PRICE ONE SHILLING.
Few words are needed in sending this little book out into the world. It is the seventh of a series of Manuals designed to meet the public demand for a simple exposition of Theosophical teachings. Some have complained that our literature is at once too abstruse, too technical, and too expensive, for the ordinary reader, and it is our hope that the present series may succeed in supplying what is a very real want. Theosophy is not only for the learned; it is for all. It may be that among those who in these little books catch their first glimpse of its teachings, there may be a few who will be led by them to penetrate more deeply into its philosophy, its science, and its religion, facing its abstruser problems with the student's zeal and the neophyte's ardour. But these manuals are not written for the eager student, whom no initial difficulties can daunt; they are written for the busy men and women of the work-a-day world, and seek to make plain some of the great truths that render life easier to bear and death easier to face. Written by servants of the Masters who are the Elder Brothers of our race, they can have no other object than to serve our fellow-men.
MAN AND HIS BODIES.

INTRODUCTION.

So much confusion exists as to consciousness and its vehicles, the man and the garments that he wears, that it seems expedient to place before Theosophical students a plain statement of the facts so far as they are known to us. We have reached a point in our studies at which much that was at first obscure has become clear, much that was vague has become definite, much that was accepted as theory has become matter of first-hand knowledge. It is therefore possible to arrange ascertained facts in a definite sequence, facts which can be observed again and again as successive students develop the power of observation, and to speak on them with the same certainty as is felt by the physicist who deals with other observed and tabulated phenomena. But just as the physicist may err so may the metaphysicist, and as knowledge widens new lights are thrown on old facts, their relations are more clearly seen, and their appearance changes—often because the further light shews that the fact which seemed a whole was only a fragment. No authority is claimed for the views here presented; they are
offered only as from a student to students, as an effort

to reproduce what has been taught but has doubtless
been very imperfectly apprehended, together with
such results of the observations of pupils as their
limited powers enabled them to make.

At the outset of our study it is necessary that the
Western reader should change the attitude in which he
has been accustomed to regard himself, and that he
should clearly distinguish between the man and the
bodies in which the man dwells. We are too much in
the habit of identifying ourselves with the outer
garments that we wear, too apt to think of ourselves
as though we were our bodies; and it is necessary, if
we are to grasp a true conception of our subject, that
we shall leave this point of view and shall cease to
identify ourselves with casings that we put on for a
time and again cast off, to put on fresh ones when we
are again in need of such vestures. To identify ourselves
with these bodies that have only a passing existence
is really as foolish and as unreasonable as it would be
to identify ourselves with our clothes; we are not
dependent on them—their value is in proportion to
their utility. The blunder so constantly made of
identifying the consciousness, which is our Self, with
the vehicles in which that consciousness is for the
moment functioning, can only be excused by the
fact that the waking consciousness, and to some extent
the dream consciousness also, do live and work in the
body and are not known apart from it to the ordinary
man; yet an intellectual understanding of the real
conditions may be gained, and we may train ourselves to regard our Self as the owner of his vehicles; and after a time this will by experience become for us a definite fact, when we learn to separate our Self from his bodies, to step out of the vehicle and to know that we exist in a far fuller consciousness outside it than within it, and that we are in no sense dependent upon it; when that is once achieved, any further identification of our Self with our bodies is of course impossible, and we can never again make the blunder of supposing that we are what we wear. The clear intellectual understanding at least is within the grasp of all of us, and we may train ourselves in the habitual distinction between the Self—the man—and his bodies; even to do this is to step out of the illusion in which the majority are wrapped, and changes our whole attitude towards life and towards the world, lifting us into a serener region above “the changes and chances of this mortal life,” placing us above the daily petty troubles which loom so largely to embodied consciousness, showing us the true proportion between the everchanging and the relatively permanent, and making us feel the difference between the drowning man tossed and buffeted by the waves that smother him, and the man whose feet are on a rock while the surges break harmlessly at its base.

By man I mean the living, conscious, thinking Self, the individual; by bodies, the various casings in which this Self is enclosed, each casing enabling the Self to function in some definite region of the universe.
As a man might use a carriage on the land, a ship on the water, a balloon in the air, to travel from one place to another, and yet in all places remain himself, so does the Self, the real man, remain himself no matter in what body he is functioning; and as carriage, ship and balloon vary in materials and arrangement according to the element in which each is destined to move, so does each body vary according to the environment in which it is to act. One is grosser than another, one shorter-lived than another, one has fewer capacities than another; but all have this in common—that relatively to the man they are transient, his instruments, his servants, wearing out and renewed according to their nature, and adapted to his varying needs, his growing powers. We will study them one by one, beginning with the lowest, and then take the man himself, the actor in all the bodies.
THE PHYSICAL BODY.

Under the term physical body must be included the two lower principles of man—in Theosophical parlance the Sthûla Sharîra and Linga Sharîra—since they both function on the physical plane, are composed of physical matter, are formed for the period of one physical life, are cast off by the man at death, and disintegrate together in the physical world when he passes on into the astral.

Another reason for classing these two principles as our physical body or physical vehicle, is that so long as we cannot pass out of the physical world—or plane, as we are accustomed to call it—we are using one or other or both of these physical vestures; they both belong to the physical plane by their materials, and cannot pass outside it; consciousness working in them is bound within their physical limitations, and is subject to the ordinary laws of space and time. Although partially separable, they are rarely separated during earthly life, and such separation is inadvisable, and is always a sign of disease or of ill-balanced constitution.

They are distinguishable by the materials of which they are composed into the gross body and the etheric double, the latter being the exact duplicate of the visible body, particle for particle, and the medium through which play all the electrical and vital currents
on which the activity of the body depends. This etheric double has hitherto been called the Linga Sharīra, but it seems advisable, for several reasons, to put an end to the use of the name in this relation. "Linga Sharīra" has from time immemorial been used in Hindu books in another sense, and much confusion arises among students of Eastern literature, whether Easterns or Westerns, in consequence of its arbitrary wrestling from its recognized meaning; for this reason, if for no other, it would be well to surrender its improper use. Further, it is better to have English names for the subdivisions of the human constitution, and thus remove from our elementary literature the stumbling-block to beginners of a Sanskrit terminology. Also, the name etheric double exactly expresses the nature and constitution of the subtler portion of the physical body, and is thus significant and therefore easy to remember, as every name should be; it is "etheric," because made of ether, "double" because an exact duplicate of the gross body—its shadow, as it were.

Now physical matter has seven subdivisions, distinguishable from each other, and each showing a vast variety of combinations within its own limits. The subdivisions are: solid, liquid, gas; ether, the latter having four conditions as distinct from each other as liquids are distinct from solids and gases. These are the seven states of physical matter, and any portion of such matter is capable of passing into any one of these states, although under what we call
normal temperature and pressure it will assume one or other of these as its relatively permanent condition, as gold is ordinarily solid, water is ordinarily liquid, chlorine is ordinarily gaseous. The physical body of man is composed of matter in these seven states—the gross body consisting of solids, liquids and gases, and the etheric double of the four subdivisions of ether, known respectively as Ether I, Ether II, Ether III, and Ether IV.

When the higher Theosophical truths are put before people, we find them constantly complaining that they are too much in the clouds, and asking: “Where ought we to begin? If we want to learn for ourselves and prove the truth of the assertions made, how are we to start? What are the first steps that we should take? What, in fact, is the alphabet of this language in which Theosophists discourse so glibly? What ought we to do, we men and women living in the world, in order to understand and verify these matters, instead of merely taking them on trust from others who say they know?” I am going to try to answer that question in the following pages, so that those who are really in earnest may see the earlier practical steps they ought to take—it being always understood that these steps must belong to a life the moral, intellectual and spiritual parts of which are also under training. Nothing that a man can do to the physical body alone will turn him into a seer or a saint; but it is also true that inasmuch as the body is an instrument that we have to use, certain treatment of
the body is necessary in order that we may turn our footsteps in the direction of the Path; while dealing with the body only will never take us to the heights to which we aspire, still to let the body alone will make it impossible for us to scale those heights at all. The bodies in which he has to live and work are the instruments of the man, and the very first thing we have to realize is this: that the body exists for us, not we for the body; the body is ours to use—we do not belong to it to be used by it. The body is an instrument which is to be refined, to be improved, to be trained, to be moulded into such a form and made of such constituents as may best fit it to be the instrument on the physical plane for the highest purposes of the man. Everything which tends in that direction is to be encouraged and cultivated; everything which goes contrary to it is to be avoided. It does not matter what wishes the body may have, what habits it may have contracted in the past; the body is ours, our servant, to be employed as we desire, and the moment it takes the reins into its own hands and claims to guide the man instead of being guided by the man, at that moment the whole purpose of life is subverted, and any kind of progress is rendered utterly impossible. Here is the point from which any person who is in earnest must start. The very nature of the physical body makes it a thing which can be turned fairly easily into a servant or an instrument. It has certain peculiarities which help us in training it and make it comparatively easy to guide and mould,
and one of these peculiarities is that when once it has been accustomed to work along particular lines it will very readily continue to follow those lines of its own accord, and will be quite as happy in doing so as it was previously in going along others. If a bad habit has been acquired, the body will make considerable resistance to any change in that habit; but if it be compelled to alter, if the obstacle it places in the way be overcome, and if it be forced to act as the man desires, then after a short time the body will of its own accord repeat the new habit that the man has imposed on it, and will as contentedly pursue the new method as it pursued the old one to which the man found reason to object.

Let us now turn to the consideration of the dense body that we may roughly call the visible part of the physical body, though the gaseous constituents are not visible to the untrained physical eye. This is the most outward garment of the man, his lowest manifestation, his most limited and imperfect expression of himself.

The Dense Body.—We must delay sufficiently long on the constitution of the body to enable us to understand how it is that we can take this body, purify it and train it; we must glance at a set of activities which are for the most part outside the control of the will, and then at those which are under that control. Both of these work by means of nervous systems, but by nervous systems of different kinds. One carries on all the activities of the body which maintain its
ordinary life, by which the lungs contract, by which the heart pulsates, by which the movements of the digestive system are directed. This is composed of the involuntary nerves, commonly called the "sympathetic system." At one time during the long past of physical evolution during which our bodies were built, this system was under the control of the animal possessing it, but gradually it began to work automatically—it passed away from the control of the will, took on its own quasi-independence and carried on all the normal vital activities of the body. While a person is in health he does not notice these activities; he knows that he breathes when the breathing is oppressed or checked, he knows that his heart beats when the beating is violent or irregular, but when all is in order these processes go on unnoticed. It is, however, possible to bring the sympathetic nervous system under the control of the will by long and painful practice, and a class of Yogis in India—Hatha Yogis, they are called—develop this power to an extraordinary degree, with the object of stimulating the lower psychic faculties. It is possible to evolve these (without any regard to spiritual, moral, or intellectual growth) by direct action on the physical body. The Hatha Yogi learns to control his breathing, even to the point of suspension for a considerable period, to control the beating of his heart, quickening or retarding the circulation at will, and by these means to throw the physical body into a trance and set free the astral body. The method is not one to be
emulated; but still it is instructive for western nations (who are apt to regard the body as of such imperative nature) to know how thoroughly a man can bring under his control these normally automatic physical processes, and to realize that thousands of men impose on themselves a long and exquisitely painful discipline in order to set themselves free from the prison-house of the physical body, and to know that they live when the animation of the body is suspended. They are at least in earnest, and are no longer the mere slaves of the senses.

Passing from this we have the voluntary nervous system, one far more important for our mental purposes. This is the great system which is our instrument of thought, by which we feel and move on the physical plane. It consists of the cerebro-spinal axis—the brain and spinal cord—whence go to every part of the body filaments of nervous matter, the sensory and motor nerves—the nerves by which we feel running from the periphery to the axis, and the nerves by which we move running from the axis to the periphery. From every part of the body the nerve-threads run, associating with each other to make bundles, these proceeding to join the spinal cord, forming its external fibrous substance, and passing upwards to spread out and ramify in the brain, the centre of all feeling and all purposive motion controllable by the will. This is the system through which the man expresses his will and his consciousness, and these may be said to be seated in the brain. The
man can do nothing on the physical plane except through the brain and nervous system; if these be out of order, he can no longer express himself in orderly fashion. Here is the fact on which materialism has based its contention that thought and brain-action vary together; dealing with the physical plane only, as the materialist is dealing, they do vary together, and it is necessary to bring in forces from another plane, the astral, in order to show that thought is not the result of nervous action. If the brain be affected by drugs, or by disease, or by injury, the thought of the man to whom the brain belongs can no longer find its due expression on the physical plane. The materialist will also point out that if you have certain diseases, thought will be peculiarly affected. There is a rare disease, aphasia, which destroys a particular part of the tissue of the brain, near the ear, and is accompanied by a total loss of memory so far as words are concerned; if you ask a person who is suffering from this disease a question, he cannot answer you; if you ask him his name, he will give you no reply; but if you speak his name, he will show recognition of it, if you read him some statement he will signify assent or dissent; he is able to think but unable to speak. It seems as though the part of the brain that has been eaten away were connected with the physical memory of words, so that with the loss of that the man loses on the physical plane the memory of words and is rendered dumb, while he retains the power of thought and can agree or disagree with any proposition made. The materialistic
argument at once breaks down, of course, when the
man is set free from his imperfect instrument; he is
then able to manifest his powers, though he is again
crippled when reduced once more to physical expres­
sion. The importance of this as regards our present
enquiry lies not in the validity or invalidity of the
materialistic position, but in the fact that the man is
limited in his expression on the physical plane by the
capabilities of his physical instrument, and that this
instrument is susceptible to physical agents; if these
can injure it, they can also improve it—a consideration
which we shall find to be of vital importance to us.

These nervous systems, like every part of the body,
are built up of cells, small definite bodies, with
enclosing wall and contents, visible under the
microscope, and modified according to their various
functions; these cells in their turn are made up of
small molecules, and these again of atoms—the atoms
of the chemist, each atom being his ultimate indivisible
particle of a chemical element. These chemical atoms
combine together in innumerable ways to form the
gases, the liquids and the solids of the dense body.
Each chemical atom is to the Theosophist a living
thing, capable of leading its independent life, and each
combination of such atoms into a more complex
being is again a living thing; also each cell has a life of
its own, and all these chemical atoms and molecules
and cells are combined together into an organic whole,
a body, to serve as vehicle of a loftier form of
consciousness than any which they know in their
separated lives. Now the particles of which these bodies are composed are constantly coming and going, these particles being aggregations of chemical atoms too minute to be visible to the naked eye, though many of them are visible under the microscope. If a little blood be put under the microscope we see moving in it a number of living bodies, the white and red corpuscles, the white being closely similar in structure and activity to ordinary amœbæ; in connection with many diseases microbes are found, bacilli of various kinds, and scientists tell us that we have in our bodies friendly and unfriendly microbes, some that injure us and others that pounce upon and devour deleterious intruders and effete matter. Some microbes come to us from without that ravage our bodies with disease, others that promote their health, and so these garments of ours are continually changing their materials, which come and stay for awhile, and go away to form parts of other bodies—a continual change and interplay.

Now the vast majority of mankind know little and care less for these facts, and yet on them hinges the possibility of the purification of the dense body, thus rendering it a fitter vehicle for the indwelling of man. The ordinary person lets his body build itself up anyhow out of the materials supplied to it, without regard to their nature, caring only that they shall be palatable and agreeable to his desires, and not whether they be suitable or unsuitable to the making of a pure and noble dwelling for the Self, the true man that
liveth for evermore. He exercises no supervision over these particles as they come and go, selecting none, rejecting none, but letting everything build itself in as it lists, like a careless mason who should catch up any rubbish as material for his house, floating wool and hairs, mud, chips, sand, nails, offal, filth of any kind—the veriest jerry-builder is the ordinary man with his body. The purifying of the dense body will then consist in a process of deliberate selection of the particles permitted to compose it; the man will take into it in the way of food the purest constituents he can obtain, rejecting the impure and the gross; he knows that by natural change the particles built into it in the days of his careless living will gradually pass away, at least within seven years—though the process may be considerably hastened—and he resolves to build in no more that are unclean; as he increases the pure constituents he makes in his body an army of defenders, that destroy any foul particles that may fall upon it from without or enter it without his consent; and he guards it further by an active will that it shall be pure, which, acting magnetically, continually drives away from his vicinity all unclean creatures that would fain enter his body, and thus shields it from the inroads to which it is liable while living in an atmosphere impregnated with uncleannesses of every kind.

