PREFACE TO THE SECOND AND REVISED EDITION.

THE original edition of this book was edited by M. M. C. and published in 1885, but without a preface. The work consists of articles selected from the first five volumes of *The Theosophist* which was then edited by H. P. Blavatsky. In revising the present edition it was contemplated to omit several articles which fall below the level of the rest of the work. This would, however, have spoilt the new edition for reference purposes, hence no omission has been made. The revision consists for the most part of a consistent transliteration of Sanskrit terms and of a generally uniform style; a fuller Index has been added, and in a few cases imperfect English has been corrected.

G. R. S. M.

LONDON, 1894.

THE "ELIXIR OF LIFE."

FROM A CHELÂ'S* DIARY.

And Enoch walked with the Elohim, and the Elohim took him.—*Genesis*.

INTRODUCTION.

[The curious information—for whatsoever else the world may think of it, it will doubtless be acknowledged to be that—contained in the article that follows, merits a few words of introduction. The details given in it on the subject of what has always been considered as one of the darkest and most strictly guarded of the mysteries of initiation into Occultism—from the days of the Rishis until those of the Theosophical Society—came to the knowledge of the author in a way that would seem to the ordinary run of Europeans strange and supernatural. He, himself, however, we may assure the reader, is a most thorough disbeliever in the *supernatural*, though he has learned too much to limit the capabilities of the *natural* as some do. Further, he has to make the following confession of his own belief. It will be apparent, from a careful perusal of the facts, that if the matter be really as stated herein, the author cannot himself be an adept of high grade, as the article in such a case *would never have been written*. Nor does he pretend to be one. He is, or rather was, for a few years a humble Chelâ. Hence, the converse must consequently be also true, that as regards the higher stages of the mystery he can have no personal experience, but speaks of it only as a close observer left to his own surmises—and no more. He may, therefore, boldly state that during, and notwithstanding, his unfortunately rather too short stay with some adepts, he has by actual experiment and observation verified some of the less transcendental or incipient parts of the "course." And, though it will be impossible for him to give positive testimony as to what lies beyond, he may yet mention that all his own course of study, training and experience, long, severe and dangerous as it has often been, leads

* A Chelâ is the pupil and disciple of an initiated Guru or Master.—Ed.

him to the conviction that everything is really as stated, save some details *purposely veiled*. For causes which cannot be explained to the public, he himself may be unable or unwilling to use the secret he has gained access to. Still he is permitted by one to whom all his reverential affection and gratitude are due—his last Guru—to divulge for the benefit of science and man, and specially for the good of those who are courageous enough to personally make the experiment, the following astounding particulars of the occult methods for prolonging life to a period far beyond the common.—G. M.]

PROBABLY one of the first considerations which move the worldly-minded at present to solicit initiation into Theosophy is the belief, or hope, that, immediately on joining, some extraordinary advantage over the rest of mankind will be conferred upon the candidate. Some even think that the ultimate result of their initiation will perhaps be exemption from that dissolution which is called the common lot of mankind. The traditions of the "Elixir of Life," said to be in the possession of Kabalists and Alchemists, are still cherished by students of Mediæval Occultism—in Europe. The allegory of the Ab-è Hyat or Water of Life, is still credited as a fact by the degraded remnants of the Asiatic esoteric sects ignorant of the *real* Great Secret. The "pungent and fiery essence," by which Zanonî renewed his existence, still fires the imagination of modern visionaries as a possible scientific discovery of the future.

Theosophically, though the fact is distinctly declared to be true, the above-named conceptions of the mode of procedure leading to the realization of the fact, are *known* to be false. The reader may or may not believe it; but as a matter of fact, Theosophical Occultists claim to have communication with (living) Intelligences possessing an infinitely wider range of observation than is contemplated even by the loftiest aspirations of modern science, all the present "Adepts" of Europe and America—dabblers in the Kabalah—notwithstanding. But far even as those superior Intelligences have investigated (or, if preferred, are alleged to have investigated), and remotely as they may have searched by the help of inference and analogy, even They have failed to discover in the Infinity anything permanent but—Space. *All is subject to change*. Reflection, therefore, will easily suggest to the reader the further logical inference that in a universe which is essentially impermanent in its conditions, nothing can confer permanency. Therefore, no

possible substance, even if drawn from the depths of Infinity; no imaginable combination of drugs, whether of our earth or any other, though compounded by even the Highest Intelligence; no system of life or discipline though directed by the sternest determination and skill, could possibly produce Immutability. For in the universe of solar systems, wherever and however investigated, Immutability necessitates "Non-Being" in the physical sense given it by the Theists—Non-Being which is *nothing* in the narrow conceptions of *Western* Religionists—a *reductio ad absurdum*. This is a gratuitous insult even when applied to the Pseudo-Christian or ecclesiastical Jehovite idea of God.

Consequently, it will be seen that the common ideal conception of "Immortality" is not only essentially wrong, but a physical and metaphysical impossibility. The idea, whether cherished by Theosophists or Non-Theosophists, by Christians or Spiritualists, by Materialists or Idealists, is a chimerical illusion. But the actual prolongation of human life is possible for a time so long as to appear miraculous and incredible to those who regard our span of existence as necessarily limited to at most a couple of hundred years. We may break, as it were, the shock of death, and instead of dying, change a sudden plunge into darkness to a transition into a brighter light. And this may be made so gradual that the passage from one state of existence to another shall have its friction minimized so as to be practically imperceptible. This is a very different matter, and quite within the reach of Occult Science. In this, as in all other cases, means properly directed will gain their ends, and causes produce effects. Of course, the only question is, what are these causes, and how, in their turn, are they to be produced. To lift, as far as may be allowed, the veil from this aspect of Occultism, is the object of the present paper.

We must premise by reminding the reader of two Theosophic doctrines, constantly inculcated in *Isis Unveiled* and in other mystic works; namely, (*a*) that ultimately the Kosmos is *one*—one under infinite variations and manifestations, and (*b*) that the so-called *man* is a "compound being"—composite not only in the exoteric scientific sense of being a congeries of living so-called material units, but also in the esoteric sense of being a succession of seven forms or parts of itself, interblended with each other. To put it more clearly we might say that the more ethereal forms are but duplicates of the same aspect—each finer one lying within the inter-atomic spaces of the next grosser. We would have the reader understand that these are no subtleties, no

“spiritualities” at all in the Christo-spiritualistic sense. In the actual man reflected in your mirror are really several men, or several parts of one composite man; each the exact counterpart of the other, but the “atomic conditions” (for want of a better word) of each of which are so arranged that its atoms interpenetrate those of the next “grosser” form. It does not, for our present purpose, matter how the Theosophists, Spiritualists, Buddhists, Kabalists, or Vedântists, count, separate, classify, arrange or name these, as that war of terms may be postponed to another occasion. Neither does it matter what relation each of these men has to the various “elements” of the Kosmos of which he forms a part. This knowledge, though of vital importance in other respects, need not be explained or discussed now. Nor does it much more concern us that the scientists deny the existence of such an arrangement, because their instruments are inadequate to make their senses perceive it. We will simply reply, “Get better instruments and keener senses, and *eventually* you will.”

All we have to say is that if you are anxious to drink of the “Elixir of Life,” and live a thousand years or so, you must take our word for the matter at present, and proceed on the assumption. For esoteric science does not give the faintest possible hope that the desired end will ever be attained by any other way; while modern, or so-called exact science—laughs at it.

So, then, we have arrived at the point where we have determined—literally, *not* metaphorically—to crack the outer shell known as the mortal coil or body, and hatch out of it, clothed in our next. This “next” is not spiritual, but only a more ethereal form. Having by a long training and preparation adapted it for a life in this atmosphere, during which time we have gradually made the outward shell to die off through a certain process (hints of which will be found further on) we have to prepare for this physiological transformation.

How are we to do it? In the first place we have the actual, visible, material body—man, so called; though, in fact, but his outer shell—to deal with. Let us bear in mind that science teaches us that in about every seven years we *change skin* as effectually as any serpent; and this so gradually and imperceptibly that, had not science after years of unremitting study and observation assured us of it, no one would have had the slightest suspicion of the fact.

We see, moreover, that in process of time any cut or lesion upon the body, however deep, has a tendency to repair the loss and reunite; a

piece of lost skin is very soon replaced by another. Hence, if a man, partially flayed alive, may sometimes survive and be covered with a new skin, so our astral, vital body—the fourth of the seven (having attracted and assimilated to itself the second) which is so much more ethereal than the physical one—may be made to harden its particles to the atmospheric changes. The whole secret is to succeed in evolving it out, and separating it from the visible; and while its generally invisible atoms proceed to concrete themselves into a compact mass, to gradually get rid of the old particles of our visible frame so as to make them die and disappear before the new set has had time to evolve and replace them. . . . We can say no more. The Magdalene is not the only one who could be accused of having "seven spirits" in her, though men who have a lesser number of spirits (what a misnomer that word!) in them, are not few or exceptional; they are the frequent failures of nature—the incomplete men and women.* Each of these has in turn to survive the preceding and more dense one, and then *die*. The exception is the sixth when absorbed into and blended with the *seventh*. The Dhātu† of the old Hindû physiologist had a dual meaning, the esoteric side of which corresponds with the Tibetan Zung (seven principles of the body).

We Asiatics have a proverb, probably handed down to us, and by the Hindûs repeated ignorantly as to its esoteric meaning. It has been known ever since the old Rishis mingled familiarly with the simple and noble people they taught and led on. The Devas had whispered into every man's ear, *Thou only*—if thou wilt—art "immortal." Combine with this the saying of a Western author that if any man could just realize for an instant, that he had to die some day, he would die that instant. The Illuminated will perceive that between these two sayings, rightly understood, stands revealed the whole secret of longevity. We only die when our will ceases to be strong enough to make us live. In the majority of cases, death comes when the torture and vital exhaustion accompanying a rapid change in our physical conditions becomes so intense as to weaken, for one single instant, our "clutch on life," or the tenacity of the will to exist. Till then, however severe may be the disease, however sharp the pang, we are only sick or wounded, as the

* This is not to be taken as meaning that such persons are thoroughly destitute of some one or several of the seven principles: a man born without an arm has still its ethereal counterpart; but that they are so latent that they cannot be developed, and consequently are to be considered as non-existing.—ED. *Theos*.

† Dhātu, the seven principal substances of the human body—chyle, flesh, blood, fat, bones, marrow, semen.

case may be. This explains the cases of sudden deaths from joy, fright, pain, grief, or such other causes. The sense of a life-task consummated, of the worthlessness of one's existence, *if strongly realized*, produces death as surely as poison or a rifle-bullet. On the other hand, a stern determination to continue to live, has, in fact, carried many through the crises of the most severe diseases, in perfect safety.

First, then, must be the determination—the *will*—the conviction of certainty, to survive and continue.* Without that, all else is useless. And to be efficient for the purpose, it must be, not only a passing resolution of the moment, a single fierce desire of short duration, but *a settled and continued strain, as nearly as can be continued and concentrated without one single moment's relaxation*. In a word, the would-be "Immortal" must be on his watch night and day, guarding self against—himself. To live—to live—to live—must be his unswerving resolve. He must as little as possible allow himself to be turned aside from it. It may be said that this is the most concentrated form of selfishness; that it is utterly opposed to our Theosophic professions of benevolence, and disinterestedness, and regard for the good of humanity. Well, viewed in a short-sighted way, it is so. But to do good, as in everything else, a man *must have* time and materials to work with, and this is a necessary means to the acquirement of powers by which infinitely more good can be done than without them. When these are once mastered, the opportunities to use them will arrive, for there comes a moment when further watch and exertion are no longer needed—the moment when the turning-point is safely passed. For the present as we deal with aspirants and not with advanced Chelâs, in the first stage

* Colonel Olcott has epigrammatically explained the creative or rather the re-creative power of the will, in his *Buddhist Catechism*. He there shows—of course, speaking on behalf of the Southern Buddhists—that this *will to live*, if not extinguished in the present life, leaps over the chasm of bodily death, and re-combines the Skandhas, or groups of qualities that made up the individual into a new personality. Man is, therefore, reborn as the result of his own unsatisfied yearning for objective existence. Colonel Olcott puts it in this way:

Q. 123. . . . *What is that, in man, which gives him the impression of having a permanent individuality?*

A. Tañhâ, or the unsatisfied desire for existence. The being having done that for which he must be rewarded or punished in future, and having Tañhâ, will have a rebirth through the influence of Karma.

Q. 124. *What is it that is reborn?*

A. A new aggregation of Skandhas, or individuality, caused by the last yearning of the dying person.

Q. 128. *To what cause must we attribute the differences in the combination of the Five Skandhas which makes every individual differ from every other individual?*

A. To the Karma of the individual in the next preceding birth.

Q. 129. *What is the force or energy that is at work, under the guidance of Karma, to produce the new being?*

A. Tañhâ—the "*will to live*."

a determined, dogged resolution, and an enlightened concentration of self on self, are all that is absolutely necessary. It must not, however, be considered that the candidate is required to be unhuman or brutal in his negligence of others. Such a recklessly selfish course would be as injurious to him as the contrary one of expending his vital energy on the gratification of his physical desires. All that is required from him is a purely negative attitude. Until the turning-point is reached, he must not "lay out" his energy in lavish or fiery devotion to any cause, however noble, however "good," however elevated.* Such, we can solemnly assure the reader, would bring its reward in many ways—perhaps in another life, perhaps in this world, but it would tend to shorten the existence it is desired to preserve, as surely as self-indulgence and profligacy. That is why very few of the truly great men of the world (of course, the unprincipled adventurers who have applied great powers to bad uses are out of the question)—the martyrs, the heroes, the founders of religions, the liberators of nations, the leaders of reforms—ever became members of the long-lived "Brotherhood of Adepts" who were by some and for long years accused of *selfishness*. (And that is also why the Yogis, and the Fakirs of modern India—most of whom are acting now but on the *dead-letter* tradition, are required if they would be considered living up to the principles of their profession—to appear *entirely dead* to every inward feeling or emotion.) Notwithstanding the purity of their hearts, the greatness of their aspirations, the disinterestedness of their self-sacrifice, *they could not live for they had missed the hour*. They may at times have exercised powers which the world called miraculous; they may have electrified man and subdued nature by fiery and self-devoted will; they may have been possessed of a so-called superhuman intelligence; they may have even had knowledge of, and communion with, members of our own Occult Brotherhood, but, having deliberately resolved to devote their vital energy to the welfare of others, rather than to themselves, they have surrendered life; and, when perishing on the cross or the scaffold, or falling, sword in hand, upon the battle-field, or sinking exhausted after a successful consummation of the life-object, on death-beds in their

* On page 151 of Mr. Sinnett's *Occult World*, the author's much abused, and still more doubted correspondent assures him that none yet of his "degree are like the stern hero of Bulwer's" *Zanoni* . . . "the heartless morally dried up mummies some would fancy us to be"; . . . and adds that few of them "would care to play the part in life of a desiccated pansy between the leaves of a volume of solemn poetry." But our Adept omits saying that *one or two degrees higher*, and he will have to submit for a period of years to such a mummifying process, unless, indeed, he would voluntarily give up a life-long labour and—die.—ED.

chambers, they have all alike had to cry out at last: "Eli, Eli, lama sabachthani!"

So far, so good. But, given the will to live, however powerful, we have seen that, in the ordinary course of mundane life, the throes of dissolution cannot be checked. The desperate, and again and again renewed struggle of the kosmic elements to proceed with a career of change despite the will that is checking them, like a pair of run-away horses struggling against the determined driver holding them in, are so cumulatively powerful, that the utmost efforts of the *untrained* human will acting within an *unprepared* body become ultimately useless. The highest intrepidity of the bravest soldier; the intensest desire of the yearning lover; the hungry greed of the unsatisfied miser; the most undoubting faith of the sternest fanatic; the practised insensibility to pain of the hardest red Indian brave or half-trained Hindû Yogî; the most deliberate philosophy of the calmest thinker—all alike fail at last. Indeed, sceptics will allege in opposition to the verities of this article that, as a matter of experience, it is often observed that the mildest and most irresolute of minds and the weakest of physical frames are often seen to resist "death" longer than the powerful will of the high-spirited and obstinately-egotistic man, and the iron frame of the labourer, the warrior and the athlete. In reality, however, the key to the secret of these apparently contradictory phenomena is the true conception of the very thing we have already said. If the physical development of the gross "outer shell" proceeds on parallel lines and at an equal rate with that of the will, it stands to reason that no advantage *for the purpose of overcoming it*, is attained by the latter. The acquisition of improved breechloaders by one modern army confers no absolute superiority if the enemy also becomes possessed of them. Consequently it will be at once apparent, to those who think on the subject, that much of the training by which what is known as "a powerful and determined nature," perfects itself for its own purpose on the stage of the visible world, necessitating and *being useless* without a parallel development of the "gross" and so-called animal frame, is, in short, neutralized, for the purpose at present treated of, by the fact that its own action has armed the enemy with weapons equal to its own. The *force* of the impulse to dissolution is rendered equal to the will to oppose it; and being cumulative, subdues the will-power and triumphs at last. On the other hand, it may happen that an apparently weak and vacillating will-power residing in a weak and undeveloped physical

frame, may be so *reinforced* by some unsatisfied desire—the Ichchhâ (wish), as it is called by the Indian Occultists (for instance, a mother's heart-yearning to remain and support her fatherless children)—as to keep down and vanquish, for a short time, the physical throes of a body to which it has become temporarily superior.

The whole *rationale*, then, of the first condition of continued existence in this world, is (a) the development of a will so powerful as to overcome the hereditary (in a Darwinian sense) tendencies of the atoms composing the "gross" and palpable animal frame, to hurry on at a particular period in a certain course of cosmic change; and (b) to so weaken the concrete action of that animal frame as to make it more amenable to the power of the will. To defeat an army, *you must demoralize and throw it into disorder.*

To do this then, is the real object of all the rites, ceremonies, fasts, "prayers," meditations, initiations and procedures of self-discipline enjoined by various esoteric Eastern sects, from that course of pure and elevated aspiration which leads to the higher phases of Real Adeptism, down to the fearful and disgusting ordeals which the adherent of the "Left-hand Road" has to pass through, all the time maintaining his equilibrium. The procedures have their merits and their demerits, their separate uses and abuses, their essential and non-essential parts, their various veils, mummeries, and labyrinths. But in all, the result aimed at is reached, if by different processes. The will is strengthened, encouraged and directed, and the elements opposing its action are *demoralized*. Now, to any one who has thought out and connected the various evolution theories, as taken, not from any occult source, but from the ordinary scientific manual accessible to all—from the hypothesis of the latest variation in the habits of species; say the acquisition of carnivorous habits by the New Zealand parrot, for instance—to the farthest glimpses backwards into Space and Eternity afforded by the "fire mist" doctrine, it will be apparent that they all rest on one basis. That basis is, that the impulse once given to a hypothetical unit has a tendency to continue; and consequently, that anything "done" by something at a certain time and certain place tends to repeat itself at other times and places.

Such is the admitted *rationale* of heredity and atavism. That the same things apply to our ordinary conduct is apparent from the notorious ease with which "habits"—bad or good, as the case may be—are acquired, and it will not be questioned that this applies,

as a rule, as much to the moral and intellectual, as to the physical world.

Furthermore, history and science teach us plainly that certain physical habits conduce to certain moral and intellectual results. There never yet was a conquering nation of vegetarians. Even in the old Âryan times, we do not learn that the very Rishis, from whose lore and practice we gain the knowledge of Occultism, ever interdicted the Kshatriya (military) caste from hunting or a carnivorous diet. Filling, as they did, a certain place in the body politic in the actual condition of the world, the Rishis as little thought of interfering with them, as of restraining the tigers of the jungle from their habits. That did not affect what the Rishis did themselves.

The aspirant to longevity then must be on his guard against *two dangers*. He must beware especially of impure and animal* thoughts. For science shows that thought is dynamic, and the thought-force evolved by nervous action expanding outwardly, must affect the molecular relations of the physical man. The *inner men*,† however sublimated their organism may be, are still composed of actual, *not hypothetical*, particles, and are still subject to the law that an "action" has a tendency to repeat itself; a tendency to set up analogous action in the grosser "shell" they are in contact with, and concealed within.

And, on the other hand, certain actions have a tendency to produce actual physical conditions unfavourable to pure thought, hence to the state required for developing the supremacy of the inner man.

To return to the practical process. A normally healthy mind, in a normally healthy body, is a good starting-point. Though exceptionally powerful and self-devoted natures may sometimes recover the ground lost by mental degradation or physical misuse, by employing proper means, under the direction of unswerving resolution, yet often things may have gone so far that there is no longer stamina enough to sustain the conflict sufficiently long to perpetuate this life; though what in Eastern parlance is called the "merit" of the effort will help to ameliorate conditions and improve matters in another.

However this may be, the prescribed course of self-discipline commences here. It may be stated briefly that its essence is a course of moral, mental, and physical development, carried on in parallel lines

* In other words, the thought tends to provoke the deed.—G. M.

† We use the word in the plural, reminding the reader that, according to our doctrine, man is septenary.—G. M.

—one being useless without the other. The physical man must be rendered more ethereal and sensitive; the mental man more penetrating and profound; the moral man more self-denying and philosophical. And it may be mentioned that all sense of restraint—even if self-imposed—is useless. Not only is all "goodness" that results from the compulsion of physical force, threats, or bribes (whether of a physical or so-called "spiritual" nature) absolutely useless to the person who exhibits it, its hypocrisy tending to poison the moral atmosphere of the world, but the desire to be "good" or "pure," to be efficacious must be spontaneous. It must be a self-impulse from within, a real preference for something higher, not an abstention from vice because of fear of the law; not a chastity enforced by the dread of "public opinion"; not a benevolence exercised through love of praise or dread of consequences in a hypothetical "future life."*

It will be seen now in connection with the doctrine of the tendency to the renewal of action, before discussed, that the course of self-discipline recommended as the only road to longevity by Occultism is *not* a "visionary" theory dealing with vague "ideas," but actually a scientifically devised system of drill. It is a system by which each particle of the several "men" composing the septenary individual receives an impulse, and a habit of doing what is necessary for certain purposes of its own free-will and with "pleasure." Every one must be practised and perfect in a thing to do it with pleasure. This rule especially applies to the case of the development of *man*. "Virtue" may be very good in its way—it may lead to the grandest results, But to become efficacious it has to be practised cheerfully, not with reluctance or pain. As a consequence of the above consideration the candidate for longevity at the commencement of his career must begin to eschew his physical desires, not from any sentimental theory of right or wrong, but for the following good reason. As, according to a well-known and now established scientific theory, his visible material frame is always renewing its particles; he will, while abstaining from the gratification of his desires, reach the end of a certain *period* during which those particles which composed the man of vice, and which were given a bad predisposition, will have departed. At the same time, the disuse of such functions will tend to obstruct the entry, in place of the old particles, of new particles having a tendency to repeat the said acts.

* Colonel Olcott clearly and succinctly explains the Buddhistic doctrine of Merit or Karma, in his *Buddhist Catechism* (Question 83).—G. M.

And while this is the *particular* result as regards certain "vices," the general result of an abstention from "gross" acts will be (by a modification of the well-known Darwinian law of atrophy by non-usage) to diminish what we may call the "relative" density and coherence of the outer shell (as a result of its less-used molecules); while the diminution in the quantity of its actual constituents will be "made up" (if tried by scales and weights) by the increased admission of more ethereal particles.

What physical desires are to be abandoned and in what order? First and foremost, he must give up alcohol in all forms; for while it supplies no nourishment, nor any direct pleasure (beyond such sweetness or fragrance as may be gained in the taste of wine, etc., to which alcohol, in itself, is non-essential), to even the grossest elements of the "physical" frame, it induces a violence of action, a rush so to speak, of life, the stress of which can only be sustained by very dull, gross, and dense elements, and which, by the operation of the well-known law of reaction (in commercial phrase, "supply and demand") tends to summon them from the surrounding universe, and therefore directly counteracts the object we have in view.

Next comes meat-eating, and for the very same reason, in a minor degree. It increases the rapidity of life, the energy of action, the violence of passions. It may be good for a hero who has to fight and die, but not for a would-be sage who has to exist and . . .

Next in order come the sexual desires; for these, in addition to the great diversion of energy (vital force) into other channels, in many different ways, beyond the primary one (as, for instance, the waste of energy in expectation, jealousy, etc.), are direct attractions to a certain gross quality of the original matter of the universe, simply because the most pleasurable physical sensations are only possible at that stage of density. Alongside with and extending beyond all these and other gratifications of the senses (which include not only those things usually known as "vicious," but all those which, though ordinarily regarded as "innocent," have yet the disqualification of ministering to the pleasures of the body—the most harmless to others and the least "gross" being the criterion for those to be last abandoned in each case)—must be carried on the moral purification.

Nor must it be imagined that "austerities" as commonly understood can, in the majority of cases, avail much to hasten the "etherealizing" process. That is the rock on which many of the Eastern esoteric sects

have foundered, and the reason why they have degenerated into degrading superstitions. The Western monks and the Eastern Yogis, who think they will reach the apex of powers by concentrating their thought on their navel, or by standing on one leg, are practising exercises which serve no other purpose than to strengthen the will-power, which is sometimes applied to the basest purposes. These are examples of this one-sided and dwarf development. It is no use to fast *as long as you require food*. The ceasing of desire for food without impairment of health is the sign which indicates that it should be taken in lesser and ever decreasing quantities until the extreme limit compatible with life is reached. A stage will be finally attained where only water will be required.

Nor is it of any use for this particular purpose of longevity to abstain from immorality so long as you are craving for it in your heart; and so on with all other unsatisfied inward cravings. To get rid of the inward desire is the essential thing, and to mimic the real thing without it is barefaced hypocrisy and useless slavery.

So it must be with the moral purification of the heart. The "basest" inclinations must go first—then the others. First avarice, then fear, then envy, worldly pride, uncharitableness, hatred; last of all ambition and curiosity must be abandoned successively. The strengthening of the more ethereal and so-called "spiritual" parts of the man must go on at the same time. Reasoning from the known to the unknown, meditation must be practised and encouraged. Meditation is the inexpressible yearning of the inner *man* to "go out towards the infinite," which in the olden time was the real meaning of adoration, but which has now no synonym in the European languages, because the thing no longer exists in the West, and its name has been vulgarized to the make-believe shams known as prayer, glorification, and repentance. Through all stages of training the equilibrium of the consciousness—the assurance that all *must* be right in the Kosmos, and therefore with *you*, a portion of it—must be retained. The process of life must not be hurried but retarded, if possible; to do otherwise may do good to others—perhaps even to yourself in other spheres, but it will hasten your dissolution in this.

Nor must the externals be neglected in this first stage. Remember that an Adept, though "existing" so as to convey to ordinary minds the idea of his being immortal, is not also invulnerable to agencies from without. The training to prolong life does not, in itself, secure one from accidents. As far as any physical preparation goes, the sword

may still cut, the disease enter, the poison disarrange. This case is very clearly and beautifully put in *Zanoni*, and it is correctly put and must be so, unless all "adeptism" is a baseless lie. The Adept may be more secure from ordinary dangers than the common mortal, but he is so by virtue of the superior knowledge, calmness, coolness and penetration which his lengthened existence and its necessary concomitants have enabled him to acquire; not by virtue of any preservative power in the process itself. He is secure as a man armed with a rifle is more secure than a naked baboon; not secure in the sense in which the Deva (god) was supposed to be securer than a man.

If this is so in the case of the high Adept, how much more necessary is it that the neophyte should be not only protected but that he himself should use all possible means to ensure for himself the necessary duration of life to complete the process of mastering the phenomena we call death! It may be said, why do not the higher Adepts protect him? Perhaps they *do* to some extent, but the child must learn to walk alone; to make him independent of his own efforts in respect to safety, would be destroying one element necessary to his development—the sense of responsibility. What courage or conduct would be called for in a man sent to fight when armed with irresistible weapons and clothed in impenetrable armour? Hence the neophyte should endeavour, as far as possible, to fulfil every true canon of sanitary law as laid down by modern scientists. Pure air, pure water, pure food, gentle exercise, regular hours, pleasant occupations and surroundings, are all, if not indispensable, at least serviceable to his progress. It is to secure these, at least as much as silence and solitude, that the Gods, Sages, Occultists of all ages have retired as much as possible to the quiet of the country, the cool cave, the depths of the forest, the expanse of the desert, or the heights of the mountains. Is it not suggestive that the Gods have always loved the "high places"; and that in the present day the highest section of the Occult Brotherhood on earth inhabits the highest mountain plateaux of the earth?*

Nor must the beginner disdain the assistance of medicine and good medical regimen. He is still an ordinary mortal, and he requires the aid of an ordinary mortal.

* The stern prohibition to the Jews to serve "their gods upon the high mountains and upon the hills" is traced back to the unwillingness of their ancient elders to allow people in most cases unfit for adeptship to choose a life of celibacy and asceticism, or in other words, to pursue adeptship. This prohibition had an esoteric meaning before it became the prohibition, incomprehensible in its dead-letter sense: for it is not India alone whose sons accorded divine honours to the *Wise Ones*, but all nations regarded their Adepts and Initiates as divine.—G. M.

"Suppose, however, all the conditions required, or which will be understood as required (for the details and varieties of treatment requisite are too numerous to be detailed here), are fulfilled, what is the next step?"—the reader will ask. Well, if there have been no back-slidings or remissness in the procedure indicated, the following physical results will follow

First the neophyte will take more pleasure in things spiritual and pure. Gradually gross and material occupations will become not only uncraved for or forbidden, but simply and literally repulsive to him. He will take more pleasure in the simple sensations of Nature—the sort of feeling one can remember to have experienced as a child. He will feel more light-hearted, confident, happy. Let him take care the sensation of renewed youth does not mislead, or he will yet risk a fall into his old baser life and even lower depths. "Action and reaction are equal."

Now the desire for food will begin to cease. Let it be left off gradually—no fasting is required. Take what you feel you require. The food craved for will be the most innocent and simple. Fruit and milk will usually be the best. Then, as till now you have been simplifying the quality of your food, gradually—very gradually—as you feel capable of it, diminish the quantity. You will ask: "Can a man exist without food?" No, but before you mock, consider the character of the process alluded to. It is a notorious fact that many of the lowest and simplest organisms have no excretions. The common guinea-worm is a very good instance. It has rather a complicated organism, but it has no ejaculatory duct. All it consumes—the poorest essences of the human body—is applied to its growth and propagation. Living as it does in human tissue, it passes no digested food away. The human neophyte, at a certain stage of his development, is in a somewhat analogous condition, with this difference or differences, that he *does* excrete, but it is through the pores of his skin, and by those too enter other etherealized particles of matter to contribute towards his support.* Otherwise, all the food and drink is sufficient only to keep in equilibrium those "gross" parts of his physical body which still remain to repair their cuticle-waste through the medium of the blood. Later on, the process of cell-development in his frame will undergo a change; a change for the better, the opposite of that in disease for the worse—he will become *all* living and sensitive, and will derive nourishment from the Ether (Âkâsha). But that epoch for our neophyte is yet far distant.

* He is in a state similar to the physical state of a fœtus before birth into the world.—G. M.

Probably, long before that period has arrived, other results, no less surprising than incredible to the uninitiated, will have ensued to give our neophyte courage and consolation in his difficult task. It would be but a truism to repeat what has been alleged (in ignorance of its real *rationale*) by hundreds and hundreds of writers as to the happiness and content conferred by a life of innocence and purity. But often at the very commencement of the process some real physical result, unexpected and unthought of by the neophyte, occurs. Some lingering disease, hitherto deemed hopeless, may take a favourable turn; or he may develop healing mesmeric powers himself; or some hitherto unknown sharpening of his senses may delight him. The *rationale* of these things is, as we have said, neither miraculous nor difficult of comprehension. In the first place, the sudden change in the direction of the vital energy (which, whatever view we take of it and its origin, is acknowledged by all schools of philosophy as most recondite, and as the motive power) must produce results of some kind. In the second, Theosophy shows, as we said before, that a man consists of several "men" pervading each other, and on this view (although it is very difficult to express the idea in language) it is but natural that the progressive etherealization of the densest and most gross of all should leave the others literally more at liberty. A troop of horses may be blocked by a mob and have much difficulty in fighting its way through; but if every one of the mob could be changed suddenly into a ghost, there would be little to retard it. And as each interior entity is more rare, active, and volatile than the outer, and as each has relation with different elements, spaces, and properties of the Kosmos which are treated of in other articles on Occultism, the mind of the reader may conceive—though the pen of the writer could not express it in a dozen volumes—the magnificent possibilities gradually unfolded to the neophyte.

Many of the opportunities thus suggested may be taken advantage of by the neophyte for his own safety, amusement, and the good of those around him; *but the way in which* he does this is one adapted to his fitness—a part of the ordeal he has to pass through, and misuse of these powers will certainly entail the loss of them as a natural result. The Ichchhâ (or desire) evoked anew by the vistas they open up will retard or throw back his progress.

But there is another portion of the Great Secret to which we must allude, and which is *now*, for the first, in a long series of ages, allowed to be given out to the world, as the hour for it is come.

The educated reader need not be again reminded that one of the great discoveries which has immortalized the name of Darwin is the law that an organism has always the tendency to repeat, at an analogous period in its life, the action of its progenitors, the more surely and completely in proportion to their proximity in the scale of life. One result of this is, that, in general, organized beings usually die at a period (on an average) the same as that of their progenitors. It is true that there is a great difference between the *actual* ages at which individuals of any species die. Disease, accidents and famine are the main agents in causing this. But there is, in each species, a well-known limit within which the race-life lies, and none are known to survive beyond it. This applies to the human species as well as any other. Now, supposing that every possible sanitary condition had been complied with, and every accident and disease avoided by a man of ordinary frame, in some particular case there would still, as is known to medical men, come a time when the particles of the body would feel the hereditary tendency to do that which leads inevitably to dissolution, *and would obey it*. It must be obvious to any reflecting man that, if by *any procedure* this critical climacteric could be once thoroughly passed over, the subsequent danger of "death" would be proportionally less as the years progressed. Now this, which no ordinary and unprepared mind and body can do, is possible sometimes for the will and the frame of one who has been specially prepared. There are fewer of the grosser particles present to feel the hereditary bias—there is the assistance of the reinforced "interior men" (whose normal duration is always greater even in natural death) to the visible outer shell, and there is the drilled and indomitable will to direct and wield the whole.*

From that time forward the course of the aspirant is clearer. He has conquered the "Dweller of the Threshold"—the hereditary enemy of his race, and, though still exposed to ever-new dangers in his progress towards Nirvâna, he is flushed with victory, and with new confidence and new powers to second it, can press onwards to perfection.

For, it must be remembered, that nature everywhere acts by law, and

* In this connection we may as well show what modern science, and especially *physiology*, has to say as to the power of the human will. "The force of will is a potent element in determining longevity. This single point must be granted without argument, that of two men every way alike and similarly circumstanced, the one who has the greater courage and grit will be longer-lived. One does not need to practise medicine long to learn that men die who might just as well live if they resolved to live, and that myriads who are invalids could become strong if they had the native or acquired will to vow they would do so. Those who have no other quality favourable to life, whose bodily organs are nearly all diseased, to whom each day is a day of pain, who are beset by life-shortening influences, yet do live by will alone."—Dr. George M. Beard.

that the process of purification we have been describing in the visible material body, also takes place in those which are interior, and not visible to the scientist by modifications of the same process. All is on the change, and the metamorphoses of the more ethereal bodies imitate, though in successively multiplied duration, the career of the grosser, gaining an increasing wider range of relations with the surrounding Kosmos, till in Nirvâna the most rarefied Individuality is merged at last into the Infinite Totality.

From the above description of the process, it will be inferred why it is that Adepts are so seldom seen in ordinary life; for *pari passu* with the etherealization of their bodies and the development of their power grows an increasing distaste, and a so-to-speak "contempt" for the things of our ordinary mundane existence. Like the fugitive who successively casts away in his flight those articles which incommode his progress, beginning with the heaviest, so the aspirant eluding "death" abandons all on which the latter can take hold. In the progress of Negation everything got rid of is a help. As we said before, the Adept does not become "immortal" as the word is ordinarily understood. By or about the time when the death-limit of his race is passed he is *actually dead*, in the ordinary sense, that is to say, he has relieved himself of all or nearly all such material particles as would have necessitated in disruption the agony of dying. He has been dying gradually during the whole period of his Initiation. The catastrophe cannot happen twice over. He has only spread over a number of years the mild process of dissolution which others endure from a brief moment to a few hours. The highest Adept is, in fact, dead to, and absolutely unconscious of, the world; he is oblivious of its pleasures, careless of its miseries, in so far as sentimentalism goes, for the stern sense of Duty never leaves him blind to its very existence. For the new ethereal senses opening to wider spheres are to ours much in the relation of ours to the Infinitely Little. New desires and enjoyments, new dangers and new hindrances arise, with new sensations and new perceptions; and far away down in the mist—both literally and metaphorically—is our dirty little earth left below by those who have virtually "gone to join the gods."

And from this account, too, it will be perceptible how foolish it is for people to ask the Theosophist to "procure for them communication with the highest Adepts." It is with the utmost difficulty that one or two can be induced, even by the throes of a world, to injure their own

progress by meddling with mundane affairs. The ordinary reader will say: "This is not god-like. This is the acme of selfishness." . . . But let him realize that a very high Adept, undertaking to reform the world, would necessarily have to once more submit to incarnation. And is the result of all that have gone before in that line sufficiently encouraging to prompt a renewal of the attempt?

A deep consideration of all that we have written will also give the Theosophists an idea of what they demand when they ask to be put in the way of gaining *practically* "higher powers." Well, there, as plainly as words can put it, is the Path. . . . Can they tread it?

Nor must it be disguised that what to the ordinary mortal are unexpected dangers, temptations and enemies, also beset the way of the neophyte. And that for no fanciful cause, but for the simple reason that he is, in fact, acquiring new senses, has yet no practice in their use, and has never before seen the things he sees. A man born blind suddenly endowed with vision would not at once master the meaning of perspective, but would, like a baby, imagine in one case, the moon to be within his reach, and, in the other, grasp a live coal with the most reckless confidence.

And what, it may be asked, is to recompense this abnegation of all the pleasures of life, this cold surrender of all mundane interests, this stretching forward to an unknown goal which seems ever more unattainable? For, unlike some of the anthropomorphic creeds, Occultism offers to its votaries no eternally permanent heaven of material pleasure, to be gained at once by one quick dash through the grave. As has, in fact, often been the case, many would be prepared willingly to die *now* for the sake of the paradise hereafter. But Occultism gives no such prospect of cheaply and immediately gained infinitude of pleasure, wisdom, and existence. It only promises extensions of these, stretching in successive arches obscured by successive veils, in an unbroken series up the long vista which leads to Nirvâna. And this, too, qualified by the necessity that new powers entail new responsibilities, and that the capacity of increased pleasure entails the capacity of increased sensibility to pain. To this, the only answer that can be given is two-fold: (firstly) the consciousness of power is itself the most exquisite of pleasures, and is unceasingly gratified in the progress onwards with new means for its exercise; and (secondly), as has been already said, *this* is the only road by which there is the faintest scientific likelihood that "death" can be avoided, perpetual memory secured, infinite

wisdom attained, and hence an immense helping of mankind made possible, once that the Adept has safely crossed the turning-point. Physical as well as metaphysical logic requires and endorses the fact that only by gradual absorption into infinity can the Part become acquainted with the Whole, and that that which is *now something* can only feel, know, and enjoy *everything* when lost in Absolute Totality in the vortex of that Unalterable Circle wherein our Knowledge becomes Ignorance, and the Everything itself is identified with the Nothing.

G. M.

IS THE DESIRE TO "LIVE" SELFISH?

THE passage "to live, to live, to live must be the unswerving resolve," occurring in the article on "The Elixir of Life," is often quoted by superficial and unsympathetic readers as an argument that the teachings of Occultism are the most concentrated form of selfishness. In order to determine whether the critics are right or wrong, the meaning of the word "selfishness" must first be ascertained.

According to an established authority, selfishness is that—

Exclusive regard to one's own interest or happiness; that supreme self-love or self-preference which leads a person to direct his purposes to the advancement of his own interest, power, or happiness, without regarding those of others.

In short, an absolutely selfish individual is one who cares for himself and none else, or in other words, one who is so strongly imbued with a sense of the importance of his own personality that to him it is the crown of all thoughts, desires, and aspirations, beyond which lies the perfect blank. Now, can an Occultist be then said to be "selfish" when he desires to *live* in the sense in which that word is used by the writer of the article on "The Elixir of Life"? It has been said over and over again that the ultimate end of every aspirant after Occult Knowledge is Nirvâna or Mukti, when the individual, freed from all Mâyâvic Upâdhi, becomes one with Paramâtmâ, or the Son identifies himself with the Father in Christian phraseology. For that purpose, every veil of illusion which creates a sense of personal isolation, a feeling of separateness from The All, must be torn asunder, or, in other words, the aspirant must gradually discard all sense of selfishness with which we are all more or less affected. A study of the Law of Cosmic Evolution teaches us that the higher the evolution, the more does it tend towards Unity. In fact, Unity is the ultimate possibility of Nature, and those who through vanity and selfishness go against her purposes, cannot but incur the punishment of annihilation. The Occultist thus recognizes that unselfishness and a feeling of universal philanthropy are the inherent laws of our being, and all he does is to attempt to

destroy the chains of selfishness forged upon us all by Mâyâ. The struggle then between Good and Evil, God and Satan, Suras and Asuras, Devas and Daityas, which is mentioned in the sacred books of all the nations and races, symbolizes the battle between unselfish and selfish impulses, which takes place in a man, who tries to follow the higher purposes of Nature, until the lower animal tendencies, created by selfishness, are completely conquered, and the enemy thoroughly routed and annihilated. It has also been often put forth in various Theosophical and other Occult writings that the only difference between an ordinary man who works along with Nature during the course of cosmic evolution and an Occultist, is that the latter, by his superior knowledge, adopts such methods of training and discipline as will hurry on that process of evolution, and he thus reaches in a comparatively short time the apex which the ordinary individual will take perhaps billions of years to reach. In short, in a few thousand years he approaches that type of evolution which ordinary humanity attains in the sixth or seventh Round of the Manvantara, *i.e.*, cyclic progression. It is evident that an average man cannot become a Mahâtmâ in one life, or rather in one incarnation. Now those, who have studied the Occult teachings concerning Devachan and our after-states, will remember that between two incarnations there is a considerable period of subjective existence. The greater the number of such devachanic periods, the greater is the number of years over which this evolution is extended. The chief aim of the Occultist is therefore to so control himself as to be able to regulate his future states, and thereby gradually shorten the duration of his devachanic existence between two incarnations. In the course of his progress, there comes a time when, between one physical death and his next re-birth, there is no Devachan but a kind of spiritual sleep, the shock of death, having, so to say, stunned him into a state of unconsciousness, from which he gradually recovers to find himself re-born, to continue his purpose. The period of this sleep may vary from twenty-five to two hundred years, depending upon the degree of his advancement. But even this period may be said to be a waste of time, and hence all his exertions are directed to shorten its duration, so as to gradually come to a point when the passage from one state of existence into another is almost imperceptible. This is his last incarnation, as it were, for the shock of death no more stuns him. This is the idea the writer of the article on "The Elixir of Life" means to convey when he says:

By or about the time when the death-limit of his race is passed *he is actually dead*, in the ordinary sense, that is to say, he has relieved himself of all or nearly all such material particles as would have necessitated in disruption the agony of dying. He has been dying gradually during the whole period of his Initiation. The catastrophe cannot happen twice over. He has only spread over a number of years the mild process of dissolution which others endure from a brief moment to a few hours. The highest Adept is, in fact, dead to, and absolutely unconscious of, the world; he is oblivious of its pleasures, careless of its miseries, in so far as sentimentalism goes, for the stern sense of duty never leaves him blind to its very existence.

The process of the emission and attraction of atoms, which the Occultist controls, has been discussed at length in that article and in other writings. It is by these means that he gets rid gradually of all the old gross particles of his body, substituting for them finer and more ethereal ones, till at last the former Sthûla Sharîra is completely dead and disintegrated, and he lives in a body entirely of his own creation, suited to his work. That body is essential to his purposes; as "The Elixir of Life" says:

To do good, as in everything else, a man *must have* time and materials to work with, and this is a necessary means to the acquirement of powers by which infinitely more good can be done than without them. When these are once mastered, the opportunities to use them will arrive.

Giving the practical instructions for that purpose, the same paper continues:

The physical man must be rendered more ethereal and sensitive; the mental man more penetrating and profound; the moral man more self-denying and philosophical.

Losing sight of the above important considerations, the following passage is entirely misunderstood:

And from this account too, it will be perceptible how foolish it is for people to ask the Theosophist to "procure for them communication with the highest Adepts." It is with the utmost difficulty that one or two can be induced, even by the throes of a world, to injure their own progress by meddling with mundane affairs. The ordinary reader will say: "This is not god-like. This is the acme of selfishness." . . . But let him realize that a very high Adept, undertaking to reform the world, would necessarily have to once more submit to Incarnation. And is the result of all that have gone before in that line sufficiently encouraging to prompt a renewal of the attempt?

Now, in condemning the above passage as inculcating selfishness, superficial critics neglect many profound truths. In the first place, they forgot the other extracts already quoted which impose *self-denial*

as a necessary condition of success, and which say that, with progress, new senses and new powers are acquired with which infinitely more good can be done than without them. The more spiritual the Adept becomes the less can he meddle with *mundane gross* affairs and the more he has to confine himself to spiritual work. It has been repeated, times out of number, that the work on the spiritual plane is as superior to the work on the intellectual plane as the latter is superior to that on the physical plane. The very high Adepts, therefore, do help humanity, *but only spiritually*: they are constitutionally incapable of meddling with *worldly* affairs. But this applies only to very high Adepts. There are various degrees of adeptship, and those of each degree work for humanity on the planes to which they may have risen. It is only the Chelâs that can live in the world, until they rise to a certain degree. And it is because the Adepts *do* care for the world that they make their Chelâs live in and work for it, as many of those who study the subject are aware. Each cycle produces its own Occultists capable of working for the humanity of the time on all the different planes; but when the Adepts foresee that at a particular period humanity will be incapable of producing Occultists for work on particular planes, for such occasions they do provide by either voluntarily giving up their further progress and waiting until humanity reaches that period, or by refusing to enter into Nirvâna and submitting to reincarnation so as to be ready for work when the time comes. And although the world may not be aware of the fact, yet there are even now certain Adepts who have preferred to remain *in statu quo* and refuse to take the higher degrees, for the benefit of the future generations of humanity. In short, as the Adepts work harmoniously, since unity is the fundamental law of their being, they have, as it were, made a division of labour, according to which each works on the plane appropriate to himself, for the spiritual elevation of us all—and the process of longevity mentioned in “The Elixir of Life” is only the means to the end which, far from being selfish, is the most unselfish purpose for which a human being can labour.

CONTEMPLATION.

A GENERAL misconception on this subject seems to prevail. One confines oneself for some time in a room, and passively gazes at one's nose, a spot on the wall, or, perhaps, a crystal, under the impression that such is the true form of contemplation enjoined by Râja Yoga. Many fail to realize that true Occultism requires a physical, mental, moral and spiritual development to run on parallel lines, and injure themselves, physically and spiritually, by practice of what they falsely believe to be Dhyâna. A few instances may be mentioned here with advantage, as a warning to over-zealous students.

At Bareilly the writer met a member of the Theosophical Society from Farrukhabad, who narrated his experiences and shed bitter tears of repentance for his past follies—as he termed them. It appears from his account that fifteen or twenty years ago having read about contemplation in the *Bhagavad Gîtâ*, he undertook the practice of it, without a proper comprehension of its esoteric meaning, and carried it on for several years. At first he experienced a sense of pleasure, but simultaneously he found he was gradually losing self-control; until after a few years he discovered, to his great bewilderment and sorrow, that *he was no longer his own master*. He felt his heart actually growing heavy, as though a load had been placed on it. He had no control over his sensations; the communication between the brain and the heart had become as though interrupted. As matters grew worse, in disgust he discontinued his “contemplation.” This happened as long as seven years ago; and, although since then he has not felt worse, yet he could never regain his original healthy state of mind and body.

Another case came under the writer's observation at Jubbulpore. The gentleman concerned, after reading Patanjali and such other works, began to sit for “contemplation.” After a short time he commenced seeing abnormal sights and hearing musical bells, but neither over these phenomena nor over his own sensations could he exercise

any control. He could not produce these results at will, nor could he stop them when they were occurring. Numerous such examples may be cited. While penning these lines, the writer has on his table two letters upon this subject, one from Moradabad and the other from Trichinopoly. In short, all this mischief is due to a misunderstanding of the significance of contemplation as enjoined upon students by all the schools of Occult Philosophy. With a view to afford a glimpse of the Reality through the dense veil that enshrouds the mysteries of this Science of Sciences, an article, "The Elixir of Life," was written. Unfortunately, in too many instances, the seed seems to have fallen upon barren ground. Some of its readers pin their faith to the following clause in that paper:

Reasoning from the known to the unknown meditation ~~must~~ be practised and encouraged.

But, alas! their preconceptions have prevented them from comprehending what is meant by meditation. They forget that the meditation spoken of "is the inexpressible yearning of the inner *man* to 'go out towards the infinite,' which in the olden time was the real meaning of adoration"—as the next sentence shows. A good deal of light would be thrown upon this subject if the reader were to turn to an earlier part of the same paper, and peruse attentively the following paragraphs:

So, then, we have arrived at the point where we have determined—literally, *not* metaphorically—to crack the outer shell known as the mortal coil or body, and hatch out of it, clothed in our next. This "next" is not a spiritual, but only a more ethereal form. Having by a long training and preparation adapted it for a life in this atmosphere, during which time we have gradually made the outward shell to die off through a certain process . . . we have to prepare for this physiological transformation.

How are we to do it? In the first place we have the actual, visible, material body—man, so called, though, in fact, but his outer shell—to deal with. Let us bear in mind that science teaches us that in about every seven years we *change skin* as effectually as any serpent; and this so gradually and imperceptibly that, had not science after years of unremitting study and observation assured us of it, no one would have had the slightest suspicion of the fact. . . . Hence, if a man, partially flayed alive, may sometimes survive and be covered with a new skin, so our astral, vital body . . . may be made to harden its particles to the atmospheric changes. The whole secret is to succeed in evolving it out, and separating it from the visible; and while its generally invisible atoms proceed to concrete themselves into a compact mass, to gradually get rid of the old particles of our visible frame so as to make them die and disappear before the new set has had time to evolve and replace them. . . . We can say no more.

A correct comprehension of the above scientific process will give a clue to the esoteric meaning of meditation or contemplation. Science teaches us that man changes his physical body continually, and this change is so gradual that it is almost imperceptible. Why then should the case be otherwise with the *inner man*? The latter too is developing and changing atoms at every moment. And the attraction of these new sets of atoms depends upon the Law of Affinity—the desires of the man drawing to his bodily tenement only such particles as are necessary to give them expression.

For science shows that thought is dynamic, and the thought-force evolved by nervous action expanding itself outwardly, must affect the molecular relations of the physical man. The *inner men*, however sublimated their organism may be, are still composed of actual, *not hypothetical*, particles, and are still subject to the law that an “action” has a tendency to repeat itself; a tendency to set up analogous action in the grosser “shell” they are in contact with, and concealed within.

What is it the aspirant of Yoga-Vidyâ strives after if not to gain Mukti by transferring himself gradually from the grosser to the next less gross body, until all the veils of Mâyâ being successively removed his Âtmâ becomes one with Paramâtmâ? Does he suppose that this grand result can be achieved by a two or four hours’ contemplation? For the remaining twenty or twenty-two hours that the devotee does not shut himself up in his room for meditation is the process of the emission of atoms and their replacement by others stopped? If not, then how does he mean to attract all this time only those suited to his end? From the above remarks it is evident that just as the physical body requires incessant attention to prevent the entrance of a disease, so also the *inner man* requires an unremitting watch, so that no conscious or unconscious thought may attract atoms unsuited to its progress. This is the real meaning of contemplation. The prime factor in the guidance of the thought is will.

Without that, all else is useless! And, to be efficient for the purpose, it must be, not only a passing resolution of the moment, a single fierce desire of short duration, but a *settled and continued strain, as nearly as can be continued and concentrated without one single moment’s remission.*

The student would do well to take note of the italicized clause in the above quotation. He should also have it indelibly impressed upon his mind that:

It is no use to fast *as long as one requires* food. . . . To get rid of the inward desire is the essential thing, and to mimic the real thing without it is barefaced hypocrisy and useless slavery.

Without realizing the significance of this most important fact, any one who for a moment finds cause of disagreement with any of his family, or has his vanity wounded, or for a sentimental flash of the moment, or for a selfish desire to utilize the divine power for gross purposes—at once rushes into contemplation and dashes himself to pieces on the rock dividing the known from the unknown. Wallowing in the mire of exotericism, he knows not what it is to live in the world and yet be not of the world; in other words, to guard *Self* against *self* is an almost incomprehensible axiom for the profane. The Hindû ought to know better from the life of Janaka, who, although a reigning monarch, was yet styled Râjarshi and is said to have attained Nirvâna. Hearing of his wide-spread fame, a few sectarian bigots went to his court to test his Yoga-power. As soon as they entered the court-room, the king having read their thoughts—a power which every Chelâ attains at a certain stage—gave secret instructions to his officials to have a particular street in the city lined on both sides by dancing girls singing the most voluptuous songs. He then had some Gharas (pots) filled with water up to the brim so that the least shake would be likely to spill their contents. The wiseacres, each with a full Ghara (pot) on his head, were ordered to pass along the street, surrounded by soldiers with drawn swords to be used against them if even so much as a drop of water were allowed to run over. The poor fellows having returned to the palace after successfully passing the test, were asked by the King-Adept what they had met with in the street they were made to go through. With great indignation they replied that the threat of being cut to pieces had so much worked upon their minds that they thought of nothing but the water on their heads, and the intensity of their attention did not permit them to take cognizance of what was going on around them. Then Janaka told them that on the same principle they could easily understand that, although being outwardly engaged in managing the affairs of his state, he could, at the same time, be an Occultist. He too, while *in* the world, was not *of* the world. In other words, his inward aspirations had been leading him on continually to the goal in which his whole inner self was concentrated.

Râja Yoga encourages no sham, requires no physical postures. It has to deal with the inner man whose sphere lies in the world of thought. To have the highest ideal placed before oneself and strive incessantly to rise up to it, is the only true concentration recognized

by Esoteric Philosophy which deals with the inner world of *noumena*, not the outer shell of *phenomena*.

The first requisite for it is thorough purity of heart. Well might the student of Occultism say with Zoroaster, that purity of thought, purity of word, and purity of deed—these are the essentials of one who would rise above the ordinary level and join the “gods.” A cultivation of the feeling of unselfish philanthropy is the path which has to be traversed for that purpose. For it is that alone which will lead to Universal Love, the realization of which constitutes the progress towards deliverance from the chains forged by *Mâyâ* (illusion) around the Ego. No student will attain this at once, but as our venerated Mahâtmâ says in the *Occult World*:

The greater the progress towards deliverance, the less this will be the case, until, to crown all, human and purely individual personal feelings, blood-ties and friendship, patriotism and race predilection, will all give way to become blended into one universal feeling, the only true and holy, the only unselfish and eternal one, Love, an Immense Love for Humanity as a whole.

In short, the individual is blended with the All.

Of course, contemplation, as usually understood, is not without its minor advantages. It develops one set of physical faculties as gymnastics does the muscles. For the purposes of physical mesmerism it is good enough; but it can in no way help the development of the psychological faculties, as the thoughtful reader will perceive. At the same time, even for ordinary purposes, the practice can never be too well guarded. If, as some suppose, they have to be entirely passive and lose themselves in the object before them, they should remember that, by thus encouraging passivity, they, in fact, allow the development of mediumistic faculties in themselves. As has been repeatedly stated—the Adept and the medium are the two poles: while the former is intensely active and thus able to control the elemental forces, the latter is intensely passive and thus incurs the risk of falling a prey to the caprice and malice of mischievous embryos of human beings, and the elementaries.

It will be evident from the above that true meditation consists in the “reasoning from the known to the unknown.” The “known” is the phenomenal world, cognizable by our five senses. And all that we see in this manifested world are the effects, the causes of which are to be sought after in the noumenal, the unmanifested, the “unknown world”; this is to be accomplished by meditation, *i.e.*, continued attention to the subject. Occultism does not depend upon one method, but employs

both the deductive and the inductive. The student must first learn the general axioms, which have sufficiently been laid down in "The Elixir of Life" and other Occult writings. What the student has first to do is to *comprehend* these axioms and, by employing the deductive method, to proceed from universals to particulars. He has then to reason from the "known to the unknown," and see if the inductive method of proceeding from particulars to universals supports those axioms. This process forms the primary stage of true contemplation. The student must first grasp the subject intellectually before he can hope to realize his aspirations. When this is accomplished, then comes the next stage of meditation, which is "the inexpressible yearning of the inner man to 'go out towards the infinite.'" Before any such yearning can be properly directed, the goal must first be determined. The higher stage, in fact, consists in practically realizing what the first steps have placed within one's comprehension. In short, contemplation, in its true sense, is to recognize the truth of Éliphas Lévi's saying:

To believe without knowing is weakness; to believe, because one knows, is power.

"The Elixir of Life" not only gives the preliminary steps in the ladder of *contemplation*, but also tells the reader how to *realize* the higher stages. It traces, by the process of contemplation, as it were, the relation of man, "the known," the manifested, the phenomenon, to "the unknown," the unmanifested, the noumenon. It shows the student what ideal to contemplate and how to rise up to it. It places before him the nature of the inner capacities of man and how to develop them. To a superficial reader, this may, perhaps, appear as the acme of selfishness. Reflection will, however, show the contrary to be the case. For it teaches the student that to comprehend the noumenal, he must identify himself with Nature. Instead of looking upon himself as an isolated being, he must learn to look upon himself as a part of the Integral Whole. For, in the unmanifested world, it can be clearly perceived that all is controlled by the "Law of Affinity," the attraction of the one for the other. There, all is Infinite Love, understood in its true sense.

It may now not be out of place to recapitulate what has already been said. The first thing to be done is to study the axioms of Occultism and work upon them by the deductive and the inductive methods, which is real contemplation. To turn this to a useful purpose, what is theoretically comprehended must be practically realized.

DAMODAR K. MAVALANKAR.

CHELÂS AND LAY-CHELÂS.

A "CHELÂ" is a person who has offered himself to a master as a pupil to learn practically the "hidden mysteries of nature and the psychical powers latent in man." The master who accepts him is called in India a Guru; and the real Guru is always an Adept in the Occult Science. A man of profound knowledge, exoteric and esoteric, especially the latter; and one who has brought his carnal nature under the subjection of the will; who has developed in himself both the power (Siddhi) to control the forces of Nature, and the capacity to probe her secrets by the help of the formerly latent but now active powers of his being—this is the real Guru. To offer oneself as a candidate for Chelâship is easy enough, to develop into an Adept the most difficult task any man could possibly undertake. There are scores of "natural-born" poets, mathematicians, mechanics, statesmen, etc., but a natural-born Adept is something practically impossible. For, though we do hear at very rare intervals of one who has an extraordinary innate capacity for the acquisition of Occult knowledge and power, yet even he has to pass the self-same tests and probations, and go through the self-same training as any less endowed fellow aspirant. In this matter it is most true that there is no royal road by which favourites may travel.

For centuries the selection of Chelâs—outside the hereditary group within the Gon-pa (temple)—has been made by the Himâlayan Mahâtmas themselves from among the class—in Tibet, a considerable one as to number—of natural mystics. The only exceptions have been in the cases of Western men like Fludd, Thomas Vaughan, Paracelsus, Pico di Mirandolo, Count St. Germain, etc., whose temperamental affinity to this celestial science, more or less forced the distant Adepts to come into personal relations with them, and enabled them to get such small (or large) proportion of the whole truth as was possible under their social surroundings. From Book IV of *Kui-te*, Chapter on "The Laws of Upâsanas," we learn that the qualifications expected in a Chelâ were:

1. Perfect physical health;
2. Absolute mental and physical purity;
3. Unselfishness of purpose; universal charity; pity for all animate beings;
4. Truthfulness and unswerving faith in the law of Karma, independent of the intervention of any power in Nature—a law whose course is not to be obstructed by any agency, not to be caused to deviate by prayer or propitiatory exoteric ceremonies;
5. A courage undaunted in every emergency, even by peril to life;
6. An intuitional perception of one's being the vehicle of the manifested Avalokiteshvara or Divine Âtmâ (Spirit);
7. Calm indifference for, but a just appreciation of, everything that constitutes the objective and transitory world, in its relation with, and to, the invisible regions.

Such, at the least, must have been the recommendations of one aspiring to perfect Chelâship. With the sole exception of the first, which in rare and exceptional cases might have been modified, each one of these points has been invariably insisted upon, and all must have been more or less developed in the inner nature by the Chelâ's *unhelped exertions*, before he could be actually "put to the test."

When the self-evolving ascetic—whether in, or outside the active world—has placed himself, according to his natural capacity, above, hence made himself master of, his (1) Sharîra, body; (2) Indriya, senses; (3) Dosha, faults; (4) Dukkha, pain; and is ready to become one with his Manas, mind, Buddhi, intellection or spiritual intelligence, and Âtmâ, highest soul, *i.e.*, spirit; when he is ready for this, and, • further, to recognize in Âtmâ the highest ruler in the world of perceptions, and in the will, the highest executive energy (power)—then may he, under the time-honoured rules, be taken in hand by one of the Initiates. He may then be shown the mysterious path at whose farther end is obtained the unerring discernment of Phala, or the fruits of causes produced, and given the means of reaching Apavarga—emancipation from the misery of repeated births, Pretya-bhâva, in whose determination the ignorant has no hand.

But since the advent of the Theosophical Society, one of whose arduous tasks it is to reawaken in the Âryan mind the dormant memory of the existence of this Science and of those transcendent human capabilities, the rules of Chelâ selection have become slightly relaxed in one respect. Many members of the Society who would not have been

otherwise called to Chelâship became convinced by practical proof of the above points, and, rightly enough thinking that if other men had hitherto reached the goal, they too, if inherently fitted, might reach it by following the same path, importunately pressed to be taken as candidates. And as it would be an interference with Karma to deny them the chance of at least beginning, they were given it. The results have been far from encouraging so far, and it is to show them the cause of their failure as much as to warn others against rushing heedlessly upon a similar fate, that the writing of the present article has been ordered. The candidates in question, though plainly warned against it in advance, began wrongly by selfishly looking to the future and losing sight of the past. They forgot that they had done nothing to deserve the rare honour of selection, nothing which warranted their expecting such a privilege; that they could boast of none of the above enumerated merits. As men of the selfish, sensual world, whether married or single, merchants, civilian or military employés, or members of the learned professions, they had been to a school most calculated to assimilate them to the animal nature, least so to develop their spiritual potentialities. Yet each and all had vanity enough to suppose that their case would be made an exception to the law of countless centuries, as though, indeed, in their person had been born to the world a new Avâtâra! All expected to have hidden things taught, extraordinary powers given them, because—well, because they had joined the Theosophical Society. Some had sincerely resolved to amend their lives, and give up their evil courses—we must do them that justice, at all events.

All were refused at first, Colonel Olcott the President himself to begin with, who was not formally accepted as a Chelâ until he had proved by more than a year's devoted labours and by a determination which brooked no denial, that he might safely be tested. Then from all sides came complaints—from Hindûs, who ought to have known better, as well as from Europeans who, of course, were not in a condition to know anything at all about the rules. The cry was that unless at least a few Theosophists were given the chance to try, the Society could not endure. Every other noble and unselfish feature of our programme was ignored—a man's duty to his neighbour, to his country, his duty to help, enlighten, encourage and elevate those weaker and less favoured than he; all were trampled out of sight in the insane rush for adeptship. The call for phenomena, phenomena,

phenomena, resounded in every quarter, and the Founders were impeded in their real work and teased importunately to intercede with the Mahâtmâs, against whom the real grievance lay, though their poor agents had to take all the buffets. At last, the word came from the higher authorities that a few of the most urgent candidates should be taken at their word. The result of the experiment would perhaps show better than any amount of preaching what Chelâship meant, and what are the consequences of selfishness and temerity. Each candidate was warned that he must wait for years in any event, before his fitness could be established, and that he must pass through a series of tests that would bring out all there was in him, whether bad or good. They were nearly all married men, and hence were designated "Lay-Chelâs"—a term new in English, but having long had its equivalent in Asiatic tongues. A Lay-Chelâ is but a man of the world who affirms his desire to become wise in spiritual things. Virtually, every member of the Theosophical Society who subscribes to the second of our three "Declared Objects" is such; for though not of the number of true Chelâs, he has yet the possibility of becoming one, for he has stepped across the boundary-line which separated him from the Mahâtmâs, and has brought himself, as it were, under their notice. In joining the Society and binding himself to help along its work, he has pledged himself to act in some degree in concert with those Mahâtmâs, at whose behest the Society was organized, and under whose conditional protection it remains. The joining is, then, the introduction; all the rest depends entirely upon the member himself, and he need never expect the most distant approach to the "favour" of one of our Mahâtmâs or any other Mahâtmâs in the world—should the latter consent to become known—that has not been fully earned by personal merit. *The Mahâtmâs are the servants, not the arbiters, of the Law of Karma.* Lay-Chelâship confers no privilege upon any one except that of working for merit under the observation of a Master. And whether that Master be or be not seen by the Chelâ makes no difference whatever as to the result; his good thoughts, words, and deeds will bear their fruits, his evil ones, theirs. To boast of Lay-Chelâship or make a parade of it, is the surest way to reduce the relationship with the Guru to a mere empty name, for it would be *prima facie* evidence of vanity and unfitness for farther progress. And for years we have been teaching everywhere the maxim, "First deserve, then desire" intimacy with the Mahâtmâs.

Now there is a terrible law operative in Nature, one which cannot be altered, and whose operation clears up the apparent mystery of the selection of certain "Chelâs" who have turned out sorry specimens of morality, these few years past. Does the reader recall the old proverb, "Let sleeping dogs lie"? There is a world of occult meaning in it. No man or woman knows his or her moral strength until it is *tried*. Thousands go through life very respectably, because they have never been put to the test. This is a truism doubtless, but it is most pertinent to the present case. One who undertakes to try for Chelâship by that very act rouses and lashes to desperation every sleeping passion of his animal nature. For this is the commencement of a struggle for mastery in which quarter is neither to be given nor taken. It is, once for all, "To be, or not to be"; to conquer, means adeptship; to fail, an ignoble martyrdom; for to fall victim to lust, pride, avarice, vanity, selfishness, cowardice, or any other of the lower propensities, is indeed ignoble, if measured by the standard of true manhood. The Chelâ is not only called to face all the latent evil propensities of his nature, but, in addition, the momentum of maleficent forces accumulated by the community and nation to which he belongs. For he is an integral part of those aggregates, and what affects either the individual man or the group (town or nation) reacts the one upon the other. And in this instance his struggle for goodness jars upon the whole body of badness in his environment, and draws its fury upon him. If he is content to go along with his neighbours and be almost as they are—perhaps a little better or somewhat worse than the average—no one may give him a thought. But let it be known that he has been able to detect the hollow mockery of social life, its hypocrisy, selfishness, sensuality, cupidity, and other bad features, and has determined to lift himself up to a higher level, at once, he is hated, and every bad, bigoted, or malicious nature sends at him a current of opposing will-power. If he is innately strong he shakes it off, as the powerful swimmer dashes through the current that would bear a weaker one away. But in this moral battle, if the Chelâ has one single hidden blemish—do what he may, it *shall* and *will* be brought to light. The varnish of conventionalities with which "civilization" overlays us all, must come off to the last coat, and the Inner Self, *naked* and without the slightest veil to conceal its reality, is exposed. The habits of society which hold men to a certain degree under moral restraint, and compel them to pay tribute to virtue by seeming to be good whether they are so or not—

these habits are apt to be all forgotten, these restraints to be all broken through under the strain of Chelâship. He is now in an atmosphere of illusions—Mâyâ. Vice puts on its most alluring face, and the tempting passions attract the inexperienced aspirant to the depths of psychic debasement. This is not a case like that depicted by a great artist, where Satan is seen playing a game of chess with a man upon the stake of his soul, while the latter's good Angel stands beside him to counsel and assist. For the strife is in this instance between the Chelâ's will and his carnal nature, and Karma forbids that any Angel or Guru should interfere until the result is known. With the vividness of poetic fancy Bulwer Lytton has idealized it for us in his *Zanoni*, a work which will ever be prized by the Occultist; while in his *Strange Story* he has with equal power shown the black side of occult research and its deadly perils. Chelâship was defined, the other day, by a Mahâtma as a "psychic solvent, which eats away all dross and leaves only the pure gold behind." If the candidate has the latent lust for money, or political chicanery, or materialistic scepticism, or vain display, or false speaking, or cruelty, or sensual gratification of any kind, the germ is almost sure to sprout; and so, on the other hand, as regards the noble qualities of human nature. The real man comes out. Is it not the height of folly, then, for any one to leave the smooth path of commonplace life to scale the crags of Chelâship without some reasonable feeling of certainty that he has the right stuff in him? Well says the *Bible*: "Let him that standeth take heed lest he fall"—a text that would-be Chelâs should consider well before they rush headlong into the fray! It would have been well for some of our Lay-Chelâs if they had thought twice before defying the tests. *We call to mind several sad failures within a twelvemonth.* One went wrong in the head, recanted noble sentiments uttered but a few weeks previously, and became a member of a religion he had just scornfully and unanswerably proven false. A second became a defaulter and absconded with his employer's money—the latter also a Theosophist. A third gave himself up to gross debauchery, and confessed it, with ineffectual sobs and tears, to his chosen Guru. A fourth got entangled with a person of the other sex and fell out with his dearest and truest friends. A fifth showed signs of mental aberration and was brought into court upon charges of discreditable conduct. A sixth shot himself to escape the consequences of criminality, on the verge of detection! And so we might go on and on. All these were apparently sincere searchers after truth, and passed

in the world for respectable persons: Externally, they were fairly eligible as candidates for Chelâship, as appearances go; but "within all was rottenness and dead men's bones." The world's varnish was so thick as to hide the absence of the true gold underneath; and the "resolvent" doing its work, the candidate proved in each instance but a gilded figure of moral dross, from circumference to core.

In what precedes we have, of course, dealt but with the failures among Lay-Chelâs; there have been partial successes, too, and these are passing gradually through the first stages of their probation. Some are making themselves useful to the Society and to the world in general by good example and precept. If they persist, well for them, well for us all; the odds are fearfully against them, but still "there is no impossibility to him who wills." The difficulties in Chelâship will never be less until human nature changes and a new order is evolved. St. Paul (*Rom.*, vii. 18, 19) might have had a Chelâ in mind when he said: "to will is present with me; but how to perform that which is good I find not. For the good I would I do not: but the evil which I would not, that I do." And in the wise *Kirâtârjunyam* of Bharâvi it is written:

The enemies which rise within the body,
Hard to be overcome—the evil passions—
Should manfully be fought; *who conquers these*
Is equal to the conqueror of worlds (xi. 32).

H. P. B.

ANCIENT OPINIONS UPON PSYCHIC BODIES.

It must be confessed that modern spiritualism falls very short of the ideas formerly suggested by the sublime designation which it has assumed. Chiefly intent upon recognizing and putting forward the phenomenal proofs of a future existence, it concerns itself little with speculations on the distinction between matter and spirit, and rather prides itself on having demolished materialism without the aid of metaphysics. Perhaps a Platonist might say that the recognition of a future existence is consistent with a very practical and even dogmatic materialism, but it is rather to be feared that such a materialism as this would not greatly disturb the spiritual or intellectual repose of our modern phenomenologists.* Given the consciousness with its sensibilities safely housed in the psychic body which demonstrably survives the physical carcase, and we are like men saved from shipwreck, who are for the moment thankful and content, not giving thought whether they are landed on a hospitable shore, or on a barren rock, or on an island of cannibals. It is not of course intended that this "hand to mouth" immortality is sufficient for the many thoughtful minds whose activity gives life and progress to the movement, but that it affords the relief which most people feel when in an age of doubt they make the discovery that they are undoubtedly to live again. To the question, "How are the dead raised up, and with what body do they come?" modern spiritualism, with its empirical methods, is not adequate to reply. Yet long before Paul suggested it, it had the attention of the most celebrated schools of philosophy, whose speculations on the subject, however little they may seem to be verified, ought not to be

* "I am afraid," says Thomas Taylor in his Introduction to the *Phædo*, "there are scarcely any at the present day who know that it is one thing for the soul to be separated from the body, and another for the body to be separated from the soul, and that the former is by no means a necessary consequence of the latter."

without interest to us, who, after all, are still in the infancy of a spiritualist revival.

It would not be necessary to premise, but for the frequency with which the phrase occurs, that the "spiritual body" is a contradiction in terms. The office of body is to relate spirit to an objective world. By Platonic writers it is usually termed *Ochêma*—"vehicle." It is the medium of action, and also of sensibility. In this philosophy the conception of soul was not simply, as with us, the immaterial subject of consciousness. How warily the interpreter has to tread here, every one knows who has dipped, even superficially, into the controversies among Platonists themselves. All admit the distinction between the rational and the irrational part or principle, the latter including, first, the sensibility, and secondly, the plastic, or that power which in obedience to its sympathies enables the soul to attach itself to, and to organize into a suitable body those substances of the universe to which it is most congruous. It is more difficult to determine whether Plato or his principal followers recognized in the rational soul or *Nous* a distinct and separable entity, that which is sometimes discriminated as the "spirit." Dr. Henry More, no mean authority, repudiates this interpretation, when saying:

There can be nothing more monstrous than to make two souls in *man*, the one sensitive, the other rational, really distinct from one another, and to give the name of astral spirit to the former, when there is in *man* no astral spirit beside the plastic of the soul itself, which is always inseparable from that which is rational. Nor upon any other account can it be called astral, but as it is liable to that corporeal temperament which proceeds from the stars, or rather from any material causes in general, as not being yet sufficiently united with the divine body—that vehicle of divine virtue or power.

So he maintains that the kabalistic three souls—*Nephesh*, *Ruach*, *Neschamah*—originate in a misunderstanding of the true Platonic doctrine, which is that of a three-fold "vital congruity." These correspond to the three degrees of bodily existence, or to the three "vehicles," the terrestrial, the *aërial*, and the *ethereal*. The latter is the *Augoeides*—the luciform vehicle of the purified soul whose irrational part has been brought under complete subjection to the rational. The *aërial* is that in which the great majority of mankind find themselves at the dissolution of the terrestrial body, and in which the incomplete process of purification has to be undergone during long ages of preparation for the soul's return to its primitive, *ethereal* state. For it must be remembered that the *preëxistence* of souls is a distinguishing tenet of this

philosophy as of the Kabbalah. The soul has "sunk into matter." From its highest original state the revolt of its irrational nature has awakened and developed successively its "vital congruities" with the regions below, passing, by means of its "plastic," first into the ærial and afterwards into the terrestrial condition. Each of these regions teems also with an appropriate population which never passes, like the human soul, from one to the other—"gods," "demons," and animals.* As to duration—

The shortest of all is that of the terrestrial vehicle. In the ærial, the soul may inhabit, as they define, many ages, and in the ethereal, for ever.

Speaking of the second body, Henry More says:

The soul's astral vehicle is of that tenuity that itself can as easily pass the smallest pores of the body as the light does glass, or the lightning the scabbard of a sword without tearing or scorching of it.

And again:

I shall make bold to assert that the soul may live in an ærial vehicle as well as in the ethereal, and that there are very few that arrive to that high happiness as to acquire a celestial vehicle immediately upon their quitting the terrestrial one; that heavenly chariot necessarily carrying us in triumph to the greatest happiness the soul of man is capable of, which would arrive to all men indifferently, good or bad, if the parting with this earthly body would suddenly mount us into the heavenly. When by a just Nemesis the souls of men that are not heroically virtuous will find themselves restrained within the compass of this caliginous air, as both Reason itself suggests, and the Platonists have unanimously determined.

Thus also the most thorough-going, and probably the most deeply versed in the doctrines of the master among modern Platonists, Thomas Taylor:

After this our divine philosopher informs [us] that the pure soul will after death return to pure and eternal natures; but that the impure soul, in consequence of being imbued with terrene affections, will be drawn down to a kindred nature, and be invested with a gross vehicle capable of being seen by the corporeal eye.† For while a propensity to body remains in the soul, it causes her to attract a certain vehicle to herself, either of an ærial nature, or composed from the spirit and vapours of her terrestrial body, or which is recently collected from surrounding air; for according to the arcana of the Platonic philosophy, between an ethereal body, which is simple and immaterial and is the eternal connate vehicle of the soul, and a terrene body, which is material and composite, and of short duration, there is an ærial body, which is material indeed, but simple and of a more extended dura-

* The allusion here is to those beings of the several kingdoms of the elements which we Theosophists, following after the Kabbalists, have called the "elementals." They never become men.—*Ed. Theos.*

† This is the theory of nearly every one of the Åryan-Hindû philosophies.—*Ed. Theos.*

tion; and in this body the unpurified soul dwells for a long time after its exit from hence, till this pneumatic vehicle being dissolved, it is again invested with a composite body; while on the contrary the purified soul immediately ascends into the celestial regions with its ethereal vehicle alone.*

Always it is the disposition of the soul that determines the quality of its body. Says Porphyry (translated by Cudworth):

However the soul be in itself affected, so does it always find a body suitable and agreeable to its present disposition, and therefore to the purged soul does naturally accrue a body that comes next to immateriality, that is, an ethereal one.

And the same author:

The soul is never quite naked of all body, but hath always some body or other joined with it, suitable and agreeable to its present disposition (either a purer or impurer one). But that at its first quitting this gross earthly body, the spirituous body which accompanieth it (as its vehicle) must needs go away fouled and incassated with the vapours and steams thereof, till the soul afterwards by degrees purging itself, this becometh at length a dry splendour, which hath no misty obscurity nor casteth any shadow.

Here it will be seen, we lose sight of the specific difference of the two future vehicles—the ethereal is regarded as a sublimation of the aërial. This, however, is opposed to the general consensus of Plato's commentators. Sometimes the ethereal body, or Augoeides, is appropriated to the rational soul, or spirit, which must then be considered as a distinct entity, separable from the lower soul. Philoponus, a Christian writer, says that:

The Rational Soul, as to its energie, is separable from all body, but the irrational part or life thereof is separable only from this gross body, and not from all body whatsoever, but hath after death a spirituous or airy body, in which it acteth—this I say is a true opinion which shall afterwards be proved by us. . . . The irrational life of the soul hath not all its being in this gross earthly body, but remaineth after the soul's departure out of it, having for its vehicle and subject the spirituous body, which itself is also compounded out of the four elements, but receiveth its denomination from the predominant part, to wit, Air, as this gross body of ours is called earthy from what is most predominant therein.†

From the same source we extract the following:

Wherefore these ancients say that impure souls after their departure out of this body wander here up and down for a certain space in their spirituous vaporious and airy body, appearing about sepulchres and haunting their former habitation. For which cause there is great reason that we should take care of living well, as also of abstaining from a fouler and grosser diet; these Ancients telling us likewise that this spirituous body of ours being fouled and incassated by evil diet, is apt to

* *Introductio, Phædo.*

† Cudworth, *Intellectual System.*

render the soul in this life also more obnoxious to the disturbances of passions. They further add that there is something of the plantal or plastic life, also exercised by the soul, in those spirituous or airy bodies after death; they being nourished too, though not after the same manner, as those gross earthy bodies of ours are here, but by vapours, and that not by parts or organs, but throughout the whole of them (as sponges), they imbibing everywhere those vapours. For which cause they who are wise will in this life also take care of using a thinner and dryer diet, that so that spirituous body (which we have also at this present time within our proper body) may not be clogged and increased, but attenuated. Over and above which, those Ancients made use of catharms, or purgations to the same end and purpose also. For as this earthy body is washed by water so is that spirituous body cleansed by cathartic vapours—some of these vapours being nutritive, others purgative. Moreover, these Ancients further declared concerning this spirituous body that it was not organized, but did the whole of it in every part throughout exercise all functions of sense, the soul hearing, seeing and perceiving all sensibles by it everywhere. For which cause Aristotle himself affirmeth in his *Metaphysics* that there is properly but one sense and one sensory. He by this one sensory meaneth the spirit, or subtle airy body, in which the sensitive power doth all of it through the whole immediately apprehend all variety of sensibles. And if it be demanded how it comes to pass that this spirit becomes organized in sepulchres, and most commonly of human form, but sometimes in the forms of other animals, to this those Ancients replied that their appearing so frequently in human form proceeded from their being increased with evil diet, and then, as it were, stamped upon with the form of this exterior ambient body in which they are, as crystal is formed and coloured like to those things which it is fastened in, or reflects the image of them. And that their having sometimes other different forms proceedeth from the phantastic power of the soul itself, which can at pleasure transform the spirituous body into any shape. For being airy, when it is condensed and fixed, it becometh visible, and again invisible and vanishing out of sight when it is expanded and rarefied.*

And Cudworth says:

Though spirits or ghosts had certain supple bodies which they could so far condense as to make them sometimes visible to men, yet is it reasonable enough to think that they could not constipate or fix them into such a firmness, grossness and solidity, as that of flesh and bone is, to continue therein, or at least not without such difficulty and pain as would hinder them from attempting the same. Notwithstanding which it is not denied that they may possibly sometimes make use of other solid bodies, moving and acting them, as in that famous story of Phlegons when the body vanished not as other ghosts use to do, but was left a dead carcase behind.

In all these speculations the *Anima Mundi* plays a conspicuous part. It is the source and principle of all animal souls, including the irrational soul of man. But in man, who would otherwise be merely analogous to other terrestrial animals—this soul participates in a

* Proem in Arist., *De Animâ*.

higher principle, which tends to raise and convert it to itself. To comprehend the nature of this union or hypostasis it would be necessary to have mastered the whole of Plato's philosophy as comprised in the *Parmenides* and the *Timæus*; and he would dogmatize rashly who without this arduous preparation should claim Plato as the champion of an unconditional immortality. Certainly in the *Phædo*—the dialogue popularly supposed to contain all Plato's teaching on the subject—the immortality allotted to the impure soul is of a very questionable character, and we should rather infer from the account there given that the human personality, at all events, is lost by successive immersions into "matter." The following passage from Plutarch* will at least demonstrate the antiquity of notions which have recently been mistaken for fanciful novelties.

Every soul hath some portion of Nous, reason, a man cannot be a man without it; but as much of each soul as is mixed with flesh and appetite is changed, and through pain and pleasure becomes irrational. Every soul doth not mix herself after one sort; some plunge themselves into the body, and so in this life their whole frame is corrupted by appetite and passion; others are mixed as to some part, but the purer part still remains without the body. It is not drawn down into the body, but it swims above, and touches the extremest part of the man's head; it is like a cord to hold up and direct the subsiding part of the soul, as long as it proves obedient and is not overcome by the appetites of the flesh. The part that is plunged into the body is called soul. But the incorruptible part is called the Nous, and the vulgar think it is within them, as they likewise imagine the image reflected from a glass to be in that glass. But the more intelligent, who know it to be without, call it a dæmon.

And in the same learned work (*Isis Unveiled*) we have two Christian authorities, Irenæus and Origen, cited for like distinction between spirit and soul in such a manner as to show that the former must necessarily be regarded as separable from the latter. In the distinction itself there is of course no novelty for the most moderately well-informed. It is insisted upon in many modern works, among which may be mentioned Heard's *Trichotomy of Man* and Green's *Spiritual Philosophy*; the latter being an exposition of Coleridge's opinion on this and cognate subjects. But the difficulty of regarding the two principles as separable in fact as well as in logic, arises from the senses, if it is not the illusion of personal identity. That we are particle, and that one part only is immortal, the non-metaphysical mind rejects with the indignation which is always encountered by a proposition that is at

* Quoted by Madame Blavatsky, *Isis Unveiled*, ii. 284.

once distasteful and unintelligible. Yet perhaps it is not a greater difficulty (if, indeed, it is not the very same) than that hard saying which troubled Nicodemus, and which has been the key-note of the mystical religious consciousness ever since. This, however, is too extensive and deep a question to be treated in this paper, which has for its object chiefly to call attention to the distinctions introduced by ancient thought into the conception of body as the instrument or "vehicle" of soul. That there is a correspondence between the spiritual condition of man and the medium of his objective activity every spiritualist will admit to be probable, and it may well be that some light is thrown on future states by the possibility or the manner of spirit communication with this one.

THE NÎLGIRI SANNYÂSÎS.

I WAS told that Sannyâsîs were sometimes met with on a mountain called Velly Mallai, in the Coimbatore District, and trying to meet with one, I determined to ascend this mountain. I travelled up its steep sides and arrived at an opening, narrow and low, into which I crept on all fours. Going up some twenty yards I reached a cave, into the opening of which I thrust my head and shoulders. I could see into it clearly, but felt a cold wind on my face, as if there was some opening or crevice—so I looked carefully, but could see nothing. The room was about twelve feet square. I did not go into it. I saw arranged round its sides stones one cubit long, all placed upright. I was much disappointed at there being no Sannyâsî, and came back as I went, pushing myself backwards, as there was no room to turn. I was then told that Sannyâsîs had been met with in the dense Sholas (thickets), and as my work lay often in such places, I determined to prosecute my search, and did so diligently, without, however, any success.

One day I contemplated a journey to Coimbatore on my own affairs, and was walking up the road trying to make a bargain with a bandy man whom I desired to engage to carry me there; but as we could not come to terms, I parted with him and turned into the Lovedale Road at 6 p.m. I had not gone far when I met a man dressed like a Sannyâsî, who stopped and spoke to me. He observed a ring on my finger and asked me to give it to him. I said he was welcome to it, but enquired what he would give me in return. He said, "I don't care particularly about it; I would rather have that flour and sugar in the bundle on your back." "I will give you that with pleasure," I said, and took down my bundle and gave it to him. "Half is enough for me," he said; but subsequently changing his mind added, "now let me see what is in your bundle," pointing to my other parcel. "I can't give you that." He said, "Why cannot you give me your Swami (family idol)?" I said, "It is my Swami, I will not part with it; rather take

my life." On this he pressed me no more, but said, "Now you had better go home." I said, "I will not leave you." "Oh, you must," he said, "you will die here of hunger." "Never mind," I said, "I can but die once." "You have no clothes to protect you from the wind and rain; you may meet with tigers," he said. "I don't care," I replied. "It is given to man once to die. What does it signify how he dies?" When I said this he took my hand and embraced me, and immediately I became unconscious. When I returned to consciousness, I found myself with the Sannyâsi in a place new to me on a hill, near a large rock and with a big Shola near. I saw in the Shola right in front of us, that there was a pillar of fire, like a tree almost. I asked the Sannyâsi what was that like a high fire. "Oh," he said, "most likely a tree ignited by some careless wood-cutters." "No," I said, "it is not like any common fire—there is no smoke, nor are there flames—and it's not lurid and red. I want to go and see it." "No, you must not do so, you cannot go near that fire and escape alive." "Come with me then," I begged. "No—I cannot," he said, "if you wish to approach it, you must go alone and at your own risk; that tree is the tree of knowledge, and from it flows the milk of life: whoever drinks this never hungers again." Thereupon I regarded the tree with awe.

I next observed five Sannyâsis approaching. They came up and joined the one with me, entered into talk, and finally pulled out a hookah and began to smoke. They asked me if I could smoke. I said no. One of them said to me, "Let us see the Swami in your bundle" (here giving a description of the same). I said, "I cannot, I am not clean enough to do so." "Why not perform your ablutions in yonder stream?" they said. "If you sprinkle water on your forehead that will suffice." I went to wash my hands and feet, and laved my head, and showed it to them. Next they disappeared. "As it is very late, it is time you returned home," said my first friend. "No," I said, "now I have found you I will not leave you." "No, no," he said, "you must go home. You cannot leave the world yet; you are a father and a husband, and you must not neglect your worldly duties. Follow the footsteps of your late respected uncle; he did not neglect his worldly affairs, though he cared for the interests of his soul; you must go, but I will meet you again when you get your fortnightly holiday." On this he embraced me, and I again became unconscious. When I returned to myself, I found myself at the bottom of Col. Jones' Coffee Plantation above Coonor on a path. Here the Sannyâsi wished me farewell, and point-

ing to the high road below, he said, "Now you will know your way home;" but I would not part from him. I said, "All this will appear a dream to me unless you will fix a day and promise to meet me here again." "*I promise*," he said. "No, promise me by an oath on the head of my idol." Again he promised, and touched the head of my idol. "Be here," he said, "this day fortnight." When the day came I anxiously kept my engagement and went and sat on the stone on the path. I waited a long time in vain. At last I said to myself, "I am deceived, he is not coming, he has broken his oath"—and with grief I made a Pûjâh. Hardly had these thoughts passed my mind, than lo! he stood beside me. "Ah, you doubt me," he said; "why this grief?" I fell at his feet and confessed I had doubted him and begged his forgiveness. He forgave and comforted me, and told me to keep in my good ways and he would always help me; and he told me and advised me about all my private affairs without my telling him one word, and he also gave me some medicine for a sick friend which I had promised to ask for but had forgotten. This medicine was given to my friend and he is perfectly well now.

E. H. MORGAN.

WITCHCRAFT ON THE NÎLGIRIS.

HAVING lived many years (thirty) on the Nilgiris, employing the various tribes of the Hills on my estates, and speaking their languages, I have had many opportunities of observing their manners and customs and the frequent practice of demonology and witchcraft among them. On the slopes of the Nilgiris live several semi-wild people: first, the Curumbers, who frequently hire themselves out to neighbouring estates, and are first-rate fellers of forest; second, the Tain (Honey Curumbers), who collect and live largely on honey and roots, and who do not come into civilized parts; third, the Mulu Curumbers, who are rare on the slopes of the hills, but common in Wynaad lower down the plateau. These use bows and arrows, are fond of hunting, and have frequently been known to kill tigers, rushing in a body on their game and discharging their arrows at a short distance. In their eagerness they frequently fall victims to these animals; but they are supposed to possess a controlling power over all wild animals, especially elephants and tigers; and the natives declare they have the power of assuming the forms of various beasts. Their aid is constantly invoked both by the Curumbers first named, and by the natives generally, when wishing to be revenged on an enemy.

