred writing of the Egyptians, it is not im. probable that ita characters were originally formed from the figure of the Nilometer, consisting of right angles, and thonce considered sacred.

## The Egyptian Mysteriet.

We must not expect, we are told, that the prieste of Isis, or Plutarch, or any other travellers who heard them tall, can be able to give us any information about the true sense and meaning of their aymbols. It was a mysterious theology; which they took great care not to divulge Those who were initiated therein engaged themselven by an oath never to communicate to the people any part of what had been revenled to them. Does not Herodotus often tell us, that he is permitted, upon no account whatever, to reveal the namea and the honours that were deatined and annexed to certain deities, or what these deities were I The eocret in this point being inviolable, are wo to wonder that they havo not explained themelves on the grounds which concern us; and can we judge of what they have not revealed ?

Let us then see (and this shall be the conclusion of our essay upon the Egyptian religion) what these myateries mo much spoken of were; and, if poesible, let us penetrate into these secrets, in epite of the veif and barriers intended to render them inacceseible.

Among the Ancient Egyptian figurea, there were mome which could not well be mistaken for celestial gods, and of which it was difficult to lose the meaning, having, at firat, been of infinite use to the psople.

Such were, for instance, the serpent, the canopus, and the hawk. We see, therefore, from the interpretation given of them by the grammarian Horapollo, that in the fourth century the Egyptian priests still expresed the life or eternity of their gods by a serpent encompassing them, (Serpentem aveream Diis suis circumponent) that they represented the overflowing of the Nile by three pitchers, and denoted the wind by s hawk spreading her winga. Acipiter alis in aere protenais ventum aignificat.- Ibid. But the people having once forgotten the sense of the sacred weriting, and taken humsn figures for colential powers, never gave over inventing histories; and the priests who preserved this writing adapted it to their histories, which render it worthy of contempt, and altogether different from the ancient as to the meaning.

The prieste at first retained a part of the primitive explications, Thence comes the mixture of great and little in the Egyptian theology and in the Eleusinian, which was the same. In them more than anywhere, remained the ancient footateps of the truths which conetituted the principal ground-work of the religion of the patriarchs

But it would have been dangerous for the Egyptian priest to attempt undeceiving the people and divert them from the plesaing thought that Osiris and Isis were two real personages, and were besides of their country and the protectors of Egypt. This chimera and all the others in appearance were autborised by the agreement of the monuments with the common phrase. The actions of Osiris and Isin were incescantly mentioned; the people believed what they saw and heard; the perpetaal recital of as many historical facts as there were figuree and ceremoniea exbibited, completed their errors, and rendered them invincible.

If our councils and the most venersble of our biahops have had so much ado to abolish among the people the belief of cortain legends unworthy the majeaty of our religion, and which were connected with no monument capable of countenancing them, how can we conceive that the Egyptian priests were able to take from a people immersed in ignorance and cupidity the extravagant atoriea which universal custom offered to their minds on sight of the personages and animals wherewith the places of their essemblies wers filled f It is much more natural to think, that the priests themeelvee, like the roet, yielded to the persuasion of being under the patronage of their anceatora transported into the atars, and now the moderators of the sun, the moon, and of all nature. The people, in their fanatic enthuainam, would have torn in pieces any that should have dared to dony the history of Osiris and Isia. Truth was, then, altered and obscured by the very priesta. They first accustomed themselves to these notions because it was dangerous not to confply with them, and afterwarda became themselves the most zealous defenders of them. The whole came on by degrees. They first complied with the common language because they could not stem the torrent; but they studied in private what they could collect of the
interpretation of the anciont writing. Thus they at once admitted both the popular morien and the explications that demoliahed them: they only took care to require profound secrecy from those whom they would indtruct in a more solid manner.

Thus instruction manumed a mastarious and important air, without altering any thing in what the people believed. It only mentioned \& more perfect state, and a kind of knowledge of whioh none became capeble till after many trials and efforts which suited not the common sort of men. Thus they avoided exciting the fury of the people.This was already a crying injustice in those prients to detain truth captive, and approprinto it exclusively to themoelvee.

So criminal a diaposition could not but occasion a still greater impairing of truth. And really overy thing degenerated more and more overy day. The probation of the disciplee, and the oath of an inviolable secrecy, being very remarkable practices, were perpetuated with groat exactness. The ceremonial part esesily supports itself in all religions, and is often embellished nather than diminished, bocause It is of no impurtance to the peasions, which it never disturbe, and sometimes really indulges. It was not with truth and instruction as with the ceremonial. They were disfigured from age to age, sometimes through the ignorance of the prieste, sometimes ly their avarice, bat principally by their fondoess for syatemstio reveries, with which the most subtlo emong them tried to explsin the symbolical writing; and of which they were much fonder than of a few plain and over aimple truthe, which their predeceasors were contented to teach them.

Therefore denger and fear first gave birth to the secrecy of the Egyptian inatructions, and have converted the practioes, of the ancient ceremonial of the public religion, into so many mysteries, to the knowledge of which none could be admitted but such as had given proofs of a profound respect for the objects of religion, of a perfection which common mon could not sttain, and of an unconquerable tachturnity. But then those who were initisted thought themselves of a clase muperior to the rest of mem, and their condition appeared worthy the envging. The prieata being sure of the discretion of their dieciples might very well acknowledge to them the grosaness of the meaning which the people annexed to theso symbole. But their shamoful connivance suffered error to get so much ground, that the piety of the initiated themselves sunk into a more ceromonial; and the small remains of truths, which subaiated amongot no many fabulous stories, remained there stifled as it were, and without any useful effect. The prieste themselves outdid the popular auperstitions; and out of cuatom, and from intercated viecos, preserved the preparatory ceremoniee, and the religion of silence, that gave the people a high notion of the minieters, and of their learning.

I have given the literal translation of most of the terms made use of in these mysteries. Neither the Greeks nor the Romans understood the meaning of them, because they are Phenician. The very name neither the motive nor the purport or destination of them. It was r
mystery being also a Phenician word, which rigaifies a veil, an invelopment," we are, on this very sccount, authorized to look out in the Chananean language for the meaning of the other terms made use of in the mysteries. But if the terms used in the Eleusinian feasts shall perfeotly concur with the sense I have ascribed to the pieces that were most in use in the aymbolical writing and ceremonies, the result will evidently be, that the figures originally sppointed to inatruct the people have been converted into vo many imaginary gods, and that we have obtained the true ariginal of all these inhabitants of the poetical heaven.

The Ceres of Sicily and Eleusis is no other than the Egyptian Iais, brought into those placea by the Phenician merohante, who made themselves rich by transporting the corn of Lower Egypt into the places whither the scarcity of provisions drew them, and generally on the difforent coasts of the Mediterranean, where they had offices and entablishments. The ceremonial of the rural feasta had in their hands taken a turn somewhat different. The mother of harvest there lamented ber daughter, instead of bewailing her husband, ss the Egyptian ritual would have it. This accopted, the ground and insention were the same. $\dagger$

The feasts instituted in honour of Ceres were called Thomophoria, whoee principal parts may be reduced to three, vis, the preparations, the processions, and the autopsia, or the sight of trutb.

The preparations, the long enumeration of which may be read in Meursius, (Grecia Feriata, ) had for their objeot the frugality, chasdity, and innocence that were neceesary to the worshippera. The procesaions consisted in the carriage of the sacred batkets, wherein they Inclosed a child and a golden serpent, a van, grain, cakees, and all the other symbole of which we have made the enumaration in another place.

If in the feasta of Ceres or Isis, men carried to an extravagant excess the form of the geaturee and exituations, the scrupalous recitale of the sec-forme of prayers, the length of the vigils, outward purity, abstinence, the forbearance of all pleasures, and the shunning all manner of distrsotion; it is because the whole of religion was reduced to these outward practices. Those who obeerved them knew

[^40]Fonger any but an artificial devotion, or the akeloton of the ancient religion. But any upright unprejudiced mind will saaily discern in them the intentions of the first founders, who knew the full value of rale, the beauty of order, and the benefit of recollection.

A long dencription of all the purifications and other ceremoniea that filled up the first of the nine days of devotion consecrated to Cersa would havo tired out my readers, and is no part of my plan, which chielly aims at obtaining the origin of these establinhmenta. It will be the mame with the long procession formerly made from Athens to Eleusis, and with the neveral marohes peculiar to each of the nine daym. The Greeks had built the particulars of this minute ceremonial upon the little adventures that composed the wonderful atory of the migration of Ceres into their country.

But this my reader is mequainted with. What was carried in the feasts of Ceres at Eleusis, is the same that was carried in the feasts of Inis. Let us, therefore, pass on to the explication of the autopsia, or the manifeatation of truth, which was in a manner the last act of this representation, and was the whole purport of the mysteries. After a horrid darkneee, lightnings, thunder olape, and an imitation of what is most shocking in nature, the serenity which at last succeeded, discovered four personages maguificently dressed, and whose habito were all mysterioun.

The most brilliant of all, and who was especially called the Hierophant, or the expounder of eacred things, wea dressed so as to reprevent the being that governs the universe. The second was the flambeas bearer, and had relation to the sun. The third, who was called the adorer, and who kept near an altar, represented the moon. The fourth wras called the meseenger of the gods, or Mercury, which corresponds to the Egyptian Anubis, with his $\operatorname{dog}^{\prime}$ 's head and messure of the Nile, sccompanied by two serpenta, and is nothing but the woholesome advice which the dog-star wisely gives to men, to make off, at the incresee of the waters, and thereby secure their subsistence.

Nothing could be better contrived than these magnificent ceremonies whereby the Egyptians incessantly recalled to the minds of the assistanta the belief of the firat men concerning the judgment of God, and the hopea which are to quiet the minds of the just as the approsch of death.

What an indestructible tradition attended with constant practiose had been able to preserve of the ancient doctrine, proved at last so very opposits to the popular notione, that the prieats thought themselves under the mecessity of using much circumspection, and of having secourse not only to the trial of their dieciples, but also to the oath of secrery. The reason of the priests themselves went astray in this labyrinth of obecure signs and mynterious practices. Then came on systems. One looked out among all this apparatus of ceremonies and fables for a complete set of physics.

Another tried to find out a complete body of moral and instructive maximg, under the colour of the moat scandalour fables, Others
imagined they had found the moot profound metaphyvics therein.Nor does the simplicity of the Egyptian appear by much so shocking an the sublime nonsense of 2 Platonic, who seee Monades and Triades overywhere; who, in a figure of Isia exposed in the middle of an amembly of husbandmen, finde the archetype world, the intellectual world, and the sensible world; or who seeks in the fret of a goat the picture of universal nature: or who finds out in the horn of an ox the efficacy of the impressions of his imaginary genii.

Thus the learned, from a habit of diving into mattere, and of looking out for extreordinary explications, have perplexed a subjeot of itself very simple.

A few regular assemblies excepted, in which by public authority were preserved some footatepe of truth, together with some ancient custome, the whole went on from bad to woree, from the liberty of embellishmente and interpretations. The gods were multiplied in the popular discourses as much as the symbols, and even in proportion to the different names given one and the same symbol. Oftentimea the minutest equivocations, proceeding from a variety in the pronunciation, the diversity of dresses of the same figure, nay, a bare change of plece, a trifle added or retrenched, gave birth to a new god.

We may see in Plutarch's treatise, but above all in Eusebius's Evangelical Preparation, the atrange variety of adventures and employments which the Africans, the Phenicians, and the Phrygians attributed to the same gods. The celeatial court whas not the same in Egypt as in Greece. In Egypt it was Osirie that gave light to the world. In Greece Oniris or Jupitar was freed from that care. The sceptre and the thunderbolt were left to him, but the chariot of the day wes given to Horus or Apollo, who in his quality of symbol of the rural works bore by way of abbrevistion the marks of the situation of the sun, or the characteristic of the seeson.

Jupiter could neither do everything nor be everywhere. Lieutenants were then given him, esch with separate districts. Eivery. thing sesumed a settled form. The histories of the gods were composed; and by attributing to them what each nation in particular was plessed to publish on their account; by adding theroto the histories of the ministera of the temples, and those of the kinga who had favoured their worahip; but chiefly by excusing the disorders of women on account of the pretended diaguises of these gods possessed with their charms; they formed that monstrous lump of mythology, in which it is no wonder that we find no sense, no coherency, no order of place or time, nor any kind of regard either to reason or good manners. Though the major part of these fabulous recitals be utterly extravagant, yet as they have made part of the atrange theology of our forefathers, men have at all times endesvoured to find out the true origin of them. I have ventured my own conjectures on the same subject; because they appeared to me to amcunt nearly to a certainty, and the whole might be unravelled with no less decency than benefit. It is no longer so with regard to the minute particulars of these extra-
ragancies. The collection of them would be the matter of very large volumes ; and there is indeed no subject apon which it will be more lawful to net bounda to one's knowiedge.

The foregoing article has been very much curtailed, as it is intended to give a full account of the ancient myateries from Bishop War. burton's Divine Legation of Moses : in which the subject is treated of more at large, and in some respect evidently with a better underatanding of it than the Abbe Pluche possessed.

The horrors exhibited at the commencement of the ceremony were intended to represent the condition of the wicked in another life, and the closing scene pourtrayed the abode of the blessed; the miseries of Tartarus and the happiness of Elysium were contrasted; and being pronounced by holy priests, in whom the vulgar in barbarous agos placed implicit confidence, to be a true picture of what actually takes place in a future state of existance, must have produced a moat powerful effect.

This ecene is imitated in the royal arch degree of masonry, originally with the same view as the archetype; and as in the original mynterise, it forms the last act or degree of ancient masonry. The eandidatees are kept in the dark by being hoodwinked; thunder and lightning are represented by the firing of pistola, rolling cannon balls, etc. In the conclusion, the aspirante are brought to light, and presented to what is called the grand council, consiating of three personages denominsted high priest, king, and the holy scribe; on whose decorations some hundred dollara are axpended, in order duly to prepare them to sustain the exalted characters allotted to them. These thres are the principal persons of the drams. The fourth, and next in dignity, is styled the captain of the host; "who is stationed at the right hand of the grand council, and whose duty in, to receive their orders, and see them duly executed."

The high prieat correeponde with the hierophant of the myateries, the king with the flambeau bearor, the sun, who was deemed the king and governor of the world ; the holy scribe with Isia, the sdorer, hence the attribute holy applied to him; and the captain of the host, with Anubis Hermes or Mercury, the messenger of the gods. The identity of these institutions cannot be mistaken.

## The $A$ uguries.

My resders, ever so little conversant in ancient history, may remember to have often seen the Romans, the Sabines, the Hetrurians, the Greeks, and many other nationa, very careful in never attempting any important undertaking, without previously consulting the birds, and drawing favoursble or ill consequences, sometimes from the number and kind of the birds that traversed the air, sornetimee from the quarter whence they began their flight, and the different courne they took. We may
likewise remember, thast in order not to be obliged to wait long for a bird which chance may not immedintely offer, the priests of the false deities hed introduced the custom of the escred chickens, brought into the middle of the nesembly of the people in a cage, for the magistrates gravely to observe their waya and motion. They had reduced into an art, and referred to constant and settled rulea, all the consequances to be drawn with regard to futurity, from the several methods in which these whimsical animals let fall or swallowed the food offered to them. Have not the priests of paganism, either out of interested views, or from an infatuation for these chimerical rules, a thouesad times apoiled or put a stop to the most important sod best concerted undertaninges, out of regard to a fowl that had refused her mest? Auguatus and many other persons of understanding, have without any fatal consequences despised the chickens and divination. But when the generals in the times of the republic had miscarried in any enterprise, the priest and people cast the whole blame of it on the heedlessness with which the sacred chickens had been consulted, and more commonly still, on the general's having preferred his own forecast to that of these fowls. Nor can one indeed without some indignation, see these dangerous sillinesses continue in the highest esteem and credit among people full of magnanimity, and the greatset genius seemingly making serious apologies for them.

Tully has handed to us a good eaying of Cato, who declared that One of the most surprising things to him was, how one soothsayer could look another in the face without laughing. I do not doubt but this judicious orator, when he was discharging his functions as a priest of the auguries, was always ready to change his countenance whenever he happened to see any of his colleagues walking with a grave stately sir, and lifting up the sugural staff. He was perfectly sensible of the vanity of these practices. After having observed in the second book of divination, that the Romana had never been concerned in a matter of greater consequence than that of the quarrel between Casar and Fompey, he freely confesses, that the augurs, aruspices, and oracles, had never been more frequently consulted; but that the anowers, whose number was endless, had not been followed by the eventa they foretold, or else had been succeeded by such as were quite contrary. However, Tully, notwithstanding this confession, which wholly demolished the art of prediction, yet out of politic siews defends the practioe of it. He preferred leaving the people in their error, to the risk of provoling them, by endesvouring to free them from a pernicious and criminal superstition.*

[^41]Ancientily, or at the time of the institution of the symbole, men, before sowing, or planting, used to say; let us first consult the birds. Nor was there any thing better understood. People were satisfied, when they had observed this custom with care. These birde signified the winds, the obeervation and course of which determined the propriety of rural works. But men, in process of time, very earneatly invoked the birda themselves.

The cock commonly placed by the side of Horus and Anubies, or Mercury, very plainly eignified what was to be done in the morning, as the owl marked out the assemblies that were to be held in tbe evening. Cocks were then made so many new monitors foretelling futurity; and the owl sequired in this matter a talent which many people earnestly contend she is atill possessed of. When this bird, which is an enemy to light, bappens to shriek as she passes by the window of a sick person, where she perceives it, you never can beat it out of their head, that this ehrieking is a foreboding of his end.

## Origin and Falsehood of the Sibyls.

$I_{\mathrm{T}}$ in from a sensible abuse in astronomy or of the custom of consulting certain stars, that the orecles of the Sibyls were introduced. Harvent has alwaya been the great object of the deaires and attention of all nationa. In order therefore to regulate the manuring of their landa, their ploughing, sowing, and the other operations of concern to the bulk of society, men had their eyes fixed on the virgin that bears the ear of corn, and which is the mark of the time of harvest. They obeerved how far the sun was remote from it and on this account they generally used to consult and have recourse to the virgin; a language as reasonable as the practice expressed by it. They at firat gave this constells. tion the name Shibyl Ergone the reddening ear of corn, because it ia exnctly the circumstance for which men wait to begin their harvest, and because their crop ripens when the sun draw near this collection of stars.

They afterwards called it sometimes Sibyl, sometimes Erigone. This name Erigone rendered in Greek by that of Ergtra, which corresponds to it, and sigoifies red, gave birth to the Egyptian Sibyl. There was certainly an advantage in consulting her, and her anowers were very just to regulate husbandry so long as she was taken for what ahe was, that is, for a cluster of stars under which the sun placed himself at the time which brought on harvest, and reddened the ear of corn. And because the Egyitian harvest did not fall under that sign, but under the Rem or the Bull, it is, that Egypt flocked to the oraclea of Ammon or of Apis, and bad eo particular an affection for Isis with the horns of a heifer, the ancient proclamation of their harveat; Fheress all the esat consulted the Erytrean Sibyl, in order to be sseured

[^42]of a plentiful crop. This language became the matter of fables. Our maid changed from a sign to a prophetese, had no doubt the most perfect knowledge of futurity since people came from all parta to ask hor questions. The arceesive wickednees of mankind at last obliged her to quit their abodes, to go, and in the heavena take pomeasion of the pleca due to her. Many countries assumed to themeelves the honor of having given birth to this sibyl : nor would it be a hard matter to find seven instend of one. All the current predictions, among which some atrokes of the prophecies addrewed to the Hebrewn, are found, in time peased for the answers of theze eibyla."

The American reeder should be sware that the term corn is used in Fingland as a generic tarm for all seeds that grow in ears. The French word, here tranalated corn, is ble, which signifies grain, wheat; ble, de Terquie or d'Indie, means maize, Indian corn. Wheat, as it ripens, puts on a reddish hue; which is not the case with Indian corn, although red ears are sometimes found among it. Grain, in English, seems the most proper term, for the genus of the different upecios.

In masonic lodges, the manter is stationed in the east, representing Osiris the sun; and the senior warden in the weet, representing Isis or Virgo, the sign of harvest; his duty is to pey the oraft their wages, Which alludes metaphorically to the reward the husbendman receives In the produce of his labor, when the sun arrivee at this sign. This In indicated by s painting representing a ahonf of wheat, which is hung back of this officer's ohair. The pass word of the fellow-craft, at this atation, to entitle him to pay, is ahibboleth, the reddening ear of wheat. Can any thing more conclugively point out the astronomical cast of free-masonry I

It muat have been at a remote period when the Egyptian harvest ccourred, an above atated, during the peasage of the sun, either under the aign of the ram or the bull.

Volnoy, in his Travels in Egypt and Syris, observes:
"As the sun spproschee the tropio of Capricorn, the winds become variable and tompestuous; they most usually blow from the north, the north-weat, and weat, in which points they continue during the monthu of December, January, and February, which is the winter-season in Egypt, as well as with ua. The vapour of the Mediterranean condensed by the coldneen of the abmoephere, desconds in mista and ralias."

## Conjuration.

I amp still to inquire into the origin of an art far more important than all the foregoing. This is necromancy, the art of calling up the apirits

[^43]of the dead, and of making them speak.". The reader will not be dis. pleased here to find the ley of the occult languages, and to be acqusinted how magiciens went about saking questions of hell, and oonvening with the devils.

A reapect for the human body which was believed to be destined for a better atate to come, and one day to rise from the duat, induced the frat nations to inter the dead in a decent manner, and always to join to thix melancholy ceremony, wishes and prayers, which were oxpressions or a profescion of their expectation.

Funeral wsemblies were the most frequent, because men died every day, and these meetings were repeated on every annirersary. They were not only the most common, but also the moet regular.

Every thing was simple in the ancient feasts. Men met upon some high and remarkable place. They made there a mall pit, wherein to consume the entrails of their victims by fire. They made the blood to flow into the same pit. Part of the fiesh wis presented to the ministere of the accrifice. They boiled the reat of the offering immolated, and eat it, eitting near the fire. By degreea they awerved from this simplicity.

What had been approved on eome important ocession, afterwarda pased into cuatom and became a law. The number, the characters, and the histories of the objects which men took for godes afterwards gave birth to a thousand varieties, which appeared very important ritea and necesasy precautions. Whoever should have neglected one ainghe point of the ceremonial prescribed, had nothing lees than the plague or famine to apprehend. Whenever the gods in that case were contented with only sending a transitory tompert or some furious beast among them, the fault was reckoned very cheaply atoned for. Esch feast having its proper service and decorations had a peculiar name. It was not thus with the funeral assembliea: nothing was ohanged in them. They were void of joy and decoration. Men weat on with practising what hed ever been done. The families in interring their deed, wers sccuatomed to a coramon rubric which wan perpotual. It is then in the service of the funerals eapeoially, that we may again find the principle of the usages of primitive antiquity. At these solemanities they continued to make a ditch to pour out wine, oil, honey, milk, or some other liquors in use, to shed the blood of the victimas to roust their fleeh, to eat it in common sitting round the pit or hearth, and discoursing of the virtues of him they came to lament. These assemblies contioued ta bear the name given to all solemn conveninga.

[^44]While the other feests, on sccount of the diversity of the ceremonies, were called Saturnalis, Dionisisca, Palilis, \&c., the funeral assemblies were rimply called the Jranes ${ }^{3}$ tbat is, the covering or regulation. That the Manes and the dead became two synonymous wordes or were indifferently used, one for another. And as the thinge which gave names to the feaets, were gensrally become the objects of an extravagant wornhip; the Maner or the dead became likewise the object reverenced in the funeral ceremonies. The strange facility with which the minute parte of the universe were deified, is a hint to us how the custom wan introduced of directing prayers, vows, and religious worship to the dead whom they had loved, whose praisee they had celebrated, and who were thought to enjoy the most refined knowledge, after they had, together with their body, cast off the frailtiee of humanity.

The ancient sacrifices were not only eucharistical. In the times when the Most High was as yet worshipped, they were looked upon as an alliance contracted with him, and whereby they engaged themselvee to be faithful to him. I shall here mention neither the reasons nor any instances of it The former are palpable, and the scripture abounds with the latter.

All nations, when they macrificed either to the gods they had framed to themselvee, or to the dead whose memory was dear to them, thought they entered into an allianoe, conversed, and familiarly eat with them. But this faniliarity engrossed their thoughts most particularly in the funeral assemblies, in whioh they wers as yet full of the memory of the persons whom they had tenderly loved, and who, ws they thought, took alwaye a great part in the concerns of their family and country.

We bave hitherto obeerved, how cupidity and iguorance having rendered all men indifferent as to juatice, had led them astray as to the object of their worship, and had afterwards converted every part of it into so many means of being relieved of in their illness, instructed in futurity, and provided all proper means to succeed in all their undertakinge Every object in nsture spoke to them. The birds in the heaven, the serpenta and other animals on the earth, a simple rod in the hand of their minister, and all the instruments of religion were so many oraclea and prophetioal signs. They read the stare, and the gods apole or revealed their intentions to them from one end of nature to the other. This coveloumess and grose religion, which applied tothe gods morsly to ank them questions in matters of interest, was no less ioquisitive, and thought it had a right to be atill better served in the funeral macrifices than in all the reat. Men in these ceremoniea thought they had to deal with affectionate gods, which, ou sccount of the concern they still had in the prosperity of their family, could not but inform them in time, of whatever might be of service or detrimental to them. The whole apparatus of the funerale was then again interpreted in

[^45]the same manner, as that of the other feastes, and the whole was converted into so many methods of divination.

The ceremonies of the Manct, though they were but the bare practices of the assemblies of the primitive times, being, in every respect different from those observed in the other feasta, appeared so many different methods of conversing with the doad, and of obtaining the deaired information from them. Who then could doubt but it was in order familiarly to converse with their ancient friends, that men eat down round a pit, into which they had thrown the oil, the flour, and the blood of the victim they had killed to their honor 1 How could it be doubted, but that this pit so different from the altars set up and pointing towarls heaven, was a suitable coremony, and peculiarly belonging to the dead! The dead evidently took plesaure in these repests, and especially in what was poured into the pit for them. Doubtless they came to consume the honey and the liquors which disappeared from thence; and if their friends were contented with offering them liquors only, no doubt it was because their condition as dead persons would not admit of gross foods. Men were then so extravagantly credulous as to believe that the phantoms came to drink and voluptuously to relish these liquors, while their relations feasted on the rest of the sacrifice around the pit. After the repast in common between the dead and the living, came the interrogation, or particular calling up of the soul, for which the escrifice was appointed, and who wan to explain her mind. Every body is bonsible that an inoonvenience attended the ceremony, it being to be apprehonded that the dead might crowd about the ditch, to get a share in this effusion which they were so very greedy of, and leave nothing for the dear soul, for whom the feest was desigoed. This was provided againgt. The relations made two ditches. In one they threw in wine, honey, water and flour, to amuse the generality of the dead: in the other they poured out the blood of the victim, then to be esten in common by the family. They sat upon the brink of the latter, and with their swords near them, they kept of by the sight of these instrumente, the crowd of dead who had no concern in their affairs. They on the contrary invited and called up by his name the deoeased, whom they had a mind to cheer and conault. They desired him to draw near. The dead seeing that there was there no security for them, flocked and swarmed round the ditch, the access to which was free, and politely abandoned the other to the privileged soul, who had a right to the offering, and who knew the bottom of the affairs about which she was to be consulted.

The questions made by the living were distinct and eary to be understood. The answers, on the contrary, though very eertain, were neither so quiak, nor so easy to be unravelled. But the priente who had boen taught in their labyrinth how fo underatand the soice of the gods, the nnawers of the planets, the language of the birds, the serpents and the mutest instruments, easily understood the dead, and became their interpretern. They reduced it into an art, whose moat necoseary point, and what beat euited the condition of the dead, wae Eilence
and darknees. They retired into the deoper cavee: they fasted and lay upon the alkins of the sacrificed beasta. When they waked, of after a watoh, which was fitter to turn their brains than to roveal hidden thinge to them, they gave for answera the thought or dream which had moot affeoted them. Or they opened certain books appointed for that une " and the frat soords which offered at the opening of them, were precisely thoes of the propheoy expected: or in short, the priest and sometimes the person himsalf who camo to consult, tookoare, at going out of the cave, to listen with attention to the very firtt tworde he could porsibly hear, from what pert eoever they proceeded, and they were to him in lieu of an answer. These words for certain had no manner of relation or connoxion with the busineses in hand; but they were turned so many wrays, and the sonse of them so violently wreated, thas they must needr have given way some amall matter. Commonly enough they had in ap peeranos mome relation to it. They sometimes, instead of the foregoing methods, had recourve to what was called sortes, vis.: a number of tickets on which there were some words written at random, or some venses alresdy current or newly coined. These tiokets being thrown into an urn, they are atirred very well together, and the firat ticket that was drawn was gravely given to the distrenaed family, as the means to make them eesy. Methode of divination were multiplied without end. The whole of religion was almost converted into so many methods of knowing futurity. See the dissertation of Vandale upon the hesthen oraclee. See the history of the oracles. This matter has been muffleiently treated upon by the learned; it would be needlese to resume It.

It is evidont that the precticen above mentioned were extremely fit every where to apread thin extravagant persuasion, which is still premerved among the people, that we may converze with the dead, and that they often come to give us advicea,

If I can again supply my readens with the proofs of this cuatom, or rather of thia perverse abuse of the funeral ceremonies, I shall, methinks, have suffciently shown, that the opinions of men upen the gode, the dead, and the answers that may be obtained from either of them, are mothing but a literal and groes interpretation made of very plain eigna, and of still plainer ceremonies, whose purport was to exprees certain truthes, and to fulfil certain duties

Becenve all nations flocked to high places, there to ohed the blood of the victims into a trench, and to converse with a dead person, by keeping off othera by the sight of a sword, it in, that ecripture so often, and in so expreas a manner, forbids the Israelites to assemble upon high places, or, (which was frequently the same thing), to hold their assembly near the blood, or to eat sitting round any pit aprinkled with the blood of the victime. The seventy interpreters Enowing per-

[^46]feetly that this was what drew the people to the high places, having very well tranalated this pessage of Leviticus xix. 26, and other the like by these words-ye shall not go and eat upon the mountains. Here to eat is the mame thing as to eacrifice. $\mathcal{X}$

In concluding my extracts and remarks on the interesting works of the Abbe Pluche, I will take some notice of what he says of the dog days; which are continually recorded in Almanacs, when probably neither the authors nor resdera, know any thing of their origin or the propriety or use of their being retained in such registers.

According to our author, the rising of the dog-star was generally accompanied with what the Egyptians called the Eteainn northern wind that continued to blow for about forty days in succesaion. When this wind failed to ocour at this period, or wae too light to be of use in causing the swelling of the Nile to a sufficient beight, a general sadnees of the people ensued. The probsbility, therefore, is, that while the inhabitants remsined idle on the high ground, watohing the progreas of the inundation, these forty daye were pessed very much in fasting and other acts of devotion to gain the favour of their gods in thie reapect. Indeed the author relates as atory that pravailed among the Cretians, that corroborates this opinion; which is, that through the diepleasure of the gods, this wind was not permitted to blow for a considerable Lime; "bat after repeated sacrifices, the gods at length granted the return of the Etesian wind, and its constant blowing, during the forty days thst followed the rising of the dog star, called the dog-days, which again brought abundance upon the earth." The people, he says in another place, "were warned to observe the dog-days."

Volney remarks that, "about the end of July, during all the month of Auguat, and half of September, the winds in Egypt remain constantly in the north, and are moderate ; brisker in the day, however, and weaker at night."

The dog-daye, in calendars calculated for the United States, are generally noted as commencing on the 30th of July, and ending on the tenth of September, making forty-two daye.

It is highly probsble that the Romas Catholio Lent has grown out of this ancient custom in regard to the dog-daya; sccommodsted, however, in respect to the time of its observance, to the circumstances of countriea differently aituated to that of Egypt. Such an essential change in the

[^47]usual habit of living, is, no doubt, very dotrimental to health, and probably causes the premature death of thousands annually. The requirement of sbetinence from meat on Fridays and Saturdays, is founded upon the same principle. A breach of this rule of the politicoreligious church of Rome, is placed in the list of damning sins, in a ritual issued, even under the reiga of the Emperor Napoleon, with his signature attached, ordering its obeervanoe by all Catholica throughout his dominions. Thus the fastings and mortifications originally got up to appesse the flokle and vindictive gode of pagasiam, have, without the least propriety or resson, been incorporated into the ayotems of some zecte of professed Christians.

By this eatablishment the catholic in required to abstain from eating reeat for forty days, except by epecial indulgence granted by a priest.

Those, therefore, to whom it is inconvenient to pay for indulgences, are under the necessity of reatricting themselves to fiah and vegetable diet during the above term.

I will here observe, that personages which Mr. Pluche declares to be mythological, never having had existence, will be considered by other writers, quoted in this work, as real historieal persons. Some of his hypotheeis, in other reapeote, may also be contrary to the dootrines of authors here cited. I shall generally pees such disarepancies without comment, leaving the reader to form his own opinion.

To Abbe Pluche's Account of Egypt, I will add a few extracts from a reoent and very valuable work, ontitled, "A View of Ancient and Modern Egypt," by the Rev. Micheel Ruesell, LL.D.

## Literature and Science of the Ancient Egyptians,

In Egypt the use of the hieroglyph wes not entiraly superseded by the invention of an alphabet For many purposes connected with religion, and even with the more solemn occupations of civil life, the emblematical style of composition continued to enjoy a preference; on a principle similar to that which disposes the Jew to perform his worahip in Hebrew and the Roman Catholic in Latin. There appears also to have been a mixed language used by the prisets, partaking at once of bieroglyphioa and of alphabetical charactors; which, in allusion to the cless of men by whom it was employed, was denominated hieratic. Hence in process of time, the Egyptians found themeelvee in posesssion of three different modes of communication -the hieroglyphic, properly so called, the hieratic, and the demotic or common. This distinction is olearly recognised in the following well-known psseage extracted from the works of Clemens Alexandrinue

Thoee who are educated among the Egyptiane, eays he, learn flast of all the method of writing called the epistolographic; secondly, the hieratic, which the sacred sgribes employ; and, lastify, the most myaterious deecription, the hieroglyphic, of which there are two kinds-the one denoting objects, in a direct manner, by means of the initial sounds of words ; the other is symbolical. Of the symbolical signs one olaes
repreeenta objects by axhibiting a likeness or picture; another, by a metaphorical or loen completo resemblance; and a third, by meann of certain allegorical onigman. Thus,-to give an example of the three methods in the symbolical division,-when they wish to represent an object by the first, they fix upon a distant resemblance; such as a circle, when they want to indicate the sun, and a creecent when their purpose is to denote the moon. The second, or metaphorical, allows a considerable freedom in seleoting the emblem, and may be auch as only suggests the object by analogous qualitiea. For instance, when they record the prases of kings in their theological fables, they exhibit them in connection with figurative alluaions which ahadow forth their good actions and benign disponitions. In this case the representation ia not direct but metsphorical. Of the third method of symbolical writing the following will sarve as an example:-They assimilato the oblique course of the planets to the body of a serpent, but that of the sun to the figure of a scarabsous.

In reference to the knowledge actually sequired of the literature of ancient Egypt by meang of the late discoveries in hieroglyphica, wo are not entitiled to speak in boantful or very confident language. The wastiog hand of time, which has rendered its effects visible even on the Pyramids, has entirely destroyed the more perishablo-matorials to which the sages of Thebea and the magicians of Memphis may have committed the science of their several generations. We know, too, that the bigokry of ignorance and of superatition accomplished, in many casae, what the flood of years had permitted to escape; for which reason we must not estimats the extent of acquirement among the wive men of Egypt by the ecanty remains of their labours which have been casually rescued from aocident and violence. From Diodorus Siculus we receive the information that in the tomb of Osymandias were depocited twenty thousand volumees, $\rightarrow$ number which is reduced by Manetho to threes thousand five hundred and twenty-five,-all of which, on account of their antiquity, or the importance of their subjects, were ascribed to Thoth or Hermee, who, it is well known, united in his character the intelligence of a divinity with the patriotism of a faithful minister.

Of these works, which unquestionably belong to a very remote antiquity, we have a short account supplied by a Christian biahop, Clemens of Alexandria, who appears to have devoted much attention to the learning of the ancient Egyptians. "In that country," he tells us, "everp individual cultivatea a different branch of philosophy,-an arrangement which applies obiefly to their holy ceremonies. In such processions the singer occupies the first place, carrying in his hands an inatrument of musia. He is esid to be obliged to learn two of the books of Hermes; one of which contains hymns addressed to the godes, and the other the rulea by which a prince ought to govern. Next comes the Horoscopus. holding a clock and the branch of a palm-tree, which are the eymbals, of sostrology. H6 must be completely master of the four books of Hermes wite treat of that science. One of these explainn the order of the flxed stars ; the eecond, the motion and phasea of the sun and moon; the other
two determine the times of their periodical rising. Then followe the Hierogrammatist, or sacred scribe, with two feathers on his head, and a book and ruler in bis hand, to which are added the instruments of writing, some ink, and a reed. He must know what are called hieroglyphics, and thoee branches of acience which belong to oosmography, geography, and astronomy, eepecially the laws of the sun, moon, and five planets; he must be aequainted with the territorial distribution of Egypt, the course of the Nile, the furniture of the templea and of all consecrated places. After these is an officer denominated Stolistes, who bears a square-rule as the emblem of juatioe, and the cup of libations, His charge includes evarything which belongs to the education of youth, as well as to sacrifices, first-fruits, hymns, prayers, religious pormps, feativala, and commemorations ; the rules for which are contained in ten books. This functionary is aucceeded by one called the prophet, who displays in his bosom a jar or vessel, meant for carrying water, -a symbol thought to represent the deity, but which, more probably, had a reference to the sacred character of the Nile. He is attended by persons besring bread cut into slices. The duty of the prophet [as president of the mysteries, according to Volney's sitation of this passage] made it necessary for him to be perfectly sequalxted with the ten booka called sacerdotal, and which treat of the lawi of the gods, and of the whole discipline of the priesthood. He alao presiden over the distribution of the sacred revenue; that is, the income ariaing from the performancesof pious rites, and dedicated to the support of religious institutions. Henoe, there are forty-two books of Hermes, the knowledge of which is sbsolutely necessary; of theee, thirty-aix, containing the whole philosophy of the Egyptians, are carefully studied by the persons we have mentioned; and the remaining six are learned by the Pastophori, or inferior prieste, as they belong to anatomy, to nooology, to iostruments of surgery, to pharmacy, to the diseases of the eye, and to the maladies of women." (Clemen. Alexandrin. Strom., lib. vi. p. 683.)

This distribution of the science does not ensble us to determine either the principles on which they were founded or the extent to which thoy were pursued. We possess a better criterion in the perfection to which the people of Egypt, at a very early period, had carried mome of those arts which have a cloae dependence upon acientifio deductions. The prodigies of Thebea could not have been accomplished by a nation igmorant of mathematios and chemistry; nor could the pyramide, the obelisks, and the monolithic temples, which still meet the eye of the traveller in almost every gpot between Elephantine and the moutha of the Nile, have been raised without the aid of euch mechanical powera ss have their origin in the celculations of philosophy.-(See p. 138, Harper's Ed.)

Here we have the arohetype of masonic processiona, on featival days and other important occseions. I shall hereafter give a detailed account of those which took place in London, on laying the corner atone and on the dedication of Freemasons' Hall. We nee here also the original of the square rule, as a maeonic symbol. It was, in Egypt, an emblem of
justice, because it was the means by which was ascertained the boundaries of lands that hed been obscured or carried away by the inundation. Wo here moreover recognise the boly or sacred scribe of a royal arch chapter, with a look and ruler in his hand. The original book, containing the laws of Egypt relating to sacrifioes and other matters appertaining to religion, not having been preserved, masonry wabetitutee for it the Bible, which is opened at the beginving of the gorpel of St. John, and with the square and compassess leid thereon, is ceremonially carried in the processions.

The jar or veasel spoken of, was undoubtedly one of the Cannopi which indicated the different heights of the Nile, and for this reason acquired a sanctity among the people. The three-pitchers carried in masonic processions no doubt originally alluded to the Egyptiea cannopi.

As to the learning, wo much bosstind by the craft, and which seems to be claimed by them as an inheritsace from their predecessore, it is to be feared, that it remains buried in the tomb of Osymandias. The hymna or odes and songs, as well as prayers are retained in great abundanos, and compose an essential part of the masonio ceremonies.

Attributing the authorahip of twenty thousand, or even three thousand five hundred and twenty-five volumes, to Thoth or Hermee, is an evidence of his being a flotitious character, and corroborates the opinion of Pluche on the eabject. Jamblichus, however, puta this matter beyond controversy; he eays: "Hermes, the god who presides over language, was formerly very properly considered as common to all prieate; and the power who presides over the true science concerning the gods in one and the same in the whole of things.

Hence our ancestors dedicated the inventions of their wisdom to this deity, inscribing all their oven writings with the name of Hermes. (Taylor's trans. p. 17.)

Volney, who, in bia Ruins, quotee part of the foregoing extraot from Clemens, obeerves, that Mercury (who in the same al Hermes) in the Janus of the Romans, the Guianese of the Indians, and it is remarkable that Yanus and Guianese are synnnymous, In short, it appeara that these bookg are the source of all that has been transmitted to us by the Greeks and Latins in every sclence, even in alchymy, necriomsney, to. What is most to be regretted in their lose Is that part which related to the principles of medicine and diet, in which the Egyptians appess to have made conaiderable progrese and useful observations.

## Remaine of the ancient Arts in warious parts of Europe.

Dendera, which is commonly identified with the ancient Tentyra, presents some very atriking examples of that sumptuous architecture which the people of Egypt lavished upon their places of worahip. The gateway in particular which leads to the temple of Isis has excited universal admiration. Each front, as well an the interior is covered with eculptured hieroglypbics, which are oxecuted with a richness, a preciaion, elegance of form, and variety of ornament, aurpeaing in many reapecta
the eimilar edificen which are found at Thebee and Philoe. The height If forty-two feet, the width thirty-three feet, and the depth seventeen. "Advancing along the briok ruins," eays Dr. Richardeon, "we came to an elegant gateway or propylon, which is also of sandstone, neatly hown, and completely covered with aoulpture and hioroglyphice remarkably well cut. Immediately over the centre of the doorway in the beautiful Egyptian ornament usually called the globe, with merpent and winge, emblematical of the glorious sun poieed in the airy firmament of heaven, supported and directed in his course by the etermal-whatom of the Deity. The sublime phraseology of Scripturs, the Bum of Righteousness shall rise with healing on his wings, could not be more emphatically or more accurately represented to the human oye than by this elogant device. The temple itself still retains all its original magnificence. The centuries which have elapsed since the era of its foundation have scarcely affected it in any importsnt part, and have impressed upon it no greater appearance of ago than serves to render it more venerable and imposing." To Mr. Hamilton, who had seen innumerable monuments of the same kind throughout the Thebaid, it seemed as if he were now witnessing the higheet degree of architectural excellence that had ever been attained on the borders of the Nile. Here were concentrated the united labours of ages, and the last effort of human art and induatry, in that uniform line of construction which had been adopted in the earlient times.

The portico consiste of twenty-four columns, in three rows; sach above twenty.two feet in circumference, thirty-two foet high, and oovered with hieroglyphics. On the front, Isis is in general the principal figure to whom offerings are mede. On the architrave sre represented two procesaions of men and women bringing to their goddeas, and to Osiris, who is sitting behind her, globes encompaseed with cowz' horns, mitred snakes, Jotus flowers, vakes, little boata, graduaied staffe, and other instruments of their emblematical worship. The interior of the pronsos is adorned with aculptures, most of them preeerving part of the paint with which they have been covered. Those on the ceiling are peculiarly rioh and varied, all illustrative of the union between the astronomical and religious creeds of the ancient Egyptian: yet, though each seperate figure is well preeerved and perfectly intelligible, we must be more intimately

[^48]noquainted with the real principlee of the science, as they were then taught, before we can undertake to explain the aigns in which they were embodied,

The sekos, or interior of the temple, consista of several apartments, all the walle and ceilinge of which are in the same way covered with seligious and astronomical representations.

The rooms have been lighted by amall perpendicular holea cut in the ceiling, and, where it was poexible to introduce them, by oblique ones in the sides. But some ides might be formed of the perpetual gloom in which the apartments on the ground-floor of the sekos must have been buried, from the fact, that where no sidelight could be introduced, all they received was communicated from the apartment above, so that notwithatanding the cloudless aky and the brilliant colours on the walle, the place must have been always well calculated for the mysterious practices of the religion to which it was consecrated. On one corner of the roof there was a chapel or temple twenty feet square, conaisting of twelve columns, exactly similar in figure and proportions to those of the pronsos. The use to which it may have been applied most probably remain one of the recrets connected with the mystical and sometimes cruel service in which the priests of Isis were eroployed.

Towards the eastern end of the roof are two separate sets of apartmentes, one on the north and the other on the south side of it.

The ceiling of the next room is divided into two compartments by a figure of Isis in very high relief. In one of them is the circular zodiac; in the other a variety of boats with four or five human figures in each; one of whom is in the act of spearing a large egg, while others are stamping with their feet upon the victims of their fury, among which are several human beings. Near this acene a large lion, supported by four dog-headed figurea, each carrying a knife, may be regarded as au additional type of the sanguinary purposes for which the apartment was used. The walls of the third room are covered with the several representations of a person,-first at the point of death lying on a couch; then stretched out lifeless upon a bier; and finally been embalmed.

The western wall of the grest temple is particularly intereating for the extreme elegance of the eculpture.

Here are frequent representations of men who seem prepared for slaughter, or just going to be put to death. On these occasions, one or more appear, with their bands and legs tied to the trunk of a tree, in the most painful and distorted attitudes.

In a amall chapel behind the temple, the cow and the hawk seem to have been particularly worahipped, as priesta are frequently seen kneeling before them, presenting sacrifices and offeringe. In the centre of the ceiling is the same front face of lais in high relief, illuminated, as it were, by a body of rays igaing from the mouth of the same long figure, which, in the other temples, appeara to encircle the heavenly bodies. About tivo hundred yards eastward from this chapel is a propylon of small dimensions, resembling in form that which conducts to the grest temple, and, like it, built in a line with the wall which nur-
rounde the sacred enclosura. Among the soulptures on it, whioh appear of tho mame atyle, but lees finiehed than those on the largo temple, little more is worthy of notice than the frequent exhibition of human aleughter by men or by lions. Still farther towerds the east, there is another propylon, equally well preserved with tha reast, about forty feet in height, and twenty feet square at the base. Among the sacred figures on thir building is an Inin pointing with a reed to a graduated ataff held by another figure of the asme deity, from which are auspended acalea containing water avimals, the whole group being an emblem of ber influence over the Nile in regulating ite periodioal inundatione.-Ibid, p. 166.

The sigas of the zodiac portrayed in the centre of the roof of Free-masons'-hall, London, are in accordance with the astronomical decorstions of the ancient temples of Egyph. Celeatial and tarreetrial giobea aleo compose a part of the masonic emblems.

The author neems not to be aware that the Isis, pointing with a reed to a graduated staff, was direoting the attention of the Egyptians to the nilomoter, or measure of the inundation, so important to their wellbeing. This measure, in after times, as before noticed, became an ensign of offce, Mercury's wand, and an such has been adopted by masonry.

The cruelty supposed to be connected with the Egyptian mode of worahip, an indicated by the appearance of parsons under torture, the resder will find in the eequel, were nothing more than sham repreeentations of the punishments said to be inflicted upon the wicked in snother life The contrast displayed in the death of virtuous charaoter, carefully embelmed, clearly points out the intention of theso roprosentatione The apartmente where thew awful figuree were portrayed were, no doubt, the first into which candidates for initiation into the myaterice were introduced.

## CHAPTER II.

ORIGDN, WATORE, AND OBJECT OF TEE ANCIENT MCTETERTES, ABETDOED FROM BIBEOP WARBURTON'S DIVINE LEOATION; WITR NOTES AND REMABES, POINTING OUT THEIE IDENTITY WITH FIZEEMASONET, ETC.

Ir in proper to premise that the author nuiformly refers to the works of the writers which he quotes, and generally givea the passegee in the original language in which they were written. His quotations from the Enoid, the Metamorphosis of Epuleius, and aome other worka, given in the latin language, are here rendered into Englieh. $A$ few Greek pesagee in his work are also given in tranalation, and all Greek terms are put in Romen characters, for the tenefit of the general reader.

An abstract of the author's remarks, introductory to his treatise on the Myataries, is first given, as follows:-

So insoparable, in antiquity, were the ideos of lavo-giving and religion, that Plutarch, apeaking of the praforence of atheism to auperatition, eupposes no other eatabliahment of divine worship than what wea the work of the legielator. "How much happier would it have been," eays he, "for the Carthagenians, hed their first law-giver been like Critian or Diogoras, who believed neither gods nor demons, rather than such an one as enjoined their public accrifices to Saturn."

But here it will be necessary to remind the resder of this previous truth, that there never was in say age of the world, from the mont early mocounts of time to this present hour, any civil-policied nation or people who had a religion, of which the chief foundation and support was not the doctrine of a future state of rewards and puniohments; the Jewiel people only eccepted. This, I presume, our adyersaries will not deny. Mr. Bayle, tho indulgent foeter father of infidelity, confesses it in the fulleat manner, and with the utmoet inganuity; "all the religiona of the world, whether true or false, turn upon this grand pivot, that there is an invisible judge, who punishes and rewarde, after this life, the actions of men, both of thought and deed. From thenoe it in aupposed the principal use of religion is derived," and thinks it was the utility of that doctrine which set the magistrate upon inventing a religion for the atate. "It is the principal motive that incited those who invented it" (Dict. Crit, and Hist. Art. Spinozs Rem. E.)

The Rgyptinas were the first people who perfected civil policy, and eatablished religion: they were the firat, too, who deified their kiogn, law-givers, and publio benefactors. This was a practice invented by them, who, in procese of time, taught the rest of the world their myetery.

The attributes and qualities ansigned to their gods always correaponded with the nature and genius of the governments If this wae
gantle, benign, compassionate, and forgiving, goodnees and mercy were most essential to the deity ; but if severe, inexorable, captious, or unequal, the very gods were tyrante, and expiations, atonements, lustrations, and bloody sacrificas composed the system of religious worship.

> Gods partial, ohangefal, paesionato, anjust, Whoso attributes were rage, rovenge, and lust, Soch as the sonis of cowards might concoive, And formed lite tyrants, tyrants would belliove.

The firat step the legislator took was to pretend a mission and revelation from some god, by whose command and direction he had framed the policy he would eatablisb. In a word, there is hardly an old lawgiver on recond but what thus pretended to revelstion and the divine masistance.

The universal custom of the ancient world was to make gode and prophets of their first kinge and law-givers. Hence it is that Plato makes legislation to have come from God, and not from man.

Aristotle, in his maxima for setting up and supporting a tyranny, lays this down for one "to seem extremely attached to the worship of the gods, for that men have no apprehension of injustice from such an they take to be religiong, and to bave a bigh sense of Providence. ${ }^{\circ}$ Nor will the people be apt to run into plots and conspiraciea against those whom they believe the gods will in tarn fight for and support." And here it is worth noting that, anciently, tyrants, es well as law-givers, gave all encouragement to religion, and endeavoured to eatablish their irregular wille, not by convincing men that there was no just nor unjust in actions, but by persusding them that the privilege of divine right exempted the tyrant from all moral obligation.

Porphyry quotes sn expreas law of Draco's conoerning the mode of divine worship. "Let the gods and our own country heroes be publicly worshipped, according to the eatablished ritee; when privately, according to every man's abilities, with terma of the greatest regard and reverence; with the firat fruita of their labours, and with annual libations." Andocides quotes another of Solon, which provides for the due and regular celebration of the Eleusinian Mysterica. Athenwus does the same. And how considerable a part these were of divine worahip, and of what importance to the very essence of religion, we ahall ase hereafter.

The second step the legislators took to propagate and establish religion, was to make the geveral dootrine of a providence, with which they prefaced and introduced their laws, the grest sanction of their institutes.

Thus Zaleucus begins his preface: "Every inhabitant, whether of town or country, should first of all be firmly persuaded of the being and axistence of the gods; which belief he will readily be induced to enter-

[^49]tain when he contemplates the heavens, regards tho world, and obeerves the disposition, order, and barmony of the universe; which can neither be the work of blind chance, nor of man. These gods are to be worshipped as the cause of all the real good we enjoy. Every one, therefore, should so purify and possess his mind, as to have it clear of all kinds of evil, being persuaded that God is not honoured by a wicked person, nor acceptably served, like miserable man, with aumptuous ceremonies, or taken with costly sacrifices, but with virtue only, and a constant disposition to good and just actions."

And much in the eame fashion does Charondas introduce his lsws.
In imitation of this practice, Plato likewise, and Cicero, both preface their laws with the sanctions of religion. And though theee two great men were not, strictly speaking, law givers in form, yet we are not to suppose that what they wrote in this science was like the dreams of the sophiste, for the amusement of the idle and curious. They were both well practised in affaira, and deeply conversant in human nature, and thoy formed their apeculative institutes on the plan, and in the spirit and views of ancient legiolation, the foundation of Plasto's being the Attic Lavs, and the foundstion of Cicero's the Twelve Tables.

Plato makes it the necessary introduction to bis laws, to establiah the being and providence of the gods by a law against sacritege. And he explains what he means by sacrilege in the following words:- "Either the denial of the being of the gods, or, if that be owned, the denial of their providence over men; or, thirdly, the teaching, that they are flexible, and easy to be cajoled by proyer ${ }^{\circ}$ and sacrifice." And afterwards :- "It in not of emall consequence, that what we here reason about the gods, ahould by all means be made probable, as that they are, and that they are good, and that their concern for jutice takes place of all other human considerations. For this, in our opinion, seems to be the nobleat and best preface that can be made to a body of laws. In compliancy with this declaration, Cicero's preface to his laws is conceived in the following terms:- "Let our citizens then be first of all firmly persueded of the government and dominion of the gods, that they are the lords and masters of the world; that all things are dispoeed by their power, discretion, and providence; and that the whole race of mankind is in the highest manner indebted to them; that they are intimately acquainted with every one's stato and condition ; that they know what he does, what he thinks, with what disposition of mind, and with what degree of piety he performs the acte and offices of religion; and that, scoordingly, they make a distinction between good and evil"

And then follow the laws themselves, the first of which is concesived in these words:- "Let those who approach the gods be pure and undefiled; let their offeringe be sessoned with piety, and all ostentation of ponsp

[^50]omittel; the god himself will be hie own avenger on tranegreesors. Let the gods, and those who were ever reckoned in the number of celeatiels, be wornhipped; and thoee, likewise, whom their merita have raised to hoaven, such as Hercules, Becchus, Sesculapius, Castor, Pollux, and Romulus. And let chspela be erected in honour to those qualities, by whose sid mortals arrive thither, such ae reason, virtuc, piety, and good faith."-De Legg. Lib. iii, o. 8.

Institution of the Mysteries.
The next step the legielstor took was to support and affirm the general doctrine of a providence, which he had delivered in his laws, by a very circurastantial and popular method of inculcating the belief of a future state of rewards and punishmenta.

This was the institution of the mysteries, the most sacred part of pagan religion, and artfully framed to atrike deeply and forcibly into the minds and imaginations of the people.

I propose, therefore, to give a full and distinct account of this whole mattor; and the rather because it is a thing little known or attended to. The ancients who wrote expresaly on the mysteries, such as Melanthius, Menander, Hioesius, Sotades, and othera, not being come down to us So that the modern writers on this subject are altogether in the darit concerning their origin and end, not excepting Meuraius himnelf, to whom, however, I am much indebted for abridging my labour in the eearch of thoee peasages of antiquity which make mention of the Elensinian Mysteriea, and for bringing the greater part of them together under one view.-(Eleuminia: five de Ceraris Eleusinm racro.)

To avoid ambiguity, it will be proper to explain the term. Esch of the pagan gods had, beaides the public and open, a secret woorship paid anto him, to which none were admitted but those who had been selected by preparatery ceremonies, called initiation. This secret worship was termed the Mysteries.

But though every god hed, besides his open worship, the secret tikewise, yet this latter did not everywhere attend the former, but only there, where he was the patron god, or in principal esteem. Thus when in consequence of thet intercommunity of paganism, which will be explained bereefter, one nation adopted the gode of another, they did not always take in at the seme time the secret worship or mysteries of that god, so, in Rome the public and open worahip of Bacchus was in use long beforo his mysteries were admitted. But, on the other hand, again, the worship of the strange god was sometimes introduced only for the sake of his mysteries, as, in the same city, that of Isis and Oeiris. Thus stood the case in general; the particular exceptions to it will be seen in the sequel of this diseartation.

The first and original mysteries, of which we have any aure account, were those of Isis and Osiris in Egypt, from whence they were derived to the Greeks, under the presidency of various gods, as the institutor thought most for his purpose. Zoroeater brought them into Perain, Cadmus and Inachus into Greece et large, Orpheus into Thrace, Me-

Iampuas into Argia, Trophonius into Bosotis, Minos into Crote, Cinyras into Cyprue, and Erechtheus into Athene. And as in Egypt they were to Isis and Osiria, so in Asia they were to Mithras, in Samothraoe to the mother of the godes, in Bcootia to Bacebus, in Cyprus to Venus, in Creto to Jupiter, in Athens to Ceres and Proserpine, in Amphises to Castor and Pollux, in Lemnos to Vulean, and so to othern in other plaoes, the number of which was incredible.

But their ond, as woll as nature, wha the mme in all-to tesch the doctrine of a future stata. In this Origen and Celaus agree, the two mont loarned writers of their eaveral parties. The first, minding his adversary of the difference between the future life promieed by Cbristianity, and that taught in peganigm, bida him compere the Christian with what all the secta of philosophy, and all the mysteries among Greeks and Berber rians, taught conoerning it; and Celsus, in his turn, endeavouring to show that Christianity had no advantage over Paganism in the efflcacy of atronger manctions, expreess himaelf to this purpoee :-"But now, altor all, just as you bolieve eternal punishmenta, so do the ministors of the sacred rites, and thooe who initiate into and preside in the mysteries."

And that nothing very heterodox was taught in the mynterios concerning a future stata, I colleot from the answer Origen makea to Celsus, who had preferred what was taught in the mysteries of Bacchus on that point, to what the Chriatian religion revealed concerning it-Lib. iv. p. 167.

They continued long in religious reverence; some were more famona and more extensive than othere, to which many ecoidents occurred. The most noted were the Orphic, the Becahic, the Kleusinian, the Samothracian, the Cabiric, and the Mithriac.

Euripidea maken Bacohus eay, in his tragedy of that name, that the Orgies were celebrated by all frreign nations, and that he came to introduce them among the Greela. And it is not improbable but eeversl barbarous nations might have learned them from the Egyptians long before they came into Greece. The Drusids of Britain twho had, as seell as the Brachmans of India, divers of their religious rites from thence, celobrated the Orgies of Bacchus, as we learn from Dyonisius, the $\Delta$ frican, And Strabo, having quoted Artemidorous for a fabulous story, subjoina, "But what he says of Ceres and Proserpine is more credible, namely, that thers is an island near Britain, where thoy perform the oame rites to those two goddesses as ars used in Samothrace." (Stmabonis Geor. lib. iv.) But of all the myateries, those which bore that name, by way of eminence, the Eleusinian, celebrated at Athena in honour of Ceres, were by far the most renowned, and, in prooses of time, eclipsed, and, as it were, awallowed up the rest. Their neighbourn round about vary early practised these myateries to the neglect of their own; in a little time all Greece and Asia Minor were initiated into them, and at length they spread over the whole Roman empire, and even beyond the limita of it. "I inaint not (eays Tully) on those secred and august rites of Eleusis, where, from the remotest regions, men come to be initiated." And we are told in Zosiamus, that "these moat holy ritos were then so exteasive. as to take
in the whole race of mankind," Aristides calle Eleusis the common temple of the earth. And Pausanias asys, the rites performed there as much excelled all other rites, instituted for the promotion of piety, as the gods excelled the heroes.

How this bappened is to be acoounted for from the nature of the State which gsve birib to these myoteries, Athens was a city, the most devoted to religion of any upon the face of the earth. On this account their poet Sophocles calls it the anored building of the gode, in allusion to its foundation. Nor wns it a less compliment 8t. Paul intended to pay the Athenians, when he said, "Ye men of Athens, I percoive that in all thinge ye are too buperstitious," (Acta, xvii. 22.) And Josephus tells us, that they were universally esteemed the moat religious people of Greece. Hence, in theee matters, Athena became the pattora and atandard to the reat of the world.

In discoursing, therefore, of the myateriea in general, we shall be forced to take our ideas of them chiefly from what we find practised in the Eleusinian. Nor need we fear to be mistaken; the end of all being the mame, and all having their common original from Egypt.

To begin with the general purpoee and deaign of their institution. This will be underatood, by ehowing what they communicated promiscuoualy to all.

To support the doctrine of a providence which, they taught, governed the world, they enforced the belief of a future state of rewards and punishments by all kinde of methods. But as this did not quite clear up the intricate waya of providenoe, they added the doctrine of a metempeychoeis, or the belief of a prior atate, as we learn from Cicero and Porphyry, the latter of whom informa us, that it was taught in the mysteries of the Persian Mithras. This was an ingenious solution, invented by the Egyptian law-givers, to remove all doubts concerning the moral attributes of God, and so, consequently to establish the belief of his providence from a future state. For the law-giver knew how procarious that belief was, while the moral attributes of God remained doubtful and uncertain.

In cultivating the doctrine of a future life, it was taught, that the initiated would be happier in that state than all other mortals; that while the souls of the profane, at their leaving the body, stuck fast in mire snd filth, snd remained in derkness, the souls of the initiated winged their flight directly to the happy iolande, and the habitations of the gods. This promise whas asnecessary for the support of the Mysterics, sa the Myateries were for the aupport of the doctrine. But now, lest it should be mistaken, that initiation alone, or any other means than a virtuous life, entitled men to this future happiness, the Mysteries openly proclaimed it as their chief business to restore the soul to its original purity. "It was the end and design of initiation, says Plato, to reatore the aoul to that state, from whence it fell, as from its native neat of perfection." They contrived that everything should tend to show the necessity of virtue, as appeara from Epictetus. "Thus the myateries became useful, thue we seice the true apirit of them, when we begin to
apprehend that every thing therein were instituted by the ancients, for instruction and amendment of life. Porphyry givee us some of those moral precepth, which were enforced in the myateries, as to honour their parentes, to offer up fruits to the gode, and to forbear cruelty to animals. In pursuance of this scheme, it was required in the aspirant to the Mysteries, that he should be of a clear and unblemished character, and free even from the suspicion of any notorious crime. (Libanius Decl. xix.) To come to the truth, he was severely interrogated by the priest or hierophant, impresaing him with the eame sense of his obligation to conceal nothing, as is now done st the Roman confeesional.

As appeers from the repartee which Plutarch records, in his Laconic $\Delta$ pothegres of $L_{y y a n d e r, ~ w h e n ~ h e ~ w e n t ~ t o ~ b e ~ i n i t i s t e d ~ i n ~ t h e ~ S a m o t h r a c i n n ~}^{\text {a }}$ mysteries, "he was required by the hierophant to confeas overy wicked act that he had committed during his whole life."

Why initistion into these mynteriee is called inquiring of the oracles, will be seen afterwarda.

Hence it whe, that when Nero, after the murder of his mother, took a journey into Greece, and had a mind to be present at the celebration of the Eleuninian myoteries, the consciuuspess of his parricide deterred him from attempting it, (Sueton Vita Neron. cap, 34.) On the same sccount, the good Emperor M. Antoninus, when he woald purge bimself to the world of the death of Avidius Casains, chose to be initisted into the Eleusinian mysteries, it being notorious that none were admitted into them who laboured under the just suspicion of any beinous immorality. This was originally a fundamental condition of initiation, observed in common by all the myateries.
During the celebration of the mysteries, they were onjoined the greatest purity, and highest elevation of mind. "When you secrifice or pray," mays Epictetus in Arrian, "go with a prepared purity of miod, and with dispositions so previously disposed. as are required of you when you approach the ancient ritee and mysteries." And Proclus tells us that the mysteries and the initiations drew the souls of men from a material, sensual, and merely human life, and joined them in communiou with the gode. Nor was a less degree of purity required of the initiated for their future conduct. They were obliged by solemn engagements to commenoe a new line of atrictest purity and virtue ; into which they were entered by a severe courze of penance, proper to purge the mind of ite natural defilements. Gregory Nazienzen tells us, "that no one could be initiated into the myateries of Mithras, till he had undergone all sorts of mortifying trials, and bad proved himself holy and impossible." The consideration of all this made Tertullian say, that, in the myeteries, "Truth herself took on overy shape, to oppose and combat truth." (Omnia adversus veritatem, do ipsa veritate constructa esse. Apol, cap. 17.) And Austin, "that the devil hurried away deluded souis to their destruction, when ho promised to purify them by thoee ceremonies, called initiations.

The initinted, under this diacipline, and with these promises, wero esteemed the only happy men. A.ristophanes, who speaka the senso of
the people, makee them exvlt and triumph after this manner :- "On ue only does the sun dirpense his blessings; we only receive pleasure from his beams; we, who are initiated, and perform towarda atrangers and. citisens all acts of piety and justioe," And Sophocles, to the same purpose, "Life only is to be had there ; all other places are full of misery and evil." "Happy," says Euripides, "is the man who hath been initiated into the greater mysteries, and leads a life of piety and religion." And the longer any one had been initisted, the more honourable they deemed him. It was even scandalous not to be initiated, and however virtuous the person otherwise appeared, he became suspicious to the people, as was the case of Socrates, and, in after-times, of Demonax. No wonder, then, if the superior advantages of the initiated, both here and hereafter, should make the myateries universally aspired to. And, indeed, they noon grew as comprehensive in the numbers they embraced, as in the regions and countriee to which they extended. Men, women, and children, $\operatorname{ran}$ to be initiated. Thus Apuleius describes the state of the mysteries even in bis time; "There was en influx of a crowd of thoec who had been initisted in the sacred rites of the goddess, consiating of men and women of every degree and of every age, reaplendent with the pure whileness of linen garmenta.".

The pagans, we see, eeemed to think initiation as necessary as the Christians did baptism. And the custom of initiating children appears, from a passage of Terence, to have been general.

Nay, they had even the same suporstition in the administration of it which some Christians had of baptism, to defer it to the approeoh of death : so the honest farmer Trygreus in the Pax of Aristophanes:
"I must be initiated befors I die."
The occasion of this molicitude is told ns by the scholisat on the Rense of the seme poet. "The Athenians believed, that he who was initiated and instructed in the mysteries, would obtain divine honours after death; and, therefore, all ran to be initiated. Their fondneas for it became so grest, that at ouch times as the public treasury was low the magistrate would have recourse to the mysteries, as a fund to supply the exigencen of the state. "Aristogiton," says the commentator on Heamogenes, "in a great scarcity of publio money, prooured a law, thatin Athens, every one should pay a certsin aum for his initiation."

Everything in these rights was mysteriously conduoted and under the moat colemn obligations to secrecy." Which, how it could agree to our ropresentation of the mysteries, as an institution for the use of the people, we ahall now ondesvour to show.

They were hidden and kept secret for two reasons :-
Firat-Nothing exoites our curicaity like that which retires from our observation, and seeme to forbid our search. Ot this opinion you will find the learned Syneaius, where he esys, "the people will despise what is

[^51]cany and intelligible, and, therefore, they must always be provided with something wonderful and myaterious in religion, to hit their taste and stimulate their curiosity." And, again, "the ignorance of the mysteriee preserve their veneration ; for which reason they are ontrusted to the cover of night."

On these principles the myateries were framed. They were kept eecret, to excite curioeity; thoy were celebrated in the night, to imprena venerntion and religious horror." And they were performed with variety of showe and representations (of which more hereafter) to fix and perpetuste those impressions. Hitherto, then, the Myateries are to be considered as invented not to deter, but to invite the curiosity of the people. But

Becondly-They were kept aecret from a necessity of teaching the initiated some things juproper to be communicated to all. The learned Varro, in a fragment of his book of religions, preserved by St. Auguatin, tella us that, "there were many truths, which it was inconvenient for the state to be generally known : and many thinge, which, though fales, if woas expedient the people ahould believe; and that, therefore, the Greeks ahut up their mysteries in the silence of their sacred inclosures."

Now, to reconcile this seeming contradiction, of supposing the mysteries to be instituted to invite the people into them, and at the same time to keep them from the people's knowledge, we are to obeerve, that in the Eleusinian ritee there were two nyysteries, the great and the less. The end of the less must be referred to what we said of the inetitutor's intention to invite the people into them; and of the greater, to his intention of keeping some truth from the people's knowledge. Nor is thin said without sufficient warrant; antiquity is very exprese for thia distinction. We are told that the lesser mysteries were only a kind of preparatory purification for the greater, and might be eesily communicated to all. That four years wha the unual time of probetion for thoae greater mysteries ; in which, as Clemens Alezandrinus expresly informan us, the secrets twere deposited.

However, as it is very certain that both the greater and lesser mysteries were instituted for the benefit of the state, it followe that thedoctrines taught in both were equally for the mervice of society, only with this difference, some without inconvenienoe, might be taught promiscuously, others could not.

On the whole, the secret in the lessor mysteries was some hidden rifes and ahows to be kept from the open vier of the people, ouly toinvits their curiosity; and the secret in the greater, some hidden doctrines to be kept from the people's knowledge for the very contrary purpose. For the ahows common both to the greater and lesser mysteries were only deeigned to engage the attention and raise their devotion.
But it may be worth while to inquire more particularly into the hidden doctrines of the greater myateries, for so religioualy was the

[^52]neerot kept, that the thing eoems still to lie involved in darkneas. Wo ahall, therefore, proceed cautioualy, and try, from the obacure hints dropped up and down in antiquity.
"Pandere res alta terra et caligine merzas."
Lay open things hidden in the deep sarth and obecurity.
To begin with a pessage of Clemens Alexandrinus, "After these, (asmely, luatrations), are the lesear mysteries, in which is laid the foundstions of the hidden doctrines, and preparations for what is to come afterwarda."

But there whs one insuperable obstacle to a life of purity and holiness, the vicious exmmples of their gods. Ego homuncio hoc non facerom i (Could not I, a eorry fellow, be permitted to do this thing)" waa the aboolving formula, whenever anyone was resolved to give a loose to hil pesaions. And the licentious rites, in the open worship of their gods, gave still greater encouragement to these conclusions Plato, in his book of lawa, forbids drinking to excess ; unlese, saye ho, during the feast of Bacchus, and in honour of that god. And Aristotle, in his politics, having blamed all lewd and obecone imagee and pictures, excepts those of the gode which religion hed sanctified.

Now the mysteries professed to exect nothing difficult of the initieted which they would not ssaist him to perform. It was necessery, then, to remedy this evil; which they did by striking at the root of it. So that, such of the initisted as were judged capable, were made eoquainted with the whole delusion. The mystagogue taught them, that Jupiter, Meroury, Bsechus, Venus, Mars, and the whole rabble of licentious deitien, were only dead mortala, subject in life to the same pessions and infirmities with themselvea; but, having been on other socounts benefactore to mankind, gratoful posterity had deified them, and, with their virtuee, had indiscreetly canonized their vices. $\phi$ The fabulous gods being thus routed, the supreme cause of all things maturally took thair place. Him they were taught to consider as the creator of the universe, who pervaded all thinge by his virtue, and governed all by his providence. Buthery it must be observed, that the discovery of this supreme cause was made consistent with the notion of

[^53]local tutelary deities, beinga superior to men, and inferior to God, and by him met over the several parts of his crestion. This was an opinion univeraally holden by antiquity, and never brought into question by any theist. What the aporreta overthrew was the vulgar polytheism, the worahip of dead men. From this time the initiated had the title of Epoptes, by which was meant one that sees thinge as they are, and without diaguiec; whereas, before he was called Mystes, which has is contrary aignification.

But beaides the prevention of viee, the deteotion of the national gods had enother important use, which was to excite men to heroic virtue, by showing them what honours the benefactors of nations had acquired by the free exercise of it And this, as will be shown heresfter, was the chiof reason why princes, statesmen, and leaders of colonies and armies all aspired to be partakers of the greater mysteries.

Thus we see how what was taught and required in the leeser mysteriea became the foundation of instruction in the greater; the obligation to a good life there made it neceesary to remove the arrors of vulgar polytheism here, and the doctrine of a providence taught previoualy in those facilitated the reception of the sole cauee of all things when finally revealed in these. Such were the truths which Varro, as quoted above, telle us it was expedient for the people to know.* He supposed, indoed, the error of vulgar polytheiam to be so inveterate, that it was not to be expelled without throwing society into convulaions, But Plato apoka out ; he owned it to be "difficult to find the father and creator of tho universe, and, when found, impoesible to disoover him to all the world." -(In Timao.)

Beaides, there was another reason why the institutors of the mysteries, who were law givers, should be for keeping this truth a secret. They had had, themselves, the chief hand in the rise of vulgar polytheism. They contrived it for the sake of the state, and to keep the people in awe, under a greater veneration for their laws. This polytheism the poets had depraved, by inventing or recording vicious stories of the gods and heroes, which the law givers were willing to have stifled. And they were only such atories that, in their opinion, as may be seen in Plato, made Polytheism hurtful to the state.

That thin accounts for the secrot in the greater myateries is no preoarious hypothesis, raived merely on conjeoture, I shall now andesvour to show.

First, from the clear evidence of antiquity, which expressly inform us of these two particulars. That the errore of polytheism were

[^54]detected, and the dootrine of the unity taught and explained in the mysteries. But here it is to be observed thast, when the ancients speak of mysteriea indefinitely, they generally mean the greater.

It hath been shown thas the Grecian and Asiatio Myateries came originally from Egypt. Now, of the Egyptian, St. Austin giveth us this remarkable account :- "Of the same nature, too, are thooe thinge which Alexander of Meoedon wrote to his mother, es revesled unto him by one Leo, a chief hierophant of the Egyptinn mysteries, whereby it appeared that, not only such an Picus, and Faunas, and Enees, and Romulus, nay Hercules, and Eaculapius, and Pacohus, the son of Semele, and Castor, and Pollux, and all others of the same rank, had been advanoed, from the condition of mortality, into gods, but that even those deities of the higher order, the Dii majorum gentium, thuee whom Cioero, without naming, seems to carp at in his Tunoulans, such an Jupiter, Juno, Seturn, Neptune, Vulcan, Veets, and many others, whom Varro endessours to allegorise into the elements or perte of the world, were in truth, only mortal men. But the priest being under great fears and spprehenaions, while he whs telling this, as conscious he was betrayfigg the secret of the mystaries, begged of Alearander, when he found thit he intended to communicate it to his mother, that he would onjoin her to burn the letter as a0on as she had read ith" $b$

To understand the concluding part, we are to know that Cyprian, who has aloo preserved this curious aneodote, tells un it was the dread of Alexander's power which extorted the secret from the hierophant.e. All this well illustrates a pansage in Lucian's council of the gods, when, after Momus had ridiculed the monstrous deities of Egypt, Jupiter replies"It is true that these are abominable thinge which you mention of the

[^55]cgptian womhip. But then consider, Momus, that much of it is enig. antical, and so, consequently, a very unfit subject for the buffoonery of the profane and uninitiated." To which the other answere with much epirit, "Yes, indeed, we have great occosion for the mysteries, to know that goda are gode, and monaters monsters"

But Tully bringa the matter home to the Eleusinian myoteries themselves. "What," saya be, "ia not almoest all heaven, not to carry on this detail say further, filled with the human rece? But if I should search and examine antiquity, and from thoee thinge which the Grecian writera have delivered, go to the bottom of this affair, it would be found that, even those very gods themselves who aro deemod the Dii mejorum gentium, had their original here below, and asoended from henco into heaven. Inquirs to whom thoee sepulchres belong, which are so commonly ahown in Greece. Remember, for you are initiated, what you have been taught in the myateries; you woill then at length understand how far this matter may be carried, - (Tuse. Disp. lib. i. cap, 13.)

He carries it further himself, for he tells us in another place, that not only the Eleusinian Myateries, but the Samothracisn likewise, and the Lemnian taught the error of polytheism, sgreeably to this system, which supposes all the myateries derived from the asme original, and constituted for the same ends. "What think you, says he, of those who sasert that raliant, or famous, or powerful men have obtained divine honours after death, and that these are the sery gode, now become the object of our woorahip, our prayers, and adoration f Euhemerus tells us, when these gode died, and where they lie buried. I forbear to speak of the ancrod and suguet righte of Eleusie-I paes by Samothrace, and the myateries of Lemnos, whoee hidden rites are celebrated in darknesa, and amidet the thick ahades of groves end forests."

Here the author comments at considerable length on an equivocal pessage of Cicero, immedistely following that here quoted, which, he ease, M. Plnche, in his Hiotowre du Ciel, bringe to prove that the purpose of the myateries was not to explain the nature of the gode." His criticism goes to show the abwurdity of this inference. He thus concludes his remarks-
" It had hardly been worth while to take this notice of M. Plucho's interpretation of Cicero, had it not been ovident that his purpose in it was to digguise the liberty he took of tranecribing the general explanation of the mystarias, as delivered in the first edition of this volume, printed in 1788, into the second edition of his book, called Hiatoire du Oiel, printed in 1741, without the least notice or acknowledgment."

That M. Pluche may have taken some of his ideas on the mysteries from the bishop's book is highly probable, but his work certainly possesses sufficient originality to prove the laborious inveetigations of the anthor upon ground not previously occupied, to eatabliah his fame as an ingenions acute writer. In the dizagreement of these authors in regard to the porport of the mysteries, the bishop has undoubtedly the advantage; he had evidently paid more attention to the nubject then his
contemporary. The abbé was deceived by Cicero, in whom he appeared to place implicit confidence; but he should have remembered thatCicero had been initiated into the Eleusinan mysteriea, and, therefore, no doubt, felt undur restraint when speaking of them. Besides, he had four characters to sustain ; that of a philosopher, a statesman, a lawger, and on augur or priest; in the due support of which his popularity was, more or less, involved. A striking instence of the incompatibility with each other of the first and last mentioned of these charaoters in axhibited by him, in the passage just quoted above end that before cited, in which he says, "Let the gods, and those who who were ever reckoned in the numberof the celestials, be worshipped; and those likewise, whom their merits have raised to heaven, such as Herculee, Beochus, Esculspius, Pollux, and Romulus" Here the augur and the philosopher are at completer issue. Two sentiments more directly in opposition could not be entertained; and it is surpriaing the bishop did not notice their total contrariety.

What has besn said will let us into the meaning of Plutarch's hint, in the following words of his tract concerning the cossing of oracles. "As to the mysteries, in whose representationa the true nature of demons is clearly and accurstely held forth, a eacred ailanoe, to use an expression of Herodotus, is to be observed."

Thus far in detection of polytheism. With regard to the doctrine of the unity, Clemens Alexandrinus informs us, that the Egyptian mystagogues taught it amongst their greater seorets. "The Egyptians," says he, "did not use to reveal their mysteriee indiscriminately to all nor expoee their truths concerning their gode to the profane, but to thowe only who were to suoceed to the adminiatration of the state; and to such of the priests as were moet approved, by their education, learning, and quality.

But, to come to the Grecian mysteriea. Chryrippus, as quoted by the author of the Etymul. magoum, spests to this purpose. "And Chrysippua says, that the secret doctrines concerning divine matters are rightly called Teletai, for that these are the last thinge the initisted should be informed of; the soul, having gained an able support, and being possessed of her desires (that is, the mistress of herself), can keep ailent before the uninitinted and profane." To the same purpose, Clemens: "The doctrines delivered in the greater mystaries are concerning the universe, Here all instruction ends. Thinge are seen as they are; and nature, and the things of nature, are given to be com. prehended."

Strabo having eaid that nature dictated to men the institution of the mysteries, as wall as the other ritios of roligion, gives thin remarkable roason for his assertion, "that the secret celebration of the myateries preservee the majesty due to the divinity, and, at the same time, imilates The naturc, which hides itsolf from our eenses." A plain intimstion of

[^56]the natura of the wecret. And had there been any ambiguity, he presently removes it, where, speaking of the different faculties exercised in the different rites of religion, he makes philosophy to be the object of the mysteries. Plutarch expresaly says, that the first cause of all thinga is communicated to those who approach the temple of Isis with prudence and sanctity. By which worda the means, the necessary qualifications for initiation.

We find Galen intimating, not obecurely, that the doctrine of the divine nature was taught in those very mysteries. In his exoellent tract Of the une of the parts of the human body, he hes theee words :-"The atudy, therefore, of the use of the parts, is not only of service to the mere phyician, but of much grester to him who joins philosophy to the art of healing; and, in order to perfect himself in this myatery, labours to inveatigate the univeral nafure. They who initiate themselvee here, whether private men or bodies, will find, in my opinion, nobler instrucHion than in the rites either of Eleusia or Samothrace, A clear implicathon, thast to lesd men thither was their apecial busineas.

But this seems to have been so well known to the learned in the time of Eusebius, that where this writor takes occsaion to observe, that the Hebrews were the only people whose object, in their publio and national worship, was the god of the universe, he suits his whole expression, by one continued metaphor, to the usages of the mysteries, "For the Hebrew people alone," eays he, "was reserved the honour of being initisted into the knowledge of God, the creator of all things, and of being instructed in the practice of true piety towards him. Where, Epopteis, which signifies the inspection of the secret; Theopis, the contemplation of it; and Demiourgoe, the creator, the subject of it, are all words appropriated to the secret of the greator mysteries. I am persuaded this learned writer had his oye on some particular passage of scripture ; probably on the 45th ohapter of Inaiah, where the prophet, foretelling the conquest of Cyrus, and the exaltation of his empire, apoetrophises the God of Israel in this manner, "Verily thou art a God that hidest thyself, O God of Iarasl the Eaviour." Thia was said with great propriety of the creator of all thinge, the subject of the $A$ porreta or secret, in all the mysteries throughout the Gentile world; and particularly of those of Mithras, in the country which was the scene of the prophecy. That this is the true sense of this obscure paasage, appears from the following worde of the same chapter, where God limself addresseth the Jewish people :- "I bave not spokea in secret, in a dark place of the earth; I said not unto the seed of Jacob, seek ye me in vain." This was said, to abow that he was taught amongat them in a different way from that participation of his nature to a few select Gentiles, in their mysteries; celebrated in secret, and in dark sublerraneous places; which not being done in order to give him glory, by promoting his public and general worship, was done in vain.

This naturally leads us to the explanation of those oracles of Apollo, quoted by Eusebius from Porphyry; the sense of which neither thoee ancient writers, nor our Sir John Maraham weem rightly to have under-
atood. The firat is in thene words, "The way to the knowledge of the divine noture is extremedy rugged, and of difficult ascent. The entrance is eecured by brazen gates, opening to the sdventurer; and the roede to be paszed through, imposrible to be deacribed. These, to the vast beneft of mankind, were firat marked out by the Egyptians."

The second is an follows :-
"True wisdom was the lot only of the Chaldeans and Hebrear, who worship the governor of the world, the self-exittent deity, with pure and holy rites."

Marobam, supposing after Eusebius, that the aame thing was apoken of in both the oracles, mays, "Certainly there can be no controveray, that, ps the religious belief of the Hebrews in One Supreme Being, was esteemed very correct, the same belief by the Egyptians was equally cotimable," And again,-"The truth is, Apolla was little consistent with himself; because in the one oracle, the Egyptians are said to bo the first; and in the other, the Chaldeans and Hebrows the only people who knew the true God." But they are perfectly convistent ; they treat of different things: the firsh of the knowoledge of the true God ; and the second of his public seorakip.

I will only observe, that the frights and terrors to which the initiated were expoeed, gave birth to all those metaphorical terms of difficulty and danger 80 constantly employed by the Greek writers, whenever they speak of the communication of the true God.

Thomas Teylor, in a note to his tranalation of Jamblichus on the mysteries of the Egyptians, Chaldeans, and Assyrians, has rendered the foregoing oracle in verse, agreeable to the original ; which he introduces as followa :-

Moet historians give the palm of sntiquity to the Egyptians. And Lucian, in lib. De Des, eaye, "That-the Egyptians are said to be the first among men that had a concoption of the gods, and a knowledge of sacred concerns. They were sleso the firss that had a knowledge of sacred names." Conformably to this, aleo, an oracle of Apollo, quoted by Eusebius, asys that the Egyptians were the firat that disclosed by infinite actions the path that leads to the gods. The oracle is as follows :-
"The path by wbich to deity we olimb,
Is arduous, rouph, inefiable, sublime;
And the strong massy gates, through whioh we pan
In onr firnt course, are bound with chaing of brase
Thow men the firat who of Egyptiac birth
Drank the fair water of Nilotio oarth,
Diaclosed by actions infioile this road,
And mnny pathe to Qod Phenicians showed.
Thia road the Amyrians printed out to viow,
And this tho Lydians and Chaldeans know,"-P, 905 .

Mr. Taylor has subetituted Lydians for Hebreno, under a sumpicion, as he says, that either Aristobolus, well known for interpolating the writinga of the Heathens, or Eusebius, had fraudulently inserted the latter.

Means are taken to produce a like terror, ss spoken of sbove, in candidates for royal arch mseonry. They are advised that "it will be neosesary for them to pans through many trials, and to travel in rough and rugged ways, to prove their fidelity." The gates alluded to in the oracle of Apollo, which secure the entrance to the knowledge of the divine nature, are actually represented in the sconery of this degree. The true name of the Supreme Being is affected to be communicated, and in en address to bim are the following expressions:-"Teach ur we pray thee, the true reverence of thy great, mighty, and terrible name."

In a German work, by C. L. Reinhold, ontitled The Hebrew Myateries, ar che oldeat religious Preemasonry, it is affirmed " that the whole Mosaic religion was an initiation into myateries, the principal forms and regulations of which were borrowed by Moses from the secrets of the old Egyptians."

Josephus, to the same purpoee, saye that "that high and sublime knowledge, which the Geotiles with diffeculty attained, in the rare and temporary celebration of their mysteries, was habitually taught to the Jews atall times. So that the body politio seems, as it were, one great assembly, constantly kept together, for the celebration of some macred mysterics."

The two great mysterious secrets of the Egyptians, it has been seen, were the existence of one Supreme Being, implying the error of poly: theism, and a future state of rewards and punishmenta foracta committed in this life. The former of which only, it appeare, was taught to the Jews. This is likewise communicsted to the masons of the royal arch degree, and is the only secret of the order.

It is true it wes formerly enjoined upon the Jews to observe certain rites and ceremonies, which were then adapted to their peculiar circumstances, but which, by the coming of Christ, were rendered vain and useless, and were accordingly abrogated by the new dispensstion." For instance, they were taught that a person became defiled by touching a human corpee, and thair priests were absolutely prohibited from doing it, So, at intorments of their dead, thoee who enter the cometery wash their hands on retiring, bowls of water and napkins being provided for the purpoee.

The ides of defilement by touching human dend bodies was also a pagan doctrine, for which Jamblichus gives the following reasons:-
"It is not lawful to touch buman dead bodies when the soul has left them, since a vertige, image, or repretentation of divine life, is extinguished in the body by death. But it is no longer unholy to touch otber desd. bodies, because they did not participate of a more divine life. To other gods, therefore, who are pure from matter, our not touching dead bodies is adapted; but to thoee gods who preside over animals, and are proximately connected with them, invocation through animals is properly made."-(Taylor's Trans. p. 275.)

[^57]An to the mystery of obtaining remisaion of eins, by the performance of certain mystic rites, se is customary with the Jews at this time, on what are called atonement days, the secret is fully known to Roman Catholic priests, and practised upon by them with equal success."

In "A brief Examination of the Rev. Mr. Warburton's Divise Legation of Moses," London, 1742, are the following remarks :-
"We have no profane records that can reach, by many hundred yeara so high as the ancient state and constitution of the religion and prieathood of Egypt, in and before the days of Moses. But as the Moenio constitution itself was accommodated to the natural temper and bise of a people perfectly Egyptianised, and who knew nothing but the language religion, lasos, and customs of Egypt; and as this people could nevar be brought off from the religion and customs to which they had been naturalised, the history of Moees and the prophets gives one almoat as just and adequate a notion of the religion, priesthood, and worehip of Egypt, as if their own history bad been banded down to us. Of this we need no other, or more authentic, authority than our learned author's own concessions, who has granted as much in this respect as could have been desired. And though Moses attempted, in his law, to reform the religion of Egypt, with regard to their symbolical polytheism, or siderial worahip by images, yet this could never be effected; but the groes of the people still continued in the symbolical worship of Egypt, except when reatrained from it by force and compulaion undor some of their kinga. But they immediately foll beck again to the mamo sort of religion and worship, as soon es that restriction and legal parsocution wore relared or taken off"

Thus, I think it appeare that the Aporrets, in the greater mysteries, were the detection of the origin of vulgar polytheiam;" and the discovery of the doctrine of the unity.

I will venture to go further, and give the very bistory repeated, and the very hymn sung, on these occasions, to the initiated; in the first of which was delivered the true origin nud progress of vulgar polytheiam, and, in the other, the unity of the deity.

For it appeara to me that the celebrated fragment of Sanchoniatho, the Phenician, translated by PLilo Bybliue, and preserved by Euzebius, containing a genealogical account of the firat ages, is that bistory, as it

[^58]was wont to be read to the initiated, in the colebration of the Egyptian and Phenician mysteries; the purpose of it being to inform us that their popular gods (whoso chronicle is there given according to their generationg) were only dead men deified.

And es this curious and authentic record (for such we shall find it was) not only serves to illustrate the subject we are now upon, but will be of use to support what ia said hereafter of the rise, progrese, and order of the several species of sacient idolatry, it may not be improper to give a short extract of it in this place.

He tells us, then, that, "of the first two mortals, Protogonus and Fin (the latter of whom was the author of seeking and procuring food from forest-trees), were begotten Genos and Genea. These, in the time of great droughts, stretched their hands upwards to the sun, whom they regarded en a god, and sole ruler of the heavens. From theee, after two or thres generations, came Upoouranios and his brother Ousous. One of them invented the art of building cottages of reeds and rushes; the other the art of making garments of the aking of wild beasts. In their time, violent tempests of wind and rain having rubbed the large branches of the forest-trees against one another, they took fire, and burnt up the woods. Of the bare trunks of trees, they first made vessels to pans the watera; they consecrated two pillary to fire and wind, and then offered bloody sacrifices to them as to gods." And here let it be observed that this worship of the elements and heavenly bodies is truly represented as the first speciea of idolatry.
"After many generations came Chrywor, and he likewise invented many things useful to civil life; for which, after his decesse, he was worshipped as a god, Then flourished Ouranus and his sister Ge , who deified and offered eacrifices to their father Upeistos, whan he had been torn in pieces by wild beasts. Afterwards Cronos consecrated Muth, his son, and was himself consecrated by his snbjects." And this is as truly represented to be the eecond species of idolatry-the worahip of dead men.