When a man thus resolves to purify the body and to make it into an instrument fit for the Self to work with, he takes the first step towards the practice of Yoga—a step which must be taken in this or in some
other life before he can seriously ask the question, "How can I learn to verify for myself the truths of Theosophy?" All personal verification of super­physical facts depends on the complete subjection of the physical body to its owner, the man; he has to do the verification, and he cannot do it while he is fast bound within the prison of the body, or while that body is impure. Even should he have brought over from better-disciplined lives partially-developed psychic faculties, which show themselves despite present unfavourable circumstances, the use of these will be hampered when he is in the physical body, if that body be impure; it will dull or distort the exercise of the faculties when they play through it, and render their reports untrustworthy.

Let us suppose that a man deliberately chooses that he will have a pure body, and that he either takes advantage of the fact that his body completely changes in seven years, or prefers the shorter and more difficult path of changing it more rapidly—in either case he will begin at once to select the materials from which the new clean body is to be built, and the question of diet will present itself. He will immediately begin to exclude from his food all kinds which will build into his body particles which are impure and polluting. He will strike off all alcohol, and every liquor which contains it, because that brings into his physical body microbes of the most impure and disgusting kinds, products of decomposition; and these are not only disgusting in themselves, but
they attract towards themselves—and therefore towards any body of which they form part—some of the most objectionable of the physically invisible inhabitants of the next plane. Drunkards who have lost their physical bodies, and can therefore no longer satisfy their hateful longing for intoxicants, hang round places where drink is taken, and round those who take it, endeavouring to push themselves into the bodies of people who are drinking and thus to share the low pleasure to which they surrender themselves. Women of refinement would shrink from their wines if they could see the loathly creatures who seek to partake in their enjoyment, and the close connection which they thus set up with beings of the most disgusting kind. Evil elementals also cluster round, the thoughts of drunkards clad in elemental essence, while the physical body attracts to itself from the surrounding atmosphere other gross particles given off from drunken and profligate bodies, and these also are built into it, coarsening and degrading it. If we look at people who are constantly engaged with alcohol, in manufacturing or distributing spirits, wines, beers and other kinds of unclean liquors, we can see physically how their bodies have become gross and coarse. A brewer's man, a publican—to say nothing of persons in all ranks of society who drink to excess—these show fully what everyone who builds into his body any of these particles is doing in part and slowly; the more of these he builds in the coarser will his body become. And so with other
articles of diet unfit for human consumption, flesh of mammals, birds, reptiles, and fish, with that of crustaceous creatures and molluscs who feed on carrion, food polluted with blood, unfit for Aryan lips — how should bodies made of such materials be refined, sensitive, delicately balanced and yet perfectly healthy, with the strength and fineness of tempered steel, such as the man needs for all the higher kinds of work? Those who build their bodies of such corrupt materials also attract elementals of a very foul kind, such as may be seen by a psychic hanging round any butcher's shop, and sucking into their round red mouths the effluvia rising from the bleeding carcasses and the pools of blood half-hidden with sawdust. Is it necessary again to add the practical lesson that may be learned by looking at the bodies of those living in such surroundings? See the slaughterman and the butcher, and judge if their bodies look like the fittest instruments for employment on high thoughts and lofty spiritual themes. Yet they are only the highly finished product of the forces that work proportionately in all bodies that feed on the impure viands they supply. True, no amount of attention paid to the physical body by the man will of itself give him spiritual life, but why should he hamper himself with an impure body? why should he allow his powers, whether great or small, to be limited, thwarted, dwarfed in their attempts to manifest by this needlessly imperfect instrument?
There is, however, one difficulty in our way that we cannot overlook; we may take a good deal of pains with the body and may resolutely refuse to befoul it, but we are living among people who are careless and who for the most part know nothing of these facts in nature. In a town like London, or indeed in any western town, we cannot walk through the streets without being offended at every turn, and the more we refine the body the more delicately acute do the physical senses become, and the more we must suffer in a civilization so coarse and animal as is the present. Walking through the poorer and the business streets where there are beer-houses at every corner, we can scarcely ever escape the smell of drink, the effluvium from one drinking-place over-lapping that from the next—even reputedly respectable streets being thus poisoned. So again we have to pass slaughter-houses and butchers’ shops, and to travel in trains and omnibuses with bodies reeking with flesh and alcohol. Of course one knows that when civilization is a little more advanced better arrangements will be made, and something will be gained when all these unclean things are gathered in special quarters where those can seek them who want them. But meanwhile particles from these places fall on our bodies, and we breathe them in with the air. But as the normally healthy body gives no soil in which disease-microbes can germinate, so the clean body offers no soil in which these impure particles can grow. Besides, as we have seen, there are armies of living creatures
that are always at work keeping our blood pure, and these regiments of true lifeguards will charge down upon any poisonous particles that come into the city of a pure body and will destroy them and cut them to pieces. For us it is to choose whether we will have in our blood these defenders of life, or whether we will people it with the pirates that plunder and slay the good. The more resolutely we refuse to put into the body anything that is unclean, the more shall we be fortified against attacks from without.

Reference has already been made to the automatism of the body, to the fact that it is a creature of habit, and I said that use could be made of this peculiarity. If the Theosophist says to some aspirant who would fain practise Yoga and win entrance to higher planes of being: "You must then begin at once to purify the body, and this must precede the attempt to practise any Yoga worthy of the name; for real Yoga is as dangerous to an impure and undisciplined body as a match to a cask of gunpowder;" if the Theosophist should thus speak, he would very probably be met with the answer that health would suffer if such a course were to be adopted. As a dry matter of fact the body does not very much care in the long run what you give it, provided that you give it something that will keep it in health; and it will accommodate itself in a short time to any form of pure and nutritious food that you choose to adopt. Just because it is an automatic creature, it will soon stop asking for things that are steadily withheld from it,
and if you disregard its demands for the coarser and ranker kinds of food it will soon get into the habit of disliking them. Just as even a moderately natural palate will shrink with a sickening feeling of disgust from the decaying game and venison yclept 'high,' so a pure taste will revolt against all coarse foods. Suppose that a man has been feeding his body with various kinds of unclean things, his body will demand them imperiously, and he will be inclined to yield to it; but if he pays no attention to it, and goes his own way and not the way of the body, he will find, perhaps to his surprise, that his body will soon recognize its master and will accommodate itself to his orders; presently it will begin to prefer the things that he gives it, and will set up a liking for clean foods and a distaste for unclean. Habit can be used for help as well as for hindrance, and the body yields when it understands that you are the master and that you do not intend the purpose of your life to be interfered with by the mere instrument that is yours for use. The truth is that it is not the body which is chiefly in fault, but Kâma, the desire-nature. The adult body has got into the habit of demanding particular things, but if you notice a child, you will find that the child's body does not spontaneously make demands for the things on which adult bodies feast with coarse pleasure; the child's body, unless it has a very bad physical heredity, shrinks from meat and wine, but its elders force meat on it, and the father and mother give it sips of wine from their glasses at dessert, and
bid it "be a little man," till the child by its own imitative faculty and by the compulsion of others is turned into evil ways. Then, of course, impure tastes are made, and perhaps old kâmic cravings are awakened which might have been starved out, and the body will gradually form the habit of demanding the things upon which it has been fed. Despite all this in the past, make the change, and as you get rid of the particles that crave these impurities you will feel your body altering its habits and revolting against the very smell of the things that it used to enjoy. The real difficulty in the way of the reformation lies in Kâma, not in the body. You do not want to do it; if you did you would do it. You say to yourself: "After all, perhaps it does not matter so much; I have no psychic faculties, I am not advanced enough for this to make any difference." You will never become advanced if you do not endeavour to live up to the highest that is within your reach—if you allow the desire-nature to interfere with your progress. You say, "How much I should like to possess astral vision, to travel in the astral body!" but when it comes to the point you prefer a "good" dinner. If the prize for giving up unclean food were a million pounds at the end of a year, how rapidly would difficulties disappear and ways be found for keeping the body alive without meat and wine! But when only the priceless treasures of the higher life are offered, the difficulties are insuperable. If men really desired what they pretend to desire, we should have much more rapid changes around us than
we now see. But they make believe, and make believe so effectually that they deceive themselves into the idea that they are in earnest, and they come back life after life to live in the same unprogressive manner for thousands of years; and then in some particular life they wonder why they do not advance, and why somebody else has made such rapid progress in this one life while they make none. The man who is in earnest—not spasmodically but with steady persistence—can make what progress he chooses; while the man who is making believe will run round and round the mill-path for many a life to come.

Here, at any rate, in this purification of the body lies the preparation for all Yoga practice—not the whole preparation most certainly, but an essential part of it. Thus much must suffice as to the dense body, the lowest vehicle of consciousness.

The Etheric Double.—Modern physical science holds that all bodily changes, whether in the muscles, cells or nerves, are accompanied by electric action, and the same is probably true even of the chemical changes which are continually going on. Ample evidence of this has been accumulated by careful observations with the most delicate galvanometers. Whenever electric action occurs ether must be present, so that the presence of the current is proof of the presence of the ether, which interpenetrates all, surrounds all; no particle of physical matter is in contact with any other particle, but each swings in a field of ether. The Western scientist asserts as a
necessary hypothesis that which the trained pupil in Eastern science asserts as a verifiable observation, for as a matter of fact ether is as visible as a chair or a table, only a sight different from the physical is needed to see it. As has already been said, it exists in four modifications, the finest of these consisting of the ultimate physical atoms—not the so-called chemical atom, which is really a complex body—ultimate, because they yield astral matter on disintegration.

The etheric double is composed of these four ethers, which interpenetrate the solid, liquid and gaseous constituents of the dense body, surrounding every particle with an etheric envelope, and thus presenting a perfect duplicate of the denser form. This etheric double is perfectly visible to the trained sight, and is violet-gray in colour, coarse or fine in its texture as the dense body is coarse or fine. The four ethers enter into it, as solids, liquids and gases enter into the composition of the dense body, but they can be in coarser or finer combinations just as can the denser constituents; it is important to notice that the dense body and its etheric double vary together as to their quality, so that as the aspirant deliberately and consciously refines his dense body, the etheric double follows suit without his consciousness and without any additional effort.†

* See an article on "Occult Chemistry," in Lucifer, November, 1895.
† On looking at a man's lower bodies with astral vision, the
It is by means of the etheric double that the life-force, Prâna, runs along the nerves of the body and thus enables them to act as the carriers of motor force and of sensitiveness to external impacts. The powers of thought, of movement, and of feeling are not resident in physical or etheric nerve-substance; they are activities of the Ego working in his inner bodies, and the expression of them on the physical plane is rendered possible by the life-breath as it runs along the nerve-threads and round the nerve-cells; for Prâna, the etheric double (Linga Sharîra) and the astral body (kâmic body) are seen interpenetrating each other, as both interpenetrate the dense physical, and hence some confusion has arisen in the past, and the names Linga Sharîra and astral body have been used interchangeably, while the latter name has also been used for the kâmic or desire-body. This loose terminology has caused much trouble, as the functions of the kâmic body, termed the astral body, have often been understood as the functions of the etheric double, also termed the astral body, and the student, unable to see for himself, has been hopelessly entangled in apparent contradictions. Careful observations on the formation of these two bodies now enable us to say definitely that the etheric double is composed of the physical ethers only, and cannot, if extruded, leave the physical plane or go far away from its denser counterpart; further, that it is built after the mould given by the Lords of Karma, and is not brought with him by the Ego, but awaits him with the physical body formed upon it. The astral or kâmic body, the desire-body, on the other hand, is composed of astral matter only, is able to range the astral plane when freed from the physical body, and is the proper vehicle of the Ego on that plane; it is brought with him by the Ego when he comes to re-incarnate. Under these circumstances it is better to call the first the etheric double, and the second the astral body, and so avoid confusion.
life-breath, is the active energy of the Self, as Shri Shankarâchârya has taught us. The function of the etheric double is to serve as the physical medium for this energy, and hence it is often spoken of in our literature as the "vehicle of Prâna."

It may be useful to note that the etheric double is peculiarly susceptible to the volatile constituents of alcohols.

*Phenomena connected with the Physical Body.*—When a person "goes to sleep" the Ego slips out of the physical body, and leaves it to slumber and so to recuperate itself for the next day's work. The dense body and its etheric double are thus left to their own devices, and to the play of the influences which they attract to themselves by their constitution and habits. Streams of thought-forms from the astral world of a nature congruous with the thought-forms created or harboured by the Ego in his daily life, pass into and out of the dense and etheric brains, and, mingling with the automatic repetitions of vibrations set up in waking consciousness by the Ego, cause the broken and chaotic dreams with which most people are familiar.* These broken images are instructive as showing the working of the physical body when it is left to itself; it can only reproduce fragments of past vibrations without rational order or coherence, fitting them together as they are thrown up, however grotesquely incongruous

* See the articles on "Dreams" in LUCIFER, November and December, 1895, published also as Transaction No. 27 of the London Lodge.
they may be; it is insensible to absurdity or irrationality, content with a phantasmagoria of kaleidoscopic shapes and colours, without even the regularity given by the kaleidoscope-mirrors. Looked at in this way, the dense and etheric brains are readily recognized as instruments of thought, not as creators thereof, for we see how very erratic are their creations when they are left to themselves.

In sleep the thinking Ego slips out of these two bodies, or rather this one body with its visible and invisible parts, leaving them together; in death it slips out for the last time, but with this difference, that it draws out the etheric double with it, separating it from its dense counterpart and thus rendering impossible any further play of the life-breath in the latter as an organic whole. The Ego quickly shakes off the etheric double, which, as we have seen, cannot pass on to the astral plane, and leaves it to disintegrate with its lifelong partner. It will sometimes appear immediately after death to friends at no great distance from the corpse, but naturally shows very little consciousness, and will not speak or do anything beyond “manifesting” itself. It is comparatively easily seen, being physical, and a slight tension of the nervous system will render vision sufficiently acute to discern it. It is also responsible for many “churchyard ghosts,” as it hovers over the grave in which its physical counterpart is lying, and is more readily visible than astral bodies for the reason just given. Thus even “in death they are not divided” by more than a few feet of space.
For the normal man it is only at death that this separation takes place, but some abnormal people of the type called mediumistic are subject to a partial division of the physical body during earth-life, a dangerous and fortunately a comparatively rare abnormality which gives rise to much nervous strain and disturbance. When the etheric double is extruded the double itself is rent in twain; the whole of it could not be separated from the dense body without causing the death of the latter, since the currents of the life-breath need its presence for their circulation. Even its partial withdrawal reduces the dense body to a state of lethargy, and the vital activities are almost suspended; extreme exhaustion follows the re-uniting of the severed parts, and the condition of the medium until the normal union is re-established is one of considerable physical danger. The greater number of the phenomena that occur in the presence of mediums are not connected with this extrusion of the etheric double, but some who have been distinguished for the remarkable character of the materializations which they have assisted in producing offer this peculiarity to observation. I am informed that Mr. Eglinton exhibited this curious physical dissociation to a rare extent, and that his etheric double might be seen oozing from his left side, while his dense body shrivelled perceptibly; and that the same phenomenon has been observed with Mr. Husk, whose dense body became too reduced to fill out his clothes. Mr. Eglinton’s body once was so diminished in size that a
materialized form carried it out and presented it for the inspection of the sitters—one of the few cases in which both medium and materialized form have been visible together in light sufficient to allow of examination. This shrinkage of the medium seems to imply the removal of some of the denser "ponderable" matter from the body—very possibly part of the liquid constituents—but, so far as I am aware, no observations have been made on this point, and it is therefore impossible to speak with any certainty. What is certain is that this partial extrusion of the etheric double results in much nervous trouble, and that it should not be practised by any sensible person if he finds that he is unfortunate enough to be liable to it.