Besides these varieties of Curumbers there are various other wild tribes I do not now mention, as they are not concerned in what I have to relate.

I had on my estate near Ootacamund a gang of young Badâgas, some thirty young men, whom I had had in my service since they were children, and who had become most useful handy fellows. From week to week I missed one or another of them, and on enquiry was told they had been sick and were dead!

One market-day I met the Moneghar of the village to which my gang belonged and some of his men, returning home laden with their purchases. The moment he saw me he stopped, and coming up to me,

said, "Mother, I am in great sorrow and trouble, tell me what I can do!" "Why, what is wrong?" I asked. "All my young men are dying, and I cannot help them, nor prevent it; they are under a spell of the wicked Curumbers who are killing them, and I am powerless." "Pray explain," I said; "why do the Curumbers behave in this way, and what do they do to your people?" "Oh, Madam, they are vile extortioners, always asking for money; we have given and given till we have no more to give. I told them we had no more money and then they said—*All right—as you please; we shall see.* Surely as they say this, we know what will follow—at night when we are all asleep, we wake up suddenly and see a Curumber *standing in our midst*, in the middle of the room occupied by the young men." "Why do you not close and bolt your doors securely?" I interrupted. "What is the use of bolts and bars to them? They come through stone walls. . . . Our doors *were* secure, but nothing can keep out a Curumber. He points his finger at Mada, at Kurira, at Jogie—he utters no word, and as we look at him he vanishes! In a few days these three young men sicken, a low fever consumes them, their stomachs swell, they die. Eighteen young men, the flower of my village, have died thus this year. These effects always follow the visit of a Curumber at night." "Why not complain to the Government?" I said. "Ah, no use, who will catch them?" "Then give them the 200 rupees they ask this once on a solemn promise that they exact no more." "I suppose we must find the money somewhere," he said, turning sorrowfully away.

A Mr. K—— is the owner of a coffee estate near this, and like many other planters employs Burghers. On one occasion he went down the slopes of the hills after bison and other large game, taking some seven or eight Burghers with him as gun-carriers (besides other things necessary in jungle-walking—axes to clear the way, knives and ropes, etc.). He found and *severely* wounded a fine elephant with tusks. Wishing to secure these, he proposed following up his quarry, but could not induce his Burghers to go deeper and further into the forests; they feared to meet the Mulu Curumbers who lived thereabouts. For long he argued in vain, at last by dint of threats and promises he induced them to proceed, and as they met no one, their fears were allayed and they grew bolder, when suddenly coming on the elephant lying dead (oh, horror to them!), the beast was surrounded by a party of Mulu Curumbers busily engaged in cutting out the tusks, one of which they had already disengaged! The affrighted Burghers fell back, and

nothing Mr. K—— could do or say would induce them to approach the elephant, which the Curumbers stoutly declared was theirs. They had killed him they said. They had very likely met him staggering under his wound and had finished him off. Mr. K—— was not likely to give up his game in this fashion. So walking threateningly to the Curumbers he compelled them to retire, and called to his Burghers at the same time. The Curumbers only said, "Just you *dare* to touch that elephant," and retired. Mr. K—— thereupon cut out the remaining tusk himself, and slinging both on a pole with no little trouble, made his men carry them. He took all the blame on himself, showed them that *they* did not touch them, and finally declared he would stay there all night rather than lose the tusks. The idea of a night near the Mulu Curumbers was too much for the fears of the Burghers, and they finally took up the pole and tusks and walked home. From that day those men, all but one who probably carried the gun, sickened, walked about like spectres, doomed, pale, and ghastly, and before the month was out all were dead men, with the one exception!

A few months ago, at the village of Ebanaud, a few miles from this, a fearful tragedy was enacted. The Moneghar or headman's child was sick unto death. This, following on several recent deaths, was attributed to the evil influences of a village of Curumbers hard by. The Burghers determined on the destruction of every soul of them. They procured the assistance of a Toda, as they invariably do on such occasions, as *without one* the Curumbers are supposed to be invulnerable. They proceeded to the Curumber village at night and set their huts on fire, and as the miserable inmates attempted to escape, flung them back into the flames or knocked them down with clubs. In the confusion one old woman escaped unobserved into the adjacent bushes. Next morning she gave notice to the authorities, and identified seven Burghers, among whom was the Moneghar or headman, and one Toda. As the murderers of her people they were all brought to trial in the Courts here—except the headman, who died before he could be brought in—and were all sentenced and duly executed, that is, three Burghers and the Toda, who were proved principals in the murders.

Two years ago an almost identical occurrence took place at Kotagher, with exactly similar results, but without the punishment entailed having *any* deterrent effect. They pleaded "justification," as witchcraft had been practised on them. But our Government ignores all occult dealings and will not believe in the dread power in the land.

They deal very differently with these matters in Russia, where, in a recent trial of a similar nature, the witchcraft was admitted as an extenuating circumstance and the culprits who had burnt a witch were all acquitted. *All* natives of whatever caste are well aware of these terrible powers and too often do they avail themselves of them—much oftener than any one has an idea of. One day as I was riding along I came upon a strange and ghastly object—a basket containing the bloody head of a black sheep, a cocoanut, ten rupees in money, some rice and flowers. These smaller items I did not see, not caring to examine any closer; but I was told by some natives that those articles were to be found in the basket. The basket was placed at the apex of a triangle formed by three fine threads tied to three small sticks, so placed that any one approaching from the roads on either side had to stumble over the threads and receive the full effects of the deadly “Soonium” as the natives call it. On enquiry I learnt that it was usual to prepare such a Soonium when one lay sick unto death; as throwing it on another was the only means of rescuing the sick one, and woe to the unfortunate who broke a thread by stumbling over it!

E. H. MORGAN.

SHÂMANISM AND WITCHCRAFT

AMONGST THE KOLARIAN TRIBES.

HAVING resided for some years amongst the Mîmdâs and Hôs of Singbhoom, and Chutia Nâgpur, my attention was drawn at times to customs differing a good deal in some ways, but having an evident affinity to those related of the Nilgiri Curumbers in Mrs. Morgan's article. I do not mean to say that the practices I am about to mention are confined simply to the Kolarian tribes, as I am aware both Oraons (a Dravidian tribe), and the different Hindû castes living side by side with the Kôls, count many noted wizards among their number; but what little I have come to know of these curious customs, I have learnt among the Mîmdâs and Hôs, some of the most celebrated practitioners among them being Christian converts. The people themselves say that these practices are peculiar to their race, and not learnt from the Hindû invaders of their plateau; but I am inclined to think that some, at least, of the operations have a strong savour of the Tântrik black magic about them, though practised by people who are often entirely ignorant of any Hindû language.

These remarks must be supplemented by a short sketch of Kôl ideas of worship. They have nothing that I have either seen or heard of in the shape of an image, but their periodical offerings are made to a number of elemental spirits, and they assign a genie to every rock or tree in the country, whom they do not consider altogether malignant, but who, if not duly "fed" or propitiated, may become so.

The Singbonga (lit., sun- or light-spirit) is the chief; Bûrû Bonga (spirit of the hills), and the Ikhîr Bonga (spirit of the deep), come next. After these come the Darha, of which each family has its own, and they may be considered in the same light as Lares and Penates. But every threshing-, flour- and oil-mill, has its spirit, who must be duly fed, else evil result may be expected. Their great festival (the Karam) is in honour of Singbonga and his assistants; the opening words of

the priests' speech on that occasion sufficiently indicate that they consider Singbonga the creator of men and things. "Mûnûre Singbonga manokoa luekidkoa" (In the beginning Singbonga made men).

Each village has its Sarna or sacred grove, where the hereditary priest from time to time performs sacrifices, to keep things prosperous; but this only relates to spirits actually connected with the village, the three greater spirits mentioned, being considered general, are only fed at intervals of three or more years, and always on a public road or other public place, and once every ten years a human being *was* (and as some will tell you *is*) sacrificed to keep the whole community of spirits in good train. The Pâhâns, or village priests, are regular servants of the spirits, and the Nâjo, Deona and Bhagats are people who in some way are supposed to obtain an influence or command over them. The first and lowest grade of these adepts, called Nâjos (which may be translated as practitioners of witchcraft pure and simple), are frequently women. They are accused, like the Mulu Curumbers, of demanding quantities of grain or loans of money, etc., from people, and when these demands are refused, they go away with a remark to the effect that, "You have lots of cattle and grain just now, but we'll see what they are like after a month or two." Then probably the cattle of the bewitched person will get some disease, and several of them die, or some person of his family will become ill or get hurt in some unaccountable way. Till at last, thoroughly frightened, the afflicted person takes a little uncooked rice and goes to a Deona or Mati (as he is called in the different vernaculars of the province)—the grade immediately above Nâjo in knowledge—and promising him a reward if he will assist him, requests his aid; if the Deona accedes to the request, the proceedings are as follows. The Deona taking the oil brought, lights a small lamp and seats himself beside it with the rice in a Sûrpa (winnow) in his hands. After looking intently at the lamp flame for a few minutes, he begins to sing a sort of chaunt of invocation in which all the spirits are named, and at the name of each spirit a few grains of rice are thrown into the lamp. When the flame at any particular name gives a jump and flares up high, the spirit concerned in the mischief is indicated. Then the Deona takes a small portion of the rice wrapped up in a sâl (*Shorea robusta*) leaf and proceeds to the nearest new white-ant nest from which he cuts the top off and lays the little bundle, half in and half out of the cavity. Having retired, he returns in about an hour to see if the rice is consumed, and according to the rapidity with

which it is eaten he predicts the sacrifice which will appease the spirit. This ranges from a fowl to a buffalo, but whatever it may include, the pouring out of blood is an essential. It must be noted, however, that the Mati never tells who the Nâjo is who has excited the malignity of the spirit.

But the most important and lucrative part of a Deona's business is the casting out of evil spirits, which operation is known variously as Âshâb and Langhan. The sign of obsession is generally some mental alienation accompanied (in bad cases) by a combined trembling and restlessness of the limbs, or an unaccountable swelling up of the body. Whatever the symptoms may be the mode of cure appears to be much the same. On such symptoms declaring themselves, the Deona is brought to the house and is, in the presence of the sick man and his friends, provided with some rice in a Sûrpa, some oil, a little vermilion, and the Deona produces from his own person a little powdered sulphur and an iron tube about four inches long and two Tiklis.* Before the proceedings begin all the things mentioned are touched with vermilion, a small quantity of which is also mixed with the rice. Three or four grains of rice and one of the Tiklis being put into the tube, a lamp is then lighted beside the sick man and the Deona begins his chaunt, throwing grains of rice at each name, and when the flame flares up, a little of the powdered sulphur is thrown into the lamp and a little on the sick man, who thereupon becomes convulsed, is shaken all over and talks deliriously, the Deona's chaunt growing louder all the while. Suddenly the convulsions and the chaunt cease, and the Deona carefully takes up a little of the sulphur off the man's body and puts it into the tube, which he then seals with the second Tikli. The Deona and one of the man's friends then leave the hut, taking the iron tube and rice with them, the spirit being now supposed out of the man and bottled up in the iron tube. They hurry across country until they leave the hut some miles behind. Then they go to the edge of some tank or river, to some place they know to be frequented by people for the purposes of bathing, etc., where, after some further ceremony, the iron is stuck into the ground and left there. This is done with the benevolent intention that the spirit may transfer its attentions to the unfortunate person who may happen to touch it while bathing. I am told the spirit in this case usually chooses a young and healthy person.

* Tikli is a circular piece of gilt paper which is stuck on between the eyebrows of the women of the province as ornament.

Should the Deona think the spirit has not been able to suit itself with a new receptacle, he repairs to where a bazaar is taking place and there (after some ceremony) he mixes with the crowd, and taking a grain of the reddened rice jerks it with his forefinger and thumb in such a way that without attracting attention it falls on the person or clothes of some. This is done several times to make certain. Then the Deona declares he has done his work, and is usually treated to the best dinner the sick man's friends can afford. It is said that the person to whom the spirit by either of these methods is transferred may not be affected for weeks or even months. But some fine day while he is at his work, he will suddenly stop, wheel round two or three times on his heels and fall down more or less convulsed, from that time forward he will begin to be troubled in the same way as his dis-obsessed predecessor was.

Having thus given some account of the Deona, we now come to the Bhagat, called by the Hindûs Sokha and Shivrâth. This is the highest grade of all, and, as I ought to have mentioned before, the 'Ilm (knowledge) of both the Deona and Bhagat grades is only to be learned by becoming a regular Chelâ of a practitioner; but I am given to understand that the final initiation is much hastened by a seasonable liberality on the part of the Chelâ. During the initiation of the Sokha certain ceremonies are performed at night by aid of a human corpse, this is one of the things which has led me to think that this part at least of these practices is connected with Tântrik black magic.

The Bhagat performs two distinct functions: first, a kind of divination called Bhao (the same in Hindi), and second, a kind of Shâmanism called Darasta in Hindi, and Bharotan in Horokaji, which, however, is resorted to only on very grave occasions—as, for instance, when several families think they are bewitched at one time and by the same Nâjo.

The Bhao is performed as follows: The person having some query to propound, makes a small dish out of a sâl leaf and puts in it a little uncooked rice and a few pice; he then proceeds to the Bhagat and lays before him the leaf and its contents, propounding at the same time his query. The Bhagat then directs him to go out and gather two Golaichi (varieties of *Posinia*) flowers (such practitioners usually having a Golaichi tree close to their abodes); after the flowers are brought the Bhagat seats himself with the rice close to the enquirer, and after some consideration selects one of the flowers, and holding it by the stalk at about a foot from his eyes in his left hand twirls it between his thumb and fingers, occasionally with his right hand dropping on it a grain or

two of rice.* In a few minutes his eyes close and he begins to talk—usually about things having nothing to do with the question in hand, but after a few minutes of this, he suddenly yells out an answer to the question, and without another word retires. The enquirer takes his meaning as he can from the answer, which, I believe, is always ambiguous.

The Bharotan, as I have above remarked, is only resorted to when a matter of grave import has to be enquired about; the Bhagat makes a high charge for a séance of this description. We will fancy that three or four families in a village consider themselves bewitched by a Nâjo, and they resolve to have recourse to a Bhagat to find out who the witch is; with this view a day is fixed on, and two delegates are procured from each of five neighbouring villages, who accompany the afflicted people to the house of the Bhagat, taking with them a Dâli or offering, consisting of vegetables, which on arrival is formally presented to him. Two delegates are posted at each of the four points of the compass, and the other two seat themselves with the afflicted parties to the right of the Bhagat, who occupies the centre of the apartment with four or five Chelâs, a clear space being reserved on the left. One Chelâ then brings a small earthenware pot full of lighted charcoal, which is set before the Bhagat with a pile of mango-wood chips and a ball composed of Dhunia (resin of *Shorea robusta*), Gur (treacle), and Ghî (clarified butter), and possibly other ingredients. The Bhagat's sole attire consists of a scanty Languti (waist-cloth), a necklace of the large wooden beads such as are usually worn by fakîrs, and several garlands of Golaichi flowers round his neck, his hair being unusually long and matted. Beside him stuck in the ground is his staff. One Chelâ stands over the firepot with a bamboo-mat fan in his hand, another takes charge of the pile of chips, and a third of the ball of composition, and one or two others seat themselves behind the Bhagat, with drums and other musical instruments in their hands. All being in readiness, the afflicted ones are requested to state their grievance. This they do, and pray the Bhagat to call before him the Nâjo, who has stirred up the spirits to afflict them, in order that he may be punished. The Bhagat then gives a sign to his Chelâs, those behind him raise a furious din with their instruments, the fire is fed with chips, and a bit of the composition is put on it from time to time, producing a volume of thick greyish-blue smoke; this is carefully fanned over, and towards the Bhagat, who, when well wrapped in

* This is the process by which the Bhagat mesmerizes himself.

smoke, closes his eyes and quietly swaying his body begins a low chaunt. The chaunt gradually becomes louder and the sway of his body more pronounced, until he works himself into a state of complete frenzy. Then with his body actually quivering, and his head rapidly working about from side to side, he sings in a loud voice how a certain Nâjo (whom he names) had asked money of those people and was refused, and how he stirred up certain spirits (whom he also names) to hurt them, how they killed so and so's bullocks, some one else's sheep, and caused another's child to fall ill. Then he begins to call on the Nâjo to come and answer for his doings, and in doing so rises to his feet—still commanding the Nâjo to appear; meanwhile he reels about, then falls on the ground and is quite still except for an occasional whine, and a muttered, "I see him!" "He is coming!" This state may last for an hour or more till at last the Bhagat sits up and announces the Nâjo has come; as he says so, a man, apparently mad with drink, rushes in and falls with his head towards the Bhagat, moaning and making a sort of snorting as if half stifled. In this person the bewitched parties often recognize a neighbour and sometimes even a relation, but whoever he may be they have bound themselves to punish him. The Bhagat then speaks to him and tells him to confess, at the same time threatening him, in case of refusal, with his staff. He then confesses in a half-stupefied manner, and his confession tallies with what the Bhagat has told in his frenzy. The Nâjo is then dismissed and runs out of the house in the same hurry as he came in.

The delegates then hold a council at which the Nâjo usually is sentenced to a fine—often heavy enough to ruin him—and expelled from his village. Before the British rule the convicted Nâjo seldom escaped with his life, and during the mutiny time, when no Englishmen were about, the Singbhoom Hôs paid off a large number of old scores of this sort.*

In conclusion I have merely to add that I have derived this information from people who have been actually concerned in these occurrences, and among others a man belonging to a village of my own, who was convicted and expelled from the village with the loss of all his movable property, and one of his victims, a relation of his, sat by me when the above was being written.

MAHÂTMÂS AND CHELÂS.

A MAHÂTMÂ is an individual who, by special training and education, has evolved those higher faculties, and has attained that spiritual knowledge, which ordinary humanity will acquire after passing through numberless series of reïncarnations during the process of cosmic evolution, provided, of course, that they do not go, in the meanwhile, against the purposes of Nature and thus bring on their own annihilation. This process of the self-evolution of the Mahâtmâ extends over a number of "incarnations," although, comparatively speaking, they are very few. Now, what is it that incarnates? The occult doctrine, so far as it is given out, shows that the first three principles die more or less with what is called the physical death. The fourth principle, together with the lower portions of the fifth, in which reside the animal propensities, has Kâma Loka for its abode, where it suffers the throes of disintegration in proportion to the intensity of those lower desires; while it is the higher Manas, the *pure man*, which is associated with the sixth and seventh principles, that goes into Devachan to enjoy there the effects of its good Karma, and then to be reïncarnated as a higher personality. Now an entity that is passing through the occult training in its successive births, gradually has less and less (in each incarnation) of that lower Manas until there arrives a time when its *whole* Manas, being of an entirely elevated character, is centred in the individuality, when such a person may be said to have become a Mahâtmâ. At the time of his physical death, all the lower four principles perish without any suffering, for these are, in fact, to him like a piece of wearing apparel which he puts on and off at will. The real Mahâtmâ is then not his physical body but that higher Manas which is inseparably linked to the Âtmâ and its vehicle (the sixth principle)—a union effected by him in a comparatively very short period by passing through the process of self-evolution laid down by Occult Philosophy. When therefore people express a desire to "see a Mahâtmâ," they really do not seem to understand what it is they ask for. How can they, with their physical eyes, hope to see that which *transcends* that sight? Is it the

body—a mere shell or mask—they crave or hunt after? And supposing they see the body of a Mahâtmâ, how can they know that behind that mask is concealed an exalted entity? By what standard are they to judge whether the Mâyâ before them reflects the image of a true Mahâtmâ or not? And who will say that the physical is not a Mâyâ? Higher things can be perceived only by a sense pertaining to those higher things; whoever therefore wants to see the real Mahâtmâ, must use his *intellectual* sight. He must so elevate his Manas that its perception will be clear and all mists created by Mâyâ be dispelled. His vision will then be bright and he will see the Mahâtmâ wherever he may be, for, being merged into the sixth and the seventh principles, which know no distance, the Mahâtmâ may be said to be everywhere. But, at the same time, just as we may be standing on a mountain top and have within our sight the whole plain, and yet not be cognizant of any particular tree or spot, because from that elevated position all below is nearly identical, and as our attention may be drawn to something which may be dissimilar to its surroundings—in the same manner, although the whole of humanity is within the mental vision of the Mahâtmâ, he cannot be expected to take special note of every human being, unless that being by his special acts draws particular attention to himself. The highest interest of humanity, as a whole, is the Mahâtmâ's special concern, for he has identified himself with that Universal Soul which runs through Humanity; and to draw his attention one must do so through that Soul. This perception of the Manas may be called "faith" which should not be confounded with "blind belief." "Blind faith" is an expression sometimes used to indicate belief without perception or understanding; while the true perception of the Manas is that enlightened belief which is the real meaning of the word "faith." This belief should at the same time be accompanied by *knowledge, i.e.,* experience, for "true knowledge brings with it faith." Faith is the perception of the Manas (the fifth principle), while knowledge, in the true sense of the term, is the capacity of the Intellect, *i.e.,* it is spiritual perception. In short, the individuality of man, composed of his higher Manas, the sixth and the seventh principles, should work as a unity, and then only can it obtain "divine wisdom," for divine things can be sensed only by divine faculties. Thus a Chelâ should be actuated solely by a desire to understand the operations of the Law of Cosmic Evolution, so as to be able to work in conscious and harmonious accord with Nature.

ANON.

THE BRÂHMANICAL THREAD.

I. THE general term for the investiture of this thread is Upa-nayana; and the invested is called Upanîta, which signifies brought or drawn near (to one's Guru), *i.e.*, the thread is the symbol of the wearer's condition.

II. One of the names of this thread is Yajna-Sûtra. Yajna means Brahma, or the Supreme Spirit, and Sûtra the thread, or tie. Collectively, the compound word signifies that which ties a man to his spirit or god. It consists of three yarns twisted into one thread, and three of such threads formed and knotted into a circle. Every Theosophist knows what a circle signifies and it need not be repeated here. He will easily understand the rest and the relation they have to mystic initiation. The yarns signify the great principle of "three in one, and one in three," thus: the first trinity consists of Âtmâ which comprises the three attributes of Manas, Buddhi, and Ahankâra (the mind, the intelligence, and the egotism). The Manas again, has the three qualities of Satva, Rajas, and Tamas (goodness, foulness, and darkness). Buddhi has the three attributes of Pratyaksha, Upamiti and Anumiti (perception, analogy, and inference). Ahankâra also has three attributes, viz., Jñâtâ, Jñeya, and Jñâna (the knower, the known, and the knowledge).

III. Another name of the sacred thread is Tridandî. Tri means three, and Danda, chastisement, correction, or conquest. This reminds the holder of the three great "corrections" or conquests he has to accomplish. These are: (1) Vākya Sanyama;* (2) Manas Sanyama; and (3) Indriya (or Deha) Sanyama. Vākya is speech, Manas, mind, and Deha (literally, body), or Indriya, is the senses. The three conquests therefore mean the control over one's speech, thought, and action.

This thread is also the reminder to the man of his secular duties, and its material varies, in consequence, according to the occupation of the

* Danda and Sanyama are synonymous terms.—A. S.

wearer. Thus, while the thread of the Brâhman is made of pure cotton, that of the Kshatriyas (the warriors) is composed of flax—the bow-string material; and that of Vaishyas (the traders and cattle-breeders), of wool. From this it is not to be inferred that caste was originally meant to be hereditary. In the ancient times, it depended on the qualities of the man. Irrespective of the caste of his parents, a man could, according to his merit or otherwise, raise or lower himself from one caste to another; and instances are not wanting in which a man has elevated himself to the position of the highest Brâhman (such as Vishvâmitra Rishi, Parâshara, Vyâsa, Satyakâma, and others) from the very lowest of the four castes. The sayings of Yudhishtira on this subject, in reply to the questions of the great serpent, in the Âranya Parva of the *Mahâbhârata*, and of *Manu*, on the same point, are well known and need nothing more than bare reference. Both *Manu* and *Mahâbhârata*—the fulcrums of Hindûism—distinctly affirm that a man can translate himself from one caste to another by his merit, irrespective of his parentage.

The day is fast approaching when the so-called Brâhman will have to show cause, before the tribunal of the Âryan Rishis, why they should not be divested of the thread which they do not at all deserve, but are degrading by misuse. Then alone will the people appreciate the privilege of wearing it.

There are many examples of the highest distinctive insignia being worn by the unworthy. The aristocracies of Europe and Asia teem with such.

A. SARMAN.

READING IN A SEALED ENVELOPE.

SOME years ago, a Brâhman astrologer named Venkata Narasimha Josi, a native of the village of Periasamudram in the Mysore Provinces, came to the little town in the Bellary District where I was then employed. He was a good Sanskrit, Telugu and Canarese poet, and an excellent master of Vedic rituals; knew the Hindû system of astronomy, and professed to be an astrologer. Besides all this, he possessed the power of reading what was contained in any sealed envelope. The process adopted for the purpose was simply this. We wrote whatever we chose on a piece of paper, enclosed it in one, two or three envelopes, each properly gummed and sealed, and handed the cover to the astrologer. He asked us to name a figure between 1 and 9, and on its being named, he retired with the envelope to a secluded place for some time; and then he returned with a paper full of figures, and another paper containing a copy of what was on the sealed paper—exactly, letter for letter and word for word. I tried him often and many others did the same, and we were all satisfied that he was invariably accurate, and that there was no deception whatsoever in the matter.

About this time, one Mr. Theyagaraja Mudalyar, a supervisor in the Public Works Department, an English scholar and a good Sanskrit and Telugu poet, arrived at our place on his periodical tour of inspection. Having heard about the aforesaid astrologer, he wanted to test him in a manner most satisfactory to himself. One morning handing to the astrologer a very indifferently gummed envelope, he said, "Here, Sir, take this letter home with you, and come back to me with your copy in the afternoon." This loose way of closing the envelope, and the permission given to the astrologer to take it home for several hours, surprised the Brâhman, who said, "I don't want to go home. Seal the cover better, and give me the use of some room here. I shall be ready with my copy very soon." "No," said the Mudalyar, "take it as it is,

and come back whenever you like. I have the means of finding out the deception, if any be practised."

So then the astrologer went with the envelope, and returned to the Mudalyar's place in the afternoon. Myself and about twenty others were present there by appointment. The astrologer then carefully handed the cover to the Mudalyar, desiring him to see if it was all right. "Don't mind that," the Mudalyar answered; "I can find out the trick, if there be any. Produce your copy." The astrologer thereupon presented to the Mudalyar a paper on which four lines were written in Telugu, and stated that this was a copy of the paper enclosed in the Mudalyar's envelope. Those four lines formed a portion of an antiquated poem.

The Mudalyar read the paper once, then read it over again. Extreme satisfaction beamed over his countenance, and he sat mute for some seconds seemingly in utter astonishment. But soon after, the expression of his face changing, he opened the envelope and threw the enclosure down, jocularly saying to the astrologer, "Here, Sir, is the original of which you have produced the copy."

The paper lay upon the carpet, and was *quite blank!* not a word, nor a letter on its clean surface.

This was a sad disappointment to all his admirers; but to the astrologer himself it was a real thunderbolt. He picked up the paper pensively, examined it on both sides, then dashed it on the ground in a fury and suddenly arising, exclaimed, "My Vidyâ* is a delusion, and I am a liar!" The subsequent behaviour of the poor man made us fear lest this great disappointment should drive him to commit some desperate act. In fact he seemed determined to drown himself in the well, saying that he was dishonoured. While we were trying to console him, the Mudalyar came forward, caught hold of his hands, and besought him to sit down and calmly listen to his explanation, assuring him that he was *not* a liar, and that his copy was perfectly accurate. But the astrologer would not be satisfied; he supposed that all this was said simply to console him, and cursed himself and his fate most horribly. However, in a few minutes he became calmer and listened to the Mudalyar's explanation, which was in substance as follows.

The only way for the sceptic to account for this phenomenon, is to suppose that the astrologer opened the covers dexterously and read

* Secret knowledge, magic.

their contents. "So," he said, "I wrote four lines of old poetry on the paper with nitrate of silver, which would be invisible until exposed to the light; and this would have disclosed the astrologer's fraud, if he had tried to find out the contents of the enclosed paper by opening the cover, however ingeniously. For, if he opened it and looked at the paper, he would have seen that it was blank, resealed the cover, and declared that the paper enveloped therein bore no writing whatever; or if he had, by design or accident, exposed the paper to light, the writing would have become black, and he would have produced a copy of it, as if it were the result of his own Vidyâ; but in either case and the writing remaining, his deception would have been clear, and it would have been patent to all that he *did* open the envelope. But in the present case, the result proved conclusively that the cover was not opened at all."

P. SREENEEVAS ROW.

THE TWELVE SIGNS OF THE ZODIAC.

THE division of the Zodiac into different signs dates from immemorial antiquity. It has acquired a world-wide celebrity and is to be found in the astrological systems of several nations. The invention of the Zodiac and its signs has been assigned to different nations by different antiquarians. It is stated by some that, at first, there were only ten signs, that one of these signs was subsequently split up into two separate signs, and that a new sign was added to the number to render the esoteric significance of the division more profound, and at the same time to conceal it more perfectly from the uninitiated public. It is very probable that the real philosophical conception of the division owes its origin to some particular nation, and the names given to the various signs might have been translated into the languages of other nations. The principal object of this article, however, is not to decide which nation had the honour of inventing the signs in question, but to indicate *to some extent* the real philosophical meaning involved therein, and the way to discover the rest of the meaning which yet remains undisclosed. But from what is herein stated, an inference may fairly be drawn that, like so many other philosophical myths and allegories, the invention of the Zodiac and its signs owes its origin to ancient India.

What, then, is its real origin, what is the philosophical conception which the Zodiac and its signs are intended to represent? Do the various signs merely indicate the shape or configuration of the different constellations included in the divisions, or, are they simply masks designed to veil some hidden meaning? The former supposition is altogether untenable for two reasons, viz.:

I. The Hindûs were acquainted with the precession of the equinoxes, as may be easily seen from their works on astronomy, and from the almanacs published by Hindû astronomers. Consequently they

E

were fully aware of the fact that the constellations in the various zodiacal divisions were not fixed. They could not, therefore, have assigned particular shapes to these shifting groups of fixed stars with reference to the divisions of the Zodiac. But the names indicating the zodiacal signs have all along remained unaltered. It is to be inferred, therefore, that the names given to the various signs have no connection whatever with the configurations of the constellations included in them.

II. The names assigned to these signs by the ancient Sanskrit writers and their exoteric or literal meanings are as follows:

NAMES OF THE SIGNS.	EXOTERIC OR LITERAL MEANINGS.
1 Mesha.....	Ram, or Aries.
2 Rishabha	Bull, or Taurus.
3 Mithuna.....	Twins, or Gemini (male and female).
4 Karkâta.....	Crab, or Cancer.
5 Simha	Lion, or Leo.
6 Kanyâ	Virgin or Virgo.*
7 Tulâ.....	Balance, or Libra.
8 Vrischika	Scorpion, or Scorpio.
9 Dhanus	Archer, or Sagittarius.
10 Makara	The Goat, or Capricornus (Crocodile, in Sanskrit).
11 Kumbha.....	Water-bearer, or Aquarius.
12 Mina	Fishes, or Pisces.

The figures of the constellations included in the signs at the time the division was first made do not at all resemble the shapes of the animals, reptiles and other objects denoted by the names given them. The truth of this assertion can be ascertained by examining the configurations of the various constellations. Unless the shape of the crocodile† or the crab is called up by the observer's imagination, there is very little chance of the stars themselves suggesting to his idea that figure upon the blue canopy of the starry firmament.

If, then, the constellations have nothing to do with the origin of the names by which the zodiacal divisions are indicated, we have to seek for some other source which might have given rise to these appellations. It becomes my object to unravel a portion of the mystery con-

* Virgo-Scorpio, when none but the initiates knew there were twelve signs. Virgo-Scorpio was then followed for the profane by Sagittarius. At the middle or junction-point where now stands Libra and at the sign now called Virgo, two mystical signs were inserted which remained unintelligible to the profane.—Ed. *Theos.*

† This constellation was never called Crocodile by the ancient Western astronomers, who described it as a horned goat and called it so—Capricornus.—Ed. *Theos.*

nected with these zodiacal signs, as also to disclose a portion of the sublime conception of the ancient Hindû philosophy which gave rise to them. The signs of the Zodiac have more than one meaning. From one point of view they represent the different stages of evolution up to the time the present material universe with the five elements came into phenomenal existence. As the author of *Isis Unveiled* has stated in the second volume of her admirable work, "the key should be turned *seven times*" to understand the whole philosophy underlying these signs. But I shall turn it only once and give the contents of the *first chapter* of the History of Evolution. It is very fortunate that the Sanskrit names assigned to the various divisions by Âryan philosophers contain within themselves the key to the solution of the problem. Those of my readers who have studied to some extent the ancient Mantra and the Tantra Shâstras* of India, will have seen that very often Sanskrit words are made to convey a certain hidden meaning by means of well-known prearranged methods and a tacit convention, while their literal significance is something quite different from the implied meaning. The following are some of the rules which may help an enquirer in ferreting out the deep significance of ancient Sanskrit nomenclature to be found in the old Âryan myths and allegories:

1. Find out the synonyms of the word used which have other meanings.
2. Find out the numerical value of the letters composing the word according to the methods given in ancient Tântrika works.
3. Examine the ancient myths or allegories, if there are any, which have any special connection with the word in question.
4. Permute the different syllables composing the word and examine the new combinations that will thus be formed and their meanings, etc.

I shall now apply some of the above given rules to the names of the twelve signs of the Zodiac.

I. Mesha.—One of the synonyms of this word is Aja. Now, Aja literally means that which has no birth, and is applied to the Eternal Brahma in certain portions of the Upanishads. So, the first sign is intended to represent Parabrahman, the self-existent, eternal, self-sufficient cause of all.

II. Rishabham.—This word is used in several places in the Upani-

* Works on Incantation and Magic.

shads and the Veda to mean Pranava (Aum). Shankarâchârya has so interpreted it in several portions of his commentary.*

III. Mithuna.—As the word plainly indicates, this sign is intended to represent the first androgyne, the Ardhanârîshvara, the bi-sexual Sephira Adam Kadmon.

IV. Karkâta.—When the syllables are converted into the corresponding numbers, according to the general mode of transmutation so often alluded to in Mantra Shâstra, the word in question will be represented by ////. This sign then is evidently intended to represent the sacred Tetragram; the Parabrahmadhâraka; the Pranava resolved into four separate entities corresponding to its *four* Mâtrâs; *the four* Avasthâs indicated by Jâgrat (waking) Avasthâ, Svapna (dreaming) Avasthâ, Sushupti (deep sleep) Avasthâ, and Turiya (the last stage, *i.e.*, Nirvâna) Avasthâ (as yet in potentiality); *the four states* of Brahma called Vaishvânara, Taijasa (or Hiranyagarbha), Prajñâ, and Îshvara, and represented by Brahmâ, Vishnu, Maheshvara, and Sadashiva; *the four aspects* of Parabrahman, as Sthûla (gross), Sûkshma (subtle), Vija (seed), and Sâkshi (witness); *the four stages or conditions* of the Sacred Word, named Parâ, Pashyanti, Madhyamâ and Vaikhari; Nâdam, Bindu, Shakti and Kâla. This sign completes the first quaternary.

V. Simha.—This word contains a world of occult meaning within itself; and it may not be prudent on my part to disclose the whole of its meaning now. It will be sufficient for the present purpose to give a general indication of its significance.

Two of its synonymous terms are Panchâsyam and Hari, and its number in the order of the zodiacal divisions (being the fifth sign) points clearly to the former synonym. This synonym—Panchâsyam—shows that the sign is intended to represent the *five* Brahmas—viz., Îshânâ, Aghoram, Tatpurusham, Vâmadevam, and Sadyojâtam—the *five* Buddhas. The second synonym shows it to be Nârâyana, the Jivâtma or Pratyagâtma. The Sukarahasy-Upanishad will show that the ancient Âryan philosophers looked upon Nârâyana as the Jivâtma.† The Vaishnavites may not admit it. But as an Advaitî, I look upon Jivâtma as identical with Paramâtma in its real essence when stripped of its illusory attributes created by Ajñânâ or Avidyâ—ignorance. The Jivâtma is correctly placed in the fifth sign counting from Mesham,

* Example, "*Rishabhasya—Chandasâm Rishabhasya Pradhânasya Pranavasya.*"

† In its lowest or most material state, as the life-principle which animates the material bodies of the animal and vegetable worlds, etc.—ED. *Theos.*

as the fifth sign is the Putrasthânam or the son's house according to the rules of Hindû astrology. The sign in question represents Jivâtmâ—the son of Paramâtmâ as it were. (I may also add that it represents the real Christ, the anointed pure spirit, though many Christians may frown at this interpretation.)* I will only add here that unless the nature of this sign is fully comprehended it will be impossible to understand the real order of the next three signs and their full significance. The elements or entities that have merely a potential existence in this sign become distinct separate entities in the next three signs. Their union into a single entity leads to the destruction of the phenomenal universe, and the recognition of the pure Spirit and their separation has the contrary effect. It leads to material earth-bound existence and brings into view the picture gallery of Avidyâ (ignorance) or Mâyâ (illusion). If the real orthography of the name by which the sign in question is indicated is properly understood, it will readily be seen that the next three signs are not what they ought to be. Kanyâ or Virgo and Vrischika or Scorpio should form one single sign, and Tulâ must follow the said sign if it is at all necessary to have a separate sign of that name. But a separation between Kanyâ and Vrischika was effected by interposing the sign Tulâ between the two. The object of this separation will be understood on examining the meaning of the three signs.

VI. Kanyâ.—Means a virgin and represents Shakti or Mahâmâyâ. The sign in question is the sixth Râshi or division, and indicates that there are six primary forces in Nature. These forces have different sets of names in Sanskrit philosophy. According to one system of nomenclature, they are called by the following names:† (1) Parâ-

* Nevertheless it is a true one. The Jiv-âtmâ in the Microcosm (man) is the same spiritual essence which animates the Macrocosm (universe), the differentiation, or specific difference between the two Jivâtmâs presenting itself but in the two states or conditions of the same and one Force. Hence, "this son of Paramâtmâ" is an eternal correlation of the Father-Cause. Purusha manifesting himself as Brahmâ of the "Golden Egg" and becoming Virâj—the universe. We are "all born of Aditi from the water" ("Hymns of the Maruts," x. 63, 2), and "being was born from not-being" (*Rig Veda*, Mandala 1, Sûkta 166).—ED. THEOS.

† Parâshakti: literally the great or supreme force or power. It means and includes the powers of light and heat.

Jñânashakti: literally the power of intellect or the power of real wisdom or knowledge. It has two aspects.

i. The following are some of its manifestations when placed under the influence or control of material conditions:

(a) The power of the mind in interpreting our sensations. (b) Its power in recalling past ideas (memory) and raising future expectation. (c) Its power as exhibited in what are called by modern psychologists "the laws of association," which enables it to form persisting connections between various groups of sensations and possibilities of sensations, and thus generate the notion or idea of

shakti; (2) Jñānashakti; (3) Ichchhāshakti (will-power); (4) Kriyāshakti; (5) Kundalinīshakti; and (6) Mantrikāshakti. The six forces are in their unity represented by the Astral Light.*

VII. Tulā.—When represented by numbers according to the method above alluded to, this word will be converted into 36. This sign, therefore, is evidently intended to represent the 36 Tattvams. (The number of Tattvams is different according to the views of different philosophers; but by Shākteyas generally and by several of the ancient Rishis, such as Agastya, Durāsa and Parashurāma, etc., the number of Tattvams has been stated to be 36.) Jīvātmā differs from Paramātmā, or to state the same thing in other words, “Baddha” differs from “Mukta”† in being encased as it were within these 36 Tattvams, while the other is free. This sign prepares the way to earthly Adam to Nara. As the emblem of Nara it is properly placed as the seventh sign.

VIII. Vrischika.—It is stated by ancient philosophers that the sun when located in this Rāshi or sign is called by the name of Vishnu (see the twelfth Skandha of *Bhāgavata*). This sign is intended to

an external object. (d) Its power in connecting our ideas together by the mysterious link of memory, and thus generating the notion of self or individuality.

ii. The following are some of its manifestations *when liberated from the bonds of matter*:

(a) Clairvoyance. (b) Psychometry.

Ichchhāshakti: literally *the power of the will*. Its *most ordinary manifestation* is the generation of certain nerve currents which set in motion such muscles as are required for the accomplishment of the desired object.

Kriyāshakti: the mysterious power of thought which enables it to produce external, perceptible, phenomenal results by its own inherent energy. The ancients held that any idea will manifest itself *externally* if one's attention is deeply concentrated upon it. Similarly an intense volition will be followed by the desired result.

A Yogī generally performs his wonders by means of Ichchhāshakti and Kriyāshakti.

Kundalinīshakti: literally the power or force which moves in a serpentine or curved path. It is the universal life-principle which everywhere manifests itself in Nature. This force includes in itself the two great forces of attraction and repulsion. Electricity and magnetism are but manifestations of it. This is the power or force which brings about that “continuous adjustment of *internal relations to external relations*” which is the essence of life according to Herbert Spencer, and that “continuous adjustment of *external relations to internal relations*” which is the basis of transmigration of souls or Punarjanmam (re-birth) according to the doctrines of the ancient Hindū philosophers.

A Yogī must thoroughly subjugate this power or force before he can attain Moksham. This force is, in fact, the great serpent of the *Bible*.

Mantrikāshakti: literally the force or power of letters or speech or music. The whole of the ancient Mantra Shāstra has this force or power in all its manifestations for its subject-matter. The power of the Word which Jesus Christ speaks of is a manifestation of this Shakti. The influence of music is one of its ordinary manifestations. The power of the mirific ineffable name is the crown of this Shakti.

Modern science has but partly investigated the first, second and fifth of the forces or powers above named, but it is altogether in the dark as regards the remaining powers.

* Even the very name of Kanyā (Virgin) shows how all the ancient esoteric systems agreed in all their fundamental doctrines. The Kabalists and the Hermetic philosophers call the Astral Light the “Heavenly or Celestial Virgin.” The Astral Light in its unity is the seventh. Hence the seven principles diffused in every unity or the six and one—two triangles and a crown.—Ed. *Theos*.

† As the Infinite differs from the Finite and the Unconditioned from the Conditioned.—Ed. *Theos*.

represent Vishnu. Vishnu literally means *that which is expanded*—expanded as Vishvam or Universe. Properly speaking, Vishvam itself is Vishnu (see Shankarâchârya's commentary on *Vishnusahasranâmam*). I have already intimated that Vishnu represents the Svapnâvasthâ or the dreaming state. The sign in question properly signifies the universe in thought or the universe in the divine conception.

It is properly placed as the sign opposite to Rishabham or Pranava. Analysis from Pranava downwards leads to the Universe of Thought, and synthesis from the latter upwards leads to Pranava (Aum). We have now arrived at the ideal state of the universe previous to its coming into material existence. The expansion of the Vija or primitive germ into the universe is only possible when the 36 Tattvams* are interposed between the Mâyâ and Jivâtmâ. The dreaming state is induced through the instrumentality of these Tattvams. It is the existence of these Tattvams that brings Hamsa into existence. The elimination of these Tattvams marks the beginning of the synthesis towards Pranava and Brahman and converts *Hamsa* into *Soham*. As it is intended to represent the different stages of evolution from Brahman downwards to the material universe, the three signs Kanyâ, Tulâ, and Vrischika are placed in the order in which they now stand as three separate signs.

IX. Dhanus (Sagittarius).—When represented in numbers the name is equivalent to 9, and the division in question is the ninth division counting from Mesha. The sign, therefore, clearly indicates the 9 Brahmas—the 9 Prajâpatîs who assisted the Demiurgus in constructing the material universe.

X. Makara.—There is some difficulty in interpreting this word; nevertheless it contains within itself the clue to its correct interpretation. The letter *Ma* is equivalent to number 5, and *Kara* means hand. Now in Sanskrit Tribhujam means a triangle, Bhujam or Karam (both are synonymous) being understood to mean a side. So, Makaram or Panchakaram means a pentagon.†

Now, Makaram is the tenth sign, and the term “Dashadisha” is generally used by Sanskrit writers to denote the faces or sides of the universe. The sign in question is intended to represent the faces of the universe, and indicates that the figure of the universe is bounded

* 36 is three times 12, or 9 Tetraktydes, or 12 Triads, the most sacred number in the Kabalistic and Pythagorean numerals.—Ed. Theos.

† The five-pointed star or pentagram represented the five limbs of man.—Ed. Theos.

by pentagons. If we take the pentagons as regular pentagons (on the presumption or supposition that the universe is symmetrically constructed) the figure of the material universe will, of course, be a dodecahedron, the geometrical model imitated by the Demiurgus in constructing the material universe. If Tulâ was subsequently invented, and if instead of the three signs Kanyâ, Tulâ, and Vrischika, there had existed formerly only one sign combining in itself Kanyâ and Vrischika, the sign now under consideration was the eighth sign under the old system, and it is a significant fact that Sanskrit writers generally speak also of Ashtadisha, or eight faces bounding space. It is quite possible that the number of Dishas might have been altered from 8 to 10 when the formerly existing Virgo-Scorpio was split up into three separate signs.

Again, Kara may be taken to represent the projecting triangles of the five-pointed star. This figure may also be called a kind of regular pentagon (see Todhunter's *Spherical Trigonometry*, p. 143). If this interpretation is accepted, the Râshi or sign in question represents the "microcosm." But the "microcosm" or the world of thought is really represented by Vrischika. From an objective point of view the microcosm is represented by the human body. Makaram may be taken to represent simultaneously both the microcosm and the macrocosm, as external objects of perception.

In connection with this sign I shall state a few important facts which I beg to submit for the consideration of those who are interested in examining the ancient occult sciences of India. It is generally held by the ancient philosophers that the macrocosm is similar to the microcosm in having a Sthûla Sharîram and a Sûkshma Sharîram. The visible universe is the Sthûla Sharîram of Vishvam; the ancient philosophers held that as a substratum for this visible universe, there is another universe—perhaps we may call it the universe of Astral Light—the real universe of Noumena, the soul, as it were, of this visible universe. It is darkly hinted in certain passages of the Veda and the Upanishads that this hidden universe of Astral Light is to be represented by an icosahedron. The connection between an icosahedron and a dodecahedron is something very peculiar and interesting, though the figures seem to be so very dissimilar to each other. The connection may be understood by the under-mentioned geometrical construction. Describe a sphere about an icosahedron; let perpendiculars be drawn from the centre of the sphere on its faces and produced to meet the

surface of the sphere. Now, if the points of intersection be joined, a dodecahedron is formed within the sphere. By a similar process an icosahedron may be constructed from a dodecahedron. (See Todhunter's *Spherical Trigonometry*, p. 141, art. 193.) The figure constructed as above described will represent the universe of matter and the universe of Astral Light as they actually exist. I shall not now, however, proceed to show how the universe of Astral Light may be considered under the symbol of an icosahedron. I shall only state that this conception of the Âryan philosophers is not to be looked upon as mere "theological twaddle" or as the outcome of wild fancy. The real significance of the conception in question can, I believe, be explained by reference to the psychology and the physical science of the ancients. But I must stop here and proceed to consider the meaning of the remaining two signs.

XI. Kumbha (or Aquarius).—When represented by numbers, the word is equivalent to 14. It can be easily perceived, then, that the division in question is intended to represent the Chaturdasha Bhuvanam, or the 14 Lokas spoken of in Sanskrit writings.

XII. Mîna (or Pisces).—This word again is represented by 5 when written in numbers, and is evidently intended to convey the idea of Panchamahâbhûtam or the 5 elements. The sign also suggests that water (not the ordinary water, but the universal solvent of the ancient alchemists) is the most important amongst the said elements.

I have now finished the task which I have set to myself in this article. My purpose is not to explain the ancient theory of evolution itself, but to show the connection between that theory and the zodiacal divisions. I have herein brought to light but a very small portion of the philosophy imbedded in these signs. The veil that was dexterously thrown over certain portions of the mystery connected with these signs by the ancient philosophers *will never be lifted up for the amusement or edification of the uninitiated public.*

Now to summarize the facts stated in this article, the contents of the first chapter of the history of this universe are as follows:

1. The self-existent, eternal Brahman.
2. Pranava (Aum).
3. The androgyne Brahmâ, or the bi-sexual Sephira Adam Kadmon.
4. The Sacred Tetragram—the four Mâtrâs of Pranava—the four Avasthâs—the four states of Brahmâ—the Sacred Dhâraka.

5. The five Brahmâs—the five Buddhas representing in their totality the Jîvâtmâ.
6. The Astral Light—the Holy Virgin—the six forces in Nature.
7. The thirty-six Tattvams born of Avidyâ.
8. The universe in thought—the Svapna Avasthâ—the microcosm looked at from a subjective point of view.
9. The nine Prajâpatis—the assistants of the Demiurgus.*
10. The shape of the material universe in the mind of the Demiurgus—the dodecahedron.
11. The fourteen Lokas.
12. The five Elements.

The history of creation and of this world from its beginning up to the present time is composed of *seven* chapters. The *seventh* chapter is not yet completed.

T. SUBBA ROW.

Triplicane, Madras, September 14th, 1881.

* The nine Kabalistic Sephiroth, emanated from Sephira the tenth and the head Sephira, are identical. Three trinities or triads with their emanative principle form the Pythagorean mystic Decad, the sum of *all* which represents the whole Kosmos.—ED. *Theos*.

THE SISHÂL AND BHÛKAILÂS YOGÎ.

WE are indebted to the kindness of the learned President of the Âdi Brahmo Samâji for the following accounts of two Yogîs, of whom one performed the extraordinary feat of raising his body by will power, and keeping it suspended in the air without visible support. The Yoga posture for meditation or concentration of the mind upon spiritual things is called Âsana. There are various modes of these postures, such as Padmâsana, etc. Babu Rajnarain Bose translated this narrative from a very old number of the *Tattvabodhini Pâtrika*, the Calcutta organ of the Brahmo Samâj. The writer was Babu Akkhaya Kumar Datta, then editor of the *Pâtrika*, of whom Babu Rajnarain speaks in the following high terms—"A very truth-loving and pains-taking man; very fond of observing strict accuracy in the details of a description."

SISHÂL YOGÎ.

A few years ago, a Deccan Yogî, named Sishâl, was seen at Madras, by many Hindûs and Englishmen, to rise in a certain Âsana into the air. The picture of the Yogî, showing his mode of sitting, and other particulars connected with him, may be found in the *Saturday Magazine* on page 28. His whole body was in the air, his right hand only lightly touching a deer skin, rolled up in the form of a tube, and attached to a brazen rod which was firmly stuck into a wooden board resting on four legs. In this position the Yogî used to perform his Japa (mystical meditation), with his eyes half shut. At the time of his ascending to his aërial seat, and also when he descended from it, his disciples used to cover him with a blanket.—*Tattvabodhini Pâtrika*, Chaitra, 1768 Sakabda, corresponding to March, 1847.

THE BHÛKAILÂS YOGÎ.

The extraordinary character of the holy man who was brought to Bhûkailâs, in Kidderpore, about fourteen years ago, may still be remembered by many. In the month of Asar, 1754 Sakabda (1834 A.C.), he was brought to Bhûkailâs from Shirpur, where he was under the charge of

Hari Singh, the Durwan (porter) of Mr. Jones. He kept his eyes closed, and went without food and drink for three consecutive days, after which a small quantity of milk was forcibly poured down his throat. He never took any food that was not forced upon him. He seemed always without external consciousness. To remove this condition Dr. Graham applied ammonia to his nostrils; but it only produced tremblings in the body, and did not break his Yoga state. Three days passed before he could be made to speak. He said that his name was Dulla Nabab, and when annoyed he uttered a single word, from which it was inferred that he was a Punjâbî. When he was laid up with gout Dr. Graham attended him, but he refused to take medicine, either in the form of powder or mixture. He was cured of the disease only by the application of ointments and liniments prescribed by the doctor. He died in the month of Chaitra, 1755 Sakabda, of a choleraic affection.*—*Tattva-bodhini Pâtrika*, Chaitra, 1768 Sakabda, corresponding to March, 1847 A.C.

* The above particulars of this holy man have been obtained on unexceptionable testimony.—Ed. T. B. P.

TRUE AND FALSE PERSONALITY.

THE title prefixed to the following observations may well have suggested a more metaphysical treatment of the subject than can be attempted on the present occasion. The doctrine of the trinity, or trichotomy of man, which distinguishes soul from spirit, comes to us with such weighty, venerable, and even sacred authority, that we may well be content, for the moment, with confirmations that should be intelligible to all, forbearing the abstruser questions which have divided minds of the highest philosophical capacity. We will not now enquire whether the difference is one of states or of entities; whether the phenomenal or mind consciousness is merely the external condition of one indivisible Ego, or has its origin and nature in an altogether different principle; the spirit, or immortal part of us, being of divine birth, while the senses and understanding, with the consciousness—Ahankâra—thereto appertaining, are from an Anima Mundi, or what in the Sâṅkhya philosophy is called Prakriti. My utmost expectations will have been exceeded if it should happen that any considerations here offered should throw even a faint suggestive light upon the bearings of this great problem. It may be that the mere irreconcilability of all that is characteristic of the temporal Ego with the conditions of the superior life—if that can be made apparent—will incline you to regard the latter rather as the Redeemer, that has indeed to be born within us for our salvation and our immortality, than as the inmost, central, and inseparable principle of our phenomenal life. It may be that by the light of such reflections the sense of identity will present no insuperable difficulty to the conception of its contingency, or to the recognition that the mere consciousness which fails to attach itself to a higher principle is no guarantee of an eternal individuality.

It is only by a survey of individuality, regarded as the source of all our affections, thoughts, and actions, that we can realize its intrinsic worthlessness; and only when we have brought ourselves to a real and

felt acknowledgment of that fact, can we accept with full understanding those "hard sayings" of sacred authority which bid us "die to ourselves," and which proclaim the necessity of a veritable new birth. This mystic death and birth is the key-note of all profound religious teaching; and that which distinguishes the ordinary religious mind from spiritual insight is just the tendency to interpret these expressions as merely figurative, or, indeed, to overlook them altogether.

Of all the reproaches which modern Spiritualism, with the prospect it is thought to hold out of an individual temporal immortality, has had to encounter, there is none that we can less afford to neglect than that which represents it as an ideal essentially egotistical and *borné*. True it is that our critics do us injustice through ignorance of the enlarged views as to the progress of the soul in which the speculations of individual Spiritualists coincide with many remarkable spirit teachings. These are, undoubtedly, a great advance upon popular theological opinions, while some of them go far to satisfy the claim of Spiritualism to be regarded as a religion. Nevertheless, that slight estimate of individuality, as we know it, which in one view too easily allies itself to materialism, is also the attitude of spiritual idealism, and is seemingly at variance with the excessive value placed by Spiritualists on the discovery of our mere psychic survival. The idealist may recognize this survival; but, whether he does so or not, he occupies a post of vantage when he tells us that it is of no ultimate importance. For he, like the Spiritualist who proclaims his "proof palpable of immortality," is thinking of the mere temporal, self-regarding consciousness—its sensibilities, desires, gratifications, and affections—which *are* unimportant absolutely, that is to say, their importance is relative solely to the individual. There is, indeed, no more characteristic outbirth of materialism than that which makes a teleological centre of the individual. Ideas have become mere abstractions; the only reality is the infinitely little. Thus utilitarianism can see in the State only a collection of individuals whose "greatest happiness," mutually limited by nice adjustment to the requirements of "the greatest numbers," becomes the supreme end of government and law. And it cannot, I think, be pretended that Spiritualists in general have advanced beyond this substitution of a relative for an absolute standard. Their "glad tidings of great joy" are not truly religious. They have regard to the perpetuation in time of that lower consciousness whose manifestations, delights, and activity are in time, and of time alone. Their glorious message is not essentially

different from that which we can conceive as brought to us by some great alchemist, who had discovered the secret of conferring upon us and upon our friends a mundane perpetuity of youth and health. Its highest religious claim is that it enlarges the horizon of our opportunities. As such, then, let us hail it with gratitude and relief; but, on peril of our salvation, if I may not say of our immortality, let us not repose upon a prospect which is, at best, one of renewed labours, and trials, and efforts to be free even of that very life whose only value is opportunity.

To estimate the value of individuality, we cannot do better than regard man in his several mundane relations, supposing that either of these might become the central, actuating focus of his being—his “ruling love,” as Swedenborg would call it—displacing his mere egoism, or self-love, thrusting that more to the circumference, and identifying him, so to speak, with that circle of interests to which all his energies and affections relate. Outside this substituted Ego we are to suppose that he has no conscience, no desire, no will. Just as the entirely selfish man views the whole of life, so far as it can really interest him solely in relation to his individual well-being, so our supposed man of a family, of a society, of a Church, or a State, has no eye for any truth or any interest more abstract or more individual than that of which he may be rightly termed the incarnation. History shows approximations to this ideal man. Such a one, for instance, I conceive to have been Loyola; such another, possibly, is Bismarck. Now these men have ceased to be individuals in their own eyes, so far as concerns any value attaching to their own special individualities. They are devotees. A certain “conversion” has been effected, by which from mere individuals they have become “representative” men. And we—the individuals—esteem them precisely in proportion to the remoteness from individualism of the spirit that actuates them. As the circle of interests to which they are “devoted” enlarges—that is to say, as the dross of individualism is purged away—we accord them indulgence, respect, admiration and love. From self to the family, from the family to the sect or society, from the sect or society to the Church (in no denominational sense) and State, there is the ascending scale and widening circle, the successive transitions which make the worth of an individual depend on the more or less complete submersion of his individuality by a more comprehensive soul or spirit. The very modesty which suppresses, as far as possible, the personal pronoun in

our addresses to others, testifies to our sense that we are hiding away some utterly insignificant and unworthy thing; a thing that has no business even to be, except in that utter privacy which is rather a sleep and a rest than living. Well, but in the above instances, even those most remote from sordid individuality, we have fallen far short of that ideal in which the very conception of the partial, the atomic, is lost in the abstraction of universal being, transfigured in the glory of a Divine personality. You are familiar with Swedenborg's distinction between discrete and continuous degrees. Hitherto we have seen how man—the individual—may rise continuously by throwing himself heart and soul into the living interests of the world, and lose his own limitations by adoption of a larger mundane spirit. But still he has only ascended nearer to his own mundane source, that soul of the world, or *Prakriti*, to which, if I must not too literally insist on it, I may still resort as a convenient figure. To transcend it, he must advance by the discrete degree. No simple “bettering” of the ordinary self, which leaves it alive, as the focus—the French word *foyer* is the more expressive—of his thoughts and actions; not even that identification with higher interests in the world's plane just spoken of, is, or can progressively become, in the least adequate to the realization of his divine ideal. This “bettering” of our present nature, it alone being recognized as essential, albeit capable of “improvement,” is a commonplace, and to use a now familiar term, a “Philistine” conception. It is the substitution of the continuous for the discrete degree. It is a compromise with our dear old familiar selves. “And Saul and the people spared Agag, and the best of the sheep, and of the oxen, and of the fatlings, and the lambs, and all that was good, and would not utterly destroy them; but everything that was vile and refuse, that they destroyed utterly.” We know how little acceptable that compromise was to the God of Israel; and no illustration can be more apt than this narrative, which we may well, as we would fain, believe to be rather typical than historical—typical of that indiscriminate and radical sacrifice, or “vastation,” of our lower nature, which is insisted upon as the one thing needful by all, or nearly all,* the great religions of the world. No language could seem more purposely chosen to indicate that it is the individual nature itself, and not merely its accidental evils, that has to be abandoned and annihilated. It is not denied that what was spared was good; there is

* Of the higher religious teachings of Mohammedanism I know next to nothing, and therefore cannot say if it should be excepted from the statement.

no suggestion of a universal infection of physical or moral evil; it is simply that what is good and useful relatively to a lower state of being must perish with it if the latter is to make way for something better. And the illustration is the more suitable in that the purpose of this paper is not ethical, but points to a metaphysical conclusion, though without any attempt at metaphysical exposition. There is no question here of moral distinctions; they are neither denied nor affirmed. According to the highest moral standard, A may be a most virtuous and estimable person. According to the lowest, B may be exactly the reverse. The moral interval between the two is within what I have called, following Swedenborg, the "continuous degree." And perhaps the distinction can be still better expressed by another reference to that book which we theosophical students do not less regard, because we are disposed to protest against all exclusive pretensions of religious systems. The good man who has, however, not yet attained his "sonship of God" is "under the law"—that moral law which is educational and preparatory, "the schoolmaster to bring us unto Christ," our own divine spirit, or higher personality. To conceive the difference between these two states is to apprehend exactly what is here meant by the false, temporal, and the true, eternal personality, and the sense in which the word personality is here intended to be understood. We do not know whether, when that great change has come over us, when that great work* of our lives has been accomplished—here or hereafter—we shall or shall not retain a sense of identity with our past, and for ever discarded selves. In philosophical parlance, the "matter" will have gone, and the very "form" will have been changed. Our transcendental identity with the A or B that now is† must depend on that question, already disclaimed in this paper, whether the Divine Spirit is our originally central essential being, or is an hypostasis. Now, being "under the law" implies that we do not act directly from our own will, but indirectly, that is, in willing obedience to another will. The will from which we should naturally act—our own will—is of course to be understood not as mere volition, but as our nature—our "ruling love," which makes such and such things agreeable to us, and others the

* The "great work," which is so often mentioned by the Hermetic philosophers, and which is exactly typified by the operation of alchemy, the conversion of the base metals into gold, is now well understood to refer to the analogous spiritual conversion. There is also good reason to believe that the material process was a real one.

† "A person may have won his immortal life, and remained the same *inner self* he was on earth, through eternity; but this does not imply necessarily that he must either remain the Mr. Smith or Brown he was on earth, or lose his individuality."—*Isis Unveiled*, i. 316.

reverse. As "under the law," this nature is kept in suspension, and because it is suspended only as to its activity and manifestation, and by no means abrogated, is the law—the substitution of a foreign will—necessary for us. Our own will or nature is still central; that which we obey by effort and resistance to ourselves is more circumferential or hypostatic. Constancy in this obedience and resistance tends to draw the circumferential will more and more to the centre, till there ensues that "explosion," as St. Martin called it, by which our natural will is for ever dispersed and annihilated by contact with the divine, and the latter henceforth becomes our very own. Thus has "the schoolmaster" brought us unto "Christ," and if by "Christ" we understand no historically divine individual, but the Logos, Word, or manifestation of God *in us*—then we have, I believe, the essential truth that was taught in the Vedânta, by Kapila, by Buddha, by Confucius, by Plato, and by Jesus. There is another presentation of possibly the same truth, for a reference to which I am indebted to our brother J. W. Farquhar. It is from Swedenborg, in the *Apocalypse Explained* (No. 527):

Every man has an inferior or exterior mind, and a mind superior or interior. These two minds are altogether distinct. By the inferior mind man is in the natural world together with men there; but by the superior mind he is in the spiritual world with the angels there. These two minds are so distinct that man, so long as he lives in the world, does not know what is performing within himself in his superior mind; but when he becomes a spirit, which is immediately after death, he does not know what is performing in his mind.

The consciousness of the "superior mind," as the result of mere separation from the earthly body, certainly does not suggest that sublime condition which implies separation from so much more than the outer garment of flesh, but otherwise the distinction between the two lives, or minds, seems to correspond with that now under consideration.

What is it that strikes us especially about this substitution of the divine-human for the human-natural personality? Is it not the loss of individualism? (Individualism, pray observe, not individuality.) There are certain sayings of Jesus which have probably offended many in their hearts, though they may not have dared to acknowledge such a feeling to themselves: "Woman, what have I to do with thee?" and those other disclaimers of special ties and relationships which mar the perfect sympathy of our reverence. There is something awful and incomprehensible to us in this repudiation of individualism, even in its most amiable relations. But it is in the Aryan philosophies that we

see this negation of all that we associate with individual life most emphatically and explicitly insisted on. It is, indeed, the impossibility of otherwise than thus negatively characterizing the soul that has attained Moksha (deliverance from bonds) which has caused the Hindû consummation to be regarded as the loss of individuality and conscious existence. It is just because we cannot easily dissociate individuality from individualism, that we turn from the sublime conception of primitive philosophy as from what concerns us as little as the ceaseless activity and germination in other brains of thought once thrown off and severed from the thinking source, which is the immortality promised by Mr. Frederic Harrison to the select specimens of humanity whose thoughts have any reproductive power. It is not a mere preference of nothingness, or unconscious absorption, to limitation that inspires the intense yearning of the Hindû mind for Nirvâna. Even in the Upanishads there are many evidences of a contrary belief, while in the Sâṅkhya the aphorisms of Kapila unmistakably vindicate the individuality of soul (spirit). Individual consciousness is maintained, perhaps infinitely intensified, but its "matter" is no longer personal. Only try to realize what "freedom from desire," the favourite phrase in which individualism is negated in these systems, implies! Even in that form of devotion which consists in action, the soul is warned in the *Bhagavad Gîtâ* that it must be indifferent to results.

Modern Spiritualism itself testifies to something of the same sort. Thus we are told by one of its most gifted and experienced champions:

Sometimes the evidence will come from an impersonal source, from some instructor who has passed through the plane on which individuality is demonstrable.*

Again:

And if he [the investigator] penetrates far enough, he will find himself in a region for which his present embodied state unfits him: a region in which the very individuality is merged, and the highest and subtlest truths are not locked within one breast, but emanate from representative companies whose spheres of life are interblended.†

By this "interblending" is of course meant only a perfect sympathy and community of thought; and I should doubtless misrepresent the author quoted were I to claim an entire identity of the idea he wishes to convey, and that now under consideration. Yet what, after all, is sympathy but the loosening of that hard "astringent" quality (to use Böhme's phrase) wherein individualism consists? And just as in true

* M.A. Oxon., *Spirit Identity*, p. 7.

† *Ibid.*, p. 15.

sympathy, the partial suppression of individualism and of what is distinctive, we experience a superior delight and intensity of being, so it may be that in parting with all that shuts us up in the spiritual pent-house of an Ego—*all*, without exception or reserve—we may for the first time know what true life is, and what are its ineffable privileges. Yet it is not on this ground that acceptance can be hoped for the conception of immortality here crudely and vaguely presented in contrast to that *bourgeois* eternity of individualism and the family affections, which is probably the great charm of Spiritualism to the majority of its proselytes. It is doubtful whether the things that “eye hath not seen, nor ear heard,” have ever taken strong hold of the imagination, or reconciled it to the loss of all that is definitely associated with the joy and movement of living. Not as consummate bliss can the dweller on the lower plane presume to commend that transcendent life. At the utmost he can but echo the revelation that came to the troubled mind in *Sartor Resartus*, “A man may do without happiness, and instead thereof find blessedness.” It is no sublimation of hope, but the necessities of thought that compel us to seek the condition of true being and immortality elsewhere than in the satisfactions of individualism. True personality can only subsist in consciousness by participation of that of which we can only say that it is the very negation of individuality in any sense in which individuality can be conceived by us. What is the content or “matter” of consciousness we cannot define, save by vaguely calling it ideal. But we can say that in that region individual interests and concerns will find no place. Nay, more, we can affirm that only then has the influx of the new life a free channel when the obstructions of individualism are already removed. Hence the necessity of the mystic death, which is as truly a death as that which restores our physical body to the elements. “Neither I am, nor is aught mine, nor do I exist,” a passage which has been well explained by a Hindû Theosophist (Peary Chand Mittra), as meaning that:

When the spiritual state is arrived at, *I* and *mine*, which belong to the *finite mind*, cease, and the soul, living in the *universum* and participating in infinity with God, manifests its infinite state.

I cannot refrain from quoting the following passage from the same instructive writer:

Every human being has a soul which, while not separable from the brain or nerves, is *mind* or *Jīvātmā*, or sentient soul, but when regenerated or spiritualized by Yoga, it is free from bondage and manifests the divine essence. It rises above all phe-

nominal states—joy, sorrow, grief, fear, hope, and in fact all states resulting in pain or pleasure, and becomes blissful, realizing immortality, infinitude and felicity of wisdom within itself. The sentient soul is nervous, sensational, emotional, phenomenal and impressional. It constitutes the natural life and is finite. The soul and the non-soul are thus the two landmarks. What is non-soul is Prakriti, or created. It is not the lot of every one to know what soul is, and therefore millions live and die possessing minds cultivated in intellect and feeling, but not raised to the soul state. In proportion as one's soul is emancipated from Prakriti or sensuous bondage, in that proportion his approximation to the soul state is attained; and it is this that constitutes disparities in the intellectual, moral, and religious culture of human beings and their consequent approximation to God.*

He also cites some words of Fichte, which prove that the like conclusion is reached in the philosophy of Western idealism:

The real spirit which comes to itself in human consciousness is to be regarded as an impersonal pneuma—universal reason, nay, as the spirit of God Himself; and the good of man's whole development, therefore, can be no other than to substitute the universal for the individual consciousness.

That there may be, and are affirmed to be, intermediate stages, states, or discrete degrees, will, of course, be understood. The aim of this paper has been to call attention to the abstract condition of the immortalized consciousness; negatively it is true, but it is on this very account more suggestive of practical application. The connection of the Theosophical Society with the Spiritualist movement is so intimately sympathetic, that I hope one of these may be pointed out without offence. It is that immortality cannot be phenomenally demonstrated. What I have called psychic survival can be, and probably is. But immortality is the attainment of a state, and that state the very negation of phenomenal existence. Another consequence refers to the direction our culture should take. We have to compose ourselves to death. Nothing less. We are each of us a complex of desires, passions, interests, modes of thinking and feeling, opinions, prejudices, judgment of others, likings and dislikings, affections, aims public and private. These things, and whatever else constitutes the recognizable content of our present temporal individuality, are all in derogation of our ideal of impersonal being—saving consciousness, the manifestation of being. In some minute, imperfect, relative, and almost worthless sense we may do right in many of our judgments, and be amiable in many of our sympathies and affections. We cannot be sure even of this. Only people unhabituated to introspection and self-analysis are quite sure of

* *Spiritual Stray Leaves*, Calcutta, 1879.

it. These are ever those who are loudest in their censures, and most dogmatic in their opinionative utterances. In some coarse, rude fashion they are useful, it may be indispensable, to the world's work, which is not ours, save in a transcendental sense and operation. We have to strip ourselves of all that, and to seek perfect passionless tranquillity. Then we may hope to die. Meditation, if it be deep, and long, and frequent enough, will teach even our practical Western mind to understand the Hindû mind in its yearning for Nirvâna. One infinitesimal atom of the great conglomerate of humanity, who enjoys the temporal, sensual life, with its gratifications and excitements, as much as most, will testify with unaffected sincerity that he would rather be annihilated altogether than remain for ever what he knows himself to be, or even recognizably like it. And he is a very average moral specimen. I have heard it said, "The world's life and business would come to an end, there would be an end to all its healthy activity, an end of commerce, arts, manufactures, social intercourse, government, law, and science, if we were all to devote ourselves to the practice of Yoga, which is pretty much what your ideal comes to." And the criticism is perfectly just and true. Only I believe it does not go quite far enough. Not only the activities of the world, but the phenomenal world itself, which is upheld in consciousness, would disappear or take new, more interior, more living, and more significant forms, at least for humanity, if the consciousness of humanity was itself raised to a superior state. Readers of St. Martin, and of that impressive book of the late James Hinton, *Man and his Dwelling-place*, especially if they have also by chance been students of the idealistic philosophies, will not think this suggestion extravagant. If all the world were Yogis, the world would have no need of those special activities, the ultimate end and purpose of which, by-the-by, our critic would find it not easy to define. And if only a few withdraw, the world can spare them. Enough of that.

Only let us not talk of this ideal of impersonal, universal being in individual consciousness as an unverified dream. Our sense and impatience of limitations are the guarantees that they are not final and insuperable. Whence is this power of standing outside myself, of recognizing the worthlessness of the pseudo-judgments, of the prejudices with their lurid colouring of passion, of the temporal interests, of the ephemeral appetites, of all the sensibilities of egoism, to which I nevertheless surrender myself, so that they indeed seem myself? Through and above this troubled atmosphere I see a being, pure,

passionless, rightly measuring the proportions and relations of things, for whom there is, properly speaking, no present, with its phantasms, falsities, and half-truths: who has nothing personal in the sense of being opposed to the whole of related personalities: who sees the truth rather than struggles logically towards it, and truth of which I can at present form no conception; whose activities are unimpeded by intellectual doubt, unperverted by moral depravity, and who is indifferent to results, because he has not to guide his conduct by calculation of them, or by any estimate of their value. I look up to him with awe, because in being passionless he sometimes seems to me to be without love. Yet I know that this is not so; only that his love is diffused by its range, and elevated in abstraction beyond my gaze and comprehension. And I see in this being my ideal, my higher, my only true, in a word, my immortal self.

C. C. MASSEY.

CHASTITY.

IDEAL woman is the most beautiful work of the evolution of forms (in our days she is very often only a beautiful work of art). A beautiful woman is the most attractive, charming, and lovely being that a man can imagine. I never saw a male being who could lay any claims to manly vigour, strength or courage, who was not an admirer of woman. Only a profligate, a coward or a sneak would hate women; a hero and a *man* admires woman, and is admired by her.

Woman's love belongs to a complete man. When she smiles on him his human nature becomes aroused, his animal desires like little children begin to clamour for bread, they do not want to be starved, they want to satisfy their hunger. His whole soul flies towards the lovely being, which attracts him with almost irresistible force, and if his higher principles, his divine spirit, is not powerful enough to restrain him, his soul follows the temptations of his physical body. Once again the animal nature has subdued the divine. Woman rejoices in her victory, and man is ashamed of his weakness; and instead of being a representation of strength, he becomes an object of pity.

To be truly powerful a man must retain his power and never for a moment lose it. To lose it is to surrender his divine nature to his animal nature; to restrain his desires and retain his power, is to assert his divine right, and to become more than a man—a god.

Éliphas Lévi says: "To be an object of attraction for all women, you must desire none"; and everyone who has had a little experience of his own must know that he is right. Woman wants what she cannot get, and what she can get she does not want. Perhaps it is to the man endowed with spiritual power that the *Bible* refers when it says: "To him who has much, more shall be given, and from him who has little, that little shall be taken away."

To become perfect it is not required that we should be born without any animal desires. Such a person would not be much above an idiot;

he would be rightly despised and laughed at by every true man and woman; but we must obtain the power to control our desires, instead of being controlled by them; and here lies the true philosophy of temptation.

If a man has no higher aim in life than to eat and drink and propagate his species; if all his aspirations and desires are centred in a wish of living a happy life in the bosom of his family; there can be no wrong if he follows the dictates of his nature and is satisfied with his lot. When he dies, his family will mourn, his friends will say he was a good fellow; they will give him a first-class funeral, and they will perhaps write on his tombstone something like what I once saw in a certain churchyard:

Here is the grave of John McBride,
He lived, got married, and died.

And that will be the end of Mr. John McBride, until in another incarnation he will wake up again perhaps as Mr. John Smith, or Ramchandra Row, or Patrick O'Flannegan, to find himself on much the same level as he was before.

But if a man has higher aims and objects in life, if he wants to avoid an endless cycle of reincarnations, if he wants to become a master of his destiny, then must he first become a master of himself. How can he expect to be able to control the external forces of Nature, if he cannot control the few little natural forces that reside within his own insignificant body?

To do this, it is not necessary that a man should run away from his wife and family, and leave them uncared for. Such a man would commence his spiritual career with an act of injustice, an act that like Banquo's ghost would always haunt him and hinder him in his further progress. If a man has taken upon himself responsibilities, he is bound to fulfil them, and an act of cowardice would be a bad beginning for a work that requires courage.

A celibate, who has no temptation and who has no one to care for but himself, has undoubtedly superior advantages for meditation and study. Being away from all irritating influences, he can lead what may be called a selfish life; because he looks out only for his own spiritual interest; but he has little opportunity to develop his will-power by resisting temptations of every kind. But the man who is surrounded by the latter, and is every day and every hour under the necessity of exercising his will-power to resist their surging violence, will, if he

rightly uses these powers, become strong; he may not have as much opportunity for study as the celibate, being more engrossed in material cares; but when he rises up to a higher state in his next incarnation, his will-power will be more developed, and he will be in the possession of the password, which is *Continence*.

A slave cannot become a commander, until after he becomes free. A man who is subject to his own animal desires, cannot command the animal nature of others. A muscle becomes developed by its use, an instinct or habit is strengthened in proportion as it is permitted to rule, a mental power becomes developed by practice, and the principle of will grows strong by exercise; and this is the use of temptations. To have strong passions and to overcome them, makes man a hero. The sexual instinct is the strongest of all, and he who vanquishes it, becomes a god.

The human soul admires a beautiful form, and is therefore an idolater. The human spirit adores a principle, and is the true worshipper.

Marriage is the union of the male spirit with the female soul for the purpose of propagating the species; but if in its place there is only a union of a male and a female body, then marriage becomes merely a brutal act, which lowers man and woman, not to the level of animals but below them; because animals are restricted to certain seasons for the exercise of their procreative powers; while man, being a reasonable being, has it in his power to use or abuse them at all times.

But how many marriages do we find that are really spiritual and not based on beauty of form or other considerations? How soon after the wedding-day do they become disgusted with each other? What is the cause of this? A man and a woman may marry and their characters may differ widely. They may have different tastes, different opinions and different inclinations. All those differences may disappear, and will probably disappear; because by living together they become accustomed to each other, and become equalized in time. Each influences the other, and as a man may grow fond of a pet snake, whose presence at first horrified him, so a man may put up with a disagreeable partner and become fond of her in course of time.

But if the man allows full liberty to his animal passions, and exercises his "legal rights" without restraint, these animal cravings which first called so piteously for gratification, will soon be gorged, and flying away laugh at the poor fool who nursed them in his breast. The wife will come to know that her husband is a coward, because she sees him

squirm under the lash of his animal passions; and as woman loves strength and power, so in proportion as he loses his love, will she lose her confidence. He will look upon her as a burden, and she will look upon him in disgust as a brute. Conjugal happiness will have departed, and misery, divorce or death will be the end.

The remedy for all these evils is continence, and it has been our object to show its necessity, for it was the object of this article,

F. HARTMANN.

ZOROASTRIANISM ON THE SEPTEN- ARY CONSTITUTION OF MAN.

MANY of the esoteric doctrines given out through the Theosophical Society reveal a spirit akin to that of the older religions of the East, especially the Vedic and the Zendic. Leaving aside the former, I propose to point out by a few instances the close resemblance which the doctrines of the old Zendic Scriptures, as far as they are now preserved, bear to these recent teachings.

Any ordinary Parsî, while reciting his daily Niyashes, Gehs and Yashts, provided he yields to the curiosity of looking into the meanings of what he recites, will, with a little exertion, perceive how the same ideas, only clothed in a more intelligible and comprehensive garb, are reflected in these teachings. The description of the septenary constitution of man found in the 54th chapter of the *Yasna*, one of the most authoritative books of the Mazdiasnian religion, shows the identity of the doctrines of Avesta and the esoteric philosophy. Indeed, as a Mazdiasnian, I felt quite ashamed that, having such undeniable and unmistakable evidence before their eyes, the Zoroastrians of the present day should not avail themselves of the opportunity offered of throwing light upon their now entirely misunderstood and misinterpreted Scriptures by the assistance and under the guidance of the Theosophical Society. If Zend scholars and students of Avesta would only care to study and search for themselves, they would, perhaps, find to assist them men who are in possession of the right and only key to the true esoteric wisdom; men, who would be willing to guide and help them to reach the true and hidden meaning, and to supply them with the missing links that have resulted in such painful gaps as to leave the meaning meaningless, and to create in the mind of the perplexed student doubts that finally culminate in a thorough disbelief in his own religion. Who knows but they may find some of their own co-religionists, who, aloof from the world, have to this day preserved the glorious truths of their once mighty religion, and who, hidden in the recesses of solitary mountains and unknown silent caves, are still in

possession of, and exercising, mighty powers, the heirloom of the ancient Magi. Our Scriptures say that ancient Mobeds were Yogis, who had the power of making themselves simultaneously visible at different places, even though hundreds of miles apart, and also that they could heal the sick and do that which would now appear to us miraculous. All this was considered *fact* only two or three centuries back, as every reader of the old books (mostly Persian) is aware, nor will he disbelieve *à priori* unless his mind is irretrievably biassed by modern secular education. The story about the Mobed and Emperor Akbar and of the latter's conversion, is a well-known historical fact, requiring no proof.

I will first of all quote side by side the two passages referring to the septenary nature of man as I find them in our Scriptures and the *Theosophist*:

SUB-DIVISIONS OF SEPTENARY MAN
ACCORDING TO THE OCCULTISTS.

SUB-DIVISIONS OF SEPTENARY MAN AC-
CORDING TO "YASHNA" (CH. 54, PARA. 1).

1. The physical body, composed wholly of matter in its grossest and most tangible form.

1. Tanwas—*i.e.*, body (the *self*) that consists of bones—grossest form of matter.

2. The vital principle (Jivâ)—a form of force indestructible, and when disconnected with one set of atoms, becoming attracted immediately by others.

2. Ushtanas—vital heat (or force).

3. The astral body (Linga Sharîra)—composed of highly etherealized matter; in its habitual passive state, the perfect but very shadowy duplicate of the body; its activity, consolidation and form depending entirely on the Kâma Rûpa.

3. Keherpas—aërial form, the airy mould (Per. Kaleb).

4. The astral shape (Kâma Rûpa)—or body of desire, a principle defining the configuration of—

4. Tevishis—will, or where sentient consciousness is formed, also foreknowledge.

5. The animal or physical intelligence or consciousness or Ego, analogous to, though proportionally higher in degree than the reason, instinct, memory, imagination etc., existing in the higher animals.

5. Baodhas (in Sanskrit, Buddhi)—body of physical consciousness, perception by the senses or the animal soul.

6. The higher or spiritual intelligence or consciousness, or spiritual Ego, in which mainly resides the sense of consciousness in the *perfect* man, though the lower dimmer animal consciousness co-exists in No. 5.

6. Urwanem (Per. Rawan)—soul, that which gets its reward or punishment after death.

7. The spirit—an emanation from the Absolute; uncreated; eternal; a state rather than a being.
7. Frawashem or Farohar—spirit (the guiding energy which is with every man, is absolutely independent, and, without mixing with any worldly object, leads man to good. The spark of divinity in every being).

The above is given in the *Avesta* as follows:

We declare and positively make known this [that] we offer [our] entire property [which is] the body [the *self* consisting of] bones (Tanwas), vital heat (Ushtanas), aërial form (Keherpas), knowledge (Tevishis), consciousness (Baodhas), soul (Urwanem), and spirit (Frawashem), to the prosperous, truth-coherent [and] pure Gathas [prayers].

The ordinary Gujarâti translation differs from Spiegel's, and this latter differs very slightly from what is here given. Yet in the present translation there has been made no addition to, or omission from, the original wording of the Zend text. The grammatical construction also has been preserved intact. The only difference, therefore, between the current translations and the one here given is that *ours* is in accordance with the modern corrections of philological research which make it more intelligible, and the idea perfectly clear to the reader.

The word translated "aërial form" has come down to us without undergoing any change in the meaning. It is the modern Persian word *Kaleb*, which means a mould, a shape into which a thing is cast, to take a certain form and features. The next word is one about which there is a great difference of opinion. It is by some called strength, durability, *i.e.*, that power which gives tenacity to and sustains the nerves. Others explain it as that quality in a man of rank and position which makes him perceive the result of certain events (causes), and thus helps him in being prepared to meet them. This meaning is suggestive, though we translate it as knowledge, or foreknowledge rather, with the greatest diffidence. The eighth word is quite clear. That inward feeling which tells a man that he knows this or that, that he has or can do certain things—is perception and consciousness. It is the inner conviction, knowledge and its possession. The ninth word is again one which has retained its meaning and has been in use up to the present day. The reader will at once recognize that it is the origin of the modern word *Rawan*. It is (metaphorically) the king, the conscious motor or agent in man. It is that something which depends

upon and is benefited or injured by the foregoing attributes. We say depends upon, because its progress entirely consists in the development of those attributes. If they are neglected, it becomes weak and degenerated, and disappears. If they ascend on the moral and spiritual scale, it gains strength and vigour and becomes more blended than ever to the divine essence—the seventh principle. But how does it become attracted toward its monad? The tenth word answers the question. This is the divine essence in man. But this is only the irresponsible minister (this completes the metaphor). The real master is the king, the spiritual soul. It must have the willingness and power to see and follow the course pointed out by the pure spirit. The vizir's business is only to represent a point of attraction, towards which the king should turn. It is for the king to see and act accordingly for the glory of his own self. The minister or spirit can neither compel nor constrain. It inspires and electrifies into action; but to benefit by the inspiration, to take advantage of it, is left to the option of the spiritual soul.

If, then, the *Avesta* contains such a passage, it must fairly be admitted that its writers knew the whole doctrine concerning spiritual man. We cannot suppose that the ancient Mazdiasnians, the Magi, wrote this short passage, without inferring from it, at the same time, that they were thoroughly conversant with the whole of the occult theory about man. And it looks very strange indeed, that modern Theosophists should now preach to us the very same doctrines that *must* have been known and taught thousands of years ago by the Mazdiasnians—the passage is quoted from one of their oldest writings. And since they propound the very same ideas, the meaning of which has well-nigh been lost even to our most learned Mobeds, they ought to be credited at least with some possession of a knowledge, the key to which has been revealed to them, and lost to us, and which opens the door to the meaning of those hitherto inexplicable sentences and doctrines in our old writings, about which we are still, and will go on, groping in the dark, unless we listen to what they have to tell us about them.

To show that the above is not a solitary instance, but that the *Avesta* contains this idea in many other places, I will give another paragraph which contains the same doctrine, though in a more condensed form than the one just given. Let the Parsî reader turn to *Yasna*, chapter 26, and read the sixth paragraph, which runs as follows:

We praise the life (Ahum), knowledge (Daenam), consciousness (Baodhas), soul (Urwanem), and spirit (Frawashem) of the first in religion, the first teachers and hearers [learners], the holy men and holy women who were the protectors of purity here [in this world].

Here the whole man is spoken of as composed of five parts, as under:

- | | | |
|---------------------------|---------------|---|
| 1. Ahum—existence, life. | It includes { | 1. The physical body. |
| 2. Daenam—knowledge. | | 2. The vital principle. |
| 3. Baodhas—consciousness. | | 3. The astral body. |
| | | 4. The astral shape or body of desire. |
| 4. Urwanem—soul. | | 5. The animal or physical intelligence or consciousness, or Ego. |
| | | 6. The higher or spiritual intelligence or consciousness, or spiritual Ego. |
| 5. Frawashem—spirit. | | 7. The spirit. |

In this description the first triple group—viz., the bones (or the gross matter), the vital force which keeps them together, and the ethereal body, are included in one and called “existence,” “life.” The second part stands for the *fourth* principle of the septenary man, as denoting the configuration of his knowledge or desires.* Then the three, consciousness (or animal soul), (spiritual) soul, and the pure spirit are the same as in the first quoted passage. Why are these four mentioned as distinct from each other and not consolidated like the first part? The sacred writings explain this by saying that on death the first of these five parts disappears and perishes sooner or later in the earth’s atmosphere. The gross elementary matter (the shell) has to run within the earth’s attraction; so the Ahum separates from the higher portions and is lost. The second (*i.e.*, the *fourth* of the septenary group) remains, but not with the spiritual soul. It continues to hold its place in the vast storehouse of the universe. And it is this second Daenam which stands before the (spiritual) soul in the form of a beautiful maiden or an ugly hag. That which brings this Daenam within the sight of the (spiritual) soul is the third part (*i.e.*, the *fifth* of the septenary group), the Baodhas. Or in other words, the (spiritual) soul has with it, or in it, the true consciousness by which it can view the experiences of its physical career. So this consciousness, this power or faculty which brings the recollection, is always with, in other words, is a part and

* Modern science also teaches that certain characteristics of features indicate the possession of certain qualities in a man. The whole science of physiognomy is founded on it. One can predict the disposition of a man from his features—*i.e.*, the features develop in accordance with the idiosyncrasies, qualities and vices, knowledge or the ignorance of man.

parcel of the soul itself; hence, its not mixing with any other part, and hence its existence after the physical death of man.*

A PARSĪ F.T.S.

* Our Brother has but to look into the oldest sacred book of China—namely, the *Yi-King*, or “Book of Changes” (translated by James Legge) written 1,200 B.C.—to find this same septenary division of man mentioned in that system of divination. Zhing, which is translated correctly enough “essence,” is the more subtle and pure part of matter—the grosser form of the elementary ether; Khi, or “spirit,” is the breath, still material, but purer than the Zhing, and is made of the finer and more active form of ether. In the Hwun, or soul (Animus) the Khi predominates and the Zhing (or Zing) in the Pho or animal soul. At death the Hwun (or spiritual soul) wanders away, ascending, and the Pho (the root of the Tibetan word Pho-hat) descends and is changed into a ghostly shade (the shell). Dr. Medhurst (*Theology of the Chinese*, pp. 10-12) thinks that “the Kwei Shans are the expanding and contracting principles of human life!” The Kwei Shans are brought about by the dissolution of the human frame—and consist of the expanding and ascending Shan which rambles about in space, and of the contracted and shrivelled Kwei, which reverts to earth and nonentity. Therefore, the Kwei is the physical body; the Shan is the vital principle; the Kwei Shan the Linga Sharīra, or the vital soul; Zhing the fourth principle, or Kāma Rūpa, the essence of will; Pho, the animal soul; Khi, the spiritual soul; and Hwun the pure spirit—the seven principles of our occult doctrine!—ED. *Theos*.

BRÂHMANISM ON THE SEVENFOLD PRINCIPLE IN MAN.

