INTRODUCTION.

Importance of This Introduction—Value of the Development of Will Power—Experiment Constantly—The Purpose of These Experiments—How to Avoid Failure—Experiments in the Waking State—Inducing Muscular Relaxation—How to Sit—Effect of the Signal—Further Admonitions—Conducting the First Experiment—How to Strengthen Your Own Self-Confidence—What to Say in the Falling Forward Test—Be Sure to Avoid Hurting the Subject—How to Meet Opposition and Skepticism—Reversing the Experiment—The Falling Backward Test—Snap the Fingers as a Signal—The Clasped Hands Test—Effect of Resistance—Deepening the Impression—Practice Till Perfect—Influencing Without Contact—Effect of Concentration of Gaze—Releasing the Influence—Rationale of the Experiment—The Key to Success—Fastening the Eyes—The Result of a Fixed Idea—Reassuring the Subject—Impossible to Fail—Inhibiting Speech—Conducting the Experiment—Cannot Think or Speak—Affecting the Sensations of the Body—What to do—A Physiological Explanation—The Basis of Cure—Words of Caution.

Importance of This Introduction.—It is necessary that the student should pay particular attention to the matter contained in this Introduction, since it embraces not only something of the philosophy of these higher phenomena which are explained in the body of the book, but also, by giving him a series of experiments to conduct in a waking state, fits him to acquire by gradual and easy stages that command of himself, that self-confidence, without which it is impossible for him either to succeed in life or to become a successful hypnotist.

Value of the Development of Will-power.—The most valuable quality which any human being can possess is that of impressing his will upon others, and this quality which we christen by such names as will-power, magnetism, etc., has its root in the condition of self-confidence which a study of this course of lessons will develop in the most timid and self-eliminating of human beings. To put this point very plainly and simply before you I should say that bashfulness and timidity, those unfortunate hindrances to success in any calling, are struck out of the character
of anyone who will carefully follow the directions laid down in this course of lessons.

**Experiment Constantly.**—It is not enough for the student to read this course over and lay it aside with the idea in his mind that he knows just what is expected of him and that he will at some future time, when the opportunity presents itself, experiment a little. It is essential that he should make use of every opportunity which comes his way to conduct one or more of these experiments daily. And he is especially cautioned to fully master each experiment before proceeding to the next.

**The Purpose of These Experiments.**—I give, therefore, a series of six graded experiments whose purpose is to develop in the operator that poise of character which we call self-confidence, at the same time showing him the basic law through which hypnotism has become a scientific fact. The first point for the student to remember is that it is not necessary to put a subject to sleep in order to produce in him the phenomena of hypnotism in their earlier stages.

**How to Avoid Failure.**—The beginner, of course, fears failure and consequent ridicule more than anything else and therefore I say at the start that you can protect yourself absolutely from both.

First—By studiously omitting the word hypnotism and firmly avoiding the idea that the experiments are even of a hypnotic character. Call them "curious experiments in magnetic or nervous attractions," if you like.

Second—By explaining carefully the very evident fact that the success of the experiments depends entirely upon the strength of will-power and concentration exercised by the subject. The operator is merely a guide. If the subject has sufficient will-power to forcibly drive back and keep from his mind all other thoughts than those supplied by the operator, success is sure. If the subject is weak-willed and lacks concentration he cannot do this. You should explain this to your subjects and show them clearly that the interest and value of the experiments rest entirely upon the determined intelligence of their co-operation. A dumb brute is much harder to hypnotize than an intelligent man. A clear explanation of these facts places you beyond the reach of ridicule or failure.

**Experiments in the Waking State.**—The following experiments are designed to show that the control over the mind
of another can be exerted while the latter is in full possession of his waking faculties.

Experiment No. 1:

Although in this experiment I shall advise you to get a number of people together simply in order that you may thus stand a better chance of securing good subjects, you can of course practice upon one at a time if it is impossible or inconvenient to get more.

Inducing Muscular Relaxation.—Gather together a circle of young people of both sexes ranging in age from fifteen to twenty-five years, and seat them in comfortable chairs in a semicircle about you and be careful to impress upon them that there must be no levity during the conduct of the evening's entertainment. Make them a little speech something as follows: "We have come here this evening to try a few experiments in psychic phenomena and you must be kind enough to give me your earnest attention and your full co-operation in carrying out anything which I wish you to undertake. Unless I have your full attention it will be very difficult for me to succeed and if you absolutely set yourself against yielding to my influence, you will make the success of the experiments impossible. For the time being, therefore, I will ask you to be perfectly passive and receptive so that my words will make the impression upon your brains which they must produce to be effective. Before we begin the experiments I want you all to assume a condition of perfect mus-

![Fig. 1. The Practice of Relaxation](image-url)
cular relaxation since that is the first step to securing in you perfect mental relaxation.