We have now studied the physical body both in its dense and etheric parts, the vesture which the Ego must wear for his work on the physical plane, the dwelling which may be either his convenient office for physical work, or his prison-house of which death alone holds the key. We can see what we ought to have and what we can gradually make—a body perfectly healthy and strong, and at the same time delicately organised, refined, and sensitive. Healthy it should be—and in the East health is insisted on as a condition of discipleship—for everything that is unhealthy in the body mars it as an instrument of the Ego, and is apt to distort both the impressions sent inwards and the impulses sent outwards. The activities of the Ego are hindered if his instrument be strained or twisted by ill-health. Healthy, then,
delicately organised, refined, sensitive, repelling automatically all evil influences, automatically receptive of all good—such a body we should deliberately build, choosing among all the things that surround us those that conduce to that end, knowing that the task can be accomplished only gradually, but working on patiently and steadily with that object in view. We shall know when we are beginning to succeed even to a very limited extent, for we shall find opening up in us all kinds of powers of perception that we did not before possess. We shall find ourselves becoming more sensitive to sounds and sights, to fuller, softer, richer harmonies, to tenderer, fairer, lovelier hues. Just as the painter trains his eye to see the delicacies of colour to which common eyes are blind; just as the musician trains his ear to hear overtones of notes to which common ears are deaf; so may we train our bodies to be receptive to the finer vibrations of life missed by ordinary men. True, many unpleasant sensations will come, for the world we are living in is rendered rough and coarse by the humanity that dwells in it; but on the other hand, beauties will reveal themselves that will repay us a hundredfold for the difficulties we face and overcome. And this, not that we may possess such bodies for selfish purposes either of vanity or of enjoyment, but in order that we, the men who own them, may own them for wider usefulness, for added strength to serve. They will be more efficient instruments with which to help the progress of humanity, and so more fit to aid in that
task of forwarding human evolution which is the work of our great Masters, and in which it may be our privilege to co-operate.

Although we have been only on the physical plane throughout this part of our subject, we may yet see that the study is not without importance, and that the lowest of the vehicles of consciousness needs our attention and will repay our care. These cities of ours, this land of ours, will be cleaner, fairer, better, when this knowledge has become common knowledge, and when it is accepted not only as intellectually probable, but as a law of daily life.
THE ASTRAL BODY.

We have studied the physical body of man both as to its visible and invisible parts, and we understand that man—the living, conscious entity—in his "waking" consciousness, living in the physical world, can only show so much of his knowledge and manifest so much of his powers as he is able to express through his physical body. According to the perfection or imperfection of its development will be the perfection or imperfection of his expression on the physical plane; it limits him while he functions in the lower world, forming a veritable "ring pass-not" around him. That which cannot pass through it cannot manifest on earth, and hence its importance to the developing man. In the same way when the man is functioning without the physical body in another region of the universe, the astral plane or astral world, he is able to express on that plane just so much of his knowledge and his powers, of himself in short, as his astral body enables him to put forth. It is at once his vehicle and his limitation. The man is more than his bodies; he has in him much that he is unable to manifest either on the physical or on the astral plane; but so much as he is able to express may be taken as the man himself in that particular region of the universe. What he can show of himself down here is limited by the physical body; what he can show of himself in the astral world is limited by the astral body; so we shall find as we rise to higher worlds in our study, that more and more
of the man is able to express itself as he himself develops in his evolution, and also gradually brings towards perfection higher and higher vehicles of consciousness.

It may be well to remind the reader, as we are entering on fields comparatively untrodden and to the majority unknown, that no claim is here put forward to infallible knowledge or to perfect power of observation. Errors of observation and of inference may be made on planes above the physical as well as on the physical, and this possibility should always be kept in mind. As knowledge increases and training is prolonged, more and more accuracy will be reached, and such errors will thus gradually be eliminated. But as the writer is only a student, mistakes are likely to be made and to need correction in the future. They may creep in on matters of detail, but will not touch the general principles nor vitiate the main conclusions.

First, let the meaning of the words astral plane or astral world be clearly grasped. The astral world is a definite region of the universe, surrounding and interpenetrating the physical, but imperceptible to our ordinary observation because it is composed of a different order of matter. If the ultimate physical atom be taken and broken up, it vanishes so far as the physical world is concerned; but it is found to be composed of numerous particles of the grossest kind of astral matter—the solid matter of the astral world.*

* The word “astral,” starry, is not a very happy one, but it has been used during so many centuries to denote super-physical
We have found seven sub-states of physical matter—solid, liquid, gaseous and four etheric—under which are classified the innumerable combinations which make up the physical world. In the same way we have seven sub-states of astral matter, corresponding to the physical, and under these may be classified the innumerable combinations which similarly make up the astral world. All physical atoms have their astral envelopes, the astral matter thus forming what may be called the matrix of the physical, the physical being embedded in the astral. The astral matter serves as a vehicle for Jīva, the One Life animating all, and by means of the astral matter currents of Jīva surround, sustain, nourish every particle of physical matter, these currents of Jīva giving rise not only to what are popularly called vital forces, but also to all electrical, magnetic, chemical and other energies, attraction, cohesion, repulsion, and the like, all of which are differentiations of the One Life in which universes swim as fishes in the sea. From the astral world thus intimately interpenetrating the physical, Jīva passes to the ether of the latter, which then becomes the vehicle of all these forces to the lower sub-states of physical matter, wherein we observe their play. If we imagine matter that it would now be difficult to dislodge it. It was probably at first chosen by observers in consequence of the luminous appearance of astral as compared with physical matter. The student is advised to read, on this whole subject, Manual No. v., *The Astral Plane*, by C. W. Leadbeater.
the physical world to be struck out of existence without any other change being made, we should still have a perfect replica of it in astral matter, and if we further imagine everyone to be dowered with working astral faculties, men and women would at first be unconscious of any difference in their surroundings; "dead" people who wake up in the lower regions of the astral world often find themselves in such a state and believe themselves to be yet living in the physical world. As most of us have not yet developed astral vision, it is necessary to enforce this relative reality of the astral world as a part of the phenomenal universe, and to see it with the mental eye, if not with the astral. It is as real as—in fact, not being quite so far removed from the One Reality it is more real than—the physical; its phenomena are open to competent observation like those of the physical plane. Just as down here a blind man cannot see physical objects, and as many things can only be observed with the help of apparatus—the microscope, spectroscope, &c.—so is it with the astral plane. Astrally blind people cannot see astral objects at all, and many things escape ordinary astral vision, or clairvoyance. But at the present stage of evolution many people could develop the astral senses and are developing them to some extent, thus enabling themselves to receive the subtler vibrations of the astral plane. Such persons are indeed liable to make many mistakes, as a child makes mistakes when he begins to use his physical senses, but these mistakes
are corrected by wider experience, and after a time they can see and hear as accurately on the astral as on the physical plane. It is not desirable to force this development by artificial means, for until some amount of spiritual strength has been evolved the physical world is about as much as can conveniently be managed, and the intrusion of astral sights, sounds, and general phenomena is apt to be disturbing and even alarming. But the time comes when this stage is reached and when the relative reality of the astral part of the invisible world is borne in upon the waking consciousness.

For this it is necessary not only to have an astral body, as we all of us have, but to have it fully organized and in working order, the consciousness being accustomed to act in it, not only to act through it on the physical body. Everyone is constantly working through the astral body, but comparatively few work in it separated from the physical. Without the general action through the astral body there would be no connection between the external world and the mind of man, no connection between impacts made on the physical senses and the perception of them by the mind. The impact becomes a sensation in the astral body, and is then perceived by the mind. The astral body, in which are the centres of sensation, is often spoken of as the astral man, just as we might call the physical body the physical man; but it is of course only a vehicle—a sheath, as the Vedântin would call it—in which the man himself is function-
ing, and through which he reaches, and is reached by, the grosser vehicle, the physical body.

As to the constitution of the astral body, it is made up of the seven sub-states of astral matter, and may have coarser or finer materials drawn from each of these. It is easy to picture a man in a well-formed astral body; you can think of him as dropping the physical body and standing up in a subtler, more luminous copy of it, visible in his own likeness to clairvoyant vision, though invisible to ordinary sight. I have said “a well-formed astral body,” for an undeveloped person in his astral body presents a very inchoate appearance. Its outline is undefined, its materials are dull and ill-arranged, and if withdrawn from the body it is a mere shapeless shifting cloud obviously unfit to act as an independent vehicle; it is in truth rather a fragment of astral matter than an organized astral body—a mass of astral protoplasm of an amœboid type. A well-formed astral body means that a man has reached a fairly high level of intellectual culture or of spiritual growth, so that the appearance of the astral body is significant of the progress made by its owner; by the definiteness of its outline, the luminosity of its materials, and the perfection of its organization, one may judge of the stage of evolution reached by the Ego using it.

As regards the question of its improvement—a question important to us all—it must be remembered that the improvement of the astral body hinges on the one side on the purification of the physical body, and
on the other on the purification and development of the mind. The astral body is peculiarly susceptible to impressions from thought, for astral matter responds more rapidly than physical to every impulse from the world of mind. For instance, if we look at the astral world we find it full of continually changing shapes; we find there "thought-forms"—forms composed of elemental essence and animated by a thought—and we also notice vast masses of this elemental essence, from which continually shapes emerge and into which they again disappear; watching carefully, we may see that currents of thought thrill this astral matter, that strong thoughts take a covering of it and persist as entities for a long time, while weak thoughts clothe themselves feebly and waver out again, so that all through the astral world changes are ever going on under thought-impulses. The astral body of man, being made of astral matter, shares this readiness to respond to the impact of thought, and thrills in answer to every thought that strikes it, whether the thoughts come from without, from the minds of other men, or come from within, from the mind of its owner.

Let us study this astral body under these impacts from within and without. We see it permeating the physical body and extending around it in every direction like a coloured cloud. The colours vary with the nature of the man, with his lower, animal, passionate nature, and the part outside the physical body is called the kâmic aura, as belonging to the kâma or desire
body, commonly called the astral body of man.* For the astral body is the vehicle of man’s kāmic consciousness, the seat of all animal passions and desires, the centre of the senses, as already said, where all sensations arise. It changes its colours continually as it vibrates under thought-impacts; if a man loses his temper, flashes of scarlet appear; if he feels love, rose-red thrills through it. If the man’s thoughts are high and noble they demand finer astral matter to answer to them, and we trace this action on the astral body in its loss of the grosser and denser particles from each sub-plane, and its gain of the finer and rarer kinds. The astral body of a man whose thoughts are low and animal is gross, thick, dense, and dark in colour—often so dense that the outline of the physical body is almost lost in it; whereas that of an advanced man is fine, clear, luminous and bright in colour, a really beautiful object. In such a case the lower passions have been dominated, and the selective action of the mind has refined the astral matter. By thinking nobly, then, we purify the astral body, even without having

* This separation of the “aura” from the man, as though it were something different from himself, is misleading, although very natural from the point of view of observation. The “aura” is the cloud round the body, in ordinary parlance; really, the man lives on the various planes in such garments as befit each, and all these garments or bodies interpenetrate each other; the lowest and smallest of these is called “the body,” and the mixed substances of the other garments are called the aura when they extend beyond that body. The kāmic aura, then, is merely such part of the kāmic body as extends beyond the physical.
consciously worked towards that end. And be it remembered that this inner working exercises a potent influence on the thoughts that are attracted from without to the astral body; a body which is made by its owner to respond habitually to evil thoughts acts as a magnet to similar thought-forms in its vicinity, whereas a pure astral body acts on such thoughts with a repulsive energy, and attracts to itself thought-forms composed of matter congruous with its own.

As said above, the astral body hinges on one side to the physical, and it is affected by the purity or impurity of the physical body. We have seen that the solids, liquids, gases and ethers of which the physical body is composed may be coarse or refined, gross or delicate. Their nature will in turn affect the nature of their corresponding astral envelopes. If, unwisely careless about the physical, we build into our dense bodies solid particles of an impure kind, we attract to ourselves the correspondingly impure kind of what we will call the solid astral. As we, on the other hand, build into our dense bodies solid particles of purer type, we attract the correspondingly purer type of solid astral matter. As we carry on the purification of the physical body by feeding it on clean food and drink, by excluding from our diet the polluting kinds of aliment—the blood of animals, alcohol, and other things that are foul and degrading—we not only improve our physical vehicle of consciousness, but we also begin to purify the astral vehicle and take from the astral world more delicate
and finer materials for its construction. The effect of this is not only important as regards the present earthly life, but it has a distinct bearing also—as we shall see later—on the next post-mortem state, on the stay in the astral world, and also on the kind of body we shall have in the next life upon earth.

Nor is this all: the worse kinds of food attract to the astral body entities of a mischievous kind belonging to the astral world, for we have to do not only with astral matter, but also with what are called the elementals of that region. These are entities of higher and lower types existing on that plane, given birth to by the thoughts of men, and there are also in the astral world depraved men imprisoned in their astral bodies, known as elementaries. The elementals are attracted towards people whose astral bodies contain matter congenial to their nature, while the elementaries naturally seek those who indulge in vices such as they themselves encouraged while in physical bodies. Any person endowed with astral vision sees, as he walks along our London streets, hordes of loathsome elementals crowding round our butchers' shops, and in beer-houses and gin-palaces elementaries specially gather, feasting on the foul emanations of the liquors, and thrusting themselves, when possible, into the very bodies of the drinkers. These beings are attracted by those who build their bodies out of these materials, and such people have these surroundings as part of their astral life. So it goes on through each stage of the astral plane; as we
purify the physical we draw to ourselves correspondingly pure stages of the astral matter.

Now of course the possibilities of the astral body largely depend on the nature of the materials we build into it; as by the process of purification we make these bodies finer and finer, they cease to vibrate in answer to the lower impulses, and begin to answer to the higher influences of the astral world. We are thus making an instrument which, though by its very nature sensitive to influences coming to it from without, is gradually losing the power of responding to the lower vibrations, and is taking on the power of answering to the higher—an instrument which is tuned to vibrate only to the higher notes. As we can take a wire to produce a sympathetic vibration, choosing to that end its diameter, its length and its tension, so we can attune our astral bodies to give out sympathetic vibrations when noble harmonies are sounded in the world around us. This is not a mere matter of speculation or of theory; it is a matter of scientific fact. As here we tune the wire or the string, so there we can tune the strings of the astral body; the law of cause and effect holds good there as well as here; we appeal to the law, we take refuge in the law, and on that we rely. All we need is knowledge, and the will to put the knowledge into practice. This knowledge you may take and experiment on first, if you will, as a mere hypothesis, congruous with facts known to you in the lower world; later on, as you purify the astral body, the hypothesis will change into
knowledge; it will be a matter of your own first-hand observation, so that you will be able to verify the theories you originally accepted only as working hypotheses.