It is now very difficult to say what was the real ancient Âryan doctrine. If an enquirer were to attempt to answer it by an analysis and comparison of all the various systems of esotericism prevailing in India, he would soon be lost in a maze of obscurity and uncertainty. No comparison between our real Brâhmanical and the Tibetan esoteric doctrines will be possible unless one ascertains the teachings of that so-called "Âryan doctrine," and fully comprehends the *whole range* of the ancient Âryan philosophy. Kapila's Sâṅkhya, Patanjali's Yoga philosophy, the different systems of Shâkteya philosophy, the various Âgamas and Tantras are but branches of it. There is a doctrine, though, which is their real foundation, and which is sufficient to explain the secrets of these various systems of philosophy and harmonize their teachings. It probably existed long before the Vedas were compiled, and it was studied by our ancient Rishis in connection with the Hindû scriptures. It is attributed to one mysterious personage called Mahâ* . . .

The Upanishads and such portions of the Vedas as are not chiefly devoted to the public ceremonials of the ancient Âryans are hardly intelligible without some knowledge of *that doctrine*. Even the real significance of the grand ceremonials referred to in the Vedas will not be perfectly apprehended without its light being thrown upon them. The Vedas were perhaps compiled mainly for the use of the priests assisting at public ceremonies, but the grandest conclusions of our real secret doctrine are therein mentioned. I am informed by persons competent to judge of the matter, that the Vedas have a distinct dual meaning—one expressed by the literal sense of the words, the other indicated by the metre and the Svara (intonation), which are, as it were, the life of the Vedas. . . . Learned pandits and philologists of course deny that Svara has anything to do with philosophy or

* The very title of the present chief of the esoteric Himâlayan Brotherhood.—Ed. *Theos*.

ancient esoteric doctrines; but the mysterious connection between Svava and *light* is one of its most profound secrets.

Now, it is extremely difficult to show whether the Tibetans derived their doctrine from the ancient Rishis of India, or the ancient Brāhman learned their occult science from the adepts of Tibet; or, again, whether the adepts of both countries professed originally the same doctrine and derived it from a common source.* If you were to go to the Sramana Balagula, and question some of the Jain pandits there about the authorship of the Vedas and the origin of the Brāhmanical esoteric doctrine, they would probably tell you that the Vedas were composed by Rākshasas† or Daityas, and that the Brāhman had derived their secret knowledge from them.‡ Do these assertions mean that the Vedas and the Brāhmanical esoteric teachings had their origin in the lost Atlantis—the continent that once occupied a considerable portion of the expanse of the Southern and the Pacific oceans? The assertion in *Isis Unveiled* that Sanskrit was the language of the inhabitants of the said continent, may induce one to suppose that the Vedas had probably their origin there, wherever else might be the birthplace of the Āryan esotericism.§ But the real esoteric doctrine, as well as the mystic allegorical philosophy of the Vedas, was derived from another source again, whatever that may be—perchance from the divine inhabitants (gods) of the Sacred Island which once existed in the sea that covered in days of old the sandy tract now called Gobi Desert. However that may be, the knowledge of the *occult powers of nature* possessed by the inhabitants of the lost Atlantis was learnt by the ancient adepts of India, and was appended by them to the esoteric doctrine taught by the residents of the Sacred Island.|| The Tibetan adepts, however, have not accepted this addition to their esoteric doctrine; and it is in this respect that one should expect to find a difference between the two doctrines.¶

* See Appendix, Note I.

+ A kind of demons—devils.

‡ And so would the Christian padris. But they would never admit that their "fallen angels" were borrowed from the Rākshasas; that their "devil" is the illegitimate son of Dewel, the Sinhalese female demon; or that the "war in heaven" of the Apocalypse—the foundation of the Christian dogma of the "fallen Angels," was copied from the Hindū story about Shiva hurling the Tārakāsura who rebelled against the gods into Andhakāra, the Abode of Darkness, according to Brāhmanical Shāstras.

§ Not necessarily. (See Appendix, Note II.) It is generally held by Occultists that Sanskrit has been spoken in Java and adjacent islands from remote antiquity.—*Ed. Theos.*

|| A locality which is spoken of to this day by the Tibetans, and called by them Scham-bha-la, the Happy Land. (See Appendix, Note III.)

¶ To comprehend this passage fully, the reader must turn to *Isis Unveiled*, i. 589-594.

The Brâhmanical occult doctrine probably contains everything that was taught about the *powers of nature* and their laws, either in the mysterious Island of the North or in the equally mysterious Continent of the South. And if you mean to compare the Âryan and the Tibetan doctrines as regards their teachings about the occult powers of nature, you must beforehand examine all the classifications of these powers, their laws and manifestations, and the real connotations of the various names assigned to them in the Âryan doctrine. Here are some of the classifications contained in the Brâhmanical system:

- I. As appertaining to Parabrahman and existing in the Macrocosm.
- II. As appertaining to man and existing in the Microcosm.
- III. For the purposes of Târaka Yoga or Pranava Yoga.
- IV. For the purposes of Sâmkhya Yoga (where they are, as it were, the inherent attributes of Prakriti).
- V. For the purposes of Hatha Yoga.
- VI. For the purposes of Kaula Âgama.
- VII. For the purposes of Shâkta Âgama.
- VIII. For the purposes of Shiva Âgama.
- IX. For the purposes of Shrichakram (the Shrichakram referred to in *Isis Unveiled* is not the *real esoteric* Shrichakram of the ancient adepts of Aryâvarta).*
- X. In Atharvana Veda, etc.

In all these classifications subdivisions have been multiplied indefinitely by conceiving new combinations of the primary powers in different proportions. But I must now drop this subject, and proceed to consider the "Fragments of Occult Truth" (since embodied in *Esoteric Buddhism*).

I have carefully examined it, and find that the results arrived at (in the Buddhist doctrine) do not differ much from the conclusions of our Âryan philosophy, though our mode of stating the arguments may differ in form. I shall now discuss the question from my own standpoint, though following, for facility of comparison and convenience of discussion, the sequence of classification of the seven-fold entities or principles constituting man which is adopted in the "Fragments." The questions raised for discussion are: (1) whether the *disembodied spirits* of human beings (as they are called by Spiritualists) appear in the séance-rooms and elsewhere; and (2) whether the manifestations taking place are produced wholly or partly through their agency.

* Very true. But who would be allowed to give out the "real esoteric" one?—Ed. *Theos.*

It is hardly possible to answer these two questions satisfactorily unless the meaning intended to be conveyed by the expression "disembodied spirits of human beings" be accurately defined. The words *spiritualism* and *spirit* are very misleading. Unless English writers in general, and Spiritualists in particular, first ascertain clearly the connotation they mean to assign to the word *spirit*, there will be no end of confusion, and the real nature of these so-called spiritualistic phenomena and their *modus occurrendi* can never be clearly defined. Christian writers generally speak of only *two* entities in man—the body, and the *soul* or *spirit* (both seeming to mean the same thing to them). European philosophers generally speak of *body* and *mind*, and argue that soul or spirit cannot be anything else than mind. They are of opinion that any belief in Linga Shâriram* is entirely unphilosophical. These views are certainly incorrect, and are based on unwarranted assumptions as to the possibilities of nature, and on an imperfect understanding of its laws. I shall now examine (from the standpoint of the Brâhmanical esoteric doctrine) the spiritual constitution of man, the various entities or principles existing in him, and ascertain whether either of those entities entering into his composition *can* appear on earth after his death, and if so, *what it is that so appears*.

Professor Tyndall in his excellent papers on what he calls the "Germ Theory," comes to the following conclusions as the result of a series of well-planned experiments. Even in a very small volume of space there are myriads of protoplasmic germs floating in ether. If, for instance, say water (clear water) is exposed to them, and if they fall into it, some form of life or other will be evolved out of them. Now, what are the agencies for the bringing of this life into existence? Evidently—

- I. The water, which is the field, so to say, for the growth of life.
- II. The protoplasmic germ, out of which life or a living organism is to be evolved or developed. And lastly
- III. The power, energy, force, or tendency which springs into activity at the touch or combination of the protoplasmic germ and the water, and which evolves or develops life and its natural attributes.

Similarly, there are three primary causes which bring the human being into existence. I shall call them, for the purpose of discussion, by the following names:

* The astral body, so called.

- (1) Parabrahman, the universal spirit.
 - (2) Shakti, the crown of the astral light, combining in itself all the powers of nature.
 - (3) Prakriti, which in its original or primary shape is represented by Âkâsha. (Really every form of matter is finally reducible to Âkâsha.)*
- It is ordinarily stated that Prakriti or Âkâsha is the Kshetram, or the basis which corresponds to water in the example we have taken, Brahman the germ, and Shakti, the power or energy that comes into existence at their union or contact.†

But this is not the view which the Upanishads take of the question. According to them, Brahman‡ is the Kshetram or basis, Âkâsha or Prakriti, the germ or seed, and Shakti, the power evolved by their union or contact. And this is the real scientific, philosophical mode of stating the case.

Now, according to the adepts of ancient Âryâvarta, *seven* principles are evolved out of these *three* primary entities. Algebra teaches us that the number of *combinations* of *n* things, taken *one* at a time, *two* at a time, *three* at a time, and so forth = $2^n - 1$.

Applying this formula to the present case, the number of entities evolved from different combinations of these three primary causes amounts to $2^3 - 1 = 8 - 1 = 7$.

As a general rule, whenever seven *entities* are mentioned in the ancient occult science of India, in any connection whatsoever, you must suppose that those seven entities came into existence from *three* primary entities; and that these three entities, again, are evolved out of a *single* entity or monad. To take a familiar example, the *seven* coloured rays in the solar ray are evolved out of *three* primary coloured rays; and the three primary colours coëxist with the four secondary colours in the solar rays. Similarly, the three primary entities which brought man

* The Tibetan esoteric Buddhist doctrine teaches that Prakriti is cosmic matter, out of which all visible forms are produced; and Âkâsha, that same cosmic matter, but still more subjective—its spirit, as it were; Prakriti being the body or *substance*, and Âkâsha Shakti its soul or energy.

† Or, in other words, "Prakriti, Svabhâvat, or Âkâsha, is space, as the Tibetans have it; space filled with whatsoever substance or no substance at all—i.e., with substance so imperceptible as to be only metaphysically conceivable. Brahman, then, would be the germ thrown into the soil of that field, and Shakti, that mysterious energy or force which develops it, and which is called by the Buddhist Arhat of Tibet, Fohat. That which we call form (Rûpa) is not different from that which we call space (Shûnyatâ). . . . Space is not different from form. Form is the same as space; space is the same as form. And so with the other Skandhas, whether Vedanâ or Sanjñâ, or Sanskâra, or Vijñâna they are each the same as their opposite." . . . (Book of *Sin-king*, or the "Heart Sûtra." Chinese translation of the *Mahâ-Prajñâ-Pâramitâ-Hridaya-Sûtra*, chapter on the "Avalokiteshvara," or the *manifested Buddha*.) So that the Âryan and Tibetan or Arhat doctrines agree perfectly in substance, differing but in the names given and the way of putting it.—Ed. *Theos*.

‡ See Appendix, Note IV.

into existence coëxist in him with the *four* secondary entities which arose from different combinations of the three primary entities.

Now these seven *entities*, which in their totality constitute man, are as follows. I shall enumerate them in the order adopted in the "Fragments," as far as the two orders (the Brāhmanical and the Tibetan) coincide:

BRĀHMANICAL.	"ESOTERIC BUDDHISM."
1. Prakriti.	Sthūla Sharīram (Physical Body).
2. The entity evolved out of the combination of Prakriti and Shakti.	Sūkshma Sharīram or Liṅga Sharīram (Astral Body).
3. Shakti.	Kāma Rūpa (Perisprit).
4. The entity evolved out of the combination of Brahman, Shakti, and Prakriti.	Jiva (Life-Soul).
5. The entity evolved out of the combination of Brahman and Prakriti.	Physical Intelligence (or Animal Soul).
6. The entity evolved out of the combination of Brahman and Shakti.	Spiritual Intelligence (or Soul).
7. Brahman.	The Emanation from the Absolute, etc. (or Pure Spirit).

Before proceeding to examine the nature of these seven entities, a few general explanations are indispensably necessary.

I. The secondary principles arising out of the combination of primary principles are quite different in their nature from the entities out of whose combination they came into existence. The combinations in question are not of the nature of mere mechanical juxtapositions, as it were. They do not even correspond to chemical combinations. Consequently no valid inferences as regards the nature of the combinations in question can be drawn by analogy from the nature (variety?) of these combinations.

II. The general proposition, that when once a cause is removed its effect vanishes, is not universally applicable. Take, for instance, the following example: If you once communicate a certain amount of momentum to a ball, velocity of a particular degree in a particular direction is the result. Now, the cause of this motion ceases to exist when the instantaneous sudden impact or blow which conveyed the momentum is completed; but according to Newton's first law of motion the ball will continue to move on for ever and ever, with undiminished velocity in the same direction, unless the said motion is altered,

diminished, neutralized, or counteracted by extraneous causes. Thus, if the ball stop, it will not be on account of the absence of the cause of its motion, but in consequence of the existence of extraneous causes which produce the said result.

Again, take the instance of *subjective phenomena*.

Now the presence of this ink-bottle before me is producing in me, or in my mind, a mental representation of its form, volume, colour, and so forth. The bottle in question may be removed, but still its mental picture may continue to exist. Here, again, you see, the effect survives the cause. Moreover, the effect may at any subsequent time be called into conscious existence, whether the original cause be present or not.

Now, in the case of the fifth principle above-mentioned—the entity that came into existence by the combination of Brahman and Prakriti—if the general proposition (in the “Fragments of Occult Truth”) is correct, this principle, which corresponds to the *physical intelligence*, must cease to exist whenever the Brahman or the seventh principle should cease to exist for the particular individual; but the fact is certainly otherwise. The general proposition under consideration is adduced in the “Fragments” in support of the assertion that whenever the seventh principle ceases to exist for any particular individual, the sixth principle also ceases to exist for him. The assertion is undoubtedly true, though the mode of stating it, and the reasons assigned for it, are to my mind objectionable.

It is said that in cases where the tendencies of a man’s mind are entirely material, and all spiritual aspirations and thoughts were altogether absent from his mind, the seventh principle leaves him either before or at the time of death, and the sixth principle disappears with it. Here, the very proposition that the tendencies of the particular individual’s mind are *entirely* material, involves the assertion that there is no spiritual intelligence or spiritual Ego in him. It should then have been said that, whenever spiritual intelligence ceases to exist in any particular individual, the seventh principle ceases to exist for that particular individual for all purposes. Of course, it does not fly off anywhere. There can never be anything like a change of position in the case of Brahman.* The assertion merely means that when there is no recog-

* True—from the standpoint of Āryan esotericism and the Upanishads, not quite so in the case of the Arahats or Tibetan esoteric doctrine; and it is only on this one solitary point that the two teachings disagree, as far as we know. The difference is very trifling, though, resting as it does solely upon the two various methods of viewing the one and the same thing from two different aspects. (See Appendix, Note IV.)—ED. THEOS.

dition whatever of Brahman, or spirit, or spiritual life, or spiritual consciousness, the seventh principle has ceased to exercise any influence or control over the individual's destinies.

I shall now state what is meant (in the Âryan doctrine) by the seven principles above enumerated.

I. Prakriti. This is the basis of Sthûla Sharîram, and represents it in the above-mentioned classification.

II. Prakriti and Shakti. This is the Linga Sharîram, or Astral Body.

III. Shakti. This principle corresponds to your Kâma Rûpa. This power or force is placed by ancient occultists in the Nâbhichakram. This power can gather Âkâsha or Prakriti, and mould it into any desired shape. It has very great sympathy with the fifth principle, and can be made to act by its influence or control.

IV. Brahman, Shakti, and Prakriti. This again corresponds to your second principle, Jiva. This power represents the universal life-principle which exists in Nature. Its seat is the Anâhatachakram (heart). It is a force or power which constitutes what is called Jiva, or life. It is, as you say, indestructible, and its activity is merely transferred at the time of death to another set of atoms, to form another organism.

V. Brahma and Prakriti. This, in our Âryan philosophy, corresponds to your fifth principle, called the *physical intelligence*. According to our philosophers, this is the entity in which what is called *mind* has its seat or basis. This is the most difficult principle of all to explain, and the present discussion entirely turns upon the view we take of it.

Now, what is mind? It is a mysterious something, which is considered to be the seat of consciousness—of sensations, emotions, volitions, and thoughts. Psychological analysis shows it to be apparently a congeries of mental states, and possibilities of mental states, connected by what is called memory, and considered to have a distinct existence apart from any of its particular states or ideas. Now in what entity has this mysterious something its potential or actual existence? *Memory* and *expectation*, which form, as it were, the real foundation of what is called *individuality*, or Ahankâram, must have their seat of existence somewhere. Modern psychologists of Europe generally say that the material substance of *brain* is the seat of mind; and that past *subjective experiences*, which can be recalled by memory, and which in their totality constitute what

is called *individuality*, exist therein in the shape of certain unintelligible mysterious impressions and changes in the nerves and nerve-centres of the cerebral hemispheres. Consequently, they say, the mind—the individual mind—is destroyed when the body is destroyed; so there is no possible existence after death.

But there are a few facts among those admitted by these philosophers which are sufficient for us to demolish their theory. In every portion of the human body a constant change goes on without intermission. Every tissue, every muscular fibre and nerve-tube, and every ganglionic centre in the brain, is undergoing an incessant change. In the course of a man's lifetime there may be a series of *complete transformations* of the substance of his *brain*. Nevertheless, the memory of his past mental states remains unaltered. There may be additions of new subjective experiences and some mental states may be altogether forgotten, but no individual mental state is altered. The person's *sense* of personal identity remains the same throughout these constant alterations in the brain substance.* It is able to survive all these changes, and it can survive also the complete destruction of the material substance of the brain.

This individuality arising from mental consciousness has its seat of existence, according to our philosophers, in an *occult power or force*, which keeps a register, as it were, of all our mental impressions. The power itself is indestructible, though by the operation of certain antagonistic causes its impressions may in course of time be effaced, in part or wholly.

I may mention in this connection that our philosophers have associated seven occult powers with the seven principles or entities above mentioned. These seven occult principles in the microcosm correspond with, or are the counterparts of, the occult powers in the macrocosm. The mental and spiritual consciousness of the individual becomes the general consciousness of Brahman, when the barrier of individuality is wholly removed, and when the seven powers in the microcosm are placed *en rapport* with the seven powers in the macrocosm.

There is nothing very strange in a power, or force, or Shakti, carrying with it impressions of sensations, ideas, thoughts, or other subjective experiences. It is now a well-known fact, that an electric or magnetic current can convey in some mysterious manner impressions

* This is also sound Buddhist philosophy, the transformation in question being known as the change of the Skandhas.—ED. *Theos.*

of sound or speech, with all their individual peculiarities; similarly, I can convey my thoughts to you by a transmission of energy or power.

Now, this fifth principle represents in our philosophy the *mind*, or, to speak more correctly, the power or force above described, the impressions of the mental states therein, and the notion of self-identity or Ahankâram generated by their collective operation. This principle is called merely *physical intelligence* in the "Fragments." I do not know what is really meant by this expression. It may be taken to mean that intelligence which exists in a very low state of development in the lower animals. Mind may exist in different stages of development, from the very lowest forms of organic life, where the signs of its existence or operation can hardly be distinctly realized, up to man, in whom it reaches its highest state of development.

In fact, from the first appearance of life* up to Turiya Avasthâ, or the state of Nirvâna, the progress is, as it were, continuous. We ascend from that principle up to the seventh by almost imperceptible gradations. But four stages are recognized in the progress where the change is of a peculiar kind, and is such as to arrest an observer's attention. These four stages are as follows:

- (1) Where life (fourth principle) make its appearance.
- (2) Where the existence of mind becomes perceptible in conjunction with life.
- (3) Where the highest state of mental abstraction ends, and *spiritual consciousness* commences.
- (4) Where spiritual consciousness disappears, leaving the seventh principle in a complete state of Nirvâna, or nakedness.

According to our philosophers, the fifth principle under consideration is intended to represent *the mind in every possible state of development, from the second stage up to the third stage.*

VI. Brahman and Shakti. This principle corresponds to your "spiritual intelligence." It is, in fact, Buddhi (I use the word Buddhi not in the ordinary sense, but in the sense in which it is used by our ancient philosophers); in other words, it is the seat of Bodha or Âtmabodha. One who has Âtmabodha in its completeness is a Buddha. *Buddhists know very well what this term signifies.* This principle is described in the "Fragments" as an entity coming into existence by the combination of Brahman and Prakriti. I do not again know in what particular sense

* In the Âryan doctrine, which blends Brahman, Shakti, and Prakriti in one, it is the fourth principle; then in the Buddhist esotericism the second in combination with the first.

the word *Prakriti* is used in this connection. According to our philosophers it is an entity arising from the union of *Brahman* and *Shakti*. I have already explained the connotation attached by our philosophers to the words *Prakriti* and *Shakti*.

I stated that *Prakriti* in its *primary* state is *Âkâsha*.*

If *Âkâsha* be considered to be *Shakti* or *power*† then my statement as regards the ultimate state of *Prakriti* is likely to give rise to confusion and misapprehension unless I explain the distinction between *Âkâsha* and *Shakti*. *Âkâsha* is not, properly speaking, the "Crown of the Astral Light," nor does it *by itself* constitute any of the *six primary forces*. But, generally speaking, whenever any *phenomenal result* is produced, *Shakti* acts in *conjunction with* *Âkâsha*. And, moreover, *Âkâsha* serves as a basis or *Adhishthânam* for the transmission of force currents and for the formation or generation of force or power correlations.‡

In *Mantrashâstra* the letter *Ha* represents *Âkâsha*, and you will find that this syllable enters into most of the sacred formulæ intended to be used in producing phenomenal results. But by itself it does not represent any *Shakti*. You may, if you please, call *Shakti* an attribute of *Âkâsha*.

I do not think that, as regards the nature of this principle, there can in reality exist any difference of opinion between the Buddhist and *Brâhmanical* philosophers.

Buddhist and *Brâhmanical* initiates know very well that mysterious circular mirror composed of two hemispheres which reflects as it were the rays emanating from the "burning bush" and the blazing star—the spiritual sun shining in *Chidâkâsham*.

The spiritual impressions constituting this principle have their existence in an occult power associated with the entity in question. The successive incarnations of Buddha, in fact, mean the successive

* According to the Buddhists, in *Âkâsha* lies that eternal, potential energy whose function it is to evolve all visible things out of itself.—Ed. *Theos*.

† It was never so considered, as we have shown it. But as the "Fragments" are written in English, a language lacking such an abundance of metaphysical terms to express every minute change of form, substance and state as are found in the Sanskrit, it was deemed useless to confuse the Western reader, untrained in the methods of Eastern expression, more than necessary, with a too nice distinction of proper technical terms. As "*Prakriti* in its primary state is *Âkâsha*," and *Shakti* "is an attribute of *Âkâsha*," it becomes evident that for the uninitiated it is all one. Indeed, to speak of the "union of *Brahman* and *Prakriti*" instead of "*Brahman* and *Shakti*" is no worse than for a theist to write that "man has come into existence by the combination of spirit and matter," whereas, his word, framed in an orthodox shape, ought to read "man as a living soul was created by the *power* (or breath) of God over matter."—Ed. *Theos*.

‡ That is to say, the *Âryan* *Âkâsha* is another word for Buddhist Space (in its metaphysical meaning).—Ed. *Theos*.

transfers of this mysterious power, or the impressions thereof. The transfer is only possible when the Mahâtma* who transfers it has completely identified himself with his seventh principle, has annihilated his Ahankâram, and reduced it to ashes in Chidagnikandam, and has succeeded in making his thoughts correspond with the eternal laws of Nature and in becoming a co-worker with Nature. Or, to put the same thing in other words, when he *has attained the state of Nirvâna, the condition of final negation, negation of individual, or separate existence.*†

VII. Âtmâ. The emanation from the absolute, corresponding to the seventh principle. As regards this entity there exists positively no real difference of opinion between the Tibetan Buddhist adepts and our ancient Rishis.

We must now consider which of these entities can appear after the individual's death in séance-rooms and produce the so-called spiritualistic phenomena.

Now, the assertion of the Spiritualists, that the "disembodied spirits" of particular human beings appear in séance-rooms, necessarily implies that the entity that so appears bears the stamp of some particular personality.

So, we have to ascertain beforehand in what entity or entities personality has its seat of existence. Apparently it exists in the person's particular formation of body, and in his subjective experiences (called his mind in their totality). On the death of the individual his body is destroyed; his Linga Sharîram being decomposed, the power associated with it becomes mingled in the current of the corresponding power in the macrocosm. Similarly, the third and fourth principles are mingled with their corresponding powers. These entities may again enter into the composition of other organisms. As these entities bear no impression of personality, the Spiritualists have no right to say that the *disembodied spirit* of the human being has appeared in the séance-room whenever any of these entities may appear there. In fact, they have no means of ascertaining that they belonged to any particular individual.

Therefore, we must only consider whether any of the last three entities appear in séance-rooms to amuse or to instruct Spiritualists. Let us take three particular examples of individuals, and see what becomes of these three principles after death.

* The highest adept.

† In the words of Agatha in the *Mahâ-pari-nirvâna Sûtra*:

"We reach a condition of rest

Beyond the limit of any human knowledge."—Ed. Theos.

I. One in whom spiritual attachments have greater force than terrestrial attachments.

II. One in whom spiritual aspirations do exist, but are merely of secondary importance to him, his terrestrial interests occupying the greater share of his attention.

III. One in whom there exists no spiritual aspirations whatever, one whose spiritual Ego is dead or non-existent to his apprehension.

We need not consider the case of a *complete adept* in this connection. In the first two cases, according to our supposition, spiritual and mental experiences exist together; when spiritual consciousness exists, the existence of the seventh principle being recognized, it maintains its connection with the fifth and sixth principles. But the existence of terrestrial attachments creates the necessity of Punarjanmam (re-birth), the latter signifying the evolution of a new set of objective and subjective experiences, constituting a new combination of surrounding circumstances, or, in other words, a new world. The period between death and the next subsequent birth is occupied with the preparation required for the evolution of these new experiences. During the period of incubation, as you call it, the spirit will never of its own accord appear in this world, *nor can it so appear*.

There is a great law in this universe which consists in the reduction of subjective experiences to objective phenomena, and the evolution of the former from the latter. This is otherwise called "cyclic necessity." Man is subjected to this law if he do not check and counterbalance the usual destiny or fate, and he can only escape its control by subduing all his terrestrial attachments completely. The new combination of circumstances under which he will then be placed may be better or worse than the terrestrial conditions under which he lived; but in his progress to a new world, you may be sure he will never turn around to have a look at his spiritualistic friends.

In the third of the above three cases there is, by our supposition, no recognition of spiritual consciousness or of spirits; so they are non-existing so far as he is concerned. The case is similar to that of an organ or faculty which remains unused for a long time. It then practically ceases to exist.

These entities, as it were, remain his, or in his possession, when they are stamped with the stamp of recognition. When such is not the case, the whole of his individuality is centred in his fifth principle.

And after death this fifth principle is the *only representative* of the individual in question.

By itself it cannot evolve for itself a new set of objective experiences, or, to say the same thing in other words, it has no Punarjanmam. It is such an entity that can appear in séance-rooms; but it is absurd to call it a *disembodied spirit*.^{*} It is merely a power or force retaining the impressions of the thoughts or ideas of the individual into whose composition it originally entered. It sometimes summons to its aid the Kâma Rûpa power, and creates for itself some particular ethereal form (not necessarily human).

Its tendencies of action will be similar to those of the individual's mind when he was living. This entity maintains its existence so long as the impressions on the power associated with the fifth principle remain intact. In course of time they are effaced, and the power in question is then mixed up in the current of its corresponding power in the Macrocosm, as the river loses itself in the sea. Entities like these may afford signs of there having been considerable intellectual power in the individuals to which they belonged; because very high intellectual power may coëxist with utter absence of spiritual consciousness. But from this circumstance it cannot be argued that either the spirits or the spiritual Egos of deceased individuals appear in séance-rooms.

There are some people in India who have thoroughly studied the nature of such entities (called Pishâcham). I do not know much about them experimentally, as I have never meddled with this disgusting, profitless, and dangerous branch of investigation.

The Spiritualists do not know what they are really doing. Their investigations are likely to result in course of time either in wicked sorcery or in the utter spiritual ruin of thousands of men and women.†

The views I have herein expressed have been often illustrated by our ancient writers by comparing the course of a man's life or existence to the orbital motion of a planet round the sun. Centripetal force is spiritual attraction, and centrifugal force terrestrial attraction. As the centripetal force increases in magnitude in comparison with the centrifugal force, the planet approaches the sun—the individual reaches a higher plane of existence. If, on the other hand, the centrifugal force becomes greater than the centripetal force, the planet is removed to a greater distance from the sun, and moves in a new orbit at that distance

^{*} It is especially on this point that the Âryan and Arahât doctrines quite agree. The teaching and argument that follow are in every respect those of the Buddhist Himâlayan Brotherhood.—Ed. *Theos.*

[†] We share entirely in this idea.—Ed. *Theos.*

—the individual comes to a lower level of existence. These are illustrated in the first two instances I have noticed above.

We have only to consider the two extreme cases.

When the planet in its *approach* to the sun passes over the line where the centripetal and centrifugal force completely neutralize each other, and is only acted on by the centripetal force, it rushes towards the sun with a gradually increasing velocity, and is finally mixed up with the mass of the sun's body. This is the case of a complete *adept*.

Again, when the planet in its *retreat* from the sun reaches a point where the centrifugal force becomes all-powerful, it flies off in a tangential direction from its orbit, and goes into the depths of void space. When it ceases to be under the control of the sun, it gradually gives up its generative heat, and the creative energy that it originally derived from the sun, and remains a cold mass of material particles wandering through space until the mass is completely decomposed into atoms. This cold mass is compared to the fifth principle under the conditions above noticed, and the heat, light, and energy that left it are compared to the sixth and seventh principles.

Either after assuming a new orbit or in its course of deviation from the old orbit to the new, the planet can never go back to any point in its old orbit, as the various orbits lying in different planes never intersect each other.

This figurative representation correctly explains the ancient Brâhmanical theory on the subject. It is merely a branch of what is called by the ancient mystics the Great Law of the Universe.

T. SUBBA ROW.

APPENDIX.

NOTE I.

In this connection it will be well to draw the reader's attention to the fact that the country called Si-dzang by the Chinese, and Tibet by Western geographers, is mentioned in the oldest books preserved in the province of Fo-kien (the headquarters of the aborigines of China) as the great seat of occult learning in the archaic ages. According to these records, it was inhabited by the "Teachers of Light," the "Sons of Wisdom" and the "Brothers of the Sun." The Emperor Yu the "Great" (2,207 B.C.), a pious mystic, is credited with having obtained his occult wisdom and the system of theocracy established by him—for he was the first one to unite in China ecclesiastical power with

temporal authority—from Si-dzang. That system was the same as with the old Egyptians and the Chaldees; that which we know to have existed in the Brâhmanical period in India, and to exist now in Tibet—namely, all the learning, power, the temporal as well as the secret wisdom, were concentrated within the hierarchy of the priests and limited to their caste. Who were the aborigines of Tibet is a question which no ethnographer is able to answer correctly at present. They practise the Bhon religion, their sect is a Pre- and Anti-Buddhistic one, and they are to be found mostly in the province of Kam. That is all that is known of them. But even that would justify the supposition that they are the greatly degenerated descendants of mighty and wise forefathers. Their ethnical type shows that they are not pure Turanians, and their rites—now those of sorcery, incantations, and nature-worship—remind one far more of the popular rites of the Babylonians, as found in the records preserved on the excavated cylinders, than of the religious practices of the Chinese sect of Tao-sse (a religion based upon pure reason and spirituality), as alleged by some. Generally, little or no difference is made, even by the Kyelang missionaries, who mix greatly with these people on the borders of British Lahoul and ought to know better, between the Bhons and the two rival Buddhist sects, the Yellow Caps and the Red Caps. The latter of these have opposed the reform of Tzong-ka-pa from the first, and have always adhered to old Buddhism, so greatly mixed up now with the practices of the Bhons. Were our Orientalists to know more of them, and compare the ancient Babylonian Bel or Baal worship with the rites of the Bhons, they would find an undeniable connection between the two. To begin an argument here, proving the origin of the aborigines of Tibet as connected with one of the three great races which superseded each other in Babylonia, whether we call them the Akkadians (a name invented by F. Lenormant), or the primitive Turanians, Chaldees, and Assyrians, is out of the question. Be it as it may, there is reason to call the Trans-Himalayan esoteric doctrine Chaldeo-Tibetan. And when we remember that the Vedas came, agreeably to all traditions, from the Mansarovara Lake in Tibet, and the Brâhmans themselves from the far North, we are justified in looking on the esoteric doctrines of every people who once had or still have them, as having proceeded from one and the same source; and to thus call it the “Âryan-Chaldeo-Tibetan” doctrine, or Universal Wisdom-Religion. “Seek for the Lost Word among the hierophants of Tartary, China and Tibet,” was the advice of Swedenborg the seer.

H

NOTE II.

Not necessarily, we say. The Vedas, Brâhmanism, and along with these Sanskrit, were importations into what we now regard as India. They were never indigenous to its soil. There was a time when the ancient nations of the West included under the generic name of India many of the countries of Asia now classified under other names. There was an Upper, a Lower, and a Western India, even during the comparatively late period of Alexander; and Persia (Iran) is called Western India in some ancient classics. The countries now named Tibet, Mongolia, and Great Tartary were considered by them as forming part of India. When we say, therefore, that India has civilized the world, and was the Alma Mater of the civilizations, arts, and sciences of all other nations (Babylonia, and perhaps even Egypt, included), we mean archaic, pre-historic India, India of the time when the great Gobi was a sea, and the lost "Atlantis" formed part of an unbroken continent which began at the Himâlayas and ran down over Southern India, Ceylon, and Java, to far-away Tasmania.

NOTE III.

To ascertain such disputed questions, one has to look into and study well the Chinese sacred and historical records—a people whose era begins nearly 4,600 back (2,697 B.C.). A people so accurate, and by whom some of the most important *inventions* of modern Europe and its so much boasted modern science were anticipated—such as the compass, gunpowder, porcelain, paper, printing, etc.—known and practised thousands of years before these were re-discovered by the Europeans, ought to receive some trust for their records. And from Lao-tze down to Hiouen-Thsang their literature is filled with allusions and references to that island and the wisdom of the Himâlayan adepts. In the *Catena of Buddhist Scriptures from the Chinese*, by the Rev. Samuel Beal, there is a chapter "On the Tian-Ta'i School of Buddhism" (pp. 244-258) which our opponents ought to read. Translating the rules of that most celebrated and holy school and sect in China founded by Chin-che-K'hae, called Che-chay (the Wise One), in the year 575 of our era, when coming to the sentence which reads, "That which relates to the one garment (seamless) worn by the Great Teachers of the Snowy Mountains, the school of the Haimavatas" (p. 256)—the European translator places after the last sentence a sign of interrogation, as well he may.

The statistics of the school of the "Haimavatas," or of our Himâlayan Brotherhood, are not to be found in the general census records of India. Further, Mr. Beal translates a rule relating to "the great professors of the higher order who live in mountain depths remote from men," the Âranyakas, or hermits.

So, with respect to the traditions concerning this island, and apart from the (to them) *historical* records of this preserved in the Chinese and Tibetan sacred books, the legend is alive to this day among the people of Tibet. The fair island is no more, but the country where it once bloomed remains there still, and the spot is well known to some of the "Great Teachers of the Snowy Mountains," however much convulsed and changed its topography by the awful cataclysm. Every *seventh* year these teachers are believed to assemble in Scham-bha-la, the "Happy Land." According to the general belief it is situated in the north-west of Tibet. Some place it within the unexplored central regions, inaccessible even to the fearless nomadic tribes; others hem it in between the range of the Gangdisri Mountains and the northern edge of the Gobi desert, south and north, and the more populated regions of Khoondooz and Kashmîr, of the Gya-Pheling (British India), and China, west and east, which affords to the curious mind a pretty large latitude to locate it in. Others still place it between Namur Nur and the Kuen-Lun Mountains, but one and all firmly believe in Scham-bha-la, and speak of it as a fertile fairy-like land once an island, now an oasis of incomparable beauty, the place of meeting of the inheritors of the esoteric wisdom of the god-like inhabitants of the legendary island.

In connection with the archaic legend of the Asian Sea and the Atlantic Continent, is it not profitable to note a fact known to all modern geologists—that the Himâlayan slopes afford geological proof that the substance of those lofty peaks was once a part of an ocean floor?

NOTE IV.

We have already pointed out that, in our opinion, the whole difference between the Buddhistic and Vedântic philosophies was that the former was a kind of *rationalistic* Vedântism, while the latter might be regarded as *transcendental* Buddhism. If the Âryan esotericism applies the term Jivâtmâ to the seventh principle—the pure and *per se* unconscious spirit—it is because the Vedânta, postulating three kinds of existence—(1)

the Paramârthika (the true, the only real one), (2) the Vyavahârîka (the practical), and (3) the Pratibhâsika (the apparent or illusory life)—makes the first Life or Jîva, the only truly existent one. Brahma, or the One Self, is its only representative in the universe, as it is the Universal Life *in toto*, while the other two are but its “phenomenal appearances,” imagined and created by ignorance, and complete illusion suggested to us by our blind senses. The Buddhists, on the other hand, deny either subjective or objective reality even to that one Self-Existence. Buddha declares that there is neither Creator nor an Absolute Being. Buddhist rationalism was ever too alive to the insuperable difficulty of admitting one absolute consciousness, as in the words of Flint, “wherever there is consciousness there is relation, and wherever there is relation there is dualism.” The One Life is either “Mukta” (absolute and unconditioned), and can have no relation to anything nor to any one; or it is “Baddha” (bound and conditioned), and then it cannot be called the absolute; the limitation, moreover, necessitating another deity as powerful as the first to account for all the evil in this world. Hence, the Arahats secret doctrine on cosmogony admits but of one absolute, indestructible, eternal, and uncreated Unconsciousness (so to translate) of an Element (the word being used for want of a better term) absolutely independent of everything else in the universe; a something ever present or ubiquitous, a Presence which ever was, is, and will be, whether there is a God, gods, or none, whether there is a universe, or no universe, existing during the eternal cycles of Mahâ Yugas, during the Pralayas as during the periods of Manvantara, and this is Space, the field for the operation of the eternal Forces and natural Law, the Basis (as Mr. Subba Row rightly calls it) upon which take place the eternal intercorrelations of Âkâsha-Prakriti—guided by the unconscious regular pulsations of Shakti, the breath or power of a conscious Deity, the theists would say; the eternal energy of an eternal, unconscious Law, say the Buddhists. Space, then, or “Fan, Bar-nang” (Mahâ Shûnyatâ) or, as it is called by Lao-tze, the “Emptiness,” is the nature of the Buddhist Absolute. (See Confucius’ *Praise of the Abyss*.) The word Jîva, then, could never be applied by the Arahats to the *seventh* principle, since it is only through its correlation or contact with matter that Fohat (the Buddhist active energy) can develop active *conscious* life; and that to the question: “How can *unconsciousness* generate *consciousness*?”—the answer would be: “Was the seed which generated a Bacon or a Newton self-conscious?”

NOTE V.

To our European readers, deceived by the phonetic similarity, it must not be thought that the name "Brahman" is identical in this connection with Brahmâ or Îshvara, the personal God. The Upanishads—the Vedânta Scriptures—mention no such God, and one would vainly seek in them any allusions to a conscious deity. The Brahman, or Parabrahman, the Absolute of the Vedântins, is neuter and unconscious, and has no connection with the masculine Brahmâ of the Hindû Triad, or Trimûrti. Some Orientalists rightly believe the name derived from the verb *brih*, to *grow* or *increase*, and to be in this sense the *Universal expansive force of Nature*, the vivifying and spiritual principle or power, spread throughout the universe, which, in its collectivity, is the one Absoluteness, the one Life and the only Reality.

H. P. BLAVATSKY.

THE SEPTENARY DIVISION IN DIFFERENT INDIAN SYSTEMS.

We give below in a tabular form the classifications, adopted by Buddhist and by Vedântic teachers, of the principles in man :

“ESOTERIC BUDDHISM.”	VEDĀNTA.	TĀRAKA RĀJA YOGA.	
1. Sthula Sharīra.	Annamayakosha.	} Sthūlopādhi.	
2. Prāna.	} Prānamayakosha.		
3. The Vehicle of Prāna.			
4. Kāma Rūpa.	} Manomayakosha.	} Sūkshmapādhi.	
5. Mind {			} Manomayakosha.
(b) Vijñānam.	Vijñānamayakosha.		
6. Spiritual Soul.	Ānandamayakosha.	Kāranopādhi.	
7. Ātmā.	Ātmā.	Ātmā.	

From the foregoing table it will be seen that the third principle in the Buddhist classification is not separately mentioned in the Vedântic division as it is merely the vehicle of Prāna. It will also be seen that the fourth principle is included in the third Kosha (sheath), as the said principle is but the vehicle of will-power, which is but an energy of the mind. It must also be noticed that the Vijñānamayakosha is considered to be distinct from the Manomayakosha, as a division is made after death between the lower part of the mind, as it were, which has a closer affinity with the fourth principle than with the sixth and its higher part, which attaches itself to the latter, and which is, in fact, the basis for the higher spiritual individuality of man.

We may also here point out to our readers that the classification mentioned in the last column is for all practical purposes connected

with Râja Yoga, the best and simplest. Though there are seven principles in man, there are but three distinct Upâdhis (bases), in each of which his Âtmâ may work independently of the rest. These three Upâdhis can be separated by an adept without killing himself. He cannot separate the seven principles from each other without destroying his constitution.

T. S.

THE SEPTENARY PRINCIPLE IN ESOTERICISM.

SINCE the exposition of the Arhat esoteric doctrine was begun, many who had not acquainted themselves with the occult basis of Hindû philosophy have imagined that the two were in conflict. Some of the more bigoted have openly charged the Occultists of the Theosophical Society with propagating rank Buddhistic heresy; and have even gone to the length of affirming that the whole Theosophic movement was but a masked Buddhistic propaganda. We were taunted by ignorant Brâhmans and learned Europeans that our septenary divisions of Nature and everything in it, including man, are arbitrary and not endorsed by the oldest religious systems of the East. It is now proposed to throw a cursory glance at the Vedas, the Upanishads, the Law-Books of Manu, and especially the Vedânta, and show that they too support our position. Even in their crude exotericism their affirmation of the sevenfold division is apparent. Passage after passage may be cited in proof. And not only can the mysterious number be found traced on every page of the oldest Âryan Sacred Scriptures, but in the oldest books of Zoroastrianism as well; in the rescued cylindrical tile-records of old Babylonia and Chaldæa, in the Book of the Dead and the Ritualism of ancient Egypt, and even in the Mosaic books—without mentioning the secret Jewish works, such as the Kabbalah.

The limited space at command forces us to allow a few brief quotations to stand as landmarks and not even attempt long explanations. It is no exaggeration to say that upon each of the few hints now given in the cited Shlokas a thick volume might be written.

From the well-known Hymn to Time, in the *Atharva Veda* (xix. 53)—

Time, like a brilliant steed with *seven* rays,
Full of fecundity, bears all things onward

Time, like a *seven*-wheeled, *seven*-naved car moves on;
His rolling wheels are all the worlds, his axle
Is immortality

—down to Manu, “the first and the *seventh* man,” the Vedas, the Upanishads, and all the later systems of philosophy teem with allusions to this number. Who was Manu, the son of Svâyambhuva? The Secret Doctrine tells us that *this* Manu was no man, but the representation of the first human races evolved with the help of the Dhyân-Chohans (Devas) at the beginning of the First Round. But we are told in his *Laws* (i. 80) that there are fourteen Manus for every Kalpa or “interval from creation to creation” (read interval from one *minor* Pralaya to another); and that “in the present divine age there have been as yet *seven* Manus.” Those who know that there are seven Rounds, of which we have passed three, and are now in the fourth; and who are taught that there are seven dawns and seven twilights, or fourteen Manvantaras; that at the beginning of every Round and at the end, and on and between the planets, there is “an awakening to *illusive* life,” and “an awakening to *real* life,” and that, moreover, there are “Root-Manus,” and what we have to clumsily translate as the “Seed-Manus”—*the seeds for the human races of the forthcoming Round* (a mystery divulged but to those who have passed the third degree in initiation); those who have learned all this, will be better prepared to understand the meaning of the following. We are told in the Hindû Sacred Scriptures that “the first Manu produced *six* other Manus [*seven* primary Manus in all], and these produced in their turn each seven other Manus” (*Bhṛigu*, i. 61-63),* the production of the latter standing in the occult treatises as 7×7 . Thus it becomes clear that Manu—the last one, the progenitor of our fourth-round Humanity—must be the *seventh*, since we are on our fourth Round, and that there is a Root-Manu on globe A and a Seed-Manu on globe G. Just as each planetary Round commences with the appearance of a Root-Manu (Dhyân-Chohan) and closes with a Seed-Manu, so a Root- and a Seed-Manu appear respectively at the beginning and the termination of the human period on any particular planet. It will be easily seen from the foregoing statement that a Manu-antaric period means, as the term implies, the time *between* the appearance of two Manus or Dhyân-Chohans; and hence a minor Manu-antara is the duration of the *seven* Races on any particular planet, and a major Manu-antara is the period of one human Round along the Planetary Chain. Moreover,

* The fact that Manu himself is made to declare that he was created by Virāj and then produced the ten Prajāpatīs, who again produced seven Manus, who in their turn gave birth to seven other Manus (*Manu*, i. 33-36), relates to other still earlier mysteries, and is at the same time a “blind” with regard to the doctrine of the Septenary Chain.

that, as it is said that each of the seven Manus *creates* 7×7 Manus, and that there are 49 Root-Races on the seven planets during each Round, then every Root-Race has its Manu. The present seventh Manu is called Vaivasvata, and stands in the exoteric texts for that Manu who represents in India the Babylonian Xisusthrus and the Jewish Noah. But in the esoteric books we are told that Manu Vaivasvata, the progenitor of our *fifth* Race—who saved it from the flood that nearly exterminated the fourth (Atlantean)—is not the seventh Manu, mentioned in the nomenclature of the root, or primitive Manus, but one of the 49 “emanated from this Root-Manu.”

For clearer comprehension we here give the names of the 14 Manus in their respective order and relation to each Round:

First Round.	{	1st (Root)	Manu on Planet A.—Svâyambhuva.
		1st (Seed)	“ “ “ G.—Svárochi or Svárochisha.
Second Round.	{	2nd (Root)	“ “ “ A.—Autami.
		2nd (Seed)	“ “ “ G.—Tâmasa.
Third Round.	{	3rd (Root)	“ “ “ A.—Raivata.
		3rd (Seed)	“ “ “ G.—Châkshusha.
Fourth Round.	{	4th (Root)	“ “ “ A.—Vaivasvata (our progenitor).
		4th (Seed)	“ “ “ G.—Sâvarna.
Fifth Round.	{	5th (Root)	“ “ “ A.—Daksha Sâvarna.
		5th (Seed)	“ “ “ G.—Brahma Sâvarna.
Sixth Round.	{	6th (Root)	“ “ “ A.—Dharma Sâvarna.
		6th (Seed)	“ “ “ G.—Rudra Sâvarna.
Seventh Round.	{	7th (Root)	“ “ “ A.—Rauchya.
		7th (Seed)	“ “ “ G.—Bhautya.

Vaivasvata thus, though seventh in the order given, is the primitive Root-Manu of our fourth Human Wave (the reader must always remember that Manu is not a man but collective humanity), while *our* Vaivasvata was but one of the seven minor Manus who are made to preside over the seven Races of this our planet. Each of these has to become the witness of one of the periodical and ever-recurring cataclysms (by fire and water in turn) that close the cycle of every Root-Race. And it is this Vaivasvata—the Hindû ideal embodiment called respectively Xisusthrus, Deukalion, Noah, and by other names—who is the allegorical man who rescued our Race when nearly the whole population of one hemisphere perished by water, while the other hemisphere was awakening from its temporary obscurity.

The number *seven* stands prominently conspicuous in even a cursory comparison of the eleventh Tablet of the Izdhubar Legends of the

Chaldæan account of the Deluge and the so-called Mosaic books. In both the number seven plays a most prominent part. The clean beasts are taken by *sevens*, the fowls by *sevens* also; in *seven* days it is promised Noah to rain upon the earth; thus he stays "yet other *seven* days," and again *seven* days; while in the Chaldæan account of the Deluge, on the *seventh* day the rain abated. On the *seventh* day the dove is sent out; by *sevens*, Xisuthrus takes "jugs of wine" for the altar, etc. Why such coincidence? And yet we are told by, and bound to believe in, the European Orientalists, when in passing judgment alike upon the Babylonian and Âryan chronologies they call them "extravagant and fanciful"! Nevertheless, while they give us no explanation of, nor have they ever noticed, as far as we know, the strange identity in the totals of the Semitic, Chaldæan, and Âryan Hindû chronology, the students of Occult Philosophy find the following fact extremely suggestive. While the period of the reign of the 10 Babylonian antediluvian kings is given as 432,000 years,* the duration of the post-diluvian Kali Yuga is also given as 432,000, while the four ages or the divine Mahâ Yuga yield in their totality 4,320,000 years. Why should they, if fanciful and "extravagant," give the identical figures, when neither the Âryans nor the Babylonians have surely borrowed anything from each other? We invite the attention of our Occultists to the three figures given—4 standing for the perfect square, 3 for the triad (the seven universal and the seven individual principles), and 2 the symbol of our illusionary world, a figure ignored and rejected by Pythagoras.

It is in the Upanishads and the Vedânta though, that we have to look for the best corroborations of the occult teachings. In the mystical doctrine the Rahasya, or the Upanishads—"the only Veda of all thoughtful Hindûs in the present day," as Monier Williams is made to confess—every word, as its very name implies,† has a secret meaning underlying it. This meaning can be fully realized only by him who has a full knowledge of Prâna, the One Life, "the nave to which are attached the *seven* spokes of the universal wheel." (Hymn to Prâna, *Atharva Vedâ*, xi. 4.)

Even European Orientalists agree that all the systems in India assign to the human body: (a) an exterior or gross body (Sthûla Sharîra);

* See *Babylonia*, by George Smith, p. 36. Here again, as with the Manus and 10 Prajâpatis and the 10 Sephiroth in the *Book of Numbers*—they dwindle down to *seven*!

† Upa-ni-shad means, according to Brâhmanical authority, "to conquer ignorance by revealing the secret spiritual knowledge." According to Monier Williams, the title is derived from the root *sad* with the prepositions *upa* and *ni*, and implies "something mystical that underlies or is beneath the surface."

(*b*) an inner or shadowy body (Sūkshma or Linga Sharīra, the vehicle); the two cemented with (*c*) life (Jīva or Kārana Sharīra, the "causal body").* These the occult system or esotericism divides into seven, further adding to them—Kāma, Manas, Buddhi, and Âtman. The Nyâya philosophy when treating of Prameyas (by which the objects and subjects of Pramâna are to be correctly understood) includes among the 12 the *seven* "root principles" (see Sûtra ix), which are (1) soul (Âtman); (2) its superior spirit (Jīvâtman); (3) body (Sharīra); (4) senses (Indriya); (5) activity or will (Pravritti); (6) mind (Manas); (7) intellection (Buddhi). The seven Padârthas (enquiries or predicates of existing things) of Kanâda in the Vaisheshika, refer in the occult doctrine to the seven qualities or attributes of the seven principles. Thus: (1) substance (Dravya) refers to body or Sthûla Sharīra; (2) quality or property (Guna) to the life principle, Jīva; (3) action or act (Karman) to the Linga Sharīra; (4) community or commingling of properties (Sâmânya) to Kāma Rûpa; (5) personality or conscious individuality (Vishesha) to Manas; (6) coïnherence or perpetual intimate relation (Samavâya) to Buddhi, the inseparable vehicle of Âtman; (7) non-existence or non-being in the sense of, and as separate from, objectivity or substance (Abhâva)—to the highest monad or Âtman.

Thus, whether we view the One as the Vedic Purusha or Brahman (neuter) the "all-expanding essence"; or as the universal spirit, the "light of lights" (Jyotishâm Jyotih) the Total independent of all relation, of the Upanishads; or as the Paramâtman of the Vedânta; or again as Kanâda's Adrishta, the "unseen force," or divine atom; or as Prakriti, the "eternally existing essence," of Kapila—we find in all these *impersonal* universal Principles the latent capability of evolving out of themselves "six rays" (the evolver being the *seventh*). The third aphorism of the *Sāṅkhya Kārikā*, which says of Prakriti that it is the "root and substance of all things," and no *production*, but itself a producer of "seven things, which, produced by it, become also producers," has a purely occult meaning.

What are the "producers" evolved from this universal root-principle, Mûla-prakriti or undifferentiated *primeval cosmic* matter, which evolves out of itself consciousness and mind, and is generally called Prakriti and Amûlam Mûlam, the "rootless root," and Avyakta, the "unevolved

* This Kārana Sharīra is often mistaken by the uninitiated for Linga Sharīra, and, since it is described as the inner rudimentary or latent embryo of the body, confounded with it. But the Occultists regard it as the *life* (body) or Jīva, which disappears at death; is withdrawn—leaving the first and third principles to *disintegrate* and return to their elements.

evolver," etc.? This primordial Tattva or "eternally existing 'That,'" the unknown essence, is said to produce as a first producer, *Buddhi*—"intellect"—whether we apply the latter to the sixth macrocosmic or microcosmic principle. This first produced produces in its turn (or is the source of) *Ahankâra*, "self-consciousness" and *Manas* "mind." The reader will please always remember that the Mahat or great source of these two internal faculties, *Buddhi per se*, can have neither self-consciousness nor mind; viz., the sixth principle in man can preserve an essence of *personal* self-consciousness or "personal individuality" only by absorbing within itself its own waters, which have run through that *finite* faculty; for *Ahankâra*, that is the perception of "I," or the sense of one's personal individuality, justly represented by the term "Ego-ism," belongs to the second, or rather the third, production out of the seven, viz., to the fifth principle, or *Manas*. It is the latter which draws, "as the web issues from the spider," along the thread of *Prakriti*, the "root principle," the four following subtle elementary principles or particles—"Tanmâtras," out of which "third class," the *Mahâbhûtas* or the gross elementary principles, or rather *Sharîras* and *Rûpas*, are evolved—the *Kâma*, *Linga*, *Jîva* and *Sthûla Sharîra*. The three *Gunas* of *Prakriti*—the *Sattva*, *Rajas* and *Tamas* (purity, passionate activity, and ignorance or darkness)—spun into a triple-stranded cord or "rope," pass through the seven, or rather six, human principles. It depends on the fifth—*Manas* or *Ahankâra*, the "I"—to thin the *Guna* "rope" into one thread—the *Sattva*; and thus by becoming one with the "unevolved evolver," win immortality or eternal conscious existence. Otherwise it will be again resolved into its *Mahâbhautik* essence; so long as the triple-stranded rope is left unstranded, the spirit (the divine monad) is bound by the presence of the *Gunas* in the principles "like an animal" (*Purusha Pashu*). The spirit, *Âtman* or *Jîvâtman* (the seventh and sixth principles), whether of the macro- or microcosm, though bound by these *Gunas* during the objective manifestation of universe or man, is yet *Nirguna*—i.e., entirely free from them. Out of the three producers or evolvers, *Prakriti*, *Buddhi* and *Ahankâra*, it is but the latter that can be caught (when man is concerned) and destroyed when *personal*. The "divine monad" is *Aguna* (devoid of qualities), while *Prakriti*, once that from passive *Mûla-prakriti* it has become *Avyakta* (an active evolver) is *Gunavat*—endowed with qualities. With the latter, *Purusha* or *Âtman* can have nought to do (of course being unable to perceive it in its *Gunavatic* state); with the

former—or Mûlaprakriti or undifferentiated cosmic essence—it has, since it is *one* with it and identical.

The *Ātma-Bodha* or “Knowledge of Soul,” a tract written by the great Śhankarâchârya, speaks distinctly of the *seven* principles in man (see verse 14). They are called therein the five sheaths (Panchakosha) in which is enclosed the divine monad—the Âtman and Buddhi, the seventh and sixth principles, or the individuated soul when made distinct (through Avidyâ, Mâyâ and the Gunas) from the supreme soul—Parabrahman. The first sheath, called Ânanda-maya—the sheath of “supreme bliss”—is the Manas or fifth principle of the Occultists, when united with Buddhi; the second sheath is Vijnâna-maya Kosha, the case or envelope of “self-delusion,” the Manas when self-deluded into the belief of the *personal* “I” or Ego, with its vehicle. The third, the Mano-maya sheath, composed of illusionary “mind” associated with the organs of action and will, is the Kâma Rûpa and Linga Sharîra combined, producing an illusive “I” or Mâyâvi Rûpa. The fourth sheath is called Prâna-maya, illusionary “life,” our *second* life principle or Jîva, wherein resides life, the “breathing” sheath. The fifth Kosha is called Anna-maya, or the sheath supported by food—our gross material body. All these sheaths produce other smaller sheaths, or six attributes or qualities each, the seventh being always the root-sheath; and the Âtman or spirit passing through all these subtle ethereal bodies like a thread, is called the “thread-soul” or Sûtrâtman.

We may conclude with the above demonstration. Verily the esoteric doctrine may well be called in its turn the “thread-doctrine,” since, like Sûtrâtman or Prânâtman, it passes through and strings together all the ancient philosophical religious systems, and, what is more, reconciles and explains them. For though seeming so unlike externally, they have but one foundation, and of that the extent, depth, breadth and nature are known to those who have become, like the “Wise Men of the East,” adepts in Occult Science.

H. P. BLAVATSKY.

PERSONAL AND IMPERSONAL GOD.

AT the outset I shall request my readers (such of them at least as are not acquainted with the cosmological theories of the idealistic thinkers of Europe) to examine John Stuart Mill's cosmological speculations as contained in his examination of Sir William Hamilton's philosophy, before attempting to understand the Advaita doctrine; and I beg to inform them beforehand that in explaining the main principles of the said doctrine, I am going to use, as far as it is convenient to do so, the phraseology adopted by English psychologists of the idealistic school of thought. In dealing with the phenomena of our present plane of existence John Stuart Mill ultimately came to the conclusion that matter, or the so-called external phenomena, is but the creation of our mind; these phenomena are the mere appearances of a particular phase of our subjective self, and of our thoughts, volitions, sensations and emotions which in their totality constitute the basis of that Ego. Matter then is the permanent possibility of sensations, and the so-called laws of matter are, properly speaking, the laws which govern the succession and coëxistence of our states of consciousness. Mill further holds that properly speaking there is no noumenal Ego. The very idea of a mind existing separately as an entity, distinct from the states of consciousness which are supposed to inhere in it, is in his opinion illusory, as the idea of an external object, which is supposed to be perceived by our senses.

Thus the ideas of mind and matter, of subject and object, of the Ego and external world, are really evolved from the aggregation of our mental states which are the only realities so far as we are concerned.

The chain of our mental states or states of consciousness is "a double-headed monster," according to Professor Bain, which has two distinct aspects, one objective and the other subjective. Mr. Mill has paused here, confessing that psychological analysis did not go any further; the mysterious link which connects together the train of our states of

consciousness and gives rise to our Ahankâram in this condition of existence, still remains an incomprehensible mystery to Western psychologists, though its existence is but dimly perceived in the subjective phenomena of memory and expectation.

On the other hand, the great physicists of Europe are gradually coming to the conclusion* that mind is the product of matter, or that it is one of the attributes of matter in some of its conditions. It would appear, therefore, from the speculations of Western psychologists that matter is evolved from mind and that mind is evolved from matter. These two propositions are apparently irreconcilable. Mill and Tyndall have admitted that Western science is yet unable to go deeper into the question. Nor is it likely to solve the mystery hereafter, unless it calls Eastern occult science to its aid and takes a more comprehensive view of the capabilities of the real subjective self of man and the various aspects of the great objective universe. The great Advaitî philosophers of ancient Âryâvarta have examined the relationship between subject and object in every condition of existence in this solar system in which this differentiation is presented. Just as a human being is composed of seven principles, differentiated matter in the solar system exists in seven different conditions. These different states of matter do not all come within the range of our present objective consciousness. But they can be objectively perceived by the spiritual Ego in man. To the liberated spiritual monad of man, or to the Dhyân Chohans, everything that is material in every condition of matter is an object of perception. Further, Prajñâ, or the capacity of perception, exists in seven different aspects corresponding to the seven conditions of matter. Strictly speaking, there are but six states of matter, the so-called seventh state being the aspect of cosmic matter in its original undifferentiated condition. Similarly there are six states of differentiated Prajñâ, the seventh state being a condition of perfect unconsciousness. By differentiated Prajñâ, I mean the condition in which Prajñâ is split up into various states of consciousness. Thus we have six states of consciousness, either objective or subjective for the time being, as the case may be, and a perfect state of unconsciousness, which is the beginning and the end of all conceivable states of consciousness, corresponding to the states of differentiated matter and its original undifferentiated basis which is the beginning and the end of all cosmic evolutions. It will be easily seen that the existence of consciousness is necessary for the

* See Tyndall's "Belfast Address."—S. R.

differentiation between subject and object. Hence these two phases are presented in six different conditions, and in the last state there being no consciousness as above stated, the differentiation in question ceases to exist. The number of these various conditions is different in different systems of philosophy. But whatever may be the number of divisions, they all lie between perfect unconsciousness at one end of the line and our present state of consciousness, or *Bahirprajñâ* at the other end. To understand the real nature of these different states of consciousness, I shall request my readers to compare the consciousness of the ordinary man with the consciousness of the astral man, and again compare the latter with the consciousness of the spiritual Ego in man. In these three conditions the objective universe is not the same. But the difference between the Ego and the Non-Ego is common to all these conditions. Consequently, admitting the correctness of Mill's reasoning as regards the subject and object of our present plane of consciousness, the great Advaitî thinkers of India have extended the same reasoning to other states of consciousness, and come to the conclusion that the various conditions of the Ego and the Non-Ego were but the appearances of one and the same entity—the ultimate state of unconsciousness. This entity is neither matter nor spirit; it is neither Ego nor Non-Ego; and it is neither object nor subject. In the language of Hindû philosophers it is the original and eternal combination of Purusha and Prakriti. As the Advaitîs hold that an external object is merely the product of our mental states, Prakriti is nothing more than illusion, and Purusha is the only reality; it is the *one* existence which remains eternal in this universe of ideas. This entity, then, is the Parabrahman of the Advaitîs. Even if there were to be a personal God with anything like a material Upâdhi (physical basis of whatever form), from the standpoint of an Advaitî there will be as much reason to doubt his noumenal existence as there would be in the case of any other object. In their opinion, a conscious God cannot be the origin of the universe, as his Ego would be the effect of a previous cause, if the word conscious conveys but its ordinary meaning. They cannot admit that the grand total of all the states of consciousness in the universe is their deity, as these states are constantly changing, and as cosmic idealism ceases during Pralaya. There is only one permanent condition in the universe which is the state of perfect unconsciousness, bare Chidâkâsham (field of consciousness) in fact.

When my readers once realize the fact that this grand universe is in

reality but a huge aggregation of various states of consciousness, they will not be surprised to find that the ultimate state of unconsciousness is considered as Parabrahman by the Advaitis.

The idea of a God, Deity, Īshvara, or an impersonal God (if consciousness is one of his attributes) involves the idea of Ego or Non-Ego in some shape or other, and as every conceivable Ego or Non-Ego is evolved from this primitive element (I use this word for want of a better one), the existence of an extra-cosmic god possessing such attributes prior to this condition is absolutely inconceivable. Though I have been speaking of this element as the condition of unconsciousness, it is, properly speaking, the Chidākāsham or Chinmātra of the Hindū philosophers which contains within itself the potentiality of every condition of Prajñā, and which results as consciousness on the one hand and the objective universe on the other, by the operation of its latent Chichchhakti (the power which generates thought).

Before proceeding to discuss the nature of Parabrahman, it is to be stated that in the opinion of Advaitis, the Upanishads and the Brahmasūtras fully support their views on the subject. It is distinctly affirmed in the Upanishads that Parabrahman, which is but the bare potentiality of Prajñā,* is not an aspect of Prajñā or Ego in any shape, and that it has neither life nor consciousness. The reader will be able to ascertain that such is really the case on examining the *Mundaka* and *Māndukya Upanishads*. The language used here and there in the Upanishads is apt to mislead one into the belief that such language points to the existence of a conscious Īshvara. But the necessity for such language will perhaps be rendered clear from the following considerations.

From a close examination of Mill's cosmological theory the difficulty will be clearly seen referred to above, of satisfactorily accounting for the generation of conscious states in any human being from the standpoint of the said theory. It is generally stated that sensations arise in us from the action of the external objects around us; they are the effects of impressions made on our senses by the objective world in which we exist. This is simple enough to an ordinary mind, however difficult it may be to account for the transformation of a cerebral nerve-current into a state of consciousness.

But from the standpoint of Mill's theory we have no proof of the existence of any external object; even the objective existence of our own senses is not a matter of certainty to us. How, then, are we to

* The power or the capacity that gives rise to perception.

account for and explain the origin of our mental states, if they are the only entities existing in this world? No explanation is really given by saying that one mental state gives rise to another mental state, to a certain extent at all events, under the operation of the so-called psychological "laws of association." Western psychology honestly admits that its analysis has not gone any further. It may be inferred, however, from the said theory that there would be no reason for saying that a material Upâdhi (basis) is necessary for the existence of mind or states of consciousness.

As is already indicated, the Âryan psychologists have traced this current of mental states to its source—the eternal Chinmâtra existing everywhere. When the time for evolution comes this germ of Prajñâ unfolds itself and results ultimately as *cosmic ideation*. Cosmic ideas are the conceptions of all the conditions of existence in the Cosmos existing in what may be called the universal mind (the demiurgic mind of the Western Kabalists).

This Chinmâtra exists, as it were, at every geometrical point of the infinite Chidâkâsham. This principle then has two general aspects. Considered as something objective it is the eternal Asat—Mûlaprakriti or *undifferentiated* cosmic matter. From a subjective point of view it may be looked upon in two ways. It is Chidâkâsham when considered as the field of cosmic ideation; and it is Chinmâtra when considered as the germ of cosmic ideation. These three aspects constitute the highest Trinity of the Âryan Advaiti philosophers. It will be readily seen that the last-mentioned aspect of the principle in question is far more important to us than the other two aspects; for, when looked upon in this aspect the principle under consideration seems to embody within itself the great law of cosmic evolution. And therefore the Advaiti philosophers have chiefly considered it in this light, and explained their cosmogony from a subjective point of view. In doing so, however, they cannot avoid the necessity of speaking of a universal mind (and this is Brahmâ, the Creator) and its ideation. But it ought not to be inferred therefrom that this universal mind necessarily belongs to an omnipresent living conscious Creator, simply because in ordinary parlance a mind is always spoken of in connection with a particular living being. It cannot be contended that a material Upâdhi is indispensable for the existence of mind or mental states when the objective universe itself is, so far as we are concerned, the result of our states of consciousness. Expressions implying the existence of a conscious

Īshvara which are to be found here and there in the Upanishads should not therefore be literally construed.

It now remains to be seen how Advaitis account for the origin of mental states in a particular individual. Apparently the mind of a particular human being is not the universal mind. Nevertheless cosmic ideation is the real source of the states of consciousness in every individual. Cosmic ideation exists everywhere; but when placed under restrictions by a material Upādhi it results as the consciousness of the individual inhering in such Upādhi. Strictly speaking, an Advaiti will not admit the objective existence of this material Upādhi. From his standpoint it is Mâyâ or illusion which exists as a *necessary condition* of Prajñâ. But to avoid confusion, I shall use the ordinary language; and to enable my readers to grasp my meaning clearly the following simile may be adopted. Suppose a bright light is placed in the centre with a curtain around it. The nature of the light that penetrates through the curtain and becomes visible to a person standing outside depends upon the nature of the curtain. If several such curtains are thus successively placed around the light, it will have to penetrate through all of them; and a person standing outside will only perceive as much light as is not intercepted by all the curtains. The central light becomes dimmer and dimmer as curtain after curtain is placed before the observer; and as curtain after curtain is removed the light becomes brighter and brighter until it reaches its natural brilliancy. Similarly, universal mind or cosmic ideation becomes more and more limited and modified by the various Upādhis of which a human being is composed; and when the action or influence of these various Upādhis is successively controlled, the mind of the individual human being is placed *en rapport* with the universal mind, and his ideation is lost in cosmic ideation.

As I have already said, these Upādhis are strictly speaking the conditions of the gradual development or evolution of Bahirprajñâ—or consciousness in the present plane of our existence—from the original and eternal Chinmâtra, which is the seventh principle in man, and the Parabrahman of the Advaitis.

This then is the purport of the Advaiti philosophy on the subject under consideration, and it is, in my humble opinion, in harmony with the Arhat doctrine relating to the same subject. The latter doctrine postulates the existence of cosmic matter in an undifferentiated condition throughout the infinite expanse of space. Space and time are

but its aspects, and Purusha, the seventh principle of the universe, has its latent life in this ocean of cosmic matter. The doctrine in question explains cosmogony from an objective point of view. When the period of activity arrives, portions of the whole differentiate according to the latent law. When this differentiation has commenced, the concealed wisdom or latent Chichchhakti acts in the universal mind, and cosmic energy or Fohat forms the manifested universe in accordance with the conceptions generated in the universal mind out of the differentiated principles of cosmic matter. This manifested universe constitutes a solar system. When the period of Pralaya comes, the process of differentiation stops and cosmic ideation ceases to exist; and at the time of Brahmāpralaya or Mahāpralaya the particles of matter lose all differentiation, and the matter that exists in the solar system returns to its original undifferentiated condition. The latent design exists in the one unborn eternal atom, the centre which exists everywhere and nowhere; and this is the *one life* that exists everywhere. Now, it will be easily seen that the undifferentiated cosmic matter, Purusha, and the One Life of the Arhat philosophers, are the Mūlaprakriti, Chidākāsham, and Chinmātra of the Advaiti philosophers. As regards cosmogony, the Arhat standpoint is objective, and the Advaiti standpoint is subjective. The Arhat cosmogony accounts for the evolution of the manifested solar system from undifferentiated cosmic matter, and Advaiti cosmogony accounts for the evolution of Bahirprajñā from the original Chinmātra. As the different conditions of differentiated cosmic matter are but the different aspects of the various conditions of Prajñā, the Advaiti cosmogony is but the complement of the Arhat cosmogony. The eternal principle is precisely the same in both the systems, and they agree in denying the existence of an extra-cosmic God.

The Arhats call themselves *atheists*, and they are justified in doing so if *theism* inculcates the existence of a conscious God governing the universe by his will-power. Under such circumstances the Advaiti will come under the same denomination. Atheism and theism are words of doubtful import, and until their meaning is definitely ascertained it would be better not to use them in connection with any system of philosophy.

T. SUBBA ROW.

PRAKRITI AND PURUSHA.

PRAKRITI may be looked upon either as Mâyâ when considered as the Upâdhi of Parabrahman or as Avidyâ when considered as the Upâdhi of Jivâtmâ (the seventh principle in man).* Avidyâ is ignorance or illusion arising from Mâyâ. The term Mâyâ, though sometimes used as a synonym for Avidyâ, is, properly speaking, applicable to Prakriti only. There is no difference between Prakriti, Mâyâ and Shakti; and the ancient Hindû philosophers made no distinction whatsoever between Matter and Force. In support of these assertions I may refer the learned hermit to *Shvetâshvatara Upanishad* and its commentary by Shankarâchârya. In case we adopt the fourfold division of the Advaitî philosophers, it will be clearly seen that Jagrat,† Svapna‡ and Sushupti Avasthâ§ are the results of Avidyâ, and that Vaishvânara|| Hiranyagarbha¶ and Sûtrâtmâ** are the manifestations of Parabrahman in Mâyâ or Prakriti. In drawing a distinction between Avidyâ and Prakriti, I am merely following the authority of all the great Advaitî philosophers of Âryâvarta. It will be sufficient for me to refer to the first chapter of the celebrated Vedântic treatise, the *Panchadashi*.

In truth, Prakriti and Purusha are but the two aspects of the same One Reality. As our great Shankarâchârya truly observes at the close of his commentary on the twenty-third Sûtra of the first chapter of the *Brahmasûtras*, "Parabrahman is Kartâ (Purusha), as there is no other Adhishtâtâ,†† and Parabrahman is Prakriti, there being no other Upadânam." This sentence clearly indicates the relation between the

* Upâdhi—vehicle.

† Jagrat—waking state, or a condition of external perception.

‡ Svapna—dreamy state, or a condition of *clairvoyance* in the astral plane.

§ Sushupti—a state of extasis; and Avasthâs—states or conditions of Prajñâ.

|| Vaishvânara—the magnetic fire that pervades the manifested solar system—the most objective aspect of the One Life.

¶ Hiranyagarbha—the one life as manifested in the plane of astral light.

** Sûtrâtmâ—the eternal germ of the manifested universe existing in the field of Mûlaprakriti.

†† Adishtâtâ—that which inheres in another principle; the active agent working in Prakriti.

“One Life” and the “One Element” of the Arha-philosophers. This will elucidate the meaning of the statement so often quoted by Advaitis —“Sarvam Kalvidam Brahma”;* and also of what is meant by saying that Brahman is the Upadânakâranam (material cause) of the Universe.

T. SUBBA ROW.

* Everything in the universe is Brahma.

MORALITY AND PANTHEISM.

QUESTIONS have been raised in several quarters as to the inefficiency of Pantheism (which term is intended to include Esoteric Buddhism, Advaiti Vedântism, and other similar religious systems) to supply a sound basis of morality.

The philosophical assimilation of *meum* and *tuum*, it is urged, must of necessity be followed by their practical confusion, resulting in the sanction of cruelty, robbery, etc. This line of argument points, however, most unmistakably to the coëxistence of the objection with an all but utter ignorance of the systems objected to, in the critic's mind, as we shall show by-and-by. The ultimate sanction of morality, as is well known, is derived from a desire for the attainment of happiness and escape from misery. But schools differ in their estimate of happiness. Exoteric religions base their morality on the hope of reward and fear of punishment at the hands of an Omnipotent Ruler of the Universe by following the rules he has at his pleasure laid down for the obedience of his helpless subjects; in some cases, however, religions of later growth have made morality to depend on the sentiment of gratitude to that Ruler for benefits received. The worthlessness, not to speak of the mischievousness, of such systems of morality is almost self-evident. As a type of morality founded on hope and fear, we shall take an instance from the Christian *Bible*: "He that giveth to the poor lendeth to the Lord." The duty of supporting the poor is here made to depend upon prudential motives of laying by for a time when the "giver to the poor" will be incapable of taking care of himself. But the *Mahābhārata* says that "He that desireth a return for his good deeds loseth all merit; he is like a merchant bartering his goods." The true springs of morality lose their elasticity under the pressure of such criminal selfishness; all pure and unselfish natures will fly away from it in disgust.

To avoid such consequences attempts have been made by some

recent reformers of religion to establish morality upon the sentiment of gratitude to the Lord. But it requires no deep consideration to find that, in their endeavours to shift the basis of morality, these reformers have rendered morality entirely baseless. A man has to do what is represented to be a thing "dear unto the Lord" out of gratitude for the many blessings he has heaped upon him. But as a matter of fact he finds that the Lord has heaped upon him curses as well as blessings. A helpless orphan is expected to be grateful to him for having removed the props of his life, his parents, because he is told in consolation that such a calamity is but *apparently* an evil, but in reality the All-Merciful has underneath it hidden the greatest possible good. With equal reason might a preacher of the "Avenging" Ahriman exhort men to believe that under the *apparent* blessings of the "Merciful" Father there lurks the serpent of evil.

The modern Utilitarians, though the range of their vision is so narrow, have sterner logic in their teachings. That which tends to a man's happiness is good, and must be followed, and the contrary shunned as evil. So far so good. But the practical application of the doctrine is fraught with mischief. Cribbed, cabined, and confined, by rank Materialism, within the short space between birth and death, the Utilitarians' scheme of happiness is merely a deformed torso, which cannot certainly be considered as the fair goddess of our devotion.

The only scientific basis of morality is to be sought for in the soul-consoling doctrines of Lord Buddha or Shri Shankarâchârya. The starting-point of the "pantheistic" (we use the word for want of a better one) system of morality is a clear perception of the unity of the one energy operating in the manifested cosmos, the grand result which it is incessantly striving to produce, and the affinity of the immortal human spirit and its latent powers with that energy, and its capacity to coöperate with the One Life in achieving its mighty object.

Now knowledge or Jñânânam is divided into two classes by Advaiti philosophers—Paroksha and Aparoksha. The former kind of knowledge consists in intellectual assent to a stated proposition, the latter in the actual realization of it. The object which a Buddhist or Advaiti Yogî sets before himself is the realization of the oneness of existence, and the practice of morality is the most powerful means to that end, as we proceed to show. The principal obstacle to the realization of this oneness is the inborn habit of man of always placing himself at the centre of the Universe. Whatever a man might act, think, or feel, the

irrepressible personality is sure to be the central figure. This, as will appear on reflection, is that which prevents every individual from filling his proper sphere in existence, where he only is exactly in place and no other individual is. The realization of this harmony is the practical or objective aspect of the Grand Problem. And the practice of morality is the effort to find out this sphere; morality, indeed, is the Ariadne's clue in the Cretan labyrinth in which man is placed. From the study of the sacred philosophy preached by Lord Buddha or Shri Shankara Paroksha knowledge (or shall we say *belief*?) in the unity of existence is derived, but without the practice of morality that knowledge cannot be converted into the highest kind of knowledge, or Aproxha Jñanam, and thus lead to the attainment of Mukti. It availeth naught to intellectually grasp the notion of your being everything or Brahma, if it is not realized in practical acts of life. To confuse *meum* and *tuum* in the vulgar sense is but to destroy the harmony of existence by a false assertion of "I," and is as foolish as the anxiety to nourish the legs at the expense of the arms. You cannot be one with all, unless all your acts, thoughts, and feelings synchronize with the onward march of Nature. What is meant by the Brahmajñânî being beyond the reach of Karma, can be fully realized only by a man who has found out his exact position in harmony with the One Life in Nature; that man sees how a Brahmajñânî can act only in unison with Nature, and never in discord with it; to use the phraseology of ancient writers on Occultism, a Brahmajñânî is a real "co-worker with Nature." Not only European Sanskritists, but also exoteric Yogis, fall into the grievous mistake of supposing that, in the opinion of our sacred writers, a human being can escape the operation of the law of Karma by adopting a condition of masterly inactivity, entirely losing sight of the fact that even a rigid abstinence from physical acts does not produce inactivity on the higher astral and spiritual planes. Shri Shankara has very conclusively proved, in his commentaries on the *Bhagavad Gîtâ*, that such a supposition is nothing short of a delusion. The great teacher shows there that forcibly repressing the physical body from working does not free one from Vâsana or Vritti—the inherent inclination of the mind to work. There is a tendency, in every department of Nature, for an act to repeat itself; the Karma acquired in the last preceding birth is always trying to forge fresh links in the chain, and thereby lead to continued material existence; and this tendency can only be counteracted by unselfishly performing all the duties appertaining to the sphere in which a person is born; such a

course alone can produce Chitta-Suddhi (purification of the mind), without which the capacity of perceiving spiritual truths can never be acquired.

A few words must here be said about the physical inactivity of the Yogî or the Mahâtâmâ. Inactivity of the physical body (Sthûla Sharîra) does not indicate a condition of inactivity either on the astral or the spiritual plane of action. The human spirit is in its highest state of activity in Samâdhi (highest trance) and not, as is generally supposed, in a dormant, quiescent condition. And, moreover, it will be easily seen, by anyone who examines the nature of occult dynamics, that a given amount of energy expended on the spiritual or astral plane is productive of far greater results than the same amount expended on the physical objective plane of existence. When an Adept has placed himself *en rapport* with the universal mind he becomes a real power in Nature. Even on the objective plane of existence the difference between brain and muscular energy, in their capacity of producing wide-spread and far-reaching results, can be very easily perceived. The amount of physical energy expended by the discoverer of the steam-engine might not have been more than that expended by a hard-working day-labourer, but the practical results of the labourer's work can never be compared with the results achieved by the discovery of the steam-engine. Similarly, the ultimate effects of spiritual energy are infinitely greater than those of intellectual energy.

From the above considerations it is abundantly clear that the initiatory training of a true Vedântin Râja Yogî must be the nourishing of a sleepless and ardent desire of doing all in his power for the good of mankind on the ordinary physical plane, his activity being transferred, however, to the higher astral and spiritual planes as his development proceeds. In course of time, as the Truth becomes realized, the situation is rendered quite clear to the Yogî, and he is placed beyond the criticism of any ordinary man. The *Mahânirvâna Tantra* says:

Charanti trigunâtite ko vidhir ko nishedhava.

"For one, walking beyond the three Gunas—Sattva (feeling of gratification), Rajas (passional activity) and Tamas (inertness)—what injunction or what restriction is there?"—in the consideration of men, walled in on all sides by the objective plane of existence. This does not mean that a Mahâtâmâ can or will ever neglect the laws of morality, but that he, having unified his individual nature with Great Nature herself, is constitutionally incapable of violating any one of the laws of nature,

and no man can constitute himself a judge of the conduct of the Great One without knowing the laws of all the planes of Nature's activity. As honest men are honest without the least consideration of the criminal law, so a Mahâtmâ is moral without reference to the laws of morality.

These are, however, sublime topics: we shall before conclusion notice some other considerations which lead the ordinary "pantheist" to the true foundation of morality. Happiness has been defined by John Stuart Mill as the state of absence of opposition. Manu gives the definition in more forcible terms:

Sarvam paravasham duhkham
Sarva matmavasham sukham
Idam jneyo samasena
Lakshanam sukhaduhkhayo.

"Every kind of subjugation to another is pain, and subjugation to one's self is happiness: in brief, this is to be known as the characteristic marks of the two." Now, it is universally admitted that the whole system of Nature is moving in a particular direction, and this direction, we are taught, is determined by the composition of two forces—namely, the one acting from that pole of existence ordinarily called "matter" towards the other pole called "spirit," and the other in the opposite direction. The very fact that Nature is moving shows that these two forces are not equal in magnitude. The plane on which the activity of the first force predominates is called in occult treatises the "ascending arc," and the corresponding plane of the activity of the other force is styled the "descending arc." A little reflection will show that the work of evolution begins on the descending arc and works its way upwards through the ascending arc. From this it follows that the force directed towards spirit is the one which must, though not without hard struggle, ultimately prevail. This is the great directing energy of Nature, and, although disturbed by the operation of the antagonistic force, it is this that gives the law to her; the other is merely its negative aspect, for convenience regarded as a separate agent. If an individual attempts to move in a direction other than that in which Nature is moving, that individual is sure to be crushed, sooner or later, by the enormous pressure of the opposing force. We need not say that such a result would be the very reverse of pleasurable. The only way, therefore, in which happiness might be attained is by merging one's nature in great Mother Nature, and following the direction in which she herself is moving;

this again can only be accomplished by assimilating men's individual conduct with the triumphant force of Nature, the other force being always overcome with terrific catastrophes. The effort to assimilate the individual with the universal law is popularly known as the practice of morality. Obedience to this universal law, after ascertaining it, is true religion, which has been defined by Lord Buddha as "the realization of the True."

An example will serve to illustrate the position. Can a practical pantheist, or, in other words, an occultist, utter a falsehood? Now, it will be readily admitted that life manifests itself by the power of acquiring sensation, temporary dormancy of that power being suspended animation. If a man receives a particular series of sensations and pretends they are other than they really are, the result is that he exercises his will-power in opposition to a law of Nature on which, as we have shown, life depends, and thereby becomes suicide on a minor scale. Space prevents further discussion, but all the ten deadly sins mentioned by Manu and Buddha can be satisfactorily dealt with in the light sought to be focussed here.

MOHINI M. CHATTERJI.

OCCULT STUDY.

THE practical bearing of occult teaching on ordinary life is very variously interpreted by different students of the subject. For many Western readers of recent books on the esoteric doctrine, it even seems doubtful whether the teaching has any bearing on practical life at all. The proposal which it is supposed sometimes to convey, that all earnest enquirers should put themselves under the severe ascetic regimen followed by its regular Oriental disciples, is felt to embody a strain on the habits of modern civilization which only a few enthusiasts will be prepared to encounter. The mere intellectual charm of an intricate philosophy may indeed be enough to recommend the study to some minds, but a scheme of teaching that offers itself as a substitute for religious faith of the usual kind will be expected to yield some tangible results in regard to the future spiritual well-being of those who adopt it. Has occult philosophy nothing to give except to those who are in a position and willing to make a sacrifice in its behalf of all other objects in life? In that case it would indeed be useless to bring it out into the world. In reality the esoteric doctrine affords an almost infinite variety of opportunities for spiritual development, and no greater mistake could be made in connection with the present movement than to suppose the teaching of the Adepts merely addressed to persons capable of heroic self-devotion. Assuredly it does not discourage efforts in the direction of the highest achievement of occult progress, if any Western occultists may feel disposed to make them; but it is important for us all to keep clearly in view the lower range of possibilities connected with humbler aspirations.

I believe it to be absolutely true that even the slightest attention seriously paid to the instructions now emanating from the Indian Adepts will generate results within the spiritual principles of those who render it—causes capable of producing appreciable consequences in a future state of existence. Anyone who has sufficiently examined

•

the doctrine of Devachan will readily follow the idea, for the nature of the spiritual existence which in the ordinary course of things must succeed each physical life, provides for the very considerable expansion of any aspirations towards real knowledge that may be set going on earth. I will recur to this point directly, when I have made clearer the general drift of the argument I am trying to unfold. At the one end of the scale of possibilities connected with occult study lies the supreme development of Adeptship; an achievement which means that the person reaching it has so violently stimulated his spiritual growth within a short period, as to have anticipated processes on which Nature, in her own deliberate way, would have spent a great procession of ages. At the other end of the scale lies the small result to which I have just alluded—a result which may rather be said to establish a tendency in the direction of spiritual achievement than to embody such achievement. But between these two widely different results there is no hard and fast line that can be drawn at any place to make a distinct separation in the character of the consequences ensuing from devotion to occult pursuits. As the darkness of blackest night gives way by imperceptible degrees to the illumination of the brightest sunrise, so the spiritual consequences of emerging from the apathy either of pure materialism or of dull acquiescence in unreasonable dogmas, brighten by imperceptible degrees from the faintest traces of devachanic improvement into the full blaze of the highest perfection human nature can attain. Without assuming that the course of Nature which prescribes for each human Ego successive physical lives and successive periods of spiritual refreshment—without supposing that this course is altered by such moderate devotion to occult study as is compatible with the ordinary conditions of European life, it will, nevertheless, be seen how vast the consequences may ultimately be of impressing on that career of evolution a distinct tendency in the direction of supreme enlightenment, of that result which is described as the union of the individual soul with the universal spirit.

The explanations of the esoteric doctrine which have been publicly given, have shown that humanity in the mass has now attained a stage in the great evolutionary cycle from which it has the opportunity of growing upwards towards final perfection. In the mass it is, of course, unlikely that it will travel that road; final perfection is not a gift to be bestowed upon all, but to be worked for by those who desire it. It may be put within the theoretical reach of all; there may be no human

creature living at this moment, of whom it can be said that the highest possibilities of Nature are impossible of attainment, but it does not follow by any means that every individual will attain the highest possibilities. Regarding each individual as one of the seeds of a great flower which throws out thousands of seeds, it is manifest that only a few, relatively to the great number, will become fully developed flowers in their turn. No unjust neglect awaits the majority. For each and every one the consequences of the remote future will be precisely proportioned to the aptitudes he develops, but only those can reach the goal who, with persistent effort carried out through a long series of lives, differentiate themselves in a marked degree from the general multitude. Now, that persistent effort must have a beginning, and granted the beginning, the persistence is not improbable. Within our own observation of ordinary life, good habits, even though they may not be so readily formed as bad ones, are not difficult to maintain in proportion to the difficulty of their commencement. For a moment it may be asked how this may be applied to a succession of lives separate from each other by a total oblivion of their details; but it really applies as directly to the succession of lives as to the succession of days within one life, which are separated from each other by as many nights. The certain operation of those affinities in the individual Ego which are collectively described in the esoteric doctrine by the word Karma, must operate to pick up the old habits of character and thought, as life after life comes round, with the same certainty that the thread of memory in a living brain recovers, day after day, the impressions of those that have gone before. Whether a moral habit is thus deliberately engendered by an occult student in order that it may propagate itself through future ages, or whether it merely arises from unintelligent aspirations towards good, which happily for mankind are more widely spread than occult study as yet, the way it works in each case is the same. The unintelligent aspiration towards goodness propagates itself and leads to good lives in the future; the intelligent aspiration propagates itself in the same way *plus* the propagation of intelligence; and this distinction shows the gulf of difference which may exist between the growth of a human soul which merely drifts along the stream of time, and that of one which is consciously steered by an intelligent purpose throughout. The human Ego which acquires the habit of seeking for knowledge becomes invested, life after life, with the qualifications which ensure the success of such a search, until the final

success, achieved at some critical period of its existence, carries it right up into the company of those perfected Egos which are the fully developed flowers only expected, according to our first metaphor, from a few of the thousand seeds. Now, it is clear that a slight impulse in a given direction, even on the physical plane, does not produce the same effect as a stronger one; so, exactly in this matter of engendering habits required to persist in their operation through a succession of lives, it is quite obvious that the strong impulse of a very ardent aspiration towards knowledge will be more likely than a weaker one to triumph over the so-called accidents of Nature.