How to Sit.—“Therefore make yourselves quite comfortable in the chairs and sitting with your feet planted flat upon the floor, rest your hands upon your knees, and raise first the right hand and then the left alternately as I count right, left, letting them fall limply and fully relaxed again upon the knees. I shall ask you to do this exercise six times with each hand.” Now standing, or rather seating yourself in a chair in the front of your semi-circle of students, raise your own right hand about a foot from your knee and say, “right.”

Effect of the Signal.—At this signal all your subjects will be required to raise the right hand as you did and holding it in the air for two or three seconds, let the arm and hand fall all limp and relaxed back upon the knee as you say “left,” raising at the same time the left hand. So proceeding with this left hand when you say “right” again, the left hands fall upon the knees heavy and dead. The idea conveyed by this experiment will be one of muscular relaxation itself, their first step in understanding that the idea of passivity suggested by your words reacts upon their muscles to the extent that they can produce in themselves complete physical repose. After this has been done five or six times, get up from your chair and going to each member of the circle in turn, say, “relax completely,” at the same time lifting first the right and then the left hand and dropping them, being careful to see that they fall dead weights, in which case muscular relaxation has been obtained.

Further Admonitions.—Now say to them, “You are all quite comfortable and relaxed and I shall take you all one by one in turn for the first important experiment. I do not wish you to whisper to each other or talk among yourselves at all. Pay particular attention to the idea which my words will convey to your minds. Realize it. Understand that the tendency of the mind is to carry out the thought suggested. Imagine that you are doing what I say you are doing, that you are feeling what I say you are feeling, and we shall obtain some interesting phenomena.”

Conducting the First Experiment.—Now select from among your company one person from whose appearance you conclude that you can more easily influence him than the rest and standing him upon his feet with his back to the circle, tell him to look you fairly in the eyes, at the same time keep your
own eyes fastened upon the root of his nose, looking him straight between the eyes and never allowing your own gaze to wander from him for an instant. Speak to him, and, indeed, speak always in these experiments in a calm, positive tone without haste and without raising your voice, but as if you were used to being obeyed and think that he must obey you. At the same time it is well to repeat to yourself for the strengthening of your influence upon him, "you must do exactly as I say." Say this in thought only to yourself and repeat this talisman continually to yourself throughout all your experiments.

**How to Strengthen Your Own Self-confidence.**—The effect will be to strengthen your own self-confidence and to give to your eyes that look of determination and force which will powerfully influence your circle. Now raise your hands and rest them on each side of your subject's head, just above the ears, very lightly, so as to cause him no feeling of discomfort by pressure upon the face. Looking him squarely between the eyes for ten seconds, allow your hands to remain in that position. Then, moving your left foot back a step, slowly and very lightly draw
your hands back over the sides of his head, at the same time bending your body backwards a little at the hips; your two hands will come together in front of his forehead, then, with a slow motion separate them and bending forward again place them again upon his head in the same position as before and withdraw them slowly and lingeringly as before. Do this three times before you speak.

**What to Say in the Falling Forward Test.**—After the third time, say to him very slowly and impressively; always keeping your gaze directed at the root of his nose and always being careful that his eyes do not wander from yours for a second: “Now you feel a drawing impulse causing you to fall forward. Do not resist it; I shall catch you; let yourself go. You are coming forward. You cannot resist. You are falling forward, falling forward, let yourself go—so.” At this point your subject, still keeping his eyes fastened upon yours, will sway forward and of course you must be careful to catch him so that he comes to no harm.

**Be Sure to Avoid Hurting the Subject.**—Be very careful in all these experiments that you never allow a subject to fall, as that destroys his confidence in you and it is upon this confidence that you build your influence over him. When you have caught him he will instantly recover himself and you may say, “All right, wide awake.” Then send him back to his seat and do not allow any discussion among the members of the circle. Proceed in this way with everyone separately and individually for two reasons: First, that you may determine which one in the circle you can most easily influence, and secondly, thus prepare the different members of the circle for the tests which are to follow. Do not leave this test until you have fairly mastered it yourself and are able to produce this motion of falling forward in every subject whom you try to influence.