Our possibilities then of mastering the astral world, and of becoming of real service there, depend first of all on this process of purification. There are definite methods of Yoga by which development of the astral senses may be helped forward in a rational and healthy way, but it is not of the least use to try to teach these to anyone who has not been using these simple preparatory means of purification. It is a common experience that people are very anxious to try some new and unusual method of progress, but it is idle to instruct people in Yoga when they will not even practise these preparatory stages in their ordinary life. Suppose one began to teach some very simple form of Yoga to an ordinary unprepared person; he would take it up eagerly and enthusiastically because it was new, because it was strange, because he hoped for very quick results, and before he had been working at it for even a year he would get tired of the regular strain of it in his daily life and disheartened by the absence of immediate effect; unused to persistent effort, steadily maintained day after day, he would break down and give up his practice; the novelty outworn, weariness would soon assert itself. If a person cannot or will not accomplish the simple and comparatively easy duty of purifying the physical and astral bodies by using a temporary self-denial to break the bonds of
evil habits in eating and drinking, it is idle for him to hanker after more difficult processes which attract by reason of their novelty and would soon be dropped as an intolerable burden. All talk even of special methods is idle until these ordinary humble means have been practised for some time; but with the purification new possibilities will begin to show themselves. The pupil will find knowledge gradually flow into him, keener vision will awaken, vibrations will reach him from every side, arousing in him response which could not have been made by him in the days of blindness and obtuseness. Sooner or later, according to the Karma of his past, this experience becomes his, and just as a child mastering the difficulties of the alphabet has the pleasure of the book it can read, so the student will find coming to his knowledge and under his control possibilities of which he had not dreamed in his careless days, new vistas of knowledge opening out before him, a wider universe unfolding on every side.

If now, for a few moments, we study the astral body as regards its functions in the sleeping and waking states, we shall be able easily and rapidly to appreciate its functions when it becomes a vehicle of consciousness apart from the body. If we study a person when he is awake and when he is asleep we shall become aware of one very marked change as regards the astral body; when he is awake, the astral activities — the changing colours and so on — all manifest themselves in and immediately around the physical body; but when he is asleep a separation has
occurred, and we see the physical body—the dense body and the etheric double—lying by themselves on the bed, while the astral body is floating in the air above them.* If the person we are studying is one of mediocre development, the astral body when separated from the physical is the somewhat shapeless mass before described; it cannot go far away from its physical body, it is useless as a vehicle of consciousness, and the man within it is in a very vague and dreamy condition, unaccustomed to act away from his physical vehicle; in fact, he may be said to be almost asleep, failing the medium through which he has been accustomed to work, and he is not able to receive definite impressions from the astral world or express himself clearly through the poorly-organized astral body. The centres of sensation in it may be affected by passing thought-forms, and he may answer in it to stimuli that rouse the lower nature; but the whole effect given to the observer is one of sleepiness and vagueness, the astral body lacking all definite activity and floating idly, inchoate, above the sleeping physical form. If anything should occur tending to lead or drive it away from its physical partner, the latter will awaken and the astral will quickly re-enter it. But if a person be observed who is much more developed, say one who is accustomed to function in the astral world and to use the astral body for that purpose, it will be seen that when the physical body goes to sleep

* See for a fuller description the articles on “Dreams” before referred to.
and the astral body slips out of it, we have the man himself before us in full consciousness; the astral body is clearly outlined and definitely organized, bearing the likeness of the man, and the man is able to use it as a vehicle—a vehicle far more convenient than the physical. He is wide awake, and is working far more actively, more accurately, with greater power of comprehension, than when he was confined in the denser physical vehicle, and he can move about freely and with immense rapidity at any distance, without causing the least disturbance to the sleeping body on the bed.

If such a person has not yet learned to link together his astral and physical vehicles, if there be a break in consciousness when the astral body slips out as he falls asleep, then, while he himself will be wide awake and fully conscious on the astral plane, he will not be able to impress on the physical brain on his return to his denser vehicle the knowledge of what he has been doing during his absence; under these circumstances his "waking" consciousness—as it is the habit to term the most limited form of our consciousness—will not share the man's experiences in the astral world, not because he does not know them, but because the physical organism is too dense to receive these impressions from him. Sometimes, when the physical body awakes, there is a feeling that something has been experienced of which no memory remains; yet this very feeling shews that there has been some functioning of consciousness in the astral world away from the
physical body, though the brain is not sufficiently recep-
tive to have even an evanescent memory of what has
occurred. At other times when the astral body returns
to the physical, the man succeeds in making a momen-
tary impression on the etheric double and dense body,
and when the latter awake there is a vivid memory of
an experience gained in the astral world; but the
memory quickly vanishes and refuses to be recalled,
every effort rendering success more impossible, as each
effort sets up strong vibrations in the physical brain,
and still further overpowers the subtler vibrations of
the astral. Or yet again, the man may succeed
in impressing new knowledge on the physical
brain without being able to convey the memory of
where or how that knowledge was gained; in such
cases ideas will arise in the waking consciousness
as though spontaneously generated, solutions will
come of problems before uncomprehended, light will
be thrown on questions before obscure. When this
occurs, it is an encouraging sign of progress, showing
that the astral body is well organized and is function-
ing actively in the astral world, although the physical
body is still but very partially receptive. Sometimes,
however, the man succeeds in making the physical
brain respond, and then we have what is regarded
as a very vivid, reasonable and coherent dream, the
kind of dream which most thoughtful people have
occasionally enjoyed, in which they feel more alive,
not less, than when “awake,” and in which they may
even receive knowledge which is helpful to them in
their physical life. All these are stages of progress, marking the evolution and improving organization of the astral body.

But on the other hand it is well to understand that persons who are making real and even rapid progress in spirituality may be functioning most actively and usefully in the astral world without impressing on the brain when they return the slightest memory of the work in which they have been engaged, although they may be aware in their lower consciousness of an ever-increasing illumination and widening knowledge of spiritual truth. There is one fact which all students may take as matter of encouragement, and on which they may rely with confidence, however blank their physical memory may be as regards super-physical experiences: as we learn to work more and more for others, as we endeavour to become more and more useful to the world, as we grow stronger and steadier in our devotion to the Elder Brothers of humanity, and seek ever more earnestly to perform perfectly our little share in Their great work, we are inevitably developing that astral body and that power of functioning in it which render us more efficient servants; whether with or without physical memory, we leave our physical prisons in deep sleep and work along useful lines of activity in the astral world, helping people we should otherwise be unable to reach, aiding and comforting in ways we could not otherwise employ. This evolution is going on with those who are pure in mind, elevated in thought, with
their hearts set on the desire to serve. They may be working for many a year in the astral world without bringing back the memory to their lower consciousness, and exercising powers for good to the world far beyond anything of which they suppose themselves to be capable: to them, when Karma permits, shall come the full unbroken consciousness which passes at will between the physical and astral worlds; the bridge shall be made which lets the memory cross from the one to the other without effort, so that the man returning from his activities in the astral world will don again his physical vesture without a moment's loss of consciousness. This is the certainty that lies before all those who choose the life of service. They will one day acquire this unbroken consciousness; and then to them life shall no longer be composed of days of memoried work and nights of oblivion, but it will be a continuous whole, the body put aside to take the rest necessary for it, while the man himself uses the astral body for his work in the astral world; then they will keep the links of thought unbroken, knowing when they leave the physical body, knowing while they are passing out of it, knowing their life away from it, knowing when they return and again put it on: thus they will carry on week after week, year after year, the unbroken, unwearied consciousness which gives the absolute certainty of the existence of the individual Self, of the fact that the body is only a garment that they wear, put on and off at pleasure, and not a necessary instrument of thought and life.
They will know that so far from its being necessary to either, life is far more active, thought far more untrammelled without it.

When this stage is reached a man begins to understand the world and his own life in it far better than he did before, begins to realize more of what lies in front of him, more of the possibilities of the higher humanity. Slowly he sees that just as man acquires first physical and then astral consciousness, so there stretch above him other and far higher ranges of consciousness that he may acquire one after the other, becoming active on loftier planes, ranging through wider worlds, exercising vaster powers, and all as the servant of the Holy Ones for the assistance and benefit of humanity. Then physical life begins to assume its true proportion, and nothing that happens in the physical world can affect him as it did ere he knew the fuller, richer life, and nothing that death can do can touch him either in himself or in those he desires to assist. The earth-life takes its true place as the smallest part of human activity, and it can never again be as dark as it used to be, for the light of the higher regions shines down into its obscurest recesses.

Turning from the study of the functions and possibilities of the astral body, let us consider now certain phenomena connected with it. It may show itself to other people apart from the physical body, either during or after earth-life. A person who has complete mastery over the astral body can, of course, leave the physical at any time and go to a friend
at a distance. If the person thus visited be clairvoyant, *i.e.*, has developed astral sight, he will see his friend’s astral body; if not, such a visitor might slightly densify his vehicle by drawing into it from the surrounding atmosphere particles of physical matter, and thus “materialize” sufficiently to make himself visible to physical sight. This is the explanation of many of the appearances of friends at a distance, phenomena which are far more common than most people imagine, owing to the reticence of timid folk who are afraid of being laughed at as superstitious. Fortunately that fear is lessening, and if people would only have the courage and common sense to say what they know to be true, we should soon have a large mass of evidence on the appearances of people whose physical bodies are far away from the places where their astral bodies show themselves. These bodies may, under certain circumstances, be seen by those who do not normally exercise astral vision, without materialization being resorted to. If a person’s nervous system be overstrained and the physical body be in weak health so that the pulses of vitality throb less strongly than usual, the nervous activity so largely dependent on the etheric double may be unduly stimulated, and under these conditions the man may become temporarily clairvoyant. A mother, for instance, who knows her son to be dangerously ill in a foreign land, and who is racked by anxiety about him, may thus become susceptible to astral vibrations, especially in the hours of the
night at which vitality is at its lowest; under these conditions, if her son be thinking of her, and his physical body be unconscious, so as to permit him to visit her astrally, she will be likely to see him. More often such a visit is made when the person has just shaken off the physical body at death. These appearances are by no means uncommon, especially where the dying person has a strong wish to reach someone to whom he is closely bound by affection, or where he desires to communicate some particular piece of information, and has passed away without fulfilling his wish.

If we follow the astral body after death, when the etheric double has been shaken off as well as the dense body, we shall observe a change in its appearance. During its connection with the physical body the sub-states of astral matter are intermixed with each other, the denser and the rarer kinds interpenetrating and intermingling. But after death a re-arrangement takes place, and the particles of the different sub-states separate from each other, and, as it were, sort themselves out in the order of their respective densities, the astral body thus assuming a stratified condition, or becoming a series of concentric shells of which the densest is outside. And here we are again met with the importance of purifying the astral body during our life on earth, for we find that it cannot, after death, range the astral world at will; that world has its seven sub-planes, and the man is confined to the sub-plane to which the matter of his
external shell belongs; as this outermost covering disintegrates he rises to the next sub-plane, and so on from one to another. A man of very low and animal tendencies would have in his astral body much of the grossest and densest kind of astral matter, and this would hold him down on the lowest level of Kâmaloka; until this shell is disintegrated to a great extent the man must remain imprisoned in that section of the astral world, and suffer the annoyances of that most undesirable locality. When this outermost shell is sufficiently disintegrated to allow escape, the man passes to the next level of the astral world, or perhaps it is more accurate to say that he is able to come into contact with the vibrations of the next sub-plane of astral matter, thus seeming to himself to be in a different region; there he remains till the shell of the sixth sub-plane is worn away and permits his passage to the fifth, his stay on each sub-plane corresponding to the strength of those parts of his nature represented in the astral body by the amount of the matter belonging to that sub-plane. The greater the quantity then of the grosser sub-states of matter, the longer the stay on the lower kâmalokic levels, and the more we can get rid of those elements here the briefer will be the delay on the other side of death. Even where the grosser materials are not eliminated completely—a process long and difficult being necessary for their entire eradication—the consciousness may during earth life be so persistently withdrawn from the lower passions that the matter by which they can find
expression will cease to function actively as a vehicle of consciousness—will become atrophied, to borrow a physical analogy. In such case, though the man will be held for a short time on the lower levels, he will sleep peacefully through them, feeling none of the disagreeables accompanying them; his consciousness, having ceased to seek expression through such kinds of matter, will not pass outwards through them to contact objects composed of them in the astral world.

The passage through Kâmaloka of one who has so purified the astral body that he has only retained in it the purest and finest elements of each sub-plane—such as would at once pass into the matter of the sub-plane next above if raised another degree—is swift indeed. There is a point known as the critical point between every pair of sub-states of matter; ice may be raised to a point at which the least increment of heat will change it into liquid; water may be raised to a point at which the next increment will change it into vapour. So each sub-state of astral matter may be carried to a point of fineness at which any additional refinement would transform it into the next sub-state. If this have been done for every sub-state of matter in the astral body, if it have been purified to the last possible degree of delicacy, then its passage through Kâmaloka will be of inconceivable rapidity, and the man will flash through it untrammelled in his flight to loftier regions.

One other matter remains in connection with the purification of the astral body, both by physical and
mental processes, and that is the effect of such purification on the new astral body that will in due course of time be formed for use in the next succeeding incarnation. When the man passes out of Kâmaloka into Devachan, he cannot carry thither with him thought-forms of an evil type; astral matter cannot exist on the devachanic level, and devachanic matter cannot answer to the coarse vibrations of evil passions and desires. Consequently all that the man can carry with him when he finally shakes off the remnants of his astral body will be the latent germs or tendencies which, when they can find nutriment or outlet, manifest as evil desires and passions in the astral world. But these he does take with him, and they lie latent throughout his devachanic life. When he returns for rebirth he brings these back with him and throws them outwards; they draw to themselves from the astral world by a kind of magnetic affinity the appropriate materials for their manifestation, and clothe themselves in astral matter congruous with their own nature, so forming part of the man's astral body for the impending incarnation. Thus we are not only living in an astral body now, but are fashioning the type of the astral body which will be ours in another birth—one reason the more for purifying the present astral body to the utmost, using our present knowledge to insure our future progress.

For all our lives are linked together, and none of them can be broken away from those that lie behind it or from those that stretch in front. In truth, we
have but one life in which what we call lives are really only days. We never begin a new life with a clean sheet on which to write an entirely new story; we do but begin a new chapter which must develop the old plot. We can no more get rid of the karmic liabilities of a preceding life by passing through death, than we can get rid of the pecuniary liabilities incurred on one day by sleeping through a night; if we incur a debt to-day we are not free of it to-morrow, but the claim is presented until it is discharged. The life of man is continuous, unbroken; the earth-lives are linked together, and not isolated. The processes of purification and development are also continuous, and must be carried on through many successive earth-lives. Some time or other each of us must begin the work; some time or other each will grow weary of the sensations of the lower nature, weary of being in subjection to the animal, weary of the tyranny of the senses. Then the man will no longer consent to submit, he will decide that the bonds of his captivity shall be broken. Why, indeed, should we prolong our bondage, when it is in our own power to break it at any moment? No hand can bind us save our own, and no hand save our own can set us free. We have our right of choice, our freedom of will, and inasmuch as one day we shall all stand together in the higher world, why should we not begin at once to break our bondage, and to claim our divine birthright? The beginning of the shattering of the fetters, of the winning of liberty, is when a man determines that he will make
the lower nature the servant of the higher, that here on the plane of physical consciousness he will begin the building of the higher bodies, and will seek to realise those loftier possibilities which are his by right divine, and are only obscured by the animal in which he lives.
We have already studied at some length the physical and astral bodies of man. We have studied the physical both in its visible and invisible parts, working on the physical plane; we have followed the various lines of its activities, have analyzed the nature of its growth, and have dwelt upon its gradual purification. Then we have considered the astral body in a similar fashion, tracing its growth and functions, dealing with the phenomera connected with its manifestation on the astral plane, and also with its purification. Thus we have gained some idea of human activity on two out of the seven great planes of our universe. Having done so, we can now pass on to the third great plane, the mind world; when we have learned something of this we shall have under our eyes the physical, the astral, and the mental worlds—our globe and the two spheres surrounding it—as a triple region, wherein man is active during his earthly incarnations and wherein he dwells also during the periods which intervene between the death that closes one earth-life and the birth which opens another. These three concentric spheres are man’s school-house and kingdom: in them he works out his development, in them his evolutionary pilgrimage; beyond them he may not consciously pass until the gateway of Initiation has opened before him, for out of these three worlds there is no other way.
This third region that I have called the mind world includes, though it is not identical with, that which is familiar to Theosophists under the name of Devachan or Devaloka, the land of the Gods, the happy or blessed land, as some translate it. Devachan bears that name because of its nature and condition, nothing interfering with that world which may cause pain or sorrow; it is a specially guarded state, into which positive evil is not allowed to intrude, the blissful resting-place of man in which he peacefully assimilates the fruits of his physical life.