This consideration brings us to the question of those habits in life which are more immediately associated in the popular views of the matter with the pursuit of occult science. It will be quite plain that the generation within his own nature by an occult student of affinities in the direction of spiritual progress, is a matter which has little, if anything, to do with the outer circumstances of his daily life. It cannot be dissociated from what may be called the outer circumstances of his *moral* life, for an occult student, whose *moral* nature is consciously ignoble, and who combines the pursuit of knowledge with the practice of wrong, becomes by that condition of things a student of sorcery rather than of true occultism—a candidate for satanic evolution instead of perfection. But at the same time the physical habits of life may be quite the reverse of ascetic, while all the while the thinking processes of the intellectual life are developing affinities which cannot fail in the results just seen to produce large ulterior consequences. Some misconception is very apt to arise here from the way in which frequent reference is made to the ascetic habits of those who purpose to become the regular Chelâs of Oriental Adepts. It is supposed that what is practised by the Master is necessarily recommended for all his pupils. Now this is far from being the case as regards the miscellaneous pupils who are gathering round the occult teachers lately become known to public report. Certainly even in reference to their miscellaneous pupils the Adepts would not discountenance asceticism. As we saw just now, there is no hard line drawn across the scale on which are defined the varying consequences of occult study in all its varying degrees of intensity—so with ascetic practice, from the slightest habits of self-denial, which may engender a preference for spiritual over material gratification, up to the very largest developments of asceticism required as a passport to Chelâship, no such practices can be quite without their

consequences in the all-embracing records of Karma. But, broadly speaking, asceticism belongs to that species of effort which aims at personal Chelâship, and that which contemplates the patient development of spiritual growth along the slow track of natural evolution claims no more, broadly speaking, than intellectual application. All that is asserted in regard to the opening now offered to those who have taken notice of the present opportunity, is, that they may now give their own evolution an impulse which they may not again have an opportunity of giving it with the same advantage to themselves if the present opportunity is thrown aside. True, it is most unlikely that any one advancing through Nature, life after life, under the direction of a fairly creditable Karma, will go on always without meeting sooner or later with the ideas that occult study implants. So that the occultist does not threaten those who turn aside from his teachings with any consequences that must necessarily be disastrous. He only says that those who listen to them must necessarily derive advantage from so doing in exact proportion to the zeal with which they undertake the study and the purity of motive with which they promote it in others.

Nor must it be supposed that those which have here been described as the lower range of possibilities in connection with occult study, are a mere fringe upon the higher possibilities, to be regarded as a relatively poor compensation accorded to those who do not feel equal to offering themselves for probation as regular Chelâs. It would be a grave misconception of the purpose with which the present stream of occult teaching has been poured into the world, if we were to think it a universal incitement to that course of action. It may be hazardous for any of us who are not initiates to speak with entire confidence of the intention of the Adepts, but all the external facts concerned with the growth and development of the Theosophical Society show its purpose to be more directly related to the cultivation of spiritual aspirations over a wide area than to the excitement of these with supreme intensity in individuals. There are considerations, indeed, which may almost be said to debar the Adepts from ever doing anything to encourage persons in whom this supreme intensity of excitement is possible, to take the very serious step of offering themselves as Chelâs. Directly that by doing this a man renders himself a candidate for something more than the maximum advantages that can flow to him through the operation of natural laws—directly that in this way he claims to anticipate the most favourable course of Nature and to

approach high perfection by violent and artificial processes, he at once puts himself in presence of many dangers which would never beset him if he contented himself with a favourable natural growth. It appears to be always a matter of grave consideration with the Adepts whether they will take the responsibility of encouraging any person who may not have it in him to succeed, to expose himself to these dangers. For any one who is determined to face them and is permitted to do so, the considerations put forward above in regard to the optional character of personal physical training fall to the ground. Those ascetic practices which a candidate for nothing more than the best natural evolution may undertake if he chooses, with the view of emphasizing his spiritual Karma to the utmost, become a *sine qua non* in regard to the very first step of his progress. But with such progress the present explanation is not specially concerned. Its purpose has been to show the beneficial effects which may flow to ordinary people living ordinary lives, from even that moderate devotion to occult philosophy which is compatible with such ordinary lives, and to guard against the very erroneous belief that occult science is a pursuit in which it is not worth while to engage, unless Adeptship is held out to the student as its ultimate result.

LAY CHELÂ.

SOME ENQUIRIES SUGGESTED BY MR. SINNETT'S "ESOTERIC BUDDHISM."

THE object of the following paper is to submit certain questions which have occurred to some English readers of *Esoteric Buddhism*. We have had the great advantage of hearing Mr. Sinnett himself explain many points which perplexed us; and it is with his sanction that we now venture to ask that such light as is permissible may be thrown upon some difficulties which, so far as we can discover, remain as yet unsolved. We have refrained from asking questions on subjects on which we understand that the Adepts forbid enquiry, and we respectfully hope that, as we approach the subject with a genuine wish to arrive at all the truth possible to us, our perplexities may be thought worthy of an authorized solution.

We begin, then, with some obvious *scientific* difficulties.

1. Is the Nebular Theory, as generally held, denied by the Adepts? It seems hard to conceive of the alternate evolution from the sun's central mass of planets, some of them visible and heavy, others invisible, and apparently without weight, as they have no influence on the movements of the visible planets.

2. And, further, the time necessary for the Manvantara even of *one* Planetary Chain, much more of all seven, seems largely to exceed the probable time during which the sun can retain heat, if it is merely a cooling mass, which derives no important accession of heat from without. Is some other view as regards the maintenance of the sun's heat held by the Adepts?

3. The different races which succeed each other on the earth are said to be separated by catastrophes, among which continental subsidences occupy a prominent place. Is it meant that these subsidences are so sudden and unforeseen as to sweep away great nations in an hour? Or, if not, how is it that no appreciable trace is left of such high civiliza-

tions as are described in the past? Is it supposed that our present European civilization, with its offshoots all over the globe, can be destroyed by any inundation or conflagration which leaves life still existing on the earth? Are our existing arts and languages doomed to perish? or was it only the earlier races who were thus profoundly disjoined from one another?

4. The moon is said to be the scene of a life even more immersed in matter than the life on earth. Are there then material organizations living there? If so, how do they dispense with air and water, and how is it that our telescopes discern no trace of their works? We should much like a fuller account of the Adepts' view of the moon, as so much is already known of her material conditions that further knowledge could be more easily adjusted than in the case (for instance) of planets wholly invisible.

5. Is the expression a "mineral monad" authorized by the Adepts? If so, what relation does the monad bear to the atom, or the molecule, of ordinary scientific hypothesis? And does each mineral monad eventually become a vegetable monad, and then at last a human being?

Turning now to some *historical* difficulties, we would ask as follows:

6. Is there not some confusion in the letter quoted on p. 62 of *Esoteric Buddhism*, where the "old Greeks and Romans" are said to have been Atlanteans? The Greeks and Romans were surely Âryans, like the Adepts and ourselves; their language being, as one may say, intermediate between Sanskrit and modern European dialects.

7. Buddha's birth is placed (on p. 141) in the year 643 B.C. Is this date given by the Adepts as undoubtedly correct? Have they any view as to the new inscriptions of Ashoka (as given by General A. Cunningham, *Corpus Inscriptionum Indicarum*, i. 20-23), on the strength of which Buddha's Nirvâna is placed by Barth (*Religions of India*, p. 106), etc., about 476 B.C., and his birth therefore at about 556 B.C.? It would be exceedingly interesting if the Adepts would give a sketch, however brief, of the history of India in those centuries with authentic dates.

8. Shankarâchârya's date is variously given by Orientalists, but always *after* Christ. Barth, for instance, places him about A.D. 788. In *Esoteric Buddhism* (p. 149) he is made to succeed Buddha almost immediately. Can this discrepancy be explained? Has not Shankarâchârya been usually classed as Vaishnavite in his teaching? And similarly has not Gaudapâda been accounted a Shaivite, and placed much later than *Esoteric Buddhism* (p. 147) places him? We would willingly

pursue this line of enquiry, but think it best to wait and see to what extent the Adepts may be willing to clear up some of the problems in Indian religious history on which, as it would seem, they must surely possess knowledge which might be communicated to lay students without indiscretion.

We pass on to some points beyond the ordinary range of science or history on which we should be very glad to hear more, if possible.

9. We should like to understand more clearly the nature of the subjective intercourse with beloved souls enjoyed in Devachan. Say, for instance, that I die and leave on earth some young children. Are these children present to my consciousness in Devachan still as children? Do I imagine that they have died when I died? or do I merely *imagine* them as adult without knowing their life-history? or do I miss them from Devachan until they do actually die, and then hear from them their life-history as it has proceeded between my death and theirs?

10. We do not quite understand the amount of *reminiscence* attained at various points in the soul's progress. Do the Adepts, who, we presume, are equivalent to "Sixth-rounders," recollect their previous incarnations? Do all souls which live on into the sixth Round attain this power of remembrance? or does the Devachan, at the end of each Round, bring a recollection of all the Devachans, or of all the incarnations, which have formed a part of that particular Round? And does reminiscence carry with it the power of so arranging future incarnations as still to remain in company with some chosen soul or group of souls?

We have many more questions to ask, but we scruple to intrude further. And I will conclude here by repeating the remark with which we are most often met when we speak of the Adepts to English friends. We find that our friends do not often ask for so-called *miracles* or *marvels* to prove the genuineness of the Adepts' powers; but they ask why the Adepts will not give some proof—not necessarily that they are far beyond us, but that their knowledge does at least equal our own in the familiar and definite tracks which Western science has worn for itself. A few pregnant remarks on Chemistry—the announcement of a new electrical law, capable of experimental verification—some such communication as this (our interlocutors say), would arrest attention, command respect, and give a weight and prestige to the higher teaching which, so long as it remains in a region wholly unverifiable, it can scarcely acquire.

We gratefully recognize the very acceptable choice which the Adepts have made in selecting Mr. Sinnett as the intermediary between us and them. They could hardly have chosen anyone more congenial to our Western minds—whether we consider the clearness of his written style, the urbanity of his verbal expositions, or the earnest sincerity of his convictions. Since they have thus far met our peculiar needs with such considerate judgment, we cannot but hope that they may find themselves able yet further to adapt their modes of teaching to the requirements of Occidental thought.

AN ENGLISH F.T.S.

London, July, 1883.

REPLY TO AN ENGLISH F.T.S.

ANSWERS.

It was not in contemplation, at the outset of the work begun in "Fragments," to deal as fully with the scientific problems of cosmic evolution as now seems expected. A distinct promise was made, as Mr. Sinnett is well aware, to acquaint the readers with the outlines of esoteric doctrines and—no more. A good deal would be given, much more kept back.

This seeming unwillingness to share with the world some of Nature's secrets that may have come into the possession of the few, arises from causes quite different from the one generally assigned. It is not *selfishness* erecting a Chinese wall between occult science and those who would know more of it, without making any distinction between the simply curious profane, and the earnest, ardent seeker after truth. Wrong and unjust are those who think so; who attribute to indifference for other people's welfare a policy necessitated, on the contrary, by a far-seeing universal philanthropy; who accuse the custodians of lofty physical and spiritual though long-rejected truths, of holding them high above the people's heads. In truth, the inability to reach them lies entirely with the seekers. Indeed, the chief reason among many others for such a reticence, at any rate with regard to secrets pertaining to physical sciences—is to be sought elsewhere.* It rests entirely on

* Needless to remind "An English F.T.S." that what is said here, applies only to secrets the nature of which when revealed will not be turned into a weapon against humanity in general, or its units—men. Secrets of such a class could not be given to any one but a regular Chelâ of many years' standing and during his successive initiations; mankind as a whole has first to come of age, to reach its majority, which will happen but toward the beginning of its sixth Race—before such mysteries can be safely revealed to it. The "vril" is not altogether a fiction, as some Chelâs and even "lay" Chelâs know.

the *impossibility* of imparting that the nature of which is, at the present stage of the world's development, beyond the comprehension of the would-be learners, however intellectual and however scientifically trained may be the latter. This tremendous difficulty is now explained to the few, who, besides having read *Esoteric Buddhism*, have studied and *understood* the several occult axioms approached in it. It is safe to say that it will not be even vaguely realized by the general reader, but will offer the pretext for sheer abuse. Nay, it has already.

It is simply that the gradual development of man's seven principles and physical senses *has* to be coincident and on parallel lines with Rounds and Root-Races. Our *fifth* Race has so far developed but its *five* senses. Now, if the Kâma or will-principle of the "Fourth-rounders" has already reached that stage of its evolution when the automatic acts, the unmotivated instincts and impulses of its childhood and youth, instead of following external stimuli, will have become acts of will framed constantly in conjunction with the mind (Manas), thus making of every man on earth of that Race *a free agent, a fully responsible being*—the Kâma of our hardly adult *fifth* Race is only slowly approaching it. As to the sixth sense of this, our Race, it has hardly sprouted above the soil of its materiality. It is highly unreasonable, therefore, to expect for the men of the fifth to sense the nature and essence of that which will be fully *sensed* and perceived but by the sixth—let alone the seventh Race—*i.e.*, to enjoy the legitimate outgrowth of the evolution and endowments of the future races with only the help of our present limited senses. The exceptions to this quasi-universal rule have been hitherto found only in some rare cases of constitutional, abnormally precocious individual evolutions; or, in such, where, by early training and special methods, reaching the stage of the "Fifth-rounders," some men in addition to the natural gift of the latter have fully developed (by certain occult methods) their sixth, and in still rarer cases their seventh, sense. As an instance of the former class may be cited the Seeress of Prevorst, a creature born *out of time*, a rare precocious growth, ill adapted to the uncongenial atmosphere that surrounded her, hence a martyr ever ailing and sickly. As an example of the other, the Count St. Germain may be mentioned. Apace with the anthropological and physiological development of man runs his spiritual evolution. To the latter, purely intellectual growth is often more an impediment than a help. An instance: radiant stuff (the "fourth state of matter") has been hardly discovered, and no one—the eminent

discoverer himself not excepted—has yet any idea of its full importance, its possibilities, its connection with physical phenomena, or even its bearing upon the most puzzling scientific problems. How then can any "Adept" attempt to prove the fallacy of much that is predicated in the nebular and solar theories when the only means by which he could successfully prove his position is an appeal to, and the exhibition of, that sixth-sense consciousness which the physicist cannot postulate? Is not this plain?

Thus, the obstacle is not that the "Adepts" would "forbid enquiry," but rather the personal, present limitations of the senses of the average, and even of the scientific man. To undertake the explanation of that which at the outset would be rejected as a physical impossibility, the outcome of hallucination, is unwise and even harmful, because premature. It is in consequence of such difficulties that the psychic production of physical phenomena—save in exceptional cases—is strictly forbidden.

And now, "Adepts" are asked to meddle with astronomy—a science which of all the branches of human knowledge has yielded the most accurate information, afforded the most mathematically correct data, and of the achievements in which the men of science feel the most justly proud! It is true that on the whole astronomy has achieved triumphs more brilliant than those of most other sciences. But if it has done much in the direction of satisfying man's straining and thirsting mind and his noble aspirations for knowledge, physical as to its most important particulars, it has ever laughed at man's puny efforts to wrest the great secrets of Infinitude by the help of only mechanical apparatus. While the spectroscope has shown the probable similarity of terrestrial and sidereal substance, the chemical actions peculiar to the variously progressed orbs of space have not been detected, nor proven to be identical with those observed on our own planet. In this particular, esoteric psychology may be useful. But who of the men of science would consent to confront it with their own handiwork? Who of them would recognize the superiority and greater trustworthiness of the "Adepts'" knowledge over their own hypotheses, since in their case they can claim the mathematical correctness of their deductive reasonings based on the alleged unerring precision of the modern instruments; while the "Adepts" can claim but their knowledge of the ultimate nature of the materials they have worked with for ages, resulting in the phenomena produced. However much it may be urged that

a deductive argument, besides being an incomplete syllogistic form, may often be in conflict with fact; that their major propositions may not always be correct, although the predicates of their conclusions seem correctly drawn—spectrum analysis will not be acknowledged as inferior to purely spiritual research. Nor, before developing his sixth sense, will the man of science concede the error of his theories as to the solar spectrum, unless he abjure, to some degree at least, his marked weakness for conditional and disjunctive syllogisms ending in eternal dilemmas. At present the “Adepts” do not see any help for it. Were these invisible and unknown “profanes” to interfere with—not to say openly contradict—the *dicta* of the Royal Society, contempt and ridicule, followed by charges of crass ignorance of the first elementary principles of modern science would be their only reward; while those who would lend an ear to their “vagaries,” would be characterized immediately as types of the “mild lunatics” of the age. Unless, indeed, the whole of that august body should be initiated into the great Mysteries at once, and, without any further ado or the preliminary and usual preparations or training, the F.R.S.’s could be *miraculously* endowed with the required sixth sense, the “Adepts” fear the task would be profitless. The latter have given quite enough, little though it may seem, for the purposes of a first trial. The sequence of martyrs to the great universal truths has never been once broken; and the long list of known and unknown sufferers, headed with the name of Galileo, now closes with that of Zöllner. Is the world of science aware of the real cause of Zöllner’s premature death? When the fourth dimension of space becomes a scientific reality like the fourth state of matter, he may have a statue raised to him by grateful posterity. But this will neither recall him to life, nor will it obliterate the days and months of mental agony that harassed the soul of this intuitional, far-seeing, modest genius, made even after his death to receive the donkey’s kick of misrepresentation and to be publicly charged with lunacy.

Hitherto, astronomy could grope between light and darkness only with the help of the uncertain guidance offered it by analogy. It has reduced to fact and mathematical precision the physical motion and the paths of the heavenly bodies, and—no more. So far, it has been unable to discover with any approach to certainty the physical constitution of either sun, stars, or even cometary matter. Of the latter it seems to know no more than was taught 5,000 years ago by the official astronomers of old Chaldæa and Egypt—namely, that it is vaporous,

since it transmits the rays of stars and planets without any sensible obstruction. But let the modern chemist be asked to tell one whether this matter is in any way connected with, or akin to, that of any of the gases he is acquainted with; or again, to any of the solid elements of his chemistry. The probable answer received will be very little calculated to solve the world's perplexity; since, all hypotheses to the contrary notwithstanding, cometary matter does not appear to possess even the common law of adhesion or of chemical affinity. The reason for it is very simple, and the truth ought long ago to have dawned upon the experimentalists, since our little world (though so repeatedly visited by the hairy and bearded travellers, enveloped in the evanescent veil of their tails and otherwise brought in contact with that matter) has neither been smothered by an addition of nitrogen gas, nor deluged by an excess of hydrogen, nor yet perceptibly affected by a surplus of oxygen. The essence of cometary matter must be—and the "Adepts" say is—*totally different from any of the chemical or physical characteristics with which the greatest chemists and physicists of the earth are familiar*—all recent hypotheses to the contrary notwithstanding. It is to be feared that before the real nature of the elder progeny of Mûlaprakriti is detected, Mr. Crookes will have to discover matter of the *fifth* or *extra-radiant* state, *et seq.*

Thus, while the astronomer has achieved marvels in the elucidation of the visible relations of the orbs of space, he has learnt nothing of their inner constitution. His science has led him no farther towards a reading of that inner mystery than has that of the geologist, who can tell us only of the earth's superficial layers, and that of the physiologist, who has until now been able to deal only with man's outer shell, or Sthûla Sharîra. Occultists have asserted, and go on asserting daily, the fallacy of judging the essence by its outward manifestations, the ultimate nature of the life-principle by the circulation of the blood, mind by the grey matter of the brain, and the physical constitution of sun, stars and comets by our terrestrial chemistry and the matter of our own planet. Verily and indeed, no microscopes, spectroscopes, telescopes, photometers, or other physical apparatuses can ever be focussed on either the macro- or micro-cosmical highest principles, nor will the Mâyâvi Rûpa of either yield its mystery to physical enquiry. The methods of spiritual research and psychological observation are the only efficient agencies to employ. We have to proceed by analogy in everything to be sure. Yet the candid men of science must very

soon find out that it is not sufficient to examine a few stars—a handful of sand, as it were, from the margin of the shoreless, cosmic ocean—to conclude that these stars are the same as all other stars—our Earth included; that, because they have attained a certain very great telescopic power, and gauged an area inclosed in the smallest of spaces when compared with what remains, they have, therefore, concurrently perfected the survey of all that exists within even that limited space. For, in truth, they have done nothing of the kind. They have had only a superficial glance at that which is made visible to them under the present conditions, with *the limited power of their vision*. And even though it were helped by telescopes of a hundred-fold stronger power than that of Lord Rosse, or the new Lick Observatory, the case would not alter. No physical instrument will ever help astronomy to scan distances of the immensity of which that of Sirius, situated at the trifle of 130,125,000,000,000 miles away from the outer boundary of the spherical area, or even that of a Capella, with its extra trifle of 295,355,000,000,000* miles still farther away, can give them, as they themselves are well aware, the faintest idea. For, though an “Adept” is unable to cross bodily (*i.e.*, in his astral shape) the limits of the solar system, yet he *knows* that, far stretching beyond the telescopic power of detection, there are systems upon systems, the smallest of which would, when compared with the system of Sirius, make the latter seem like an atom of dust imbedded in the great Shamo desert. The eye of the astronomer, who thinks he also knows of the existence of such systems, has never rested upon them, has never caught of them even that spectral glimpse, fanciful and hazy as the incoherent vision in a slumbering mind, that he has occasionally had of other systems, and yet he verily believes he has gauged Infinitude! And yet these immeasurably distant worlds are brought as clear and near to the spiritual eye of the *astral* astronomer as a neighbouring bed of daisies may be to the eye of the botanist.

Thus, the “Adepts” of the present generation, though unable to help the profane astronomer by explaining the ultimate essence, or even the material constitution, of star and planet, since European science, knowing nothing as yet of the existence of such substances, or more properly of their various states or conditions, has neither proper terms for, nor can form any adequate idea of them by any description, they may, per-

* The figures are given from the calculations of exoteric Western astronomy. Esoteric astronomy may prove them false some day.

chance, be able to prove what this matter *is not*—and this is more than sufficient for all present purposes. The next best thing to learning what is true is to ascertain what is *not* true.

Having thus anticipated a few general objections, and traced a limit to expectations, since there is no need of drawing any veil of mystery before "An English F.T.S.," his few questions may be partially answered. The negative character of the replies draws a sufficiently strong line of demarcation between the views of the "Adepts" and those of Western science to afford some useful hints at least.

QUESTION I.—DO THE ADEPTS DENY THE NEBULAR THEORY?

No; they do not deny its general propositions, nor the approximative truths of the scientific hypotheses. They only deny the completeness of the present, as well as the entire error of the many so-called "exploded" old theories, which, during the last century, have followed each other in such rapid succession. For instance: while denying, with Laplace, Herschel and others, that the variable patches of light perceived on the nebulous background of the galaxy ever belonged to remote worlds in the process of formation; and agreeing with modern science that they proceed from no aggregation of formless matter, but belong simply to clusters of "stars" already formed; they yet add that many of such clusters, that pass in the opinion of the astro-physicists for stars and worlds already evolved, are in fact but collections of the various materials made ready for future worlds. Like bricks already baked, of various qualities, shapes and colour, that are no longer formless clay but have become fit units of a future wall, each of them having a fixed and distinctly assigned space to occupy in some forthcoming building, are these seemingly adult worlds. The astronomer has no means of recognizing their relative adolescence, except perhaps by making a distinction between the star-clusters with the usual orbital motion and mutual gravitation, and those termed, we believe, irregular star-clusters of very capricious and changeful appearances. Thrown together as though at random, and seemingly in utter violation of the law of symmetry, they defy observation: such, for instance, are 5 M. Lyrae, 52 M. Cephei, Dumb-Bell, and some others. Before an emphatic contradiction of what precedes is attempted, and ridicule offered perchance, it would not be amiss to ascertain the nature and character of those other so-called "temporary" stars, whose periodicity,

though ~~never~~ actually proven, is yet allowed to pass unquestioned. What are these stars which, appearing suddenly in matchless magnificence and splendour, disappear as mysteriously as unexpectedly, without leaving a single trace behind? Whence do they appear? Whither are they engulfed? In the great cosmic deep—we say. The bright “brick” is caught by the hand of the mason—directed by that Universal Architect *which* destroys but to rebuild. It has found its place in the cosmic structure and will perform its mission to its last manvantaric hour.

Another point most emphatically denied by the “Adepts” is, that there exist in the whole range of visible heavens any spaces void of starry worlds. There are stars, worlds and systems *within* as *without* the systems made visible to man, and even *within our own atmosphere*, for all the physicist knows. The “Adept” affirms in this connection that orthodox, or so-called official science, uses very often the word “infinitude” without attaching to it any adequate importance; rather as a flower of speech than a term implying an awful, a most mysterious Reality. When an astronomer is found in his Reports “gauging *infinitude*,” even the most intuitional of his class is but too often apt to forget that he is gauging only the superficies of a small area and its visible depths, and to speak of these as though they were merely the cubic contents of some known quantity. This is the direct result of the present conception of a three-dimensional space. The turn of a four-dimensional world is near, but the puzzle of science will ever continue until their concepts reach the natural dimensions of visible and invisible space—in its septenary completeness. “The Infinite and the Absolute are only the names for two counter-imbecilities of the human [uninitiated] mind”; and to regard them as the transmuted “properties of the nature of things—of two subjective negatives converted into objective affirmatives,” as Sir W. Hamilton puts it, is to know nothing of the infinite operations of human liberated spirit, or of its attributes, the first of which is its ability to pass *beyond* the region of our terrestrial experience of matter and space. As an absolute vacuum is an impossibility *below*, so is it a like impossibility *above*. But our molecules, the infinitesimals of the vacuum “below,” are replaced by the giant-atom of the Infinitude “above.” When demonstrated, the four-dimensional conception of space may lead to the invention of new instruments to explore the extremely dense matter that surrounds us as a ball of pitch might surround—say, a fly, but which, in our extreme

ignorance of all its properties save those we find it exercising on our earth, we yet call the *clear*, the *serene*, and the *transparent* atmosphere. This is no psychology, but simply occult physics, which can never confound "substance" with "centres of force," to use the terminology of a Western science which is ignorant of Mâyâ. In less than a century, besides telescopes, microscopes, micrographs and telephones, the Royal Society will have to offer a premium for such an *etherscope*.

It is also necessary in connection with the question under reply that "An English F.T.S." should know that the "Adepts" of the Good Law reject gravity as at present explained. They deny that the so-called "impact theory" is the only one that is tenable in the gravitation hypothesis. They say, that if all efforts made by the physicists to connect it with ether, in order to explain electric and magnetic distance-action have hitherto proved complete failures, it is again due to the race ignorance of the ultimate states of matter in Nature, and, foremost of all, of the real nature of the solar stuff. Believing but in the law of mutual magneto-electric attraction and repulsion, they agree with those who have come to the conclusion that "universal gravitation is a weak force," utterly incapable of accounting for even one small portion of the phenomena of motion. In the same connection they are forced to suggest that science may be wrong in her indiscriminate postulation of centrifugal force, which is neither a universal nor a consistent law. To cite but one instance: this force is powerless to account for the spheroidal oblateness of certain planets. For if the bulge of planetary equators and the shortening of their polar axes is to be attributed to centrifugal force, instead of being simply the result of the powerful influence of solar electro-magnetic attraction, "balanced by concentric rectification of each planet's own gravitation achieved by rotation on its axis," to use an astronomer's phraseology (neither very clear nor correct, yet serving our purpose to show the many flaws in the system), why should there be such difficulty in answering the objection that the differences in the equatorial rotation and density of various planets are directly in opposition to this theory? How long shall we see even great mathematicians bolstering up fallacies to supply an evident hiatus! The "Adepts" have never claimed superior or *any* knowledge of Western astronomy and other sciences. Yet turning even to the most elementary text-books used in the schools of India, they find that the centrifugal theory of Western birth is unable to cover *all* the ground. That, unaided, it *can* neither account for every

oblate spheroid, nor explain away such evident difficulties as are presented by the relative density of some planets. How indeed can any calculation of centrifugal force explain to us, for instance, why Mercury, whose rotation is, we are told, only "about one-third that of the earth, and its density only about one-fourth greater than the earth," should have a polar compression *more than ten times greater than the latter?* And again, why Jupiter, whose equatorial rotation is said to be "twenty-seven times greater, and its density only about one-fifth that of the earth," should have its polar compression seventeen times greater than that of the earth? Or, why Saturn, with an equatorial velocity fifty-five times greater than Mercury for centrifugal force to contend with, should have its polar compression *only three times* greater than Mercury's? To crown the above contradictions, we are asked to believe in the central forces as taught by modern science, even when told that the equatorial matter of the sun, with more than four times the centrifugal velocity of the earth's equatorial surface and only about one-fourth part of the gravitation of the equatorial matter, has not manifested any tendency to bulge out at the solar equator, nor shown the least flattening at the poles of the solar axis. In other and clearer words, the sun, with only one-fourth of our earth's density for the centrifugal force to work upon, has no polar compression at all! We find this objection made by more than one astronomer, yet never explained away satisfactorily so far as the "Adepts" are aware.

Therefore do they say that the great men of science of the West, knowing nothing or next to nothing either about cometary matter, centrifugal and centripetal forces, the nature of the nebulae, or the physical constitution of the sun, stars, or even the moon, are imprudent to speak so confidently as they do about the "central mass of the sun" whirling out into space planets, comets, and what not. Our humble opinion being wanted, we maintain: that it evolves out, but the *life* principle, the *soul* of these bodies, *giving and receiving it back* in our little solar system, as the "universal life-giver," the One Life, gives and receives it in the Infinitude and Eternity; that the solar system is as much the microcosm of the *One* Macrocosm, as man is the former when compared with his own little solar cosmos.

What are the proofs of science? The solar spots (a misnomer, like much of the rest)? But these do not prove the solidity of the "central mass," any more than the storm-clouds prove the solid mass of the atmosphere behind them. Is it the non-coëxtensiveness of the sun's

body with its apparent luminous dimensions, the said "body" *appearing* "a solid mass, a dark sphere of matter confined within a *fiery* prison-house, a robe of fiercest flames"? We say that there is indeed a "prisoner" behind, but that having never yet been seen by any *physical*, mortal eye, what he allows to be seen of him is merely a gigantic *reflection*, an illusive phantasma of "solar appendages of *some* sort," as Mr. Proctor honestly calls it. Before saying anything further, we will consider the next interrogatory.

QUESTION II.—IS THE SUN MERELY A COOLING MASS?

Such is the accepted theory of modern science: it is not what the "Adepts" teach. The former says: The sun "derives no important accession of heat from without"; the latter answer: "The sun needs it not." He is quite as self-dependent as he is self-luminous; and for the maintenance of his heat requires no help, no foreign accession of vital energy; for he is the heart of his system, a heart that will not cease its throbbing until its hour of rest shall come. Were the sun "a cooling mass," our great life-giver would have indeed grown dim with age by this time, and found some trouble to keep his watch-fires burning for the future races to accomplish their cycles, and the planetary chains to achieve their rounds. There would remain no hope for evolving humanity; except perhaps in what passes for science in the astronomical text-books of Missionary Schools—namely, that "the sun has an orbital journey of a hundred millions of years before him, and the system yet but *seven thousand years* old [!]." (Prize Book, *Astronomy for General Readers*.)

The "Adepts," who are thus forced to demolish before they can reconstruct, deny most emphatically: (*a*) that the sun is in combustion, in any ordinary sense of the word; or (*b*) that he is *incandescent*, or even *burning*, though he is *glowing*; or (*c*) that his luminosity has already begun to weaken and his power of combustion may be exhausted within a given and conceivable time; or even (*d*) that his chemical and physical constitution contains any of the elements of terrestrial chemistry in any of the states that either chemist or physicist is acquainted with. With reference to the latter, they add that, properly speaking, though the body of the sun—a body that was never yet reflected by telescope or spectroscope that man invented—cannot be said to be constituted of those terrestrial elements with the state of

which the chemist is familiar, yet that these elements are all present in the sun's outward robes, and a host more of elements unknown so far to science. There seems little need, indeed, to have waited so long for the lines belonging to these respective elements to correspond with the dark lines of the solar spectrum to *know* that no element present on our earth could ever be possibly found wanting in the sun; although on the other hand, there are many others in the sun which have either not reached or not as yet been discovered on our globe. Some may be missing in certain stars and heavenly bodies still in the process of formation; or, properly speaking, though present in them, these elements on account of their undeveloped state may not respond as yet to the usual scientific tests. But how can the earth possess that which the sun has never had? The "Adepts" affirm as a fact that the true *Sun*—an invisible orb of which the known one is the shell, mask, or clothing—has in him the spirit of every element that exists in the solar system; and his "chromosphere," as Mr. Lockyer named it, has the same, only in a far more developed condition, though still in a state unknown on earth; our planet having to await its further growth and development before any of its elements can be reduced to the condition they are in within that chromosphere. Nor can the substance producing the coloured light in the latter be properly called solid, liquid, or even "gaseous," as now supposed, for it is neither. Thousands of years before Leverrier and Padri Secchi, the old Âryans sung of Sûrya "hiding behind his Yogî,* robes his head that no one could see"; the ascetic's dress being, as all know, dyed expressly into a red-yellow hue, a colouring matter with pinkish patches on it, rudely representing the vital principle in man's blood—the symbol of the *vital principle* in the sun, or what is now called chromosphere. The "rose-coloured region"! How little astronomers will ever know of its real nature, even though hundreds of eclipses furnish them with the *indisputable evidence* of its presence. The sun is so thickly surrounded by a *shell* of this "red matter," that it is useless for them to speculate with only the help of their physical instruments, upon the nature of that which they can never see or detect with mortal eye behind that brilliant, *radiant zone* of matter.

* There is an interesting story in the Purānas relating to this subject. The Devas, it would appear, asked the great Rishi Vasishtha to bring the Sun into Satya Loka. The Rishi requested the Sun-god to do so. The Sun-god replied that all the worlds would be destroyed if he were to leave his place. The Rishi then offered to place his red-coloured cloth (Kashāya Vāstram) in the place of the Sun's disk, and did so. The visible body of the Sun is this robe of Vasishtha, it would seem.

If the "Adepts" are asked: What, then, in your views, is the nature of our sun and what is there beyond that cosmic veil?—they answer: *Beyond* rotates and beats the *heart and head* of our system; externally is spread its robe, the nature of which is not matter, whether solid, liquid, or gaseous, such as you are acquainted with, but *vital* electricity, condensed and made visible.* And if the statement is objected to on the grounds that were the luminosity of the sun due to any other cause than *combustion* and *flame*, no physical law of which Western science has any knowledge could account for the existence of such intensely high temperature of the sun *without combustion*; that such a temperature, besides burning with its light and flame every visible thing in our universe, would show its luminosity of a homogeneous and uniform intensity throughout, which it does not; that undulations and disturbances in the photosphere, the growing of the "protuberances," and a fierce raging of elements in combustion have been observed in the sun, with their tongues of fire and spots exhibiting every appearance of cyclonic motion, and "solar storms," etc., etc.; to this the only answer that can be given is the following: the appearances are all there, yet it is not combustion. Undoubtedly were the "robes," the dazzling drapery which now envelops the whole of the sun's globe, withdrawn, or even "the shining atmosphere *which permits us to see the sun*" (as Sir William Herschel thought) removed so as to allow one trifling rent, our whole universe would be reduced to ashes. Jupiter Fulminator revealing himself to his beloved would incinerate her instantly. But it can never be. The protecting shell is of a thickness and at a distance from the Universal Heart that can hardly be ever calculated by your mathematicians. And how can they hope to see the sun's *inner* body once that the existence of that "chromosphere" is ascertained, though its actual density may be still unknown, when one of the greatest, if not *the* greatest, of their authorities—Sir William Herschel—says as follows:

* If "An English F.T.S." would take the trouble of consulting p. 11 of *Magia Adamica* of Eugenius Philalethes, his learned compatriot, he would find therein the difference between a visible and an invisible planet as clearly hinted at as it was safe to do at a time when the iron claw of orthodoxy had the power as well as the disposition to tear the flesh from heretic bones. "The earth is invisible," says he, ". . . and which is more, the *eye of man never saw the earth*, nor can it be *seen without art*. To make this element visible is *the greatest secret in magic*. . . . As for this feculent, gross body upon which we walk, it is a *compost*, and no earth but *it hath earth in it*. . . . in a word, all the *elements are visible* but one, namely, the *earth*: and when thou hast attained to so much *perfection* as to know why God hath placed the *earth in abscondito*, thou hast an excellent figure whereby to know *God himself*, and how he is *visible*, how *invisible*." The italics are the author's, it being the custom of the alchemists to emphasize those words which had a double meaning in their code. Here "God himself," "visible" and "invisible," relates to their *Lapis Philosophorum*—Nature's seventh principle.

The sun, also, has its *atmosphere*, and, if some of the fluids which enter into its composition should be of a shining brilliancy, while others are merely transparent, *any temporary cause which may remove the lucid fluid will permit us to see the body of the sun* through the transparent ones.

The italicized words, written nearly eighty years ago, embody the wrong hypothesis that the *body of the sun* might be seen under such circumstances, whereas it is only the far-away layers of "the lucid fluid" that would be perceived. And what the great astronomer adds invalidates entirely the first portion of his assumption:

If an observer were placed on the moon, he would see the solid body of our earth *only in those places where the transparent fluids of the atmosphere would permit him*. In others, the opaque vapours would reflect the light of the sun without permitting his view to penetrate to the surface of our globe.

Thus, if the atmosphere of our earth, which in its relation to the "atmosphere" (?) of the sun is like the tenderest skin of a fruit compared with the thickest husk of a cocoa-nut, would prevent the eye of an observer standing on the moon from penetrating everywhere "to the surface of our globe," how can an astronomer ever expect his sight to penetrate to the *sun's* surface, from our earth and at a distance of from 85,000,000 to 95,000,000 miles,* whereas, the moon, we are told, is only about 238,000 miles! The proportionately larger size of the sun does not bring it any the more within the scope of our physical vision. Truly remarks Sir William Herschel that the sun "has been called a globe of fire, *perhaps metaphorically!*" It has been *supposed* that the dark spots were solid bodies revolving near the sun's surface. "They have been *conjectured* to be the smoke of volcanoes . . . the scum floating upon an ocean of fluid matter. . . . They have been *taken* for clouds . . . *explained* to be opaque masses swimming in the *fluid matter* of the sun. . . ." When all his anthropomorphic conceptions are put aside, Sir John Herschel, whose *intuition* was still greater than his great learning, alone of all astronomers comes near the truth—far nearer than any of those modern astronomers who, while admiring his gigantic learning, smile at his "imaginative and fanciful theories." His only mistake, now shared by most astronomers, was that he regarded the "opaque body" occasionally observed through the curtain of the "luminous envelope" as the sun itself. When saying in the course of his speculations upon the Nasmyth willow-leaf theory:

* Verily, "*absolute accuracy* in the solution of this problem [of distances between the heavenly bodies and the earth] *is simply out of the question.*"

The definite shape of these objects, their exact similarity one to another . . . all these characters seem quite repugnant to the notion of their being of a vaporous, a cloudy, or a fluid nature

—his spiritual intuition served him better than his remarkable knowledge of physical science. When he adds:

Nothing remains but to consider them *as separate and independent* sheets, flakes . . . having *some sort of solidity*. . . . Be they what they may, they are evidently *the immediate sources of the solar light and heat*

—he utters a grander physical truth than was ever uttered by any living astronomer. And when, furthermore, we find him postulating:

Looked at in this point of view, we cannot refuse to regard them as *organisms* of some peculiar and amazing kind; and though it would be too daring to speak of such organization as partaking of the nature of life, yet *we do know that vital action is competent to develop at once heat, and light, and electricity—*

Sir John Herschel gives out a theory approximating an occult truth more than any of the profane ever did with regard to solar physics. These "wonderful objects" are not, as a modern astronomer interprets Sir John Herschel's words, "*solar inhabitants*, whose fiery constitution enables them to illuminate, warm and electricize the whole solar system," but simply the reservoirs of solar vital energy, the *vital* electricity that feeds the whole system in which it lives, and breathes, and has its being. The sun is, as we say, the storehouse of our little cosmos, self-generating its vital fluid, and ever receiving as much as it gives out. Were the astronomers to be asked—what definite and positive fact exists at the root of their solar theory—what knowledge they have of solar combustion and atmosphere—they might, perchance, feel embarrassed when confronted with all their present theories. For it is sufficient to make a *résumé* of what the solar physicists *do not know*, to gain conviction that they are as far as ever from a definite knowledge of the constitution and ultimate nature of the heavenly bodies. We may, perhaps, be permitted to enumerate:

Beginning with, as Mr. Proctor wisely calls it, "the wildest assumption possible," that there is, in accordance with the law of analogy, some general resemblance between the materials in, and the processes at work upon, the sun, and those materials with which terrestrial chemistry and physics are familiar, what is that sum of results achieved by spectroscopic and other analyses of the surface and the inner constitution of the sun, which warrants any one in establishing the *axiom* of the sun's combustion and gradual extinction? They have no means,

as they themselves daily confess, of experimenting upon, hence of determining, the sun's physical condition; for (*a*) they are ignorant of the atmospheric limits; (*b*) even though it were proved that *matter*, such as they know of, is continuously falling upon the sun, being ignorant of its real velocity and the nature of the material it falls upon, they are unable "to discuss of the effect of motions wholly surpassing in velocity . . . enormously exceeding even the inconceivable velocity of many meteors"; (*c*) confessedly—they "have no means of learning whence that part of the light comes which gives the continuous spectrum"—hence no means of determining how great a depth of the solar substance is concerned in sending out that light. This light "may come from the surface layers only"; and, "it may be but a shell" (truly!); and finally, (*d*) they have yet to learn "how far combustion, properly so-called, can take place within the sun's mass"; and "whether these processes, which we [they] recognize as combustion, are the only processes of combustion which can actually take place there." Therefore, Mr. Proctor for one comes to the happy and prudent idea after all "that what had been supposed the most marked characteristic of incandescent solid and liquid bodies, is thus shown to be a possible characteristic of the light of the glowing gas." Thus, the whole basis of their reasoning having been shaken (by Frankland's objection), they, the astronomers, may yet arrive at accepting the occult theory, viz., that they have to look to the sixth state of matter, for divulging to them the true nature of their photospheres, chromospheres, appendages, prominences, projections and horns. Indeed, when one finds one of the authorities of the age in physical science—Professor Tyndall—saying that:

No earthly substance with which we are acquainted, no substance which the fall of meteors has landed on the earth—*would be at all competent to maintain* the sun's combustion.

And again:

Multiplying all our powers by millions of millions, we do not reach the sun's expenditure. And still, notwithstanding this enormous drain in the lapse of human history, we are unable to detect a diminution of his store

—after reading this, to see the men of science still maintaining their theory of "a hot globe cooling," one may be excused for feeling surprised at such inconsistency. Verily is that great physicist right in viewing the sun itself as "a speck in infinite extension—a mere drop in the universal sea"; and saying that:

To Nature nothing can be added; from Nature nothing can be taken away; the sum of her energy is constant, and the utmost man can do in the pursuit of physical truth, or in the applications of physical knowledge, *is to shift the constituents of the never-varying total. The law of conservation rigidly excludes both creation and annihilation . . . the flux of power is eternally the same.*

Mr. Tyndall speaks here as though he were an occultist. Yet, the *memento mori*—"the sun is cooling . . . it is dying!"—of the Western Trappists of Science resounds as loud as it ever did.

No, we say; no, while there is one man left on the globe, the sun will not be extinguished. Before the hour of the Solar Pralaya strikes on the watch-tower of Eternity, all the other worlds of our system will be gliding in their spectral shells along the silent paths of Infinite Space. Before it strikes, Atlas, the mighty Titan, the son of Asia and the nursling of Æther, will have dropped his heavy manvantaric burden and—died; the Pleiades, the bright seven sisters, will have upon awakening liding Sterope to grieve with them—to *die themselves for their father's loss*. And Hercules, *moving off his left leg*, will have to shift his place in the heavens and erect his own funeral pile. Then only, surrounded by the fiery element breaking through the thickening gloom of the Pralayan twilight, will Hercules, *expiring amidst a general conflagration*, bring on likewise the death of our sun: *he will have unveiled by moving off the "Central Sun"*—the mysterious, the ever-hidden centre of attraction of our sun and system. Fables? Mere poetical fiction? Yet, when one knows that the most exact sciences, the greatest mathematical and astronomical truths went forth into the world among the *hoi polloi* from the circle of initiated priests, the Hierophants of the Sanctum Sanctorum of the old temples, under the guise of religious fables, it may not be amiss to search for universal truths even under the patches of fiction's harlequinade. This *fable* about the Pleiades, the seven sisters, Atlas and Hercules, exists identical in subject, though under other names, in the sacred Hindû books, and has likewise the same occult meaning. But then like the *Râmâyana* "borrowed from the Greek *Iliad*" and the *Bhagavad Gîtâ* and Krishna plagiarized from the Gospel—in the opinion of the *great* Sanskritist, Prof. Weber, the Âryans may have also borrowed the Pleiades and their Hercules from the same source! When the Brâhmans can be shown by the Christian Orientalists to be the direct descendants of the Teutonic Crusaders, then only, perchance, will the cycle of proofs be completed, and the historical truths of the West vindicated!

QUESTION III.—ARE THE GREAT NATIONS TO BE SWEEPED AWAY IN AN HOUR?

No such absurdity was ever postulated. The cataclysm that annihilated the choicest sub-races of the fourth Race, or the Atlanteans, was slowly preparing its work for ages, as any one can read in *Esoteric Buddhism* (p. 54). "Poseidonis," so called, belongs to historical times, though its fate begins to be realized and suspected only now. What was said is still asserted: every Root-Race is separated by a catastrophe, a cataclysm—the basis and historical foundation of the fables woven later on into the religious fabric of every people, whether civilized or savage, under the names of "deluges," "showers of fire," and such like.

That no "appreciable trace is left of such high civilization" is due to several reasons. One of these may be traced chiefly to the inability, and partially to the unwillingness (or shall we say congenital spiritual blindness of this our age!) of the modern archæologist to distinguish between excavations and ruins 50,000 and 4,000 years old, and to assign to many a grand archaic ruin its proper age and place in pre-historic times. For the latter the archæologist is not responsible—for what criterion, what sign has he to lead him to infer the true date of an excavated building bearing no inscription; and what warrant has the public that the antiquary and specialist has not made an error of some 20,000 years? A fair proof of this we have in the *scientific* and *historic* labelling of the Cyclopean architecture. Traditional archæology bearing directly upon the monumental is rejected. Oral literature, popular legends, ballads and rites, are all stifled in one word—"superstition"; and popular antiquities have become "fables" and "folk-lore." The ruder style of Cyclopean masonry, the walls of Tiryns, mentioned by Homer, are placed at the farthest end—the dawn of Pre-Roman history: the walls of Epirus and Mycenæ—at the nearest. The latter are *commonly* believed the work of the Pelasgi and *probably* of about 1,000 years before the Western era. As to the former, they were hedged in and driven forward by the Noachian deluge till very lately—Archbishop Usher's learned scheme, computing that earth and man "were created 4,004 B.C.," having been not only popular but actually *forced* upon the educated classes until Mr. Darwin's triumphs. Had it not been for the efforts of a few Alexandrian and other mystics, Platonists, and heathen philosophers, Europe would never have laid her hands even on those few Greek and Roman classics she now possesses. And, as among the few that escaped the dire fate, not all by any means were

trustworthy—hence, perhaps, the secret of their preservation—Western scholars got early into the habit of rejecting all heathen testimony, whenever truth clashed with the dicta of their churches. Then, again, the modern archæologists, orientalist and historians, are *all* Europeans; and they are all Christians, whether nominally or otherwise. However it may be, most of them seem to dislike to allow any relic of archaism to antedate the supposed antiquity of the Jewish records. This is a ditch into which most have slipped.

The traces of ancient civilizations exist, and they are many. Yet, it is humbly suggested, that so long as there are reverend gentlemen mixed up unchecked in archæological and Asiatic societies; and Christian bishops to write the supposed histories and religions of Non-Christian nations, and to preside over the meetings of orientalist—so long will archaism and its remains be made subservient in every branch to ancient Judaism and modern Christianity.

So far, archæology knows nothing of the sites of other and far older civilizations, except the few it has stumbled upon, and to which it has assigned their respective ages, mostly under the guidance of biblical chronology. Whether the West had any *right* to impose upon Universal History the untrustworthy chronology of a small and unknown Jewish tribe, and reject, at the same time, every datum as every other tradition furnished by the classical writers of *Non-Jewish* and *Non-Christian* nations, is questionable. At any rate, had it accepted as willingly data coming from other sources, it might have assured itself by this time, that not only in Italy and other parts of Europe, but even on sites not very far from those it is accustomed to regard as the hot-bed of ancient relics—Babylonia and Assyria—there are other sites where it could profitably excavate. The immense "Salt Valley" of Dasht-Beyad by Khorassan covers the most ancient civilizations of the world; while the Shamo desert has had time to change from sea to land, and from fertile land to a dead desert, since the day when the *first* civilization of the fifth Race left its now invisible, and perhaps for ever hidden, "traces" under its beds of sand.

Times have changed, are changing. Proofs of the old civilizations and the archaic wisdom are accumulating. Though soldier-bigots and priestly schemers have burnt books and converted old libraries to base uses; though the dry rot and the insect have destroyed inestimably precious records; though within the historic period the Spanish brigands made bonfires of the works of the refined archaic American

races, which, if spared, would have solved many a riddle of history; though Omar lit the fires of the Alexandrian baths for months with the literary treasures of the Serapeum; though the Sibylline and other mystical books of Rome and Greece were destroyed in war; though the South Indian invaders of Ceylon "heaped into piles as high as the tops of the cocoanut trees" the ollas of the Buddhists, and set them ablaze to light their victory—thus obliterating from the world's knowledge early Buddhist annals and treatises of great importance; though this hateful and senseless Vandalism has disgraced the career of most fighting nations—still, despite everything, there are extant abundant proofs of the history of mankind, and bits and scraps come to light from time to time by what science has often called "most curious coincidences." Europe has no very trustworthy history of her own vicissitudes and mutations, her successive races and their doings. What with their savage wars, the barbaric habits of the historic Goths, Huns, Franks, and other warrior nations, and the interested literary Vandalism of the shaveling priests who for centuries sat upon its intellectual life like a nightmare, an antiquity could not exist for Europe. And, having no past to record themselves, the European critics, historians and archæologists have not scrupled to deny one to others—whenever the concession excited a sacrifice of biblical prestige.

No "traces of old civilizations" we are told! And what about the Pelasgi—the direct forefathers of the Hellenes, according to Herodotus? What about the Etruscans—the race mysterious and wonderful, if any, for the historian, whose origin is the most insoluble of problems? That which is known of them only shows that could something more be known, a whole series of pre-historic civilizations might be discovered. A people described as are the Pelasgi—a highly intellectual, receptive, active people, chiefly occupied with agriculture, warlike when necessary, though preferring peace; a people who built canals as no one else, subterranean water-works, dams, walls, and Cyclopean buildings of the most astounding strength; who are even *suspected* of having been the inventors of the so-called Cadmæan or Phœnician writing characters from which all European alphabets are derived—who were they? Could they be shown by any possible means as the descendants of the biblical Peleg (*Gen.*, x. 25) their high civilization would have been thereby demonstrated, though their antiquity would still have to be dwarfed to 2,247 "B.C." And who were the Etruscans? Shall the Easterns like the Westerns be made to believe that between

the high civilizations of the Pre-Roman (and we say—pre-historic) Tursenoi of the Greeks, with their twelve great cities *known* to history, their Cyclopean buildings, their plastic and pictorial arts, and the time when they were a nomadic tribe "first descended into Italy from their northern latitudes"—only a few centuries elapsed? Shall it be still urged that the Phœnicians with their Tyre 2,750 "B.C." (a chronology accepted by *Western* history), their commerce, fleet, learning, arts, and civilization, were only a few centuries before the building of Tyre but "a small tribe of Semitic fishermen"? Or, that the Trojan war could not have been earlier than 1,184 "B.C.," and thus Magna Græcia must be fixed somewhere between the eighth and the ninth century "B.C.," and by no means thousands of years before, as was claimed by Plato and Aristotle, Homer and the Cyclic Poems, derived from, and based upon, other records millenniums older? If the Christian historian, hampered by his chronology, and the free-thinker by lack of necessary data, feel bound to stigmatize every *Non-Christian* or *Non-Western* chronology as "obviously fanciful," "purely mythical," and "not worthy of a moment's consideration," how shall one wholly dependent upon Western guides get at the truth? And if these incompetent builders of Universal History can persuade their public to accept as authoritative their chronological and ethnological reveries, why should the Eastern student, who has access to quite different—and we make bold to say, more trustworthy—materials, be expected to join in the blind belief of those who defend Western historical infallibility? He believes—on the strength of the documentary evidence, left by Yavanâchârya (Pythagoras) 607 "B.C." in India, and that of his own national "temple records," that instead of giving hundreds we may safely give thousands of years to the foundation of Cumæ and Magna Græcia, of which it was the pioneer settlement. That the civilization of the latter had already become effete when Pythagoras, the great pupil of Âryan Masters went to Croton. And, having no biblical bias to overcome, he feels persuaded that, if it took the Celtic and Gaelic tribes of the Britannicæ Insulæ, with the ready-made civilizations of Rome before their eyes, and acquaintance with that of the Phœnicians whose trade with them began a thousand years before the Christian era, and to crown all with the definite help later of the Normans and Saxons—two thousand years before they could build their mediæval cities, not even remotely comparable with those of the Romans; and it took them two thousand five hundred years to get half as civilized; then, that instead

of that hypothetical period, benevolently styled the childhood of the race, being within easy reach of the Apostles and the early Fathers, it must be relegated to an enormously earlier time. Surely if it took the barbarians of Western Europe so many centuries to develop a language and create empires, then the nomadic tribes of the "mythical" periods ought in common fairness—since they never came under the fructifying energy of that Christian influence to which we are asked to ascribe all the scientific enlightenment of this age—about ten thousand years to build their Tyres and their Veii, their Sidons and Carthages. As *other Troys* lie under the surface of the topmost one in the Troad; and other and higher civilizations were exhumed by Mariette Bey under the stratum of sand from which the archæological collections of Lepsius, Abbott, and the British Museum were taken; and six Hindû "Delhis," superposed and hidden away out of sight, formed the pedestal upon which the Mogul conqueror built the gorgeous capital whose ruins still attest the splendour of his Delhi; so when the fury of critical bigotry has quite subsided, and Western men are prepared to write history in the interest of truth alone, will the proofs be found of the cyclic law of civilization. Modern Florence lifts her beautiful form above the tomb of Etruscan Florentia, which in her turn rose upon the hidden vestiges of anterior towns. And so also Arezzo, Perugia, Lucca, and many other European sites now occupied by modern towns and cities, are based upon the relics of archaic civilizations whose period covers ages incomputable, and whose names Echo has forgotten to even whisper through the "corridors of Time."

When the Western historian has finally and unanswerably proven who were the Pelasgi, at least, and who the Etruscans, and the as mysterious Iapygians, who seem also to have had an earlier acquaintance with writing—as proved by their inscriptions—than the Phœnicians, then only may he menace the Asiatic into acceptance of his own arbitrary data and dogmas. Then also may he tauntingly ask "how it is that no appreciable trace is left of such high civilizations as are described in the past?"

"Is it supposed that the present European civilization with its offshoots . . . can be destroyed by any inundation or conflagration?" More easily than was many another civilization. Europe has neither the Titanic and Cyclopean masonry of the ancients, nor even its parchments, to preserve the records of its "existing arts and languages." Its civilization is too recent, too rapidly growing, to leave any positively

indestructible relics of either its architecture, arts or sciences. What is there in the whole of Europe that could be regarded as even approximately indestructible, without mentioning the *debâcle* of the geological upheaval that follows generally such cataclysms? Is it its ephemeral Crystal Palaces, its theatres, railways, modern fragile furniture; or its electric telegraphs, phonographs, telephones, and micrographs? While each of the former is at the mercy of fire and cyclone, the last enumerated marvels of modern science can be destroyed by a child breaking them to atoms. When we know of the destruction of the "Seven World's Wonders," of Thebes, Tyre, the Labyrinth, and the Egyptian pyramids and temples and giant palaces, as we now see, slowly crumbling into the dust of the deserts, being reduced to atoms by the hand of Time—lighter and far more merciful than any cataclysm—the question seems to us rather the outcome of modern pride than of stern reasoning. Is it your daily newspapers and periodicals, rags of a few days; your fragile books bearing the records of all your grand civilization, withal liable to become annihilated after a few meals are made on them by the white ants, that are regarded as invulnerable? And why should European civilization escape the common lot? It is from the lower classes, the units of the great masses who form the majorities in nations, that survivors will escape in greater numbers; and these know nothing of the arts, sciences, or languages except their own, and those very imperfectly. The arts and sciences are like the phoenix of old—they die but to revive. And when the question found on p. 58 of *Esoteric Buddhism* concerning "the curious rush of human progress within the last two thousand years," was first propounded, Mr. Sinnett's correspondent might have made his answer more complete by saying: "This rush, this progress, and the abnormal rapidity with which one discovery follows the other, ought to be a sign to human intuition that what you look upon in the light of 'discoveries' are merely *re-discoveries*, which, following the law of gradual progress, you make more perfect, yet in enunciating, you are not the first to explain them." We learn more easily that which we have heard about, or learnt in childhood. If, as averred, the Western nations have separated themselves from the great Âryan stock, it becomes evident that the races that first peopled Europe were inferior to the Root-Race which had the Vedas and the pre-historic Rishis. That which your far distant forefathers had heard in the secrecy of the temples was not lost. It reached their posterity, which is now simply improving upon details.

QUESTION IV.—IS THE MOON IMMERSSED IN MATTER?

No "Adept," so far as the writers know, has ever given to "Lay Chelâ" his "views of the moon," for publication. With selenography, modern science is far better acquainted than any humble Asiatic ascetic may ever hope to become. It is to be feared the speculations on pp. 104 and 105 of *Esoteric Buddhism*, besides being hazy, are somewhat premature. Therefore, it may be as well to pass on to:

QUESTION V.—ABOUT THE MINERAL MONAD.

Any English expression that correctly translates the idea given is "authorized by the Adepts." Why not? The term "monad" applies to the latent life in the mineral as much as it does to the life in the vegetable and the animal. The monogenist may take exception to the term and especially to the idea; while the polygenist, unless he be a corporealist, may not. As to the other class of scientists, they would take objection to the idea even of a human monad, and call it "unscientific." What relation does the monad bear to the atom? None whatever to the atom or molecule as in the scientific conception at present. It can neither be compared with the microscopic organism classed once among polygastric infusoria, and now regarded as vegetable and ranked among algæ; nor is it quite the *monas* of the Peripatetics. Physically or constitutionally the mineral monad differs, of course, from that of the human monad, which is neither physical, nor can its constitution be rendered by chemical symbols and elements. In short, the mineral monad is *one*—the higher animal and human monads are countless. Otherwise, how could one account for and explain *mathematically* the evolutionary and *spiral* progress of the four kingdoms? The "monad" is the combination of the last two principles in man, the sixth and the seventh, and, properly speaking, the term "human monad" applies only to the spiritual soul, not to its highest spiritual vivifying principle. But since divorced from the latter the spiritual soul could have no existence, no being, it has thus been called. The composition (if such a word, which would shock an Asiatic, seems necessary to help European conception) of Buddhi or the sixth principle is made up of the essence of what you would call matter (or perchance a centre of spiritual force) in its sixth and seventh condition or state; the animating Âtman being part of the One Life or Parabrahman. Now the monadic essence (if such a term be permitted) in the mineral,

vegetable and animal, though the same throughout the series of cycles from the lowest elemental up to the Deva kingdom, yet differs in the scale of progression.

It would be very misleading to imagine a monad as a separate entity trailing its slow way in a distinct path through the lower kingdoms, and after an incalculable series of transmigrations flowering into a human being; in short, that the monad of a Humboldt dates back to the monad of an atom of hornblende. Instead of saying a mineral monad, the more correct phraseology in physical science which differentiates every atom, would of course have been to call it *the* monad manifesting in that form of Prakriti called the mineral kingdom. Each atom or molecule of ordinary scientific hypotheses is not a particle of something, animated by a psychic something, destined to blossom as a man after æons. But it is a concrete manifestation of the Universal Energy which itself has not yet become individualized—a sequential manifestation of the one Universal Monas. The ocean does not divide into its potential and constituent drops until the sweep of the life-impulse reaches the evolutionary stage of man-birth. The tendency towards segregation into individual monads is gradual, and in the higher animals comes almost to the point. The Peripatetics applied the word Monas to the whole Cosmos, in the pantheistic sense; and the Occultists while accepting this thought for convenience' sake, distinguish the progressive stages of the evolution of the concrete from the abstract by terms of which the "mineral monad" is *one*. The term merely means that the tidal wave of spiritual evolution is passing through that arc of its circuit. The "monadic essence" begins to imperceptibly differentiate in the vegetable kingdom. As the monads are uncompounded things, as correctly defined by Leibnitz, it is the spiritual essence which vivifies them in their degrees of differentiation which constitutes properly the monad—not the atomic aggregation which is only the *vehicle* and the substance through which thrill the lower and higher degrees of intelligence. And though, as shown by those plants that are known as sensitives, there are a few among them that may be regarded as possessing that conscious perception which is called by Leibnitz *apperception*, while the rest are endowed but with that internal activity which may be called vegetable *nerve-sensation* (to call it *perception* would be wrong), yet even the vegetable monad is still *the* monad in its second degree of awakening sensation. Leibnitz came several times very near the truth, but defined the monadic evolution incorrectly and

often greatly blundered. There are *seven* kingdoms. The first group comprises three degrees of elementals, or nascent centres of forces—from the first stage of the differentiation of Mûlaprakriti to its third degree—*i.e.*, from full unconsciousness to semi-perception; the second or higher group embraces the kingdoms from vegetable to man; the mineral kingdom thus forming the central or turning-point in the degrees of the “monadic essence”—considered as an evolving energy. Three stages in the elemental side; the mineral kingdom; three stages in the objective physical side—these are the seven links of the evolutionary chain. A descent of spirit into matter, equivalent to an ascent in physical evolution; a reâscent from the deepest depths of materiality (the mineral) towards its *status quo ante*, with a corresponding dissipation of concrete organisms up to Nirvâna—the vanishing point of differentiated matter. Perhaps a simple diagram will aid us:

The line A D represents the gradual obscuration of spirit as it passes into concrete matter; the point D indicates the evolutionary position of the mineral kingdom from its incipient (*d*) to its ultimate concretion (*a*); *c*, *b*, *a*, on the left-hand side of the figure, are the three stages of elemental evolution; *i.e.*, the three successive stages passed by the spiritual impulse (through the elementals—of which little is permitted to be said) before they are imprisoned in the most concrete form of matter; and *a*, *b*, *c*, on the right-hand side, are the three stages of

organic life, vegetable, animal, human. What is total obscuration of spirit is complete perfection of its polar antithesis—matter; and this idea is conveyed in the lines A D and D A. The arrows show the line of travel of the evolutionary impulse in entering its vortex and expanding again into the subjectivity of the Absolute. The central thickest line, *d d*, is the mineral kingdom.

The monogenists have had their day. Even believers in a personal god, like Professor Agassiz, teach now that:

There is a manifest progress in the succession of beings on the surface of the earth. The progress consists in an increasing similarity of the living fauna, and among the vertebrates especially, in the increasing resemblance to man. Man is the end towards which all the animal creation has tended from the first appearance of the first palæozoic fishes.*

The "mineral monad" is not an individuality latent, but an all-pervading force which has for its present vehicle matter in its lowest and most concrete terrestrial state; in man the monad is fully developed, potential, and either passive or absolutely active, according to its vehicle, the five lower and more physical human principles. In the Deva kingdom it is fully liberated and in its highest state—but one degree lower than the One Universal Life.†

QUESTION VIII.—SHRÎ SHANKARÂCHÂRYA'S DATE.

It is always difficult to determine with precision the date of any particular event in the ancient history of India; and this difficulty is considerably enhanced by the speculations of European Orientalists, whose labours in this direction have but tended to thicken the confusion already existing in popular legends and traditions, which were often altered or modified to suit the necessities of sectarian controversy. The causes that have produced this result will be fully ascertained on examining the assumptions on which these speculations are based. The writings of many of these Orientalists are often characterized by an imperfect knowledge of Indian literature, philosophy and religion, and of Hindû traditions, and a contemptuous disregard for the opinions of Hindû writers and pandits. Very often facts and dates are taken by these writers from the writings of their predecessors or contemporaries

* *Principles of Zoology*, pp. 205, 206.

† The above diagram represents a logical section of the scheme of evolution, and not the evolutionary history of a unit of consciousness.

on the assumption that they are correct without any further investigation by themselves. Even when a writer gives a date with an expression of doubt as to its accuracy, his follower frequently quotes the same date as if it were absolutely correct. One wrong date is made to depend upon another wrong date, and one bad inference is often deduced from another inference equally unwarranted and illogical. And consequently, if the correctness of any particular date given by these writers is to be ascertained, the whole structure of Indian chronology constructed by them will have to be carefully examined. It will be convenient to enumerate some of the assumptions above referred to before proceeding to examine their opinions concerning the date of Shankarâchârya.

I. Many of these writers are not altogether free from the prejudices engendered by the pernicious doctrine, deduced from the *Bible*, whether rightly or wrongly, that this world is only six thousand years old. We do not mean to say that any one of these writers would now seriously think of defending the said doctrine. Nevertheless, it had exercised a considerable influence on the minds of Christian writers when they began to investigate the claims of Asiatic chronology. If an antiquity of five or six thousand years is assigned to any particular event connected with the ancient history of Egypt, India or China, it is certain to be rejected at once by these writers without any enquiry whatever regarding the truth of the statement.

II. They are extremely unwilling to admit that any portion of the Veda can be traced to a period anterior to the date of the Pentateuch, even when the arguments brought forward to establish the priority of the Vedas are such as would be convincing to the mind of an impartial investigator untainted by Christian prejudices. The maximum limit of Indian antiquity is, therefore, fixed for them by the Old Testament; and it is virtually assumed by them that a period between the date of the Old Testament on the one side, and the present time on the other, should necessarily be assigned to every book in the whole range of Vedic and Sanskrit literature, and to almost every event of Indian history.

III. It is often assumed without reason that every passage in the Vedas containing philosophical or metaphysical ideas must be looked upon as a subsequent interpolation, and that every book treating of a philosophical subject must be considered as having been written after the time of Buddha or after the commencement of the Christian era.

Civilization, philosophy and scientific investigation had their origin, in the opinion of these writers, within the six or seven centuries preceding the Christian era, and mankind slowly emerged, for the first time, from "the depths of animal brutality" within the last four or five thousand years.

IV. It is also assumed that Buddhism was brought into existence by Gautama Buddha. The previous existence of Buddhism, Jainism and Arhat philosophy is rejected as an absurd and ridiculous invention of the Buddhists and others, who attempted thereby to assign a very high antiquity to their own religion. In consequence of this erroneous impression every Hindû book referring to the doctrines of Buddhists is declared to have been written subsequent to the time of Gautama Buddha. For instance, Mr. Weber is of opinion that Vyâsa, the author of the *Brahma Sûtras*, wrote them in the fifth century after Christ. This is indeed a startling revelation to the majority of Hindûs.

V. Whenever several works treating of various subjects are attributed to one and the same author by Hindû writings or traditions, it is often assumed, and apparently without any reason whatever in the majority of cases, that the said works should be considered as the productions of different writers. By this process of reasoning they have discovered two Bâdarâyanas (Vyâsas), two Patanjalis, and three Vararuchis. We do not mean to say that in every case identity of name is equivalent to identity of personality. But we cannot but protest against such assumptions when they were made without any evidence to support them, merely for the purpose of supporting a foregone conclusion or establishing a favourite hypothesis.

VI. An attempt is often made by these writers to establish the chronological order of the events of ancient Indian history by means of the various stages in the growth or development of the Sanskrit language and Indian literature. The time required for this growth is often estimated in the same manner in which a geologist endeavours to fix the time required for the gradual development of the various strata composing the earth's crust. But we fail to perceive anything like a proper method in making these calculations. It will be wrong to assume that the growth of one language will require the same time as that of another within the same limits. The peculiar characteristics of the nation to whom the language belongs must be carefully taken into consideration in attempting to make any such calculation. The history of the said nation is equally important. Any one who examines

Max Müller's estimate of the so-called Sûtra, Brâhmana, Mantra and Khanda periods, will be able to perceive that no attention has been paid to these considerations. The time allotted to the growth of these four "strata" of Vedic literature is purely arbitrary.

We have enumerated these defects in the writings of European Orientalists for the purpose of showing our readers that it is not always safe to rely upon the conclusions arrived at by these writers regarding the dates of ancient Indian history.

In examining the various quotations and traditions selected by European Orientalists for the purpose of fixing Shankarâchârya's date, special care must be taken to see whether the person referred to was the very first Shankarâchârya who established the Advaiti doctrine, or one of his followers who became the Adhipatis (heads) of the various Mathams (temples) established by him and his successors. Many of the Advaiti Mathâdhipatis who succeeded him (especially of the Shringeri Matham) were men of considerable renown and were well known throughout India during their time. They are often referred to under the general name of Shankarâchârya. Consequently, any reference made to any one of these Mathâdhipatis is apt to be mistaken for reference to the first Shankarâchârya himself.

Mr. Barth, whose opinion regarding Shankara's date is quoted by "An English F.T.S." against the date assigned to that teacher in Mr. Sinnett's book on Esoteric Buddhism, does not appear to have carefully examined the subject himself. He assigns no reasons for the date given, and does not even allude to the existence of other authorities and traditions which conflict with the date adopted by him. The date which he assigns to Shankara appears in an unimportant foot-note on p. 89 of his book on *The Religions of India*, which reads thus:

Shankarâchârya is generally placed in the eighth century; perhaps we must accept the ninth rather. The best accredited tradition represents him as born on the 10th of the month "Mâdhava" in A.D. 788. Other traditions, it is true, place him in the second and fifth centuries. The author of the *Dabistan*, on the other hand, brings him as far down as the commencement of the fourteenth.

Mr. Barth is clearly wrong in saying that Shankara is generally placed in the eighth century. There are as many traditions for placing him in some century before the Christian era as for placing him in some century after the said era, and it will also be seen from what follows that in fact the evidence in favour of the former statement preponderates. It cannot be contended that the generality of Orientalists have

any definite opinions of their own on the subject under consideration. Max Müller does not appear to have ever directed his attention to this subject. Monier Williams merely copies the date given by Mr. Wilson, and Mr. Weber seems to rely upon the same authority without troubling himself with any further enquiry about the matter. Mr. Wilson is probably the only Orientalist who investigated the subject with some care and attention; and he frankly confesses that the exact period at which "he [Shankara] flourished can by no means be determined" (*Essays on the Religion of the Hindûs*, i. 201). Under such circumstances the foot-note above quoted is certainly very misleading. Mr. Barth does not inform his readers where he obtained the tradition referred to, and what reasons he has for supposing that it refers to the first Shankarâchârya, and that it is "the best accredited tradition." When the matter is still open to discussion, Mr. Barth should not have adopted any particular date if he is not prepared to support it and establish it by proper arguments. The other traditions alluded to are not intended, of course, to strengthen the authority of the tradition relied upon. But the wording of the foot-note in question seems to show that all the authorities and traditions relating to the subject are comprised therein, when in fact the most important of them are left out of consideration, as will be shown hereafter. No arguments are to be found in support of the date assigned to Shankara in the other portions of Mr. Barth's book, but there are a few isolated passages which may be taken either as inferences from the statement in question or arguments in its support, which it will be necessary to examine in this connection.

Mr. Barth has discovered some connection between the appearance of Shankara in India and the commencement of the persecution of the Buddhists, which he seems to place in the seventh and eighth centuries. On p. 89 of his book (*The Religions of India*) he speaks of "the great réaction on the offensive against Buddhism which was begun in the Deccan in the seventh and eighth centuries by the schools of Kumârila and Shankara"; and on p. 135 he states that the "disciples of Kumârila and Shankara, organized into military bands, constituted themselves the rabid defenders of orthodoxy." The force of these statements is, however, considerably weakened by the author's observations (pp. 89 and 134), regarding the absence of any traces of Buddhist persecution by Shankara in the authentic documents hitherto examined, and the absurdity of legends which represent him as exterminating Buddhists from the Himâlaya to Cape Comorin.

The association of Shankara with Kumârila in the passages above cited is highly ridiculous. It is well known to almost every Hindû that the followers of Pûrva Mîmâmsâ (Kumârila commented on the Sûtras) were the greatest and the bitterest opponents of Shankara and his doctrine, and Mr. Barth seems to be altogether ignorant of the nature of Kumârila's views and Pûrva Mîmâmsâ, and the scope and aim of Shankara's Vedântic philosophy. It is impossible to say what evidence the author has for asserting that the great réaction against the Buddhists commenced in the seventh and eighth centuries, and that Shankara was instrumental in originating it. There are some passages in his book which tend to show that this date cannot be considered as quite correct. He says (p. 135) that Buddhist persecution began even in the time of Ashoka.

Such being the case, it is indeed very surprising that the orthodox Hindûs should have kept quiet for nearly ten centuries without retaliating on their enemies. The political ascendancy gained by the Buddhists during the reign of Ashoka did not last very long; and the Hindûs had the support of very powerful kings before and after the commencement of the Christian era. Moreover, the author says, on p. 132 of his book, that Buddhism was in a state of decay in the seventh century. It is hardly to be expected that the réaction against the Buddhists would commence when their religion was already in a state of decay. No great religious teacher or reformer would waste his time and energy in demolishing a religion already in ruins. But what evidence is there to show that Shankara was ever engaged in this task? If the main object of his preaching was to evoke a réaction against Buddhism, he would no doubt have left us some writings specially intended to criticize its doctrines and expose its defects. On the other hand, he does not even allude to Buddhism in his independent works. Though he was a voluminous writer, with the exception of a few remarks on the theory advocated by *some* Buddhists regarding the nature of perception, contained in his Commentary on the *Brahma Sûtras*, there is not a single passage in the whole range of his writings regarding the Buddhists or their doctrines; and the insertion of even these few remarks in his Commentary was rendered necessary by the allusions contained in the Sûtras which he was interpreting. As, in our humble opinion, these *Brahma Sûtras* were composed by Vyâsa himself (and not by an imaginary Vyâsa of the fifth century after Christ, evolved by Mr. Weber's fancy), the allusions therein contained relate to the Buddhism

which existed previous to the date of Gautama Buddha. From these few remarks it will be clear to our readers that Shankarâchârya had nothing to do with Buddhist persecution. We may here quote a few passages from Mr. Wilson's preface to the first edition of his Sanskrit Dictionary in support of our remarks. He writes as follows regarding Shankara's connection with the persecution of the Buddhists:

Although the popular belief attributes the origin of the Bauddha persecution to Shankarâchârya, yet in this case we have some reason to distrust its accuracy. Opposed to it we have the mild character of the reformer, who is described as uniformly gentle and tolerant; and, speaking from my own limited reading in Vedânta works, and the more satisfactory testimony of Ram Mohun Roy, which he permits me to adduce, it does not appear that any traces of his being instrumental to any persecution are to be found in his own writings, all of which are extant, and the object of which is by no means the correction of the Bauddha or any other schism, but the refutation of all other doctrines besides his own, and the reformation or re-establishment of the fourth religious order.

Further on he observes that:

It is a popular error to ascribe to him [Shankara] the work of persecution; he does not appear at all occupied in that odious task, nor is he engaged in particular controversy with any of the Bauddhas.

From the foregoing observations it will be seen that Shankara's date cannot be determined by the time of the commencement of the Buddhist persecution, even if it were possible to ascertain the said period.

Mr. Barth seems to have discovered some connection between the philosophical systems of Shankara, Râmânuja and Ânandatirtha, and the Arabian merchants who came to India in the first centuries of the Hejira, and he is no doubt fully entitled to any credit that may be given him for the originality of his discovery. This mysterious and occult connection between Advaita philosophy and Arabian commerce is pointed out in his book (p. 212), and it may have some bearing on the present question, if it is anything more than a figment of his fancy. The only reason given by him in support of his theory is, however, in my humble opinion, worthless. The Hindûs had a prominent example of a grand religious movement under the guidance of a single teacher in the life of Buddha, and it was not necessary for them to imitate the adventures of the Arabian prophet. There is but one other passage in Mr. Barth's book which has some reference to Shankara's date. He writes as follows (p. 207):

The Shiva, for instance, who is invoked at the commencement of the drama of *Sakuntala*, who is at once God, priest and offering, and whose body is the universe,

is a Vedāntic idea. This testimony appears to be forgotten when it is maintained, as is sometimes done, that the whole sectarian Vedāntism commences with Shankara.

But this testimony appears to be equally forgotten when it is maintained, as is sometimes done by Orientalists like Mr. Barth, that Shankara lived in some century after the author of *Sakuntala*.

From the foregoing remarks it will be apparent that Mr. Barth's opinion regarding Shankara's date is very unsatisfactory. As Mr. Wilson seems to have examined the subject with some care and attention, we must now advert to his opinion and see how far it is based on proper evidence. In attempting to fix Amara Sinha's date (which attempt ultimately ended in a miserable failure), he had to ascertain the period when Shankara lived. Consequently his remarks concerning the said period appear in his preface to the first edition of his Sanskrit Dictionary. We shall now reproduce here such passages from this preface as are connected with the subject under consideration, and comment upon them. Mr. Wilson writes as follows:

The birth of Shankara presents the same discordance as every other remarkable incident among the Hindūs. The Kadali [it ought to be Kūdali] Brāhmans, who form an establishment following and teaching his system, assert his appearance about 2,000 years since; some accounts place him about the beginning of the Christian era, others in the third or fourth century after; a manuscript history of the kings of Konga, in Colonel Mackenzie's Collection, makes him contemporary with Tiru Vikrama Deva Chakravarti, sovereign of Skandapura in the Dekkan, A.D. 178; at Shringeri, on the edge of the Western Ghauts, and now in the Mysore Territory, at which place he is said to have founded a College that still exists, and assumes the supreme control of the Smārta Brāhmans of the Peninsula, an antiquity of 1,600 years is attributed to him, and common tradition makes him about 1,200 years old. The *Bhoja Prabandha* enumerates Shankara among its worthies, and as contemporary with that prince; his antiquity will then be between eight and nine centuries. The followers of Mādhvāchārya in Tuluva seem to have attempted to reconcile these contradictory accounts by supposing him to have been born three times; first at Sivuli in Tuluva about 1,500 years ago, again in Malabar some centuries later, and finally at Padukachaytra in Tuluva, no more than 600 years since; the latter assertion being intended evidently to do honour to their own founder, whose date that was, by enabling him to triumph over Shankara in a supposititious controversy. The Vaishnava Brāhmans of Madura say that Shankara appeared in the ninth century of Salivāhana, or tenth of our era. Dr. Taylor thinks that, if we allow him about 900 years, we shall not be far from the truth, and Mr. Colebrooke is inclined to give him an antiquity of about 1,000 years. This last is the age which my friend Ram Mohun Roy, a diligent student of Shankara's works, and philosophical teacher of his doctrines, is disposed to concur in, and he infers that "from a calculation of the spiritual generations of the followers of Shankara Svāmi from

his time up to this date, he seems to have lived between the seventh and eighth centuries of the Christian era," a distance of time agreeing with the statements made to Dr. Buchanan in his journey through Shankara's native country, Malabar, and in union with the assertion of the *Kerala Utpatti*, a work giving an historical and statistical account of the same province, and which, according to Mr. Duncan's citation of it, mentions the regulations of the castes of Malabar by this philosopher to have been effected about 1,000 years before 1798. At the same time, it must be observed, that a manuscript translation of the same work in Colonel Mackenzie's possession, states Shankarâchârya to have been born about the middle of the fifth century, or between thirteen or fourteen hundred years ago, differing in this respect from Mr. Duncan's statement—a difference of the less importance, as the manuscript in question, either from defects in the original or translation, presents many palpable errors, and cannot consequently be depended upon. The weight of authority therefore is altogether in favour of an antiquity of about ten centuries, and I am disposed to adopt this estimate of Shankara's date, and to place him in the end of the eighth and beginning of the ninth century of the Christian era.

We will add a few more authorities to Mr. Wilson's list before proceeding to comment on the foregoing passage.

In a work called *The Biographical Sketches of Eminent Hindû Authors*, published at Bombay in 1860 by Janardan Ramchenderjee, it is stated that Shankara lived 2,500 years ago, and, in the opinion of some people, 2,200 years ago. The records of the Kumbakonum Matham give a list of nearly sixty-six Mathâdhipatis from Shankara down to the present time, and show that he lived more than 2,000 years ago.

The Kûdali Matham referred to by Mr. Wilson, which is a branch of the Shringeri Matham, gives the same date as the latter Matham, their traditions being identical. Their calculation can safely be relied upon as far as it is supported by the dates given on the places of Samâdhi (something like a tomb) of the successive Gurus of the Shringeri Matham, and it leads us to the commencement of the Christian era.

No definite information is given by Mr. Wilson regarding the nature, origin, or reliability of the accounts which place Shankara in the third or fourth century of the Christian era or at its commencement; nor does it clearly appear that the history of the Kings of Konga referred to unmistakably alludes to the very first Shankarâchârya. These traditions are evidently opposed to the conclusion arrived at by Mr. Wilson, and it does not appear on what grounds their testimony is discredited by him. Mr. Wilson is clearly wrong in stating that an antiquity of 1,600 years is attributed to Shankara by the Shringeri Matham. We have already referred to the account of the Shringeri Matham, and it is precisely similar to the account given by the Kûdali

Brâhmans. We have ascertained that it is so from the agent of the Shringeri Matham at Madras, who has recently published the list of teachers preserved at the said Matham with the dates assigned to them. And further, we are unable to see which "common tradition" makes Shankara "about 1,200 years old." As far as our knowledge goes there is no such common tradition in India. The majority of people in Southern India have, up to this time, been relying on the Shringeri account, and in Northern India there seems to be no common tradition. We have but a mass of contradictory accounts.

It is indeed surprising that an Orientalist of Mr. Wilson's pretensions should confound the *poet* named Shankara and mentioned in *Bhoja Prabandha* with the great Advaitî teacher. No Hindû would ever commit such a ridiculous mistake. We are astonished to find some of these European Orientalists quoting now and then some of the statements contained in such books as *Bhoja Prabandha*, *Kathâ Sarit Sâgara*, *Râja Taranginî* and *Panchatantra*, as if they were historical works. In some other part of his preface Mr. Wilson himself says that this *Bhoja Prabandha* is altogether untrustworthy, as some of the statements contained therein did not harmonize with his theory about Amara Sinha's date; but now he *misquotes* its statements for the purpose of supporting his conclusion regarding Shankara's date. Surely, consistency is not one of the prominent characteristics of the writings of the majority of European Orientalists. The person mentioned in *Bhoja Prabandha* is always spoken of under the name of Shankara *Kavi* (poet), and he is nowhere called Shankara *Âchârya* (teacher), and the Advaitî teacher is never mentioned in any Hindû work under the appellation of Shankara *Kavi*.

It is unnecessary for us to say anything about the Mâdhva traditions or the opinion of the Vaishnava Brâhmans of Madura regarding Shankara's date. It is, in our humble opinion, hopeless to expect anything but falsehood regarding Shankara's history and his philosophy from the Mâhdvas and the Vaishnavas. They are always very anxious to show to the world at large that their doctrines existed before the time of Shankara, and that the Advaitî doctrine was a deviation from their preëxisting orthodox Hindûism. And consequently they have assigned to him an antiquity of less than 1,500 years.

It does not appear why Dr. Taylor thinks that he can allow Shankara about 900 years, or on what grounds Mr. Colebrooke is inclined to give him an antiquity of about 1,000 years. No reliance can be placed on

such statements before the reasons assigned therefor are thoroughly sifted.

Fortunately, Mr. Wilson gives us the reason for Ram Mohun Roy's opinion. We are inclined to believe that Ram Mohun Roy's calculation was made with reference to the Shringeri list of Teachers or Gurus, as that was the only list published up to this time; and as no other Matham, except perhaps the Kumbakonum Matham, has a list of Gurus coming up to the present time in uninterrupted succession. There is no necessity for depending upon his calculation (which from its very nature cannot be anything more than mere guess-work) when the old list preserved at Shringeri contains the dates assigned to the various teachers. As these dates have not been published up to the present time, and as Ram Mohun Roy had merely a string of names before him, he was obliged to ascertain Shankara's date by assigning a certain number of years on the average to every teacher. Consequently, his opinion is of no importance whatever when we have the statement of the Shringeri Matham which, as we have already said, places Shankara some centuries before the Christian era. The same remarks will apply to the calculation in question even if it were made on the basis of the number of teachers contained in the list preserved in the Kumbakonum Matham.

Very little importance can be attached to the oral evidence adduced by some unknown persons before Dr. Buchanan in his travels through Malabar; and we have only to consider the inferences that may be drawn from the accounts contained in *Kerala Utpatti*. The various manuscript copies of this work seem to differ in the date they assign to Shankarâchârya; even if the case were otherwise, we cannot place any reliance upon this work, for the following among other reasons:

I. It is a well-known fact that the customs of Malabar are very peculiar. Their defenders have been, consequently, pointing to some great Rishi or some great philosopher of ancient India as their legislator. Some of them affirm (probably the majority) that Parashurâma brought into existence some of these customs and left a special Smriti for the guidance of the people of Malabar; others say that it was Shankarâchârya who sanctioned these peculiar customs. It is not very difficult to perceive why these two persons were selected by them. According to the Hindû Purânas, Parashurâma lived in Malabar for some time, and according to Hindû traditions Shankara was born in that country. But it is extremely doubtful whether either of them had

anything to do with the peculiar customs of the said country. There is no allusion whatever to any of these customs in Shankara's works. He seems to have devoted his whole attention to religious reform, and it is very improbable that he should have ever directed his attention to the local customs of Malabar. While attempting to revive the philosophy of the ancient Rishis, it is not likely that he would have sanctioned the customs of Malabar, which are at variance with the rules laid down in the Smritis of those very Rishis; and as far as our knowledge goes, he left no written regulations regarding the castes of Malabar.

II. The statements contained in *Kerala Utpatti* are opposed to the account of Shankara's life given in almost all the Shankara Vijayams (Biographies of Shankara) examined up to this time—viz., Vidyâranya's *Shankara Vijayam*, Chitsukhâchârya's *Shankara Vijayavilâsam*, *Brihad Shankara Vijayam*, etc. According to the account contained in these works, Shankara left Malabar in his eighth year, and returned to his native village when his mother was on her death-bed, and on that occasion he remained there only for a few days. It is difficult to see at what period of his lifetime he was engaged in making regulations for the castes of Malabar.

III. The work under consideration represents Malabar as the seat of Bhattapâda's triumphs over the Buddhists, and says that this teacher established himself in Malabar and expelled the Buddhists from that country. This statement alone will be sufficient to show to our readers the fictitious character of the account contained in this book. According to every other Hindû work, this great teacher of Pûrva Mîmâmsâ was born in Northern India; almost all his famous disciples and followers were living in that part of the country, and according to Vidyâranya's account he died at Allahabad.

For the foregoing reasons we cannot place any reliance upon this account of Malabar.

From an examination of the traditions and other accounts referred to above, Mr. Wilson comes to the conclusion that Shankarâchârya lived in the end of the eighth and the beginning of the ninth century of the Christian era. The accounts of the Shriingeri, Kûdali and Kumbakonum Mathams, and the traditions current in the Bombay Presidency, as shown in the biographical sketches published at Bombay, place Shankara in some century before the Christian era. On the other hand, *Kerala Utpatti*, the information obtained by Dr. Buchanan in his travels through Malabar, and the opinions expressed by Dr. Taylor

and Mr. Colebrooke, concur in assigning to him an antiquity of about 1,000 years. The remaining traditions referred to by Mr. Wilson are as much opposed to his opinion as to the conclusion that Shankara lived before Christ. We shall now leave it to our readers to say whether, under such circumstances, Mr. Wilson is justified in asserting that "the weight of authority is altogether in favour" of his theory.

We have already referred to the writings of almost all the European Orientalists who expressed an opinion upon the subject under discussion; and we need hardly say that Shankara's date is yet to be ascertained.

We are obliged to comment at length on the opinions of European Orientalists regarding Shankara's date, as there will be no probability of any attention being paid to the opinion of Indian and Tibetan initiates when it is generally believed that the question has been finally settled by European Sanskritists. The Adepts referred to by "An English F.T.S." are certainly in a position to clear up some of the problems in Indian religious history. But there is very little chance of their opinions being accepted by the general public under present circumstances, unless they are supported by such evidence as is within the reach of the outside world. As it is not always possible to procure such evidence, there is very little use in publishing the information which is in their possession until the public are willing to recognize and admit the antiquity and trustworthiness of their traditions, the extent of their powers, and the vastness of their knowledge. In the absence of such proof as is above indicated, there is every likelihood of their opinions being rejected as absurd and untenable; their motives will no doubt be questioned, and some people may be tempted to deny even the fact of their existence. It is often asked by Hindûs as well as by Englishmen why these Adepts are so very unwilling to publish some portion, at least, of the information they possess regarding the truths of physical science. But, in doing so, they do not seem to perceive the difference between the method by which they obtain their knowledge and the process of modern scientific investigation by which the facts of Nature are ascertained and its laws are discovered. Unless an Adept can prove his conclusions by the same kind of reasoning as is adopted by the modern scientist they remain undemonstrated to the outside world. It is, of course, impossible for him to develop in a considerable number of human beings such faculties as would enable them to perceive their truth; and it is not always practicable to estab-

lish them by the ordinary scientific method unless all the facts and laws on which his demonstration is to be based have already been ascertained by modern science. No Adept can be expected to anticipate the discoveries of the next four or five centuries, and prove some grand scientific truth to the entire satisfaction of the educated public after having discovered every fact and law of Nature required for the said purpose by such process of reasoning as would be accepted by them. They have to encounter similar difficulties in giving any information regarding the events of the ancient history of India.