**How to Meet Opposition and Skepticism.**—Should you meet with anyone who is either of a stubborn or argumentative disposition, you must waive that kind of thing entirely on one side by saying something as follows: “No doubt you could have resisted this drawing influence if you had tried to do so, but I have already told you that you are to make yourself completely passive, and I cannot conduct these experiments successfully with you if you argue with yourself or with me. All I require from you is the use of your imagination and your implicit obedience. I do not
wish you to even analyze your sensations. Let my words absorb your whole attention and nothing else. This will be sufficient to show your argumentative subject that you are not in the least interested in his opinion and you will find a few words to this effect always sufficient to keep your circle in the proper mood of simple obedience.

REVERSING THE EXPERIMENT.—Now reverse this experiment, selecting from your circle three of those whom you have found to yield most readily to the falling forward test. Call these three up one at a time, and standing your subject with his face to the wall and his back to the circle, you take a position behind him with your back to the circle, and placing the forefinger of your right hand lightly at the base of the brain, just above the neck, lay your left hand against the side of his head, above the ear, so that the fingers rest upon his left temple.

THE FALLING BACKWARD TEST.—Tell him now to close his eyes and very slowly and gradually draw your left hand back until it is clear of his head, saying, as you gradually lighten the pressure of your right forefinger so that he can scarcely feel it
touch him, "Now you feel the influence drawing you back. You are falling backwards into my arms. Let yourself go as the feeling becomes stronger. You are falling backward, falling backward." While you are saying this—saying it very slowly, with a pause between each word—you are slowly repeating the drawing back with the left hand upon his head very slowly, and sometimes almost instantly, but always after this formula has been repeated a few times, your subject will sway upon his heels and fall a little out of the perpendicular. When he has swayed back per-

haps a foot you should catch him and before saying, "All right, wake up," you should repeat the experiment by saying, "That is very well, but you must relax a little further this time." Now repeating the process, say, "You are falling backward and you cannot help yourself. You are falling right back into my arms. Let go. You are falling now." At this point your subject, who is in the mental condition of a performer who has learned his lesson, will, having the fullest confidence in you, fall back completely relaxed into your arms. Then restoring him to the perpendicular you say, "All right now, wake up."
Snap the Fingers as a Signal.—At the same time snap your fingers, because it will be advisable for you later to associate in your subject’s mind this sound of the snapping of the fingers with the idea that the experiment is at an end. This concludes the first experiment in the waking state and you have now a clue to the two or three most easily influenced persons in your circle.

Experiment No. 2. Call one of the three forward, and standing him with his back to the circle, tell him again to look you straight in the eye and under no circumstances to remove his gaze from yours. Now stretch your hands out towards him, palms upward and tell him to grasp your hands tightly; as tightly as he possibly can. At the same time bend your head forward a little until it is within six inches of his own.

The Clasped Hands Test.—Now, looking at him in silence for ten seconds, say very positively and slowly, “You cannot unclasp your hands. You cannot take them away from mine. They are fastened to mine and you cannot move them. You will find the muscles are rigid. Try to take them away. You cannot.” By the influence of your gaze, which, being directed fully upon him, prevents him from exercising his reason to the fullest extent, you will find that his mind is receptive only to the idea which you have impressed upon it, viz., that his hands are indeed rigid and that he has lost the power to move them.

Effect of Resistance.—Immediately there will be in him a resistance to the suggestion which will first take shape in an endeavor on his part to remove his gaze from yours. Should his eyes waver in the slightest, say quickly, “All right, now you can move them. The muscles are relaxed.” He will feel perhaps a little foolish at the close of this experiment and will say, “Why, I could have moved them if I had tried to,” and it is your policy here to fully agree with him, assuring him, however, that because of his concentration upon your words it was impossible for him to unclasp his hands as long as he was giving you his whole attention.

Deepening the Impression.—In order to impress him still further and at the same time to make plain to your audience that this effect is not brought about by any trick, you should repeat the experiment with him, saying, “Now we will try that once more, and this time you will find that the closer the attention you give to my words, the more impossible it will
be for you to let go my hand until I tell you you can do so.” Now repeat the experiment and you will find that his attention will not waver in the slightest degree for perhaps five or six seconds, during which time his face has become flushed with the effort he makes to unloose his grasp. Say then, “All right, perfectly relaxed and comfortable now,” and when he has let go, should his eyes still remain fastened upon yours, snap your fingers, lay your left hand upon his forehead and say, “All right, wide awake.”