A preliminary word of explanation regarding the mind world as a whole is necessary in order to avoid confusion. While, like the other regions, it is subdivided into seven sub-planes, it has the peculiarity that these seven are grouped into two sets—a three and a four. The three upper sub-planes are technically called arûpa, or without body, owing to their extreme subtlety, while the four lower are called rûpa, or with body. Man has two vehicles of consciousness, consequently, in which he functions on this plane, to both of which the term mind body is applicable. The lower of these, the one with which we shall first deal, may however be allowed to usurp the exclusive use of the name until a better one be found for it; for the higher one is known as the causal body, for reasons which will become clear further on. Students will be familiar with the distinction between the Higher and Lower Manas; the causal body is that of the Higher Manas, the permanent body of the
Ego, or man, lasting from life to life; the mind body is that of the Lower Manas, lasting after death and passing into Devachan, but disintegrating when the life on the rûpa levels of Devachan is over.

(a) The Mind Body.—This vehicle of consciousness belongs to, and is formed of, the matter of the four lower levels of Devachan. While it is especially the vehicle of consciousness for that part of the mental plane, it works upon and through the astral and physical bodies in all the manifestations that we call those of the mind in our ordinary waking consciousness. In the undeveloped man, indeed, it cannot function separately on its own plane as an independent vehicle of consciousness during his earthly life, and when such a man exercises his mental faculties, they must clothe themselves in astral and physical matter ere he can become conscious of their activity. The mind body is the vehicle of the Ego, the Thinker, for all his reasoning work, but during his early life it is feebly organized and somewhat inchoate and helpless, like the astral body of the undeveloped man.

The matter of which the mind body is composed is of an exceedingly rare and subtle kind. We have already seen that astral matter is much less dense than even the ether of the physical plane, and we have now to enlarge our conception of matter still further, and to extend it to include the idea of a substance invisible to astral sight as well as to physical, far too subtle to be perceived even by the “inner” senses of man. This matter belongs to the
fifth plane counting downwards, or the third plane counting upwards, of our universe, and in this matter the Self manifests as mind, as in the next below it (the astral) it manifests as sensation. There is one marked peculiarity about the mind body, as its outer part shows itself in the human aura; it grows, increases in size and in activity, incarnation after incarnation, with the growth and development of the man himself. This peculiarity is one to which so far we are not accustomed. A physical body is built incarnation after incarnation, varying according to nationality and sex, but we think of it as very much the same in size since Atlantean days. In the astral body we found growth in organization as the man progressed. But the mind body literally grows in size with the advancing evolution of the man. If we look at a very undeveloped person, we shall find that the mind body is even difficult to distinguish—that it is so little evolved that some care is necessary to see it at all. Looking then at a more advanced man, one who is not spiritual, but who has developed the faculties of the mind, who has trained and developed the intellect, we shall find that the mind body is acquiring a very definite development, and that it has an organization that can be recognized as a vehicle of activity; it is a clear and definitely outlined object, fine in material and beautiful in colour, continually vibrating with enormous activity, full of life, full of vigour, the expression of the mind in the world of the mind.
As regards its nature, then, made of this subtle matter; as regards its functions, the immediate vehicle in which the Self manifests as intellect; as regards its growth, growing life after life in proportion to the intellectual development, becoming also more and more definitely organized as the attributes and the qualities of the mind become more and more clearly marked. It does not, like the astral body, become a distinct representation of the man in form and feature, when it is working in connection with the astral and physical bodies; it is oval—egg-like—in outline, interpenetrating of course the physical and astral bodies, and surrounding them with a radiant atmosphere as it develops—becoming, as I said, larger and larger as the intellectual growth increases. Needless to say, this egg-like form becomes a very beautiful and glorious object as the man develops the higher capacities of the mind; it is not visible to astral sight, but is clearly seen by the higher vision which belongs to the world of mind. Just as an ordinary man living in the physical world sees nothing of the astral world—though surrounded by it—until the astral senses are opened, so a man in whom only the physical and astral senses are active will see nothing of the mind world, or of forms composed of its matter, unless the mental senses be opened, albeit it surrounds us on every side.

These keener senses, the senses which belong to the mind world, differ very much from the senses with which we are familiar here. The very word “senses”
in fact is a misnomer, for we ought rather to say the mental "sense." The mind comes into contact with the things of its own world as it were directly over its whole surface. There are no distinct organs for sight, hearing, touch, taste and smell; all the vibrations which we should here receive through separate sense-organs, in that region give rise to all these characteristics at once when they come into touch with the mind. The mind body receives them all at one and the same time, and is as it were conscious all over of everything which is able to impress it at all.

It is not easy to convey in words any clear idea of the way this sense receives an aggregate of impressions without confusion, but it may perhaps be best described by saying that if a trained student passes into that region, and there communicates with another student, the mind in speaking speaks at once by colour, sound, and form, so that the complete thought is conveyed as a coloured and musical picture instead of only a fragment of it being shown, as is done here by the symbols we call words. Some readers may have heard of ancient books written by great Initiates in colour-language, the language of the Gods; that language is known to many chelâs and is taken, so far as form and colour are concerned, from the mind world "speech," in which the vibrations from a single thought give rise to form, to colour and to sound. It is not that the mind thinks a colour, or thinks a sound, or thinks a form; it thinks a thought,
a complex vibration in subtle matter, and that thought expresses itself in all these ways by the vibrations set up. The matter of the mind world is constantly being thrown into vibrations which give birth to these colours, to these sounds, to these forms; and if a man be functioning in the mind body apart from the astral and the physical, he finds himself entirely freed from the limitations of their sense-organs, receptive at every point to every vibration that in the lower world would present itself as separate and different from its fellows.

When, however, a man is thinking in his waking consciousness and is working through his astral and physical bodies, then the thought has its producer in the mind body and passes out, first to the astral and then to the physical; when we think, we are thinking by our mind body—that is, the agent of thought, the consciousness which expresses itself as "I." The "I" is illusory, but it is the only "I" known to the majority of us. When we were dealing with the consciousness of the physical body, we found that the man himself was not conscious of all that was going on in the physical body itself, that its activities were partially independent of him, that he was not able to think as the tiny separate cells were thinking, that he did not really share that consciousness of the body as a whole. But when we come to the mind body we come to a region so closely identified with the man that it seems to be himself; "I think," "I know"—can we go behind
that? The mind is the Self in the mind body, and it is that which for most of us seems the goal of our search after the Self. But this is only true if we are confined to the waking consciousness. Anyone who has learned that the waking consciousness, like the sensations of the astral body, is only a stage of our journey as we seek the Self, and who has further learned to go beyond it, will be aware that this in its turn is but an instrument of the real man. Most of us, however, as I say, do not separate, cannot separate in thought, the man from his mind body, which seems to them to be his highest expression, his highest vehicle, the highest self they can in any way touch or realise. This is the more natural and inevitable in that the individual, the man, at this stage of evolution, is beginning to vivify this body and to bring it into pre-eminent activity. He has vivified the physical body as a vehicle of consciousness in the past, and is using it in the present as a matter of course. He is vivifying the astral body in the backward members of the race, but in very large numbers this work is at least partially accomplished; in this Fifth Race he is working at the mind body, and the special work on which humanity should now be engaged is the building, the evolution of this body.

We are then much concerned to understand how the mind body is built and how it grows. It grows by thought. Our thoughts are the materials we build into this mind body; by the exercise of our mental faculties, by the development of our artistic powers,
our higher emotions, we are literally building the mind body day by day, each month and year of our lives. If you are not exercising your mental abilities, if so far as your thoughts are concerned you are a receptacle and not a creator; if you are constantly accepting from outside instead of forming from within; if as you go through life the thoughts of other people are crowding into your mind; if this be all you know of thought and of thinking, then, life after life, your mind body cannot grow; life after life you come back very much as you went out; life after life you remain as an undeveloped individual. For it is only by the exercise of the mind itself, using its faculties creatively, exercising them, working with them, constantly exerting them—it is only by these means that the mind body can develop, and that the truly human evolution can proceed.

The very moment you begin to realize this you will probably try to change the general attitude of your consciousness in daily life; you will begin to watch its working; and as soon as you do this you will notice that, as just said, a great deal of your thinking is not your thinking at all, but the mere reception of the thoughts of other people: thoughts that come you do not know how; thoughts that arrive you do not know whence; thoughts that take themselves off again you do not know whither; and you will begin to feel, probably with some distress and disappointment, that instead of the mind being highly evolved it is little more than a place through which thoughts are passing.
Try yourself, and see how much of the content of your consciousness is your own, and how much of it consists merely of contributions from outside. Stop yourself suddenly now and then during the day, and see what you are thinking about, and on such a sudden checking you will probably either find that you are thinking about nothing—a very common experience—or that you are thinking so vaguely that a very slight impression is made upon anything you can venture to call your mind. When you have tried this a good many times, and by the very trying have become more self-conscious than you were, then begin to notice the thoughts you find in your mind, and see what difference there is between their condition when they came into the mind and their condition when they go out of it—what you have added to them during their stay with you. In this way your mind will become really active, and will be exercising its creative powers, and if you be wise you will follow some such process as this: first, you will choose the thoughts that you will allow to remain in the mind at all; whenever you find in the mind a thought that is good you will dwell upon it, nourish it, strengthen it, try to put into it more than it had at first, and send it out as a beneficent agent into the astral world; when you find in the mind a thought that is evil you will turn it out with all imaginable promptitude. Presently you will find that as you welcome into your mind all thoughts that are good and useful, and refuse to entertain thoughts which are evil, this result will appear: that more and
more good thoughts will flow into your mind from without, and fewer and fewer evil thoughts will flow into it. The effect of making your mind full of good and useful thoughts will be that it will act as a magnet for all the similar thoughts that are around you; as you refuse to give any sort of harbourage to evil thoughts, those that approach you will be thrown back by an automatic action of the mind itself. The mind body will take on the characteristic of attracting all thoughts that are good from the surrounding atmosphere, and repelling all thoughts that are evil, and it will work upon the good and make them more active, and so constantly gather a mass of mental material which will form its content, and will grow richer every year. When the time comes when the man shall shake off the astral and physical bodies finally, passing into the mind world, he will carry with him the whole of this gathered-up material; he will take with him the content of consciousness into the region to which it properly belongs, and he will use his devachanic life in working up into faculties and powers the whole of the materials which it has stored.

At the end of the devachanic period the mind body will hand on to the permanent causal body the characteristics thus fashioned, that they may be carried on into the next incarnation. These faculties, as the man returns, will clothe themselves in the matter of the rūpa planes of the mind world, forming the more highly organized and developed mind body for the coming earth life, and they will show themselves
through the astral and physical bodies as the "innate faculties," those with which the child comes into the world. During the present life we are gathering together materials in the way which I have sketched; during the devachanic life we work up these materials, changing them from separate efforts of thought into faculty of thought, into mental powers and activities. That is the immense change made during the devachanic life, and inasmuch as it is limited by the use we are making of the earth-life, we shall do well to spare no efforts now. The mind body of the next incarnation depends on the work we are doing in the mind body of the present; here is then the immense importance to the evolution of the man of the use which he is now making of his mind body; it limits his activities in Devachan, and by limiting those activities it limits the mental qualities with which he will return for his next life upon earth. We cannot isolate one life from another, nor miraculously create something out of nothing. Karma brings the harvest according to our sowing; scanty or plentiful is the crop as the labourer gives seed and tillage.

The automatic action of the mind body, spoken of above, may perhaps be better understood if we consider the nature of the materials on which it draws for its building. The Universal Mind, to which it is allied in its inmost nature, is the storehouse in its material aspect from which it draws these materials. They give rise to every kind of vibration, varying in quality and in power according to the combinations made.
The mind body automatically draws to itself from the general storehouse matter that can maintain the combinations already existing in it, for there is a constant changing of particles in the mind body as in the physical, and the place of those which leave is taken by similar particles that come. If the man finds that he has evil tendencies and sets to work to change them, he sets up a new set of vibrations, and the mind body, moulded to respond to the old ones, resists the new, and there is conflict and suffering. But gradually, as the older particles are thrown out and are replaced by others that answer to the new vibrations—being attracted from outside by their very power to respond to them—the mind body changes its character, changes, in fact, its materials, and its vibrations become antagonistic to the evil and attractive to the good. Hence the extreme difficulty of the first efforts, met and combated by the old form-aspect of the mind; hence the increasing ease of right thinking as the old form changes, and finally, the spontaneity and the pleasure that accompany the new exercise.

Another way of helping the growth of the mind body is the practice of concentration; that is, the fixing of the mind on a point and holding it there firmly, not allowing it to drift or wander. We should train ourselves in thinking steadily and consecutively, not allowing our minds to run suddenly from one thing to another, nor to fritter their energies away over a large number of insignificant thoughts. It is a good practice to follow a consecutive line of reasoning, in
which one thought grows naturally out of the thought that went before it, thus gradually developing in ourselves the intellectual qualities which make our thoughts sequential and therefore essentially rational; for when the mind thus works, thought following thought in definite and orderly succession, it is strengthening itself as an instrument of the Self for activity in the mind world. This development of the power of thinking with concentration and sequence will show itself in a more clearly outlined and definite mind body, in a rapidly increasing growth, in steadiness and balance, the efforts being well repaid by the progress which results from them.

(b) The Causal Body.—Let us now pass on to the second mind body, known by its own distinctive name of causal body. The name is due to the fact that all the causes reside in this body which manifest themselves as effects on the lower planes. This body is the “body of Manas,” the form-aspect of the individual, of the true man. It is the receptacle, the storehouse, in which all the man’s treasures are stored for eternity, and it grows as the lower nature hands up more and more that is worthy to be built into its structure. The causal body is that into which everything is woven which can endure, and in which are stored the germs of every quality, to be carried over to the next incarnation; thus the lower manifestations depend wholly on the growth and development of this man for “whom the hour never strikes.”
The causal body, it is said above, is the form aspect of the individual. Dealing, as we do here only with the present human cycle, we may say that until that comes into existence there is no man; there may be the physical and etheric tabernacles prepared for his habitation; passions, emotions and appetites may gradually be gathered to form the kâmic nature in the astral body; but there is not man until the growth through the physical and astral planes has been accomplished, and until the matter of the mind world is beginning to show itself within the evolved lower bodies. When, by the power of the Self preparing its own habitation, the matter of the mind plane begins slowly to evolve, then there is a downpouring from the great ocean of Ātmâ-Buddhi which is ever brooding over the evolution of man—and this, as it were, meets the upward-growing, unfolding mind stuff, comes into union with it, fertilizes it, and at that point of union the causal body, the individual, is formed. Those who are able to see in those lofty regions say that this form-aspect of the true man is like a delicate film of subtlest matter, just visible, marking where the individual begins his separate life; that delicate, colourless film of subtle matter is the body that lasts through the whole of the human evolution, the thread on which all the lives are strung, the re-incarnating Sûtrâtmâ, the “thread-self.” It is the receptacle of all which is in accordance with the Law, of every attribute which is noble and harmonious and therefore enduring. It is that which marks the
growth of man, the stage of evolution to which he has attained. Every great and noble thought, every pure and lofty emotion, is carried up and worked into his substance.