He goes on, and eays that "Ouranus was the inventor of the Bmotylin, a kind of animated etones, framed with great art. And that Tasutua formed allegoi ic figures, characters, and images of the celeatial gods and elements. In which is delivered the third speciea of idolatry, statue and brute worship. For by the animated atones is meant atones cut into human shape; brute, unformed stones being, before this invention, consecrated and adored. As, by Tasutus's invention of allegoric figures, is insinuated (what wss truly the fact) the origin of brute worship from the use of hieroglyphics.

This is a very short and imperfect extract of the fragment ; many particulars, to avoid tediousnees, are omitted, which would much support what we are upon, particularly a minute detail of the principal arta invented for the use of civil life. But what has been selected on this head will afford a good comment to a celebrated pasagge of Cicero, quoted in this eection on another occasion. As the two important doctrines, taught in eecret, were the detection of polytheism and the discovery
of the unity, so the two capital तootrines, tsught more openly, were the origin of society with the arts of life, and the existence of the soul after death in a state of roward or punishments.

The fragment explains what Tully meant by men's being drawn by the mysteries from an irrational and asvage life, and tamed, as it were, and broken to humanity. It was, wo seo, by the information given them concerning the origin of aociety, and the inventors of the arts of life, and the rewards they received from grateful posterity, for making them selves benefactora to mankind.

The reasons which induce me to think this fragment the very history narrated to the Epoptai, in the celebration of the greater mysteries, are these -

First, it bears an exact conformity with what the ancients toll us that history contained in general, namely, an instruction that all the national gods, as well as those majorum, such as Hypaistus, Oranua, and Cronos, as those minorum gentium were only dead men deified; together with a recommendation of the advantages of civil life sbove the state of nature, and an excitement to the most conaiderable of the initiated (the summatibus viris, as Macrobius calls them) to procure it. And these two ends are served together, in the history of the rise and progress of idolatry as dolivered in thin fragment.

Again, in order to recommend civil life, and to excite men to promote ita edvantages, a lively pioture is given of his miserable condition, and how obnozivus he was, in that state, to the rage of all the olements, and how imperfectly, while he continued in it, he could, with all his industry, fence against them by food of acorns, by collages of reeds, and by coaks of akins: a matter the mysteries thought so vecessary to be impressed, that we find, by Diodorus Siculus, there was a scenical representation of this state exhibited in their shows." And what stronger excitement bad heroic minds than to be taught, as they are in this fragment, that publio benefita to their fellow-creatures were rewarded with immortality.

My second reason for supposing it to be that very history, is our being told, that Sanchonistho transcribed the account from eecret records, kept in the penetralia of the temples, and written in a eacred sacerdotal character, called the Ammonean, from the place where they were first deposited; which as Marshara ressonably supposes, was Ammonno, or Thebes, in Egypt; a kind of writing employed (as we bave shown elsewhere) by the hierophants of the mysteries.

But, lastly, we are told, that when this genealogical history came into the hands of a certain son of Thabion, the first bierophant on record amongst the Phenicians, he, after having corrupted it with allegories,

[^59]and intormired physical and coamical affections with hintorioal, that is, made the one aignificative of the other, delivered it to the prophets of the orgies, and the hierophants of the mysteries, who left it to their succeseors. So that now we have an exprese tedimony for the fact here advanced, that this was the very history read to the Epoptai in the celebration of the greater mysteries.

But one thing is too remarkable to pass by unobearved; and that is, Senobonistho's account of the corruption of this hiatory with allegories and physical affections, by one of his own countrymen; and of its delivery, in that stste, to the Eggptians, for Isiris is the same en Osiris, who corrupted it still more. That the pagan mythology was, indeed, thus corrupted, I have shown at large, in several parts of this work; but I believe, not wo early es is here pretended; which maken me suspeot that Sanchoniatho lived in a latar age than bis interpretar, Philo, aseigas to him. And what confirms me in this suspicion, is that mark of netional vanity and partiality, common to after-times, in making the mysteriee of his own country original, and conveyed from Phenicis to Egypt. Whereas it is very certain, they came first from Egyph. But of thie, elsewhere. However, let the reader take notice, that the question concerving the antiquity of Sanchoniatho does not at all affect our inference concerning the nature and use of this history.

A criticism of that very knowing and sagacious writer, father Simon of the Oratory, will show the resder how groundless the suapicions of learned men are concerning the genuinenees of this fragment. Father Simon imagines that Porphyry forged the hiatory of Sanohoniatho, under the name of a tranalation by Philo Byblius; and conjecturee, his purpoee in so doing wae to support paganiam; by taking from it, ite mythology and allegories, which the Cbristian writers, perpetually objected to. "He would make it appear, to answer the objections that were made on all sidee apon this, that their theology was a pure mythology-they go back to the times which had preceded the allogories and the fictions of the sacrificers." (Bib. Crit. v.i. p. 140.) But this learned mas totally mistakes the case. The Christians objected to rulgar paganism, that the stories told of their gods were immoral. To this their priests and Philosophers replied, that these stories were only mythological allegories, which veiled all the great truths of theology, ethics, and physics. The Christians eaid, this could not be; for that the stories of the gods had a substantial foundation in fact, these gods being only dead men deified, who in life, had like paseions and infirmities with others. For the truth of which they appealed to such writers as Sanchoniatho, who had given the history boti of their mortal and immortal stations and conditions. How then could eo acute an adveraary ${ }^{\text {as }}$ Porphyry, deeply engaged in this controversy, so far mintake the atate of the question, and grounde of his defence, as to forge a book in aupport of his cause, which totally overthrew it I

[^60]nencement of his work bears a atrong resemblance to the foregoing Cragment. Insteed, however, of permitting the first inhabitants of the world to gain knowledge gradually by the aid of experience, he makea them finished artizans from the beginning. This was neoeesary for his purpose, whioh was to show the original eatablishment of the freemason wociety. As his account throws much light upon the early history of man, and the amasing progress of the arts and sciencos in the first stages of human existence, and is, moreover, greatly relied upon by masons, I will here give a short abstract of it.
"The Almighty Architect," esya the Dr., "having created all things ecoording to geometry, lant of all formed Adam, and engraved on his heart the same noble science, which Adam soon disoovared by surveying his earthly paradise, and fabricating an arbour as a convenient shelter from heat, etc. When expelled from his lovely arbour, he reaided in the most convenient abodes of the land of Eden, where he could be beat secured from cold, heat, winds, rains, tempests, and wild beaste, till his sons grew up to form a lodge; whom he taught geometry and the great use of it in architecture; without which the children of men nuust bave lived like brutes, in woods, dens, caves, eta. or at best in poor huts of mud, or arbours made of branches of trees, etc. * Tubal Kain wrought in metala, Jubsl olevated musio, and Jabal extended his tentes

Adam whs succeeded in the grand direction of the craft by Seth, Knoch, Kainan, Mahalaleel, and Jared, whoee son Enoch was expert and bright, both in the acience and in the art, and being a prophet, he foretold the destruction of the earth for sin, first by water, and afterwards by fire. Therefore Rnoch erected twoo large pillarz, the one of stone and the other of brick, whereon he engraved the abridgment of the arts and aciences, principally geometry and masonry.

At last when the world's destruction drew nigh, God commanded Noah to build the great ark or floating castle, and his three sons essisted, like a deputy and two woardens. That edifice, though of wood only, was fabricated by geometry as nicely as any stone-building, like true shipbuilding at thin day, a curious and largo piece of architecture, and Anishod when Noak entered into his six hundredth year; aboard which he and his three sons and their four wivee passed, and having received the cargo of animals by God's direction, they were saved in the ark, while the rest perished in the flood for their immorality and unbelief. And so from these masons, or four grand officars, the whole present race of mankind are descended.

After the flood Noab and his three sons, having preserved the knowledge of the arts and sciences, communicated it to their growing offspring. And it came to poss, as they journeyed from the East towards the Weast, they found a plein in the land of Shinar, and dwelt there together, as Noachidec, or sons of Nonh, which was the first name of masong, according to some old traditions. When Peleg was born there to Heber, after the flood one bundred and one years, father Noah partitioned the earth, ordering them to dieperse and take possession, but from a fear of the consequences of separation, they resolved to keep together,

Nirarod, the son of Cush, the eldeat non of Ham, was at the head of those that would not dieperse, or, if they must separate, they resolved to transmit their memorial illustrious to all future ages, and so employed themselves under grand master Nimrod," in the large and fertile vale of shinar, along the banka of the Tygris, in building a stately tower and city, the largest work that ever the world saw, and soon filled the vale with uplendid edifices. But they over built it, and knew not when to desist till their vanity provoked their Maker to confound their grand design, by confounding their speech. Hence the city was called Babel, confurion.

Thus they were forced to disperse, about fifty-three years after they began to build, or after the flood one hundred and fiftry-four years, when the general migration from Shinar commenced. They went off at various times, and travelled North, South, East, and Weat, with their nighty akill, and found the good use of it in settling their coloniee.

But Nimrod went forth no farther than into the land of Asayrie, and founded the first great empire at hia capital Ninaveh, where he long reigned. Under him flourished many learned mathemsticians, whose successors were long afterwards called Chaldees and Magians, and though many of them turned imageworahippers, yet even that idolatry 000 sioned an improvement in the arta of deaigning, for Ninus, king of Nineveh or Assyrie, ordered his beet artista to frame the statue of Bael, that was worshipped in a gorgeous temple.

This history of Dr. Anderson is the only authority that masonry can produce to substantiate the extraordinary antiquity which it olaims, The specimen I have given of it is sufficient for the reader to form an opinion of its authenticity, es well as its resemblance to the fragmont of Sanchoniatho. Nimrod, Bel, Baal, and Belus are supposed by mythologiste to be the same person. We will turn to Warburton.

We now come to the hymn celebrating the unity of the godkeed, which was sung in the Eleusinian mysteries by the bierophant, habited like the Creator.t And this I take to be the little orphic posm quoted by Clemens Alexandrinus and Eusebius, which begine thus :-"I will deolare a secret to theInitiated, but let the doors beshut against the profane. But thou, O Museus, the offspring of bright Selene, attend carofully to my song, for I shall deliver the trath without disguiso. Suffer not, therefore, thy former prejudices to debar thee of that happy life whioh the knowledge of these sublime truths will procure unto thee, but carefully contemplate this divine oracle, and preserve it in purity of mind and heart. Go on, in the right way, and see the sole governor of the world it he is one, and of himself alone, and to that one all thinga owe.

- Nimrod signifies rebel, the name that the Igraelites gave him, but hip friends called him Belus, lord,
+ A passage in Porphyry shows what kind of personage the Creator was represented by, and that it was, like all the rest, of Egyptian original, and introduced into these secret mysteries for the reason above explained.
$\ddagger$ That is, his representative: but how he could be habrited like the Creator, who was never seen by morlal syes, it is difficult to imagine.-Edit.
thefr being. He operstes through all, wes never seen by mortal eyes, but does himsall see every one."

The reseons whioh support my conjecture are these:-1. We learn from the scholiast on Aristophanes and others, that hymns were sung in the mysteries. 2 Orphens, as we have said, first brought the myateries from Egypt into Thrace, and even religion itself; henoe it wee called Threnceia, as being supposed the invention of the Thracian, 3. The vorres, which go under the name of Orpheus, are, at least, more ancient than Plato and Herodotus, though since interpolated. It wis the cormmon opinion that they wore genuine, and those who doubted of that yet gave them to the earlieat Pythagoreans. (Laertius in Vits Pythag. and Suidaa). 4. The subjeot of them are the mysteries, under the soveral titlee of Thronimmoi metrooi teldai icros, logos and Eis ado Katabaris. D. Pausanias tells us, that Orpheus's hymns were sung in the rites of Ceree, in preference to Homer's, though more elegant, for the reasons given above. 6. This hymn is sddreseed to Musæus, his disciple, who was nsid, though falsely, to institute the mysterien at Athens, as hin master had done in Thraoe, and begins with the formule ueed by the mystagogue on that oocasion, warning the profane to keep at distance, and is the fourth line mentions that new life or regeneration, to which the initiated were tanght to aspire. 7. No other original, than the singing the hymns of Orpheus in the Eleusinian mysteries, can be well imagined of that popular opinion, mentioned by Theodoret, that Orpheus instituted those mystaries, when the Athenians had such certain records of enother founder. 8. We are told that one article of the Athenians' charge againat Diagoras for revealing the mysteries, wns his making the Orphic speech, or hyma, the subject of his common conversation. 9. But lestly, the account which Clomens gives of this bymn, seems to put the matter out of question. His words are these:- "But the Thracian mystagogue, who was at the same time a poet, Orpheus, the son of Oeager, sfter he had opened the mysteries, and sung the whole theology of idols, recants all he had said, and introduceth truth. The sacreds then truly begin, though late, and thus he enters upon the matter." To understand the force of this pestage we are to know that the mystegogue explained the repreeentations in the mysteriee, where, an we learn from Apuleius, the eupernal and infernal gods passed in review. To each of these they sung a hymn, which Clemens calls the theology of images, or idols. These are yet to be seen amongat the works ssoribed to Orpheus. When all this was over then came the Aporette, delivered in the bymn in queation. And, after that, the assembly was diamissed, with these two barbsrous words, kogx omphax, which show the mysteries not to have been originally Greek. The learned Mr. Lo Clere well obeerves, that this seems to be only an ill pronunciation of kots and omphets, which, he tells us, sigoify in the Phenician tongue, watch and abotain from evil."

[^61]Thus the reader ecee the and and uee both of the greater and leas mysceries, and that, as well in what they hid se what they divulged, all aimed at the benofit of the state. To this end they were to draw in as many as they could to their general participation, which they did by spreading sbroed the doctrine of a providence, and a future atate, and how much happier the initiated would be, and what superior felicitiee they were entieled to in another life. It whes on this account that antiquity is so full and exprees in this pert. But then they were to make those they had got in as virtnous as they could, which they provided for by discovering to such as were capable of the secret, the whole delurion of polytheism. Now this being supposed the shaking foundations, whe to be done with all poesible circumspection, and under the mast treseendoun ecal of secrecy. (Soe cap. xx. of Meursius' Elevsinin.) For they taught, the gods themeelves punished the reveelors of the zecret, and not them only, but the hearers of it too. (Apul. Met. lib. xi) Nor did they altogether truat to that neither, for, more effectually to curb an ungovernable curiosity, the atate decreed capital puniahmenta against the betrayers of the mysteries, and inflicted them with merciless severity. (8i quis arcense mysteria Cereris sacra vulgesset, lege morti sddicebstur.)

The case of Diagoras, the Melian, is too remarkable to be omitted. This man hed revealed the Orphic and Eleusinian mysteriea; and so pessed with the people for an atheist; which et once confirms what hath been ssid of the object of the eeoret doctrines, and of the mischiof that would attend an indiscreet communication of them. He likewive disuaded his friends from being initiated into these rites; the consequence of whiok was that the city of Athens proecribed him, and set a price upon his heed. While Socrates, who presched up the latter pert of this doctrine (and was likewise a reputed atheist), and Epicusus, who taught the former (and wan a real one), were suffered, because they delivered their opinions only as points of philosophio speculation, amongat their followers, to live a long time unmolested. And this, perhaps, was the reason why Socrates declined being initiated." Which, as it appeared a singular affectation, exposed him to much censure. But it wes foreborne with his usual prudence. He remembered that Eschylus, on a mere imagination of his having given a hint in his soenes of something in the mysteries, had like to have been torn in pieces on the stage by the people, asd only eecaped by an appeal to the areopagus; which venerable court acquitted him of that dangerous imputation, on his proving that he had never been initiated. The famous Euhemerus, who ssaumed the same office of hierophant to the people at large, with more boldnees than Socrates, end more temperance than Epicurus, omployed another expedient to acreen him-

[^62]melf from the laws, though he foll, and perhaps deservodif, under the eame imputation of atheism. He gave a fabulous relation of a voyage to the imaginsry ialand of Panchose, a kind of ancient Utopia, where, in a temple of Jupiter, be found a genealogical record, which discovered to him the birtbes and deaths of the greater gods; and, in ehort, evergthing that the hierophant revealed to the initiated on this subject. Thus he too avoided the suspicion of a betrayer of the mysteriea.

This, therefore, in the resmon why mo little in to be met with concerning the Aporreta. Varro and Cloero, the two most inquisitive persons in antiquity, affording but a glimmering light. The first giving us a short account of the cause only of the secret, without mentioning the doctrine; and the other, a hint of the doctrine, without mentioning the cause.

But now a rercarkable exception to all we bsve been saying concerving the secrecy of the mysteries obtruden itself upon us, in the case of the Cretans, who, ns Diodorus Siculua sasures us, celebrated their myateries openly, and taught their aporreta without reserve. His words are these: "At Cnowsus in Crote, it was provided for, by an ancient law, that thoee myeteries ahould be shown openly to all ; and that those thinga, whioh in other plsces were delivered in secret, should be hid from none who were deairous of knowing them." But, as contrary as this seoms to the principles delivered sbove, it will be found, on attentive reflection altogether to confirm them. We have ahown, that the great secret was the detection of polytheism; which was dona by teaching the originsl of the gods: their birth from mortale, and their advancement to divine honour, for benefits done to their country or mankind. But it is to be observed, that the Cretans proalaimed this to all the world by ahowing and boasting of the tomb of Jupiter himsolf, the Father of gods and men. How then could they toll that as a secrot in their myotories, which they told to everyone out of them I Nor in it less remarkable that the Cretans themselves, as Diodorus, in the same plece, telle us, gave this very circumstance of their colvbrating the mystaries openly es a proof of their being the firbt who had consecrated dead mortals. These are the old stories which the Cretans tell of their gods, who, they pretend to eay, were born amongst them. And they urge this as an invincible reason to prove that the adoration, the worship, and the mysteries of these gods were first derived from Crete to the rest of the world, for, whereas amongst the Athenians, those most illustrious mysteries of all, cslled the Eleuainian, those of Samothrace, and thowe of the Ciconians in Thrace, of Orpheus's institution, are all celebrated in zecret; yet in Crete"-and so on as sbove. For it seems the Cratans were proud of their invention, and used this metbod to proclaim and perpetuate the notice of it. So when Pythagoras, as Porphyry informs us, had been initistod into the Cretan: mysteries, and had continued in the Idean cave three times sine days, they wrote this epigram on the tomb of Jupiter, Zan, schow men call Jupiter, lies here dectased.

It was this which so much oxusperated the other Grecisns againet them, and gave birth to the common proverb of Reetes aci yeeyylati, the Creatas are eterial liars. For nothing could more affront theso rupenstitious idolaters than asserting the fact, or more displense the politio protectors of the myateries than the divulgingit.
The mysteries then being of so great service to the state, we shall not be surprised to hear the wireat of the anciente epeaking highly in their commendation; and their best lawgivera and reformera providing carefully for their support. "Cerea (anya Inocratea) hath made the Atheniens two presente of the greatest consequence; corn, which brought us out of a atate of brutality; and the myateries, which teach the initistod to entertain the moat sgreeable expectations touching death and oternity." And Plsto introducoth Socrates spenking after this mapner; " In my opinion, those who eatablinhed the mysteries, whoever they were, were well akilled in human nature. For in these ritea it was of old signified to the sapirant, that those who died without being initiated, stuck fast in mire and filth; but that the who was purifed and initisted, at his death should have his habitation 'With the Gode.'" And Tully thought them of such use to bociety, for preserving, and propagating the doctrine of a future state of rewards and puniabmenta, that in the law where he forbide nocturval escrifices offered by women, he maken an expreas exception for the Mysteries of Ceres, as well as for the sacrifices to the good goddess.
Aristides ssid, the welfare of Greece was secured by the Eleusinian mysteries alone I Indeed, the Greeks seemed to place their ohief happiness in them. So Euripides makes Hercules say, "I was blest when I got sight of the mysteries;" and it was a proverbial speech, when any one thought himself in the highest degree happy, to say, I seem as if I had been initiated in the higher mysteries.

Bat now, such ia the fate of human things, these myateries, venerable as they were in their firat institution, did, it must be owned, in course of time, degenerate; and those very provieions made by the State to enable the mysteries to obtain the end of their establisbment became the very meanin of lefesting it. For we can asxiga no surer cause of the horrid abuees and corruptions of the mysteries, (beeides time, which naturally and fatally depraves and vitiates all things) than the season in which they were represented, and the profound silenoe in which they were buried. For night gave opportunity to wioked men to attempt avil actions, and secrecy, encouragement to repeat them; and the iaviolable nature of that seerrecy, which encouraged sbusee, kept them from the magistate 'h knowledge so long, till it was too late to reform them. In a word, we must own that these myoteries, so powerful in their first institutions for the promotion of virtue and knowledge, became in time horribly subeervient to the gratification of lust and revenge. (Wiadom of Sol. xiv. 28, 24.) Nor will this appear st all strango, after what hath been said above. A like corruption, from the same cause, crept even into the church, during the pureat ages of it. The primitive Chrietians, in imitation, perlapp, of these pagan rites, or from the eame kind
of epirit, had a custom of celebrating vigila in the night, which, at first, were performed with all becoming sanctity; but, in a little time, they were so overrun with abuses, that it was necessary to abolish them.

And the ssme remedy, Cicero tells us, Diagondus, the Theban, was forced so apply to the disorders of the myateriea.

However, this was not the only, though the most powerful cause of the depravation of the mysteries. Another, doubtlees, was their being sometimes uoder the patronage of those deities who were supposed to inapire and preside over sensual passions-such as Bacchus, Venus, and Cupid-for these had all their mysteries; and where was the wonder, if the initiated should be sometimes inclined to give a loose to vices, in which the patron god was supposed to delight 9 And, in this case, the hidden doctrine came too late to put a stop to the disorder. However, it is remarksble, and confirme what hath been said concerning the origin of the mysteries, and of their being invented to perpetuate the doctrine of a future state, that the doctrine continued to be taught even in the moet debauched celebrations of the mysteriee of Cupid and Beochus. Nay, even that very flagitious part of the mysterious rites when at worst, the carrying the kteis and phallos, in procession, was introduced but under pretence of their being emblems of the myatical regeneration and new life, into which the initiated had engaged themselves to onter.

The last cause to which one may ascribe their corruption was the Hierophant's withdrawing the mysteriee from the care and inspection of the civil magistrate, whose original institution they were. Buts is aftertimes, it would happen that a little priest, who had borse an inferior share in these rites, would leave his society and country, and set up for himself, and in a clandeatine manner, without the allowance or knowledge of the magistrate, institute and celebrate the myateries in private conventicles. From rites so managed, it is easy to believe many enormities would arise. This was the original of those horrid impieties committed in the mysteries of Becchus at Rome, of which the historian Livy has given so circumstantial an account; for, in the beginning of his story, he tolls us the mischief was occasioned by one of theee priesta bringing the mysteries into Etruria on his own head, uncommissioned by his superiors in Greece, from whom he learnt them; and unauthorized by the State into which he had introduced therc. The words of Livy ahow that the myeteries were, in their own nature, a very different affair, and invented for the improvement of knowledge and virtue. "A Greek of mean extraction," saya he, "a little priest and soothsayer, came first into Etruria, without any akill or wisdom in mysterious ritos, many surta of which, that most improve people have brought in amongat us, for the culture and perfection both of mind and body."

What Livy means by the culture of the body will be seen hereafter, when we come to speak of the probationary and toilsome trials updergone by those aspirants to the mystories, called the soldiers of Mithras.

However, it is very true that in Greece itself the mysteries became abominsbly sbused; a proof of which we have even in the conduct of their comio writers, who frequently lay the noene of their eubject-such as
the rape of a young girl, and the like-at the celebration of a religioua mystery; and from that mystery denominate the comedy. And, in the time of Cicero, the terms mysteries and abominations were almost synonymous, The Academic having said they had aecrets and mystories, Lucullua roplies, "Queo funt tandem ista mysteria! nut cur celatis, quasi turpe aliquid, vestram sententiam "' What, after all, are theee myalerias ? or why conceal your purpose, es if it included something base. However, in spite of all occasions and opportunities, some of the mysteries, as particularly the Eleusinian, continued for many agee pure and undefiled. The two cspital corruptions of the mysteries were magic and impurities. Yet, ao late as the age of Apollonius Tyan, the Eleusinian kept so clear of the first imputation, that the hierophant refused to initiate that impostor, because be was a magioian. And, indeed, their long-continued immunity, both from one and the other corruption, will not appear extraordinary, if we consider that, by a lawt of Solon, the Senate was always to meet the day sifter the celebration of tbese myeteries, to see that nothing had besn done amiss during the performance. (Andoc. Orat) So that these were the very last that submitted to the common fate of all human institutions.

And bere the fathers will hardly egcape the consure of those who will not allow high provocation to be an excuse for an unfair representation of an adveraary. They will hardly eecape censure for accustoming themselves to speak of the mysteries as gross impieties and immoralities, in their very original." Clemens Alexandrinus, in a heat of seal, breaks out, "Lot him be accursed, who first infected the world with thess impostures, whether it was Dardanus - or - \&o. Thees I make no scruple to call wicked authora of impious fables; the fathera of an ezecrable superatition, who, by this inetitution, sowed in human life the seeds of vice and corruption." But the wieeat and best of the pagan worid invariably hold that the mysteries were instituted pure, and proposed the noblest end by the worthiest means.

The truth of the matter was this: the fathers bore a secret grudge to the mysteries for their injurious treatment of Christianity on ita first appearance in the world. We are to obeerve that atheism, by which was meant a contempt of the godis, wae reckoned, in the myateries, amonget the greatest crimes. So in the sixth book of the Eneid (oi which more hereafter), the hottest seats in Tartarus are allotted to the atheist-auch ss Salmoneus, Tityus, and the Titans, de. Now, the

[^63]Christians, for their contempt of the national gods, were, on their first appearance, deemed Atheiata by the people; and so branded by the myatagogue, as we find in Lucian, and exposed amongat the rest in Tartarus, in their colemn shows and representations. This may be gathered from a remarkable paenge in Origen, where Celsus thus addresses bia adversary :-
"But now, as you, good man, believe oternal punishments, even so do the interpreters of these holy mysteries, the mystagogues and initistors. You thresten others with thom; these, on the contrary, threaten you."

This, without doubt, was what sharpened the fathers against the myateries; and they were not always tender in loading what they did not approve. But here comes in the strange part of the story-that, after this, they should so studiously and formally transfer the terms, phraves, riles, ceremonies, and discipline of these odious mysteries, into our holy religion, and thereby very early vitiste and deprave what a pagan writer (Marcellinue) could see and acknowledge to be abooluta et simplex (perfect and pure) as it came out of the hands of ita suthor. Sure, then, it was some more than ordinary veneration the people had for these mysteries, that could incline the fatbers of the church to so fatal a counsel. However, the thing ia notorious, and the effects have been severely felt.

The reader will not be displessed to find hare an exact account of this whole matter, extracted from a very curious dissertation of a grest and unezceptionable writer, Is. Casaubon, in his sixteenth Exer. on the Annals of Baronius.- [Bishop W. has given the remacks of Cassubon in the original Latin, of which the following is a translation]:-
"When the fathers found it to be an easier way of bringing over minds corrupted by supersitition to the love of the truth, they first adopted many terms used in their ritee; and after thua treating of several heads of the true doctrines, they further adopted some of their ceremoniea; that they might seem to be saying, sa Paul said to the Gentiles,-' Whom ye ignorantly worship the same do I declere unto you !' Thencs it came that the fathers called the sacraments by the same names as were used to describe the (pagan) mysteries, as mueseis, teletas, teleiosei, epoptcias, or epopseias, telesteria, and sometimes, but more rarely, orgics. The Eucharist they emphatically denominated the mystery of mysteries; snd also, by antonomy, the mystery, or in the plural, the mysteries. And you may everywhere read in the writings of the fathers, when tresting of the holy communion, the words phrieta, mysteria, or aporretom, mysterion, referring to those that were to be divulged and those that were not. So the Greek verb myenthai in the ancient writing is often employed to signify the becoming a partaker of the Lord'a Supper ; and the term myerin for the act itself, and mystes for the prient, who is also called mystagogon and hierotelestes. In the Groek liturgies and elsewhere hiera telete, and cryphia kat epiphobos telete (the hidden and awful mystery) means the Eucharist.
"And as certain degrees were used in the pagan rites, so in like manner Diongsius divides the whole tradition of the sacraments into three acts,
distinguisbed by their seasons and ceremonies. The firat was Catharsir, the purgation, or purification, the second the myestis or initiation, and the third, teleosio or the consummation, which they also frequently called epopsian, or the recered. Tully had before affirmed that the Athenian mysteriee brought to the dying better hopss. On their pert, the fathers maintained, thst the mysteries of Christ brought certain salvation and oternal life to those who worthily partook of them; and that for those who contemned them there was no salvation; and they did not soruple to say that the end and ultimate fruit of the secraments wea deifioation, when they knew that the Authora of thoee vain superatitions had dared to promige the same honour to their initiatea. And, therefore, you may read in the fathers that the ond of the holy myatagogies was deification, and that those who faithfully received them should in the life to come be gode. Athanasias has ueed the verb theopoicsthai (to deity) in the same sense, and subsequently confirmed it by saying, "that by partaking of the spirit we are united to the God-head.' Of the symbols of the sacraments by which thuse ceremonies are celebrated, it is not here the placo to treat; but that which is called a symbol of faith is various in its kinds, and they serve as tokens or tests by which the faichful may recognize each other. And we show that the same were used in the pagan mysteries. The formula pronounced by the deacons, 'Depart hence all ye catachumens, all ye possessed and uninitiated, correaponds with the 'procul catc profani' of the pagans. Many rites of the pagana were perenrmed in the night, and Gundentiua has the expreavion 'aplendidienima now vigiliarum, the brighteat night of the vigila. And es to what we hase said of the rilence observed by the pegans in their secret devotions, the ancient Christians so far approved, that they exceeded all their mystaries in that obeervance. And as Seneca bas observed, the most holy of the sacred rites were only known to the initiated; and Jamblichus on the philosophy of the Pythagoreann has distinguished between the aporreta which could not be carried abroad, and the exphora, which might ; wo the ancient Christians distinguished their whole doctrines into those which might be divulged to all (the exphora) and the aporreta, or arcana, which wert not rashly to be disolosed. Their dogross, sayd Basilius, they kept secret, their preaching wes public. And Chrywostom, treating of those who were baptized for the dead, eays, 'I verily dexire to relate the matter fully, but I dare not be particular, because of the uninitiated.' They make a difficulty for us in the interpretation, and oblige us either to speak without precision, or else to dinclose what they nhould not be informed of ; and ss the pagans ueed the torms exorcheish is ta mysteria, touching those who divulged the mysteries, so Dionyaius saye, 'See that you do not discloee, nor slightly reverence the mysteries, and everywhers in A ugustinus, you will read of the sacrament known to the faithful. And thus (in Johannem, tract xvi.) 'all the cataohumens alresdy believe in Christ, but Christ does not trust them; and if we should ask one of them whether he eat the fleah of the Son of man, be would not underntsnd what we meant; snd again, "The catachumens are ignorant of what the Christians receive.' Lot them blueh that they are ignorant."

We have observed sbove, that the fathera gave very easy credit to what wse reported of the abominations in the mysteries ; and the casier, perhapa, on account of the secrecy with which they were celebrated. The same affectation of secrecy in the Christian rites, and the same language in apeaking of them, without doubt procured as casy crerlit to those calumnies of murder and inceat, charged upon them by the pagans. Nay, what is still more remarkable, those very specific enormitiee in which their own mysteries were then known to offend, they objected to in the Christians.
"A catachumen is a candidate for baptism, or a person who prepares himself for receiving it. Towards the end of the first century, Christians were divided into two orders, distinguished by the names of believers and catachumens. The latter, as contra-distinguished from the former, were such as had not yet been dedicated to God and Christ by baptiam, and were, therefore, admitted neither to the public prayers, nor to the holy communion, nor to the ecclesiastical assemblies. As they wore not allowed to assist at the celebration of the eucharist, the deacon dismissed them, after sermon, with this formula, proclaimed three times, " Ite catachumeni missa est."-(Rees.) "Missa is derived from mitto, to send. Mises has been used for mistio. Ite missa est or misrio cot. You may all retum home."-(Bailey.)
"Quod norunt fideles, what the faithful know. These worde, or, as expressed in Greek, isasin oi pemuemenoi, forms what may be called the watchword of the secret, and occur constantly in the fathers. Thus St Chrysoatom, for inatance, -in whoes writings Casaubon remarked the recurrence of this phrase at lesst fifty times, in speaking of the tongue (comment in Pselm 153), ssys, 'Reflect that this is the member with which we receive the tremendous sacrifice-the faithful know what I speak of?' Hardly less frequent is the occurrence of the same phrase in St. Auguatin, who seldom ventures to intimate the eucharist in any other way than by the words Quod norunt fideles."-(Travels in soarch of a Religion, Phila, ed. p. 82.)

This precaution needs no apology when referring to religions rites, which if exposed, would subject its votaries to punishment. "It was," saye the eame writer, in the third century, when the followers of Chriat were most severely tried by the fires of persecution, that the discipline of secrecy, with respect to this (the Eucharist) and the other mysteries, was most strictly observed." "A faithful concealment (says Tortullian, is due to all mysteries from the very mature and constitution of them. How much more must it be due to such mysteries as, if they were once discovered, could not escape immediate punishment from the hands of man."-(Ibid, p. 73.)

The persecuted, when they obtained the majority, became the permecutors, and the Druids of England were under the same necessity of concealing their dogwas and rites as the Christians formerly had been. But what excuse have the masonn of the present day for making a mystery of the same rites when not in danger of persecution ?

There can be no pretest for retaining a secret, when, the cause that
gave it birth no longer exists. Beaides, the masons do not profess the doctrines of paganiam, they merely repeat the caramonies, parrot-like, without any regard to or knowledge of the original intention.

That the mysteries were invented, estahlished, and supported by lawgivers, may be Been.

From the place of their original; which was Egypt. This Herodotus, Diodorus, and Plutarch, who collect from ancient testimonies, expresaly affirm; and in this all antiquity concurs; the Eleusinian myateries, particulariy, retaining the very Egyptian gods in whoee honour they were celebrated; Ceres and Triptolemus being only twoo other names for Iris and Oriris. a

Hence it is, that the universal nature, or the first cause, the object of all the myateries, yet disguised under diverse names, speaking of herself in Apuleius, concludes the enumeration of her various mystic rites, in these words-"The Egyptisns, skilled in ancient learning, worshipping me by ceremonies perfectly appropriste, call me by my true name, queen Isis."

But the similitude between the rites practised, and the doctrines taught in the Grecian and Egsptian mysteries, would be alone suffcient to point up to their original; such as the secrecy required of the initisted; which, se whall see hereafter, peculiarly characterised the Egyptian teaching; such as the doctrines taught of a metempaychosia, and a future state of rewards and punishments, which the Greek writera agree to have been first set abroach by the Egyptians ; $b$ such as abstinence enjoined from domestic fowl, fish, and beans (see Porphyrius De Abstin.) the peculiar superstition of the Egyptians; such as the Ritual composed in hieroglyphics, an invention of the Egyptians. But it would be endless to reckon up all the particulars in which the Egyptian and Grecian mysteries agree ; it shall suffice to say, that they were in all thing the same.

Again; nothing but the supposition of this common original to all the Grecian mysteries can clear up and reconcile the disputes which arose smongast the Grecian states and cities concerning the first rise of the mysteriee ; every one claiming to be origiaal to the rest. Thus Thrace pretended that they came first from thence; Crete contested the bonour with those barbarians: and Athens claimed it from both. And at that time, when they had forgotten the true original, it was impossible to settle and adjust their differences ; for each could prove that he did not borrow from others; and, at the same time, seeing a

[^64]aimilitude in the ritea, would conclude that they bad borrowed from bim. But the owning Egypt for their common parent, clears up all difficultiee; by accounting for that general likeness which gave birth to everyone's pretonsions.

Now, in Egypt, all religious worship being planned and eatablished by statesmen, and directed to the ends of policy, we must conclude, that the myateries were originally invented by legialators.

The sages who brought them out of Egypt, and propagated them in Asis, in Greece, and Britain, were all kings or lawgivera; such as Zoroaster, Inachus, Orpheus,a Melampus, Trophonius, Minas, Cinyras, Erectheus, and the Druids.

They were under the superintendence of the State. A magistrate, entitled Basileus, or king, presided in the Eleusinian mysteries. Lysias informs us that this king was to offer up the public prayers according to their country rites, and to see that nothing impions or immoral crept into the celebration. (In Andoc.) This title, given to the president of the myateries, wes, doubtless, in memory of the first founder.

Though it be now apparent that the mysteries were the invention of the civil magistrate, yet even some ancienta who have mentioned the mysteries, seemed not to be apprised of it, and their ignorance hath occasioned great embroilment in all they say on this subject. The reader may see by the second chaptar of Meursius' Eleucinia how much the ancients were at a lose for the true founder of those mysteries; some giving the institution to Ceres; some to Triptolemus ; others to Eumolpus ; others to Mussus ; and some again to Erectheus. How then shall we disengage ourselves from this labyrinth, into which Meursius has led us, and in which his guard of ancients keep us enclosed I This clue will easily conduct us through it. It appears, from what hath been said, that Erectheus, King of Athens, established the mynteries, 6 but that the people unluckily confounded the institutor with the priests. Eumolpus and Musseus, who firat officiated in the rites; and with Ceres and Triptolemus, the deities, in whose honour they were celebrated. And these mistakes were natural enough; the poets would be apt, in the license of their figurative style, to call the godes, in whose name the mysteries were performed, the foundera of those mysteries; and the people, seeing only the ministry of the officiating priest, in good earnest believed those mystagogues to be the founders. And yet, if it were reasonable to expect from poeta or people attention to their own fancies and opinions, one would think they might have distinguiahed better by the help of that mark, which Brecthens left behind him, to ascertain his tille-namely, the erection of the officer called Basileus, or king.

But this original is still further seen from the qualities required in the aspirants to the mysteriee Aocording to their original institution,

[^65]neither slaves nor foreigners were to be admitted into them. $a$ Now, if the myateriea were instituted primarily for the sake of teaching religious truths, there can be no reason given why every man, with the proper moral qualities, ahould not be admitted ; but, aupposing them instituted by the State for political purpoees, a very good one may be assigned, for slaves and foreignera have there neither property nor country. When, afterwarde, the Greeks, by frequent confederations against the Peraian, the common enemy of their liberties, began to consider themselves as one people and community, the mysteries were extended to all who apoke the Greek language. Yet the ancienta, not reflecting on the original and end of their institution, wers much perplexed for the reasons of an exclusion so apparently capricious, Lucinn telle us, in the life of his friend Demonax, that the great philosopher had the courage, one day, to ask the Athenians why they excluded barbarians from their mysteries, when Eumolpus, a barbarous Thracian, had established them ; $b$ but he does not tell us their answer. One of the most judicious of the modern critice (Is. Cassubon) was as much at a lose; and therefore thinks the restruint ridiculous, as implying that the institutors thought the speaking the Groek tongue contribnted to the advancement of piety.

Another proof of this original may be deduced from what was taught promiscuously to all the initiated-which was, the necessity of a virtuous and holy life to obtain a happy immortality. Now this, we know, could not come from the sacerdotal warehouse ; the priests could afford. their elysium at the easy expense of oblations and eacrifices; for, as our great philowopher (who, however, was not aware of this extraordinsry institution for the support of virtne, and therefore concludes too generally) well obeerves, "the priests made it not their businese to teach the people virtue; if they were diligent in their observancea and ceremonies, punctual in their feasts and solemnities, and the tricka of religion, the boly tribe assured them that the gods were pleased, and they looked no further: few went to the schools of philosophers to be instructed in their duty, and to know what was good and evil in their actions : the priesta sold the better pennyworths, and thereforo had all the custom: for lustrations and sacrificea were much eanier than a clean conscience and a steady course of virtue; and an expintory sacrifice, that atoned for the Fant of it, much more convenient than a strict and holy life." (Locke's Reasonableness of Christianity.) Now, we may be assured that an institution which taught the necessity of a strict and boly life could not but be the invention of law-givers, to whose schemes virtue was so necesary.

[^66]It is now sabmitted to the reader whether it be not fairly proved that the myateries were invented by the legialator to affirm and establish the genoral dootrine of a providence, by inculcating the belief of a future state of rewards and punishments. Indeed, if we may believe a certain ancient, who appears to have been well versed in these matters, they gained their end by clearing up all doubts concerning the righteous government of the gode. (Sopater in Divis Quest.)

It seems of very little importance to detarmine whether the myateries were the invention of civil legislators or of the sacerdotal order. And, In fact, in Egypt, where they wero first established, the priesthood and the legislatore formed but one body. This was also the case in Britain, where the Druids performed the offices of priests, and were at the same time the makers of the laws.

Tytler, in his Elements of general History, in the chapter on Egypt, says, "The functiona of the sovereign were partly civil, and partly religious. The hing had the chief regulation of all that regarded the godes, and the prieste, considered as his deputies, filled all the offices of state. They were both the legislators and the civil Judges, they imposed and levied the taxes, and regulated weights and measures."

The litle of Basileus (king) given to one of the officers in the celebrations of the mysteries, who is decorated with a crown, has doubtless caused the supposition that this character was the representative of civil temporal power. Whereat the crown was originally the ensign of divinity." "In the remotest antiquity the crown was only given to gods." Leo, the Egyptian, Bays, it was lsis who first wore a crown, and that it consisted of ears of corn [grain] the use whereof she first taught men.
"In this most authors agree, that the crown originally was rather a religious than a civil ornsment; rather one of the pontificalia than the regalia; that it only became common to kinga, as the ancient kings were priesta as well as princes, and that the modern princes are entitled to it in their eccleeiastical capacity rather than their temporal."-(Rees' Cycl.)

The author citee no authority for hio essertion that, "A magistrate, entitled Basileus, or king, preaided in the Eleusinian mysteriea." But, be esya, "Lysias informs us that this king was to offer up the public prayers, according to their country rites, and to see that nothing impious or immoral crept into the celebration."

Lysias, it appears, was noticed by Cicero as an orator of some repute, but he is little known as an author, and he seems, in this case, to have indulged his fancy in one of his popular orations, without possessing an abeolute knowledge of the truth of his declaration, for there is no ovidence of his having been initiated into the mysteries. He was, no doubt, deceived by the title given to one of the officers in these celebre tions, which was very likely to be generally known.

Besides, the bishop has shown above that, "By a law of Solon, the Senate was always to meet the day after the celebration of these mys teries, to see that nothing had boen done amisa during the performance." Now, if there were a magistrate appointed by the king, bearing his title.
and presiding in these celebrations an his repiceontative, what need would there be for the meeting of the senate for the purpose here stated.

Jamblichus, who, by-the-by, was a Pagan priest, and appears to be thoroughly versed in the metaphysical science of the gode, has clearly intimsted who this Basileus of the mysteriea was. In speaking of the one Supreme, he says, "prior to truly existing beings and total prin. ciples, there is one god, prior to the first god and king, immoveable, and abiding in the solitude of his own unity. Who is father of bimeelf, is self-begotten, is father alone, and is truly good."- (See Taylor's Trans. p. 301.)

The original of that part of the pesesgo particularly alluded to is proton kai ton proton Theon kai Basileus, which Gale properly tranalatos, prior etiam primo Deo, et rege [sole.] That is, prior to the firnt god and king, the sun. For it is well known that the sun was the firet object of aduration among all the ancient nations, and he was atyled the king or governor of the world.

The Supreme God, alluded to by Jamblichus, was called in Egypt, Kneph, of whom Plutarch saya, "The unbegotten Kneph was celebrated with an extraordinary degree of veneration by the Egyptian Thebans."

As a further proof of the erroneous opinion formed by our author on this subject, an appeal may be made to the practice of royal arch mesonry, which I deem conclusive in this and similar cases. Here the hiorophant or high priest is the presiding offeer, and the king holds the second rank, and presides only in the absence of the former. And the idea that this officer was ever the representative of an earthly monarch was never entertained by masons. No civil power has ever exercised any suthority in the lodge, and although some of the royal family of England, and also of other countriea have beoome membera of the fraternity, they onter it like other men, on the ground of perfect equality. In short, the officer styled king, personates Osiris, the sun, one of the divinities celebrated in the mysteries, the second person in the pagan trinity.

It is worthy of remark, and perhape here is the most proper place to make it, that masonry conforms to the practice of the Egyptians, in prohibiting to slaves a perticipstion of its mystic rites. It excludes also all thoee who possess any bodily defect. That a benevolent society, as the mssonic institution is, should make a misfortnne of this kind tbe cause of debaring admission to its social and friendly communion, admita of no justification ; no mason can give a plausible reason for it.

It is an outrage againat humanity. Any one who, in fighting the battles of liberty and his country, should have lost a leg or an arm in the conflict, would in vain apply for admission into this society. Every moson has aworn not to be present at the initiation of a person thus situated. He is bound down with the adamantine chains of precedent which has often perverted the plainest principles of justice and common sense.

I do not believe there is s single mason who would not wish to get rid of this rule, but the fraternity entertain a religious horror against defacing the "old land marks."-The ouths, therefore, engendered in dayn of darkness and superstition, must remain the samo to the end of time.

This circumstance alone is a strong proof of the origin of the order. The practice arises from a stupid adherence to the religious customa and observances of the ancient EgJptians. The mysteries, it has been seen, were deemed a sacred institution, and the moat rigid investigation of character, and the severest trials were imposed upon the aspirants to itr beneflts. "No person," esys De Parv" (in his Phil. Diss. on the Egypt. and Chinewe), who was born with any remarkable bodily imperfection, could be consecrated in Egypt, and the very animals, when deformed, were never used either for sscrifice or in symbolical worship."

The Levites among the Jews were subjected to the same rigid discipline; no one that hed the least bodily blemish oould be admitted into the sacerdotal order.
"As to the admittance of the Levites into the ministry, birth alane did not give it to them; they were likewiee obliged to receive a sort of consecration. Take the Levites from among the children of Israel, says God to Moser, and cleense them. And thus shalt thou do unto them to cleanse them; sprinkle water of purifying upon them, and let them shave all their flesh, and let them wah their clotbee, and so make themmelves clean. Then let them take a young bullock, etc. (Numbers, viii. v. 6.)

Nor was any Levite permitted to exercise his functions till after he had served a sort of novitiate for five years, in which he carefully learned all that related to his ministry.
"From conaidering their order, we proceed to consider the manner in which the priests were chosen, and the defects which excluded them from the priesthood. Among the defects of body, which rendered them unworthy of the sacerdotal functions, the Jews reckon up fifty whioh are common to men and other animale, and pinety which are peculine to men alone. The prieat whose birth was polluted with any profaneness, was clothed in black, and sent without the verge of the priesta' court, but be who was chosen by the judges appointed for that purpose, was clothed in white, and joined himself to the other prieets. And I know not whether St. John does not allude to this custom when he says, "He that overcometh, the same shall be clothed in white rairent; and I rill not blot his name out of the book of life." (Rev. iii. v. 5.) They whoee birth was pure, but who had some defect of body, lived in those apartments of the temple wherein the stores of wood were kept, and ware obliged to split, and prepare it for keeping up the fire of the ultar." (Rev. Adsm Clarke's Hish Anc. Israelites. Burlington Edit-p. 273, 279,)
There is a remarkable aimilarity in the institutions of the Egyptians, Jews, and Freemasons. The probation of four years was required after initiation into the lesacr myzteries, before the candidate could be admitted to a participstion of the greater. An entered apprentice in the lodge of Freemasons had formerly to serve seven years in that grade before he could be advanced. This axtra time, however, arose from the necoseity of adapting the rules of the order to the craft of masosry ; it being the usual period required for apprentices in that and othor mechanical trades. The members of the mesonio fraternity also "formerly wore white during lodge-hours, but at present the white apron alone ra-maing,-(Smith.)

## CHAPTER III.

AR EXAYRNATION OF VIBOL'B BIXTH BOOX OF THE RERID; IN WHICR AF Is BHOWZ TEAT TEE AWHBORIOAL DEAOENT OF ENEAS INTO HELL IS FO OTRER TEAN AT ENIGMATLCAI REPRESENTATION OF EMS WITLATION HTNO THE MYETERIES.

We have seen, in general, how fond and tanacious ancient paganism whe of this extroordinary rite, as of an ingtitution supremely useful both to society and religion. But this will be seen more fully in what I now proceed to lay before the reader, an examination of two celebrated pieces of antiquity, the famous Sixth Book of Virgil's Bneid, and the Metamorphoris of Apuleius. The first of which will nhow us of what une the mysteries were esteemed to society; and the second of what use to religion.
$\Delta n$ inquiry into Eness' adventure to the shades, will have this farther advantage, the instructing us in the shovos and representations of the mysterias; a part of their history which the form of thia discourse upon them hath not yet enabled as to give. So that nothing will be now wanting to a perfect tnowledge of thin moat extraordinary and important institution.

For the descent of Virgils hero into the infernal regions, I presume, was no othar than a figurative description of an initiation; and partionlarly, a very exact picture of the spectacles in the Sleurinian mysteriea, where everything was done in show and machinery; and where a repreeantation of the history of Ceres afforded opportunity of bringing in the coonee of heaven, hell, elyaium, purgatory, and whatever related to the Iuture state of men and heroes.

As the Eneid is in the style of ancient legialation, it would be hard to think that so great a master in his art should overlvok a dootrine which, we have ahown, was the foundation and support of ancient politica; namely, a future state of rewards and puniahments. Accordingly he hath given us a complete system of it, in imitation of his models, which were Plato's vision of Erus, and Tully's dream of Scipio. Again, is the lawgiver took care to support this doctrine by a very extraordinary inatitation, and to commemorate it by a rite, which had all the allurement of spectacle and afforded matter for the utmoet embellishments of poetry, we cannot but confess a description of such a scene would add largely to the grace and elegance of his work, and must conclude he would be invited to attempt it Accurdingly, he bath done this likewise, in the allegorical descent of Eneas into hell; which is no other than an anigmatical representation of his initiation into the myateriea

Virgil was to represent a perfect lawgiver in the person of Enesa ;
now, initistion into the mysteries was what sanctified his character and ennobled his function. Hence we find all the ancient heroee and lawgivers were, in fect, initiated.

Another reason for the hero's initiation was the important instructions he received in matters that concerned his offlce.

A third resson for his initiation, was the custom of seeking support and inspiration from the god soho presided in the mysteries.

A fourth reazon for his initiation, was the ciroumstance in which the poet has plesed him, unsettled in his affairs, and anxious about his future lortune. Now, amongot the unes of initiation, the advioe and direction of the oracle whas not the least. And an oracular burean was so neceesary an appendix to some of the myateries, as perticulariy the Samothracian. that Plutarch, speaking of Lysander's initiation, there expresece it by a word that signifles consulting the ormole; on this socount, Jason, Orpheus, Hercules, Castor, and (as Macrobius eaya) Tarquinius Priscus, were everyone of them initiated into those mynteriea.

All this the poet seem clearly to have intimated in the speech of Anohises to his son:
"Carry with you to Italy the choicest of the youtho, the stoutent hearts. In Latium you have to subdue a hardy race, rugged in manners. But first, my son, visit Pluto's infernal madaions, and, in quest of an intervien with me, cross the deep floode of Avernus."

A fifth resson was the couforming to the old popular tradition, which said, that several other heroes of the Trojen timee, such a Agamemnon and Ulysses, had been initiated.

A Eixth, and principal, was that Augustag, who was ehadowed in the pernon of Eneas, had been initisted into the Kleutinian mysteries. (Suet. Oct. cap. xeiii.)

While the mysteries wers confined to Egypt, their native country, and while the Grecian lawgivers went thither to be initisted, as a kind of dexignation to their offico, the ceremony would be nsturally described in terms highly allegorical. This was, in part, owing to the genius of the Egyptian manners ; in part, to the humour of travellers; but most of all, to the poliog of lawgivers, who, returning home to civilize a berbarous people by lawn and arts, found it useful and neceasary (in order to aupport their own charactern, and to eatablich the fundamental principle of a future state) to represent that initiation, in which they maw the state of departed mortale in machinery, as an actual descent into hell. This why of spesting wes used by Orpheus, Beochus, and others; and continued even after the mysteries were introduced into Greece, an appears by the fables of Hercules, Castor, Pollus, and Theneus's descent into hell But the allegory was generally so circumstanced sa to discover the truth conceeled under it. So Orpheus is said to go to hell by the power of his harp; that is, in quality of lawgiver; the harp being the nnown syafbol of his lawe, by which he humanized a rude and barbarous people. So agnin, in the lives of Heroules and Bacchus, wo have the true history and the fable founded on it, blended and recorded tugether. For we are told, that they were in faot joitiated into the

IRlousinian mysteries ; and that it was just before their deacent into hell, as an aid and security in that desperate undertaking. Which, in plain speech, was no more than that they could not eafely see the ahows till they had been initisted. The same may be said of what is told us of Theeeus's ariventure. Near Eleusia there was a well, called Callichorus; and, adjoining to that, a stone, on which, as the tradition went, Ceres oas doon, sad and weary, on her coming to Eleusia. Hence the stone was named Agelastus, the melancholy stone. On which account it wha deemed unlawful for the initiated to sit thereon. "For Ceres (enys Clemens), wandering about in search of her daughter Proserpine, when she came to Eleuxis, grew weary, snd sat down melancholy on the side of a well. So that, to this very day, it is unlaviful for the initiated to sit down there, lest they, who are nuw become perfect, should seem to imitate her in her desolate condition." Now let us nee what they tell us concerning Theseus's descent into hell. "There is also a stone," ssys the scholiast on Aristophanes, "called by the Atheniane, Ageleatus; on which, they say, Theseus ast when he was meditsting his descent into hell. Hence the stone had ita name. Or, perbape, becsuss Cares ant there weeping, when she sought Proeerpine." All this seems plainly to intimate, that the deecent of Theeeus was his entrance into the Eleusinian mysteries. Which entrance, as we shall see hereafter, wam a fraudulent intrusion.

Both Euripides and Aristophanes moem to confirm our interpretation of these descents into hell. Euripides, in his Hercules furens, brings the hero, just come from hell, to succour his family, and deatroy the tyrant Lycus. Juno, in revenge, persecutes him with the furies; and he, in his transport, kills his wife and children, whom he mistakes for his enemies. When he comes to himself, he is comforted by his friend Theseus; who would excuse his exceenes by the criminal examples of the gods; a consideration, which, as I have obsarved above, grestly encouraged the people in their irregularities; and was therefore obviated in the mysteriea, by the detection of the vulgar arrore of polytheism. Now Euripides seems plainly enough to have told us what he thoughtof the fabulous descents into hell, by making Herculea reply, like one just come from the celebration of the myoteries, and entrusted with the aporreta. "The examples," aaya he, "whioh you bring of the gods, are nothing to the purpose. I cannot think them guilty of the orimes imputed to them, I cannot apprehend, how one god can be the sovereign of another god. A god, who is traly so, stands in need of no one. Roject we then these idle fables, which the poets teach concerning them." A secret, which we must suppuse, Thesens had not yet learnh.

The comic poet, in his Progs, tells us as plainly what he too underatood to be the ancient heroes' descent into hell, by the equipage, which he gives to Bocchus, when he brings him in, inquiring the way of Hercules It was the custom, at the celebration of the Eleusinian mysteries, an weare told by the acholiant on the place, to have what wan wanted in thowe rites, carried upon assea. Hence the proverb, $A$ ginua portat myoteria; ecoordingly the poet introducon Becchus, followed by his buffoon servants.

Xanthius, bearing a bundle in like manner, and riding on an sss, And lest the meaning of this should be mistaken, Xanthius, on Herculea's tolling Beochus, that the inhabitants of Elysium were initiated, pute in, and saye, "And I am the nes carrying mysteries," This was no brond a hint, that it seems to have awakened the old scholisst; who, when he comes to ghat place, where the chorus of the initiated ${ }^{\circ}$ appears, tella us, wo are not to understand this scene as really lying in the Elysian fields, but in the Bleusinian mysteries.
Here, then, as was the case in many other of the ancient fables, the pomp of expreesion betrayed willing posterity into the marrellous. But why need wo wonder at this in the genius of more ancient tifipes, whioh delighted to tell the commonest thing in a highly figurative manner, when a writer of eo late an age as Apulaius, either in imitation of antiquity, or perhape in compliance to the received phraseology of the mysteriee, describea his initiation in the same manner: "I spprosch to the confines of death, and having trod on the threshold of Proserpine, I retarned from it, being carried through all the elements. At midnight I eaw the aun shining with a aplendid light; and I manifeetly drew near to the gods beneath, and the gods above, and proximately adored them."

Eneas could not have described his night's journey to his companions after he had been let out of the ivory gate, in properer terms, had it been indeed to be understood as a journey into hell.

Thus, we see, Virgil was obliged to have his hero initiated: and that he had the authority of fabulous antiquity to call hininitiation a descent into hell. And surely he made use of his advantages with great judgment; for such a fiction animates the relation, which, delivered out of allegory, had boen too cold and flat for epic poetry.

Had an old poem, under the name of Orpheus, entitled, " $\Delta$ descent into hell," been now extant, it would, perhaps, have shown us, that no more was meant than Orpheus's initiation; and that the idea of thia siath book wes taken from thence.

But further, it was cuatomary for the poets of the Auguatan age to exercise themselvee on the eubject of the mysteries, as appears from Cicero, who desires Atticus, then at Athens, and initiated, to send to Chilius, a poet of eminence, an account of the Eleusinian mysteries; in order, es it would seem, to insert into some poem he was then writing. Thus it appeare, that both the ancient and modern poeta afforded Virgil a pattern for this farmous epieode.

Even Servius eaw thus far into Virgil's design, an to say, that many thinge were delivered according to the profound learning of the Egyptian theology. And we have ahown that the doctrines taught in the mysteries, were invented by that people. But though I say this was our poet's general deaigo, I would not be supposed to think he followed no other guides. Several of the circumstances are borrowed

[^67]from Homer ; and several of the philosophic notions from Plato; some of which will be taken notice of, in their place.

The great manager in this affair is the sibyl; and, as a virgin, aho sustains two principal and distinct parts; that of the inspired priestess, to pronounce the oracle ; and that of hierophant, to condwet the initiated through the whole celebration. ${ }^{1}$

For, as we have obeerved, the initiated had a guide or conductor called Hierophanten, Mystagogos, indifferantly of either sex, who was to instruct him in the preperatory ceremonies, and lead him through, and explain to him, all the shows and representations of the myateries. Hence Virgil calls the sibyl Magna Sacerdos, and Docta Comes, words of equivalent signification. And as the female myatagngue, as well as the male, was devoted to a single life, so was the Cummen Sibyl, whom he - calls Caeta Síbylla, Another reason why a prieatesa is given to conduct him is, becaune Proeerpine prexides in this whole affair. And the name of the priestess in the Eleusinian mysteries shows that she properly belonged to Proeerpine, though she was called the priestens of Ceres. "The ancients," says Porphyrins, "called the prientesees of Corss, Melissai (bees), as being the ministers or hierophants of the enbterraneoun goddees, and Proserpine herself, Melitodes.

It was for this resson that theee female hierophants were called Molissai, as is well observed by the Schol. on Pind. in Pyth, the bee being, among the ancients, the symbol of chastify. ${ }^{2}$

> Quod neo concubitu indulgent, neo corpors negnes In Venerem solvunt.

The first instruction the prieatess gives Eneas, in to eearch for the golden bough, eacred to Properpine.

Uoder this branch is concealed the wreath of myrtle, with which tho initisted were crovened, at the celebration of the mysteries.-(Schol. Aristoph. Rania,

The golden bough is said to be sacred to Proserpine, and so wo are told was the myrtle; Proserpine only is mentioned all the wey; partly because the initiation is deecribed as an actual desoent into hell, but principally because, when the ritee of the myateries wers performed, Cerea and Proserpine wero equally invoked, but when the ahowos were ropresented, then Proserpine alone presided. Now this book is a representation of the shows of the mysteries. The quality of this golden bough, with its lento trimene, admirably deacribes the tender branches of myrtle. But the reader may sak, why in this myrtle-branch represented to be of gold 1 Not merely for the sake of the marvellous, he may be marured. A golden bough was literally part of the sacred equipage in the shows of the mysteries. For the branch, which was sometimes

[^68]soreathed into a croven, and woorn on the head, was, at other times, cerried in the hand. Clemens Alexandrinus tells us, from Dionyeius Thrax, the grammarian, that it was an Egyptian custom to hold a branch in the act of adoration. And of what kind these branchoe ware, Apuleina talls us, in his deecription of a procesaion of the initiated in the myatores of Iais :- "A thirḍ advanced bearing a palm branch of thin gile leaves, and also the Mereverial Caduceus." The golden branch, then, and the coduceus were related. And mocordingly Virgil makee the former do the uaual office of the latter, in affording a free pasaage into the regions of the deed. Again, Apuleius, describing the fifth person in the prooession, eaye, "A fifth (beering) a golden van full of golden boughe" So that a goldea bough, we see, was an important implement, and of a very complicated intention, in the shows of the mysteries.

Eness having now poseesed himself of the golden bough, s pessport as neosesary to his dencont as a myrtle crown to initiation,

He is then led to the opening of the descont :-
"Here stood a cave profound and hideous, with a wide gawning month, atony, fenced by a black lake and glvomy woods."

And is reception his thus described :-
"The ground beveath their feet begen to rumble, the mountain topa to quake, and doge were seen to howl through the ahade of the woods at the approach of the goddess."

How similar is all this to the fine description of the poet Claudian, where, professedly and without diaguise, he apeaks of the tremendous entry into these mystic rites :-
"Now I see the shrines shake upon their tottering basee, and lightnings, announcing the deity's approach, shed a vivid glare around. Now a loud warring is heard from the deptbs of the earth, and the Cecropion temple re-echoes, and Eleuris raises her holy torches, the makes of Triptolemue hise, and lift their scaly neoks, rubbed by their curved yokee So afar, the three-fold Hecate burste forth." - (De Raptu Proserpinee.)

Both these descriptions agree exactly with the relations of the ancient Greek writers on this aubjeot. Dion Crysontom, apeaking of initiation into the myoteries, givea us this general idea of it:-Just so it is, an when one leads a Greek or barbarian to be initiated in a oertain mystia dome, oxcelling in beauty and magnificence, where he seen many myatic sighta, and hears in the same manner a multitude of voices, where darknees and light alternately affect his senses, and a thousand other uncommon thinga present themselvee before him.
"The ritual of initiation was read aloud, and hymme were atung in honour of Cerea.-Soon after a hollow sound was heard, and the earth seemed to groen beneath our feet; wo beard thunder, and perceived by the glare of the lightning phantoms and apectres wandering in darkness, and filling the holy places with howlinga that chilled us with terror, and groans that rent our hearts."-(Travels of Anacharsia.)
"This happy moment (de l'autopaia) was introduced, says Dupuie, by frightful scence, by alternate fear and joy, by light and darkness, by
the gimmeringo of light, by the terrible noise of thunder, which was imitated, and by the apparitions of spectrea, of magical illusione, which struck the eyes and ears all at once." (See Moore's Epicurean.)

De Pauw, in his Philosophical Dissertation on the Egyptian and Chinese, obeerves, "Were it true, as some have pretended, that certain masteries were celebrated in apartments of the labyrinth, it would not have beon difficult to produce noise there as violent as thunder. Pliny asaures us, that the re-percussion of the air in that edifice, merely on opening the doors, which probably acting as suckers, caused others to shut. According to the common report thunder was imitsted in Greece, by rolling atones in vessels of copper. The initiated were to be torrified, and this was done effectually in the mysteries of Mithra." Vol $i$, p. 305.

If Virgil copied solely from initiations in the Eleusinian mysteries, the temples of Cereas would seem to have been constructed on a plan similar to that of the Egyptian labyrinth; for in the sirth book of the Eneid, 7. 126, are othe following lines :-

> Now, with a fariona blast, the hundred door
> Ope of themealves; a riahing whirlwind roars Within the aeve, and sibyl's voice reatores.

Similar delasions are practised in rogal arch meeonry, where thunder is imitated by rolling cannon balls, tco.

The poet next relates the fanatic agitation of the mystagogue, on this oceasion.
"Procul, 0 procul, este, profani, etc. Hence, far hence, 0 ye profane, exclaims the prophetess, and begone from all the grove." This said, she furiously plunged into the open cave."

So sgain, Claudisn, where he counterfeits, in his own person, the raptures and astonishment of the initiated, and throws himself, as it were, like the sibyl, in the middle of the scene.
"Away, ye profane,-now fury has expelled human feelings from my breant", "The affectation of fury or madneas, as we are told by Strabo, (lib. x) was an ineeparable circumstance of the mysteries.

The "Procul, 0 procul este, procani" of the sibyl, is a literal translantion of the formula used by the myatagogue, at the opening of the mysterien,

## "Ekas, eloss este, bebeloi".

But now the poet, intending to accompany his hero through all the mysterious rights of his initiation, and conscious of the imputed impiety in bringing them out to open day, stopa ahort in his narration, and breaks out into this solemn apology,

Dii, quibus in imperium est animarum, etc.
"Ye gods, to whom the empire of ghoots belongs, and ye silent

[^69]ahadea, and Chaos, and Phlegethon, places where silence reigns around fn the realms of night ! permit me to utter the secrets I have heard; may I have your divine permisaion to discloae thinge buried in deep earth and darkness."

Claudian, who, an we have obeerved, professes openly to treat of the Eleusinian mysteries, st a time when they were in little veneration; yet, in compliance to old custom, excuses his undertaking in the eame manier:-

Dii, quibus in numeram, ots.
Had the revealing the mynteriee been as ponal at Rome an it was in Greece, Virgil had never ventured on this part of his poam. But yet it was esteemed impious.

He therefore does it covertly, and makes this apology to such as eaw Into his meaning.

The haro and hia guide now enter on their journey.
"They advanced under the solitary night through the mhade, and through the desolute halls and empty realms of Pluto; their progrees resembling a journey in woods by the precarious glimmering moon under a faint malignant light, when Jupiter had wrapped up the heavens in shade, and sable night had stripped objects of colour."

This description will receive much light from a passage in Lucian's dialogue of the tyrant. As a company made up of every condition of life, are voyaging together to the other world, Mycillus breaks out, and says:- "Bleea un ! how dark it in I where is the fair Megillus I who can tell, in this situation, whether Simmiche or Phryna be the handsomer : overything is alike, and of the same colour; there is no room for rivalling of beauties. My old cloak, which but now presented to your eyes mo irregular a figure, ia become es hunourable a garb an his majenty's purple. They are, indeed, both vaniabed, *and retired together under the same covor. But my friend, the Cynic, where are you I give me your hand: you are initiated in the Eleusinian myoteries. Tell me now, do you not think this wery like the blind march they make there f Oh, extremely; and see, here comes one of the Furies, at I guest by her equipage, her torch, and her terrible looks."

The Sibyl, on their approech to the mouth of the cave, hed edvieed Eneas to call up all his courage, as being to undergo the severest triala
"Do you, Eneas, boldly march forward, and anatch your sword from ta meath; now in the time for fortitude, now for firmneen of remolution."

[^70]These trials were of two aorts-the encountering real labours and diftculties, and the being exponed to imaginary and false terrora. This Iatter was submitted to by all the initiated in general; the other was reserved for ohiefe and leaders. On which account Virgil describes them both in their order, as thoy were both to be undergone by his hero. The first in these words :-
"Before the very courts and in the opening jaws of hell, grief and tormonting cares have fixed their couches, and pale diseases, repiniog ago, feer, and famine, forma terrible to view (terribiles visuformm) and death and toil ; then sleep that is akin to death, and criminal joys of the mind; and in the opposite threshold murderous war, the iron bed chambers of the furies, and frantic discord."

To understand the force of this deecription it will be neceenary to tranacribe the account the ancients have left un of the probationary triala in the myateries of Mithras, whoee participation was more particularly aspired to by chiefa and lesders of armies, whence thoee initiated were commonly called the soldiers of Mithraa "No one," bays Nonnas, "could be initiated into these myoteries till he had psesed gradually through the probationary laboura, by which he was to soquire a certain apathe sad sasctity. There were eighty degrees of these labours, from lean to greater, and when the appirant has gone through them all, he is initinted. These labours are-to pen through fire, to eadure cold, hunger, and thirot, to undergo much journeyinge, and, in a word, every toil of this nature."

They exercized the candidates, saye Dupuin, in his "Recherches bur les Initiations," many days, to crose by swimming, a large extent of water; they threw them into it, and it wan with great difficulty that they extricated themeelvee. They applied a sword and fire to their bodies; they made them pees over flames. The aspirants were often in considerable danger, and Pythagoras, we are told, nearly loat bis life in the trials.

In tracing the early connections of spectscles with the ceremonies of religion, Voltaire eaye, "The truly grand tragedies, the imposing and terrible ropreeentations, were the macred mysterieg, which were celebrated in the greatseat temples in the world, in presence of the initiated only; it was there that the habita, the decorations, the mar chinery were propar to the subject, and the subject was the present and future life."

Volney shows the origin of these ceremonics. "The Egyptians," eays Porphery, "employ every year a taliman in remembranoe of the world; at the summer solatice, they mark their houses, flocks, and trees with rod, supposing that on that day the whole world had been set on fire. It was also at the asme period that they celebrated the pyrrhio or fire dance." And this illustrates the origin of purification by fire and water, for having denominated the tropic of Cancer, gate of hoaven and of heat or celestinal fire, and that of Capricorn, gate of deluge or of water, it was imagined that the spirits or souls who passed through these gates in their way to and from heaveo, were scorched or bathed; honco the
baptism of Mithra, and the pessage through the flames, obeerved throughout the Esest long before Moees. Ruins, p. 238.

Ancient masonry has alightly imitated these trials, particularly in the third and royal arch degrees. The Druidn who established it were, perhaps, fearful that, by carrying the joke too far, their prectioes might come to the knowledge of the government, which would probebly have led to the destruction of the order, For, for men, whose professed object was merely to teach the mechnoical art of masonry, to be engaged In the performance of such extravegances as were practiged in the ancient mysteries, would certainly have alarmed even the initisted themselves. a great portion of whom, who were carried no farther than the third degree, doubtless retained their attachment to the Christian religion. They knew not what was meant by the ceremonies ; they were pleased, however, with the showe

But the inventors of modern degrees of the order, without any regard to religion, keeping, however, for the most part, within the pale of Christisnity, bave indulged their imaginationa to an unbounded extent. They could have been influenced by no other motives than the pleasure of exercising their wit in experiments upon human credulity.

The following apecimens will ahow that the ancient models have served ss the ground work upon which the new superstructure has been reared, which, by the by, alreedy extenda fifty stories abova the old fabrio.

In the degree called Chevalier de l'Orient, or knight of the East, the master asye to the junior general, cause Zerubbabel to undergo the neventy trials, which I reduce to three, namely, first that of the body; mecond, that of his courage; third, that of his mind. After, which, perbape, he may merit the favour which he demands.- (Bernard.)

The following is taken from the Abbs Barruel, but whoee book, being replete with falsehoods againgt masonry, renders the escount justly entitled to auspicion. It relatee to initistionn in the degree of Knight of Kadoah, "or," es he esys, "the regenerated Man."
"Adepts have told me that no physical art is spared ; that there is no machinery, spectres, terrons, \&o., which are not employed to try the oonstancy of the candidste. We are told by Mr. Monjoy, that the Duke of Orieans was obliged to ascend, sad then throw himself off a ladder. A deep cave, or rather precipice, whence a narrow tower risea to the summit of the lodge, having no avenue to it but by pubterraneous passages replete with horror, is the place where the candidate in abandoned to himeelf, tied hand and foot. In thie situation he finde himself raised from the ground by machinea making the moat frightful noize, He alowly ascends this darl vault, and then buddenly falle, as if he were not supported by snything. Thus mounting and falling altervately, he must carofully avoid showing any sign of fear."

Perhapas on account of the high rank of the Duke of Orleans he was thought entitled to greater perils and trials than common men. Bernard gives this degree, sud, although a ladder is required to be ascended, and the candidate ia prohibited to return the same way, yet no such hasards as here related are opoken of.

The description of the ceremonies in the degree of knights of the White Sagle or Pelican, as reported to Carlile, exceede, in terrors and awfulneses, even Barruel's account of thoee in the knight of Kadosh. It munt have been got up by persons intimately acquainted with the practices of the holy Inquisition, particularly in regard to Auto-da-fss. I will give a ahort axtract from it.

## Second Point of Reception.

The apartment for the preparation, and for this reception, is made as terrifying as possible, to resemble the torments of hell. It has scven chandeliers, with grey burning flambeaus, whose mouths represent death's-heads with cross-bones. The walle are hung with tapeatry, painted with flames and figures of the damned.

The door is opened by a brother appointed to guard it, to whom each gives the report of a perfect mason, and the poss-word Emanuel. The candidate is instructed to say, "I am one of the brothers, who seek the woord loat, by the aid of the new law, and the three columns of masonry." At these words, the guard takes his sash and apron from him, baying thewe markn of decoration are not humble evough to quaiify him to find it, and that he must pass through much more vigorous trials. He then covers him with a black cloth, so that he can see nothing, telling him that he must be conducted to the darkeat of places, from whioh the word muit come forth triumphant, to the glory of masonry, and that he must sbandon all self-confidence. In thia condition he is conducter into an apartment in which there is a steep deecent, up and down which he is directed to travel. After which he is conducted to the door, and the black cloth is removed. Before him stand three figurea dressed as devils. Ho is then ordered to parade the room three times, in memory of the mysterious deacent into the dark places, which lasted three dayz. $\mathrm{H}_{\mathrm{s}}$ is then led to the door of the apartment, covered with the black cloth, and told that the horrors through which he has passed are as nothing in comparison with those through which he has to paas: therefore he in cautioned to summon all his fortitude to meet the dreadjul acene. After farther manceuvering of this sort, the candidate is reported to the manter by the deacon as a Knight of the Eagle, who, after penetrating the deepest placee, hopes to procure the loot word, as the fruit of his research, and to becoine a perfect mason, de.

On turning to Bernard's description of this degree, I find he agrees in subetance with Carlile. He eays, "On the hangings of the third apartment must be represented, in transparent paintings, sll the horrors which we attach to the idea of hell; such as human figures and monaters with convulsed muscles, engulfed in flames, so., se. On each side of the door is a human skeleton, with an arrow io his hand, tcc."

Virgil has made the sufferings in the other world, preparatory to admission into Elysium, as related by Anchises to Eneas, to correspond with the trials to which candidates were subjeoted in the mysteries. Bishop Warburton refers to that part of the poem which deecribes the nature and end of purgatory, but does not quote the passage.

Anchisea seys, "Even when, with the lust beams of light their lifo in gone, yet not every ill, nor all corporeal stains are quite removed from the unhappy beings, and it is abeolutely unavoidable that many vicious habits, which have long grown up with the soul, should be atrangely confirmed and riveted therein. Therefore are they afflicted with paing, and pay the penalties of their former illa. Some, hung on bigh, are spread out to whiten in the empty winds; in othere, the guilt not done away is washed out in a vest watary abyss, or burned away in fire." We have each of us a demon, from whom we suffer, till length of time, after the fixed period is elapsed, hath done away the inherent staing, and hath left celeatial reason pure from all irregular paesions, and the soul, that apark of heavenly fire, in its original purity and brightnese, simple and unmixed; then are we conveyed into Elyeium, and we, who are the hsppy few, poseess the fields of blise."-(Davidoon's Trans.)

The second eort of trial were the imaginary terrors of the myateriee; and these Virgil describes next. And to distinguiah them from the real labours preceding, he separates the two accounta by that fine ciroumstance of the tree of dreams, which introduces the latter.
"In the midst a gloomy elm displays its boughs and aged arma; which seat vain dreams are said to haunt, and under overy leaf they dwoll. Besides many monstrous spectrea of various forms; in the gate Centaurs, and double-formed Scylas, Briareus with his hundred bands, and the onormous snake of Lerna hissing dreadful, and Chimsera armed with flames; Gorgones, Harpes, and the form of Geryon's tbree-bodied ghosk"

These terribiles visu formm are the eame which Pletho, in the place quoted sbove, calls allokota tas morphas phasmata, as seen in the entrenoe of the mysteries, and which Celsus tells us were likèwise presented in the Becchic ritea.

But it is reasonable to suppose that, though theee things had the use here asaigned to tham, it wea some circumstance in the recondite physiology of the East which prefarred them to this station. We are to consider then this dark entrance into the mysteries as a representation of the Chaos thus characterised :-
"They advenced under the solitary night through the desolate halla and empty realms of Pluto."

And amongat the reveral powers invoked by the poet, at his ontrance on this scene, Chsos is one.

Now, a fragment of Beroens, preserved by Georgo Syncellus, describea the ancient Chaoe, according to the phyaiology of the Chaldeane, in this manner:-"There was a time," they say, "when all was water and darkness; and these gave birth and habitation to monstrous animals of mixed forms and apecies. For there were men with two wings, others with four, and some again with double faces. Some had the horns of goats, some their lega, and some the lege of horses; others had the hind-parte of horses and the fore-parts of men, like the hippocentaure There were bulls with human heads, doga with four bodies ending in
fishes, horses with doga' hesds; and men, and other creaturee with the heads and bodiee of horses and with the tails of fishes. And s number of animals, whose bodies were a monstrous compound of the diesimilar parts of bessts of various kinds. Together with these, were fishee, reptiles, serpentes, and other creatures, which by a reciprocal tranalation of the parts to one another, became all portentoualy deformed; the piotures and representations of which were hung up in the temple of Belus, A woman ruled over the whole, whowe name was Omoroca, in the Chaldee tongue Thalath, which signifies the sea; and, in the course of connexion, the moon." This nocount seems to have been exactly oopied in the mysteries, as appears from the description of the poet.

The canine figures have a considerable station in this region of monsters. And he tella us, "And doge were seen to howl through the shade of the woods," which Pletho explains in his acholis on the magic oraclee of Zoroaster. "It in the custom in the celebration of the saysteries, to present before many of the initiated, phantesms of a canine figure, and other monstroua shapee and appearances."

The woman, whose name coincides with thet of the moon, wat the Hecate of the Greeks, who is invoked by Eneas on this occasion.
"By mystic sounds invoking Hecate, powerfol both in heaven and hell." Hence terrifying visions were called Hecates.

The ancieuts called Hecate, diva triformis. And Scaliger observea that the word thalath, which Syncellus, or Berosus, sayo was equivalent to the moon, siguifies trian.

And now we zoon find the hero in a fright, "Here Eneas, dinconcerted with sudden fear, graspa hir aword, and prosenta the naked point to eech approeching ahade."

With these affections the ancients represent the initiated as possessed on his first entrance into these holy rites. "Entering now into the mystic dome (saye Themintius) he is filled with horror and amazement. He is saized with solicitude and a total perplerity; he is unable to movo a stop forward, and at a loes to find the entranco to that road which is to lead him to the place he espiree to-till the prophet or conductor, laying open the vestibule of the temple." To the same purpose Proclus : " $\lambda$ a in the most holy mysteries, before the soene of the myatic risions, there is a terror infused over the minde of the initiated, $\quad$ o," $\& \mathrm{cc}$.

The advonturera come now to the banks of Cocytus. Eness is surprised at the crowd of ghoets which hover round it, and appear impatient for a pessage. His guide telle him they are those who have not had the rites of sepulture performed to their manes, and so are doomed to wander up and down for a hundred years, before they be permitted to croses tho river.

We are not to think this old notion took its rise from the vulgar superstition. It was one of the wisest contrivances of ancient politica, and came originally from Egypt, the fountain-head of legislation. Those profound masters of wiadom, in projecting for the common good, found nothing would more contribute to the safety of their fellow-citizens than
the pablic and solemninterment of the dead; as, without this provision, private murdera might be easily and securely committed. They therefore introduced the custom of pompous funeral ritea ; and, as Berodotus and Diodorus tell us, were of all people the most circumatantially ceremonious in the observance of them. To necure these by the force of religion, as well as civil custom, they taught that the decessed could not retire to a place of rest till they were performed. The notion spread so wide, and fixed its roots so deep, that the substance of the auperstition remains oven to this day, in most civilised countries. By mo effectual a method did the legislature gain its end, the eecurity of the citizen.

Mr. Bayle cries out, "What injustice is this ! was it the fault of these souls that their bodies were not interred $r^{\prime \prime}$ But not knowing the origin of this opinion, nor seeing ita use, be ascribes that to the blindnese of religion which was the issue of wise policy.

The next thing obeervable is the ferryman, Charon; and be, the learned well know, was a substantial Egyptian ; and as an ingenious writer says, fairly existing in this world.-(Blackwells Life of Homer.) The case was plainly thus: the Egyptians, like the rest of mankind, in their deacriptions of the other soorld, used to copy from something they were well acquainted with in this. In their funeral rites, which, ws we obwerved, was a matter of greater moment with them than with any other people, they used to carry their dead over the Nile, and through the marah of Acherusia, and there put them into subterraneous caverns ; the ferryman employed in this businees being, in their language, called Charon. Now, in their mysteries, the description of the passage into the other world was borrowed, as was natural, from the circumstances of their funeral rites. And it might be easily proved, if there were occasion, that they themselvee transferred these realitiee into the mythos, and not the Greeks, as later writers generally imagine.
Eneas having crosed the river, and come into the proper regions of the deed, the first spparition that occurs is the dog Cerberus; "Huge Cerberus makes thooe realma resound with barking from his triple jaws, etretched at his enormous length in a den that fronts the gate."

This is plainly one of the phantoms of the mysteries, which Pletho tells sbove, was in the shape of a dog kunode tina. And in the fable of Hercules's descent into bell, which, we have shown, signified no more than hia initiation into the mysterieg, it is gaid to have been, amongot other things, for fetching up the dog Cerberus.

The prophetess, to appesse his rage, gives him a medicated cake, which casta him into a slumber; "Flings to him a soporific cake of honey and medicated grains"-(medicatis frugibus.)

In the mysteries of Trophodius (who was said to be nursed by Ceres, that in to derive his rites from the Eleusinian), the initiated carried the same sort of medicated cakes to appease the serpents he met with in him pasagge. Tertullian, who gives all mysteries to the devil, and makee dim the author of what is done there, mentions the offering up of these cakes, celebrat et pasis oblationem. This in queation was of poppy-seed,
made up with honey; and so I underotand medicatis frugibus, here, on the authority of the poet himself, who, in the fourth book makes the priestase of Venus prepare the same treat for the dragon who guarded. the Heaperian fruit.

But without doubt, the images which the juice of poppy presents to the fancy, was one reason why thia drug had a place in the ceremonial of the ahows; not improbably, it was given to some at least of the initiated, to aid the impression of those mystic visions which pansed before them.* For that something like this was done, that is, giving medicated draughts to the aspirante, we are informed by Platarch, who epeaks of a mhrub called Leucophyllus used in the celebration of the myateries of Hecate, which drives men into a kind of frenzy, and makee them confees all the wickedness they had done or intended. And confestion was one neceesary preparative for ivitiation. $\dagger$

The regions, according to Virgil's geography, are divided into three parts, Purgatory, Tartarue, and Elyaium.

The mysteries divided them in the same manner. So Plato, where he speake of what was taught in the mysteries, talks of soula sticking finst in mire and filth, and remaining in darkness till a long series of yeara had purged and purified them; and Celsua, in Origen sayn, that the mysteries taught the doctrine of eternal punishmente.

Of all the three otstes this of Tartarus only was eternal. There wes, indeed, another, in the ancient pagan theology, which bad the same relatiun to Elywium that Tartarus had to Purgatory, the extreme of reward, as Tartarus of punishment. But then this atate was not in the infernal regions, but in Heaven. Neither was it the lot of common humanity, but reserved for heroes and dæmons; beings, of an order superior to men, such as Hercules, Bacchus, tec., who became gods on

[^71]their admisuion into that atate, where the elernify was in consequence of their deification.

And here it is to our purpose to observe, that the virtues and viese which stock these three divisions with inhabitants, are such as more immediatoly affeot society. A plain proof that the poet followed the views of the legialator, the institutor of the mysteries.

Purgatory, the firat division, is inhabited by suiciden, extravagant lovers, and ambitious warriors ; and, in a word, by all those who had indulged the violence of the pastions; which made tham rather miserable than wicked. It is remarkable that amongot these we find one of the initiated; "Polybetee devoted to Corea." This was agreeable to the public doctrine of the mysterieg, which taught thet initiation with virtue procured men great advantages over othera in a future atate; but that, without virtue, it was of no service.

Of all these disorders, the poet hath more distinctly marked out the misery of suicide.

Hers be keeps close to the mysteries, which not only forbede suicide, but taught on what aocount it was criminal. "That whichis esid In the mysteriea (eays Plato) concerning thewe matters of man's being placed in s oertain watch or station, which it is unlawful to fly from, or forsake, is a profound doctrine, and not sasily fathomed."-(Phsed. p. 62, Ser. ed. tom. 1.

Hitherto all goea well. But what must we may to the poot's putting new-born infants and menfalsely condemned into his purgstory ${ }^{1}$ For though the faith and inquisition of modern Rome send many of both sorts into a place of punishment, yet the genius of aucient paganiema had a gentler aepech. It is, indeed, difficult to toll what these inmatee have to do hers. Let us consider the caso of the infants; and if wo find it can only be cleared up by the general view of things here offored, this will be considered as another argament for the truth of our interprotation.
"Forthwith are heard voices, loud wailings, and weeping ghosts of Infante, in the first opening of the gate; whom, bereaved of aweet life vut of the couree of nature, and snatched from the breast, in a bleck anjoyous day cut off, and buried in an untimely grave."
Thees appear to have been the cries and lamentinge that, Proclus tells us, ware heard in the mysteries. So that we only want to know the original of so extraordinary a circumstance; which I take to have bean just such another proviaion of the lawgiver for the security of infancy, as that about funeral rites was for the adult. For nothing could more engage parents in the care and preservation of their young than so terrible a doctrine. Nor are we to imagine that their natural fondness needed no inforcement or support; for that most degenerato and horrid practice among the ancients, of exposing infants, was universal; ; and had almost arased morality and instinch. St. Psul seems to

[^72]have had this in his oge when he acoused the pagan world of being without natural affection. It needed therefore the strongest and sovereat check; and I am well persuaded it occasioned this counterplot of the magiatrate, in order to give instinct fair play, and call back baniahed nature. Nothing, indeed, could be more worthy of his care; for the destruction of children, as Pericles finely observed of youth, is like cutting off the spring from the year. Aocordingly we are told by Diodorus, that the Egyptians had a law against this unnatural prectice, which law he numbera amongst the aingularities of that people. "They are obliged," says he, "to bring up all their children, in order to render the country populous, this being esteemed the best means of making states flourishing and happy." And Twaitus speaks of the prohibition as no leas singular amongat the Jews.

Here again Mr. Bayle is much acandalised: "The firat thing which occurred, on the entrance into the other world, was the atation asaigned to infanta, who cried and lamented without ceasing ; and next to that, the station of men unjuatly condemned to death. Now what could be more ahocking or scandalous than the punishment of those little creatures, who had yet committed no sin, or those peraons whose innocence had been oppressed by calumny?" The firet difficulty is already cleared up; the second shall be considered by and by. But it is no wonder Mr. Bayle could not digent this dootrine of the infante; for I am much mistaken, if it did not stick with Plato hirmeelf; who, rolating tho Vision of Erue, the Pamphylian, concerning the distribution of rewards and puniahments in another life, when be comes to the condition of infantes, pesses it over in these words:-"But of children who died in their infancy, he reported certain other thinge not worthy to be remembered. Erua's account of what he saw in another world wha a summary of what the Egyptians taught in their mysteries concarning that matter. And I make no doubt but the thing not worthy to be remembered, wha the doctrine of infarte in purgatory; which appears to have given Plato much scandal, who did not, at thut time at least, refieot upon ite original and ure,

But now, es to the faleely condemned, we must seek another solution:
"Next to thowe are such as had been condemned to death by falme ascusation. Nor yet were these seats a anigned them without destination and sppointment, or without the sentence of a judge. Minoe, as inquieiftor, whakes their un : he convoke the council of the silant absdes, and examines their lives and orimes."

This deeignment appears both ioiquitous and abaurd. The falsely

[^73]scerned are not only in a place of punishment, but, being first delivered under this single predicament, they are afterwards diatinguished into two sorta; some as blameable, others as innocent. To clear up this confuaion, it will be necesaary to transeribe an old atory, told by Plato in his Gorgias :-"This law, concerning mortals, was enseted in the time of Saturn, and is yet, and ever will be, in force, aroongat the gode; that he who bad lived a just and pious life, ehould at his death be carried into the ialnnds of the bleseed, and there possess all kinds of happiness, untainted with the evils of mortality; but that he who had lived unjustly and impiously ahould be thrust into a place of punishment, the prison of divine justice, called Tartarus. Now, the judges, with whom the execution of thia law was entrusted, were, in the time of Satorn, and under the infancy of Jove'a government, liring men, ritting in judgment on the living, and pensing sentence on them upon the day of their decesse. This gave occssion to unjust judgments ; on which eccount, Pluto, and those to whom the care of the happy islands was committed, went to Jupiter, and told him that men came to them wrongfully judged, both when sequitted and when condernned. To which the father of the gods thus replied :- 'I will put es stop to this evil.' Theee wrong judgments are partly oocomioned by the corporeal covering of the persons judged; for they are tried while living. Now, many have their corrupt minds hid under a fair outside, adorned with birth and riohens; and, when they come to their trial, have witnesses at hand to teatify for their good life and conversation. This perverts the process, and blinds the oyee of justica. Beaides, the judgee themselven are encumbered with the ame corporeal covering; and eyes and ears, and an impenetrable tegument of fleah, hinder the mind from a free exertion of ita faculties All these, ss well their own covering as the covering of those they judge, are bars and obstaclea to right judgment. In the first place, then, esye he, we are to provide that the foreknowledge which thoy now have of the day of death be taken away, and this ahall be given in charge to Prometheus; and then provide that they who come to judgrent be quite naked; for from henceforth they shall not be tried till they come into the other world. And an they are to bo thus stripped, it is but fit their judges should awnit them there in the same condition; that, st the arrival of every inhabitant, coul may look on soul, and all family ralation, and every worldly ornament being dropped and left behind, righteous judgment msy at length take place. I, therefore, who foreeaw all theee thinga before you felt them, have taken care to constitute any own sona the judgee. Two of them, Minos and Rhadamanthus, are Asistica; the third, Escus, an European. These, when they die, ahall have their tribunal erected in the shades, just in that part of the highway where the two roads divide; the one leading to the happy islande, the other to Tarterue Rhadamanthus aball judge the Asiatics, and Feous the Europeans; but to Minos I give the superior suthority of hearing appeala, when anything obscure or difficult shall perplex the others' judgmente ; that evergone may have his abode assigned him with the utmoet equity."

The matter now begins to clear up, and we see plainly that the circumstance of the falsely condemned alludes to this old fable; so that by falso damnati crimine mortis, if it be the true reading, Virgil did not mean, as one would suppose, man falsely condemned, but wrongfully jodged, whether to acquittal or conviction ; but condemnation being oftenent the sentence of justice, the greater part is put figuratively for the whole.