Practice Till Perfect.—Here again I must impress upon you that you must practice each one of these experiments until you are perfect in its accomplishment. Do not go hastily from one to another, and remember that you cannot fail in all cases. You may fail in seven or eight out of twelve, but that is because your subjects have not acquired the power of concentration. If you follow our directions the fault will not lie with you and you will always find as many as three or four out of a dozen who are susceptible to your influence because they are by nature obedient to the commands of others.

Experiment No. 3. In the first two experiments you have by contact with the subject strengthened your commands, i. e., you have personally laid your hands upon him, but in this third experiment you will be able to demonstrate to yourself that it is not necessary for you to even touch your subject in order to produce in him a loss of muscular control, which is one of the most startling phenomena produced in the waking state.

Influencing Without Contact.—Seat your subject now in a chair with his back to the circle and draw your chair up close to him, so that his knees are almost touching yours. Choose for this experiment also that one among your subjects whom you have most easily influenced in the preceding tests. Now, laying your hands open upon your knees, palms downward, lean forward impressively, keeping your eyes fastened upon the root of the subject’s nose, and telling him to look you fairly in the eyes, and under no circumstances to remove his gaze from you and say, “Clasp your hands tightly together, tighter, tighter still. They are fastened together and try as you will you cannot open them. You cannot take them apart.” Say these words to him very slowly, with a pause between each word, so that what you say sinks deeply into his mind. If you see any wavering in his gaze it means that he is resisting the suggestion, in which case stop
the experiment at once and caution him that he must attend to you very closely.

**Effect of Concentration of Gaze.**—Remember that if you hold his eyes fixed, *he cannot think*. If he think, he can resist. He must not be allowed to do anything but receive an idea from you. Among the three subjects, however, whom you have found very susceptible to these experiments, you will meet with no resistance whatever. On the contrary, they will try each and all their very hardest to separate their hands but will not be able to do so. You may now permit this experiment to continue as many as fifteen or twenty seconds, showing plainly to the circle that the phenomenon is genuine and that it is also lasting in its effects until you choose to release the subject.

**Releasing the Influence.**—Now say, snapping your fingers at the same time, "All right, you can unclasp them; wide awake." The effect of this experiment upon the subject is quite peculiar, inasmuch as he knows that he was awake all the time, but he felt an absolute loss of control over the muscles of his hand and arm. Yet the phenomenon is very easily explained when you remember...
that you simply prevented him from using his reason by inserting in his mind one dominant idea, which took the place of any other evolved by himself.

**RATIONALE OF THE EXPERIMENT.**—The mind can only fully grasp one thing at a time and when you have acquired the art of driving one idea into the mind of a subject you have also acquired the power of inhibiting the opposition of that subject to your suggested thought, in other words, you have established an influence over him, and you have taken your first step in making you a competent hypnotist and a successful business man.

**THE KEY TO SUCCESS.**—Throughout these lessons you must bear in mind the fact that to influence the minds of others is the key to success in all walks of life. Even should you never contemplate making use of the power which these lessons will bestow upon you as a hypnotist, you will find them of the very greatest value in teaching you to influence men and women whom you meet in business or social gatherings.

**Experiment No. 4.** Do not essay this experiment until you are perfect in those preceding. Select the most susceptible of your circle and seat him in a chair with his back to the rest.

**Fastening the Eyes.**—Now, standing in front of him and a little to one side, tell him to raise his eyes to yours and look fixedly at you. When he has looked in this manner for ten seconds, close his eyes with your fingers and resting the thumb and middle finger lightly upon his pulse, tell him to continue to look upward underneath the lids. Say to him very slowly and impressively, "Do not think or reason an instant. Use your whole will-power and imagination in concentrating, in believing what I say. When I take my fingers away you will find that the power to open your eyes is gone from you. You will have lost the muscular control of the eyelid and your eyes will remain tightly closed and the lids will not come open." Then remove your fingers very gently from his eyelids and repeat the above suggestion, adding, "You cannot open them, try as hard as you will; you will find them shut tight; shut tighter; closed fast and they will not open."