Let us take the life of an ordinary man and try to see how much of that life will pass upwards for the building of the causal body, and let us imagine it pictorially as a delicate film; it is to be strengthened, to be made beautiful with colour, made active with life, made radiant and glorious, increasing in size as the man grows and develops. At a low stage of evolution he is not showing much mental quality, but rather he is manifesting much passion, much appetite. He feels sensations and seeks them; they are the things to which he turns. It is as though this inner life of the man put forth a little of the delicate matter of which it is composed, and round that the mind body gathers; and the mind body puts forth into the astral world, and there comes into contact with the astral body, and becomes connected with it, so that a bridge is formed along which anything capable of passing can pass. The man sends his thoughts downwards by this bridge into the world of sensations, of passions, of animal life, and the thoughts intermingle with all these animal passions and emotions; thus the mind body becomes entangled with the astral body, and they adhere to each other and are difficult to separate when the time of death comes. But if the man, during the life which he is spending in these lower regions, has an unselfish thought, a thought of service
to someone he loves, and makes some sacrifice in order to do service to his friend, he has then set up something that is able to endure, something that is able to live, something that has in it the nature of the higher world; that can pass upwards to the causal body and be worked into its substance, making it more beautiful, giving it, perhaps, its first touch of intensity of colour; perhaps all through the man's life there will only be a few of these things that are able to endure, to serve as food for the growth of the real man. So the growth is very slow, for all the rest of his life does not aid it; all his evil tendencies, born of ignorance and fed by exercise, have their germs drawn inward and thrown into latency as the astral body which gave them home and form is dissipated in the astral world; they are drawn inward into the mind body and lie latent there, lacking material for expression in the devachanic world; when the mind body in its turn perishes, they are drawn into the causal body, and there still lie latent, as in suspended animation. They are thrown outwards as the Ego, returning to earth-life, reaches the astral world, reappearing there as evil tendencies brought over from the past. Thus the causal body may be spoken of as the storehouse of evil as well as good, being all that remains of the man after the lower vehicles are dissipated, but the good is worked into its texture and aids its growth, while the evil, with the exception noted below, remains as germ.

But the evil which a man works in life, when he
puts into its execution his thought, does more injury to the causal body than merely to lie latent in it, as the germ of future sin and sorrow. It is not only that the evil does not help the growth of the true man, but where it is subtle and persistent it drags away, if the expression may be permitted, something of the individual himself. If vice be persistent, if evil be continually followed, the mind body becomes so entangled with the astral that after death it cannot free itself entirely, and some of its very substance is torn away from it, and when the astral dissipates this goes back to the mind stuff of the mind world and is lost to the individual; in this way, if we think again of our image of a film, or bubble, it may be to some extent thinned by vicious living—not only delayed in its progress, but something wrought upon it which makes it more difficult to build into. It is as though the film were in some way affected as to capacity of growth, sterilised or atrophied to some extent. Beyond this, in ordinary cases, the harm wrought to the causal body does not go.

But where the Ego has become strong both in intellect and will without at the same time increasing in unselfishness and love, where it contracts itself round its own separated centre instead of expanding as it grows, building a wall of selfishness around it and using its developing powers for the "I" instead of for the all; in such cases arises the possibility alluded to in so many of the world-scriptures, of more dangerous and ingrained evil, of the Ego setting
itself consciously against the Law, of fighting de­
liberately against evolution. Then the causal body
itself, wrought on by vibrations on the mental plane
of intellect and will, but both turned to selfish ends,
shows the dark hues which result from contraction,
and loses the dazzling radiance which is its character­
istic property. Such harm cannot be worked by a
poorly developed Ego nor by ordinary passional or
mental faults; to effect injury so far-reaching the
Ego must be highly evolved, and must have its
energies potent on the manasic plane. Therefore is it
that ambition, pride, and the powers of the intellect
used for selfish aims are so far more dangerous, so far
more deadly in their effects, than the more palpable
faults of the lower nature, and the "Pharisee" is often
further from the "kingdom of God" than "the pub­
lican and the sinner." Along this line is developed
the "black magician" the man who conquers passion
and desire, develops will and the higher powers of
the mind, not to gladly offer them as forces to help
forward the evolution of the whole, but in order to
grasp all he can for himself as unit, to hold and not
to share. These set themselves to maintain separa­
tion as against unity, they strive to retard instead of
to quicken evolution; therefore they vibrate in discord
with the whole instead of in harmony, and are in
danger of that rending of the Ego which means the
loss of all the fruits of evolution.

All of us who are beginning to understand some­
thing of this causal body can make its evolution a
definite object in our life; we can strive to think
unselfishly and so contribute to its growth and activity. Life after life, century after century, millennium after millennium, this evolution of the individual proceeds, and in aiding its growth by conscious effort we are working in harmony with the divine will, and carrying out the purpose for which we are here. Nothing good that is once woven into the texture of this causal body is ever lost, nothing is dissipated; for this is the man that lives for ever.

Thus we see that by the law of evolution everything that is evil, however strong for the time it may seem, has within itself the germ of its own destruction, while everything that is good has in it the seed of immortality; the secret of this lies in the fact that everything evil is inharmonious, that it sets itself against the kosmic law; it is therefore sooner or later broken up by that law, dashed into pieces against it, crushed into dust. Everything that is good, on the other hand, being in harmony with the law, is taken on by it, carried forward; it becomes part of the stream of evolution, of that “not ourselves which makes for righteousness,” and therefore it can never perish, can never be destroyed. Here lies not only the hope of man but the certainty of his final triumph; however slow the growth, it is there; however long the way, it has its ending. The individual which is our Self is evolving, and cannot now be utterly destroyed; even though by our folly we may make the growth slower than it need be, none the less everything we contribute to it, however little, lasts in it for ever, and is our possession for all the ages that lie in front.
OTHER BODIES.

We may rise one step further, but in doing so we enter a region so lofty that it is well-nigh beyond our treading, even in imagination. For the causal body itself is not the highest, and the “Spiritual Ego” is not Manas, but Manas united to, merged in, Buddhi. This is the culmination of the human evolution, the end of the revolution on the wheel of births and deaths. Above the plane with which we have been dealing lies a yet higher, sometimes called that of Turiya, the plane of Buddhi.* Here the vehicle of consciousness is the spiritual body, the Anandamayakosha, or body of bliss, and into this Yogis can pass, and in it taste the eternal bliss of that glorious world, and realize in their own consciousness the underlying unity, which then becomes to them a fact of experience and no longer only an intellectual belief. We may read of a time that comes to the man when he has grown in love, wisdom and power, and when he passes through a great gateway, marking a distinct stage in his evolution. It is the gateway of Initiation, and the man led through it by his Master rises for the first time into the spiritual body, and experiences in it the unity which underlies all the diversity of the physical world and all its separateness, which underlies the

* This plane has also been called that of Sushupti. See Manuals iv. and v.
separateness of the astral plane and even of the mental region. When these are left behind and the man, clothed in the spiritual body, rises beyond them, he then finds for the first time in his experience that separateness belongs only to the three lower worlds; that he is one with all others, and that, without losing self-consciousness, his consciousness can expand to embrace the consciousness of others, can become verily and indeed one with them. There is the unity after which man is always yearning, the unity he has felt as true and has vainly tried to realize on lower planes; there it is realized beyond his loftiest dreamings, and all humanity is found to be one with his innermost Self.

Temporary Bodies.—We cannot leave out of our review of man's bodies certain other vehicles that are temporary, and may be called artificial, in their character. When a man begins to pass out of the physical body he may use the astral, but so long as he is functioning in that he is limited to the astral world. It is possible, however, for him to use the mind body—that of the Lower Manas—in order to pass into the mental region, and in this he can also range the astral and physical planes without let or hindrance. The body thus used is often called the Māyāvi Rūpa, or body of illusion, and it is the mind body re-arranged, so to speak, for separate activity. The man fashions his mind body into the likeness of himself, shapes it into his own image and likeness, and is then in this temporary and artificial body free to traverse the three
planes at will and rise superior to the ordinary limitations of man. It is this artificial body that is often spoken of in Theosophical books, in which a person can travel from land to land, passing also into the world of mind, learning there new truths, gathering new experience, and bringing back to the waking consciousness the treasures thus collected. The advantage of using this higher body is that it is not subject to deception and glamour on the astral plane as is the astral body. The untrained astral senses often mislead, and much experience is needed ere their reports can be trusted, but this temporarily formed mind body is not subject to such deceptions; it sees with a true vision, it hears with a true hearing; no astral glamour can overpower, no astral illusion can deceive; therefore this body is preferably used by those trained for such journeyings, made when it is wanted, let go again when the purpose for which it was made is served. Thus it is that the student often learns lessons that otherwise could not reach him, and receives instructions from which he would otherwise be entirely shut off.

Other temporary bodies have been called by the name of Mâyâvi Rûpa, but it seems better to restrict the term to the one just described. A man may appear at a distance in a body which is really a thought-form more than a vehicle of consciousness, thought clothed in the elemental essence of the astral plane. These bodies are, as a rule, merely vehicles of some particular thought, some special volition, and outside this show
no consciousness. They need only be mentioned in passing.

The Human Aura.—We are now in a position to understand what the human aura, in its fullest sense, really is. It is the man himself, manifest at once on the four planes of consciousness, and according to its development is his power of functioning on each; it is the aggregate of his bodies, of his vehicles of consciousness; in a phrase, it is the form-aspect of the man. It is thus that we should regard it, and not as a mere ring or cloud surrounding him. Most glorious of all is the spiritual body, visible in Initiates, through which plays the living atmic fire; this is the manifestation of the man on the buddhic plane. Then comes the causal body, his manifestation in the highest mental world, on the arūpa levels of the plane of mind, where the individual has his home. Next the mind body, belonging to the lower mental planes, and the astral, etheric, and dense bodies in succession, each formed of the matter of its own region, and expressing the man as he is in each. When the student looks at the human being he sees all these bodies making up the man, showing themselves separately by virtue of their different grades of matter, and thus marking the stage of development at which the man has arrived. As the higher vision is developed the student sees each of these bodies in its full activity. The physical body is visible as a kind of dense crystallization in the centre of the other bodies, the others permeating it and extending beyond its
periphery, the physical being the smallest. The astral comes next, showing the state of the kâmic nature that forms so great a part of the ordinary man, full of his passions, lower appetites and emotions, differing in fineness, in colour, as the man is more or less pure—very dense in the grosser types, finer in the more refined, finest of all if the man be far advanced in his evolution. Then the mind body, poorly developed in the majority but beautiful in many, very various in colouring according to the mental and moral type. Then the causal, scarcely visible in most, visible only if careful scrutiny be brought to bear on the man, so slightly is it developed, so comparatively thin is its colouring, so feeble is its activity. But when we come to look at an advanced soul, it is this and the one above it that at once strike the eye as being emphatically the presentation of the man; radiant in light, most glorious and delicate in colouring, showing hues that no language can describe, because they have no place in earth's spectrum—hues not only most pure and beautiful, but entirely different from the colours known on the lower planes, additional ones which show the growth of the man in those higher regions in the loftier qualities and powers that there exist. If the eye be fortunate enough to be blessed with the sight of one of the Great Ones, He appears as this mighty living form of life and colour, radiant and glorious, showing forth His nature by His very appearance to the view; beautiful beyond description, resplendent beyond imagination. Yet what He
is all shall one day become; that which He is in accomplishment dwells in every son of man as possibility.

There is one point about the aura that I may mention, as it is one of practical utility. We can to a great extent protect ourselves against the incursions of thoughts from outside by making a spherical wall round us from the auric substance. The aura responds very readily to the impulse of thought, and if by an effort of the imagination we picture its outer edge as densified into a shell, we really make such a protective wall around us. This shell will prevent the incoming of the drifting thoughts that fill the astral atmosphere, and thus will prevent the disturbing influence they exercise over the untrained mind. The drain on our vitality that we sometimes feel, especially when we come into contact with people who unconsciously vampirize their neighbours, may also be guarded against by the formation of a shell, and any one who is sensitive and who finds himself very exhausted by such a drain will do wisely thus to protect himself. Such is the power of human thought on subtle matter that to think of yourself as within such a shell is to have it formed around you.

Looking at human beings around us on every side we may see them in every stage of development, showing themselves forth by their bodies according to the point in evolution which they have reached, living on plane after plane of the universe, functioning in region after region, as they develop the corresponding
vehicles of consciousness. Our aura shows just what we are; we add to it as we grow in the true life; we purify it as we live noble and cleanly lives; we weave into it higher and higher qualities.

Is it possible that any philosophy of life should be more full of hope, more full of strength, more full of joy than this? Looking over the world of men with the physical eye only, we see it degraded, miserable, apparently hopeless, as in truth it is to the eye of flesh. But that same world of men appears to us in quite another aspect when seen by the higher vision. We see indeed the sorrow and the misery, we see indeed the degradation and the shame; but we know that they are transient, that they are temporary, that they belong to the childhood of the race and that the race will outgrow them. Looking at the lowest and vilest, at the most degraded and most brutal, we can yet see their divine possibilities, we can yet realize what they shall be in the years to come. That is the message of hope brought by Theosophy to the western world, the message of universal redemption from ignorance, and therefore of universal emancipation from misery—not in dream but in reality, not in hope but in certainty. Everyone who in his own life is showing the growth, is, as it were, a fresh realization and enforcement of the message; everywhere the first-fruits are appearing, and the whole world shall one day be ripe for the harvest, and shall accomplish the purpose for which the LOGOS gave it birth.
THE MAN.

We have now to turn to the consideration of the man himself, no longer studying the vehicles of consciousness but the action of the consciousness on them, no longer looking at the bodies but at the entity who functions in them. By “the man” I mean that continuing individual who passes from life to life, who comes into bodies and again leaves them, over and over again, who develops slowly in the course of ages, who grows by the gathering and by the assimilation of experience, and who exists on that higher manasic or mental plane referred to in the last chapter. This man is to be the subject of our study, functioning on the three planes with which we are now familiar—the physical, the astral and the mental.

Man begins his experiences by developing self-consciousness on the physical plane; it is here that appears what we call the “waking consciousness,” the consciousness with which we are all familiar, which works through the brain and nervous system, by which we reason in the ordinary way, carrying on all logical processes, by which we remember past events of the current incarnation, and exercise judgment in the affairs of life. All that we recognize as our mental faculties is the outcome of the man’s work through the preceding stages of his pilgrimage, and his self-consciousness here becomes more and more vivid, more and more active, more and more alive, we
may say, as the individual develops, as the man progresses life after life.

If we study a very undeveloped man, we find his self-conscious mental activity to be poor in quality and limited in quantity. He is working in the physical body through the gross and etheric brains; action is continually going on, so far as the whole nervous system is concerned, visible and invisible, but the action is of a very clumsy kind. There is in it very little discrimination, very little delicacy of mental touch. There is some mental activity, but it is of a very infantile or childish kind. It is occupied with very small things; it is amused by very trivial occurrences; the things that attract its attention are things of a petty character; it is interested in passing objects; it likes to sit at a window and look out at a busy street, watching people and vehicles go by, making remarks on them, overwhelmed with amusement if a well-dressed person tumbles into a puddle or is badly splashed by a passing cab. It has not much in itself to occupy its attention, and therefore it is always rushing outwards in order to feel that it is alive; it is one of the chief characteristics of this low stage of mental evolution that the man working at the physical and etheric bodies and bringing them into order as vehicles of consciousness, is always seeking violent sensations; he needs to make sure that he is feeling and to learn to distinguish things by receiving from them strong and vivid sensations; it is a quite necessary
stage of progress, though an elementary one, and without this he would continually be becoming confused, confused between the processes within his vehicle and without it; he must learn the alphabet of the self and the not-self, by distinguishing between the objects causing impacts and the sensations caused by impacts, between the stimulus and the feeling. The lowest types of this stage may be seen gathered at street-corners, lounging idly against a wall, and indulging occasionally in a few ejaculatory remarks and in cackling outbursts of empty laughter. Any one able to look into their brains finds that they are receiving somewhat blurred impressions from passing objects, and that the links between these impressions and others like them are very slight. The impressions are more like a heap of pebbles than a well-arranged mosaic.