However, before giving the exact date assigned to Shankarâchârya by the Indian and Tibetan initiates, we shall indicate a few circumstances by which his date may be approximately determined. It is our humble opinion that the Shankara Vijayams hitherto published can be relied upon as far as they are consistent with each other regarding the general outlines of Shankara's life. We cannot, however, place any reliance whatever upon Ânandagiri's *Shankara Vijaya* published at Calcutta. The Calcutta edition not only differs in some very material points from the manuscript copies of the same work found in Southern India, but is opposed to every other Shankara Vijayam hitherto examined. It is quite clear from its style and some of the statements contained therein, that it was not the production of Ânandagiri, one of the four chief disciples of Shankara and the commentator on his Upanishada Bhâshyam. For instance, it represents Shankara as the author of a certain verse which is to be found in Vidyâranya's *Adhikâranaratnamâla*, written in the fourteenth century. It represents Shankara as giving orders to two of his disciples to preach the Vishishthâdvaitî and the Dvaitî doctrines, which are directly opposed to his own doctrine. The book under consideration says that Shankara went to conquer Mandanamishra in debate, followed by Sureshvarâchârya, though Mandanamishra assumed the latter name at the time of initiation. It is unnecessary for us here to point out all the blunders and absurdities of this book. It will be sufficient to say that in our opinion it was not written by Ânandagiri, and that it was the production of an unknown author who does not appear to have been even tolerably well acquainted with the history of the Advaitî doctrine. Vidyâranya's (otherwise Sâyanâchârya, the great commentator of the Vedas) *Shankara Vijaya* is decidedly the most reliable source of information as regards the main features of Shankara's biography. Its authorship has been universally accepted, and the information contained therein was derived

by its author, as may be seen from his own statements, from certain old biographies of Shankara existing at the time of its composition. Taking into consideration the author's vast knowledge and information, and the opportunities he had for collecting materials for his work when he was the head of the Shringeri Matham, there is every reason to believe that he had embodied in his work the most reliable information he could obtain. Mr. Wilson, however, says that the book in question is "much too poetical and legendary" to be acknowledged as a great authority. We admit that the style is highly poetical, but we deny that the work is legendary. Mr. Wilson is not justified in characterizing it as such on account of its description of some of the wonderful phenomena shown by Shankara. Probably the learned Orientalist would not be inclined to consider the biblical account of Christ in the same light. It is not the peculiar privilege of Christianity to have a miracle-worker for its first propagator. In the following observations we shall take such facts as are required from this work.

It is generally believed that a person named Govinda Yogî was Shankara's Guru, but it is not generally known that this Yogî was in fact Patanjali—the great author of the *Mahābhāshya* and the *Yoga Sūtras*—under a new name. A tradition current in Southern India represents him as one of the Chelās of Patanjali, but it is very doubtful if this tradition has anything like a proper foundation. However, it is quite clear from the 94th, 95th, 96th, and 97th verses of the 5th chapter of Vidyāranya's *Shankara Vijayam* that Govinda Yogî and Patanjali were identical. According to the immemorial custom observed amongst initiates, Patanjali assumed the name of Govinda Yogî at the time of his initiation by Gaudapāda. It cannot be contended that Vidyāranya represented Patanjali as Shankara's Guru merely for the purpose of assigning some importance to Shankara and his teaching. Shankara is looked upon as a far greater man than Patanjali by the Advaitis, and nothing can be added to Shankara's reputation by Vidyāranya's assertion. Moreover, Patanjali's views are not altogether identical with Shankara's views; it may be seen from Shankara's writings that he attached no importance whatever to the practices of Hatha Yoga regarding which Patanjali composed his *Yoga Sūtras*. Under such circumstances, if Vidyāranya had the option of selecting a Guru for Shankara, he would no doubt have represented Vyāsa himself (who is supposed to be still living) as his Guru. We see no reason therefore to doubt the correctness of the statement under examination. Therefore

as Shankara was Patanjali's Chelâ, and as Gaudapâda was his Guru, his date will enable us to fix the dates of Shankara and Gaudapâda. We may here point out to our readers a mistake that appears on p. 148 of Mr. Sinnett's book on Esoteric Buddhism as regards the latter personage. He is there represented as Shankara's Guru; Mr. Sinnett was informed, we believe, that he was Shankara's Paramaguru, and not having properly understood the meaning of this expression, Mr. Sinnett wrote that he was Shankara's Guru.

It is generally admitted by Orientalists that Patanjali lived before the commencement of the Christian era. Mr. Barth places him in the second century before the Christian era, accepting Goldstücker's opinion, and Monier Williams does the same thing. Weber, who seems to have carefully examined the opinions of all the other Orientalists who have written upon the subject, comes to the conclusion that:

We must for the present rest satisfied with placing the date of the composition of the Bhâshya between 140 B.C. and A.D. 60, a result which considering the wretched state of the chronology of Indian Liturgy generally, is, despite its indefiniteness, of no mean importance.

And yet even this date rests upon inferences drawn from one or two unimportant expressions contained in Patanjali's *Mahâbhâshya*. It is always dangerous to draw such inferences, and especially so when it is known that, according to the tradition current amongst Hindû grammarians, some portions of *Mahâbhâshya* were lost, the gaps being filled up by subsequent writers. Even supposing that we should consider the expression quoted as written by Patanjali himself, there is nothing in those expressions which would enable us to fix the writer's date. For instance, the connection between the expression "Arunad Yavanah Sâketam" and the expedition of Menander against Ayodhya between 144 B.C. and 120 B.C., relied upon by Goldstücker, is merely imaginary. There is nothing in the expression to show that the allusion contained therein points necessarily to Menander's expedition. We believe that Patanjali is referring to the expedition of Yavanas against Ayodhya during the lifetime of Sagara's father described in *Harivamsha*. This expedition occurred long before Râma's time, and there is nothing to connect it with Menander. Goldstücker's inference is based upon the assumption that there was no other Yavana expedition against Ayodhya known to Patanjali, and it will be easily seen from *Harivamsha* (written by Vyâsa) that the said assumption is unwarranted. Consequently the whole theory constructed by Goldstücker on this weak foundation falls

to the ground. No valid inferences can be drawn from the mere names of kings contained in *Mahābhāṣya*, even if they are traced to Patanjali himself, as there would be several kings in the same dynasty bearing the same name. From the foregoing remarks it will be clear that we cannot fix, as Weber has done, 140 B.C. as the maximum limit of antiquity that can be assigned to Patanjali. It is now necessary to see whether any other such limit has been ascertained by Orientalists. As Pāṇini's date still remains undetermined, the limit cannot be fixed with reference to his date. But it is assumed by some Orientalists that Pāṇini must have lived at some time subsequent to Alexander's invasion, from the fact that Pāṇini explains in his Grammar the formation of the word "Yavanāni." We are very sorry that European Orientalists have taken the pains to construct theories upon this basis without ascertaining the meaning assigned to the word "Yavana," and the time when the Hindūs first became acquainted with the Greeks. It is unreasonable to assume without proof that this acquaintance commenced at the time of Alexander's invasion. On the other hand, there are very good reasons for believing that the Greeks were known to the Hindūs long before this event. Pythagoras visited India, according to the traditions current amongst Indian initiates, and he is alluded to in Indian astrological works under the name of Yavanâchârya. Moreover, it is not quite certain that the word Yavana was strictly confined to the Greeks by the ancient Hindû writers. Probably it was originally applied to the Egyptians and the Ethiopians; it was probably extended first to the Alexandrian Greeks, and subsequently to the Greeks, Persians, and Arabians. Besides the Yavana invasion of Ayodhya described in *Harivamsha*, there was another subsequent expedition to India by Kâla Yavana (Black Yavana) during Krishna's lifetime, described in the same work. This expedition was probably undertaken by the Ethiopians. Anyhow, there are no reasons whatever, as far as we can see, for asserting that Hindû writers began to use the word Yavana after Alexander's invasion. We can attach no importance whatever to any inferences that may be drawn regarding the dates of Pāṇini and Katyâyana (both of them lived before Patanjali) from the statements contained in *Kathâ Sarit Sâgara*, which is nothing more than a mere collection of fables. It is now seen by Orientalists that no proper conclusions can be drawn regarding the dates of Pāṇini and Katyâyana from the statements made by Hiuan Thsang, and we need not, therefore, say anything here regarding the said statements. Consequently

N

the dates of Pânini and Katyâyana still remain undetermined by European Orientalists. Goldstücker is probably correct in his conclusion that Pânini lived before Buddha, and the Buddhists' accounts agree with the traditions of the initiates in asserting that Katyâyana was a contemporary of Buddha. From the fact that Patanjali must have composed his *Mahābhāshyam* after the composition of Pânini's *Sûtras* and Katyâyana's *Vārttika*, we can only infer that it was written after Buddha's birth. But there are a few considerations which may help us in coming to the conclusion that Patanjali must have lived about the year 500 B.C.; Max Müller fixed the *Sûtra* period between 500 B.C. and 600 B.C. We agree with him in supposing that the period probably ended with 500 B.C., though it is uncertain how far it extended into the depths of Indian antiquity. Patanjali was the author of the *Yoga Sûtras*, and this fact has not been doubted by any Hindû writer up to this time. Mr. Weber *thinks*, however, that the author of the *Yoga Sûtras* might be a different man from the author of the *Mahābhāshya*, though he does not venture to assign any reason for his supposition. We very much doubt if any European Orientalist can ever find out the connection between the first Anhika of the *Mahābhāshya* and the real secrets of Hatha Yoga contained in the *Yoga Sûtras*. No one but an initiate can understand the full significance of the said Anhika; and the "Eternity of the Logos" or Shabda is one of the principal doctrines of the Gymnosophists of India, who were generally Hatha Yogîs. In the opinion of Hindû writers and pandits, Patanjali was the author of three works, viz., *Mahābhāshya*, *Yoga Sûtras*, and a book on medicine and anatomy; and there is not the slightest reason for questioning the correctness of this opinion. We must, therefore, place Patanjali in the *Sûtra* period, and this conclusion is confirmed by the traditions of the Indian initiates. As Shankarâchârya was a contemporary of Patanjali (being his Chelâ) he must have lived about the same time. We have shown that there are no reasons for placing Shankara in the eighth or ninth century after Christ, as some of the European Orientalists have done. We have further shown that Shankara was Patanjali's Chelâ, and that his date should be ascertained with reference to Patanjali's date. We have also shown that neither the year 140 B.C. nor the date of Alexander's invasion can be accepted as the maximum limit of antiquity that can be assigned to him, and lastly we have pointed out a few circumstances which will justify us in expressing an opinion that Patanjali and his Chelâ Shankara belonged to the *Sûtra* period.

We may, perhaps, now venture to place before the public the exact date assigned to Shankarâchârya by Tibetan and Indian initiates. According to the historical information in their possession he was born in the year 510 B.C. (fifty-one years and two months after the date of Buddha's Nirvâna), and we believe that satisfactory evidence in support of this date can be obtained in India if the inscriptions at Konjeveram, Shringeri, Jagannâth, Benares, Kashmîr, and various other places visited by Shankara, are properly deciphered. Shankara built Konjeveram, which is considered as one of the most ancient towns in Southern India; and it may be possible to ascertain the time of its construction if proper enquiries are made. But even the evidence now brought before the public supports the opinion of the initiates above indicated. As Gaudapâda was Shankarâchârya's Guru's Guru, his date entirely depends on Shankara's date; and there is every reason to suppose that he lived before Buddha.

QUESTION VI.—"HISTORICAL DIFFICULTY"—WHY?

It is asked whether there may not be "some confusion" in the letter quoted on p. 52 of *Esoteric Buddhism* regarding "old Greeks and Romans said to have been Atlanteans." The answer is—None whatever. The word "Atlantean" was a generic name. The objection to having it applied to the old Greeks and Romans on the ground that they were Âryans, "their language being intermediate between Sanskrit and modern European dialects," is worthless. With equal reason might a future sixth-race scholar, who had never heard of the (possible) submergence of a portion of European Turkey, object to Turks from the Bosphorus being referred to as a remnant of the Europeans. "The Turks are surely Semites," he might say 12,000 years hence, and "their language is intermediate between Arabic and our modern sixth-race dialects."*

The "historical difficulty" arises from a certain authoritative statement made by Orientalists on philological grounds. Professor Max Müller has brilliantly demonstrated that Sanskrit was the "elder sister"—by no means the mother—of all the modern languages. As to that "mother," it is *conjectured* by himself and colleagues to be a "*now extinct tongue, spoken probably by the nascent Âryan race.*" When

* This is not to be construed to mean that 12,000 years hence there will be still any man of the sixth Race, or that the fifth will be submerged. The figures are given simply for the sake of a better comparison with the present objection in the case of the Greeks and Atlantis.

asked what was this language, the Western voice answers: "Who can tell?" When, "during what geological periods did this nascent race flourish?"—the same impressive voice replies: "In pre-historic ages, the duration of which no one can now determine." Yet it must have been Sanskrit, however barbarous and unpolished, since "the ancestors of the Greeks, the Italians, Slavonians, Germans and Kelts" were living within the "same precincts" with that nascent race, and the testimony borne by language has enabled the philologist to trace the "language of the gods" in the speech of every Âryan nation. Meanwhile it is affirmed by these same Orientalists that classical Sanskrit has its origin at the very threshold of the Christian era; while Vedic Sanskrit is allowed an antiquity of hardly 3,000 years (if so much) before that time.

Now, Atlantis, on the statement of the "Adepts," sank over 9,000 years before the Christian era.* How then can one maintain that the "old Greeks and Romans" were Atlanteans? How can that be, since both nations are Âryans, and the genesis of their languages is Sanskrit? Moreover, the Western scholars *know* that the Greek and Latin languages were formed within historical periods, the Greeks and Latins themselves having no existence as nations 11,000 B.C. Surely they who advance such a proposition do not realize how very *unscientific* is their statement!

Such are the criticisms passed, such the "historical difficulty." The culprits arraigned are fully alive to their perilous situation; nevertheless, they maintain the statement. The only thing which may perhaps

* The position recently taken up by Mr. Gerald Massey in *Light* that the story of Atlantis is not a geological event but an ancient astronomical myth, is rather imprudent. Mr. Massey, notwithstanding his rare intuitional faculties and great learning, is one of those writers in whom the intensity of research bent into one direction has biased his otherwise clear understanding. Because Hercules is now a constellation it does not follow that there never was a hero of this name. Because the Noachian "Universal" Deluge is now proved a fiction based upon geological and geographical ignorance, it does not, therefore, appear that there were not many local deluges in pre-historic ages. The ancients connected every terrestrial event with the celestial bodies. They traced the history of their great deified heroes and memorialized it in stellar configurations as often as they personified pure myths, anthropomorphizing objects in Nature. One has to learn the difference between the two modes before attempting to classify them under one nomenclature. An earthquake has just engulfed over 80,000 people (87,903) in Sunda Straits. These were mostly Malays, savages with whom but few had relations, and the dire event will soon be forgotten. Had a portion of Great Britain been thus swept away instead, the whole world would have been in commotion, and yet, a few thousand years hence, even such an event would have passed out of man's memory; and a future Gerald Massey may be found speculating upon the astronomical character and signification of the Isles of Wight, Jersey, or Man, arguing, perhaps, that this latter island had not contained a real living race of *men* but "belonged to astronomical mythology," was a "man submerged in celestial waters." If the legend of the lost Atlantis is only "like those of Airyâna-Vaêjo and Jambu-dvîpa," it is terrestrial enough, and therefore "the mythological origin of the Deluge legend" is so far an open question. We claim that it is *not* "indubitably demonstrated," however clever the theoretical demonstration.

here be objected to is, that the names of the two nations are incorrectly used. It may be argued that to refer to the remote ancestors and their descendants equally as "Greeks and Romans," is an anachronism as marked as would be the calling of the ancient Keltic Gauls, or the Insubres, Frenchmen. As a matter of fact this is true. But, besides the very plausible excuse that the names used were embodied in a private letter, written as usual in great haste, which was hardly worthy of the honour of being quoted *verbatim* with all its imperfections, there may perhaps exist still weightier objections to calling the said people by any other name. One misnomer is as good as another; and to refer to old Greeks and Romans in a private letter as the old Hellenes from Hellas or Magna Græcia, and the Latins as from Latium, would have been, besides looking pedantic, just as incorrect as the use of the appellation noted, though it may have *sounded*, perchance, more "historical." The truth is that, like the ancestors of nearly all the Indo-Europeans (or shall we say Indo-Germanic Japhetidæ?), the Greek and Roman sub-races mentioned have to be traced much farther back. Their origin must be carried far into the mists of that "pre-historic" period, that *mythical* age which inspires the modern historian with such a feeling of squeamishness that anything creeping out of its abysmal depths is sure to be instantly dismissed as a deceptive phantom, the *mythos* of an idle tale, or a *later fable unworthy of serious notice*. The Atlantean "old Greeks" could not be designated even as the Autochthones—a convenient term used to dispose of the origin of any people whose ancestry cannot be traced, and which, at any rate with the Hellenes, meant certainly more than simply "soil-born," or primitive aborigines; and yet the so-called *fable* of Deukalion and Pyrrha is surely no more incredible or marvellous than that of Adam and Eve—a fable that hardly a hundred years ago no one would have dared or even thought to question. And in its esoteric significance the Greek tradition is possibly more truly historical than many a so-called *historical* event during the period of the Olympiades, though both Hesiod and Homer may have failed to record the former in their epics. Nor could the Romans be referred to as the Umbro-Sabellians, nor even as the Itali. Peradventure, had the historians learnt something more than they have of the Italian "Autochthones"—the Iapygians—one might have given the "old Romans" the latter name. But then there would be again that other difficulty: history *knows* that the Latin invaders drove before them, and finally cooped up, this mysterious and

miserable race among the clefts of the Calabrian rocks, thus showing the absence of any race affinity between the two. Moreover, Western archæologists keep to their own counsel, and will accept of no conjectures but their own. And since they have failed to make anything out of the undecipherable inscriptions in an unknown tongue and mysterious characters on the Iapygian monuments, and so for years have pronounced them unguessable, he who would presume to meddle where the doctors muddle would be likely to be reminded of the Arab proverb about proffered advice. Thus, it seems hardly possible to designate "the old Greeks and Romans" by their legitimate, true name, so as to at once satisfy the "historians" and keep on the fair side of truth and fact. However, since in the "Replies" that precede "science" had to be repeatedly shocked by most unscientific propositions, and that before this series is closed many a difficulty, philological and archæological as well as historical, will have to be unavoidably created—it may be just as wise to uncover the occult batteries at once and have over with it.

Well, then, the "Adepts" deny most emphatically to Western science any knowledge whatever of the growth and development of the Indo-Aryan race which, "at the very dawn of history," they have espied in its "patriarchal simplicity" on the banks of the Oxus. Before our proposition concerning "the old Greeks and Romans" can be repudiated or even controverted, Western Orientalists will have to know more than they do about the antiquity of that race and the Âryan language; and they will have to account for those numberless gaps in history which no hypotheses of theirs seem able to fill up. Notwithstanding their present profound ignorance with regard to the early ancestry of the Indo-European nations, and though no historian has yet ventured to assign even a remotely approximate date to the separation of the Âryan nations and the origins of the Sanskrit language, they hardly show the modesty that might, under these circumstances, be expected from them. Placing as they do that great separation of the races at the first "dawn of traditional history," with the Vedic age as "the background of the whole Indian world" (of which confessedly they know nothing), they will, nevertheless, calmly assign a modern date to any of the Rig Vedic oldest songs, on its "internal evidence"; and in doing this, they show as little hesitation as Mr. Fergusson when ascribing a Post-Christian age to the most ancient rock-cut temple in India, merely on its "external form." As for their unseemly quarrels,

mutual recriminations, and personalities over questions of scholarship, the less said the better.

"The evidence of language is irrefragable," as the great Oxford Sanskritist says. To which he is answered: "Provided it does not clash with historical facts and ethnology." It may be—no doubt it is, as far as *his* knowledge goes—"the only evidence worth listening to with regard to ante-historical periods"; but when something of these alleged "pre-historical periods" comes to be known, and when what we think *we* know of certain supposed pre-historic nations is found diametrically opposed to *his* "evidence of language," the "Adepts" may be, perhaps, permitted to keep to their own views and opinions, even though they differ with those of the greatest living philologist. The study of language is but a part—though, we admit, a fundamental part—of true philology. To be complete, the latter has, as correctly argued by Böckh, to be almost synonymous with history. We gladly concede the right to the Western philologist, who has to work in the total absence of any historical data, to rely upon comparative grammar, and take the identification of roots lying at the foundation of words of those languages he is familiar with, or may know of, and put it forward as the result of his study, and the only available evidence. But we would like to see the same right conceded by him to the student of other races; even though these be *inferior* to the European races, in the opinion of the paramount West; for it is barely possible that, proceeding on other lines, and having reduced his knowledge to a system which precludes hypothesis and simple affirmation, the Eastern student has preserved a perfectly authentic record (for him) of those periods which his opponent regards as *ante*-historical. The bare fact that, while Western men of science are referred to as "scholars" and scholiasts, *native* Sanskritists and archæologists are often spoken of as "Calcutta" and "Indian *sciolists*," affords no proof of their real inferiority, but rather of the wisdom of the Chinese proverb that "self-conceit is rarely companion to politeness."

The "Adept," therefore, has little, if anything, to do with difficulties presented by Western history. To his knowledge—based on documentary records from which, as said, hypothesis is excluded, and as regards which even psychology is called to play a very secondary part—the history of his and other nations extends immeasurably beyond that hardly discernible point that stands on the far-away horizon of the Western world as a landmark of the commencement of *its* history.

Records made throughout a series of ages, based on astronomical chronology and zodiacal calculations, cannot err. (This new "difficulty"—palæographical, this time—that may be possibly suggested by the mention of the Zodiac in India and Central Asia before the Christian era, is disposed of in a subsequent article.)

Hence, the main question at issue is to decide which—the Orientalist or the "Oriental"—is most likely to err. The "English F.T.S." has choice of two sources of information, two groups of teachers. One group is composed of Western historians with their suite of learned ethnologists, philologists, anthropologists, archæologists, and orientalist in general. The other consists of unknown Asiatics belonging to a race which, notwithstanding Mr. Max Müller's assertion that the same "blood is running in the veins [of the English soldier] and in the veins of the dark Bengalese," is generally regarded by many a cultured Western as "inferior." A handful of men can hardly hope to be listened to, specially when their history, religion, language, origin, and sciences, having been seized upon by the conqueror, are now disfigured and mutilated beyond recognition—who have lived to see the Western scholar claim a monopoly beyond appeal or protest of deciding the correct meaning, chronological date, and historical value of the monumental and palæographic relics of his motherland. It has little, if ever, entered the mind of the Western public that their scholars have, until very lately, worked in a narrow pathway obstructed with the ruins of an ecclesiastical, dogmatic Past; that they have been cramped on all sides by limitations of "revealed" events coming from God, "with whom a thousand years are but as one day," and have thus felt bound to cram millenniums into centuries and hundreds into units, giving at the utmost an age of 1,000 years to what is 10,000 years old. All this to save the threatened authority of their religion and their own respectability and good name in cultured society. And that even when free themselves from preconceptions, they have had to protect the honour of the Jewish divine chronology assailed by stubborn facts, and thus have become (often unconsciously) the slaves of an artificial history made to fit into the narrow frame of a dogmatic religion. No proper thought has been given to this purely psychological but very significant trifle. Yet we all know how, rather than admit any relation between Sanskrit and the Gothic, Keltic, Greek, Latin, and old Persian, facts have been tampered with, old texts purloined from libraries, and philological discoveries vehemently denied. And we have also heard

in our retreats, how Dugald Stewart and his colleagues, upon seeing that the discovery would also involve ethnological affinities, and damage the prestige of those sires of the world races—Shem, Ham, and Japhet—denied in the face of fact that “Sanskrit had ever been a living, spoken language,” supporting the theory that “it was an invention of the Brâhmans, who had constructed their Sanskrit on the model of the Greek and Latin.” And again we know, holding the proof of the same, how the majority of Orientalists are prone to go out of their way to prevent any Indian antiquity (whether MS. or inscribed monument, whether art or science) from being declared *Pre-Christian*. As the origin and history of the Gentile world is made to move in the narrow circuit of a few centuries “B.C.,” within that fecund epoch when mother earth, recuperated from her arduous labours of the Stone age, begat, it seems without transition, so many highly civilized nations and false pretences, so the enchanted circle of Indian archæology lies between the (to them unknown) year of the Samvat era, and the tenth century of the Western chronology.

Having to dispose of a “historical difficulty” of such a serious character, the defendants charged with it can but repeat what they have already stated: all depends upon the past history and antiquity allowed to the Indo-Âryan nation. The first step to take is to ascertain how much History herself knows of that almost pre-historic period when the soil of Europe had not yet been trodden by the primitive Âryan tribes. From the latest Encyclopædia down to Professor Max Müller and other Orientalists, we gather what follows. They acknowledge that at some immensely remote period, before the Âryan nations got divided from the parent stock (with the germs of Indo-Germanic languages in them), and before they rushed asunder to scatter over Europe and Asia in search of new homes, there stood a “single barbaric [?] people as physical and political representative of the nascent Âryan race.” This people spoke “a *now extinct* Âryan language,” from which, by a series of modifications (surely requiring more thousands of years than our difficulty-makers are willing to concede), there arose gradually all the subsequent languages now spoken by the Caucasian races.

That is about all Western history knows of *its* genesis. Like Râvana's brother, Kumbhakarna—the Hindû Rip van Winkle—it slept for a long series of ages a dreamless, heavy sleep. And when at last it awoke to consciousness, it was but to find the “nascent Âryan race” grown into scores of nations, peoples and races, most of them effete

and crippled with age, many irretrievably extinct, while the true origin of the younger ones it was utterly unable to account for. So much for the "youngest brother." As for the "eldest brother, the Hindû," who, Professor Max Müller tells us, "was *the last* to leave the central home of the Âryan family," and whose history this eminent philologist has now kindly undertaken to impart to him—he, the Hindû, claims that while his Indo-European relative was soundly sleeping under the protecting shadow of Noah's ark, he kept watch and did not miss seeing one event from his high Himâlayan fastnesses; and that he has recorded the history thereof, in a language which, though as incomprehensible as the Iapygian inscriptions to the Indo-European immigrant, is quite clear to the writer. For this crime he now stands condemned as a falsifier of the records of his forefathers. A place has been hitherto purposely left open for India "to be filled up when the pure metal of history should have been extracted from the ore of Brâhmanic exaggeration and superstition." Unable, however, to meet this programme, the Orientalist has since persuaded himself that there was nothing in that "ore" but dross. He did more. He applied himself to contrast Brâhmanic "superstition" and "exaggeration" with Mosaic revelation and its chronology. The Veda was confronted with Genesis. Its absurd claims to antiquity were forthwith dwarfed to their proper dimensions by the 4,004 years "B.C." measure of the world's age; and the Brâhmanic "superstition and fables" about the longevity of the Âryan Rishis, were belittled and exposed by the sober historical evidence furnished in "The genealogy and age of the Patriarchs from Adam to Noah," whose respective days were 930 and 950 years; without mentioning Methuselah, who died at the premature age of nine hundred and sixty-nine.

In view of such experience, the Hindû has a certain right to decline the offers made to correct his annals by Western history and chronology. On the contrary, he would respectfully advise the Western scholar, before he denies point-blank any statement made by the Asiatics with reference to what are *pre-historic* ages to Europeans, to show that the latter have themselves anything like trustworthy data as regards their own racial history. And that settled, he may have the leisure and capacity to help his ethnic neighbours to prune their genealogical trees. Our Râjputs, among others, have perfectly trustworthy family records of an unbroken lineal descent through 2,000 years "B.C." and more, as proved by Colonel Tod—records which are accepted by the British

Government in its official dealings with them. It is not enough to have studied stray fragments of Sanskrit literature—even though their number should amount to 10,000 texts, as boasted of—allowed to fall into foreign hands, to speak so confidently of the "Âryan first settlers in India," and assert that, "left to themselves, in a world of their own, *without a past and without a future* [!] before them, they had nothing but themselves to ponder upon," and therefore could know *absolutely nothing* of other nations. To comprehend correctly and make out the *inner* meaning of most of them, one has to read these texts with the help of the esoteric light, and after having mastered the language of the *Brâhmanic Secret Code*—branded generally as "theological twaddle." Nor is it sufficient—if one would judge correctly of what the archaic Âryans did or did not know; whether or not they cultivated the social and political virtues; cared or not for history—to claim proficiency in both Vedic and classical Sanskrit, as well as in Prâkrit and Ârya-Bhâshâ. To comprehend the esoteric meaning of ancient Brâhmanical literature, one has, as just remarked, to be in possession of the key to the Brâhmanical Code. To master the conventional terms used in the Purânas, the Âranyakas and Upanishads is a science in itself, and one far more difficult than even the study of the 3,996 aphoristical rules of Pânini, or his algebraical symbols. Very true, most of the Brâhmins themselves have now forgotten the correct interpretations of their sacred texts. Yet they know enough of the dual meaning in their scriptures to be justified in feeling amused at the strenuous efforts of the European Orientalist to protect the supremacy of his own national records and the dignity of his science by interpreting the Hindû hieratic text after a peremptory fashion quite unique. Disrespectful though it may seem, we call on the philologist to prove in some more convincing manner than usual, that he is better qualified than even the average Hindû Sanskrit pandit to judge of the antiquity of the "language of the gods"; that he has been really in a position to trace unerringly along the lines of countless generations the course of the "now extinct Âryan tongue" in its many and various transformations in the West, and its primitive evolution into first the Vedic, and then the classical Sanskrit in the East, and that from the moment when the mother-stream began deviating into its new ethnographical beds, he has followed it up; finally that, while he, the Orientalist, can, owing to speculative interpretations of what he thinks he has learnt from fragments of Sanskrit literature, judge of the nature of all that he knows

nothing about—*i.e.*, to speculate upon the past history of a great nation he has lost sight of from its “nascent state,” and caught up again but at the period of its last degeneration—the native student never knew, nor can ever know, anything of that history. Until the Orientalist has proved all this, he can be accorded but small justification for assuming that air of authority and supreme contempt which is found in almost every work upon India and its Past. Having no knowledge himself whatever of those incalculable ages that lie between the Âryan Brâhman in Central Asia, and the Brâhman at the threshold of Buddhism, he has no right to maintain that the initiated Indo-Âryan can never know as much of them as the foreigner. Those periods being an utter blank to him, he is little qualified to declare that the Âryan, having had no political history “of his own,” his only sphere was “religion and philosophy . . . in solitude and contemplation.” A happy thought, suggested, no doubt, by the active life, incessant wars, triumphs, and defeats portrayed in the oldest songs of the *Rig-Veda*. Nor can he with the smallest show of logic affirm that “India had no place in the political history of the world,” or that “there are no synchronisms between the history of the Brâhmans and that of other nations before the date of the origin of Buddhism in India”; for he knows no more of the pre-historic history of those “other nations” than of that of the Brâhman. All his inferences, conjectures, and systematic arrangements of hypotheses begin very little earlier than 200 “B.C.,” if even so much—on anything like really historical grounds. He has to prove all this before he can command our attention. Otherwise, however “irrefragable the evidence of language,” the presence of Sanskrit roots in all the European languages will be insufficient to prove, either that, (a) before the Âryan invaders descended toward the *seven rivers* they had *never left their northern regions*; or (b) why the “eldest brother, the Hindû,” should have been “the last to leave the central home of the Âryan family.” To the philologist such a supposition may seem “quite natural.” Yet the Brâhman is no less justified in his ever-growing suspicion that there may be at the bottom some occult reason for such a programme. That in the interest of his theory the Orientalist was forced to make the “eldest brother” tarry so suspiciously long on the Oxus, or wherever “the youngest” may have placed him in his “nascent state” after the latter “saw his brothers all depart towards the setting sun.” We find reasons to believe that the chief motive for alleging such a procrastination is the necessity to bring the race closer to the

Christian era. To show the "brother," inactive and unconcerned, "with nothing but himself to ponder on," lest his antiquity and "fables of empty idolatry," and perhaps his traditions of other people's doings, should interfere with the chronology by which it is determined to try him. The suspicion is strengthened when one finds in the book from which we have been so largely quoting—a work of a purely scientific and philological character—such frequent remarks and even prophecies as: "History seems to teach that the whole human race required a gradual education before, in the fulness of time, it could be admitted to the truths of Christianity." Or again: "The ancient religions of the world were but the milk of nature, which was in due time to be succeeded by the bread of life"; and such broad sentiments expressed as that "there is *some truth* in Buddhism, as there is in every one of the *false religions* of the world, but"*

The atmosphere of Cambridge and Oxford seems decidedly unpropitious to the recognition of either Indian antiquity, or the merit of the philosophies sprung from its soil!†

LEAFLETS FROM ESOTERIC HISTORY.

The foregoing—a long, yet necessary digression—will show that the Asiatic scholar is justified in generally withholding what he may know. That it is not merely on historical *facts* that the "historical difficulty" at issue hangs, but rather on its degree of interference with time-honoured, long-established conjectures, often raised to the eminence of an unapproachable historical axiom. That no statement coming from our quarters can ever hope to be given consideration so long as it has to be supported on the ruins of reigning hobbies, whether of an alleged

* Max Müller's *History of Ancient Sanskrit Literature*.

† And how one-sided and biassed most of the Western Orientalists are may be seen by reading carefully *The History of Indian Literature*, by Albrecht Weber—a Sanskrit scholiast classed with the highest authorities. The incessant harping upon the one special string of Christianity, and the ill-concealed efforts to pass it off as the key-note of all other religions, is painfully preëminent in his work. Christian influences are shown to have affected not only the growth of Buddhism and Krishna worship, but even that of the Shiva cult and its legends; it is openly stated that "it is not at all a far-fetched hypothesis that they have reference to scattered Christian missionaries"! The eminent Orientalist evidently forgets that, notwithstanding his efforts, none of the Vedic, Sûtra, or Buddhist periods can be possibly crammed into this Christian period—their universal tank of all ancient creeds, and of which some Orientalists would fain make a poorhouse for all decayed archaic religions and philosophy. Even Tibet, in his opinion, has not escaped "Western influence." Let us hope to the contrary. It can be proved that Buddhist missionaries were as numerous in Palestine, Alexandria, Persia, and even Greece, two centuries before the Christian era, as the Padres are now in Asia. That the Gnostic doctrines (as he is obliged to *confess*) are permeated with Buddhism. Basilides, Valentinian, Bardesanes, and especially Manes, were simply *heretical* Buddhists, "the formula of abjuration of these doctrines in the case of the latter, specifying expressly Buddha (Bodda) by name."

historical or religious character. Yet pleasant it is, after the brainless assaults to which occult sciences have hitherto been subjected—assaults in which abuse has been substituted for argument, and flat denial for calm enquiry—to find that there remain in the West some men who will come into the field like philosophers, and soberly and fairly discuss the claims of our hoary doctrines with the respect due to a truth and the dignity demanded for a science. Those alone whose sole desire is to ascertain the truth, not to maintain foregone conclusions, have a right to expect undisguised facts. Reverting to our subject, so far as allowable, we will now, for the sake of that minority, give them.

The records of the Occultists make no difference between the “Atlantean” ancestors of the old Greeks and Romans. Partially corroborated and in turn contradicted by licensed or recognized history, *their* records teach that of the ancient Latini of classic legend called Itali—of that people, in short, which, crossing the Apennines (as their Indo-Âryan brothers—let this be known—had crossed *before them* the Hindû-Kûsh) entered the peninsula from the north—there survived at a period long before the days of Romulus *but the name, and a nascent language*. Profane history informs us that the Latins of the “mythical era” got so Hellenized amidst the rich colonies of Magna Græcia that there remained nothing in them of their primitive Latin nationality. It is the Latins proper, it says, those Pre-Roman Italians who by settling in Latium had from the first kept themselves free from the Greek influence, who were the ancestors of the Romans. Contradicting exoteric history, the occult records affirm that if, owing to circumstances too long and complicated to be related here, the settlers of Latium preserved their primitive nationality a little longer than their brothers who had first entered the peninsula with them after leaving the East (which was *not* their original home), they lost it very soon, for other reasons. Free from the Samnites during the first period, they did not remain free from other invaders. While the Western historian puts together the mutilated, incomplete records of various nations and people, and makes them into a clever mosaic according to the best and most probable plan and rejects entirely traditional fables, the Occultist pays not the slightest attention to the vain self-glorification of alleged conquerors or their lithic inscriptions. Nor does he follow the stray bits of so-called historical information, often concocted by interested parties and found scattered hither and thither in the fragments of classical writers, whose original texts themselves have not seldom been tam-

pered with. The Occultist follows the ethnological affinities and their divergencies in the various nationalities, races and sub-races in a more easy way; and he is guided in this as surely as the student who examines a geographical map. As the latter can easily trace by their differently coloured outlines the boundaries of the many countries and their possessions; their geographical superficies and their separations by seas, rivers and mountains; so the Occultist can by following the (to him) well distinguishable and defined *auric shades and gradations of colour in the inner man* unerringly pronounce to which of the several distinct human families, as also to what special group, and even small sub-group of the latter, belongs any particular people, tribe, or man. This will appear hazy and incomprehensible to the many who know nothing of ethnic varieties of nerve-aura and disbelieve in any "inner-man" theory, scientific but to the few. The whole question hangs upon the reality or unreality of the existence of this inner man whom clairvoyance has discovered, and whose odyle or nerve-emanations Von Reichenbach proves. If one admits such a presence and realizes intuitively that being closer related to the one invisible Reality, the *inner* type must be still more pronounced than the outer physical type, then it will be a matter of little, if any, difficulty to conceive our meaning. For, indeed, if even the respective physical idiosyncrasies and special characteristics of any given person make his nationality usually distinguishable by the physical eye of the ordinary observer—let alone the experienced ethnologist, the Englishman being commonly recognizable at a glance from the Frenchman, the German from the Italian, not to speak of the typical differences between human root-families* in their anthropological division—there seems little difficulty in conceiving that the same, though far more pronounced, difference of type and characteristics should exist between the *inner* races that inhabit these "fleshly tabernacles." Besides these easily discernible psychological and *astral* differences, there are the documentary records in their unbroken series of chronological tables, and the history of the gradual branching off of races and sub-races from the three *geological* primeval Races, the work

* Properly speaking, these ought to be called "geological races," so as to be easily distinguished from their subsequent evolutions—the Root-Races. The occult doctrine has nothing to do with the biblical division of Shem, Ham and Japhet, and admires, without accepting it, the latest Huxleyan physiological division of the human races into their quintuple groups of Australioids, Negroids, Mongoloids, Xanthochroics, and the fifth variety of Melanochroics. Yet it says that the *triple* division of the blundering Jews is closer to the truth. It knows but of three entirely distinct primeval races whose evolution, formation and development went *pari passu* and on parallel lines with the evolution, formation and development of three geological strata; namely, the *black*, the *red-yellow* and the *brown-white* Races.

of the Initiates of all the archaic and ancient temples up to date, collected in our *Book of Numbers* and other volumes.

Hence, and on this double testimony (which the Westerns are quite welcome to reject if so pleased) it is affirmed that, owing to the great amalgamation of various sub-races, such as the Iapygian, Etruscan, Pelasgic—and later, the strong admixture of the Hellenic and Kelto-Gaulic element in the veins of the primitive Itali of Latium—there remained in the tribes gathered by Romulus on the banks of the Tiber about as much Latinism as there is now in the Romanic people of Wallachia. Of course if the historical foundation of the fable of the twins of the Vestal Silvia is entirely rejected, together with that of the foundation of Alba Longa by the son of Æneas, then it stands to reason that the whole of the statements made must be likewise a modern invention built upon the utterly worthless fables of the “legendary mythical age.” For those who now give these statements, however, there is more of actual truth in such fables than there is in the alleged *historical* regal period of the earliest Romans. It is to be deplored that the present statement should clash with the authoritative conclusion of Mommsen and others, (yet stating but that which to the “Adepts” is *fact*) it must be understood at once that all (but the fanciful chronological date for the foundation of Rome—April, 753 “B.C.”) that is given in old traditions in relation to the Pæmerium, and the triple alliance of the Ramnians, Luceres and Tities, of the so-called Romuleian legend, is indeed far nearer the truth than what external history accepts as *fact* during the Punic and Macedonian wars up to, through, and down the Roman Empire to its fall. The founders of Rome were decidedly a *mongrel* people, made up of various scraps and remnants of the many primitive tribes—only a few really Latin families, the descendants of the distinct sub-race that came along with the Umbro-Sabelians from the East, remaining. And, while the latter preserved their distinct colour down to the Middle Ages through the Sabine element, left unmixed in its mountainous regions, the blood of the true Roman *was Hellenic blood* from its beginning. The famous Latin league is no fable, but history. The succession of kings descended from the Trojan Æneas is a fact; and the idea that Romulus is to be regarded as simply the symbolical representative of a people, as Æolus, Dorus, and Ion were once, instead of a living man, is as unwarranted as it is arbitrary. It could only have been entertained by a class of historiographers bent upon condoning their sin in supporting the dogma that Shem, Ham

and Japhet were the historical once living ancestors of mankind, by making a burnt-offering of every really historical but Non-Jewish tradition, legend, or record which might presume to a place on the same level with these three privileged archaic mariners, instead of humbly grovelling at their feet as "absurd myths" and old wives' tales and superstitions.

It will thus appear that the objectionable statements on pp. 56 and 62 of *Esoteric Buddhism*, which are alleged to create an "historical difficulty," were not made by Mr. Sinnett's correspondent to bolster up a Western theory, but in loyalty to historical *facts*. Whether they can or cannot be accepted in those particular localities where criticism seems based upon mere conjecture (though honoured with the name of scientific hypothesis), is something which concerns the present writers as little as any casual traveller's unfavourable comments upon the time-scarred visage of the Sphinx can affect the designer of that sublime symbol. The sentences, "the Greeks and Romans were small sub-races of our own Caucasian stock" (p. 56), and they were "the remnants of the Atlanteans (the modern belong to the fifth Race)" (p. 62), show the real meaning on their face. By the old Greeks, "remnants of the Atlanteans," the *eponymous* ancestors (as they are called by Europeans) of the Æolians, Dorians and Ionians, are meant. By the connecting together of the old Greeks and Romans without distinction, was meant that the primitive Latins were swallowed by Magna Græcia. And by "the modern" belonging "to the fifth Race"—both these small branchlets from whose veins had been strained out the last drop of the Atlantean blood—it was implied that the Mongoloid fourth-race blood had already been eliminated. Occultists make a distinction between the races intermediate between any two Root-Races; the Westerns do not. The "old Romans" were Hellenes in a new ethnological disguise; and the still older Greeks the real blood ancestors of the future Romans. In direct relation to this, attention is drawn to the following fact—one of the many in close historical bearing upon the "mythical" age to which Atlantis belongs. It is a fable and may be charged to the account of historical difficulties. It is well calculated, however, to throw all the old ethnological and genealogical divisions into confusion.

Asking the reader to bear in mind that Atlantis, like modern Europe, comprised many nations and many dialects (issues from the three primeval root-languages of the first, second, and third Races), we may

return to Poseidonis, its last surviving remnant of 12,000 years ago. As the chief element in the languages of the fifth Race is the Âryan-Sanskrit of the "brown-white" *geological* stock or race, so the predominating element in Atlantis was a language which has now survived but in the dialects of some American Red-Indian tribes, and in the Chinese speech of the inland Chinamen, the mountainous tribes of Kivang-ze—a language which was an admixture of the agglutinate and the monosyllabic, as it would be called by modern philologists. It was, in short, the language of the "red-yellow" second or middle geological stock (we maintain the term "geological"). A strong percentage of the Mongoloid or fourth Root-Race was, of course, to be found in the Âryans of the fifth. But this did not prevent in the least the presence at the same time of unalloyed, pure Âryan races in it. A number of small islands scattered around Poseidonis had been vacated, in consequence of earthquakes, long before the final catastrophe, which has alone remained in the memory of men—thanks to some written records. Tradition says that one of the small tribes (the Æolians) who had become islanders after emigrating from far northern countries, had to leave their home again for fear of a deluge. If, in spite of the Orientalists and the conjecture of M. F. Lenormant—who invented a name for a people whose shadowy outline he dimly perceived in the far-away past as preceding the Babylonians—we say that this Âryan race that came from Central Asia, the cradle of the fifth-race Humanity, belonged to the "Akkadian" tribes, there will be a new historico-ethnological difficulty created. Yet it is maintained that these "Akkads" were no more a "Turanian" race than any of the modern British people are the mythical ten tribes of Israel, so conspicuously present in the *Bible*, and absent from history. With such remarkable *pacta conventa* between modern exact (?) and ancient occult sciences, we may proceed with the *fable*. Belonging virtually, through their original connection with the Âryan, Central Asian stock, to the fifth Race, the old Æolians yet were Atlanteans, not only in virtue of their long residence in the now submerged continent, covering some thousands of years, but by the free intermingling of blood, by intermarriage with them. Perhaps in this connection, Mr. Huxley's disposition to account for his Melanochroi (the Greeks being included under this classification or type) as themselves "the result of crossing between the Xanthochroi and the Australioids"—among whom he places the Southern India *lower* classes and the Egyptians to some extent—is not far off from fact. Anyhow, the

Æolians of Atlantis were Âryans on the whole, as much as the Basques—Dr. Pritchard's Allophylians—are now southern Europeans, although originally belonging to the South Indian Dravidian stock (their progenitors having never been the aborigines of Europe prior to the first Âryan emigration, as supposed). Frightened by the frequent earthquakes and the visible approach of the cataclysm, this tribe is said to have filled a flotilla of *arks*, to have sailed from beyond the Pillars of Hercules, and, sailing along the coasts, after several years of travel to have landed on the shores of the Ægean Sea in the land of Pyrrha (now Thessaly), to which they gave the name of Æolia. Thence they proceeded on business with the gods to Mount Olympus. It may be stated here, at the risk of creating a "geographical difficulty," that in that mythical age Greece, Crete, Sicily, Sardinia, and many other islands of the Mediterranean, were simply the far-away possessions, or colonies, of Atlantis. Hence the "fable" proceeds to state that all along the coasts of Spain, France, and Italy the Æolians often halted, and the memory of their "magical feats" still survives among the descendants of the old Massilians, of the tribes of the later Carthago Nova, and the seaports of Etruria and Syracuse. And here again it would not be a bad idea, perchance even at this late hour, for the archæologists, with the permission of the anthropological societies, to trace the origin of the various autochthones through their folklore and fables, as they may prove both more suggestive and reliable than their "undecipherable" monuments. History catches a misty glimpse of these particular autochthones thousands of years only after they had been settled in old Greece—namely, at the moment when the Epiroans cross the Pindus bent on expelling the black magicians from their home to Bœotia. But history never listened to the popular legends which speak of the "accursed sorcerers" who departed, leaving as an inheritance behind them more than one secret of their infernal arts, the fame of which crossing the ages has now passed into history—or, classical Greek and Roman *fable*, if so preferred. To this day a popular tradition narrates how the ancient forefathers of the Thessalonians, so renowned for their magicians, had come from behind the Pillars, asking for help and refuge from great Zeus, and imploring the father of the gods to save them from the deluge. But the "Father" expelled them from the Olympus, allowing their tribe to settle only at the foot of the mountain, in the valleys, and by the shores of the Ægean Sea.

Such is the oldest fable of the ancient Thessalonians. And now, what was the language spoken by the Atlantean Æolians? History cannot answer us. Nevertheless, the reader has only to be reminded of some of the accepted and a few of the as yet unknown facts, to cause the light to enter any intuitional brain. It is now proved that man was universally conceived in antiquity *as born of the earth*. Such is now the profane explanation of the term autochthones. In nearly every vulgarized popular fable, from the Sanskrit "Ârya" "born of the earth," or "lord of the soil" in one sense; the Erechtheus of the archaic Greeks, worshipped in the earliest days of the Akropolis, and shown by Homer as "he whom the earth bore" (*Iliad*, ii. 548); down to Adam fashioned of "red earth"—the genetical story has a deep occult meaning, and an indirect connection with the origin of man and of the subsequent races. Thus, the *fables* of Helen, the son of Pyrrha the red—the oldest name of Thessaly; and of Mannus, the reputed ancestor of the Germans, himself the son of Tuisco, "the red son of the earth," have not only a direct bearing upon our Atlantis fable, but they explain moreover the division of mankind into *geological* groups as made by the Occultists. It is only this, their division, that is able to explain to Western teachers the apparently strange, if not absurd, coincidence of the Semitic Adam—a divinely revealed personage—being connected with *red earth*, in company with the Âryan Pyrrha, Tuisco, etc.—the mythical heroes of "foolish" fables. Nor will that division made by the Eastern Occultists, who call the fifth-race people the "brown-white," and the fourth-race the "red-yellow," Root-Races—connecting them with geological strata—appear at all fantastic to those who understood verse iii. 34-39, of the *Veda* and its occult meaning, and another verse in which the Dasyus are called "yellow." "Hatvi Dasyûn prâ âryam varanam âvat" is said of Indra who, by killing the Dasyus, protected the *colour* of the Âryans; and again, Indra "unveiled the light for the Âryas, and the Dasyu was left on the *left* hand" (ii. 11, 18). Let the student of Occultism bear in mind that the Greek Noah, Deukalion, the husband of Pyrrha, was the reputed son of Prometheus, who robbed Heaven of its *fire* (*i.e.*, of Secret Wisdom of the "right hand," or occult knowledge); that Prometheus is the brother of Atlas; that he is also the son of Asia and of the Titan Iapetus—the antetype from which the Jews *borrowed* their Japhet for the exigencies of their own popular legend to mask its kabalistic, Chaldæan meaning; and that he is also the antetype of Deukalion. Prometheus is the creator

of man out of earth and water,* who after stealing *fire* from Olympus—a mountain in Greece—is chained on a mount in the far-off Caucasus. From Olympus to Mount Kazbek there is a considerable distance. The Occultists say that while the fourth Race was generated and developed on the Atlantean continent—our Antipodes in a certain sense—the fifth was generated and developed in Asia. (The ancient Greek geographer Strabo, for one, calls by the name of Ariana the land of the Âryas, the whole country between the Indian Ocean in the south, the Hindû Kûsh and Parapamisus in the north, the Indus on the east, and the Caspian Gates, Karamania and the mouth of the Persian Gulf, on the west.) The *fable* of Prometheus relates to the extinction of the civilized portions of the fourth Race, whom Zeus, in order to create *a new race*, would destroy entirely, and Prometheus (who had the sacred fire of knowledge) saved partially "for future seed." But the origin of the fable antecedes the destruction of Poseidonis by more than seventy thousand years, however incredible it may seem. The seven great continents of the world, spoken of in the *Vishnu Purâna* (ii. 2), include Atlantis, though, of course, under another name. Ilâ and Irâ are synonymous Sanskrit terms (see Amarakosha), and both mean earth or *native soil*; and Ilâvrita is a portion of Ilâ, the central point of India (Jambudvîpa), the latter being itself the centre of the *seven* great continents before the submersion of the great continent of Atlantis, of which Poseidonis was but an insignificant remnant. And now, while every Brâhman will understand the meaning, we may help the Europeans with a few more explanations.

If the "English F.T.S." turns to vol. i. p. 589, of that generally tabooed work, *Isis Unveiled*, he may find therein narrated another old Eastern legend. An island . . . (where now the Gobi desert lies) was inhabited by the last remnants of the Race that preceded ours—a handful of "Adepts," the "Sons of God," now referred to as the Brâhman Pitris; called by another yet synonymous name in the Chaldæan Kabalah. *Isis Unveiled* may appear very puzzling and contradictory to those who know nothing of occult sciences. To the Occultist it is correct, and while perhaps left purposely sinning (for it was the first cautious attempt to let into the West a faint streak of Eastern esoteric light), it reveals more facts than were ever given before its appearance. Let any one read these pages and he may comprehend. The "six such races" in Manu refer to the sub-races of the *fourth* Race

* Behold Moses saying that it requires earth and water to make a living man.

(p. 590). In addition to this the reader must turn to the paper on "The Septenary Principle in Esotericism" (p. 120 *ante*), study the list of the "Manus" of our *fourth* Round (p. 122), and between this and *Isis* light may, perchance, be focussed. On pp. 590-596 of the work mentioned above, he will find that Atlantis is mentioned in the "Secret Books of the East" (as yet virgin of Western spoliating hand) under another name in the sacred *hieratic* or sacerdotal language. And then it will be shown to him that Atlantis was not merely the name of one island but that of a whole continent, many of whose isles and islets have to this day survived. The remotest ancestors of some of the inhabitants of the now miserable fishermen's hovel "Aclo" (once Atlan), near the Gulf of Uraha, were allied at one time as closely with the old Greeks and Romans as they were with the "true inland Chinaman," mentioned on p. 57 of *Esoteric Buddhism*. Until the appearance of a map, published at Basle in 1522, wherein the name of America appears for the first time, the *latter was believed to be part of India*; and strange to him who does not follow the mysterious working of the human mind and its unconscious approximations to hidden truths—even the aborigines of the new continent, the red-skinned tribes, the "Mongoloids" of Mr. Huxley, were named Indians. Names now attributed to chance—elastic word that! Strange coincidence, indeed, to him who does not know—science refusing yet to sanction the wild hypothesis—that there was a time when the Indian peninsula was at one end of the line, and South America at the other, connected by a belt of islands and continents. The India of the pre-historic ages was not only within the region at the sources of the Oxus and Jaxartes, but there was even in the days of history, and within its memory, an upper, a lower, and a western India; and still earlier it was doubly connected with the two Americas. The lands of the ancestors of those whom Ammianus Marcellinus calls the "Brâhmans of Upper India" stretched from Kashmir far into the (now) deserts of Shamo. A pedestrian from the north might then have reached—hardly wetting his feet—the Alaskan peninsula, through Manchûria, across the *future* Gulf of Tartary, the Kurile and Aleutian Islands; while another traveller, furnished with a canoe and starting from the south, could have walked over from Siam, crossed the Polynesian Islands, and trudged into any part of the continent of South America. On pp. 592, 593, vol. i. of *Isis Unveiled*, the Thevetatas—the evil, mischievous gods that have survived in the Etruscan Pantheon—are mentioned, along with the "Sons of God," or Brâhman Pitris. The

Involute, the hidden or shrouded gods, the Consentes, Complices, and Novensiles, are all disguised relics of the Atlanteans; while the Etruscan art of soothsaying, their *Disciplina* revealed by Tages, comes direct and in undisguised form from the Atlantean king Thevetat, the "invisible" Dragon, whose name survives to this day among the Siamese and Burmese, as also, in the Jâtaka allegorical stories of the Buddhists, as the opposing power under the name of Devadatta. And Tages was the son of Thevetat, before he became the grandson of the Etruscan Jupiter-Tinia. Have the Western Orientalists tried to find out the connection between all these Dragons and Serpents; between the "powers of evil" in the cycles of epic legends, the Persian and the Indian, the Greek and the Jewish; between the contests of Indra and the giant; the Âryan Nâgas and the Iranian Aji Dâhaka; the Guatemalian Dragon and the Serpent of *Genesis*, etc.? Professor Max Müller discredits the connection. So be it. But the *fourth* Race of men, "men" whose sight was unlimited and who knew all things at once, the hidden as the revealed, is mentioned in the *Popol-Vuh*, the sacred books of the Guatemalians; and the Babylonian Xisuthrus, the far later Jewish Noah, the Hindû Vaivasvata, and the Greek Deukalion, are all identical with the great Father of the Thlinkithians who, like the rest of these allegorical (not mythical) Patriarchs, escaped in his turn and in his days, in a large boat at the time of the last great Deluge—the submersion of Atlantis.

To have been an Indo-Âryan, Vaivasvata had not, of necessity, to meet with his Saviour (Vishnu, under the form of a fish) within the precincts of the present India, or even anywhere on the Asian continent; nor is it necessary to concede that he was the seventh great Manu himself (see catalogue of the Manus, in the paper on "The Septenary Principle in Esotericism" cited above), but simply that the Hindû Noah belonged to the clan of Vaivasvata and typifies the *fifth* Race. Now the last of the Atlantean islands perished some 11,000 years ago; and the *fifth* Race headed by the Âryans began its evolution, to the certain knowledge of the "Adepts," nearer one million than 900,000 years ago. But the historian and the anthropologist with their utmost stretch of liberality are unable to give more than from twenty to one hundred thousand years for all our human evolution. Hence we put it to them as a fair question: At what point during their own conjectural lakh of years do they fix the root-gérm of the ancestral line of the "old Greeks and Romans"? Who were they? What is known or even

"conjectured" about their territorial habitat after the division of the Âryan nations? And where were the ancestors of the Semitic and Turanian races? It is not enough for purposes of refutation of other people's statements to say that the latter lived separate from the former, and then come to a full stop—a fresh hiatus in the ethnological history of mankind. Since Asia is sometimes called the Cradle of Humanity, and it is an *ascertained* fact that Central Asia was likewise the cradle of the Semitic and Turanian races (for thus it is taught in *Genesis*), and we find the Turans agreeably to the theory evolved by the Assyriologists *preceding* the Babylonian Semitists, where, at what spot of the globe, did these Semito-Turanian nations break away from the parent stock, and what has become of the latter? It cannot be the small Jewish tribe of Patriarchs; and unless it can be shown that the garden of Eden was also on the Oxus or the Euphrates, fenced off from the soil inhabited by the children of Cain, philologists who undertake to fill in the gaps in Universal History with their made-up conjectures, may be regarded as ignorant of this detail as those they would enlighten.

Logically, if the ancestors of these various groups had been at that remote period massed together, then the self-same roots of a parent common stock would have been as equally traceable in their perfected languages as they are in those of the Indo-Europeans. And so, since whichever way one turns, one is met with the same troubled sea of speculation, margined by the treacherous quicksands of hypothesis, and every horizon bounded by inferential landmarks inscribed with imaginary dates, again, the "Adepts" ask, why should anyone be awed into accepting as final criterion that which passes for science of high authority in Europe? For all this is known to the Asiatic scholar—in every case save the purely mathematical and physical sciences—as little better than a secret league for mutual support, and, perhaps, admiration. He bows with profound respect before the Royal Societies of Physicists, Chemists, and, to a degree, even of Naturalists. He refuses to pay the slightest attention to the merely speculative and conjectural so-called "sciences" of the modern Physiologist, Ethnologist, Philologist, etc., and the mob of self-styling Œdipuses to whom it is not given to unriddle the Sphinx of Nature, and who therefore throttle her.

With an eye to the above, as also with a certain prevision of the future, the defendants in the cases under examination believe that the "historical difficulty" with reference to the non-historical statement,

necessitated more than a simple reëffirmation of the fact. They knew that with no better claims to a hearing than may be accorded by the confidence of a few, and in view of the decided antagonism of the many, it would never do for them to say "we maintain," while Western professors maintained to the contrary. For a body of, so to say, unlicensed preachers and students of unauthorized and unrecognized sciences to offer to fight an august body of universally recognized oracles would be an unprecedented piece of impertinence. Hence their respective claims had to be examined on however small a scale to begin with (in this as in all other cases) on other than psychological grounds. The "Adepts" in Occult Arts had better keep silence when confronted with the "A.C.S.'s"—Adepts in Conjectural Sciences—unless they could show, partially at least, how weak is the authority of the latter and on what foundations of shifting sands their scientific *dicta* are often built. They may thus make it a thinkable conjecture that the former may be right, after all. Absolute silence, moreover, as at present advised, would have been fatal. Besides risking to be construed into inability to answer, it might have given rise to new complaints among the faithful few, and led to fresh charges of *selfishness* against the writers. Therefore, have the "Adepts" agreed to smoothen in part at least a few of the most glaring difficulties, and, showing a highway, to avoid them in future by studying the *non*-historical but actual, instead of the historical but mythical, portions of Universal History. And this they have achieved, they believe—at any rate, with a few of their querists—by simply showing, or rather reminding them, that since no historical fact can stand as such against the "assumption" of the "Adepts"—historians being confessedly ignorant of Pre-Roman and Greek origins beyond the ghostly shadows of the Etruscans and Pelasgians—no real *historical* difficulty can be possibly involved in their statement. From objectors outside the Society, the writers neither demand nor do they expect mercy. The "Adept" has no favours to ask at the hands of conjectural science, nor does he exact from any member of the "London Lodge" blind faith, it being his cardinal maxim that faith should only follow enquiry. The "Adept" is more than content to be allowed to remain silent, keeping what he may know to himself, unless worthy seekers wish to share it. He has so done for ages, and can do so for a little longer. Moreover, he would rather not "arrest attention" or "command respect" at present. Thus he leaves his audience to first verify his statements in every case by the

brilliant though rather wavering light of modern science; after which his facts may be either accepted or rejected, at the option of the willing student. In short, the "Adept"—if one indeed—has to remain utterly unconcerned with, and unmoved by, the issue. He imparts that which it is lawful for him to give out, and deals but with *facts*.

The philological and archæological "difficulties" next demand attention.

PHILOLOGICAL AND ARCHÆOLOGICAL "DIFFICULTIES."

Two questions are blended into one. Having shown the reasons why the Asiatic student is prompted to decline the guidance of Western history, it remains to explain his contumacious obstinacy in the same direction with regard to philology and archæology. While expressing the sincerest admiration for the clever modern methods of reading the past histories of nations now mostly extinct, and following the progress and evolution of their respective languages, now dead, the student of Eastern occultism, and even the profane Hindû scholar acquainted with his national literature, can hardly be made to share the confidence felt by Western philologists in these conglutinative methods, when practically applied to his own country and Sanskrit literature. Three facts, at least, out of many are well calculated to undermine his faith in these Western methods:

1. Of some dozens of eminent Orientalists, no two agree, even in their *verbatim* translation of Sanskrit texts, nor is there more harmony shown in their interpretation of the possible meaning of *doubtful* passages.

2. Though numismatics is a less conjectural branch of science, and when starting from well-established basic dates, so to say, an exact one—since it can hardly fail to yield correct chronological data in our case, namely, Indian antiquities—archæologists have hitherto failed to obtain any such position. On their own confession, they are hardly justified in accepting the Samvat and Shâlivâhana eras as their guiding lights, the real initial points of both being beyond the power of the European Orientalists to verify; yet all the same, the respective dates "of 57 B.C. and A.D. 78" are accepted implicitly, and fanciful ages thereupon ascribed to archæological remains.

3. The greatest authorities upon Indian archæology and architecture—General Cunningham and Mr. Fergusson—represent in their conclusions the two opposite poles. The province of archæology is to

provide trustworthy canons of criticism, and not, it should seem, to perplex or puzzle. The Western critic is invited to point to one single relic of the past in India, whether written record or inscribed or un-inscribed monument, the age of which is not disputed. No sooner has one archæologist determined a date—say the first century—than another tries to pull it forward to the tenth or perhaps the fourteenth century of the Christian era. While General Cunningham ascribes the construction of the present Buddha Gayâ temple to the first century after Christ, the opinion of Mr. Fergusson is that its *external form* belongs to the fourteenth century; and so the unfortunate outsider is as wise as ever. Noticing this discrepancy in a *Report on the Archæological Survey of India* (vol. viii. p. 60), the conscientious and capable Buddha Gayâ Chief Engineer, Mr. J. D. Beglar, observes that "notwithstanding his [Fergusson's] high authority, this opinion must be unhesitatingly set aside," and forthwith assigns the building under notice to the sixth century. While the conjectures of one archæologist are termed by another "hopelessly wrong," the identifications of Buddhist relics by this other are in their turn denounced as "quite untenable." And so in the case of every relic of whatever age.

When the "recognized" authorities agree—among themselves at least—then will it be time to show them collectively in the wrong. Until then, since their respective conjectures can lay no claim to the character of history, the "Adepts" have neither the leisure nor the disposition to leave weightier business to combat empty speculations, as many in number as there are pretended authorities. Let the blind lead the blind, if they will not accept the light.*

As in the "historical," so in this new "archæological difficulty," namely, the apparent anachronism as to the date of our Lord's birth, the point at issue is again concerned with the "old Greeks and Romans." Less ancient than our Atlantean friends, they seem more dangerous inasmuch as they have become the direct allies of philologists in our dispute over Buddhist annals. We are notified by Prof. Max Müller—by sympathy the most fair of Sanskritists as well as the most learned, and with whom, for a wonder, most of his rivals are found siding in this particular question—that "everything in Indian chronology depends on the date of Chandragupta"—the Greek Sandracottus. "Either of these dates [in the Chinese and Ceylonese chronology] is impossible, because

* However, it will be shown elsewhere that General Cunningham's latest conclusions about the date of Buddha's death are not all supported by the inscriptions newly discovered.—T. SUBBA ROW.

it does not agree with the chronology of Greece." (*History of Sanskrit Literature*, p. 275.) It is then by the clear light of this new Alexandrian Pharos shed upon a few synchronisms casually furnished by the Greek and Roman classical writers, that the "extraordinary" statements of the "Adepts" have now to be cautiously examined. For Western Orientalists the historical existence of Buddhism begins with Ashoka, though, even with the help of Greek spectacles, they are unable to see beyond Chandragupta. Therefore, "before that time Buddhist chronology is *traditional* and full of absurdities." Furthermore, nothing is said in the Brâhmanas of the Bauddhas—*ergo*, there were none before "Sandracottus," nor have the Buddhists or Brâhmans any right to a history of their own, save the one evolved by the Western mind. As though the Muse of History had turned her back while events were gliding by, the "historian" confesses his inability to close the immense *lacunæ* between the Indo-Âryan supposed immigration *en masse* across the Hindû Kûsh and the reign of Ashoka. Having nothing more solid, he uses contradictory inferences and speculations. But the Asiatic Occultists, whose forefathers had her tablets in their keeping, and even some learned native pandits—believe they can. The claim, however, is pronounced unworthy of attention. Of late the Smṛiti (traditional history)—which, for those who know how to interpret its allegories, is full of unimpeachable *historical* records, an Ariadne's thread through the tortuous labyrinth of the Past—has come to be unanimously regarded as a tissue of exaggerations, monstrous fables, "clumsy forgeries of the first centuries A.D." It is now openly declared as worthless not only for exact chronological but even for general historical purposes. Thus by dint of arbitrary condemnations, based on absurd interpretations (too often the direct outcome of sectarian prejudice), the Orientalist has raised himself to the eminence of a philological mantic. His learned vagaries are fast superseding, even in the minds of many a Europeanized Hindû, the important historical facts that lie concealed under the exoteric phraseology of the Purânas and other Smṛitic literature. At the outset, therefore, the Eastern Initiate declares ruled out of court the evidence of those Orientalists who, abusing their unmerited authority, play ducks and drakes with his most sacred relics; and before giving *his* facts he would suggest to the learned European Sanskritist and archæologist that, in the matter of chronology, the difference in the sum of their series of conjectural historical events, proves them to be mistaken from A to Z. They know

that one single wrong figure in an arithmetical progression will always throw the whole calculation into inextricable confusion; the multiplication yielding, generally, in such a case, instead of the correct sum something entirely unexpected. A fair proof of this may, perhaps, be found in something already alluded to—namely, the adoption of the dates of certain Hindû eras as the basis of their chronological assumptions. In assigning a date to text or monument they have, of course, to be guided by one of the Pre-Christian Indian eras, whether inferentially, or otherwise. And yet—in one case, at least—they complain repeatedly that they are utterly ignorant as to the correct starting-point of the most important of these. The positive date of Vikramâditya, for instance, whose reign forms the starting-point of the Samvat era, is in reality unknown to them. With some, Vikramâditya flourished 56 "B.C."; with others, 86 "B.C."; with others again, in the sixth century of the Christian era; while Mr. Fergusson will not allow the Samvat era any beginning before the "tenth century A.D." In short, and in the words of Dr. Weber,* they "have absolutely no authentic evidence to show whether the era of Vikramâditya dates from the year of his birth, from some achievement, or from the year of his death, or whether, in fine, it may not have been simply introduced by him for astronomical reasons." There were several Vikramâdityas and Vikramas in Indian history—for it is not a name, but an honorary title, as the Orientalists have now come to learn. How then can any chronological deduction from such a shifting premise be anything but untrustworthy, especially when, as in the instance of the Samvat, the basic date is made to travel along, at the personal fancy of Orientalists, between the first and the tenth century?

Thus it appears to be pretty well proved that in ascribing chronological dates to Indian antiquities, Anglo-Indian as well as European archæologists are often guilty of the most ridiculous anachronisms. That, in fine, they have been hitherto furnishing History *with an arithmetical mean, while ignorant, in nearly every case, of its first term!* Nevertheless, the Asiatic student is invited to verify and correct *his* dates by the flickering light of this chronological will-o'-the-wisp. Nay, nay. Surely "An English F.T.S." would never expect us in matters demanding the minutest exactness to trust to such Western beacons! And he will, perhaps, permit us to hold to our own views, since we know that our dates are neither conjectural nor liable to modifications. When even

* *The History of Indian Literature*, p. 202, Trübner's Series, 1882.

such veteran archæologists as General Cunningham do not seem above suspicion, and are openly denounced by their colleagues, palæography seems to hardly deserve the name of exact science. This busy antiquarian has been repeatedly denounced by Prof. Weber and others for his indiscriminate acceptance of that Samvat era. Nor have the other Orientalists been more lenient; especially those who, perchance under the inspiration of early sympathies for biblical chronology, prefer in matters connected with Indian dates to give head to their own emotional, but unscientific, intuitions. Some would have us believe that the Samvat era "is not demonstrable for times anteceding the Christian era at all." Kern makes efforts to prove that the Indian astronomers began to employ this era "only after the year of *grace* 1,000." Prof. Weber, referring sarcastically to General Cunningham, observes that "others, on the contrary, have no hesitation in at once referring, wherever possible, every Samvat or Samvatsare-dated inscription to the Samvat era." Thus, *e.g.*, Cunningham (in his *Archæological Survey of India*, iii. 31-39,) directly assigns an inscription dated Samvat 5 to the year "52 B.C.," etc., and winds up the statement with the following plaint:

For the present, therefore, unfortunately, where there is nothing else [but that *unknown* era] to guide us, it *must generally remain an open question which era we have to do with in a particular inscription, and what date consequently the inscription bears.**

The confession is significant. It is pleasant to find such a ring of sincerity in a European Orientalist, though it does seem quite ominous for Indian archæology. The initiated Brâhmans know the positive dates of their eras and remain therefore unconcerned. What the "Adepts" have once said, they maintain; and no new discoveries or modified conjectures of accepted authorities can exert any pressure upon their data. Even if Western archæologists or numismatists took it into their heads to change the date of our Lord and Glorified Deliverer from the seventh century "B.C." to the seventh century "A.D.," we would but the more admire such a remarkable gift for knocking about dates and eras, as though they were so many lawn-tennis balls.

Meanwhile, to all sincere and enquiring Theosophists, we will say plainly, it is useless for any one to speculate about the date of our Lord Sanggyas' birth, while rejecting *à priori* all the Brâhmanical, Ceylonese, Chinese and Tibetan dates. The pretext that these do not

* *Op. cit.*, p. 203.

agree with the chronology of a handful of Greeks who visited the country 300 years after the event in question, is too fallacious and bold. Greece was never concerned with Buddhism, and besides the fact that the classics furnish their few synchronistic dates simply upon the hearsay of their respective authors—a few Greeks, who themselves lived centuries before the writers quoted—their chronology is itself too defective, and their historical records, when it was a question of national triumphs, too bombastic and often too diametrically opposed to fact, to inspire with confidence any one less prejudiced than the average European Orientalist. To seek to establish the true dates in Indian history by connecting its events with the mythical "invasion," while confessing that "one would look in vain in the literature of the Brâhmans or Buddhists for any allusion to Alexander's conquest, and although it is impossible to identify any of the historical events related by Alexander's companions with the *historical tradition* of India," amounts to something more than a mere exhibition of incompetence in this direction; were not Prof. Max Müller the party concerned, we might say that it appears almost like predetermined dishonesty.

These are harsh words to say, and calculated no doubt to shock many a European mind trained to look up to what is termed "scientific authority" with a feeling akin to that of the savage for his family fetich. They are well deserved, nevertheless, as a few examples will show. To such intellects as Prof. Weber's—whom we take as the leader of the German Orientalists of the type of Christophiles—certainly the word "obtuseness" cannot be applied. Upon seeing how chronology is deliberately and *maliciously* perverted in *favour* of "Greek influence," Christian interests and his own predetermined theories—another, and even a stronger term should be applied. What expression is too severe to signify one's feelings upon reading such an unwitting confession of disingenuous scholarship as Weber repeatedly makes (*History of Indian Literature*) when urging the *necessity* of admitting that a passage "has been touched up by *later interpolation*," or forging fanciful chronological places for texts admittedly very ancient, as "otherwise the dates would be brought down too far or too near"! And this is the keynote of his entire policy—*fiat hypothesis, ruat cælum*! On the other hand Prof. Max Müller, enthusiastic Indophile as he seems, crams centuries into his chronological thimble without the smallest apparent compunction.

These two Orientalists are instances, because they are accepted

beacons of philology and Indian palæography. Our national monuments are dated and our ancestral history perverted to suit their opinions; the pernicious evil has ensued that as a result History is now recording for the misguidance of posterity the false annals and distorted facts which, upon their evidence, will be accepted without appeal as the outcome of the fairest and ablest critical analysis. While Prof. Max Müller will hear of no other than a Greek criterion for Indian chronology, Prof. Weber (*op. cit.*) finds Greek influence—his universal solvent—in the development of India's religion, philosophy, literature, astronomy, medicine, architecture, etc. To support this fallacy the most tortuous sophistry, the most absurd etymological deductions are resorted to. If one fact more than another has been set at rest by comparative mythology, it is that their fundamental religious ideas, and most of their gods, were derived by the Greeks from religions flourishing in the north-west of India, the cradle of the main Hellenic stock. This is now entirely disregarded, because a disturbing element in the harmony of the critical spheres. And though nothing is more reasonable than the inference that the Grecian astronomical terms were inherited equally from the parent stock, Prof. Weber would have us believe that "it was Greek influence that first infused a real life into Indian astronomy" (p. 251). In fine, the hoary ancestors of the Hindûs borrowed their astronomical terminology and learnt the art of star gazing and *even their zodiac* from the Hellenic infant! This proof engenders another: the relative antiquity of the astronomical texts shall be henceforth determined upon the presence or absence in them of asterisms and zodiacal signs, the former being undisguisedly Greek in their names, the latter are "designated by their Sanskrit names which are translated from the Greek" (p. 255). Thus "Manu's Law being unacquainted with the planets," is considered as more ancient than Yâjñavalkya's Code, which "inculcates their worship," and so on. But there is still another and a better test found out by the Sanskritists for determining with "infallible accuracy" the age of the texts, apart from asterisms and zodiacal signs: any casual mention in them of the name "Yavana," is taken in every instance to designate the "Greeks." This, apart "from an *internal* chronology based on the character of the works themselves, and on the quotations, etc., therein contained, is the only one possible," we are told. As a result the absurd statement that "the Indian astronomers regularly speak of the Yavanas as their teachers" (p. 252). *Ergo*, their *teachers* were

Greeks. For with Weber and others "Yavana" and "Greek" are convertible terms.

But it so happens that Yavanâchârya was the Indian title of a single Greek—Pythagoras; as Shankarâchârya was the title of a single Hindû philosopher; and the ancient Âryan astronomical writers cited his opinions to criticize and compare them with the teachings of their own astronomical science, perfected and derived from their ancestors long before him. The honorific title of Âchârya (master) was applied to him as to every other learned astronomer or mystic; and it certainly did not mean that Pythagoras or any other Greek "master" was necessarily *the* master of the Brâhmins. The word "Yavana" was a generic term, employed ages before the "Greeks of Alexander" projected "their influence" upon Jambudvîpa, to designate people of a younger race, the word meaning Yuvan "young," or *younger*. They knew of Yavanas of the north, west, south, and east; and the Greek strangers received this appellation as the Persians, Indo-Scythians, and others had before them. An exact parallel is afforded in our present day. To the Tibetans every foreigner whatsoever is known as a Peling; the Chinese designate Europeans as "red-haired devils"; and the Mussulmans call every one outside of Islam a Kaffir. The Webers of the future, following the example now set them, may perhaps, after 10,000 years, affirm, upon the authority of scraps of Moslem literature then extant, that the *Bible* was written, and the English, French, Russians and Germans who possessed and translated or "invented" it, lived in Kaffiristan shortly before their era under "Moslem influence." Because the *Yuga Purâna* of the *Gârgi Sanhitâ* speaks of an expedition of the Yavanas "as far as Pâtaliputra," therefore, either the Macedonians or the Seleucidæ had conquered all India! But our Western critic is ignorant, of course, of the fact that Ayodhya or Saketa of Râma was for two millenniums repelling inroads of various Mongolian and other Turanian tribes, besides the Indo-Scythians, from beyond Nepaul and the Himâlayas. Prof. Weber seems finally himself frightened at the Yavana spectre he has raised, for he queries: "Whether by the Yavanas it is really the Greeks who are meant . . . or possibly merely their Indo-Scythian or other successors, to whom the name was afterwards transferred." This wholesome doubt ought to have modified his dogmatic tone in many other such cases.

But, drive out prejudice with a pitch-fork it will ever return. The eminent scholar, though staggered by his own glimpse of the truth,

returns to the charge with new vigour. We are startled by the fresh discovery that Asuramaya,* the earliest astronomer, mentioned repeatedly in the Indian epics, "is identical with 'Ptolemaios' of the Greeks." The reason for it given is, that:

This latter name, as we see from the inscriptions of Piyadasī, became in Indian "Turamaya," out of which the name "Asuramaya" might very easily grow; and since, by the later tradition, this "Maya" is distinctly assigned to Romaka-pura in the West.

Had the "Piyadasī inscription" been found on the site of ancient Babylonia, one might suspect the word "Turamaya" as derived from "Turanomaya," or rather "mania." Since, however, the Piyadasī inscriptions belong distinctly to India, and the title was borne but by two kings—Chandragupta and Dharmâshoka—what has "'Ptolemaios' of the Greeks" to do with "Turamaya," or the latter with "Asuramaya," except, indeed, to use it as a fresh pretext to drag the Indian astronomer under the stupefying "Greek influence" of the upas tree of Western philology? Then we learn that, because "Pânini once mentions the Yavanas, *i.e.*, . . . Greeks, and explains the formation of the word 'Yavanânî,' to which, according to the Varttika, the word *Lipi*, 'writing,' must be supplied," therefore the word signifies "the writing of the Yavanas"—of the *Greeks* and none other. Would the German philologists (who have so long and so fruitlessly attempted to explain this word) be very much surprised if told that they are yet as far as possible from the truth? That—Yavanânî does not mean "Greek writing" at all, but any foreign writing whatsoever? That the absence of the word "writing" in the old texts, except in connection with the names of foreigners, does not in the least imply that none but Greek writing was known to them, or that they had none of their own, being ignorant of the art of reading and writing until the days of Pânini (theory of Prof. Max Müller)? For Devanâgarî is as old as the Vedas, and held so sacred that the Brâhmins, first under penalty of death, and later on of eternal ostracism, were not even allowed to mention it to profane ears, much less to make known the existence of their secret temple libraries. So that by the word Yavanânî, "to which, according to the Varttika, the word *Lipi*, 'writing,' must be supplied," the writing of foreigners in general, whether Phœnician, Roman, or Greek, is always

* Dr. Weber is not probably aware of the fact that this distinguished astronomer's name was simply *Maya*; the prefix "Asura" was often added to it by ancient Hindû writers to show that he was a *Rākshasa*. In the opinion of the Brâhmins he was an "Atlantean," and one of the greatest astronomers and occultists of the lost Atlantis.

meant. As to the preposterous hypothesis of Prof. Max Müller that writing "was not used for literary purposes in India" before Pānini's time (again upon Greek authority), that matter has been disposed of elsewhere.

Equally unknown are those certain other and most important facts, fable though they seem. First, that the Âryan "Great War," the Mahâbhârata, and the Trojan War of Homer—both mythical as to personal biographies and fabulous supernumeraries, yet perfectly historical in the main—belong to the same cycle of events. For the occurrences of many centuries, among them the separation of sundry peoples and races, erroneously traced to Central Asia alone, were in these immortal epics compressed within the scope of single dramas made to occupy but a few years. Secondly, that in this immense antiquity the forefathers of the Âryan Greeks and the Âryan Brâhmans were as closely united and intermixed as are now the Âryans and the so-called Dravidians. Thirdly, that before the days of the *historical* Râma, from whom in unbroken genealogical descent the Oodeypore sovereigns trace their lineage, Râjputâna was as full of direct Post-Atlantean "Greeks" as the Post-Trojan, subjacent Cumæ and other settlements of Pre-Magna Græcia were of the fast Hellenizing sires of the modern Râjput. One acquainted with the *real* meaning of the ancient epics cannot refrain from asking himself whether these intuitional Orientalists prefer being called deceivers or deceived, and in charity gives them the benefit of the doubt.* What can be thought of Prof. Weber's endeavour when, "to determine more accurately the position of Râmâyana [called by him the 'artificial epic'] in literary history," he ends with the assumption that:

* Further on, Prof. Weber indulges in the following piece of chronological sleight of hand. In his arduous endeavour "to determine accurately" the place in history of the "Romantic Legend of Shâkya Buddha" (translation by Beale), he thinks "the special points of relation here found to Christian legends are very striking. The question which party was the borrower Beale properly leaves undetermined. Yet in all likelihood [!] we have here simply a similar case to that of the appropriation of Christian legend by the worshippers of Krishna" (p. 300). Now, it is this, that every Hindû and Buddhist has the right to brand as "dishonesty," whether conscious or unconscious. Legends originate earlier than history and die out upon being sifted. Neither of the fabulous events in connection with Buddha's birth, taken exoterically, necessitated a great genius to narrate them, nor was the intellectual capacity of the Hindûs ever proved so inferior to that of the Jewish and Greek mob that they should *borrow* from them even fables inspired by religion. How their fables, evolved between the second and third centuries after Buddha's death, when the fever of proselytism and the adoration of his memory were at their height, could be *borrowed* and then appropriated from the Christian legends written during the first century of the Western era, can only be explained by a German Orientalist. Mr. T. W. Rhys Davids (*Jâtaka Book*) shows the contrary to have been true. It may be remarked in this connection that, though the first "miracles" of both Krishna and Christ are said to have happened at a Mathura, while the latter city exists to this day in India—the antiquity of its name being fully proved—the Mathura, or Matura in Egypt, of the *Gospel of Infancy*, where Jesus is alleged to have produced his first miracle, was sought to be identified, centuries ago, by the stump of an old tree in the desert, and is represented by an empty spot!

It rests upon an acquaintance with the Trojan cycle of legend . . . the conclusion there arrived at is that the date of its composition is to be placed at the commencement of the Christian era, . . . in an epoch when the operation of the Greek influence upon India had already set in!*

The case is hopeless. If the "internal chronology," and external fitness of things we may add, presented in the triple Indian epic, did not open the eyes of the hypercritical professors to the many historical facts enshrined in their striking allegories; if the significant mention of "black Yavanas" and "white Yavanas," indicating totally different peoples, could so completely escape their notice;† and the enumeration of a host of tribes, nations, races, clans, under their separate Sanskrit designations in the *Mahābhārata*, had not stimulated them to try to trace their ethnic evolution and identify them with their now living European descendants, there is little to hope from their scholarship except a mosaic of learned guess-work. The latter *scientific* mode of critical analysis may yet end some day in a consensus of opinion that Buddhism is due wholesale to the "Life of Barlaam and Josaphat," written by St. John of Damascus; or that our religion was plagiarized from that famous Roman Catholic legend of the eighth century in which our Lord Gautama is made to figure as a Christian Saint; better still, that the Vedas were written at Athens under the auspices of St. George, the tutelary successor of Theseus. For fear that anything might be lacking to prove the complete obsession of Jambudvīpa by the demon of "Greek influence," Dr. Weber vindictively casts a last insult into the face of India by remarking that *if* "European Western steeples owe their origin to an imitation of the Buddhist topes‡ . . . on the other hand, in the *most ancient Hindū edifices* the presence of Greek influence is unmistakable" (p. 274). Well may Dr. Rājendralāla Mitra "hold out particularly against the idea of *any* Greek influence whatever on the development of Indian architecture." If his ancestral literature must be attributed to "Greek influence," the temples, at least, might have been spared. One can understand how the Egyptian Hall in London reflects the influence of the ruined temples on the Nile; but it is a more difficult feat, even for a German professor, to prove the archaic structure of old Āryāvarta a foreshadowing of the genius of the lamented Sir Christopher Wren! The outcome of this palæographic

* *Ibid.*, p. 194.

‡ Of Hindū Lingams, rather.

spoliation is that there is not a tittle left for India to call her own. Even medicine is due to the same Hellenic influence. We are told—this once by Roth—that “only a comparison of the principles of Indian *with those of Greek* medicine can enable us to judge of the origin, age and value of the former . . .”; and “*à propos* of Charaka’s injunctions as to the duties of the physician to his patient,” adds Dr. Weber, “he cites *some remarkably coincident expressions from the oath of the Asklepiads.*” It is then settled. India is Hellenized from head to foot, and even had no physic until the Greek doctors came.

SHĀKYA MUNI'S PLACE IN HISTORY.

No Orientalist, save, perhaps, the same wise, not to say deep, Prof. Weber, opposes more vehemently Hindû and Buddhist chronology than Prof. Max Müller. Evidently if an Indophile he is not a Buddhophile, and General Cunningham, however independent otherwise in his archæological researches, agrees with him more than would seem strictly prudent in view of *possible* future discoveries.* We have then to refute in our turn this great Oxford professor's speculations.

To the evidence furnished by the Purānas and *Mahāvansha*, which he also finds hopelessly entangled and contradictory (though the perfect accuracy of that Sinhalese history is most warmly acknowledged by Sir Emerson Tennant, the historian), he opposes the Greek classics and their chronology. With him, it is always "Alexander's invasion" and "conquest," and "the ambassador of Seleucus Nicator—Megasthenes," while even the faintest record of such "conquest" is conspicuously absent from Brāhmanic record; and although in an inscription of Piyadasî are mentioned the names of Antiochus, Ptolemy Magus, Antigonus, and even of the great Alexander himself, as vassals of the king Piyadasî, the Macedonian is yet called the "conqueror of India." In other words, while any casual mention of Indian affairs by a Greek writer of no great note must be accepted unchallenged, no record of the Indians, literary or monumental, is entitled to the smallest consideration. Until rubbed against the touchstone of Hellenic infalli-

* Notwithstanding Prof. M. Müller's regrettable efforts to invalidate every Buddhist evidence, he seems to have ill-succeeded in proving his case, if we can judge from the openly expressed opinion of his own German *confrères*. In the portion headed "Tradition as to Buddha's Age" (pp. 283-288) in his *History of Indian Literature*, Prof. Weber very aptly remarks, "Nothing like positive certainty, therefore, is for the present attainable. . . . Nor have the subsequent discussions of this topic by Max Müller (1859), *History of Ancient Sanskrit Literature*, p. 264 ff, by Westergaard (1860), *Ueber Buddha's Todesjahr*, and by Kern, *Over de Jaartelling der Zuidel Buddhisten*, so far yielded any definite result." Nor are they likely to.

bility it must be set down, in the words of Prof. Weber, as "of course mere empty boasting." Oh, rare Western sense of justice!*

Occult records show differently. They say—challenging proof to the contrary—that Alexander never penetrated into India farther than Taxila; which is not even quite the modern Attock. The murmuring of the Macedonian's troops began at the same place, and not as given out, on the banks of the Hyphasis. For having never gone to the Hydaspes or Jhelum, he could not have been on the Sutlej. Nor did Alexander ever found satrapies or plant any Greek colonies in the Punjab. The only colonies he left behind him that the Brāhmins ever knew of, amounted to a few dozens of disabled soldiers, scattered hither and thither on the frontiers; who with their native raped wives settled around the deserts of Karmania and Drangaria—the then natural boundaries of India. And unless history regards as colonists the many thousands of dead men and those who *settled* for ever under the hot sands of Gedrosia, there were no other, save in the fertile imagination of the Greek *historians*. The boasted "invasion of India" was confined to the regions between Karmania and Attock, east and west, and Belûchistan and the Hindû Kûsh, south and north—countries which were all India for the Greek of those days. His building a *fleet* on the Hydaspes is a fiction; and his "victorious march through the fighting armies of India" another. However, it is not with the "world conqueror" that we have now to deal, but rather with the supposed accuracy and even casual veracity of his captains and countrymen, whose hazy reminiscences on the testimony of the classical writers have now been raised to unimpeachable evidence in everything that may affect the chronology of early Buddhism and India.

Foremost among the evidence of classical writers, that of Flavius Arrianus is brought forward against the Buddhist and Chinese chronologies. No one should impeach the *personal* testimony of this conscientious author had he been himself an eye-witness instead of Megasthenes. But when a man comes to know that he wrote his accounts upon the now lost works of Aristobulus and Ptolemy; and that the latter described their data from texts prepared by authors who had never set their eyes *upon one line written by either Megasthenes or*

* No Philaryan would pretend for a moment on the strength of the Piyadasi inscriptions that Alexander of Macedonia, or either of the other sovereigns mentioned, was claimed as an actual "vassal" of Chandragupta. They did not even pay tribute, but only a kind of quit-rent annually for lands ceded in the north—as the grant-tablets could show. But the inscription, however misinterpreted, shows most clearly that Alexander was never the conqueror of India.

Nearchus himself; and that knowing so much one is informed by Western historians that among the works of Arrian, Book VII of the "Anabasis of Alexander" is "the chief authority on the subject of the Indian invasion—a Book unfortunately *with a gap* in its twelfth chapter"—one may well conceive upon what a broken reed Western authority leans for its Indian chronology. Arrian lived over 600 years after Buddha's death; Strabo 500 (55 "B.C."); Diodorus Siculus—quite a trustworthy compiler!—about the first century; Plutarch over 700 Anno Buddhæ, and Quintus Curtius over 1,000 years! And when, to crown this army of witnesses against the Buddhist annals, the reader is informed by our Olympian critics that the works of the last-named author—than whom no more blundering (geographically, chronologically, and historically) writer ever lived—form along with the Greek history of Arrian *the most valuable source of information* respecting the military career of Alexander the Great—then the only wonder is that the great conqueror was not made by his biographers to have—Leonidas-like—defended the Thermopylean passes in the Hindû Kûsh against the invasion of the first Vedic Brâhmans "from the Oxus." Withal the Buddhist dates are either rejected or only accepted *pro tempore*. Well may the Hindû resent the preference shown to the testimony of Greeks—of whom some, at least, are better remembered in Indian history as the importers into Jambudvîpa of every Greek and Roman vice known and unknown to their day—against his own national records and history. "Greek influence" was felt, indeed, in India, in this, and only in this, one particular. Greek damsels mentioned as an article of great traffic for India—Persian and Greek Yavanîs—were the fore-mothers of the modern nautch-girls, who had till then remained pure virgins of the inner temples. Alliances with the Antiochuses and the Seleucus Nicators bore no better fruit than the rotten apple of Sodom. Pâtaliputra, as prophesied by Gautama Buddha, found its fate in the waters of the Ganges, having been twice before nearly destroyed, again like Sodom, by the fire of heaven.