One difficulty remains; and that, to confesa the truth, hath srieen rather from a mistake of Virgil than of his reader. We find these people, yet unjudged, alreedy fixed with other criminals in the assigned diatrict of purgatory. But they are misplaced, through an oversight of the poet, which, had he lived to perfect the Eneid, he would probsbly have corrected; for the fable tells us they ehould be stationed on the borders of the three divicions, in that part of the high rood that dividee itself in two, which lead to Teartarus and Elysium, thus devcribed by the poet:
"This is the place where the path divides in two: the right is that whioh leads to great Pluto's walls, by this our way to Elymium lies; but the left carries on the punishments of the wicked, and convegs to oursed Tartarue"

It only remains to consider the origin or moral of the fable, whioh, I think, wea this:-It was an Egyptian custom, as we are told by Diodorus Siculua, for judges to sit on every man's life, at his interment; to examine his past actions, and to condemn and acquit according to the evidence before them. These judges were of the priesthood; and so, it is probable, taught, like the priests of the church of Rome, that their decrees were ratified in the other world. Partiality and corruption would, in time, pervert their sontence, and apite and favour prevail over justica. As this might scandalise the people, it would be found neceseary to tesch that the sentence which influenced every one's final doom was reserved for a future judicature. However, the prieat took care that all should not go out of his hends; and when he could be no longer judge, he contrived to find his socount in tursing evidence; ss may be seen by the singular cast of this ancient inscription:-"I, Sextus Anicius, pontiff, certify that this mosn has lived honestly; may his soul reat in peace." (Fabius Celsua Inecript. Antiq. lib. iii.)

Eneas, having paseed this firet division, comer now on the confines of Tartarus, and is instructed in what relatee to the crimes and puniahmenta of the inbabitants.

It is ramarkable that Eneas is led through the regiona of Purgatory and Elysium; but he only seee the sighte of Tartarus at a distance, and this could not be otherwise in the shows of the mysteriee, for very obvious ressons.

Among the criminals deetined to eternal punishment, in this division, are thoee who had einned so secretly as to eecape the animedvernion of the magistrate.

And it was principally on sccount of such crimes that the legiciator enforced the doctrine of a future state of punishment.

The infringere of the duties of imperfect obligation, which eiviz laves cannot reach; such as those without natural effection to brothers, dúty to parente, protection to cliente, or charity to the poor."

The invaders and violaters of the holy myzteries, held out in tho person of Theweus, make the last cises of offenders,
"There sits, and to oternity shall ait, the unhappy Thessus; and Phlegyas, most wrotched, is a monitor to all, and with loud voice proclaims through the shade: Warned by my example, learn righteousness, and not to contemn the gods."

The fable says that Thoseus and his friend Pirithous formed a deaiga to steal Proserpine from hell; but, boing taken in the fact, Pirithous wan thrown to the dog Cerberus, and Theeous kept in chains, till he was delivered by Hercules; which, without doubt, means the death of one, and the imprisonment of the other, for their clandeastine intrusion into the mysteries. We have already offered several reasons to show that the descent of Theseus into hell was a violation of the myateries; to which we may edd what the ancienta toll no of the duration of his imprison. ment, which was four years; the interim between the celebrations of the greater mysteries.

But when Virgil comes to deacribe theee shows, which were supposed to be a true representation of what was done and suffered in hell, Theseus is put among the demned, that being his station in the other world.

This will remind the learned reeder of a story told by Livy. "The Athenians,' 'says ho, "drow upon themselves a war with Philip on a very alight occasion, and at a time when nothing remained of their ancient fortune but their high spirit. Two young Acarnanians, during the days of initiation, themselvee uninitianted, and ignorant of all that related to that secret worship, entered the temple of Ceres along with the arowd. Their diecourss soon betrayed them, as making wome abeurd inquiries into what they naw; so, being brought before the president of the mysteries, although it whe evident they had ontered ignorantly and without deaign, they were put to death, as guilty of a mont abominable crime."

The office Theseus is put upon, of admonishing his hearers egainit impiety, could not, sure, be discharged in these shows by any one so woll as by him who represented the riolator of them. But the critics, unconscious of any such design, considered the tesk the poet has imposed on Theseus, of perpetually sounding in the ears of the damned this admonition, "Waraed by my example, learn righteoumess, and not to contemn the gode", as a very impertinent employment. For, though it was as sentence of great truth and diguity, it was preached to very little purpose amongst those to whom there was no room for parden or remisaion.

Even Scarron bath not neglected to urge this objeotion against

[^74]it : and it must be owned that, eccording to the common ideas of Erieas's descent into hell, the objection is not easily got over.

But auppose Virgil to be here relating the admonitory maxims dolivered during the celebration of these mystic ahows, and nothing could be more just or useful; for then the diacourse was addressed to the vast multitude of living spectators. Nor is it a mere supposition that such discourses made part of these reprosentations. Ariatides expreealy says, that in no place were more astonishing worde pronounced or sung, than in these mysteries ; the reseon, he tells us, was, that the counds and the sights might mutually anaist each other in making an impresaion on the minds of the initiated. But, from a pasage in Pindar, I conclude, that in these shows from whence men took their ideas of the infernal regions, it was customary for each offender as be pased by, in machinery, to make an sdmonition against his own crime. "It is reported," says Pindar, "that Ixion, by the decrees of the gods, while he is incensantly turning round his rapid wheel, calls out upon mortals to this effect-that they should be always at hand to repay a benefactor for the kindness he had done them." Where the word Brotoi, living men, seem plainly to show that the speech was at first made before men in this world.

The poet clowes the catalogus of the damned with these words :Aux omnes immene nofia, ausoque potiti;
For the ancients thought that an action whe sanctifled by the auccoes; which they esteemed a mark of favour and approbation of hesven. Se this was a very persicious opinion, it was necessary to tesch that the imperial villain who trampled on his country, end the beffled plotter who expired on a gibbet, were equally the objecta of divine vengeance.

Eness has now passed through Tarlarks ; and here end the lesser *)

The hero endiances to the bordera of Elyeium, and here he undergoea the luatration :
"Enesa springs forward to the entry, sprinkles his body with fresh soater, and fixes the bough in the fronting portal."
"Being now about to undergo the luatration, eaye Sopater, which immediately precedes initiation into the greater mysteries, they called mo happy."

Accordingly, Raees now entern on the greater mysteries, and comes to the abodee of the bleesed :
"They came st length to the regions of eternal joy, delightful green retreate, and blessed abodes in groves where happiness abounds. Here the air they breathe is more free and enlarged, and clothes the fields with radiant light: here the happy inhabitanta know their own aun and their own stars."

These two нo different scenes explain what Aristides meant, when he called the shows of the Eleusinian mysterien, that moat ahooking, and st the samo time, moet ravishing repreeentation.

[^75]The initiated, who till now only bore the name of Myatai, are called Epoptai, and this new vision, Antopaia. "The Autopais, or the sceing with their own eyes, ways Peellus, in when he who is initiatod beholds the divine lights."

In these very circumstances Themistius describes the initisted, when just entered upon this scene. "It being thoroughly purified, he now discloses to the initiated a region all over illuminated, and shining with a divine splendour. This which woas all over illuminated, and which the priest had thoroughly purifled was agalma, an image. The reason of transferring what is said of the illumination of the image, to the illumina. tion of the region, is, because this image represented the appearance of the divine Being, in one large, uniform, extensive light. This, Jamblichus says, wes without figura To this image, the following lines in the oreoles of Zoraster allude:
"Invoke not the self-conspicuona image of nature, for thou must not behold these things before thy body be purified by initiation." This autopton agalina was only a diffusive shining light, sa the name partly declares; and the sight of this divine oplendour whe what the myuteries called autopsia.

The cloud and thiak darkness are diopersed; and the mind omerges, as it were, into day, full of light and cheerfulnes, as before of disconsolate obscurity.

Pletho tell us with what these alouds were accompanied, mamely, thender and lightning, and othor metooric appearanose. He anya, they were nymbola, but not of the nature of the deity: and this was true; for the ngmbol of that wan the nutopton agalmen which followed : hence, as we mee above, it wes without flgwre.

Let me observe, that the lines, "Iire the air they breathe is more froe and enlarged, and clothes the flelds with radiant light: here the happy inhabitanta know their own sun and their own atars," are in the very language of those who profess to toll un what they saw at their initiation into the greater mymteries. "At midnight I esw the mus ahining with a splendid light," eayn Apuleius ou that ocossion.

Dupuin, epeaking of the myateries, meys, "They disoovared the origin of the soul, ita fall to the earth through the spheres and the elementa, and ite return to the place of ita origia: bere wha the moat motaphyaical part, and which could not be understood by the generality of the initiated, but of which they gave them the sight by fguren and allegorical epeotors." -(See Moore's Epic.)

Thomas Taylor, a modern writer, and I believe atill living, in a Diesertation on the Mlecuinian and Becchi Myateries, contende for the reality of the descent of the gods through magical evocation; and he quotes the anthority of excient anthone in proof of the fact.

Mr. Taylor ponseneen great erudition ; has translated the commentarios of Proclus, and the works of Jamblichus and Apuleius; in a thorough convert to the Platonic philosophy, and an enthuminatio admirer of the sites of Ceres aud Beochus ; "In the composition of which, he anys, wo
may dincern the traces of exalted wisdom and recondile theology; of a theology the most vencrable for its antiquity, and the moat admirable for its excellence in reality.

Plato, says he, in the Phoodrus, thus describes the felicity of the virtuous soul prior to ite descent, in a beautiful allusion to the arcana vinion of the myateries :
"Rut it was then lawful to survey the most splendid beauty, when we obtained together with that blessed choir, this happy vision and contemplation. And wo indeed enjoyed this blessed apectacle together with Jupiter, but others in conjunction with some other god; at the ampe time being initiated in thoae mysterien, which it is lawful to call the moet blessed of all mysteries. And these divine Orgies were celebrated by us, while we poasessed the proper integrity of our nature, and were freed from the moleatations of evil which awaited uain a succeeding period of time. Likewise in consequenoe of this divine initiation we became apectatore of entire, cimple, immoveable, and bleased visions, resident in a pure light ; and were ourselves pure and immaculate and liberated from this surrounding veatment, which we denominate body, and to which we are now bound like an oyster to its shell." Upon thia beautiful pessage Proclus observes, in Theol. Plat. lib. 4. p. 198, "That initiation and inspection are symbols of ineffable silence, and of union with mystical natures, through intelligible visiona I"

Now, from all thia, it may be inferred, that the most aublime part of epoptia, or inspection, consisted in beholding the gods themselves invosted with a reeplendent light ; and that this was symbolical of thoes transporting vieions, which the virtuous soul will constantly enjoy in a future state, and of which it is able to gain some ravishing glimpees, even while connected with the cumbrous vestment of the body.

But that this was sctually the case, is evident from the following unequivocal testimony of Proclus in Plat. Repub. p. 380.
"In all initistions and mysteries, the gods axhibit many forms of thomselves and appear in a variety of shapes ; and sometimes indeed, an unjigured light of themselves is held forth to the view, sometimes this light is figured according to a human form, and sometimes it proceeds into a different shape." This doctrine, too, of divine appearances in the mysteries, is clearly confirmed by Plotinus, Ennead i. lib. 6. p. 55, and Ennesd 9. lib. 6. p. 700. And in ahort that magical evocation formod a part of the accerdotal office in the myateries, and that this was universally believed by all antiquity, long before the era of the latter Platonists, is plain from the testimony of Hippocratee, or at least Demooritua, in his treatise de Morbo. Secro. p. 86. For speaking of those who ettempt to cure disease by magic, he obeerven:
"If they profess themselves able to draw down the moon, to obecure the sun, to produce atormy and pleseant westher, as likewise showers of rain, and heata, and to render the ses and the aarth barren, and to accomplish every thing elee of this kind, whether they derive this knowledge from the myateries or from some other institution or meditation, they sppear to me to be impious from the study of suah concerns." From
all whioh it in easy to seo how egregionaly Dr. Warburton wis mistaken when, in his Divino Legation, he asserts "that the light beheld in the myoteries wee nothing more than an illuminated image which the priesta had thoroughly purified."

But he is likewise no lees mistaken in transferring the injunotion given in one of the magic oracles of Zoroanter, to the businees of the Eleusinian mynteries, and in perverting the meaning of the Oracle's admonition. For thus the Oracle apeaks:
"Invoke not the eelf-conspicuous image of nature, for you must not behold these things before your body has received the purification necesary to initistion." Upon which he observes, "that the self-conspicuous imsge was only a diffusive shining light, as the name partly declares." But this is a piece of groes ignorance, from which be might have been freed by an attentive perusal of Proclus on the Timseus of Plato, for in these truly divine commentaries we learn, "that the moon is the self-conspicuous image of fortal dature."-In Tim. p. 260.

Theurgio magio is still sdbered to by the church of Rome, and forms - part of the ascerdotal office. By which means, it ia believed, that the real presence of the Saviour is manifested in the eucharist.

Mesoary adopta the same principle. In the royal aroh degree, the axtopton agalma is exbibited in an illuminated oush; the candidate for initistion is ordered to put off his ahoes, being told that the place where he stands is holy ground. In fact one of the characters personates the deity, and announcer his aotual appearance.

The more we examine the pagan system of religion the more shall we be convinced that the rites and ceremonies of mssonry, es well as those of the Catholio ohurch, are derived from that ancient institation.

Virgil, by leaving his master, and copying the amisble paintings of Elysium, as they were represented in the myateries, hath artfully avoided a fault too juatly objected to Homer, of giving so dark and joyleas a landscape of the fortunata nemora, as could raise no desire or appetite for them: his favourite hero himself, who poeseseed them, telling Ulisees, that he had rather be a day labourer above, than command in the regions of the dead. Such a representation defeats the very intent of the lawgiver in propagating the doctrinee of a future atate. Nay, to mortify every excitement to noble actiona, the Greek poet makee reputation, fame, and glory, the great apur to virtue in the pagan syetem, to be visionary and impertinent. On the contrary, Virgil, whose aim in this poem was the good of society, makea the love of glory so strong a passion in the other world, that the Silyl's promise to Palinurus, that his name should only be affized to a promontory, rejoices bis shade even in the regions of the unhappy.

It was this ungracious description of Elyaium, and the licentious atories of the gode, both so pernicious to society, that made Pluto baniah Homer out of his repablic.

But to return. The poet having deecribed the elimate of the happy regions, speaka next of the umusement of ita inhebitanta,
"Some exercise their limbe on the grasay plains, in eports contend, and wrestle on the yellow asand."

Beeides the obvious allusion in these lines to the philosophy of Plato, concerning the duration of the passions, it seems to have a more secrat one to what he had all the way in his eye, the Elevainian Mysteries, whoee celebration wan accompanied by the Grecian games. On which socount, too, perhaps it wos that, in the disposition of his work, his fifth book is employed in the gamen as a prelude to the descent in the aixth.

The first place in these happy regiona is aseigned to the lawgivera and thoee who brought manhind from a state of nature into society.

At the hesd of theee in Orpheus, the mist renowned of the European lawgivers, but better knopn under the character of poet: for the firat lava being written in measure, to allure men to learn them, and when learnt to retain them, the fable would have it that, by the force of harmony, Orpheus softened the savage inhabitants of Thrace

But he has the first place becsuse he was not only a legialator but the bringer of the mysteries into that part of Europe.

The vext is allotted to patriote, and those who died for the service of their country.

The third to virtuous and pious priests. For it was of priscipal use to society, that religious men should lead holy lives; and that they ahould teach nothing of the gods but what was agreesble to the divine nature.

The leat place is given to the inventors of arts mechanical and liberal. The order is exsect and beautiful. The first class is of those who found society, heroes and lawgivere ; the seoond, of those who supported it, patriots and holy priesta; and the third, of those who edorned it, the inventars of the arts of life, and the recorders of worthy zoysteries.

Virgil han all along cloeely followed the doctrine of the thyateries, which carefully taught that virtue only could entitle men to happiness; and that rites, ceremonies, lustrations, and aacrifices would not supply the want of it.

Nor has he been leses studious in copying their shows and representations; in which the figures of those beroes and heroines, who were most celebrated in tha writings of the ancient Greek authors, paased in proceesion.-(Aristid.)

But notwithstanding this entire conformity between the poet's scenes and those represented in the mysteries, something is still wanting to complete the identification; and that in, the famous secrel of the myzteries, the unity of the godhead, of which mo much hath been said above. Had Virgil neglected to give us this characteristic mark, though, even then, we could not but asy, his intention was to represent an initiation, yet we must have been forced to own he had not done it with the ntmost art. But he was too good a painter to leave any thing ambiguous; and hath, therefore, concluded his hero's initiation, ss was the custom, with instructing him in the Aporreta, or the dootrine of the
unity. Till this was done, the initisted waa not arrived to the highest stage of perfection; nor, in the fullest sense, intitled to the appellation of Epopten. Muncus, therefore, who had been hicrophant at Athens, takes the place of the Sibyl, as if soas the custom to have different guides in different parte of the celebration, and is made to condnct him to the recese where bis father's bhade opens to him the hidden doctrine of perfection, in these sublime words :-
"Finst, then, the divine opirit within surtains the hesvens, the earth, and watery plains, the moon's enlightened orb, and ehining otara; and the eternal mind, diffused through all the parta of nature, actantea the whole stupendous frame and mingles with the vart body of the universe. Thence proceed the race of men and beesta, the vital principles of the flying kind, and the monatern which the ocean breeds under its amooth crystal plain."

This was no other than the doctrine of the old Egyptiane, as we are saured by Plato; who seys they taught that Jupiter was the spirit which prevadeth all things.

We have shown how easily the Greek philosophy corrupted this principle into what is now called Spinozism. Hero Virgil has proved his judgenent to great advantage. Nothing was more abhorrent from the mysteries than Spinozism, ise it overturned the doctrine of a future state of rewards and punishmenta, which the mysteries so carefully inculcated; and yet the principle iteelf, of which Spinovism whs the ebouse, was cherished there, ae it was the consequence of the doctrine of the wnity, the grand seerel of the myaterics. Virgil, therefure, delivera the principle with caution, and pure and free of the abuse; though ho underatoud the nature of Spinozism, and his fourth Georgio, where he delivera it, appears to have been infected with it.

The doctrine of the unity of the godhead, here contended by the authior to be taught by Virgil, and as being the doctrine of the old Bgyptians, muat not be understood as opposed to the belief in the triplicity of the Supreme Being, an opinion univeraally held by the ancient world. Different nations expreased this triplicity by various namee, to which they also assigned different attributes.
"The philosophere of all nations (esye Ramsey, in a Dissortation on the Theory and Mythology of the Pagans) seem to have some idee, more or lesse confused, of the triplicily of the Supreme Unily. Plato speaks of the three forme of the Divinity, whiob he calls Agathos, Logos, and Pryche; the sovereign good, which is the principle of deity; the intelligence, whioh drew the plan of the world; and the energy, which executed it."

An erroneous assigument in here made, by Ramsey, of the attributes or powers of the persons composing thin trinity. Agathos, the sovereign good, in the intelligence, which drew the plan of the world; Logoa, or Word, is the energy which executed it; and Payche in but another name for Isis, indicating the productions of the earth, which gives a finish and besuty to the whole creation. This is sgreeable to the musonio trinity, mhinh io denominsted Wisdom, Slrength, and Beauly.

Fontenelle gives the following curious anecdote of a response from the Oracle of Serapis:-
"Thulis, a king of Egypt, who, as is said, gave the name of Thule to the isle now called Icelsod; his empire resching thither, was of large extent; and, being puffed up with pride, be went to the Oracle of Serapis, and thus spake to it:-Thou that art the god of fire, and who governest the course of the heavens, tell me the truth; was there ever, or will there ever be, one so puisant as myself ! The oracle answered bim thus :- First God, then the Word, and Spirit, all united in one, whose power can nover ond. Go hence immediately, 0 mortal I whoee life is always uncertain.' And Thulis at his going thence, had his throat cut." (Suidas) History Oracles, p. 9, London, 1688.

The Greek inecription on the great obelisk at Rome, says Chateaubrian, wha to this effect :- "The Mighty God ; Begotten of God; and the All-reaplendent Apollo, the Spirit."-(See Knapp's Spirit, Mas. p. 102.)

The idea of the pagan trinity, according to Volney's opinion, was founded on the three modes of action of the sun, in the three seasons of the year. The uun thus characterised, "Is, says he, no other than the threc-eyed Jupiter, eyc and sun being expreased by the same word in most of the ancient languages in Asia. This is the origin of all the trinitary system subtilised by Pythagoras and Plato, and totally disfigured by their interpreters."-(Ruins, p. 159.)

Although innovations appear to bave been introduced in the administration of the rites of the lesser mysterien, in Greece and Rome, particularly in the latter, still it does not appear that women, as our author supposes, were even sdmitted to participate in the celebrations of the greator mysetrise; much lese to act as hierophants, to expound what were called the accred secrets therein contained. This would have been $t 00$ great a departure from the original, and, moreover exposed the secreta to too great hazard, "In Egypt the office of the priesthood is in every instance confined to the men; there are no priesteeses in the service of male or female deities."-(See Beloe's Herodotus.) And bere it may be worthy of remark, that the freemssons have adhered closely to their prototype, by the total exclusion of females from their order.

Women and children, as we have seen, were freely admitted to the trifling shows and representations of the lesser mysteries, and here, it seems, women sometimes took the lead, and presided at the celebrations.

Virgil has made this distinction as pointed as possible, in the dutiea he sesigns to the Sibyl. When she arrives in eight of Elynium, where the greater mybteries commence, her command cesses, and she resigns her office to Mueceus. She was an utter stranger to the country, and applies to him for instruction. Eneas, while under her guidance, could only view at a distance, like Moses upon Mount Pisgah, the happy regions of the blessed :-

[^76]> The love of homea which they had, alive, Avd care of chariota, after death uurvive. Bome choertul souls were fesating on the plain ; gome did the mong, and some the ohoir, maintain, Bensath a laurol ahede, where mighty Po Mounte up to moods above, and hlaes his hesd below.

> To thess the Slibyl thus her specoh addrose'd, And fint to him eurrounded by the rest(Tow'rigg his beight, and ample wra his breat)-
> *gay, happy couls 1 divino Musagus 1 say, Whero Itres Anchisos, and welere lien ous may To find the hero, for whose only sake Wo soaght the dark abodas, aud oroda'd the bltter lakot" To this the escred poet thus repliod:
> * In no fix'd place tho hnppy soule resida In groves wo livo, and lie on moesy bods, By cryatal streams, that marmur through the mends; But pase jon eany hills, and thence deecand: The peth condncta you to your Jonrney's end." This said. Ae led flem up the mountain's brow, And shown them all the ahining Belda below: They wind the hill, and thro' the blimfal meadows ga.

(Drgien'e Trase.)

The mysteries did not teach the doctrine of the unity for mere speculation; but, se we said before, to obviate certsin misohiafs of polytheism and to support the belief of a providence. Now, as a future state of rewards and punishments did not quite remove the objections to its inequalities bere, they added to it the doctrines of the metermpaychosia, or the belief of a prior atate. (Vid Porph. do Abst. 1. iv. neot. 16. et Cio Fragm. ox lib. de Philosophis.) And this, likewise, our poot han been oareful to record. For after having revealed the grest mecres of the unity, he goes on to speak of the metemperyohoris, or tranemigration, in this manner:-
"All thees souls whom you see, after they bave rolled away a thousand years, are summoned forch by the god, in a great body, to the river Lethe, to the intent that, losing memory of the peat, thoy may roviait the apper regions, and again become willing to return into bodiee."

And thence takea cocsaion to explain the nature and use of purgatory, which, in our hero's peessge through that region, had not been done This affords him, too, sn opportunity for that noble epitoode, the proceswiou of the horo's posterity, which pases in review before him, And with this the scene closen.

In attanding the hero's progrees through the three estates of the desd, wo have shown, from some ancient nuthor, at almoet every atep, the exact conformity of his adventures to thoee of the initiated in the myetories. We shall now colleot these scattered lighty to a point, which will, I am persuaded, throw such a lustre on thim interpretation as to make the truth of it irrexistible. To this purpose, I shall bave nothing to do but to transcribe a pessage from an ancient writer, preserved by Stobeens, which profees to explain the exsot conformity between death, of a real descent to the infernal regions, and initiation, whore the repre-
sentation of thoee regions was exbibited. His words are these:- "The mind is affected and agitated in death, just as it is in initiation into thes grand mysteries. And word answers to word as well as thing to thing; for Teleylan is to die, and Teleisthai to be initiated. The first stage is nothing but errors and uncertainties; laborious canderings; a rude and fearful march through night and darkness. And now arrived on the verge of death and initiation, everything weara a dreadful aspect; it is all horror, trembliny, and affrightment. But this scene once over, a miraculous and divine light diaplays itself; and ahining plains and flowery meadows open on all hands before them. Here they are entertained with bymns and dances, with the sublime doctrines of sacred knowledge, and with revereod and boly visions. And now, become perfect and inithated, they are free and no longer under restrainta; but, crowned and triumphant, they walk up and down the regions of the bleseed; converse with pure and holy men; and celebrate the sacred mysteries at pleasure."

The Son of Sirach, who was full of Grecian ideas, and hath embellished his admirable work of Ecclesiasticus with a great deal of Gentile learning, hath plainly alluded, though in few words, to these circumatances of initiation, where encouraging men to seek altor toiodom, he esys:-"At first she will walk with him by crooked ways, and bring fear and dread upon him, and torment him woith her diecipline, until she may trust her soul, and try him by her laws. Then will she return the straight way unto him, and comfort him, and show him her secrets."(Chap, iv. 17, 18.)

The conjecture of the author, that an allusion is here made to circum. otancee attending initiations into the mysteries, is corroborated, or, I might aay, confirmed by masonry; for a known practice in the one renders it pretty certain that the same existed in the other.

In the royal arch degree, after the candidates have taken the required oath, they are told that they were now obligated and received as royal arch masons, but as this degree was infinitely more important than any of the preceding, it was necesaary for them (as before noticed) to pars through many trials, and travel in rough and rugged ways to prove their fidelity, before they could be entrusted with the more important secrets of thin degree. They are further told, that though they could not discover the path they were to travel, they were under the direction of a faithful guide, who would "bring the blind by a way they know not, and lead them in paths they had not known ; who would make darkness Hght before them, and crooked things straight; who would do these things, and not forsake them." (Iesiah 42, v. 16.)-Bernard.

The progress finiched, and every thing over, Eneas and his guide are let out again to the upper regions, through the ivory gate of dreams. A circumstance borrowed from Homer, and very happily applied to this subject; for, an Euripides elegantly expresmen it, "A dream in the lesser mysteries of death."

But, besides this of ivory, there was another of hors. Through the first insued faleo visiona; and through the latter, true.

Servius, with the spirit of a rank grammarian, who seldom finds any thing to stop at but a solecism in expresaion, says very readily, "Vult sutem intelligi, fales esse omnis ques dixit. He would have you understand by this, that all he has been saying is false snd groundlees." Other critica give the same solution. Rumus, one of the best, may epeak for them all ; "when, therefore, Virgil sends Eness forth through the ivory gute, he clearly indicates that whatever he has said in regard to the infernal regions, is to be reokoned among the fables."

This interpretation is strongthened by Virgil's being an Epicurean; and making the esme concluaion in his mecond Georgic:
"Felix, qui potuit cognoscere cacses,
Atque metus omnes et inexorabile fatum
Subjecit pedibus, strepitumque Acherontis avari ${ }^{\prime \prime}$
"Happy is he who can know the causes of things, and tread under foot all fear, inexorable fate, and the noise of greedy Acheron."

But Virgil wrote, not for the amusement of wonien and children over a winter's fire, in the taste of the Milesian fables, but for the uso of men and citizens, to instruct them in the duties of humanity and society. The purpose, therefore, of such a writer, when he treats of a future atate, must be to make the doctrine interesting to his rasder, and useful in civil life; Virgil hath done the firet, by bringing his hero to it through the most perilous achievement; and the second, by appropriating the rewards and puniohments of that state to virtue and to vice only.

The truth is, the difflculty can never be gotten over, but by supposing the descent to sigaify an initiation into the mysteries. This will unriddle the enigms, and reatore the poet to himself. And if this was Virgil's meening, it is to be presumed he would give some private mark to ascertain it, for which no place was so proper as the oonclusion. He has, therefore, with a beauty of invention peculiar to himself, made this fine improvement on Homer's story of the two gates; and imagining that of horn for true visions, and that of ivory for false, insinuatos by the first the reality of another state; and by the second, the shadowy representations of it in the shows of the mysteries; so that, not the thinge objented to Eness, but the scenes of them only were false; as they lay not in hell but in the temple of Ceres.

But though the visions which iesued from the ivory gate were unsubstantial, as being only representative, yot I make no question, but the ivory gate itself was real. It appears, indeed, to be no other than that sumptuous door of the temple, through which the initiated came out, when the celebration was over. This temple wan of an immense bigness.*

[^77]And now, having occusionally, and by parte only, naid so much of these thinge, it will not be amiss, in conclusion, to give one general and concine idea of the whole. I suppose the subetance of the celebration to be a kind of drama of the history of Ceres, which afforded opportunity to represent the three particulars, sbout which the myateriee were principally concerned; the rine and eetablishment of civil nociety; the doctrine of a future state of rewards and punishmenta; the arror of polytheiam, and the principle of the anity.

But here let it be observed, that the secrets of the mysteries were unfolded both by woords and actions; of which Aristides, quoted above, gives the reason; "That so the sounds and sights might mutually sesist esch other in making an impression on the minds of the initiated." The error of polytheism, therefore, was as well exposed by the dank wanderinge in the subterraneous pessagee through which the inftiated began his course, is by the information given him by the hierophant; and the trudh of the unity as strongly illustrated by the autopton agalma, the self seen image, the diffusive shining light, as by the hymin of Orpheus, or the speech of 4 nchises.

On the whole, if I be not greatly deceived, the viow in which I pleoo this famous spisode not only cleare up a number of diffioulties inexplicable on any other acheme, but likewise onnoblen, and gives a gracaful finishing to the whole poem, for now the epieode in seen to be an sesential part of the mein subject, which io the ereotion of a civil poliny and a religion. For custom had made initiation into the mystarios a necessary preparative to that arduous undertaking.

To conclude, the principles here assumed, in explaining this famous pootical fiction, are, I presume, such as give solidity, se well as light, to What is deduced from them; and are, perhape, the only principlea from which any thing ressonable can be deduced in a piece of criticiam of this nature. For from what I have shown was taught and repreeented in the myateriss, I iufer that Encas's descent into hell sigaifles an initiation; becauee of the exact confornity, in all circumstances, between what Virgil relates of hie haro's adventure, and what antiquity delivers concerning the shows and doctrines of thome mysteries into which heroes were wont to be initisted.

The view taken by bishop Warburton of the purport of the sixth book of the Eneid, was new, and calculated to excite the deep attention of the learned world. Accordingly various opinions were entartained for and against the correctnesa of the position assumed by him. Among the

[^78]critics who entered the lists in opposition to the suthor, was the colebrated historian Gibbon. And this, he saye, was his first publication in English. His remarks on the aubject are contained in the third volume of his miscollaneous work, which he introduces as follows:-
"The allegorical interpretstion which the bishop of Glouceeter has given of the sixth book of the Eneid, seems to have been very favourably recoived by the publia Many writers, both at home and abruad, have mentioned it with approbation, or at least with eateem; and I have more than once heard it alleged, in the conversation of soholars, an an ingenious improvement on the plain and obvioun sense of Virgil. Ae much, it is not undeserving the notice of a candid critio; nor can the inquiry be void of entertainment, whilat Virgil is our conatant theme.
"I ahall rendily allow, what I believe may in general be true, that the myateries exbibited a thestrical representation of all that was believed or imagined of the lower world ; that the aspirant was conducted through the mimic scenes of Erebua, Tartarus, and Elyaium; and that a warm onthusiost, in describing these awful apeotaclee, might express himself as if he had actually visited the iofernal regions. It is not aurpriaing that the copy was like the original; but it still remsine undetermined, whether Virgil intended to deecribe the original or the copy."

If the copy was a true representation of the original, of what consequence is it which the poet took as his sampler ? But, es it was more easy to procure a correct description of the spectacles exhibited in the temple of the Eleusinian Cores, than of what takes place in the regions below, it is most probable Virgil chowe the former. Beaides, it may be remarked, that the deecription of the infernal regiona was doubtless firet matured in the mysteries. No suthor, it is presumed, had, before their eatabliahment, ever given enything like a detailed account of suoh place. They therefore, properly speaking, are the original, and the garalld is to be found in Virgil's description of Eneas's descent.

Mr. Voltaire shows great frokleness in his opinion on this aubject; mometimes giving it in favour of Warburton's hypothesix, and at others the contrary. Speaking of the Eleuninian mysteriea (tome xvi. p. 162), he reys:-
"The mysterions ceremonies of Ceres were an imitation of those of Isis. Those who had committed crimes confessed and expiated them. They fasted, they purified thomselves, and gave alms, All the ceremonies were hald secret, under the religious sanction of an osth, to ronder them more venerable. The mysteries were celebrater in the night, to inspire a holy horror. They represented a kind of tragedy, in which the spectacle exposed to view the happinesa of the junt and the torments of the wicked. The greatast men of antiquity, the Piatos, the Ciceros, have eulogised these mysteries, which had not then degenerated from their primitive purity.
"Very learned men have supposed that the aisth book of the Eneid was a description of what passed in these secret and celebrated showe." Again, he aays, "The aixth book of the Eneid is only a deecription of the myaterice of Lsil and the Eleuainian Cares."

He afterwards recanta this opinion, and says, "I think I see a description of the Eleutinian Ceres, in Claudian's poem on the Rape of Proserpine, much dearer than I can see any in the sixth book of the Eneid. Virgil lived under a prince who joined to all his other bad qualities that of wiohing to pese for a religious character; who was probsbly initiated in these myaterise himself, the better thereby to impose upon the people, and who would not have tolerated what would have been pretended to be such decided profanation."

Why, Augustus was the hero of the poom; it was for his honour and glory that the poet laboured. He was, maye our suthor, ehadowed in the person of Eneas ; and would not, therefore, probsbly have been very scrupulous about a vague expoeition of the mysterien, while it tended to its own glorification.
"Cleudian (says Warburton) professes openly to treat of the Eloueinian myateries, at a time when they were in little veneration" It is not strange, therefore, that Mr. Voltaire should ace a description of the Eleusinian Ceres, in Claudian's poem, ruuch clearer than in the sixth book of the Eneid; the author of which evidently not intending that his object ahould be generally known.

Voltaire seems frequently to hsvo written off-hand, without subjecting himself to the trouble of rigid scrutiny; and, indeed, he wrote so much, and upon such a variety of topics, that it would appesr imposeible that he should beatow strict attontion to them all. In the present case, his firet impreseions appear to have been founded on the opinions of the learned men he alludes to, and he probably adopted a contrary belief in like manner, without an attentive examination of the subject.

Biahop Warburton wes probably occupied many years in the composition of his learned work; he had thoroughly atudied the subject, and it is confidently believed that this application of the sixth book of the Eneid to the mysteries will stand the test of the most severe criticiom.

The Abbe Barthelemi, in an article on the myeteries, in his "Travela of Anacharsis," quotee the Rneid in a deecription of them, as if no question then existed in regard to Virgil's viewh,

## CHAPTER IV.

TEE MLTAMOPREGOAS OF APULEIUB; AND THE AMOUR OY OUPID AND Ptichis

Thus far concerning the use of the mysteries to society. How essential they were esteemed to roligion, we may understand by the Metamorphoris of Apuleius; a book, indeed, which from ita very first appearance hath pensed for a trivial fable. Capitolinus, in the life of Clodius Albinus, where he speaks of that kind of tales which disooncert the gravity of philosophers, tellh us that Severus could not bear with patience the honours the Senste had conferred on Albinus; especially their distinguiahing him with the title of learned, who wes grown old in the study of old-wives fablee, such as the Mileaian-Punic talea of his countryman and favourite, Apuleius.

The writer of the Metamorphonis, however, was one of the graveat and most virtuous, as well as most learned philosophers of his age. Albinus appears to have gone further into the true character of this work, than his rival Severus. And if we may believe Marous Aurelius, who calls Albinus "A man of experience, of demure life, and grave morals," he was not a man to be taken with such trifling amusementa ss Milesian fables. His fondness, therefore, for the Metamorphosis of Apuleius showa that he considered it in another light. And who so likely to be lot into the author's true deeign, as Albinus, who lived very near his time, and was of Adrumetum, in the neighbourhood of Carthage, whera Apuleius sojourned and atudied, and was distinguinhed with public honours ! The work is indeed of a different charncter from what some socienta have represented and even from what modern critics have pretended to discover of it. Thowe ancients, who atuck in the outaide, considered it, without refinement, as an idle fable; the moderns who could not reconcile a work of that nature to the gravity of the author's oharacter, beve suppoeed it a thing of snore importance, and no lese than a general satire on the vices of those times.

But thits is far short of the matter. The author's main purpose was not to satirise the specifio vices of his age, though to enliven his fable, and for the better carrying on his atory, he bath employed many circumstances of this kind, but to reoommond Pagan religion, as the only cure for all vices shatsoever.
To give what we have to ey its proper force, we must consider the real character of the writer. Apuleius, of Medaura in Africa was a devoted Platonist; and, like the Platonista of that age, an inveterate
eneray to Christianity. His real for the honour of philasophy is seen in the aolemn affirmation, when convened before a court of juatice, "I have never doragated ought from the honour of philosophy, which is more precious to me than life." His muperatitioua attechment to the religion of his country is seen in his immoderate fondneas for the myateries. He was initiated, as he tells us, into almost all of them; and in nome, bore the moot diatinguished offices. In his apology before the proconsuI of Africs, he says, "Will you have me relate what kind of things thooe were, which wrapped up in a napkin, I confided to the house of Pontianus? You shall be allowed. I have been initisted in Greece into many mysteries. I carefolly guard certain of their signs and tokena which have been committed to me by the prieste, I say nothing unusual, nothing unknown. Ye who are present know what thing it is of father Bacchus Symmistse which you keep concealed at home, and silently venerste apart from the profane. But I, an I have said, through love of truth, and duty to the gods, have learnt numerous mysteries. and very many rites, and various ceremoniee. Nor do I make up this for the occasion; but it is about three years ago that shortly after my arrival at Dea, in a public discourse on the Majesty of Assculapius, I marie some declaration, and enumenited whatever mysteriee I knew. That discourse ie very celebrated; in generally read; is in the hands of everybody,-commended to the pious people of Oes, not so much by my eloquence, as by the mention of Asaculapius. Can it then appear strange to any body who has any knowledge of religion, that a man vensed in so many mysteries of the gods should keep certain holy trifles in his bouse I I am accustomed wherever I go to take with me the image of some god packed up among my books, and on festivala to worship it with incence and wine, and mometimee with sacrifices."

His great devotion to Paganism, therefore, must needs have been attended with equal aversion to Christianity; and it is more than probsble, that the oration he apeake of ar made in honour of Feculapiue, was in the number of those invectives, at that time so well received by the enemies of our holy faith. For, not to insist on the success of his oration, which he tells us, was in everybody's hands, a thing common to discoursea on subjecte that evgage the public attention, but rarely the fortune of such stale ware an panegyrics on a god long worn into an establishment; not, I say, to insist upon this, we may observe that Aheculapius was one of those sacient heroes who were employed, by the defendere of Paganimen, to oppose to Jesus; and the circumetances of Areculapius's story made him the fittest of any in fabulous antiquity for that purpose.

Having neem what there was in the common peerion of his sect, and his own fond mode of superstition, to indispose A puleius to Christianity, let us inquirewhat private provocation he might have to prejudice himagainst it; for, a privato provocation, I am perausded, he had; occasioned by a personal injury done him by one of his profestion; which, I suppose, did not a little contribute to exasperata his bigotry. He had married a rich wilow, against the will of her first huaband'a rolations; who on-
deavoured to eet aside the marringo on pretence of hin employiog sorcery and enchantments to engage her affections. Of this, he wha judicially accueed by his wifa's brother-in-law, Licinius Emilianus befors the Proconsul of Africa. Now his acouser, if I am not much miotaken, wes a Christian, though thio interesting circumstance hath eacaped his commentatorr,

Now irreligion and atheiam, we know, was the name Christianity at that time went by, for having dared to renounce the whole family of the gentile gode in a lump, §milianus had made such clear work, that there was not so much as ad anointed stone, or a tree adorned with consocrated garlands, to be found throughout his whole farm. That the atheism of Amilianus was of this sort, and no courely or philosophic impiety, appears from his character and atation. He was eitbor a fine gentleman or a profound inquirer into nature-charncters indeed which are sometimee found to be above religion-but a mere rustic in hin life and manners. Now plain unpoliahed men in such a station are never without some religion or other ; when we find Emilianus, therefore, not of the atablished, we must needs conclude him to be a sectary and a Christian. His neglect of hia country gode wan not a mere negative affront; of forgetfulnese. He gloried in being their deapiser; and took kindly the name of Mezentius, as a title of honour,-(alterum, quod libentius audit, ob deorum conteraptum, Mesentius,) which I would consider as a further mark of a Christian convict. He even held it in an abomination so much an to put his hands to his lips, (according to the mode of adoration in those times) when he pensed by a hesthen temple; (nefna habet sdorandi gratia manum labris admovere), the moet characteristic mark of a primitive confessor, by which he could never be mistaken; nor, one would think, ao long overlooked.

The aversion, therefore, which Apuleius had contracted to his Christian accuser, and we see, by his apology, it was in no ordinary degree, would without doubt increase his prejudice to that religion. I am persuaded he gave the chareoter of the Baker's wife, in his Golden ABe, for no other reason than to outrage our holy faith. He draws her, stained with all the vices that could fall to the ahare of a woman; and then, to finish all, he makee her a Christian.

Let us nee now how this would infuence his writinge. There was nothing the philosophers of that time had more at heart, especially the Platonists and Pythagoreans, than the support of sinking Paganiam. This service, an hath been occasionally remarked, they performed in various ways and manners; some by allegorizing their theology; somo by spiritualizing their philosophy; and some, as Jamblicus and. Philostratus, by writing the lives of their heroes to oppose to that of Christ; others again, as Pophyry, with this view, collected their oracles, or as Melanthius, Meander, Hicesius, and Sotadee, wrote descriptive encomiums on their mysteries. Which last, as we shall now show, was the province undertaiken by Apuleius, his Metamorphosis being nothing else but one continued recommendation of them.

But let us inquire into the motivea our author might have for enter-
log at all into the defence of Paganism: His reasons for choosing this topic of defence, the recommendation of the mysteries.
As to his defence of paganiam in general, we may observe, that worke of this kind were very much in fashion, eapecially amonget the philosophers of our author's sect. He was, as we have seen, moet superatitiously devoted to pagan worship; and, he bore a personal spite and prejudice to the Christian profesoion.
As to making the defence of the mysteries his choice, still stronger reasons may be assigned. These were the rites to which he was 50 peculiarly devoted, that he had contrived to be initiated into all the mysteries of notes in the Roman world; and in several of them had borne the most distinguished officea. The myateries being at this time become eztremely corrupt, and consequently, in discredit, needed an able and eealous apologist: both of which qualities met eminently in Apuleius. The corruptions were of two kinds, debaucheries and magic. Their debaucheries we have taken notice of above; their magic will be considered bereafter. But, our author's close attachment to myaterious rites wes, without question, the very thing that occasioned all those suspicions and reports, which ended in an accuestion of magic ; and, coneidering What hath been aaid of the corrupt state of the myateries, the reader will not wonder at $i t$.

Such, then, being the general character of the mysteries, and of this their great devotee, nothing was more natural than his projecting their defence; which, at the same time that it concurred to the support of paganism in general, would vindicate his own credit, together with an institution of which be was so immoderately fond. And the following considerations are sufficient to show that tho Metamorphosia was written after his Apology : for, his accusers never once mention the fable of the golden ass to support their charge of magia, though they were in great want of proofs, and thia lay so ready for their purpose, He positively anserta, before the tribunal of Maximus Claudius, that he had never given the least occasion to suspect him of magio: "Nusquam passus sum vel exiguam suspicionem magise consistere."

Now antiquity considered initiation into the mysteries as a delivery froms a living death of vice, brutality, and misery, and the beginning of a new life of virtue, reason, and happiness. This, therefore, wes the very circumstance which our author chose for the subject of his recommendation.

And as in themysteries, their moraland divino truthswere represented in shovs and allegories, so, in order to comply with this method of instruction, and in imitation of the ancient masters of wisdom, who borrowed their manner of teaching from thence, he hath artfully insinuated his doctrine in an agreeable fable; and the fittest one could conceive for his purpose, as will be seen when we come to examine it

The fonndation of this allegory was a Milesian fable, a кpecies of polito trifling then much in vogue, and not very unlike the modern Arabian talcs. To allure his readers, therefore, with the promise of a fashionable work, he introduces his metamorphosis in this manner: "And I too will deliver to you various fables in this Milesian atylo, and delight your
ears in a gentle whisper "" plainly intimating that there was something of more consequence at bottom. But they took him at his word, and nevar troubled their heade about a further meaning. The outaide enguged all their attention, and sufficiently delighted them; as we may gather from the early title it bore, of Asinus Aureus; unlees we will rather auppose it to have been beatowed by the fow intelligent readers in the secret; for, in spite of the author, a secret it was, and so all along sontinued.

Upor one of these popular fables, he chose to engraft his instruction; taking a celebrated tale from the collections of ons Lucius of Patron; who relates his transformation into an ass, and his adventures under that shape. Lucian has epitomised this story, as Apuleius seems to have paraphrased it; and the subjeot being a motamorphosis, it admirably fitted his purpose; as the motempaychosin to which that auperetition belonge was one of the fundamental doctrines of the myaterien.

The fable opene with the representation of a young man, personated by himself, wensible of the adrantages of virfue and piety, but immoderately fond of plearure, and es curious of magic. He gives a loose to hia vicious appetite, and the crimes and follies into which they lead him soon ends in hir transformation to a brute.

This contrivance of the introductory part is artful ; and finely insinuates the great moral of the piece, that brutality attends vice as its punishment; and punishment by actual tranaformation wan keeping up to the popular opinion.

St. Austin permitted himsolf to doubt whether Apuleius's account of his change into an ass was not a true relation. I shall essy nothing to this extravagant doubt, but only observe, that it appears from henoe, that St. Austin esteemed $\Delta$ puleius a profligate in his manners, and addicted to the superatitions of magic.

But to proceed with his plan. Heving now ahown himself thoroughly brutalized by his crimes, he goes on to represent at large the miseries of that condition, in a long detail of his missdventures, in the course of which he fell, by turns, under the dominion of every vicious pession; though the incidents are chiefly confined to the mischiefs of unlswful love, and this, with much judgment, as one of the principal ends of tha myateries was to curb and subdue this inordinance, which brings mors general and lasting misery upon mankind than all the other. And as it was tho great moral of his piece to show that pure religion, wuch as a Platonic philosopher esteemed pure, was the only remedy for human corruption; so, to prevent the abuse or mistake of this capital principle he takes care to inform un, that an attachment to superstitiona and corrupt religion does but plange the wretched vietim into still greater miseries. This he finely illuatrates, in the history of his adventures with the begging prients of Cybele, whowe enormities are related in the

[^79]eighth and ninth booke, and whowe corrupt mystariee are intended as a contrast to the pure rites of Isis, with which, in a very studied description and encomium he concludes the Fable.

In the meantime, matters growing from bed to worse, and Lucius plunged deeper and deeper into the aink of vice, his affairs come to a crisias For this is one great beauty in the conduct of the fable, that every change of station, while he remains a brute, makes his condition atill more wretahed and deplorable. And being now about to perpetrato one of the most shocking enormitioe, Nature, though so deeply brutalised, revolts; he abhors the ides of his projected orime; he ovades his keopers ; he flies to the sea-shore ; and, in this solitude, begins to reflect more sariously on his lost condition. This is finely imagined, for we often mee men, even after a whole life of horrors, come suddenly to themselves on the hidsous aspect of some monster vice too frightful even for s hardened conacionce to ondure. Nor is it with less judgment that the author makes these beginnings of reformation confirmed by molitude, when the unhappy victim of plessure hath broken loose from the companions and partakers of hia follies.

And now, a more intimate acquaintance of his hopeless state obliges him to fly to heaven for relief. The moon is in full splendour, and the awful nilence of the night inspires him with sentimente of religion.

He then purifies himeolf in the manner preseribed by Pythagoras, the philosopher most addicted to initiations of all the early sagea ; an Apuleius, of all the later; and so makee his prayer to the moon or Iris, invoking her by her several namee of the Bleusinian Ceres, the celeatial Venus, Diana, and Proserpine, when betaking himself to repoes, she sppears to him in a dream, under that shining image so much spoken of by the myatics, as ropresenting tho divine nature in general.

These noveral symbolic attributes [as described by Apulaius, but here omitted] the lucid round, the anakes, the care of corn, and the siotrum, reprowent the tutolar deities of the Hecatasan, Bacchic, Eleusinian and Inise myateries. That is, the mystio ritea in goneral, for whose sake the allegory wan invented. As the black Palls in which sho is wrspped, embroidered with a nilver moon and atars, denotes tho time in which the myateriee were colebrated, namely, in tho dead of night; which was so constant and inseparable a circumstanes, that the author calls inition tion, noctes societas. $\dagger$

[^80]" Behold, Lucius, I, moved by thy prayers, am present with thee; I who am nature, the parent of things, the queen of all the elements, the primordial progeny of ages, the Supreme of Divinities, the sovereign of the opirits of the dead, the first of the celestials, and the uniform resemblance of gods and goddesses. I who rule by my nod the luminous summits of the heavens, the salubrious breezes of the sea, and the deplorable ailences of the realms beneath; and whose one divinity the whole orb of the earth veuerates under a manifold form, by different rites, and a variety of appellations. Hence the primogenial Phrygians call me Pesainuntica, the mother of the gods; the Attic Aborigines, Ceoropian Minerva ; the flosting Cyprians, Paphian Venus ; the arrowbearing Cretana, Diana Dictynna; the three-tongued Sicilians, Stygian Proserpine ; and the Eleusinians, the ancient goddess Ceres. Some also call me Juno, others Bellona, others Hecate, and others Rhamnusia, And those who are illuminated by the incipient raya of that divinity, the sun, when he rises, via, the Ethiopian, the Arii, and Egyptians bkilled in ancient learning, worshipping me by ceremoniee perfectly appropriate, call mo by my true name, Queen Iais." This was exactly sdapted to the derign of the mysteries; and preparatory to the communication of the aporreta, It had likewise this further use, to patch up and recommend the pagan religions; by showing that their Polytheiem consisted in nothing else than in giving the Supreme God various names, merely expressive of his various attributea. This was tho fashionable colouring, which, after the sppearance of Christianity, the sdvocates of paganism employed to blanch their idolatry. I will only observe further that the words, the Egyptians worshipping me with ceremoniet perfectly appropriate, insinuate what was true, that all mysterious worship came frgt from Egypt; this people having penetrated furthest into the nature of the gods; as the calling her who represents the mysteries in general rerum natura parens, abows plainly what were the aporreta of them all.

Parent Nature then reveals to Lucius the means of his recovery. Her fedtival was on the following day; when there was to be a procession of her wotaries. The priest who led it up, would have a chaplet of roses in his hand, which had the virtue to restore him to his former ehape. But as breaking through a habit of vice is, of all things, the moet difficult, she adde oncouragements to her promises, "nor should you faar anything pertaining to my concerns as difficult. For in this very eame moment of time in which I come to you, being there sleo present, I order my priest in a dream to do those thinge which are to be done beresfter." Alluding to what was taught in the myateries, that, the essistance of Hearen was always present to second the efforte of virtue. But in return for the favour of releesing him from his brutal shape, that in, of reforming his manners by initiation, she tells him she oxpected the service of hia whole life ; and this, the mysteries required. Nor should his service go unrewarded, for he should have a place in Blysium hersefter; and this, too, the myateries promised.
Laciue is at langth confirmed in bia resolution of aspiring to a life of
virtue. And on this change of his diepositions, snd entire conquest of bis pasaions, the author finely representa all nature as putting on a now face of cheerfulness and gaiety. "All thinge likewise, independent of my peculiar joy, seemed to me to exult with such great hilarity that I might have thought that cattle of every kind, every house, and even the day itself, rejoiced with a serene countenance." And to enjoy Nature, in these her beet conditions, was the bossted privilege of the Initiated, as we may see from a chorus in the Progy of Aristophanee.

And now the procession, in honour of Lsis, begins. Where, by the way, we must observe, that the two first days of the celobration of the Eleusinian mysteries are plainly described : the one called agyrmos, from the multitude sssembled; the other alase mystai, from the procession made to the sea-shore. "There was an influx of a crowd of those who had been initisted in the aacred rifes of the goddess, resplendent with the pure whitness of linen garments. In the next place, the images of the gods, carried by the prients of Isie, proceeded, not disdaining to walk with the feet of men; this terriffically raioing a canine head; but that being the messenger of the infernal gods, and of those in the realms beneath, with an erect face, partly black, and partly of a golden colour bearing in his left hand a caduceus, and ahaking in his right hand branches of the flourishing palm tree; whose foutateps, a crow, in an srect position, immediately followed. This crow was the prolific resemblance of the all-parent goddess, and was carried on the shoulders of one of the blessed servants of this divinity and who acted the part of a mimic as he walked ; anuther carried a cista or chest, oontaining arranc, and perfectly concealing the mystic symbols of a magnificent religion. And another bors in his happy bosom the renerable effigies of the Supreme Divinity, which was not similar to any cattle, bird, or wild beast, nor even to man; but being venerable for the subtility by which it was invented, and also for ite novelty, was an ineflable indication of a more sublime religion, and which was to be concealed with the greatert silence." The priest or hierophant of the rilea leads up the train of the initiated Fith a gerland of roses in his hand. Lucius approaches, devours the roses, and is according to the promise of the goddess, restored to his natural form, by which, as we have said, no more was meant than a change of manners from vice to virtue. And this the author plainly intimates by making the goddees thus eddress him under his brutal form, "Immediately divest yourself of the hide of that worst of beasts, and which for some time since has been to me detestable." For an ass was so far from being detestable, that it was employed in the celebration of her rites; and was ever found in the retinue of Oairis or Bacchus

[^81]The garland plainly representa that which the aspirants were erovoned with at their initiation; just an the virtue of the rasea designa the mysteries. At thin transformation he had been told, thast roses were to restore him to humanity, a so that amidst all his adventures, he had atill thin remedy in view.

Our author proceeds to tell us, that the people wondered at this instantaneous metamorphosis. "The people edmire, and the religious venerate ao evident an indication of the power of the Supreme Divinity, and the magnificenos and facility of my restoration." For the myateries boasted the power of giving as audden and entire change to the mind and affections. And the advocatem of paganiem against Cbristianity used to oppose this bosat to the real and miraculons efficacy of grace.

As scon as Lucius had recovered the integrity of his nature by initintion, the priest covers him, naked as he was, with a linen garment. A habit always beotowed upon the aspirant, on his admission to the mysteries ; the rationale of which, Apulaius himself gives us in hia apology. $b$ When all was over, the priest acoosts his penitent in the following manner. "O Lucius I you have at length arrived at the port of quiet, and the altar of pity, having endured many and various lsbours, and great tempests of fortune, and been toseed about by mighty waves of calamity. Aserume now a more joyful countenance, and more adapted to that white garment which you wear. Attend the pomp of your saviour goddess with triumphant steps. Let the inreligious we les tiem ase and acknowledge their error. Behold Lucius, rejoicing in the providence of the great Isis, and freed from his pristive miseries, triumphe In his own fortune," $a$

[^82]Here the moral of the fable in delivered in plain terms; and, in thie moral, all we have advanced, concerning the purpose of the work, fully confirmed. It is expressly declared, that vice and inordinate curiosity were the causes of Lucius's dieastera; from which the only relief was initiation into the mysteries. Whereby the author would insinuate that nothing was more abhorent from those holy rites than debauchery and magic; the two enormities they were then commonly suspected to encourage.

It hath been observed above, that, by Lucius's return to him proper form, was meant his initiation; and, accordingly, that retura is called, as initiation was, the being born again,-ut renatus quodammodo, andsua providentia quodammodo renalos; but this was only to the leseer, not the greater mysteries. The first was to purify the mind : hence it was called by the ancient, kakias aphaireein, a separation from evil; the eecond was to onlighten it, when purified, and to bring it to the knowledge of divine secrets. Hence they named the one Katharsin, and the other Teleiothts, purification and perfection." The first is here represented in the incident of Luciua's being reatored to humanity by the use of roses. The second, as the matter of chief importance, the uathor treats more circumstantially.

He begins with making the prient take occamion, from the benefit already received, to prees Lucius to ontor into the greater myateries of Inis.

But at the same time makes him inform the candidate, that nothing Wes to be precipitated; for that not only many previous rites and ceremonies, concerning religious diet, and abetinenoo from profane food, were to be obeerved; but that the aspiranta to these higher mysteries were to wait for a call.

The author, by the doubta and apprehensions which retarded his initiation, flrst givea us to underatand, that the highest degree of sanctity was required of those who entered into the mysteries.

These difficulties being surmounted, he is initiated with the accustomed ceremonies. He then maked his prayer, in which the grand aporreta of the myateries is still more pleinly reforred to.
"Thou, 0 holy and perpetual Saviour of the human race, being always munificent in cheriuhing mortal, doot employ the sweet affection of a mother in the misfortunes of the miserable. Nor is there any day or night, or even a alender moment of time, which passes unattended by thy benevolent interpositions. Thou protectest men both by aes and land, and dispersing the storms of life, dost oxtend thy salutary right band, by which thou draweat back the ineztricably twisted thread of

[^83]the Fates, and doat miltigate the tempests of inclement fortune, and restrain the noxious courses of the stars. The superual gods reverance thee, and those in the realms beneath attentively observe thy nod. Thou rollest the sphere of the universe round the steady poles, dost illuminate the sun, govern the world, and tread on the dark realms of Tartarus. The stara move responsive to thy command, a the gods rejoice in thy divinity, the hours and seesons return by thy appointment, and the elements reverence thy decree. By thy nod blasts of wind blow, the cloude are nourished, meeds germinate, and blossoms increase. Birds swiftly pass through the tracks of the air, wild beasts wandering on the mountains, serpents concenled in the ground, and the enormous monaters that swim in the ses, are terrified at the majeety which invests thy divinity, etc.

The affair thun over, the author, in the next place, takes cocssion, agrepably to his real practice, and opinions, to recommend a multiplicity of initiations. He tells us how Leis counselled him to onter into the mysteries of Osiris ; how, sfter that she invited him to a third initiation, and then rewarded him for his accumulated picty with an abundance of temporal blessinga

All this considered, we can no longer doubt but that the true design of his work was to recommend initiation into the myateries, in opposition to the new religion. We see the catastrophe of the piece, the whole Eleventh Book entirely taken up with it; and composed with the greatest seriousmess and superstition.

And, surely, nothing could be bettor conceived, to recommend the mysteries, than the idea of auch a plan, or better contrived than his execution of it, in which be omits no circumatance that might be plausibly opposed to Christianity; or that he might be recommended, with sdvantage, to the magistrateln favour; an where he tells us, that in these rites, they prayed for the prosperity of sll orders in the State, - "For the great Emperor, the senate, the equestrinn order, and for all the Roman people."

This interpretation will throw new light on every part of the golden ass. But I bave been so long on the subject, that I have ouly time to give one instance; and this, chiefly becsuse it reflecte it back agsin on the general interpretation of the fable.

## The $\Delta$ mour of Cupid and Psyche.

In the fifth and eixth book is the long episode of Cupid and Payche,b Fisibly allegorical throughout; and entirely foreign to all the reat of tho work, considered as a mere Milesian fable; but very spplicable to the writer's purpose, if he had that moral to inculcate which we bave here sesigned him.

[^84]There whe no man, though he regarded the Golden Ass as a thing of mere amusement, but eaw that the story of Cupid and Payche was a philosophic allegory of the progress of the soul to perfection in the posseesion of divine love and the reward of immortality." Now we have ehown at large, that the professed end of the mysteries was to restore the soul to its original rectitute, and to encourage good men with the promises of happiuess in another life. The fable, therefore, of Cupid and Peyche, in the fifth and sixth books, was the finest and most artiful preparative for the eubject of the eleventh, which treats of the mysteries.

But if wo look more nearly into this beautiful fable, we shall find that, bosides its general purpone, it has one more particular. We have obaerved that the corrupt atate of the mynteries, in the time of Apuleius, was one principal reason of his undertaking their apology. Theee corruptions were of two kinds, debaucheries and magic. Their debaucheriea have been taken notice of above. Their magic weg of three sorts : The magic of invocation or necromancy; the magic of tranaformation, or metamorphosis; and the magic of divine communication under a visible appearance or theurgy. The shows of the mgsteries seem to have given birth to the first, the doctrine of the metempeychosis taught therein to the second, and the $\Delta$ porrela conceraing the divine nature, to the third. The abomination of the two first sorts was seen, by all, and frankly given up as oriminal ; but the fanatic Platonista and Pythagoreans of the latter sges, aspousing the third, occasioned it to be beld in credit and reverence. So that, as Heliodorus tells us, the Egyptian priests (between whose philosophy and fanatio Platoniom there was at this time a kind of coalition), affected to distinguish the magic of necromancy and the magio of skeurgy, accounting the firat infamous and wicked; but the last very fair and even commendable. For now both those fanatica bad their philomphic mysteries, the rites of which consisted in the practice of this theurgic magic. These were the mysteries, to observe it by the way, of which the Emperor Julian was so fond, that he placed his principal felicity, as the Christians did his principal crime, in their celebration.

But our author, who had imbibed his Platonism not at the muddy streams of those late enthusinate, but at the pure fountain-head of the Academy iteelf, well understood how much this superstition, with all its plausible pretences, had polluted the mysteries; and, therefore, as in the course of the adventuree of his golden ass, he had stigmatized the two

[^85]other kinds of magic, be composed this colebrated tala, hitherto so little understood, to expose the magio of theurgy. It is, as we said, a philosophio allegory, delivered in the adventurse of Payche, or the soul, whose various labours and traverses in this progress, are all represented as the effects of her indiscreet pasaion for that apecies of magic called Theurgy.

To understand this, we must observe, that the enthusiestio Platonista, in their purauit of the Supreme Good, the union with the Deity, masde the completion and perfection of it to consist in the theurgic vision of the Autopton Aglama or the self.seen image, that is, seen by the splendour of ite own light. Now the atory tella us, there were three aisters, the youngeet of whom wan called Payche; by which we are to underatand, the three precipitate soute, the sensitive, the animel, and the rational; or, in other worde, sense, appetite, and reason: that the beauty of Pbyche was so divine, that men forsook the altars of the gods to follow and worahip her according to the ancient aphorism.

Nullum Numen aboet, si eit Prudentia.
No Deity is soanting, if Prudence is consulted.
She is contracted to, and posseepes the celelestial Cupid or divine love, inviaibly. In the meantime her sisters, envious of her superior enjoyments, take edvantage of the god's invisibility to perplex her with a thousand doubts and ecruplea, which end in exciting her curiocity to get s sight of her lover. By which the author seems to insinuate that they are the irregular pasaions and appetites which stir up men's curiosity to this species of magic, the theurgic vision. Pbyohe is deluded by tham, and againat the express injunction of the god who calls it ascrilega curiasitar, attempta thir forbidden sight. She aucceeds, and is uodone. Divine love forsakes her: the scones of pleasure vanish: and she finds herself forlorn and sbandoned; nurrounded by miseries, and pursued with tho vengance of Hesven. In this distress she comea to the tomples of Cerea and Juno, and seeks protection of those deities; by whioh is meant, the having recoure to their mysteries, against the evils end disasters of life: an is plainly marked by the reason given for her application:-"Not willing to omit any even doubtful meane of bettering my condition." They both deny admittanoe to her; intimating that the purer myaterics discouraged all kind of magic, even the most apecious. In a word, after a long and severe repentance and penance, in which the author seeme to have shadowed the triale and labours undergone by the ampirante to the myateries, the is pardoned and restored to the favour of Heaven. She is put again into possossion of Divine Love, and rewarded with the prerogative of immortality.

There are many other ciroumotances in this fine allegory equally serving to the end here explained; ss there are othera which allude to divers beautiful platonic notions, foreign to the present discoursa. It is enough that we have pointed to ita chief and peculiar purpose; which it was impossible to see while the nature and dexign of the whole fable lay undiscovered.

Before I totally diemiss this matter it may not be improper to obserto,
that both Virgil and Apuleius have repreeented the genuine mysteries, ss rites of perfect eanctity and purity; and recommended only such to their countrymen; while they expoes impure and impious rites to the public averaion; for it was their purpose to stigmative the reigning corruptions and to recommend the ancient sanctity. On the contrary, a man attached by his office to the recommendation of the myateries, as then practised, was to do the bent he could, when deprived of the benefit of this distinction; and was to endeavour to give fair colours to the fouleat things. Thin was the case of Jamblichue. His friend Porphyry had somescruples on this head. He doubta whether those rites could come from the gode, which admitted auch a mixture of lewdiness and imparity. Such a mirture Jemblichus confesses, but at the same time endeavours to account for their divine original, by ahowing that they are only the emblems of natural truthes, or a kind of moral purgation of the inordinate pasaions.

Hitherto we have considered the legislator's care in perpetuating the doctrine of a future atate. And if I have been longer than ordinary on this head, my excuso in, that the topio was new, nod the doctrine itself, which is the main subject of the present inquiry, much intercested in it.

## Theurgy.

Thetirgy is compounded of Theos, God, and ergon, work, and signifles magic operating by divine or celential means, or the power of doing extraordinary and supernatural thiogs by lawfol means, as prayer, invocation of God, tce., called by somo sohife magic.-Bailey.
"The wisest of the pegran world, and their greatest philoeophers, held Theirgio magic in the higheat enteem. Theurgy was, according to them, a divine art, which served only to sdvance the mind of man to the higheat perfection, and render the soul more pure; and they who by means of this magio had the happinees to arrive at what they called Autopoia or Intuition, a stato wherein they enjoyed intimate intercourno with the goda, believed themeolvee invested with all their power, and wrore persuaded that nothing to them was impossible. Towards this state of perfection all those aspired who made profeesion of that sort of magic ; but then it laid them under severe regulations. None oould be priest of this order but a man of unblemiahed morals, and all who joined with him in his operations were bound to strict purity; they were not allowed to bave any commerce with women; to eat any kind of animal food, nor to defile themsolves by the touch of a dead body. The philoeophers, and persons of the greatest virtue, thought it their honour to be initiated into the myateriea of thia mort of magic."-Mayo's Myth. v. 1. p. 277.

Thomas Taylor, in a note to his translation of Jamblichus, observea : -"This art of divine woorks is called theargy, in which Pytbagoras was initisted among the Syrians, as wo are informed by Jamblichua in his life of that pbilosopher. Proclus was also akilled in this art, as may be soen in his life by Marinus, Psoller, in his MS, treatise on Demons,
esays, 'that magic formed the last part of the ancerdotal science; in which place by magic he doubtless means that kind of it which is denominated theurgy. And that theurgy was employed by the ancients in their my:teries, I have fully proved in my treatise on the Eleusinian and Bacchic mysteries. This theurgy, is doubtleas the same sa the magic of Zoroaster, which Plato in his flrst Alcibiadee saya, consisted in the worahip of the gods."
"The emperor Julian alludes to thin theurgical art, in the following extracts from his Arguments againat the Christians, preserved by Cyril:
'For the inspiration which arrives to men from the gode is rare, sad exiots but in a few. Nor is it easy for every man to psitake of this, nor at every time. It has ceased among the Hebrews, nor is it preserved to the present time among the Egyptians. Spontaneous oracles, also, are seen to yield to temporal periods. This, however, our philanthropio lord and father Jupiter understanding, that we might not be ontirely deprived of communion with the gods, has given us observation through sacred arte, by which we have at hand sufficient assistance.'"-(p. 343,347 ).

This art wes professed by the early masons, as appears by an examination of one of the brotherhood of King Henry VI. It is, es before observed, a fundamental doctrine of the Roman Catholic cburch.

The priests of Egypt, Persia, Indis, dec., pretended to bind the gods to their idols, and to make them descend from heaven at their pleasure; they threatened the sun and moon to reveal the secret anysteries, to shake the heavene, d:c. (Eusebius, Prep. Evang., p. 198, and Jamb. do Myst. Egypth-See Ruing, p. 285.)

## CHAPTER $\nabla$.

A SKETCH OF THE LIEE AND DOCTRINES OF PYTHAGORAB, THE FOUNDEE OF THE BECT OF ANCIBNT PHILOBOPBERS THAT BORE BIB NAXE. ALSO THE DOCTRINES AND CUSTOMS OF THE DRUIDS, THE PRYESTS OF THE ANCIENT BRTTONB.

Notwithstanding Pythagoras died, at least fifteen hundred years before the institution of the Freemasons' society, he is hailed by the fraternity sa a brother mason. Both Cross and Webb, in trsating of masonio emblems, smong which they include a diagram of the forty-seventh problem of Enclid, hold the following language:-
"This was an invention of our ancient friend and brother, the great Pythagoras, who, in his travels through Asia, Alrica, and Europe, was initisted into several orders of priesthood, and raised to the sublime degree of master-mason. This wise philosopher enriched his mind abandantly in a general knowledge of things, and more eapecially in geometry or masonry; on this subject he drew out many problems and theorems," \&e.

The appellation of grandfather of freemasons would perhaps spply much more appropriately to Pythagoras, than that of brother; for he probably was the father of Druidism, and this was the father of thy masonic society; which it made use of as a mere closk to cover ita relfgious observances, with no special regard to the improvement of the craft. The idea however of a connection between Pythagoras and masonry, must have been handed down in tradition by the old Druidical masons; which is a strong evidence, that the secrets and ceremonies of manoonry are derived from the ancient Egyptian mynteries through the Pythagorean school.

Upon this supposition, of the truth of which I have no doubt, it becomes important to give some sccount of this celebrated philowopher, Whose memory is so denervedly venerated by the masonio order.

The best arranged account of his life and doctrines, that I have met with, is contained in Reee's Cyclopedia; I therefore make the following abatract from that work.

Pythagores was of Slamoe, the son of a lapidary, and the pupil of Pherecydea, and flourished, eaye Bayle, about five hundred yeers befone Christ, in the time of Tarquin, the last king of Nwme, and not in Numa's
timo, as many authors have mupposed,-(See Cicero Tus. Ques, 2ib, is. oap. 1.)

Poeterity has been very liberal to this philosopher, in bestowing upon him all such inventions as others had negleeted to claim, particularly in mumic; for there is socarcely any pert of it, as a science, with which he has not been invested by his generous followers in biography.

Musical ratios have been asaigned to him, with the method of determining the gravity or acuteness of sounde by the greater or lees degrees of valocity in the vibration of stringe; the addition of an eighth to the lyro (Pliny, lib. ii. cap. 2); the harmony of the spheres (Plato); and the Greek musical notation (Boothius). His right, indeed, to some of theeo discoveries has been dieputed by several authors, who hsve given them to others with as little reason, perbapes, es they have been before bestowed upon him.

After muasical ratios wers dincovered and reduced to numbers, they were mede, by Pythagoran and his followers, the type of order and just proportion in all thinga; hence virtue, friendahip, good government, celestial motion, the human soul, and God himself were harmony.

This discovery gave birth to various species of music, far morestrange and inconceivable than chromatic and enharmonic; such as divine music, nuundane musio, elementary muic, and many other divisions and nub-divisions, upon which Zarlino, Kirchor, and almost all the old writans, never fail to expatiate with wonderful complacence * It is parhape, equally to the credit and advantage of music and philosophy, that they have long deacended from these heighta, and telien their proper and eeparate atatione upon earth; that we no longer edmit of music that cannot be beard, or of philoeophy that cannot bo underetood.

Mantar Thomas Mabe, nuthor of a moot delectable book, called "Musio's Monument," would have been an excellent Pythagorean; for he maintains that the myatery of the Trinity is perapicuously mads plain Dy the connection of the three harmonical concorde, 1, 3, 5; that musio and divinity are nearly allied; and that the contemplation of concord and discord, of the nature of the octave snd unison, will so strengthen s man's faith, "that he shall never after degenerate into that groes subbesetical sin of atheiam."

Pythagorss is said by the writers of his life, to have regarded muaio an eomething celeatial and divine, and to have had such an opinion of Ita power over the human affeotions, that acoording to the Egyptian system, he ordered his dieciplea to be waked every morning, and lulled to aleop every night, by eweet sounds. He likewise considered it as greatly conducive to hoalth, end made use of it in dieorders of the body, .as well as in those of the mind. His biographers pretend to tall us what

[^86]Kind of munic he applied on these occasious. Grave and nolemn, ws may be oertain ; and vocal, esy they, was proferred to instrumental, and the lyre to the flute, not only for ite decency and gravity, but because inatruction could be conveyed to the mind, by means of articulation in ainging, at the same time as the esr wes delighted by sweet mounds.

In perusing the list of illustrious men who have sprung from the achool of Pythagoras, it appeara that the love and cultivation of musio whe so much a part of their discipline, that almont every one of them left s treatise behind him upon the subject.

The first journey of Pythegoras from the Grecian Ieland was probably into Egypt, which was celebrated in his time for that kind of wisdom which best suited his genius and temper. In his way thither, Jamblichus amerts that he vieited Phoenecis, and conversed with the propheta sad philonophers that were the successors of Moohus the Pbyxiologist.

While he was in Egypt, he wes introduced by the recommendation of Polycrates, tyrant* of Samos, to Amssis, king of Egypt, a distinguiahed patron of literary men, and thus obtained accesa to the colleges of the priesta. Having found it diffioult to gain this privilege, he performed many severe and troublemome proliminary ceremonies, and even aubmitted to circumciaion, a prencribed condition of his admission. He passod twenty.two years in Egypt, availing himself of all poeaible means of informstion with regard to the recondito doctrines of the Eggptinn priente, as well as their astronomy and geometry, and Egyptian learning in ita most unlimited extent,

Aftar his return from Egypt'to hin native ialand, he wished to communicate the benefit of his reesarches and studiea to his follow-citivens, and with this view he attempted to inatitute a achool for their instruotion in the elements of science; proposing to adopt the Egyptian mode of tesabing, and to communicate hir doctrines under symbolical form. But the Samians were either too etupid or too indolent to profit by his instruotions. Although he was obliged to relinquish his design, he did not altogether abendon it. In order to engage the attention of his countrymen by some other means, he repaired to Deloe ; and after presenting an offering of oakee to $\Delta$ pollo, he there received, ur protended to receive, moral dogmas from the priestess, which he afterwards dolivered to his disciples under the character of divine preceptu. With the asme views he also visited the islend of Crete, wo celebrated in mythological history; where he was conducted by the Corybantes, of prieste of Cybele, into the cave of mount Ide, in which Jupiter is said to have been buried. Here he conversed with Epimenides, an eminent pretender to prophetic powers, and was by him initiated into the mosto eacred mysteries of Greece. About the same time he visited Sparta and Elis, and was present during the celebration of the Olympic games,

[^87]whero be is eaid to have exhibited a golden thigh to Absris, in order to convince him that he was Apollo. Beeides other places which he visited during his stay in Greece, he repaired to Phlius, where he first ansumed the appellation of Philosopber. Having tbus added to the stores of learning which he had previously accumulated, and acquired a kind of authority which was calculated to command respect, he returned to gamos, and made a second attempt, more succeseful than his first, to establish a school of philosophy. In a memi-circular kind of building, which the Samians had used as a place of rezort for public businese, he delivered, with an asumed authority of a sacred nature, popular preoepta of morality; and he also provided himself with a secret cave, into which he retired with bia intimato friends and professed disciples, and here he gave his followers daily instructions, accompanied with a considerable parade of myatery, in the more abstruse parts of philonophy. His fame, and the multitude of his followers, increased. What he failed to accomplish by mere force of learning and ability, he affected by concealing his doctrines under the veil of mysterious symbols, and iseuing forth his precepts es responses from a divine oracle. About the beginning of the fifty-ninth Olympiad, Pythagoras, desirous of escaping the tyrsnoical government exercised in his native ialand, by Syloson, the brother of Polycrates, left Samos, and, as we have already hinted, passed over into Italy, and attempted to establish his achool among the colonies. of Magna Gracia. It is probable, that, in order to obtain credit with the prpulace, be about this time pretended to possess a power of performing miracles, and practised many arts of imposture. The first place at which he arrived in Italy was Crotons, a city in the bay of Tarentum, the inhabitants of which were very corrupt in their manners. But such were his reputation and influence that he was treated with grest respect, and people of all clanes assembled to hear his discourses; insomuch that the mannere of the citizens were soon totally changed from great luxury and licentiousness to atrict wobriety and frugality. It is said that aix hundred (some say two thousand) persons were prevailed upon to submit to the atrict discipline which he required and to throw their effects into a common stock for the benefit of the whole fraternity. The influence of his philosophy extended from Crotona to many other cities of Magna Grecia, and obtained for Pythagoras from his followers a degree of reepect little short of adoration. If he had contented him. self with delivering doctrines of philosophy and precepts of practical wiodom, he might probably have continued his labours, without molestation, to the ond of his life. But he manifested a strong propensity towarden the political innovations; and he employed his influence in urging the people to the strenuous assertion of their rights, against the emeroachment of their tyrannical governors. This course of conduct raiced against him \& very powerful opposition, which he was unabie to resistand contend against, and which obliged him to retire to Metapontum Hers he found himsolf atill surrounded with enemiee, aud was under a neoesaity of seeking an asylum in the temple of the Muses, where n't beiog oupplied by his frienda with suffleient food, he perished with
bunger." The time of his death is uncertain; but acoording to the Chronicon of Eubebius, he died in the third year of the aixty-eighth Olympiad, B.C. 506, after having lived, according to the mont probable statement of bis birth, to the age of eighty yearm. After his death his followers paid a superstitious reapeot to his memory. They erected statuea in honour of him, converted his house at Crotona into a temple of Ceres, the street in which it atood was called the Museum, and appealed to him as a divinity, swearing by his name.

It appeers, from the history of thin philosopher, that with all his talenta and learning, he owed much of his celebrity and authority to imposture His whole manner of life confirms this opinion. Clothed in a long white robe with a flowing beard, and, as some say, with a golden crown on his heed, he preserved among the people, and in the presence of his disciples, a commanding gravity and majesty of aspect. He recurred to musio for promoting the tranquillity of hia mind, frequently singing, for this purpose, hymns of Thales, Hesiod, and Homer. He had such an entire command over himself, that he was never seen to exprees, in his countenance, grief, joy, or anger. He relrained from animal food, and confined himself to a frugal vegetable diet, excluding from his simple bill of fare, for mystical reasons, pulee or beans. By this artificial dameanour, Pythagoras appeared among the vulgar as a being of an order superior to the common condition of humanity, and persuaded thom that he had received his dootrine from heaven. Pythagoras married Theano of Crotona, or, as Bome say, of Crete, by whom he had two sons, Telaugus and Mreesarchus, who, after his death, took the charge of his school. Whether this philosopher left behind him avy writinge, has been a subject of dispute, Many works have been enumerated under his name by Laertius, Jamblichus, and Pliny; but it is the declared opinion of Plutarch, Josephus, Lucian, and others, that there were no geunine works of Pythagores axtant; and it appesre highly probable, from the pains which he took to confine his doctrine to his own school during his life, that he never coramitted his philosophical ayetem to writing, and that the pieces to which his name was afflied at an early period, were written by mome of his followers, upon the principles imbibed in his school. The famous golden verses attributed to Phythagoras, and illustrated with a commentary by Herocles, were not written by our philosopher, but are to be asoribed to Epicbarmus, or Empedoclea. They may, however, be considered as a brief eummary of his popular doctrines.

Hin method of instruction, formed upon the Egyptian model, was "eaoteric," and "eaoteric," that is, public and private. Those auditora,

[^88]who sttended bis pablic lectures, did not properly belong to his mehool, but followed their usual mode of living. His select disciples, called his companions and friende, were euch an eubmitted to a peculiar plan of diaciplines, and were admitted by a long course of inalruction, into all the mysteries of his esoteric doctrine.a

Previously to the admission of any person into this fraternity, Pythagoras examined his features and external appearance; inquired how he had been accustomed to behave towarda his parents and friende; marked his manner of leughing, conversing, and keeping silence; and obeerved what paations he was most inclined to indulge ; with what kind of company he chose to sssociste; how he passed his leisure moments ; and what incidents appeared to excite in him the atrongest emotions of joy or sorrow. Nor after this examination was any one admitted intohis society, till he wan fully persuaded of the docility of his disposition, the gentleness of his manners, his power of retaining in ailence what he was taught, and, in fine, his capscity of becoming a true philonopher. After the first probetionary admission, the fortitude and self-command of the candidate were put to the trial by a long course of severe abstinence and rigorous exercise. The courve of abstinence and self-denial comprebended food and drink, and clothing, all which were of the most plain and simple kind, and the exercises prescribed were such as could not be performed without pain and fatigue. To teach them humility and induatry, he expoed them, for three years, to a continued course of conlradiction, ridicule and contempt, among their follown. 6 In order to-

[^89]restrain the powerful passion of svarice, he required his disciples to submit to voluntary poverty; be doprived them of all command over their own property, by canting the posseesions of each individual into a common thock, to be distributed by proper officers as occasion required. After this sequestration of their goods, they lived tngether on a footing of perfect equality, and sat down together daily at a common table. If unyone afterwarde repented of the connection, he was at liberty to dopart, and might reclaim, from the general fund, his whole contribution. That his disciples might acquire a habit of entire docility, Pythagoras enjoined upon them, from their first admission, a long term of ailence, called echemythia. This initiatory silence, which probably consiated in refraining from speech, not only during the hours of instruction, but through the whole term of initiation, continued from two to five years, according to the propensity discovered by the pupil towards conceit and loquacity. With regard to himeelf, this was a judicious expedient, as it checked impertinent curiosity, and prevented every inconvenience of contradiction. Accordingly his discipless silenced all doubta and rofuted all objections, by appening to his authority. Autos epha, ipse dixit, decided every dispute. Moreover, during the yeara of initiation, the disciples were prohibited from seeing their master, or hearing his lectares, oxcept from behind a curtain, or receiving inatructions from some inferior preceptor.

To the membero of the esoteric echool (who wero called gyeisoi emile$t a i$, genuine disciplea) belonged the peculiar privilege of receiving a full explanation of the whole doctrine of Pythagoras, which was delivered to others in brief precepte and dogmas, under the concealment of aymbols. Disciples of this olean were permitted to take minutee of their master's lectures in writing, as well as to propose queations, and offer remarks upon every subject of discouree. These were particularly diatinguished by the appellation of the "Pythagoreans," they were also called "Mathematiciens," from the studies upon which they entered immediately after their initiation. After having maide a sumpient progress in geometrical science, they proceeded to the atudy of nature, the investigation of primary principles, and the knowledge of god. Those who pursued theee sublime speculations were called "Theorista," and those who devoted themselves more perticularly to Theology, were styled

[^90]Sabastiloi religious. Others, acoording to their abilities and inclinations, wers engaged in the study of morale, economica, and policy; and were afterwards employed in managing the affairs of the fraternity, or sent into the cities of Greece, to instruct them in the principlea of government, or aseist them in the institution of lawe.

The brethren of the Pythagoresn college at Crotona called coniobion, cosnobium, about six hundred in number, lived together as in one family with their wives and children, and the whole bueineen of the society wan conducted with the most perfeot regularity. Every day commonced with a deliberation upon the manner in which it should be spent, and concluded with a retrospect of the eventa which had occurred, and of the business that hed been transacted. They rose before the sun, that they might do him homage; after which they ropeated select vernes from Homer and other poets, and made use of musio, both vocal and instrumental, to enliven their spirits and fit them for the busineas of the day. They then employed several hours in the etudy of acience. Theee were suoceeded by an interval of leisure, which was commonly spent in a solitary walk for the purpose of contamplation. The next portion of the day was ellotted to conversation. The hour immedistely before dinner was filled up with various kinde of athletic exercibea. Their dinner conaisted chiefly of bread, honey, and water; tor after they were perfectly initiated, they wholly denied thamselves the use of wine. The remainder of the day was devoted to civil and domestio affairs, conversation, bathing, and religious ceremonies.

The "exoteric disciples of Pythagoras were taught after the Egyptian manner, by images and symbols, obecure and almost unintelligible to those who ware not initiated into the mysteriea of the echool; and thote who were admitted to this privilogo were under the strictast obligation of silence with regard to the recondite doctrines of their mastar. The wisdom of Pythagores, that it might not pass into the ears of the vulgar, was committed chielly to memory; and when they found it necessary to make use of writing, thay took care not to suffer their minutes to pess beyond the limita of the echool.

Clemens observes, that the two onders above described correepond very

[^91]exactly to those among the Hebrews; for in the schools of the prophets there were two classer, viz.: the sons of the prophets, who were the scholars ; and the doctors or masters, who were also called perfecti; and emong the Levites, the novices, or tyros, who had their quinquennial exercises, by way of preparation. Lastly, even among the proselytes there were two orders ; exoterici, or proselytes of the gate ; and intrinseci, or perfecti, proselytes of the covenant. He adde, it is highly probsble that Pythagorss himself had been a proselyte of the gate, if not of the covenant.

After the dissolution of the assembly of Pythagoras's disciples by the faction of Cylo, a man of wealth and distinction at Crotona, it wes thought necessary by Lysie and Archippus, in order to preserve the Pythagorean doctrine from oblivion, to reduce it to enyatematic summary; at the same time, however, atrongly enjoining their children to preserve these memairs secret, and to transmit, them in confldence to their posterity. From this time books began to multiply among the followers of Pythagoris, till at length, is the time of Plato, Philolaus exposed the Pythagoresn records for sale, and Archytas of Tarentum gave Plato a copy of his commentaries upon the aphorisms and precepts of his master. Of the imperfect records of the Pythagorean philosophy left by Lysis, Archytas, and otherr, notbing has escaped the wreck of time, except perhape sundry fragments collected by the diligence of Stobeeus, concerning the authenticity of which there are some grounds for suspicion; and which, if admitted as genuine, will only oxhibit an imperfect view of the mornl and political doctrine of Pythagoran under the diaguise of aymbolical and enigmatical language. The strict injunction of necrecy which was given by oath to the initiated Pythagoreans has effectually prevented eny original recorda of their doctrine concerning Nature and God from passing down to pooterity. On this head we are to rely entirely for information, and indeed concerning the whole doctrine of Pythagoras, upon Plato and his followers. Plato himself, while be enriched his system with stores from the magazine of Pythagoras, accommodsted the Pythagorean doctrines, as he also did those of his master Socrates, to his own aystem, and thus gave an imperfect, and, we may suppose, in many particulare, a false representation of the doctrines of the Samian philosopher. It was further corrupted by the followers of Plato, even in the old academy, and afterwards in the Alexandrian eohool. To which we may add, that the doetrine of Pythagoras itself, probably in its original state, and certainly in every form under which it has been tranamitted to us, was observed, not only by symbolical, but by mathematical language, which is rether adapted to perplex than to illuatrate metaphyoical conceptions. In this fault Pythagoras was afterwarda imitated by Plato, Aristotle, and others.*

[^92]We extract from Brucker the following faint delineation of the Py thagorean philowophy: The end of philosophy is to free the miod from thoee incumbrances which hinder ita progress towards perfection, and to raise it to the contemplation of immutable truth, and the knowledge of divine and spiritual objects. This effect must be produced by eany enteps, lest the mind, hithorto converasnt only with eonsible thinge, uhould revolt at the change. The fint stop towards wisdom is the etudy of mathematioe, a science whioh contemplates objeote that lie in the middle way between corporeal and incorporeal beinga, and as it were on the confines of both, and which most advantageounly inures the mind to contemplation.

The monad, or unity, is that quantity which, being deprived of all number, remains fixed; whence called monad from to mencin. It is the fountain of all number. The duad is imperfeot and pessive, and the cause of increaso and division. The tried, composed of the monad and duad, partakee of the nature of both. The totrad, tetractya, or quaternion number, is the moet perfect. The decad, which is the sum of the four former, comprehends all arithmetical and musical proportions.

According to some writers, the monad denotes the active priaciple in nature, or God : the duad, the passive priaciple, or mattor; the triad, the word formed by the union of the two former; and the totractys, the perfection of nature. Some have understood by this mystorious number the four elementa; others, the four faculties of the human mind; others, the four cardinal virtuen ; and others have been so absurd as to euppose that Pythagoras made une of this number to express the name of God, in referenco to the word [Gehovah,] by which that neme is expressed in the Hebrow language. But every attempt to unfold thia mystary has hitherto been unsuocesaful.

Next to numbers, musio had the chiel pisoo in the preparatory exercinee of the Pythagorean school, by means of which the mind was to be raised above the dominion of the passions, and inured to contemplation. Pythagoras conxidered musio not only as an art to be judged of by the eer, but as a acience to be reduced to mathematical principlea and proportions.

It was said of Pythagoras by his followers, who hesitated at no assention, however improbable, which might seem to exalt their master's fame, that he was the only mortal so far favoured by the gods as to be permitted to hear the celestial music of the sphares. Pythagoras applied music to the cure of disenses, both bodily and mental. It was, as we heve seen, the custom of his achool to compoes their minds for reet in the evening, and to prepare themselves for action in the morning, by suitable airs, which they performed apon the lute or other atringed instrumente. The mueic was, however, alwaya accompanied with verves, so that it may be doubted, whether the effect was to be asoribed mare

[^93]to the musician or to the poet It is said of Clinius, a Pythagorean, that whenever he perceived bimself inclined to anger, spleen, or other reatleas pessions, he took up his lute, and that it never failed to restore tho tranquillity of his mind. Of Pythagoras himself, it is related, that ho checked a young man, who in the midat of hia revele was meditating zome act of Bacchanalian madnesa, by ordering the musician, who had inflamed his pasaions by Phrygian airs, to change the music on a sudden into the slow and solemn Doric mood. If the atoriee which are related by the ancients concerning the wonderful effecta of their muajc are to be credited, we must acknowledge we are atrangers to the method by which these effects were produced.

Beeides arithmetic and music, Pythagorne cultivated geometry, which he had learned in Egypt; but he greatly improved it, by inveatigating many new theorems, and by digesting its principles, io an order more perfectly aystematical than had before been done. Several Greciana about the time of Pythogoras, applied themeelves to matbematical learning, particularly Thalen in Ionis. But Pythagoras seems to have done more than any other philosopher of this period towarde reducing geometry to a regular science. His definition of a point is, a monad or unity with position. He taught that a geometrical point correaponde to unity in arithmetic, a line to two, a superficien to three, a solid to four. Of the geometrical theorems asoribed to Pythagoras, the following are the principal; thus the interior anglea of every triangle are together equal to two right anglea; that the only polygons which fill up the whole apace about a given point, are the equilsteral triangle, the square, and the hexagon; the first to be taken six times, the necond four times, and the third three times ; and that, in rectangular triangles, the equare of the side which subtends the right angle in equal to the two equares of the sidee which contain the right angle. Upon the invention of this Ister proposition (Elucid. 1, i. prop. 47), Plutarch aaya, that Pythagoram offered an ox, others, an becatomb, to the gods. But thin story is thought by Cicero inconeistent with the institations of Pythagoras, which, as he suppuees, did not admit of animal escrifices.