In studying the way in which the physical and etheric brains become vehicles of consciousness, we have to run back to the early development of the Ahamkāra, or “I-ness,” a stage that may be seen in the lower animals around us. Vibrations caused by the impact of external objects are set up in the brain, transmitted by it to the astral body, and felt by the consciousness as sensations, before there is any linking of these sensations to the objects that caused them, this linking being a definite mental action—a perception. When perception begins the consciousness is using the physical and etheric brains as a vehicle for itself, by means of which it gathers
knowledge of the external world. This stage is long past in our humanity, of course, but its fleeting repetition may be seen when the consciousness takes up a new brain in coming to rebirth; the child begins to "take notice," as the nurses say, that is, to relate a sensation arising in itself to an impression made upon its new sheath, or vehicle, by an external object, and thus to "notice" the object, to perceive it.

After a time the perception of an object is not necessary in order that the picture of that object may be present to the consciousness, and it finds itself able to recall the appearance of an object when it is not contacted by any sense; such a memoried perception is an idea, a concept, a mental image, and these make up the store which the consciousness gathers from the outside world. On these it begins to work, and the first stage of this activity is the arrangement of the ideas, the preliminary to "reasoning" upon them. Reasoning begins by comparing the ideas with each other, and then by inferring relations between them from the simultaneous or sequential happening of two or more of them, time after time. In this process the consciousness has withdrawn within itself, carrying with it the ideas it has made out of perceptions, and it goes on to add to them something of its own, as when it infers a sequence, relates one thing to another as cause and effect. It begins to draw conclusions, even to forecast future happenings when it has established a sequence, so that when the perception regarded as "cause"
appears the perception regarded as “effect” is expected to follow. Again, it notices in comparing its ideas that many of them have one or more elements in common, while their remaining constituents are different, and it proceeds to draw these common characteristics away from the rest and to put them together as the characteristics of a class, and then it groups together the objects that possess these, and when it sees a new object which possesses them it throws it into that class; in this way it gradually arranges into a cosmos the chaos of perceptions with which it began its mental career, and infers law from the orderly succession of phenomena, and the types it finds in nature. All this is the work of the consciousness in and through the physical brain, but even in this working we trace the presence of that which the brain does not supply. The brain merely receives vibrations; the consciousness working in the astral body changes the vibrations into sensations, and in the mental body changes the sensations into perceptions, and then carries on all the processes which, as just said, transform the chaos into cosmos. And the consciousness thus working is, further, illuminated from above with ideas that are not fabricated from materials supplied by the physical world, but are reflected into it directly from the Universal Mind. The great “laws of thought” regulate all thinking, and the very act of thinking reveals their pre-existence, as it is done by them and under them, and is impossible without them.
It is unnecessary almost to remark that all these earlier efforts of consciousness to work in the physical vehicle are subject to much error, both from imperfect perception and from mistaken inferences. Hasty inferences, generalizations from limited experience, vitiate many of the conclusions arrived at, and the rules of logic are formulated in order to discipline the thinking faculty, and to enable it to avoid the fallacies into which it constantly falls while untrained. But none the less the attempt to reason, however imperfectly, from one thing to another is a distinct mark of growth in the man himself, for it shows that he is adding something of his own to the information contributed from outside. This working on the collected materials has an effect on the physical vehicle itself. When the mind links two perceptions together, it also sets up—as it is causing corresponding vibrations in the brain—a link between the sets of vibrations from which the perceptions arose. For as the mind body is thrown into activity, it acts on the astral body and this again on the etheric and dense bodies, and the nervous matter of the latter vibrates under the impulses sent through; this action shews itself as electrical discharges, and magnetic currents play between molecules and groups of molecules, causing intricate inter-relations. These leave what we may call a nervous track, a track along which another current will run more easily than it can run, say, athwart it, and if a group of molecules that were concerned in a vibration should be again made
active by the consciousness repeating the idea that was impressed upon them, the disturbance there set up readily runs along the track formed between it and another group by a previous linking, and calls that other group into activity, and it sends up to the mind a vibration which, after the regular transformations, presents itself as an associated idea. Hence the great importance of association, this action of the brain being sometimes exceedingly troublesome, as when some foolish or ludicrous idea has been linked with a serious or a sacred one. The consciousness calls up the sacred idea in order to dwell upon it, and suddenly, quite without its consent, the grinning face of the intruding idea, sent up by the mechanical action of the brain, thrusts itself through the doorway of the sanctuary and defiles it. Wise men pay attention to association, and are careful how they speak of the most sacred things, lest some foolish and ignorant person should make a connecting link between the holy and the silly or the coarse, a link which afterwards would be likely to repeat itself in the consciousness. Useful is the precept of the great Jewish Teacher: “Give not that which is holy to the dogs, neither cast ye your pearls before swine.”

Another mark of progress appears when a man begins to regulate his conduct by conclusions arrived at within, instead of by impulses received from without. He is then acting from his own store of accumulated experiences, remembering past happenings, comparing results obtained by different lines of action in the
past, and deciding by these as to the line of action he will adopt in the present. He is beginning to forecast, to foresee, to judge of the future by the past, to reason ahead by remembering what has already occurred, and as a man does this there is a distinct growth of him as *man*. He may still be confined to functioning in his physical brains, he may still be inactive outside them, but he is becoming a developing consciousness which is beginning to behave as an individual, to choose its own road instead of drifting with circumstances, or being forced along a particular line of action by some pressure from without. The growth of the man shews itself in this definite way, and he develops more and more of what is called character, more and more of will-power.

Strong-willed and weak-willed persons are distinguished by their difference in this respect. The weak-willed man is moved from outside, by outer attractions and repulsions, while the strong-willed man is moved from inside, and continually masters circumstances by bringing to bear upon them appropriate forces, guided by his store of accumulated experiences. This store, which the man has in many lives gathered and accumulated, becomes more and more available as the physical brains become more trained and refined, and therefore more receptive: the store is in the man, but he can only use so much of it as he can impress on the physical consciousness. The man himself has the memory and does the reasoning; the man himself judges, chooses, decides; but he
has to do all this through his physical and etheric brains; he must work and act by way of the physical body, of the nervous mechanism, and of the etheric organism therewith connected. As the brain becomes more impressible, as he improves its material and brings it more under his control, he is able to use it for better expression of himself.

How then, shall we, the living men, try to train our vehicles of consciousness, in order that they may serve as better instruments? We are not now studying the physical development of the vehicle, but its training by the consciousness that uses it as an instrument of thought. The man decides that in order to make more useful this vehicle of his, to the improvement of which physically he has already directed his attention, he must train it to answer promptly and consecutively to the impulses he transmits to it; in order that the brain may respond consecutively, he will himself think consecutively, and so sending to the brain sequential impulses he will accustom it to work sequentially by linked groups of molecules, instead of by haphazard and unrelated vibrations. The man initiates, the brain only imitates, and unconnected careless thinking sets up the habit in the brain of forming unconnected vibratory groups. The training has two stages: the man, determining that he will think consecutively, trains his mental body to link thought to thought and not to alight anywhere in a casual way; and then, by thinking thus, he trains the brain which vibrates in answer to his thought. In
this way the physical organisms—the nervous and the etheric systems—get into the habit of working in a systematic way, and when their owner wants them they respond promptly and in an orderly fashion, when he requires them they are ready to his hand. Between such a trained vehicle of consciousness and one that is untrained, there is the kind of difference that there is between the tools of a careless workman, who leaves them dirty and blunt, unfit for use, and those of the man who makes his tools ready, sharpens them and cleans them, so that when they are wanted they are ready to his hand and he can at once use them for the work demanding his attention. Thus should the physical vehicle be ready always to answer to the call of the mind.

The result of such continued working on the physical body will be by no means exhausted in the improved capacity of the brain. For every impulse sent to the physical body has had to pass through the astral vehicle, and has produced an effect upon it also. For, as we have seen, astral matter is far more responsive to thought-vibrations than is physical, and the effect on the astral body of the course of action we have been considering is proportionally great. Under it the astral body assumes a definite outline, a well-organized condition, such as has already been described. When a man has learned to dominate the brain, when he has learned concentration, when he is able to think as he likes and when he likes, a corresponding development takes place in what—if he be physically
conscious of it—he will regard as his dream life. His dreams will become vivid, well-sustained, rational, even instructive. The man is beginning to function in the second of his vehicles of consciousness, the astral body, is entering the second great region or plane of consciousness, and is acting there in the astral vehicle apart from the physical. Let us for a moment consider the difference between two men both "wide awake." i.e. functioning in the physical vehicle, one of whom is only using his astral body: unconsciously as a bridge between the mind and the brain, and the other of whom is using it consciously as a vehicle. The first sees in the ordinary and very limited way, his astral body not yet being an effective vehicle of consciousness; the second uses the astral vision, and is no longer limited by physical matter; he sees through all physical bodies, he sees behind as well as in front, walls and other "opaque" substances are to him transparent as glass; he sees astral forms and colours also, auras, elementals, and so on. If he goes to a concert, he sees glorious symphonies of colours as the music swells; to a lecture, he sees the speaker's thoughts in colour and form, and so gains a much more complete representation of his thoughts than is possible to one who hears only the spoken words. For the thoughts that issue in symbols as words go out also as coloured and musical forms, and clothed in astral matter impress themselves on the astral body. Where the consciousness is fully awake in that body, it receives and registers the whole of
these additional impressions, and many persons will find, if they closely examine themselves, that they do catch from a speaker a good deal more than the mere words convey, even though they may not have been aware of it at the time when they were listening. Many will find in their memory more than the speaker uttered; sometimes a kind of suggestion continuing the thought, as though something rose up round the words and made them mean more than they meant to the ear. This experience shews that the astral vehicle is developing, and as the man pays attention to his thinking and unconsciously uses the astral body, it grows and becomes more and more organized.

The "unconsciousness" of people during sleep is due either to the undevelopment of the astral body, or to the absence of connecting conscious links between it and the physical brain. A man uses his astral body during his waking consciousness, sending mind currents through the astral to the physical brain; but when the physical brain is not in active use, the brain through which the man is in the habit of receiving impressions from without, he is like David in the armour which he had not proved; he is not so receptive to impressions coming to him only through the astral body, to the independent use of which he is not yet accustomed. Further, he may learn to use it independently on the astral plane, and yet not know that he has been using it when he returns to the physical—another stage in the slow progress of the man—and he thus begins to employ it in its own world,
before he can make connections between that world and the world below. Lastly, he makes those connections, and then he passes in full consciousness from the use of one vehicle to the use of the other, and is free of the astral world. He has definitely enlarged the area of his waking consciousness to include the astral plane, and while in the physical body his astral senses are entirely at his service; he may be said to be living at one and the same time in the two worlds, there being no break, no gulf between them, and he walks the physical world as a man born blind, whose eyes have been opened.

In the next stage of his evolution, the man begins to work consciously on the third, or mental plane; he has long been working on this plane, sending down from it all the thoughts that take such active form in the astral world and find expression in the physical world through the brain. As he becomes conscious in the mind body, in his mental vehicle, he finds that when he is thinking he is creating forms; he becomes conscious of the creative act, though he has long been exercising the power unconsciously. The reader may remember that in one of the letters quoted in the Occult World, a Master speaks of everyone as making thought-forms, but draws the distinction between the ordinary man and the Adept, that the ordinary man produces them unconsciously, while the Adept produces them consciously. (The word Adept is here used in a very wide sense to include Initiates of various grades far below that of a “Master.”) At this
stage of a man's development, his powers of usefulness very largely increase, for when he can consciously create and direct a thought-form—an artificial elemental, as it is often called—he can use it to do work in places to which, at the moment, it may not be convenient for him to travel in his mind body. Thus he can work at a distance as well as at hand, and increase his usefulness; he controls these thought-forms from a distance, watching and guiding them as they work and making them the agents of his will. As the mind body develops, and the man lives and works in it consciously, he knows all the wider and greater life he lives on the mental plane; while he remains in the physical body and is conscious through that of his physical surroundings, he is yet wide awake and active in the higher world, and he does not need to put the physical body to sleep in order to enjoy the use of the higher faculties. He habitually employs the mental sense, receiving by it impressions of every kind from the mental plane, so that all the mental workings of others are sensed by him as he senses their bodily movements.

When the man has reached this stage of development—a relatively high one, compared with the average, though low when compared with that to which he aspires—he functions then consciously in his third vehicle, or mind body, traces out all he does in it, and experiences its powers and its limitations. Of necessity, also, he learns to distinguish between this vehicle he uses and himself; then he feels the
illusory character of the personal “I,” the “I” of the mind body and not of the man, and he consciously identifies himself with the individuality that resides in that higher body, the causal, which dwells on the loftier mental planes, those of the arūpa world. He finds that he, the man, can withdraw himself from the mind body, can leave it behind, and rising higher yet remain himself; then he knows the many lives are in verity but one life, and that he, the living man, remains himself through all.

And now as to the links—the links between these different bodies. They exist at first without coming into the consciousness of the man. They are there, otherwise he could not pass from the plane of the mind to that of the body, but he is not conscious of their existence, and they are not actively vivified. They are almost like what are called in the physical body rudimentary organs. Every student of biology knows that rudimentary organs are of two kinds; one kind affords the traces of the stages through which the body has passed in evolution, while the other gives hints of the lines of future growth. These organs exist but they do not function; their activity in the physical body is either of the past or of the future, dead or unborn. The links which I venture by analogy to call rudimentary organs of the second kind, connect the dense and etheric bodies with the astral, the astral with the mind body, the mind body with the causal. They exist, but they have to be brought into activity; that is, they have to be de-
veloped, and like their physical types, they can only be developed by use. The life current flows through them, the mind current flows through them, and thus they are kept alive and nourished; but they are only gradually brought into functioning activity as the man fixes his attention on them and brings his will to bear on their development. The action of the will begins to vivify these rudimentary links, and step by step, very slowly perhaps, they begin to function; the man begins to use them for the passage of his consciousness from vehicle to vehicle.

In the physical body there are nervous centres, little groups of nervous cells, and both impacts from without and impulses from the brain pass through these centres. If one of these is out of order then at once disturbances arise and physical consciousness is disturbed. There are analogous centres in the astral body, but in the undeveloped man they are rudimentary and do not function. These are links between the physical and the astral bodies, between the astral and the mind bodies, and as evolution proceeds they are vivified by the will, setting free and guiding the "serpent-fire," called Kundalini in Indian books. The preparatory stage for the direct action that liberates Kundalini is the training and purifying of the vehicles, for if this be not thoroughly accomplished the fire is a destructive instead of a vivifying energy. That is why I have laid so much stress on purification and urge it as a necessary preliminary for all true Yoga.
When a man has rendered himself fit to safely receive assistance in the vivifying of these links, such assistance comes to him as a matter of course from Those who are ever seeking opportunities to aid the earnest and unselfish aspirant. Then, one day, the man finds himself slipping out of the physical body while he is wide awake, and without any break in consciousness he discovers himself to be free. When this has occurred a few times the passage from vehicle to vehicle becomes familiar and easy. When the astral body leaves the physical in sleep there is a brief period of unconsciousness, and even when the man is functioning actively on the astral plane, he fails to bridge over that unconsciousness on his return. Unconscious as he leaves the body, he will probably be unconscious as he re-enters it; there may be full and vivid consciousness on the astral plane, and yet a complete blank may be all that represents it in the physical brain. But when the man leaves the body in waking consciousness, having developed the links between the vehicles into functional activity, he has bridged the gulf; for him it is a gulf no longer, and his consciousness passes swiftly from one plane to the other, and he knows himself as the same man on both.

The more the physical brain is trained to answer to the vibrations from the mind body, the more is the bridging of the gulf between day and night facilitated. The brain becomes more and more the obedient instrument of the man, carrying on its activities under the impulses from his will, and like a well-broken horse
answering to the lightest touch of hand or knee. The astral world lies open to the man who has thus unified the two lower vehicles of consciousness, and it belongs to him with all its possibilities, with all its wider powers, its greater opportunities of doing service and of rendering help. Then comes the joy of carrying aid to sufferers who are unconscious of the agent though they feel the relief, of pouring balm into wounds that then seem to heal of themselves, of lifting burdens that become miraculously light to the aching shoulders on which they pressed so heavily.