Reverting to the main subject, the "contradictions" between the Ceylonese and Chino-Tibetan chronologies actually prove nothing. If the Chinese annalists of Sauî in accepting the prophecy of our Lord that "a thousand years after He had reached Nirvâna, His doctrines would reach the north" fell into the mistake of applying it to China, whereas Tibet was meant, the error was corrected after the eleventh century of the Tzin era in most of the temple chronologies. Besides which, it may

now refer to other events relating to Buddhism, of which Europe knows nothing: China or Tzina dates its present name only from the year 296 of the Buddhist era* (vulgar chronology having assumed it from the first Hoang of the Tzing dynasty), therefore the Tathâgata could not have indicated it by this name in his well-known prophecy. If misunderstood even by several of the Buddhist commentators, it is yet preserved in its true sense by his own immediate Arhats. The Glorified One meant the country that stretches far off from the Lake Mansarovara; far beyond that region of the Himavat, where dwelt from time immemorial the great "Teachers of the Snowy Range." These were the great Shrâman-âchâryas who preceded Him, and were His teachers, their humble successors trying to this day to perpetuate their and His doctrines. The prophecy came out true to the very day, and it is corroborated both by the mathematical and historical chronology of Tibet—quite as accurate as that of the Chinese. Arhat Kâshyapa, of the dynasty of Moryas, founded by one of the Chandraguptas near Pâtaliputra, left the convent of Panch-Kukkutarama, in consequence of a vision of our Lord, for missionary purpose in the year 683 of the Tzin era (436 Western era) and had reached the great Lake of Bod-yul in the same year. It is at that period that the prophesied millennium expired. The Arhat carrying with him the fifth statue of Shâkyâ Muni, one of the seven gold statues made after his bodily death by order of the first Council, planted it in the soil on that very spot where seven years later was built the first Gonpa (monastery), where the earliest Buddhist Lamas dwelt. And though the conversion of the whole country did not take place before the beginning of the seventh century (Western era), the good law had, nevertheless, *reached* the North at the time prophesied, and no earlier. For, the *first* of the golden statues had been plundered from Bhikshu Sali Sûka by the Hiong-un robbers and melted, during the days of Dharmâshoka, who had sent missionaries beyond Nepaul. The *second* had a like fate, at Ghar-zha, even before it had reached the boundaries of Bod-yul. The *third* was rescued from a barbarous tribe of Bhons by a Chinese military chief who had pursued them into the deserts of Shamo about 423 Buddhist era (120 "B.C."). The *fourth* was sunk in the third century of the Christian era, together with the ship that carried it from Magadha toward the hills of Ghangschhen-dzo-ngâ (Chittagong). The *fifth* arriving in the nick of time

* The reference to Chinahunah (Chinese and Huns) in the Bishma Parva of the *Mahâbhârata* is evidently a later interpolation, as it does not occur in the old MSS. existing in Southern India.

reached its destination with Arhat Kâshyapa. So did the last two.*

On the other hand, the Southern Buddhists, headed by the Ceylonese, open their annals with the following event:

They claim *according to their native chronology* that Vijaya, the son of Sinhabâhu, the sovereign of Lala, a small kingdom or Râj on the Gandaki river in Magadha, was exiled by his father for acts of turbulence and immorality. Sent *adrift* on the ocean with his companions, after having their heads shaved, Buddhist-Bhikshu fashion, as a sign of penitence, he was carried to the shores of Lankâ. Once landed, he and his companions conquered and easily took possession of an island inhabited by uncivilized tribes, generically called the Yakshas. This

* No doubt, since the history of these seven statues is not in the hands of the Orientalists, it will be treated as a "groundless fable." Nevertheless such is their origin and history. They date from the first Synod, that of Râjagriha, held in the season of *war* following the death of Buddha, *i.e.*, one year after his death. Were this Râjagriha Council held 100 years after, as maintained by some, it could not have been presided over by Mahâkâshyapa, the friend and brother Arhat of Shâkya Muni, as he would have been 200 years old. The second Council or Synod, that of Vaisali, was held 120, not 100 or 110 years as some would have it, after the Nirvâna, for the latter took place at a time a little over twenty years before the physical death of Tathâgata. It was held at the great Saptaparna cave (Mahâ-vansha's "Sattapanni") near the Mount Baibhâr (the Webhâra of the Pâli Manuscripts), that was in Râjagriha, the old capital of Magadha. Memoirs exist, containing the record of his daily life, made by the nephew of King Ajâtashatru, a favourite Bikshu of the Mahâchârya. These texts have ever been in the possession of the superiors of the first Lamasery built by Arhat Kâshyapa in Bod-yul, most of whose Chohans were the descendants of the dynasty of the Moryas, there being up to this day three of the members of this once royal family living in India. The old text in question is a document written in Anudruta Magadha characters. (We deny that these or any other characters—whether Dev-anâgari, Pâli or Dravidian—ever used in India, are variations of, or derivatives from, the Phœnician.) To revert to the texts, it is therein stated that the Sattapanni cave, then called "Sarasvatî" and "Bamboo" Cave, got its latter name in this wise. When our Lord first sat in it for Dhyâna, it was a large six-chambered natural cave, fifty to sixty feet wide by thirty-three deep. One day, while teaching the mendicants outside, our Lord compared man to a Saptaparna (seven-leaved) plant, showing them how after the loss of its first leaf every other could be easily detached but the seventh leaf—directly connected with the stem. "Mendicants," He said, "there are seven Buddhas in every Buddha, and there are *six* Bikshus and but one Buddha in each mendicant. What are the *seven*? The seven branches of complete knowledge. What are the *six*? The six organs of sense. What are the *five*? The five elements of illusive being. And the *one* which is also ten? He is a true Buddha who develops in him the ten forms of holiness and subjects them all to the one—the 'silent voice'" (meaning Avalokiteshvara). After that, causing the rock to be moved at His command, the Tathâgata made it divide itself into a seventh additional chamber, remarking that a rock too was septenary, and had seven stages of development. From that time it was called the Sattapanni or the Saptaparna cave. After the first Synod was held, seven gold statues of the Bhagavat were cast by order of the king, and each of them was placed in one of the seven compartments. These in after times, when the good law had to make room for more congenial because more sensual creeds, were taken in charge by various Vihâras and then disposed of as explained. Thus when Mr. Turnour states on the authority of the sacred traditions of Southern Buddhists that the cave received its name from the Sattapanni plant, he states what is correct. In the *Archæological Survey of India*, we find that Gen. Cunningham identifies this cave with one not far away from it and in the same Baibhâr range, but which is most decidedly not our Saptaparna cave. At the same time the Chief Engineer of Buddha Gayâ, Mr. Beglar, describing the Chetu cave, mentioned by Fa-hian, thinks it is the Saptaparna cave, and he is right. For these, as well as the Pippâl and the other caves mentioned in our texts, are too sacred in their associations—both having been used for centuries by generations of Bhikkhus, unto the very time of their leaving India—to have their sites so easily forgotten.

—at whatever epoch and year it may have happened—is an *historical* fact, and the Ceylonese records, independent of Buddhist chronology, give it out as having taken place 382 years before Dushtagamani (*i.e.*, in 543 before the Christian era). Now, the Buddhist Sacred Annals record certain words of our Lord pronounced by Him shortly before His death. In *Mahāvansha* He is made to have addressed them to Shakra, in the midst of a great assembly of Devatās (Dhyân Chohans), and while already “in the exalted unchangeable Nirvâna, seated on the throne on which Nirvâna is achieved.” In our texts Tathâgata addresses them to his assembled Arhats and Bhikkhus a few days before his final liberation:

One Vijaya, the son of Sinhabâhu, king of the land of Lala, together with 700 attendants, has just landed on Lankâ. Lord of Dhyâna Buddhas [Devas]! my doctrine will be established on Lankâ. Protect him and Lankâ!

This is the sentence pronounced which, as proved later, was a prophecy. The now familiar phenomenon of clairvoyant prevision, amply furnishing a natural explanation of the prophetic utterance without any unscientific theory of miracle, the laugh of certain Orientalists seems uncalled for. Such parallels of poetico-religious embellishments as found in *Mahāvansha* exist in the written records of every religion—as much in Christianity as anywhere else. An unbiassed mind would first endeavour to reach the correct and very superficially hidden meaning before throwing ridicule and contemptuous discredit upon them. Moreover, the Tibetans possess a more sober record of this prophecy in the notes, already alluded to, reverentially taken down by King Ajâtashatru's nephew. They are, as said above, in the possession of the lamas of the convent built by Arhat Kâshyapa; the Moryas and their descendants being of a more direct descent than the Râjput Gautamas, the Chiefs of Nâgara—the village identified with Kapilavastu—are the best entitled of all to their possession. And we know they are historical to a word. For the Esoteric Buddhist they yet vibrate in space; and these prophetic words, together with the true picture of the Sugata who pronounced them, are present in the aura of every atom of His relics. This, we hasten to say, is no proof but for the psychologist. But there is other and historical evidence: the cumulative testimony of our religious chronicles. The philologist has not seen these; but this is no proof of their non-existence.

The mistake of the Southern Buddhists lies in dating the Nirvâna of

Sanggyas Pan-chhen from the actual day of his death, whereas, as above stated, He had reached it over twenty years previous to his disincarnation. Chronologically, the Southerners are right, both in dating His death in 543 "B.C.," and one of the great Councils at 100 years after the latter event. But the Tibetan Chohans, who possess all the documents relating to the last twenty-four years of His *external* and *internal* life—of which no philologist knows anything—can show that there is no real discrepancy between the Tibetan and the Ceylonese chronologies as stated by the Western Orientalists.* For the profane, the Exalted One was born in the sixty-eighth year of the Burmese Eeatzana era, established by Eeatzana (Anjana), King of Dewaha; for the *initiated*—in the forty-eighth year of that era, on a Friday of the waxing moon, of May. And it was in 563 before the Christian chronology that Tathâgata reached his full Nirvâna, dying—as correctly stated by Mahâvana—in 543, on the very day when Vijaya landed with his companions in Ceylon, as prophesied by Loka-nâtha, our Buddha.

Professor Max Müller seems to greatly scoff at this prophecy. In his chapter upon Buddhism (*History of Sanskrit Literature*)—the "false" religion—the eminent scholar speaks as though he resented such an *unprecedented* claim. "We are asked to believe"—he writes—"that the Ceylonese historians placed the founder of the Vijyan dynasty of Ceylon in the year 543 in accordance with their sacred chronology" (*i.e.*, Buddha's prophecy), "while *we* [the philologists] are not told, however, *through what channel* the Ceylonese could have received their information as to the exact date of Buddha's death." Two points may be noticed in these sarcastic phrases; (*a*) the implication of a false prophecy by our Lord; and (*b*) a dishonest tampering with chronological records, reminding one of those of Eusebius, the famous Bishop of Cæsaræa, who stands accused in history of "perverting every Egyptian chronological table for the sake of synchronisms." With reference to charge *one*, he may be asked why our Shâkyasinha's prophecies should not be as much entitled to his respect as those of his Saviour would be to ours—were we to ever write the true history of the "Galilean" Arhat. With regard to charge *two*, the distinguished philologist is reminded of the glass house he and all Christian chronologists are themselves living in. Their inability to vindicate the adoption of

* Bishop Bigandet, after examining all the Burmese authorities accessible to him, frankly confesses that "the history of Buddha offers an almost complete blank as to what regards his doings and preachings during a period of nearly twenty-three years" (*Romantic Legend of Gaudama*, vol. i. p. 260).

December 25th as the actual day of the Nativity, and hence to determine the age and the year of their Avatâra's death—even before their own people—is far greater than is ours to demonstrate the year of Buddha to other nations. Their utter failure to establish *on any other but traditional evidence* the, to them, historically *unproved*, if probable, fact of his existence at all, ought to engender a fairer spirit. When Christian historians can, upon undeniable *historical* authority, justify biblical and ecclesiastical chronology, then, perchance, they may be better equipped than at present for the congenial work of rending heathen chronologies into shreds.

The "channel" the Ceylonese received their information through, was two Bikhshus who had left Magadha to follow their disgraced brethren into exile. The capacity of Siddhârtha Buddha's Arhats for transmitting intelligence by psychic currents may, perhaps, be conceded without any great stretch of imagination to have been equal to, if not greater than, that of the prophet Elijah, who is credited with the power of having known from any distance all that happened in the king's bedchamber. No Orientalist has the right to reject the testimony of other people's Scriptures, while professing belief in the far more contradictory and entangled evidence of his own upon the self-same theory of proof. If Professor Müller is a sceptic at heart, then let him fearlessly declare himself; only a sceptic who impartially acts the iconoclast has the right to assume such a tone of contempt towards any Non-Christian religion. And for the instruction of the impartial enquirer only, shall it be thought worth while to collate the evidence afforded by historical—not psychological—data. Meanwhile, by analyzing some objections and exposing the dangerous logic of our critic, we may give the Theosophists a few more facts connected with the subject under discussion.

Now that we have seen Professor Max Müller's opinions in general about this, so to say, the Prologue to the Buddhist Drama with Vijaya as the hero—what has he to say as to the details of its plot? What weapon does he use to weaken this foundation-stone of a chronology upon which are built and on which depend all other Buddhist dates? What is the fulcrum for the critical lever he uses against the Asiatic records? Three of his main points may be stated *seriatim* with answers appended. He begins by premising that:

1st. "If the starting-point of the Northern Buddhist chronology turns out to be merely hypothetical, based as it is on a prophecy of

Buddha, it will be difficult to avoid the same conclusion with regard to the date assigned to Buddha's death by the Buddhists of Ceylon and of Burmah" (p. 266). "The *Mahāvansha* begins with relating three miraculous visits which Buddha paid to Ceylon." Vijaya, the name of the founder of the first dynasty (in Ceylon), means "conquest," "and, therefore, such a person *most likely* never existed" (p. 268). This he believes invalidates the whole Buddhist chronology.

To which the following pendant may be offered:

William I, King of England, is commonly called the *Conqueror*; he was, moreover, the illegitimate son of Robert, Duke of Normandy, surnamed *le Diable*. An opera, we hear, was invented on this subject, full of miraculous events, called "Robert the Devil," showing its traditional character. Therefore, shall we be also justified in saying that Edward the Confessor, Saxons and all, up to the time of the union of the houses of York and Lancaster under Henry VII—the new historical period in English history—are all "fabulous tradition" and "such a person as William the Conqueror *most likely never existed*"?

2nd. In the Chinese chronology—continues the dissecting critic—"the list of the thirty-three Buddhist patriarchs . . . is of a doubtful character. For Western history the exact Ceylonese chronology begins with 161 B.C." Extending beyond that date there exists but "a traditional native chronology. Therefore, . . . what goes before . . . is but fabulous tradition."

The chronology of the Apostles and their existence has never been proved historically. The history of the Papacy is confessedly "obscure." Ennodius of Pavia (fifth century) was the first one to address the Roman Bishop (Symmachus), who comes fifty-first in the Apostolic succession, as "Pope." Thus, if we were to write the history of Christianity, and indulge in remarks upon its chronology, we might say that since there were no antecedent Popes, and since the Apostolic line began with Symmachus (A.D. 498), all Christian records beginning with the Nativity and up to the sixth century are *therefore* "fabulous traditions," and all Christian chronology is "purely hypothetical."

3rd. Two discrepant dates in Buddhist chronology are scornfully pointed out by the Oxford Professor. If the landing of Vijaya, in Lankâ—he says—on the same day that Buddha reached Nirvâna (died) is in fulfilment of Buddha's prophecy, then "if Buddha *was a true prophet*, the Ceylonese argue quite rightly that *he must have died in the year of the conquest*, or 543 B.C." (p. 270). On the other hand, the

Chinese have a Buddhist chronology of their own; and it does not agree with the Ceylonese. "The lifetime of Buddha from 1,029 to 950 rests on his own prophecy that a millennium would elapse from his death to the conversion of China. If, therefore, Buddha *was a true prophet he must have lived about 1,000 B.C.*" (p. 266). But the date does not agree with the Ceylonese chronology—*ergo*, Buddha *was a false prophet*. As to that other, "the first and most important link" in the Ceylonese as well as in the Chinese chronology, "it is extremely weak." In the Ceylonese "a *miraculous genealogy had to be provided* for Vijaya," and "a *prophecy was therefore invented*" (p. 269).

On these same lines of argument it may be urged that:

Since no genealogy of Jesus, "exact or inexact," is found in any of the world's records save those entitled the Gospels of SS. Matthew (i. 1-17), and Luke (iii. 23-38); and since these radically disagree—although this personage is the most conspicuous in Western history, and the nicest accuracy might have been expected in his case; therefore, agreeably with Professor Max Müller's sarcastic logic, if Jesus "*was a true prophet, he must have*" descended from David through Joseph (Matthew's Gospel); and "if he *was a true prophet*," again, then the Christians "argue quite rightly that he must have" descended from David through Mary (Luke's Gospel). Furthermore, since the two genealogies are obviously discrepant, and prophecies were, in this instance, truly "invented" by the post-apostolic theologians (or, if preferred, old prophecies of Isaiah and other Old Testament prophets, irrelevant to Jesus, were *adapted* to suit his case, as recent English commentators—in Holy Orders—the *Bible* revisers, now concede); and since, moreover—always following the Professor's argument, in the cases of Buddhist and Brâhmanical chronologies—Biblical chronology and genealogy are found to be "traditional and full of absurdities . . . every attempt to bring them into harmony having proved a failure" (p. 266); have we or have we not a certain right to retort, that if Gautama Buddha is on these lines shown *a false prophet*, then Jesus must likewise be "a false prophet"? And if Jesus was a true prophet despite existing confusion of authorities, why on the same lines may not Buddha have been one? Discredit the Buddhist prophecies and the Christian ones must go along with them.

The utterances of the ancient pythoness now but provoke the scientific smile; but no tripod ever mounted by the prophetess of old was so shaky as the chronological trinity of points upon which this Orien-

talist stands to deliver his oracles. Moreover, his arguments are double-edged, as shown. If the citadel of Buddhism can be undermined by Professor Max Müller's critical engineering, then *pari passu* that of Christianity must crumble in the same ruins. Or have the Christians alone the monopoly of *absurd* religious "inventions" and the right of being jealous of any infringement of their patent rights?

To conclude, we say, that the year of Buddha's death is correctly stated by Mr. Sinnett, *Esoteric Buddhism* having to give its chronological dates according to *esoteric* reckoning. And this reckoning would alone, if explained, make away with every objection urged, from Professor Max Müller's *Sanskrit Literature* down to the latest "evidence"—*the proofs* in the *Reports of the Archæological Survey of India*. The Ceylonese era, as given in *Mahāvansha*, is correct in everything, withholding but the above given fact of Nirvâna, the great mystery of Samma-Sambuddha and Abhijñâ remaining to this day unknown to the outsider; and though certainly known to Bikshu Mahāvana—King Dhâṛṣena's uncle—it could not be explained in a work like the *Mahāvansha*. Moreover, the Sinhalese chronology agrees in every particular with the Burmese chronology. Independent of the religious era dating from Buddha's death, called "Nirvânic Era," there existed, as now shown by Bishop Bigandet (*Life of Gaudama*), two historical eras. One lasted 1,362 years, its last year corresponding with 1,156 of the Christian era; the other, broken into two small eras, the last, succeeding immediately the other, exists to the present day. The beginning of the first, which lasted 562 years, coincides with the year A.D. 79 and the Indian Shâka era. Consequently, the learned Bishop, who surely can never be suspected of partiality to Buddhism, accepts the year 543 of Buddha's Nirvâna. So do Mr. Turnour, Professor Lassen, and others.

The alleged discrepancies between the fourteen various dates of Nirvâna collected by Ksoma Körösi, do not relate to the Nyr-Nyang in the least. They are calculations concerning the Nirvâna of the precursors, the Bodhisattvas and previous incarnations, of Sanggyas that the Hungarian found in various works and wrongly applied to the last Buddha. Europeans must not forget that this enthusiast acted under protest of the Lamas during the time of his stay with them: and that, moreover, he had learned more about the doctrines of the heretical Dugpas than of the orthodox Gelugpas. The statement of this "great authority [!] on Tibetan Buddhism," as he is called, to the effect that

Gautama had *three* wives whom he names—and then contradicts himself by showing (*Tibetan Grammar*, p. 162, see note) that the first two wives “are one and the same,” shows how little he can be regarded as an “authority.” He had not even learned that “Gopâ, Yashodharâ and Utpala Varnâ” are the three names for three mystical powers. So with the “discrepancies” of the dates. Out of the sixty-four mentioned by him but two relate to Shâkya Muni—namely, the years 576 and 546—and these two err in their transcription; for when corrected they must stand 564 and 543. As for the rest they concern the seven Ku-sum, or triple form of the Nirvânic state and their respective duration, and relate to doctrines of which Orientalists know absolutely nothing.

Consequently from the Northern Buddhists, who, as confessed by Professor Weber, “alone possess these [Buddhist] Scriptures *complete*,” and have “preserved more authentic information regarding the circumstances of their redaction”—the Orientalists have up to this time learned next to nothing. The Tibetans say that Tathâgata became a full Buddha—*i.e.*, reached *absolute* Nirvâna—in 2,544 of the Kali era (according to Sauramâna), and thus *lived* indeed but *eighty* years, as no Nirvânî of the *seventh degree* can be reckoned among the *living* (*i.e.*, existing) men. It is no better than loose conjecture to argue that it would have entered as little into the thoughts of the Brâhmans to note the day of Buddha's birth “as the Romans or even the Jews [would have] thought of preserving the date of the birth of Jesus before he had become the founder of a religion.” (Max Müller, *History of Sanskrit Literature*.) For, while the Jews had been from the first rejecting the claim of Messiahship set up by the Chelâs of the Jewish prophet and were not expecting their Messiah at that time, the Brâhmans (the initiates, at any rate) knew of the coming of him whom they regarded as an incarnation of divine wisdom, and therefore were well aware of the astrological date of his birth. If, in after times, in their impotent rage they destroyed every accessible vestige of the birth, life and death of Him, who in His boundless mercy to all creatures had revealed their carefully concealed mysteries and doctrines in order to check the ecclesiastical torrent of ever-growing superstitions, yet there had been a time when He was met by them as an Avatâra. And, *though they destroyed, others preserved.*

The thousand and one speculations and the torturing of exoteric texts by archæologist or palæographer will ill repay the time lost in their study.

The Indian annals specify King Ajâtashatru as a contemporary of Buddha, and another Ajâtashatru helped to prepare the council one hundred years after his death. These princes were sovereigns of Magadha and have naught to do with Ajâtashatru of the *Bṛihad-Aranyaka* and the *Kaushîtaki-Upanishad*, who was a sovereign of the Kasis; though Bhadrasena, "the son of Ajâtashatru" cursed by Aruni, may have more to do with his namesake the "heir of Chandragupta" than is generally known. Professor Max Müller objects to two Ashokas. He rejects Kalâshoka and accepts but Dharmâshoka—in accordance with "Greek" and in utter conflict with Buddhist chronology. He knows not—or perhaps prefers to ignore—that besides the two Ashokas there were several personages named Chandragupta and Chandramâsa. Plutarch is set aside as conflicting with the more welcome theory, and the evidence of Justin alone is accepted. There was Kalâshoka, called by some Chandramâsa and by others Chandragupta, whose son Nanda was succeeded by his cousin the Chandragupta of Seleucus, and under whom the Council of Vaisali took place "supported by King Nanda" as correctly stated by Târânâtha. (None of them were Shûdras, and this is a pure invention of the Brâhmans.) Then there was the last of the Chandraguptas who assumed the name of Vikrama; he commenced the new era called the Vikramâditya or Samvat and began the new dynasty at Pâtaliputra, 318 (B.C.)—according to some *European "authorities"*; after him his son Bindusara or Bhadrasena—also Chandragupta, who was followed by Dharmâshoka Chandragupta. And there were two Piyadasis—the "Sandracottus" Chandragupta and Ashoka. And if controverted, the Orientalists will have to account for this strange inconsistency. If Ashoka was the only "Piyadasî" and the builder of the monuments, and maker of the rock-inscriptions of this name; and if his inauguration occurred as conjectured by Professor Max Müller about 259 B.C., in other words, if he reigned sixty or seventy years later than any of the Greek kings named on the Piyadasian monuments, what had he to do with their vassalage or non-vassalage, or how was he concerned with them at all? Their dealings had been with his grandfather some seventy years earlier—if he became a Buddhist only after ten years' occupancy of the throne. And finally, three well-known Bhadrasenas can be proved, whose names spelt loosely and phonetically, according to each writer's dialect and nationality, now yield a variety of names, from Bindusara, Bimbisara, and Vindusara, down to Bhadrasena and Bhadrasara, as he is called in the *Vāyu*

Purâna. These are all synonymous. However easy, at first sight, it may seem to be to brush out of history a real personage, it becomes more difficult to prove the non-existence of Kalâshoka by calling him "false," while the second Ashoka is termed the "real," in the face of the evidence of the *Purânas*, written by the bitterest enemies of the Buddhists, the Brâhmans of the period. The *Vâyu* and *Matsya Purânas* mention both in their lists of their reigning sovereigns of the Nanda and the Morya dynasties, and, though they connect Chandragupta with a *Shûdra* Nanda, they do not deny existence to Kalâshoka, for the sake of invalidating Buddhist chronology. However falsified the now extant texts of both the *Vâyu* and *Matsya Purânas*, even accepted as they at present stand "in their true meaning," which Professor Max Müller (notwithstanding his confidence) fails to seize, they are *not* "at variance with Buddhist chronology before Chandragupta." Not, at any rate, when the *real* Chandragupta instead of the false Sandracottus of the Greeks is recognized and introduced. Quite independently of the Buddhist version, there exists the historical fact recorded in the Brâhmanical as well as in the Burmese and Tibetan versions, that in the year 63 of Buddha, Susinago of Benares was chosen king by the people of Pâtaliputra, who made away with Ajâtashatru's dynasty. Susinago removed the capital of Magadha from Râjagriha to Vaisali, while his successor Kalâshoka removed it in his turn to Pâtaliputra. It was during the reign of the latter that the prophecy of Buddha concerning Pâtalibot or Pâtaliputra—a small village during His time—was realized. (See *Mahâparinibbâna Sutta*.)

It will be easy enough, when the time comes, to answer all-denying Orientalists and face them with proof and document in hand. They speak of the extravagant, wild exaggerations of the Buddhists and Brâhmans. The latter answer: "The wildest theorists of all are they who, to evade a self-evident fact, assume moral, anti-national impossibilities, entirely opposed to the most conspicuous traits of the Brâhmanical Indian character—namely, borrowing from, or imitating in anything, other nations. From their comments on the *Rig Veda*, down to the annals of Ceylon, from Pânini to Matouan-lin, every page of their learned scholia appears, to one acquainted with the subject, like a monstrous jumble of unwarranted and insane speculations. Therefore, notwithstanding Greek chronology and Chandragupta—whose date is represented as "the sheet-anchor of Indian chronology" that "nothing will ever shake"—it is to be feared that, as regards India, the chrono-

logical ship of the Sanskritists has already broken from her moorings and gone adrift with all her precious freight of conjectures and hypotheses. She is drifting into danger. We are at the end of a cycle—geological and otherwise—and at the beginning of another. Cataclysm is to follow cataclysm. The pent-up forces are bursting out in many quarters; and not only will men be swallowed up or slain by thousands, “new” land appear and “old” subside, volcanic eruptions and tidal waves appal, but secrets of an unsuspected past will be uncovered to the dismay of Western theorists and the humiliation of an imperious science. This drifting ship, if watched, may be seen to ground upon the upheaved vestiges of ancient civilizations, and fall to pieces. We are not emulous of the prophet’s honours: but still, let this stand as a prophecy.

INSCRIPTIONS DISCOVERED BY GEN. A. CUNNINGHAM.

WE have carefully examined the new inscription discovered by General A. Cunningham, on the strength of which the date assigned to Buddha's death by Buddhist writers has been declared to be incorrect; and we are of opinion that the said inscription confirms the truth of the Buddhist traditions instead of proving them to be erroneous. The above-mentioned archæologist writes as follows regarding the inscription under consideration in the first volume of his reports:

The most interesting inscription (at Gayâ) is a long and perfect one dated in the era of the Nirvâna or death of Buddha. I read the date as follows: *Bhagavati Parinirvritte Samvat 1819 Karttike Badi 1 Budhi*—that is, “in the year 1819 of the Emancipation of Bhagavata on Wednesday, the first day of the waning moon of Kartik.” If the era here used is the same as that of the Buddhists of Ceylon and Burmah, which began in 543 B.C., the date of this inscription will be $1819 - 543 =$ A.D. 1276. The style of the letters is in keeping with this date, but is quite incompatible with that derivable from the Chinese date of the era. The Chinese place the death of Buddha upwards of 1,000 years before Christ, so that according to them the date of this inscription would be about A.D. 800, a period much too early for the style of character used in the inscription. But as the day of the week is here fortunately added, the date can be verified by calculation. According to my calculation, the date of the inscription corresponds with Wednesday, the 17th of September, A.D. 1342. This would place the Nirvâna of Buddha in 477 B.C., which is the very year that was first proposed by myself as the most probable date of that event. This corrected date has since been adopted by Professor Max Müller.

The reasons assigned by some Orientalists for considering this so-called “corrected date” as the real date of Buddha's death have already been noticed and criticized in the preceding paper; and now we have only to consider whether the inscription in question disproves the old date.

Major-General Cunningham evidently seems to take it for granted, as far as his present calculation is concerned, that the number of days

in a year is counted in the Magadha country and by Buddhist writers in general on the same basis on which the number of days in a current English year is counted; and this wrong assumption has vitiated his calculation and led him to a wrong conclusion. Three different methods of calculation were in use in India at the time when Buddha lived, and they are still in use in different parts of the country. These methods are known as Sauramânam, Chandramânam and Barhaspatyamânam. According to the Hindû works on astronomy a Sauramânam year consists of 365 days 15 ghadyas and 31 vighadyas; a Chandramânam year has 360 days, and a year on the basis of Barhaspatyamânam has 361 days and 11 ghadyas nearly. Such being the case, General Cunningham ought to have taken the trouble of ascertaining before he made his calculation the particular Mânam (measure) employed by the writers of Magadha and Ceylon in giving the date of Buddha's death and the Mânam used in calculating the years of the Buddhist era mentioned in the inscription above quoted. Instead of placing himself in the position of the writer of the said inscription and making the required calculation from that standpoint, he made the calculation on the same basis on which an English gentleman of the nineteenth century would calculate time according to his own calendar.

If the calculation were correctly made, it would have shown him that the inscription in question is perfectly consistent with the statement that Buddha died in the year 543 B.C. according to Barhaspatyamânam (the only Mânam used in Magadha and by Pâli writers in general). The correctness of this assertion will be clearly seen on examining the following calculation.

Five hundred and forty-three years according to Barhaspatyamânam are equivalent to 536 years and 8 months (nearly) according to Sauramânam.

Similarly, 1,819 years according to the former Mânam are equivalent to 1,798 years (nearly) according to the latter Mânam.

As the Christian era commenced on the 3,102nd year of Kaliyuga (according to Sauramânam), Buddha died in the year 2,565 of Kaliyuga, and the inscription was written in the year 4,362 of Kaliyuga (according to Sauramânam). And now the question is whether, according to the Hindû almanack, the first day of the waning moon of Kârtika coincided with a Wednesday.

According to *Sûryasiddhânta*, the number of days from the beginning of Kaliyuga up to midnight on the fifteenth day of increasing

moon of Ashvinî is 1,593,072, the number of Adhikamâsânshas (extra months) during the interval being 1,608, and the number of Kshayatithis 25,323.

If we divide this number by seven the remainder would be five. As Kaliyuga commenced with Friday, the period of time above defined closed with Tuesday, as according to *Sûryasiddhânta* a week-day is counted from midnight to midnight.

It is to be noticed that in places where Barhaspatyamânam is in use Krishnapaksham (or the fortnight of waning moon) commences first and is followed by Shuklapaksham (period of waxing moon).

Consequently, the next day after the fifteenth day of the waxing moon of Ashvinî will be the first day of the waning moon of Kârtika to those who are guided by the Barhaspatyamânam calendar. And therefore the latter date, which is the date mentioned in the inscription, was Wednesday in the year 4,362 of Kaliyuga.

The geocentric longitude of the sun at the time of his meridian passage on the said date being $174^{\circ} 20' 16''$ and the moon's longitude being $7^{\circ} 51' 42''$ (according to *Sûryasiddhânta*) it can be easily seen that at Gayâ there was Padyamitithi (first day of waning moon) for nearly 7 ghadyas and 50 vighadyas from the time of sunrise.

It is clear from the foregoing calculation that "Kartik 1 Badi" coincided with Wednesday in the year 4,362 of Kaliyuga or the year 1,261 of the Christian era, and that from the standpoint of the person who wrote the inscription the said year was the 1,819th year of the Buddhist era. And consequently this new inscription confirms the correctness of the date assigned to Buddha's death by Buddhist writers. It would have been better if Major-General Cunningham had carefully examined the basis of his calculation before proclaiming to the world at large that the Buddhist accounts were untrustworthy.

DISCRIMINATION OF SPIRIT AND NOT-SPIRIT.

[Translated from the original Sanskrit of Shankara Âchârya.]

[An apology is scarcely needed for undertaking a translation of Shankara Âchârya's celebrated Synopsis of Vedântism, entitled, *Âtmânâtma-Vivekah*. This little treatise, within a small compass, fully sets forth the scope and purpose of the Vedânta philosophy. It has been a matter of no little wonder, considering the authorship of this pamphlet and its own intrinsic merits, that a translation of it has not already been executed by some competent scholar. The present translation, though pretending to no scholarship, is dutifully literal, excepting, however, the omission of a few lines relating to the etymology of the words Sharîra and Deha, and one or two other things which, though interesting in themselves, have no direct bearing on the main subject of treatment.—Tr.]

NOTHING is Spirit which can be the object of consciousness. To one possessed of right discrimination, the Spirit is the subject of knowledge. This right discrimination of Spirit and Not-spirit is set forth in millions of treatises.

This discrimination of Spirit and Not-spirit is given below:

Q.—Whence comes pain to the Spirit?

A.—By reason of its taking a body. It is said in the Shruti:* “Not in this [state of existence] is there cessation of pleasure and pain of a living thing possessed of a body.”

Q.—By what is produced this taking of a body?

A.—By Karma.†

Q.—Why does it become so by Karma?

* *Chândogya Upanishad*.

† This word it is impossible to translate. It means the doing of a thing for the attainment of an object of worldly desire.

A.—By desire and the rest [*i.e.*, the passions].

Q.—By what are desire and the rest produced?

A.—By egotism.

Q.—By what again is egotism produced?

A.—By want of right discrimination.

Q.—By what is this want of right discrimination produced?

A.—By ignorance.

Q.—Is ignorance produced by anything?

A.—No, by nothing. Ignorance is without beginning and ineffable by reason of its being the intermingling of the real (Sat) and the unreal (Asat).^{*} It is a something embodying the three qualities[†] and is said to be opposed to Wisdom, inasmuch as it produces the concept, "I am ignorant." The Shruti says, "[Ignorance] is the power of the Deity and is enshrouded by its own qualities."[‡]

The origin of pain can thus be traced to ignorance, and it will not cease until ignorance is entirely dispelled, which will be only when the identity of the Self with Brahma [the Universal Spirit] is fully realized.[§] Anticipating the contention that the external acts [*i.e.*, those enjoined by the Vedas] are proper, and would therefore lead to the destruction of ignorance, it is said that ignorance cannot be dispelled by Karma [religious exercises].

Q.—Why is it so?

A.—By reason of the absence of logical opposition between ignorance and act. Therefore, it is clear that ignorance can only be removed by Wisdom.

Q.—How can this Wisdom be acquired?

A.—By discussion—by discussing the nature of Spirit and Not-spirit.

Q.—Who are worthy of engaging in such discussion?

A.—Those who have acquired the four qualifications.

Q.—What are the four qualifications?

A.—[1] True discrimination of permanent and impermanent things. [2] Indifference to the enjoyment of the fruits of one's actions both here and hereafter. [3] Possession of Sama and the other five qualities. [4] An intense desire of becoming liberated [from conditional existence].

^{*} This word, as used in Vedāntic works, is generally misunderstood. It does not mean the negation of everything; it means "that which does not exhibit the truth," the "illusory."

[†] Sattva (goodness), Rajas (foulness), and Tamas (darkness) are the three qualities; pleasure, pain and indifference considered as objective principles.

[‡] *Chhândogya Upanishad*.

[§] This portion has been condensed from the original.

[1] *Q.*—What is the right discrimination of permanent and impermanent things?

A.—Certainty as to the material universe being false and illusive, and Brahman being the only reality.

[2] Indifference to the enjoyment of the fruits of one's actions in this world is to have the same amount of disinclination for the enjoyment of worldly objects of desire [such as garlands of flowers, sandalwood paste, women and the like] beyond those absolutely necessary for the preservation of life, as one has for vomited food, etc. The same amount of disinclination to enjoyment in the society of Rambhâ, Urvashî and other celestial nymphs in the higher spheres of life, beginning with Svarga Loka and ending with Brahma Loka.*

[3] *Q.*—What are the six qualities, beginning with Sama?

A.—Sama, Dama, Uparati, Titikshâ, Samâdhâna and Shraddhâ.

Sama is the repression of the inward sense called Manas—*i.e.*, not allowing it to engage in any other thing but Shravana [listening to what the sages say about the Spirit], Manana [reflecting on it], Nididhyâsana [meditating on the same]. Dama is the repression of the external senses.

Q.—What are the external senses?

A.—The five organs of perception and the five bodily organs for the performance of external acts. Restraining these from all other things but Shravana and the rest, is Dama.

Uparati is the abstaining on principle from engaging in any of the acts and ceremonies enjoined by the Shâstras. Otherwise, it is the state of the mind which is always engaged in Shravana and the rest, without ever diverging from them.

Titikshâ [literally the desire to leave] is the bearing with indifference all opposites [such as pleasure and pain, heat and cold, etc.]. Otherwise, it is the showing of forbearance to a person one is capable of punishing.

Whenever a mind, engaged in Shravana and the rest, wanders to any worldly object of desire, and, finding it worthless, returns to the performance of the three exercises—such returning is called Samâdhâna.

Shraddhâ is an intensely strong faith in the utterances of one's Guru and of the Vedânta philosophy.

[4] An intense desire for liberation is called Mumukshatvâ.

Those who possess these four qualifications, are worthy of engaging in

* These include the whole range of Rûpa Loka (the world of forms) in Buddhistic esoteric philosophy.

discussions as to the nature of Spirit and Not-spirit, and, like Brahma-chârins, they have no other duty [but such discussion]. It is not, however, at all improper for householders to engage in such discussions, but, on the contrary, such a course is highly meritorious. For it is said: Whoever, with due reverence, engages in the discussion of subjects treated of in Vedânta philosophy and does proper service to his Guru, reaps happy fruits. Discussion as to the nature of Spirit and Not-spirit is therefore a duty.

Q.—What is Spirit?

A.—It is that principle which enters into the composition of man and is not included in the three bodies, and which is distinct from the five sheaths [Koshas], being Sat [existence],* Chit [consciousness],† and Ananda [bliss],‡ and witness of the three states.

Q.—What are the three bodies?

A.—The gross (Sthûla), the subtile (Sûkshma), and the causal (Kâraṇa).

Q.—What is the gross body?

A.—That which is the effect of the Mahâbhûtas [primordial subtile elements] differentiated into the five gross ones [Panchikrita],§ is born of Karma and subject to the six changes beginning with birth.|| It is said:

“What is produced by the [subtile] elements differentiated into the five gross ones, is acquired by Karma, and is the measure of pleasure and pain, is called the body (Sharîra) *par excellence*.”

Q.—What is the subtile body?

A.—It is the effect of the elements not differentiated into five and having seventeen characteristic marks (Lingas).

Q.—What are the seventeen?

A.—The five channels of knowledge (Jñânendriyas), the five organs of action, the five vital airs, beginning with Prâna, and Manas and Buddhi.

Q.—What are the Jñânendriyas?

* This stands for Purusha.

† This stands for Prakriti, cosmic matter, irrespective of the state we perceive it to be in.

‡ Bliss is Mâyâ or Shakti, it is the creative energy producing changes of state in Prakriti. Says the Shruti (*Taittiriya Upanishad*): “Verily from Bliss are all these Bhûtas [elements] born, and being born by it they live, and they return and enter into Bliss.”

§ The five subtile elements thus produce the gross ones; each of the five is divided into eight parts, four of those parts and one part of each of the others enter into combination, and the result is the gross element corresponding with the subtile element, whose parts predominate in the composition.

|| These six changes are: birth, death, existence in time, growth, decay, and undergoing change of substance (Parinâma) as milk is changed into whey.

A.—[Spiritual] ear, skin, eye, tongue, and nose.

Q.—What is the ear?

A.—That channel of knowledge which transcends the [physical] ear, is limited by the auricular orifice, on which the Âkâsha depends, and which is capable of taking cognizance of sound.

Q.—The skin?

A.—That which transcends the skin, on which the skin depends, and which extends from head to foot, and has the power of perceiving heat and cold.

Q.—The eye?

A.—That which transcends the ocular orb, on which the orb depends, which is situated to the front of the black iris, and has the power of cognizing forms.

Q.—The tongue?

A.—That which transcends the tongue; and can perceive taste.

Q.—The nose?

A.—That which transcends the nose, and has the power of smelling.

Q.—What are the organs of action?

A.—The organ of speech (Vâch), hands, feet, etc.

Q.—What is Vâch?

A.—That which transcends speech, in which speech resides, and which is located in eight different centres,* and has the power of speech.

Q.—What are the eight centres?

A.—Breast, throat, head, upper and nether lips, palate, ligature [frænum] binding the tongue to the lower jaw, and tongue.

Q.—What is the organ of the hands?

A.—That which transcends the hands, on which the palms depend, and which has the power of giving and taking. . . . [The other organs are similarly described.]

Q.—What is the Antahkarana?†

* The secret commentary says seven; for it does not separate the lips into the "upper" and "nether" lips. And it adds to the seven centres the seven passages in the head connected with, and affected by Vâch—namely, the mouth, the two eyes, the two nostrils and the two ears. "The left ear, eye and nostril being the messengers of the right side of the head; the right ear, eye and nostril, those of the left side." Now this is purely scientific. The latest discoveries and conclusions of modern physiology have shown that the power or the faculty of human speech is located in the third frontal cavity of the left hemisphere of the brain. On the other hand, it is a well-known fact that the nerve tissues inter-cross each other (decussate) in the brain in such a way that the motions of our left extremities are governed by the right hemisphere, while the motions of our right limbs are subject to the left hemisphere of the brain.

† A flood of light will be thrown on the text by the note of a learned occultist, who says: "Antahkarana is the path of communication between soul and body, entirely disconnected with the former, existing with, belonging to, and dying with the body." This path is well traced in the text.

A.—Manas, Buddhi, Chitta and Ahankâra form it. The seat of the Manas is the root of the throat, of Buddhi the face, of Chitta the umbilicus, and of Ahankâra the breast. The functions of these four components of Antahkarana are respectively doubt, certainty, retention and egotism.

Q.—How are the five vital airs (Prânas),* beginning with Prâna, named?

A.—Prâna, Apâna, Vyâna, Udâna, and Samâna. Their locations are said to be: of Prâna the breast, of Apâna the fundamentum, of Samâna the umbilicus, of Udâna the throat, and Vyâna is spread all over the body. Functions of these are: Prâna goes out, Apâna descends, Udâna ascends, Samâna reduces the food eaten into an undistinguishable state, and Vyâna circulates all over the body. Of these five vital airs there are five sub-airs, namely, Nâga, Kûrma, Krikara, Devadatta and Dhananjaya. Functions of these are: eructations, produced by Nâga, Kûrma opens the eye, Dhananjaya assimilates food, Devadatta causes yawning, and Krikara produces appetite—this is said by those versed in Yoga.

The presiding powers [or macrocosmic analogues] of the five channels of knowledge and the others are Dik [Âkâsha] and the rest. Dik, Vâta [air], Arka [sun], Prachetâs [water], Ashvins, Vahni [fire], Indra, Upen-dra, Mrityu [death], Chandra [moon], Brahmâ, Rudra, and Kshetra-jñeshvara,† which is the great creator and cause of everything. These are the presiding powers of ear, and the others in the order in which they occur.

All these taken together form the Linga Sharîra.‡ It is also said in the Shâstras:

“The five vital airs, Manas, Buddhi, and the ten organs form the subtle body, which arises from the subtle elements, undifferentiated into the five gross ones, and which is the means of the perception of pleasure and pain.”

Q.—What is the Kârana Sharîra?

A.—It is ignorance [of different monads] (Avidyâ), which is the cause of the other two bodies, and which is without beginning [in the

* These vital airs and sub-airs are forces which harmonize the interior man with his surroundings, by adjusting the relations of the body to external objects. They are the five allotropic modifications of life.

† The principle of intellect (Buddhi) in the macrocosm. For further explanation of this term, see Shankara's commentaries on the Brahma-Sûtras.

‡ Linga means that which conveys meaning, characteristic mark.

present Manvantara],* ineffable reflection [of Brahma], and productive of the concept of non-identity between self and Brahma. It is also said :

“Without a beginning, ineffable Avidyâ is called the Upâdhi [vehicle]—Kârana [cause]. Know the Spirit to be truly different from the three Upâdhis—*i.e.*, bodies.”

Q.—What is Not-spirit?

A.—It is the three bodies [described above], which are impermanent, inanimate (Jada), essentially painful and subject to congregation and segregation.

Q.—What is impermanent?

A.—That which does not exist in one and the same state in the three divisions of time [namely, present, past and future].

Q.—What is inanimate (Jada)?

A.—That which cannot distinguish between the objects of its own cognition and the objects of the cognition of others. . . .

Q.—What are the three states [mentioned above as those to which the Spirit is witness]?

A.—Wakefulness (Jagrat), dreaming (Svapna), and the state of dreamless slumber (Sushupti).

Q.—What is the state of wakefulness?

A.—That in which objects are known through the avenue of [physical] senses.

Q.—Of dreaming?

A.—That in which objects are perceived by reason of desires resulting from impressions produced during wakefulness.

Q.—What is the state of dreamless slumber?

* It must not be supposed that Avidyâ is here confounded with Prakriti. What is meant by Avidyâ being without beginning, is that it forms no link in the karmic chain leading to succession of births and deaths, it is evolved by a law embodied in Prakriti itself. Avidyâ is ignorance or matter as related to distinct monads, whereas the ignorance mentioned before is cosmic ignorance, or Mâyâ. Advidyâ begins and ends with this Manvantara. Mâyâ is eternal. The Vedânta philosophy of the school of Shankara regards the universe as consisting of one substance, Brahman (the one Ego, the highest abstraction of subjectivity from our standpoint), having an infinity of attributes, or modes of manifestation from which it is only logically separable. These attributes or modes in their collectivity form Prakriti (the abstract objectivity). It is evident that Brahman *per se* does not admit of any description other than “I am that I am.” Whereas Prakriti is composed of an infinite number of differentiations of itself. In the universe, therefore, the only principle which is undifferentiable is this “I am that I am,” and the manifold modes of manifestation can only exist in reference to it. The eternal ignorance consists in this, that as there is but one substantive, but numberless adjectives, each adjective is capable of designating the All. Viewed in time the most permanent object or mood of the great knower at any moment represents the knower, and in a sense binds it with limitations. In fact, time itself is one of these infinite moods, and so is space. The only progress in Nature is the realization of moods unrealized before.

A.—That in which there is an utter absence of the perception of objects.

The indwelling of the notion of "I" in the gross body during wakefulness is Vishva [world of objects],* in the subtle body during dreaming is Taijas [magnetic fire], and in the causal body during dreamless slumber is Prajñâ [One Life].

Q.—What are the five sheaths?

A.—Annamaya, Prânamaya, Manomaya, Vijñânāmaya, and Ânandamaya.

Annamaya is related to Anna† [food], Prânamaya to Prâna [life], Manomaya to Manas, Vijñânāmaya to Vijñâna [finite perception], Ânandamaya to Ânanda [illusory bliss].

Q.—What is the Annamaya sheath?

A.—The gross body.

Q.—Why?

A.—The food eaten by the father and mother is transformed into semen and blood, the combination of which is transformed into the shape of a body. It wraps up like a sheath and is hence so called. It is the transformation of food and wraps up the Spirit like a sheath—it shows the Spirit which is infinite as finite, which is without the six changes beginning with birth, as subject to those changes, which is without the three kinds of pain,‡ as liable to them. It conceals the Spirit as the sheath conceals the sword, the husk the grain, or the womb the foetus.

Q.—What is the next sheath?

A.—The combination of the five organs of action, and the five vital airs form the Prânamaya sheath.

By the manifestation of Prâna, the spirit which is speechless appears as the speaker, which is never the giver as the giver, which never moves as in motion, which is devoid of hunger and thirst as hungry and thirsty.

Q.—What is the third sheath?

A.—It is the five [subtle] organs of sense (Jñânendriya) and Manas. By the manifestation of this sheath (Vikâra) the Spirit which is

* That is to say, by mistaking the gross body for self, the consciousness of external objects is produced.

† This word also means the earth in Sanskrit.

‡ The three kinds of pain are:

Adhibhautika, i.e., from external objects, e.g., from thieves, wild animals, etc.

Adhidaivika, i.e., from elements, e.g., thunder, etc.

Adhyâtmiika, i.e., from within one's self, e.g., head-ache, etc. See *Sāṅkhya Kārikā*, Gaudapāda's commentary on the opening Shloka.

devoid of doubt appears as doubting, devoid of grief and delusion as grieved and deluded, devoid of sight as seeing.

Q.—What is the Vijnānamaya sheath?

A.—[The essence of] the five organs of sense form this sheath in combination with Buddhi.

Q.—Why is this sheath called the Jīva [personal Ego], which by reason of its thinking itself the actor, enjoyer, etc., goes to the other Loka and comes back to this?*

A.—It wraps up and shows the Spirit which never acts as the actor, which never cognizes as conscious, which has no concept of certainty as being certain, which is never evil or inanimate as being both.

Q.—What is the Ānandamaya sheath?

A.—It is the Kāraṇa Sharīra, wherein ignorance predominates, and which produces gratification, enjoyment, etc. It wraps up and shows the Spirit, which is void of desire, enjoyment and fruition, as having them, which has no conditioned happiness as being possessed thereof.

Q.—Why is the Spirit said to be different from the three bodies?

A.—That which is truth cannot be untruth, knowledge ignorance, bliss misery, or *vice versa*.

Q.—Why is it called the witness to the three states?

A.—Being the master of the three states, it is the knowledge of the three states, as existing in the present, past and future.†

Q.—How is the Spirit different from the five sheaths?

A.—This is being illustrated by an example: "This is my cow," "this is my calf," "this is my son or daughter," "this is my wife," "this is my Ānandamaya sheath," and so on‡—the Spirit can never be connected with these concepts; it is different from and witness to them all. For it is said in the Upanishad: [The Spirit is] "naught of sound, of touch, of form, or colour, of taste, or of smell; it is everlasting, having no beginning or end, superior [in order of subjectivity] to Prakṛiti [differentiated matter]; whoever correctly understands it as such attains Mukti [liberation]." The Spirit has also been called [above] Sat, Chit, and Ānanda.

Q.—What is meant by its being Sat [presence]?

A.—Existing unchanged in the three divisions of time and uninfluenced by anything else.

Q.—What by being Chit [consciousness]?

* That is to say, flits from birth to birth.

† It is the stable basis upon which the three states arise and disappear.

‡ The "heresy of individuality," or Attavāda, of the Buddhists.

A.—Manifesting itself without depending upon anything else, and containing the germ of everything in itself.

Q.—What by being Ânanda [bliss]?

A.—The *ne plus ultra* of bliss.

Whoever knows, without doubt and apprehension of its being otherwise, the self as being one with Brahma or Spirit, which is eternal, non-dual and unconditioned, attains Moksha [liberation from conditioned existence].

MOHINI M. CHATTERJI.

WAS WRITING KNOWN BEFORE PÂNINI?

I AM entrusted with the task of putting together some facts which would support the view that the art of writing was known in India before the time of our grammarian—the Shiva-taught Pânini. Professor Max Müller has maintained the contrary opinion ever since 1856, and has the approbation of other illustrious Western scholars. Stated briefly, their position is that the entire absence of any mention of “writing, reading, paper, or pen” in the Vedas, or during the whole of the Brâhmana period, and the almost, if not quite, as complete silence as to them throughout the Sûtra period, “lead us to suppose that even then [the Sûtra period], though the art of writing began to be known, the whole literature of India was preserved by oral tradition only.”* To support this theory, he expands the mnemonic faculty of our respected ancestors to such a phenomenal degree that, like the bull’s hide of Queen Dido, it is made to embrace the whole ground needed for the proposed city of refuge, to which discomfited *savants* may flee when hard pressed. Considering that Professor Weber—a gentleman who, we observe, likes to distil the essence of Âryan æons down into an attar of no greater volume than the capacity of the biblical period—admits that Europe now possesses 10,000 of our Sanskrit texts; and considering that we have, or have had, many other tens of thousands which the parsimony of Karma has hitherto withheld from the museums and libraries of Europe, what a memory must have been theirs!

Under correction, I venture to assume that Pânini, who was ranked among the Rishis, was the greatest known grammarian in India, than whom there is no higher in history, whether ancient or modern; further, that contemporary scholars agree that the Sanskrit is the most perfect

* *History of Sanskrit Literature*, p. 501.

of languages. Therefore, when Prof. Müller affirms that "there is not a single word in Pânini's terminology which presupposes the existence of writing,"* we become a little shaken in our loyal deference to Western opinion. For it is very hard to conceive how one so preëminently great as Pânini should have been incapable of inventing characters to preserve his grammatical system—supposing that none had previously existed—if his genius was equal to the invention of classical Sanskrit. The mention of the word *Grantha*, the equivalent for a written or bound book in the later literature of India—though applied by Pânini to the Veda (i. 3, 75); to any work (iv. 3, 87); to the work of any individual author (iv. 3, 116); and to any work that is studied (iv. 3, 79)—does not stagger Prof. Max Müller at all. *Grantha* he takes to mean simply a composition, and this may be handed down to posterity by oral communication. Hence, we must believe that Pânini was illiterate; and yet composed the most elaborate and scientific system of grammar ever known; recorded its 3,996 rules only upon the molecular quicksands of his "cerebral cineritious matter," and handed them over to his disciples by atmospheric vibration, *i.e.*, oral teaching! Of course, nothing could be clearer; it commends itself to the simplest intellect as a thing most probable! And in the presence of such a perfect hypothesis, it seems a pity that its author should confess that "it is possible" that he "may have overlooked some words in the Brâhmanas and Sûtras, which would prove the existence of written books previous to Pânini."† That looks like the military strategy of our old warriors, who delivered their attack boldly, but nevertheless tried to keep their rear open for retreat if compelled. The precaution was necessary; written books *did* exist many centuries before the age in which this radiant sun of Âryan thought rose to shine upon his age. They existed, but the Orientalist may search in vain for the proof amid the *exoteric* words in our earlier literature. As the Egyptian hierophants had their private code of hieratic symbols, and even the founder of Christianity spoke to the vulgar in parables whose mystical meaning was known only to the chosen few, so the Brâhmanas had from the first (and still have) a mystical terminology couched behind ordinary expressions, arranged in certain sequences and mutual relations, which none but the initiate would observe. That few living Brâhmanas possess this key but proves that, as in other archaic religious and philosophical systems, the soul of Hindûism has fled (to its primal imparters—the initiates), and only the

* *Op. cit.*, p. 507.

† *Op. cit.*, p. 523.

decrepit body remains with a spiritually degenerate posterity.* I fully perceive the difficulty of satisfying European philologists of a fact which, upon my own statement, they are debarred from verifying. We know that from the present mental condition of our Brâhmans. But I hope to be able to group together a few admitted circumstances which will aid, at least, in showing the Western theory untenable, if not in making a base upon which to rest our claim for the antiquity of Sanskrit writing. Three good reasons may be adduced in support of the claim—though they will be regarded as circumstantial evidence by our opponents.

I. It can be shown that writing was known in Phœnicia from the date of the acquaintance of Western history with her first settlements; and this may be dated, according to European figures, 2,760 B.C., the age of the Tyrian settlement.

II. Our opponents confess to ignorance of the source whence the Phœnicians themselves got their alphabet.

III. It can be proved that before the final division and classification of languages there existed two languages in every nation: (*a*) the profane or popular language of the masses; (*b*) the sacerdotal or secret language of the initiates of the temples and mysteries—the *latter being one and universal*. Or, in other words, every great people had, like the Egyptians, its demotic and its hieratic writing and language, which had resulted first in a pictorial writing or the hieroglyphics, and later on in a phonetic alphabet. Now, it requires a stretch of prejudice indeed to assert upon no evidence whatever that the Brâhman Âryans—mystics and metaphysicians above everything—were the only ones who had never had any knowledge of either the sacerdotal language or the characters in which it was recorded. To contradict this gratuitous assumption we can furnish a whole array of proofs. It can be demonstrated that the Âryans no more borrowed their writing from the Hellenes, or from the Phœnicians, than they were indebted to the influence of the former for all their arts and sciences. (Even if we accept Mr. Cunningham's "Indo-Grecian Period," for it lasted only from 250-57 B.C., as he states it.) The direct progenitor of the Vedic Sanskrit was the sacerdotal language (which has a distinct name among the initiates). The Vâch—its *alter ego* or the "mystic self," the sacerdotal

* Not only are the Upanishads a secret doctrine, but in dozens of other works, as, for instance, in the *Âitareya Âranyaka*, it is plainly expressed that they contain *secret doctrines*, that are not to be imparted to anyone but a Dvija (twice-born, initiated Brâhman).

speech of the initiated Brâhman—became in time the mystery language of the inner temple, studied by the initiates of Egypt and Chaldæa; of the Phœnicians and the Etruscans; of the Pelasgi and Palanquans; in short, of the whole globe. The appellation Devanâgarî is the synonym of, and identical with, the Hermetic and Hieratic Neter-Khari (divine speech) of the Egyptians.

As the discussion divides naturally into two parts as to treatment—though a general synthesis must be the final result—we will proceed to examine the first part—namely, the charge that the Sanskrit alphabet is derived from the Phœnicians. When a Western philologist asserts that writing did not exist before a certain period, we assume that he has some approximate certitude as to its real invention. But so far is this from the truth, that admittedly no one knows whence the Phœnicians learned the characters now alleged (by Gesenius first) to be the source from which modern alphabets were directly derived. De Rougé's investigations make it extremely probable that "they were borrowed, or rather adapted from certain archaic hieroglyphics of Egypt"; a theory which the Prisse Papyrus, "the oldest in existence," strongly supports by its "striking similarities with the Phœnician characters." But the same authority traces it back one step farther. He says that the ascription (by the myth-makers) of the art of writing to Thoth, or to Kadmos, "only denotes their belief in its being brought from the East (Kedem), or *being perhaps primeval*." There is not even a certainty whether, primevally or archaically, "there were several original alphabetical systems, or whether one is to be assumed as having given rise to the various modes of writing in use." So, if conjecture has the field, it is no great disloyalty to declare one's rebellion against the eminent Western gentlemen who are learnedly guessing at the origin of things. Some affirm that the Phœnicians derived their so-called Kadmæan or Phœnician writing-characters from the Pelasgians, held also to have been the inventors, or at least the improvers, of the so-called Kadmæan characters. But, at the same time, this is *not proven*, they confess, and they only know that the latter were in possession of the art of writing "before the dawn of history." Let us see what is known of both Phœnicians and Pelasgians.

If we enquire who were the Phœnicians, we learn as follows: From having been regarded as Hamites on *Bible* testimony, they suddenly became Semites—on geographical and philological evidence (?). Their origin begins, it is said, on the shores of the Erythræan Sea; and that

sea extended from the eastern shores of Egypt to the western shores of India. The Phœnicians were the most maritime nation in the world. That *they* knew perfectly the art of writing no one would deny. The historical period of Sidon begins 1,500 B.C. And it is well ascertained that in 1,250 Sanchuniathon had already compiled from annals and state documents, which filled the archives of every Phœnician city, the full records of their religion. Sanchuniathon wrote in the Phœnician language, and was mis-translated later on into Greek by Philo of Byblus, and annihilated bodily—as to his works—except one small fragment preserved by Eusebius, the literary Shiva, the destroyer of nearly all *heathen* documents that fell in his way. To see the direct bearing of the alleged superior knowledge of the Phœnicians upon the alleged ignorance of the Âryan Brâhmans, one has but to turn to “European Universal History,” meagre though its details and possible knowledge, yet I suppose no one would contradict the historical facts given. Some fragments of Dîus, the Phœnician who wrote the history of Tyre, are preserved in Josephus; and Tyre’s activity begins 1,100 B.C., in the earlier part of the third period of Phœnician history, so called. And in that period, as we are told, they had already reached the height of their power; their ships covered all seas, their commerce embraced the whole earth, and their colonies flourished far and near. Even on biblical testimony they are known *to have come to the Indies by the Red Sea*, while trading on Solomon’s account about a millennium before the Western era. These data no man of science can deny. Leaving entirely aside the thousand and one documentary proofs that could be given on the evidence of *our* most ancient texts on Occult Sciences, of inscribed tablets, etc., those historical events that are accepted by the Western world are alone here given. Turning to the *Mahâbhârata*, the date of which—on the sole authority of the fancy lore drawn from the inner consciousness of German scholars, who perceive in the great epic poem proofs of its modern fabrication in the words, “Yavana” and others—has been changed from 3,300 years to the first centuries after Christ (! !), we find: (1) ample evidence that the ancient Hindûs had navigated (before the establishment of the caste system) the open seas to the regions of the Arctic Ocean and held communication with Europe; and (2) that the Pândus had acquired universal dominion and *taught the sacrificial mysteries to other races* (see *Mahâbhârata*, Book xiv). With such proofs of international communication, and more than proved relations between the Indian Âryans and the Phœni-

cians, Egyptians and other literate people, it is rather startling to be told that our forefathers of the Brâhmanic period *knew nothing* of writing.

Admitting, for the argument only, that the Phœnicians were the sole custodians of the glorious art of writing, and that as merchants they traded with India, what commodity, I ask, could they have offered to a people led by the Brâhmans so precious and marketable as this art of arts, by whose help the priceless lore of the Rishis might be preserved against the accidents of imperfect oral transmission? And even if the Âryans learned from Phœnicia how to write—to every educated Hindû an absurdity—they must have possessed the art 2,000 or at least 1,000 years earlier than the period supposed by Western critics. Negative proof, perhaps? Granted: yet no more so than their own, and most suggestive.

And now we may turn to the Pelasgians. Notwithstanding the rebuke of Niebuhr, who, speaking of the historian in general, shows him as *hating* “the spurious philology, out of which the pretences to knowledge *on the subject of such extinct people* arise,” the origin of the Pelasgians is conjectured to have been from: (a) swarthy Asiatics (*Pellāsici*); or from some (b) mariners—from the Greek *pelagos*, the sea; or again to be sought for in (c) the biblical *Peleg*! The only divinity of their Pantheon well known to Western history is Orpheus, also the “swarthy,” the “dark-skinned”; represented for the Pelasgians by Xoanon, their “Divine Image.” Now if the Pelasgians were Asiatics, they must have been Turanians, Semites or Âryans. That they could not have been either of the first two, and *must* have been the last named, is shown on Herodotus’ testimony, who declared them the forefathers of the Greeks—though they spoke, as he says, “a most barbarous language.” Further, “unerring” philology shows that the vast number of roots common both to Greek and Latin, are easily explained by the assumption of a common Pelasgic linguistic and ethnical stock in both nationalities. But then how about the Sanskrit roots traced in the Greek and Latin languages? The same roots must have been present in the Pelasgian tongues? We who place the origin of the Pelasgi far beyond the biblical ditch of historic chronology, have reasons to believe that the “barbarous language” mentioned by Herodotus was simply “the primitive and now extinct Âryan tongue” that preceded the Vedic Sanskrit. Who could they be, these Pelasgians? They are described generally on the meagre data in hand as a highly intellectual, receptive,

active and simple people, chiefly occupied with agriculture; warlike when necessary, though preferring peace. We are told that they built canals, subterranean water-works, dams, and walls of astounding strength and most excellent construction. And their religion and worship originally consisted in a mystic service of those natural powers—the sun, wind, water, and air (our Sûrya, Maruts, Varuna, and Vâyu), whose influence is visible in the growth of the fruits of the earth; moreover, *some of their tribes were ruled by priests, while others stood under the patriarchal rule of the head of the clan or family.* All this reminds one of the nomads, the Brâhmanic Âryas of old under the sway of their Rishis, to whom were subject every distinct family or clan. While the Pelasgians were acquainted with the art of writing, and had thus “*a vast element of culture in their possession before the dawn of history,*” we are told (by the same philologists) that *our* ancestors knew of no writing until the dawn of Christianity!

Thus the Pelasgianic language, that “most barbarous language” spoken by this mysterious people, what was it but Âryan; or, rather, which of the Âryan languages could it have been? Certainly it must have been a language with the same and even stronger Sanskrit roots in it than the Greek. Let us bear in mind that the Æolic was neither the language of Æschylus, nor the Attic, nor even the old speech of Homer, as the Oscan of the “barbarous” Sabines was not quite the Italian of Dante nor even the Latin of Virgil. Or has the Indo-Âryan to come to the sad conclusion that the average Western Orientalist will rather incur the blame of ignorance, when detected, than admit the antiquity of the Vedic Sanskrit and the immense period which separated this comparatively rough and unpolished language, compared with the classical Sanskrit, and the palmy days of the “extinct Âryan tongue”? The Latium Antiquum of Pliny and the Æolic of the Autochthones of Greece present the closest kinship, we are told. They had a common ancestor—the Pelasgian. What, then, was the parent tongue of the latter unless it was the language “spoken at one time by all the nations of Europe—before their separation”? In the absence of all proofs, it is unreasonable that the Rig-Brâhmanas, the Mahâ-bhârata and every Nirukta should be treated as flippantly as they now are. It is admitted that, however inferior to the classical Sanskrit of Pânini, the language of the oldest portions of *Rig Veda*, notwithstanding the antiquity of its grammatical forms, is the same as that of the latest texts. Every one sees—cannot fail to see and to know—that for

a language so old and so perfect as the Sanskrit to have survived alone, among all languages, it must have had its cycles of perfection and its cycles of degeneration. And, if one had any intuition, he might have seen that what they call a "dead language" being an anomaly, a useless thing in Nature, it would not have survived, even as a "dead" tongue, had it not its special purpose in the reign of immutable cyclic laws; and that Sanskrit, which came to be nearly lost to the world, is now slowly spreading in Europe, and will one day have the extension it had thousands upon thousands of years back—that of a *universal language*. The same as to the Greek and the Latin: there will be a time when the Greek of Æschylus (and more perfect still in its future form) will be spoken by all in Southern Europe, while Sanskrit will be resting in its periodical Pralaya; and the Attic will be followed later by the Latin of Virgil. Something ought to have whispered to us that there was also a time—before the original Âryan settlers among the Dravidian and other aborigines, admitted within the fold of Brâhmanical initiation, marred the purity of the sacred Sanskrita-Bhâshâ—when Sanskrit was spoken in all its subsequent unalloyed purity, and therefore must have more than once had its rise and fall. The reason for it is simply this: classical Sanskrit was only *restored*, if in some things perfected, by Pânini. Pânini, Katyâyana or Patanjali did not create it; it has existed throughout cycles, and will pass through other cycles still.

Professor Max Müller is willing to admit that a tribe of Semitic nomads—fourteen centuries before the year 1 of the Westerns—knew well the art of writing, and had their *historically and scientifically proven* "book of the covenant and the tables 'with the *writing of God* upon them.'" Yet the same authority tells us that the Âryans could neither read nor write until the very close of the Brâhmanic period. "No trace of writing can be discovered [by the philologists] in the Brâhmanical literature before the days of Pânini." Very well, and now what was the period during which this Shiva-taught sage is allowed to have flourished? One Orientalist (Böhtlingk) refers us to 350 B.C., while less lenient ones, like Professor Weber, land the grammarian right in the middle of the second century of the Christian era! Only, after fixing Pânini's period with such a remarkable agreement of chronology (other calculations ranging variously between 400 B.C. and A.D. 460), the Orientalists place themselves inextricably between the horns of a dilemma. For whether Pânini flourished 350 B.C. or A.D. 180,

he could not have been illiterate; for firstly, in the *Lalita Vistara*, a canonical book recognized by the Sanskritists, attributed by Max Müller to the *third* Buddhist council (and translated into Tibetan), our Lord Buddha is shown as studying, besides Devanâgarî, sixty-three other alphabets specified in it as being used in various parts of India; and secondly, though Megasthenes and Nearchus do say that in their time the laws of Manu were not (popularly) reduced to writing (Strabo, xv. 66 and 73), yet Nearchus describes the Indian art of making paper from cotton. He adds that the Indians wrote letters on cotton twisted together (Strabo, xv. 53 and 67). This would be late in the Sûtra period, no doubt, according to Professor Müller's reasoning. Can the learned gentleman cite any record within that comparatively recent period showing the name of the inventor of that cotton-paper, and the date of his discovery? Surely so important a fact as that, a novelty so transcendently memorable, would not have passed without remark. One would seem compelled, in the absence of any such chronicle, to accept the alternative theory—known to us Âryan students as a fact—that writing and writing-materials were, as above remarked, known to the Brâhmans in an antiquity inconceivably remote—many centuries before the epoch made illustrious by Pânini.

Attention has been asked above to the interesting fact that the god Orpheus, of "Thracia" (?) is called the "dark-skinned." Has it escaped notice that he is "*supposed to be the Vedic Ribhu or Abrhu*, an epithet both of Indra and the Sun"?* And if he was "the inventor of letters," and is "placed anterior to both Homer and Hesiod," then what follows? That Indra taught writing to the Thracian Pelasgians under the guise of Orpheus,† but left his own spokesmen and vehicles, the Brâhmans, illiterate until "the dawn of Christianity"? Or, that the gentlemen of the West are better at intuitionnal chronology than conspicuous for impartial research? Orpheus was—in Greece—the son of Apollo or Helios, the sun-god, according to corrected mythology, and from him received the phorminx or lyre of *seven* strings, *i.e.*—according to occult phraseology—the seven-fold mystery of Initiation. Now Indra is the ruler of the bright firmament, the disperser of clouds, "the restorer of the sun to the sky." He is identified with Arjuna in the *Samhitâ Shatapatha Brâhmana* (although Prof. Weber denies the existence of any such person as Arjuna, yet there was indeed one), and

* *Chambers' Encyclopædia*, vii. 127.

† According to Herodotus the Mysteries were actually brought from India by Orpheus.

Arjuna was the Chief of the Pândavas;* and though Pându the *white* passes for his father, he is yet considered the son of Indra. As throughout India all ancient cyclopean structures are even now attributed to the Pândavas, so all similar structures in the West were anciently ascribed to the Pelasgians. Moreover, as well shown by Pococke—laughed at because too intuitional and too fair, though perchance less philologically learned—the Pândavas were in Greece, where many traces of them can be shown. In the *Mahâbhârata*, Arjuna is taught the occult philosophy by Krishna (a personification of the universal Divine Principle); and the less mythological view of Orpheus presents him to us as “a divine bard or priest in the service of Zagreus . . . founder of the Mysteries . . . the inventor of everything, in fact, that was supposed to have contributed to the civilization and initiation into a more humane worship of the deity.” Are not these striking parallels; and is it not significant that, in the cases of both Arjuna and Orpheus, the sublimer aspects of religion should have been imparted along with the occult methods of attaining it by masters of the mysteries? Real Devanâgarî—non-phonetic characters—meant formerly the outward symbols, so to say, *the signs used in the inter-communication between gods and initiated mortals*. Hence their great sacredness and the silence maintained throughout the Vedic and the Brâhmanical periods about any object concerned with, or referring to, reading and writing. It was *the* language of the gods. If our Western critics can only understand what the ancient Hindû writers meant by Rhuthaliai, so often mentioned in their mystical writings, they will be in a position to ascertain the source from which the Hindûs first derived their knowledge of writing.

A secret language, common to all schools of occult science, once prevailed throughout the world. Hence Orpheus learnt “letters” in the course of his initiation. He is identified with Indra; according to Herodotus he brought the art of writing from India; his complexion,

* Another proof of the fact that the Pândavas were, though Âryans, not Brâhmins, and belonged to an Indian tribe that preceded the Brâhmins, and were later on Brâhmanized, and then outcasted and called Mlechchhas, Yavanas (*i.e.*, foreign to the Brâhmins), is afforded in the following: Pându has *two* wives; and “it is not Kuntî, his lawful wife, but Mâdri, his most beloved wife,” who is burnt with the old king when dead, as well remarked by Prof. Max Müller, who seems astonished at it without comprehending the true reason. As stated by Herodotus (v. 5), it was a custom amongst the Thracians to allow the most beloved of a man’s wives to be sacrificed upon his tomb; and Herodotus (iv. 17) asserts a similar fact of the Scythians, and Pausanias (iv. 2) of the Greeks. (*History of Sanskrit Literature*, p. 48.) The Pândavas and the Kauravas are called esoterically *cousins* in the epic poem because they were two distinct yet Âryan tribes, and represent two peoples, not simply two families.

swarthier than that of the Thracians, points to his Indo-Âryan nationality—supposing him to have been “a bard and priest,” and not a god; the Pelasgians are said to have been born in Thracia; they are believed (in the West) to have first possessed the art of writing, and taught the Phœnicians; from the latter all modern alphabets proceed. I submit, then, with all these coincidences and sequences, whether the balance of proof is on the side of the theory that the Âryans transmitted the art of writing to the people of the West; or on the side which maintains that they, with their caste of scholarly Brâhmans, their noble sacerdotal tongue, dating from high antiquity, their redundant and splendid literature, their acquaintance with the most wonderful and recondite potentialities of the human spirit, were illiterate until the era of Pânini, the grammarian and last of the Rishis? When the famous theorists of the Western colleges can show us a river running from its mouth back to its source in the feeble mountain spring, then may we be asked to believe in their theory of Âryan illiteracy. The history of human intellectual development shows that humanity always passes through the stage of ideography or pictography before attaining that of cursive writing. It therefore remains with the Western critics who oppose the antiquity of Âryan Scriptures to show us the pictographic proofs which support their position. As these are notoriously absent, it appears they would have us believe that our ancestors passed immediately from illiteracy to the Devanâgarî characters of Pânini’s time.

Let the Orientalists bear in mind the conclusions drawn from a careful study of the *Mahâbhârata*, by Muir, in his *Sanskrit Texts* (vol. i. pp. 390, 480 and 482). It may be conclusively proven on the authority of the *Mahâbhârata* that the Yavanas (of whom India, as alleged, knew nothing before the days of Alexander!) belong to those tribes of Kshatriyas, who, in consequence of their non-communication with, and in some cases rejection by, the Brâhmans, had become from Twice-born, Vrishalas—*i.e.*, outcasts:

Sakah Yavana-Kambojas tastah kshattriya jatayah Vrishalatvam parigatah Brahmananam adarshana. Dravidas cha Kalindas cha Pulindas chapya Usinarah Kalisarpa Mahishakas tastah kshattriya jatayah, etc.*

The same reference may be found in verses 2,158, 2,159. The *Mahâbhârata* shows the Yavanas descended from Turvasu—once upon a time Kshatriya, subsequently degraded into Vrishala. *Harivamsha* shows when and how the Yavanas were excommunicated. It may be inferred

* *Mahâbhârata*, Anushâsana Parvam, vv. 2,103 F.

from the account therein contained of the expedition against Ayodhya by the Yavanas, and the subsequent proceedings of Sagara, that the Yavanas were, previous to the date of the expedition, Kshatriyas subject to the government of the powerful monarchs who reigned at Ayodhya. But on account of their having rebelled against their sovereign, and attacked his capital, they were excommunicated by Sagara, who successfully drove them out of Ayodhya, at the suggestion of Vasishtha, who was the chief minister and Guru of Sagara's father. The only trouble in connecting the Pelasgians with, and tracing their origin to, the Kshatriyas of Râjputâna, is created by the Orientalist who constructs a fanciful chronology, based on no proof, and showing only unfamiliarity with the world's real history, and with Indian history even within historical periods.

The value of that chronology—which virtually places the “primitive Indo-Germanic period” before the *ancient* Vedic period (!)—may, in conclusion, be illustrated by an example. Rough as may be the calculations offered, it is impossible to go deeper into any subject of this class within the narrow limits prescribed, and without recourse to data not generally accessible. In the words of Prof. Max Müller:

The Code of Manu is almost the only work in Sanskrit literature which, as yet, has not been assailed by those who doubt the antiquity of everything Indian. No historian has disputed its claim to that early date which had from the first been assigned to it by Sir William Jones.*

And now, pray, what is this extremely “early date”? “From 880 to 1,200 B.C.,” we are told. We will then, for the present purpose, accept this authoritative conclusion. Several facts, easily verifiable, have to be first of all noticed: (1) Manu in his many enumerations of Indian races, kingdoms and places, *never once mentions Bengal*; the Âryan Brâhmins had not yet reached, in the days when his Code was compiled, the banks of the Ganges nor the plains of Bengal. It was Arjuna who went first to Banga (Bengal) with his sacrificial horse. (Yavanas are mentioned in Râjadharmâ, Anushâsanika Parva, as part of the tribes peopling it.) (2) In the Ayun a list of the Hindû kings of Bengal is given. Though the date of the first king who reigned over Banga cannot be ascertained, owing to the great gaps between the various dynasties, yet it is known that Bengal ceased to be an independent Hindû kingdom from 1,203 after Christ. Now, if, disregarding these gaps, which are wide and many, we make up the sum of only

* *History of Sanskrit Literature*, p. 61.

those chronological periods of the reign of the several dynasties that are preserved by history, we find the following:

24 kings of the Kshatriya families reigned for a period of.....	2,418 years.
9 Kaista kings reigned for a period of.....	250 years.
11 kings of the Adisur families reigned for a period of.....	714 years.
10 kings of the Bhopal family reigned for a period of.....	689 years.
10 kings of the Pala Dynasty (from 855 to A.D. 1040) reigned for a period of	185 years.
10 of the Vaidya Rajas reigned for a period of.....	137 years.
Total.....	4,393 years.

If we deduct from this sum 1,203, we have 3,190 years B.C. of successive reigns. If it can be shown on the unimpeachable evidence of the Sanskrit texts that some of the reigns happened *simultaneously*, and the line cannot therefore be shown as successive (as has been already tried), well and good. Against an arbitrary chronology set up with a predetermined purpose and theory in view, there will remain but little to be said. But if this attempt at reconciliation of figures and the surrounding circumstances is maintained simply upon "critical, internal evidence," then, in the presence of these 3,190 years of an unbroken line of powerful and mighty Hindû kings, the Orientalists will have to show a very good reason why the authors of the Code of Manu seem entirely ignorant even of the existence of Bengal—if its date has to be accepted as not earlier than 1,280 B.C.! A scientific rule which is good enough to apply to the case of Pânini ought to be valid in other chronological speculations. Or, perhaps, this is one of those poor rules which will *not* "work both ways"?

A CHELÂ.

WHAT IS THEOSOPHY?

ACCORDING to lexicographers, the term *theosophia* is composed of two Greek words—*theos* “god,” and *sophia* “wisdom.” So far, correct. But the explanations that follow are far from giving a clear idea of Theosophy. Webster defines it most originally as “a supposed intercourse with God and superior spirits, and consequent attainment of superhuman knowledge by *physical processes*, as by the theurgic operations of some ancient Platonists, or by the *chemical processes* of the German fire-philosophers.”

This, to say the least, is a poor and flippant explanation. To attribute such ideas to men like Ammonius Saccas, Plotinus, Jamblichus, Porphyry, Proclus, shows either intentional misrepresentation, or ignorance of the philosophy and motives of the greatest geniuses of the later Alexandrian School. To impute to those whom their contemporaries as well as posterity styled “Theodidaktai” (God-taught) a purpose to develop their psychological, spiritual perceptions by “physical processes,” is to describe them as materialists. As to the concluding fling at the fire-philosophers, it rebounds from them upon some of the most eminent leaders of modern science; those in whose mouths the Rev. James Martineau places the following boast: “Matter is all we want; give us atoms alone, and we will explain the universe.”

Vaughan offers a far better and more philosophical definition. “A Theosophist,” he says, “is one who gives you a theory of God or the works of God, which has not revelation, but inspiration of his own for its basis.” In this view every great thinker and philosopher, especially every founder of a new religion, school of philosophy, or sect is necessarily a Theosophist. Hence, Theosophy and Theosophists have existed ever since the first glimmering of nascent thought made man seek instinctively for the means of expressing his own independent opinions.

There were Theosophists before the Christian era, notwithstanding

that the Christian writers ascribe the development of the Eclectic Theosophical system to the early part of the third century of their era. Diogenes Laërtius traces Theosophy to an epoch antedating the dynasty of the Ptolemies, and names as its founder an Egyptian Hierophant called Pot-Amun, the name being Coptic, and signifying a priest consecrated to Amun, the god of Wisdom. History shows its revival by Ammonius Saccas, the founder of the Neoplatonic School. He and his disciples called themselves "Philaletheians"—lovers of the truth; while others termed them the "Analogists," on account of their method of interpreting all sacred legends, symbolical myths and mysteries, by a rule of analogy or correspondence, so that events which had occurred in the external world were regarded as expressing operations and experiences of the human soul. It was the aim and purpose of Ammonius to reconcile all sects, peoples, and nations under one common faith—a belief in one Supreme, Eternal, Unknown, and Unnamed Power, governing the universe by immutable and eternal laws. His object was to prove a primitive system of Theosophy, which, at the beginning, was essentially alike in all countries; to induce all men to lay aside their strifes and quarrels, and unite in purpose and thought as the children of one common mother; to purify the ancient religions, by degrees corrupted and obscured, from all dross of human elements, by uniting and expounding them upon pure philosophical principles. Hence, the Buddhistic, Vedântic and Magian, or Zoroastrian, systems were taught in the Eclectic Theosophical School along with all the philosophies of Greece. Hence also, that preëminently Buddhistic and Indian feature among the ancient Theosophists of Alexandria, of due reverence for parents and aged persons, a fraternal affection for the whole human race, and a compassionate feeling for even the dumb animals. While seeking to establish a system of moral discipline which enforced upon people the duty to live according to the laws of their respective countries, to exalt their minds by the research and contemplation of the one Absolute Truth; his chief object, in order, as he believed, to achieve all others, was to extract from the various religious teachings, as from a many-chorded instrument, one full and harmonious melody, which would find response in every truth-loving heart.

Theosophy is, then, the archaic Wisdom-Religion, the esoteric doctrine once known in every ancient country having claims to civilization. This "Wisdom" all the old writings show us as an emanation of the Divine Principle; and the clear comprehension of it is typified in such

names as the Indian Buddha, the Babylonian Nebo, the Thoth of Memphis, the Hermes of Greece; in the appellations, also, of some goddesses—Metis, Neïth, Athena, the Gnostic Sophia; and, finally, the Vedas, from the word “to know.” Under this designation, all the ancient philosophers of the East and West, the Hierophants of old Egypt, the Rishis of Âryâvarta, the Theodidaktoi of Greece, included all knowledge of things occult and essentially divine. The Mercavah of the Hebrew Rabbis, the secular and popular series, was thus designated as only the vehicle, the outward shell, which contained the higher esoteric knowledges. The Magi of Zoroaster received instruction and were initiated in the caves and secret lodges of Bactria; the Egyptian and Grecian hierophants had their Aporrheta, or secret discourses, during which the Mystes became an Epoptes—a Seer.

The central idea of the Eclectic Theosophy was that of a single Supreme Essence, Unknown and Unknowable, for “How could one know the knower?” as enquires *Brihadâranyaka Upanishad*. Their system was characterized by three distinct features: the theory of the above-named Essence; the doctrine of the human soul, an emanation from the latter, hence of the same nature; and its theurgy. It is this last science which has led the Neoplatonists to be so misrepresented in our era of materialistic science. Theurgy being essentially the art of applying the divine powers of man to the subordination of the blind forces of Nature, its votaries were first decisively termed magicians—a corruption of the word “Magh,” signifying a wise or learned man. Sceptics of a century ago would have been as wide of the mark if they had laughed at the idea of a phonograph or telegraph. The ridiculed and the “infidels” of one generation generally become the wise men and saints of the next.

As regards the Divine Essence and the nature of the soul and spirit, modern Theosophy believes now as ancient Theosophy did. The popular Dev of the Âryan nations was identical with the Iao of the Chaldæans, and even with the Jupiter of the less learned and philosophical among the Romans; and it was just as identical with the Jahve of the Samaritans, the Tiu or “Tiusco” of the Northmen, the Duw of the Britons, and the Zeus of the Thracians. As to the Absolute Essence, the One and All, whether we accept the Greek Pythagorean, the Chaldæan Kabalistic, or the Âryan philosophy in regard to it, it will all lead to one and the same result. The Primeval Monad of the Pythagorean system, which retires into darkness and is itself Dark-

ness (for human intellect), was made the basis of all things; and we can find the idea in all its integrity in the philosophical systems of Leibnitz and Spinoza. Therefore, whether a Theosophist agrees with the Kabalah, which, speaking of Ain Suph, propounds the query: "Who, then, can comprehend It, since It is formless, and non-existent?" or, remembering that magnificent hymn from the *Rig Veda* (Hymn 129, Book x), enquires:

Who knows from whence this great creation sprang?

Whether His will created or was mute.

He knows it—or perchance *even He knows not* . . .

or, again, accepts the Vedântic conception of Brahma, which, in the Upanishads, is represented as "without life, without mind, pure," *unconscious*, for Brahma is "Absolute Consciousness"; or, even finally, siding with the Svâbhâvikas of Nepaul, maintains that nothing exists but "Svabhâvat" (substance or nature) which exists by *itself* without any creator—he is the true follower of pure and absolute Theosophy—that Theosophy which prompted such men as Hegel, Fichte and Spinoza to take up the labours of the old Grecian philosophers and speculate upon the One Substance—the Deity, the Divine All proceeding from the Divine Wisdom—incomprehensible, unknown and *unnamed* by any ancient or modern religious philosophy, with the exception of Judaism, including Christianity and Mohammedanism. Every Theosophist, then, holding to a theory of the Deity, "which has not revelation but an inspiration of his own for its basis," may accept any of the above definitions or belong to any of these religions, and yet remain strictly within the boundaries of Theosophy. For the latter is belief in the Deity as the All, the source of all existence, the infinite that cannot be either comprehended or known, the universe alone revealing It, or, as some prefer it, Him, thus giving a sex to that, to anthropomorphize which is *blasphemy*. True Theosophy shrinks from brutal materialization; it prefers believing that, from eternity retired within itself, the Spirit of the Deity neither wills nor creates; but from the infinite effulgence everywhere going forth from the Great Centre, that which produces all visible and invisible things is but a ray containing in itself the generative and conceptive power, which, in its turn, produces that which the Greeks called Macrocosm, the Kabalists Tikkun or Adam Kadmon, the Archetypal Man, and the Âryans Purusha, the manifested Brahmâ, or the Divine Male. Theosophy believes also in the Anastasis, or continued existence, and in trans-

migration (evolution), or a series of changes of the personal Ego, which can be defended and explained on strict philosophical principles by making a distinction between the Paramâtmâ (transcendental, supreme spirit) and Jivâtmâ (individual spirit) of the Vedântins.

To fully define Theosophy, we must consider it under all its aspects. The interior world has not been hidden from all by impenetrable darkness. By that higher intuition acquired by Theosophia, or God-knowledge, which carries the mind from the world of form into that of formless spirit, man has been sometimes enabled, in every age and every country, to perceive things in the interior or invisible world. Hence, the Samâdhi, or Dhyâna Yoga Samâdhi, of the Hindû ascetics; the "Daimonion Phôs," or spiritual illumination of the Neoplatonists; the "sidereal confabulation of soul," of the Rosicrucians or Fire-philosophers; and, even the ecstatic trance of mystics and of the modern mesmerists and spiritualists, are identical in nature, though various as to manifestation. The search after man's diviner "Self," so often and so erroneously interpreted as individual communion with a personal God, was the object of every mystic; and belief in its possibility seems to have been coëval with the genesis of humanity, each people giving it a different name. Thus Plato and Plotinus call "noëtic work" that which the Yogî and the Shrotriya term Vidyâ. Said the Greeks:

By reflection, self-knowledge and intellectual discipline, the soul can be raised to the vision of eternal truth, goodness, and beauty—that is, to the Vision of God. This is the Epopeteia.

Says Porphyry:

To unite one's soul to the Universal Soul requires but a perfectly pure mind. Through self-contemplation, perfect chastity, and purity of body, we may approach nearer to It, and receive, in that state, true knowledge and wonderful insight.

And Svâmi Dayânand Sarasvatî, who has read neither Porphyry nor other Greek authors, but who is a thorough Vedic scholar, says in his *Veda Bhâshya* (Opasna Prakaru Ank. 9):

To obtain Dikshâ [highest initiation] and Yoga, one has to practise according to the rules. . . . The soul in the human body can perform the greatest wonders by knowing the Universal Spirit [or God] and acquainting itself with the properties and [occult] qualities of all the things in the universe. A human being [a Dikshita or initiate] can thus *acquire a power of seeing and hearing at great distances*.