Theoretical philosophy, which treate of nature and ita origin, wes the highest object of study of the Pythagorean school, and included all thoes profound mysteries, which those who have been ambitious to report what Pytbagoras eaid behind the curtain, have endesvoured to unfold. Upon this subject, nothing can be advanced with certainty, orpecially respecting theology, the doctrine of which Pythagores, efter the manner of the Egyptian priests, was peculiarly careful to hide under the veil of symbols, probably through fear of distarbing the popular superstitions. The ancients have not, however, left us without nome grounds of conjecture.

With respeot to God, Pythagorsa appeera to have taught, that he ia the Universal Mind, diffused through all things, the source of all animal life, the proper and intrinsic cause of all motion, in substance similar to light, in nature like truth, the first principle of the universe, incapable of pain, inviaible, incorruptible, and only to be comprebended by the mind.

The region of the eir was supposed by the Pythagoreans to be full of spirita, demons, and heroes, who cause sickness or health to a man or bessh, and communicata, at their plessure, by means of dreams, and other instrumenta of divination, the knowledge of future ovents. That Pythagoras himself held this opinion cannot be doubted, if it batrue, es his biographers relate, that he prufessed to cure disesses by incantations. It is probable that he derived it from the Egyptians, smong whom it Was beliered many diseases were caused by demoniacal possessions.

The doctrine of the Pythagoreans, respecting the nature of brate animals, and metempsychosio, the transmigration of moule, were the foundation of their abstineace from animal food, and of the exalusion of unimal ascriftces from their religious ceremonies.

This dootrine Pythagoras probably learned in Egypt, where it was commonly taught. Nor is there any sufficient reason for understanding it, as some have done, rymbolically.

The precept prohibiting the use of beans, is one of the mynteriea which the ancient Pythagoreans never disclosed, and which modern ingenuity has in vain attempted to discover. Pythagorean precepts of more value are auch as these : Discourse not of Pythagorean doctrinea without light. Above all thinge govern your tongue. Quit not your station without the command of your general. Remember that the peths of virtue and of vice resemble the letter Y. To this symbol Persios refers, when he 23s,

> "There hat the Semain Y's inatructivo make Pelnted the rosd thy doubtral foot ohonld take; There warnd thy raw and yet onpractis'd yoath, To treed the risigg right-hand ppoth of trath," (Brikers Hial, Philos, by Binkeld, wol. 1. b. o. 12.)
After the death of Pythagoras, the caresnd educstion of hia children, and the oharge of his sohool, devolved upon Aristaus of Crotons, who having taught the doctrine of Pythagoras thirty-nine yees, was succeeded by Mnesarchus, the son of Pythagoras. Pythagorean schools were afterwards conducted in Hersclis by Clinias and Philolaus; at Metspontum by Theorides and Kurytus ; and at Tarentum by Archytes, who is said to have been the eighth in succeesion from Pythagoes. The first person who divalged the Pythagorean doctrine was Phislorus.

The symbolical use of the letter $\mathbf{Y}$ has reference to the old fable, before noticed, of the trivia, or triple path, that is, where the rosd to tho infernal regions dividen into two, the one lesding to Elysium, and the other to Tartarus. This letter was a very sppropriate symbol to mark out theee roade ; the disproportion of the two strokes which form it, being indicative of the comparative numbers to be nccommodated in the two coursea ; that is, of the righteous and the wicked. St. Matthew, no doubt, makes allumions to the common ides entertained upon this subject when he says-
"Enter ye in at the straight gate ; for wide is the gate, and broad is the way, that leadoth to deatruction, and many there be that go in
therent: because straight in the gate, and narrow is the way, whioh leendeth nnto life ; and few there be that find it." (rii. 13.)
"It is surprising, says Bayle, that a philosopher so akilful as Pythagoras, in estronomy, in geometry, and in other parts of the mathomatics, should be pleased to deliver his moet beautiful precepts nuder the veil of enigmas. This veil was so thick, that the interpretera have found ir it ample matter for conjecture. This symbolic method was very muoh used in the East and in Egypt. It is from thence without doubt Pythagoras has derived it. He returned from his travels laden with the spoils of the erudition of all the countries he had visited. It is pretended that his tedractys is the same thing as the name tetragrammaton, a name ineffable and full of myatery, according to the Rabbins. Othera will have it tbat this tetractys, this great object of veneration and of oaths, is nothing more than a mysterious manner of dogmatizing by numbers. But let us not forget, that Pytbagoras and his succeasurs had two wasa of teaching, one for the initiated, and one for strangers and the profane. The first was olear and unveiled, the second waa aymbolic and enig-matical."-(Dict.)

It is somewhat remarkable, that a difference of opinion ehould exist among the learned in regard to the meaniog which Pythagoran intended to convey to hia pupils of the eateric clase, by the word Tetractys, for it appeare pretty evident, that be used it enigmatically as aynonymous with geometry. And eo Bailey, who seems to have known more of antiquity than any other of his day, defines it. He rays, "Tetractya in ancient geometry, sigaified a point, a line, a surface, a solid." Hutchinmon, in his "Spirits of Masonry," gives the same definition. He sagy, "The Pythagoric tetractics [tetractys] were s point," \&c., as above.

The encient Druidical Freemasons were taught, es reported by Prichard, that there are four principles in masonry, which are specified agreasbly to the above definition of tetractys.

These four principles contained in the tetractys or geometry, comprehend the entire of physical nature, and on thin account the enigma of the perfection of the number four has been erected.

A writer on masonry (see Carlile, p. 99) observes, "that the Pythagoreans affirmed the tetractys, or number four, to be the sum and completion of all thinge, as compriaing the four great principlea both of arithmetic and geometry. In the centre of a manonic lodge, within an irradiation or blasing star, ia inscribed the letter G, denoting the great and glorious science of geometry, as cultivated by our ancient and venerable masters." And adds, "Whilst esch of thess our aymbols reciprocally serves to illustrate the reat, there is one senee, in which they yield to the decided pre-eminence of the great central emblem, whoee sacred initial character, surrounded by a blase of glory, recalls our minde from the work to the architect, from the science to its mystery."

The Egyptians invented geometry, sad they found it of auch infinite froportance, that they in a manner deified the science. Hence the great respect paid to its initial in mamonry. It is, in frect, made to indicate the Supreme Being, who, nocording to the Pythagorean doctrine, was
mgateriously involved in the phyaical principlea of nature. Geomekry is painted as a lody, with a sallow face, cled in a green mantle, fringed with silver, and holding a silver wand (the Nilometer) in her right hand. -Bailey.

The Eleusinian mysteries were regularly celebrated every filth year, that is, after a revolution of four years. The Olympic gamee took place at the amme time, the name of which originated from their being first colebrated near the city of Olympia. Hence the Olympiad, an epoch of four yeers; all ariaing, evidently, from the perfection attributed to the number four.

## The Custowes and Religious Dognas of the Druids of England, extracted from the Hiatory of Great Britain, by Robert Henry, D.D.

When the Romans first invaded Britain, under Julius Casar, the inhabitants of it were famous, even among foreign nations, for their euperior knowledge of the principles, and the great seal for the rites of their religion.

To say nothing here of the profits which the Druide derived from the adminiatration of justice, the practice of phyaic, and teaching the aciencee (whioh ware all in their hands), they oartainly received great emoluments from those whom they instructed in the principlea and initiated into the myzteries of their theology; eapecially from such of them na were of high rank, and came from foreign countries.

Notbing can be affirmed with certainty concerning the preciee number of the Britinh Druide, though, in general, we have reason to believe that they were very numerous. Both the Gauls and the Britons of thess timen were much sddicted to superstition; and among a superatitious people there will slways be many priests. Besidee this, they entertain an opinion, as we are told by Strabo, which was highly favourable to the incresse of the priestly order. They were fully persuaded, that the greater number of Druids they had in their country, they would obtain the more plentifal harvest, and the greater abundance of all thinge. Nay, we are direotly informed by Cesear, that great numbers of people, allured by the honours and privilegen which thoy anjoyed, ombraced the diecipline of the Druids of their own accord, and that many more were dedicated to it by their parents. Upon the whole, therefore, we shall probably not be very much mistaken, if we auppose that the Britiah Druids bore ${ }^{2}$ great a proportion in number to the rest of the people, as the olergy in popish countries bear to the laity in the present ago.

The Druide, as well as the Gymnosophinta of Indis, the Magi of Persia, the Chaldeans of Aseyris, and all the other priesta of antiquity, had two sets of religious doctrines and opinions, which were very different from one enother. The one of theseaystems they communicated only to the initiated, who were admitted intu their own order, and at their admission wers solemnly sworn to keep that aystem of dootrines a profound ecerct from all the reat of mankind. Beeidea this, they took several other precautions to prevent these necret doctrines from transpir-

Ing. They taught their disoiples, as we are told by Mola, in the moat private places, such as caves of the earth, or the deepest recesses of tho thickeat foresta, that they might not be overheard by any who were not initiated. They never committed any of theee doctrines to writing, for fear they should thereby become public. Nay, so jealous were nome orders of these ancient priesta on this heed, that they made it an inviolable rule sever to communicate any of these secret doctrines to soomen, lest they should blab them. The other aystem of religious doctrines and opinions were made public, being adspted to the capscitios and superstitious humours of the people, and oalculated to promoto the honour and opulence of the priesthood.

It cannot be expected, that we should be able to give a minute detail of the secret doctrines of the Druids. The Greak and Roman writers, from whom alone we can receive information, were not perfectly acquainted with them, and, therefore, they have left us only mome general hints and probable conjeotures about them, with which wo must bo contented. The secret doctrines of our Druids were much the same with thoee of the Gymnowophiste and Brachmans of India, the Magi of Persia, the Chaldeans of Asayria, the priests of Egypt, and of all the other prieste of antiquity. All these are frequeatly joined together by ancient authore, as entertaining the same opinions in religion and philosophy, which might be essily confirmed by an induction of particulars. The truth is, there is hardly anything more surprising in the history of mankind, than the similitude, or rather identity, of the opinions, institutions, and manners of theve orders of ancient priesta, though thay lived under such different climates, and at eo great a distance from ono another, without intercourse or communication. This amounts to a demonstration, that all these opinions and institutions flowed originally from one fountain. The secret doctrines of the Druids, and of all thees different orders of priests, were more agresable to primitive tradition and right resson, than their public doctrines; as they were not under any temptation, in their private schools, to concesl or disguiso the truth. It is not improbable shat they still retsined, in aecret, the great doctrine of one God, the creator and governor of the universo. This, which was originally the belief of all the orders of prieste which we have mentioned, was retained by some of thom long after the period we are now considering, (that is from the first inveaion of England by the Romans under Julius Cosesar, fifty-five years before the Christian era, to the arrival of the Saxons, A.D. 449,) and might, therefore, be known to the Druids at this period. This in one of the doctrines which the Brachmans of India are sworn to keep secret:-"that there is one God, the creator of heaven and earth" Casar soquainte us, that thay taught their disciples many things about the nature and perfections of God. Some writers are of opinion, and have taken much learned pains to prove, that our Druids, an well as the other orders of ancient priests, tsughts their disciples many things concerning the creation of the world-the formation of man-his primitive innocence and felicity-and hin fall into guilt and minery-the creation of angela-their rebollion and ax-
puleion out of Heaven - the universal deluge, and the final destruction of this world by fire; and that their doctrines on all theseabjects were not very different from thooe which are contained in the writings of Moses and other parta of Scripture. There is abundant evidence that the Druids taught the doctrine of the immortality of the souls of men; and Mela tells us, that this was one of their doctrines which they were permitted to publish, for political rather than religioua reasons. "There is one thing which they teach their disciples, which hath been made known to the common people, in order to render them more brave and fearless ; viz., "that souls are immortal, and there is nother life aftar the present." Cesar and Diodorus say, that the Druida taught the Pythagorean doctrine of the transmigration of soula into other bodies. This was perbaps their public doctrine on this subject, as being most level to the gross conceptions of the vulgar. But others represent them ns tewohing that the soul after death ascended into some higher orb and enjoyed a more sublime felicity. This was probably their private doctrine and real sentiments.*

But however agreesble to truth and reason the secret doctrines of the Druide might be, they were of no benefit to the bulk of mankind, from whom they were carefully concealed. For these artful prieate, for their own mercenary enda, had embreced a maxim, which hath unhappily survived them, that ignorance was the mother of devotion, and that the common people were incapable of comprehending rational principles, or of being influenced by rational motives ; and that they were, therefore, to be fed with the cosrser food of superstitious fables. This is the reason asaigned by Strabo, for the fabulous theology of the ancients. "It is not posaible to bring women, and the common herd of mankind to religion, piety, and virtue, by the pure and aimple dictates of reason. It is necessary to call in the aids of auperstition, which must be nourished by fables and portents of various kinds. With this view, therefore, were all the fables of ancient theology invented, to awnken ruperstitious terrors in the minds of the ignorant multitude." As the Druids had the same ends in view with the other priesta of antiquity, it is highly probable that their public theology was of the same complexion with theirs; conaisting of a thousand mythological fablea, concerning the genealogies, attributes, offices, and actions of their gods; the various superstitious methods of appewsing their anger, gaining their favoor, and discovering their will. This farrago of fables was couched in verae full of figures and metaphors, and was delivered by the Druids

[^94]from little eminences (of which there are many atill remaining) to the surrounding multituden. With this fabulous divinity, these poetical declaimera intermixed moral precepts, for the regulation of the lives and manners of their hearora; and were peculiarly warm in exhorting them to abstain from doing any hurt or injury to one suother; and to fight valiantly in defence of their country. These pethetio declamations are said to have made great impresaion on the minds of the people, inapiring them with a supreme veneration for their gods, an ardent love to their country, an undsunted courage and sovereign contempt of death. The secret and public theology of the Druids, together with their ayatem of morals and philosophy, had swelled to such an enormous size, in the beginning of this period, that their disciples employed no lees than twenty years in making themselves masters of all their different branches, and in getting by heart that infinite multitude of verses in which they were contained.

The sun seems to have been both the most ancient and most univernal object of idolatrous worship; inammuoh, that perhapa there never was any nation of idolstora which did not pay some homage to this glorious luminary. He was worshipped by the ancient Britona with great devotion, in many places, under the various names of Bel, Belinus, Belatucardus, Apollo, Grannius, etc., all which namee in their language were expresespe of the nsture and properties of that visible fountain of light and heat. To this illustrious object of idolatrous worahip, those famous circles of stones, of which there are not a few still remaining, seem to have been chiefly dedicated, where the Druids kept the sacred firc," the symbol of this divinity, and from whence, as being situsted on eminences, they had a full view of the heavenly bodies.

As the moon appeared next in lustre and utility to the sun, there can be no doubt that this rediant queen of heaven obtained a very early and very large share in the idolatrous veneration of mankind. The Gaula and Britons seems to have paid the zame kind of worahip to the moon as to the sun, and it hath been observed, that the circular temples dedicated to these two luminaries were of the same construction, and commonly contiguous. But a great number of the gods of Gaul and Britain, as well as of Greece and Rome, had been men, viotorious prinoes, wise legislators, inventors of useful arts, etc.

They worshipped also ssveral female divinitiea or goddesses; as Andraste, who is suppoeed to have been the same with Venua or Diana, Minerva, Ceres, Proserpine, etc. Nay, into such an abyes of supersatition and idolatry were they aunk, that, acoording to Gildas, they had a greater number of Gods than the Egyptians; and there was hardly a river, lake, mountain, or wood, which was not supposed to have some divinities or genii residing in them.

[^95]As it hath always been one end of religiour worahip to obtain ce:tain favours from tie objects of it, so prayere and eupplications for these favnurs have always made a part of the religious worship of all natione, and in particular of that of the ancient Britona. When in danger, they implored the protection of their gods; prayers were intermixed with their praiees, accompanied their sacrifioes, and attended every act of their religion. It aeems, indeed, to bave been the conatant, invariable practice of all nations, the Jewa not excepted, whenever they presented any offeringe or sacrifiose to their gods, to put up prayers to them to be propitious to the persons by whom and for whom the offeringa or sacrifices were presented; and to grant them such particular favours as they desired. Offeringe of varioun kinds constituted an important part of the religion of the ancient Britons. This was a mode of worship which the Druide very much enoouraged, and their emered 'pleces were crowded with thooe pious gifts.

Mankind in all ager, and in every country, have betrayed a consciousneas of guilt, and dread of puniabment from superior beings on that sccount. In consequeucs of this, they have employed various means to expiate the guilt of which they were oonscions, and to ecsape the puniahment of which they were afraid. The means which have been moat univerally employed by mankind for thene ends, were sacrifices of living creatures to their offended gods ; which constituted a very essential part of the religion of the ancient Britons, and of almost all other avcient nationa. The animah which were escrifiord by them, $n s$ well as by other nations, were such as they used for their own food: which being very palatable aod nouriahing to themselves, they imagined would be no less agreesble to their goda. These victime were examined by the Druide with great care, to see that they were the moet perfect and beautiful in their several kinds; after which they were killed, with various ceremonies, by priests appointed for that purpose. On some occasiong the victims were consumed entirely by fire upon the altar; but more commonly they were divided into three parts, one of which was consumed upon the altar, another fell to the share of the priests who offlciated; and on the third, the person who bought the sacrifice feasted with his friends.

It had been well if our British ancestors had confined themeolves to the sacrificing of oxen, abeep, goaty, and other animals; but we have undoubted eridence that they proceeded to the most borrid lengthe of cruelty in their superatition, and offered buman victims to their gods. It had unhappily become an articlo in the Druidical creed, ${ }^{4}$ That nothing but the life of man could atone for the life of man." In consequence of thin maxim their altara atreamed with human blood, and great numbers of wretched men fell a sacrifice to their barbarous superstition. They aro said, indeed, to have preferred such as had been guilty of theft, robbery, and other crimes, as moet scceptable to their gods; but when there was a acarcity of criminalg, they made no acruple to supply their place with innocent persons. These dreadful escrifices were offered by the Druide for the public, at the eve of a dangerous war, or in the time
of any national calamity; and for particular pernons of high ravk, when they were afflicted with any dangerous disease. By such acts of cruelty did the ancient Britons endesvour to avert the diopleasure and gain the favour of their gods.

It seems to have been one article in the creed of the sacient Britons and of all the other nations of antiquity, that the goda whom they worahipped had the government of the world and the direction of future evente in their hande; and that they were not unwilling, upon proper application, to discover theae eventa to their pione worshippers. "The gods (eays Aminnus), either from the benignity of their own natures and their love to mankind, or because men have merited this favour from them, take a pleasure in discovering impending events by various indications." This belief give rise to astrology, augury, magic, lots, and an infinite multitude of religious rites and ceremonies, by which deluded mortala hoped to discover the counsels of Heaven, with regard to themselves and their undertakings. We learn from Pliny, that the ancient Britons were greatly addicted to divination, and excelled so much in the practice of all ite arte, that they might have given s lesson to the Persisns themmolves.

The British eovereigns at thia period had not much authority either in the making or executing the laws, which are the principal acts of governmeat in peaceful times. In that great relaxation of political union and civil government which prevailed in times of peace, their religion seems to have been the cbief bond of union among the British tribes and nations; and the Druids, who were the miniaters of that religion, appear to have profeased the aole authority of making, explaining, and executing the laws; an authority to which the clergy of the church of Rome long and eagerly aspired, but never fully obtained. One great reason of the superior success of the Druids in their ambitious schemes was this: the lawe among the ancient Britons, and some other ancient nations, were not considered as the decrees of their princes, but as the commands of their gods; and the Druide were supposed to be the only persona to whom the gods communicated the knowledge of their commands, and consequently the only persons who could declare and explain them to the people. The violstion of the lawn were not coneidered as crimen against the princes or state, but as sins againat Heaven; for which the Druids, as ministern of Heaven, had alone the right of taking vengeence. All these important prerogatives of declaring, oxplaining, and exeouting the lawa, the Druids enjoyed and exercised in their full extent. "All controveraies, saya Cæesar, both public and private, are determined by the Druids. If any crime is committed, or any murder perpotrated; il any diaputes arise about the division of inheritances, or the boundaries of estates, they alone have the right to pronounce sentence; and they are the only dispensers both of rewards and punishments. Thene ghostly judges had one engine which contributed much to procure eubmisaion to their decisiona. Thia was the nentence of excommunication or interdict, which they pronounced againat particular persons, or whole tribee, when they refused to submit to their decreea. The intardicts of the Druids
were no leas dreadful than those of the Popes, when their power was at ita greateat height. The unhappy permons againat whom they were fulminated, were not only excluded from all sacrifices and religious rites; but they were held in unirereal deteatation, as impious and abominable; their company was avoided as dangerous and contaminatiog; they wore declared incapeble of any truat or honour, put out of the protection of the lame, and exposed to injuries of every kind." A condition which muat have rendered life intolerable, and have brought the moot refractory spirita to submiseion.

The firat day of May was a great annual feetival, in honour of Belinus, or the sun. On this day prodigious fires were kindled in all their sacred places, and on the tops of all their cairns, and many sacrifices were offered to that glorious luminary, which now began to ahine upon them with great warmth and lustre. Of this feestival there are still some vestiges remaining, both in Ireland and in the Highlands of Scotland, where the first of May is called Beltain, that is, the fire of Bel, or Belinuas $\dagger$ Mid-aummer-day and the first of Novernber, were likewise annual feetivale; the one to implore the friendly influences of heeven upon their fielde, and the other to return thanke for the favourable seasons and the fruita of the earth; as well as to pay their yearly contributions to the miniaters of their religion. Nay, it is even probable, thast all their gods and goddesses, their sacred groves, their hallowed hills, lakes, and fountsing, had their several anniversary feetivals; so that the Druidish calendar was perhaps as much crowded with holidaya as the popish one is at presont: On theee feativals, after the appointed sacrifices and other acts of devotion were finished, the rest of the time whs spent in feasting, singing, dancing, and all kinds of divension.

It was an article in the Druidical oreed, "That it was uniawful to build templee to the gods, or to worship them witbin walls and under roofs." All their pleces of worship therefore were in the open air, and generally on eninences, from whence they had a full view of the heavenly bodiea, to whom much of their adoration was directed. But, that they might not be too much incommoded by the winds and rains, distracted by the view of exteraal objects, or disturbed by the intrusion of unhal.

[^96]lowed feet, when they were instructing their diaciples, or performing their religious rites, they made choice of the deepest recessea of grovea and woods for their sacred places. These groves wero planted, for that purpose, in the moet proper situations, and with those trees in which they most delighted. The chief of these was a atrong and spreading oak, for which tree the Druidn had a very high and superatitious veneration. These escred groven were watered by some consecrated fountain or river, and surrounded by a ditch or mound, to prevent the intrusion of improper persons. In the centre of the grove was a circular area, inclosed with one or two rows of large stones, set perpendicularly in the earth, which constituted the temple, within which the altar stood on which the sacrifices were offered. In some of their most magnificent temples, as particularly in that of Stone-henge, they had laid stones of prodigious weight on the tope of the standing pillars, which formed a kind of circle aloft in the air, and added much to the grandear of the whole.

The Britioh Druids were in the zenith of their pewer and glory at this period, enjoying an almost absolute authority over the minds and persons of their own countrymen, and being greatly admired and resorted to by strangers. But as the Romans gained ground in this island, the powar of the Druids gradually declined, until it was quite destroyed; for that victorious people, contrary to their usual policy, discovered everywhere a very great animonity againat the persons and religion of the Druids. They deprived the Druids of all authority in civil matters, and ahowed them no mercy when they found them tranegressing the laws, or concerned in any revolt.

Such of the Druids as did not think fit to submit to the Roman government, and comply with the Roman rites, fled into Caledonia, Ireiand, and the lesser Britiah isles, where they supported their authority for some time longor. Many of them retired into the isle of Anglesey, which was a kind of little world of their own; and where the Arah Druid of Britain is thought to have had his stated reeidence. But they did not long remain undisturbed in thio retirement. For Suetonius Paulinus, who was governor of Britain under Nero, A.D. 61, observing that the isle of Anglesey wes the great seat of dissffection to the Roman government, and the anylum of all who wero forming plota againat it, determined to subdue it. Having conducted his army to the island, and defeated the Britons who attempted to defend it, though they were animated by the presencs and prayers and the exortations of a great multitude of Druids and Druidesses, he made a very cruel use of his victory. Not content with cutting down their sacred groves, demolishing their temples, overturning their altars, he barned many of them in the fires, which they had kiodled for Racrificing the Roman primoners, if the Britons had gained the victory. So many of the Druids perished on this occasion, and the

[^97]unfortanato revolt under Boedicia, Queen of the Ieeni, which happened soon after, that they were Dever ablo to make any conciderable figure after this period.

But though the dominion of the Druids in South Britain was destroyed at thia time, many of their superntitious practices continued much longer. Ney, so deeply rooted were theee principles in the rinds of the peoplo, both of Gaul and Britain, that they not only bafled all the power of the Romans, but they even resisted the superior power and divine light of the gospel for a long time after they had embreced the Christian religion. This ia the reason that we meet wilh so many edicte of emperors, and canons of councils, in the sixth, seventh, and eighth centuries, against the wormhip of the sun, moon, mountaine, rivers, lakes, and treen. This ruperatitution continued oven longer in Britain than in some other countries, having been revived firat by the Saxona, and afterwarde by the Danea. It is a sufflient proof of this that ao late as the eleventh century, in the reigu of Canute, it was found necessary to make the following law ngoinst the heathenish superatitions: "Wo striotly discharge and forbid all our subjects to worahip the gode of the gentiles; that is to say, the sun, moon, fires, rivers, fountains, bille, or trees, and wood of any kind."

Extract from Dr. Lingard'e History of England.
"To the veneration which the British Druide derived from their scoerdotal character, muast be added the respect which the reputation of knowledge nover fails to extort from the ignorant. They profesed to be the repositories of a ascred science, far above the comprebenaion of the vulgar ; and their mahools were opened to none but the eons of illustrious families. Such was their fame, that the Druide of Gaul, to attain the perfection of the inatitute, did not disdain to study under their Britiab brethron. They professed to be soquainted with the nature, the power, and the providence of Divinity ; with the figure, aize, formation, and final deatruotion of the earth; with the atare, their position and motions, and their supposed influence over human affairs. They practised the art of divination and magic. Three of their ancient astrologers were able, it is enid, to foretel whatover should happen before the day of doom. To medicine also they had protensions; but their knowledge was principally confined to the use of the miseltoe, vervein, savin, and trefoil ; and even the efficacy of theoe simples wras attributed not to the nature of the plants, but to the influence of prayers and in. cantations."

## From the Edinburgh Encyclopedia.

"The garments of the Druids were remarkably long; and when employed in religious ceremonies, they alwaya wore a white surplice. They generally carried a voand in their hands, and wore a kind of ornament encosed in gold, about their necke, called the Druid's egg. Thair necks were likewise decorated with gold chains, and their hands and arms
with braoeleta; they wore their hair very short, and their beards remarkably long.
"The Druids hed one ohief, or Arch-Druid, in every nation, who acted as high-prieat, or pontifex macimus. They had abeolute authority over the reat ; and commanded, decreed, punished, etc, at pleasure. Ho waa elocted from amongat the most eminent Druids, by a plurality of votas.
"They worshipped the Supreme Being under the name of Eeve, or Hesua* and the aymbol of the oak; and had no other temple than a wood or a grove, where all their religious ritea were performed. Nor was any person admitted to onter that acered recess, unlese he carried with him a chain, in token of his abeolute depondence on the Deity.

The consecrated groves, in which they performed their religious ritee, were fonced round with stonee, to prevent any persons entering except through the pacoegse laft open for that purpose, and which were guarded by some inferior Druide, to prevent any okranger from intruding into their mysterics. These groves were of different forms; some quite cireular, others oblong, and more or less capecious as the votaries in the distriota to which they belongod were more or lena numerous,"

In the chain carried by the ancient Britons, in the performance of their raligious rites, is to be soen the archotype of the csble-tow, or towrope, worn ebout the neok of the aspirant to masonio secrets, which is the subject of much ridicule among the uninitiated profane, and, indoed, the fraternity themeelves do not neam to be aware of its true import. They are not conscious that this humble bsdge is a testimony of their belief in God, their dependence on him, and their soleran obligationa to deyote themselves to his will and eervice.

The caodidate for mssonio instruction ahould be looked upon as an untutored, wild man of the woods; a mere child of nature, unregonerated and destitute of any knowledge of the true God, as well as the conveniences and comforts of civilized life. For this reason, he is exhibited blindfolded, "neither naked nor clothed," but about halt-way botween both.

Hero also many be seen the type of the masonic tiler, an inferior efficer, with a drawn sword, to guard the lodge from the impertinent intrusion of cowane, or rather covins, and eaveedroppera It will not be pretended that a sword is needed in thin case; it is a mere ensign of office, in conformity to the Druidical curtom.

[^98]The following extracta from Hume's History of Englend, will account for the slow introduction of Christianity among the ancient Britona:-
"The most memorable event which distinguiahed the reign of this great prince [Etbelbert] was the introduction of the Christian religion among the Renglish Sarons, The superstition of the Germans, particularly that of the Saxons, was of the grossest and most barberous kind, and being founded on traditionary tales received from their ancestors, not reduced to any systam, nor supported by political institutions like that of the Druids, it esems to have made little imprescion on its votaries, and to have easily reaigned ita place to the new doctrine promulgated to them.
"On the contrary, the constant bostilities which the Saxons maintained egainst the Britons would naturally indispose them for receiving the Christinn faith, when preached to them by such inveterato enemies.
"The Sexons, though they had been long settled in the ialend, seem not as yet [early part of the ninth century], to have been much improved beyond their German ancestors, either in arts, civility, knowledge, humanity, justice, or obedience to the laws. Even Chrigtianity, though it opened the way to connections between them and the more polinhed states of Europe, had not hitherto been very effectual in banishing their ignorance or softening their barbaroun mannera. As they received that doctrine through the corrupted channels of Rome, it carried along with it a great mixture of credulity and auperstition, equally destructive to the understanding and to morals. The reverence toward saints and reliques seems to have almost supplanted the adoretion of the Supreme Being. Monastic observances were eeteemed more meritorious than the active virtues; the knowledge of natural caumes whas neglected, from the universal belief of niraculous interposition and judgments; bounty to the church atoned for every violencu againat society; and the remornea for cruelty, marder, treachery, assassination, and the more robust vices, were appessed, not by amendment of life, but by penances, sarvility to the monke, and an abject and illiberal devotion * The ecclecientics, in thoes days of ignorance [middle of the ninth oentury], made rapid edvance in the acquisition of power and grandeur, and in inculcating the most absurd and most interested doctrines. Not content with the donations of land mede them by the Saxion princes and nobles, they had cast a wiohful eye on a vast revenue, which they olaimed as belonging to them, by a racred and indefeasible title. However little versed in the Scripturee, they had been able to discover, that, under the Jewiah law, a tenth of all the produce of land was conferred on the prienthood; and, forgetting what they themselves taught, that the moral part only was obligatory on Christians, they insisted that this donation conveyed a perpetual property, inherent, by divine right, in those who officiated at the altar. During mome centuries, the whole scope of sermona and homilies was directed to this purpoee ; and one would have imagined, from the general tanor
of these discourses, that all the prestical parte of Christianity were comprised in the exact and faithful payment of the tithes to the clergy. Encouraged by their success in inculcating these doctrines, they ventured farther than they were warranted, even by the Levitical law, and pretended to draw the tenth of all industry, merchandize, wages of Lsbourers, and pay of soldiers; nay, some canonista went so far as to affirm, that the clergy were entitled to the tithe of the proftes made by courtesans in the exercise of their profeasion."

## Slavery in England.

As alaves are not admitted into the society of Freemesons, it may be interesting to some of our readers, unscquainted with the fact, to know the vaet extent of the evils of alavery in England at the time when this institution is supposed to have been established, and the great proportion of the inhabitante, partioularly of the mechanical and labouring clases, that were consequently excluded from a participation in its charitalle and benevolent purposes. I therefore give the following extract from Dr. Henry's Hiatory of the different ranke of people in Britain, from the arrival of the Saxons, A.D 449, to the landing of William, Duke of Normandy, 1066.

The lowest order of people among the Anglo-Saxons and the other nations of Britain, in this period, were alaves, who with their wives and children were the property of their masters. Besides those who were native slaves, or alsves by birth, others frequently fell into this wrotched etate by various mesns, sa by an ill run at play, by the fate of war, or by forfeiting their freedom hy their crimes, or even by contracting debts which they were not able to pay. Theee unhappy people, who were very numerous, formed an article, both of internal and foreign trade; only if the alave was a Christion, he was not be sold to a Jew or - Pagan; or, if be belonged to the same nation with his master, he was not to be sold beyond the sea. Slaves were, however, of various kinds, among the Anglo-Sexons, employed in vaious works, and were not all in an equal state of thraldom. Some of them were called villani, or villains, because they dwelt at the villages belonging to their masters, and performed the Bervile labours of cultivating their lands, to which they were sunexed, and transferred with these lande from one owner to another. Others were domeatic alaves, and performed various offices about the housea and families of their masters. Some of these domestic slaves of the king and the nobility were taught the mechanic sits, which they practised for the benefit of their owners; and the greateat number of the mechanics of those times seem to have been in a state of servitude. Slaves were not supposed to have any family or relstions who sastained any loss by their death; and, therefore, when one of them was killed by his master, no mulet was paid, because the master was supposed to be the only luser; when slain by another, hia price or manbote was paid to his master. In a word, slaves of the Luwest order were considered merely as animals of burden and parts of their owner's living stock. In the laws of Wales it is expresaly
aid:- "That a master hath the same right to his alaves as to his cattle."

The horrorn of this cruel servitude were gradually mitignted; and many of those unhappywretches were raised from this abject atate to the privileges of humanity. The introduction of Christianity contributed not a little, both to alleviate the weight of aervitude and diminiah the number of alavee. By the canonn of the church, which were in those timea incorporated with the lawa of the land, and of the rame authority, Christian were commanded to allow their alaves certain portions of time to work for their own benefit, by which they scquired property,-the biahope had authority to regulate the quantity of work to be done by slaves,-and to take care that no man used his alsve harohly but an a fellow Christisn. The bishope and clergy recommended the manumisaion of alaves as a most charitable and meritorious action; and in order to sot the example, they procured a law to be mede, that all English alaves of every biohop should be set at liberty at his death, and that every other bishop and abbot in the kingdom should set three slaves at liberty. But after all these mitigations of the severities of alavery, and diminutions of the number of slaves, the yoke of eervitude was atill very heary, and the greatest part of the labourara, mechanice, and common people groaned under that yoke at the sonclusion of this period.

The next class or rank of people in Britain, in this period, was composed of those who were called frilazin, who had been alsves, but had either purchased, or by some other means obtsined their liberty. Though these were in reality free-men, thoy were not considered as of the same rank and dignity with those who had been born free; but were atill in a more ignoble and dependent condition, either on their former masters, or on some new petrons. This oustom the Anglo Sexons aeermed to have derived from their ancestore in Gormany, among whom thoee who had been made free did not differ much in point of dignity or importance in the state from thoes who continued in servitude. This distinction, between thoee who had been made free and thoee who enjoyed freedom by dencent from a long race of freemen, still prevaila in many parts of Germany, and particularly in the original seata of the Anglo-Sarons. Many of the inhabitants of towns and cities in England, in this period, seem to have been of this class of men, who were in a kind of middle state, between slaves and freemen.

The third class or rank of people in Britain, in the period we are now oonsidering, consisted of those who were completely free, and descended from a long race of freemen. This numerous and respectable body of men, who were called ceorls, constituted a middle class, between the labourers and mechanics, who were generally slaves, or deecended from slaves on the one hand, and the nobility on the other. They might go where they pleased, and pursue any way of life that was moet agreeable to their humour. - vol. iii., p. 320.

In the time of the Anglo-Saxon rule, says Dr. Lingard, not less than two-thirds of the population of Britain existed in a state of alavery
and the sale and purchase of slaves publicly prevailed during the whole of this period. These unhappy men were sold like cattle in the market. The Northumbrians, like the savages of Africa, are said to havecarried off, not ouly their own countrymen, but even their friends and relativer, and to bave eold them as slavee in the ports of the continent. The men of Bristol were the last to absudon this nefarious traffic. Their egents travelled into every part of the country; they were instructed to give the highest price for females in a state of pregnancy; and the alave ahipe regulariy seiled from that port to Ireland. where they were secure of a ready and profitable market.

## CBAPTER VI.

## OPTNIONS AND OBSERVATIONS OT LEARNED WRITEBS OM FBERMABONBT, Who arg in full conowuion with the order.

Most of those writers on mesonry who belong to the craft, either through ignorance or deaign, bave myatified the subject in auch a manner as to render it not only unintelligible, but absolutely forbidding.

The opiniona, therefore, of those of the order who have written with candour, and with a view of eliciting the truth, so far as they deemed consistent with their obligations, are entitled to great cousideration. Suoh are the writingo from which the following extracts are made; or, at least, the passagea selected generally bear that character.

## From "The Spirit of Masonry," by William Hutchinsom. Carlises, (England) 1802.

I sm induced to believe the name of mason has ita derivation from a language, in which it implies a strong indication, or distinction, of the mature of the society; and that it has no relation to architecta.

The titles of masons and masonry most probably were derived from the Greek language, as the Greek idiom is adopted by the Druids, as in ahown in many instances in the course of this work. When thay committed anything to writing they used the Greek alphabet, and I am bold to assert that the most perfect remains of the Druidical rites and ceremonies are preserved in the ceremonials of masons that are to be found existing among mankind. My brethren may be able to trace them with greater exactness than I am at liberty to explain to the public. The original namee may probably be derived from or corrupted of Mysterion, rea arcana, mysteries, and Mystes, sacris initiatus myatis-those initiated to sacrei mysteries."
There is no doubt that our ceremonies and myeteries were derived from the rites, ceremonies, and Institutions of the ancienta, and some of them from the remoteat ages.

The ancient masonic reoord [the examination of a freemseon by Henry

[^99]VI.] rays, that masons knew the way of gaining an undentanding of Abrac. On this word all commentators (which I have yet read) an the subject of wasonry have confessed themselves at a loss.

Abrac, or Abracar, was a name which Besilidea, a roligious of the aecond century, gave to God, who he said was the guthor of three hundred and eixty-five.

The author of this superatition is said to have lived in the time of Adrian, and that it had its name after Abrasan, or A rbasas, the denomination which Basilides gave to the Deity.- He called him the Supreme God, and ascribed to him soven subordinate powera or angels, who presided over the heavens:-and aloo, aceording to the number of the days in the year, he held that three hundred and sixty-five virtues, powers, or intelligences, existed as the emanations of God; the value, or numerical distinctions of the letters in the word, according to the ancient Greek numerala, made 865-A

With entiquaries, $A$ braxas is an antique gem or stone, with the word abraxas ongraven on it. There are a great many kinds of them, of various figures and sizes, mostly as old as the third century. Persons professing the religious principles of Beailides, wore this gem with great veneration, as an amulet; from whose virtues, and the protection of the Deity, to whom it was consecrated, and with whose name it was inscribed, the wearer presumed he derived health, prosperity, and safety.

In the British Museum is a beryl utone, the form of an egg. The head is in esmio, and reversed in taglio. The head is aupposed to represant the image of the Creator, under the denomination of Jupiter Ammon:- the nun and moon on the reverse, the Osiris and Isis of tho Egyptians ; and were used hieroglyphically to ropresent the omnipotence, omnipreeence, and eternity of God. The star seema to be used as a point only, but is an emblem of prudence, the third emanation of the Basilidian divine permon.

In church history, $4 b \mathrm{rax}$ is noted as a mystical term, expreasing the Supreme God; undor whom the Basilidians supposed three hundred and sixty-five dependent deities; it was the principle of the gnortio hierarchy; whence sprang their multitudes of Thisons. From $A$ bracas proceeded their primoganial mind; from the primogenial mind, the logos or word; from the logos, the Phroncesis or prudence; from phrongesis, Sophia and Dynamis, or wisdom and atrength ; from theae two proceeded principalities, poroers, and angels; and from these, other angels, of tho number of three hundred and aixty-five, who were suppoeed to have the guvernment of so many celestial orbs committed to their care. The Gnostics were a sect of Christians having particular tenets of faith; they assumed their name to expreas that new knowledge and extraordinary light to which thes made pretansions; the word gnostic implying an enlightened pereon.

Jupiter Ammon was worshipped under the symbol of the sun. He was painted with horns, because with the astronomers the sign Aries in
the sodino in the beginning of the year; when the wun enters into the house of Aries, be commencee his annual course. Heat, in the Hebrew tongue is Hammah, sud in the prophet Isaiah Hammamin is given as a name of such images. The error of depieting him with horns grew from the doubtful signification of the Hebrew word, which at once expresses Meat, splendour, or brightnees, and also homs.

The sun was aleo wornhipped by the house of Judah, under the name of Tamus, for Tamus, mith Hierom, was Adonis, and Adonis is gonerally interpreted the sun, from the Hebrew word Adan signifying dominue, the name as Baal, or Moloch, formerly did the lord or prince of the planets. The month which we call June, wis by the Hebrews called Tamuz; and the entrance of the sun into the sign cancer was in Jewe' astronomy termed Tekupha Tamuz, the revolntion of Tamua About the time of our Saviour, the Jews held it unlawfal to pronounce that essential name of God, Jevohah; and instead thereof, read Adonai, to prevent the henthen blaspheming that holy name by the adoption of the name of Jove, etc., to the idole. Concerning Adonis, whom some ancient writers call Oairia, there are two thiogs remarkable. The death, or lom of Adonis, and the finding of him again; as there was great lamentation at his lons, so wis there great joy at his finding. By the desth or loses of Adonia, we are to underatand the departure of the sun; by his findiog egrain, the return of that luminary. Now he seemeth to depart twice in the year; first, when he is in the tropic of cancer, in the farthest degree northward; and, seoondly, when be is in the tropio of capricorn, in the farthent degree zouthward. Heace we may note, that the Egyptiane celebrated their Adonis in the month of November, when the sun began to be farthest southward, and the house of Judah theirs in the month of June, when the sun was farthest northward; yot buth were for the same reasons. Some authore say, that this lamentation was performed over an image in the night beason; and when they had sufficiontly lamented, a candle was brought into the room, which ceremony might myatically denote the retura of the sun, then the prieat with a soft voice muttered this form of words, "Trust ye in God, for out of paine acluation in come to us."-Godroyn's Mases and Aaron.

Our sacient recond, which I have mentioned, brings us positive evidence of the Pythagoresn doctrins, and Basilidian principlea, making the foundation of our religious and moral rules.

As the servanta of one God, our predecessors professed the temple, Wherein the deity approved to be zerved, whe not the work of men's hande. In this the Druids copied after them; the universe, they confeesed, was slled with his presence, and he wes not hidden from the most distant quarters of creation ; they looked up towarda the heavens as his throne, and Wheresoever under the sun they worshipped they regarded themselves as being in the dwelling-plece of the Divinity, from whose eye nothing wha concealed. The anosents not only refrained from buildiog temples, but even held it utterly unlawful; because they thought no temple aper cious enough for the sun, the great symbol of the deity. "Mundus uni-
verrus est templum solis*" was their maxim; they thought it profane to eet limits to the infinity of the Deity ; when in later agee they built temples, they left them open to the hearens, and unroofed.

As we derived many of our mysteries and moral principlea from the doctrinen of Pythagoras, who had acquired his learning in Egypt, and othere from the Phoenecians, who had received the Egyptian theology in an early age, it is not to be wondered that wa should ndopt Egyptien aymbola to represent or express the attributea of the Divinity.

The third emanation of Abrax, in the Gnoetic hierarchy, was Phronsedele, the emblem of Prudence, which is the first and moat exalted object that demands our attention in the Lodge. It in pleced in the oentre, ever to be present to the eye of the mason, that hie heert may be attentive to her dictates, and ateadinat in her laws;-for prudence is the rule of all virtues ; prudence is the path which leads to every degree of propriety; -prudence is the channel whence self-approbation flowe for ever;-she leads ua forth to worthy aotions, and as a Bloring Star, onlightaneth us through the dreary and darknome paths of this life.t

That innocence should be the professed principle of a maon, occanions no astonishment, when we consider that the discovery of the Deity leads us to the knowledge of thone maxims wherowith ho may be wall pleased. The very ides of a God is succeeded with the belief that he can approve of nothing that is ovil; and when firat our predeocasore profensed themselves eervante of the Architoot of the world, as an indiapensable duty, they profeesed innocence, and put on a white raiment, as a type and abaracteriatic of their conviction, and of their being devoted to his will. The Druids were apparelled in white, at the time of their ascrifices and molemn ofices. The Egyptian priestes of Oairis wore anow.white cotton in the service of Ceres [Iais], under whom was symbolised the gift of Providence in the fruite of the earth, and the Grecian priests also put on white.
Every degreo of ain strikea the rational mind of man with nome feelinge of eelf-condemnation. Under auch conviction, who could call upon, or claim the presence of a Divinity, whoee demonstration ia good worka it Hence art men oaturally led to conceive that such Divinity will rocept only of worke of rigbteousaess, Standing forth for the approbation of heaven, the servants of the first revealed God bound themselves to maxims of purity and virtue; and as masons, we regand the principles of those who were the firet worahippers of the true God; we imitate their apparol, and asume the badge of innoonce.

In this pretension of the anthor, that the predecessons of the freemasons:

[^100]wore the first to discover the true God, sa allusion is evidentily made to the Eggptians, who seem to have been great boasters in this respect.
"The most encient of the profane historisns, and he who speaks in the most learned manner of the religion of the Rgyptians, is Herodotus, The Egyptians, according to him, are the firat people in the world who know the names of the twelve grest gods, and from them the Greeks hed learned them. They, too, are the first who erected altars to the goda, made repreventations of them, raised temples ts them, and had priesta for their eorvice, excluding wholly the other sex from the priesthood. Never wat any people, continues he, more religious. They even had two sorte of writing, the one common, and the other zacered; and thia last is set spart solely for the myateries of religion. Their priestes share their whole body every third day. Clothed in linen, with sandels made of the plant papirus, they were not allowed to wear other apparol, nor other covering for the feet. They are obliged to bathe themselves in cold water twice a day, and as often by night. So scrupuloualy exact must the priests be in the choice of the victims which they are to offer to their gode, that they are puniehed with death if they offor up apy which have not the qualities requisite,"-Mayo's Myth. v. 11. p. 27.

The colour of white's being made a symbol of purity and innocance probably owes its origin to the following absurd notions of the ancienta:
" $\Delta s$ the constellations of summer socompsuied the season of long, warm and unclouded days, and that of fruits, and harvests, they were considered as the powers of light, fecundity, and creation, and by a transition from a phyaical to a moral eense, they became genii, angela of science, of benificence, of parity and virtue; and as the constellations of winter were connected with long sighte and polar foge, they were the genii of darkmeng, of destruction, of death, and, by transition, avgels of ignorance, of wiekedness, of sin and vice.
"Now, as the earthly atates, the greater part despotic, had already their monarohs, and as the sun was spparently the monaroh of the skies, the summer hemisphere, empire of light, and its constellations, a people of white angela, had for king an enlightened God, a creator intelligent and good. And as every rebel fsction must have its chief, the heaven of winter, the subterraneous empire of darkness and woe, and ita stare, a poople of black angels, gianta or demons, had for their chief a malignent genius, whowe character was applied by different persons to the constellation which to them was the moet remarkable."-Ruins, p. 144-5.
"The prients, eays Dupuis, clothe themselves in white, s colour asaigned to Aromaze, or the god of light."

The superstition, or rather affectation in regard to this colour, is still retained among some Chriatian sects, whose priesta cover themselvea with this pagan outward show of purity.

It is nomowhat remarkable that white, as an emblem of purity and innocence, should have deacended to the sborigives of America. The prophet, who accompanied Black Hawk and other chiefs to Weahington as hostages for the faithful performance of the treaty made with their nation (1833), thus addreased the Preaident of the United Statas:-
"Father I have come this day clothed in vehite (pointing to his leather doublet) in order to prove that my intentions are of the most pacific nature, and (raising his hands to heaven) I call upon the Great Spirit of myself and forefathers to witness the purity of my heart on this occasion."

In this country [England] under the Druids, the first principles of our profession moet assuredly were taught and exercised.

We are bold to say, that if we trace the antiquity of masonry on operative principles, and derive such principles from the building of Solomon's Temple, we may as well claim all the professions which Hiram excelled in.

Assuredly the secrets revealed to us were for other uses than what relate to labouring up masses of stone ; and our society as it now stands is an association on religious and charitable principles, which principles were instituted and arose upon the knowledge of God.

We ground a judgment of the nature of our profession on our ceremonials, and fiatter ourselves overy mason will be convinced that they have no relation to building and architecture, but are emblematical, and imply moral, and spiritual, and roligious tenets. It appears self-evident, that the situation of the Lodge, and ita several parts, are copied after the Tabernacle and Temple, and are representative of the universe, implying that the univerase is the temple in which the Deity is everywhere present, Our mode of teaching the principlea of our profession is derived from the Druids ; our maxims of morality, from Pythagoras; our chief emblems originally from Egypt: to Bacilidea we owe the acience of $\Delta b r a x$ and the characters of those emanations of the Deity which we have adopted, and which are ao neceessry for the maintenance of a moral society.

Our lodges are not now appropriated to worship and religious caremonies; we meet as a social society, inclined to acts of benevolence, and suffer the more sacred offices to reat unperformed. Whether thia neglect is to our honour, we presume not to determine ; in our present state, professing ourselves free and sccepted masons, we are totally severed from architecte, and are beoome a set of mon working in the dutiee of charity, good offices, and brotherly love.

From the ancient rites and ceremonies which we have laid before you, it will be easy for you to trace the origin of our own ritee, and to discover the foundations on which our society is formed,

We have explained to you, that the structure of the Lodge is a pattern of the universe, and that the firnt entry of a mason represents the first worehip of the true God. We have retained the Egyptian mymbols of the sun and moon, as the emblems of God'e power, eternity, omnipresence, and benerolence; and thereby we signify, that we are the children of light, and that the first foundation of our profession is the knowledge and adoration of almighty Mesouraneo, who seateth himself in the oentre of the heavens:-We derive from the Druids many

[^101]of the Ammonian rites; and have saved from oblivion many of thatr roligious rites, in our initiation to the firat degree of masonry, whioh otherwise would have alept in eternity. These we meem to have mixed and tempered with the principles of the Eseenes, who are a sect ag ancient es the departure of the children of Israel out of Egypt. The philosopby of the Egyptinns, and the mannere, principles, sad customs of the Hebrews, were introduced to this land by the Phoeniciane, and make n part of our profession, so far as they are adapted to the worahip of Nature's greet Author, unpolluted by idolstry.

We hold our grand featival on the day of St. John, which is midsummer day; in which we celebrate that season when the sun in in its greatest altitude, and in the midst of its prolific powers-the great type of the omniputenoe of the Deity.

We are not to search for our antiquity in the mythology of Greece or Rome, we edvance into ramoter agea. Religion was the original and constituent principle; a recognition of the Deity first diatinguished ua from the reat of mankind; our predeoessore searched for the divine eseance in wonders displayed on the face of nature-they diecovered suprame wiadom in the order of the universe-in the stellary system they traced the power, in the seasons and their changes the bounty, and in animal life the benevolence of God; every argument brought with it conviotion, and every objeot confirmation, that all the wondere displayed to the eye of man, were only to be produced by some superlative being, and maintained by his suparintendency. It was from auch conviction, that men began to class themselves in religious societies.

I may venture to assert, it was the only consequence which could ensue whilst men were looking up to the Divinity through his works, that they would conclude the sun was the region where, in celestial glory, the Daity repored.

We diecover in the Ammonian and Egyptian ritee, the most perfeot semnins of those originals to whom our society refers. We are told they eateemed the soul of man to be an emanation of the Supreme, and a spirit detarhed from the seraphio bands, which filled the solar mansions, and surrounded the throne of majesty. They looked up to this grand luminary as the native realm from whence they were sent on this esrthly pilgrimage, and to which they should, in the end, return; the figure of the aun was at once a memorial of their divine origin, a badge of the religious faith they professed, and s monitor of those principles which should conduct and ensure their restoration. How soon, or to what extreme, superatition and bigotry debased this emblem, is a research painful and unprofitable.

We masons have adopted three partioular characteristica, necrecy, charity, and brotherly love. Our sense of these great duties has been explained, and of what especial import they are to masons, or to men who have separated themselves from the rest of mankind, and professed they are servante of Him who ruleth in the midst of heaven.

If our ceremonies mean not the matter which has been expressed; it they imply not the moral and religious principles which we have endea-
voured to unveil ; it may be asked of you, masons, what they do imply, import, or indicate !

## Genius of Masonry.

Samuel L. Knapp, Esq., in a work entitled "The Genius of Maeonry, or a defence of the Order," in taking notice of the lata discoveries made by Champollion and others, of the hidden wiodom of the Egyptians, by ancertaining a clue to the understanding of their hieroglyphics, obeerven:
"These distinguished men who have embarked with so much of that seal which is neceseary for the sccomplishment of any great object, will, we trust, be permitted to entirely draw the veil of Inis which bas covered her mysteriee so long that the worid began to deapair of ever seeing the glories it concealed. Behind this veil of Isia I have long thought was concealed our masonio birth. I now fully believe it. There wes tho cradle of masonry : no matter by what name it was called : no matter by whom it whe enjoyed."-p. 99.

> An Ahiman Reson;

By brother Frederiek Dalcho, M.D., Cherleston, S. C., 1807. Contalning extracta from an Oration delivered by him, bafure the grand lodge of Bouth Carollina, 1801: from which the following is taken.

In the carliest ego of man, when the human mind, untainted by the vices and prejudicen of later times, unahackled by the terrors and ansthemas of contending sectaries, and the machinations of bigoted priests, and the God of nature received the homage of the world, and the worahip of his adorable name constituted the principal employment of him to whom the mysteries of nature were first revealer. After the deluge, the Worship of the Moet High was obecured by the olouds of imagery, and defiled by idolatry.

In many of the ancient nations of the eest, their religious rights were enveloped by the prieata, in allegories, emblems, hieroglyphics, and myatic devicee, which none could understand but those of their own order. From these ancient examples, the myateries of the craft have been wisely concealed from the vulgar; and under cover of various well adspted eymbols, is conveyed to the enlightened freemason an uniform and well connected aystem of morality.

I am of opinion that the ancient society of free and accepted masons was never a body of architects; that is, they were not, origioally, embodied for the purposes of building, but were associated for moral and religious purposes It must be evident to every freemsson, that the situation of the lodge and its several parts are copied after the Tabernacle and Temple ; and represent the universe as the temple in which the Deity is everywhere present. Our manner of teaching the priociples of our myatic profesion is derived from the Druids, who worship one suprems

[^102]God, immense and infinite; our maxims of morality from Pythagoras, who taught the duties we owe to God as our creator, and to man as our fellow creature; many of our emblems are originally from Egypt; the scienoe of Abrax, and the characters of those emanations of the Deity, which we have ndopted, are derived from Basilides.

The word Mason is derived from the Greek, and, literally, means a member of a religious sect, or one who is profeseedly devoted to the worship of the Deity.*

As humanity ever springs from true religion, every religious sect, which acknowledges the Supreme Being, are equally respected by the order. Religious disputes are baniahed from our societies, as tonding to sap the foundations of friendship, and to undermine the basis of the best institutions. The great book of nature is revealed to our eyes; and the universal religion of her God is what we profeen as freemssonse

Dr. Dalcho published a second edition of his Ahiman Rezon, with additions and explanatory notes, in 1822. And it may not be improper to atate, that previously to this period he had taken clerical orders, Which perhaps caused him to examine the masonic inatitution more crilically than fe had done, to ascortsin if it contained anything inconxistent with his escerdotal functions. At any rate, a change in his opinions on some points, seems to have taken place, which are set forth in his explanstory notes, from which the following extancts are taken.

## Origin of Freemasonry.

The principles of our order are coeval with the oreation. Founded upon the laws of nature and the commands of God, nothing had precedence of them in time. The origin of the society, however, as an institution distinct from other aesociations, is involved in impenetrable obscurity. And notwithstanding the learning and zeal of many industrious masons, it will, I fear, for ever remain unknown. Various indeed have been the speculations on this subject, and great has boen the labour expended by many "good men and true" to prove that every man of note, from Adam down to the present dsy, were freemasons. But such round assertions are beneath the dignity of the order, snd would not be urged by men of letters. Neither Adam, nor Noah, nor Nimrod, nor Mosea, nor Joshua, nor David, nor Solomon, nor Hiram, nor St. John the Baptist; nor St. John the Evangelist, belonged to the mamonic order, however congenial their principlea may have bean. It is unwise to menert more than we can prove, and to argue against probability. Hypotheaia in history is absurd. There is no record, ascred or profane, to induce us to believe that theee holy end distinguished men were freemasons, and our traditions do not go back to their daya, To assort that they were freemasons, may "make the Fulgar stare", but will rather excite the contompt than the admiration of the wise. If St John was a freamason,

[^103]then it in imposeible that Solomon should have been one, because his lodges could not have been dedicated to St. John, who was not born until a thouaand yeare after the first temple wes built, therefore there would have been in St. John's day, what there whe not in Solomon'e, which would be contrary to our known principlea. And bealdee, if both theee perzonagea were froemasons, then wo have the evidence that Solomon was the greater mason of the two, and our lodges should be dedicated to him, instead of St. John. Butil Solomon was a freemason, then there could not have been a freemoson in the world, from the day of the creation down to the building of the temple, as must be ovident to every mastar masol.

The axcellence of our institution dependa upon fta nsefulnees, and not ite antiquity. It is sufficient for us to know, that the origin of tho inatitution if so remote, that the date is loet in the lapee of ages, and can now only be indistinctly tresed by occusional recorde, and the traditions of the order.

Dr. Priestly, in his romarise on Mr. Dupuis' Origin of all Religionn, clensea the freemnons and Gypeiea together. He affirms thet, "they have formed themsolves into a body, though of a very heterogeneous kind, but are not able to give any rational sccount of their origin." (Institutee of Moses, page 836.) The philosopher hes certainly placed us in bad compeny, by cleseing us with thees vegrants; but his inference is nevertheleses true. The purpoeen for which our institution wan originally orgenired, aro now an unknown as the date of ite origio. Whether it was dexigned for architectural purposen, for the improvement of the arta and scienoss, or for the preservation of revealed religion, by siguificant symbole and impressive rites, in an idolatrous and barbarous sge, cannot now be mecertained. Perhapa all these objecta gave rise or perfection to the inatitution.

When the Hindoos olaim for their Shastran an mntiquity of more than two millions of yeara; when the Chaldeans boast of obeervations of the stars for more than four hundred and weventy thousand years, and Manetho Sebennyte, the high prient of Hellopolin, claime for the Egyptinns a national existence of nearly fifty-four thousand years, who would heaitate to pronounce them all fabulous 1 Let freemseons, then, give up the vain boastinga which ignorance has foiated into the order, and relinquish a fabulous antiquity rather than eacrifice common senve. Let us trace our principles to Adam, or even to God himself, with reverence be it spoken, but let us not excite the pity of the wise, by calling Adam a freemason. This will not lessen the digaity or importance of the inatitution, but rather add to its colebrity by giving it a rewonable origin.

Mr. Clinch supposean freemseonry was introduced into Europe by means of the Gypeien. (See Anthologia Hibernica, for April, 1794, p. 280.)

Although this is a very ridiculous suppoaition, it is highly probsble that the leaders of the first emigrants of this tribe from Rgypt had been initiated into the leaser mysteries, and perhape copled in part from them the forms of the oath which they adminiater to their initiates.
"Every person who was not guilty of some public crime, conld obtain admisaion to the leaser mysteriea. Those vagabonds called Egyptian priesta in Greece and Ital5, required oonsiderable euma for initustions; nnd the Gypaiee practize similar mummeries to obtain money." -(De Puaw's Egypt, vol. ii., p. 42.)
The customs of the latter, and the oath which they impose upon each othar, hes been preserved by Bailey ; from whioh, as a curious antique, I make the following extract:-
"The Gypaiea derive their origin and name from the Egyptians, a people heretofore very famous for estronomy, natural magio, the art of divination, stc., and, therefore, are great pretenders to forlune-telling.

It is the custom of these vagrants to swear all that are admitted into their fraternity, by a form and articlee annexed to it, administered by the principal Maunder or roguish Strowler, and which they generally observe inviolably. The manner of admitting a new member, together with the said oath and articles, are as follows:
"The name of the person is first demanded, and a nick-name is then given him in ite stesd, by which he is ever after called, and in time, his other name in quite forgotten. Then standing up in the middle of the fraternity, and directing hia face to the Dimber-Damber, or prince of the gang, he awears, in this manner, as is dictated to him by one of the moet experienced:
"'I, Crank-Cuffin, do swear to be a true brother, and will in all thinge obey the commands of the great Tawney Prince, and keep his counsel, and not dirulge the secrets of my brethren.
"I will never leave nor forsake this company, but obeerve and keep all the times of appointmente, either by day or by night, in any place whateoever.
"I will not tesch any one to cant; nor will I dieciose aught of our snyuteries to them, although they flog me to death.
"I will take my prince's part against all that shall oppoee him, or any of us according to the utmost of my sbility; nor will I euffer him, or any belonging to us, to be abused by any strange Abrams, Rufflers Hookers, etc., but will defend him or them as much an I can against all other outlyers whatover.
"I will not conceal eught I win out of Libking, or from the Ruffmans; but will preserve it for the use of the company.'"

The canters have, it seems, a tradition, that from the three first articles of the oath, the firat founders of a certain boestful, worshipful fraternity, who pretend to derive their origin from the earliest times, borrowed of them both the hint and form of their eastablishment; and that their pretended derivation from the first Adam, is a forgery, it being only from the first Adam-Tiler.

The same author hes given the meaning of the cant terms here uned as followa :-Abrams; shabby beggars. Ruffers; notorious rogues. Hookers ; petty thieves. Libkin ; a house to lie in. Ruffmana; the woods or buehes. Adam-Tiler; the comarare of a pickpucket, who roceives stolen goods or money and scours off with them.

## Featival of St. John the Erangeliut.

In every country where freemasonry is encouraged, their anniversary feetival is celebrated with great ceremony. It is a day set apart by the brotherhnod, to worship the Supreme Architect of heaven and earth; to implore his blessioga upon the great family of mankind; and to partake of the feast of brotherly affection. All who can apare a day from their necessary avocations, should join in this celebration. The froemssons of South Carolina have chosen St. John the Evangelist's day as their annivernary.

The annual festival of the order is oelebrated in some places on St. John the Baptist's day (June 24), and in others on St. John the Evangolist'a day (Dec. 27). The latter has boen proferred in South Carolina, on account of the hest of the climate. But why either of them nhould bo chosen in proference to any other day is, perhaps, difficult to explain. I know of no oonnection between theso eminent "Saints and Servanta" of God, and the lodge of freemasons. I nowe write as a minister of that God to whoee honour and glory my life is devoted, and to whom I must, ere long, give an acoount of my stewardehip. I think I run no hazard of contradiction in eaying that if either of thene moat holy men were now permitted to revieit the earth, they would greatly wonder at finding their names enrolled as patrons of an inatitution of whioh they bad never heard. And there can be no question of the fact, that if they were now to apply for admisaion into any of our lodges, they wuold be utterly incapsble of "working their way in."

The annual masonic feetival in England is hold "on the anniversary of the feast of St. John the Baptist, or of St. George, or on auch other day as the grand master may appoint." Their reasons for welecting these daya are sueflciently expressive of their opinions. The feast of St. John the Baptiat oocurs on the 24th June, when, in that climate, the weather is not too warm for a public procesesion; and St. George, whone anniverasy is held April 23rd, is the patron Saint of Englend. This, to me, is clear evidence that the anniversary of 8 L . John was not eelected becau ee they deem him to have been a freemanon.

I am, however, of opinion, that we set wisely in taking St. John the Evangelist for the patron of our order. He in worthy of imitation, buth in his principles snd conduct But, as it has been well said of old, 4 micus Plato, Asricus Soorates, sed magis amica veritss; so I may truly asy, that I highly venerate the masonic inatitution, under the fullent persumsion that, where its principlee are acknowledged, and its lawn and precepts obeyed, it comes nearest to the Christian religion, in its moral effecte and influence, of any institution with which I am aequainted. At the eame time, I hold truth to be too seacredly connected with my office and charsoter, to allow me to approve of the cuatom, now generally adupted, of dedicating oor lodges "to God and the holy St. John," ss joint patrons of the society. I hold it to be irreverent, to unite the name of any created being with the uncrested Godbead. The name of God is surely sufficiently honourable nad powerful an the patron of our institution,
without the addition of any other. If the lodge be dedicated to God, let it be dedicated to him alone. He can blean all our "work begum, continued, and ending " in Him, without the assistance of St. John. But, if it be necessary to have St. John, let us take him alone, as our tutelary heed, or unite with him any of the old worthies, usually considered ae masons.

It is a vell known fect, as before obeerved, that the early Chriatians very judiciously adopted, not only the feetival days of the pagana, but evon their manner of celebrating them. This was doubtless done with the viow of rendering the change in the new religion lese perceptible, and consequently lees shocking to the prejudioes of those who adhered to the ancient institation. Among the principal feestivals of the Pagans were those of the solatices and equinoxes.

De Pauw, is his Philos. Diss, on the Egyptians and Chinese, observee, that "Beedides the Sabbeth, whioh the Egyptians seem to have observed very regularly, they had a fixed festival at sech new moon; one at the aummer and the other at the winter soletios, as well as the vernal and antumnal equinoxes. All othere axcopt that at the rieing of Sirius were changeable, and dependant on certain combinations, known to the priesta only, who transferred thom arbitrarily, whenever they occurred on the neomenis, the equinox, or the eolatice" - VoL ii., p. 159.
"The festival of the 25th of December (says Higgins, in his Celtic Druids, p. 185), was celebrated by the Druids in Britain and Irelend with great firas lighted on the tops of the hilla This feetival was repeated on the twelfth day, or on what we call Epiphany. In some part, the firos aro atill continued. The evergreens, and partioularly the mis. thetoe, which are used all over the country, and even in London, in this featival, betray its Druidical origin.
"On the 25 th of December, at the first moment of the day, throughout all the ancient world, the birth-dsy of the god Sol was celebrated. This was the moment when, after the supposed winter solstice, and the lowest point of his degradation below our hemiophere, ho began to increase, and gradually to ascend. At this moment, in all the ancient regions, his birth-day wes kept; from India to the ultima Thule, theee ceremoniea pertook of the same character; and everywhere the god was feigned to be born, and his festival was celebrated with great rejoicinga."

The fires on the hills are emblematical of the power and ardour of the sun, when he should have ascended to the upper regione, which he waa then approeching: and the evergreens are typical of the effect that would be produced in the vegetable kingdom by such an event.

What possible allusion can the display of evergreens at Christmas have unless that here suggeated ! The oustom is undoubtedly borrowed from the Druids, and is continued without the least applicsbility to the Christien religion. Masonic lodges, moreover, are decorated in this msnner on the 27th of December, which is corroborative of the opiniun here advanced.

The Roman and Episcopal churches still retain an astronomical cast, as is apparent both in their fused and moveable feasts. "The principal of the moveable feasta is Easter, which governs the rest. Easter was an inol or goddess of the Saxions, in honour of whom sacrifices were offered about the time of year which is now observed by the church in commemoration of our Ssviour's reaurrection. Itis kept on the first Sunday after the full moon succeeding the vernal equinax." (Bailey.)

The birth days of the two St. Johns, it appears, are fixed by the framers of the church ritual, at the periods of the solstices. These of course were obeerved as featival-days ly the Druidical masons; and as they were celebrated openly with pompous processions, otc, it became necossary for them to use every precaution to prevent a discovery of the real cause of these demonstrations of joy. With this view they appropristed the namee of the feasts or festivals that had been assumed for them by the Catholic Church. But while they ostenaibly honoured the two St. Johna, they wera mentally paying homage to their favourite divinity, the sun.

## Signs and Symbols,

Illustrated and explained, in a course of Lectures on Freemasonry. By George Oliver, Vicar of Clee, \&c.-Grimsby, 1826.
Under what denomination noever our Science has been known in the world; under what form soever it may have been practised, it has alwaya been understood to have a distinct referenoe to the worship of God and the moral culture of man.

The charscteristic propensity of a people, the state of their progress from barbarim to civilization; their intellectual attainments, the character of their government or their intercourse with other nations, might and did create some distinction in the ceremonial, but the great essentiale, broadly atruck out by the Cabiric priests, did never vary.

In a word, the mysteries were the only vehicles of religion throughout the whole idolatrous world; and it is probeble that the very name of religion might have been obiiterated from amongst them, but for the support it received by the periodical celebrations, which preserved all the forms and ceremonies, ritee and praoticee of divine worship; and the varieties of custom in this particular conatituted the sole difference betwixt the masonry (shall I eo call it ) of different nations. Wheresoever the mysteries were introduced, they retained their primitive form, adapted to the customs and usages of the national religion: and if varied in zome unimportant pointe, it was to commemorate certain extraordinary performances of the tutelary deitios, or to perpetuate some remarkable ciroumstance attending their first institution in a partioular country. Hence the same, or similar ceremonies, which were applied to Osiris and Isis in Egypt, the great source of secret and mysterious rites, (Lucian de Des Syr), were celebrated in Greece in honour of Bacchus and Rhea; at Eleusis, they were applied to Cores and Proserpine; in Tyre and Cyprus, to Adonis and Venus; in Persia, to Mithras and Mithre; in India, to Maha Deva and Sits ; in Britain, to Hu and Ceridwen; in

Scandinsaria, to Odin and Fres; and in Mexico, to Tlaloc and the Great Motber; for these appear to be but different names for the deities, sad most probsbly referred to Noah and the Ark. They were all originally the same system.

They used as most significant emblems, the Theological Lsider-the triple support of the universal lodge, called by masons, wisdom, strength, and beauty; the point within a circle, and many other legitimate emblema of masonry ; they used the eame form of government-the same system of secreay, allegory, and symbolical instruction ; all tending to tho same point, the practice of moral virtue. None were admitted without previous prubation and initiation ; the candidates were bound by solemn oaths; united by invisible ties; taught by symbols; distinguiehed by aigus and tokens; and, impelled by a conscientious adherence to the rules of the order, they profesed to practice the moet rigid morality; justice towards men, and piety to the gods.

If primitive masonry was a system of light, the initiated heathen equally paid divine honoure to the sun, as the source of light, by oircumambulating in the course of that luminary, during the ceremony of initiation.

Did the initiated refer to the four elementa 1 They were portrayed by certain prismatic colours. White represented the air; Blue the water; Purple the earth; and Crimson the fire.

The Zodisc was considered as the great sasembly of the tweloe gods; the sun being supreme, nod the planets his attendants.

The emblems which masons now make uee of as the eecret repositoriee of their treasures of morality, were adopted by the ancients in very early times, as signs and symbols; and were oven substituted for alphabetical characters.

The trisngle, now called a trowel, was an emblem of very extensive application, and was much revered by ancient nations as containing the greatest and most abatruse mysteries. It signifed equally the Deity, Creation, and Fire.

## On the Name of the Deity.

The great name of the deity, which in termed by Josephus, incommunicsble, is said to be preserved in the system of freemesonry. Calmet observes, "when we pronounce Jehovah, we follow the crowd; for We do not know distinctly the manner wherein this proper and incommuniosble name of God should be pronounced, which is written with Iod, Hi, Vau, Hi, and comes from the verb haiah, "he has been." The ancients have expresed it differently. Sanchonisthon writes Jevo; Diodorus the Sicilian, Macrobius, St. Clemens Alexandrinus, St. Jerom, and Origen, pronounce Iao," etc.

The Tetragrammaton was preserved and transmitted by the Esenenes, it was always communicated in a whisper ( $R$. Tarphon, apud. Ten, Idol., page 395), and under such a disguised form, that while its component parts were universally known, the connected whole was an incommunicable mystery. They used, in common with the Jewish nation
the ancient and significant bymbol by which this name wes denignated, viz three jode, with the point kametz placed underneath, thus, expreas the equality of the three pereons of which they believe the godhead to he composed. This boly zame they held in the utmost veneration. Calmet nayn, they believe the name of God to include all things. "He who pronounces it, asy they, shakes heaven and earth, and inspires the very angele with astoniahnent and terror. There is a sovereign authority in his name; it goterse the world by its power."

The letter achin, was adopted as a mysterious emblem to designate the Tetragrammaton; and hence this letter was supposed to comprehond many valuable qualities. It was, therefore, deeply engraven by the Jewe on their phylacterien, both before and behind, to induce the protection of the omnipresent deity it represented. Another symbol was an equilateral triangle, illuminated with a eingle jod. This initial letter jod, "denotes the thought, the idea of God. It is a Ray of Light, say the enraptured cabbaliste, which darts a lustro too transcendent to be contemplated by mortal eye; it is a point at which thought pauses, and imagination itself grows giddy and confounded. Man, esys M. Basnage, citing the rabbiea, may lawfully roll his thought from one and of hesven to the other, but they cannot approach that inaccassible Light, that primitive oxiatence contained in the letter Jod."-(Maur. Ind. Ant, vol. iv.)

The chief varieties of his sacred name arnong the inhabitanta of different nations, were Jah, and Bel or Basl, and On or Om. The first of these, as we have just seen, had many fluctuations. Jupiter, Jove, Evohe, etc., were but corruptions of Jah or Jehovah. lao was pronounced by the oraole of Apollo to be the first and gresteat of the deities.(Macrob. Saturn. 1. 18.)

The compounde of the ecoond name Bel, ave of great variety. Belus, was used by the Chaldeans; and the deity known among the ancient Celtze, by the name of Bel or Bel-enus, which title, by the modern suthore, is identified with Apollo.

The third variation was On. Under this appellation the deity was worshipped by the Egyptians; and they professend to believe that he was eternal, and the fountain of light and life ; but according to their gross conceptions, being neceesarily visible, the sun was adored as his representative, and was, most probably, the same as Osiris. They knew the general purport of the name and little more. If they believed ON to bo the living and eternal God, they allowed the same attributes to the sun, which they undoubtedly worshipped as the Lord of the creation. Oannes Was the god of the Chaldeans ; and Drag-On of the Pbilistines, both of which are derivations of the same nswe. On was evidently the same deity as the Hebrew Jehovah; and was introduced amongat the Greeka by Plato, who acknowledges his eternity and incomprehensibility in theeo
remarkable words; "Tell me of the god On , which is, sud never knew beginning." (In Timceo. v. iii., p. 27.) And the same name was ueed by the early Christians for the true God; for St. John in the Apocalypee, (Chap. i., v. 4.) has this expresaion-On, kai 6 em , kai 6 erchomenos, which is tranalated in our authorized veraion of the Scriptures, by, "Hrar which is, and which wes, and which is to come."

The same word, with a amall variation, was one of the names of the supreme deity of India ; and a devout meditation on it was considered capable of conveying the highest degree of perfection, a In the ordinancee of Menu, we are informed how this sacred word was produced. "Brahous milked out, at it were, from the three Vedas, the letter A, the letter $U$, and the letter $M$, which form, by their coalition, the triliteral monoeyllable, together with three mysterious words, bhur, bhuvah, swer; or, earth, sky, heaven." (S. W. Jones's Worka, vol iii. p. 93.) These three letters, which are pronounced om, refer to the deity in his triple capecity of creator, preserver, and destroyer. The method of using it is given in the same code. Three suppreaions of breath, made according to the divine rule, sccompanied with the triverbial phrase bhurbhuvahswah and the triliteral syllable ox, may be considered as the highest devotion of a Brahmin." (Ibid. p. 235.) Mr. Colebrooke informs us that "a Brahmana beginning and ending a lecture of the Veda, or the recital of any holy atrain, must always pronounce to himself the nyllable Our; for, unless the syllable om precede, his learning will alip away from him; and unlea it follow, nothing will be retained ; or that syllable keing prefixed to the several names of the worlde, denotee that the seven worlds are manifestations of the power signified by that ayllable" (Asist, Rea, vol. v., p. 352.)

## On the Cherabim.

Every branch of Science is progressive. In the first degree of mssonry we are taught the several duties of our station, whether to God, our neighbour, or ourselves;-the practica of the Theological and Cardinal Virtues, and every moral and social work. In the second degree, we are admitted to a participatiou in the mysteries of human acience; and catch a glimpse of celestial glory. But in the third degree, the veil is removed; we are admitted to the holy of holies-we view the Cherubim in all their brightness, and aro blessed with a forelaste of heaven, through the resurrection of the dead. And if we pass on to the royal arch, we receive a wondarful accesaion of knowledgo, and find everything made perfcet; for this is the ne plus ultra of masonry, and can never be exceeded by any human institution.

In the peculiar lectures of masonry, much importance is attached to the great symbol of the glory of God, the cherubim. It is a subjeet

[^104]which adde much to the dignity and authority of our science ; inasmuch se its illustration has formed an important part of speculative masonry.

When the true invisible God was renounced and forgotten, this aymbol furnished mankind with plasuible substitutes ; and henoe in almost all the heathen nations of which we bave any scoount, the Supreme Being whs worshipped under the curporeal form of one or other of its component parts ; and they all ultimately referred to the sun ; and hence this luminary, in connection with the cherubic animals, became a ohief object of Gentile worahip throughout the world.

The ox was adored in Egypt, India, and Britain; China, and Japan; Persia, Greece, and Peru. (Plin. Nat. Hist, 1. viii. o. $\$ 6,-$ Anint. Remeirch., vol. i., p. 250.-Dav. Druids. p. 128.)

As the ox was the predominating flgure in the cherubim, so it whs the most univeras symbol of idolatry, and was frequently worshipped in a compounded form.

He was an emblem of the great father or Noah ; and the ark was called Ken Tauros, the atimulator of the bull. (Bryant. Anal. vol. ii., p. 440.) He was worchipped with aplendid rites at that season of the year, particularly when the sun was in Taurue.

In India, the bull was held in high veneration; and honoured with diurnal worship in conjunction with the Lings or Phallus, as an emblem of justice and prolific power.

A buil was also the well-known symbol of Bacchus; who is styled in the Orphic hyrons, "the deity with two horns, baving the head of a bull." (Hymu 29.)

The Lion was adored in the eest sud the west, by the Egyptians and the Mexicans, as a moat powerful divinity. (Diod. Sic, Bibl. 1. i. a. 6.)

The same animal was exublematical of the sun in Tartary and Peraia; (Hesych.) and bence, on the national banner of Persia, a lion was emblesoned with the sun rising from his back. "The aovereigns of Persia have for many centuries preserved, as the peculiar arms of their country, the sign or figure of Sol in the constellation Leo; and this device, which exhibits a lion couchant and the sun rising at his back, has not only been sculptured upun their palaces, and embroidered upon their banners, but has been converted into an order, whioh in the form of gold and silver medals, has been given to those who have distinguished themselves against the enemies of their country." (Sir John Malcolm's Hist. of Pers, c. xxv.)

The Egyptian astronomers tanght that the creation of the world too $\mathbf{E}$ place at the precise period of time when the sun rose in Leo; which sign was hence esteomed the peculiar habitation of the aun; and this belief gave an additional stimulus to the veneration which mankind entertained for the king of animala. Mr. Bryant observes, in referenoe to this superstition, "as the chief increase of the Nile was when the sun was paseing through Leo, the Egyptians made the lion a type of am inundation. All effusions of water were apecified by this characteristie. And from hence has been the custom of making the water which proceede from cisters and reservolra, on well as spouta from the roofa of
buildioge, some through the mouth of a lion." (Bryant's Plaguet of Egypt, p. 86, note.)

The eagle was escred to the sun in many countries, particularly in some parta of Egypt, Greece, and Persic. In our Scriptures the king of Jabylon is termed an Eagle. It was reputed to have fed Jupiter with noctar in the Cretan cave, and was certainly an emblem of his dominion. With the British Druida it formed a aymbel of their Supreme God; it wtis ambroidered on the consecrated standard of the Mexican princeas and the common ensign of the Roman legions was a golden eagle. Indoed the peculiar property which this noble bird possesses of beholding with impunity the undiminished vigour of the sun's meridian rayas would naturally procure for it an emblematical distinction.

The man, or idol in human shape, was worshipped all over the world ; for which custom this reason has been assigned by Porphiry, when chnrged with worehipping God under the figure of a man. He allowed the deity to be invisible, but thought him well represented in that form; not because he is like him in external shape, but because that which is divine is rational. (Porph in Euseb. de prop. evan. 1 iii., a 7.)

The Cherubim, acoording to the author, consists of the figures of a man, an ox, a lion, and an eagle; which combination he represents as awfully sacred and sublime, evidently with the view of heightening the myatical importanoe of roynal arch masonry, whone armorial ensigns it composes.

Dr. Rees remarks, that "Cherub, or Cherubim, in Hebrew, is sometime talken for a calf or an ox. In Syriac and Caldee, the word cherub eiguifies to till or plough, which is the work of oxen. According to Grotius, the Cherubim were figurea reeembling a calf. Bochart and Spencer think they were aimilar to an ox. The figure of the Cherubim wae not always uniform, since they are differently described in the shapes of men, esgles, oxen, lions, and a composition of all these figures put together. After all the suggestions and conjecturea of learned persons, it still remains to be deternained what these emblematic figuree wers intended to represent."

They form a part of the maohinery of pagan worehip, each figure being symbolical of the great object of adoration, the sun. This Mr. Oliver himself has fully ahown.

Thus it appears that the maeonic Chorubim, composing its srms, conaiste of representations of the sun under various figures, conformsble to the fanciful superstitious notions of ancient nations,
"Ye iubabitants of India $I$ in vain you cover yourself with the veil of mystery; the hawk of your god Vichenou is but one of the thousend

[^105]emblems of the sun in Egypt; and your incarnations of a god in the fish, the boar, the lion, the tortoise, and all bis monstrous adventures, are only the metamorposes of the suw, who, puseing through the signs of the twelve animale, was supposed to asaume their figures, and perform their astronomical functions. People of Japan 1 your bull which breaks the mundane egg, is only the bull of the zodiac, which in former times opened the seasons, the age of creation, the vernal equinox. It is the same bull Apis, which Egypt adored, and which your ancestora, O Jewieh rabbins 1 worehipped in the golden calf. This is atill your bull, followers of Zoroaster! which sacrificed in the aymbolical myateries of Mythra, poured out his blood which fertilised the earth." Ruins, p. 138.

The supporters of the armorial ensigni of royel arch masonry, acsording to Cruss's chart, are two figures representing the god Pan; who may be considered as one of the moet ancient divinities of paganism.
"Orpheus asys that Pan significe universal nature, proceeding from the divine mind, of which the heaven, earth, eea, and the eternal fire, are so many members. He was generally represented with the body and head of a man, and the lower part were those of a goat."-Bailey.

## On the myaterious Darknews of the Third Degres.

In the ancient mysteries, the Epoptes, or perfectly initiated aspirants, were reputed to have attained a stats of pure and ineffable Light, and pronounced safe under the protection of the celential gods (Diod. Sic. Bibl., 1, v. c. 8) ; while the unhappy multitude who hed not undergone the purifying ceremonies, wero declared reprobato ; eaid to wander in all the obscurity of darknes, to be deprived of the divine favour, and doomed to a perpetual residence in the infernal regions, amidat a cheerleas and overwhelming contamination. (Plato Phodone.-Ariat. Elousinis et apud Stıbæum. Serm. 189, etc. Schol, Ariat. Ranis.)

During the Perian initiations, this doctrine was enforcod ex cathedra, (from the deek or pulpit). The Archimagus informed the candidate, at the moment of illumination, that the divine lighte were displayed before him (Peell, in Schol. in Orac. Zoroest.); and after explaining the nature and purport of the mysteriea in general, he taught that the universe was governed by a good and evil power, who wero perpetually engaged in conteat with each other, and as each in turn prevsiled, the world was characterised by a corresponding sucosstion of happiness and misery; that uninitiated and immoral men were votaries of the evil power, and the virtuoul initiated of the good; and that at the end of the world, each with bis followers, will go into a separate abode; the lattor with Yaedan shall ascend, by mesos of a ladder, to a atate of aternal light, where existes unalloyed bappiness and the purest pleasures ; the former with 4 hriman, shall be plunged ioto an abode of darkness, where they ahall suffer an eternity of dinquietude and misery, in a desolate place of punishment aituated on the shore of a stinking river, the waters of which are llack as pitch end cold as ice. Here the eouls of the uninitiated.
etoroally float. Dark columns of smoke ascend from this stream, the inside of which is full of serpents, scorpions, and venomous reptilest. (Hyde de relig. vet. Pers. p. 399.)

The multitude, being thus amued with fables, and torrified with denumciations, were effectually involved in unoertainty, and directed to paths whero error only could be found; for every proceeding was mybtarious, and every mythological doctrine ahrouded under a correaponding aymbol. These allegorical fablee becoming popular, the simple rites of primitive worahip soon asumed a new and more imposing form, and refigion was at length enveloped ins veil no thick and impervious as to render the interpretation of their aymbolical imagery extremely difficult and uncertain. The alender thread of truth being intimately blended and confused with an incongruous mases of error, the elucidstion was a tank mo complicated and forbidding, that few had the courage to undertake it; and men were rather inclined to bow implicity to popular tradition, than be at the pains to reconcile truth with iteelf, and eaparate with a nice and delicate hand, the perticlea of genuine knowledge from the cumbrous web of allegory and superatition in which they were interwoven.

It is an extreordinary fact, that there is scarcely a single ceremony in freemasonry, but we find ita correaponding rite in one or other of the Idolatrous mysteries ; and the coincidence can only be sooounted for by suppoeing that these mysteries were derived from masonry. Yet, howevar they might aseimiliato in coremonial observances, an essential difference existed in the fundamental principles of the respective inatitutions*

In all the ancient myateries, before an aspirant could claim to participate in the higher eecrets of the institution, he was placed within the Paston, or Bed, or Coffin; or, in other words, was subjected to a solitary confinement for a prescribed poriod of time, that he might reflect mariously, in seclusion and darkness, on what he was about to undertake;

[^106]and be reduced to a proper state of mind for the reception of great and important truths, by a course of fasting and mortification. This soas the symbolical death of the mysteries, and bir deliverance from confinemunt was the act of regeneration, or being born egain; or, as it was also termed, being raised from the dead. Clement of Alexandria tella us, that in the formulary used by one who bad been initinted, he was taught to say, "I have descended into the bed chamber." The ceremony here alluded to wea doubtless the same an the descent into Hades; and I am inclined to think, that when the appirant entered into the myatio cell, he soas direeted to lay himself down upon the bed, which shadoneed out the tomb or coffin of the Great Father. This procees was equivalent to his entering into the infernal ship; and while stretched upon the boly couch, in imilation of his figurative decossed prototype, he was said to bo wrapped in the deep aleep of death. His resurrection from the bed was his restoration to life, or his regeneration into a new world; and it was virtually the same as his return from Hades, or his emerging from the gloomy cavern, or his liberation from the womb of the ship-goddoss," (Fab. Pag. Idol, b, v. c. 7.)

The candidats was made to undergo these changes in scenic representation; and was placed under the Paston in perfectdarkness, generally for the space of three days and nights. The time of this eolitary confinement however varied in different ngtions. In Britain nine dayn and nighta was the specified period; (W. Arch. Tri. 50 apud Dav. Druids, p. 104.) in Greece, three timea nine daya; (Porph. vit. Pyth.) while in Persis it extended to fifty days and nights of darkness, want of rest, and fasting! (Porph. de Abatin. c. vi. 8. 18). To explain the nature of thase places of pensnce and mortification, I need not carry you to distant shores; the remains in our own country are both numerous and open to public inspection; I have no doubt the British Cromlech was the very identical vehicle of preparation for the Druidical mysteriee.

A celebrated piece of antiquity was recently standing near Maidstone, called Kit'e Cotti House. This was a derk chamber of probation; for

[^107]Kit is no other than Ked, or Coridwen, the Britinh Cores; and Cotit or Cetti moant an Ark or Cheat; hence the compound word referred to the Ark of the diluvian god Noah, whoee mysterivun rites were celebrated in Britain ; and Ceridwen was either the consort of Noah, or the Ark itself: symbolically the great mother of mankind.

The Phallus was the groses Symbol under which Noah or the great fither of the mystariee was worahipped, and it was usually represented by a pyramidal stone.

Coincidences like these are too striking to be overlooked : particularly when we consider that the initintions formed a most important and esaential part of religious worship ; and no person could hold any dignified appointment as a pricet, or logialator, without peseing through theee forms, whioh included, as an indiaponsable proliminary rito, the solitary confinenent of the darkened Paston.

## On the Three Pillark, Wisdom, Strength, and Bearty.

In the British and other mysteries, these three pillars represented the great emblemstical Triad of the Deity, as with us they refer to the three principal officers of the lodge. We shall find however that the symbolical meaning was the same in both. It is a fact, that in Britain, the Adytum or lodge was sctually supported by three stones or pillare, which wero supposed to oonvey a regenersting purity to the sepirant, after having endured the ceremony of initiation in all ite accustomed formalities. The delivery from between them was termed a new birth. (Hanes Taliesen, a. iii.-Dav. Druides p. 230.) The correeponding pillars of the Hindu mythology were aleo known by the names of wiedorn, atrength, and beauty, and placed in the east, weat, and south, crowned with three human heads. They jointly refer to the creator, who was said to have planned the great work by bis isfinite wisdom; executed it by his atrength; and to have adorned it with all its beauty and usefulneas for the benefit of man. These united powera were not overlooked in the mysteries, for we find them represented in the solemn coremony of initiation, by the three presiding Brahmins or Hierophants. The chief Brahmin eat is the east, high exalted on a brilliant throne, clad in a flowing robe of asure, thickly aparkled with golden stara, and bearing in hin haad a magical rod; thus symbolizing Brahma, the creator of the world. Hia two compeers, clad in robee of equal magnificence, occupied corresponding situations of distinction. The representative of Vishnu, the setting aun, was placed on an exalted throne in the weat; and he Who personatee Siva, the meridian aun, ocoupied a aplendid throve in the south. The masonic lodge, bounded only by the extreme points of the compass, the highest heavens and the lowest depths of the central abyse, is said to be mupported by three pillars, wisdom, atrength, and beauty. In like manner the Persians, who termed their emblemstical Mithratic cave or lodge, the Empyrean, feigned it to besupported by three intelligeaces, Ormisda, Mithra, and Mithres, who were usually denominated, from certain oharacteriation which they were supposed individually to poesese, eternity, fecundity, and authority. (Vid. Ramsay's Travele of Cyrus,
and dissertation thereto annexed.) Similar to this were the forme of the Egyptian Deity, deaignated by the attributes of wisdom, power, and goodness: (Plut. de Isid. and Oair. p. 373.) And the sovereign good, intellect, and energy of the Platonitts, whioh were also regarded an the respective properties of the divine Triad. (Plat, in Timeso.)