More than this is needed to bridge over the gulf between life and life; to carry memory through day and night unbrokenly merely means that the astral body is functioning perfectly, and that the links between it and the physical are in full working order. If a man is to bridge over the gulf between life and life he must do very much more than act in full consciousness in the astral body, and more than act consciously in the mind body; for the mind body is composed of the materials of the lower planes of the manasic world, and reincarnation does not take place from them. The mind body disintegrates in due course, like the astral and physical vehicles, and cannot carry anything across. The whole question on which memory of past lives turns is this: Can the man, or can he not function on the higher planes of the manasic world in his causal body? It is the causal body that passes from life to life; it is in the causal body that everything is stored; it is in the causal body that all experience remains,
for into it the consciousness is drawn up, and from its plane is the descent made into re-birth. Let us follow the stages of the life out of the physical world, and see how far the sway of King Death extends. The man draws himself away from the dense part of the physical body; it drops off him, goes to pieces, and is restored to the physical world; nothing remains in which the magnetic link of memory can inhere. He is then in the etheric part of the physical body, but in the course of a few hours he shakes that off, and it is resolved into its elements. No memory then connected with the etheric brain will help him to bridge the gulf. He passes on into the astral world, remaining there till he similarly shakes off his astral body, and leaves it behind as he had left the physical; the "astral corpse," in its turn, disintegrates, restores its materials to the astral world, and breaks up all that might serve as basis for the magnetic links necessary for memory. He goes onward in his mind body and dwells on the rūpa levels of Devachan, living there for hundreds of years, working up faculties, enjoying fruit. But from this mind body also he withdraws when the time is ripe, taking from it to carry on into the body that endures the essence of all that he has gathered and assimilated. He leaves the mind body behind him, to disintegrate after the fashion of his denser vehicles, for the matter of it—subtle as it is from our standpoint—is not subtle enough to pass onward to the higher planes of the mānasic world. It has to be shaken off, to be
left to go back into the materials of its own region, once more a resolution of the combination into its elements. All the way up the man is shaking off body after body, and only on reaching the arûpa planes of the mãnasic world can he be said to have passed beyond the regions over which the disintegrating sceptre of Death has sway. He passes finally out of his dominions, dwelling in the causal body over which Death has no power, and in which he stores up all that he has gathered. Hence its very name of causal body, since all causes that effect future incarnations reside in it. He must then begin to act in full consciousness on the arûpa levels of the mãnasic world in his causal body ere he can bring memory across the gulf of death. An undeveloped soul, entering that lofty region, cannot keep consciousness there; he enters it, carrying up all the germs of his qualities; there is a touch, a flash of consciousness embracing past and future, and the dazzled Ego sinks downwards towards rebirth. He carries the germs in this causal body and throws outward on each plane those that belong to it; they gather to themselves matters severally befitting them. Thus on the rûpa levels of the lower mãnasic world the mental germs draw round them the matter of those levels to form the new mind body, and the matter thus gathered shows the mental characteristics given to it by the germ within it, as the acorn develops into an oak by gathering into it suitable materials from soil and atmosphere. The acorn cannot develope
into a birch or a cedar, but only into an oak, and so the mental germ must develop after its own nature and none other. Thus does Karma work in the building of the vehicles, and the man has the harvest of which he sowed the seed. The germ thrown out from the causal body can only grow after its kind, attracting to itself the grade of matter that belongs to it, arranging that matter in its characteristic form, so that it produces the replica of the quality the man made in the past. As he comes into the astral world, the germs are thrown out that belong to that world, and they draw round themselves suitable astral materials and elemental essences. Thus reappear the appetites, emotions and passions belonging to the desire-body, or astral body, of the man, reformed in this fashion on his arrival on the astral plane. If then consciousness of past lives is to remain, carried through all these processes and all these worlds, it must exist in full activity on that high plane of causes, the plane of the causal body. People do not remember their past lives because they are not yet conscious in the causal body as a vehicle; it has not developed functional activity of its own. It is there, the essence of their lives, their real “I,” that from which all proceeds, but it does not yet actively function; it is not yet self-conscious, though unconsciously active, and until it is self-conscious, fully self-conscious, the memory cannot pass from plane to plane and therefore from life to life. As the man advances, flashes of consciousness break forth that illumine fragments
of the past, but these flashes need to change to a steady light ere any consecutive memory can arise.

It may be asked: Is it possible to encourage the recurrence of such flashes? Is it possible for people to hasten this gradually growing activity of consciousness on the higher planes? The lower man may labour to this end, if he has patience and courage; he may try to live more and more in the permanent self, to withdraw thought and energy more and more, so far as interest is concerned, from the trivialities and impermanences of ordinary life. I do not mean that a man should become dreamy, abstracted and wandering, a most inefficient member of the home and of society; on the contrary, every claim that the world has on him will be discharged, and discharged the more perfectly because of the greatness of the man who is doing it; he cannot do things as clumsily and imperfectly as the less developed man may do them, for to him duty is duty, and as long as anyone or anything has a claim upon him the debt must be paid to the uttermost farthing; every duty will be fulfilled as perfectly as he can fulfil it, with his best faculties, his best attention. But his interest will not be in these things, his thoughts will not be bound to their results; the instant that the duty is performed and he is released, his thought will fly back to the permanent life, will rise to the higher level with upward-striving energy, and he will begin to live there and to rate at their true worthlessness the trivialities of the worldly life. As he steadily does this, and seeks to
train himself to high and abstract thinking, he will begin to vivify the higher links in consciousness and begin to bring into this lower life the consciousness that is himself.

A man is one and the same man on whatever plane he may be functioning, and his triumph is when he functions on all the five planes in unbroken consciousness. Those whom we call the Masters, the “Men made perfect,” function in Their waking consciousness, not only on the three lower planes, but on the fourth plane—that plane of unity spoken of in the Māndūkyopanishad as the Turiya, and on that yet above it, the plane of Nirvāṇa. In them evolution is completed, this cycle has been trodden to its close, and what they are all in time shall be who are climbing slowly upwards. This is the unification of consciousness; the vehicles remain for use, but no longer are able to imprison, and the man uses any one of his bodies according to the work that he has to do.

In this way matter, time and space are conquered, and their barriers cease to exist for the unified man. He has found in climbing upwards that they are less and less barriers in each stage; even on the astral plane matter is much less of a division than it is down here, separating him from his brothers far less effectually. Travelling in the astral body is so swift that space and time may be said to be practically conquered, for although the man knows he is passing through space it is passed through so rapidly that
its power to divide friend from friend is lost. Even that first conquest sets at nought physical distance. When he rose to the mental world he found another power his; he thought of a place: he was there; he thought of a friend: the friend was before him. Even on the third plane consciousness transcends the barriers of matter, space, and time, and is present anywhere at will. All things that are seen are seen at once, the moment attention is turned to them; all that is heard is heard at a single impression; space, matter and time, as known in the lower worlds, have disappeared, sequence no longer exists in the "eternal now." As he rises yet higher, barriers within consciousness also fall away, and he knows himself to be one with other consciousnesses, other living things; he can think as they think, feel as they feel, know as they know. He can make their limitations his for the moment, in order that he may understand exactly how they are thinking, and yet have his own consciousness. He can use his own greater knowledge for the helping of the narrower and more restricted thought, identifying himself with it in order gently to enlarge its bounds. He takes on altogether new functions in nature when he is no longer divided from others, but realizes the Self that is one in all and sends down his energies from the plane of unity. With regard even to the lower animals he is able to feel how the world exists to them, so that he can give exactly the help they need, and can supply the aid after which they are blindly groping. Hence his
conquest is not for himself but for all, and he wins wider powers only to place them at the service of all lower in the scale of evolution than himself; in this way he becomes self-conscious in all the world; for this he learned to thrill responsive to every cry of pain, to every throb of joy or sorrow. All is reached, all is gained, and the Master is the man "who has nothing more to learn." By this we mean not that all possible knowledge is at any given moment within His consciousness, but that so far as this stage of evolution is concerned there is nothing that to Him is veiled, nothing of which He does not become fully conscious when He turns His attention to it; within this circle of evolution of everything that lives—and all things live—there is nothing He cannot understand, and therefore nothing that He cannot help.

That is the ultimate triumph of man. All that I have spoken of would be worthless, trivial, were it gained for the narrow self we recognize as self down here; all the steps, my reader, to which I have been trying to win you would not be worth the taking did they set you at last on an isolated pinnacle, apart from all the sinning, suffering selves, instead of leading you to the heart of things, where they and you are one. The consciousness of the Master stretches itself out in any direction in which He sends it, assimilates itself with any point to which He directs it, knows anything which He wills to know; and all this in order that He may help perfectly, that there may be nothing that He cannot feel, nothing that He cannot
foster, nothing that He cannot strengthen, nothing that He cannot aid in its evolution; to Him the whole world is one vast evolving whole, and His place in it is that of a helper of evolution; He is able to identify Himself with any step, and at that step to give the aid that is needed. He helps the elementary kingdoms to evolve downwards, and, each in its own way, the evolution of the minerals, vegetables, animals and men, and He helps them all as Himself. For the glory of His life is that all is Himself and yet He can aid all, in the very helping realizing as Himself that which He aids.

The mystery how this can be gradually unfolds itself as man develops, and consciousness widens to embrace more and more while yet becoming more vivid, more vital, and without losing knowledge of itself. When the point has become the sphere, the sphere finds itself to be the point; each point contains everything and knows itself one with every other point; the outer is found to be only the reflection of the inner; the Reality is the One Life, and the difference an illusion that is overcome.
THE THEOSOPHICAL SOCIETY.

The Theosophical Society is an international body which was founded at New York, on the 17th of November, 1875. Its objects are:

First.—To form a nucleus of the universal brotherhood of humanity without distinction of race, creed, sex, caste, or colour.

Second.—To encourage the study of comparative religion, philosophy and science.

Third.—To investigate unexplained laws of nature and the powers latent in man.

Of these three objects the first is the only one which is binding on all members, the two others being meant to subserve the first. The carrying out of the second, revealing the East and the West to each other, tends to break down the barriers of race and creed, and places at the common service their respective hidden treasures of spiritual knowledge. The third object also tends to brotherhood, in that it leads man to understand himself and his environment, and finally demonstrates to him the underlying spiritual unity of all beings. But both these objects require for their prosecution special capacities and special opportunities; they are not, therefore, binding on members, but are voluntarily taken up by those who are attracted by them and who are able to pursue them. Still, a person entirely indifferent to them, if he believes in human brotherhood and is willing to work for it, has full welcome and standing in the Theosophical Society.

The members of the Society are connected by an ethical rather than by an intellectual bond, and their unity rests on a sublime ideal, not on a formulated creed. The Society has no dogmas, insists on no beliefs, endorses no church, supports no party, takes no sides in the endless quarrels that rend society, and embitter national, social and personal life. It seeks to draw no man away from his own religion, but rather impels him to seek in the depths of his own religion for the spiritual nourishment he needs. The teachings mentioned in its second
object it presents as subjects for study, not as dogmas to be blindly accepted. That each should show to the religion of others the respect that he claims for his own, is understood as an honourable obligation in the Society, and perfect mutual courtesy on these matters is expected from members. More and more this leads to co-operation in the search for truth, to softening of prejudices, to liberalizing of minds, and to the growth of a gracious friendliness and willingness to learn. Thus the Society is a wall of protection against the twin-foes of man, superstition and materialism, and should spread wherever it goes a gentle and refining influence of peace and goodwill, forming one of the forces that make for good amid the conflicts of modern civilization.

MEMBERSHIP.

Membership in the Society in Europe may be obtained either by being elected by a Branch, or by being admitted by the General Secretary, in the case of those who wish to be unattached. And the fact of such election on the one hand, or of admission on the other, constitutes the person a member of the Theosophical Society. All applications for membership must be made on the printed form supplied for the purpose by the General Secretary or the Secretary of a Branch.

A copy of the Rules of the Society and of the European Section—giving particulars as to the formation of Branches, etc.,—will be forwarded on application to the General Secretary.

FEES AND DUES (EUROPE).

All applications for membership must be accompanied by 
(a) an entrance fee of five shillings, English (or the equivalent), and 
(b) the current annual subscription, which for English-reading members is five shillings (or the equivalent), and for all other members 2/6 (or the equivalent).

Fees and dues may be remitted in special cases.

All cheques, postal orders, etc., to be made payable to the General Secretary, G. R. S. Mead.
GENERAL OFFICERS.

President, Col. H. S. Olcott, Adyar, Madras, India; Vice-President, A. P. Sinnett, 27, Leinster Gardens, London, W.

EUROPEAN SECTION.—General Secretary, G. R. S. Mead, B.A. (Cantab.), 19, Avenue Road, London, N.W.

AMERICAN SECTION.—General Secretary, Alexander Fullerton, 108, East Seventeenth Street, New York City, U.S.A.

INDIAN SECTION.—General Secretary, Bertram Keightley, M.A. (Cantab.), Theosophical Society, Benares, India.

AUSTRALIAN SECTION.—General Secretary, J. C. Staples, 42, Margaret Street, Sydney, New South Wales, Australia.

SCANDINAVIAN SECTION.—General Secretary, Dr. Gustaf Zander, Medico-Mekaniska Institutet, Jaktvarfsgatan, 4, Stockholm, Sweden.

NEW ZEALAND SECTION.—General Secretary, Miss Lilian Edger, M.A., Mutual Life Buildings, Lower Queen Street, Auckland.

OFFICERS OF EUROPEAN SECTION.

GENERAL SECRETARY.—G. R. S. MEAD, B.A. (Cantab.).
TREASURER.—Hon. O. S. F. Cuffe.
ASSISTANT-SECRETARY.—C. W. Leadbeater.
AUDITORS.—A. J. Faulding and M. U. Moore, M.A.
EXECUTIVE COMMITTEE.—Mr. A. P. Sinnett and Dr. W. Wynn Westcott (Great Britain); Mons. Courmes (France); Señor José Xifré (Spain); Mynheer W. B. Fricke (Holland); the Treasurer and General Secretary.

EUROPEAN HEADQUARTERS.—19, Avenue Road, Regent's Park, London, N.W.

MAGAZINES.

The Theosophist. Edited by Colonel H. S. Olcott, P. T. S. £1 per annum, post free.
Lucifer, monthly, founded by H. P. Blavatsky, and edited by Annie Besant and G. R. S. Mead; 17/6 per annum, post free.
Mercury, edited by J. T. Walters, Palace Hotel, San Francisco, Cal., U.S.A.; one dollar per annum.

All the above can be obtained at the Offices of the Theosophical Publishing Society, 26, Charing Cross, S.W., where also full catalogues of books can be obtained.

THE THEOSOPHICAL PUBLISHING SOCIETY—
LONDON: 26, Charing Cross, S.W.; NEW YORK: 65, Fifth Avenue; INDIA: Benares, N.W.P.

THE REFERENCE LIBRARY.

There is a Reference Library at Headquarters, open to Members of the Society only, containing the majority of works of reference found in Theosophical literature. The Library is open from 2 to 10 p.m.

THE LENDING LIBRARY.

There is a Lending Library at Headquarters, open to the public. The subscription is 10s. for 12 months, 6s. for 6 months, and 1s. 6d. for 1 month. Postage to be paid by the subscriber.

Those desiring further information can obtain it by applying in person or in writing to the General Secretary of the European Section or to any of the Officers of the various Lodges in the United Kingdom and Europe.

G. R. S. Mead,
Gen. Sec. European Section.

19, Avenue Road, Regent's Park, London, N.W.

All orders for periodicals and books should be addressed to the Manager, Theosophical Publishing Society, 26, Charing Cross, S.W., and NOT to the General Secretary.