Finally, Alfred R. Wallace, F.R.S., a spiritualist and yet a confessedly great naturalist, says, with brave candour:

It is "spirit" that alone feels, and perceives, and thinks, that acquires knowledge, and reasons and aspires. . . . There not unfrequently occur individuals so con-

stituted that the spirit can perceive independently of the corporeal organs of sense, or can, perhaps, wholly or partially quit the body for a time and return to it again; the spirit communicates with spirit easier than with matter.

We can now see how (after thousands of years have intervened between the age of the Gymnosophists* and our own highly civilized era), notwithstanding, or, perhaps, just because of such an enlightenment which pours its radiant light upon the psychological as well as upon the physical realms of Nature, upwards of twenty millions of people to-day believe—under a different form—in those same spiritual powers that were believed in by the Yogis and the Pythagoreans, nearly 3,000 years ago. Thus, while the Âryan mystic claimed for himself the power of solving all the problems of life and death, when he had once obtained the power of acting independently of his body, through the Âtman, "Self," or "Soul"; and the old Greeks went in search of Atmu, the Hidden One, or the God-Soul of man, with the symbolical mirror of the Thesmophorian mysteries; so the spiritualists of to-day believe in the capacity of the spirits, or the souls of disembodied persons, to communicate visibly and tangibly with those they loved on earth. And all these, Âryan Yogis, Greek philosophers, and modern spiritualists, affirm that possibility on the ground that the embodied soul and its never embodied spirit—the real *self*—are not separated from either the universal soul, or from other spirits, by space, but merely by the differentiation of their qualities, as in the boundless expanse of the universe there can be no limitation. And that when this difference is once removed—according to the Greeks and Âryans by abstract contemplation, producing the temporary liberation of the imprisoned soul, and according to spiritualists, through mediumship—such a union between embodied and disembodied spirits becomes possible. Thus was it that Patanjali's Yogis, and following in their steps, Plotinus, Porphyry, and other Neoplatonists, maintained that in their hours of ecstasy, they had been united to, or rather become as one with, God several times during the course of their lives. This idea, erroneous as it may seem in its application to the universal spirit, was, and is, claimed by too many great philosophers to be put aside as entirely chimerical. In the case of the Theodidaktoi, the only controvertible point, the dark spot on this philosophy of extreme mysticism, was its claim to include that which is simply ecstatic illumination, under the

* The reality of the Yoga-power was affirmed by many Greek and Roman writers, who call the Yogis Indian Gymnosophists—by Strabo, Lucan, Plutarch, Cicero (*Tusc. Dis.*), Pliny (vii. 2), etc.

head of sensuous perception. In the case of the Yogîs, who maintained their ability to see Īshvara "face to face," this claim was successfully overthrown by the stern logic of the followers of Kapila, the founder of the Sāṅkhya philosophy. As to the similar assumption made for their Greek followers, for a long array of Christian ecstasies, and, finally, for the last two claimants to "God-seeing" within these last hundred years—Jacob Böhme and Swedenborg—this pretension would and *should* have been philosophically and logically questioned, if a few of our great men of science, who are spiritualists, had had more interest in the philosophy than in the mere phenomenalism of spiritualism.

The Alexandrian Theosophists were divided into neophytes, initiates and masters, or hierophants, and their rules were copied from the ancient Mysteries of Orpheus, who, according to Herodotus, brought them from India. Ammonius obliged his disciples by oath not to divulge his *higher* doctrines, except to those who were proved thoroughly worthy and initiated, and who had learned to regard the gods, the angels, and the demons of other peoples, according to the esoteric *hyponoia*, or under-meaning. "The gods exist, but they are not what the *hoi polloi*, the uneducated multitude, suppose them to be," says Epicurus. "He is not an atheist who denies the existence of the gods, whom the multitude worship, but he is such who fastens on these gods the opinions of the multitude." In his turn, Aristotle declares that of the "Divine Essence pervading the whole world of nature, what are styled the gods are simply the first principles."

Plotinus, the pupil of the "God-taught" Ammonius, tells us that the secret Gnosis or the knowledge of Theosophy, has three degrees—opinion, science, and illumination.

The means or instrument of the first is sense, or perception; of the second, dialectics; of the third, intuition. To the last, reason is subordinate; it is *absolute knowledge*, founded on the identification of the mind with the object known.

Theosophy is the exact science of psychology, so to say; it stands in relation to natural, uncultivated mediumship, as the knowledge of a Tyndall stands to that of a school-boy in physics. It develops in man a direct beholding; that which Schelling denominates "a realization of the identity of subject and object in the individual"; so that under the influence and knowledge of *hyponoia* man thinks divine thoughts, views all things as they really are, and, finally, "becomes recipient of the Soul of the World," to use one of the finest expressions of Emerson. "I, the imperfect, adore my own Perfect," he says in his superb *Essay*

on the *Oversoul*. Besides this psychological, or soul state, Theosophy cultivated every branch of the sciences and arts. It was thoroughly familiar with what is now commonly known as mesmerism. Practical theurgy or "ceremonial magic," so often resorted to by the Roman Catholic clergy in their exorcisms, was discarded by the Theosophists. It was Jamblichus alone who, transcending the other Eclectics, added to Theosophy the doctrine of Theurgy. When ignorant of the true meaning of the esoteric divine symbols of nature, man is apt to miscalculate the powers of his soul, and, instead of communing spiritually and mentally with the higher celestial beings, the good spirits (the gods of the theurgists of the Platonic school), he will unconsciously call forth the evil, dark powers which lurk around humanity, the undying, grim creations, of human crimes and vices, and thus fall from *theurgia* (white magic) into *goëtia* (or black magic, sorcery). Yet neither white nor black magic are what popular superstition understands by the terms. The possibility of "raising spirits," according to the *Key of Solomon*, is the height of superstition and ignorance. Purity of deed and thought can alone raise us to an intercourse "with the gods" and attain for us the goal we desire. Alchemy, believed by so many to have been a spiritual philosophy as well as a physical science, belonged to the teachings of the Theosophical School.

It is a noticeable fact that neither Zoroaster, Buddha, Orpheus, Pythagoras, Confucius, Socrates nor Ammonius Saccas committed anything to writing. The reason for it is obvious. Theosophy is a double-edged weapon and unfit for the ignorant or the selfish. Like every ancient philosophy it has its votaries among the moderns; but, until late in our own days, its disciples were few in numbers, and of the most various sects and opinions.

Entirely speculative, and founding no schools, they have still exercised a silent influence upon philosophy; and no doubt, when the time arrives, many ideas thus silently propounded may yet give new directions to human thought.

Thus remarks Kenneth R. H. Mackenzie, himself a mystic and a Theosophist, in his large and valuable work, *The Royal Masonic Cyclopædia*.^{*} Since the days of the Fire-philosophers, they had never formed themselves into societies, for, tracked like wild beasts by the Christian clergy, to be known as a Theosophist often amounted, hardly

^{*} Articles, "Theosophical Society of New York" and "Theosophy," p. 731, *The Royal Masonic Cyclopædia of History, Rites, Symbolism and Biography*; edited by Kenneth R. H. Mackenzie, IX^o (Cryptonymus), Honorary Member of the Canongate Kilwinning Lodge, No. 2, Scotland. (New York: J. W. Bouton, 706, Broadway, 1877.)

a century ago, to a death-warrant. The statistics show that, during a period of 150 years, no less than 90,000 men and women were burned in Europe for alleged witchcraft. In Great Britain only, from A.D. 1640 to 1660—but twenty years—3,000 persons were put to death for compact with the “Devil.” It was but late in the present century—in 1875—that some progressed mystics and spiritualists, unsatisfied with the theories and explanations of “spiritualism” started by its votaries, and finding that these were far from covering the whole ground of the wide range of phenomena, formed at New York, U.S.A., an association which is now widely known as the Theosophical Society.

HOW A CHELÂ FOUND HIS GURU.

[Being Extracts from a private letter to Damodar K. Mavalankar, Joint-Recording Secretary of the Theosophical Society.]

WHEN we met last at Bombay I told you what had happened to me at Tinnevely. My health having been disturbed by official work and worry, I applied for leave on a medical certificate, and it was duly granted. One day in September last, while I was reading in my room, I was ordered by the audible voice of my blessed Guru, M—— Maharshi, to leave all and proceed immediately to Bombay, whence I was to go in search of Madame Blavatsky wherever I could find her, and follow her wherever she went. Without losing a moment, I closed up all my affairs and left the station. For the tones of that voice are to me the divinest sound in Nature, its commands imperative. I travelled in my ascetic robes. Arrived at Bombay, I found Madame Blavatsky gone, and learned through you that she had left a few days before; that she was very ill; and that, beyond the fact that she had left the place very suddenly with a Chelâ, you knew nothing of her whereabouts. And now I must tell you what happened to me after I had left you.

Really not knowing whither I had best go, I took a through ticket to Calcutta; but, on reaching Allahabad, I heard the same well-known voice directing me to go to Berhampore. At Azimgunge I met in the train, most providentially I may say, with some Bengali gentlemen (I did not then know they were also Theosophists, since I had never seen any of them), who were also in search of Madame Blavatsky. Some had traced her to Dinapore, but lost her track and went back to Berhampore. They knew, they said, she was going to Tibet, and wanted to throw themselves at the feet of the Mahâtâmâs to permit them to accompany her. At last, as I was told, they received from her a note, permitting them to come if they so desired it, but saying that she herself was prohibited from going to Tibet just now. She was to remain, she said, in the vicinity of Darjiling, and would see the Mahâtâmâ on

the Sikkhim territory, where they would not be allowed to follow her. . . . Brother Nobin K. Bannerji, the President of the Adhi Bhautic Bhrâtru Theosophical Society, would not tell me where Madame Blavatsky was, or perhaps did not then know himself. Yet he and others had risked all in the hope of seeing the Mahâtâmâs. On the 23rd, he at last brought me from Calcutta to Chandernagore, where I found Madame Blavatsky, ready to start by train in five minutes. A tall, dark-looking hairy Chelâ (not Chunder Cusho), but a Tibetan I suppose by his dress, whom I met after I had crossed the river Hugli with her in a boat, told me that I had come too late, that Madame Blavatsky had already seen the Mahâtâmâs and that he had brought her back. He would not listen to my supplications to take me with him, saying he had no other orders than what he had already executed—namely, to take her about twenty-five miles beyond a certain place he named to me, and that he was now going to see her safe to the station and return. The Bengali brother Theosophists had also traced and followed her, arriving at the station half an hour later. They crossed the river from Chandernagore to a small railway station on the opposite side. When the train arrived she got into the carriage, upon entering which I found the Chelâ! And, before even her own things could be placed in the van, the train, against all regulations and before the bell was rung, started off, leaving the Bengali gentlemen and her servant behind, only one of them and the wife and daughter of another—all Theosophists and candidates for Chelâship—having had time to get in. I myself had barely the time to jump into the last carriage. All her things, with the exception of her box containing Theosophical correspondence, were left behind with her servant. Yet, even the persons that went by the same train with her did not reach Darjiling. Babu Nobin K. Bannerji, with the servant, arrived five days later; and those who had time to take their seats were left five or six stations behind, owing to another unforeseen accident (?), reaching Darjiling also a few days later. It required no great stretch of imagination to conclude that Madame Blavatsky was, perhaps, being again taken to the Mahâtâmâs, who, for some good reasons best known to them, did not want us to be following and watching her. Two of the Mahâtâmâs, I had learned for a certainty, were in the neighbourhood of British territory; and one of them was seen and recognized by a person I need not name here, as a high Chutuktu of Tibet.

The first days of her arrival Madame Blavatsky was living at the

house of a Bengali gentleman, a Theosophist, refusing to see anyone, and preparing, as I thought, to go again somewhere on the borders of Tibet. To all our importunities we could get only this answer from her: that we had no business to stick to and follow her, that she did not want us, and that she had no right to disturb the Mahâtmâs with all sorts of questions that concerned only the questioners, for they knew their own business best. In despair, I determined, come what might, to cross the frontier, which is about a dozen miles from here, and find the Mahâtmâs or—die. I never stopped to think that what I was going to undertake would be regarded as the rash act of a lunatic. I had no permission, no “pass” from the Sikkhim Râjah, and yet had decided to penetrate into the heart of a semi-independent State, where, if anything happened, the Anglo-Indian officials would not—even if they could—protect me, since I should have crossed over without their permission. But I never gave that a thought, but was bent upon one engrossing idea—to find and see my Guru. Without breathing a word of my intentions to anyone, one morning, namely, October 5th, I set out in search of the Mahâtmâ. I had an umbrella and a pilgrim’s staff for sole weapons, with a few rupees in my purse. I wore the yellow garb and cap. Whenever I was tired on the road, my costume easily procured for me for a small sum a pony to ride. The same afternoon I reached the banks of the Runjit river, which forms the boundary between British and Sikkhimese territories. I tried to cross it by the aerial suspension bridge constructed of canes, but it swayed to and fro to such an extent that I, who have never known in my life what hardship was, could not stand it. I crossed the river by the ferry-boat, and this even not without much danger and difficulty. That whole afternoon I travelled on foot, penetrating further and further into the heart of Sikkhim, along a narrow foot-path. I cannot now say how many miles I travelled before dusk, but I am sure it was not less than twenty or twenty-five miles. Throughout, I saw nothing but impenetrable jungles and forests on all sides of me, relieved at very long intervals by solitary huts belonging to the mountain population. At dusk I began to search around me for a place to rest in at night. I met on the road, in the afternoon, a leopard and a wild cat; and I am astonished now to think how I should have felt no fear then nor tried to run away. Throughout, some secret influence supported me. Fear or anxiety never once entered my mind. Perhaps in my heart there was room for no other feeling but an intense desire to find my Guru. When it

was just getting dark, I espied a solitary hut a few yards from the roadside. To it I directed my steps in the hope of finding a lodging. The rude door was locked. The cabin was untenanted at the time. I examined it on all sides and found an aperture on the western side. It was small indeed, but sufficient for me to jump through. It had a small shutter and a wooden bolt. By a strange coincidence of circumstances the hillman had forgotten to fasten it on the inside when he locked the door. Of course, after what has subsequently transpired, I now, through the eye of faith, see the protecting hand of my Guru everywhere around me. Upon getting inside, I found the room communicated, by a small doorway, with another apartment, the two occupying the whole space of this sylvan mansion. I lay down, concentrating every thought upon my Guru, as usual, and soon fell into a profound sleep. Before I went to rest, I had secured the door of the other room and the single window. It may have been between ten and eleven, or perhaps a little later, that I awoke and heard sounds of footsteps in the adjoining room. I could plainly distinguish two or three people talking together in a dialect unknown to me. Now, I cannot recall the same without a shudder. At any moment they might have entered from the other room and murdered me for my money. Had they mistaken me for a burglar the same fate awaited me. These and similar thoughts crowded into my brain in an inconceivably short period. But my heart did not palpitate with fear, nor did I for one moment think of the possibly tragical chances of the moment. I know not what secret influence held me fast, but nothing could put me out or make me fear; I was perfectly calm. Although I lay awake staring into the darkness for upwards of two hours, and even paced the room softly and slowly without making any noise, to see if I could make my escape, in case of need, back to the forest by the same way I had effected my entrance into the hut—no fear, I repeat, or any such feeling ever entered my heart. I recomposed myself to rest. After a sound sleep, undisturbed by any dream, I awoke at daybreak. Then I hastily put on my boots, and cautiously got out of the hut through the same window. I could hear the snoring of the owners of the hut in the other room. But I lost no time, and gained the path to Sikkhim (the city) and held on my way with unflagging zeal. From the inmost recesses of my heart I thanked my revered Guru for the protection he had vouchsafed me during the night. What prevented the owners of the hut from penetrating to the second room? What kept me in the

same serene and calm spirit, as if I were in a room of my own house? What could possibly make me sleep so soundly under such circumstances—enormous dark forests on all sides abounding in wild beasts, and a party of cut-throats—as most of the Sikkhim^{ese} are said to be—in the next room, with nothing but a rude door between them and me?

When it became quite light, I wended my way on through hills and dales. Riding or walking, the journey was not a pleasant one for any man not as deeply engrossed in thought as I was then myself, and quite oblivious to anything affecting the body. I have cultivated the power of mental concentration to such a degree of late that, on many an occasion, I have been able to make myself quite unconscious of anything around me when my mind was wholly bent upon the one object of my life, as several of my friends will testify; but never to such an extent as in this instance.

It was, I think, between eight and nine A.M. I was following the road to the town of Sikkhim, whence, I was assured by the people I met on the road, I could cross over to Tibet easily in my pilgrim's garb, when I suddenly saw a solitary horseman galloping towards me from the opposite direction. From his tall stature and skill in horsemanship, I thought he was some military officer of the Sikkhim Râjah. Now, I thought, I am caught! He will ask me for my pass and what business I have in the independent territory of Sikkhim, and, perhaps, have me arrested, and sent back, if not worse. But, as he approached me, he reined up. I looked at and recognized him instantly. . . . I was in the awful presence of him, of the same Mahâtmâ, my own revered Guru, whom I had seen before in his astral body on the balcony of the Theosophical Headquarters. It was he, the Himâlayan Brother of the ever-memorable night of December last, who had so kindly dropped a letter in answer to one I had given but an hour or so before in a sealed envelope to Madame Blavatsky, whom I had never lost sight of for one moment during the interval. The very same instant saw me prostrated on the ground at his feet. I arose at his command, and, leisurely looking into his face, forgot myself entirely in the contemplation of the image I knew so well, having seen his portrait (the one in Colónel Olcott's possession) times out of number. I knew not what to say; joy and reverence tied my tongue. The majesty of his countenance, which seemed to me to be the impersonation of power and thought, held me rapt in awe. I was at last face to face with the Mahâtmâ of the Himavat, and he was no myth, no "creation of the

imagination of a medium," as some sceptics had suggested. It was no dream of the night; it was between nine and ten o'clock of the forenoon. There was the sun shining and silently witnessing the scene from above. I see him before me in flesh and blood, and he speaks to me in accents of kindness and gentleness. What more could I want? My excess of happiness made me dumb. Nor was it until some time had elapsed that I was able to utter a few words, encouraged by his gentle tone and speech. His complexion is not as fair as that of Mahâtmâ Kûthûmi; but never have I seen a countenance so handsome, a stature so tall and so majestic. As in his portrait, he wears a short black beard, and long black hair hanging down to his breast; only his dress was different. Instead of a white, loose robe he wore a yellow mantle lined with fur, and on his head, instead of the turban, a yellow Tibetan felt cap, as I have seen some Bhûtanese wear in this country. When the first moments of rapture and surprise were over, and I calmly comprehended the situation, I had a long talk with him. He told me to go no further, for I should come to grief. He said I should wait patiently if I wanted to become an accepted Chelâ; that many were those who offered themselves as candidates, but that only a very few were found worthy; none were rejected, but all of them tried, and most found to fail signally, as, for example, — and —. Some, instead of being accepted and pledged this year, were now thrown off for a year. The Mahâtmâ, I found, speaks very little English—or at least it so seemed to me—and spoke to me in my mother-tongue—Tamil. He told me that if the Chohan permitted Madame Blavatsky to visit Parijong next year, then I could come with her. The Bengali Theosophists who followed the "Upâsikâ" (Madame Blavatsky) would see that she was right in trying to dissuade them from following her now. I asked the blessed Mahâtmâ whether I could tell what I saw and heard to others. He replied in the affirmative, and that, moreover, I would do well to write to you and describe all.

I must impress upon your mind the whole situation, and ask you to keep well in view that what I saw was not the mere "appearance" only, the astral body of the Mahâtmâ, as we saw him at Bombay, but the living man, in his own physical body. He was pleased to say when I offered my farewell Namaskâram (prostration) that he approached the British territory to see the Upâsikâ. Before he left me, two more men came on horseback, his attendants, I suppose, probably Chelâs, for they were dressed like Lama-gylungs, and both, like himself, with

long hair streaming down their backs. They followed the Mahâtmâ, when he left, at a gentle trot. For over an hour I stood gazing at the place that he had just quitted, and then I slowly retraced my steps. Now it was that I found for the first time that my long boots had pinched my legs in several places, that I had eaten nothing since the day before, and that I was too weak to walk further. My whole body was aching in every limb. At a little distance I saw some petty traders with country ponies, carrying burdens. I hired one of these animals. In the afternoon I came to the Runjit river and crossed it. A bath in its cool waters revived me. I purchased some fruit in the only bazaar there and ate heartily. I took another horse immediately and reached Darjiling late in the evening. I could neither eat, nor sit, nor stand. Every part of my body was aching. My absence had seemingly alarmed Madame Blavatsky. She scolded me for my rash and mad attempt to try to go to Tibet after that fashion. When I entered the house I found with Madame Blavatsky, Babu Parbati Chum Roy, Deputy Collector of Settlements and Superintendent of Dearah Survey, and his assistant, Babu Kanty Bhushan Sen, both members of our Society. At their prayer and Madame Blavatsky's command, I recounted all that had happened to me, reserving, of course, my private conversation with the Mahâtmâ. They were all, to say the least, astounded. After all, she will not go this year to Tibet; for which I am sure she does not care, since she has seen our Masters and thus gained her only object. But we, unfortunate people! we lose our only chance of going and offering our worship to the Himâlayan Brothers, who, I know, will not soon cross over to British territory, if ever, again.

And now that I have seen the Mahâtmâ in the flesh, and heard his living voice, let no one dare say to me that the Brothers do not exist. Come now whatever will, death has no fear for me, nor the vengeance of enemies; for what I know, I know!

S. RAMASWAMIER.

THE SAGES OF THE HIMAYAT.

WHILE on my tour with Col. Olcott several phenomena occurred, in his presence as well as in his absence, such as immediate answers in my Master's handwriting, and over his signature, to questions put by a number of our Fellows. These occurrences took place before we reached Lahore, where we expected to meet my Master in the body. There I was visited by him in the body, for three nights consecutively, for about three hours every time, while I myself retained full consciousness, and, in one case, even went to meet him outside the house. To my knowledge there is no case in the Spiritualist records of a medium remaining perfectly conscious, and meeting, by previous arrangement, his spirit-visitor in the compound, reëntering the house with him, offering him a seat and then holding a long converse with the "disembodied spirit" in a way to give him the impression that he is in personal contact with an embodied entity. Moreover, him whom I saw in person at Lahore was the same whom I had seen in astral form at the Headquarters of the Theosophical Society, and again, the same whom I had seen, in visions and trances, at his house, thousands of miles off, which I reached in my astral Ego by his direct help and protection. In those instances, with my psychic powers hardly yet developed, I had always seen him as a rather hazy form, although his features were perfectly distinct and their remembrance was profoundly graven on my soul's eye and memory, while now at Lahore, Jummoo, and elsewhere, the impression was utterly different. In the former cases, when making Pranâm (salutation) my hands passed through his form, while on the latter occasions they met solid garments and flesh. Here I saw a living man before me, the original of the portraits in the possession of Madame Blavatsky and Mr. Sinnett, though far more imposing in his general appearance and bearing. I shall not here dwell upon the fact of his having been corporeally seen by both Col. Olcott and Mr. Brown separately for two nights at Lahore, as they can do this better, each for him-

self, if they so choose. At Jummoo again, whither we proceeded from Lahore, Mr. Brown saw him on the evening of the third day after our arrival there, and from him received a letter in his familiar handwriting, not to speak of his visits to me almost every day. And what happened the next morning almost every one in Jummoo is aware of. The fact is, that I had the good fortune of being sent for, and permitted to visit a sacred Âshrama, where I remained for a few days in the blessed company of several of the Mahâtmâs of Himavat and their disciples. There I met not only my beloved Gurudeva and Col. Olcott's Master, but several others of the fraternity, including one of the highest. I regret the extremely personal nature of my visit to those thrice blessed regions prevents my saying more about it. Suffice it that the place I was permitted to visit is in the Himâlayas, not in any fanciful Summer Land, and that I saw him in my own Sthûla Sharîra (physical body) and found my Master identical with the form I had seen in the earlier days of my Chelâship. Thus, I saw my beloved Guru not only as a living man, but actually as a young one in comparison with some other Sâdhus of the blessed company, only far kinder, and not above a merry remark and conversation at times. Thus, on the second day of my arrival, after the meal hour, I was permitted to hold an intercourse for over an hour with my Master. Asked by him smilingly what it was that made me look at him so perplexedly, I asked in my turn: "How is it, Master, that some of the members of our Society have taken into their heads a notion that you were an 'elderly man,' and that they have even seen you, clairvoyantly, looking an old man past sixty?" To which he pleasantly smiled and said that this latest misconception was due to the reports of a certain Brahmachârî, a pupil of a Vedântic Svâmi in the Punjab,* who had met last year in Tibet the chief of a sect, an elderly Lama, who was his (my Master's) travelling companion at that time. The said Brahmachârî, having spoken of the encounter in India, had led several persons to mistake the Lama for himself. As to his being perceived clairvoyantly as an "elderly man," that could never be, he added, as *real* clairvoyance could lead no one into such mistaken notions; and then he kindly reprimanded me for giving any importance to the age of a Guru, adding that appearances were often false, etc., and explaining other points.

These are all stern facts, and no third course is open to the reader. What I assert is either true or false. In the former case, no Spiritual-

* See *infra*. Rājani Kanta Brahmachârî's "Interview with a Mahâtmâ."

istic hypothesis can hold good, and it will have to be admitted that the Himâlayan Brothers are living men, and neither disembodied spirits nor creations of the over-heated imagination of fanatics. Of course I am fully aware that many will discredit my account; but I write only for the benefit of those few who know me well enough neither to see in me a hallucinated medium, nor attribute to me any bad motive, and who have ever been true and loyal to their convictions and to the cause they have so nobly espoused. As for the majority who laugh at and ridicule what they have neither the inclination nor the capacity to understand, I hold them in very small account. If these few lines will help to stimulate even one of my brother-fellows in the Society, or one right-thinking man outside of it, to promote the cause of Truth and Humanity, I shall consider that I have properly performed my duty.

DAMODAR K. MAVALANKAR.

THE HIMÂLAYAN BROTHERS—DO THEY EXIST?

“ASK and it shall be given unto you; knock and it shall be opened,” this is an accurate representation of the position of the earnest enquirer as to the existence of the Mahâtmâs. I know of none who took up this enquiry in right earnest and were not rewarded for their labours with knowledge, certainty. In spite of all this there are plenty of people who carp and cavil but will not take the trouble of proving the thing for themselves. Both by Europeans and a section of our own countrymen—the too Europeanized graduates of Universities—the existence of the Mahâtmâs is looked upon with incredulity and distrust, to give it no harder name. The position of the Europeans is easily intelligible, for these things are so far removed from their intellectual horizon, and their self-sufficiency is so great, that they are almost impervious to these new ideas. But it is much more difficult to conceive why the people of India, who are born and brought up in an atmosphere redolent with the traditions of these things, should affect such scepticism. It would have been more natural for them, on the other hand, to hail such proofs as those I am now laying before the public with the same satisfaction as an astronomer feels when a new star, whose elements he has calculated, swims within his ken. I myself was a thorough-going disbeliever only two years back. In the first place I had never witnessed any occult phenomena myself, nor did I find any one who had done so in that small ring of our countrymen for whom only I was taught to have any respect—the “educated classes.” It was only in the month of October, 1882, that I really devoted any time and attention to this matter, and the result is that I have as little doubt with respect to the existence of the Mahâtmâs as of mine own. I now know that they exist. But for a long time the proofs that I had received were not all of an objective character. Many things which are very satisfactory proofs to me would not be so to the reader. On the other

hand, I have no right to speak of the unimpeachable evidence I now possess. Therefore I must do the best I can with the little I am permitted to give. In the present paper I have brought forward such evidence as would be perfectly satisfactory to all capable of measuring its probative force.

The evidence now laid before the public was collected by me during the months of October and November, 1882, and was at the time placed before some of the leading members of the Theosophical Society, Mr. Sinnett among others. The account of Bro. Ramaswamier's interview with his Guru in Sikkhim being then ready for publication, there was no necessity, in their opinion, for the present paper being brought to light. But since an attempt has been made in some quarters to minimize the effect of Mr. Ramaswamier's evidence by calling it most absurdly "the hallucinations of a half-frozen strolling Registrar," I think something might be gained by the publication of perfectly independent testimony of, perhaps, equal, if not greater, value, though of quite a different character. With these words of explanation as to the delay in its publication, I resign this paper to the criticism of our sceptical friends. Let them calmly consider and pronounce upon the evidence of the Tibetan pedlar at Darjiling, supported and strengthened by the independent testimony of the young Brahmachârî at Dehradun. Those who were present when the statements of these persons were taken, all occupy very respectable positions in life—some, in fact, belonging to the front ranks of Hindû society, and several in no way connected with the Theosophical movement, but, on the contrary, quite unfriendly to it. In those days I again say I was rather sceptical myself. It is only since I collected the following evidence and received more than one proof of the actual existence of my venerated Master, Mahâtma Koothoomi, whose presence—quite independently of Madame Blavatsky, Colonel Olcott or any "alleged" Chelâ—was made evident to me in a variety of ways, that I have given up the folly of doubting any longer. Now I believe no more—I know; and knowing, I would help others to obtain the same knowledge.

During my visit to Darjiling I lived in the same house with several Theosophists, all as ardent aspirants for the higher life, and most of them as doubtful with regard to the Himâlayan Mahâtmas as I was myself at that time. I met at Darjiling persons who claimed to be Chelâs of the Himâlayan Brothers and to have seen and lived with them for years. They laughed at our perplexity. One of them showed

us an admirably executed portrait of a man who appeared to be an eminently holy person, and who, I was told, was the Mahâtmâ Koot-hoomi (now my revered Master), to whom Mr. Sinnett's *Occult World* is dedicated. A few days after my arrival, a Tibetan pedlar of the name of Sundook accidentally came to our house to sell his things. Sundook was for years well known in Darjiling and the neighbourhood as an itinerant trader in Tibetan knick-knacks, who visited the country every year in the exercise of his profession. He came to the house several times during our stay there, and seemed to us, from his simplicity, dignity of bearing and pleasant manners, to be one of nature's own gentlemen. No man could discover in him any trait of character even remotely allied to the uncivilized savages, as the Tibetans are held in the estimation of Europeans. He might very well have passed for a trained courtier, only that he was too good to be one. He came to the house while I was there. On the first occasion he was accompanied by a Goorkha youth, named Sundar Lall, an *employé* in the *Darjiling News* office, who acted as interpreter. But we soon found out that the peculiar dialect of Hindi which he spoke was intelligible to some of us without any interpreter, and so none was needed on subsequent occasions. On the first day we put to him some general questions about Tibet and the Gelugpa sect, to which he said he belonged, and his answers corroborated the statements of Bogle, Turnour, and other travellers. On the second day we asked him if he had heard of any persons in Tibet who possessed extraordinary powers besides the great lamas. He said there were such men; that they were not regular lamas, but far higher than they, and generally lived in the mountains beyond Tchigatze and also near the city of Lhasa. These men, he said, produce many and very wonderful phenomena or "miracles," and some of their Chelâs, or Lanoos, as they are called in Tibet, cure the sick by giving them to eat the rice which they crush out of the paddy with their hands, etc. Then one of us had a glorious idea. Without saying one word, the above-mentioned portrait of the Mahâtmâ Koot-hoomi was shown to him. He looked at it for a few seconds, and then, as though suddenly recognizing it, he made a profound reverence to the portrait, and said it was the likeness of a Chohan (Mahâtmâ) whom he had seen. Then he began rapidly to describe the Mahâtmâ's dress and naked arms; then suiting the action to the word, he took off his outer cloak, and baring his arms to the shoulder, made the nearest approach to the figure in the portrait, in the adjustment of his dress.

He said he had seen the Mahâtmâ in question accompanied by a numerous body of Gylungs, about that time of the previous year (beginning of October, 1881) at a place called Giansi, two days' journey southward of Tchigatzé, whither the narrator had gone to make purchases for his trade. On being asked the name of the Mahâtmâ, he said to our unbounded surprise, "*They* are called Koothum-pa." Being cross-examined and asked what he meant by "*they*," and whether he was naming one man or many, he replied that the Koothum-pas were many, but there was only one man or chief over them of that name; the disciples being always called after the names of their Guru. Hence the name of the latter being Koot-hum, that of his disciples was "Koot-hum-pa." Light was shed upon this explanation by a Tibetan dictionary, where we found that the word "pa" means "man"; "Bod-pa" is a "man of Bod or Thibet," etc. Similarly Koothum-pa means man or disciple of Koothoom or Koothoomi. At Giansi, the pedlar said, the richest merchant of the place went to the Mahâtmâ, who had stopped to rest in the midst of an extensive field, and asked him to bless him by coming to his house. The Mahâtmâ replied, he was better where he was, as he had to bless the whole world, and not any particular man. The people, and among them our friend Sundook, took their offerings to the Mahâtmâ, but he ordered them to be distributed among the poor. Sundook was exhorted by the Mahâtmâ to pursue his trade in such a way as to injure no one, and warned that such was the only right way to prosperity. On being told that people in India refused to believe that there were such men as the Brothers in Tibet, Sundook offered to take any voluntary witness to that country, and convince us, through him, as to the genuineness of their existence, and remarked that if there were no such men in Tibet, he would like to know where they were to be found. It being suggested to him that some people refused to believe that such men existed at all, he got very angry. Tucking up the sleeve of his coat and shirt, and disclosing a strong muscular arm, he declared that he would fight any man who would suggest that he had said anything but the truth.

On being shown a peculiar rosary of beads belonging to Madame Blavatsky, the pedlar said that such things could only be got by those to whom the Tesshu Lama presented them, as they could be got for no amount of money elsewhere. When the Chelâ who was with us put on his sleeveless coat and asked him whether he recognized the latter's profession by his dress, the pedlar answered that he was a Gylung, and

then bowing down to him took the whole thing as a matter of course. The witnesses in this case were Babu Nobin Krishna Bannerji, deputy magistrate, Berhampore, M. R. Ry. Ramaswamiyer Avergal, district registrar, Madura (Madras), the Goorkha gentleman spoken of before, all the family of the first-named gentleman, and the writer.

Now for the other piece of corroborative evidence. This time it came most accidentally into my possession. A young Bengali Brahmachârî, who had only a short time previous to our meeting returned from Tibet and who was residing then at Dehradun, in the North-Western Provinces of India, at the house of my grandfather-in-law, the venerable Babu Devendra Nath Tagore of the Brahmo Samâj, gave most unexpectedly, in the presence of a number of respectable witnesses, the following account:

On the 15th of the Bengali month of Asar last (1882), being the twelfth day of the waxing moon, he met some Tibetans, called the Koothum-pas, and their Guru in a field near Taklakhar, a place about a day's journey from the Lake of Mansarovara. The Guru and most of his disciples, who were called Gylungs, wore sleeveless coats over under-garments of red. The complexion of the Guru was very fair, and his hair, which was not parted but combed back, streamed down his shoulders. When the Brahmachârî first saw the Mahâtma he was reading in a book, which the Brahmachârî was informed by one of the Gylungs was the *Rig Veda*.

The Guru saluted him, and asked him where he was coming from. On finding the latter had not had anything to eat, the Guru commanded that he should be given some ground gram (Sattoo) and tea. As the Brahmachârî could not get any fire to cook food with, the Guru asked for, and kindled a cake of dry cow-dung—the fuel used in that country as well as in this—by simply blowing upon it, and gave it to our Brahmachârî. The latter assured us that he had often witnessed the same phenomenon, produced by another Guru or Chohan, as they are called in Tibet, at Gauri, a place about a day's journey from the cave of Tarchin, on the northern side of Mount Kailâs. The keeper of a flock, who was suffering from rheumatic fever, came to the Guru, who gave him a few grains of rice, crushed out of paddy, which the Guru had in his hand, and the sick man was cured then and there.

Before he parted company with the Koothum-pas and their Guru, the Brahmachârî found that they were going to attend a festival held on the

banks of Lake Mansarovara, and that from thence they intended to proceed to the Kailâs Mountains.

The above statement was on several occasions repeated by the Brahmachârî in the presence (among others) of Babu Devendra Nath Tagore, of Jorasanko, Calcutta; Babu Cally Mohan Ghose of the Trigonometrical Survey of India, Dehradun; Babu Cally Cumar Chatterji of the same place; Babu Gopi Mohan Ghosh of Dacca; Babu Priya Nath Sastri, clerk to Babu Devendra Nath Tagore, and the writer. Comments would here seem almost superfluous, and the facts might very well have been left to speak for themselves to a fair and intelligent jury. But the averseness of people to enlarge their field of experience and the wilful misrepresentation of designing persons know no bounds. The nature of the evidence here adduced is of an unexceptional character. Both witnesses were met quite accidentally. Even if it be granted, which we certainly do not for a moment grant, that the Tibetan pedlar, Sundook, had been interviewed by some interested person, and induced to tell an untruth, what can be conceived to have been the motive of the Brahmachârî, one belonging to a religious body noted for their truthfulness, and having no idea as to the interest the writer took in such things, in inventing a romance; and how could he make it fit exactly with the statements of the Tibetan pedlar at the other end of the country? Uneducated persons are no doubt liable to deceive themselves in many matters, but these statements dealt only with such disunited facts as fell within the range of the narrator's eyes and ears, and had nothing to do with his judgment or opinion. Thus, when the pedlar's statement is coupled with that of the Dehradun Brahmachârî, there is, indeed, no room left for any doubt as to the truthfulness of either. It may here be mentioned that the statement of the Brahmachârî was not the result of a series of leading questions, but formed part of the account he voluntarily gave of his travels during the year, and that he is almost entirely ignorant of the English language, and had, to the best of my knowledge, information and belief, never even so much as heard of the name of Theosophy. Now, if anyone refuses to accept the mutually corroborative but independent testimonies of the Tibetan pedlar of Darjiling and the Brahmachârî of Dehradun on the ground that they support the genuineness of facts not ordinarily falling within the domain of one's experience, all I can say is that it is the very miracle of folly. It is, on the other hand, most unshakably established upon the evidence of several of his Chelâs, that the

Mahâtmâ Koothoomi is a living person like any of us, and that moreover he was seen by two persons on two different occasions. This will, it is to be hoped, settle for ever the doubts of those who believe in the genuineness of occult phenomena, but put them down to the agency of "spirits." Mark one circumstance. It may be argued that during the pedlar's stay at Darjiling, Madame Blavatsky was also there, and, who knows, she might have bribed him (!!) into saying what he said. But no such thing can be urged in the case of the Dehradun Brahmachârî. He knew neither the pedlar nor Madame Blavatsky, had never heard of Colonel Olcott, having just returned from his long journey, and had no idea that I was a Fellow of the Society. His testimony was entirely voluntary. Some others, who admit that Mahâtmâs exist, but that there is no proof of their connection with the Theosophical Society, will be pleased to see that there is no *à priori* impossibility in those great souls taking an interest in such a benevolent Society as ours. Consequently it is a gratuitous insult to a number of self-sacrificing men and women to reject their testimony without a fair hearing.

I purposely leave aside all proofs which are already before the public. Each set of proofs is conclusive in itself, and the cumulative effect of all is simply irresistible.

MOHINI M. CHATTERJI.

INTERVIEW WITH A MAHÂTMÂ.

At the time I left home for the Himâlayas in search of the Supreme Being, having adopted Brahmacharyâshrama (religious mendicancy), I was quite ignorant of the fact that there was any such philosophical sect as the Theosophists existing in India, who believed in the existence of the Mahâtmâs or "superior persons." This and other facts connected with my journey are perfectly correct as already published, and so need not be repeated or contradicted. Now I beg to give a fuller account of my interview with the Mahâtmâs.

Before and after I met the so-called Mahâtmâ, Koothum-pa, I had the good fortune of seeing in person several other Mahâtmâs of note, a detailed account of whom, I hope, should time allow, to write to you by and by. Here I wish to say something about Koothum-pa only.

When I was on my way to Almora from Mansarovara and Kailâsa, one day I had nothing with me to eat; I was quite at a loss how to get on without food. There being no human habitation in that part of the country, I could expect no help, but pray to God, and make my way patiently on. Between Mansarovara and Taklakhar, by the side of a road, I observed a tent pitched and several Sâdhus (holy men), called Chohans, who numbered about seventeen in all, sitting outside it. As to their dress, etc., what Babu M. M. Chatterji says is quite correct. When I went to them they entertained me very kindly, and saluted me by uttering, "Râm, Râm." Returning their salutations, I sat down with them, and they entered into conversation with me upon different subjects, asking me first the place I was coming from and whither I was going. There was a chief of them sitting inside the tent, and engaged in reading a book. I enquired about his name and the book he was reading from; one of his Chelâs, who answered me in rather a serious tone, said that his name was Guru Koothum-pa, and the book he was reading was *Rig Veda*. Long before, I had been told by some Pandits of Bengal that the Tibetan Lamas were well acquainted

♦

with the *Rig Veda*. This proved what they had told me. After a short time, when his reading was over, he called me in by one of his Chelâs, and I went to him. He, also bidding me "Râm, Râm," received me very gently and courteously, and began to talk with me mildly in pure Hindi. He addressed me in words such as follows: "You should remain here for some time and see the fair at Mansarovara, which is to come off shortly. Here you will have plenty of time and suitable retreats for meditation, etc. I will help you in whatever I can." He spoke as above for some time, and I replied that what he said was right, and that I would gladly have stayed, but there was some reason which prevented me. He understood my object immediately, and then, having given me some private advice as to my spiritual progress, bade me farewell. Before this he had come to know that I was hungry, and so wished me to take some food. He ordered one of his Chelâs to supply me with food, which he did immediately. In order to get hot water ready for my ablutions, he prepared fire by blowing into a cowdung cake, which burst into flames at once. This is a common practice among the Himâlayan Lamas. It is also fully explained by M. M. Chatterji, and so need not be repeated.

As long as I was there with the said Lama, he never persuaded me to accept Buddhism or any other religion, but only said, "Hindûism is the best religion; you should believe in the Lord Mahâdeva—he will do good to you. You are still quite a young man—do not be enticed away by the necromancy of anybody." Having had a conversation with the Mahâtmâ as described above, for about three hours, I at last took leave and resumed my journey.

I am neither a Theosophist nor a sectarian, but am a worshipper of the only OM. As regards the Mahâtmâ I personally saw, I daresay that he is a great Mahâtmâ. By the fulfilment of certain of his prophecies, I am quite convinced of his excellence. Of all the Himâlayan Mahâtmâs with whom I had an interview, I never met a better Hindi speaker than he. As to his birthplace and the place of his residence, I did not ask him any question. Neither can I say if he is the Mahâtmâ of the Theosophists. As to the age of the Mahâtmâ Koothum-pa, as I told Babu M. M. Chatterji and others, he was an elderly-looking man.

RÂJANI KANT BRAHMACHÂRIN.

THE SECRET DOCTRINE.

FEW experiences lying about the threshold of occult studies are more perplexing and tormenting than those which have to do with the policy of the Brothers, as to what shall, and what shall not, be revealed to the outer world. In fact, it is only by students at the same time tenacious and patient—continuously anxious to get at the truths of occult philosophy, but cool enough to bide their time when obstacles come in the way—that what looks, at first sight, like a grudging and miserly policy in this matter on the part of our illustrious teachers can be endured. Most men persist in judging all situations by the light of their own knowledge and conceptions; and certainly by reference to standards of right and wrong with which modern civilization is familiar, a pungent indictment may be framed against the holders of philosophical truth. They are regarded by their critics as keeping guard over their intellectual possessions, declaring, “We have won this knowledge with strenuous effort and at the cost of sacrifice and suffering; we will not make a present of it to luxurious idlers who have done nothing to deserve it.” Most critics of the Theosophical Society and its publications have fastened on this obvious idea, and have denounced the policy of the Brothers as “selfish” and “unreasonable.” It has been argued that, as regards occult *powers*, the necessity for keeping back all secrets which would enable unconscientious people to do mischief, might be granted, but that no corresponding motives could dictate the reservation of occult philosophical truth.

I have lately come to perceive certain considerations on this subject which have generally been overlooked; and it seems desirable to put them forward at once; especially as a very considerable body of occult philosophical teaching is now before the world, and as those who appreciate its value best, will sometimes be inclined to protest all the more emphatically against the tardiness with which it has been served out, and the curious precautions with which its further development is even now surrounded.

In a nutshell, the explanation of the timid policy displayed is that the Brothers are fully assured that the disclosure of that actual truth (which constitutes the secret doctrine) about the origin of the World and of Humanity—of the laws which govern their existence, and the destinies to which they are moving on—is calculated to have a very momentous effect on the welfare of mankind. Great results ensue from small beginnings, and the seeds of knowledge now being sown in the world may ultimately bear prodigious harvest. We, who are present merely at the sowing, may not realize the magnitude and importance of the impulse we are concerned in giving, but that impulse will roll on, and a few generations hence will be productive of tremendous consequences one way or the other. For occult philosophy is no shadowy system of speculation like any of the hundred philosophies with which the minds of men have been overwhelmed; it is the positive Truth, and by the time enough of it is let out, it will be seen to be so by thousands of the greatest men who may then be living in the world. What will be the consequence? The first effect on the minds of all who come to understand it, is terribly iconoclastic. It drives out before it *everything* else in the shape of religious belief. It leaves no room for any conceptions belonging even to the groundwork or foundation of ordinary religious faith. And what becomes then of all rules of right and wrong, of all sanctions for morality? Most assuredly there are rules of right and wrong thrilling through every fibre of occult philosophy really higher than any which commonplace theologies can teach; far more cogent sanctions for morality than can be derived at second-hand from the distorted doctrines of exoteric religions; but a complete transfer of the sanction will be a process involving the greatest possible danger for mankind at the time. Bigots of all denominations will laugh at the idea of such a transfer being seriously considered. The orthodox Christian—confident in the thousands of churches overshadowing all Western lands, of the enormous force engaged in the maintenance and propagation of the faith, with the Pope and the Protestant hierarchy in alliance for this broad purpose, with the countless clergy of all sects, and the fiery Salvation Army bringing up the rear—will think that the earth itself is more likely to crumble into ruin than the irresistible authority of Religion to be driven back. They are all counting, however, without the progress of enlightenment. The most absurd religions die hard; but when the intellectual classes definitely reject them, *they die*, with throes of terrible agony, maybe, and, perhaps, like Samson

in the Temple, but they cannot permanently outlive a conviction in the leading minds of the age that they are false. Just what has been said of Christianity may be said of Mohammedanism and Brâhmanism. Little or no risk is run while occult literature aims merely at putting a reasonable construction on perverted tenets—in showing people that truth may lurk behind even the strangest theologic fictions. And the lover of orthodoxy, in either of the cases instanced, may welcome the explanation with complacency. For him also, as for the Christian, the faith which he professes—sanctioned by what looks like a considerable antiquity to the very limited vision of uninitiated historians, and supported by the attachment of millions grown old in its service and careful to educate their children in the convictions that have served their turn—is founded on a rock which has its base in the foundations of the world. Fragmentary teachings of occult philosophy seem at first to be no more than annotations on the canonical doctrine. They may even embellish it with graceful interpretations of its symbolism, parts of which may have seemed to require apology, when ignorantly taken “at the foot of the letter.” But this is merely the beginning of the attack. If occult philosophy gets before the world with anything resembling completeness, it will so command the assent of earnest students that for them nothing else of that nature will remain standing. And the earnest students in such cases must multiply. They are multiplying *now* even, merely on the strength of the little that has been revealed. True—for some time to come—the study will be, as it were, the whim of a few; but “those who know,” know among other things that, give it fair play, and it must become the subject of enthusiasm with all advanced thinkers. And what is to happen when the world is divided into two camps—the whole forces of intellectuality and culture on the one side, those of ignorance and superstitious fanaticism on the other? With such a war as that impending, the Adepts, who will be conscious that they prepared the lists and armed the combatants, will require some better justification for their policy before their *own* consciences than the reflection that, in the beginning, people accused them of selfishness, and of keeping a miserly guard over their knowledge, and so goaded them with this taunt that they were induced to set the ball rolling.

There is no question, be it understood, as to the relative merits of the moral sanctions that are afforded by occult philosophy and those which are distilled from the worn-out materials of existing creeds. If the

world could conceivably be shunted at one *coup* from the one code of morals to the other, the world would be greatly the better for the change. But the change cannot be made all at once, and the transition is most dangerous. On the other hand, it is no less dangerous to take no steps in the direction of that transition. For though existing religions may be a great power—the Pope still ruling over millions of consciences if not over towns and states, the name of the Prophet being still a word to conjure with in war, the forces of Brâhmanical custom holding countless millions in willing subjection—in spite of all this, the old religions are sapped and past their prime. They are in process of decay, for they are losing their hold on the educated minority; it is still the case that in all countries the camps of orthodoxy include large numbers of men distinguished by intellect and culture, but one by one their numbers are diminishing. Five-and-twenty years only, in Europe, have made a prodigious change. Books are written now that pass almost as matters of course which would have been impossible no further back than that. No further back, books thrilled society with surprise and excitement which the intellectual world would now ignore as embodying the feeblest commonplaces. The old creeds, in fact, are slowly losing their hold upon mankind—more slowly in the more deliberately moving East than in Europe, but even here by degrees also—and a time will come, whether occult philosophy is given out to take their place or not, when they will no longer afford even such faulty sanctions for moral conduct and right as they have supplied in times gone by. Therefore it is plain that something *must* be given out to take their place, and hence the determinations of which this movement in which we are engaged is one of the undulations—these very words some of the foremost froth upon the advancing wave.

But surely, when something which must be done is yet very dangerous in the doing, the persons who control the operations in progress may be excused for exercising the utmost caution. Readers of Theosophical literature will be aware how bitterly our adept Brothers have been criticized for choosing to take their own time and methods in the task of partially communicating their knowledge to the world. Here in India these criticisms have been indignantly resented by the passionate loyalty to the Mahâtmâs that is so widely spread among Hindûs—resented more by instinct than reason in some cases perhaps, though in others, no doubt, as a consequence of a full appreciation of all that

is being now explained, and of other considerations beside. But in Europe such criticisms will have seemed hard to answer. The answer is really embodied, however imperfectly, in the views of the situation now set forth. We ordinary mortals in the world work as men travelling by the light of a lantern in an unknown country. We see but a little way to the right and left, only a little way even behind. But the Adepts work as men travelling by daylight, with the further advantage of being able at will to get up in a balloon and survey vast expanses of lake and plain and forest.

The choice of time and methods for communicating occult knowledge to the world necessarily includes the choice of intermediary agents. Hence the double set of misconceptions in India and Europe, each adapted to the land of its origin. In India, where knowledge of the Brothers' existence and reverence for their attributes is widely diffused, it is natural that persons who may be chosen for their serviceability rather than for their merits, as the recipients of their direct teaching, should be regarded with a feeling resembling jealousy. In Europe, the difficulty of getting into any sort of relation with the fountain-head of Eastern philosophy is regarded as due to an exasperating exclusiveness on the part of the Adepts in that philosophy, which renders it practically worth no man's while to devote himself to the task of soliciting their instruction. But neither feeling is reasonable when considered in the light of the explanations now put forward. The Brothers can consider none but public interests, in the largest sense of the term, in throwing out the first experimental flashes of occult revelation into the world. They can only employ agents on whom they can rely for doing the work as they may wish it done—or, at all events, in no manner which may be widely otherwise. Or they can only protect the task on which they are concerned in another way. They may consent sometimes to a very much more direct mode of instruction than that provided through intermediary agents for the world at large, in the cases of organized societies solemnly pledged to secrecy, for the time being at all events, in regard to the teaching to be conveyed to them. In reference to such societies, the Brothers need not be on the watch to see that the teaching is not worked up for the service of the world in a way they would consider, for reasons of their own, likely to be injurious to final results or dangerous. Different men will assimilate the philosophy to be unfolded in different ways; for some it will be too iconoclastic altogether, and its further pursuit

after a certain point is reached, unwelcome. Such persons, entering too hastily on the path of exploration, if thoroughly pledged to secrecy in the first instance, will be able to drop off from the undertaking whenever they like, without being a source of embarrassment afterwards, as regards the steady prosecution of the work in hand by other more resolute, or less sensitive, labourers. It may be that in such societies, if any should be formed in which occult philosophy may be secretly studied, some of the members will be as well fitted as, or better than, any other persons employed elsewhere to put the teachings in shape for publication, but in that case it is to be presumed that special qualifications will eventually make themselves apparent. The meaning and good sense of the restrictions, provisionally imposed meanwhile, will be plain enough to any impartial person on reflection, even though their novelty and strangeness may be a little resented at the first glance.

LAY CHELÂ.

THE PURĀNAS ON THE DYNASTY OF THE MORYAS AND ON KUTHUMI.

It is stated in *Matsya Purāna* (chapter cclxxii), that ten Moryas would reign over India, and would be succeeded by the Shungas, and that Shata Dhanvan will be the first of these ten Mauryas (or Moryas).

In *Vishnu Purāna* (iv. 4) it is stated that there was in the Sūrya dynasty a king called Moru, who through the power of devotion (Yoga) is said to be still living in the village called Kalāpa, in the Himālayas (Wilson, iii. 197), and who, in a future age, will be the restorer of the Kshatriya race, in the Solar dynasty, that is, many thousands of years hence. In another part of the same Purāna (iv. 24) it is stated that, “upon the cessation of the race of Nanda, the Moryas* will possess the earth, for Kautilya will place Chandragupta on the throne.” Col. Tod considers Morya, or Maurya, a corruption of Mori, the name of a Rājput tribe. The Commentary on the *Mahāvanso* thinks that the princes of the town Mori were thence called Mauryas. *Vāchaspathya*, a Sanskrit Encyclopædia, places the village of Kalāpa on the northern side of the Himālayas—hence in Tibet. The same is stated in chapter (Skanda) xii of *Bhāgavata* (iii. 325). The *Vāyu Purāna* seems to declare that Moru will reestablish the Kshatriyas in the nineteenth coming Yuga. In *Vishnu Purāna* (iii. 6), a Rishi called Kuthumi is mentioned. Will any of our Brothers tell us how our Mahātmās stand to these revered personages?

R. RAGOONATH ROW.

EDITOR'S NOTE.

In the Buddhist *Mahāvanso*, Chandagatto, or Chandragupta, Ashoka's grandfather, is called a prince of the Moryan dynasty as he certainly was—or rather as they were—for there were several Chandraguptas. This dynasty, as said in the same book, began with certain Kshatriyas (warriors) of the Shākya line closely

* The particulars of this legend are recorded in the *Atthala Kathā* of the Uttaravihāro priests.
u

related to Gautama Buddha, who crossing the Himavanto (Himālayas) "discovered a delightful location, well watered, and situated in the midst of a forest of lofty bo and other trees. There they founded a town, which was called by its Shākya lords, Morya-Nāgara." Prof. Max Müller would see in this legend a made-up story for two reasons: (1) A desire on the part of Buddhists to connect their King Ashoka, the "beloved of gods," with Buddha, and thus nullify the slanders set up by the Brāhmanical opponents of Buddhism to the effect that Ashoka and Chandragupta were Shūdras; and (2) because this document does not dovetail with his own theories and chronology based on the fanciful stories of the Greek Megasthenes and others. It was not the princes of Morya-Nāgara who received their name from the Rājput tribe of Mori, but the latter that became so well known as being composed of the descendants of the Moryan sovereign of Morya-Nāgara. Some light is thrown on the subsequent destiny of that dynasty in "Replies to an English F.T.S." (See *ante*.) The name of Rishi Kuthumi is mentioned in more than one Purāna, and his Code is among the eighteen Codes written by various Rishis, and preserved at Calcutta in the library of the Asiatic Society. But we have not been told whether there is any connection between our Mahātmā of that name and the Rishi, and we do not feel justified in speculating upon the subject. All we know is, that both are Northern Brāhmans, while the Moryas are Kshatriyas. If any of our Brothers know more, or can discover anything relating to the subject in the Sacred Books, we shall hear of it with pleasure. The words: "The Moryas will possess the earth, for Kautilya will place Chandragupta on the throne," have in our occult philosophy a dual meaning. In one sense they relate to the days of early Buddhism, when a Chandragupta (Morya) was the king of "*all the earth*," i.e., of Brāhmans, who believed themselves the highest and only representatives of humanity for whom earth was evolved. The second meaning is purely esoteric. Every Adept or genuine Mahātmā is said to "possess the earth," by the power of his occult knowledge. Hence, a series of ten Moryas, all initiated Adepts, would be regarded by the occultists, and referred to as "possessing all the earth," or all its knowledge. The names of "Chandragupta" and "Kautilya" have also an esoteric significance. Let our Brother ponder over their Sanskrit meaning, and he will perhaps see what bearing the phrase—"for Kautilya will place Chandragupta upon the throne"—has upon the Moryas possessing the earth. We would also remind our Brother that the word Itihāsa, ordinarily translated as "history," is defined by Sanskrit authorities to be the narrative of the lives of some august personages, conveying at the same time meanings of the highest moral and occult importance.

THE THEORY OF CYCLES.

It is now some time since this theory—which was first propounded in the oldest religion of the world, Vedaism—has been gradually coming into prominence again. It was taught by various Greek philosophers, and afterwards defended by the Theosophists of the Middle Ages, but came to be flatly denied by the wise men of the West, the world of negations. Contrary to the rule, it is the men of science themselves who have revived this theory. Statistics of events of the most varied nature are fast being collected and collated with the seriousness demanded by important scientific questions. Statistics of wars and of the periods (or cycles) of the appearance of great men—at least those who have been recognized as such by their contemporaries; statistics of the periods of development and progress of large commercial centres; of the rise and fall of arts and sciences; of cataclysms, such as earthquakes, epidemics; periods of extraordinary cold and heat; cycles of revolutions, and of the rise and fall of empires, etc.—all these are subjected in turn to the analysis of the minutest mathematical calculations. Finally, even the occult significance of numbers in names of persons and cities, in events, and like matters, receives unwonted attention. If, on the one hand, a great portion of the educated public is running into atheism and scepticism, on the other hand we find an evident current of mysticism forcing its way into science. It is the sign of an irrepressible need in humanity to assure itself that there is a power paramount over matter, an occult and mysterious law which governs the world, and which we should rather study and closely watch, trying to adapt ourselves to it, than blindly deny and dash ourselves vainly against the rock of destiny. More than one thoughtful mind, while studying the fortunes and reverses of nations and great empires, has been struck by one identical feature in their history—namely, the inevitable recurrence of similar events, and after equal periods of time. This relation between events is found to be substantially constant,

though differences in the outward form of details no doubt occur. Thus the belief of the ancients in their astrologers, soothsayers and prophets might have been warranted by the verification of many of their most important predictions, without these prognostications of future events implying of necessity anything very miraculous. The soothsayers and augurs having occupied in the days of the old civilizations the very same position now occupied by our historians, astronomers and meteorologists, there was nothing more wonderful in the fact of the former predicting the downfall of an empire or the loss of a battle, than in the latter predicting the return of a comet, a change of temperature or perhaps the final conquest of Afghanistan. Both studied exact sciences, for, if the astronomer of to-day draws his observations from mathematical calculations, the astrologer of old also based his prognostication upon no less acute and mathematically-correct observations of the ever-recurring cycles. And, because the secret of this ancient science is now being lost, does that give any warrant for saying that it never existed, or that to believe in it one must be ready to swallow "magic," "miracles" and the like? Says a writer in the *Novoyé Vremja*:

If, in view of the eminence to which modern science has reached, the claim to prophesy future events must be regarded as either child's play or a deliberate deception, then we can point at science, which, in its turn, has now taken up and placed on record the question whether there is or is not in the constant repetition of events a certain periodicity; in other words, whether these events recur after a fixed and determined period of years with every nation; and if a periodicity there be, whether this periodicity is due to blind chance, or depends on the same natural laws which govern the phenomena of human life.

Undoubtedly the latter. And the writer has the best mathematical proof of it in the timely appearance of such works as that of Dr. E. Zasse, and others. Several learned works treating upon this mystical subject have appeared of late, and to some of these treatises and calculations we shall presently refer. A very suggestive work by a well-known German scientist, E. Zasse, appears in *The Prussian Journal of Statistics*, powerfully corroborating the ancient theory of cycles. These periods which bring around ever-recurring events, begin from the infinitesimally small—say, of ten years rotation—and reach to cycles which require 250, 500, 700 and 1,000 years to effect their revolutions around themselves, and within one another. All are contained within the Mahâ Yuga, the "Great Age," or cycle of Manu's calculation, which itself revolves between two eternities—the Pralayas or Nights of Brahmâ.

As, in the objective world of matter, or the system of effects, the minor

constellations and planets gravitate each and all around the sun, so in the world of the subjective, or the system of causes, these innumerable cycles all gravitate between that which the finite intellect of the ordinary mortal regards as eternity, and the still finite, but more profound, intuition of the sage and philosopher views as but an eternity within The Eternity. "As above, so it is below," runs the old Hermetic maxim. As an experiment in this direction, Dr. Zasse selected the statistical investigations of all the wars recorded in history, as a subject which lends itself more easily to scientific verification than any other. To illustrate his subject in the simplest and most easily comprehensible manner, Dr. Zasse represents the periods of war and the periods of peace in the shape of small and large wave-lines running over the area of the Old World. The idea is not a new one, for the image was used for similar illustrations by more than one ancient and mediæval mystic, whether in words or pictures—by Henry Kunrath, for example. But it serves well its purpose, and gives us the facts we now want. Before he treats, however, of the cycles of wars, the author brings in the record of the rise and fall of the world's great empires, and shows the degree of activity they have played in Universal History. He points out the fact that if we divide the map of the Old World into six parts—into Eastern, Central and Western Asia, Eastern and Western Europe, and Egypt—then we shall easily perceive that every 250 years an enormous wave passes over these areas, bringing to each in its turn the events it has brought to the one next preceding. This wave we may call the "historical wave" of the 250 years' cycle.

The first of these waves began in China 2,000 years B.C., in the "golden age" of this empire, the age of philosophy, of discoveries, of reforms.

In 1,750 B.C. the Mongolians of Central Asia establish a powerful empire. In 1,500, Egypt rises from its temporary degradation and extends its sway over many parts of Europe and Asia; and about 1,250, the historical wave reaches and crosses over to Eastern Europe, filling it with the spirit of the Argonautic Expedition, and dies out in 1,000 B.C. at the Siege of Troy.

The second historical wave appears about that time in Central Asia.

The Scythians leave their steppes, and towards the year 750 B.C. inundate the adjoining countries, directing themselves towards the south and west; about the year 500, in Western Asia begins an epoch of splendour for ancient Persia; and the wave moves on to the east of Europe, where, about 250 B.C., Greece reaches her highest state of culture and civilization—and further on to the west, where, at the birth of Christ, the Roman Empire finds itself at its apogee of power and greatness.

Again, at this period we find the rising of a third historical wave in the far East. After prolonged revolutions, about this time, China forms once more a powerful empire, and its arts, sciences and commerce flourish again. Then, 250 years later, we find the Huns appearing from the depths of Central Asia; in the year A.D. 500 a new and powerful Persian kingdom is formed; in 750—in Eastern Europe—the Byzantine empire; and in the year 1000—on its western side—springs up the second Roman Power, the Empire of the Papacy, which soon reaches an extraordinary development of wealth and brilliancy.

At the same time the *fourth* wave approaches from the Orient. China is again flourishing; in 1250, the Mongolian wave from Central Asia has overflowed and covered an enormous area of land, including Russia. About 1500, in Western Asia the Ottoman Empire rises in all its might, and conquers the Balkan peninsula; but at the same time, in Eastern Europe, Russia throws off the Tartar yoke; and about 1750, during the reign of the Empress Catherine, rises to an unexpected grandeur, and covers itself with glory. The wave ceaselessly moves further on to the West. Beginning with the middle of the past century, Europe is living over an epoch of revolutions and reforms, and, according to the author, "if it is permissible to prophesy, then about the year 2000, Western Europe will have lived through one of those periods of culture and progress so rare in history." The Russian press taking the cue believes, that:

Towards those days the Eastern Question will be finally settled, the national dissensions of the European peoples will come to an end, and the dawn of the new millennium will witness the abolition of armies and an alliance between all the European empires.

The signs of regeneration are also fast multiplying in Japan and China, as if pointing to the rise of a new historical wave in the extreme East.

If from the cycle of two and a half centuries we descend to that which leaves its impress every century, and, grouping together the events of ancient history, mark the development and rise of empires, then we shall find that, beginning from the year 700 B.C., the centennial wave pushes forward, bringing into prominence the following nations, each in its turn—the Assyrians, the Medes, the Babylonians, the Persians, the Greeks, the Macedonians, the Carthaginians, the Romans, and the Teutons.

The striking periodicity of the wars in Europe is also noticed by Dr.

E. Zasse. Beginning with A.D. 1700, every ten years have been signalized by either a war or a revolution. The periods of the strengthening and weakening of the warlike excitement of the European nations represent a wave strikingly regular in its periodicity, flowing incessantly, as if propelled onward by some fixed inscrutable law. This same mysterious law seems also to connect these events with the astronomical wave or cycle, which governs the periodicity of solar spots. The periods when the European powers have shown the most destructive energy are marked by a cycle of fifty years' duration. It would be too long and tedious to enumerate them from the beginning of history. We may, therefore, limit our study to the cycle beginning with the year 1712, when *all* the European nations were fighting each other in the Northern, and the Turkish wars, and the war for the throne of Spain. About 1761, the "Seven Years' War"; in 1810, the wars of Napoleon I. Towards 1861, the wave was a little deflected from its regular course; but, as if to compensate for it, or propelled, perhaps, with unusual force, the years directly preceding, as well as those which followed it, left in history the records of the most fierce and bloody wars—the Crimean War in the former, and the American Civil War in the latter period. The periodicity in the wars between Russia and Turkey appears peculiarly striking, and represents a very characteristic wave. At first the intervals between the cycles of thirty years' duration—1710, 1740, 1770; then these intervals diminish, and we have a cycle of twenty years—1790, 1810, 1829-30; then the intervals widen again—1853 and 1878. But if we take note of the whole duration of the in-flowing tide of the warlike cycle, then we shall have at the centre of it—from 1768 to 1812—three wars of seven years' duration each, and at both ends, wars of two years.

Finally, the author comes to the conclusion that, in view of facts, it becomes thoroughly impossible to deny the presence of a regular periodicity in the excitement of both mental and physical forces in the nations of the world. He proves that in the history of all the peoples and empires of the Old World, the cycles marking the millenniums, the centennials as well as the minor periods of fifty and ten years' duration, are the most important, inasmuch as neither of them has ever yet failed to bring in its train some more or less marked event in the history of the nation swept over by such historical waves.

The history of India is one which, of all histories, is the most vague and least satisfactory. Yet were its consecutive great events noted

down, and its annals well searched, the law of cycles would be found to have asserted itself here as plainly as in every other country in respect of its wars, famines, political exigencies, and other matters.

In France, a meteorologist of Paris went to the trouble of compiling the statistics of the coldest seasons, and discovered that those years which had the figure 9 in them had been marked by the severest winters. His figures run thus: In A.D. 859, the northern part of the Adriatic Sea was frozen, and was covered for three months with ice. In 1179, in the most moderate zones, the earth was covered with several feet of snow. In 1209, in France the depth of snow and the bitter cold caused such a scarcity of fodder that most of the cattle perished in that country. In 1249, the Baltic Sea between Russia and Norway and Sweden remained frozen for many months, and communication was kept up by sleighs. In 1339, there was such a terrific winter in England, that vast numbers of people died of starvation and exposure. In 1409, the river Danube was frozen from its sources to its mouth in the Black Sea. In 1469, all the vineyards and orchards perished in consequence of the frost. In 1609, in France, Switzerland and Upper Italy, people had to thaw their bread and provisions before they could use them. In 1639, the harbour of Marseilles was covered with ice to a great distance. In 1659, all the rivers in Italy were frozen. In 1699, the winter in France and Italy proved the severest and longest of all. The prices for articles of food were so much raised that half of the population died of starvation. In 1709, the winter was no less terrible. The ground in France, Italy and Switzerland was frozen to the depth of several feet; and the sea, south as well as north, was covered with one compact and thick crust of ice, many feet deep, and for a considerable distance in the usually open sea. Numbers of wild beasts, driven out by the cold from their dens in the forests, sought refuge in villages and even cities; and the birds fell dead to the ground by hundreds. In 1729, 1749 and 1769 (cycles of twenty years' duration), the rivers and streams were ice-bound all over France for many weeks, and all the fruit trees perished. In 1789, France was again visited by a very severe winter. In Paris, the thermometer stood at nineteen degrees of frost. But the severest of all winters proved that of 1829. For fifty-four consecutive days the roads in France were covered with snow several feet deep, and all the rivers were frozen. Famine and misery reached their climax in the country in that year. In 1839, there was again in France a most terrific and trying cold season. And

the winter of 1879 also asserted its statistical rights, and proved true to the fatal influence of the figure 9. The meteorologists of other countries are invited to follow suit, and make their investigations likewise, for the subject is certainly most fascinating as well as most instructive.

Enough has been shown, however, to prove that neither the ideas of Pythagoras on the mysterious influence of numbers, nor the theories of the ancient world-religions and philosophies, are as shallow and meaningless as some too forward thinkers would have the world believe.

H. P. B.

ODORIGEN AND JÎVA.

PROFESSOR JAEGER of Stuttgart has made a very interesting study of the sense of smell. He starts from the fact well known in medical jurisprudence, that the blood of an animal when treated by sulphuric, or indeed by any other decomposing acid, smells like the animal itself to which it belongs. This holds good even after the blood has been long dried.

Let us state before all what is to be understood by the smell of a certain animal. There is the pure, specific smell of the animal, inherent in its flesh, or, as we shall see hereafter, in certain portions of its flesh. This smell is best perceived when the flesh is gently boiling in water. The broth thereby obtained contains the specific taste and smell of the animal—I call it specific, because every species, nay, every variety of species, has its own peculiar taste and smell. Think of mutton broth, chicken broth, fish broth, etc. I shall call this smell the specific scent of the animal. I need not say that the scent of an animal is quite different from all such odours as are generated within its organism, along with its various secretions and excretions; bile, gastric juice, sweat, etc. These odours are again different in the different species and varieties of animals. The cutaneous exhalation of the goat, the sheep, the donkey, widely differ from each other; and a similar difference prevails with regard to all the other effluvia of these animals. In fact, as far as olfactory experience goes, we may say that the odour of each secretion and excretion of a certain species of animals is peculiar to itself, and characteristically different in the similar products of another species.

By altering the food of an animal we may considerably alter all the above-mentioned odours, scents, as well as smells; yet essentially they will always retain their specific odoriferous type. All this is matter of strict experience.

Strongly diffusive as all these odorous substances are, they permeate

the whole organism, and each of them contributes its share to what in the aggregate constitutes the smell of the living animal. It is altogether an excrementitious smell tempered by the scent of the animal. That excrementitious smell we shall henceforth simply call the smell, in contradistinction to the scent of the animal.

To return after this not very pleasant, but nevertheless necessary digression, to our subject, Professor Jaeger found that blood, treated by an acid, may emit the scent or the smell of the animal, according as the acid is weak or strong. A strong acid, rapidly disintegrating the blood, brings out the animal's *smell*; a weak acid, the animal's *scent*.

We see, then, that in every drop of blood of a certain species of animal, and we may as well say, in each of its blood corpuscles, and in the last instance, in each of its molecules, the respective animal species is fully represented, as to its odorant speciality, under both aspects of scent and smell.

We have, then, on the one side, the fact before us that wherever we meet in the animal kingdom with difference of shape, form, and construction, so different as to constitute a class, a genus, or a family of its own, there we meet at the same time with a distinct and specific scent and smell. On the other hand, we know that these specific odours are invariably interblended with the very life-blood of the animal. And, lastly, we know that these specific odours cannot be accounted for by any agents taken up in the shape of food from the outer world. We are, then, driven to the conclusion that they are properties of the inner animal; that they, in other words, pertain to the specific protoplasm of the animal concerned.

And thus our conclusion attains almost certainty, when we remember that it stands the crucial test of experiment—that we need only decompose the blood in order to find there what we contend to be an essential ingredient of it.

I must now say a few words in explanation of the term protoplasm. Protoplasm is a soft, gelatinous substance, transparent and homogeneous, easily seen in large plant-cells; it may be compared to the white of an egg. When at rest all sorts of vibratory, quivering and trembling movements can be observed within its mass. It forms the living material in all vegetable and animal cells; in fact, it is that component of the body which really does the vital work. It is the formative agent of all living tissues. Vital activity, in the broadest sense of the term, manifests itself in the development of the germ into the

complete organism, repeating the type of its parents, and in the subsequent maintenance of that organism in its integrity; and both these functions are exclusively carried on by the protoplasm. Of course, there is a good deal of chemical and mechanical work done in the organism, but protoplasm is the formative agent of all the tissues and structures.

Of tissues and structures already formed, we may fairly say that they have passed out of the realms of vitality, as they are destined to gradual disintegration and decay in the course of life; it is they that are on the way of being cast out of the organism, when they have once run through the scale of retrograde metamorphosis; and it is they that give rise to what we have called the *smell* of the animal. What lives in them is the protoplasm.

In the shape of food the outer world supplies the organism with all the materials necessary for the building up of the constantly wasting organic structures; and, in the shape of heat, there comes from the outer world that other element necessary for structural changes, development and growth—the element of force. But the task of directing all the outward materials to the development and maintenance of the organism—in other words, the task of the director-general of the organic economy falls to the protoplasm.

Now this wonderful substance, chemically and physically the same in the highest animal and in the lowest plant, has been all along the puzzle of the biologist. How is it that in man protoplasm works out human structure; in fowl, fowl structure, etc., while the protoplasm itself appears to be everywhere the same? To Professor Jaeger belongs the great merit of having shown us that the protoplasms of the various species of plants and animals are not the same; that each of them contains moreover, imbedded in its molecules, odorant substances peculiar to the one species and not to the other.

That, on the other hand, those odorous substances are by no means inactive bodies, may be inferred from their great volatility, known as it is in physical science that volatility is owing to a state of atomic activity. Prevost has described two phenomena that are presented by odorous substances. First that, when placed on water, they begin to move; and second, that a thin layer of water, extended on a perfectly clean glass plate, retracts when such an odorous substance as camphor is placed upon it. Monsieur Ligeois has further shown that the particles of an odorous body, placed on water, undergo a rapid division,

and that the movements of camphor, or of benzoic acid, are inhibited, or altogether arrested, if an odorous substance be brought into contact with the water in which they are moving.

Seeing, then, that odorous substances, when coming in contact with liquid bodies, assume a peculiar motion, and impart at the same time motion to the liquid body, we may fairly conclude that the specific formative capacity of the protoplasm is owing, not to the protoplasm itself, since it is everywhere alike, but to the inherent, specific, odoriferous substances.

I shall only add that Professor Jaeger's theory may be carried farther yet. Each metal has also a certain taste and odour peculiar to itself; in other words, they are also endowed with odoriferous substances. And this may help us to explain the fact that each metal, when crystallizing out of a liquid solution, invariably assumes a distinct geometrical form, by which it may be distinguished from any other. Common salt, for instance, invariably crystallizes in cubes, alum in octohedra, and so on.

Professor Jaeger's theory explains further to us that other great mystery of Nature—the transmission from parent to offspring of the morphological speciality. This is another puzzle of the biologist. What is there in the embryonal germ that evolves out of the materials stored up therein a frame similar to the parents'? In other words, what is there that presides over the preservation of the species, working out the miniature duplicate of the parents' configuration and character? It is the protoplasm, no doubt; and the female ovum contains protoplasm in abundance. But neither the physicist nor the chemist can detect any difference between the primordial germ, say of the fowl, and that of a female of the human race.

In answer to this question—a question before which science stands perplexed—we need only remember what has been said before about the protoplasmic scent. We have spoken before of the specific scent of the animal as a whole. We know, however, that every organ and tissue in a given animal has again its peculiar scent and taste. The scent and taste of the liver, spleen, brain, etc., are quite different in the same animal.

And if our theory is correct, then it could not be otherwise. Each of these organs is differently constructed, and as variety of organic structure is supposed to be dependent upon variety of scent, there must necessarily be a specific cerebral scent, a specific splenic scent, a specific hepatic scent, etc. What we call, then, the specific scent of the

living animal must, therefore, be considered as the aggregate of all the different scents of its organs.

When we see that a weak solution of sulphuric acid is capable of disengaging from the blood the scent of the *animal*, we shall then bear in mind that this odorous emanation contains particles of all the scents peculiar to each tissue and organ of the animal. When we further say that each organ in a living animal draws by selective affinity from the blood those materials which are necessary for its sustenance, we must not forget that each organ draws at the same time by a similar selective affinity the specific odorous substances requisite for its constructive requirements.

We have now only to suppose that the embryonal germ contains, like the blood itself, all the odorous substances pertaining to the various tissues and organs of the parent, and we shall understand which is the moving principle in the germ that evolves an offspring, shaped in the image and after the likeness of the parents.

In plants it is the blossom which is entrusted with the function of reproduction, and the odorous emanations accompanying that process are well known. There is strong reason to believe that something similar prevails in the case of animals, as may be seen from an examination of what embryologists call the *aura seminalis*.

Let us now enquire what are the effects of odours generated in the outer world on animals. The odorous impressions produced may be pleasant or unpleasant, pleasant to one and unpleasant to another animal. What is it that constitutes this sensation of pleasure or displeasure? Professor Jaeger answers: It is harmony or disharmony which makes all the difference. The olfactory organs of each animal are impregnated by its own specific scent. Whenever the odorous waves of a substance harmonize in their vibration with the odorous waves emanating from the animal; in other words, whenever they fall in and agree with each other, an agreeable sensation is produced; whenever the reverse takes place, the sensation is disagreeable. In this way it is that the odour regulates the choice of the food on the part of the animal. In a similar way the sympathies and antipathies between the various animals are regulated. For every individual has not only its specific but also its individual scent. The selection between the sexes, or what, in the case of the human race, is called love, has its mainspring in the odorous harmony subsisting in the two individuals concerned.

This individual scent—a variation of the specific odorous type—alters (within the limits of its speciality) with age, with the particular mode of occupation, with the sex, with certain physiological conditions and functions during life, with the state of health, and last, but not least, with the state of our mind.

It is to be remembered that every time protoplasm undergoes disintegration, specific odours are set free. We have seen how sulphuric acid, or heat, when boiling or roasting meat, brings out the specific animal odour. But it is an established fact in science, that every physical or mental operation is accompanied by disintegration of tissue; consequently we are entitled to say that with every emotion odours are being disengaged. It can be shown that the quality of those odours differs with the nature of the emotion. The prescribed limits prevent further pursuit of the subject; I shall, therefore, content myself by drawing some conclusions from Professor Jaeger's theory in the light of the Esoteric Doctrine.

The phenomena of mesmeric cures find their full explanation in the theory just enunciated. For since the construction and preservation of the organism, and of every organ in particular, is owing to specific scents, we may fairly look upon disease in general as a disturbance of the specific scent of the organism, and upon disease of a particular organ of the body, as a disturbance of the specific scent pertaining to that particular organ. We have been hitherto in the habit of holding the protoplasm responsible for all phenomena of disease. We have now come to learn that what acts in the protoplasm are the scents; we shall, therefore, have to look to them as the ultimate cause of morbid phenomena. I have mentioned before the experiment of Mons. Ligeois, showing that odoriferous substances, when brought in contact with water, move; and that the motion of one odoriferous substance may be inhibited, or arrested altogether, by the presence of another odoriferous substance. Epidemic diseases, and the zymotic diseases in particular, have, then, most likely their origin in some local odours which inhibit the action of our specific organic odours. In the case of hereditary diseases, it is most likely the transmission of morbid specific odours from parent to offspring that is the cause of the evil, knowing, as we do, that in disease the natural specific odour is altered, and must, therefore, have been altered in the diseased parent.

Now comes the mesmerizer. He approaches the sick with the strong determination to cure him. This determination, or effort of the will,

is absolutely necessary, according to the agreement of all mesmerizers, for his curative success. Now an effort of the will is a mental operation, and is, therefore, accompanied by tissue disintegration. The effort being purely mental, we may say it is accompanied by disintegration of cerebral and nervous tissue. But disintegration of organic tissue means, as we have seen before, disengagement of specific scents; the mesmerizer emits, then, during his operation, scents from his own body. And as the patient's sufferings are supposed to originate from a deficiency or alteration of his own specific scent, we can well see how the mesmerizer, by his mesmeric or odoriferous emanations, may effect a cure. He may supply the want of certain odoriferous substances in the patient, or he may correct others by his own emanations, knowing, as we do, from the experiment of Monsieur Ligeois, that odorant matter does act on odorant matter.

One remark more and I have done. By the Esoteric Doctrine, we are told that the living body is divided into two parts:

1. The physical body, composed wholly of matter, in its grossest and most tangible form.
2. The vital principle (or Jîva), a form of force indestructible, and, when disconnected with one set of atoms, becoming attracted immediately by others.

Now this division, generally speaking, fully agrees with the teachings of science. I need only remind you of what I have said before with regard to the formed tissues and structures of the body and its formative agent the protoplasm. Formed structure is considered as material which has already passed out of the realms of life; what lives in it is the protoplasm. So far the esoteric conception fully agrees with the result of the latest investigations of modern science.

But when we are told by the Esoteric Doctrine that the vital principle is indestructible, we feel we move on occult, incomprehensible ground, for we know that protoplasm is, after all, as destructible as the body itself. It lives as long as life lasts, and, it may be said, it is the only material in the body that does live as long as life lasts. But it dies with the cessation of life. It is true it is capable of a sort of resuscitation. For that very dead protoplasm, be it animal or vegetable, serves again as our food, and as the food of all the animal world, and thus helps to repair our constantly wasting economy. But for all that it could hardly be said to be indestructible; it is assimilable—that is to say, capable of reëntering the domain of life, through its being taken

up by a living body. But such an eventual chance does by no means confer upon it the attribute of indestructibility; for we need only leave the dead animal or plant containing the protoplasm alone, and it will rot and decay—organs, tissues, and protoplasm altogether.

To our further perplexity the Esoteric Doctrine tells us that the vital principle is not only indestructible, but it is a form of force, which, when disconnected with one set of atoms, becomes attracted immediately by others. The vital principle to the Esoteric Doctrine would then appear to be a sort of abstract force, not a force inherent in the living protoplasm—this is the scientific conception—but a force *per se*, independent altogether of the material with which it is connected.

Now, I must confess this is a doctrine which puzzles one greatly, although one may have no difficulty in accepting the *spirit* of man as an entity, for the phenomena of ratiocination are altogether so widely different from all physical phenomena that they can hardly be explained by any of the physical forces known to us. The materialist, who tells us that consciousness, sensation, thought, and the spontaneous power of the will, so peculiar to man and to the higher animals, are altogether so many outcomes of certain conditions of matter and nothing else, makes at best merely a subjective statement. He cannot help acknowledging that spontaneity is not a quality of matter. He is then driven to the contention that what we believe to be spontaneous in us, is, after all, an unconscious result of external impulses only. His contention rests then on the basis of his own inner experience, or what he believes to be such. This contention of his is, however, disputed by many, who no less appeal to their own inner experience, or what they believe to be their experience. It is then a question of inner experience of the one party *versus* inner experience of the other. And such being the case, the scientific materialist is driven to admit that his theory, however correct it *may* be, rests, after all, on subjective experience, and can, as such, not claim the rank of positive knowledge. There is then no difficulty in accepting the entity of the spirit in man, the materialistic assertion to the contrary notwithstanding. But the vital force is exclusively concerned with the construction of matter. Here we have a right to expect that physical and chemical forces should hold the whole ground of an explanation, if an explanation is possible at all. Now, physical and chemical forces are no entities; they are invariably connected with matter. In fact, they are so intimately connected with matter that they can never be dissevered from it altogether. The energy of matter may

x

be latent or patent, and, when patent, it may manifest itself in one form or the other, according to the condition of its surroundings; it may manifest itself in the shape of light, heat, electricity, magnetism, or vitality; but in one form or the other energy constantly inheres in matter. The correlation of forces is now a well-established scientific fact, and it is more than plausible that what is called the vital principle, or the vital force, forms a link in the chain of the other known physical forces, and is therefore transmutable into any of them; granted even that there is such a thing as a distinct vital force. The tendency of modern biology then is to discard the notion of a vital entity altogether. If vital force is to be indestructible, then so are heat, light, electricity, etc., also indestructible; they are indestructible in this sense, that whenever their respective manifestation is suspended or arrested, they make their appearance in some other form of force; and in this very same sense vital force may be looked upon as indestructible; whenever vital manifestation is arrested, what had been acting as vital force is transformed into chemical, electrical forces, etc., taking its place.

But the Esoteric Doctrine appears to teach something quite different from what I have just explained, and what is, as far as I understand, a fair representation of the scientific conception of the subject. The Esoteric Doctrine tells us that the vital principle is indestructible, and, when disconnected with one set of atoms, becomes attracted by others. It then evidently holds that what constitutes the vital principle is a principle or form of force *per se*, a form of force which can leave one set of atoms and go over as such to another set, without leaving any substitute force behind. This, it must be said, is simply irreconcilable with the scientific view on the subject as hitherto understood.

By the aid of Professor Jaeger's theory this difficulty can be explained, I am happy to say, in a most satisfactory way.

The seat of the vital principle, according to the Professor's theory, is not the protoplasm, but the odorant matter imbedded in it. And such being the case, the vital principle, as far as it can be reached by the breaking-up of its animated protoplasm, is really indestructible. You destroy the protoplasm by burning it, by treating it with sulphuric acid, or any other decomposing agent—the odoriferous substances, far from being destroyed, become only so much the more manifest; they escape the moment protoplasmic destruction or decomposition begins, carrying along with them the vital principle, or what has been acting

as such in the protoplasm. And as they are volatile, they must soon meet with other protoplasms congenial to their nature, and set up there the same kind of vital activity as they have done in their former habitat. They are, as the Esoteric Doctrine rightly teaches, indestructible, and when disconnected with one set of atoms, they immediately become attracted by others.

L. SALZER, M.D.

ODORIGEN AND JÎVA.

THERE is a well-known Sanskrit treatise, where most of the deductions of Dr. Jaeger are anticipated and practically applied to sexual selection in the human species. The subject of *aura seminalis* finds a pretty full treatment there. The connection between what Dr. Jaeger calls Odorigen and Jîva or Prâna, as it is differently called in different systems of Indian philosophy, has been well traced. But his remarks on this subject, able as they no doubt are, call for a few observations from the point of view of occult philosophy. Jîva has been described by a trustworthy authority as a "form of force indestructible, and, when disconnected with one set of atoms, immediately attracted by another set." Dr. Salzer concludes from this that occult philosophy looks upon it as an abstract force or force *per se*. But surely this is bending too much to the Procrustean phraseology of modern science, and if not properly guarded will lead to some misapprehension. Matter in occult philosophy means existence in the widest sense of that word. However much the various forms of existence, such as physical, vital, mental, spiritual, etc., differ from each other, they are mutually related as being parts of the One Universal Existence, the Parabrahman of the Vedântist. Force is the inherent power or capacity of Parabrahman, or the "matter" of occultism, to assume different forms. This power or capacity is not a separate entity, but is the thing itself in which it inheres, just as the three-angled character of a triangle is nothing separate from the triangle itself. From this it will be abundantly clear that, accepting the nomenclature of occult science, one cannot speak of an abstract force without being guilty of a palpable absurdity. What is meant by Jîva being a "form of force," etc., is that it is matter in a state in which it exhibits certain phenomena, not produced by it in its sensuous state, or, in other words, it is a property of matter in a particular state corresponding with properties called, under ordinary circumstances, heat, electricity, etc., by modern science, but at the same time

without any correlation to them. It might here be objected that if Jīva was not a force *per se*, in the sense which modern science would attach to the phrase, then how can it survive unchanged the great change called death, which the protoplasms it inheres in undergo? And even granting that Jīva is matter in a particular state, in what part of the body shall we locate it, in the teeth of the fact that the most careful examination has not been successful in detecting it? Jīva, as has already been stated, is subtle supersensuous matter, permeating the entire physical structure of the living being, and when it is separated from such structure life is said to become extinct. It is not reasonable, therefore, to expect it to be subject to detection by the surgeon's knife. A particular set of conditions is necessary for its connection with an animal structure, and when those conditions are disturbed, it is attracted by other bodies, presenting suitable conditions. Dr. Jaeger's "Odorigen" is not Jīva itself, but is one of the links which connect it with the physical body; it seems to be matter standing between Sthūla Sharīra (gross body) and Jīva.

DHARANIDAR KAUTHUMI.

INTROVERSION OF MENTAL VISION.

SOME interesting experiments have recently been tried by Mr. F. W. H. Myers and his colleagues of the Psychic Research Society of London, which, if properly examined, are capable of yielding highly important results. With the details of these we are not at present concerned; it will suffice for our purpose to state, for the benefit of readers unacquainted with the experiments, that in a very large majority of cases, too numerous to be the result of mere chance, it was found that the thought-reading sensitive obtained but an inverted mental picture of the object given him to read. A piece of paper, containing the representation of an arrow, was held before a carefully blindfolded thought-reader, who was requested to mentally see the arrow as it was turned round. In these circumstances it was found that when the arrow-head pointed to the right, it was read off as pointing to the left, and so on. This led some to imagine that there was a mirage in the inner as well as on the outer plane of optical sensation. But the real explanation of the phenomenon lies deeper.

It is well known that an object as seen by us and its image on the retina of the eye, are not the same in position, but quite the reverse. How the image of an object on the retina is inverted in sensation, is a mystery which physical science is admittedly incapable of solving. Western metaphysics, too, with regard to this point, hardly fares any better; there are as many theories as there are metaphysicians. The only philosopher who has obtained a glimpse of the truth is the idealist Berkeley, who says that a child does really see a thing inverted from our standpoint; to touch its head it stretches out its hands in the same direction of its body as we do of ours to reach our feet. Repeated failures give experience and lead to the correction of the notions born of one sense by those derived through another; the sensations of distance and solidity are produced in the same way.