It is remarkable that every mysterious system practised on the habitable globe contained this Triad of deity. The oracle in Damsascus nesserts tbat "throughont the world a Triad shines forth, which resolves itsolf into a Monad;" and the uniform symbol of this three-fold Deity, was an equilateral triangle; the precise form occupied by our pillarn of wisdom, strength, and besuty. In the mysteries of India, Brahme-Vishnu-Siva, were considered as a tri-une god, distioguished by the eignificant appellation of Tri-murti.a Brahma was asid to be the creator Vishnu, the preserver, and Siva, the judge or deatroyer. In the east, as the pillar of wisdom, this diety was called Brahma ; in the weat, as the pillar of strength, Vishnu; and in the south, an the pillar of beauty, Siva: and hence in the Indian initiations, as we have juut observed, the represontetive of Brahma was seated in the eest; that of Visbnu in the west; and that of Sive in the eouth. A very remarkable coincidence in the practioe of ancient masonry.

## On the Point within a Circle.

The tribes contiguous to Judes, placed a jod (,) in the centre of a circle, as a symbol of the Deity surrounded by eteraity, of which be was asid to be the inscrutable author, the oroament, and support. The Samothracians had a great veneration for the circle, which they considered as consecrated by the universal presence of the deity; and hence ringe are distributed to the initisted, $b$ as amulets possessed of tho power of averting danger. (Plin, Nat. Hist. I. rxxiii. a i.) The Chinese used a symbol which bore a great resemblance to that which is the subject of this lecture. The circle was bounded north and south by two serpenta, equivalent to the two perpendicular parallel lines of the masonic symbol ; and was emblematical of the universe, protected and supported equally by the power and wiedom of the creator. The Hindus believed that the Supreme Being was corroctly repromented by a perfect aphere. without beginning and without end. (Holwel. Hint. Events.) The first settlere in Egypt transmitted to their posterity an oxact copy of our point within a circle, expressed in omblematical language. The widely extended univerae wan represented an a circle of boundlees light, in the centre of which the deity was said to dwell: or, in other words, the circle was symbolical of his eternity.

The point within the circle afterwards became a universal emblem to denote the tomple of the deity, and was referred to the planetary circle, in the centre of which wes fixed the sun, as the univernal god and father

[^108]of nature ; for the whole circle of hesven was called God ¿Ciearo de Nat. Deor. 1.) ; Pythagoras asteemed them the contral fire, the supernal manaion of Jove (Stob. Phya.-Aristot, de Calo, 1, ii); and he called it Mesouraneo, because the most excellent body ought to have the moet excollent plsces, i.e, the centro. (Plut Simplic) And Servius tolls us it was believed that the centre of the temple was the peculisr residence of the deity; the exterior deoorations being merely ornamental (Serv. Georg. 8.) Hence the astronomical character used to denote or represent the sun, is a point within a circle ; because that figure is the symbol of perfection. The moat perfeot motal, gold, is sliso designated in chymistry by the same charactor.

With thir reference, the point within a circle wis an emblem of great importance amongat the British Druida. Their teraples were circular: many of them with a aingle stone erected in the centre ; their molemn proceetions were all arranged in the same form; their weapons of war, the circular ahield with a central boee, the apear with a hollow globe st its end, etc., all partaking of thie general principle : and without a circle it was thought imponible to obtain the favour of the gods. The rites of divisation could not be securely and ancoesafully performed unleas the operator was protected within the consecrated periphery of a magical carcle. The plant vervain was supposed to posesen the virtue of proventing the effects of fascination, it gathered ritually with an iron instrament, at the rising of the dog-star, scoompanied with the essential ceremony of describing a circle, on the turf, the circumference of which ahall be equally distant from the plant, belore it be taken up. (Borl. Ant. Corn., p. 91, from Pliny.)

Specimens of British templee founded on the principle of a point within a circle, are still in existence to demonatrate the truth of the theory.

The body of the ternple at Clemsernites, in the ialand of Lewis, secred to the aun and the elemente, will illustrate the principle before ua. This curious Celtic ternple was constructed on geometrical and astronomical principles, in the form of a croes and a cirole. The circle consisted of twelve upright stones, in allusion to the solar year, or the twelve signa of the Zodiac; the east, west, and wouth are marked by three stones seoh, pleoed without the circle, in direct lines, pointing to each of thowe quartars; and towards the north is a double row of twice nineteen atones, forming two perpendicular parallel lines, with a aingle elevated atone at the entrance. In the centre of the cirole stande, high exalted above the reot, the gigantio representative of the Deity, to which the adoration of his worahippers wha peculiarly directed. (Olans Magnus, apud Borl. Ant. of Corn., p. 193 ; Tolend. Druids, vol. 1, p. 90. )

This extrsordinary symbol was aleo uegd by the ancient inhabitanta of Soandinsria; and had an undoubted referenoe to the hall of Odin, or the Zodiac; which, the Edds informs us, contained twelve seate dispoeed in the form of a circle, for the principal gods, besides an elevsted throne in the centre for Odin, as the representative of the grest father.

It is remarkable that in all the ancient systems of mythology, the

Great Father, or the male generative principle, was uniformly symbolised by a point within a circle. This emblem was placed by the Scandinavian prieats and poets, on the central summit of a rainbow, which wes fabled to be a bridge leading from earth to heaven; the emblem, therefors represented Valhall, or the supernal palace of thecbief celestial deity. It is ssid in the Edda, that this bridge, "is all on fire ; for the giants of the mountains would climb up to heaven by it, if it were eeny for any one to walk over it." The palace thus elevated was no other than the coleetial system, illuminated by a central sun, whose representative on earth was Thor, a god depicted by Verstegan with a crowned head placed in the centre of twelve bright stare, expreesive of the sun's annual course through the Zodiacal Signs. (Res. of Dea. Int. p. 74.)

## Circumambulation.

The author in conclusion of his course of lectures, among other remarks, observes :-
"It was an ancient custom to use circumambulation during the performance of religious ceremonies. In Greece, while the sacrifice was in the act of consuming, the priestes and people walked in procession round the altar thrice, singing the tacred hymn, which was divided into tbres parta, the Strophe, the Antistrophe, and the Epode. While the first pert was chanted, thoy circumambulated in a direction from esst to weet, emblematical of the apparent motion of the hesvenly bodies; at the commencement of the second' part, they changed their course, and proceeded from weat to east, pointing out their real motion; and during the performance of Epode, they remained stationed around the altar, a symbol of the stability of the earth, waiting for some propitious omen which might announce the divine accoptance of the sacrifice.

In Britain, the devotional exercises of the insular sanctuary were conducted on a similar principle. Ceremonial procesaions moved round it, regulated by the mystical numbers, and observing the course of the sun; sometimes moving slowly and with solemn gravity, chanting the sacred hymn to Hu ; at others, the devotees advanced with greater rapidity, using impassioned geatures, and saluting each other with secret signs. This was tarmed, "the mystical dance of the Druids." The circular movement was intended to symbolies the motion of the earth, and to give an idea of God's immensity, which fills the universe.

The foundation stone of every magnificent edifice was usually laid in the northeast; which accounts in a rational manner for the general disposition of a nowly-initiated candidate when, onlightened but uninetructed, he is accounted to be in the most superficial part of manonry. This stone, to which some portion of secret influence was formerly attributed, is directed in Alet'i Ritual to be "solid, angular, of about a foot square, and laid in the north-east."

It was incumbent on the author, in the firat place, to account in a rational maxner for the origin of the custom of laying the frundation
atone of buildinge in tho north-each. As the wholo machinery of the roligion from which masonry is derived wes founded on the movemente of the heevenly bodies, there is doubtless an astronomical reemon for this prectice.

Now, we are told by Mr. Bryant, quoted by our author, that the "Egyptian astronomers taught that the crestion of the world took plsos at the precise period of time when the sun rove in Lee"" And edmitting that this notion was got up when that constellation was situated In thenorth-eastat the rising of the aun, this circumatanco would naturally, in acoordanoe with the Eggptian mode of worehip, induce the custom of commencing magnifioant edifices at the north-east corner, in imitation of that glorioun luminary, believed by the Egyptiann to be the Supreme Architect of the world. This, among a muperstitious people, would be deemed a certain means of insuring their stability and usefulneme.

Mr. Oliver has bentowed great labour in his reearches into the original meaning and intantion of the ancient pagan symbols, and ahed much light upon the subject. But by endeavouring to plece freemsaonry or something like it, before the pagun mysteries, he has thrown a vei of darkness over the inveetigation, tending to bewilder bis readers who have any wish to arrive at truth in thia inquiry. By this course he ex pects to clear freemnsonry from the imputation of having deacended from what he considera a vitisted source, and, on the contrary, to ahow it to be derived from a pure institution, of which in his opinion, the mysterica are a corruption.

In thia way he thinks to connect Christianity with ancient manonry, and consequently show that he , as a ministor of the gospel, may without impropriety ally himself to the order. There is no need of this fastidioumesas. Ancient masonry is a pure morel institution, but has no connection or relation whatever with Christianity. Ite original dogmea are totally different; but these at present ane not regarded, nor ovan known to the craft, who perform the ceremonies for mere sociability and pastime.

## THE SECRET DISCIPLINE

## Mentioned in ancient Beoleviastioal Hidtory explainod.

A small but learned work, bearing this title, has latoly been issued from the press in this city' under a fictitious signature, sdited by Samuel L. Knapp, Esq.

This author adduces many suthorities, in eddition to thowe before cited in this volume, which go to prove that the fathers of the ohurch edopted the terms and ceremonies used in the ancient mysterica.

The following are extracts from the work:
St. Cyril, Bishop of Alexandrio, in 412, in his seventh booka geinst Julian, declares, "These mystaries are no profound and no exalted, that they can be comprehended only by thoee who are enlightaned. I shall
not therefore attempt to speak of what is most sdmirable in them, leat by discovering them to the uninitiated I should offend against the injunction not to give what is holy to the impure, nor to cast pearls before such as cannot eatimate their worth." And elsewhere, "I should say much more if I were not afraid of being heard by thoee who are uninitiated ; because men are apt to deride what they do not understand; and the ignorant, not being aware of the weakness of their minde, condemn what they ought most to venerate."

Theodoret, Binhop of Cyzicus, in Syria, 420, in the first of his three dialogues, that entitiled "The Immutable," introduces Orthodoxus, speaking thus-" answer me, if you pleese, in mystical and obscure terma, for, perhape, there are persons present who are not initinted in the mysteriea" And in his preface to Ezekiel, tracing up the secret discipline to the commencement of the Christian era, says, "these mysterien are so august that we ought to keep them with the greatest caution."

To ahow that thees myateries were retained under ecclesiantical sanction to a still lator period, I refor to the Seal of the ancient $A$ bbey of $A$ rbreath, in Seolland, and to the explanation given of it by the Rev. Charles Cordinet, in his "Deacription of the Ruins of North Britain," 2 vols, 4to.

"The figuree sculptured on the seal marked INITIATION, evidently represent (eays he) some formidable ceremony in a sacred placo where a pontiff presides in state ; one hand on his breast expreseive of seriousness,
the other atretched out at a right angle, holding a rod and croses, the badge of high office, while he makes some avful appeal reapeoting a suppliant, who, in a loose robe, blindfolded, with eeeming terror kneela before the atepe of an altar, while several attendants with drawn awords, brandiah them over his head." Mr. Cordinet intirnates the reeemblance of these figures to an engraving which made the frontispieces to a book about freemasonry : and then adds, that both bring to remembrance a deacription which Plutarch, in hia famous easay, "De Osirig," gives of the engreving of a menl which the Priests of Isis used in their solemnities, namoly, tbat of a man kneeling with his hands bound, a knife at his throat, edc. "And (sags he) it is not a little remarkable, which is more to the preeent purpoee, in how many particulars the mysterious fate of Osiris, as recorded by the above celebrated author, corresponds with the eccount of Hiram; s strong insinustion that the annala of the latter, however mutilated and deficed, have somehow or other been descended from the Elousinian Myateries, and that the Masonic riles of initiation into a lodge, are a faint aketch, in imperfect epitome, of the august ceremonies which took plece at initistion into the wecrets which hallowed tho primeval fanca; and this high origin, when divoorned, may bave boen at the botton of that general respect which men of learning have avowed for them.

This subject, as an amusing research into antiquity, may be resumed; It only remaine at preeent to epecify that, Hiram coming forth in hallowed dignity of character from within the veil of the annctuary; violated in the open temple of the world by the ignorant and profane; concealed for a time in awful secrecy ; the want of his presence pathetically deplored; the ardent solicitude with whioh he is sought for ; the scclamation of jog at finding him again ; and consequent discovery of the word, almoss of itself developet the secrel which the personyfication had inoolved"

It does indeed develope the secres, that the Hiram of masonry is eubstituted for Oviris, one of the pagan gods of the mysterios. Mr. Cordinet underatands what is meant by the lost soord, which is declared in the royal arch degree, to be recovered, and prover to be the Logos, the second person of the ancient trinity, the lost sun.
"The rod and cross, the badge of high office," held by the pontifr, is precisely a copy of the measure of the Nile, which wis originally put into the hands of a figure of Anubia, to indicate the rise of the inuodation upon which maninly depended the subeistence, or tamporal enivation of Egypt

This pole or rod afterwarde obtained, anya Pluche, the name of Caderceus, or Mercury's wand, and was borne as a sceptre or waif of honour, indicating a saered person. The figure (10), a cabalistic number, supposed, eays Beiley, "to conjoin the virtue of all sumbers," maviked upon this copy, showa its original to have been a measure. Mr. Oliver observee, thet "the amount of the pointe contained in the Pythagoreen circle, is exactly ter, which is the consummation of all thinga."

## CEAPTER VII.

## AN IFQUIBT INTO TEE ORIGIN AND HISTOBT OF FREEYABOKRT.

"The spirit of innovation had seized all the Brethren. No man ean give a tolerable account of the origin, history, or object of the Order, and it appeared to sll as a lost or forgotten mystery. The symbols soemed to be oqually susceptible of every interpretation, and none of these seemod entitled to any decided preference."-Professor Robison.

Proofs of the existence of the society of freemesons at certain remote periods, added to the occurrence of eventa that would naturally tend to create it, will point out its origin with sufficient accuracy for the present inquiry. No regular history of the order is attainable at this time, nor is it essential to our purpose.

It is highly probable, as asserted by Dr. Anderson, that many valuable documents relating to the society were destroyed at the revolution of the order in 1717, by some scrupulous brethren, for fear that an improper use might be made of them.

I shall endeavour to show that the British Druide instituted this society, and the first consideration will be to point out the period when they were in a condition that required a resort to auch secret means for the preservation and continuance of their religious rites.

We bave seen that their open worship was entirely probibited by the edict of Canute, who reigned from 1015 to 1035. Within those periods, therefore, this edict was issued; by phich the very existence of the Druids in England was put at hasard." Cut off from their favourite devotional retreat, do means was left them but to devise some mode to evade the scrutinizing eye of the miniatera of the law.
" $\Delta$ bout the beginning of the fifth century (eaye Lawrie), Theodosiun the Great prohibited, and almost totally extinguiahed the pagan theology in the Roman empire (Gibbon); and the mysteries of Eleusis suffered in the general devastation. (Zosim. Hist.) It is probable, however, that these mysteriee wers secrelly celebrated, in spits of thesevere edicts of Theodosius; and that they were partly continued during the dark ages, though atripped of their original purity and aplendour : we are certain, at least, that many rites of the pagan religion were performed, under the dissembled names of conrivial meetinge, long after the publication of

[^109]the emperor's edict (Gibbon.) And Psellus informs us, that the mysteries of Cerea subsiated in Athens till the eighth century of the Christian era, and were never totally suppressed." (p. 22.)

A similar course would maturally suggest itself to the Druida: that such a course was adopted, and that they fixed on the craft of masonry es a cloak onder which to soreon their myetio ceremonien and dogmas, Frill, it is believed, sppear so evident in the sequel as to leave no room Ior doubt upon the subject.

During the reign of Csante, therefore, it may fairly be preeumed the famous freemason society was first established.

The conquest of Kingland, by William, Duke of Normandy, occurred in 1086, and it is highly probable that many of the artizans who were induced by him to emigrate from France to Kingland, were initiated into the order of freemsans, and greatly contributed to raiso its fume as an operative masonic institution. "King William (says Dr, Anderson), brought many expert masons from France. He died in Normendy, is 1087."

It in probable that many of theae masons were attached to the Druidfical roligion, as the rites of Druidism are said to have been openly practiced in France upwarde of a hundred years aftor the edict of Canute prohibiting them in England.

The condition and character of the people of England, at the time of the Conquest, is thus pourtrayed by Guthrie:
"With regard to the mannern of the Anglo-Saxons, we can eay little, but that they were in general a rude, uncultivated people, ferorant of lettors, wnekilful in the mechanical arts, untamed to submistion under $i_{a w}$ and government $t_{1}$ addicted to intemperance, riot, and disorder. Even so lateas the time of Canute, they sold their children and lindred into foreiga parta
"Their best quality was their military courage, which yot was not supported by discipline or conduct. Even the Norman historians, notwithstanding the low state of the arts in their own country, spesk of them as barbarous, when they mention the invasion of the Duke of Normandy. Conqueat placed the people in a aituation to receive alowly from abroed the rudiments of acience and cultivation, and to correct their rough and licentious manners.
"He (William) introduced the Norman laws and language. He built the stone square tower at London; bridled the country with forta, and disarmed the old inhabitants ; in short be attempted overy messure possible to obliterate even the tracee of the Anglo-Saxon conatitution, though at his coronation he took the same oath that had been taken by the ancient Saxon Kinga." Grest adranoement, however, in the art of building, it seams, soon followed this event. Dr. Heary, in his "History of the Necesesary Arts in Britain, from 1066 to 1216," zays:
"Architectore, in all ite branches, receivod as great improvements in this period as agriculture. The truth is, that the twelfth century may very probably be called the age of architectare, in which the rage for building was more violent in England that at any other time
" The great and general improvementa that were made in the fabrica of housea and churches in the Arst years of this contury, are thus described by a contemporary writer: 'The now cathedrals and innumerable churchea that were built in all parta, together with the many magnificent cloisters and monasteries, and other apartmente of monks, that were then ereotod, afford a safficient proof of the grest felicity of Eagland in the reigu of Henry I.'"

Heary 1. wha the third son of Willism, and ascended the throne in 1100 ; only thirty-four yeara after the Conqueat. To ensble him to carry on such extensive worke in architecture, required that his subjects should have been previoukly inatructed by his predecessors. Under the patronago, therefore, of King William, there in the strougent reseon to believe, the masonio society wes fostered and protected. And although the principal purpose of the leading membera of the institution was the preeervation of their religious rites, yet attention was required to be given by them to the catensible object of the establishment. Through this means there in no reason to doubt that architecture was improved to a greater extent in Eagland, at this time, than it would have been but for this siventitious circumstance.

The mere craftaman, however, knew nothing of the secret views of his superiors. The symbols made use of in the lodge were uniatelligible to him. But ho was plessed with the tinsel show of the representations; and when be was found sufficiently intelligent, and was thought worthy to be trusted, he was raised to the sublime degree of Holy Royal Arch, and gained the honorary appellation of companion. Hore, if duly attentive to the aymbole and ceremonies, ho might make some progrees towards discovering the bidden echeme upon which freemesonry was founded.

Lewrie observes, "The principles of the order were even imported into Scotland,* where they continued for many ages in their primitive aimplicity, long after they bed been oxtinguished in the continental lingdoms. What those causes were which continued the socioties of freemazons longer is Britain thas in other countries, it may not perhaps be easy to determine; but es the fact iteelf is unquestionably true, it must have arisen either from favourable circumotancen in the political state of Britain, which did not exist in the other governments of Europe, or from the superior policy by whioh the Britiah masons eladed the suspicions of their enemies, and the superior pradence with which they maintained the primitive simplicity and respectability of the order. In this manner did freemasonry flourish in Britain when it was completely abolished in every other part of the world."
"That freemasoury was introduced into Sootland by those arohitsota who built the abbey of Kilwinning is manifest, not only from thoee aathentio documenta by which the existence of the Kilwinoing lodge has been traced back as far as the end of the fifteenth century, but by othor collateral argumenta, which amount almost to a demonstration.

[^110]"In every country where the temporal and epiritual jurisdiction of the Pope was acknowledged, there was a continual demand, particularly during the twelfth century, for religious structures, and consequently for operative masons, proportional to the piety of the inhabitantsand the opulence of their ecclesiastical eatablishmenta ; and there was no kingdom in Europe where the zeal of the inhabitants for popery was more ardent, where the kinge and the noblea were more liberal to the clergy, and where, of consequence, the church was more richly endowed, than in Scotland. ${ }^{*}$ The demand, therefort, for olegant cathedrals and ingenious artista, must have bsen proportionately greater than in other countries, and that demand could be supplied only from the trading association on the continent. Weare authorised, therefore, to conclude, that those numerous and elegant ruins which atill adorn the villages of Scotland, were erected by foreiga masons, who introduced into thil ialand the eustoms of their order.
"It in a curious fact, that in one of those towns where there in an elegant abbey, which was built in the twelfth century, the author of this hiatory bas often heard that it was orected by a company of induatrious men who apoke in a foreign language, and lived eeparately from the townspeople. And atories are still told about their petty quarrels with the inhabitants.
"It was probsbly about this time, also, that freemasonry whe introduoed into England; but whether the English reoeived it from the Scotch masons at Kilwinning, or from other brethren who had arrived from the continent, there is no method of determining. The fraternity in England, however, maintain that St. Alban was the first that brought masonry to Britain, abont the end of the third century; that the brethran received a charter from King Athelatane, and that hia brother Edwin summoned all the lodges to meet at York, which formed the first grand lodge of England in 926. But these are merely essertions, not only incapable of proof from authentio history, but inconaistent also with several historical events which rest upon indubitable evidence. Seo Dr. Plot's Nat. Hist. of Staffordehire, chap. viii., Pp, 316-818.) In support of these opinions, indeed, it is alleged, that no other lodge has laid claim to grester antiquity than that of York, and that its jurisdiction over the other lodges in England has been invariably acknowledged by the whole fraternity. But this ergument only proves that York was the birth-place of freemasonry in England. It bringe no additional evidence in support of the improbable stories about St. Alben, Athelstane, and Edwin. If the antiquity of freemseonry in Britain can be defended only by the forgery of silly and uninteresting slories, it does not desarve to be defended at all. Those who invent and propagate such tales do not surely consider that they bring diseredit upon their order by the warmoth of their seel; and that by eupporting what in false, they debar thinking men from believing what is true."

Mr. Lawrie has made it appear very probable that the churches erected

[^111]in Scotiand in the twelfth century, were built by foreiga masons. Indeed, the want of akill in the natives is a sufficient evidence of the fact. But this is no proof that they belonged to the freemason nuciety. And the dissolution of the trading astociations on the continent, of which he mpeaks, as soon as the rage for church building had ceased, while freemssonry hald its ground in England, is conclusive that there was no conneotion between them.

But even admitting that the foreigu masons who built the abbey of Kilwinning were freemasons, the preaumption would be, that they had been initiated in England; and there is no evidence that the secrets of the eociety were communicated to the Scotch. They could be of no possible advantage to operative masons, and the people of Scotland appear to have been thoroughly imbued with popery to embrace them in a religious point of view. Besides, if these foreigners were freemasons, and had admitted into their society a portion of their inhabitants of the places where they were employed, it is not probable that the petly quarrele mentioned by Lawrie would have occurred.

The case was different in England, where Druidism had been revived by the Danish emigrants, after its conquest by that nation.
Upon the whole, there is no conclusive evidence that freemasonry was established in Scotland till after its reorganisation in England, in 1717. The mason associations in that country before this period appear to be no other than common trade companies, such as those incorporated in London.

They had a chief or grand master, with deputies in the different counties, all appointed by the king, though nometimss by consent of the craft. The master was styled the patron, protector, judge, or master of the masons of Scotland; and the craft atyled themselves "free of the masons and hammermen." Lawrie cites the following:-
"In the Privy Seal book of Scotland there in a letter dated at Holy-rood-house, 25th Sept. 1590, and granted by King James VI., 'to Patrick Copland of Udaught, for nsing and exercising the office of Wardanrie over the art and craft of masonrie, over all the boundis of Aberdeen, Banff, and Kincardine, to had warden and justice courta within the boundis, and there to minister justice.' Lawrie also obmerves that in the year 1645, a particular jurisdiction for masons wan established in Franoe. All differences which related to the art of building were decided by particular judges, who were called overseers of the art of masonry ; and several counaellors were appointed for pleading the causes which were referred to their decision. Thia ingtitution has such a striking resemblance to the warden courts which existed in Scotland in the sixteenth century, that it must have derived ites origin from these. In both of them those causes only were decided which related to masonry, and overseers were chosen in both for bringing these causes to a decision."

There is nothing of freemssonry in all this; there is nothing ot Druidism, the very apirit and soul of the order, to be seen in it. There is every reseon to believe that freemasonry was first eatablished in Eng-
land, and that there it remained till the famous meeting of the brotherhood, at the Apple Tree tavern, in 1717, when it took to wing, and visited all perts of the civilized world.

In fact, there was no cause for its institution in any other country than England, where the edict of Canute had compelled the Druids to relinquiah their religion altogether, or practise his rights and seremoniea oovertly.
"As the Druids (says Hutchinson) wera a sect of religious peculiar to Gaul and Britain, it may not be improper to cast our eyee on the ceremonies they used : their antiquity and peculiar station render it probable some of their rites and institutions might be retained in formfing the ceremonies of our society. In so modern an era as 1140 they were reduced to a regular body of religious in France, and built a college in the city of Orleans. They were heretofore one of the two cetates of France, to whom were committed the care of providing sacrifices, of preecribing the laws for worship, and deciding controversiea concerning rights and properties,"-(Spirit of Mas. p. 37.)

As, therafore, it does not appear that Druidiam at any time was under a poeitive legal reatraint, except in England, it may be reasomably inforred that ite offspring, freemasonry, existed nowhere else till the period above stated.
"All the brethren on the continent agree in eaying that freemasonry whs imported from Great Britain, about the beginning of this [the eighteenth] cantury, and in the form of a mystical society."-(Robison's Proofs, p. 393.)

Robison, in speaking of freemasonry in Germany, obeerves, "Though no man could protend that ho understood the true meaning of freemasonry, its origin, its history, or its real aim, all ssw that the interprotations of ite hieroglyphics, and the rituals of the new degrees imported from France, were quite gratuitous. It appeare, therefore, that the safest thing for them was an appeal to the birth-place of masonry. They sent to London for instructions. There they learned that nothing was acknowledged for genuine, unsophisticated mneonry but the three degreen; and that the mother lodge of London alons could, by her instructions, prevent the most dangerous schisms and innovations. Many lodges, therefore, applied for patents and instructions. Patents were easily made out, and most willingly sent to the zealous brethren: and theee were thankfully received and paid for. But instruction was not so easy e matter.
"They afterwards sent a deputation to Old Aberdeen, Scotland, to inquire after the caves where their venerable mysteriee were known, and where their treagures were hid. They had, they thought, merited some confidence, for they bad remitted annual contributions to their unknown auperiors to the ammunt of some thousande uf dollars. But, alas 1 their ambesssdors found the freemasuns of Old Aberdeen ignorant of all this, and equally eager to learn from the ambassadors what was the true origin and meaning of freemaeonry, of which they know nothing but the cimple tale of old Hiram.

Mr. Ward, in his Anti-Masonio Review, v. L., p. 845, quoten the following from a French work, entitled "Easeis sur la Franche Magonnerie," by J. L. Laurens, which showe very concluairely that the freematon society originated in England. Mr. Laurens says :-
"Imponaible no it io to determine the precise era of the eatabliahment of freemanonry in Europe, so easy it is to ahow in what manner and by what means it apread and propagated itaelf. Many reasons concur to make ns believe that the Engliah brought it into Europe; and that they have given it the exterior form, and the different names by which we know it at this day. Independent of the historical monuments, which prove that long before the 14th century it was known in Eng: land, it appears indisputable that in that country of Europe it has been furnished, if I may so exprese myself, with the form in whioh it has come to us. There is not a doubt that the names Franche-Maponneric and Prance-mapons are purely of Engliah origid. Freemasonry-freemason; that is to say, maponnerie libre, mapona libres, literally randered into French have produced theee strange terma, a manner of apeaking far enough removed both from our cuatoms and the genius of our lenguago; for it is certain if what we understand by freemasonry and freemesons hed received in France, or in any other country besidea Eagland, any name whatever, that name could not have had wo characteristic a mark of the English tongue. A alight knowledge of the principal languages of Europe, and especially to know that in Engliah the adjective commonly precedes the noun, is enough in order to become oonvinoed that theee names have been formed by the genius of the English tongue."

After criticizing the manonic word lodge at some length, he goes on to esy:-" I might further push the investigation of the terms of Eogliah etymology peculiar to freemasonry, did I not fear to enter upon details which I am not permitted to publisb. The usagee and practices of the lodgea in what concerns only the exterior of freemssoury, present some points of resemblance not less atriking; and it in this intimate relation with the peculiar character of the Rogliah people, that I cite in support of my proposition.
"What is the origin of that wearioome quantity of healths, with which the masonic entertainmenta were formerly burdened, which have been the occasion of so much sarcagm against freemssonry, and which a good trate has now wisely reformed? Ia not this immoderate use of a custom, innocent in itself, an image of the too-often repeated toast, which so much distinguishes English Clube I The love of good cheer, the profusion, tbe lengthening out of the feast, the intemperate drinking, which aro contrary to French sobriety, and which resson and decency have long since banished to the taveras of London, to which they legitimatoly belong, can theme have mny relation to the object of masonio fellowahip, of which they are at best only a despicable parody $\boldsymbol{f}$ The groesness of these practices, introduced into France with freemssonry, is too nearly allied to the taste of the Engliah nation, not to be attributed to their invention.
"The nature of the centoms connected with freemesonry, ite pecu-
liar name, the most of the works that express the matters which make up its exterior form, are precisely conformed to the taste and peculiar genius of the English, and prove that in England it began to have being as a society."

After further argument from the geographical position, free institutions, and melancholy temperament of the English, Mons, Laurens adds:-"all these observations incline us to believe, that it is from England freemasonry comes to us as it exista now; that is to say, dressed in thir whimaical fashion, which almost entirely disguises it, and searoely permits us to discover it in the precious allegory of the Egyptian philosophy."-p. 215.

The allegories of the Egyptian mysteries required to be disguised, to provent the real purport of masonry being discovered. The ides of the author, that the English first established freemasoury is very correct, but insocurately expressed: they did not bring it into Europe; they manufactured it themselves at home, from what he calls "the precious allegory of the Esgptian philosophy."

I will now produce such proofe of the long standing of the society of freemasons in England, as have survived the wreck of time.

## Examination of a Mason by King Henry VI.

One of the doctrines referred to by freemasons in proof of their antiquity, and which is coosidered ao more deciaive than any other, is a paper taid to have been found in the Bodleian library, in 1696, and uppposed to have been written in about the year 1436. It purports to be an examination of one of the brotherhood by King Henry VI.

Altbough there are suspicious circumstances attending this manuseript in regard to its authenticity, yet it appears to possess an internal evidence of genuineness. The objections to it are, that it was first printed at Frankfort, in Germany, as late as 1748, sod is accompanied with annotations attributed to the learned John Locke, a moet absurd supposition, tending to cast a doubt upon the original document itzelf. The annotations never emanated from the philosophical mind of Locke. They were written by a sealous mason superstitionsly credulous in the mysteriea of the craft, or intending to impose upon the credulity of others. Locke was not a mason, and if he had been, he would not have given countenence to the abeurditiea set forth in this manuecript.

It would eeem, that the Frankfort editor had heard of the learned John Looke, and in order to give the greater respectability to the record, he aingles him out as a proper person to write a commentary upon it. But not having a sufficient knowledge of English characters to select a suitable person to be addressed by Locke on the occasion he directs his letter, enclosing the record and comments, to the Rt. Hon, * ** Eerl of *** ; and for fear of detection by what is technically called an alibi, he dates the letter, without giving the place from whence it was written, May 6, 1696. The addreas continued to be thus printed in copies issued in England as lete as 1764, when Dermott firat pub-
ished his Ahiman Rezon. Since that period, some English editor, to rid the document of this awkwerd appearance, substituted for the blanks Thomes Pembroke. Hutchinson gives this amendment in 1772. Where did be obtain the information I The parties concerned, however, were all defunct, and there was no means of detecting the fraud. But, slthough the connecting of the name of John Locke in this affair, is eridently a forgery, atill that does not deatroy the validity of the record, which accords in every reapect with Druidical masonry.

This paper is said to have been found in the desk of a deceesed brother at Frankfort, but how it came into his posession is not secounted for. If believed to be suthentic, it would no doubt be highly prised by a superstitious mason, and preserved with great care. Everything, at the time of its supposed discovery in 1696, relating to the origin and purport of masonry, was kept a profound secret; and this document went to expose both. It is, therefore, not a little surprising that the fraternity should ever have acknowledged its authenticity. The pride of untiquity seems in this case to have prevailed over discretion, for all masonic writers claim it as genuine. The author of a work entitled Annales Magonnique, speaking of this document, says, "We ought to value this piece the more, because it is an historical monument of the dawn of the fifteenth century, a time when we march through a vast wilderness. So the thirsty traveller, finding an unexpected fountain in the desert, rests and refreshes himself, and quits it only with painful regreti"-(See Anti-Mas. Review, vol. ii., p. 28).

I shall give the whole of this curious document. In copying it, however, I have changed the ancient orthography to the present, and corrected, according to the annotations, the errors it contains in respect to persons and places.

The title of the paper is, "Certain questions, with answers to the mame, concerning the mytery of masonry, written by King Henry the Sixth, and faithfully copied by me, John Leylande, antiquariun, by command of his highnees."

They are as follows :
What mote it be i-It is the knowiedge of nature and the power of ita various operations; particularly, the skill of reckoning, of weights and measures, of constructing dwellings and buildings of all kinds, and the true manner of forming all thinge for the use of man.

Where did it begin 1-It began with the first men of the east who were before the first men of the weat, and coming weaterly, it hath brought with it all comforts to the wild and comfortlens.

Who brought it to the west i-The Pheniciang, who being great merchants, came first from the east into Phenicis, for the convenience of commerce, both eset and weat, by the Red and Mediterranoan seas,

How came it into England:-Pythagoras, a Grecian, travelled to sequire knowledge in Egypt and Syria, and in every other land whero the Phenicians had planted masonry; and guining admittance into all lodgee of masons, he learned much, and returned and dwelt in Grecis Magns, growing and beooming mighty wiac, and greatly renowned.

Hero ho formed a great lodge, at Crotona, and medo many masona, some of whom travalled into France, and thero made many more, from whence, in procese of time, the art peased into England.
Do masons discover their arts to others l-Pythagoras, when he travelled to gain knovledge, was firut made [initiated] and then taught; this courso abould rightly be applied to all others. Neverthelesa masons have alwass, from time to time, communicated to mankind such of their socrote as might be generilly useful; they have kopt beok such only as might bo hurtful if taught to improper pervons, or wuch an would not be beneficial without the neosesary teaching joined thereto in the lodge; or such as to bind the brethren mare strongly, by the profite end convenience scouring to the fraternity therefrom.

What arts have the mesons taught mankind:-The arte of agriculture, atronomy, arithmetic, music, poetry, chemistry, government and religion.

How does it happen that maoons are better teachers than other man; -They only have the art of finding wew arts, which the firat mason receired from God, by which they disoover what arte they pleape, and the true way of teaching the aume. What other men find out is only by shance, and therefore but of little value, I trow.

What do the masons conoeal and hidel-They conceal the art of finding now arts, and that for their own profit and praise. They conceal the art of keeping secrets, that so the world masy hide nothing from them. They conceal tho sat of wondermoorking and fortelling chinge to wome, that so the same art may not be used by the wicked to a bad end; they also conceal the art of clanging, the way of obtaining the faculty of Abrac, the akill of becoming good and perfect without the aid of hope or fear, and the uninersal language of mavons.

Will you teach me the same arts i-You shall be taught if you be worthy, and able to learn.

Do all masons know more than other menl-Not so. They only have a right and opportunity to know more than other men, but many fail from want of capacity, and many more from want of industry, which is very necessary for gaiving all knowledge.

Are masons better men than others i-Some masons are not so vir tuour as some other men; but for the most pert they are better than they would be if they were not masons.

Do masons love one snother mightily, as is said i-Yea, verily, and that cannot be otherwise; for the better men are, the more they love one another.
"Our celebrated annotator, saye Hutchinsor, has taken no notice of the masons having the art of working miracler, and forasying things to come." This circumstance alone renders it sufficiently evident that Locke was not the annotator, for auch a bold asamption would not have

[^112]encaped his nbeervation and severe avimadveraion. The annotator was doubtless feerful of involving the craft in difficulty by touching upon this subject ; although he must have cited the mysteries in support of the pretention.

The univeral language of masons, so muoh vaunted of, extende no further than to a few worde, eigns, and grips, by which they can communicate to each other that they are mesons, and have been initiated into certain degrees. They may aleo learn a cypher that is given in the royal arch, but which not one in a thousand takes the pains to ecquire, and if obtaised, can be of no masonio uee, that is, to communicate any mecrete of the oraft, for manonn are prohibited from committing these to writing, printing, carving, or ongraving.

## John $G_{\text {willim. }}$

In a work, ontitled "The Diaplay of Heraldry," by John Guillim, it is stated that the company of masons, being otherwise termed freemasone, of ancient standing and good reckoning, by means of affable and kind meetings, divers times did frequent this mutual assembly in the time of King Heary VIn, in the twelfth year of his reign, 1434.

## Elias Aehmole.

Ashmole, in his diary, p. 15, easys, "I wes made a freemseon at Warrington, in Lancsshire, 16th of October, 1846.-On March the 10th, 1682, I reoeived a summons to appear at a lodge, to be held the next day, at Mason's hall, in London. March 11, I accordingly attended, where I wan the senior fellow among them, it being nearly 95 years since I had been admitted into the fraternity. We all dined at the Half-moon Tavern, where we partook of a sumptuous dinner, at the expenee of the new socepted mason."

Lswrie, in recording this anecdote, says, "This gentleman was the celebrated antiquary who founded the Ashmolean museum at Oxford, His attachment to the fraternity is evident from his diligent inquiries into its origin and hiotory, and his long and frequent attendance upon its meetinga.-See Diary, p. 66."

Robert Plott, LL.D., keeper of the Ashmolean museum, ctc., says, in his Natural History of Staffordshire (1686), thast, "They have a custom in Staffordabire of adrnitting men into the society of freemasons; that in the moorlands of this country moem to be of grester request than anywhere else, though I find the custom spresd more or less all over the nation; for here I found persona of the mont eminent quality, that did not disdain to be of this fellowahip; nor indeed need they, were it of that antiquity and honour that is pretended in a large parchment volume they have among them, containing the history and rulea of the craft of masonry, which is there deduced not only from Secred Writ, but profane story," \&ce--(Freemes. Poe. Comp., p. 182; Anti-Mas. Review, vol. ii., p. 884).

## Nes Regulatione.

According to a copy of the old consfitutions, says Anderson, a general
meembly and feant was held on St. John's day, 27th December, 1668, when Henry Jermyn, Earl of St. Albsns, was elected grand manter, who appointed Sir John Denham his deputy, and Mr. (afterwarda Sir) Cbristopher Wren and John Webb his Wardens. At this sasombly the following regulationa, among others, were made :-
"That no person of what degree soever, be made or accepted a freemason, unless in a regular lodge, whersof one to be a master or tacrden in that limit or divikion where ruch lodge is kept, and another to be a craftoman in the srade of free masoury."

This regulation show clearly that the society wes not confined to operatives. It shows also, that it was at this time in a very disorderly oondition.
"That, for the future, the fraternity of freemasons shall be regulated and governed by one grand master, and as many wardens as the society shall think fit to appoint at the annual general assembly."

It appears by this, that at the period bere spoken of, whatever may have been the case formerly, the freemasons had no grand master, and that each lodge regulated its own affairs.
"That no person shall be accepted unless he be twenty-one years old, or more."

It is evident that this regulation was an innoration, and that previoualy apprentices were entared at the usual age at which they are taken in other trades.

Sir Christophen Wren, asys Anderson, was ohosen grand master in 1698. He then enumerates the public buildinge that were erected by freemasons, under his euperintendence, and adde "some few years after this, Sir Christopher neglected the office of grand master, yet the old lodge near St. Paul'm, and a fow others, continued their otated meetlinge"

Previlously to this period, the government "enacted the building of fifty new churches in the suburbe of London," to supply the placee of thoee consumed at the great fire in London, in 1666, and Sir Christopher Wren, an eminent architect, was appointed one of the commissioners to superintend the construction of these edifices.

It is highly probable that Wran was at this time master or president of the company of operative masons of London, and may perhaps have been a member of the freemssons' society, but that the latter, as a body, was employed to construct public works is not probsble. It was not acknowledged by the government as a oompany of architects, and, whatever may have been ita standing in the time of the Druids, it was at this period in little repute.

Anderson gives the following account of the revolution of the order which took place at this period. "In 1716, the few lodges in London, finding thomselves neglected by Sir Christopher Wren, thought fit to cement under a grand master aa the centre of sion and harmony." It bere appeara that the order made in 1668, in regard to a grand master, had become neglected. These lodgen were thone "that met, lat, at the Goone and Gridiron Ale-house in St. Peul's churchyand; 2nd, at the

Crown Ald-house, in Parker'g-lane; 8rd, at the Apple-tree Tavern, in Charles-street, Covent-garden ; 4th, at the Rummer and Grapes Tavern, in Channel-row, Weatminster.
"The members of these lodges and some old brothers met at the said Apple-tree, and having put into the chair the oldest master mason, they constituted themselrea a grand lodge, pro tempore in due form, and forthwith revived the quarterly communication of the officers of lodges, called the grand lodge, and resolved to bold the annual assembly and feast ; and then to choose a grand master from among themoelves, till they should have the honour of a noble brother at their head.
"Accordingly, on St. John Baptiat's day [the 24th June, the summer colstice,] 1717, the assembly and feast of the free and accepted masons was held at the aforesaid Goose and Gridiron Ale-house."

The freemasons, at this time, seem to have rummaged their old recorde, and found out what the society formerly was, and come to a determination to revive old, Druidical, Biram masonry.

At this assembly, "Mr. Anthony Sayre, gentleman, was elected grand master of masons, who being forthwith invested with the badgee of office and power, and installed, was duly congratulated by the assembly, who paid him the homage. Capt. Joseph Elliot, and Mr. Jacob Lamball, carpenter, were appointed grand wardens.

The brethren did not wait long before a noble brother condesecnded to be placed at their head; for on the 24th of June, 1721, the Duke of Montague was elected, and accepted the office of grand master of masona From that time to the present, a nobleman or a prince hae constantly presided over the lodges of England. The society soon became fashionable. The brilliant processiona and luxurious feasta now got up, which had for a long time been neglected, added to the sublime mysteries and secuets held out to the initisted, allured the young, the gay, and the inqrisitive to the standard of the order, which now aesumed such an imdosing appearance as caused it to apread with sstonishing rapidity over Europe, Asia, and America. The year 1717 forms an important epoch in the bistory of freemasonry. It had till then been, for some centuries, almost exclusively in the hands of mere craftemen, who knew not what to make of it Druidism being extinct, the religious cement which had bound them together was dissolved, and the incorporated company of masons, no doubt, rendered its combination in respect to that profession inefficient.

As operative masone, the incorporated compeny would naturally take the lead of a society not sanctioned by the laws, the utility of whose myatic rites could not be eetimated after the religion which gave them birth was no longer known.

Dermott mentions eight persons, among whom is the Rev. Dr. Desaguliers, who was elected grand master in 1719, as the authora of this remarkable revolution. At this revival, the ostensible ground upon which the society was originally founded, the craft of masonry, as though in deriaion of the pretension, was utterly abandoned, and no longer considered as a recommandation for admission into the order

The sooiety, however, keeps up a ahow of reapect to the craft by marching in procesions, to lay the corner stone of mesonic halle, and other public edificen. This was an ancient raligious cuatom, having no reference to the art of building.

## Incorporation of Masone in Londom.

Mesons, No, 30.-By the arms granted this society by Willism Eanckeatow, Clarencieux-king-at-arms, ${ }^{\text {" }}$ in the year 1477, it appeare to be of considerable antiquity; however, it was only incorporated by Lettera Patent of the 29th of Charles II., Sopt. 17, anno 1677, by the name of the master, wardene, asaistants, and commonalty of the company of naseons of the city of London.

They consist of a master, two wardens, twenty.two asniatante, and aeventy livery men, whoee fine of edmisaion is five pounde. They have a amall but convenient hall in Meson-alley, Basinghall-street.

Their armorial enaigna are asure on a chevron between three cantles argent, a pair of oompesses somewhat oxtended of the first. Creet a centle of the meond, -(Maithand's Hiatory of London, from the Foundation to 1756.)

This incorporation of course included the operatives of the freemasons, who in their society make use of the same armorial bearings, whioh, it is very probsble, originally belonged to them.

To what pariod the pagan rites, under the name of Druidiam, were mastained in different parta of .Europe, is cuncertain; but that they were not concealed, under the title of freemesonry, in any other quarter than Britain, is evident from the charters of all lodges on the Continent emanating from either the grand lodge of England or that of Scotland. The latter, however, wes not instituted till 1736.

The grand lodge of Ireland was formed in 1730. And in 1788, a chartar for a lodgy was obtained for Boston. So, it is seon, that America was not far behind in availing itself of the earlieat opportunity to bocome a partaker in the advantagee resulting from a knowledge of this soonderful secres.

To suppose, as some writera have done, that the freemasons' society first sprang up in 1717; that such s masa of ourious ceremonies,

[^113]bearing on their very front the most palpable marks of remote antiquity, was then, for the firet time, conoocted by doctors of divinity and other learned men, is, to my mind, proposterous.

Freemasonry is besed on Sabeism, the worship of the stars ; but, as beforo obeerved, its original intention has long since been lost eight of and abandoned. Modern mreons not only continue the coremoniee of ancient masonry, consiating of soven degrees, which relate oxclusively to pagan rites, but have added thereto about fifty others. Theso are founded partly upon pagan mysteriea, and partly upon Jewish and Christian doctrinea; forming altogether an incoherent medley of opposite principlee. The partinans, however, of oppoeing sects neem to be reconciled to it, not atopping to inquire into the meaning of the symbols, or willing to be deceived by the false explication given of them, congregate together in great harmony. And, although the ceremonies relate wholly to religion, either Pagan, Jewish, or Christian, discussion on the subject is abeolutely prohibited in the lodgss.

## CHAPTER VIII.

## AKALYEIS OF YREZMASONRT. ${ }^{*}$

## Introduction.

I shall now proceod to analyae Freemssonsy. And as I conceive it to be no other than the forms and ceremonies of the ancient Pagan religion; that is, Sabeism, or the worship of the stars, the following remarks of Volney, on the natural causes which led to this apecies of worahip, will not be amiss :
"The unanimous testimony of all ancient monuments, presents us a methodical and complicated aystem, that of the worship of all the stars, adored sometimes in their proper forms, sometimes under figurative emblems and aymbols; and this worship was the effect of the knowledge men had sequired in physics, and was derived immedistely from the first causee of the social state, that in, from the neceesities and arts of the first degree whioh are among the elements of nociety.
"Indeed, as Boon as men began to unite in society, it becamo necessary for them to multiply the means of subeistence, and consequently to attend to agricultare; agriculture to be oarried on with euecess, requires the observation and knowledge of the hesvens. It was necensary to know the periodical return of the same operations of nature, and the came phenomena in the akies; indeed, to go so far as to ascertain the duration and succession of the sessons and the months of the year. It was indispensible to know, in the first place, the course of the sun, who in his zodiacal revolutions, shows himself the first and supreme agent of the whole creation; then, of the moon, who, by her phases and periods, regulates and distributes time; then of the stars, and even planota, which, by their appearance and disappearance on the horizon and nocturnal hemiophere, marked the minutest divisions; finally, it was necessary to form a whole aystem of astronomy, or a calendar ; and from these works there naturally followed a new manner of coneidoring these predominant and governing powers. Hsving obeerved that the productions of the

[^114]earth had a regular and constant reistion with the hesvenly bodien : that the rise, growth, and decline of each plant kept pace with the appearance, elevation, and declination of the same star, or group of stars: in short, that the languor or activity of vegetation Beemed to depend on celestial influences, men drew from thence an idea of nction, of power in those beings, superior to earthly bodies; and the star dispensing plenty or acarcity, became powers, gonii, gods, authors of good and evil
${ }^{4}$ As the state of society had already introduced a regular hierarehy of ranks, omploymente, and conditiona, men, continuing to reason by comparison, carried their now notions into their theology, and formed e complicated nystem of gradual divinities, in which the aun, as firat god, was a military chief, a political king; the moon wes his wife, end queen; the planets were servants, bearers of commands, messengers; and the multitude of stara were a nation, an army of heroes, genii, whose office was to govern the world under the orders of their chiefs; and all the individuale had names, functions, attributes drawn from their relations and influences;* and oven sexes, from the gender of their appelletione $\dagger$
"If it be saked to what people this system is to be attributed, we chall answer that the same monumente, uupported by unanimous traditions, attribute it to the first tribes of Egypt; and when reason finds in that country all the circumastancea which could lead to such a system; When it finds there a zone of aky, bordering on the tropic, equally free from the rains of the equator and the fogu of the north; when it finds there a central point of the sphere of the ancientu, a salubrious climate, a great, but managasble, river, a soil fertile without labour or art, and placed between two sees which communicate with the richest countries, it conceives that the inhabitant of the Nile, addicted to agriculture from the nature of his soil, to geometry from the annual neceesity of measuring his lands, to commerce from the facility of commanications, to astronomy from the state of his aky always open to obeervation, must have been the first to pesa from the savage to the social state, and consequently to attain the physical and moral scienoen necostary to civilised life.
"It was, then, on the borders of the upper Nile, among a black race of mon, that was organised the complicated aystem of the worsbip of the stars considered in relation to the productions of the earth and the labours of agriculture; and this firat worahip, characterised by their adoration under their own forms and natural attributee, was a simple proseeding of the human mind; but in a short time, the multiplicity of

[^115]the objecte of their relations, and the reciprocal influence, having complicated the ideas, and the aigns that represented them, there followed a confusion as singular in ite cause an pernicious in its effects."

It has been sufficiently made to appear, it is believed, that the Sodiety of Preemasons has exioted in England for upwards of six hundred years. How far its principles and objects were generally understood by its members in the early otage of its establishment, is unknown. But, judging from the enigmatical manner in which ita ritual, as handed down to us, is explained, we may conclude that the brethren, particularly the craftemen of the three firot degrees, were kept es closely hoodwinked in reapect to ite true import, after, as thoy were before their lnitintion. The personal asfety of its founders required this course. Hence the awful osths exacted of them to keep secret the rites and ceremonies in which they were percoitted to participate.

These ceremonies were manufactured for the occasion; and were so obscurely framed as to be rendered incomprehensible to all those not intrusted with the secret object of the institution. Besides, artifice was made use of to misleed the brethren, answers to queetions propounded being often given that have no relation to their true interpretation. In ahort, freemasonry is allegorical throughout, and in an imitation of the astronomical worahip of the Egyptians, Hiram being substituted for Osiris. There are occaaional departures from the original, to accommodate it to the craft or trade of masonry, which, as before obeerved, is a mere finesse to cover the real design. There, otherwise, would have been no necessity for dividing the subject matter of the three first degrees, which may be coneddered as subatituted for the coremonies and searets of the lesser mysteriea; and that of the royal arch and ite appendages, for those of the greater. It may, however, have boen the policy of the Druide, to deal out their myateries in small parcels, to try the good faith of their pupils by degrees, and to stop ahort, or proosed with them acoordingly.

No sccount of the secret practices of masonry had been given to the public, till after ite revival in 1717. The first writers who undertook to expose them, were Prichard, in 1780 ; Master Key to the Door of Freemesonry, in 1768; and Jachin and Boas, in 1776. As materisl alterations in the ritual have been made since the report of Prichard, whatever may be said of "old land marka," in making this analysis I ohall rely chiefly upon him and the two following exponitions for an explanation of the three first degrees, which was the extent of their Inbours, although the author of Mester Key, aigas himself "A Member of Royal Arcb."

On the revival of the institution, the surviving heirs of the mystery, no doubt, gave to the society as far so recollected, the very words and ceremonies as dolivered to them; and which Prichard testifies under oath to be truly roported by him.

This expose particularly indicates the order to be of ancient date. After perusing it, it would seem imposeible to believe that men of learning, talents, and standing in eociety, would, in the eighteenth century
of the Christian ers, seriously form de nowo such a medley, void of the least claim to wit or rationality, except in reference to the scientific worabip of the heavenly bodies and other physical powers of neture. According to Prichard, many of the questions and answers are in verse, which sumficiently indicato their Druidical formation ; the sense of which, however, has been changed to prose, thereby rendering the dialogue more conformable to the present taste, and at the same time diveating it of its Druidical dress.

In adapting this parody of the myateries to the uninformed state of the initinted to the three first degreee of masonry, although a trinity is scknowledged under the title of wiedom, atrength, and beauty, still the true first person is kept out of view.
"The maintainers of the Egyptian philosophy held that the Supreme Being, the infinitaly perfect and happy, was not the creator of the world, nor the alone independent Being. The Supreme Being, who resides in the immensity of space, which they call peteroma or fullneea, produced from himself, zay they, other immortal and spiritual natures, atyled by them EOns, who filled the residence of the Deity with beinga eimilar to themselves."-(Key to the New Testament-Hutchinson, p. 88.)

This Divinity is spoken of by Jambliohus, under the name of Emeph or Kneph. Ho says, that "This God is an intellect, itself intellectually perceiving itself, and converting intellections to itself; and is to be worshipped through silence alone."-(Taylor's Trans. Jam. p. 202.)

Although this god was secretly acknowledged by the philosophers and learned prieats of Egypt, he was utterly unknown to the common people; and thir is supposed to be the case with the mason of the three first degrees. But when he arrives at the holy royal arch, the discovery is made known to him. This is the awful Divinity, on coming into whose presence the shocking exhibitions of thunder, lightning, etc., produce such excessive trepidation and fear. This is the Wisdom, the first person of the Egyptian trinity; Osiris, the sum, the Strength, the Demiurgus or supposed maker of the world, is the second person ; and Isis the moon, the Beauty of masonry, is the third. But as the first person is not revealed to the initiates of the minor degrees, the trinity for these grades is made up wholly of visible, physical powers, adapted to the gross conceptions of the unenlightened, vis., Oairis, Isis, and Orus; that is, the sun, moon, and Orion.
To provent that satiety srising from the perusal of long rituals, particularly those in which the reader has no faith, I shall confine myelf to as few items in that respect as is conoistent with the necessary development of the subject. This anslyxis in not intended as a regular expoof of the ceremonies of masonry.

After these preliminary remarks, I commence with the

## Manner of Opening a Lodge, and Preparing a Candidate for Initiation; taken from Jachin and Boaz

Masonry throughout is in the catechetical form, in the same manner
as instruction is given to novices in all other roligions. The master, before opening the lodge, demands of the offlicers their various atstions and duties (which will appear in what are called Lectures, further on), onding with those of the meater, whose station is in the east, because the sun rises in the east to open the day, mo the master atands in the east to open Kie lodge, and set the men to work.

After the conclusion of this ceremony the masater puts on his hat, and declaree the lodge to be opened, in the name of holy St. John, forbidding all curging, swearing, whisparing, and all profane discourse whatever. He then gives three knocks upon the table, add puta on his hat, the brethren being uncovered. Provided a candidste has received the approval of the lodge for admittance, the master asks if the gentleman proposed last lodgo night is ready to be made; and on being answered in the affirmative, he orders the wardens to go out and prepare the person, who is generally waiting in a room at some distance from the lodge room by himself, being left there by hia friend who propoeed him. He is conducted into another room, which is totally dark; and then anked, whother he is conscious of having the vocation necessary to be received ! On answering yen, ho in saked his name, surname, and profession. When he has answered theae questions, whatever he has about him made of motal is taken away, as bucklea, buttons, ringe, ato., and even the money in his pocket. Then they uncover his right knee and put his left foot with his shoe on into a slipper (this is not practised in every lodge, sonse only slipping the heel of the shoe down), hoodwink him with a handkerchief, and leave him to his reflection for about balf an hour. The chamber is also guarded within and without by some of the brethren, who have drawn swords in their hands. The person who proposed the candidate staye in the room with him, but they are not permitted to converse together.

During this silence, and while the candidate is preparing, the brethren In the lodge are putting everything in order for hia reception there; such as drawing the annexed figure [omitted] on the floor at the upper part of the room, which is generally done with chalk and cbarcoal intermixed. It is drawn east and west. The Master stands in the east, with the square banging to his bresat, the holy bible opened at the gospel of St. John, and three lighted tapera are placed in the form of a triangle in the midst of the drawing on the floor.

The proposer then goes and knocks three times at the door of the apartment in which the ceremony is to be performed. The Master answers within by three atrokes with the hammer, and the Junior wardon aske, who comes there ? The candidate anowera (after another who prompts him), "One who bega to receive part of the benefit of this Right Worshipful Lodge, dedicated to St. JoKa, as many brothers and fellows have done beforo me." The doors are then opened, and the sonior and junior wardens, or their assistants, receive him, one on the right, and the other on the left, and conduct him blindfolded three times round the drawing on the floor, and bring him up to the foot of it, with his face to the mater, the brethren ranging themselves on each side,
and making a confused noise, by striking on the attributes of the ordor, which they carry in their hands.*

In some lodges the candidatee are led nine times round; but as this in very tiresome to the person who is to undergo the operation, his patience being pretty well tried by being blinded so long beforehand, it is very justly omitted.

## Apprentice's Degree.

I commence this degree with Prichard's report, called, "Manonry Dissected," as inserted in the Antimasonic Reviow, which Mr. Ward, the editor, informa me he printed from a manuscript copy. It in evidently an abridgment of the original, for it opens with the examination of an apprentice previously initiatod. It contains, however, enough for the present purpose. An attestation to the truth of the statement in prefixed to the document, as followa :
"Samuel Prichard maketh oath, that the copy lereunto annexed is a true and genuine copy in every particular. Jur. 13 Die Oct. 1730, Coram me R. Hopkins."

I aball not confine myself to any one of the books on the subject in regular order, but take the questions and answers, or the purport of them, from either, as may best suit my purpose.

Question.-From whence came you I Answer.-From the Boly Lodge of St. John [Why the Druids gave this name to the lodge will be explained in the sequel.] What recommendations brought you from thence :-The recommendation which I brought from the right worshipful brothers and fellows of the right worshipful and holy lodge of St. John, from whence I ceme, and greet you thrice heartily well,

What do you come here to do l-

> Not to do my owa propar will,
> But to subdue my paselons still: The milee of masonry in hand to thee, Asd daily prognves theroin to make.

Are you a mason 1-I am so taken and acoepted to be among brothera and fellows. Where were you made a mason !-In a just and perfect lodge. What makes a lodge :-Five. Masons are deceived by the reason given for this number making a lodge. "The ancient theology (as before ubserved) being nothing more than a aystem of physics, a picture of the operations of nature, wrapped up in ingaterious allegories and enigmatical aymbola," a solution of the enigma must be sought for from that eource.
"The Egyptiana represent the world by the number five, being that of the elements, which, says Diodorus, aro earth, water, sir, fire, and ether or apiritus (they are the same amongot the Indians) ; and according to the mystics, in Nacrobius, they are the nupreme God or primum mobile, the intelligence or meus born of him, the soul of the world which proceeds from him, the celeatial spheres and all thinge terrew-

[^116]trial. Hence, adds Plotaroh, the analogy between the Greek peate, five, and Pan, all." (See Ruins, p. 236.)

What makee a just and perfect Lodget-Seven. This is in consequence of its being formed by the union of three and four; which, ss before observed, renders this number superlatively perfect

Masonry teaches that the above numbers are required to make a lodge, because man has five senses, and there are seven liberal sciences, and much ridiculous parade is made in the definition of thees eciences, which are thus arranged :-Grammar, rhetoric, logic, arithmetic, geometry, music, and astronomy. What doth geometry teach !-The art of messuring, whereby the Egyptians found out their own land, or the same quantity which they had before the overflowing of the Nile. -How were you prepared to be made a maan l-I was neither naked nor clotked, barefoot nor shod; deprived of all metal; hoodwinked, with a cable-tone about my neck, when I was led to the door of the lodge, in a halting moviog posture. This preparation, as before noticed, is in conformity to the ancient usage in the mysteries; it in a scenical representation of the forlorn condition of man in a state of nature. The rope about the neck of the candidate, like the chain required by the Druids to be carriod by their followers in the performance of their sacred rites, was, as before stated, in testimony of hia submisaion to the will of God, [See Mayo's Myth. v. ii., p. 220.

How got you simittance $1-B y$ three great knocks. Who received you $\mathrm{t}-\boldsymbol{A}$ junior warden. How did he dirpose of you i - He carried me up to the north-east part of the lodge, and brought me back again to the weat, and delivered me to the senior warden. [Why the candidate begins his labours at the north-east part of the lodge has already been explained.]

Where did our ancient brothren meet before lodges were erected $1-$ Upon holy ground, or the highest hill or lowest vale, or in the vale of Jehowhaphat, or any other secret place; the better to guard againgt cowans ${ }^{\text {" and enemips, either ascending or deecending, that the krethran }}$ might have timely notice of their approuch to provent being surprised.

These ancient brethren were Druids; and the places mentioned are such as they used to assemble at, before the edict of Canute entirely prohibited their public meetinga. In consequence of which Druidism was changed into freemesonry, and lodges erected. It cannot be shown that a lodge of masons ever held a meeting for the performance of their mystio rites, except in a close room, properly tiled. The groves and other places where the Druids assembled for worship were consecrated to some divinity, and considered holy ground. The vale of Jehoshaphat is here introduced ss a mere juggle. It is a valley near Jerusalem, where, or in Jerusalem itself, a lodge of freemasonn never held a meet,

[^117]ing. The following extract from Holwell's Mythol. Dict. will show the reasons given by the ancients for worshipping the gode upon high hille or mountains :-

## High Places.

Many of old worshipped upon hills, and on the tope of high mountaing, imagining that they thareby obtained a nearer communication with heaven. Strabo says (I. 15) that the Persians always performed their worship upon hills. (Some nations, inatead of an irwage, worshipped the hill as the deity. Max. Tyr. Diesert. 8, v. Appian. de bello Mithridatico.) In Japan most of their temples at thin day are upon eminencea; and often upon the asoent of high mountaina; commanding fine views, with groves and rivulets of clear water; for they any, that the gods are extremely delighted with such $\mathrm{bi}_{\mathrm{k}} \mathrm{h}$ and pleasant apota. (Kempfer's Japan. ii., b. 6.). This practice in early times was almost universal ; and every mountain was esteemed holy. The people who prosecuted this method of worship enjoyed a soothing infatuation, which flattered the gloom of uuperatition. The eminences to which they retired were lonely and silent, and neemed to be happily circumatanced for contemplation and prayer. They who frequented them were raised above the lower world ; and fancied that they were brought into the vicinity of the powers of the air, and of the deity who reaided in the bigher regions. But the chief excellence for which they were frequented, was the 0 mphi , interpreted Thiea cledon, vox divins, beiug a particular revelation from heaven. In ahort, they were looked upon as the peculiar places where God delivered his oracles.

Many times when a reformation among the Jews way introduced by some of the wiser and better princes, it is still lamented by the sacred writer (1 Kings xxii.) that the high places were not taken asoay; the people will offered, and burnt incense on the high places.

The lodge is described as extending in length from east to west; in breadth from north to south; as high as the heavens; as deep as from the surface to the centre; and supported by three large columns or pillars, named Widdom, Strength, and Beauty.
"Our institution is asid to be supported by wisdom, strength, and besuty; and because it is neceasary that there should be wisdom to contrive, atrength to support, and beauty to adorn, all great and important. ondertakings. Its dimensions are unlimited and its covering no less than the canopy of beaven. To this object the mason's mind is continually directed, and thither be hopes at last to arrive, by the aid of the theologioal ladder, which Jacob, in his vision, saw ascending from earth to heaven; the three principal rounds of which are denominated faith, hope, and charity." (Webb.)

It is ovident from the foregoing, that a masonic lodge is suppoeed to represent the world; upon which plan the ancient pagan temples wereformed. The flooring of the lodge is intended to resemble the face of the earth, and the principal ceremonies performed in it are an imitation
of the movements of the heavenly bodios, partioularly of that great Iuminary the Sun, the god of Egypt.

The Rev. R. Taylor, in his lecture on masonry, very ingeniously molven the enigma of the three principal rounds of the aforesaid theological, or rather astronomical, ladder, thua :
"Falth is the Geniun of Spring; Hope of Summer ; and Charity of Autumn.-Faith, in Spring, because faith and works must alwaye come together.-Hope, of Summer, becsuse from that point the sun looks vertically down upon the seeds which have been committed in faith to the fertilizing womb of the earth.-Charity of sutumn, because then thesun empties bis cornucopis into our deeiring lapa.-Faith is the eastern pillar; charity the western; and hope the key stone of this royal arch."-This theological ladder has seven rounds, and is enigmatically described in the degres called Knight of Kadoeh, which I shall hereafter notice. It marks the course of the sun through the seven signs of the sodieo, commencing at the vernal equinox, and onding at the autumnal, both inclumive. The somicircle mado by the sun in paseing these sigan forms the colebrated royal arch; and a mason to attain the degree so called, muat pase through the seven grades of the order. The three principal stepe above noticed allude to the equinoxes and the northern eoletice.

Why should the msster represent the pillar of wisdom, and be stationed In the east ! As the sun rises in the east to open and adorn the day, so risee (at these words the master rises), the worshipful master in the east to open and adorn his lodge, and wet the craft to work. Why should the senior warden represent the pillar of atrength; As the aun wets in the west, to close the day, so atands the senior warden in the west, to clome the lodge, and dismias the men from labour, paying them their wages. The junior warden representa the pillar of beauty, because he stands in the south, at high twelve at noon, which is the glory and beauty of the day, to call men off from labour to refreshment, and to see that they come on again in due tiree.

The above arrangement is evidently deosptive. Wisdom, applicable to the true God, who, scoording to pagan theology, resides in the immensity of apace, is kept out of view, and Oairis, the sun, in aubatituted in his place. Strength, which is required for labour, at the opening of the day, and is applicsble to the sun, is transferred to ite close, when men are called from lsbour. The senior warden proporly personstes Isis, indicating the pruductions of the earth in the fall, which ornaments and beautifies the creation. The sun, moon, and Orus or Orion, [whioh lies directly over the equstor), form the wisdom, strength, and beauty of the three first degrees ; and they also composed the vulgar trinity of the Egyptians.

The two principal pillars are called Jachin and Boar, and sre supponed to be placed at the equinoctial pointe; Boar in the enst, and Jschin in the west; the former on the left hand, and the letter on the right, to the inhabitants of the northern hemiephers, the sest of masonry. "The equinoctial points are called pillare, because the great semicircle, or upper bemisphere, doth seem to rest upon thom." (R. Taylor.)

In the degree of perfect master, these two pillars are paid to be fixed erosnoayn. It is asked, are you a perfect master t Ane. I have aeen the circle and the square enclosing the two columns. What do the columns represent ! Jachin and Boaz, through which I muat have passed to arrive at the degree of perfect master. What bave you done in entering the lodge 1 I came to the altar, worked as an entered apprentice, fellow-craft, and master, to croes the two columns. "Now (esys Taylor) what are cross ways but two ways of which one crossea the other 1 These cross ways, Boas and Jachin, are the equinoctial points, at which the line of the ecliptic crosses the line of the equator-that is, the sum in his apparent patb, the eclpitic, comes to shine directly over the line of the equator : this he doee in epring and autumn, and only then."

The fellow-craft is said to receive his wages in the middle chamber, at which he arrives by seven winding stairs, passing the two pillars of Boaz and Jachin. This is emblematical of the seven circular stagee, made by the aun in his tour round those imaginary columns. The emerging of the sun from the lower hemisphere on the 21st of March, and his return on the 27th of September, may in figurative language be denominated his riaing and aetting in regard to our hemiaphere. Thus Osiris, the sun, sete the husbandmen to work on his rising at the former period, and lsia, the emblem of hervest, pays them in the fruits of the earth, on his return to the latter.

The figure in the following page is that by which the symbol of harvett is represented in mythology; the torch, however, was peculiar to Ceres.

So the master of the lodge, who stands in the east, representing the sun, rises and sets his men to work; and the senior warden, who stands in the west, representing Isis, pays them their wages. To render this personification of Isis perfectly plain, a painting of a sheaf of whest is hung on the back of the senior warden's seat.*

It is also worthy of remark, that as the pagans constructed their tomples in a manner to represent the world, they would naturally, for that purpose, imagine the world to be divided into three departments or chambers ; the upper, the middle, and the lower. The middle chamber would of course include the autumnal equinox; and on the arrival of the sun at that point of the heavens, the labourer, the husbandman, is peid. his wagea in the fruits of the earth.

Freemasona' hall, in London, is a partial imitation of a pagan temple. "In the centre of the roof of this magnificent hall, esay Smith, a splendid sun is represented, surrounded with the twelve signs of the zodiac."

[^118]And he adda "The soientifio freemason only knows the resaon why the sun is thus placed in the centre of this beautiful hall."

How is the lodge aituated I Due east and west, because all churches and chapels are or ought to be so.

All pagan tamples ware so situated in oonsequence of the mun's being the univeraal object of worship. "The Egyptians, Chaldeans, Indiann, Peraians, and Chinese, all place their temples fronting the eant, to roceive the firut rays of the sun. Hence the worahip of the sun has been the religion of the ancient people from which theee, [the preeent raco] are descanded."-Tytler'n Elem. of Hist.

- Winsggle

It is true this custom continned long after the cause which produced it, ceased to be respected. Preston, in his illustrations of masonry, in giving a description of St. Paul's Cathedral, eays, " $\boldsymbol{\Lambda}$ strict regard to the eituation of this edifice, due cast and weat, hes given it an oblique appearance in respect to Ludgate-street in front."

This building was finished in 1696. Ita architect, Sir Christopher Wron, in a letter dated 1707, addressed to a joint commissioner with himaelf for building churchea to supply the plecee of those deatroyed by the conflagration of 1686, observes, "As to the situation of the churchee, I ehould propose they be brought forward an far as poseible into the larger and more opan atreata. Nor aro we, I think, too nicely to observe east or west in the poaition, unlees it falls out properly." (See Andernvn's Consth of Freemasonry.)

Have you any ornamenta in your lodge I Yea, the mesonic pavement, the blazing star, and the indented or teesled border. The Mosaic pavement is the flooring of the lodge. This points out the diversities of objecte which decorate and adorn the creation, the animate as well as the inanimate parts thersof. "The same divine hand which hath bleased us with the aighte of his glorious work in the heavens, he hath also spread the earth with a beautiful carpet : he hath wrought it in various colours, fruits and flowers, peatures and meade, he hath wrought it as it were, in mosaio work, giving a pleasing variety to the eye of man."-Smith.

The blazing star in the centre indicatee that prudence which ought to appear conspicuous in the conduct of every mason. The indented or temaled border refers us to the pleneth, which in their various revolutions form a beautiful border of akirt work round that grand luminary the aun. The furniture of the lodge is the polume of the sacred lave, the compans, and the square.

The origin of what is called mosaic roork, as woll as the term by which it is detignated, appears to be lost through the lapee of time.
${ }^{54}$ The ancients, espocially the Greeks, zays Bailey, adorned their floors, parements of temples, pelnces, eta, with moeaic, or rather musaic work $\Delta$ work composed of many stones, or athor matters of different colourg, so dirposed as to represent divers ahapes and ornamenta, birds, etc." Dr. Rees obeerves, "The critios are divided an to the origin and reason of the name moseic." He then gives unsatiafaotory hypotheses of several writers on the aubject, and concludes by eaying, mosaic appears to have taken ite origin from paving : " leaving the quention an to the propriety of thus denominating any kind of paving unsolved. This matter having eluded the researches of the learned for so many ages, it is with diffdence I offer the following remarks:-
"The rural works, mays Pluche, not being resumed in Feypt till after the Nile had quitted the plain, they for this resson gave the public eign of husbandry the name of Moeen or Muneus, aaved from the soatere; and on the same account, the nine moons during which Horus, Apollo, or husbendry continued his exerciees, went by the same name." Hence, as wo have seen, originated the fable of the nine musea, "Isis, saya the same writer, was so far the proclamstion of the year, that she put on suoh
clothes and dresses an were agreeable to the four seasons. To announco the beginning of apring, that overspreads and onamola the earth with flowers and verdure, she wore carpete of different colours," ete.

Now what could be more appropriate than to denominate the variegated and beautiful face of the earth in Egypt, during the nine moathe that bore the name of Mones or Museus, usosaic or musaic work, and to give the same appellation to ita imitation !

The Egyptisns and other ancient nations held high hills, groves, eta, In superstitious veneration; and although, when more civilived, in order to shelter themselven from the weather, they quitted these favourite retrests, and worehipped their gods in temples, atill it was natural that they should endesyour to imitato the seenes which they venerated, and had been accustomed to contemplate in their former devotions. With this view then, they decorsted their temples so as, in some measure, to resemble the works of crestion, as exbibited in the pinces where they before assembled for religious worship. And the name Mosaic or Musaic would naturally oscur to them as proper to be given to this ornamental work, intended to represent the face of the earth during the nine moenio monthe.

How many principlen are there in masonry 1 Four : point, line, superfices, and solid. Point, the centre, round which the master cannot err ; line, length without breadth; solid comprehends the whole (Pritchard.) This before observed, is the definition of the acience of geosaetry.

## A point soithin a Circle.

"In all regular, well constituted lodges, there is a point within a circle, which is bounded north and south by two parallel lines, one ropresenting Moses, the other king Solomon. On the upper part of this circle rests the volume of the sacred lawo, whioh nupporta Jacob'a ladder, the top of which reaches to heaven." In going round this circle wo must necessarily touch on both these parallel lines, and on the sacred volume, and while a mason keeps himself thu ciroumscribed he cannot err."Carlile.

Although our ancient brethren dedicated their lodgea to king Solomon, yet masons professing Christianity, dedicate theirs to St. John the Baptist and St, John the Evangelist, who were eminent patrons of ma-

[^119]eonry ; and eince their time thers ia represented in every regular and well governed lodge, a point within a circle; the point ropresenting an indiridual brother, the circle representing the boundary line of his duty to God and man, beyond which ho is never to suffer his passions, prejudices, or interest, to betray him on any oocasion. This circle is ombroidered by two perpendicular parallel lines, representing St. John the Baptios, and St. John the Evangelist, who wore perfeot paralleals in Christianity as well as masonry ; and upon the vertex reste the book of Holy Scriptures, which point out the whole duty of man. In going round the circle, we necessarily touch upon thoee two linees, as well as upon the Holy Scriptures; and whilo a mason keeps himself thus circumeoribed, it is impoesible that he ahould materially err. (Webb.)

That expoeltori of mamonry should difier in their interpretation of this figure is not surprising. It is an aetronomical enigma, the sense of which wns probebly loot night of during the centuries in which the effaire of the lodge, with very few exception, were in the hands of ignorant eraftemen.

The solution of the aymbol I take to be an follows:-The point in the centre represents the Supreme Being ; the circle indicates the annual circuit of the sun; and the parallel linee mark out the solstices within which that circuit is limited. The mason, by subjecting himsell to due bounds, in imitation of that glorious luminary, will not wander from the path of duty. The device is ingenious, and its meaning ought to be restored in the lodge to its original intention.

The aseertion that lodges were formerly dedicated to Solomon, is gratuitous, and I bolieve will not admit of proof. I am not sensiblo of any historical document that subatantiatea the faot. We know very little of masonry prior to the revival of the order in 1717. And wo
learn by the earliest report of its practices that the old masons hailed from the holy lodge of St. John. It is evident, as before observed, that the Druids adopted the namea of their solotitial festivals, which had been asaumed for them by the Christians, calling them Sth John's deys; and it is highly probable that they resorted to the same finesse to delude their enemies, as well as those of the fraternity who wore not fully initiated Into their mysteries, in dedicating their lodges to these sainta.

This artifice of introducing the St. Johns among the symbole of mssonry, has put the craft to their wita to invent a plansible story to meet the case, and they have come, it is presumed, to an erroneous conclusion, that this was done by Christian masons.

What do you learn by boing a gentleman mason ! Secrecy, morality, and good fellowahip. What do you learn by being an operative mason it To hew, square, and mould atone; ley a level and raise a perpendicular. Have you seen your master to dsy! Yes. How was he olothed I Is a yellowe jacket and blue pair of brecches. (The mastor is the compassee, the yellow jacket in the brasa body, and the blue breeches are the steel points.) How old are you I Under eeven. ("Denoting he had not passed master." Or rather that he had not passed to the fellow-araft's degree, seven yeara being formerly the term of an apprentioeahip in freemssonry as in other trades.)

The five last questions and answers are from Prichard, and Irom the simplicity of the dialogue, it may be concluded the original language and facts have not been perverted, and consequently that there were acceptod gentleman masons, that is not of the cralt from the foundation of the institution.

## Fellow-Crafts Degrei.

Are you a fellow-oraft \& I am, Why were you made a fellow-craft i For the sake of the letter $G$. What does the letter $G$ denote $\mid$ Geometry, or the fifth science. In snother part of the same degree, $G$ is said to denote "the grand architect and contriver of the universe." On being further questioned, the respondent replies, by letters four and science five this $G$ aright doth stand, in a due art and proportion. You have your answer, friend. (N.B. Four letters are Boes, fifth science, geometry.)

[^120](Prichard.) The importance beetowed apon geometry, the fifth science, according to masodic clansification, may be another reason why five ahould compose a lodge.

How did you attain to this degree -By the benefit of a grip and pass-word. The name of the grip is Jachin; that of the pass-word Shibboleth, which denotes plenty, and is ropresented by a sheaf of wheat suepended near a water-ford. (Allyn.) Did you ever work ? Yeen, in the building of the temple. Where did you receive your wages In the middle chamber, which I entered through the porch, by aeven winding atairs, where 1 discovered two grest columns or pillars. The name of the one on the left hand is Boas, and denotes atrength, that on the right, Jachin, which denotes to establish; and when combined, stability; for God said, in atrength will I establish this, mine house, to stand frm for ever. The house of God is the universe, which is doubtless eatablished upon principlea that will austain it for ever. The pillars Boas and Jachin are imaginary prope, standing at the two equinoxes, east and west, to support the world. Hence it may be remarked, that the pillar representing Boas, or the sun, is properly said to denote strengtb, wheress in the apprentice's degree it is insde to denote risdom. Jachin, signifying Isis the moon, wha a neosesary appendago to the creation and per hape may be applied metaphorically to eastablioh.
"The sun is the creator and father, the moon the mother of all things. These two deities govern, produce, and nourioh overything connected with the visible universe. The san is the third Demiurgus, the supreme creative intelligence under the third form : incarnate be becomes Oairia, the author of all good, and it is he that completes the Egyptian trinity." (Anthon's Class Dict.)

Osiris, the sun, by his genial influence in the spring aesson, preperes the sarth for cultivation, gives life to its various productions, and consequently enables the husbandman to oommence his labours. Isis, the teeming mother, who personifies the earth an well as the moon, nourishes during the summer the seeds committed to her bosom, and in the fall eeason rewards the labourer.

The pillars of Boaz and Jaohin are dewcribed to be cighteen cubita high, twelve in circumference, and four in diameter.

The eighteen cubite refer to the inundation of the Nile, being the highest elevation it is known to have sttained. The twelve cubita relste to the twelve signs of the zodiac, through which the sun pasees; and the four cabits have reference to the tectractys, which comprehends the principles of geometry, point, line, auperfices, and solid.

The pillare are adorned with two large chapiters, which are ornamented with net work, denoting unity; lily-work, denoting peace ; and pomogranates, which, from the exuberance of their seeds, denote plenty. It is only the pillar of Jachin, which represents Isis, the omblem of harvent, that in decorated with pomegranates in the figures of these columns among tbe masonic symbols. They are further adorned with two globee, one colestial, the other terreetrin.

The display of globea, like moat of the cuatome of masonry, may be traced to Egypt. Dr. Hichardeon, as reoorded in a former part of this work, io deacribing the gateway or porch leading to the temple of Ixis, in Tentyra, says "Immedistely over the centre of the doonoay, is the beantiful Byyptian ornansent usually called the globe, with serpents and wings, emblematical of the glorious sun poised in the airy firmament of heaven, supported and direoted in his couns by the etarnal wiedom of the Deity."

Voltaire, however, is of opinion that thin globe indicated the Supreme Being; he aays, "It may be remarked, that the globe placed over the door of the temple of Memphis represented the unity of the divino nature, under the name of Knef."-(Eurres-T. 16, p. 100.)

The candidate having learned the grip, token, and pass-word (Shibboleth, plenty,) of the fellow-craft, receives his wages, and panea the pillar of Jachin. He is then placed in the south-eant part of the lodge, and thus addreased by the master :-
"Brother, masonry being a progreasive science, when you were made an entered apprentioe, you were placed in the north-east part of the lodge, wo show that you wero nowly admitted. You are now placed in the wouth-east part, to mark the progress you have made in the acience."

Thus the candidate commences his labours at that point where the aun is supposed first to have risen at the period of the creation, and by pursuing the couree of that luminary till he has completed the circuit, becomes then worthy of the master's degres.

## Master Mason's Degrees

The degree of master mason follows that of fellow-craft As it contains the story of the murder of Biram upon which the entire fabric of masonry is erected; the very gist of the order, to which all other considerations are aubordinate; which meete us at every turn through all the varied acanes of the Institution, it becomes necessary to possess a due knowledge of the original upon which it is founded. This is the fable of Osirie and Isis; which I, therefore, place as an introductory prefsoe to the master's degree. I take the fable from L'Origine de tous les Cultee, par Dupuis.

## Explanation of the travels of Isis, or the Moon.

The moon was rasociated, by the ancient Egyptians, with the sun in the general administration of the world, and it is a se who represents the charncter of Isis in the sacred fable, known by the title of the history of Osiria and Isis. The first men who inhabited Egypt, esys Diodorus of Sicily, struck with the grandeur of the heavens, and the admirable order of the universe, thought they perceived two primary and eternal
oanses, or two grand divinities, and they called one of them, or the sun, Osiris; and the other, or moon, Isis,

The denomination of Iais, given to the moon, is confirmed by Porphyry and other authora; whence we draw a necessary conclusion, that the courses or journeyings of Isis are no other that the courses of the moon; and as the regions of the heavens are those she traverses in her monthly revolutions, we will there fix the scene of her adventure.

This conclusion is justified by the pessags from Cheremon, where thin learned Egyptian talls us, that the Egyptians explained the fable of Ogiris and Isis, as well as all other sacred fables, by the celestial bodies, by the phases of the moon, by the increase and diminution of her light, by the division of time and of the heavens into two parts, by the paranatellons or the stars which riee and set in eapect with the signs. It is upon this principle we bave explained the poem of tho Twelve Labours of Hercules ; we shall follow the same principle in the explication of the Legend of Isis ; of which wo shall give also a comparative table, with those presented by the heavens, at the moment when the sun has doparted from our hemisphere, and left to the moon, then at her full, the empire over long nights, up to the moment when be returns again to our regions.

Let us take then Igis at the epoch of the death of Oriris, her husband, and let us follow her steps, from the moment when she is deprived of him, up to that when he returne to her from hell; or, to drop the figure, from the moment when the sun has passed into the southern or inferior regions of the world, up to that when he repasses conqueror into the northern or superior hemisphers.

Plutarch suppoees that Osiris, after his travels, being on his return through Figypt, was invited to a repast by Typhon, his brother and rival. The latter put him to desth, and threw his body into the Nile. The sun, says Plutarch, then occupied the sign Soorpio, and the moon was full; she was then in the sign oppoesto to Scorpio, that is to say, to Taurus, which lent its forms to the sun of the epring equinoz or to Osiris; for at that distant period, Taurus was the eige which answered to the spring equinox. As soon as Isis was informed of the death of the unfortunate Oairis, whom all the aacients had denominated the same god as the sun, when ehe learned thet the genius of darkness had shut him up in a coffin, she coromenced a search after his body. Uncertain of the route ahe ought to purave, uneasy, agitsted, her heart lacerated with grief, in mourning garb, she interrogates eoery one ahe meets. She is informed by some young children that the coffin which contains the body of her husband, had been carried by the waters nut to sea and thence to Biblos, where it was stopped; and was now reposing upon a plant, which had immediately put forth a ruperb stalk. The coffin was so enveloped, an to bear the appearance of being but a part of it. The king of the country, astonished at the beauty of tho bush, had it cut, and made of it a column for hia palace, without perceiving the coffin which had become incorporated with the truak. Isis, actuated by a divine impulse, arrives at Biblos; bathed in tears, she seats dertelf near a fous-
tain, whers she remained overnohelmed wich grief, spesking to no one until the arrival of some of the queen's women. She salutes them politely, and commencosedressing their hair in such a manner as to spread in it, as well as over their whole body, the odour of an exquisite perfuma.

The queen learning from her women what had happened, and peroeiving the exquisite odour of the ambrosia, deaired to know this stranger. She invites Isie to her palace, attached her to her household, and placed her as nurse to her son. The goddess then mado herself known, and demanded that the precious column should be given to her.

She drew from it easily the body of her husband, by diaengaging tho coffin from the branches which covered it; these she found to be of light texture, which she perfumed with essences; she sent to the king and queen this envelope of strange boughs, which was deposited at Biblos, in the temple of Isis. She then embarked and returned to Egypt, to Orus her son, and deposited the body in a secluded placs. Typhon having gone that night to the chase, finds the coffin, recognized the corpee, and outs it into fourteen picces," which he scattered here and there.

The goddess seeing this, returned to collect theee dispersed fragments ; she interred each part in the place where it was found. Of all the parte of the body of Osiris, those of propagation were the only ones Isis could not find. Sbe subetituted for them the phallus, which wes the image of them, and which was consecrated in the mysteries.

This is the precise Egyptian legend concerning Isis, which has not been handed down to us without much mutilation, and which mske part of a sacred poem upon Osiris, Isis, and Typhon, their enemy.

Notwithatanding the immense defciences discoverable in this allegorical bistory, it will not be difficult for us to trace a perfect correspondence between the principal features of this sacred fable which remain to us, and the reprecentations which the heavens offer, at the different epocha of the movements of the two grest stars which regulate the course of the seanons ; the periodical march of vegetation, the division of time, and the auccession of daysa and nights. We will now proceed as in the poem on Hercules, to bring together these different representations, those which are presented by the fable, as woll as those exhibited by the heavens. We will divide them into twelve parts.

[^121][Here follows a critical comparison between the wanderinga of Ieis in eearch of the desd body of Osiris, and the courses of the moon in the heavens; but as the fable alone answera the purpose here intended, I omit the comparative representations. The foregoing note, however, is drawn from the part omitted. The author concludes as follows :-]

A conformity so complete, and one which bears so many points of resemblance between the representations of the legend and those of the heavens, and which, mutilated as the legend or this macred history may be, is so woll sustained from one end to the other, as not to permit un to doubt that the astronomical priest who composed it, did nothing more than write down the courses of the moon in the hesvens, under the title of the wanderinge of Isis ; especially when it is known that Isia in the name given to the moon in Egypt. We have, in our explanation, only made use of the method laid down for us by Cheremon to analyee these eacred fables, and eapecially that of Osiris and Isia, which he asid was relative to the increases and diminutions of the light of the moon at the superior and inferior hemispheres, and to the atars in aspect with the signs, otherwise called paranatellons. The learned men of Egypt have themselves traced out the plan which we have adopted.

Here we have then an ancient queen of Egypt and an ancient king, whowe imaginary adventures have been described in the form of history, but who, however, as the Hercules of the Greeks, are only physical beings, and the two principal agents of nature. We are led to judge, by these exmples, of the allegoric character of antiquity, and to consider how much we should be on our guard againat traditions which place phyaical beings as oharactera in hintory.

It is important not to lose sight of the fact, that formerly the history of the beavens, and particularly of the sun, was written under the form of a history of men, and that the people, almont universally, received it as such, and looked upon the hero as a man. The tombe of the gods were ahown, es if they had really existed; feasts were celebrated, the objeot of which seemed to be to renew every year the grief which had been occasioned by their loss.

Such was the tomb of Osiris, covered under those enormous massen, known by the name of Pyramids, which the Egyptians raised to the atar which gives us light. One of these has ite four fronts facing the four cardinal points of tho world. Eech of these fronts, is one hundred and ten fathoms wide at its base, and the four form as many equilateral triangles. The perpendicular height in seventy-seven fathome, according to the mesaurement given by Chavelles, of the Academy of Sciences. It results from these dimensions, and the latitude under which this pyramid is erected, that fourteen days before the spring equinox, the precise period at which the Persians celebrsted the revival of nature, the sun would cease to cast a abade at mid-day, and would not again cast it till fourteen days after the fall equincs. Then the day or the aun would be found in the parallel or circle of mouthern declension, which anawers to five degrees fifteen minutea; this would happen twice a year, once before the apring equinox, and ovce after the fall equinoz

The sun would then appear exactly at mid-day upon the summit of this pyramid. Then his majestic disk would apposir for somo moments, placed upon thie immense pedeatal and to rest upon it, while his worshippers, on their knees at ite bess, extending their view along the inclined plane of the northern aide of the pyramid, would conternplate the great Osiris, as well when he descended into the darkness of the comb, as when he arove from it triumphant." The same might be said of the full moon of the equinoxes, when it takea place in this parallel.