**The Result of a Fixed Idea.**—Your subject will raise his eyebrows in a vain endeavor to open his eyes, but the idea having been firmly planted in his mind that he cannot open them, the same loss of control takes place in this instance as in the experiment in unclasping his hands previously noted. Allow him
to try his hardest to open his eyes, and after the lapse of ten or twelve seconds perhaps he will be able to get them open. It is well in conducting this experiment to make of it a double trial, so that when he has once opened his eyes you may say, "That is very good; you found it a very difficult matter, did you not? Now we will try it once more and this time you will not be able to open them until I give you leave." Proceed then in exactly the same manner as before, but after he has made several ineffectual attempts to open his eyes, you may add, snapping your fingers, "All right now, the influence is at an end. You have full control over yourself again. Open the eyes; wide awake."

Reassuring the Subject.—After this experiment, which is leading you in the direction of true hypnotism, it is well for you to lay your hands upon your subject's forehead and talk reassuringly to him. The mental condition which I wish you to arouse in your subject is one of thorough good nature and content. I want you to make him feel, as you very easily can, that you are absolutely his friend and that you will take care that nothing happens to him to injure him in any way. Encourage in him, therefore, by your conversation a feeling of friendly rapport and perfect trust. You will find that at this stage he is becoming just as much interested in these experiments as you are yourself, and he will do his utmost to give you always his full attention, which is all that you need to make them a success.

Impossible to Fail.—Remember that not a single experiment which I have given you here can possibly fail when you secure the right kind of a subject and when you faithfully carry out in their minutest detail all the directions I give you, omitting nothing.

Experiment No. 5. We have dealt so far with the inhibition or prevention of muscular action.

Inhibiting Speech.—Now we come to the inhibition of the faculty of speech, which is only a short step further. It will seem to you perhaps that it must be a very difficult thing to prevent a person in the waking state from both remembering his name and speaking that name aloud at one and the same time, but if you will remember what I said previously about the power of the mind in grasping only one dominant idea, you will understand how it comes about that this experiment is just as easy to carry out successfully as any of those preceding,
bearing in mind the fact that you must not attempt it upon any but your most susceptible subjects, those upon whom you have successfully practiced the experiments preceding.

CONDUCTING THE EXPERIMENT.—Standing your patient on his feet before you, with his back to the circle, and placing both of your hands on the sides of his head, as in the falling forward experiment, request him, as before, to look steadily into your eyes, while you direct your gaze, as always, at the root of his nose. Now incline your head a little closely to him and say sharply: “Give me your whole attention. You have forgotten your name. You cannot speak it. You cannot remember it. You do not know it. You cannot utter a sound. You have forgotten it.” Withdraw your hand and stepping back a pace, point your finger at the root of his nose, repeating sharply, “You cannot speak your name.” Give him three or four seconds in which to make the attempt and then snap your fingers and say, “All right, you have it now; what is it?” when he will immediately say it aloud in a tone of great relief.

CANNOT THINK OR SPEAK.—It is not true to assume, as some of your circle may, that he remembered the name and could have spoken it, because in this case, as I have found in numerous experiments where the matter has been properly conducted, there is neither memory nor speech possible and yet the subject is to all appearance wide awake. It is quite true that he is awake, but it is also quite true that he is not in his normal condition. He seems to be so to himself, but as a matter of fact, he is in a condition of concentration which precedes the establishment of hypnosis, when it is desired to reach hypnosis through experiments conducted in the waking state.

Experiment No. 6. We come now to an experiment which is of very peculiar significance, inasmuch as it shows how, when you have obtained a control over the mind of a person in the waking state you can produce in him hallucinations of sensation which of course have a limit, bearing upon the value of hypnotism as a therapeutic agent.

AFFECTING THE SENSATIONS OF THE BODY.—It stands to reason that if you can in the waking state convey a sensation of warmth to a person’s hand, you can very easily make use of the reverse suggestion in fevers and the like, and on beds of sickness you can, even while the patient is wide awake, remove much of the discomfort of fever and undue heat by positive suggestions of
coolness and comfort. I do not mean in this Introduction to take you at all into the therapeutic side of hypnotism, but cannot resist the opportunity of pointing out to you how closely this work touches the beneficent action of ministering to the comfort of the sick. Every experiment which you have been required to perfect yourself in in this Introduction can be and should be carried through without any reference whatever to the word hypnotism. You should never mention hypnotism to your subject in carrying out these experiments.