The application of this knowledge to the above mentioned experi-

ments of the Psychic Research Society will lead to very suggestive results. If the trained adept is a person who has developed all his interior faculties, and is on the psychic plane in the full possession of his senses, the individual who accidentally, that is, without occult training, gains the inner sight, is in the position of a helpless child—a sport of the freaks of one isolated inner sense. Such was the case with the sensitives with whom Mr. Myers and his colleagues experimented. There are instances, however, when the correction of one sense by another takes place involuntarily and accurate results are brought out. When the sensitive reads the thoughts in a man's mind, this correction is not required, for the will of the thinker shoots the thoughts, as it were, straight into the mind of the sensitive. The introversion under notice will, moreover, be found to take place only in the instance of those images which cannot be corrected by the already acquired sense-experience of the sensitive. A difficulty may here suggest itself with regard to the names of persons or the words thought of for the sensitive's reading. But allowance must in such cases be made for the operation of the thinker's will, which forces the thought into the sensitive's mind, and thereby obviates introversion. It is abundantly clear from this that the best way of studying these phenomena is when only one set of inner faculties, that of the sensitive, is in play. This takes place always when the object the sensitive has to abnormally perceive is independent of the will of any other person, as in the case of its being represented on paper.

Applying the same law to dreams, we can find the *rationale* of the popular superstition that facts are generally inverted in dreams. To dream of something good is generally taken to be the precursor of something evil. In the exceptional cases in which dreams have been found to be prophetic, the dreamer was either affected by another's will or under the operation of some disturbing forces, which cannot be calculated except for each particular case.

In this connection another very important psychic phenomenon may be noticed. Instances are too numerous and too well authenticated to be amenable to dispute, in which an occurrence at a distance—for instance, the death of a person—has pictured itself to the mental vision of one interested in the occurrence. In such cases the double of the dying man appears even at a great distance, and becomes visible usually to his friend only, but instances are not rare when the double is seen by a number of persons. The former case comes within the class of

cases under consideration, as the concentrated thought of the dying man is clairvoyantly seen by the friend, and the incidents correctly reproduced by the operation of the dying man's will-energy, while the latter is the appearance of the genuine Mâyâvi Rûpa, and therefore not governed by the law under discussion.

MOHINI M. CHATTERJI.

“PRECIPITATION.”

OF all phenomena produced by occult agency in connection with our Society, none have been witnessed by a more extended circle of spectators, or more widely known and commented on through recent Theosophical publications, than the mysterious production of letters. The phenomenon itself has been so well described in *The Occult World* and elsewhere, that it would be useless to repeat the description here. Our present purpose is more connected with the process than the phenomenon of the mysterious formation of letters. Mr. Sinnett sought for an explanation of the process, and elicited the following reply from the revered Mahâtmâ who corresponds with him:

“Bear in mind these letters are not written, but impressed, or precipitated, and then all mistakes corrected . . . I have to think it over, to photograph every word and sentence carefully in my brain, before it can be repeated by precipitation. As the fixing on chemically-prepared surfaces of the images formed by the camera requires a previous arrangement within the focus of the object to be represented, for, otherwise—as often found in bad photographs, the legs of the sitter might appear out of all proportion with the head, and so on, so we have to first arrange our sentences, and impress every letter to appear on paper in our minds, before it becomes fit to be read. For the present, it is all I can tell you.”

Since the above was written, the Masters have been pleased to permit the veil to be drawn aside a little more, and the *modus operandi* can thus be explained now more fully to the outsider.

Those having even a superficial knowledge of the science of mesmerism know how the thoughts of the mesmerizer, though silently formulated in his mind, are instantly transferred to that of the subject. It is not necessary for the operator, if he is sufficiently powerful, to be present near the subject to produce the above result. Some celebrated practitioners in this science are known to have been able to put their subjects to sleep even from a distance of several days' journey. This

known fact will serve us as a guide in comprehending the comparatively unknown subject now under discussion. The work of writing the letters in question is carried on by a sort of psychic telegraphy; the Mahâtâmâs very rarely write their letters in the ordinary way. An electro-magnetic connection, so to say, exists on the psychic plane between a Mahâtâmâ and his Chelâs, one of whom acts as his amanuensis. When the Master wants a letter to be written in this way, he very often draws the attention of the Chelâ whom he selects for the task, by causing an astral bell (heard by so many of our Fellows and others) to be rung near him, just as the despatching telegraph office signals to the receiving office before wiring the message. The thoughts arising in the mind of the Mahâtâmâ are then clothed in words, pronounced mentally, and, forced along currents in the astral light, impinge on the brain of the pupil. Thence they are borne by the nerve-currents to the palms of his hands and the tips of his fingers, which rest on a piece of magnetically-prepared paper. As the thought waves are thus impressed on the tissue, materials are drawn to it from the ocean of Âkâsha (permeating every atom of the sensuous universe) by an occult process, out of place here to describe, and permanent marks are left.

From this it is abundantly clear that the success of such writing, as above described, depends chiefly upon two conditions: (1) The force and clearness with which the thoughts are propelled; and (2) the freedom of the receiving brain from disturbance of every description. The case with the ordinary electric telegraph is exactly the same. If, for some reason or other, the battery supplying the electric power falls below the requisite strength on any telegraph line, or there is some derangement in the receiving apparatus, the message transmitted becomes either mutilated or otherwise imperfectly legible. Inaccuracies, in fact, do very often arise, as may be gathered from what the Mahâtâmâ says in the above extract. "Bear in mind," says he, "that these letters are not written, but *impressed*, or precipitated, and *then all mistakes corrected*." To turn to the sources of error in the precipitation. Remembering the circumstances under which blunders arise in telegrams, we see that if a Mahâtâmâ somehow becomes exhausted, or allows his thoughts to wander during the process, or fails to command the requisite intensity in the astral currents along which his thoughts are projected, or the distracted attention of the pupil produces disturbances in his brain and nerve-centres, the success of the process is very much interfered with.

It is to be regretted that illustrations of the above general principles are not permitted to be published. Enough, however, has been disclosed to give the public a clue to many apparent mysteries in regard to precipitated letters, and to draw all earnest and sincere enquirers strongly to the path of spiritual progress, which alone can lead to the comprehension of occult phenomena.

ANON.

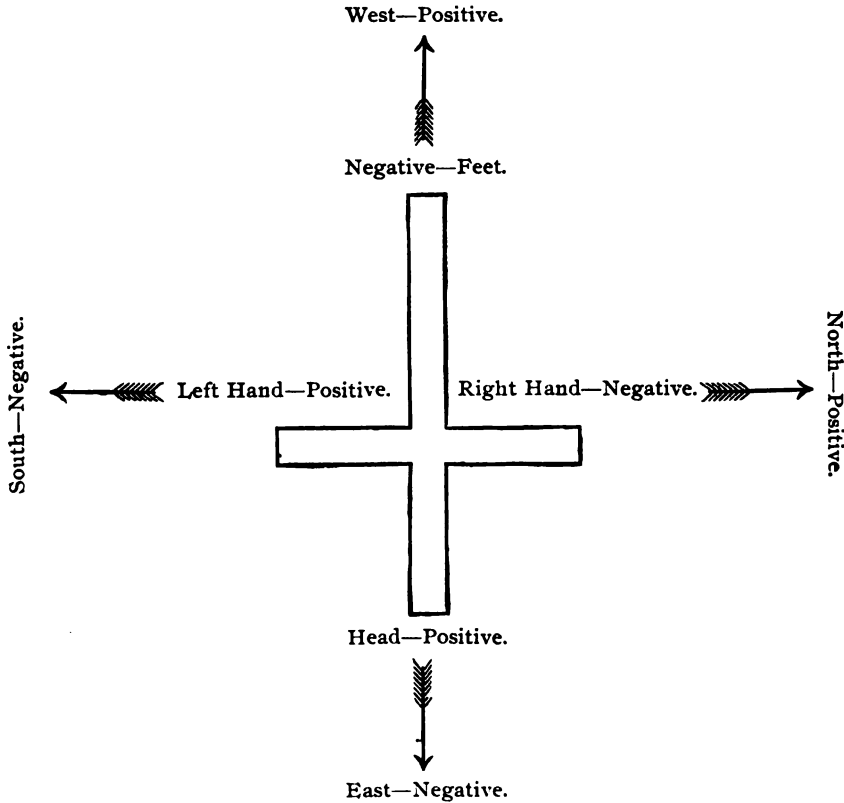

“HOW SHALL WE SLEEP?”

READING Mr. Sita Nāth Ghose's paper on "Medical Magnetism" and having studied long ago Baron von Reichenbach's *Researches in Magnetism*, I am sorely puzzled, inasmuch as these two authorities appear to clash with each other most completely—the one asserting "head to north never, under no circumstances," the other "head to north ever and under all circumstances." I have pursued the advice of the latter, not knowing of the former, for many years, but have not found the effect on my health which I had hoped for; and what is of more importance, I have not found a law of certain application to humanity and bringing health to *all*. It seems to me on carefully reading this article that a most important point has been omitted or passed over—*i.e.*, the position of the sleeper, whether on his face or on his back? This is most important, for a correct answer may go far to reconcile the two theories, which, be it remembered, claim both to be supported by experiment and by observation. I cannot conceive that a *one-sided* position is a natural one for man, and thus have two alternatives. Is the proper position in sleep lying on the back or on the stomach? Not one word has been said as to the *position* in which experiments were tried on either side.

Now, the one thing which seems clear in all this is, that positive should lie toward negative and negative toward positive. Let us then draw a diagram and these positions will follow with these results—taking the north as positive and south as negative, east as negative, and west as positive.

Now, from this will come some light, I think, on the apparently contradictory theories, if we could ascertain: (1) Which position did the renowned Garga and Mārkaṇḍeya contemplate as the proper position for men to sleep in? (2) In which position did those on whom Baron von Reichenbach experimented lie?

This is a most important question for all who value the gift of health, as well as for those who would be wise. In my sojourn in southern countries I have noticed that the natives, of the lower classes at least,

POSITION I—LYING ON THE BACK.

- A—Head to the East.....Accord in all.
- B—Head to the North.....Discord in head and feet; accord in hands.
- C—Head to the South.....Accord in hands and feet; discord in hands.
- D—Head to the West.....Discord in all.

POSITION II—LYING ON THE STOMACH.

- AA—Head to the East.....Accord in head and feet; discord in hands.
- BB—Head to the North.....Discord in all.
- CC—Head to the South.....Accord in all.
- DD—Head to the West.....Discord in head and feet; accord in hands.

always sleep on their stomachs, with their back turned to the sun, and all animals do the same, while sleeping on the back is most dangerous, at least in the sun. Is not this a guide or hint as to the true position?

I. O.

It appears that the opinion of Mr. Sita Nâth Ghose and of Baron von Reichenbach are in direct conflict on the subject of this paper, the latter recommending the head of the sleeper to be northward, the former entirely condemning that position.

It is my humble opinion that both writers are correct, each from his own standpoint, as I shall try to show. What is the reason that our position in sleep should be of any consequence? Because our body must be in a position in harmony with the main magnetic currents of the earth; but as these currents are not the same in all parts of the world the positions of the sleeper must, therefore, vary.

There are three main magnetic currents on our earth—viz., in the northern hemisphere, from north pole towards the equator; in the southern hemisphere, from south pole towards the equator; these two currents meeting in the torrid zone continue their combined course from east to west. So the position of the sleeper must vary according as he finds himself to the north or south of the torrid zone or within it.

In the north frigid or temperate zone, he has to lie with his head northward; in the southern, southward; in the torrid zone, eastward—in order that the magnetic current may pass through him from head to foot without disturbance, as this is the natural position for magnetization.

The able writer of "How Shall We Sleep?" shows, in his cross diagram, that he thinks the head to be entirely positive and both feet negative. I think that this is not the case, but that the right side of the head and the left foot are positive, and the left side of the head and the right foot negative, and similarly the right hand is negative and the left hand is positive.

As the north pole is positive and the left side of the head negative, the natural position in sleep for those living within the northern zones would be on the right side, head northward; and it is obvious that in the southern zones the position must be exactly the reverse. As to those who live under the tropics, lying on the stomach seems to me to be the most natural position, since the left, or negative side of the head, is turned to the north or positive current, and *vice versa*.

The following diagram may give a clearer view of the case, and thus help us to answer the second part of the question, whether and when we ought to lie on the right or the left side, on the stomach or on the back:

For many years I and my family have been sleeping with our heads either to the north or the west (the right position in our hemisphere, in my opinion), and we have no occasion to regret it; for from that time forward the physician has become a rare visitor in our house.

Mr. Sita Nâth Ghose says, in his interesting paper on "Medical Magnetism," that Mandulies (metallic cells) are worn to great advantage in India on diseased parts of the body. The curative properties of these cells I have seen verified in authentic instances. When, years ago (I believe about 1852), cholera was devastating some parts of Europe, it was remarked at Munich (Bavaria) that among the thousands of its victims there was not a single coppersmith. Hence, it was recommended by the medical authorities of that town to wear disks of thin copperplate (of about 2½ inch diameter) on a string, on the pit of the stomach, and these proved to be a powerful preventive of cholera. Again, in 1867, cholera visited Odessa. I and my whole family wore these copper disks; and while all around there were numerous cases of cholera and dysentery, not one of us was attacked. I propose that serious experiments should be made in this direction, and especially in those countries which are periodically devastated by that disease; as

India, for instance. It is my conviction that one disk of copper on the stomach, and another of zinc on the spine, opposite the former, will be of still better service, the more so if the disks are joined by a thin copper chain.

GUSTAVE ZORN.

In the first place it is necessary to say that the rules laid down by Garga, Mârkandeya and others on the above subject, refer to the inhabitants of the plains only, and not to dwellers on mountains. The rule is that on retiring a man should first lie on his right side for the period of sixteen breathings, then turn on his left for double that time, and after that he can sleep in any position. Further, that a man must not sleep on the ground, on silken or woollen cloth, under a solitary tree, where cross-roads meet, on mountains, or on the sky (whatever that may mean). Nor is he to sleep with damp clothes, wet feet, or in a naked state; and, unless an initiate, should not sleep on kusha grass or its varieties. There are many more such rules. I may here notice that in Sanskrit the right hand or side and south are signified by the same term. So also the front and north have one and the same name. The sun is the great and chief source of life and magnetism in the solar system. Hence to the world the east is positive as the source of light and magnetism. For the same reason, to the northern hemisphere the south (the equator and not the north) is positive. Under the laws of dynamics the resultant of these two forces will be a current in the direction from S.E. to N.W. This, I think, is one of the real causes of the prevailing south-east wind. At any rate, I do not think the north pole to be positive, as there would be no snow there in such a case. The aurora cannot take place at the source of the currents, but at their close. Hence the source must be towards the equator or south. The course of life, civilization, light and almost everything seems to be from E. to W. or S.E. to N.W. The penalty for sleeping with the head to the west is said to be anxiety of mind, while sleeping with the head to the north is considered fatal. I beg to invite the attention of the Hindûs to a similar penalty of death incurred by any but an initiate (Brâhman) pronouncing the sacred Pranava (Om). This does not prove that Pranava is really a mischievous bad word, but that, with incompetent men, it is fraught with danger. So also, in the case of ordinary men of the plains, there may be unknown dangers which it would not be prudent for them to risk so long as they do not know how to meet them, or so long as they are not under the guidance of men

who can protect them. In short, ordinary men should move on in their beaten course, and these rules are for them only.

As an instance of the infringement of the rule the following anecdote is given:

After Ganesha (Shiva's son) was born, all the Devas (gods) came to congratulate the family and bless the child. Shani or Saturn, was the last to come, and even then he came only after he had been several times enquired after. When he went to see the infant, it appeared headless! This at once created a sensation, and all the Devas were at their wits' end. At last Saturn himself approached Mahâdeva with folded hands and reminded him that it was due to his presence, and to the child having been kept in a bed with its head to the north. For such was the law. Then the Devas consulted together and sent out messengers to find out who else was sleeping with the head to the north. At last they discovered an elephant in that position. Its head was immediately cut off and placed on the shoulders of Ganesha. It need not be said that Ganesha became afterwards so learned and wise that if he had not had an elephant's head, a human head would never have been sufficient to hold all he knew. This advantage he owed to the circumstance of his sleeping with head to the north, and the blessing of the Devas. To the elephant, the same position but *minus* the blessing of the Devas proved absolute death.

NOBIN K. BANNERJI.

TRANSMIGRATION OF THE LIFE-ATOMS.

It is said that "for three thousand years at least the 'mummy,' notwithstanding all the chemical preparations, goes on throwing off to the last invisible atoms, which, from the hour of death, reëntering the various vortices of being, go indeed through every variety of organized life-forms. But it is not the soul, the fifth, least of all the sixth principle, but the *life-atoms of the Jiva*, the second principle. At the end of the 3,000 years, sometimes more and sometimes less, after endless transmigrations, all these atoms are once more drawn together, and are made to form the new outer clothing or the body of the same monad (the real soul) which they had already clothed two or three thousand years before. Even in the worst case, that of the annihilation of the conscious *personal* principle, the monad or *individual* soul is ever the same, as are also the *atoms of the lower principles*, which, regenerated and renewed in this ever-flowing river of being, are magnetically drawn together owing to their affinity, and are once more reincarnated together."

This little passage is a new instalment of occult teaching given to the public, and opens up a vast field for thought. It suggests, in the first instance, that the exoteric doctrine of the transmigration of the soul through lower forms of existence—so generally believed in by the Hindûs, though incorrect as regards the soul (fifth principle)—has some basis of truth when referred to the lower principles.

It is stated further that the mummy goes on throwing off invisible atoms, which go through every variety of organized life-forms, and further on it is stated that it is the *life-atoms of the Jiva*, the second principle, that go through these transmigrations.

According to the esoteric teaching, the Jîva "is a form of force indestructible, and, when disconnected with one set of atoms, becoming attracted immediately by others."

What, then, is meant by the *life-atoms*, and their going through endless transmigrations?

The invisible atoms of the mummy would mean the imperceptibly decaying atoms of the physical body, and the *life-atoms of the Jîva* would be quite distinct from the atoms of the mummy. Is it meant to imply that both the invisible atoms of the physical body, as well as the atoms of the Jîva, after going through various life-forms, return again to re-form the physical body, and the Jîva of the entity that has reached the end of its devachanic state and is ready to be reincarnated again?

It is again, taught, that even in the worst case (the annihilation of the Personal Ego) the atoms of the *lower principles* are the same as in the previous birth. Here, does the term "lower principles" include the Kâma Rûpa also, or only the lower triad of Body, Jîva and Linga Sharîra? It seems the Kâma Rûpa in that particular case cannot be included, for in the instance of the annihilation of the personal soul, the Kâma Rûpa would be in the eighth sphere.

Another question also suggests itself. The fourth principle (Kâma Rûpa) and the *lower* portion of the fifth, which cannot be assimilated by the sixth, wander about as shells, and in time disperse into the elements of which they are made. Do the atoms of these principles also reunite, after going through various transmigrations, to constitute over again the fourth and the lower fifth of the next incarnation?

N. D. K.

NOTE.

To begin with, we would draw attention to the closing sentence of the passage quoted above: "Such was the true occult theory of the Egyptians," the word "true" being used there in the sense of its being the doctrine they really believed in, as distinct from both the tenets fathered upon them by some Orientalists, and those which the modern Occultists may be now teaching. It does not stand to reason that, outside those occult truths which were known to, and revealed by, the great Hierophants during the final initiation, we should accept *all* that either the Egyptians or any other people may have regarded as true. The Priests of Isis were the only true initiates, and their occult teachings were still more veiled than those of the Chaldæans. There was the true doctrine of the Hierophants of the *inner* Temple; then the half-veiled Hieratic tenets of the Priests of the *outer* Temple; and, finally, the vulgar popular religion of the great body of the ignorant, who

were allowed to reverence animals as divine. As shown correctly by Sir Gardner Wilkinson, the initiated priests taught that:

Dissolution is only the cause of reproduction . . . nothing perishes which has once existed, but things which appear to be destroyed only change their natures and pass into another form.

In the present case, however, the Egyptian doctrine of atoms coincides with our own occult teachings. In the above remarks the words, "The life-atoms of the Jîva," are taken in a strictly literal sense. Without any doubt Jîva or Prâna is quite distinct from the atoms it animates. The latter belong to the lowest or grossest state of matter—the *objectively conditioned*; the former, to a higher state—that state which the uninitiated, ignorant of its nature, would call the "objectively finite," but which, to avoid any future misunderstanding, we may, perhaps, be permitted to call the *subjectively eternal*, though, at the same time and in one sense, the subsistent existence, however paradoxical and unscientific the term may appear.* Life, the occultist says, is the eternal uncreated energy, and it alone represents in the infinite-universe that which the physicists have agreed to name the principle, or the law of continuity, though they apply it only to the endless development of the conditioned. But since modern science admits, through her most learned professors, that "energy has as much claim to be regarded as an objective reality as matter itself,"† and as life, according to the occult doctrine, is the *one* energy acting, Proteus-like, under the most varied forms, the occultists have a certain right to use such phraseology. Life is ever present in the atom or matter, whether organic or inorganic—a difference that the occultists do not accept. Their doctrine is that life is as much present in the inorganic as in the organic matter—when life-energy is active in the atom, that atom is organic; when dormant or latent, then the atom is inorganic. Therefore, the expression "life-atom," though apt in one sense to mislead the reader, is not incorrect after all, since occultists do not recognize that anything in Nature can be inorganic, and know of no "dead atoms," whatever meaning science may give to the adjective. The *law* of biogenesis, as ordinarily understood, is the result of the ignorance

* Though there is a distinct term for it in the language of the adepts, how can one translate it into a European language? What name can be given to that which is *objective* yet *immaterial* in its finite manifestations, *subjective* yet *substantive* (though not in our sense of substance) in its eternal existence? Having explained it the best we can, we leave the task of finding a more appropriate term for it to our learned English occultists.

† *Unseen Universe.*

of the man of science of occult physics. It is accepted because the man of science is unable to find the necessary means to awaken into activity the dormant life inherent in what he terms an inorganic atom; hence the fallacy that a living thing can only be produced from a living thing, as though there ever was such a thing as *dead* matter in Nature! At this rate, and to be consistent, a mule ought to be also classed with inorganic matter, since it is unable to reproduce itself and generate life. We dwell so much upon the above as it meets at once all future opposition to the idea that a mummy, several thousand years old, can be throwing off atoms. Nevertheless, the sentence would perhaps have gained in clearness if we had said, instead of the "life-atoms of Jīva," the atoms "animated by dormant Jīva or life-energy." Again, the definition of Jīva quoted above, though quite correct on the whole, might be more fully, if not more clearly, expressed. The Jīva, or life-principle, which animates man, beast, plant, and even a mineral, certainly *is* "a form of force indestructible," since this force is the one life, or Anima Mundi, the universal living soul, and that the various modes in which objective things appear to us in Nature, in their atomic aggregations, such as minerals, plants, animals, etc., are all the different forms or states in which this force manifests itself. Were it to become—we will not say absent, for this is impossible, since it is omnipresent—but for one single instant inactive, say in a stone, the particles of the latter would lose instantly their cohesive property, and disintegrate as suddenly, though the force would still remain in each of its particles, but in a dormant state. Then the continuation of the definition, which states that when this indestructible force is "disconnected with one set of atoms, it becomes attracted immediately by others," does not imply that it abandons entirely the first set, but only that it transfers its *viv* *viva* or living power—the energy of motion—to another set. But because it manifests itself in the next set as what is called kinetic energy, it does not follow that the first set is deprived of it altogether; for it is still in it, as potential energy, or life latent.* This is a cardinal and basic truth of occultism, on the perfect knowledge of which depends the production of every phenomenon. Unless we admit this point, we should have to give up all the other truths of occultism. Thus what

* We feel constrained to make use of terms that have become technical in modern science—though they do not always fully express the idea to be conveyed—for want of better words. It is useless to hope that the occult doctrine will be ever thoroughly understood, even the few tenets that can be safely given to the world at large, unless a glossary of such words is compiled: and, what is of a still greater importance, until the full and correct meaning of the terms therein taught is thoroughly mastered.

is "meant by the life-atom going through endless transmigration" is simply this: we regard and call, in our occult phraseology, those atoms that are moved by kinetic energy as "life-atoms," while those that are for the time being passive, containing but imperceptible potential energy, we call "sleeping atoms"; regarding, at the same time, these two forms of energy as produced by one and the same force or life.

Now to the Hindû doctrine of metempsychosis. It has a basis of truth; and, in fact, it is an axiomatic truth, but only in reference to human atoms and emanations, and that not only after a man's death, but during the whole period of his life. The esoteric meaning of the *Laws of Manu* (xii. 3, and xii. 54 and 55), of the verses asserting that "every act, either mental, verbal or corporeal, bears good or evil fruit [Karma]," that "the various transmigrations of *men* [not souls] through the highest, middle and lowest stages, are produced by their actions," and again that "a Brahman-killer enters the body of a dog, bear, ass, camel, goat, sheep, bird, etc.," bears no reference to the human Ego, but only to the atoms of his body, his lower triad and his fluidic emanations. It is all very well for the Brâhmans to distort, in their own interest, the real meaning contained in these laws, but the words as quoted never meant what they were made to yield later on. The Brâhmans applied them selfishly to themselves, whereas by "Brahman," man's seventh principle, his immortal monad and the essence of the personal Ego were meant allegorically. He who kills or extinguishes in himself the light of Parabrahman—*i.e.*, severs his personal Ego from the Âtman, and thus kills the future Devachani, becomes a "Brahman-killer." Instead of facilitating, through a virtuous life and spiritual aspirations, the union of the Buddhi and the Manas, he condemns, by his own evil acts, every atom of his lower principles to become attracted and drawn, in virtue of the magnetic affinity thus created by his passions, into the bodies of lower animals. This is the real meaning of the doctrine of metempsychosis. It is not that such amalgamation of human particles with animal or even vegetable atoms can carry in it any idea of personal punishment *per se*, for of course it does not. But it is a cause, the effects of which may manifest themselves throughout succeeding re-births, unless the personality is annihilated. Otherwise, from cause to effect, every effect becoming in its turn a cause, they will run along the cycle of re-births, the once given impulse expending itself only at the threshold of Pralaya. But of this anon. Notwithstanding their esoteric meaning, even the words of the grandest and

noblest of all the adepts, Gautama Buddha, are misunderstood, distorted and ridiculed in the same way. The Hîna-yâna, the lowest form of transmigration of the Buddhist, is as little comprehended as the Mahâ-yâna, its highest form; and, because Shâkya Muni is shown to have once remarked to his Bhikshus, pointing to a broom, that "it had formerly been a novice who neglected to sweep out" the Council-room, hence was re-born as a broom (!), therefore, the wisest of all the world's sages stands accused of idiotic superstition. Why not try and find out the true meaning of the figurative statement before condemning? Why should we scoff before we understand? Is or is not that which is called magnetic effluvium a something, a stuff, or a substance, invisible and imponderable though it be? If the learned authors of *The Unseen Universe* object to light, heat and electricity being regarded merely as imponderables, and show that each of these phenomena has as much claim to be recognized as an objective reality as matter itself, our right to regard the mesmeric or magnetic fluid which emanates from man to man, or even from man to what is termed an "inanimate" object, is far greater. It is not enough to say that this fluid is a species of molecular energy like heat, for instance, though of much greater potency. Heat is produced whenever kinetic energy is transformed into molecular energy, we are told, and it may be thrown out by any material composed of sleeping atoms, or inorganic matter as it is called; whereas the magnetic fluid projected by a living human body *is life itself*. Indeed it is "life-atoms" that a man in a blind passion throws off unconsciously, though he does it quite as effectively as a mesmerizer who transfers them from himself to any object consciously and under the guidance of his will. Let any man give way to any intense feeling, such as anger, grief, etc., under or near a tree, or in direct contact with a stone, and after many thousands of years any tolerable psychometer will see the man, and perceive his feelings from one single fragment of that tree or stone that he had touched. Hold any object in your hand, and it will become impregnated with your life-atoms, indrawn and out-drawn, changed and transferred in us at every instant of our lives. Animal heat is but so many life-atoms in molecular motion. It requires no adept knowledge, but simply the natural gift of a good clairvoyant subject to see them passing to and fro, from man to objects and *vice versâ* like a bluish lambent flame. Why, then, should not a broom, made of a shrub, which grew most likely in the vicinity of the building where the lazy novice lived, a shrub, perhaps, repeatedly touched by

him while in a state of anger provoked by his laziness and distaste for his duty—why should not a quantity of his life-atoms have passed into the materials of the future besom, and therein have been recognized by Buddha, owing to his superhuman (not *supernatural*) powers? The processes of Nature are acts of incessant borrowing and giving back. The materialistic sceptic, however, will not take anything in any other way than in a literal, dead-letter sense.

To conclude our too long answer, the “lower principles” mentioned before are the first, second and the third. They cannot include the Kâma Rûpa, for this Rûpa belongs to the middle, not the lower principles. And, to our correspondent’s further query, “Do the atoms of these [the fourth and the fifth] also re-form, after going through various transmigrations, to constitute over again the fourth and the lower fifth of the next incarnation?”—we answer, “They do.” The reason why we have tried to explain the doctrine of the “life-atoms” at such length, is precisely in connection with this last question, and with the object of throwing out one more fertile hint. We do not feel at liberty at present, however, to give any further details.

H. P. BLAVATSKY.

“OM,” AND ITS PRACTICAL SIGNIFICANCE.

I SHALL begin with a definition of Om as given by the late Professor Theodore Goldstücker:

Om is a Sanskrit word which, on account of the mystical notions that even at an early date of Hindû civilization were connected with it, acquired much importance in the development of Hindû religion. Its original sense is that of emphatic or solemn affirmation or assent. Thus, when in the White Yajur Veda the sacrificer invites the gods to rejoice in his sacrifice, the goddess Sâvitri assents to his summons by saying, “Om” (*i.e.*, be it so; proceed).

Or, when in the *Bṛihadâraṇyaka Upanishad*, Prajâpati, the father of gods, men and demons, asks the gods whether they have understood his instructions, he expresses his satisfaction with their affirmative reply in these words, “Om, you have fully comprehended it”; and in the same Upanishad, Pravâhana answers the question of Shvetaketu, as to whether his father has instructed him, by uttering the word “Om”—*i.e.*, “forsooth [I am].”

A portion of the *Rig Veda* called the *Aitareya Brâhmana*, where, describing a religious ceremony at which verses from the *Rig Veda*, as well as songs called Gâthas, were recited by the priest called Hotri, and responses given by another priest, the Adhvaryu, says: Om is the response of the Adhvaryu to the *Rig Veda* verses (recited by the Hotri), and likewise “Tathâ” (*i.e.*, thus) his response to the Gâthas, for Om is (the term of assent) used by the gods, whereas Tathâ is (the term of assent) used by men (the *Rig Veda* verses being, to the orthodox Hindû, of divine, and the Gâthas of human authorship).

In this, the original sense of the word, it is little doubtful that *om* is but an older and contracted form of the common Sanskrit word *evam* (“thus”), which, coming from the pronominal base *a*, in some derivations changed to *e*, may have at one time occurred in the form *avam*, when, by the elision of the vowel following *v*, for which there are numerous analogies in Sanskrit, *vum* would become *aum*, and hence,

according to the ordinary phonetic laws of the language, *om*. This etymology of the word; however, seems to have been lost even at an early period of Sanskrit literature; for another is met with in the ancient grammarians, enabling us to account for the mysticism which many religious and theological works of ancient and mediæval India suppose to inhere in it. According to this latter etymology, *om* would come from a radical *av*; by means of an affix *man*, when *om* would be a curtailed form of *avman* or *oman*, and as *av* implies the notion of "protect, preserve, save," *om* would be a term implying "protection or salvation," its mystical properties and its sanctity being inferred from its occurrence in the Vedic writings and in connection with sacrificial acts, such as are before alluded to.

Hence Om became the auspicious word with which the spiritual teacher had to begin and the pupil to end each lesson of his reading of the Veda. The existing *Prati-sakhya*, or a grammar of the *Rig Veda*, enjoins:

Let this syllable be the head of the reading of the Veda; for alike to the teacher and the pupil it is the supreme Brahman, the gate of heaven.

And Manu ordains:

A Brâhman at the beginning and end [of a lesson on the Veda] must always pronounce the syllable Om; for unless Om precede, his learning will slip away from him; and unless it follows, nothing will be long retained.

At the time when another class of writings (the Purânas) were added to the inspired code of Hindûism, for a similar reason Om is their introductory word.

That the mysterious power which, as the foregoing quotation from the law-book of Manu shows, was attributed to this word must have been the subject of early speculation, is obvious enough. A reason assigned for it is given by Manu himself, who says:

Brahma extracted from the three Vedas the letter *a*, the letter *u*, and the letter *m* [which combined result in Om], together with the [mysterious] words Bhûh [earth], Bhuvah [sky], and Svah [heaven].

And in another verse:

These three great immutable words, preceded by the syllable Om and [the sacred *Rig Veda* verse called] Gâyatrî, consisting of three lines, must be considered as the mouth [or entrance] of Brahman [the Veda]—

or, as the commentators observe, the means of attaining final emancipation; and

The syllable Om is the supreme Brahman. [Three] regulated breathings, accompanied with the mental recitation of Om, the three mysterious words Bhûh, Bhuvah, Svah, and the Gâyatrî, are the highest devotion.

All rites ordained in the Veda, such as burnt and other sacrifices, pass away, but the syllable, Om must be considered as imperishable; for it is [a symbol of] Brahman [the supreme spirit] himself, the Lord of Creation.

In these speculations Manu bears out, and is borne out by, several Upanishads. In the *Katha Upanishad*, for instance, Yama, the god of death, in replying to a question of Nachiketas, says:

The word which all the Vedas record, which all the modes of penance proclaim, desirous of which religious students perform their duties, this word I will briefly tell thee—it is *Om*. This syllable means the [inferior] Brahman and the supreme [Brahman]. Whoever knows this syllable obtains whatever he wishes.

And in the *Prashna Upanishad*, the saint Pippalâda says to Satyakâma:

The supreme and the inferior Brahman are both the word Om; hence the wise follow by this support the one or the other of the two. If he meditates upon its one letter [*a*] only, he is quickly born on the earth; is carried by the verses of the *Rig Veda* to the world of man; and, if he is devoted there to austerity, the duties of a religious student and faith, he enjoys greatness. But if he meditates in his mind on its two letters [*a* and *u*], he is elevated by the verses of the Yajur Veda to the intermediate region; comes to the world of the moon, and, having enjoyed there power, returns again [to the world of man]. If, however, he meditates on the supreme spirit by means of its three letters [*a*, *u*, and *m*] he is produced in light to the sun; as the snake is liberated from its skin, so is he liberated from sin.

According to the *Mândūkya Upanishad* the nature of the soul is summarized in the three letters *a*, *u*, and *m* in their isolated and combined form—*a* being Vaishvânara, or that form of Brahman which represents the soul in its waking condition; *u*, Taijasa, or that form of Brahman which represents it in its dreaming state; and *m*, Prajñâ, or that form of Brahman which represents it in its state of profound sleep (or that state in which it is temporarily united with the supreme spirit); while *a*, *u*, *m* combined (*i.e.*, *Om*), represent the fourth or highest condition of Brahman:

Which is unaccountable, in which all manifestations have ceased, which is blissful and without duality. *Om*, therefore, is soul, and by this soul, he who knows it, enters into [the supreme] soul.

Passages like these may be considered as the key to the more enigmatic expressions used; for instance, by the author of the Yoga Philosophy, where, in three short sentences, he says:

His [the supreme lord's] name is Pranava [*i.e.*, *Om*]; its muttering [should be made] and reflection on its signification; thence comes the knowledge of the transcendental spirit and the absence of the obstacles [such as sickness, languor, doubt, etc., which obstruct the mind of an ascetic].

But they indicate, at the same time, the further course which superstition took in enlarging upon the mysticism of the doctrine of the

Upanishads. For, as soon as every letter of which the word Om consists was fancied to embody a separate idea, it is intelligible that other sectarian explanations were grafted on them to serve special purposes. Thus, while Shankara, the great theologian and commentator on the Upanishads, is still contented with an etymological punning, by means of which he transforms *ā* into an abbreviation of *āpti* (pervading), since speech is pervaded by Vaishvânara; *u* into an abbreviation of *utkarsha* (superiority), since Taijasa is superior to Vaishvânara; and *m* into an abbreviation of *mīti* (destruction), Vaishvânara and Taijasa, at the destruction and regeneration of the world, being, as it were, absorbed into Prajñâ—the Purânas make of *a*, a name of Vishnu; of *u*, a name of his consort Shrî; and of *m*, a designation of their joint worshipper; or they see in *a*, *u*, *m*, the Triad—Brahmâ, Vishnu and Shiva; the first being represented by *a*, the second by *u*, and the third by *m*—each sect, of course, identifying the combination of these letters, or Om, with their supreme deity. Thus, also, in the *Bhagavad Gîtâ*, which is devoted to the worship of Vishnu in his incarnation as Krishna, though it is essentially a poem of philosophical tendencies based on the doctrine of the Yoga, Krishna in one passage says of himself that he is Om; while in another passage he qualifies the latter as the supreme spirit. A common designation of the word Om—for instance, in the last-named passages of the *Bhagavad Gîtâ*—is the word “Pranava,” which comes from a so-called radical *nu*, “praise,” with the prefix *pra*, amongst other meanings implying emphasis, and, therefore, literally means “eulogium, emphatic praise.” Although Om, in its original sense as a word of solemn or emphatic assent, is, properly speaking, restricted to the Vedic literature, it deserves notice that it is now-a-days often used by the natives of India in the sense of “yes,” without, of course, any allusion to the mystic properties which are ascribed to it in the religious works. Monier Williams gives the following account of the mystic syllable Om:

When by means of repeating the syllable Om, which originally seems to have meant “that” or “yes,” they had arrived at a certain degree of mental tranquillity, the question arose what was meant by this Om, and to this various answers were given according as the mind was to be led up to higher and higher objects. Thus, in one passage, we are told at first that Om is the beginning of the Veda, or, as we have to deal with an Upanishad of the *Sâma Veda*, the beginning of the *Sâma Veda*; so that he who meditates on Om may be supposed to be meditating on the whole of the *Sâma Veda*.

Om is the essence of the *Sāma Veda*, which, being almost entirely taken from the *Rig Veda*, may itself be called the essence of the *Rig Veda*. The *Rig Veda* stands for all speech, the *Sāma Veda* for all breath or life; so that Om may be conceived again as the symbol of all speech and all life. Om thus becomes the name not only of all our mental and physical powers, but is especially that of the living principle of the Prāna or spirit. This is explained by the parable in the second chapter, while in the third chapter that spirit within us is identified with the spirit in the sun.

He, therefore, who meditates on Om, meditates on the spirit in man as identical with the spirit in nature or in the sun, and thus the lesson that is meant to be taught in the beginning of the *Chhândogya Upanishad* is really this: that none of the Vedas, with their sacrifices and ceremonies, could ever secure the salvation of the worshippers. That is, the sacred works performed, according to the rules of the Vedas, are of no avail in the end, but meditation on Om, or that knowledge of what is meant by Om, alone can procure true salvation or true immortality.

Thus the pupil is led on step by step to what is the highest object of the Upanishads—namely, the recognition of the self in man as identical with the highest soul. The lessons which are to lead up to that highest conception of the universe, both subjective and objective, are, no doubt, mixed up with much that is superstitious and absurd. Still the main object is never lost sight of. Thus, when we come to the eighth chapter, the discussion, though it begins with Om ends with the question of the origin of the world, and the final answer—namely, that Om means Âkâsha, ether, and that ether is the origin of all things.

Dr. Lake considers electricity as the Âkâsha, or the fifth element of the Hindûs.

I shall now give my own opinion on the mystic syllable Om.

Breath consists of an inspiration termed Pûraka, an interval termed Kumbhaka, and an expiration called Rechaka. When the respiration is carried on by the right nostril, it is called the Pingalâ; when it is carried on by the two nostrils, it is named the Sushumnâ; and when it is carried on by the left nostril, it is called Idâ.

The right respiration is called the *solar* respiration, from its heating nature; while the left respiration is termed the *lunar* respiration, from its cooling character. The Sushumnâ respiration is called the Sambhumnâdi. During the intermediate respiration the human mind should be engaged in the contemplation of the supreme soul.

The breath takes its origin from the "indiscrete" or unreflecting form, and the mind from the breath. The organs of sense and action are under the control of the *mind*. The Yogis restrain their mind by the suspension of breath. Breath is the origin of all speech. The word "Soham" is pronounced by a deep inspiration followed by expiration carried on by the nostrils. This word means, "God is in us."

There is another word called "Hamsa." This is pronounced by a deep expiration followed by inspiration. Its meaning is, "I am in God."

The inspiration is Shakti, or strength. The expiration is Shiva, or death. The internal or Kumbhaka is a promoter of longevity. When the expiration is not followed by inspiration death ensues. A forcible expiration is always the sure and certain sign of approaching dissolution or death. Both these words Soham and Hamsa cause the waste of the animal economy, as they permit the oxygen of the inspired air to enter the lungs where the pulmonary changes of the blood occur.

According to Lavoisier, an adult Frenchman inhales daily 15,661 grains of oxygen from the atmosphere, at the rate of 10.87 grains nearly per minute.

The word Om is pronounced by the inspiration of air through the mouth and the expiration of the same by the nostrils.

When a man inspires through the mouth and expires through the nostrils, the oxygen of the inspired air does not enter the lungs where the pulmonary changes of the blood take place. The monosyllable Om thus acts as a substitute for the suspension of the breath.

The waste of the body is proportionate to the quantity of oxygen taken into the system by the respiration. The waste of a man who breathes quickly is greater than that of one who breathes slowly. While tranquillity of mind produces slow breathing, and causes the retardation of the bodily waste, the tranquil respiration has a tendency to produce calmness of mind. The Yogis attain to Nirvâna by suspending or holding the breath. The Vedântists obtain Moksha, or emancipation of the soul, by holding the mind (mental abstraction). Thus Om is the process of separating the soul from the body. It is the product of the gasping breath which precedes the dissolution of our body. The ancient Hindûs utilized the gasping breath of the dying man by discovering the syllable Om.

The syllable Om protects man from premature decay and death, preserves him from worldly temptations, and saves him from re-birth. It causes the union of the human soul to the supreme soul. Om has the property of shortening the length of respiration.

Shiva is made to say in a work on *Sarodaya* (an excellent treatise on respiration) that the normal length of the expiration is 9 inches. During meals and speaking the length of the expiration becomes 13.5 inches. In ordinary walking the expiration is lengthened to 18 inches. Running lengthens the expiration to 25.5 inches.

In sexual intercourse the extent of respiration becomes 48·75 inches. During sleep the respiration becomes 75 inches long. As sleep causes a great waste of the body and invites disease, premature decay and death, the Yogî tries to abstain from it. He lives upon the following dietary: rice, 6 ounces, troy; milk, 12 ounces, troy. He consumes daily: carbon, 156·2 grains; nitrogen, 63·8 grains.

Under this diet he is ever watchful, and spends his time in the contemplation of Om. From the small quantity of nitrogen contained in his diet he is free from anger. The Yogî next subdues his carnal desire or sexual appetite. He diminishes day by day his food until it reaches the minimum quantity on which existence is maintained. He passes his life in prayer and meditation. He seeks retirement. He lives in his little cell; his couch is the skin of tiger or stag; he regards gold, silver, and all precious stones as rubbish. He abstains from flesh, fish, and wine. He never touches salt, and lives entirely on fruits and roots. I saw a female mendicant who lived upon a seer of potatoes and a small quantity of tamarind pulp daily. This woman reduced herself to a skeleton. She led a pure, chaste life, and spent her time in the mental recitation of Om. One seer of potatoes contains 3,600 grains of solid residue, which is exactly $7\frac{1}{2}$ ounces, troy.

The solid residue of one seer of potatoes consists of the following ultimate ingredients:

Carbon	1587·6 grains.
Hydrogen.....	208·8 grains.
Nitrogen.....	43·2 grains.
Oxygen.....	1580·4 grains.
Salts	180 grains.
Total.....	3600 grains.

I saw a Brâhman (Brahmachârî) who consumed daily one seer of milk, and took no other food.

ANALYSIS OF ONE SEER OF COW'S MILK BY BOUSSINGAULT.

Water.....	12,539·52 grains.
Carbon.....	1,005·408 grains.
Hydrogen.....	164·736 grains.
Nitrogen.....	74·88 grains.
Oxygen.....	525·456 grains.
Salts.....	90 grains.
Total.....	14,400 grains.

Now, one seer of cow's milk requires for combustion within the animal economy 3278·88 grains of oxygen. The Brahmachârî inhaled

2.27 grains of oxygen per minute. This Brahmachârî spent his life in the contemplation of Om, and led a life of continence. The French adult, who is a fair specimen of well-developed sensuality, inhaled from the atmosphere 10.87 grains of oxygen every minute of his existence.

A retired, abstemious, and austere life is essentially necessary for the pronounciation of Om, which promotes the love of rigid virtue and a contempt of impermanent sensuality. Shiva says:

He who is free from lust, anger, covetousness and ignorance is qualified to obtain salvation [Moksha, or the Nirvâna of the Buddhists].

The solid residue of one seer of cow's milk is 1860.48 grains. "In 1784 a student of physic at Edinburgh confined himself for a long space of time to a pint of milk and half a pound of white bread."

The diet of this student contained 1487.5 grains of carbon and 80.1875 grains of nitrogen. This food required 4.305 grains of oxygen for the complete combustion of its elements. He inspired 2.92 grains of oxygen per minute. In this instance the intense mental culture diminished the quantity of oxygen inspired from the atmosphere. The early Christian hermits, with a view to extinguish carnal desire and overcome sleep, lived upon a daily allowance of 12 ounces of bread and water. They daily consumed 4063.084 grains of oxygen. They inhaled oxygen at the rate of 2.8215 grains per minute.

According to M. Andral, the great French physiologist, a French boy ten years old, before the sexual appetite is developed, exhales 1852.8 grains of carbon in the twenty-four hours. He who wishes to curb his lust should consume 1852.8 grains of carbon in his daily diet.

Now, 6,500 grains of household bread contain 1852 grains of carbon, according to Dr. Edward Smith. This quantity of bread is equal to 14 ounces, avoirdupois, and 375 grains, but the early Christian hermits who lived upon 12 ounces of bread, avoirdupois, consumed daily 1496.25 grains of carbon. This quantity of carbon was less than that which the French boy consumed daily by 356.55 grains. The French boy consumed 1852.8 grains of carbon in his diet, but the Hindû female mendicant, who led a life of continence, consumed in her daily ration of potatoes 1587.6 grains of carbon. Hence it is evident that the French boy consumed 265.2 grains of carbon more than what was consumed by the female Hindû Yogî. There lived in Brindavana a Sannyâsî, who died at the age of 109 years, and who subsisted for forty years upon the daily diet of four *chuttacks* of *penda* and four *chuttacks* of milk. His diet contained 1980 grains of carbon and 90.72 grains of nitrogen. Abstemi-

ousness shortens the length of respiration, diminishes the waste of the body, promotes longevity, and engenders purity of heart. Abstemiousness cures vertigo, cephalalgia, tendency to apoplexy, dyspnœa, gout, old ulcers, impetigo, scrofula, herpes, and various other maladies.

Cornaro, an Italian nobleman, who was given up by all his physicians, regained health by living upon 12 ounces of bread and 15 ounces of water, and lived to a great age.

He consumed less than an ounce of flesh-formers in his diet. According to Edward Smith 5401·2 grains of bread contain one ounce of flesh-formers.

He who wishes to lead a life of chastity, honesty, meekness, and mercy, should consume daily one ounce of flesh-formers in his diet. As an ounce of nitrogenous matter contains 70 grains of nitrogen, one should take such food as yields only 70 grains of azote.

Murder, theft, robbery, cruelty, covetousness, lust, slander, anger, voluptuousness, revenge, lying, prostitution and envy are sins which arise from a consumption of a large quantity of aliments containing a higher percentage of azote.

He who intends to be free from every earthly thought, desire and passion should abstain from fish, flesh, woman, and wine, and live upon the most innocent food.

The following table shows approximately the quantities of various aliments furnishing 70 grains of nitrogen:

Wheat dried in vacuo.....	3181·81 grains.
Oats dried in vacuo.....	3181·81 grains.
Barley dried in vacuo.....	3465·34 grains.
Indian corn dried in vacuo.....	3500 grains.
Rye dried in vacuo.....	4117·64 grains.
Rice dried.....	5036 grains.
Milk dried.....	1750 grains.
Peas dried.....	1666·6 grains.
White haricots dried.....	1627·67 grains.
Horse beans dried.....	1272·72 grains.
Cabbage dried.....	1891·89 grains.
Carrots dried.....	2916·66 grains.
Jerusalem artichokes.....	4375 grains.
Turnips dried.....	3181·81 grains.
Bread.....	5401·2 grains.
Locust beans.....	6110 grains.
Figs.....	7172·13 grains.
Cow's milk fresh.....	1346·2 grains.

z

Abstemiousness begets suspension of breath. From the suspension of breath originates tranquillity of mind, which engenders supersensuous knowledge. From supersensuous knowledge originates ecstasy, which is the Samâdhi of the ancient Hindû sages.

Instead of walking and running, which lengthen the respiration, the devotees of Om should practise the two tranquil postures termed the Padmâsana and Siddhâsana, described in my mystic tract called *The Yoga Philosophy*. According to Shiva the normal length of expiration is 9 inches. He says that one can subdue his lust and desire by shortening his expiration to 8·25 inches, whether by the inaudible pronunciation of Om or by the suspension of breath (Prânâyâma); that one can enjoy ecstasy by diminishing the length of his expiration to 7·5 inches.

One acquires the power of writing poetry by reducing his expiration to 6·75 inches.

When one can reduce his expiration to 6 inches long he acquires the power of foretelling future events. When one reduces the length of his expiration to 5·25 inches he is blessed with the divine eye. He sees what is occurring in the distant worlds.

When the inaudible pronunciation of Om reduces the length of the expiration to 4·5 inches it enables its votary to travel to aërial regions. When the length of expiration becomes 3·75 inches, the votary of Om travels in the twinkling of an eye through the whole world.

When by the inaudible muttering of Om a man reduces his expiration to 3 inches, he acquires the Ashta Siddhis, consummations (or superhuman powers). When the expiration is reduced to 2·25 inches, the votary of Om can acquire the nine precious jewels of the world (Nava Nidhis). Such a man can attract the wealth of the world to him.* When the expiration becomes 1·5 inches long from the above practice, he sees the celestial sphere where the Supreme Soul resides. When the inaudible pronunciation of Om reduces the length of expiration to ·75 inch, the votary becomes deified and casts no shadow.

Om Amilaya! measure not with words
The immeasurable; nor sink the string of thought
Into the Fathomless! Who asks doth err;
Who answers errs. Say nought!

Om mani padme hum. Om the jewel in the lotus.

By the muttering of the above formula the Great Buddha freed him-

* Supposing he had any care or use for it.—ED. *Theos.*

self from selfishness, false faith, doubt, hatred, lust, self-praise, error, pride, and attained to Nirvâna.

And how man hath no fate except past deeds,
No Hell but what he makes, no Heaven too high
For those to reach whose passions sleep subdued.

According to Shiva a man acquires Nirvâna when his breathing becomes internal and does not come out of the nostrils. When the breathing becomes internal—that is, when it is contained within the nostrils, the Yogî is free from fainting, hunger, thirst, languor, disease and death. He becomes a divine being, he feels not when he is brought into contact with fire; no air can dry him, no water can putrefy him, no poisonous serpent can inflict a mortal wound. His body exhales fragrant odours, and can bear the abstinence from air, food and drink.

When the breathing becomes internal, the Yogî is incapable of committing any sin in deed, thought, and speech, and thereby inherits the Kingdom of Heaven, which is open to sinless souls.

N. C. PAUL.

GLOSSARY.

- AB-È-HYAT**, Water of Life, supposed to give eternal youth.
- ABHĀVA**, negation or non-being of individual objects; the substance, the abstract objectivity.
- ADAM KADMON**, the bi-sexual Sephira of the Kabalists.
- ADEPT**, one who, through the development of his spirit, has attained to transcendental knowledge and powers.
- ADHIBHAUTIKA**, arising from external objects.
- ADHIDAIVIKA**, arising from the gods, or accidents.
- ADHIKAMĀSĀNSHAS**, extra months.
- ADHISHTĀNAM**, basis; a principle in which some other principle inheres.
- ADHYĀTMIKA**, arising out of the inner-self.
- ADVAITĪ**, a follower of the school of Philosophy established by Shankarāchārya.
- AHANKĀRA**, personality; egoism; self identity; the fifth principle.
- AHRIMAN**, the Evil Principle of the Universe; so called by the Zoroastrians.
- AHUM**, the first three principles of septenary human constitution; the gross living body of man according to the *Avesta*.
- ĀKĀSHA**, the subtle supersensuous matter which pervades all space.
- AMŪLAM MŪLAM** (lit. the "rootless root"); Prakriti; the material of the universe.
- ANĀHATACHAKRAM**, the heart, the seat of life.
- ĀNANDA**, bliss.
- ĀNANDAMAYA KOSHA**, the blissful; the fifth sheath of the soul in the Vedāntic system; the sixth principle.
- ANASTASIS**, the continued existence of the soul.
- ANIMA MUNDI**, the soul of the world.
- ANNAMAYA KOSHA**, the gross body; the first sheath of the divine monad (Vedāntic).
- ANTAHKARANA**, the internal instrument, the soul, formed by the thinking principle and egoism.
- ANUMITI**, inference.
- APAROKSHA**, direct perception.
- APAVARGA**, emancipation from repeated births.
- APPORRHETA**, secret discourses in Egyptian and Grecian mysteries.
- ĀRANYAKAS**, holysages dwelling in forests.
- ARDHANĀRĪSHVARA** (lit. the "bi-sexual Lord"), the unpolarized state of cosmic energy; the bi-sexual Sephira, Adam Kadmon.
- ARHATS** (lit. "the worthy ones"), the initiated holy men of the Buddhist and Jain faiths.
- ARKA**, sun.
- ĀRYĀVARTA**, the ancient name of Northern India, where the Brāhmanical invaders first settled.
- ĀSANA**, the third stage of Hatha Yoga; the posture for meditation.
- ASAT**, the unreal, Prakriti.
- ĀSHĀB and LANGHAN**, ceremonies for casting out evil spirits, so called among the Kolarian tribes.
- ASHTA SIDDHIS**, the eight consummations of Hatha Yoga.
- ASHOKA (KING)**, a celebrated conqueror, monarch of a large portion of India, who is called the "Constantine of Buddhism," temp. circa 250 B.C.

- ASHVINS**, the divine charioteers of the Vedas; mystically they correspond to Hermes in the Theosophy of Egypt. They represent the internal organ by which knowledge is conveyed from the soul to the body.
- ASTRAL LIGHT**, a subtle form of existence forming the basis of our material universe.
- ASURAMAYA**, an Atlantean astronomer, well known in Sanskrit writings.
- ASURAS**, a class of elementals considered maleficent; demons.
- ATHARVA VEDA**, one of the four most ancient and revered books of the ancient Brâhmans.
- ATLANTIS**, the continent that was submerged in the Southern and Pacific Oceans.
- ÂTMÂ**, the spirit; the divine monad; the seventh principle of the septenary human constitution.
- ATMABODHA** (lit. "self-knowledge"), the title of a Vedântic treatise by Shankarâchârya.
- ÂTMAN**. See Âtmâ.
- ATTAVÂDA**, the sin of personality (Pâli).
- AUM**, the sacred syllable in Sanskrit representing the Trinity.
- AVALOKITESHVARA**, manifested wisdom, or the Divine Spirit in man.
- AVASTHÂS**, states, conditions, positions.
- AVATÂRA**, the incarnation of an exalted being, so called among the Hindûs.
- AVESTA**, the sacred books of the Zoroastrians.
- AVYAKTA**, the unrevealed cause.
- BADDHA**, bound or conditioned; the state of an ordinary human being who has not attained Nirvâna.
- BAHIRPRAJÑÂ**, the present state of consciousness.
- BAODHAS**, consciousness; the fifth principle of man.
- BARHASPATYAMÂNAM**, a method of calculating time prevalent during the later Hindû period in North-eastern India.
- BHADRASENA**, a Buddhist king of Magadha.
- BHAGATS** (called Sokha and Shivrâth by the Hindûs), one who exorcises an evil spirit.
- BHAGAVAD GÎTÂ** (lit. the "Lord's Song"), an episode of the *Mahâbhârata*, the great epic poem of India. It contains a dialogue between Krishna and Arjuna on Spiritual Philosophy.
- BHAO**, ceremony of divination among the Kolarian tribes of Central India.
- BHÂSHVA**, commentary.
- BHIKSHU**, a religious mendicant and ascetic who suppresses all desire and is constantly occupied in devotion; a Buddhist monk.
- BHON**, religion of the aborigines of Tibet.
- BODDHISATTVAS**, Egos evolving towards Buddhahood.
- BRAHMÂ**, the Hindû Deity which personifies the active cosmic energy.
- BRAHMACHÂRÎ**, a Brâhman ascetic.
- BRAHMAJÑÂNÎ**, one possessed of complete illumination.
- BRÂHMAN**, the highest caste in India; Brahman, the absolute of the Vedântins.
- BRÂHMANA PERIOD**, one of the four periods into which the Vedic literature has been divided.
- BRIHADÂRANYAKA UPANISHAD**, one of the sacred books of the Brâhmins; an Âranyaka is a treatise appended to the Vedas, and considered the subject of special study by those who have retired to the forest for purposes of religious meditation.
- BUDDHA**, the founder of Buddhism; he was a royal Prince, by name Siddhârtha, son of Shuddhodhana, king of the Shâk-yas, an Âryan tribe.
- BUDDHI**, the spiritual Ego.
- BÔRÔ BONGA**, spirit of the hills worshipped by the Kolarian tribes of Central India.
- CANARESE**, one of the Dravidian tongues, spoken in Southern India.
- CHANDRAGUPTA**, one of the kings of Magadha, an ancient province of India.
- CHANDRAMÂNAM**, the method of calculating time by the movements of the moon.

- CHARAKA**, the most celebrated writer on medicine among the Hindûs.
- CHATURDASHA BHUVANAM**, the fourteen lokas or states.
- CHELÂ**, a pupil of an adept in occultism; a disciple.
- CHICHCHHAKTI**, the power which generates thought.
- CHIDAGNIKANDAM** (lit. "the fireplace in the heart"), the seat of the force which extinguishes all individual desires.
- CHIDÂKÂSHAM**, the field of consciousness.
- CHINMÏTRA**, the germ of consciousness, abstract consciousness.
- CHIT**, the abstract consciousness.
- CHITTA SHUDDHI** (Chitta, mind, and Shuddhi, purification), purification of the mind.
- CHUTUKTU**, the five chief Lamas of Tibet.
- DÆMON**, the incorruptible part of man; Nous; rational soul.
- DAENAM** (lit. "knowledge"), the fourth principle in man, according to the Avesta.
- DAIMONION PHÔS**, spiritual illumination.
- DAITYAS**, demons, Titans.
- DAMA**, restraint of the senses.
- DARASTA**, ceremonial magic practised among the Kolarian tribes of Central India.
- DARHA**, ancestral spirits of the Kolarian tribes of Central India.
- DEONA** or **MATI**, one who exorcises evil spirits (Kolarian).
- DEVAS**, gods; beings of the subjective side of Nature.
- DEVACHAN**, a blissful condition in the after-life; heavenly existence.
- DEVANÂGARÎ**, the current Sanskrit alphabet.
- DHARMÂSHOKA**, one of the kings of Magadha.
- DHÂTU**, the seven principal substances of the human body—chyle, flesh, blood, fat, bones, marrow, semen.
- DHYÂNA**, contemplation. There are six stages of Dhyâna, varying in the degrees of abstraction of the Ego from sensuous life.
- DHYÂN CHOHAHS**, Devas or Gods; planetary spirits.
- DÎK**, space.
- DÎKSHÂ**, initiation.
- DOSHA**, fault.
- DRAVIDIANS**, a group of tribes inhabiting Southern Indian.
- DRAVYA**, substance.
- DUGPAS**, the "Red Caps," evil magicians, belonging to the left-hand path of occultism; so called in Tibet.
- DUHKHA**, pain.
- DVIJA BRÂHMAN**, twice born; the investiture with the sacred thread constitutes the second birth.
- ELEMENTALS**, generic name for all subjective beings other than disembodied human creatures.
- EPOPTES**, Greek for seer.
- FAKÎR**, a Mohammedan recluse or Yogî.
- FAN**, **BAR-NANG**, space, eternal law.
- FOHAT**, Tibetan for Shakti; cosmic force or energizing power of the universe.
- FRAVASHEM**, absolute spirit.
- GAUDAPÂDA**, a celebrated Brâhmanical teacher, the author of commentaries on the *Sânkhya Kârîkâ*, *Mândûkyâ Upanishad*, etc.
- GÂYATRÎ**, the holiest verse of the Vedas.
- GEHS**, Pârsi prayers.
- GELUGPAS**, "Yellow Caps," the true Magi and their school, so called in Tibet.
- GUJARÂTÎ**, the vernacular dialect of Gûjârat, a province of Western India.
- GUNAS**, qualities, properties.
- GUNAVAT**, endowed with qualities.
- GURU**, spiritual preceptor.
- HA**, a magic syllable used in sacred formulæ; represents the power of Âkâsha Shakti.
- HAMSA**, a mystic syllable standing for evolution; it literally means "I [am] he."
- HATHA YOGA**, a system of physical training to obtain psychic powers, the chief feature of this system being the regulation of breath.

- HIANG-THSANG**, the celebrated Chinese traveller whose writings contain the most interesting account of India of the period.
- HIEROPHANTS**, High Priests.
- HÎNA-YÂNA**, lowest form of transmigration of the Buddhist.
- HWUN**, spirit; the seventh principle in man (Chinese).
- ICHCHHA**, will.
- ICHCHHASHAKTI**, will power; force of desire; one of the six forces of Nature.
- IKHIR BONGA**, spirit of the deep of the Kolarian tribes.
- INDRIYA**-, or **DEHA-SANYAMA**, control over the senses.
- ÎSHVARA**, Personal God, Lord, the Spirit in man, the Divine principle in its active nature or condition, one of the four states of Brahma.
- JÂGRAT**, waking.
- JÂGRAT AVASTHÂ**, the waking state; one of the four aspects of Pranava.
- JAINS**, a religious sect in India closely related to the Buddhists.
- JAMBUDVÎPA**, one of the main divisions of the world, including India, according to the ancient Brâhmanical system.
- JANAKA**, King of Videha, a celebrated character in the Indian epic of *Râmâyana*. He was a great royal sage.
- JANWAS**, gross form of matter.
- JAPA**, mystical practice of the Yogî, consisting of the repetition of certain formulæ.
- JEVISHIS**, will; Kâma Rûpa; fourth principle.
- JÎVA** or **KÂRANA SHARÎRA**, the second principle of man; life.
- JIVÂTMÂ**, the human spirit; seventh principle in the microcosm.
- JÑANAM**, knowledge.
- JÑANASHAKTI**, the power of true knowledge; one of the six forces.
- JÑANENDRIYAS**, the five channels of knowledge.
- JYOTISHÂM JYOTIH**, the light of lights, the supreme spirit, so called in the Upanishads.
- KABALAH**, ancient mystical Jewish books.
- KALI YUGA**, the last of the four ages into which the evolutionary period of man is divided. It began 3,000 years B.C.
- KALPA**, the period of cosmic activity; a day of Brahmâ, 4,320 million years.
- KÂMA**, lust, desire, volition; the Hindû Cupid.
- KÂMA LOKA**, abode of desire, the first condition through which a human entity passes in its passage, after death, to Devachan. It corresponds to purgatory.
- KÂMA RÛPA**, the principle of desire in man; the fourth principle.
- KAPILA**, the founder of one of the six principal systems of Indian philosophy—viz., the Sâṅkhya.
- KARAM**, great festival of the Kolarian tribes in honour of the sun-spirit.
- KÂRANA SHARÎRA**, the causal body; Avidyâ; ignorance; that which is the cause of the evolution of a human ego.
- KARMA**, the law of ethical causation; the effect of an act for the attainment of an object of personal desire; merit and demerit.
- KARMAN**, action; attributes of Linga Sharîra.
- KÂRTTIKEYA**, the Indian god of war, son of Shiva and Pârvatî; he is also the personification of the power of the Logos.
- KÂSHI**, another name for the sacred city of Benares.
- KEHERPAS**, ærial form; third principle in the Avesta.
- KHANDA PERIOD**, a period of Vedic literature.
- KHI** (lit. breath), the spiritual Ego; the sixth principle in man (Chinese).
- KIRÂTÂRJUNIYA** of Bharâvi, a Sanskrit epic, celebrating the encounters of Arjuna, one of the heroes of the *Mahâbhârata*, with the god Shiva, disguised as a forester.
- KOLS**, one of the tribes in Central India.
- KRÎYASHAKTI**, the power of thought; one of the six forces in Nature.
- KSHATRIYA**, the second of the four castes into which the Hindû nation was originally divided.

- KSHETRAJÑESHVARA**, embodied spirit, the conscious ego in its highest manifestation.
- KSHETRAM**, the great abyss of the Kabalah; chaos; Yoni, Prakriti; space.
- KUMBHAKA**, retention of breath, regulated according to the system of Hatha Yoga.
- KUNDALINĪSHAKTI**, the power of life; one of the six forces of Nature.
- KWER SHANS**, Chinese for third principle; the astral body.
- LAMA-GYLUNGS**, pupils of Lamas.
- LAO-TZE**, a great Chinese reformer.
- MACROCOSM**, universe.
- MAGI**, fire worshippers; the great magicians or wisdom-philosophers of old.
- MAHĀBHĀRATA**, the celebrated Indian epic poem.
- MAHĀBHĀSHYA**, a commentary on the Grammar of Pānini by Patanjali.
- MAHĀBHĀUTIK**, belonging to the macrocosmic principles.
- MAHĀBHŪTAS**, gross elementary principles.
- MAHĀPARINIBBĀNA SUTTA**, one of the most authoritative of the Buddhist sacred writings.
- MAHĀ SHŪNYATĀ**, space or eternal law; the great emptiness.
- MAHAT**, Buddhi; the first product of root-nature and producer of Ahankāra (egotism) and Manas (thinking principle).
- MAHĀTMĀ**, a great soul; an adept in occultism of the highest order.
- MAHAVANSO**, a Buddhist historical work written by the Bhikshu Mahānāmo.
- MAHĀ YUGA**, the aggregate of four Yugas, or ages—4,320,000 years—in the Brāhmanical system.
- MANAS**, the mind, the thinking principle; the fifth principle in the septenary division.
- MANAS SANYAMA**, perfect concentration of the mind; control over the mind.
- MANOMAYA KOSHA**, third sheath of the divine monad, Vedāntic equivalent for fourth and fifth principles.
- MANTRA PERIOD**, one of the four periods into which Vedic literature has been divided.
- MANTRA SHĀSTRA**, Brāhmanical writings on the occult science of incantations.
- MANTRA TANTRA SHĀSTRAS**, works on incantation and magic.
- MANTRIKASHAKTI**, the power of speech; one of the six forces in Nature.
- MANU**, the great Indian legislator.
- MANVANTARA**, the outbreathing of the creative principle; the period of cosmic activity between two *pralayas*.
- MARUTS**, the wind gods.
- MATHĀDHIPATIS**, heads of different religious institutions in India.
- MĀTRĀ**, the quantity of a Sanskrit syllable.
- MATSYA PURĀNA**, one of the Purānas.
- MĀYĀ**, illusion, the cosmic power which renders phenomenal existence possible.
- MĀYĀVIC UPĀDHI**, the covering of illusion, phenomenal appearance.
- MĀYĀVI RŪPA**, the “double”; “doppelgänger”; “perisprit.”
- MAZDIASNIAN**, Zoroastrian (lit. “worshipping God”).
- MICROCOSM**, man.
- MOBEDS**, Zoroastrian priests.
- MONAD**, the spiritual soul, that which endures through all changes of objective existence.
- MONEGHAR**, the headman of a village.
- MORYA**, one of the royal houses of Magadha; also the name of a Rājput tribe.
- MUKTA**, liberated; released from conditional existence.
- MUKTI**. See Mukta.
- MŪLAPRAKRITI**, undifferentiated cosmic matter; the unmanifested cause and substance of all being.
- MUMUKSHATVA**, desire for liberation.
- NĀBHICHAKRAM**, the seat of the principle of desire, near the umbilicus.
- NAJO**, witch.
- NANDA (KING)**, one of the kings of Magadha.
- NĀRĀYANA**, in mystic symbology it stands for the life principle.

- NAVA NIDHI**, the nine jewels, or consummation of spiritual development.
- NEOPHYTE**, a candidate for initiation into the mysteries of adeptship.
- NEPHESH**, one of the three souls, according to the Kabalah; the first three principles in the human septenary.
- NESHAMAH**, one of the three souls, according to the Kabalah; the seventh principle in the human septenary.
- NIRGUNA**, unbound; without Gunas or attributes; the soul in its state of essential purity is so called.
- NIRVĀNA**, beatitude, abstract spiritual existence, absorption into all.
- NIYASHES**, Pārsi prayers.
- NOUMENA**, the true essential nature of being, as distinguished from the illusive objects of sense.
- NOUS**, spirit, mind; Platonic term, reason.
- NYĀYA PHILOSOPHY**, a system of Hindū logic founded by Gautama.
- OCCULTISM**, the study of the mysteries of Nature and the development of the psychic powers latent in man.
- OCHĒMA**, vehicle; Platonic term for body.
- PADĀRTHAS**, predicates of existing things, so called in the Vaisheshika, or atomic system of philosophy, founded by Kanāda.
- PADMĀSANA**, a posture practised by some Indian mystics. It consists in sitting with the legs crossed one over the other and the body straight.
- PĀHĀNS**, village priests.
- PANCHA KOSHA**, the five sheaths in which is enclosed the divine monad.
- PANCHĪKRITA**, developed into the five gross elements.
- PARABRAHMAN**, the supreme principle in Nature; the universal spirit.
- PARAMĀRTHIKA**, one of the three states of existence according to Vedānta; the true, the only real one.
- PARAMĀTMĀ**, the Supreme Spirit.
- PARĀSHAKTI**, one of the six forces of Nature; the great force.
- PAROKSHA**, intellectual apprehension of a truth.
- PĀTALIPUTRA**, the ancient capital of the kingdom of Magadha, in Eastern India, a city identified with the modern Patna.
- PATANJALI**, the author of the Yoga Philosophy, one of the six orthodox systems of India, and of the *Mahābhāshya*.
- PELING**, the name given to Europeans in Tibet.
- PHALA**, retribution; fruit or results of causes.
- PHO**, animal soul.
- PISHĀCHAM**, fading remnants of human beings in the state of Kāma Loka; shells or elementaries.
- PIYADASI**, another name for Ashoka (*q.v.*).
- PLASTER or PLANTAL**, Platonic term for the power which moulds the substances of the universe into suitable forms.
- POPOL VUH**, the sacred book of the Guatemalians.
- POSEIDONIS**, the last submerged island of the continent of Atlantis.
- PRACHETĀ**, the principle of water.
- PRAJĀPATIS**, the constructors of the material universe.
- PRAJÑĀ**, consciousness.
- PRAKRITI**, undifferentiated matter; the supreme principle regarded as the substance of the universe.
- PRALAYA**, the period of cosmic rest.
- PRAMEYAS**, things to be proved; objects of Pramāna or proof.
- PRĀNA**, the one life.
- PRĀNAMAYA KOSHA**, the principle of life and its vehicle; the second sheath of the Divine monad (Vedāntic).
- PRĀNĀTMAN**, the eternal or germ thread on which are strung, like beads, the personal lives. The same as Sūtrātmā.
- PRATIBHĀSIKA**, the apparent or illusory life.
- PRATYAKSHA**, perception.
- PRETYA-BHĀVA**, the state of an Ego under the necessity of repeated births.
- PUNARJANMAM**, power of evolving objective manifestation; re-birth.
- PŪRAKA**, in-breathing, regulated according to the system of Hatha Yoga.

- PURĀNAS (lit. "old writings"). A collection of symbolical Brāhmanical writings. They are eighteen in number, and are supposed to have been composed by Vyāsa, the author of the *Mahābhārata*.
- PURUSHA, spirit.
- RAJAS, the quality of foulness; passionate activity.
- RĀJARSHI, a king-adept.
- RĀJA YOGA, the true science of the development of psychic powers and union with the Supreme Spirit.
- RĀKSHASAS, evil spirits; literally, raw [flesh] eaters.
- RĀMĀYANA, an epic poem describing the life of Rāma, a deified Indian hero.
- RAM MOHUN ROY, the well-known Indian reformer, died 1833.
- RECHAKA, out-breathing, regulated according to the system of Hatha Yoga.
- RIG VEDA, the first of the Vedas.
- RISHABHAM, the Zodiacal sign Taurus, the sacred syllable Aum.
- RISHIS (lit. "revealers"), holy sages.
- RUACH, one of the souls, according to the Kabbalah; the second three principles in the human septenary.
- SAKĒTA, the capital of the ancient Indian kingdom of Ayodhya.
- SAMA, repression of mental perturbations.
- SAMĀDHĀNA, incapacity to diverge from the path of spiritual progress.
- SAMĀDHI, state of ecstatic trance.
- SĀMĀNYA, community or commingling of qualities.
- SAMMA-SAMBUDDHA, perfect illumination.
- SAMVAT, an Indian era which is usually supposed to have commenced 57 B.C.
- SĀNKHYA KĀRIKĀ, a treatise containing the aphorisms of Kapila, the founder of the Sāṅkhya system, one of the six schools of Hindū philosophy.
- SĀNKHYA YOGA, the system of Yoga as set forth by Sāṅkhya philosophers.
- SANNYĀSĪ, a Hindū ascetic whose mind is steadfastly fixed upon the Supreme Truth.
- SAT, the real, Purusha.
- SATTVA, goodness, purity.
- SATYA LOKA, the abode of Truth, one of the subjective spheres in our solar system.
- SHABDA, the Logos or Word.
- SHAKTI, the crown of the astral light; the power of Nature.
- SHAKUNTALĀ, a Sanskrit drama by Kālidāsa.
- SHAMANISM, spirit worship; the oldest religion of Mongolia.
- SHANKARĀCHĀRYA, the great expositor of the monistic Vedānta Philosophy, which denies the personality of the Divine Principle, and affirms its unity with the spirit of man.
- SHARĪRA, body.
- SHIVA, one of the Hindū gods, with Brahmā and Vishnu forming the Trimūrti or Trinity; the principle of destruction.
- SHIVITE, a worshipper of Shiva; the name of a sect among the Hindūs.
- SHLOKAS, stanzas (Sanskrit).
- SHRADDHĀ, faith.
- SHRAVANA, receptivity, listening.
- SHŪNYATĀ, space; nothingness.
- SIDDHĀSANA, one of the postures enjoined by the system of Hatha Yoga.
- SIDDHI, abnormal power obtained by spiritual development.
- SING BONGA, sun-spirit of the Kolarian tribes.
- SKANDHAS, the impermanent elements which constitute a man.
- SMRITI, legal and ceremonial writings of the Hindūs.
- SOHAM, a mystic syllable representing involution (lit. "that [am] I").
- SOONIUM, a magical ceremony for the purpose of removing a sickness from one person to another.
- SPACE, Ākāsha; Svabhāvat (*q. v.*).
- STHŪLA-SHARĪRAM, the gross physical body.
- SŪKSHMA SHARĪRAM, the subtle body.

- SÔKSHMOPÂDHI, fourth and fifth principles (Râja Yoga).
- SÔRAMÂNAM, a method of calculating time.
- SURAS, elementals of a beneficent order; gods.
- SURPA, winnower.
- SÔRYA, the sun.
- SÔRYASIDDHÂNTA, a Sanskrit treatise on astronomy.
- SUSHUPTI AVASTHÂ, deep sleep; one of the four aspects of Pranava.
- SÔTRA PERIOD, one of the periods into which Vedic literature has been divided.
- SUTRÂTMAN (lit. the "thread spirit"), the immortal individuality upon which are strung our countless personalities.
- SVABHÂVAT, Âkâsha; undifferentiated primary matter; Prakriti.
- SVÂMÎ (lit. "a master"), the family idol.
- SVAPNA, dreamy condition, clairvoyance.
- SVAPNA AVASTHÂ, dreaming state; one of the four aspects of Pranava.
- TAMAS, ignorance or darkness.
- TAÑHÂ, thirst; desire for life; that which produces re-birth.
- TANMÂTRAS, the subtle elements, the abstract counterpart of the five elements, earth, water, fire, air and ether, consisting of smell, taste, feeling, sight and sound.
- TANTRAS, works on magic.
- TÂNTRIKA, ceremonies connected with the worship of the goddess Shakti, who typifies Force.
- TÂRAKA YOGA, one of the Brâhmanical systems for the development of psychic powers and attainment of spiritual knowledge.
- TATTVA, eternally existing "that"; the different principles in Nature.
- TATTVAMS, the abstract principles of existence, or categories, physical and metaphysical.
- TELUGU, a language spoken in Southern India.
- TESSHU LAMA, the head of the Tibetan Church.
- THE LAWS OF UPÂSANAS, a chapter in Book iv of *Kui-te* on the rules for aspirants for chelâship.
- THEODIDAKTOS (lit. "God-taught"), a title of Ammonius Saccas.
- THEOSOPHY, the Wisdom-Religion taught in all ages by the sages of the world.
- TIKKUN, Adam Kadmon, the ray from the Great Centre.
- TITIKSHÂ, renunciation.
- TODA, a mysterious tribe in India that practise black magic.
- TRIDANDA (Tri, three, Danda, chastisement), name of Brâhmanical thread.
- TRIMÔRTI, the Indian Trinity—Brahmâ, Vishnu and Shiva, Creator, Preserver and Destroyer.
- TURÎYA AVASTHÂ, the state of Nirvâna.
- TZONG-KA-PA, a celebrated Buddhist reformer of Tibet, who instituted the order of Gelugpa Lamas.
- UNIVERSAL MONAS, the universal spirit.
- UPÂDÂNA KÂRANA, the material cause of an effect.
- UPÂDHIS, bases.
- UPAMITI, analogy.
- UPANAYANA, investiture with the Brâhmanical thread.
- UPANISHADS, Brâhmanical Scriptures appended to the Vedas, containing the esoteric doctrine of the Brâhmins.
- UPANÎTA, one who is invested with the Brâhmanical thread (lit. "brought to a spiritual teacher").
- UPARATI, absence of out-going desires.
- URVANEM, spiritual Ego; sixth principle in Avesta.
- USHTANAS, vital force; second principle in Avesta.
- VÂCH, speech; the Logos; the mystic Word.
- VAISHYAS, cattle breeders; artisans; the third caste among the Hindûs.
- VÂKYA SANYAMA, control over speech.
- VARUNA or PRACHETÂS, the Neptune of India.
- VASHISHTHA, a great Indian sage, one of those to whom the *Rig Veda* was revealed in part.

- VĀTA, air.
 VĀYU, the wind.
 VĀYU PURĀNA, one of the Purānas.
 VEDĀNTISTS, followers of the Vedānta school of Philosophy, which is divided into two branches, monists and dualists.
 VEDAS, the most authoritative of the Hindū Scriptures. The four oldest sacred books—Rig, Yajur, Sāma and Atharva—revealed to the Rishis by Brahmā.
 VEDIC, pertaining to the Vedas.
 VIDYĀ, secret knowledge.
 Vīja, the primitive germ which expands into the universe.
 VIJÑĀNAMAYA KOSHA, the sheath of knowledge; the fourth sheath of the divine monad; the fifth principle in man (Vedānta).
 VIRĀJ, the material universe.
 VISHNU, the second member of the Hindū trinity; the principle of preservation.
 VISHNUITE or VAISHNAVA, a worshipper of Vishnu; the name of a sect among the Hindūs.
 VRISHĀLAS, outcasts.
 VYĀSA, the celebrated Rishi, who collected and arranged the Vedas in their present form.
 VYAVAHĀRIKA, objective existence; practical.
 YAJNA SŪTRA, the name of the Brāhmanical thread.
 YAMA, law; the god of death.
 YASHODHARĀ, the wife of Buddha.
 YASHTS, the Pārsi prayer-books.
 YASNA, religious book of the Pārsis.
 YAVANĀCHĀRYA, the name given to Pythagoras in the Indian books.
 YAVANAS, the generic name given by the Brāhmans to younger peoples.
 YOGA SŪTRAS, a treatise on Yoga philosophy by Patanjali.
 YOGA VIDYĀ, the science of Yoga; the practical method of uniting one's own spirit with the universal spirit.
 YOGIS, mystics, who develop themselves according to the system of Patanjali's Yoga Philosophy.
 YUDHISHTHIRA, the eldest of the five brothers, called Pāndavas, whose exploits are celebrated in the great Sanskrit epic *Mahābhārata*.
 ZEND, the sacred language of ancient Persia.
 ZHING, subtle matter; Kāma Rūpa, or fourth principle (Chinese).
 ZOROASTER, the prophet of the Pārsis.

LUCIFER:

A THEOSOPHICAL MONTHLY.

FOUNDED BY

H. P. BLAVATSKY.

Devoted to Theosophical topics, treating them with special reference to the intellectual aptitudes of the West, and to the varied problems, social, scientific, and literary continually arising in the vivid activity of Western civilization.

"Has a large number of readable contributions."—*Literary World*.

"Full of capital writing. The mysteries of life and thought are treated of in a very interesting manner."—*Western Morning News*.

"Essentially a product of the present age."—*Manchester Examiner*.

"A most luxuriously printed magazine, in which the marvellous and the metaphysical are combined."—*Manchester Guardian*.

"Powerfully written."—*Perthshire Advertiser*.

Subscription price, 17s. 6d. per annum; Single numbers, 1s. 6d.

THE THEOSOPHIST.

THE POPULAR ASIATIC MAGAZINE.

CONDUCTED BY

COLONEL H. S. OLCOTT.

A Monthly Magazine of Oriental Philosophy, Art, Literature, and Occultism. It contains, each month, at least 64 pages of reading matter. It is now offered as a vehicle for the dissemination of facts and opinions connected with the Asiatic religions, philosophies, and sciences, and numbers among its contributors learned Brāhman pandits, Mohammedan, Sufi, and Buddhist native scholars, as well as those who are pursuing special studies, both practically and theoretically, in Occultism.

"A high-class literary organ. . . . We marvel at the beauty and accuracy with which this magazine is edited."—*Public Opinion*.

"The *Theosophist* should find many readers."—*Indian Spectator* (Bombay).

"Much to interest."—*Times of India*.

"Most interesting for lovers of the mystical lore."—*Bombay Gazette*.

The THEOSOPHIST is the organ of the Theosophical Society, and is published in India, at Adyar, Madras. Subscription price, 20s. per annum. Single numbers, 2s. each.

THEOSOPHICAL PUBLISHING SOCIETY, 7, DUKE STREET, ADELPHI, W.C.

THE PATH.

EDITED BY

WILLIAM Q. JUDGE.

Devoted to the Brotherhood of Humanity, Theosophy in America, and the study of Occult Science, Philosophy and Aryan Literature.

Founded in 1886.

NEW YORK: 144, Madison Avenue.

\$2 per year in advance. 20 cents per copy. Issued monthly.

Subscriptions, 8s. per annum, post free, may be sent to the Theosophical Publishing Society, 7, Duke Street, Adelphi, W.C.

Single numbers, 1s. each.

The Gul Afshān (Anglo-Gujerāti), edited by A. P. Pamar, Bombay.

THEOSOPHICAL PUBLISHING SOCIETY, 7, DUKE STREET, ADELPHI, W.C.

NEW EDITION, REVISED.

THE SECRET DOCTRINE.

BY

H. P. BLAVATSKY.

Volume I contains a general outline of the Esoteric Doctrine in its relation to the formation of the Solar System, preceded by a statement of the fundamental philosophic conceptions which underlie the entire system.

The Mysteries of Religious and Occult Symbology are treated at considerable length in a part of the work devoted to that subject; and the bearing of Modern Science upon the "Secret Doctrine" is discussed with considerable care.

Volume II deals with the Esoteric Doctrine as to the evolution of Man on this earth.

This Volume contains an account of the various origins of Man. It gives the outline of his evolutionary history down to the close of the race immediately preceding our own; the history terminating with the archaic version of the events which are related in the Bible account of the Exodus of the Israelites.

Royal Octavo. Price £2 5s. Cloth.

A Copious Index, separately bound, accompanies these volumes.

SOME OPINIONS OF THE PRESS ON THE FIRST EDITION.

"A complete exposition of the doctrine of occultism."—*Morning Post*.

"Two wonderful volumes."—*Daily Chronicle*.

"At once remarkable and interesting—remarkable for its wide range of curious and ancient lore, interesting for the light it throws on the religions of the world. Deserves to be read; it deserves to be thought over."—*Pall Mall Gazette*.

"Displays monumental learning and brilliant literary workmanship."—*Los Angeles Tribune*.

"A very exhaustive and conclusive work upon the subjects of which it treats."—*Memphis Daily Appeal*.

Theosophical Manuals

BY

ANNIE BESANT.

These Manuals are designed to meet the growing demand for a simple exposition of Theosophical teachings.

THEOSOPHICAL PUBLISHING SOCIETY, 7, DUKE STREET, ADELPHI, W.C.

From the Caves and Jungles of Hindustan.

By H. P. BLAVATSKY.

Cloth, thick 8vo, pp. 318. Price 7s. 6d.

"It is not necessary to be a Theosophist to admire Madame Blavatsky's letters from India. While they are evidence of very considerable literary power on the part of the writer, they reveal a mind already biased strongly towards Oriental mysticism, and intensely susceptible to the weirder aspects of Hindû life. Her power of penetrating into the sympathies and secrets of the natives might be imitated in moderation by Anglo-Indians with advantage."—*Times*.

"Brilliant passages."—*Glasgow Evening News*.

"The book deserves high praise. It shows a glowing imagination and a sprightly fancy, as well as much sympathy with nature; and her descriptions of scenery are often very beautiful."—*Manchester Guardian*.

"The most romantic book of travels we have ever read. Full of mystery and magnificence. No work of fiction, no book of imaginative literature, no story of travel that will issue from the press this winter, can surpass the volume before us in entrancing interest."—*Methodist Times*.

THE VOICE OF THE SILENCE:

AND OTHER EXTRACTS FROM

THE BOOK OF THE GOLDEN PRECEPTS.

Translated by H. P. BLAVATSKY.

PRICE 2s. 6d.

IN MEMORIAM H. P. B.

A SHILLING BOOK

That every Theosophist should have in order to repel the

Slandereous Attacks made on H. P. Blavatsky

BY THOSE WHO DID NOT KNOW HER.

It consists of Twenty-five Articles on her Life and Character by her friends and pupils, and is the best answer to her enemies. Well printed on good paper in blue cover, with Portrait.

A NEW THEOSOPHICAL BOOK FOR THE YOUNG.

THE WONDER-LIGHT, AND OTHER TALES.

BY

MRS. J. CAMPBELL VER-PLANCK.

Cloth, price 3s.

THEOSOPHICAL PUBLISHING SOCIETY, 7, DUKE STREET, ADELPHI, W.C.

NIGHTMARE TALES.

By H. P. BLAVATSKY.

Illustrated by R. MACHELL.

"Whatever Madame Blavatsky may or may not have been, there is no doubt that she was a wonderful writer. Although some of these stories are too horrible for anything, they all bear the distinctive mark of their author's genius. Nothing that Edgar Allan Poe ever wrote can excel the horror of the story of clairvoyance, with its awful illustration of the torture of eternity. It is impossible to read it without a shudder, for through it we get a glimpse of a region in which it is possible to conceive of hell."—*Review of Reviews*.

"The late Madame Blavatsky in the rôle of a writer of a shilling shocker is something new. Yet she plays the part in the book called *Nightmare Tales* to perfection. Her stories are marked by a weird lurid power that is enthralling, and by a cultured, graceful style that is very pleasing. . . . All the tales display strong literary power and brilliant imagination."—*Dundee Advertiser*.

"A delightful book, entitled *Nightmare Tales*, by the well-known Madame Blavatsky, is just published in small book form. . . . Replete with weird horrors, mingled with pathetic touches, which will place their writer high amongst the tellers of tales."—*Magazine Journal*.

"Whatever view is held of the author, readers will grant that she displays great literary power in weaving and depicting with graphic force these fanciful stories, which have enough of weirdness about them to furnish forth a dozen Christmas Annals of the old-fashioned ghostly type."—*Glasgow Herald*.

"Nervous people had better not read Madame Blavatsky's tales."—*Weekly Dispatch*.

"The brain-work of this extraordinary woman [H. P. Blavatsky] was prolific, but the peculiar direction in which she exercised her talents naturally restricted her students to a comparatively limited section. The *Nightmare Tales*, as the title sufficiently indicates, are of a different character, and as the imaginative element is strongly *en evidence*, the book will likely find its way into an infinitely wider sphere than that embraced by the Theosophical movement."—*Belfast Morning News*.

"These tales exhibit the powers of Madame Blavatsky as a writer, and especially her strong imaginative faculty."—*Manchester Examiner*.

"If you want something to give you the creeps, get *Nightmare Tales* by Madame Blavatsky; but don't read the book just before going to bed, or you will have nightmare."—*Bow Bells*.

"A more gruesome story than 'A Bewitched Life' it would be difficult to find; Mr. Edgar Poe might, indeed, have written it, but not without the aid of a collaborator from Hanwell. . . . It will not please Madame Blavatsky to see her book at the head of our 'shilling shockers,' but that is the position it will occupy for some time to come. *Nightmare Tales* is the very name for it."—*Illustrated London News*.

"They have, as might be expected, a large element of the occult in them, and show a certain weird power of imagination."—*Manchester Guardian*.

"They are weird and fanciful stories, chiefly based on the Theosophic idea that the soul can separate itself from the body even during life. . . . The stories are of a sensational character, and will be so far welcome to the general reader. Those who have a philosophic leaning to the study of spiritualistic or psychic phenomena will find in the stories food for reflection."—*Northampton Mercury*.

"A little volume of startling tales."—*Reynolds's Newspaper*.

ONE SHILLING.

THEOSOPHICAL PUBLISHING SOCIETY, 7, DUKE STREET, ADELPHI, W.C.