It would seem that the Egyptians, alwaye grand in their conceptions, had executed a project the boldeat that was ever imagined, of giviog a pedestal to the sun and moon, or to Osiris and Isis, at mid-day for the ona, and at midnight for the other, when they arrived in that part of the hesvens near to which pesses the line which separatea the northern from the southern hemisphere, the empire of good from thst of evil, the region of light from that of davkness. They wished that the shade whould dieappear from all the fronts of the pyramid at mid-day, during the whole time that the sun sojourned in the luminous hemisphere, and that the northern front should be again covered with shade when aight began to attain hor aupremacy in our hemisphere, that in at the moment when Owiris deecended into the tomb or into hell. The tomb of Oairis was covered with shade nearly six months; after which light surrounded it entirely at mid-day, se soon as Osiris, returning from hell, regained his empire in pessing into the luminous hemisphere. Then he had returned to Isis and to the god of spring, Oras, who had at length conquered the genius of darkness and of winter. What a sublime idea f In the centre of the pyramid is a vault, which is said to be the tomb of an ancient king. This king is the husband of Iois, the famous Oxiris, this beneficent king whom the people bolieved to have reigued formerly over Egypt, while the priests and learned men saw in him the powerful planet which governs the world and enriches it with his benefits. And, in fact, would they have ever gone to so great an expense if this tomb had not been reputed to contain the precious remains of Osiris, which his wife had collected, and which she confided, say they, to the priests to be interred at the same time thew. hey decreed to him divine honoura: Can we suppose that there was any other object among a people who spared nothing to give all pomp and magnificence to their worship, and whose greateat luxury was a religious luxury it It in there that the

[^122]Babylonians, who worshipped the sun under the name of Belus, raised him a tomb which was hid by an immense pyramid; for as soon an the powerful planet which animates nature became personified, and in tho sacred fictions was made to be born, to die, and to riee again, imitative worship, which sought to retrace his adventures, placed tombs beside their temples.

Thus is shown that of Jupiter, in Crete; of Mithra, in Persis; of Hercules, in Cedis; of the Coschman, the Celestial Bear, of Medusa, of the Pleaides, etc., in Greece. These various tomb prove nothing for the historical existence of the feigned personages to whom the mystic spirit of the ancients had consecrated them.

They show, alao, the place where Hercule burned himself up, and we have shown that Herculee was no other than the sun personifled in the eacred allegories; at the same time that we have proved that the adventures of the queen Isis were those of the moon, suag by her worahippers.

I now proceed with the

## Master Mason's Degree.

This degree, as before observed, is chiefly occupied in the pretended sasassination of Hiram Abiff."

The temple of Solomon, like the temples of the Egyptians and other nations of the east, is said to have been constructed with a view to a representation of the world in miniature; thereby the bettor to adapt it to the popular prejudice in favour of performing religious rites in places where the operations of nature were exbibited before the worshippers. This temple, therefore, was well adapted for those astronomical allusions which composed the mystic ritee of the ancienta ; and was for this reason probably selected, by the Druids, as an appropriate place in which to lsy the zcene of masonic mysteries.

The equinoxes and solatices are called the gaten of heaven through which the sun passes. It was only at the latter, however, that any obstructions were believed to occur to his free egress and regreas. The ceene, therefore, of the death of Hiram, who taken the part of Osiris, as now acted in the lodgen, is not a oloee imitation of the origiaal, which has been lost sight of, but in suffleiently so to show from whence the copy is derived.

Are you a msater mason 1-I am; try me; prove me; diaprove me,

[^123]If you oan. Where wero you passed master:-In a perfect lodge of mastera. What makea a perfeot lodge of masters i-Three. Why do three mako a lodge ? - Because there were three grand Masons in building the soorld. (Master Key, and Jachin, and Boas.)

Here the Kneph, Osiris, and Isis of the Egyptians; the Agathon, Logos, and Peyche of the Platonista ; snd the Wisdom, Strongth, and Besuty of masonry, are too olearly indicated to admit of misinterpretation.

From whence came gou - From the eash. Where are you going !To the weat. For what purpoee -To search for that which whs loet What wha that which was loet p-The master mason'n word. How whe it loet i-By three great knocks, or the death of our master Hirama Where do you hope to find it ?-With a centre. What is a centre ? A point within a circle, from which every part of the circumference ia equally distant. Why with a centre - Because, from that point, no zosater manon can err.

The allusion here to Osiris, the sun, is very plain : and, when found, it is evident he must be on the imaginary circle made by his annual course, unless he should deviste from the order of nature. And the poiat in the centre of that circle, according to the meaning evidently intended, it is equally cartsin, would be found in its proper place.

The story of Hiram is as followe:-
$\Delta t$ the building of Solomon's temple, fifteen fellow-orafte, perceiving that the work wes nearly finished, and not having received the manter's word, grew impatient, and agreed to extort it from their master Firam the first opportunity they could find of meeting him alone, that they might pans for masters in other countries, and receive wages as such; but before they could accompliah their scheme, twelve of them reeented, The other three, being of a more determined charncter, pernisted in their design : their names were Jubela, Jubelo, and Jubelum.

Hiram having entered the temple at twelve at noon, as was his curtom, to pay his devotion to God, the three asassins placed themselvee at the sast, west, and mouth doors; Hiram, having fininhed his prayer, came to the east door, which was guarded by Jubela, who demanded of him the master's grip and word in a resolute manner; he received for answer from Hiram, that it was not cuatomery to ask it in such a strain; that he himself did not receive it so. He told him, farther, that it weas not in his power alone to reveal it, except in the presence of Solomon, and Hiram King of Tyre. Jubela, being diseatisfied with this answer, sitruck him across the throst with a twenty-four inch guage. Hiram then flew to the south door, where be received aimilar treatment from Jubelo; and thence to the west door, where he was struck on his head by Jubelum, with a gavel or setting maul, which occasioned hia death. (Jachin and Boas.)

Carlile places the conspirators at the east, north, and south entrances of the tomple, and makes Hiram receive the finishing stroke at the east door; whereas to render the parallel in atrict accordance as an allegory of the death of Oairis, Hiram should expire at the noith or south gate or
door. The story is badly conceived, an there is no pretext for confining the word to Solomon and the two Hirams, nor for requiring that it ahould not be communicated except in the presence of the three. Besides, mooording to masonio tradition, there were at the same time 3,300 master masons employed on the temple, who must, of coume, have been furnished with the master's word. To make out the parody, however, it was neceseary that Hirmm be put to death, and a cause must be invented to procure it; and although the one fixed upon for the purpose appears very mal a propos, it seems to be astisfactory to the craft.

It may be remarked, however, that Solomon asd the two Hirams are here intended to repreeent the trinity in unity, and, therefore, it may be supposed, could not set separately.

How did the ruffians dispose of the body:-They carried it out at the soest door (according to the apparent courne of the sun) and hid it till twelve o'clock the next night, when they met by agreement, and buried it on the side of a hill, in a grave six feet perpendicular, dug due seat and weet; and stuck down a sprig of cassia ${ }^{0}$ to mark the place.

Mastar Hiram not coming to view the workmen as uaual, king Solomon caused search to be made for him in and sbout the temple; which proving ineffectual, he ordered the roll of workmen to be called, when it was found that three were miening, namely, Jubols, Jubelo, and Jubelum. The twelve fellow-crafts who had recanted, then went to Solomon with white aprons and gloves, omblems of their innocence, and informed him of everything relating to the effair, as far as they knew, und offered their asaistance to discover the three others who hed absconded.

Solomon then ordered twelve trusty fellow-cralts to be selected, and eant three east, three weat, three north, and three south, in search of Hiram. Elder Bernard gives fifteen as the number selected for thia purpose, and adds, "In some lodges they send only twelve, when their own lectures say fifteen were sent." The Elder wes not aware of the vast importance of conflining the number to precisely twelve. Those Who were deputed for this service represented the twelve sigus of the zodiac; one of whom would be aure to find their grand master Hiram, the personification of Oeiris, the sun.

The party who took a weoterly course, fell in with a wayfaring man, near the coast of Jopps, who, on being interrogated, informed them that he had ween three men pane that morning, whom, from their appearance, be took to be workmen from the temple. They had been seeking for a passage to Ethiopia, and not being able to obtain it, had turned beck jnto the country. This party then returned, and made their report to Sulomon. Of the thres who steered an easterly course, one, being weary, sat down at the brow of a hill to rest and refresh himself; and in rising, he caught hold of a twig, which coming easily up, excited his suspicions ; and perceiving the ground to have been recently broken, he hailed his companions, and on searching, they found the body of their grand master Hiram, decently buried in a handsome grave, six feet east

[^124]and west, and aix feet parpendicular; and its covering was green mosr and turf, which surprised them: whareupon they exclaimed, setuseus domus Dei gratia ${ }^{*}$, which, according to masonry, is thanks be unto God, our master has got smoany housc. So they covered him clcsely, and went and acquainted king Solomon.

In regard to the conspiratore, it shall suffice here to say that, according to the story, thay were discovered, arrested, and executed. "Jubelum'a body was severed in two, and scattered in south and north." (Jachin and Boas.)

After which, Solomon ordered twelve crafts to take up the body of Hiram, in order that it might be intorred in a solemn manner in the vanctum sanctorum ; he also told them, if they could not find a keyword about him, it was lost; for there were only three in the world to whom it was known; and unless they ware present it could not be delivered; and Hiram being dead, it consequently was loat. But the first siga and word that were made and spoken at hie raising should be the master's word ever after. The twelve crafts went and cleared the rubbish, and found their master in a mangled condition, having lain fourteen days, upon which they lifted up their hands above their heads and exclaimed, 0 Lord my God I They failed in their attempts to raise the body, either by the grip of the apprentice, or that of the fellow-craft, the fleeh clearing from the bone: upon which they all raised their hands, and exolaimed, 0 Lord my God I I fear the master's word is for ever lost; was there no help for the widow's son !

Kiog Solomon then ordered alodge of master masons to be summoned, and said, I will go myself in person, and try to raine the body by the master's grip or lion's pasb. Some say, by the strong grip or lion's paw. (Bernard.) By means of this grip the body of grand msster Hiram was risedt. (See next paga.)

If this affinir would admit of serious criticiam, upon the supposition that this woord was a mere name, term, or phrase, it might be aaked what was the use in seeking for that which, when found, could not be made use of, unless the finders turned traitore, and exposed it unlewfally. The story, as before observed, wants plausibility.

This word, however, is not a name, it in the personified Logos, the key atone of the arch, the absence of which rendered the structure incomplete.

That Solomon and the two Hirams are made to personate the pagan trinity is evident from the following:-

Master.-What supports our lodge Ans, Three pillars. Pray what are their names, brother f-Wisdom, Strength, and Beauty. What do they. represent:-Three grand mastera : Solomon, king of Iarael; Hiram, king

[^125]of Tyre ; and Hiram Abiff; the three grand masters in the building of Solomon's temple. And we were before told, there were three grand Masons in building the world;-of which Solomon's temple was an epitoma.

the raiging of oamib, the prototype of hirak. (bie page 15.)
The names Jubela, Jubelo, Jubelum, given to the pretended asasenins of Hiram, I take to be a play upon the word Jubilum, the Latin term answering to Jubilee. They were of course formed at the time freemasonry was first eatablished. The inflections of this word will give Jubili, Jubilo, Jubilum. That a slight variation should have taken place in their pronunciation, will not appear surpriaing, when it is considered that they have been handed down orally, by illiterate men, through many ages. Jubilum is derived from jubeo, to appoint; it aleo signifies to bid, order, charge, or command. Now, these reputed assassins are represented as demanding, in an imperious and authoritative tone, of grand master Hiram, the master's grip and word; and their names were probably given in alluaion to thin circumstance, being appropriate to the character assumed for them.

Beaides the relation which the story of Hiram bears to that of Osiris, there is a singular fancy set forth in ancient astronomy in regard to the reputed murderers of Chrisna, which contains a strict analogy to the
supposed asansinstion of Hirem-Chrisna, among the Findoos, is the same es Oairis with the Egyptianes, and is worshipped by them in like manner. Nothing could bo more explanatory of the fable of Hiram than this astronomical notion; which is given in Mackey's mythological astronomy, as fullown :-
"The stories which have been the result of the particular method made use of by snciont historians to exprese the various changes of the constelletions and sessons of the year, and the causea of those changes, may be worth our while to examine.
"The Elohim, the Decans, or the Symbols which presided over the thirty-xix subdivisions of the zodiac, or, more properly speaking, of the year, ench month having three, were thoes gods whose care it was to regulate the weather in the different sessone, and who were mupposed to vary it according to their will.
"Thees Decens or Elohim aro the gode, of whom it in anid, the Almighty created the univeree. They arranged the ordor of the zodiac, The Elohim of the summer were gods of a benevolent diaposition : they made the days long, and looded the sun's head with topas. While the three seretches that presided in the winter, at the extreme eni of the year, hid in the roalme below, were, with the constellation to which they belong, cut off from the rest of the zodiac: and, as they were misaing, would, consequently, be accused of bringing Ohrians into those troubles which at last ended in his death."*

Eleven is one of the numbers singled out to make a lodge, which, like the reat, must have an astronomical allusion ; and there is little doubt that it refern to the fanciful notion just detailed ip regard to the defection of one of the great gods composing the zodiac, with his attendent setollites, the Decana, or Rlohim. In consequence of this treachery, but aloven of these great chiefer remained faithful to their lord, the supreme ralor, the sun. This circumstance would be sufficient to caube the commemoration of that number, in the manoer it is done in masonry.

It may be remarked, that the lamentations uttered for the death of grand master Hiram, is in exact sccordance with the customs of the Egyptians in their celebrations of the fabled death of Oairis the sun; of the Phenicisns, for the lose of Adonis ; and of the Greeks, in their myatio rites of the Eleusinian Ceres.

It in through the instrumentslity of Leo, that Oniris, the sun, is relieved from his perilous condition. The strong paw of the lion wrests him from the clutches of Typhon, and places bim in his wonted course. Anubis, the dog-atar, in the berald of this event. Here we see the archetype of the raising of grand master Hiram, by the "atrong gripe or lion's pawe."

In short, the attentive reader must have perceived that the story of Hiram is only another version, like those of Adonis and Aatarta, and of Ceres and Proserpine, of the fable of Osiris and Isis. The likeness

[^126]throughout is so ezact as not to admit of doubt. The search for the body of Hiram; the inquiries made of a wayfaring man, and the intelligence received; the sitting down of one of the party to reat and refresh himself, and the hint conveged by the sprig over the grave ; the body of Hiram remsining fourteen daya in the grave prepared by the assaesins before it was discovered, all have allusion to, and comport with, the ellegory of Oeiris and Isia. The condition even in which the grave of Hiram is found, covered with green moss and turf, corresponda very much with that in which Isis found the coffin of Osiris.

Again, the cutting up and acattering the parts of the body of Jubelum is a fac simile of the treatment which the body of Osiris is said to have received. By the way, the oath imposed upon the master mason, very likely grew out of the fable of Typhon's murder of Oairis, and aiterwarde cutting up the body into fourteen pieses, and scattering them hither and thither on the plains of Eggpt.

## Select Master's Degree.

Mr, Cole, Editor of "The Freemasons' Library," sayn, "There are, I am bold to assert, but four degrees in ancient freemasonry. This opinion accords, not only with the sentimenta of the oldest and beat informed masona, with whom I have conversed, but is aleo agreesble to written and printed documents ; some of the latter of which are almost as old as the art of printing itself." The intermediato degrees between the master's and that of royal arch, which he considera the fourth, which bave, he says, within a few years past, been manufactured into degrees, are merely elucidatory of the second, third, and fourth. Why, Mr. Cole need not have gone farther back into antiquity than to 1750, to learn that, at that time, but three degrees of masonry were known tothe world. The party who styled themselves ancient masons, aboutthis time, discovered the royal arch among the archives of the ordar, as has been ahown above; but which those called moderns were strangersto, and did not then acknowledge.

The division of masonry into degreea is entirely arbitrary, and, since, operative masonry is no longer taught in the lodge, unnecessary. The reasons which governed in the administration of the pagan rites, which concealed from the initiates of the leaser mysteries the aporetta or grand. eceret, which was communicated to those of the greater, are inapplicable to masonry. For that secret, the existence of one Supreme God, and the error of polytheism, is now openly taught amongst all nations where freemasonry is established. The affectation, therefore, of confining this knowledge to the companions of the royal arch, is at this timeextremely sbsurd.

What Mr. Cole advances, however, in regard to the connection in the matter of the several degrees which he notices, is evidently very correct; and the same might be said of the two first degrees, which aremeraly preparatory to the third. Still, I am inclined to believe that. the founders of the order divided its secrets or ceremonies originally into zeven grades. It was incumbent upon them to move slowly, and to-
manage the exbjects with whom they had to deal with much caution, for fear of a divolosure. Beaides seven etope seem necessary to complete the rounde of the holy royal arch, the grand deaideratum of masonry.

Of the mark and pass-masters' degrees thero is nothing worthy of notice, exoepting ons circumstance in that of the latter; whioh ing, the electing of a newly initiated member, on the night of his admiesion, to preside, pro tempore, we mastor of the lodge; and then for the brethrea to exercive their wit at his axpence, by exponing hir ignorance of tho dutien of the office impoeed upon him ; finally knooking off hin hat, and dragging him from the mantor's chair.

This, as has been noticod above, is in perfect acoord with the customs of the Pythagorean achool, which treated novitiates in like manner.

In regard to the select master's degree, Mr. Cole observes, "Wo know of no degree in masoury that has a more needful, or more important connection with another, than the molect with the royel arch. It fills up a chasm, which every intelligent mason has observed, and without it it soems difficult, if not impossible, to comprehend clearly some of tho mysteries that belong to the august degreo of royal aroh. Indeed, such is the nature of the degree, that we cannot feel freedom to allude remotoly to its secrets." And Mr. Croes remarks, "Without thin degree, tho history of the royal areh cannot be complete. It rationally ecoounte for the concealmont and preservation of thoee easentiale of the craft, which were brought to light at the erection of the second templo, and which lay concealed from the masonic eye 470 years."

The fact is, the grasd omnific (all.creuting) loes word, it will be seen in the sequel, was eventually found in a veult under the ruine of Solomon's temple; and the dififculty was rationally to account for the manner in which it got there. This, therefore, is the grand object of the weleot master's degree ; and at the same time so to locate the word an aymbolioally to repreeent its archetype, the aun lost in the inferior homiaphere. For this purpose, a history of the order was manufactured. by its founders, of which the following is a aketch :

The three grand masters, at the building of the temple, entared into a solemn agreament not to confar the master's degree uctil the temple ahould be completed, that all three must be present when it abould be conferred, and if either should be taken away by death prior to the finishing of the temple, the msater's degree should be loste.

After this wise arrangement, leat the knowledge of the arts and sciences, together with the patterns and valuable models which were contained in the tomple, ahould be lost, they agreed to build a recored wauls under ground, leading from Solomon's most retired spartment, a due soas course, and ending under the sanctum sanctorum of the temple, to be divided Into nine aeparate arches. The ninth arch was to be the place for holding the grand council, and also for a deposit of a true copy of all thoee things whioh were contained in the sanctum aanctorume above.

After the ninth arch was completed, the three grand masters deposfted therein thoee things which were important to the craft, such as the
ark of the covensint, a pot of manna, the rod of Aaron, the book of the law, etc.

Prior to the completion of the temple, grand master Hiram Aliff was assassinated, and by his death the master's word was lost. The two kings were willing to do all in their power to preserve the sacred Word, and as they could not communiaste it to any, by reason of the death of Hiram, they agreed to place it in the secret vault, that if the other treasures were evor brought to light, the Word might be found alno.

The all-creating or omnific Word was deposited in the royal vault, (the term used in this degree,) as is said, in three languages, Jah, Bel, On, which are all names of the sun. The direction of the archos, from east to west, is following the apparent course of that luminary; the royal vault, therefore, in a aymbol of the lower regions, in which the sun, the king and governor of the world, was supposed to be loat; who, "under the name of Oairis, persecuted by Typhon and the tgrants of the air, was put to deatb, shut up in a dark tomb, emblem of the hemisphere of winter; and afterwarde, ascending from the inferior zone towards the zenith of heaven, arose again from the dead triumphant over the giants and the angels of deatruction."-[Ruins, p. 139.]

The nine archee have an astronomical alluaion in regard to the latitude of the place where the scene is intended to be laid.

Mackey accounta for the origin of the mysterious numbern among different nations in the following manner:- "In the Asintic Researchea (vol. 8, p. 289,) we are told, that 'seven was formerly a favourite and fortunate number among the Hindua; eight among the Budhists; and nine formerly in the weat, and in the north of Asia Nine was held a sacred and myatical number in the northern parta of the continent, from Chins to the extremity of the weat." And why I Because the people there lived under the eame elevation of the pole. They all saw the great Dial of the Deity from the mame point of view; -they nll esw the pole from the ninth atage of the world, that is, the ninth climate, from which, it would be reen se a pyramid with nine steps; while from the latitude of 32 , the eighth atage of the world, it would be seen as a cone or pyramid with eight steps. At Delhi, in latitude 28, which is in the seventh atage, or climate, the pole wis represented by a cone of seven stepe. Hence, we find, the cause which induced the anciente, in the above latitudee, to venerate the numbers 7.8-9, was attro-geographical; and hence also we see the impossibility of making the astronomical numbers of a large empire agree with one capital.
"According to Herodotus, the Tower of Babel, which was in the latitude of 82 degrees, had a roed-wny up on the outside, which went eight times round in its ascent, so se to give the whole the appearence of eight towers, one above another. These were no doubt intended to commemorate the eight rovolutions of the pole, which represented a serpent coiled eight times round a mountain. Berides the eight volved Tower of Babel, in the latitude of 32 degrees, we find at Pekin, a Tower of Porcelain ten stories high, thereby indicatiog its latitude to bo 10
degrees; for in that aituation, the north pole is so far elevated above the horison ss to admit ten wolves of the serpent.
"Again, in Egypt, we find the statue of Pluto with e eerpant coilod uix times round him, which representa the six volves of the pole of the ecliptic round the south pole of the earth; which ahows that the atatue must have been erected at or near Thebee or Elephantina. Thus we nee, that from Pelkin to Klephantine, the men of learning agree in coupling the histories of their countries with that of the beavens."[Mytho. Astro. part 1st, p. 68.]

I am induced to add the following curious remarks of the same writer, as, in some measure, explanatory of the preceding.
"The stories of the Pagans concorning the asoension of their gods into heaven, and their descent into hell, have produced in the minds of modern Europeans the most absurd notions, such as never entored the minds of the first astronomers, who divided the heavens into threo grand divisions, in the most aimple manner imaginable. They obeerved towards the north, that a circuit in the heavens always appeared abovo the horizon; this they denominated one great empirs; asd as there in s point in the middle of it which ia always stationary, this they made the seat of that empire, and aubjected it to the government of a monarch, who could from his throne, that is the pole, behold all the nations of the earth, both by night and by day."
"They could not but be sensible of that part of the vant concave that fo for over hid from our sight, surrounding the south pole; this was distinguished as another grand division, and called the pit, in contra-distinction from the oppoeite, which was called the mountaint Hence among the ancients arose the epithets of Helion and 4 cheron, which meant nearly the same; as He-lion is the sun in his higheat, which the Greeks pronounce Heli-os, that is, Elios, the most high. Acheron is generally tranalated hell. It is compounded of Achar, the last atate or condition, and $O n$, the sun. Achar-on, therefore aignifies the last state or condition of the sun, alluding to his annual disappearance in thoee constellstions which were in the neighbourhood of the south pole.
"We see, by the precession of the equinotical points, that while one sign is sinking into the bottomlens pit, another sigu is sscending into heaven, that ia, riaing up towards the pole. And as the inhabitanta of the earth are insensible of its motion, they thougbt the pole of hesven revolved round that of the earth, describing a figure like a serpent coiled eight times; which would aeem like a ladder with eight rounds, reaching from the earth up to the pole, that is, the throne of Jove. Up this ladder then the gods, that is, the signs of the zodiac, ascended and de-cended."-[Myth. Astro. part 1, p. 55.]

[^127]
## Host Exsellent Master's Degree.

This degres is introduced in mesonic booke ae follows:-
"None but the meritorious and praiseworthy, none but those who through diligence and industry havo edvanced far towarde porfection, none but thoee who have been sested in the oriental chair by the unanimous suffrages of their brethern, can be edmitted to this degree of masonry.
"In ita original eatabliahment, when the tample of Jeruselem was finiahed, and the fraternity colebrated the cope-stone with grest joy, it ia demonstrable that nono but those who had proved themselvee to be completo masters of their profession were admitted to this honour ; and indeed the dutiea incumbent on every mason, who is accepted and acknowledged as a most excellent master, aro such as render it indispenasble that he ahould have a correct knowledge of all the preceding degrees."

This degree contains a detail of the ceromony in the celebration of the pessage of the sun through the first celeatial gate, the winter solatice, that is the twenty-filth day of December, which, at we have seen, was oommemorated an the birthdey of the god Sol. The nun was the key or cope-stone required to complete (or rather to form) the arch; and this rived by masons, is a aymbol of that made by the aun in the heavens, and is commemorative of the commencement of his return to the upper heminphere, in which that arch is formed. This degree, in some measure, anticipates the subject of the royal arch, in which the story of the finding of the lost aun, logos or eoord, is consummated.

For the purpose of opening the lodge, the brethern asemble round the altar, and form a circle, leaving a space for the master. All then kneel and join hande, and the mastar roade the following passages from scripture:-
"Psalm xxiv. The earth is the Lord's and the fulnesa thereof; the world, and they that dwell therain. For he hath founded it upon the seas, and established it upon the floods. Who aball ascend into the hill of the Lord 1 or who shall stand in his holy place i He that bath clean hands, and a pure heart; who hath not lifted up his aoul unto vanity, nor sworn deceitfully. He shall receive the blessing from the Lord, and righteousness from the God of his salvation. This is the generation of them that seek him, that seek thy face, O Jacob. Selah. Lift up your beade, $O$ ye gates, and be ye lift up, ye everlasting doors, and the King of Glory shall come in. Who is this King of Glory I The Lord strong and mighty; the Lord mighty in battle. Lift up your heads, 0 ye gates, even lift them up ye everlasting doors, and the King of Glory shall come in. Who is this King of Glory 1 The Lord of Hosts, be is the King of Glory. Selab."
" 2 Chron. vi. Then said Solomon, the Lord hath said that he would dwell in the thick darknees. But I have built a house of hebitation for thee, and a place for thy dwolling for ever. And the king turned hie face, and blessed the whole congregation of Larael."

An the master reads the worde, "lift up your beads, 0 yo gates," each brother raisen his head; and as he continues, "and the king of glory shall come in," be steps along s few steps towards the spece left for him in the circle.

The foregoing passage from the Psalms is very appropriate to the object of commemoration in this ceremony. For, slithough the Pealmiet alluded to the true God, the language made use of would equally apply to the Pagan god, the sum. The Abbe Pluche observes, as before noticed, that the tongue and religion of the Hebrewa were originally the eame as the Egyptians : and, notwithatanding the variations which afterwards took place between them, "the forms of prayer remsined the eame." So in this case, the expreeaions, the hill of the Lord; the hing of glory; the Lord mighty in battle, may be applied to the course of the aun; the veneration in which he was held, und his wars and victories over Typhon, the genius of evil. King, moreovar, was one of the peculiar titles beotowed upon Osiris the gun. He was denominated, eays Pluche, "the leader, the king, the moderator of the atars, the sonl of the world, the governor of nature." Beaides, the torm made une of above, Haxia or Hesus, and tranalated Lord, ia a pagan name of the Deity, and answers, esys the same author, to the Warts or Mars of the Sabines and Latins.

So the ides in Chronicles, of the Lord's dwelling in darkness, might anciently, among the Pagans, have alluded to the sun, in the lower hemisphere, or enveloped in clouds for a time, in the tropic of Cancer.

The reading being ended, the mastor kneele, and joins hande with the others, which closea the circle. They then rise, disengage their hands, and lift them above their heada; cast up thair eyee, and then suffer their hands to fall by their sides.

This sign, it may be presumed, is intended to expreas admirstion and gratitude for the return of the sun.

Aftor some further ceremonies, the senior warden demands of the most excellent, if this be not the day set apart for the oelebration of the copestone I Which being ascertained to be the fact, the brethren form a procesvion double file, and march six timea round the lodge, ageinat the course of the aun, singing the following song:-

> All hail to the morning, that bida na rejoies;
> The tample's complated, axalt bigh each yoios;
> The cope-atone in findabed-our labour is cier. The sound of the gavel ahall hail us no mora.
> Companions, esomble on thie Joyful day, The occasion It glorions, the key-stone to lay; Fulalled in the promise, by the ancienl of days,
> To briog forth the cope-stone, with abouting and praise.

> Thy siedem inipired ine great Institution;
> Thy sreagth mhall support it till nasture oxpire;
> And when the eroatiou shall fall into rulo,
> Its Deauty thall rito through the midete of the firo.

[^128]The key-stone is now brought forward, and two pillars or columns are set up, and an arch placed on them, made of plank, in imitation of block work; in the centre of which is a mortice left for the reception of a keyatone, which the manter takes, and placing it in the arch, drives it dowa, by giving it six rape with his gavel.
The ark, which all thin time has been carried round by four of the brethren, is now put upon the altar, and a pot of incense placed on it

The membera all kneel, and while in this attitude the master reads the following passage of Scripture:--2 Chron. vii. 1, 4. "Now when Solomon had made an end of praying, the fire came down from heaven, and consumed the burnt offering and the sacrificen; and the glory of the Lord filled the house, and the priests could not enter into the house of the Lord, because the glory of the Lord had filled the Lo.d's house. And when all the children of Israel anw how the fire came down, and the glory of the Lord upon the house, they bowed themselves with their facen to the ground upon the pavement, and worshipped and praised the Lord, saying, for he is good, for his mercy endureth for ever."

As the master reads the last clause of the above extract, a brother touches a piece of gum camphor to a candle, and throws it into the pot of incense, of the same combustible matter, which stands on the altar before the kneeling brethren, which immediately ignites and makes a very brilliant light.

Here the emblem of the restoration of the lost sun, is too plain to be mistaken. The reader may recollect the account, given in a formos
part of this work, of a aimilar ceremony in the ancient myateriea; in which, aftar great lamentation for the loes of Adonis or Osiris, the sun, there was also great joy at his finding. "It is eaid, that this lementation was performed over an image in the night season; and when they had sufficiently lamented, a candle was brought into the room, which ceremony might mystically denote the return of the sun; then the prieat with a soft voico, muttered this form of words, "Trust ge in God, for out of pains salvation is come unto us."

After the above, the brethren all repeat in concert the words, "For he in good, for his mercy endureth for ever," six times, each time bowing their heade low towarde the floor."

The members then balance air times an in opening, rise and balance cix times more, and the lodge is closed.

Ancient freemasonry could have no connection with the Hebrew Scriptures, any farther than they contained sentimente sad expresions in common use among other nations. Or if the founders of the institution adopted passages of scripture, they perverted them to suit their own peouliar views. We have neen that the prospect of the retarn of the sun to the northern hemiaphere, caused great rejoicings among the anciont pagan nations; and the expression, "For he is good, for his meroy endureth for ever," is peouliarly applicable to that circumatance.

The mentiment conveyed in the first verse of the foregoing song, calling upon the brotherhood to rejoice in consequence of having arrived at the ond of his labours, is well illustrated in the following extract from Bryant's mythology, (vol iii. p. 38.) which alludes to a fact notioed above.
"Part of the ceremony in the Eleusinian mysteries was a night ecene, attended with tears and lamentations, on account of some person who wras supposed to have beeen lost; but at the close a priest used to present himself to the people who were mourning, and bid them to be of good courage, for the Deity whom they lamented as lost, was preserved; and that they would now have some comfort, some reapite after all their labour. To which was added, I have escaped a calariity, and met with a better portion. This is the mene rite es that which wea called in Canasn,

[^129]the death and revival of Adonin or Thamus, who was the Osiris and Thames of Egypt."

Again the eame author observes (rol 8. p. 179), "The principal rites in Egypt were confessedly for a person lost, and consigned for a time to darkness ; who was at last found. This person I have montioned to have been described under the charnater of Oairis. Hence these exclamations at the feast of Iais: Burekamen Sugeharomen. [We have found him, and we rejoice together.]

After Oairia had been reputed for some time lost, it was a custom among the Egyptiann to go in quest of him; and the process, as described by Plutaroh, was very remarkable; upon the nineteenth of the month, the Egyptiane go down at night to the mea, at which time the prients and supportars (the Paterw) carry the sacred vehicle. In this is a golden venel in the form of a ship, or boat, into which they pour nome of the river water. Upon this being performed, a ahout of joy is raised, and Osiria is suppoeed to be found."

The blaze of the gum-camphor of masonry seems more appropriate than the above, to typify the reetoration of the lost sun.

The leat verse of the song cited above, contains a beautiful allusion to the masonic trivity; and at the same time forcibly conveys the ides that the writer meant, by the establishment of the great institution, the creation of the world, planned by infinite wisdom, supported by atrength, and adorned by beauty.

## Jubilee at Romes.

The church of Rome practises a rite very eimilar to that of the maeonio order in laying the cope-stone. It is called the Jubilee, and the mannor of performing it, says Bailey, is as follows :-
"The Pope goes to St. Peter'a church to open what they call the holy gate, knocking at it three times with a golden hammer, repeating the 18th verse of the 118th peslm, "Open to me the gates of righteouaness, and I will go unto them and praise the Lord," At this time the masons break down the will, and the pope kneels bofore it, while the penetentiariee of St. Peter wash him with holy water, then taking up the croes, he begins to sing the $T e$ Deum, and enters the church, the clergy following him.
${ }^{4}$ In the mean time the cardinal legatee are sent to open the three other holy gates, with the mame ceremonies, in the churches of St. John of Lateran, St. Paul, and St. Mary the Greates. This is performed at the first vespers of Christmas eve, and the next morning the pope givea his benediction to the people in the Jubilee form. When the holy year in ending, they shut the gates again in the following menner; the pope, after ho has bleased the stones and mortar, laya the firstastone, and leaves there twelve boxes of gold and ailver medals.
"Formerly much people resorted from all parta to Rome, to onjoy the benefte of the jubilee, but now-a-daye but few, except thone who dwell in Italy, the Pope allowing them to obeerve the Jubileo in their own country, granting the name benefita as if they came to Romes"

There can be no possible meaning in this ceremony, unless an astronomical bearing be attributed to it, by considering the four gates as symbula of the equinoctial and solstitial points, which by the pagans were denominated gates of hesven, and through which souls were supposed to pasa to arrive at the manuiona of blizs. And as the popes hold the keys of these gates, it is kind in them oocssionally to open them, in order to edmit a few at least of their own flock.

The twelve boxes of modals deposited by his holiness, are emblematical of the twelve signs of the zodine; which he, perhapa, considers, as reating places on his celestial turnpike.

This farce is still continued at Rome, of which s late traveller in Italy gives the following accuunt:-

## Clasing of the holy door.

At four o'clock on the day of the Jubilee, the sound of trumpetes was heard ; in the midst of a procession which issued from the church, passing through the holy door, was his holineas the pope, clothed in white robes, snd wearing a golden mitre. He seated himself on his white throne, and remained quiet for a minute or tro. He then descended from bis throne and performed some ceremonies or mummeries I sincerely pitied the poor old man-he looked the picture of death, and had been raised from his bed to personate St. Peter; be appeared to sink under the weight of his robes ; his cumbrous mitre oppressed his aching head; he raised his heary eyes and held up his skinny fingers, and soemed to say,-"How painful are hypocriay, folly, and fraud, to a aiok and dying man." The cardinale came about him in a fawning manner, and changed for him a part of his drasa. At the closing of the holy door, we wery somewhat disappointed. We beheld only the feeble pattering of an impotent old man. He blessed the golden trowel and ita handle of mother-of-pearl; he bleased the mortar and the bricks. He contrived to lay three bricks in the holy doorway, using his holy mortar aparingly es though it were lip-ealve. The door-way being then closed, a white satin curtain, decorated with a crose in golden embroidery, was drawn over it. The holy father with as much thestrical jeaticulation as he was capable of, gave his bleesing, which concluded the farce of olosing the holy door.

The opening and closing of the holy gates or doors must be an annual ceremony, and therefore differa from what is generally called the Jubilea.

Jubilees were formerly celebrated by the Jews every fiftieth year. Pope Sextus IV, in 1475, appointed it to be held every twenty-6ifth year, to give a greater chance for every pereon to receive the benefit of it once in bis life. They afterwards became more frequent, and the popes granted them as often as the church, or themselves, had oocasion for them. There is usually one at the inauguration of a new pope. At these Jubilees the pope grants full pardon to all sinners who are present at thair celebration.- See Rees' Cycl.

We have seen in the masonic caremonies a constant reiteration of the
number three, and sometimes thrice repeated, which is called giving the grand honours of masonry. There must have been aome cause or reason fur this custom, now unknown. And I will venture to say that (as suggested by the suthor of the Defence of Freemasonry, before noticed) ita original intention was in honour and out of reverance to the ancient trinity. The practice seems to be kept up by the church of Rome, which goes to corroborate this opinion. One of the rules established by the reverend mother abbess of the Ureuline Convent at Charlestown, as reported by Miss Reed, one of the novices in that institution, is, " before ontering the room to give three knocks on the door, accompanied with some religious ejaculation, and wait until they are answered by three from within." The maeon will nee that this is an exact copy of his rulee snd practico.

The reader has obeerved that the number rix, in the degree under consideration, in particularly respected. In the opaning ecenes of initiations, not noticed above, the candidate is prepared with a rope wound sir times round his body, and in then conducted to the door of the lodge, against which he gives six distinct knocks, which are answered by the same number from within; and when admitted, he in walked aix timen sound the lodge, moving with the sun. On the contrary, the brethren more advanced, form a procession, as above stated, and march six times round the lodge, againac the course of the sun. Mesons from babit pass through these ceremonies, without atopping to examine into their meaning and original intention.

The Druids also paid grest veneration to the number six. "As to what remains, says Mayo,-vol. ii. p. 239, respecting the superatitions of the Druids, I know not what was the foundation of the religious respect which they had for the number six; but it is certain they preferred it to all other numbers. It wes the sixth day of the moon that they performed their principal ceremonies of religion, and that they began the year. They went eix in number to gather the misseltoe; and in monuments now extant, we often find eix of these prieste together."

In every movement of the masonic order we discover traits of its derivation from a religion founded on astronomy. The Egyptians worahipped astronomy. They were the first people known to have acquired a knowledge of it. Their prieete, shut up in the labyriuth, had nothing elee to do but to study the movements of the heavenly bodies, and they communicated their discoveries in such a manner as to be incomprehensible to the common people.

So in mesonry ; the novice is marched round the lodge in conformity to the apparent movement of the Sun ; but afterwards the direction of the procession is reversed, showing that this appearance in produced by the actual movement of the earth, from west to east, round the sub. But this explanation is not given, and consequently the purport of the coremony is not understood by the brethren.

Making the processiona six times round the lodge is in honour of the aix benevolent divinities of the upper hemisphere. Volney, in treating
of the notions the Pensians had of the future world, and that paradiso in pleced under the equator, with this singular attribute, that in it the blemed cast no shade, observes, "There is on this subject a passage in Plutarch so interesting and explanatory of the whole of this system, that we ahall cite it entire ; having obseryed that the theory of good and evil had at all times occupied the attention of naturaliste end thoologiang, he adds:- 'Many suppose there are two gode of opposite inclinationsone delighting in good, the other in ovil; the firat of these in called particularly by the name of God, the second by that of Genios or Demon. Zorosater has denominated them Oromare and Ahrimanes, and hae said that of whatever falls under the cognizance of our sensee, light is the best representative of the one, and darknees and iguorance of the other. He adds that Mithra is an intermediste being, and it is for this reason that the Persians call Mithra the Mediator or intercessor.
'The Persians also eay that Oromaze was born or formed out of the purest light; Ahrimanes, on the contrary, out of the thickeat darkness that Oromare made six goda an good as himself, and Ahrimaues oppoeed to them sir wicked ones. That sfterwards Oromaze trebled himeolf (Hermes trie-megintaa), and removed to a distance remoto from the earth; that he there formed atara, and among othera, Syrius, which ho pleoed in the heavens as a guard and sentinel. He made almo twentylour other gods, whom he inclosed in an egg; but Ahrimanes created an equal number who cracked the egg, and from that moment good and evil wore mixed (in the universe). But Ahrimanes is one day to be conquered, and the earth to be made equal and smooth, that all men may live happy."

## Royal Arch Degree.

The royal aroh degree seems not to have been known to what are called modern masonn as late as about 1750. That portion of the old freeraseons who met at the famoun Apple Tree Tavern, in 1717, and formed the society upon somewhat new principles; that is, so far as to admit into fellowship indisoriminately reepectable individuals of all professions, were denominated by the noz-adherents to this plan modern masons. This affair caused the division of the masonio society into two parties, which continued till 1813, nearly one hundred yeara. To the rivalry occasioned by this schisw, masonry, it is presumed, is mainly indebted to the great celebrity it has obtained in the world.

It appears that the nonconformists to this new scheme, who considered themselves the orthodox party, by rummaging among the old recorde of the order, firat discovered the royal aroh degree, which had probably lain dormant for centurioe During which time, it would appear, the mociety had been confined almost exclusively to operative masons; who continued the ceremoniee only of tbeapprentioe, fellow-craft or journey man, and master mason, these being deemed appropriate to their occupation.

This fact Dermott proves, by the production of an answer of a Mr. spencer, one of the grand secrotarice of a lodge of modern masons, to
an application of W. C., a petitioner from Ireland; which is at fol-lows:-
"Your being an ancient mason, you are not entitled to any of our oharity. The ancient maeons have a lodge at the Five Bells in the Strand, and their secretary's name is Dermott.-Our society is neither arch, royal arch, nor ancient, so that you have no right to partake of our charity."
"Such," eaye Dermott, " was the character given of them by their own grand secretary, about fourtoen years ago."-Dermott published his book in 1764.

If the knowledge communicated in this degree had not been recovered, the loses to the society would have been incalculable, provided its valne be not overrated in the following estimation of it by masonio writers :-

Webb says :- "This degree is indescribably more august, aublime, and important, than all which precede it ; and is the summit and perfection of ancient masonry. It impresses on our minds a belief of the being and existence of a Supreme Deity, without beginning of dayi or end of years; sud reminde us of the reverence dus to his holy name." Dermott calls it the root, heart, and marrow of masonry.

Cole adopta the following sentiment of a brother mason:-"In the R. A. [royal arch] mason's degree I beheld myself axalted to the top of Piagah, an extenaive acene opened to my view of the glory and goodness of the M. E. H. P. [most excollent high pricet] of our salvation. I dug deep for hidden treasures, found them, and regained the omnifio word."
"If we pass on to the royal arch," eays the Rev. G. Oliver, in hir Lectures on Freemasonry, "we receive a wonderful acceesion of knowledge, and find everything made perfect; for this is the ne plus ultre of manonry, and can never be exceeded by any human inatitution."

By the manner in which this subject is treated, it would seem that a masson is supposed to be ignorant of the existence of the one Supreme Being till admitted into the royal arch. This arises from oopying after an institution eetablished when this doctrine was not taught to the oommon people. Polytheism was the prevailing relipion. The one Supreme was revealed only to a select number who were initisted into the greater mysteries, the royal arch of the ancients.

The members of this degres are denominated companions, and are "entitled to a full explanation of the mysteries of the order ;" wherees, in the former degrees they are recognined by the common familiar appellation of brothers, and kept in s state of profound ignorance of the sublime secret which is disclosed in this chapter. Thie accurds with the custom of Pythagoras, who thue distinguished his pupils. After a probation of five years, as before stated, they were admitted into the presence of the preceptor, called his companions, and permitted freely to converse with him. Previously to the expiration of this term, he delivered his instructions to them from behind a sereen.

The royal arch degree owee ite title to the imaginary arch mede in the heavens by the course of ling Osiris, the sun, from the vernal to the
autumnal equinox. The eigna through which he pances in forming this semicircle, including thoee of the equinoxes, being seven, the number of gradea or stepe required to be taken by the msoon to entitle him to the honours of this degree.

This order is called a chapter, which requires nine offcers ; the priacipal of which are three, who compose what is called the grand council, and one denominated captain of the host.

There is, or should be, when convenient, an organ in the room in which the chaptar is held. The companiona anter the chapter in procession. At the entrance each gives the wign of sorrow, which is done by bowing the head and body, placing the right hand on the forehead. The eign is repeated as they approach the altar. They then plece their aceptrea in their left hands, with the right on the left breast, and make the following declaration:-In the beginning was the word; and the word was with God ; and the word was God. The sign of eorrow ia now given the third time, and each advances to hia proper place. They aro wo arranged as to form an arch or semicircle.- [Carlile.]

The sorrow here expressed, is an intimation of that of the ancients fer the loes of the word, logoe, or Ociris, personsted by Hiram. The use of the organ agreee with the ancient manner of celebrating the orgiee, and is in accordance with the oustom of the Pythagorean school. The semicircle formed by the companions confirms my opinion in regard to the name of this degree.

The grand council consists of the most excellent high prient, king, and holy scribe. The high priest is drosed in a white robe, with a bresst-plate of out glass, consiating of twelve pieces [to represent the twelve aigas of the sodiac], an apron and a mitre. The king wears a scarlot robe, apron, and crown." The mitre and crown are generally made of peateboard ; sometimes they are made of most aplendid matorials, gold and silver velvot; but these are kept for public occeasions. The mitre has the words Holinees to the Lord, in gold letters, acroes the forehead. The ecribe weara a purple robe, apron and turban,

The colour of the robes worn by the reepective members of the grand council, the reader may be asgured, has not been fixed upon through the mere fancy of the masonic order. There muat be a mythological authority to manction it.-The ancient satrologers, says the must learned of the Jews (Maimonides), having consecrated to each planet a colour, an snimal, a tree, a metal, a fruit, a plant, formed from them all a figure or representation of the star, taling care to aelect for the purpose a proper moment, a fortunate day, such as the conjunction or some other favourable aspect; they conceived that by their (magic) ceremoniea they could introduce into those figures or idola the influences of the superior beinge aftor which they were modelled. These were the idols that the Chaldean Sabeans adored; and in the performance of their worahip they were obliged to be dreseed in the proper colour-. Thue, the autrolingers, by their practices, introduced idolatry, desirous of being regarded es the dispensers of the farours of heaven.
a The Egyptians, says Porphyry, call Kneph the intelligence, or efficient cause (of the universe). They represent him under the form of a man in deep blue, (the colour of the sky,) having in bis hand a sceptre, a belt round his body, and a small bonnet-royal of light feathera on his head, to denote how vary subtle and fugacious tho ides of that being is." Upon which I shall observe that Kneph, in Hebrew, signifies a wing, a feather, and that this colour of aky blue is to be found in the majority of the Indian gods, and is, under the name of narayan, one of their most distinguished epithets.-See Ruins, pi 230-234.

Porphyry, I presume, is mistaken in supposing this god dressed in blue, to be Kneph; for as he was the Supreme God of the Egyptians, his proper dress would be white.
"The Roman Catholio cardinals (says Mr. Buok, in his Theol. Dict) drees in mearlet, to signify that they ought to be ready to ahed their blood for the faith and church, when the defence and honour of eithar require it." This, I imagina, is a mere conjecture, and not founded in fact. The custom has, doubtlees, an eatronomical bearing. The pope, on gala days, is clothed in a white robe, wearing a golden mitre, and is seated on his white throne; and as the cardinals are second in rank, like the king in the royal arch, their appropriste oolour is, no doubt, scarlet,

The habit required for the person representing the sun, in the Dyonisian mysteries, says Taylor, is thas dencribed in the Orphic verses preserved by Macrobeus in the first book of his Seturnalis, cap. 18.

> He who desirea in pomp of escred drean The sun's reapleodeet body to express, Shonld first a vell sasume of purple bright, Like falr white beamen combin'd with flery light: On his right ahouldor, naxt, a mulo's broad hide, Widely diversified with apotted prido Should hang, an image of the pols divine, And dedal atars, whoee orbs eternal shina A goldon splandid zons, then, o'er the veat Ho next should throw, nod bind it round his brenat: In mighty token, how with goldan light, The rising sun, from earth's last boanda and night Saddex emerges, and, with matchloes force, Darts throngh old Ocean's billows in his course, A houndless splendor honoe, onabrin'd in dew; Plays on his whirlpools, glorious to the viow; Whilo his circumfluent waters apresd abroed, Full in the prosence of the radiant god: But Ocean's circle, like a zone of light, The sun's wide bosom girde, and obarms the vrond'ring ripht. Eleus, and Baa. Mysu. p. 160.

The officers and companions of the chapter being stationed, the high prieat says, Companions, I am about to open a cbapter of royal arch msaons, and will thank you for your attention and assistance. If there is any person present who is not a royal arch mason, he is requested to retire. Companion captain of the hoet, the first care of congregsted masons:-Captain. To see the tabernacle duly guarded. High prieat. Attend to that part of your duty. The eaptain of the hoot stations the
guard at the outaide of the door, gives him his ordern, clowee the doos, and makes an alarm of three times three, on the inmide, to secertain that the guard is on his post ; the guard anawera by nine correaponding rape; the captain then givem one, and the guard does the same. Hi then reporta that the clapter is duly guarded, by a companion of thin degree at the outer avenue, with a drawn aword in his hand. The high prieat then gives two rapa with his gavel, and anks the following queswions :-Captain of the hoat, are you a royal aroh mason 1-I am, that I am. How bball I know you to be a royal aroh manon 1-By thres timen throe. He thus proceede, as is done in the other degrese, to damand the etations and dutiee of the officers of the chapter; which are as follown :-

The captain of the host in atationed at the right hand of the grand council, to reosive their ardera, and see them duly exeouted.

The station of the principal sojourner in at the laft hand of the grand council, to bring the blind by a way they know not, to lead them in patha they have not known, to mako darkneea light before them, and crooked thinga straight.

The duties of the two lant mentioned officers, in the ancient myateries, appertain to one character, Mercury, who was the messenger of the gods and the conductor of sould to the other world, through the dark regions belown

The rogal arob, ilike the greater myateries, contains a scanioal roproentation of a journey from thin world to the nert. In the way are four guarded passes, called vaile, emblematical of the equinoxen and solstices, allegorioally denominated gates of heavan, through which lies the sun'e sourse.

Three of the officers atstioned at these passes, are called grand msetora of the first, second, and third vail, who require certain tokens and pess-worde of the cendidates on their admiseion through them. The fourth offleer is atyled royal arch captain. He is atstioned at the inner vail, or entrance of the sanctum eanctorum, to guard the same, and nee that none pass but such as are duly qualified, and have the proper pass-words and signet of truth. The colours of their several benners are, the first blue, the mecond purple, the third red, and the fourth white; which have the same astronomical reference as the dresses of the

[^130]grand oouncil. The white banner, as masonry asserta, is emblemetical of that purity of hoart, and rectitude of conduct, which is essential to obtain admination into the divine sanctum zanctorum sbove.

In the duty assigned to the royal arch captain, there is evidently an alluaion to that required of the "eovere and incorruptible boatman, Charon," who was prohibited from transporting souls scrose the lake or river $\Delta$ cheron to the Blysian felds, the heaven of the ancients, without the signet of the judges, who were appointed to examine into the characters of the deceased, and to allow or withhold their permiseion accordingly.-" To arrive at Tartarus, or Elywium, soule were obliged to cross the rivers Styx and Acheron, in the boat of the ferryman Charon, and to pass through the gatee of horn or ivory, guarded by the dog Cerberus." (Ruins, p. 148.)

Nine companions must be present at the opening of the royal arch chapter. Not more nor less than three are permitted to take this degree at the rame time. The candidates are prepared by tying a bandage over their eyes, and coiling a rope aeven times round the body of each, which unites them together, with three feet of slack rope between them.

Thus prepared, they are led into the royal arch chapter; which, they are told, is dedicated to enlighten thoee that are in darkness, and to show forth the way, the truth, and the life.

On entering the chapter they pass under what is called a living arch, which is formed by a number of companions arranging themeelves on both sides of the door, each joining bands with the one opposite to himself. The conductor eays, stoop low, brothers; remember that he that humbleth himself shall be exalted; stoop low, brothers, stoop low ; we are about to enter the arch; which is raised up for him, but lowered when the candidates come under it. They seldom peas the first pair of hands without being obliged to support themselves on their hands and kneea. Their progress may well be imagined to be very slow : for, notwithstanding their humble condition, they are under the necesaity of sustaining on their backs nearly the whole weight of the living arch above. The conductor, to encourago them, calls out occaaionally, atoop low, brothers, stoop low I If they go too slow to suit the companions, it in not unueual for some one to apply a aharp point to their bodies, to urge them on ; after they have ondured this humiliating exercise as long as suita the convenience of the companions, they pasa from under the living arch.

The reader will readily perceive that this scene is an imitation of the trials of the greater myateries ; and, although a faint one, the likeness is too apparent to be mistaken. It was anciently a religious rite, and the ceremony has outlived the principle that produced it,

Having got through the arch, the candidates are conducted once round the chapter, and directed to kneel at the altar to receive the obligation. The principal sojourner then thus addrensos them:-Brethren, as you adrance in masoary, your obligation becomes more binding. You are now kneeling at the eltar for the seventh time, and about to take a solemn oath or obligation : if you are willing to proceed, eay after me :..

I, A. B., of my own free will and accord, in presence of Almighty God, end this chapter of royal arch masons, erected to God, and dedicated to Zerubbabel, do hereby, etc. At the concluaion of the osth, the candidates kiss the book seven times.

Here the farce of dedication to St. John, which was originally intended as a sheer hoax upon the mystics of the minor degrees, is no longer continued. I shall hereafter endeavour to analyze the name of Zerubbabel

The candidatea are now conducted once round the chapter, and directed to kneel; while the sojourner reade a prayer. (See Webb'n Monitor, p. 134.)

After prayer, the principal sojourner saye, "Companions, arine, and follow me."

He conducts them once round the chapter, during which time he reads from Exodus, iii, 1-6.
"Now Moses kept the flock of Jethro, his father-in-law, the prient of Midian ; and be led the flock to the back side of the desert, and came to the mountain of God, even Horeb. And the angel of the Lord appeared unto him in a flame of fire, out of the midst of the bush; and he looked, and behold the buah burned with fire, and the buah was not consumed."

By the time this resding is ended, the candidates havesmived in front of a representation of the burning bush, placed in a corner of the chapter, when the principal sojourner directes them to halt, and slips up the bandage from their eyes.

A companion who performs this part of the scene, viz., personating Deity, stepe behind the burning bush, and calls out vehemently, "Moeea ! Moges !!" The principal sojourner answers for the candidates, "Here am I."

The compavion behind the bush exclaims still more vehemently, 'Draw not nigh hither; put off thy ehoes from thy feet, for the place where thou standest is holy ground. [Their shoes are now taken off.] I am the God of thy fathers, the God of Abraham, the God of Iseac, and the God of Jacob.'

The principal sojouraer then directs them to kneel down and cover their faces, snd says, 'And Moses hid his face, for he was afreid to look upon God.'

The principal sojourner then eays to the candidates, "Arise and follow me,' and leads them three times round the chapter, during which time he reads from 2 Cbron. c. $85-\mathrm{v}$. 11-20.

The terror in which the initisted into the ancient mysteries were thrown, by the counterfeiting of thunder, lightning, eto., is bere imitated. This occura after the words, "and brake down the wall of Jerusalem ;" the companions then make a tremendous noise, by firing pistols, olanhing swordes, overturning chairs, rolling capnon balls acrose the floor, etc. The candidatea being blindfolded, must of couree be rurprised and terrified at guch a scene.

In the meantime, the candidates are thrown down, bound, and dragged out into the preparation room, and the door cloned. On being
brought again into the chapter, they pass under the living arch. This is formed on one side of the hall or chapter; on the other side is what is called the rugged road, which is generally made of blocke of wood, old chairs, benches, etc. The conductor consoles the candidates by observing, this is the way many grest and good men bave travelled before you; never deeming it derogatory to their dignity to level themwelves with the fraternity. I have ofton travolled this road from Babylon to Jerusalem, and generally find it rough and rugged. However, I think I never asw it much amoother than it in at the present tima.

By this time, the candidatea hase stumbled over the rugged road, and arrived again at the entrance of the living arch. The conductor saye, companions, there is a very diffloult and dangerous pess abead, which liee directly in our way. Before we attempt to pass it, we muat kneel down and pray.

Sundry prayers and passages of acripture are recited before the rugged path is got rid of. There are clauses in one of them which make it appear that it was origizally addreseed to the sun, when in the lower hemisphere, imploring his return to the upper regions, as follows :-
"Hear my prayer, 0 Lord l give ear to my mupplications: for the enemy hath persecuted my soul; he hath made me to dwoll in darkness. Therefore is my spirit overvholmed within me; my heart within me in deeolate Hear me mpeedily, 0 Lord I my spirit faileth: hide not thy face from me, leat I be like unto them that go down into the pit. Cause me to hear thy loving Lindnem in the morning; for in thee do I trust. Bring my moul out of troublo. And of thy mercy cut off my onemies; for I am thy mervant."

The most appropriate prayer, an regards the mysteries of masoury is, perhape, that recorded by Dermott, which is used in the lodge of Jewish freematans.
"O Lord, excellent art thou in thy truth, and there is nothing great in comparison to thee; for thine in the praies, from all the worke of thy hands, for evermore.
"Enlighten us, we beeeech thee, in the true knowledge of masonry; by the eorrows of Adam, thy first-made man; by the blood of Abel, the holy one; by the righteousness of Seth, in whom thou art well plessed ; sod by thy covenant with Nosh, in whose architecture thou was pleased to save the aeed of thy beloved; number un not among those that know not thy statutes, nor the divine mysteries of the necret Cabala.
"But grant, we beseech thee, that the ruler of thit lodge may be endued with knowledge and wisdom, to instruct us and explain his necret mysteries, as our holy brother Mosent did, in his lodge, to Aaron,

[^131]to Eleacar, and Ithamar, the sons of Aron, and the seventy alders of Israel.
" And grant that we may understand, learn, and keep all the statates and commandments of the Lord, and this holy myatery, pure and undefiled unto our lives' end. Amen, Lord."

The candidates, after having peesed the four vails, by giving the aigus and pass-words appropristed to each, are admitted into the promenos of the grand council, by means of a eigoet, being a triangular piece of metal with the word $Z$ er-ubba-bel engraved upon it.

I have had the curioeity to look into the derivation and mesaing of the word Zer-ubbe-bel. $\Delta s$ it is a compounded word, some of ite compounds are of course abbreviated. Zer, it is likely, is a contraction of serah, which means east, brightnoes; ubba is probably a corruption of abba, father, which the Deity is sometimes atyled; and bel is woll known to mean the sun, or lord. Zerubbabel is defined, dieparaion of confusion.

What could more clearly point out the glorious luminary of day, rising in the east, and dispersing the clouds and darkness : Hia seal ought, of course, to entitle the bearer to admittance into the sarctems sanctorum,

Finally, the grand conncil, being satisfied as to the pretensions of the candidates, directa them to repeir to the north-weat corner of the ruins of the old temple, and commence removing the rubbiah, to lay the foundation of the new. (The reader will remember, that it whs in the north-west that the Deity wea supposed to have commenood hie operstions in the erection of the world.) While thus engaged, they discover a secret vault, in which is found the key stone of the arch; which, by the by, had already boen put in ita plaoe, in the preceding degree. ${ }^{\text {on }}$ a seoond descant of one of the perty, be diseovere a small box or chent, standing on a pedestal, curiously wrought and overlaid with gold: he involuntarily found his hand raised to guard his oyes from the intenso light and heat refleoted from it. This proved to be the ark, containing the lost word, logos, gr sun; which accounts for the intense light and

[^132]

The Candidates paming under the Living Arch; also, the Deesent of a Companion inte the vault of the Nine Arches.
heat reflected from it** It contained also, the book of the lew-Aarce's rod-s pot of manna, and a key to the ineffable characters of this degree,

This ark of masonry is but a copy of the old mysterious cheet of the ancient Egyptians; which, among other monuments of the anciens state of mankind, contsined "acorns, heads of poppies, bay-berries, branchee of fig-tree," \&c.; whioh, like the manas of the Jews, aro said to have served as their main sustenance in the early ages of the worid.

Although the masons pratend to inherit Asron's rod, in their hands it has lost ita mirsculous powern. Aid as to the book of the law, by which modern masons, at least, mean the law of Moees, it wea not in tho Jewish ark ; for, according to 1 Kinga, o. 8, v. 9, "There was nothing in tho ark esve the two tablee of atune."

The following queetions and answers cocur, in what is called lectares, after the coremonies of initiation are possed; which are, in fact, atatements of चhat had been before detailed. I have endeavoured to aroid repetitions, by previously omitting part of what takes place at initiations

After receiving the obligation, what wan said to you I We were told that we were nuw obligated and received as royal arch masons, but as this degree was infinitaly more important than any of the preceding, it Wes neosesary for us to pasa through many triale, and to travel in rough and rugged ways, to prove our fidelity, before we could be entrusted with the more important secrets of this degree. We were further told, that, though we could not disoover the path we were to travel, we were under the direction of a faithful guide, who would bring the blind by a way they know not, and lead them in paths they hed not known; who would make darkness light before them, and crooked thinge atraight; who would do these thinge, and not foraake them. (See Isa. 42, v. 16.) Follow your leader and fear no danger. Lat your advance be by seven solemn steps, and at each step you must halt and make obeinance, with the awe and roverence suited to this grand and solemn occsaion, for every atep bringe you nearer to the eacred neme of God.

The following remarks of Plato, in his "Pbeodon, or Dialogne on the Immortality of the Soul," will tend to explain the infereace intendei to be drawn from the above passage, by ahowing the idea entertained by the ancients in regard to the difficulties to be encountered in the journey to the other world; to which the extract from Isaish is here made to apply.

If the soul is immortal, it stands in need of cultivation and improve.

[^133]ment, not only in the time that we call the time of life, but for the future, or what we call the time of eternity. For if you tbink justly upon this point, you will find it very dangerous to neglect the soul. Were death the diseolution of the whole man, it would be a great advantage to the wicked after death, to be rid at once of their body, their soul, and their vices. But forasmuch as the soul is immortal, the only way to avoid those evils and obtain salvation, is to become good and wise. For it carries nothing along with it but its good or bad actions, and its virtues or vicen, which are the cause of its eternal happiness or misery, commencing from the first minute of its arrival in the other world. And it is said, that after the death of every individual person, the demon or geniua that was partner with it, and conducted it during life, leads it to a certain place, where all the dead are obliged to appear in order to be judged, and from thence are conducted by a guide to the world below. And after they have there received their good or bad deserts, and continued there their appointed time, another conductor brings them back to this life, after several revolutions of ages. Now this road is not a plain road, else there would be no occasion for guides, and nobody miss their way. But there are several by-ways and crossways, as I conjecture from the method of their sacrifices and religious ceremonies. So that a temperate wise soul follows its guide, and is not ignorant of what happons to it; but the soul that is nailed to its body, that is inflamed with the love of it, and has been long its slave, after much struggling and suffering in this visible world, is at last dragged along againet ita will by the demon allotted for its guide. And when it arrives at that fatal rendezvous of all soule, if it has been guilty of any impurity, or polluted with murder, or has committed any of those atrocious crimes that desperate and lost souls are commonly guilty of, the otber souls abhor it and avoid its company. It finds neither companion nor guide, but wanders in a fearful solitude and horrible desert; till after a certain time, necessity drage it into the mansions it deserves. Whereas the temperate and pure soul has the gods themolves for its guides and conductors, and goee to cohabit with them in the mansions of pleasure prepared for it."

What further was said to you $\ddagger$ The high priest first read the following passage (Exodus vi. 2, 3)-"And God spake unto Moser, and aaid unto him, I am the Lord, and I appeared unto Abraham, unto Iseac, and unto Jacob, by the name of God almighty, but by my namo Jehovah was I not known to them."

He then informed us that the name of Deity, the divine Logos, or word, to which reference is had in John (1, v. 1-5) "In the beginning was the word [Logoe], and the word was with God, and the word was God; the same was in the beginning with God; all thinge were made by him, and without him was not any thing made that was made; in him was life, and the life was the light of men : and the light obineth in darkness, and the darkness comprehended it not." That this Logos, or word, was anciently written only in these sacred charactera (showing them), and thus preserved from one generation to another. That thil
was the true masonic word, which was lost in the death of Hiram Abiff, and was reatored at the building of the temple, in the manner we had at that time sesisted to represent.

Here the whole mystary of masonry is unveiled; here is a candid confession of what the masons had been so long in search of, which proves to be the lost Logos, the eecond person in the pegan trinity. Logos is the same as Osiris, the sun, considered as the Demiurgus, the maker of the world, under the direction of the Supreme Being.

It has been asserted by Dr. Priestly and otherr, thas the above pessage in John is an interpolation; and the use here made of it, by an institution derived from paganism, corroborates the fact.
"Those who believe that the Logos was the personification of the divine intellect, or of the divine attributes of wisdom, power, Ac., trace this doctrine to the ancient Platonists; from whom, as they conceive, it was adopted by the Christian fathers." " " "In the writings of Plato, Logos has two acceptations, viz, those of speech, and of reason, such as is found in man. But when this philonophor speakn of nows or Logus, ss something distinct from the Divine Being himself, as a power or property belonging to him, and all divine powera and properties being subetance, it would be very natural and easy to tranaform this divino power into a subetantial person; and this we shall find to have been the osse with respect to the latter Platonista, agreeably to one of the Platonic maxima, vis., that being and energy are the same thing."(Rees' Cycl.)
"Never any philoeophy was so fashionable as that of Plato during the first ages of the church. The Pagans interested themselves amongat all the different sects of philosophers, but the conformity which Pleto's was found to bave with religion, made almost all the knowing Christians of that sect. Thence came the mighty enteem they had of Plato; they looked upon him as a sort of prophet who had foretold many important points of Christianity, especially that of the holy Trinity; ney, they went so far as to taks his works for comments on the Scripture; and to conceive the nature of the Word, as he conceived it. He represented God so elevated above his creatures, that he did not believe that they were immediately made by his handa ; and therefore he put between them and him this Word, se a degree by which the actions of God might pass down to them; the Christians had the like idee of Jesus Christ: and this may perhspe be the reason why no hereay has been more geverally received and maintained with greater heat than $A$ rianiom.

This Platonism then (which seems to honour the Christian religion by countenancing it) was very full of notions about Demons ; and thence they essily paned into that opinion which the old Christians had of oracles.

Plato mid that Demons were of a middle nature, between God and man ; that they were the serisl genii eppointed to hold a commerce betwsen God and ue; that although they were near us, yet we could not see them; that they penetrated into all our thoughts; that they had
a love for the good, and a hatrod for the bad; and that it was for their honour that such variety of sacrifices, and so many different coromonies were sppointed; but it doee not at all appear that Plato acknowledged any ovil demone, to which might be attributed the management of the illusions of oracles. Plutarch, notwithetanding, asaures us that Plato was not igrorant of them; and amonget the Platonic philocophern, the thing in out of doubt. Eusebius, in bis Evangelical Preparations, recitee a great number of passegee out of Porphyrius, where that Pagan philosopher asoures us, that civil demons are the authora of snchantmente, philtres, and witch-crafts; that they cheat our eyes with spectres, phantoms, and apparitions; that lying is essential to their nature; that thay raiae in us the greater part of our passiona; and that they have an smbition to pasa with us for gods; and their serial and apiritual bodies are nourished with suffumigations, and with the blood and fat of sacrifices; and that it is only these that employ themselves in giving oracles, and to whom this task so full of fraud is assigned : in short, at the head of, this troop of evil demons he plecess Hecate and Serapir.

Jamblichus, snother Platonist, has said as much. And the greateat part of theee thinga being true, the Christians received them all with joy, and have added to them beaides a little of their own, as, for example, that the demons stole from the writinge of the prophets some knowledge of the things to come, and so got honour by it in their oracles.

This syatern of the ancient Christians had this advantage, that it discovered to the Pagans, by their own priaciples, the original of their falee worahip, and the source of those errors which they always embraced. They were pernuaded that there was something supernatural in their oraclea; and the Christians, who were alwaye disputing against them, did not desire to confute this opinion. Thus by demons (which both partien believed to be concerned in the oraclea) they explicated all that wes supernatural in them. They acknowledged, indeed, that this sort of ordingry miracles were wrought in the Pagan religion, but then they ruioed this advantage again, by imputing them to such authora as evil spirita. And this way of convincing was more ahort sod easy than to contradict the miracle itself, by a long train of inquiries and argumenta. Thus I have given you the manner how that opinion which the first ages of the church bad of the Pagan oracies, was grounded. I might, to the three reasons which I have already brought, add a fourth of no less authority perhaps than tboee; that ia, that in the supposition of oracles being given by demons, there is something miraculuses and if we consider the bumour of mankind a little, we shall find how much we are taken with anything that is miraculous. But I do not intend to enlarge myself on this reflection; for those that think upon it will eseily believe me, and those that do not, will perhaps give it no oredit, notwithatanding my argumenta.

The physical properties of the mun are plainly set forth in the extract from John.-The language is in the myntic style of the Platonic achool, and not in the plain, simple manner of the goapel writera ; but notwithstanding, if put in the ahape of interrogatory, "What is that which con-
taina the principles that produce life, and is at the same time the light of men ${ }^{\prime \prime}$ It would not form a conundrum difficult of solution. -"The light shineth in darkuess, and the darkness comprehendeth it not," alludes to a time past, when the sun was enveloped with clouds in either of the tropics; and his extrication and triumph over Typhon, the prince of darkness, was the very cause of the oelebration here imitated by the masons.

Besides, it is said, "That was the true light, which lighteth every man that cometh into the world." No, thin could not properly be said of Christ, as it would not apply to thoee who never heard of hin name ; but is very epplicable to the sun, which lighteth every one in all parts of the earth.

Mr. Dupuis, taking for granted that the above passagea are genuine, tbat is, actually written by St. John, makes great account of them, ss well he might, to prove that Cbrist and the sun are the same, and consequently that Christianity is sun-worship. He says,
"The theolngy of Orpheus taught that light, the most ancient and the most sublime of all beiogs, is God, that inaccessible God who envelopes all tbings in his substance, and who is called reason (conseil), light and life. These theological idess have been copied by the ovangaliot Juhn, when he said 'That the life was the light, and the light was the life, and that the light was the Word, or the resson, and the wisdom of God.'"

Agrin, "The Guebres atill at this day reverence the light as the moat beautiful attribute of the divinity. 'Fire, eay they, produced the light, and the light is God.' This is the ethereal fire, in which ancient theology placed the subatance of the divinity, or universal soul of the world, from whence emanates light and life, or, to use the expreasions of the Christians, the Logos, or the word, which lighteth every man that cometh into the world, and giveth life to all beinga."

But, admitting the passages sbove quoted from St. John's goopel, to be interpolations, as I believe hes been made evident, the argument of Dupuis, on this head, falls to the ground.

There is much confunion, after all, in regard to the omnific word. Whether this was created by the original founders of the order, for the purpose of deception, or has been introduced by modern masone, is unknown. After declaring the Logos to be the recovered long lost word, another compound name, intended to bear the same import, is subetituted in its place.

This the Engliah masons call Jao-Bul-On, and the American masons Jah-Buh-Lun. They both say the word is compounded of the namea of Deity in three languages, Hebrew, Chaldean, and Syrisc; leaving Egypt, the mother of the mysteries, from which masonry is derived, out of the question, although On , which comprsea part of the compound word used by English mesions, was one of the namen of the Deity peculiar to that country.

Neither Buh nor Lun, it is believed, was ever the name of a Deity in any language; and although the aun was worshipped under the aym-
bolical Ggure of the bull, either on account of hia great use in agriculture, or because the celestial sign of the bull was formerly in the vernal equinox at the opening of the year; yet it is evident that the bull was looked upon merely as a aymbol, and not as actually constituting the name of the Supreme Being. Whereas Jab-Bel-On, were permanent names, universally, and at all timea bestowed upon the Deity, by one or other of the nations above mentioned.
"The chief varieties of this sacred name [of Gori] amongst the inhabitants of different nations (says Oliver,) were Jah-Bel or Real, and On or Om."
"Bel or Baal, (says Mayo), was the same god with Moloch. Their names, both of which signify the king, the lord, are titlen applicable to the sun."

It is not permitted to utter this omnifio word sbove the breath, and three companions are required to perform it, each pronouncing a ayllable alternately. And admitting Jah-bel-on to be the word, one would eay Jab, another Bel, and the third On ; and then interchangeably until each had pronounced the whole compound. A similar superatition prevails among the Jews, in regard to what is called the Tetragammaton, or word of four letters, which, in Hebrew, compose the name Jehovah. The Jews, however, are not permitted to pronounce this names, oven by dividing the syllables in the manner of the companions of royal arch masonry.

The very attribute given to the loot word, omnific, (all creatiog, indicates the Demiurgus, the Creator of the world, which, as before obverved, wan believed by the ancienta to be the sun.

It was of no importance to invertigate the composition of the omnifio word of masonry, any further than to show that in ell the movements of the order, the sun ia kept constantly in view; and that the loat master mason's word meant nothing but the lost influence of that luminary, when in his greatest northern, or southern declination.

But to return to the lecture: it is atated by the candidates, that the high priest placed crowns upon their heade, and told them they were now invested with all the important aecreta of this degree, crowned asd received as worthy companions, royal arch maeons.

This custom, it has been shown, is not without authority, or precedent, in the ancient myateries.

I will repest, from Dupuis, the purport and end of the mysteries:"The mystagogues make darkness and light succesaively to appear before the eyes of the ivitiates. Night the most obscure, accompanied with frightful apectres, is replaced by a brilliant day, whose light onvirons the statue of the divinity. This sanotuary is approached with trembling, where all wes prepared to exhibit the spectacle of Tartarus and Elyeium. It is in thin last atage that the initiated, being ultimately inducted, perceives the picture of beautiful prairies enlightened by a clear sky; there he hears harmonious voices, and the charming songe of the escred choirs. It is then that, become ebeolutely free and diafranchised from all evil, he mixes with the crowd of the initiatee, and when
bis heed being crowned with flowers, ho colebrates the holy orgies with them.
"Thus the ancients represented here below, in their initiations, that which would, they eaid, one day happen to noule when they ahould bo disengaged from bodies, and drawn from the obscure prison in which deatiny had onchained them in uniting them to terrestrial matter." (Orig. de tous les Cultes, p. 601.)

As this arowning in the closing ceremony of initiations into the mystaries, mo is its imitation in the rogal arch included in the last act of the drams of ancient freemasonry.

The following address, copied from Webb's Freemason's Monitor, is delivered to the newly initiatod companion:-
" Worthy companion, by the consent and asaistance of the meabers of this chapter, you are now exalted to the sublime and honourable degree of a royal arch mason. Having attained this degree, you have arrived at the summit and perfection of ancient maconry, and are consequently entitled to a full explanation of the mysteries of the order.
"The rites and masteriea developed in this degree have been handed down through a choeen few, unchanged by time, and uncontrolled by prejudice ; and we expect and trust they will be regarded by you with the same veneration, and transmitted with the eame scrupulous purity to your succestors.
"No one can reflect on the ceremonies of gaining adminsion into this plece, without being forcibly struck with the important leseons which they teuch,
"Here we are necessarily led to contemplate with gratitude and admiration the sicred source from whence all earthly comforts flow; here we find additional inducements to continue steadiast and immoveable in the discharge of our reepective duties ; and here we are bound, by the most solemnities, to promote each other's welfare, and correct esch other's failings, by advice, admonition, and reproof."

I shall conclude the notice of this chapter with a few remarks on the Jewel and Badge of the order. The following is an abridgment of a deecription given by Carlile:-

The jewel is composed of two interseoting triangles, surrounding snother triangle, with the sun in the centre, an emblem of the Deity**

Under these is the compound charseter,
 the Triple Tau, (triple
T.) which is the royal arch maoon's bedge; by which the wearer soknowledgee himeelt the servant of the true God.

The T, it has been seen, is the figure of the old Egyptian Nilometer, uFed to anoertain the height of the inundation, on which depended the subcistence, the life of the inhabitants. The Nilometer, in consequence, became the aymbol of life, health, and prosperity; and was supposed to

[^134]possess the power of averting evil. It was, therefore, in an abbreviated form, suapended to the necke of the sick as an amulet or charm.*

Thus hes originated the bedge of royal arch masonry: its triple form, as usual, relates to the Egyptian trinity.

It is generally conceded by masonic writers, that ancient masonry clowes with the royal arch. In an edition of "The Illustrations of Mesonry": by the late Mr. Preston, publisbed in London, 1829, the editor, Mr. Oliver, author of the lectures from which quotations have been made above, obeerves :-
"All degrees beyond the royal arch ought to be carefully separated from genuine masonry, as they are mortly founded on vague and uncertsin traditions, wbich posess not the shadow of authority to recommend them to our notice."

The additional degrees, including thoee considered legitimate, amount to upwards of fifty. These are founded, partly upon astronomical principles, agreeing with the ancient worship of the Egyptians; and partly upon the Hebrow and Christian doctrines; of two or three of which a slight notice will be taken.

It may be remarked in general, that many of the degrees of knighta are founded on the Christian knighthoods, got up in the time of the arisades, in the twelfth century; and that the ceremoniea thereof are an imitation of thoee superstitious eatabliahments. A former grand high priest of the chaptera in the state of New York, informs me that he initiated a French gentleman into the degree of knight of Malta, who told him he was a member of the sncient order of that name, and that the ceremoniea were very similar.

At the time those old knighthoodn were founded, "Superotition mingled in overy public and private action of life; in the holy wars, it sanctified the profession of arms; and the order of chivalry wean assimi. lated in its rights and privileges to the sacred orders of prieothood. The bath and the white garment of the novica were en indecent copy of the regeneration of baptism; his sword, which be uffered on the altar, was blessed by the miniaters of religion; his solemn reception wes preceded by festa and vigila; and he was created a knight in the name of God, of Sth George, and of St. Michael the archangeL"-(Rees's Cyol.)

## Order of High Prieathood.

The ancient priests of Egypt, and the Druids of Gaul and Britain, of course, officiated in the edministration of the mysteries. Soon aftor Druidism was extinct, it is probsble, the royal arch was neglected, and lay dormant for several centuries. On its revival, sbout the middle of the eighteenth century, it was found that priests, or persons to officiste as such, were necesesry to preside in this chapter. Accordingly they were chosen from the laity smong the brethren, or from such clergymen

[^135]as had joinod themselves to the order; and there were doctore of divinity among the firat promoters of the revival, or revolution of the society.

Here the Englinh clergy had an opportunity, which they did not neglect, to mould the ceremonies connectad with the order of priesthood to suit their purpose. The odious tithes-syatem is openly advocated, and the awful fate of Korah, Dathan, and Abiram, held out as the due punishment of all those who ehould dare to resist it.

The following remarks upon this subject are abstracted from Crose and Webb:-

This order appertains to the offlice of high priest of a royal arch chapter: it should not be conferred when a less number than three bigh priests are present. Whenever the ceremony is performed in due and amplo form, the assistance of at least nine high priests are requisito. A convention notified to moet at the time of any communication of the grand chapter, will afford the best opportunity of conferring this important and exalted degree of masonry, with appropriate solemnity.

The reading of the following passages of ecripture composes a part of the ceremonies appertsining to this order.

The first pasaage read is the 1 thth chapter of Genesis, relating to the succesaful expedition of Abram against certain kings, and on his return, giving to Melchisedeo tithes of all he had obtained. A reference is then made to Hebrew 7, v. 1-6; wherein it is said, "Thia Melchisedec, king of Salem, which is ling of peace, was without father, without mother, without descent; having neither beginning of days nor end of life; but abideth a prieat continually. Now consider how great this man was, unto whom even the patriarch Abraham gave the tenth of his spoils. And verily they that are of the sons of Levi, who receive the office of the priesthood, have a commandment to take tithes of the people, according to the law, that is, of their brethren."

Now, this alludes particularly to the Levitical law, and had a apecial reference to that portion of the tribe of Levi who were admitted into the sacerdotal order, and is totally inapplicable to the Caristian dinpensation. It was a peace-offering of St. Paul, the author of the book of Hebrews, to the Jewish priests, to present their persecution : for surely the apostle did not pretend to the right of demanding tithes of the Christian laity of his day; for he bossts of having been no charge to them, labouring for his own support, The English clergy, however, claim the benefit of this law, and have duped the masons into an acknowledgment of their pretensions.

The next passage cited is Numbers, 16, v. 1-33; which gives the horrid cataatrophe of Korah and company, for resisting Moses and Aeron. This example is evidently adduced to deter the laity of England from opposing the tithen-claimers, the would-be legitimste heirs of the sons of Levi, who receive the office of the priesthood.

Mosea bere accusea the body of the Levitea of seeking the priesthood, and asks, "What is Aaron, that yo murmur agninst him T" Which shows that tithes were the bone of contention even in the time of Moses, the prieathood obtaining a greeter ahare, in proportion to their numbers
than the reat of the tribs. The pasagge concludes an follows :- © And it came to pase as he (Moses) had made an end of epeaking all these words, that the ground clave asunder that whe under them : and the earth opened her mouth and awallowed them up, and the houses, and all the men that appertained unto Korah, and all their goods. They, and all that appertained to them, went down alive into the pit, and the earth cloeed upon them; and they perished from among the congregation."

The American masons ought, at least, to have so modified the ordination of priest into the order, as to render it consistent with republican institutions, and not given the lesat countenance to the iniquitous exaction of clerical tithea

It mas be said, that there is no immediate cause of slarm on this head; yet the reiterated admiseion of such a cleim, by a numorone, respectable society, may in time be the means of rendering it popular. It may bo remarked, that Chriatisa clergymen who are inducted into this order, assume the duties of pagan priests, and of course perform ceromodies appropriate to the worehip of the heavenly bodies, all tho host of heaven. This, to be sure, may be done very innocently, an they are not neceesarily diverted from theintegrity of their faith; and, moreover, are probably not aware of the real import of the ritea and ceramonies in which they participate.

After the election of a candidate to the office of high prient, he is thus addressed by the grand high prieet:-"You are appointed chaplain to this chapter, and I now invest you with thi circular jewel, the bedge of your offise. It is emblematical of eternity, and reminds un that hero is not our abiding place," etc. Now, we have seen, that a circle, owing to its figure, was esteemed by the ancients, a symbol of their god, the sun.
"Let the mitre, with which you are invented, remind you of the dignity of the office you sustain, and its inscription impress upon your mind a senes of your dependence upon God," etc.-The inscription upon it is holiness to the Lord: the same an that which surrounds the mitre of the hierophant of the mysteries, and also that of the Roman pontiff.
"The breast-plate, with which you are decorated, is in imitation of that upon which were engraved the names of the twelve tribes, and worn by the high prieat of Irrael," etc.-The breast-plate is the same an that worn by the bierophante of Egypt, wbich had described upou it the twelve nigna of the zodiac.**
"The various colours of the roben you wear, are emblematical of every grace and virtue which can adorn and beautify the human mivd." The various colors of the robes of the high priest are symbolical of

[^136]the measons, when the sun is in different constallations of the sodisc. -"Ye priests 1 (says Volney, alluding to Catholic priests, you wear hin [the cun's] amblems all over your bodies; your tonsure is the diak of the sun, your stole is his zndiac, your rossries are symbole of the stars and planets. Ye pontiffs and prelates I your mitre, your crosier, your mantle, are thowe of Oairis."-[Ruins, p. 189.]

Although, aftar the axtinction of Druidism, it was necessary for masony to creats an order of priests to officinte in the royal arch chaptor an representatives of the deity, still it is evident that the Englioh alergy, who undoubtedly took a principal part in arranging the coremonies appropriated to initiations into the order, have managed the atair to suit their own ainister purpones. They made up a medley, compounded of Paganism, Jewism, and Christianity. Little of ancient mesonry is to be seen in it, excepting the dress of the high priest, Which is purely of pagan origin. And here it may be proper to remark, that although it has been shown, that the prayers of the ancient pagans and those of the Jews were couched in the same terms, the objects to whom they were addressed only being changed, nevertheless it may be doubted that the frequent introduction of texte of scripture in the ceremoniee, is in atrict conformity to original mesonry. Two doctors of divinity, Dissanguliers and Anderson, were engaged in the collection, or forming anew, of the ceremonies, and had it in their power to mould them at will.

Whether innovations, in this respect, were made or not upon this occasion, is of no consequence any farther than thereby to give an impreation that masonry might have some connection with the Jewish religion. Theee observations are, therefore, mede to guard against such a conclusion.

## Knight of the Eagle and Sovereign Prince of Rose-Cnoix de Beroden,

This dogree is a parody on the royal arch; and, as such, tende to confirm our interpretation of the purport of that ohapter.- Here the lost word is Jerus of Nazareth, insteed of Hiram.

The time and circumatances attending the loaing of the word are thus stated:-

The moment when the vail of the temple was rent; when darknees and consternation covered the earth; when the stars disappeared, and the lamp of day was darkened; when the implementa of masonry were lost, and the cubic stone sweated blood and water ; that was the mos ment when the great Masonic Word was lost.

Nevertheless, says the master, we will endeavour to recover it, and, addreasing the candidato for initiation, says, are you disposed to follow us ? Answer.-Yes, I am. Master.-Brother wardens, make the candidate travel for thirty-three yeare, to learn the beauties of the new law. The junior warden tben conduots the candidates thirty-three times round the lodge witbout stopping. (Bernard reduces the number to seven.) The candidete is now conducted to the darkest of places, from which the word must come forth triumphant, to the glory and sdrantage of
masonry. He is then ordered to perede the room three times, in memory of the mysterious desoent, which lasted three days.

After some further cererony, the master questions the candidate as follown:-

From whence came you \&-From Judea. Which way did you comel -By Nazareth. Who conducted you l-Raphael. Of what tribe are you deecended i-The tribe of Judah.

What do these four initial letters I. N. R. I., signify $P$-Jesus Nasarenus, Rex Judmorum. (Jesus of Nazareth, Ring of the Jews.)

Master. My brethren, what happinese ! the word is recovered; give him the light. The vail is taken off, and all the brethren clap their hands three times, and give three huzzas.-(Carlile.)

The master eays to the candidate, spproach, my brother, I will communicate to you our perfect mysteries. I congratulate you on the recovery of the word, which entitles you to this degree of perfect masonry. I shall make no comment or eulogium on it. Its aublimity will be duly appreciated by you. The impreeaion which, no doubt, it has mado on your mind, will convince you that you were not deceived when you wereinformed thst the ultimatum of masonio perfection was to be acquired by this degree. It cortainly will be a eource of very considerable satigfotion to you, that your merit alone has entitled you to it.

The above is a mere aketch of this degree: its scenery, some parta of which has alresdy been noticed, is very impoeing. In the representation of the infernal regions, the awful sights of the grester mysteries are more cloeely copied than is done in the royal arch. Whether the inventors of the order expeoted any serious effects to be produced by it, or whether it was got up for amusement, and to show the ingenuity of its projectors is uncertain. But it is pretty evident that such exhibitions intruduced amidst scenes of merriment and recreation, would not tand to mako a vary strong impression.

## Knight of Kadouk,

Chapter of the grand Inspectors of Lodges, grand elected Knights of Kadoeh, or the White and Black Eagle. The chief is entitled Grand Commander.

Although this degree is not recognized in ancient masonry, it bas, nevertheless, such a decided astronomical bearing as to render it probable that it is derived from the Egyptian rites. I will, therefore, attempt to givi an explication of its enigmatical alluaions.

When a reception into this degree is made, the grand commander remains alone in the chamber, and must be so aituated that the candidiste cannot see bim, as he is not to know who initiated him. A part of this obligation is, that he will never declare to any one who received him or aseisted at his reception to this sublime degree. This is sheer affectation, and intended for no other purpose than to imprens upon the candidate the awfulness of the mysteries in which he is abont to be instructed. It ie, however, an imitstion of an ancient custom. Warburton Esys, "A pessage in Eunapius soems to say, that it was unlawful to
reveal the name of the hiorophant." And Pgthagoras, it bas been seecu, gave his lesmons from behind a sersen to his newly ontered pupil.

The aaluting sign of Knights of Kadosh is, to hold the sword in the left hand and place the right hand on the red crosa which covers tho heart. The question, Are you Kadonh ? is answered by placing tho right hand on the forshesd, ${ }^{\text {, }}$ and saying, Yes, I am.

The mounting of what is called the mysterious ledder, is the most alistinguiahed ceremony in thia degees. It is thus represontsd:-

[^137]This ladder is an astronomical riddle, founded on the progreas of the sun through the seven signs of the zodiac, namely, from Aries to Libra inclusive.

In oxpounding this riddle, I shall avail myelf of the solution, by Dupuis, of the fable of Hercules, one of the names of the sun, whose pretended labours are shown to be a mere allegory of the course of that luminary.

Whether the names given to the stops of the Indder, have a meaning in any language, or are here used arbitrarily, I know not. I give them es published by Bernard, with the significations annezed.

Previously to the candidate's mounting the ladder, he is taught to pronounce the names of the eeven stepe, and is aworn to observe the injunctions pretended to bo indicated thereby. After he has pronounced the last word, in the eoventh stop, the Grand Commander asys, "By the seven conditions and by the power that is transmitted to me, which I have acquired by my diccretion, my untired travele, zeal, fervour, and constancy, I receive you Grand Inapector of all lodges, Grand Elect Knight Templar, and to take rank among the Knighte of Kadoeh, or White and Black Eagle, which we bear the name of : I desire you not to forget it. It is indispensable for you, my brother, to mount the mysterious ladder, which you see there; it will serve to instruct you in the mysteries of our order, and it is absolutely necessary that you should have a true knowledge of it." The candidate then ascends the ladder. When he is on the seventh or bighest step, and hae pronounced the three last words, the ladder in lowered and the candidato passes over it, because he cannot retire the same way, as he would in such case be obliged to go back, against which be hes taken an obligation. He then reeds the words at the bottom of the ladder, ne plus witra.

It has been the custom of the manufacturers of masonic degrees to entitle the last, for the time being, the ne plua ultra; which, being suoceeded by others, the latter, like more of the last words of Mr. Baxter, throw the former into the back ground. So the Grand Commander, in addressing the candidate, calls "This order the last degree of masonry." The attention, therefore, of the candidate, when arrived at the top of the latter is directed to the ne plus ultra below.

The candidate's retiring by a different way from that by which ho ascended, is in imitation of the course of the sun. The following fanciful description of the laws which govern the stellary ayatem, is given by Mackey, (p. 139).
"In the oblong eodiac of Tentyra, each of the twelve sigos is divided into three parta of ten degrees, and each part in represented by a humsa figure, (with attributea expressive of his functions,) called a Decsn; and as each sign of the zodiac has three of these, the first of each was called a powerful leader of three. To this company of thirty-six Decans they attributed the management of the sessons. These were the powers whose functions were more durable than those of the twelve zodincal constellations, which are atill found to alter their poaition every 2,000 vears, relative to the season; and to move, in that time, through a space
of thirty degrees from the equinoctial pointa. Not so the more powerful and constant gods, called the Decans, or Eloim; those of that rank which are fixed at the equator, are still supposed to compel the sun to ebine twelve hours a day all the world over; and those at the oppoeite parta of the equator, constantly propel the sun the same way through their dominions, that is, those at the spring node will not suffer the san to pass out of their pelace the same way by which be entered; bat order him to move on to the sign more northward. This is known to be the constant order of the sun, moon, and planeta"

## First Step of the Myoterious Ledder.

The name designating the first elep, is Iesdakah, which is defined righteousnees.