**WHAT TO DO.**—Seat your subject in a chair as before, with his back to the circle and let him, as he looks up into your eyes, while you stand over him, relax his arms and rest his hands a dead weight upon his knees. Now say to him slowly, "Close your eyes, fix your attention upon your right hand. When I touch that hand with my finger you will feel a sensation of great warmth passing into the back of the hand until the whole hand becomes hot and burns. Remember, it will burn you. The sensation will be one of strong heat. It will burn you. Fasten your attention closely upon it and you will feel the pain in the hand." Having now aroused his expectation, touch the back of his right hand very lightly with your finger and say sharply, "It is burning. You feel the heat, you feel the sensation of great warmth, it is burning and tingling, burning you, burning you." Your subject will not only show by his expression that the sensation is real, but he will make efforts to draw his hand away. When you have shown your circle that the effect has been produced you may snap your fingers and say, "All right, wake up, the sensation is all gone," at the same time taking his right hand in yours and rubbing the back of it briskly.

**A PHYSIOLOGICAL EXPLANATION.**—There is an explanation of this phenomenon which many of you may put to very good use in your daily life, which is briefly this: Any concentration of the mind upon one part of the body tends to produce a flow of blood in the direction of the part thought of. This we call dirigitation of the blood and it is possible by steadily concentrating your attention upon the sensation of heat in the feet, for example, to cure yourself of that unfortunate condition known as cold feet by the simple agency of the force of your concentration. This is perhaps one of the very finest examples of the power of the mind.
over the body and the power of the mind alone to affect the cir-
culation of the blood.

The Basis of Cure.—It is really upon such a well-known physi­
ological fact as this that the cures wrought by mental sci-
ence and hypnotism, as well as by Christian Science and auto-
suggestion, are based. We have, therefore, the highest warrant
for asserting that the study of hypnotism puts one in possession
of the facts concerning the healing power of the individual man
resident within himself and based upon the power of thought
to influence the blood currents. You have now before you six
experiments which require your careful attention and complete
assimilation.

Words of Caution.—Do not be in a hurry to tell all your
friends what you can do. In fact, do not mention your work to
your friends at all, as they are inclined to accord you less honor
than strangers. Study the rules laid down for your guidance
here very carefully. Remember that when you bring the right
conditions to bear in carrying out the experiments you cannot
possibly fail in producing the phenomena. They are as certain
to occur as that four must be the product of two multiplied by
two. It is simply the law of cause and effect. Given a certain
cause, there must follow a logical effect, and, indeed, hypnot­
ism, startling as its phenomena undoubtedly are in their outer
manifestations, is the one line of study whose effects are based
upon unalterable logic. There are no phenomena connected with
hypnotism which are irrational and illogical. It is the greatest
of all studies; the study of Vital Facts.

Conclusion:

The experience gained in the foregoing experiments will
give you confidence, ease of manner and an understanding of
the basic principle of hypnotism. After a few experiments
you are sure to have developed one or more good subjects whom
you can take into the further stages of hypnotism as indicated
in the course of lessons to follow and with whom you can
make a profoundly impressive exhibition before strangers and
critical or scoffing observers. Not unless you are an experienced
hypnotist is it wise to experiment on new subjects before criti-
cal observers. Their presence has its effect both upon yourself
and the subject, whose whole interest and attention, must, as I
have explained, be strained upon the delicate task of securing absolutely harmonious conditions and the voluntary elimination of doubt or mental analysis on the part of the subject.

As you become experienced through the handling of subjects whom you have already developed, you will unconsciously acquire the "knack" which always comes with familiarity with any process, and your success, both with new and with tried subjects, will increase in inverse proportion as you proceed.
LESSON I.

Hypnotism a Factor in Human Life—The Purpose of This Course—
The Completeness of This Course—The Old, Old Power—Everyone Can Learn to Use the Power—The Importance of Profound Hypnosis—The Value of High Motives in Psychic Research.

Hypnotism a Factor in Human Life.—The study of Hypnotism is the study of Human Nature. So long as the world produces some to lead and some who are led, some who are strong and some who are weak, some who are dependent and some who are independent, Hypnotism will be a factor in human happiness. It is my earnest hope that through the awakening of public interest in this science which has marked the closing of the present century there will come a better understanding of the benefits to be conferred upon the human race through the right use of this power and a knowledge of its benignant influence.