This, 1 apprebend, has an allusion to the sun in the vernal equinox, in the month of Maroh, when the days and nights are equal all over the world, and when the sun, after having been long in the nouthern hemiaphere, panees the line, in order to dispense his fisvours equally to the north; which is doing justice to all, agreeably to the above definition.

## Second Step.

The second step is Shor-laban, (white ox, figuratively.) This is the only step, the definition of whioh is literally true; which, as it might lead to an interpretation of the meaning of the myaterious ladder, is thun faleely denominated figurative.

Taurus, the bull, is the second eign of the sodise, into which the sun - onterf on the 2 lat of April. Hia entry into this sign is marked by the setting of Orion, who, in mythological language, is said to be in love with the Pleisdes ; and by the rising of the latter.

## Third Slep.

The third step is called Mothok, (sweotness)
The third sign of the zodieo is Jemini, into which the aun ontern in the mild, pleaeant month of May. "Canat thou hinder the aweot influences of Pleiades or loose the bands of Orion.'-(Job.) Now, the Pleiadee were denominated by the Romans, Vergilis, from their formerly riaing when the spring commenced; and their sweet influences blessed the year by the beginning of apring."-(Identity of the Hebrow and Druidical religiona.)

## Fourth Slep.

The fourth step is Emunah (truth in dieguise.)
The fourth sign is Cancer, into which the sun enters in the month of June. Egypt, at this period, is enveloped in clouds and duot, by which means the sun is obecured or diaguised; and which figuratively may be denominated truth.

> Fifh Step.

The fifth step is Hamal saggi, (great labour,) edvanoement to the practico of Heaven.

The fifth sign is Leo, or that of the celestial lion, called the liou of Nemes, under which the sun passes in July.-The great labour and difficulties to which the sun was supposed to be nubjected in passing this sign, bave before come under notice: which, aleo, is in perfect accord with the fable of the eminent exploit of Herculea in trilling the lion of Nemea.

The sun when in the siga Leo, is on his advence towards the equator where the ancienta supposed heaven to be situated.

Sixth Step.
The sixth stop is Sabbal, (s burden, or patience.)
The sixth sign through which the sun passen is Virgo, marked by the total disappearince of the celestial Hydra, called the hydra of Lerna, from whose head springa up the great dog and the crab.

Herculea deetroys the hydra of Lerna, but is annoyed in his operation by a sea-crab, whioh bit him in the foot. Appollodorous says, that whenever Herculee lopped off one of the monster's heads, two others sprang up in the place of it, so that this labour would have been endless, hind he not ordered his companion Iolas to sear the blood with fire, and thereby puta atop to their reproduction; and thus was that event actually repreeented in a fize picture in the temple of Delphi-(Mayo,)

## Seventh Step.

The seventh step is named Gemulah, Binah, Tebunah, (retribution, intelligenee, prudeuce.)

The seventh sign is Libre, into which the sun enters at the commencement of sutumn, indicated by the rising of the celestial Centaur, the same that treated Herculen with hospitality. This constellation is represented in the heavens with a flask full of wine, and a thyrous, ornamented with branches of leaves and grapes, the symbol of the productions of the season.

The aun has now arrived at the autumaal equinox, bringing in hie train the fruits of the earth; and retribution is made to the husbendman, in proportion to his iatelligance and prudence.

The allegory is certainly beautiful, and the mysterions ladder is well worthy to be called the ne plue ultra of masonry.

Since preparing the above, my attention bas been drawn to a learned article on the same subject, in a work, before noticed, by tha Rev, $G$. Oliver, which confirms my conjecture that the ledder composed a part of the machinery of the mysteries, and consequently has a legitimata atanding in masonry. It probably constituted a component part of the royal arch degrea, illustrating the sevon steps required to consummate that exalted grade. - The following is a sketch of this article :-

The ladder with seven stops, was used in the Indian mysteries to desigate the approach of the soul to perfection. The nteps were usually denominated gates. The meaning is undoubtedly the same; for it is observable that Jacob, ia referring to the lower atave of his ladder, excla med, "this is the house of God, and the gate of heav enc" Here

We find the notion of ascending to heaven by means of the practice of moral virtue, depicted by the Hebrew patriarche, and by a remote idolatrous nation, under the idea of a ladder. These gates were said to be composed of different metals of gradually increasing purity: the uppermost stave, which constituted the summit of perfection, and opened a Why to the renidence of the celeetial deities, was composed of the pure imperiohable substance of gold, and was under the protection of their moat high god, the sun.

The ascent to the summit of the paradissical mount of God, by means of a pyramid consiating of aeven stepe, wha an old notion certainly entertained before the vision of Jacob; for it prevailed emongst the Mexican savages*; and the original mettlera on the vast continent of America could have no knowledge of this vioion, either by tradition or personal expcrience.

In these mysteries, during the ceremony of initiation, the candidate was passed successively through seven dark and winding caverns; which progress was mystically denominated the ascent of the ladder. Each cavern terminated in a narrow stone orifice, which formed an entrance into its successor. Through these gates of purification, the mortified aspirant was compelled to squeese his body with considerable labour; sad when be had attained the summit, he was ssid to have passed through the transmigration of the spheres, to have accomplished the ascent of the soul, and to merit the favour of the celestial deities.

In the Persian myateriea, the candidate by a eimilar process, was pasaed through seven spacious caverna, connected by winding passages, each opening with a nerrow portal, and each the scene of some perilous adventure, to try his courage and fortitude before he was admitted into the aplendid Sacellum, which being illuminated with a thouaand torches, reflected every shade and colour from rich gems and amolets, with which the walle were copiously bedecked. The dangerous progress was denominated ascending the ladder of perfection.

From this doctrine bas arisen the tale of Rustam, who was the Persian Hercules, and Dive Sepid, or the White Giant.-(Fsb. Pag. Idol v. iii. p., 328.)
"Cai-Caus, the successor of Cai-Cobab, the first monarch of the Caianian dynasty, is instigated by the song of a minstrel to attempt the conqueot of Mazenderaun, which is celebrated as a perfect earthly Paradise."

This celeatial abode refers to the splendid sacellum of the Persian Epoptre, which was an emblematical representation of heaven.
"Cai-Caus fails in his enterprise; for the sacred country is guarded by the White Giant, who smites him and all his troope with bliodnees, and makes them hia prisoners."

This is a literal sccount of the first stage of initistion, which in the mysteries always commences with darkness. In those of Britain, the candidate is deegrignted us a blind man. And the captivity of Cai-

[^138]Caus and his Persians in the cavern, under the rigid guardianship of the Dive, is but a figurative representation of the candidate's inclosure under the Pastos; and this place of penance in the Celtio myateries, which had many ceremonies in common with those of Persia (Borl Ant. of Corn., b. ii. c. 22), was aaid to be guarded by the gigantic deity Buanawr, armed with a drawn sword, who is represented as a most powerful and vindictive being, capable in his fury of making heaven, earth, and hell to tremble.-(Dav. Notes on Talisin's Cad Goddeu.) In the Gothic mysteries, the same place of captivity and penance it fabled to be guarded by Heimdall, whoee trumpet emita so loud a blast, that the eound is heard through all the worlds.-(Edda Fab.)
"In thie emergency the king sends a messenger to Zaul, the father of the bero Ruatam, begging bis immediste aesistance. For the greater deapatch, Rustam takes the shorter, though more dangerous road, and departs alone, mounted on bis charger Rakesh."

Fifere Rustarn enters upon the dreadful and dangerous business of initistion, mounted, says the legend, upon the charger Rakesh, or more properly Rakshi. This was a horrible winged animal, whose common food is said to have been serpents and dragons. Now these reptiles, together with monsters compounded of two or more animaln, were the ordinary machinery used in the mysteries to prove the courage and fortitude of the aspirant, during bis progress through the neveu stages of regeneration.
"The course which he chooses is styled the road of the seven stages, and at each of the first six he meets with s different adventure, by which his persevering cuurage is soverely tried."

At each of the seven stages the candidate really encountered many dangers ; and vanquisher a multitude of Dives, dragons, and enchanters who in succession opposed his progress to perfection.-(Shah name, in Richardson's Dissert. Best. Nat.) Being pantomimically enacted during the procese of initiation, and the reiterated attacks prosecuted with unrelenting maverity, instances have occurred where the poor affrighted wretch has absolutely expired through oxcesa of fear.
"Having at length, however, fought his way to the seventh, he discovers his prince and the captive Persians; when he learns from CaiCaus, that nothing will restore his sight but the spplication of three drope of blood from the heart of the White Giant."

The aymbolical three drops of blood had its counterpart in all the mysteriea of the ancient world; for the number three was ineffable, and tho conservator of many virtues. In Britain, the emblem was three drope of water; in Mexico, as in thin legend, three drope of blood; in India, it was a belt composed of three triplo threads; in China, the three strokes of the letter $Y$, etc., etc.
"Upon thia, he attacks his formidable enemy in the Cavern where he was accustomed to dwell; and having torn out bis heart, after an obstinate combat, be infuses the prescribed three dropa into the eyes of Cai-Caus, who immedistely regains his powers of vision."

In this tale we have the theological ladder connected with the syatem
of Pereian initiation transferred Erom mythology to romance; and tbe ooincidence is sufficiently striking to impress the most ordinary obwerver with the atrict propriety of the application. The candidate comee off conqueror, and is regularly reatored to light, after having given full proof of his courage and fortitude, by surmounting all opposing dangersFather Angelo, who went out as a miesionary into the East about 1663, sags, that in the midst of a vast plain between Shiras and Shuster, he saw a quadrangular monument of stupendous size, which was eaid to have been erected in memory of this great enterprize of the herv Rustam. The fact is, that this quadrangular inclosure was an ancient place of initiation; and from a confused rememorance of the scenes of mimic adventure which were represented within its seven secret caverne, the fabulous labours of Rustam has doubtless their origin.

Here the author has evidently mistaken the copy for the archetype. The acenes of mimic adventure alluded to undoubtedly originated from the fabuloun labours of Rustam, the Persisn Hercules. It has been ahown that Hercules was one of the namen by which the sun was designated," and that the periloua adventures attributed to a fabulous character to whom the name was given, was a mere allegory on the progress of that luminary through the signe of the eodiac; of which the tale of Rustam is another veraion.

## The Order of Noachites, or Chevaliers Prussian.

This order, there is reason to believe, was instituted by the ancient Pruseians. It claims priority over that of the freemasons of England. The author of an expose of the ritual of that institution, which will be noticed below, gives just fifty-three years between the periods of the two eatablishments; and says, "This tradition is firmly believed." In corroboration of this fact, Dr. Anderson observes, "The first name of Masons, according to somo old traditiones, was Nouchids."

The ceremoniea of the Noachites seem to have served in some measure an a model upon which thoee of freemasonry are founded. Although the scene of the eatablishment of this order is laid at the Tower of Babel, instead of the Temple of Solomon, the craft of masonry, as in the freemasons' society, is made use of to cover the real design of the inatitution, the maintaining of religious dogmas, if not the recovery of independence.

The following remarke, in Guthrie's sketch of history of the ancient Prussia and Poland, will tend to show at what time this institution was probsbly formed.

Speaking of Poland, he saya, "From this period [880] for some centuries we have no very certain records of the history of Poland. The title of duke was retsined till the year 998, when Boleslaus (the I.) assumed the title of king, and conquered Moravis, Prussia, and Bohemia, making them tributary to Poland."

[^139]Of Prussia.- "The ancient bistory of Prussia, like that of other kingdoms, is lost in the clouds of fiction and romance. The iuhabitants appear to have been a brave and warlike people. They were descended from the Selavonians, and refused to aubmit to the neighbouring princes, who, on pretence of converting them to Christianity, wanted to reduce them to slavery. They made a noble stand against the kings of Poland, one of whom, Boleslaus IV., thoy defeated sod killed in 1163. They continued Pagana till the time of the latter crusades, about the year 1227."

From the foregoing statementa, it appeare that the sway of Poland over Prussia, obtained in 999, was not of long duration; and it is reaconable to conjecture that, soon after the conquest, the people of Pruesia established the order of Noachites. It was evidently a military institution, and undoubtedly intended as a rallying point, to operates, as occasion might occur, for the recovery of the civil and religious libertiea of the nation.

Admitting that the mociety of Noachitea was founded in the year 1000, which is probable, and provided the foregoing tradition be correct, the establishment of Freemasonry in England would have oocurred about the middle of the eleventh century, which is as late an it is likely to have been neglected, after the edict of Casute prohibiting the open worabip of the Druide.

Beroard, in his sccount of this order, says, "The grand master general of ths order, whoes title is chovalier grand commander, is Frederio William, king of Prussia. His ancestors, for three hundred years, have been protectors of this order. The knighte were formerly known by the name of Noschites.
"The Noachites, now ealled Prussian Chevaliers, are descended from Peleg, the grand architect of the Tower of Babol, their origin being more ancient than that of the masons descended from Hiram. The knights assembled on the night of the full moon in the month of March [the vernal equinox], in a secret place, to hold their lodges; and they cannot initiate a candidate into the mysterien of this order unleas by the light of the moon."

Great innovations have been introduced into the ceremonies of thil order. I have a copy of its ritual, which, from its antiquity and Druidical atyle, may be preaumed genuine. It was reprinted from a London oopy, by John Holt, New York, 1768. As a curiosity, and as bearing - rolationship to the ancient mysteries, I will give an abetract of it.

The order consists of two degrees, called Minor and Major ; and tho officens form what masonically may be termed a Chapter, to which the other membera are not admitted. This chapter comports with the royal arch of Freemssonry; for here the secret word, Belus, is rerealed, which, the reader is aware, in the same as Osiris, personated by Hiram. The expounder of the order appeara to have committed an error, in giving this word at the opening of the minor's degree; because it is expresaly eaid afterwards, that it was unknown to all but officers.

## Misor's Degreen

Examiner-When did Masonry begin ! Respondent-About one hundred and fify-four years after Noah's floud, at the building of Babel's Tuwer. Who was grand master there? Nimrod, called by masons Belus. [Not Peleg, as modern masons have it.] Where was the firet ludge held I In a pleasant plain of Babylon, called Shinar, on the banks of the river Tigris.

In what manner were you madel I was led to a door, where a man atood with a drawn sword in his hand, who asked my friend what ho wauted. What did your friend reply $!$ To have me made a mason. Did he aimit you 1-Yes, he atruck tbe door with his aword, upon which it instantly flew open: my friend then led me by the hand into a very dark rinm, and then the door was shut. What succeeded this i-My friend then said, with a loud voice,-

> Here stands a csndidato for masonry, Who fain would know our art and mystery, 8how him the light by which we work, aud then Perhapa ho'll learn the art, Hike other men.

Upon this a door flew open, and disoovered a room extromely light, out of which came three men with drawn swords, one of whom esid, "Deliver your friend to us." Upon thio my friend delivered mo into their care, and I was urhered into the lodge, one walking before, and one on each side, and my friend in the rear. Thus wes I brought out of darkuess into light.

What was dove after this! I was stripped naked, in order that all the lodge might be well assured they were not imposed upon by a woman.t What was then done I The master clothed mo with the ladge of innoceace. [This in a loose white garment, generally made of fine linen, and sometimes of silk.] Ho then took me by the right hand, and placed me in the centre of the brethren: he then ordered me to kneel down on both my knees, and held to my throat the point of a sword which he had in his hand, and then addressed me as follows :-
"Sir,-You are now going to be admitted a member of this ancien and honourable fraternity, and it is expected that you will lay yourself under the subsequent obligation.
"You shall not reveal to any person or persons, either by word of mouth or your own hand.writiog, or cause to be revealed in any manner whatever, any part or parts, point or points, or any traditions, which have been, are now, or shall hereafter be held as a secret among masons,

[^140]unlesa to an honeat man, who you know is a mason, or to the master or wardens of any regular Lodge.
"And as it was always esteemed by the masons of old, that to awear by the aword was the most binding of all obligations, so we do insiat and require you solemnly to kiss the edge of this sword preeented to your throat, as a sigoification of your full consent to, and approbation of, tha above particuiars.
"Your well performing this injunction, will make you ever eateomed by this veaerable body, as the contrary will render you guilty of a breach of the most sacred bond of human society, and ennsequently degrade you from the cbaracter of a man of honour, which every mason ought to preserve more carefully than his life." -

Are you desirous of knowing the Major's secrets :-Yes. Ex. Your good behsviour alone will not obtain them.

> B. By thak alooe they could not be obtaln'd, But I by that a Golden Signot gain'd; Which will admit me into that degroe, That I may work among the Majore Frea.

What is that signet !-A ring. Ex. Produce it. R. Behold it hare. (Showing the ring.)
Ex. Attend, my brethren, all that round me stand,
While I obey grost Belua' dreed command
Our brother here, upon examination.
Deaires I'll place hira in a higher atation.
A Minor's chasactor bas well masintained,
And snswar'd all things well ; by whioh ho's galnod
The 8ignet raro, which Bolue did ordain
For such es could the Minor's art attaid,
That they may to the tow's ropair, and be
Receir'd to work among the Najor's Fred,
Tis thon my will and plessure that ho may
Begin to work and enter into pay.

## Ceremony of Installment of Officers.

Where were you installed I In the obeervatory. How high wes it 1 On the top of the tower. How got you there? By a winding secent. In what manner were you inatalled I I first passed the Minor's examination, and then the Major's; after which Belua informed me the brethren had unanimoualy agreed to elect me into the office of which he invested me with the badge. Have the officern a secret word I Yea, How did you receive it !-

> On my two knee be ordered me to kneel, Bofore be could the secret word roveal; A word to all but offioers unknown, Because we give it when we are alone; The word is Belu, bo it known to thee, Twhe that great man gave birth to Mireonry.

[^141]
## CHAPTER IX.

## MTSCELLANEOUS AETICLES.

Ceremonics obserred in laying the foundation atone of Freemasons' Hall, London, 1775 ; and its dedication, in 1776.
The similarity of practices in masonry and the ancient rites of Bacchus, is fully exemplified in these ceremonies. The Caduceus or megical wand of Mercury, the mysterious obeat, and the three pitchers, containing corn, wine, and oil, are appropriately used. This will appear by the following short abstract of the transaction on thoee occasions as published by Smith.
"The first stone of the masons" hall was laid by the Rt. Hon. Robert Edward Lord Peter, baron of Writtle, grand master of the masons of Eingiand, accompenied by the worsbipful Rowland Holt, etc.

About twelve o'olock the prooession arrived, and continued threa timee round the ground, where the ball was to be erected. The griand master then depoesited the foundstion stone with the usual formalites, After which the doputy grand master presented the square to the grand master, when his lordship tried the corners of the stone, and then returned it to the deputy, who gave it to the architect. The senior grand warden next presented the level to the grand master, who therewith tried the stone horizontally, and returned it as before. The junior grand warden then presented the plumb-rule to the grand master, who applied it properly, and returned it as before. Hin lordship then etruck the atone three times with the mallet, on which the grand treasurer waved his wand, and the brethren joined in the grand honours of masonry. (This was done by clapping hande three times three.)* The following anthem wad then sung :-
To Heaven's high Architeot all praleg
All prives, all gratitudo be givev,
Who deigned the hnman soul to ralso,
By mystio mearote aprung from heaven.
Chorue. Thrice repeated.
Bound aloud the great Jehuvah'n praise,
To him the dome, the temple raisa.

[^142]An oration wat then pronounced; at conclusion of which, the grand treasurer again waved his wand, and the grand honoura were given as before. A grand piece of music was then performed by the instrumente, and an ode on masonry rehesrsed; after which the proceesion wha resumed, and continued three times round as before.

The whole ceremony was conducted with the greatest order and decorum. The grand master and the rest of the brethren then proceeded through the city in procession in their carriages, without exposing any of the insignia of the order, to Leathersellen'-hall, where an elegant ontertainment was provided, and the ovening concluded with great joy and feativity."

## Dedioation of the Hall, in 1776.

At half past twelve the procession entered the hall in the following onder:-

Grand Tiler, with a drawn sword-four tilers, carrying the lodge [the myeterious chest,] covered with white satin-master of the soventh lodge, carrying two ailver pitchers, containing wine and oil-the master of the sixth lodge, carrying a gold pitcher, containing corn-the firat light carried by the magter of the fifth lodge-architect, carrying square, level, and plumb-rule-master of the fourth lodge, carrying the bible, compasses, and square, on a velvet cushion-grand chaplain,-grand secretary, with the bag, (purporting to contain private papers appertaining to the sffairs of the lodge-a mere formality)-grand treasurer, with the staff (wand,)-zecond light, carried by the master of the third lodge-the third light, carried by master of the second lodge-master of the senior lodge, carrying the book of constitutions-grand swordbearer, carrying the sword of state-grand master.

On the proceasion reaching the grand manter's chair, the brethren who formed it were proclaimed, and from that atation walled round the hall three times. The lodge wes then placed in the centre of the hall, and the three lights, with one gold and two silver pitchers, containing corn, wine, and oil, were placed thereon; the bible, compassee, square, and bouk of constitutions, on a velvet cushion, being placed on a pedestal, the foundation stone anthem was sung.

His lordship then expressed his approbation of the architect's conduct, and commanded the proper officera to receive back the implements which had been delivered him at laying the foundation atone. A solemn piece of music was next performed, during which the ladiea, and those who were not masons, retired. The grand master then ordered the hall to be tiled, on which the lodge [the little chest] was uncovered, and the grand secretary informed the grand master that it was the desire of the society to have the hall dedicated to masonry; on which the grand master commanded the grand officers to assist in that ceremony, during which the organ kept playing solemn music. The grand officers then walked round the lodge in procession three times, stopping each time for the ceremony of dedication; when the grand master in solemn form declared the hall dedicated to masorry, to virtue, and to universal
charity and bevevolenoe; which beiog proclaimed, the grand honoars were given as before : the lodge was tben oovered, and the lediee introduced, amidst the ncelamation of the brethren: next a grand anthem was sung. An oration on manonry was then deliversed by William Dodd, LL.D., grand chaplain."

As the method of dispoeing of the corn, wine, and oil, is not stated in the foregoing acoount, I will subjoin the custom in this reepect, whick is obeerved at laying the foundation stone of public structures, and at the dedication of masona' halle, as given by Webb and othere
"The gold and silver vessels are presented to the grand master, and he, according to ancient ceremony, pours the corn, the wine, and the oil, which they contain, on the stone saying,
"May the all-bounteous Author of Nature blese the inhsbitanta of this plece with all the neceesarios, convenionces, and comforta of life; asaist in the erection and completion of this building; protect the workmen againnt every accident, and long preeorve this structure from decay; and grant to un all, in needed eupply, the corn of nourishment, the wine of rofreahment, and the oil of joy.

## "Ament So mole it bef AmenI'

"He then etrikes the atone thrice with the mallet, and the public bonours of masonry ere given."

In the dedication of masons' halle, the corn, wine, and oil, are poured upon the lodge, that is, se before observed, the little mysterious chost Aamon, or ark.

The proseseiona three times round the foundation, and the hall when finiahed; the three ligbte; the olapping bande three times; atriking the stone thrice, etc., are in conformity to the customs of the ancients; which was done by them in reverence of the deity, and in acknowledsmont of their belief in the triplicity of his nature or attributes.
"The Druid pries, in their worship, looked towards the sun-they retained many of the Ammonian rites, - they are said to have made mystical processions round their consecrated fires aunwise before they proceeded to escrifice." - [Hutchinson, p. 69.]

In short, the agreement of the foregoing customs of masons with the observances of the anciente on similar occasions, will appear evident from the following historical facts:-
"We learn from Festus, that the Etrurians had books concorning the ceremonies observed at the founding of cities, altars, temples, walls, and gates. Plutarch telle us, that Romulua, before he laid the foundation of Rome, sent for men from Etruria, who informed him in all the punctilios of ceremony which he was to observe. According to Dionysius, they began with offering a escrifico. They then dug a ditob, into which they threw the first fruits of all the thinge that served for human nourishment; at the same time they consulted the gods, to know if the enterprise would be acceptable to them, and if they approved of the day chosen to begin the work. They then chalked out the boundaries by a more of white earth, which they called Terra pura, While they were
forming the boundary, they stopped at certain intervale to renew the mecrifices. In these sacrifices they invoked, beaides the gods of the country, the Gods to whose protection the new city was recommended, which was done secretly, because it wes neceseary that the tutelar gode should be uoknown to the vulgar. In fine, so much regarded was the day on which a city was founded, that they kept up the memory of it by an annivereary feestival.

Among the Romans, when they were to build a temple, the Auruspices were omployed to choone the placo where, and time when, they ahould begin the work. This place was purified with great care; they even encircled it with fillots and garlande. The Vestala, eccompanied with young boye and girla, washed this apot of ground with water, puro and clean, and the priest expiated it by a solemn ascrifice. Then ho touched the atone that was first to be laid in the foundation, which was bound with a fillet; when the people, animated with enthusiastic real, threw it in with some pieces of money or metal which had never peesed through the fursace. When the edifico wes finished, there wes aleo a consecration of it, with grand ceremonies, wherein the prieat or, in his absence, some of his college presided-(Mayo's Myth. vol. 1, p. 141 and 297.)
"The same author, in treating of the festivale and processions of the Eggptians, observes :-'The Hebrews, who derived from the Egyptians that fatal propensity which they had towarda idolatry, imitated them but too often, not only in the solemnity of the golden calf, but also in the caremony of thair procesaions. The prophet Amos upbraide them for having led about in the wilderness, the tabernacle of the God Moloch, the image of their idol, and the atar of the god Rempham. St. Stephen, in the $\Delta$ cts of the $\Delta$ postlea, taxes them with the same piece of idolatry. -Several other people practised the same ceremonies, whether they had learned them from the Egyptians, as is very probsble, or had invented them themselves."-(Vol. 1, p. 303.)

In regard to sacrifices, Harwood, in his Grecian antiquities, says, "When the fruite of the earth were the only food of men, care was taken to reserve a cartain portion for the goda. The same custom was observed when they began to feed upon the flesh of snimals. Sometimes. water was poured on the altar or the bead of the victims, zometimes honey or oil; but in general they were sprinkled with wine, and then the wood of the fig tree, the myrtle, or the vine, were burnt upon the altar.-There was ecarce any sacrifice without corn or bread, and more particularly barley, as it was the first sort of corn used by the Greeks, after the diet of acorna wea given up."-(p. 146.)

Although masonry copies the cuatoms of the ancient nations, it mustnot be supposed that there is any idolatry connected with it. It in merely an idle-imitation of their rites and ceremonies, without any reference to the original import of them.

Antimasonic Wrilers.
The Abbs Barruel and Profeasor Robison, by thair malignant and
falmo allegatione againat the masonic society, heve so far prejudiced the minds of a portion of the readiog public, an to causo a belief that freemasonry was hoetile to Christianity, to good order, and to civil goverrment. This calumny was founded solely upon the sid given by the freemsaons of France to the revolution of goverument in that country. A revolution which cortainly, in its commencement, met with the approbation of every friand of liberty thronghont the civilised world.

Both these writers were ultra royalists. Barruel whe a Fronch Jesuit prieat, who, on the breaking out of the revolution in France, fied to England, where ho published his phillipio against republicanism and freemasonry, under the title of "Memoirs, illustrating the history of Jacobinism." Robison was Professor of Natural Philosophy, and Secretary to the Royal Society of Edinburgh. His attack on masonry snd free goveramente, is entitled "Proofs of Conspirecy against all the religions and goveramenta of Europe, carried on in the secret meotingo of Freemasona, Illuminati and Reading Societien."

These writers pursue the common, beckneyed course of aristocrsacy against liberty, by calumniating and vilifying its supporters. No crime is too infamons to be laid to the charge of the moot talented and virtuous of men. The disiogenuous course shows the turpitude of the cause ther espouse. It is most base to divert the reader from priaciples to men, and, by false allegations against them, to prejudice him against their principles. Many an unsuapecting reader has suffered his mind to be perverted by this flagitious mode of argument.

Barruel makea the following charge against the order of masone :"I saw masons, till then the moat reserved, who freely and openly doclared, 'Yea, at length the grand object of freemasonry is accompliahed, equality and liberty; all men are equal and brothers; all men are free. [Monstrous.] That was the whole aubstance of our doctrine, the object of our wishes, the whole of our grand secret. Such was the languago I heard fall from the most zealous masons, from thoes whom I have eseen decorated with all the insignia of the deepest masonry, and who enjoyed the rights of venerable, to preside over lodgos. I have heard them express themselves in this msiner before those whom mesons would call the profane (uninitiated), without requiring the smallest secrecy, either from the men or women present. They esid it in a tone as if they wished all France should be acquainted with this glorious achievement of masonry. - (Vol. ii., p. 149.- Hartford ed. 1799.)
Barruel aleo extracte the following sentiments, from Condoroet's "Progress of the human mind," es worthy of reprobation. Condorvet, speaking of the secret associstions which existed in Franoe, previonaly to the revolvtion, nays, "They were the sesociations" of thoee generoun men who dare examine the foundations of all power or authority, and who revealed to the people the great trutbs, that their liberty in inalienable; that no prescription can exist in behalf of tyranny; that no convention can irrovocably subject a nation to any particular family; that magistratee, whatever may be their titles, functions, or powers, aro $\rightarrow$ ly the officers, and not the masters of the people; that the poople al-
waye presarve the right of revoking those powers emanating from them alone, whether they judge it has been abused, or consider it to be unelees to continue them. In short, that the people have the right of punishing the sbuse as well as of revoking the power."
"Thus we see (eaye Berruel) Cordorsot tracing beok the germ at least of all the principles of the French revolution to thene necret anoociationas which he repremonts as the benefactors of nationa,"

Had not masons a right, equally with other citisens, to take part in the glorious cause of freeing their country from despotism $\dagger$ Was it not their duty, and would they not be infamous not to have done not The American masons were as zealous, I believe, in the cause of their country in our rovolution as other men, and havo never, to my knowledge, as a distinct class, been reproached for it.

The French revolution, however objectionable ite course in some stages of its progrees, and however unfortanate its termination, wes holy and just. Ita projectors and tho French people as a nation, are no more reoponaible for the atrocitied of Robeapierre, than are the eociety of masons for the murder of Morgan.

But how were the enormities complained of produced I By the combination of the deapota of Europe for the parpose of reducing the French nation to its former state of bondage. Among the means employed, a civil war was fumented in La Vendee, comprehending three depertments of the republic, and money waa furnished to the rebele against their country, by Rogland, to prosecute this nefarious warfare.

Besides, almoat all the nobility and clergy of France were in oppoaition to the cause of liberty, and carrying on every powible intrigue to reinstate the monarchy. They were neneible of tho benefite resulting to them from the mervices of an enalaved people, and thay wished to bring them back to their former dobesed state.

Thus was the French nation aituated : surrounded by external foes, and harresed by those within; to kill or to be killed became the only slternative, and sota were committed, under the sway of Robeapierre, that tarniabed the glorious causo in which they wero engaged.

But, after all, it is a pretty well socertained fact, that Robeopierro was in the interest of the powers combined against France, which caused him to diegrece the revolution in the manner he did.

If any eountry ever had cause to revolutionise its government, it was France, under the ancient regime. Where Americs had one just complaint agaiost the abuses of goverament, France had a hundred : it would require a volume to enumerate them. I have not a list before me, but one wae so degrading to the character of man, that it made a atrong impresaion upon my mind when examining the catalogue. It was this; in some places, in certain seasons of the jear, the pescants, by the law called the Gabelle, wero obliged, in turn, to beet the ponds and brooks all night, to prevent the seigneur or lord of the manor and family's being disturbed by the croeking of the frogo.

By thin single example the debased atate of the poople of France may eacily be imagined.

The horrors of the Bastile, the famous prison at Paris, is pretty well understood. A Mr. Caritat, well known in the city of New York as a bookseller, informed me that he had boen employed as a clerk in one of the offices of government in Parie, and that he had filled up hundreds of letters de cachet, aigned in blank by the king. These letters wero ordera to the keeper of the Bastile, to receive under his charge the pernons named in them; and which might be obtained for a few guineas, by any influential character. Thus were persons thrown into this dismal place, without trial and without any charge of crime. One man roleased from it, on its demolition, had suffered confinement for forty years, and was entirely ignorant of the cause of his imprisonment.

In the meantime the ling, good eary soul, was enjoying the pleasuree of the table and the chase, unmindful of the sufferings of his fellow men, inflicted through his instrumentality. In fact, whatever may be eaid of Louis XVI., it is very svident that he was a complete gourmand, and very little endowed with the active virtues.

Thomas Paine, in his "Righta of Man," in answer to Edmund Burke'e attack on the French revolution, obeerves, "Through the whole of MrBurke's book, I do not obearve that the Beotile is mentioned more than once, and that with a kind of implication as if he was sorry it is pulled down, and wisbed it was built up again. 'We have rebuilt Newgate, says be, and tenanted the mansion; and we have prisons almost as atrong as the Bestile who dare to belie the Queen of France.'
"Not one glance of oomprasion, not one commiserating reflection, that I can find throughout his book, has he beatowed on those that lingered out the moet wretched of lives, a life without hope, in the mont miserable of prisons. It is painful to behold a man employing his talonta to corrupt himself. Nature has been kinder to Mr. Burke than he has been to her. He is not affected by the reality of distreen touching his beart, but by the showy resemblance of it striting hin imagination. He pities the plumage, but forgeta the dying bird. Acouetomed to kiss the aristooratical hand that hath purloined him from himself, he degeneratea into a composition of art, and the genuine soul of nature forsukes him. His hero or his beroine mast be a tragedy-victim, expiring in show, and not the real prisoner of misory, sliding into death in the silence of a dungeon."

Mr. Burke, for his apostacy from the whig cause, and writing his philippie against the French revolutiod, reoeived from the British king, of the people's money, a pension of fifteen hundred pounda aterling(Six thousend six hundred and sixty dolars).

By this work, says Jool Barlow, in a noto to his "Conspiracy of Kings," "He (Burke) conjured up a war, in which at least two millions of his follow oreatures must be eacrificed to bis unaocountable passion. Such is the condition of human nature, that the greateat crimes have unually gone unpunished. It apposer to me that history does not furnish a greater one than thin of Mr. Burke; and yet all the consolation that wo can draw from the detection, is to leave the man to his own reflectinne, and expose his conduct to the execration of posterity."

Many mientatementa have been published, charging the legislatures of France in the time of the revolution, with an open avowal of indidelity to the Chriatian religion, and with persecuting the clergy, with a vien of projudiaing mankind againat their canse. All this has been grounded upon asingle expreserion of Anscharas Cloots, one of the assembly, which received, however, no countenance from the other members. Hobeepiorro, who, above all others, deserves the severest censure, professed the greatest regard for religion, and introduced to the asoembly along re port expreesly upon that subject, which was received with approbation

The following extract from the Eistory of the Revolution, by $\mathbf{M}$. Rabaut de 8t. Etienne, will correct the errors that have been circulated reapecting the trestment of the priesta, Rabaut was a protestant clergyman, a member of the National Aseembly, and a man of firstrate charnctor and talenta- - He saye,
"The outh required of tho clergy wis one of the preterts used for ondeavouring to oreate one of thowe quarrels which are termed achiams, and in which men seperate into parties, and then fight, for the sake of abstract questions which they do not underatand. The National Anembly had given the title of Civil Constitution of the Clergy, to what was nothing but its organisation. It should seem that the Assembly would have done better in not engaging in this affair, since each profession ant each professor can arrange themselves agreeably to their own mode od proceeding saving the suparintending power of the government. It ran the hakard of reviving nuder one form, a body which it had deetroyed under another. But priests maintain such a fast hold of all temporal affairs, and attech themeelves so closely to the interest of the governmont, that it is difficult to separate them from these affiirs and thase interesta; and, take the matter up in what shape you will, the prieets bood still meets you at every oorner ; this createe a degree of embarrasement in every country, where the sovereign, be it what it may, bath a serious inclination to be msster.
"The National Assembly, then, baving orgenized the clergy, according to the principles of the Frebch constitution, required of the priests the outh, which had been taken by every citizen, to support the constitution; but it required, at the eame time, that they should swear to maintain the civil conatitution of the clergy. Of all the military men who have taken, and broken the civic oath, not one ever thought of saying that Heaven was iDjured by the military organization ; their pretext hath been that they had airemdy taken an oath to the king, which rendered the hatter null and of no effect. But priesta are in the babit of identifying themselves with Gur, end whoever offends them, offends Heaven. Accordingly, certain subtle minde soon discovered the means of creating a schism, in asserting, that this constitution was a spiritual affair, nay more, that it was another religion; that to require such an oath wea a reatraint of the freedom of conecience, that it was putting priesta to the hirture, and exposing them to suffer martyrdom. They even deaired death, and that they might be led to execution, well ansured that the National Convention would never do any auch thing.
"There was found in the kingdom a considerable number of wellmeaning persons, who imagined that their consciences had received a Tuaterial injury by this new organization of the clergy ; for what men iloat believe, is, very often, what they lesst underatand. Mesnwhile the nonjuring priests were obliged to quit their parishes, and pensions were allotted to them; but they endeavoured to preserve their influence over their parishioners, and to interest them in their favour, by all those means which continually lie within the resch of thone to whom men bave committed the government of their reason. This divieion inspired the enemies of the constitution with the hope, that the French might be seduced into a civil war for the sake of the priesthood, since they would not go to war for the sake of the nobility, which, in truth, had no abstract ideas to present ts the aubtle minds of the diecontented. The courtiers and the friends of privileges, on a sudden became devout; they were devout even at court; nay, they were devout even at Worms and at Coblente But the citizens of Paris, even such as were leagt enlightened, did not become the dupes of this mummery; now without Paris, there can be no civil war."-(Lond. ed., p. 200.)

Mr. Robson maintains the eame tyrannical doctrines as Barruel ; in gupport of which he quotes the argumente of one of the kinge of France in vindication of his claims to power.
"Hear, says he, what opinion was entertained of the aggoe of France by their Prince, the father of Louis XVL., the unfortunate martyr of monarchy: 'By the principles of our new philosophers the throne no longer wears the splendour of divinity.' They maintain that it arose from violence, and that by the same justioe that force erected it, force may again shake it, and overturn it. The people can never give up their power. They onls let it out for their own advantage, and always retained the right to rescind the contract, snd resume it whenever their personal advantage, their only rule of conduct, requires it. Our philosophera teach in public what our passions suggest only in secret.' "| Then follows the reesoning of Louis, intended to show this doctrine to be heretical and absurd; and Robison adds, "This opinion of a prince is unpolished indeed, and bomely, but it is juat."- (p. 843.)

The author attempts, without a shadow of proof, to connect freemasonry with the order of Illuminati; snd then, by calumniating the Iatter, to disparage the former. But in this he has miserably failed; for, after all that has been raid againat the society of Illuminati, it appeara to have been instituted for the sole purpose of lessening the evils which result from the want of information, by enlightening the public mind, and diffuaing useful knowledge smong all classes of the community.

To buppose an the author pretends, that this society, composed of men of the first reapectability and standing, wishes to deatroy all order and goverament, is tou preposteroue for a moment's consideration.

The order zs eaid to have been founded in Germany, sbout the year 1777; and Dr. Adam Weishaupt, professor of Canon lew in the university of Ingolstadt, wae the proprietor.

The anthor gives Dr. Weiehaupt's prospectua of his views, by which the reader may form his own opinion of the merits of his scheme.
"The order of Illuminati appears as an accessory to freemasonry. It is in the lodges of freemssons that the Minervals are found, and there they are prepared for Illumination. They must have previouply obtained the tbree English degrees. The founder says more,-that bis doctrines are the only true freemasonry. He was the chief promoter of the Eclectic System. This he urged as the beat method for getting information of all the explanations which have been given of the masonio myateries. He was also a Strict Observanz, and an adept Roeycrucian. The result of all his knowledge is worthy of particular remark, and ahall therefore be given at large.
"I declare, says he, and I challenge all mankind to contradict my declaration, that no man can give any account of the order of freemasonry, of its origin, of its history, of its object, nor any explanation of its mysteries and symbols, which does not leave the mind in tutal uncertainty on all these points, Every man is entitled, therefore, to give nn explanation of the symbols, and any eystem of the doctrines, that he can render palatable. Hence have aprung up that variety of systom, which, for twenty years, have divided the order. The simple tale of the English, and the fifty degrees of the French, and the knights of Baron Hunde, are equally suthentic, and have equally had the support of intelligent and zealous brethren. These systems are, in fact, but one. They have all aprung from the blue lodge of three degrees; take these for their standard, and found on these all the improvementa by which each system is afterwardes suited to the perticulsr object which it keeps in view. There is no man, nor gystem, in the world, which can show by undoubted succession that it should stand at the head of the order. Our ignorance in this particular frete me. Do but consider our short history of one hundred and twenty years.- Who will show me the mother lodge ! Those of London we have discovered to be self-erected in 1716. [1717.] Ask for their archives. They tell you they wero burnt. They have nothing but the wretched sophistications of the Englishman Anderson and the Frenchman Desaguliers. Where is the lodge of York, which pretends to the priority, with their king Bouden, and the archives that he brought from the East ? These, too, are all burnt. What is the chapter of Old Aberdeen, and its holy clericate9 Did we not find it unknown, and the mason lodges there the moat ignorant of all the ignorant, gaping for instruction from our deputies $\$$ Did we not find the same thing at London 1 And have not their miasionaries been among us, prying into our mysteries, and eager to learn from us what is true freemsaoury I It is in vaio, therefore, to appeal to judges; they are no where to be found; all claim for themselves the sceptrs of the order; all, indeed, are on an equal footing. They obtained followers, not from their authenticity, but from their conducivencen to the end which they proposed, and from the importance of that end. It is by this ncale that we must measure the mad and wicked explanations of the Roaycrucians, the Exorcista, and Cabalista. These are rejected by all good masons,
because incompatible with social happinese. Only such systems as promote this are retained. But, alas I they are all sedly deficient, because they leave us under the dominion of politioal and religious prejudioes; and they are ss inefficient as the aloepy does of an ordinary sermon.*
'But I have contrived an explanation which has every advantage; is inviting to Christinns of every communion; gradually frees them from all religious prejudices; cultivstee the social virtues; and animates them by a great, a feasible, and speedy proapect of univeral happiness, in a stats of liberty and moral equality, freed from the obstacles which aubordination, rank, and richee, continually throw in our way. My explanation is acourate, and complete, my means are effoctual, and irroaistible. Our secret association works in a way that nothing can withstand, and man shall soon be free and happy.
'Thie is the great object held out by this associstion; and the means of attaining it is Illumination, enlightening the undergtanding by the sen of reason, which will dispel the olouds of auperstition and of prejudics. The proficients in this order are therefore justly named the Illuminated. And of all Illumination which human resson can gire, none is comparable to the disoovery of what we are, our nature, our obligations, what happiness we are capable of, and what are the means of nttaining it. In comparison with this, the most brilliant aciences aro but amusements for the idle and luxurious, To fit man by Illumination for active virtue, to engage him to it by the strongest motives, to render the attainment of it easy and certain, by finding employment for every talent, and by placing every talent in ita proper sphere of ection, so that all, without feeling any axtrwordinary effort, and in conjunction with and completion of ordioary businese, shall urge forward, with united powers, the general task. This, indeed, will be an employment suited to noble maturee, grand in its viewa, and delightful in its exerciee.
${ }^{\text {t And what is this goneral happinees i The happiness or tere humar }}$ racs. Is it not distreesing to a generous mind, after contemplating whit human nature in capable of, to see how little we exjoy 1 When we look at this goodly world, and see that every man may be happy, but that the happiness of one depends on the conduct of another; when we soe the wioked so powerful, and the good so weak; and that it is vain to strive, ningly end alone, against the general current of vice and oppression; the wish vaturally arioas in the mind, that it were possible to form a durable comlination of the most worthy persons, who should work together in removing the obataclen to human happinees, become terrible to the wicked, and give their aid to all the good without distinction, and should, by the moat powerful means, first fetter, and by fettering, temen

[^143]vice; means which at the same time should promote virtae, by rendering the inclination to rectitude, hitherto too feeble, more powerful and engaging. Would not such an mesociation be a blessing to the world I
${ }^{\text {'But we }}$, where are the proper pereons, the good, the generous, and the accomplished, to be found i and how, and by what atrong motives, are they to be induced to engage in a task so vast, so inceseant, so difficult, and so laborious ? This associstion unust be gradual. There are some such persons to be found in every society. Such noble minds will be engaged by the heart-warming object. The first task of the associstion must therefore be to form the young members. As these multiply and advance, they become the apostles of beneficence, and the work is now on foot, and advences with a speed incressing every day. The alightest observation shows that nothing will so much oontribute to increase the zeal of members as secret union. We see with what keenness and zeal the frivolous business of freemseonry ia conducted, by persons knit together by the secrecy of their union. It in needless to inquire into the causes of this zeal which secrecy produces. It is an universal fact, confirmed by the history of evary age. Let this circumstance of our conatitution therefore be directed to this noble purpose, and then all the objections urged againat it by jealous tyranny and affrighted auperatition will vaniah. The order will thus work eilently, and securely; and though the generous benefactors of the buman race are thus deprived of the applause of the world, they have the noble pleasure of seeing their work prosper in their hands.'
"The candidate, before his admissaion, is required to peruse and sign the following oath:"
'I, N. N., hereby bind myself, by my honour and good name, forewearing all mental rewervation, never to reveal, by hint, word, writing, or in any manner whatever, aven to my moot trusted friend, any thing that shall now be said or done to me respecting my wished-for reception, and this whether my reception shall follow or not; I being previously sesured that it ahall contain nothing contrary to religion, the state, nor good manners. I promise, that I shall make ne intelligible extract from eny papers which aball be shown me now or during my noviciate. All this I awesr, as I am, and as I hope to continue, s man of honour.'
"The urbanity of this proteotation must agreeably impress the mind of a person who recollecte the dreedful imprecations which he made at his reception into the different ranks of freemasonry."

The difference in the atyle of the osth, administered in the two orders, must be attributed to the customs of the times in which they were formed.

Mr. Robison, after bentowing the most rulgar abuse npon the learned and amiable Dr. Priestly, adds, "But I do not auppose that he has yet attained his acmé of illuminatism. Hisgenius has been cramped by British prejudices, This need not away his mind sny longer. He in now in that 'rara temporis (et loci) felicilate, ubi sentire quae velis, et qua sentias dicere licit.' "-That is, he now enjoys the rare felicity of time and placa (America) where it is lawful to think what one pleases, and to speak
what one think.
The liberty of speech which we daim in this country, muat be very grating to the feelings of a man possesaing the principles of Robison. He would have no person, except the mean eulogiste of power, like himself, permitted to utter his sentiments.
"Does Dr. Priestly think (says he) that the British will part mare eskily than their neighbours in France with their property and bonours, secured by ages of peaceable poeseenion, protected by law, and acquiesced in by all who wish and hope that their own deacendants may reap the fruits of their honeaty industry."-(p. 367.)

The following deed of the ferocious robber, William of Normandy, will serve as a general examplo of the manner in which the British nobility obtained their property. It is taken from the National Portanit Gallery, London, 1829.

Prancia Rawdon Hastinge, Marquia of Heatinge, K.B. The family of Rawdon is of great antiquity, and of Norman extraction. But the English pedigree is deduced from Panlin, or Paulinus Roydon, who commanded a body of archere, in the army of William, at the battle of Hastinga. For this service he received from the Conqueror a grant of lands in the Weat Hiding of Yorkshire, near Leode, The tenure was by grand sergeantry ; and the condition, that of presenting to the king and his successores a cross-bow and arrow, whenever any of them should come to hust there. Of the title-deed conveying these manorial rights, Weever, in his "Funeral Monuments," gives the following as a foithfal tranecript:-

> I, whilinm, Kyng, the thard yore of my reien.
> Give to theo Punlyu Roydon, Hopo and Hopetomen,
> With all the booude both ap and downe,
> From heavan to yerthe, from yertho to hol,
> For theo and thyne there to dwel,
> As truly as thls king-right is mya:
> For a crosebow and an arrow,
> When I sal come to hunt on varrow And fu token that this thing fa mooth, 1 bit the why wax with my tooth, Before Med, Maud, and Margery, And my third sonne Henry.

The armorial bearing is that of feas between three pheons, or arrowheads, with this mutto,-Et nos quoque tela sparsimus: We too havo scattered our arrows, The following statement exhibits the amount drawn annually from the hard earnings of the people, to support the prolligate luxury of the nohility and clergy of Great Britain.

## Nice British Pickings,-Expressed in British Pounds.

## 399 Peers sitting in Parliament, add their families, receive from the taxes £2,754,386

309 Peern not eitting in Parliament, and their families, receive.
The Marquis of Bute and family receive ..... 65,811
Lord Eldon ..... 50,400
The Duke of Besufort ..... 48,600
The Earl of Lauderdale ..... 33,600
Lord Beresford ..... 28,000
The Duke of Newcastle ..... 19,000
Archbishop of Canterbury 41,100 and 176 livings
Bishop of Durham 61,700 livings anknown
Bishop of London 10,200 with 95 livings
Bishop of Litchfield 12,590 with 48 living
Bishop of St. Assph 7,000 with 90 livings
Bishop of Bath and WellsBishop of Chestor4,700 with 30 livings
Bishop of Chichester 6,770 with 36 livinge
Bishop of Ely 21,340 with 108 livings
Bishop of Lincoln 8,280 with 36 livings
Bishop of Norwich 8,370 with 40 living*Bishop of Oxford$8,50 \mathrm{~J}$ with 11 livings
Bishop of Rochester 5,400 with 21 living
Bishop of Salisbury 14, 120 with 40 livings
Biahop of Cloyne 7,500 and great patconago
467,511
Which added to the aforesaid sum of $3,732,386$
Amounts to the sum of. ..... £4,199,847

Which will maintain 83,997 families, st 150 a year and upwards each family.

Here we see the honest industry by which the privileged orders acquire their property. By livinge are to be understood parishes, in which curates are located by the bishops, and from which the latter receive every tenth animal, sheaf of whest, etc., which aro raised therein; whilst the famished curates, who actually do all the service, in reading prayers, sermons, etc., receive but sixty or seventy pounde a year. This is English Christisnity, but it is not the religion of Christ.

I will add to these notable instances of acquiring wealth, in England, by honest industry, a late communication from a writer in Liverpool to an editor of a paper in New York. After giving a list of the present Cabinet and other officers of atate, he says :-American notions of economy will be shocked, when I add that for the privilege of being mis governed by these gentlemen, the tax-ridden, church-rate, and tythe-striken people of England, Scotiand, and Ireland, must pay the enormous yearly aum of six hundred thousand dollara! Yes, the mere aalaries to the members of the goverament-I say nothing of the fees, perquisites, peculation and patronage, amount to this sum. Nor is this all: supposing the members of the government remain in office only a week-a day-an hour-nearly every one of them is entitled to a retiring pension, varging from ono-half to one-third of his salary. Thus

Lord Brougham, after a Chancellorahip of four years, receives a penkion of twenty-five thousand dollsres a year for life !-The Duke of Wellington, who has ottained grants, amounting to upwards of five millions of dollars, allowa his mother to draw a small pension from the country:
"These thinga are worth knowing, in case any attempt should be made-a made it one day will be-to trammel the free institutions of America with the trappings of royalty. If you are wise, remain an you are-blessed with a cheap government, and a corrective control over it."

For opposing these outrageous impositions, is Dr. Priestly abused, by this defender of the oppressions and degradation to which the people of European monarchies are subjected.
"The Assembly, says Robison, hed given the illumination war-whoup- 'Peace with cottages, but war with palaces.' A poutoir revolutionaire is mentioned, which supersedes all narrow thoughts, all ties of morality. Lequinio publishes the most detestable book that over iasued from a pribting prees, Les Projuges vaincus, contaioing all the priaciples, and expressed in the very words of Illuminatiam" -(p. 317.)

Any pretence of regard for the tiea of morality, by Mr. Robison, after having vindicated the mont tyrannical and pernioioun doctrines, is adding insult to injury.

There was never a more moral and humave sentiment proclaimed by any goverament in the world than that quoted above. What animoaity existed between the people of France and thoee of other countries : None at all. The crowned heeda, supported by the privileged orders of Europe, had combined against France, with a view of destroying her free institutions, and thereby secure their ill-gotten power and emoluments. They alone were her enemies.

Lequinio and Robison were antipodes to each other in principle, while the one wished to destroy prejudices, the other endeapoured to cultivate and support them.

Lequinio was a member of the National Convention of France, and published the book in question, Prejudices Fanquiahed or Destroyed, in 1794. It has not, to my knowledge, been tranalated into English, nor have I a copy of the original before me. It was, however, favourably noticed by a British Review, at the time of its publication; from which the following sentiments are extracted. These will show the tenor of the work, and enable the reader to determine which book, that of Robison or Lequinio, is entitled to the epitbet detestable.

Of Prejudices. "Prejudices arise out of ignorance and the want of reflection ; theee are the basee on which the system of deepotiom is erected, and it is the master-piece of art in a tyrant, to perpetuate the stupidity of a nation, in order to perpetuate its slevery and his own dominion. If the multitude knew how to think, would they be dupes to phantoms, ghosta, hobgoblins, spirits, \&a, as they have been at all times, and in all nations ? What is nubility, for example, to a man who thinks 1 What are all those abstract beinge, children of an exalted
imagination, which have no existence but in a vulgar credulity, and who cease to have a being as soon as we cease to believe in them.
"The greateat, the most absurd, and the most fuolish of all prejudices, in that the very prejudice which induces men to believe that they are necessary for their happiness, and for the very exintence of society.

Oy Kings.- "Kinga have ever been tyrants, more or lees despotio, more or less cruel, more or less unjust, but equally emitten with a love of power, intoxicated by the spirit of domination, forgetful that they were men, anxious to place themselvea on a level with gods, and averse to recollect that all their power and authority was derived from the very nations whom they oppressed.
"It may be easily perceived, that by the word tyrant, I do not mean molely those monsters of the buman race, such an Nero, Caligula, Charles IX., etc., my definition extends to almost all kings, past and present; I do not even except that King of Frances so often vaunted as the 'good Henry' (Henry IV.), although leas cruel than most of his predeceseons, he was assuredly no less despotio, and thought no less than they that all France was deatined for his pleasure and his glory; if an innovator during his reign had dared to have recalled the memory of their inalienable rights to the minds of the people, be would havo been crushed under the weight of the royal authority. Let any one recolleot the game lawe enacted by this monarch, and then ank himself if he were really a good king. By an article of his ordonance on this subject, it was decreed that every peasant found with a gun in his hand near a thicket, should be stripped naked and beaten with rode around it. It was thum that the life of man was sacrificed to the repose and the existence of hares and partridges, destined for the pleasures of a prince, more culpable, perhaps, in reapect to this barbarous law, than any of his predecessors, because, educated among the indigent and unfortunate, he ought never to have permitted any other sentimenta than those of gentleneas and humanity to penetrate into his mind.
" What should a king be, if he were as he ought ! A man oovered with a paper jacket, on which is written. (De par la nation et la loi) 'By order of the people and the law;' the herald of the nation, the proclaimer of its ordera, and nothing more. It is ridiculous enough to see royalty propagated from father to zon, like the king's evil; it is atill more ridiculous to see nations so deceived by being secustomed to slavery, as to become servile idolatore of that power by which they are oppresied, without once recollecting that it is their own.

OF War.-" Who is that perverse and ever execrabie man, who firot invented the murderous art of war, and that famous science of tactica, which consista in the beat messns of massacreing whole nations if One creature may assassinate another in a moment of pasaion, and, however barbarous this act really is, and however much it may be repugaant to the sensibility of a good man, yet he can conceive it ; but for two men, in cool blood, to think of assassinating one another, or thoueands of men of assasiivating other thousande, with whom they are utterly unconnected and canhave no quarrel or even difference with, of this he can form no idee.
"O shame to the human apecies I Nations, blind and asleep, wif you never awake? What ! ehall not an individual whom you have placed upun the throne, and whom you have overwhelmed with your bounties, be katisfied with consuming the fruit of your aweat and of your toils, in the bosom of indolence and voluptuousness, and with laying your indastry and your fortune under contribution! And shall he wish to diapose of your very existence i must you be the instruments of hin anger and his vengeance, of his ambition and his mad desires !
"He wishes to conquer a province, that is to eay, to usurp the dominion over a country, and pillage the inhabitanta ; and it is to assist this audacious robbery, of which you will enjoy no lucrative portion, that you are about to desolate the territoriee of a people who never offended you, to burn their villages, and to spread death and desolation over their fields ; whilo in this attempt you expose yourselves to excessive fatigues, to continual privations, sad even to death itself; or, what is still woree, to wounds which but prolong a miserable existence 1"

A philanthropist, a man who wishes to promote the general happiness of his fellow men, can see nothing deteatable in the foregoing sentimente of Lequinio. But Professor Robison, as well as the Abbé Barruel, had his own private interests to subserve. He possessed s lucrative office in the University of Edinburgh; which he could neither have obtained nor held, had he advocated the cause of oppressed humsnity. Thus, unhappily for mankind, it becomes the intereat of the learned in monsrehies, to support the power of tyrants.

Bsrruel beld a place, perhape, equally lucrative in the church; and although the republic, as has been seen, exercised much forbearance and generosity towarde the nonjuring prients, he did not possess sufficient liberality of soul to make the least sacrifice for the benefit of the nation under ite embarrassed situation. He would neither take the oath of allegisnce to the republic, nor retire upon a moderate pension.

I sball now make some remarks on the cslumnies that have been industriously spread throughout the world against the French revolution. And elthough none can reflect without detestation on the tyranny and cruelties of Robespierre, and some others who obtained power in the course of that revolution, I shall be able to show that these are inferior in atrocity to the barbarities which took plece in the American revolutionary war.

It ahould be remembered also, that a great part of the enormities which occurred in France, were perpetrated by the mob. The peopla, driven to madness by the intrigues of their internal foes, gave a loose to their fury, which the government could not control.

It was the policy of kings and their adberents, to stigmatise the actors in the French revolution, as well as the just principles upon which it was founded. Hence the cry of awful, horrible, detestable, revolution, was eohoed from oourt to court throughout Europe; sad, without correot information, relying upon the reports of the corrupt presses of the enemies of France. The same cry, I am sorry to say, was reverberated by a portion of the press, from the republican shores of America.

The eame course was pursued to scandalize the American revolation; and Europe was filled with the liea which were daily issued from "Rivington's lying Gazette," printed in New York, when in possession of the Britiab.

Which is moat criminal, it may be asked, to rebel against one's country, against a nation, or to robel against one man, a king, who arrogantly claims the right to govern a country, because one of him ancestors, in a former age, like William the Norman, or Canuto the Dane, compelled the peoplo of that country, by foroe of arms, to submit to his authority !

The grand and ultimate objeot of thene writere whe to bring the French revolution into disrepute among the people of Europe, in order to check its progrese in other countries. And to effect this, no meana were thought too vile to be resorted to. The principle of liberty itealf, as though mankind were unworthy of enjoying it, was to be calumniated and denounced. "The French offlicers and soldiers, says Robison, who returned from Americs, imported the American principles, and in every compsoy found fond hearers who listened with delight and regret to their fascinating talo of American independence. During the war, the minister was obliged to allow the Rarisians to amuse themeelvos with theatrical ontertainments, where every extravagance of the Americans was applauded as a noble atruggle for native freedom. All wished for a taste of that liberty and equality which they wore allowed to applaud on the stage; but as soon as they came from the theatre into the atreet, they found themelves under all their former reatraints. The sweet charm had found its way into their hearta, and all the luxuries of France became as dull as common lifo doee to a fond girl When she lays down her novel.
"In this irritable state of mind a apark was sufflient for kindling a flame. To import this dangerous delicacy of American growth, Franoe had expended wany millions, and was drowned in debt."

The author then atates aundry circumstances, either true or false, to prove that the Illuminati and Freemasons took a part in the revolution of France ; and rayz, "After all these particulare, can any person have a doubt that the order of Illuminati formerly interfered in the Fronch revolution, and contributed greatly to ita progreas $\Gamma^{\prime}$ He at the same time acknowledges that, "There is no denying the insolence and oppression of the crown, and the nobles, nor the misery and slavery of the people, nor that there were sufficient provocation and cause for a total change of measures and of principles."

But be finds fault with "Tho rapidity with which one opinion wha declared in every corner, and that opinion as quickly changed ;"ss though it were to be expected that a whole people, who had just burnt the bonda which had heid them onchained for centuries, ahould eimultaneoukly adopt the eame opinions in regard to the manner of securing their future liberties,
"In 1789, or the beginving of 1790, a manifesto was sent from the grand National Lodge of Freemasons (so it is entitled) at Paria. signed
by the duke of Orieans as grand Mastar, addreesed and sent to the Lodgee in all the reapectable citiea in Europe, exorting them to unite for the support of the French Revolution, to gain its friendes, defenders, and dependents; and according to their opportunities, and the practicability of the thing, to kindle and propagate the spirit of revolution through all lands. This is a most important article, and deeervee a very serious attention. I got it first of all in a work written by L. A. Hoffmann, Vienna, 1795.
"The author asya, "That every thing he advances in these memorandums is consistent with his own personal knowledge, and that he is ready to give convincing proofa of them to any respectable person who will apply to him personally. He has zlready given such convincing documents to the Emperor, and to several Princes, that many of the mechinations ocossioned by this manifesto havo been detected and stopped; and he would have no scruple at laying the whole before the poblic, did it not unavoidably involve several worthy persons who had suffered themselves to be minled, and heartily repented of their errors." $\mathrm{H}_{\mathrm{o}}$ is daturally (being a Catholic) very severe on the Protestanta (and indeed he has much resson), and by this has drawn on himeelf many bitter retorts. He has, however, defended himeelf againat all that are of any consequence to his good name and veracity, in a manner that fully conFinces any impertial reader, and turna to the confusion of the elanderers.

Hoffomenn esys, "that he saw some of thoee manifesta; that they were not all of one tenor, some being addresed to friends, of whose nupport they were already aspured. One very important article of their contenta is earneet exhortations to eatablish in every quarter secret achools of political education, and echools for the publio education of the children of the people, under the direction of well-principled masters; and offers of pecuniary assiatance for this purpose, and for the encouragement of writers in favour of the Revolution, and for idemnifying the patriotio booksellers who suffer by their endeavours to suppress pablications which have an opposite tendency."

There is nothing in all this but what common prudence would dictate. Shall monarchs and their astellites be applauded for oxerting every means to secure their power and to provent the apread of liberal politioal opinions; and shall the friends of liberty be reproached for naing the same means for the support and security of free governments 1

From whnt is said of Hoffmann, here epoken of, it is probsble he was a worthless character, on whoee word no reliance could be placed. His complaints against the Proteatants were, doubtless, that they favoured the revolution, which, in the eyes of Professor Robison, would bo guffcient to justify every abuse. He was, no doubt, rewarded for his bese offliciousness,
"I conclude," bays Mr. Robison, "this article (on the French Revolution) with an extract or two from the proceedinga of the National Assembly and Convention, which make it evident that their principles and their practice are precisely those of the Illuminati, on a great scale.
"On the 19th of November, 1792, it was decreed, "That the Conven-
tion, in the name of the French nation, tenders help and fraternity to all people who would recover their liberty."
"On the 21at of November the President of the Convention asid to the pretended deputies of the Duchy of Sevoy, 'Representatives of an independent people, important to mankind was the day when the National Convention of France pronounced its sentence, 'Royal dignity is sbolished.' From that day many nations will, in future, reckon the ers of their political existence. From the beginning of civil establinhmenta kinge have been in opposition to their nations. But now they riwe up to adnibilate kioga Resson, when she darts her raye into every corner, laye open eternal trutha; ahe alone enablea us to pass sentenco on despots, hitherto the scarecrow of other antions."

But the moot distinct axhibition of principle is to be seen in a report from the Diplomatic Committee who were commiveioned to deliberato on the conduct which France whe to hold with other nations. On thin report was founded the decree of the 15th of December, 1793. The reportar addresses the Convention as follows :-
"The Committees of Finance and War ask, in the beginning, 'What is the object of the war which we have taken in hand!' Without all doubt, the object is the annihilation of all privileges, war with the palaces, and peace with the cottagee. These are the principles on which your declaration of war is founded. All tyranny, all privilege, must be treated as an onemy in the countries where wo set our foot. This is the genuine result of our principles. But it is not with kinga alone that we wage war; were those our sole enemies, we abould only have to bring down ten or twelve heads. We have to fight with all their accomplices, with the privileged orders, who devour and have oppreened the people during many centuries.
"We must, therefore, declare ournelvea for a revolutionary power in all the countriea into which we enter-(loud applause from the Asem-bly)-nor need we pat on the cloak of humanaty -we disdain such little arts. We must clothe ourselves with all the brilliancy of reason, and all the force of the nation. We need not makk our principles, the despots know them already. The first thing we must do is to ring the slarm-bell for insurrection. We must, in a solemn manner, let the people aee the banishment of their tyrants and privileged castea, otharwise the people, accuatomed to their fetters, will not be able to break their bonds. It will effect nothing merely to excite a riaing of the people -this would only be giving them words instead of atanding by them.
"And since, in this manner, we ourselves are the Revolutionary Administration, all that is againgt the rights of the people must be overthrown st our entry. We muat display our principies by actually doatroying all tyranny; and our generaila, after having chased away the tyrants and their satellites, must proclaim to the people that they have brought them happinees; and then, on the spot, they must suppreen tithes, feudal rights, and every apecies of servitude
"'But we abell have done nothing if we stop bere. Aristocracy atill domineers-we must, therefore, supprem all authorities exigting in the
hande of the upper claesea. When the revolutionary authority appears, there must nothing of the old eatablishment remain. A popular aystem must be introduced-every offlice must be occupied by new functionaries -and the Seneculottes* munt everywhere have a share in the administration.
"still nothing is done, till we declare aloud the precision of our principlea to auch as want only a ball freedom. We must asy to them -if you think of compromising with the privileged castes, we cannot unffer euch dealinge with tyrants-they are our enemies, and we must treat them as enemiee, because they are neitber for liberty nor equality. Show yourselves disposed to recaive a free constitution-and the Convention will not only staod by you, but will give you permanent support; we will defend you against the vengeance of your tyrants, against their attackes, and againat their return. Therefore abolish from among you the nobles-and every eccleaisatical and military incorporation. They are incompatible with equality. Henceforward you are citizens, all equal in rrigts-equally called upon to rule, to defend, and to servo your country. The agente of the Frenoh Republic will instruct and amist you in forming a free constitution, and assure you of happiness and fraternity.'
"This report was londly applanded, and a decree formed in precise conformity to its principles. Both were ordered to be tranalated into all languagee, and copies to be furnished to their goverals, with orders to hsve them carefully dispersed in the countries which they invaded."

The reader is aware, that the principel powers of Europe had combined for the purpoee of putting down the French Republic, and restoring the anoient regime; and still they complained of theee retaliatory measures.

What oourse did the American revolutionista take, under aimilar ciroumstancee 1 In the confederation of the American States, in 1781, the 11th article mayn, "Canads, scceding to the confederation, and joining the measuree of the United States, shall be admitted into the Union." $\Delta \mathrm{n}$ army wes sent into Canada, for the purpose of inducing and aiding the people of that province to assert and maintain their independerce.

Let us see how the government of the United States trested this revolutionary principle in lator times. The following is an extract of

[^144]a speech delivered by Henry Clay, in the House of Representatives, in 1818, in favour of acknowledging the independence of the provinces of La Plata, in South America :-
"I maintsin," "said he, " that an oppressed people are authorised, whenever they can, to rise and break their fetters. This was the great principle of the English revolution. It wee the great principle of our own. We must, therefore, pass sentence of condemnation upon the founders of our liberty-bay that they were rebels, traitora-and that we are, at this moment, legislating without competent powers, before we can condemn the cause of Spanish America. Our revolution was mainly directed againat the theory of tyranny. We had suffered oomparatively but little-we had in some respects been kindly treated-but our intrepid intelligent fathers easw, in the ueurpations of the power to levy an inconsiderable tax, the long train of oppreseive acta that was to follow. They rose-they breasted the storm-they conquered, and left us the glorious legacy of freedom. Spaniah America, for centuries, has been doomed to the practioal effects of an odious tyranny. If we were justified, she is more than juatified."

The sentiments of Mr. Clay were responded to by Congress, and La Plata was declared by our government free and independent.

The French revolution was hailed with joy by the friends of liberty in England, as appears by the following document. Mr. Robison states, that while his book was printing, he obtained a work then juat published in Paris. It confirms, says he, all that I have said respecting the use made of the freemason lodges. It gives a particular account of the formation of the Jacobin Club, by the Club Breton. The author writes: We may judge of what the Duke of Orleans could do in other places, by what he did during his stay in England. He gained over to his interest Lord Stanhope and $\mathrm{Dr}_{\mathrm{r}}$. Price, two of the most respectable members of the Revolution Society. This society even sent to the Assembly an ostensible letter, in which are the following paseages :-
"The Society congratulates the National Assembly of France on the Revolution which has taken place in that country. It canuot but earnestly wish for the happy conclusion of so important a Revolution, and, at the same time, express the extreme satisfaction which it feelo in reflecting on the glorious example which France has given to the world.
"The Society reeolves unanimously to invite all the people of England to eatablish societies through the kingdom, to support the principles of the Revolution, to form correspondences between themselves, and by these means to establish a great concerted Union of all the true Friends of Liberty,"

Accordingly (eays the French author) this was executed, and Jacobin: Clube were established in neveral citios of England, Scotiand, and Ireland.

The following passages are quoted by Mr. Robison from a vindication published by Professor Weiohaupt, against the chargea brought against him, by those who wished to retain the mana of the people in a state of visaslage:-
'All men,' maya he, 'are aubject to errors, and the best man is ho who best concealo them. I have never been guilty of such vices or 2olliee: (as be had been socused of) for proof, I sppeal to the whole tenor of my life, which my reputation, and my atruggles with hostile cabala, had brought completely into public view long before the institution of thia Order, without abating anything of that flattering regard. which was paid to me by the firat persons of my country snd ite neighbourhood; a regard well evinced by their confidence in me as the beet Instructor of their children.
'It is well known that I have mede the chair, which I occupied in the Univeraity of Ingoletadt, the reeort of the firat clase of the German gouth.
"The tenor of my life har been the opposite of evergthing that in vile; and no man can lay any auch thing to my charge. I have reasom to rejoice that these writinga have appeared ; they are a vindication of tho Order and of my conduct. I can, and muat declare to God,-and I do it now in the moat solemn manner,-that in my whole life I never gav or heard of the so much condemned eecret writings; snd in particolar, reapecting these abominable means, such as poisoning, abortion, etc., was it ever known to me in any case, that any of my friends or sequaintances ever even thought of them, advised them, or made any use of them.
' It whan the full conviction of what could be done, if every man were placod in the offlice for which he was fitted by nature and a proper education, which first suggeated to me the plan of Illumination.
'I am proud to be known to the world as the founder of the Order of Illuminati; and I repeat my wiah to have for my epitaph,

> "Bic athes as Phaellon, ewerrus amriga paterni,
> "Qwem A non tensil, enagnis tames exidit auris"
"This is the resting place of Phaëton, won of Apollo; he failed to guide the chariot of the sun, and fell-yet nobly fell, so lofty the attempt."

It is reproschful to human nature, that men respectable for their acquirements, and of good standing in society, ehould be induced through molfintereot, to use every posaible means by calumny and falsehood to destroy the character and ueefulness of persons like Professor Weishauph who exert their talents with a view of bettering the condition of their fellow men. And it is to be lamented that many of those for whose benefit such philanthropists lsbour, join in the hue and cry against them.

The following appropriate language is applied to the writings of Mearrs. Barruel and Rubison, in an address of De Witt Clinton, past srind master of the State of New York, at the inatsllation of Stephen Yan Renseelser, as grand master of the lodges of this Stato, September, 1825:-
"Our fraternity has suffered under the treatment of well-meaning friends, who have nudeaignedly inflicted more injuries upon it than ite most virulent enemies. The abourd accounts of its origin and history, in most of the booke that treat of it, have proceeded from enthusianm
operating on credulity and the love of the marveilons. An imbecile friend often does more injury than an avowed foe. The calumnies of Barruel and Robison, who laboured to connect our society with the Illuminati, and to represent it as inimical to social order and good government, have been consigned to everlasting contempt, while exaggerated and extravagant friendly accounts and representations continually atare us in the face, and mortify our intellectual discrimination, by ridiculous claime to unlimited antiquity. Nor ought it to be forgotten, that genuine masonry is adulternted by sophistications and interpolations foreign from the simplicity and sublimity of its natare. To this magnificent Temple of the Corinthinin order, there have been added Gothic erections, which disfigure its beauty and derange its symmetry. The adoption in some cases of frivolous pageantry and fantastic mummery, equally revolting to good taste and genuine masoory, hase exposed us to much animadversion; but our inatitution, clothed with celeatial virtue, and armed with the panoply of truth, has defied all the storms of open violence, and reeisted all the attacks of ingidious impostare ; and it will equally triumph over the errors of misguided friendship, which, like the tranait of a planet over the diak of the sun, may produce a momentary obscuration, but will instantly lesve it in the full radiance of its glorg."-Freemason's Library, p. 838.

## Horrors of the American Revolution, eta.

The revolution of France was agreeable to the will, doubtlees, of ninety-Dine out of a huudred of its inhabitanta. The republic was the rule of the people ; the French citizens, therefore, who resisted it, were rebela, were traitors to their country. And although the severition exercised towards them in many cases, can by no means be justified, yot reproaches againat the republic, on the zoore of cruelty, come with a very ill grace from ita enemics.

In proot of which, I will call to remembrance some of the appalling mosnes of the American revolutionary war, ehowing how rebels to a king wero treated by his myrmidona ; which ought to be often recurred to, and held up to the eternal execration of posterity. This zould be more becoming Americans than to dwell upon the horrors of the Fronch revo lution, relying on the garbled accounte of its domestio and foreign foes For this purpose I shall give the following indubitsble fects.

The policy of the British government evidently wan to waste away the amall number of troops which America had raised, and to deter othera from entering into the war, by the inhumen means here detailed.
Extracts from Mrs. Warner's History of the American Revolution (v. iii, p. 84).
"Many of the captured Americans were sent to Great Britain, where they were for a time treated with almost every soverity short of death. Some of them were transported to the East Indies ; others put to menial services on board their shipa. But after some time had elapeed, those in general who were conveyed to England, might be deemed happy, when their sufferingu were compared with those of their countrymen
who periahed on board the prison shipe in Americs, under the eye of Britiah commanden of renown, and who, in many reapecta, were civilised and polite.
"No time will wipe off the stigma that is left on the namee of Clinton and Howe, when postarity look over the calculations, and find that during six yeara of their command in New York, elevon thousand Americana died on board the Jervey, a single prison ship, stationed before that city for the reseption of those victims of deapair. Nor was the proportion smaller of those who periehed in their jails, dangeons, and prison hulks.
"It is true that in England, the laoguage of government held up all the American prianoers as rebele, traitors, insurgenta, and pirates ; yet this did not prevent the compansionate heart from the exerciee of the benign virtues of charity and brotherly kidncess. The lenient hand of many iodividuale was stretched out for their relief. While their sorrows were thus softened, their brethren in America, in the neighbourhood of parents, childron, and the most affectionate partnerg, not being permitted to receive from them the neoessary relief, were dying by thousands, amidst famine, filth, and disesse."

In speaking of the ravages of the Britinh on the borders of the state of Connecticut, under the command of the traitor Arnold, Mrs. Warren obeerves:-
" New London was more meriously attacked; and after a ahort and brave resistance, plundered and burnt. As soon sa the town had eurrendered, a number of solliers entered the garrison. The officer who headed the party inquired who commanded it 1 The veliant Colonel Ledyard atepped forward and replied with ease and gallantry, "I did, but you do now ;" and at the same time delivered his sword to a Britich officer. The barbarous ruffisn, instead of receiving his rubmiseion like the generous victor, immedintely otabbed the brave American. Nor was his death the only sacrifice made in that plece to the wanton vengeance of the foes of Americe Sovaral other officers of merit were sessesinated, after the murrender of the town; while their more helplesa connexions experienced the usual cruel fate of cities captured by inhuman conquerors."-(Vol, iii. p. 90.)

Fort Griawold, above alluded to, was probably defended with as much bravery as was exhibited on any occasion during our revolutionary war. The whole garrinon, with the exoeption of one who seoreted himself, were inhumanely butchered. Thoee who had been wounded during the action, were crammed into carts, and precipitated down the stoop hill on which the fort stands among the rocks below: where those who were not instantly killed, wers left to perigh. This is the manner in which British officers rewerd bravery in an enemy. The staternent here made I bave from an aye witoess, Thomas Herttell, Raq, who will substantiate the faots, if denied. Mr. Herttell was in sight of the fort at the time of the action, and learnt all the particulars moon alter.

The following account of the trontment and sufferings of the American
prisoners on board of the Jersey prison ship, in taken from the recently published Narrative of the Rev. Mr. Andros, of Berkley, Maneachusets:
"We were captured, on the 27th of August, by the Sslebsy Frigate, and asfely stowed away in the old Jersey prison ship at New-York. This was an old 64 gun ship, which through age had beoome unfit for further actual service. Her dark and filthy external appearanee perfectly correaponded with the death and deepair that reigned within ; and nothing could be more foreign from the truth than to paint her with colours flying, or any circumatance or appendage ts please the eye. She was moored about three quarters of a mile to the eastward of Brooklyn Ferry, near a tide mill on the Long Island shora. The nearest distance co land was sbout twenty rods, And doubtless no other ship in the Britiah navy ever proved the means of the destruction of so many human beings. It is computed that no less than eleven thousand American seamen perished in her. But after it was known that it was next to certain death to confine a prisoner there, the inhumanity and wickednean of doing it was about the eame as if he had been taken into the city and daliberataly shot on mome public square. But as if mercy had fled from the earth, bere we were doomed to dwell; and never, while I was on board, did any Howard, or angel of pity, appear to inquire into, or al leviate our woea. Once or twice, by the order of a atranger on the quartar deck, bag of applea were hurled promiscuoualy into the midet of hundrede of prisoners orowded together thick as they could atand; life and limbe ware andengered by the scramble. This, inoteed of com. pasaion, was a cruel aporth When I saw it about to commence, I fled to the most distant part of the ship. On the commencement of the firat evening, we were driven down to darkness between decks secured by iron gratings and armed soldiery. And now a acene of horror, which baffles all description, presented itself. On every side wretched, desponding shapen of men could be seen. Around the well room an armed guard were forcing up the prisoners to the winches, to clear the ship of water and prevent her ainking, and little elee could be heard but mutual execrations, reprosches, and insults. During this operation there was in amall dim lyght admitted bolow, but it served to make darkness more visible, and horror more terrifia.
"When I became an inmate of this span abode of suffering, despsir, and death, there were about four hundred prisoners on board, but in a short time they amounted to twelve hundred. And in proportion to our numbers the mortality increased. All the moet deadly disesses were pressed into the service of the king of terrors, but his prime ministers were dyeentery, small pox, sud yollow fever. There were two hospital shipe near the old Jersey, but these were soon so crowded with the sick that they cuuld reoeive no more. The consequence was, that the discased and the healthy were mingled together in the main ahip. In a short time we had two bundred or more esick and dying, lodged in the fors part of the lower gun deck, where all the prisonere were confined at night. Utter derangement was a oommon symptom of yellow faver, and to increase the horror of the darknees that shrouded us, (for we
were allowed no lights betwixt decks), the voice of warning would be heard, "Take heed to yourselves, There is a mad-man stalking through the ship with a knife in his hand.' I sometimes found the man a ocrpee in the morning, by whose aide I lay down at night. At another time he would become deranged, and attempt in darknesa to rise, and atumble over the bodies that everywhere oovered the deck. In this case I had to hold him in his place by main strength. In spite of my efforta ho would aometimes rise, and then I had to clowe in with him, trip up hia heels, and lay him again upon the deck. While so meny were sick with raging fever, there was is loud cry for water, but none could bo had except on the upper deck, end but one allowed to ancond at a time. The suffering then from the rage of thirst, during the night, wan very great Nor was it at all times sale to go up. Provoked by the continual cry for leave to ascend, when there was already one on deck, the sentry wruld push them back with his bayonet. By one of these thrustes, which was more spiteful and violent than common, I had a narrow secape of my life. In the morning the hatchwaye were thrown open and We were allowed to ascend, all at once, and remain on the upper deck during the day. But the first object that met our view in the morning was a most appalling spectacla. A bost losied with dead bodies, convoyed them to the Long Ialand shore, where they were alightly covered with sand. I sometimes used to stand to count the number of times the shovel was filled with eand to cover a deed body, and certain I am that a few high tidea or torrenta of rain muat bave diainterred them; and had they not been removed, I should suppose the shore, aven now, would be covered with buge piles of bones of American seamen. There were probsbly four bundred on board who had never had the amall pox; some, perbape, might have been asved by inoculation. But humanity was wanting to try even this experimont Let our diseese be what it Fould, we were abendoned to our fate.
"Now and then an American physician was brought in as a captive, but if he could obtain his parole he left the ship, nor could wo much blame him for thia. For his own death was next to cartain, and his suocess in saving othors by medicine in our situation, whas amall. I remomber only two American phyaicians who tarried on board a few daye. No English phyaicians, or any one from the city, ever, to my knowledge, came near ua. There were thirteen of the crew, to which I belonged, but in a ahort time all but three or four were dead. The moot healthy and vigorous were seised first with the fever, and died in a few hours. For them there seemed to be no mercy. My constitution was lese muscular and plethoric, and I escaped the fever longer than any of the thirteen, except one, and the first onset was lees violent. There If one palliating circumstance as to the inhumanity of the British, which ought to be mentioned. The prisoners were furnished with buokets and brushes to cleanse the ahip, and with vinegar to sprinklo her inside, but their indolence and their despair was such that they would not use them, or but rarely. And, indeed, at this time, the encouragement to do it was small. For the whole ship, from har keel to the taffrail, was
equally affeoted, and contained pestilence aufficient to deeolate a world; disease and death were wrought into her timbers. At the time I left her, it is to be presumed a more filthy, contagious, and deadly abode for humav beinga, never exiated among C'hristianiced people."

The following is oxtracted from an acoount of the war, by an Englinh historian, William Gordon, D.D. :-
"Great complaints are made of the horrid uagge the Americans mot with after they were captured. The garrison of Fort Weshington eurrendered by capitulation to General Howe, the 16th of November. The terms were, that the fort ahould be aurrendered, the troope be considered prisonera of war, and that the American officera should keep their baggage and side arma. These articles were signed and afterwards published in the New-York papers. Major Williams of Rawling'a rifle regiment, in doing hin duty that day, fell into the bands of the enomy. The haughty, imperious deportment of the officers, and the insolent scurrility of the moldiers of the British army, soon dispelled his hopes of being treated with leaity. Many of the American officers were plundered of their baggege, and robbed of their side arms, bata, cockados, etc., and otherwise grosaly ill-treated. The fourth day of thair captivity, Rawlings, MoIntyre and himself, all wounded officers, were put into one common dirt cart, and dragged through the city of New York, as objecte of derision, reviled as rebels, and treated with the utmost contompt. From the cart they were set down at the door of an old waste houee, the remsins of Hamden Hall, near Bridewell. The privatea in the coldeet seseon of the year were closely confined in churches, sugar-houses, and other open buildings, which sdmitted all kinds of weather, and were aubjected to the severeat kind of persecution that ever unfortunste captivee suffered. Offioers were inaulted and often struck for attempting to afford the mieerable privates mome relief.
"Major Williams verily believed, that not leas than fiftoen hundred prisoners perished in the course of a few weeks in the city of New York, and that thia dreadful mortality was principally owing to the want of proviaions and extreme cold."-(Vol ii., p. 427.)

An extract from Gen. Ethan Allen's nerrative of his capture and treatment by the Britiah, in the American revolutionary war:-
"I next invite the reader to a retrospective aight and conaideration of the doleful acene of inhumanity exercised by Gen. Sir William Howe, and the army under his command, towards the priwonern taken on Long Island, on the 27th of August, 1776; sundry of whom were, in an inhuman and barbaroua manner, murdered after they had surrendersd their arms ; particularly a Gen. Woodhull, of the militia who wa hacked to pieces with cutlasses, by the light horsemen, and a Captain Fellowe of the Continental army, who was thruat through with a bayonet, of which wound be died inatantly.
"Sundry othere ware hanged up by the neck till thoy wero dead, five on the limb of a white oak tree, and without any resson asaigned oxcept that they were fighting in defence of the only blessing worth preserving; and, indeed, thoee who had the misfortune to fall into their hands at

Fort Washington, in the month of November following, met with but very little better usage, oxcept that they were reserved from immediato death to famish and die with hunger; in fine, the word rebol was thought, by tha enemy, sufficient to sanctify whatever cruelties they wero plessed to inflict, death itself not excepted; but to pasa over partioulars, which would swell my narrative far beyond my desiga.
"The private soldiers who were brought to New York, were crowded into churchos, and environed with slavish Hessian Guarde, a people of a strange langunge, who were sent to Americs, for no other design but oruelty and demolation. I bave gone into the churches, and seen sundry of the prisonere in the agonies of death, in consequence of very hunger, and others speechless, and near death, biting pieces of chips; others pleading for God's eake, for something to eat, and at the esme time shivering with cold. Hollow groans saluted my earn, and deepair seemed to be imprinted on every one of their countenances. The filth of these churches, in consequence of the fluxes, was almost beyond desoription. I have eeen in one of them seven desd, at the same times, lying among the excrements of their bodies,
"It was a common practice of the enemy, to conver the dead from these filthy places in carto, to be slightly buried; and I have seen whole gange of tories making derision, and exulting over the dead, assing, 'there goes another load of d-d rebela.' I have obeerved the Britid) soldiers to be full of their insulting jokes, and vaunting on tho se occasions ; but they appeared to me less malignant than tories
"The provisions dealt out to the prisoders, were by no means mufficient for the support of life. It was deficient in quantity, and much moro $\infty 0$ in quality. The prisoners often presented me with a sample of their broad, which was demaged to that degree, that it whs loathsome, and unfit to be eaten. Their allowance of meat (as they told me) was quite trifling, and of the basest sort. I never saw any of it, but was informed bad as it was, it was swallowed almost as quick as they got hold of it I bsw some of them sucking bonee after they were speechless; others who could yet speak, and had the use of their ressos, urged me in the strongeat and moat pathetic manner, to use my interest in their behalf; 'for you plainly see,' said they, ' that we are devoted to death and desstruction ;' Aal, after I had examined more particularly into their truly deplorable condition, and had beoome more fully apprized of the ewsential facts, I wes peranaded that it was a premeditated and syatematical plan of the British council, to destroy the youthe of our land, with a view thereby to deter the country, and make it eubmit to their despotiom; but that I could not do them any material service, and that, by any public attempt for that purpose, I might endanger myeelf by frequenting places the mist asuseous and contagious that could be conceived of. I refrained going into the churches, but frequently conversed with such of the prisonera as were admitted to come out into the yard, and found that the syotemstical usage still continued. The guard would often drive me away, with their fixed beyoneta.
"The integrity of these auffering prisoners, is hardly credible,

Many hundrede, I am oonfident, aubmitted to death, rather than onlist in the British service, which, I am informed, they most generally wero pressed to do."
"The auccess of the American arms at Princeton had a mighty effect on Gen. Howe and his council. Their obduracy and death-denigning malevolence, in some measure, abated or was suapended. The prisonera who were condemned to the most wretched and cruelest of deaths, and who survived to this period, were immediately ordered to be sent within the American lines for exchange. Several of them, however, fell dead in the streets of Now Yurk, as they attempted to walk to the vessels in the harbour for their intended embarkation. Most of the residue, wbo reached their homes, having recaived their death wound, could not be restored by the assistance of physicians and friends; but, like their brother prisoners, fell a sacrifice to the relentless and acientifio barbarity of Britain. I took as much paina as my circumatances would admit of, to inform myself not only of matters of fact, but likewise of the very design and aims of Gen. Howe and his council. The latter of which I predicated on the former, and submit it to the candid publio."-(See Moore's Memoir, p. 157.)

## Journal of Congress.

The following is an abstract of a roport mande to Congreas by the Board of Wer, January, 1778.
"It appeara that the general allowance of provinions for each primoner per day, does not exceed four ounces of meat and the same quantity of bread, and ofttimes muoh less, and frequently so damaged as not to be eatable; although the professed allowance is from eight to ten ounces ; and that the prisoners have been treated in general, officers not excepted, with a cruelty soarce to be parallaled, and with the most studied and illiberal insult.
"That it has been a common practice with the enemy, on s prisoner'a being first csptured, to keep him three, four, and even five days without a morsel of provisions of any kind, and then to ternpt him to enlist 干ith the new levies, in order to ssve his life:-that there are numerous instances of prisoners of war perishing in all the agonies of hunger:-that, being generally stript of what clothes they have when taken, they have suffered greatly for want thereof during their confinomont."

The British prisoners, on the eontrary, were treated with the greatest humanity, as appears by the following resolution of Congrees, pased. Jenuary 27, 1776 :
"Resolved, That the committee of inspection of Esopus, or Kingston, be direoted to supply the prisoners there with neceesary olothing, and aleo provide them with lodgings and provisions, not exceeding the rations allowed to privates in the continental army, on the moet reasonablo terma they can."

But the worst is not yet told. The moat horrible, the moat appalling to civilized humanity, is the employment of sevagea an auxilisrien
in war, and then paying them a atipulated price for the acalpa of men, women and children. This was done in the American revolutionary war. A graduated price was fixed upon by British commenders for the sosips of soldiers, farmers, women and children.

The late CoL Willet, who was second in command, at a period of the war, of a body of American troops stationed at Fort Stanwicks at the head of the Mohawk river, and bearing one day the firing of muaketa in the woods adjacent to the fort, he issued out with a party of the garri200 and 8000 met a little girl running with a basket of blackberriee in her hand-on advancing further he lound har companion tomahawked and scalped. He aftorwands overtook a party of Indians, some of whom he killed, and made primoners of othere; on one of whom he found an official paper, uigned by a Britich offlcer, atating the amount that was paid for the various scalpa sa above enumorated.

He sent this dooument to Gov. Livingatos of Jersey, who then oontemplated to write a history of the war; but which he did not accomplish, and the paper, perhape, has never been publiohed.

This statement wha made by Col. Willet, a short time before his desth, in the uffice of the Recorder of this city, in the presence of Mr. Rik-r, the Recorder, Gen. Lamb, and meveral others, among whom was myself.

Even in the last war of America with England, st the taking of Little York, in Upper Canada, a woman's scalp, with long hair, was found in the council chamber, hanging behiod the Speaker's chair, alongside the mace. This must have been a signal to the Indians to prepare for profitable employment.

This faot is officially stated by Gen. Dearborn and Commodors Chauncey.

The scalp agent in this war resided at Malden, and was well known to a friend of mine, the late Dr. Le Baron, United States' apothecarygeneral ; who told me that the office and duty of its incumbent were notorious, and edmitted of no doubt. After, however, the American government had taken into pay some Indian tribes, and a retaliation was appreheuded, a council of war of Britiah officers was convened at Kingaton, when it was determined to pay the Indians in future for priconers brought to the camp alive, instesd of scalpe.

Tho legislature of New York passed an act granting a bounty on wolves' heads, on account of the depredations made by them on the shesp of the farmers. This was a justifiable mode of warfare againat wolves ; but the British government, it is believed, staode pre-eminent, without a parallel among nations, in paying a bounty on human scalps.

And, however birbarous were the native executioners of itas vengeance, they never violated the obsstity of femsles that fell into their power, as the British soldiers wore permitted to do, at sundry places during the last war; and they woro led aleo to expect an opportunity to commit the name outr -ge at New Orlenns, as appears by the watchword, beauty and booty, given out on the night of the attack.

I will make a shurt extract from the Memoirs of William Sampeon,

Eeq., as an example of the manner in which hings trest rebele to their assumed authority, in case they do not succoed in ridding themselven of it.
"I remained in Dublin until the 16th of April, when the terror became no atrocious that humanity could no longer endure it. In every quarter of the metropolin, the ehrieks and groans of the tortured were to be heard, and that, through all hours of the day and night. Men were taken at random without procese or cecusation, and tortured at the plessure of the lowent dregs of the community. Bloody thestres were opened by these self-constituted inquisitora, and new and unheard of machines were invented for their diaboliaal purposes. Unhappily, in every country, history is but the record of black crimes ; but if ever this history comes to be fairly written, whatever has yet been held up to the execration of maokind, will fade befors it. For it had not happened bofore, in any country or in any age, to inflict torture and to offer bribes at the same moment. In this bloody reign, the coward and the traitor were sure of wealth and power; the brave and the loyal to auffor death or torture. The very manaion of the viceroy was peopled with aslaried denouncers, kept in mecret, and led out only for purpoess of death. Some of them, struck with remorse, have since published their own crimes, and some have been hanged by their employers Men wers hung up until their tongues started from their moutha, and let down to receive freah offers of bribe to betray their neighbour or discover themselves. It they neither knew nor would discover anything, these intervala of relaxation were followed by new add more poignant inflictions. And when that courage, which ia the noble attribute of my unhappy countrymen, apurned in the midat of agony at the tempter and the bribs, the nearest and the tenderest relatives were often brought to witness these horrors; that out of their feelinge might be extorted some denunciation, true or falee, which the virtue of the sufferer had withheld."

Among other means of torture made ane of for the ahove purpose, I am told by an Irieh gentloman, who now holde a reapectable offico in our republic, that cape made of pitch mired with powder were not unfrequeatly placed upon the heeds of these unfortunate viotims, and then set on fire.

Unfortunate Poland, like Ireland, made a brave but ineffeotual effort to shake off the desputism with which it is oppressed; and the following atatement shows the humanity of its conquerora :-
"Poland fell, neither from the valour nor from the number of her enemies; she fell from their all-pervading intrigues and the power of their gold. There was treachery in the midat of her camp, and in the bosom of her councils; and to this foe, no citadel was ever impregnable. Her fall was followed by greator outrages upon civilisation and bumanity than have ever been perpetrated in modern ages. Warsaw immediately became a pandemonium of masescre, rapine, and cruelty, of which not half the horrora have been breathed or written. The Rusainu prisoners were liberated, and revenge added its fury to the tide of their paeniona.

Fathers and huobende, pinioned for the dungeon and the gallowe, witnessed the dishonour of their deughters and wives. The aleeping infant attracted nocompseaion, and lneeling children were not apared. Similar scenes occurred in all the principal cities of the kingdom. Of the military and civil offioere, great numbers were shot or hanged : hundrede of others were chained togethor and marched off to the minee of SiberiaSome, however, eceaped, and are fugitives in England. Franos, and the United States. An English traveller who has very recently passed through Poland, met on its northern frontior some hundreds of Poles, many of them apparently of the higher class of the population, chained five abreaat to an iron bar, and marching to bard labour for lifo, in minee where the light of day never anters, But one of the latest means employed for the deatruction of the Polish people is the exportation of cbildren. The imperial ukases for this meanire apread terror and desolation throughout the kingdom. Entire achoola of ohildren have been seized, and hurried off in caravans to the interior of Ruseis, without being sellowed a sight of their parenta; and parente, whose natural yeerninge over their little ones impelled them to attempt their rescue, wero immediately delivered over to the military tribunal, to be tried for insubordiantion. But a pecaliarly diabolical feature of thia ukse remsins to be developed. It only mentions orphan children, yet it definee these to be either children without fathers, though having fortunee, or thoee having fathers but in indigent circumstanoes. Thus the two branches of this definition are made to embrace nearly the whole youthful population. The commismaries of police in the cities, and the commiesaries d'arrondiamens in the provinces, were ordered to invite all parents, having familise in distrems, to send in declarations to that effect, that they might obtain relief from the government. Many, suffering from the prevailing misery of the country, were aeduced by thie apparently benevolent offer to do so. Tho children of all these came within the regulation of the ukese, and were speedily torn from their arms. An oye-witness has essured us that out of 450 children of the first diviaion transported, scaroely 116 reached Bobruysk alive. They were compelled to walk the moment they crosed the frontiers; and when any were unable, from sickness or fatigue, ts proceed further, they were a bandoned, with a portion of bread and water. Several persons recently arrived from Siberia, have fallen in with the corpaes of these unfortunste innocents, stretched beside the bread of whioh they could not avail themselves, The next step was to seize all the male children of the parochial schoola, and by this meana, and that of the recent military conscription, the population of brave but unhappy Poland ban alresdy been reduced to half its former number."

## Extracto from Foreign Papers.

The whole province of Lithuanis was traversed in different directions by the Russian troops, who burnt the towna and villaget, macesared the prisoners, and killed even the women and children.
"Three of the confederates of Driewioki, who ham poisoned himsolf, have been shot at Wareaw in the public place of oxeoution, without the
walle. They all died with a display of courage and firmness, boping that their deaths might be useful to their unhappy country. Olkowiki, in particular, showed great self-command. While on his way to execution, he gathered up a handful of the soil, and exclaimed, 'For this we have fought, snd for this we are willing to die I' The tombs of these young heroes have becomeobjects of veneration to the people, who atrew flowers and garlands apon them. Many women have compromised themaselves. A young lady, named Helen Nowakowaka, has received 200 stripea for having sent provisions to some unfortunate insurgents who were dying of bunger in the woods. This horrible punisbment was inflicted in one of the barracks of Lublin, to the sound of military music ; snd to render it more severe, they afterwards shaved her head, and confined her in a convent, and no one can tell when she will be released. The wifo of Orlowska had been condemned to receive 500 atripee for having sheltered one of her relations. She entreated that her puniehment might be inflicted publicly at Warsaw, in order that it might inflame the courage of the patriots. The favour, however, being denied her, on the day har sentence was to have been executed she was found dead in her prison, having forced pina into her bosom." (The Polonaise.)
"Gallicis, of all the provinces of Poland, seems to be suffering under the most cruel persecutions, and that at the hands of the cold-blooded diplomste, Metternich. Count George Tyskiewics, thougb an old man, has been confined in a aubterranean cell for more than a year; his wife, Who went to Vienna to supplicate the late emperor, was received by him juat before his ieath, but repulsed by Metternich. Colonel Lariaki is attached to a wall by an iron bar in another dungeon, do."

We nee nothing in revolutionary France like the cruelties I have detailed. Many rebels and traitors to the republic were executed, but there was no torture, no protracted sufferinga.

And shall the autocrat of Russia, and his misersble alaves, the instruments of his vengeance;-shall the government of England, and those who approve and aupport it, exclaim against the horrors of the French revolution ! And will the present generation in America, forgetful of the consideration due to themselves, and the toils and sufferinge of their virtuous fathers in purchasing their liberties at mo dear a rate, beatow all their sympathies upon the sufferinga of a fow crowned heads, and others impudently styling themselves noble-who are the enemies of freedom, and whose sole aim is to support rank and privileges, at the expense of the degradation and misery of the rest of mankind, with whom they have no feelinge in common.

Above all, while irreligion is urged against France an the cause of cruelties in her revolutionary atruggle, let not the profesaion of piety in other nations sanctify the commiseion of deeds infinitely more atrocious, for well might the French exclaim, in the language of a Scotch marshall, "If we are sinners, our enemies are na saints."

It is, moreover, worthy of remark, that the atrocities imputsble to France, were committed during the awny of Robeepierre, who profeesed as great regard to religion an did the monarche that combined goinst
the republic, under a pretonce of preserving it. He aenoanced the Moderatee, commonly called the Gironde party, for want of taith in Christianity, the mont prominent characters of which ware Condoroot, Briseot, Lafayette, Thomne Paine, dea. Roligion, in fact, has been the hobby-horse of tyranta in all ages and in all countries, and mankind. have been too easily gulled by their hollow pretensions. In the practice of monarohs profesaing Chrietianity, we do not perceive the hamble, oharitable, forgiving eparit rooommended by ita benevolont founder. These virtues, they eeem to think, do not properly belong to them. They must be arrogant, proud, and vindiotive; and the moot appropriate onsigns of their esoutcheon would bo a bloody aroes, supported by doath'e-heseds and croes-bonee.

$$
\text { An } \Delta \text { betract of " } \Delta D_{\text {Defence of }} \text { Masonry." }
$$

Occesfoned by \& Pamphlet celled "Meeonry Diessoted." Lonilon, $\mathbf{1 7 8 0}$.
This pamphlet is written by Samuel Prichard, and made use of in this volume.- The Defence was published by Dr. Anderson, and sppended to his "History of the Constitution of Freemasons." Tbe author, though probably a member of the masonic society, would wish to make it appear that he drew all his information of it from the work he pretends to answer.
"I was exceedingly pleased," saye he, "to find the Dissector lay the original scene of manonry in the East, a country alwaya famous for aymbolical learaing supported by secrecy. I could not avoid immediately thinking of the Egyptians, who conoealed the chief mysteries of their religion under sigas and symbols, called hieroglyphica
"Pythagoras, by travelling into Egypts, became instructed in the myeteries of that nation; and here he lsid the foundation of all his symbolical learning. The several writers that have mentioned this philosopher, and given an account of bis eect and institutions, have canvinced me fully, that freemssonry, as published by the Dissector, is very nearly allied to the old Pythagorean discipline ; from whence, I am perauaded, it may in some circumatances very justly olaim ita descent" Here the author details some of the leading doctrinea and customs of the Pythagoreans, in proof of his opinion; which have been before noticed. After mentioning some other bects whose practioes cor responds, he exys, in many particulars with those of the fraternity, he eddes "The last instance I ahall mention, is that of the Druids of our own nation, who were the only priests of the ancient Britons. In their solemnitiea they were clothed in white, and their ceremonies alwaya ended with a good feast."
"The number thres in frequently mentioned in the Dissection, and I find that the ancients, both Greeks and Latins, professed a great veneration for that number. Thoocritus thus introduces a person who dealt in secret arta :-

[^145]${ }^{*}$ Whether this fancy owee ite origival to the esteem the Pythagoreans and other philoeopbers hed for the number three, ou account of their triad or trinity, or to its aptness to sigoify the power of all the gods, who were divided into three classes, celestial, terreetrial, and infernal, I shall leave to be determined by others.
"The gode had s particular eeteem for this number, as Virgil aseerts:
"'Numero Deus impare gaudet.' Unequal numbers plesse the gods. The sons of Saturn, among whom the world was divided, were thiree; and for the aame resson we read of Jupiter's Fulmen trifidum, or threeforked thunderbolt, and Neptune's trident, with several other tokens of the veneration they bore to this particular number.
"A particular coremony belonging to the oath, ae declared by the Dissector, bears a near relation to a form of awearing among the ancienta, mentioned by a learned author. The person who tnok the oath was to be upon his bare kness, with a naked sword pointed to hia throat, invoking the sun, moon, and stars to be witneesee to the truth of what he awore. (Alex. ab Alexandro, Lib. $\mathrm{V}_{\text {, }}$ cap. 10.)
"The sceident by which the body of Master Hiram was found after his death, seems to allude, in some circumatances, to a beautiful paseago in the eixth book of Virgil's Eneid." The author here reciten the story of the golden bough, as being a necessary paesport for Kinean's demcont into the infernal regione, and adda:-
"Anchises, the great preserver of the Trojen name, could not have been discovered but by the belp of a bough, which wae plucked with great ease from the tree; nor, it seeme, could Hiram, the grand master of masonry, have been found out but by the direction of a shrub, which, saya the Diesector, came eseily up. The principal cause of Eneas's descent into the shades, was to inquire of his father the seorets of the fates, which should aometime bo fulfilled among his posterity. The occasion of the brethron soarching so diligently for their master was, it seems, to receive from him the seoret word of masoary, which should be delivered down to their fratornity in aftar agee. Thir remarkable verse follows :-
"The body of your triend lies near you, dead. Alas you know not how :-This was Misanus, that was murdered and buried, Monte aub ecrio, under a high hill, as, says the Dienootor, Manter Hiram whe
" But there is another story in Virgil, that atanda in a nearer relation to the case of Hiram, and the acoident by which he in said to bave been discovered, which is this;-Priamus, king of Troy, in the beginning of the Trojan war, committed his son Polydorus to the care of Polymnestor, king of Thrace, and sent bim with a great sum of money; but after Truy whe taken, the Thracian, for the make of the money, killed young prinos, and privataly buried him. Enees coming into that country, and accidontally pluckiog up a abrub that was near him on tho side of a hill, diacovered tho murdered body of Polydorus, Eneid III. ${ }^{4}$ By Dryden-

> Thers whillo I went to erop the nylvan someses, And ahado our nitars will the leafy greena, I pallod a plant: With borror I ralate A prodigy mo atranzo and foll of tatol Boarce dars I tall tho sequel trom the womb Of wounded earth and caverna of the tomb, A groan, as of a troubled ghost, renowid My tright; and then theoo dreodrul words eoead; Why doent thou thas may buried body reed? 0 apare the corpee of tay unhappy triand ${ }^{\circ}$
"The agreoment between these two molations is so exset, that there wantar no further illuatration."

## Rovycrucian Degres.

1 have lately noticed that some writers (and particularly William L. Stone, Eeq., who is the author of a very intereating work on freemasonry) have conjoctured that this institution sprung from the famous mociety of Ronycruciana; I will, therefore, here add a ahort acoount of that asoociation, we well as of the masonic degree founded upon it.
"The Ronyerucinna, that is to say, brotbere of the Roey Croes, were, mya Bailey, a sect or cabsal of hermetical philonophere, who bound themelivee together by a solemn socret, which they awore inviolably to observe, and obliged themsolves, at their admisaion into the order, to a atrict obeervance of certain eatabliahed rules. Their obief wan a German gontleman, educated in a monastery, where having learned the languages he travelled to the Holy Land, Anno 1978, and being at Damancus, and talling siek, he had the conversation of nome Arabe and other oriental philosophers, by whom he in aupposed to bo initiated into this myiterious art. At his return into Germany, he formed a Society, and communicated to them the secreta he had brought with hirn out of the East.
"They pretended to know all sciecces, and eapecially medicine, of which they publiahed themselves the reatorers; they alno pretended to be masters of abundance of important seerets, and among others that of the philosopher's atone; all of which they sffirmed they had received by tradition from the ancient Egyptians, Cbaldeans, the Magh, and Gymnonophists. They protended to protract the period of haman life by meane of certain noestrums, and even to restore youth. They pretended to know all thinge. Thoy aro also called the invisible Brothere, because they have made no appearance, but have kopt themselves incognito for many yeara.
"This society in frequently signified by the lottem F.R.C., Fratres Rorme Cocti, it being pretended that the mattor of the philoeopher'a stone is dow, concocted and exhaled."

The mystical importance which this society had obtained, rendered it a fit subject for the manufacturers of mesonic degrece to found an order upos, which, therefore, wes not neglected.

The Roaycrucian degree eeems, in Carlile'a report, to be confounded with that of the Knigbte of the Eagle, and Sovereign Prince of RoseCross, before noticod. The subject of both is the death and resurrection
of the Saviour. Tha meater beans the ame titlo in each. In the latter he is asid allegorically to represent the person of Wisdom and Perfection, which gives him the title of most wise and perfect master. The Wardepa are atyled most excellent and perfect. The other officers, moot puisaant and perfect brothers. The brethrea are called most respeotable and perfect masona. The allegory of the pelican forms a part of both degrees. The Jewel of that of the Roecyerucian is a triangle formed by a compasa and a quarter of a circle. In the centre is a crose, upon which is a roee, and upon the quarter of the circle is a polican, bleeding to feed her young. The Jewel is tied to a black roee, and pendant to a blaok collar, in the first point, and to a crimson in the second.

The decorations of the lodge, in the principal spartment, are, first, a triangular altar on seven steps. Behind it is a large trunsparancy, with a croes and a rose painted on its middle, and this inscription over it, "Jesue of Nazareth, the King of the Jewn." Broken columns are visible on one eide of the transparency, and a tomb on the othar in the earts with three large lights in the west.-Jam aatis.

The Roaycrucian mociety is of a very different cart from that of ancient freemasonry, which beare the most palpable marls of a descent from an inatitution established anterior to the Christian era.

In coucluding my work, I repeat that the freemanona' society was founded for the purpose of concealing the rites of the ancient pagan seligion, under the cover of operative maeonry; and that, although the religion in extinct, its ceremonials remain, sud clearly develop the origin of the institution. Sabeism, or the worship of the stars, is conspicuous in every grade of the order. The frequent quotations from the Bible betray its religious cast, and, moreover, confirm what has before been advanced, that the forms of prayer, and consequently othar eots of devotinn among the Pagans aud Hebrews, were delivered in the same terms, though applied to difforeat objects.

The ceremoniea of masonry, however, by no means impeach the morality it inculcates, which is unoxceptionablo, whatever may have been the conduct of some of its deluded membern, impolled by a fanatical real for the preservation of ita supposed secrots, or whatever innovations may havo been introduced by sapiring political demagoguen, adverse to the eatablisbed principles of the order. But et the same time, it muat bo confessed, that its moral precopth aro conveyed in a style mal apropos at the present day. Moral action can now be taught without the aid of the Moesic or Musaio pavement, the tosselated border, the equare, the compass, the bee-hive, the plumb-line, de. And es to any useful art or science, sbout which great parade is still mede in masonic bookn, nothing of the kind is now practised in lodges, Among the ancient ignorant operative masona, a little instruction in the rudiments of learning, including rough architecture, were, no doubt, given; but operative freemsenonry has been absendoned for upwarde of ono hundred years, and no more of it remains to the order than the record of its former practice.

I rill close the volume with the following appoeite remarke of Dupuis,
applied to the original sohool, from which masonry received ita leseosas. The suthor, after giving s epecimen of the extravagant and absurd commogonies of different nations, observes :-
"Wo will not pursue farther the parallel of all the philosophical opinions which each of the mystagogues has deliversd in his own manner. We confine ourselvee to this example, which is sufficient to give an idea of the allegorioul genius of the ancient sagen of the eant, and to justify the use which we have made of the philomophical dogman that are known to us, to disoover the somse of thess monstrous fictions of oriental mysticiam. This manner of ingtructing men, or, rather, of imposing upon them under the protext of instruction, is as far removed from our oustoma as hieroglyphios are from our writing, and as the atylo of tho mecred science is from the philosophy of our days. But sueh wan tho language that was held to the initintes, says the author of the Phenician cosmogony, in order to axcite in mortals astoniahment and admiration."

[^146]
[^0]:    *"At the very threabold of our mypteries, en oath of searecy, axtremely minuts In all ita dotaile, and tremendotus in ita sanctions, has frora tume immemorial been ecriotod of overy candidate. It it not to be eopposed that suoh an oath had no foandatlon at first. It would arguis it profigicy incredible, to invent one so asored and inviolable merely for the make of awearing it. Nor dose auch a solennity comport with the deaign or practicos of any amociation of architecta whatever, For what in there or what could there over have been, in the art of building, or in the whole oirole of selemes moraly, that could require or oven wharrant so appalling ati obligation? Neither dose it agree with the present atate of the inatitution; for manonry harbous no treasona nor blapphemies Its designa at the prosent day aro not only innooent, but laudablo. It requirea nis te fear Gor and promote the happineen of man. The inveatore of this oath, then, must have most onpadoanbly trified Fith the awfal malemnity of anch an engagarnent, if, at the time of ita fnstitution, thers did not exiat a asume, proportionate, at least in some degres, to the precautlona naed against its violation. (Vid. - The way to words by thinge, or an ettempt at the retriovel of tho ancient Caltic, in a rolume of tracta in the library of Hiarvard Cullega.) What this asuse was, wa can determine ouly by probable conjecture. Bat we may prsaume that it must have originated in nome groat personal denger. If not desth, appreheaded to mombers of the Institution from the popolinos, If their mecrets were lald open to the world. Every manon, by reffecting ou theno hinte will sakiafy his own mind, that at the first oonatitution of our fretarnity, ita great object was nor wolely the edvencoment of the arta, otili loes of architecturo alone."(Greenloars' Briof Luquiry into the Origin and Priaciples of Fremmaconry.)

[^1]:    - The middle or dark agea aro described as comprohending the thounand yosr from the taling of Rome by the Ooths, in the middle of the fifh centary to the taiking of Constantinople, by the Turla, in the middle of the fifteenth ontary,-Edil.

[^2]:    * Great use is masdo of the Bible, in the ceremonies of masoncy: whioh may be scosounted for by the conformity in the curtoms of the Hebrewe with those of more anclent nations, from which the masonio order is derived,-EDIT,

    $\uparrow$ In the timo of Herodotas, sixteen cublta were neoemary, or at leest inteen, tooverfiow the Delta. The same aumber was sufficient in the time of the Romans, Before the time of Petronias, aye Btrabo, plenty was not known in the Delta, nuloee tho Nile reee to forateen cabita-Ibld.( $\mathrm{KiOLI}_{\mathrm{c}}$ )

[^4]:    - See Platarch de Isid. and, Oeirian ; also M. Do Manlet's deecription of Egyith

[^5]:    - A pessage in Shakepeare's Hamlet soems evidently to allude to the hawk and hoop, or hoopoe, of Egypt. Hamlet says, "My uncle-father and auntmother are decaived." G. "In whet, my lord V" Ham. "I am but mad north-north-weot: when the wind is southerly I know a hawk from a handsaw." Thomas Capell, editor of the Oxford edition of Shakspeare, changes handsew to harnshaw, which renders the passage intelligible. Hernshaw, or hern, is but another name for heron, of which there are various species; the tufted or crowned heron is alwo denominated hoopoe. This kind is very rare in Earope, but in Africa they associste in great numbers. They feed upon worms, and in Egypt follow, as above stated, the retreat of the Nilo. See Rees's Cycl.

    Hamlet, though feigring madness, yet clairas sufficient sanity to distinguish a hawk from a herushaw, when the wind is southerly-that is, in tho Cime of the migration of the latter to the north, and when the former is not to be seen.

    If It be said that Slarkspeara was not probably acquainted with the customs of theae migrating birds of Egypt, I answer, that several of the works of Plutarch, who givee a particular account of that country, wero tranalated into English, by Thomas North, in about the middle of the sixteenth century, and no doubt were known to Shakspeare, whowe Hemlot , was firat pablighed in 1596.-EDIT.

[^6]:    *In one of the modern degrees of masonry, entitled "The Brazan Serpent," the jewel is a serpent entwined upon a croen pole, in formin or a T, about which are the Hebrew chareoters-which aigaify, one who shall live. The covered word is John Ralph, the founder of this degree. The sacred word is Moess. This degree has reference to the deliverance of the Irreolites from captivity. (Benard)-EDrs.

[^7]:    - Plutarch de Isid, and Isirid, and Macrob. Dux and princeps, modarator luminum, relignorum, mens mundi, and emperatio.
    + "Eye and son are expressed by the same word in most of the ancient languages of Asia." (Rums, p. 159.)

    This is one of the emblems of masonry called the all-seeing eye, and said to represent the true God; whereas it is nothing more tban a symbol of the sun made ure of by the ancient Egyptians, and from them deecended to the mesone,-Fidr.

[^8]:    *The coffin of Hiram has a place among the omblematical figures of masonry.-EdIT.

[^9]:    - Anthors write this name differvntly: in the Greek, from which it seemes to be copied, the firnt letter, omegn, is aspirated. -EDIr.
    + "Orus was more particularly Orisis in his second state, and therafore represented by the Egyptians as a child."-(Holwell's Myth.)-EDIr.

[^10]:    * I will hero remark, that all the talk pot into the mouth of masonio candidates about "wanting light and more light," relates to a phyaical and not to a mental benefit: it has reference to the light of the mun. In fact, on taking the bandage from the eyes of a candidate the blaze of many tapers is exbibited before him in eatiafaction of his deaires, with this decieration of t1 3 matter, "And God said let there be light, and thore was Hight." These coremoniee are emblematioal of the eun's roturn to the northern homisphere.-EDir.

[^11]:    * "On comparing the different explanations given by Plutarch, and other ancient writers, it will appear that Osiris is the type of the active, generating and beneficont forco of nature and the elements ; Isis, on the contrary, is the pasaive force, the power of conceiving and bringing forth into life in the gublunary world. Osiris wae particularly adored in the sun, whose raye vivify and impart new warnth to the earth, and who on his annual return in the spring, appears to create anow all organic bodies. Isis was the earth or sublunary nature, in peneral ; or, in a more confined sonse, the soil of Egypt inundated by the Nile, the principle of all focundity, the goddess of groneration and production. United to one another, Osiris and Isis typify the universal being, the soul of nature, the Pantheus of the Orphic verses."
    "The Egyptiana solemnized, at the new moon Phamenoth (March) the entrance of Oxiris into the moon, which planet he was believed to fecundate that it might in turn fecundate the Earth. (Plut. de Is et os.) Finally, on the 30th of Epiphi (24th of July), the featival of the Birth of Horus took place (of Horus the representative of Osiris, the conqueror of Typhon), in the second great poriod."- Anthon's Lemp. Class. Dict., Art. Isis.)

    The first conquest of Osiris over Typhon was at the winter solstice, and then the birth of a renewed sun was celebrated; the second conquest, as above stated, was attributed to Horus, Apollo, as before observed, was the name given to the sun when in the northern hemisphere, or at least after his passing the summer solstice.

    One of the grand festival days of masons is on the 2 fth of June. The zause of this variation from the ancient custom arises from the procession of the equinoxes, which has caused the northern solstice to occur on that day, when the sun is in the sign Cancer; whereas it was in Loo (July 24th) that this solstice took place in ancient times during 2160 yoars. This is the reason why the Egyptians consecrated this animal to the sun, while in ite full strength, and as the forerunner of the summer solstice, of the rise of the Nile and its succeeding overflow, which caused the fertlity of ERypt. -See "Truth Drawn from Fables," by Dr, Constantio,

[^12]:    - It is a little remarkable, that one of the aignifications given to tower, is high nead-Dress.-EDIT.
    $t$ This is Mosaic-work, and was no doubt intended to represent in anticipation the variegated face of the earth in the approaching season, after the sun had changed his course to return to the northern hemisphere.EDIT.
    $\mp$ The Roman Catholics seem to have borrowed from the Egyptians the style of their addreas to the Virgin Mary, which is as follows:-
    "Holy Mary-Holy Mothar of God-Mother most amisble-Mystical rose-Tower of David-Tower of Ivory-Gate of Heaven-Morning atarQueen of Virgins-Quen of all Saints" eto.-EDIF.

[^13]:    - Cross's masonic ohart represents two cornucopiw, or goats horns, and one pitcher ; three, however, of the latter, an before obsarved, are used in the coremonies,-Edit.

[^14]:    * "Blessed are the people that know the joyful sound, they shall walk, 0 Lord, in the light of thy countenance. For thou art the glory of their strength ; and in thy favour our born shall be exalted. For the Lond is our dofence; and the holy one of Lerael is our king. How long, Lord, wilt thou hide thyself for ever!"

[^15]:    *The author gives in notes the originals of the above names, which are omitted.

[^16]:    * Every royel arch chspter of masons is sapplied with a similar chest ; to which great connequence is affectedly attached. It contains, besides other teatimonials of times past, nomething resembling, and which is declared to be, manna, the food upon which the Iaraolites are said to have subsisted during their wanderings in the wilderness.

    Among the emblems of masonry are likewise the akeleton or akull of the human head, as well as the figure of a serpent. But the original intention of these eymbols is probably now unknown to the fraternity.
    "The Jaws also had, at the eant end of every school or synagogue, a chest; called Aaron, or ark, in which was locked up the pentateuch in mannscript, wiften on vellum in square characters, whioh, by express command, was to be delivered to euch only as were fo:ind to be seise among them."- Colcott Disq, on Masonry, p. 72.)

    It is probable that this ohest alno contained memorials of the wretched state of the Israelites while in the wildernese. The letters above mentioned were probably the same as the royal arch ineffable characters, which consist of right angles in various attitudea, with the addition of a dot.Edit.

    + The author makea this child the symbol of work; and as the sun bore the name of Apollo, or Horus Apollo, when in the northern hemisphere, which is the time for carrying on the labours of husbandry in this region, there may be a propriety in the application.-Edih.

[^19]:    - From ceri, or eri, which bas the same sense as in Fronch, and from ——or, the vault, the grave -arber.

[^20]:    *They sometimes changed this worl into that of sen, which comos from sar and zao, to live, which make the same sarion.

[^21]:    - Hearken thon, 0 Menes Museus, son of the star of day.
    + From —aish man and from -caleph dog comes -asalopi the max-dog. The Greeks call him astrokuon, the ster-dog.

[^22]:    - Eeculapius was sometimes represented either standing, or sitting on a throne, holding in one hand a staff, and grasping with the other the hear of a sorpent: at his feet a doy lay extended. On some ancient monuments we see him with one hand applied to his beard, and having in the other a knotted staff encircled by a aerpent.-A nton's Class. Dict.- Edit.
    + For this reason it wea that they gave God or the sun among other titles that of phoob, Phoobus, or Phoibos, which signifies the mouth of Ob, that is the source of the overfowing, from the two words, phebt os the mouth, and the of the swelling, the overfowing; it is the anoient name they gave to the Nile overflowing its benica.

[^23]:    - See the name of Hero in that eense in the interpratation of the obelisk of Ramesses in Amminn Marcellin, or in Marsham's rule of times. From that hero the Latins made their herus and hera, the lord, the lady. Th Philistines called him the lord of men, marnas, from the word maras which signifies the manter, and from as, which signifles man. And this comes to the sense of the foregoing names.
    + Achrd tiricus, and by a softened pronuncistion, adad, one, the obly. The ancient kings of Syria, who styled themselves his children, assumed the name of Benudad, son of God. See Macrob. Saturnal,
    $\ddagger$ Doninus coelorum.
    8 Hu esh ipse est ignis. Douteron. iv. 24. Ata ash, tu vita es. See Strabo, 1, 10.

[^24]:    *The supplications in Masonry are similar to the above. In the degree of royal arch, the following ejaculstions are uttered:-" Lord, I ory unto thee: make haste unto me; give aer anto my voice. Mine eyes aro unto thee, 0 God the Lord; in thee is my trust; leave not my soul deatitute. I cried unto theo, 0 Lord: I said, thou art my refuge, and my portion in the land of the living, Attend unto my ory: for I am brought very low: deliver me from my persecutors, for they are atronger than I. Hear my prayer. 0 Lord; give ear to my supplications: in thy faithfulness answer me and in thy righteousness."-(Webb.)-EDIT.

    + Thess fables may be seen in the hymns attributed to Orpheus and Homer; in the poems of Hesiod and Ovid; in the hymns of Callimsobus; in the mythologiee of Noel le Comte and others.

    I This is what the Latins expressed by Thyesos induoere: to form ohoruses of people dreseed like goats and rams,—thiasim hirci ot Genes. 80. 85.

[^25]:    * After the virgins, followed a company of mencarrying poles, at the end of which were fastened phafloi. The heads of theas men were crowned with ivy and violeta, and their faces covered with other herbe. They marched singing monge upon the oocsaion of the festivel, - Anthon's Lemp. Class, Dict.-EDIT.
    + Ibat pando Silenus asello,
    "It was the custom, at the colebration of the Rleusinian mysteries, as wo are told by the Scholiast on the place, to have what was wanted in those rites carried upon Asses. Hence the proverb, Asinus portat mysteria."Warb, Div. Img.-EDrs.

[^26]:    - Vos, a clarisaims mundi Lumina, labentem coelo quas ducitis annum, Liber ot alms Ceres,-Georgio I.

[^27]:    * Bailey obeerves that "a Phoenix, hieroglyphically, was pictored to signify a raformation," which corroborates our author's hypothesis, for there was a complete reformation of the calendar, according to the Egyptian calculation, at the end of the above-mentioned period-EDIT.

[^28]:    - The proof of this is frequently mot with in Scripture. Whea the tribes murmured at seeing the prieathood settled in the family of Aaron, the chiofs of the tribes received orders to bring their sceptres into the tabernacla. The eceptro of Levi borne by Aaron was found in bloom the pext day; and the Scripture obearree, that the other chiefa took back their ecoptree or staves of command.
    $f$ A similar plate decorated the chlief priest of the Iareolites. The highprieet wore a plate of gold upon hia foreheed, on which ware engraven theso two words, Kodeech Layhovah, that in Holy to the Lord. It wat tied with a purple or brite ribbon to his tiara, which was made of linen, like thowe of the other prients, and was only distinguiabed from them by this plato and ribbon. There wa in every synngogue a sort of minister, who reed the prayers, direoted the reading of the law, and preaohed. Ho was called Chazan, that is, Inspector or Bishop,-See Dr. A. Clark's Hist, Imrael, p. $25 \%-7$.

    Thereis a degree in masonry called "a Chapter of the grand Inspector of Lodese, or Grand Elected Knights of Kadooh" "wo meero to have borrowed their titlo and functions as Inspeotors from those of the Egyptian Mercury. The baige borne by Mercury appears to be alluded to by the mannar of anewering the queetion "Are you Kadonhr" upon which the pernon quentioned placos his hand upon his foreheed and asyen "Y es, I arn" Tho maored worde

[^29]:    *The author, it seems, wan not sensible of the propristy of this title ; but none could be more sppropriate for the inhabitants of the northern olimates to bestow upon Apollo, the sun of the upper hemisphere. Dupuis, as bofore noticed, has well described the complaints that would naturally occur, in consequence of the abeence of the sun in the vinter season: "What has become of the happy temperature which the earth enjoyed in the summer! that harmony of the eloments which accorded with that of the heavens i that richnees, that beauty of our fields f" etc.

    Apollo rentored this happy state of thinga, and migbt, therefore, very properly be styled a deity preeiding over harmony. "The god of the sun became also the god of music by a nstural allugion to the movements of the planets and the mysterious harmony of the spheres." (Anthon's Clase, Diot.)-RDIT.

[^30]:    - From charat, abcingers, comes cheritont repudixum, acieriv the interruption of commerce. See the word Cheritont. Isai BO, 1; and Dout. 2, 1, 1.

[^31]:    - Gaditarorwa marcatores ingentibuy witi navibus, pawperes, parvit, quas equos appellent. Strab. geograph. 1. 2. p. 99. edit. Reg.
    + From - pag, ceseat, otiatsr; and from - aks, cursor, navis, comes pegasks, navigationis intermissio. The head of a steed put on the shoulders of Isis. (Pakgan, in Arad.) with a finh in one hand and doves in the other, was evidently the proolamation of a feest that opened the navigation when the sum laft the sign Pieces, and brought on the Zephyrs, the gentlenges of which was denoted by the dove,

[^32]:    Pomibly this has procured Horus-Apollo the titile of Prean or Pmann, revelator, the interpreter of hidden things, the oracle. It is the same name Pharoah pave Joseph in his tongue. He called him (Genes. 41, 45) tasphat posanach, the interproter of smared thinga. These Egyptian worde have a vast relation with the two of the Phenician language which sjonity the same thing-to obeerve, to percoive and - tashan, to hido.

[^33]:    - The figures of Anubis and Isia are sometimes attended by a tortoise, s duck, or an amphibious lizard. The nature of these animals is to keep within reach both of the land and water, which are frequently neceaanary to them, and to get to higher ground as the water rises. This was the symbol borne by the Egyptian Isia at the approech of the overflow, and she was thon calied Leto or Latons, which is the name of the amphibious lisard. This Isis, having the heend ond shoulders of a woman, with the pawn, body and tail of a loto or lisard, is found in the monuments of antiquity.

[^34]:    - That of the Argonaute, which is ahown pretty conalusively by Dupuis eontrary to our suthor's explication, to be purely astronomical. - Edit:

[^35]:    are derived the wordia argoth or argot, opus textrinum, the weavers work. Thence are erived the wordis ergon, opus ourgla, generally used to exprees all kinds of work, that of spinning and making of sloth being the most common.

[^36]:    - From - peri, fircius, comes, pored, copin fructuum. Genos. 49, 22.

[^45]:    - From - manim, diarributiones, vices, relitus, polemnitar. Thio name was giveo to the aymbolical figares. In pertioular it remeined tho name of the image of the doud perwon which sharacterived a foneral amembly.

[^46]:    * A similar custom is atill practised by some superstitious people; who, When in doubt what they ought to determine in particular circumstances, open the bible, and the irrot paragage that strikea their eyes is expected to intimate the proper course.-Ediu.

[^47]:    "Masonic writers may, "their brethren used to meet on the highest hills." This declaration applies to the predeceesors of freemesons, but not to the craft, whose assemblies were always held in a lodge-room, guarded by a momber at the door, with a drawn sword.

    The first seond spoken, on raising the dead body of Hiram, was to be substituted for the lost master mason's uend, provided it was not found upon him. This idea is evidently copied from the superatitious practices mentioned above, at the funeral anniversaries,--Edit.

[^48]:    - The knowledge of astronomy Ineda to the fatarpretation of hleroglyphioal oherice tors, since antronomical signa are often found on the andient Egyphian monuments, which were probsbly smployed by the priests to recori dstes. On the oeiling of the portico of the tample amung the rufas of Tentyrs, there is s long row of figuree of men and nolmala, following esch othor in the mame direotion; among these are the twalve signis of the sodise, placed zcoording to the motion of the sun; It is probable that the Ant figure in the procesaion ropresenta the beginning of the year. Now tho frat is the Lion as if coming out of the temple; and it is well known that the agrioultural year of tho Eggptians commenoed at the solation of summer, the epoch of the Inundation of the Nile; than if the proceding bypothesis be true. the soletion at the time the temple was built must have happened In the con-tellation of the lion: but, as the solstice now happens $21^{*} 6^{\prime}$ north of the conatollation of tho Twios, it is easy to comprito that the zodiac of Tentyra mast havo been made 4,000 yeare ogo.Dise on Mech. of the Heav, by Nr , Bomerville-EDIT.

[^49]:    *This principle is beginning to be underatood, and noted upon, by some of our leading patriots in the American republic,-E'lit.

[^50]:    *Plutarch, in bis troatise of Isis and Osiris, remarks that, "In Crete there was a statue of Jupiter, without ears. The Crotians judging it fit tbat he who is the ruler nnd lord of all things, should hear no ones"-8ee Taylor'a Translation Jamb. p. 248.-Edit.

[^51]:    - This obligation of the initiated to secrecy was the reason of the Epyptian hieroglyphic for them was a grasahopper, whioh was suppowed to have no mouth, See Horapollo Hyeroglyph. iib, ii, aap. S5.

[^52]:    - Euripides, in the Bacchantes, sot ii., makes Bacchue eay, that tho orgies were celebrated in the night, because darknees has something solomn and eugust in it, and proper to fill the miod with sacred horror.

[^53]:    - Terance, Ban. act. iii, sa. Y.-Euripldes puts this argament into the moathe of soveral of his apeskers, up and down his tragedies. Helen, in the fourth act of the Irejan Dames, says, "How could I reaist a godden whom Jupiter himnolf obeys t" Ion, in bis play of that name, in the lattor end of the Arat act, spenks to the eame purpoes; and in the fith act of Hercules Furens, Thasus comforts his friend by the examples of the erlues of the gods. Bee likewise his Hyppolitus, act ii. sc, ii. The learned and Ingenlous Mr. Sewarn, in his tract of the conformity betiocen popery and paganism, has taken notico of a diffleult paasago in thia tragedy, which he has very nbly explained, on the ayztem here dolivared of the dotection of PolyHueiam in the ascred mysterios.
    † Whon St. Austin (Civ. dei, lib. iL., cap. 7, 8) had quoted the Ego homunico Lioo non faoerem, to show what mischicf theso atoriee did to the morals of the people, he makes the defendern of paganim reply, that it whe true, but then these thinge wers valy taught in the fables of the poets, which an attontion to the mystaries would rocitify. Tbis the father oannot dony; but observes, however, that in the them cornupt state of the tryateries, the remody was beceme part of the disesso. Nolo dicern illis mystios quam fala theatrica ooso turplora

[^54]:    *These two ware tbe tratha which the pontifiax Scevola, said wers to be kopt hid from the people. "It is recorind in bookn that Boevols, a very learned pontifi, argued that three kinds of goda had been handed down to na, one by the poets, snother by the philosophers, the third by the rulers of the stats. The first kind be says is worthlow- the second not suitablo for commonwealtha, because it contalos oortaln things, the knowledge of which ie prejudioial to the peoplo. What, then, are those thingn which are projudicial to tho multitude? "These," he asye, "that Heroules, Enculapius, Castor, Pollax, are not gods, but wore men who depparisd humas life,Suguxia de Civit Dei. (ib, iv. cap, 27.

[^55]:    a It is not improbable bet this might be a name of offico. Porphyiy, in hie fourih book of abatinence, informs us that the prisata of the myaterias of Mithras were oalled zions, tho prientenses lionowes, and the inferior ministers ravens. For thers was a sreat conformity, in the practices and coremonies of the several mysteries throughout tho whole pagan world. And thin conjectore is supported by a panasge in Eunapiug, Which ssems to say, that it was unlawitl to reveal the name of the hierophant.

    In the modern degree of masonry, called knight of the Engle, and soveraign priboe of Rose Croes de Heroden, the enpirant "solamnly promises on his honour, never to roveal the place where he was recelved, the recelved blm, nor thoer who wore present at his recoption."

    Also in the degree of "knight of Kadooh," "when a roception is made, the great commander remains alone in the chapter with the candidato, and mnat beso situated Hist the lattor cannot mee him, as he ls not to know who inltiatem hira." (Bernard.) -Bdit,
    b1 suppoee thia commmioation to hia mother might be to let hor noderatand that he wes no longer a dupe of her ilne story of Japiter's intruaion, and the intrigus of his divine original. For Erastonthenes, acoording to Plutarch, saye, that Olympiae, when ahe brougbt Alexander on hia way to the army, in his firat military expedition, soquainted him in privato with this eecret of his birth, and exhorted him to behave himeolf as becamo the son of Jupiter Hammon. This, 1 suppoee, Alexander miglit thill to the priest, and so the murder came out.

    But this is a mistake, at least it is expreneod inececurately. What wra extorted by the dread of Alezender's power wae not the searet, which the initinted had a right wo, but the prieat's consent that he ahould communicate the secret to another, which wis contrary to the lawn of the mynterios.

[^56]:    * Here 8trabo takes in all that is asid, both of the gode, and of natures in the two preceding panages from Chryaippus and Clomons; and abow that by nature in not proment the commical bat theological natares,

[^57]:    - se Bit notwithatinding he (Chriat) oblained a more excellent ministry, by how much aleo he is the mudiator of a bettor oovebant, whleh wns established upon bettar promises. For if that Irat corenant had been faultlees, then should no placs have been sought for the second."-(Bebrews Nill. 6-7.)

[^58]:    * What hath been esid will give light to a strange ntory fold by Thacydides, Plutarch, and others, of a debnuch and night ramble of Alcibiades, Just before hia expedition to Byracuse. In which, they pay, he reveeled to, and acted over with hite companions, the myeteries of Ceres; that he nesumed tho office of the blerophant, and called rome of those he initisted Msatai, and othere Epoptal; and thast, leatly, they broke all the niatues of Hermes. These are mentioned as distinct netions, and nneonnected with one another. Bot now wo wee their relalions, and bow one arose from the other: for Alcibiades having revealed the origin of polytheinm, and the doctrine of the unity, to bif companicna, nothligg wne more ninturat than for mea. bested with wine, to run forth in a kind of religions fary, and hreak the statuee of their idols. For, what ho acted over, was the greater mysteries, as appeane from Plaiarch's calling them the myaterios of Corea, nud from Alcibinics caling somo Epoptal, the pame of tboes who participated of 'the greater nyystarica.

[^59]:    *We here soe tho origin of the forlorn condition in which the candidate for masonic hooours is placol, when propared for initiation; who "nelthor naked nor olothed, barefoot, nor ahod, deprived of all motale, hoodwinked, with a cablo-tow sbout his neok, is lod to the door of the lodge, in a halling moving posture." His being hoodwinked is omblematios of the uninformed state of those not initiated Into the mysterlea; and the rope abont his neok is in token of his sulvoission to the divine will, as will haruattor be ahown from the arutoma of the Drulde-Edit,

[^60]:    The Rev. Jamee Anderson, D.D., published, in 1723, the fint book ou masonry with the sanction of the grand lodge of England. The com-

[^61]:    * In closing a royal arch chapter, the high priest says, "may we invariably practice all those duties out of the chapter, which are inculcated in it. Response ; so mote it be. Amen." (Bernard,)-Edit.

[^62]:    * "Some enlightened persona did not believe that to be rirtnous there was any meoesity for each an mesoistion. Diogenee wha onot advieed to contract the secred engagement ; but he answered, "Patspion the notorions robber, obtained instatation; Epaminondas and Agerilases never solicited it; is it poealble I should belleve thet the former will enjov the blise of the Elysian felds, while the lather shall be dragged through the mire of the infarnal wades." - Travels of Anachar.) - Blit,

[^63]:    *What bath been said above shows that M. Le Clerc hath goneinto theother extreme, when he contends (Bibl. Univ. tom. vi. p. 73) that the mysteries were not corrupted at all. I can conceive no reason for his paradox; but as it favoured an accusntion against the fathers, who have much insisted on the corruption of them. "The fathers have said that all kinds of lowdness wero committed in the mysteries ; but whatever they may say, it is not credible that all Greece, however corrupt it may bave been, has ever consented that the women and girls should prostitute themselves in the mysteries. But eome Christian authors have found no difficulty in maying a thousand things little conformable to truth to dofame paganism; as though there were none but pagans against whom thoy could dischargo their calumnies."-Dits. Univ, tom, vi. p. 120.

[^64]:    a Mr. Lo Clere owns that Platarch, Diodorns, and Theodoret havo all sadd this, yot, the better to aupport his scheme In the interpretation of tho history of Ceres he has thonght at to contrndict them. Yet he in another place, conld weo that Astart was certainly Isia as Adonis was Oairis; and this, merely from the identity of thoir ceremonies.
    $b$ Timenes the Locraic, in his book of the sonl of the world, spoaking of the necessity of incricating the doctrine of futnre punishmonts, calls them Timopisi xenai, foreign tormente; hy which name both Latin and Grook writers gonerilly moan Egyptian, where tho subject is religion.

[^65]:    a Of whom Aristophanes says "Orphens tanght na the myateries, sod to abetain from rourder," that is, from allte of rapine and violence, such as mon lived in the state of ninture.
    b And ao saye Diodoras Siealus, Ib. 1. Bibl.

[^66]:    a Schol. Hom, It.-It was the mame in the Cabtrio myeteries, as we learn from Diodoras Siculns, inh $v$, who speaks of the Ilke innorations medo there. As to elavees hear Aristophanes. in his Themophorias:-"Begone, ye vulgar crow, it fa notittiog that slaves ahould hear theee words."
    $b$ But the fict, thare not being a Greolan, but a forelgn, that is, berbaroas, inveas tion, is proved by their verv name, mysteria, from the fintern dialeot, mistor, of mirtur, res ant locus abeconditus (a thlag or pleoe hid).

[^67]:    - The rowomblanoe between the practiose of masonery and those of the anolent myntarien, lo too atrikiag not to be potioed. Hero wo havo the chorus of the initiated: in masoury, we obeerve the apprentice's, the fellow craftis, and the master mason'a chorus or aong: thet is, songa adaptod to sech degree,-Edic.

[^68]:    a Thls recaark can apply only to the ahow nnd repremontations of the leaser mysteries at the concluation of whice the office of fomale hierophant ends, if we can judge by the duty impoeed upon the sibyl by Virgil, as will appear further on.- Bdit.
    o The bee, or rather beekive, smong the masonle symbole, is considered an amblem of indwatry, for which thare in probably somen anthority in antiquity. $\frac{8 d i c}{}$

[^69]:    - When aboat to open a chaptor of royal arch masons, the high priest esys, "A? thers be any person present, who is not stoyal srah masoo, he is reguested to retire." Dernard-Edil.

[^70]:    - The original has a peonllar olegance. Haphane gar ampbo, ela, allades to the encient Greok notions conoorning the first mettor, which thoy called aphanes, invisiblo, as belog without the qualition of form asd colonr. The inverting mattor with these quallition, whe the production of bodies, the ta Phalnomens ; their dineoIntion, a return to a stats of firlaibility-oin Haphanes obordi ta dialuornems, wathe the frotended Merce. Trimang. has it, cap, zi. Matter, in thia state of inviaibrilty was, by the earllar Greelcs, callod Hadea. 人fverwards, the stats itself was mo called; and at leogth it came to elgnify the abode of departed spirits; hence sorae of the Orphise odes, which were sang in the mysteviea, bore the titio of o ole Adoy Katabade, edenoent futo the regions of the deed, a litulo equivalent to Tepetie and Hieros Logpe,

[^71]:    * This praction obtaina in a modern degree of masonry, denominsted Le Petif Arekitect. A portion is given to the candidate, which, ho is told, is a part of the heare of Afaster Hiram, preserved ever since his aesaseination; Which overy faild/ul mason may receive, but that it cannot remain in the body of one who is perjured. After the candidate has swallowed the doso, the mastor thue addressee him, "Brother, ons thing you camo here to learn is, that jou ought novor to rofuse to confan your faultas: obatinacy ought to bo beniahed from the heart of every good mason."- Bdif.
    + What ware called the seorut ceremonies of the gods, sagi Fontenolle, wora, without doubt, the beat artifices the priests could fnvent to keep people in the dork; and yot they could not so well hide thejaggle, bat that the oheat would be raspected by many parsons; and, therefore, they contrived among themsel res to satablinh cartain mysterios which ahould engage thoee who were initiated into them to an inviolable mecrecy. Those who were initiated also gave further seonrity for their diecretion; for they were obliged to make a confomion to their priesta of all the moet privats eotions of their livee; mo that by thls meane they became elaves to tholr prieste, that their oann secreds might be kept.

    It was upon this sort of confession that a Lacodemonian, who was goling to be Initiated into the mysteries of Samothrace, spoke roundly thue to the priest; if I have committed any crime, nurely the gods are not ignorant of them.

    Another answered almost affer the asme manner; is it to you or to God wee ought to confese our crime: 7 It is to God, says the priest. Well then, retirs thou, enowersed the Leodemonisn, and $I$ zeill confess then to God. These Lacetemonlans were not very fall of the spirit of devotion,-(Eist, of Oracles, P. 114, London, 1088.-Edit.)

[^72]:    * Wo may woll Judge it to be so, when we find it amongat the Chinese (see M. Polo, H6. IL Cap 26), and the Arabiens, the two people least corrupted by foreigu manners,

[^73]:    and the vicious customs of more alvilited nations. The Arabians, partionalarly, Ifling mach in a state of Dature, where men's wants are faw, and consequently where there is ecman temptation to taile onnatural crime, yet ware bocome so prome to tt, that their lawgiver Mabomot found it neopary to ecrat an oesth of the Arabian women, not to destroy their ohildrea. The form of thir osth is edven ws by Gegrier, in his notsis on Abolifoda's Lfo of Mahomet, and it is in thees words:-" You wil anociato nothing whth God; nor indalge anger; nor dertroy your ohildina; nor bo dinobedient to tho Apostis of God, 的 that whioh is Jost"

[^74]:    - Bo the law of the Tvelve Tublev: Patronus of clicuti frawden focerif, man ewfa,

[^75]:    - Cottés mantranos, est bonio ot belle, Male en Enfor de quol sert-alle?

[^76]:    The chief behold their chariots from afor, Their ahining arms, and courvars trained to war. Their lances rx'd in earth-their streds around, Froe from their harness, grase she flow'ry groand.

[^77]:    *Anoient authors inform us that the fentivals of Ceres cometime brought to Eleueis thirty thoumand of the initiated, without including those who came only from motive of curiosity. Theee were not present at all the coremonies, To the more eecrot, no donbt, waro only admitted the emall number of novioen who evory year roeeired the last soal of Initiation, and some of thow who had recoived it long before. Behjud the temple, on the weotern side, is atill to bo moen a tarraco, cut in the rook

[^78]:    Iteolf, and raised oight or nine feet above the floor of the temple. Ita leagth is a bout 270 feet, and ita breadth in some places 44. At the aarthern ead is to be seen the remalina of a chapel, to go up into whlch there ware soveral stope.

    1 conjecture that on this terrace was exhibited the eoenary; that it was divided Iengthwise into three grest galleries, the two first of which represouted the regios of tria, and that of the iofarnal ahades; and the third, covered with earth, presented groves and meadows to the view of the initiated, who, from thence weot up into the chapel, where their eyee were daniled by the splendour of the statute of the goddese (Travala of Anachanias)-Edil

[^79]:    *From the beginaing of one of PIfay's eplaties, I suspect that Asreat wes the common title given to the Mikaias and auoh Uko talea as atrollera usod to toll for a piece of money to tho rabble in a corcole. Pliny's worde are theso-sssam para of socipe auream fabulam. 1, i1. Ep. 20.

[^80]:    - Artamidorocasam, that for a man to dream that Ceres, Prowrpine, or Bacoks epppeers to hlm, betokens somse extraordinary good fortane to heppon to hlm. This poprolar divination by dreama was apparantly lounded on tha common opinion of the advantages attanding finitiation into the mysteries. The ancient Oniroeritics ware not founded on the arbikrary fanoles of the lmpootors who profoepd that arts, bat on the customs and emperotitions of the times and with s prinoipal refersoce to the Egyptias Hieroglyphies and snyateries.
    + Mesonic meetinga ars nootaran, and the aprons of the fraternity are gonerally ornamauted with figures of thench, moon, and seven elars, or plasets; which showe that the principal dadgn of ths inatitation was somothing vary differwat from the mechanical ocoupation of masonry. They show, indoed, thatit wa founded ga Sabeism, the worshig of the stans-Sdif,

[^81]:    * I have given a more full scoount of this procesion, from the work of A pulolus, than is copled by Warburton. In the procesaions of the London masons, hefore notioed, at laying the foundation stone, and the dedication of Freemasona' hall, in 1775 end 1776, among other things were carnied, three pitchers, containing corn, wine, and oil; the Bible; sand or caduceut: a ciata or chest, bere called the lodgo. \$a. Afar the cerensony of laying the funvdation stone, " hio brethren prooecded throngh the city in procemion, without esposiag any of the insignia of the order,"8 mith-Edif.

[^82]:    a The modern masonio degres of Rose-Croes seems to sllude to this ridicolons ooncelt regarding the virtue of rowes. The following dislogue takes plaoe between the mantor and eanior warden :- "Do you know the Pelican?-I do, -What does it signify t-A mong us it la s symbol of the Saviour of the world, and of his perfect kumanity. What is the objeot of the degros of Knighte of the Rose-Crose -To lend us to respect the decrses of the Most High, who is able to reinstamp his imago on ua." To roinstamp is haro intanded to eignify the reatoration to a former atate ; which is exsotly what occurred to Lucing, when in his assine condition, by the eating of roses. The Pelican is a Roman Catholio symbol of the Beviour, srialing from the fnble that this bird periornten Its breast, and suffers ite young to foed upon the blood issuing theretrom.

    Tho Saviour, in the ritanl of the Catholle Chnrch, fe thns addressed: "O Pelican Jesws / eleanse we with diy blood, one drop of which is nupleient to prurify a weorld."

    The degree of Rowe-Croes was invented in France, a Roman Cathollo conntry. ${ }^{\text {H }}$ Idit.
    $6^{\text {" }}$ Wool, the exerotion of the most alagzish body belonging to the herd, was for that roseon, pronounood by Orphens and Fythegoras, to be a profane raiment, But flax, truly the most cleanly of the beet productions of the earth, not only clothed and veiled the most holy prienta of Egypt, but was used also to covor the atcrod ntensils," -Apal. p. 64.
    $c$ "Whilat the apron with which we (mseons) are clothed indicates a diaposition of innocence, and belies not the wearer's beart, let the ignorant derido and nooll on: superior to the ridicale and malice of the wicked, we wlll enfold onreelvee in the garis of our own virtae; and exfo in our self-spproving conecienoe, stand unmoved ageinstthe pervecutions of adversity.
    "The ralinent which trily implies the innoomes of the heart, ia a badge more

[^83]:    honourable than ever wan devised by kingn ; the Roman esgle, with all the orders of knighthood, are therennto inferior " -8 mit b.
    "Formeriy masons used to be clothed in uchite daring Lodge hours, which practice Is still followed in many lodges in Germany, France, and Holland; but in Eogland, the telite apron onily is remaining." Ibid.-Bdit.

    - The masonic "Degree of Pefection, or the grand elect, perfect, and sustime mason," it masy be prosumed, ta entitied to the appallation of Teleiothta-Edit.

[^84]:    a Reapondert cirlerc. This, I supposes, rolates to tho music of the spheres. The Image is noble and aublime. It in taken from the consen( in the lyre, is auswor to, and obey the hand of the master who had put, them iuts tune.
    $b$ In order to a due a iderstatidiog of tho fable, it is necessary to know the natnre of the charnotern upon which it is foutded. "Payche, (Greek, the sonl or life) a gui-

[^85]:    dees by whioh the ancientes soem to mean the homan eonl. She was represented with the winge of a buttarity on her eboulders, to intimate by the aimblenese of that cresturs, the aotivity, nature, and propertien of the moul."-(Baileg.) Acoording to ancient mythology, thero were tro oupide, one born of Veaul, and begotion by Jopiter, the incitor of celestial love; the other, the son of Erebus and Nox, the author of Terrestrial Amoure.-EDir.

    - The amour of Cupid and Puyohe was a nobject which lay in common amongat the Platonio writers, And evory oue fahioned thia agrioeble fletion acoording to the doctrines he bad to convey under it. By thia means it could not bocome famots. The remsining monnmenta of ancient soulpture convince nis that it wha very famona; In which nothing is no common as tho Agute of Cupld and Pujahe in tho varluas circumstances of thuir adyentores.

[^86]:    *The torms accred and profare manio, aro still rotained, appropriating grave and platative tones to the former, and gay and livoly to the lattor. On thia account, if Is reported that Wesley, the fonnder of the Mothodist sect, declared that tha Deril should not havo all tho bent tanes, and sooordtogly, he iotroduced into the oburoh sorvioe the moet aprightly airn, which are still in uno among his followem, harlog, it Is said, the most happy offect.- $B$ dit,

[^87]:    © The neme tyrant, an at first used, morsly dedignated the ohlef magietrate of a plsoe; the Groek in old lime, ealiod the aupreme governor of overy oity a tyrant of ling. Bailey,-Edic.

[^88]:    - Anoblus affirms that Pythagoras was buried 'alivo in a tample; others stato that he was alain in attempting to manke hin aceape. It can bardly be doabted that his death wee violont, and that, with all his cantion to preserve himaolf, he fell a martyr to his generous efforts to undeceive mankind. An ill construction wss put upon the union of tho Pythagoreane, and it proved vary fatal to them. That eocioty of atudente boing looked upon es a fuction which conopired against the atato, adxty of them were destroyed, and the rest went into baniabment-Diogonies by the Elev, I. Taylot,-EdiL.

[^89]:    a Meeona, who bave taken only the three Airst degrees of the order, are taught ouly what may be celled the exoterio dootrine of mesoury, and this in an obsoars eymbollcal manner, not intended to bo fully understood. In this grade, they call oecho othar Orolhr. They were formerly, that is, in the time of the Dralds, not permittod to adraoce further, ontil thoy had convinced their superiora that confldence might bo placed in them, and that they were worthy of recelving the esoleric prindlplea of the order. When raised to the sublime degree of royal arch, they addrees one another br the appellation of companion. And then, no doabt, in ancient timee, the wholenecret of masonsy, that is, the doctrive of Druidiam, wia rlearly exposed

    Dermoth, after making some remarks on the conduet of cortsin pertoons. who, itseeme, were dimatiefled at not having been sdmitted to the royal arch degrea, nays, "To this I will add the oplolon our workhipful brother, Dr. Fifiald DAveiguey, printed in the year 1744. Some of the frateralty, saye he, have exproweed an uneasinesa at thia matter's boing lept a vecrot from them, since they had already pased through the usual degrees of probation; bnt 1 cansot help befing of opinion that they have no right to any such banefit until thoy make a proper application, and aro reoelved with due formality; and as it is an organlend body of mean, who havo paseed the chair, and given undeniable proafs of their akill in architecture, it cannot be trated with too muoh rererence."

    Now, Dr. Fillald must have been manaibla, that arobltecture wes not taught in the lodge in bis day. This ridiculous parade, tbernforb, about akill in this art, im a mere eroues, for the obearvance of an ancient custom, the reseon for whioh was unknown. - Bdif
    $b$ This is fmitater in the pant master's degrse of masonry. The nowly initinted momber, perfectly fgoorant of the mode of proceedings in a lodgo, is, againat bis will, placed in the chair of the master me a presiding officer; end "the finstalled *onhipfal la made the butt for evory worthy brother to exercise his wit upon."

    This custom, it would appear, hes detcended from the Drulds, the aneiont raboolmaston of England, to the univeratios and colleges, oven of Americs, where thoee

[^90]:    of the freshmen, or newly entared olas, are mado the butt and ridicule of the higher clesses for twolve monthe. The lattor are arapowered to direct the former to perform any orrand they wiah: can order them to ropair to thair rooms, and there footure them for their awkwardness, ignoranos, eto. This prictico was doubtleme introdueed upon the principles of Py thagoras, to inoulouto Awisility; but when exercieed upon eraw, difident, conntry boy, it mast prove extremely diboouraging and oppreedre. The custom, howerer, it if said, hee gone into disusa Gen. Erastas Rowi, of Dolhl, in tilis State by a resolute refueal to submit to this dibeipine, has the honour, as I am informed by a graduate of Dartmouth college, of patling an and to thie vile practico in that inatitution,-Edit.
    *Thero is an affectation of this mort, an before obserred, in the masonle degrees of "Kuigbs of the Eagle" and "Knight of Kadoeh," in which the cendidate is not pers miltid to see the percon who lisitiates him,-Edit.

[^91]:    - The prinoipal and most efficecious of their doctrines, tho Pythagoreans committod to momory, and communicated thom to thoir anooosors an mysteries from tha gods; sud if at any time there were any extraneouf, or, an Imay say, prapare perzons among tham, thog eignified thoir meaning by aymbols

    Hence Lyzis reproving Hipparahns for commanioating the diecourne to uninitiated persona, void of mathematics and theory, salth, it is reported that you tesoh philosophy In publio to will that como, which Pythagorss would not do. If you ere ohanged, i shall rejoice; if not, you are dend to me: for we ought to remambar that it is pions, socording to the direction of divine and human oxortations, that the goods of soinctone ought not to be oommunicaied to those whose moul if not purifted 60 mach ss in dresm. It is not lawful to bestow on every one that whioh was acquired with momach labour, nor to reveal the rayatories of the Eleusinian godesen to profane porzons. Thos who do both these, aro ulike unjust and irreligiona It iagoor to conemder within ourmolves heww much timo was employed in taking away tho apots that were in our breasts, that after ive years we might bo maide capable of his [Pythagoran's] diecounses, Jambliohus. Qnotod in 'T. Stanlog'0 History of Philosophy, Londo3, 1660, p, 876, - Edif.

[^92]:    - Moderatus saith, that the Pythagorio philowophy came at last to be extingulahed: fret, because it Wha enigratical; next, becuuse the writings were in the Diorio dialect, which is obecure, by which means the doctrinee delivered in it wero not underviood, and moreover, becanse they who published them were not Pythagoreans, Beaides, Plato, Aristotlo and others, th the Pythagoreans affirm, vended the bost of

[^93]:    them as their own, changing only cotno.fow things in them, but the more valgar and trivia, and whatmoever was aflerwards invented by envious and culkinrioks gicsoas, to enst a oontempt upon the Pythagorean mohool, they collented and dolivered ail propor to that reot,-(Porphyry, P4 36 ; Stanley, p. 364.)-Bdit,

[^94]:    * Man la pinced, according to their (the Drulda') doctrine, maye Dr. Lingard, in his hiatory of England, in tbe circlo of coursed; good and evil are ploced before him for his pelection. If ho prefer the former, death tranmalta him from the earth into the ofrcle of felicity; but Ir he profer the latler, death returns him to the circle of courrecs: he is made to do penance for a time in tha body of a beent or reptile; apd then permitted to re-musime the form of man. According to the predominance of vice or virtine in bia dispodition, a repetition of his probation may be necemsary; but aflar a certain number of trapmifirations his offences will be expiated, his pasaionasubdued, and the circle of folicity will receive him among Its tnhebitanta-EdiL.

[^95]:    - Liko the anciont Jowi and Persiang, the Drulds had a eacred, inoxtingulahablofire which was proserved with the gresteet caro. At Kildare, Ireland, it whe guariod from tho most remote antiquity, by an order of Druldesses, who wero gucooeded In later times by an ordar of Christina Kuns,"-(IIiggin's Celtic Druide, p. 283.)-Edih

[^96]:    - Here doubule is the wourse of tho enverity esid to be anjoired apon the masonio brotherhood towards bacolollding or contamacioses members; but tho tolerant spirit of the ago has, no doubt, leat the threata held out in thla case a mere dead letter. Manone expel their members for immoral conduot, and so do all other religione mociotion Thoy have a priotice, howovor, in this regard, that appeers reprohonsible, whioh in, to publieh in thelr ragiatans the naraen of all those who have had the misfortune to be expelled from the order. This tende to fix an indeliblestigran upon the charaoter of an offonding brother, prefodicial not only to himeolf, but to his family connectiona Tho list containing anmes of dolinquente ahould never be permitted to go boyond the walls of the lodge-room. - Edit.
    $\dagger$ I am inolineal to think the author hae mistaken the casuso of these illaminations, and that they woro originally the signale for a general purification, montioned by Thucho, in which overy thing subjeot to decay, for the benefit of ho ath, whe consumed by fire, on the first of Fobruary in Egyph. They wore csiled the footival of The fire-trande: Which name probably became changed, in consequence of the origia aud intention of the cuatom baring been lont.-Edih.

[^97]:    © "Where (asys manoury) did our ancient brethron meet, before lodges were orected i Angwer. Upunholy grousd, or the hiphex hill, or the loweat vale, or any other searet pleos; the bottor to grand egalnat cownens and enemien,"-Edic.

The Byrians softoned this word and pronounced Baris. Wo flad the same word haris or herne, nsed to signify the terrible in mar. 'The Lord strong and mighty, the Lord mighty' in battle.' Pi. Exiv. 8. Other pronouncod it withont aapiration, and aald Area; others with a very harsh and rough appiration, and provounood Warets. This flgure of Horus in a warike drea, became the god of combata He evidenily Is the Aris of the inlubitants of Bieese, the Hearus of the Gsula, the Ares of the Greeks, the Warts or Mars of the Sabines and Lating,"-Edit,

[^99]:    *The English word mason han a very simple origin; it comen from macon, Frepoh; *From mas, an old word which elguifica hone ; this a mason is a person who makea houser - - (French Enoy.) The Ankward conneotion whlob archistectare is mado to bear towards the myaterios involved in froemasonry, is easily ncoounted for on the supponition, which is undoubtedly a fact, that the Druida made uso of the craft of meonry meroly as scover to their mystic worblip.

[^100]:    "The maxim of the ancionte, "That the whole soorld mae the lenaple of the own," doss not indicato that they looked upon the sus as the aymbol of the Deily, but so tho Deity Itealf
    $\dagger$ It is a diflionit takk for mesoos to make ouk anything respeeting this Olaring satar, that has the least momblonce of reator. They find it among the nymbols, but are not aware how it came thore, and endenvour to make the beat of it ther jomibly cen. The reader will reonliect that it is Anubis the dog-star, who warned the Egyptiane to rotire rom the plain with their produce, to avoid the dentrootive affeote of the inundation.

[^101]:    * Thie was a pagan priselpla, acoording to the anthor'a own showing abova. The Asot in, the tabermacle, as well as the tomple of Bolomon, appeari to have beem constructod apon the samo plan the the tomples of the ancienta,

[^102]:    *The book of constitation is unuelly denominated Ahiman Rezon : which is a corraption of three Hebrew wordn, achi man raizon, which signiffea the thoughte, or oplniona, of a true and faithful brothor.

[^103]:    - The anthor here adopta Hutohineor's cocijeoture, upon truat, whloh has been shown to be erraneonas.

[^104]:    a. Sonecs, the ritole, says, "It is of Ittle consequence by what name you call the firat nature, and the ditine roason that presides over the noiverse, and filts all the parts of it he is still the asarae God. Yon may givo him as niany pamee an you pleese, provided you allow but one sole principle, evergwhore prement"

[^105]:    * At the and of the planetary syntem, the myatagogae prosenta ua with a pleture of the fixed haavatus, and the forr colestial Aguree whioh were placod at tho four carners of heswen. socording to the estrolugical eotheme. Theee four figuros wors the licn, the buil, the man (Aquariue), and the eagle, which divide the whole Eodian into four parte of throe signe esch, in the pointe of the apbers ca led fixed and eolid. The etara which corroupount to toese ars called royal etark-(Dupuis, p. S57.)-Bdic

[^106]:    - The author, in the commencoment of his work, asay:- "One important question which appeari to bave boen elmoet wholly nogleoted by masonic writers, is whether fresmasonry be s sorvile imitation of cortaln ouremonies in the ancient idolntrons mysterien, as la mesorted by some writers, or whother it be the great eriginal from which the myztaries tharaselvee were derived! Oa thje inquiry I have bestowed much deIiberate consideration ; for I found it impoelble to bo astialed with praotising a ecience derived from the polluted drege of liolatry." And, he comes to the conclation that freemesotary is " in reality, the original ingtitation from which all the myeteries wero derived." And adds, "We have ample tentimony to establinh the fact, thet the majateries of all nationa were originally the mame, and divenifiod ouly by the mocidental elroumatancen of local ajtuation and politioal sconomy." That an canchtial differencer exicte kotwean tho avciout mysterien and froemnaongy, wants evidence. The whole of blahop Warbarton'e disertakion on the subject of the formor, goee to dilaprove tho neersion. Howover orroneous both may bo in a theologioal pofnt of view theg agree in moral prinosples, And aro unexcoptionabla. And that any institution ollied free mesonry, or having a rolation therets, sxisted antarior to that which in termed the myyteries, is a gratuitous asumption, withous a shadow of proof. The toysterios, under the name of froomsoonry, wore inst introduoed in the eloventh centary of the Chriatian erp. The reverend autbor, it is orident, Instesd of having any qualma of oonecienos on the subject, wan endessonring to eatisfy the ecruplee which might aries in the minds of some of hila lem liberal parishlouers.

[^107]:    * This ia oxactly imitated in the third degree of manonry; where the candidate perv monales Ais Agurative deceased protolype, Hiram. Of this Mr. Oliver is fully arrare, yet, with all this pitiful mummery before him, ho, as wo havassen above, asys:-"In the third degree, the vell is remoeed; wo aro molmitted to the holy of holies: wo viow the cherubim, [the ox, the lion, etc.] all in their brightpess; and are blewed with a fordaude of haswen, through the resurrection of the dead." Voltaire, in apeaking of the Elousinian myetariee, asye, "This pure roligion consisted in the ncknowledgment of one supreme God, of bis providence, and of his justice. That which diefoured theso mysteries was, if wo can bolioro Tortallian, the ceremony of reyeneration. It wes necossary that the initiatod sbould appear to bo renucitated; it wat the symbol of the new life he was aboas to embraca the bierophant raieod over him the eacred ienife; they feign to striko him, and he almo folgna to fall dead ; after which he appears to be resuscitated. There is atill among the freemasone a remnant of this anciont cersmony."-(CEuvres, tome 16, p. 16a) The whole of this nonsence grows out of the fabled death of the cun. "It is he, [the sux] that, ander the name of Odiria, persecnted by Typhon and by the tyrants of the alr, was pul to death, shut up in a dark lonib, enablem of the hemiophere of wointer; and sfterwards, asoonding from the Inferior zone tomarda the zenith of heavod, arove again from the dead, trimmphan over the giants and the angole of datruction." (Rulns, p. 189.)

[^108]:    a "The word murti, or form, is oxnetly synouymons with eldolon; and in a socondary sense means an image; but in ite primary eocoptation, it denotian any ahapo or appearinee assumed by a colestial belng." (Wilford in Axiat. Ree, vol. ili, p. $\$ 80$. )
    o Ringe are aleo prosanted to the foltinted into the masonio degroe of Noachidia. -Edit

[^109]:    * It appeara that pagaism exirted at thia time not only in England, but in most of the other atates of Europe. Dr. Lingand, speaking of Olave, Kíg of Norway, asys, "That prinoe was a seslous Christian; but his roligious innovations irritatod the jealonsy of the pagan prients ; and be was murdarad in an lesurreotion of his subjeote" [in 1028]

[^110]:    *A.D. 1140, Vid. Statirtical Acoonnt of Sootland, vol xi. Pariah of Kilwionlog or, Edinburgh Magazine for April, 1802, p. 934.

[^111]:    ${ }^{*}$ The clurch ponmencel about one half of the property in the kingdom.- Robertnn's "Hist of Bcotland,"

[^112]:    * It has bese objected, that the word chymidry was not in use in the time of Henry FI.- Its appeeranoe, howevar, in this dooument may be acoounted for, by supponing that the Irankfort editor saletikuted it Poz alchyny.-Edic.

[^113]:    * Kingont-arms are offloars of groat antiquity, and anciontly of great anthority; they direet the heraids preside ot their chaptars, and have the juriadiotion of armoury. Thare are three in nambor, Gartar, Norroy, and Clarenoleox,-Bailay.

[^114]:    - The author of "The Master Key to the Door of Freemasonry," hae Judioloualy remarked, "that the word free was added to masonry by the society, becanse nons bat the freeborn wers ndmitted into it." And for a very obvioas rabson, for there could be no esfety in conflding secreta to alsvos, which might at suy time be extorted from them by thoir mastern. Besides, this was in conformity with the rulo entabliahod in the Egyptian mysterlet.

[^115]:    - A pretty fhir description of a maneonic lodga, with the sorndipful master at the heead, pernonifying the sun, taking hit place in the oast: surrocuded by the monior wanden, who aote the pert of the moon; the junlor warden, who takes that of Orion, and the other anbordinate officern and privates, all under the command of their obief, the worabipfal mater,-BdiL

    4 According as tpe gender of the object was in the language of the nstion masouline or fensining, the divinity who bore its name was male or femala. Thus the Capadosiana called the moon god, and the ann godden; a oircunatanos which givee to the came beinga a perpatual variety in anciont mythology.

[^116]:    * This oustom is not obeervod in all Lodgea

[^117]:    - Cownin seems to be a corruption of Covin, which the anthor of The Secret Disefpline, de., noticed above enbistitaten for It, This word is thus defned by Webster: -"Covin (Qu. Arabio-to defraud). More probably this word belongs to some rerb In Gb, zigulifing to conceal, or to agree, In Norm. Fr. coryne is a searet place of moeting:

[^118]:    * Henry O'Brion, A.B., in a Isto work entitled: "Phameaian Iroland," Dublin, 1833, afler truating of some other pagan Divinities, anys; "But our dectaion on the word aibbol, a name by which the lrish, we well as almost all other nationa, dealgnated and worshipped Cybelo, muat be guided altogether by enother priaciple. For hers I at onvo recognizo the Syriao charncter as dorived from sibola, an ear of corn, under Whlch gulso the Phoencoiana nued to worehip the earth as tho mother of all harventes and vegetables. All natione, therefore, by one common coneent, represented Cybole holding in her right hand some ears of corn" [wheat] ( $\mathrm{p}, 107$.)-Now, Cybele hes beon shown to bo but enother name for Iteta,

[^119]:    * "In the factitions caves, whloh prients everywhere construoted, they celebrated mysteries which consisted, says Origem against Colsus, in imitating the motion of the stars, the planets, and the heavens. The Initiated took the name of constellationa, and assumed the figure of amimala. In the cave of Mithra was a ladder of acven riejst representing the seven spheres of the planets, by meens of which souls arcended and deeosided; this is preolsely the isdder in Jacol's vinion; which ahows that at that epoch the whole syetem wha formed. There is in tha royal library, a naperb volume of pistures of the indinu gods, in whioh the ladder is represented with the souls of mon sacending it. Bee Bailey's Aneient Antronomy." (Ruine, p, 239,) I spprehend that the anthor is mistaken in regard to the steper of this allegorical ladder. The ephores of the planots being mare imaginary lines and not so well adspted as the permanent conatoilations And, in order to imitate the $\begin{gathered}\text { ann } \\ \text {, the principel object of the }\end{gathered}$ pagan religious ceremonies, these would naturally be fized upon for the purpose. The actors in the soenical representations in the cave of Mithra, br taking the name of constellations, end assuming the figure of enimals, corroborate this opinion.

[^120]:    - It has been seon, that by the doctrize of the Pythegoreans, an woll as that of mamonry, the Suprome Boing in ofen confounded with geometry as contajuing the principles of the material world. This is in conformity to the source from which both darive their origis. The secrat doctrine of the Egyptian prienta, llee that of the Brahmine of India and the Magi of Persia, preespla fiself under the double form of a Theological and Coomogonical syatom. It had for a basis, a apeciss of pantheiem, at one momant more physical, at another more intellectusl in ith charnotor, and at tirmes syain combining both of theee attributes; a perronification of the powers of nature more or leen identifed with the powers of mind, and conceived in a point of viaw losving ruforence to a myaterions voity in which the Daity and tho univarne wers. blanded togotber,"-(Protemer Anthon's Cleng Diet.)

[^121]:    - This is, into er many parta as there ero daye between the full moon aud the now. This circumatance, eays Plutaroh, hen reforence to the gradual diminution of the Inmary ilglit, during tho fourien days that follow the full moon. The moon at the ond of fourteen dsya enters Tanrus, and besomes anited to the sun, from whum ohe collecta fire upon her dink, during the fourteen dage which follow. She fa then found every month in conjunction with him in tho superior parts of the aigne. The equinoctial year fivishes at the moment when the sun and moon are fornd united with Orion, or the atar of Orus, a oonstellation placed under Tanros, which onitositsolf to the Neomania of Spring. The moon ronown hersolf in Taurue, and a fow deye after Is eoen In the formo of a crescent, in the following sign, that is, Gemilil, the home of Mcroury. Then Orion, united to the nung in the attitude of a formidable warrior, precipitates Scorpio, his rival, into the shadee of night; for he note every timu Orion appeare above the horizon. The day becomas lengthened, and the germa of evil aro by degrees rearroyod. It is thus that the poet Noonus pietures to us Typhon conquered at the end of wirter, when the aun arrives in Tauras, and when Orion monnte futw the heavens with his.

[^122]:    * Here we find an explanation of the time that it is said the body of grand menter Hiram ropoesd in the tomb bofore ft was dheoverod, and raised by Kivg solomon. "Which," saye Bernard, "It'losaid, bad lein there fourleen days: some say fifteen." To have suffered the body of Hiram to have remained in this tomb fficen dass, would have marred the origion dealgn : it would have antiraly destroyed the astronomicar allualion intended by the finowroaration.- Edit.
    $\dagger$ This soems to me to bo the most reasonsblo conjecture that had appeared reapecting the motives which onused the greotion of thopestupendous monumanta, the pyramidas. On the aubject of the Ephynx, which his also caused great apeculation In regerd to its origit and purport, the author of the "Identity of the Druldical sad Hebrew Raligions," givee the following aolution:- "The Sphynx was a repreentation of the slgus Leo and Virgo jotned together, in commemoration of theinundation of the iles, which oceurs when the ran in in thoes aigus. The Egiptiaps had alwaya a sort

[^123]:    of antronomical myatic reverence for the three signe, Canoer, Leo, and Virgo." M. Mraillett is of the same opinion. (See Anthon's Class. Diet.) The great utility of the overfiowing of the Nilo to Egypt, which was considered a providential ocourrence, whas sofficiont, among a mapersitious people, to csuso its commemoration in this manner. - Bdic.
    *There is no propriety In the addition of Abiff or Abif to the name of Hiram. In the original Hobrew, from which it is takan, the aifir is $A b b i$, the poasnalive casa of Abbs; which rignifee father, and figaratively, a saperior. His proper address, therefore, is my folher, or, in court atyle, my lord. In this nense, it in equivilent to Adonis, Beal, or Oairis, all names of the sun. And as Solomon'e tataple wea bullt go as to imitate the world, the grand arohitoct wes vary properiy ontifled.

[^124]:    * "Cassia, my friende, did not grow about Jerusalem."-(Dr. Dalcho.)

[^125]:    *The Latin tongua meems to heve boen familiar to the Hebrow masons of king Bolomon's temple.

    + The anthor of the Everre Discipline, te., before noticed, romarks on the paesword of this degree, that, "By a singalar lapnes lingue, the moderua have subbetitrited Tusal cain in the third degree for Tymboxein, to be ontombed. Thls in the ancient Catecheris Areani, wan the prea-word, from the aymbolical representation of the state of death, to the rentoral and undying ariatences

[^126]:    - Thle is a sketcb of the Ufo of the sun, who, Anishing his aarest at the Finter solotices, when Typhon and the rebel aogels gain the domision, seema to be put to death by them; but who soon after fa born again, and riese into the vailt of hearen where ho relgne-Fivins, p. 105-plith.

[^127]:    - This notion donbtlees give rise to the custom of symbolixing the Deity by a circle with n dot in ils centre,-Edik.

    4 An allution to thin iden seema to be made in the oxpregrion, "Who shall aeoend to the hill of the Lord $\mathrm{F}^{\prime \prime}$ or as Colo, to his Freemasons' Llbrary, has it "seale the
    nhunt of Gou."

[^128]:    * Thise is the tille given to Lala.

[^129]:    a Tha companions of roysl aroh, provionaly to giving the grand omnifte seora, balsnoe three timees three, with their havds joined, hrioging them down on thoir lonees sine times, making a pause between esch thres-Similar customs prevail in Chins at this day, which no doubt are dorived from the emane source as thoee of masonry. The followligg extract from the Chineeo Courier, pnblished at Cauton, Nov. 18s2, estabHiehee thisfnct. "Poking Ris Majobty, a fow daye ago, whon worshippligg and offering sacrifico on the altar of Hwang Th, tho Yellowe Smperor, avd divine oripinator of agriculture, drank the 'cup of otise,' sod porformed the grand cercmony of uriot kneeling, and nine times putting hiz forelead to the grownd, It soems ho dia notmuoh Hike ith, for he has censured the master of the coremonien for giviog the words, ineel-knock:-lnesl-knock;-kneel-inoek, too alowig. He complalned sloo, that the man Who read the prayer bad buta poor voioo, and comzands that enother be ohosen whohas a strong, clear voice, And ta perfootly scquainted with the dedail of riter and ceremonies, On the 13th of May, the Emperor went in person to the altar of the BlaclDragon to pray for rais: and appoinsed acloct Budh priesta, with sovernl princeas and Lings, to from t wo partios, and Altermatoly lodge at tho templo, to contirive lleir aispalications till rairelould be granted. "

[^130]:    - In the lower degrees, the duty of meaponger, aa woll at that of regulating and conducting the ceromonien, is performud by two offieers who are denominated deacons, These, like the reet of the masouic drams, I fud to be astronomical characters, "The sacient Egyptiens, mays the eatrologer Julius Firmicus, (Actron. Lib, 2, c. 4.) divida osch aign of the zodine into three sectiona ; and each noction was under the direction of en fmaginery being whom they called Decan, or chiof of vea; mo that thare wore throd decane in a month, and thirty-six in a year. Now, these docans, who were also called goda (Thooi), regulated the deatisies of mankind, and ware placed partioularly in ceriain atars (Ruing, p. 297.) In the course of timo, atrifing variation in the orthography of the name of these ofloers, admitting of little or none in the prozanciation, has taken place. The dutiee of the decans and thoee of the descons are affioiently nilled to identify them. "Among the Grooks, thnse youtbe who cerred the tablea ware called diaconoi, demcone ; that la minioters, attondants." (Calmos" Dlot.)

[^131]:    - Cabal or Cabala is a rearet molenoo, profereed by the Eiobrow Rabbina, concernIng the allogorioal interpretation of tho Bible -Ediu,

    7 In the profece to the Mishos, we find thin tradition of the Jowh, explained an follows:-God not ooly dellvered the law to Moen on Mount Sinal, but the explenetion of It Ilkowlen; when Moess came down from the Mount and eatered into his tent

[^132]:    Aaron went to visit him; and Moeen aoquainted Aaron تrith the lawa he bad received froma God, togethar with the explanation of them ; afler this Aaron placed bimself at tho right hand of Moese, and Eleapar aud Ithamar, the sonn of Aamn, wore admitted, to whom Moees repeated what he had Juat beforo told to Asron: thees beling seated, the one on the right hasd, the other on tha laft hand of Moees; the weventy eldern of Irani, who componed the Eanbedrim, camo in ; and Mowes again deolared the amo laws to them, with the interpretation of them, an he had dono before to Aaron and him sons Lastly, all who pleased of the common people wore invited to enter, and Moece instructed them likewina in tho same manner as the reat: wo that Aaron heard four tirnee what Moess bad been taught by God npon Mount Sinai, Eloasarand Ithamar throe times, the eeventy elderi twice, and the people once. Moses afterwards rednced the laws which he had receivel into writing, but not the explanations of them; sheee be thought it suffelent to trust to the momories of the above mentioned persons, who, belng perfectly inatructed in them, delivared them to their children, and these again to thioirs from age to aga.

    * This circnmatanoe, es well as that of the pase-word, Rabboni, being the marue in the maet exceliant master's dogree ns in this, show, As notioed by Mr. Cole, the Intimato connection between the iwo dogrees.

[^133]:    - The god of day, poreonified to the saorod allegories, was subjected to all the devtinies of man; he hal hie oradle and ble tomb, under the names of Eencules, Bsochus, Oniris, tea. He wis an infent at the winter moletios, at the moment when the day began to inoressa; it was under thla form that hla imege was axpoeed in the anoient teraples, there to reseive the homsge of his adorers "Bocause thon, enga Macrobers, the disy boing the shortont, this god moomed to bo but a foeble ohild. This is the child of tho magaterien, he whooe imagotho Egyptian drew from the hottom of thelr sanctuaries every year on a fixed dsy." (Origine do tous los Calten, p. s18.) [^134]:    * Or rather a delty itenalf

[^135]:    - The lettor T (Tau) wha neod by captains and heralda, and aigned on their namee, Who remained alive after a bertle; as the letter Thots wat uned as a mark of death, 40 wis T of life,-(Balley.)

[^136]:    * Voleey, in taking notice of some customs of the Hebrewn, which are also atrictly ramonic, obeerves:-"In vain did Moses proearibe the worihip of the symbola wbich provailed in lower Egypt and Phenicia; in vain did he wiah to blot from bis religion every thing which had relation to the stars: many tritit call them to mind in epito of all ho has dona." He citen as inatances, "The waven luminariea or planets of the great candlestlek; the twolve stones or signs in the arim of the high prient, and the reast of the two equinoxes, antranose and gates of the two hemispheres,"

[^137]:    * In the Beat, any person praforred o honours, bore a soeptre or atall of hobour, And momotimes a plato of gold oa the forehoed, aelled Cadoeh, or Caduceas, aigulfying , saared permor, (See supra)

[^138]:    - See Humbolat's Reworahes in Ambries, vol. 1. p. 86.

[^139]:    * Osfris, Bucchus, Cronus, Pluto, and Hercnleg, are all equally the san,-(Faber Dis. on the Mynt. of the Cabirl, v. 1, p. 17.)

[^140]:    - Nimrod, which signifies a robel, In tho Jowish and Chaldean Innguage, was the name given him by Moese; but in Chaldea bo was called Belus, which signiffed lord; and aflorwarta was worshipped as e god, by many nations, under the name of Bel; or Banl, and became the Bacchua of the sneienta, or Bar Chus, the won of Chas
    $\dagger$ This is a sheer honx upon the order. Tho real intention, es in the myateries and freemneonry, in to represent man in a sinte of naturm, before the arta, and particularly that of nuaking clothing, were invented. The caudidate boforo inftistion ia looked upur as an uncultivated asvago; kin initiution civilixes aud rogenerates him.-Edih

[^141]:    * The Freemasons, at the rorival of the oriler in 1717, weuld have done well to have adupted this oath, inalead of thoee of Hiram-manonry,-Edit,

[^142]:    * On laging the foundation of the Royel Infirmary of Edinburgh in 1738, each of the brethrea in their turns gave threo atrokse upon the corner stons with an ircu mallet which wan snooeeded by thres ciarione of the trumpet, thres husras, and three olape of hande.-(8oe Lawries p. 155.)-Edit.

[^143]:    - Dr. Wrishanpt has made a declaration rather too bold in the openiog of bla viem In respect to freemaroary. He might powibly bo juetifeble in enylog that the arigia of the oriler had not been diecover. : bat that it oannot be, remalna to be proved He, however, had not, perhape, perused the Oerman work, notioxd in the introdoction of this volume ; the author of which, I whil venture to say, had found the right olne to lead to a development of the mocrot. Whother it conducted bim to a result astiafactory to hie renders, or whether his book fell into the hande of thowe "who can underitund," I know not,

[^144]:    - Ransculotte literally means without mall olothes. It mas bentowed in derision by the well dresed royaliats upon the republicans of Pranos; who anknowledged its applicablity, avd esaumed the term, saying ourcondition in the result of the iniquitous sputom of government, which has hitherto been oonduoted for the benetit of a fow, to the degradation and dobesoment of the great mase of the people. The French republicans wore also atyled Jacobine, whiloh aroee marely from the elrcurastance of thefr meetinge being beld in a monsatery formerly belongiog to an order of monks thus denominatod. And thia name. in forelgn countries, hae been mosde ro mean nomething awfully atrooious. The apontate, Cheothem, attempted to play thin pitiful ganie, by stylligg the repablioans of Now Fork, Martlingmen, in connequence of their nieeting at a house kept by Abraham Martling. Buoh conteraptible roiorta show the bawnons of the anuse interded to be benefitod by them.

[^145]:    "Thrioe, thrioo I pour, and tbrice ropeat my charma I Verbsque ter dixit : Thrice he repente the worda (Ovid.) The colurs in throo knots unita." (Virg.)

[^146]:    TET EAD