The Purpose of this Course.—The purpose of this exhaustive Series of Lessons is to enable the student not only to hypnotize without fail, but also to understand something of the great laws which underlie a manifestation of this power. It has seemed to me in examining many of the published works upon Hypnotism and allied sciences that the writers have been less impressed with the great possibilities following its use than with the ease with which in some cases they have induced profound hypnotic conditions. It is a fact that there is no mystery in the production of hypnosis, but the effects or results of Hypnotism will always remain greater and still greater marvels.

The Completeness of this Course.—In these Lessons I wish carefully to point out to you how the old experts in this work achieved their results and how you will do wisely to follow to a certain extent in their footsteps, aided, however, by the brighter light which modern psychology has thrown upon many hitherto inexplicable phenomena. It is not necessary to waste time over the discussion of the history of Hypnotism; every book that has been written upon this subject deals with the history of the science; and the student can gather from its
pages anything he may care to know concerning the early success of those who discovered and named it Mesmerism and later rechristened it Hypnotism.

The Old, Old Power.—Under whatever name it appears to-day it is the same old force; and no matter how often we change its name, whether we call it Mesmerism, Hypnotism, Electro-Biology or Statuvolence, it is the same old power, viz., the power of the mind over the body. I have gathered together from various sources many methods of Hypnotizing, and I venture to say that there will be no student of these Lessons who will be incapable of successfully applying several of these methods. I intend to teach you how to Hypnotize.

Everyone Can Learn to Use the Power.—There is no one of ordinary intelligence who understands the meaning of written language who cannot learn from this Course of Instruction all that could be taught him in any School of Suggestive Therapeutics in the country. Everything will be made plain and practicable. I shall assume that you know nothing whatever of Suggestion, Hypnotism, Mesmerism, Clairvoyance or Suggestive Therapeutics, and hope to carry you with me, understandingly, from the most elementary to the most complex manifestations. Our modern investigators have been too much impressed with what they call Suggestion, and Suggestive Therapeutics, and in my opinion have largely overlooked the superior importance of the profound sleep which distinguishes true Hypnotism.

The Importance of Profound Hypnosis.—In this Course of Lessons, therefore, I shall impress upon you the importance of inducing in your subjects the profoundest degrees of Hypnosis possible, and you will be expected to look always toward the production of deeper and still deeper slumber. In the works of the early Mesmerists we find instances of Clairvoyance induced in their Somnambules which are not often paralleled to-day, and I take the reason of this to be that to-day our operators are too easily content with the lighter stages of Hypnosis, and do not persevere sufficiently for the purpose of inducing the deeper conditions. There is another reason for the success of the older Hypnotists. They were invariably men of high moral purpose. They threw out an influence for good which was easily perceived and received by their subjects. They were able to induce almost at a word a condition of profound passivity in those whom they treated. The purity of their motives
and their beneficent intent shone from their features, and had immediate effect upon the troubled minds and sensitive nerves of those upon whom they exercised their art.

The Value of High Motives in Psychic Research.—I lay this down as an axiom which cannot be challenged, that the nobler his purpose the more generally successful will be the operator. While many have practiced Hypnotism through unworthy motives, and have been to a certain extent successful, they have never reached the success attained by those who brought a clean heart and clean hands to the study of this science, and I therefore take it for granted that if you have any intentions of merely gratifying your curiosity by mastering the intricacies of Hypnotism you will not expect to reap the reward which is given only to those who earnestly search for higher truths through the medium of Psychology.
LESSON II.

The Method of Verbal Suggestion—Liebeault's Mode of Procedure—

The Intention of this Method—Sleep Suggestions—A Second Treatment—Conclusion of Second Treatment—The Memory Is Amenable to Suggestion.

The Method of Verbal Suggestion.—We will take for our Second Lesson the method most generally employed by the Hypnotist of to-day, and which was first brought into public notice by Dr. Liebeault of the School of Nancy, France. He christened his method “Verbal Suggestion,” and his views, opinions and experiments were later embodied by Dr. Bernheim, his pupil, in a work entitled “Suggestive Therapeutics.” Let us put ourselves for a moment in Dr. Liebeault’s place and suppose that a patient has come to him to be treated by Hypnotism for some nervous disorder. The Doctor takes the patient’s hand, asks him a few questions, and receiving the patient’s assurance that he is at present suffering great pain in his head, he requests the patient to sit down in a comfortable chair.

Liebeault's Mode of Procedure.—The Doctor stands before the patient, and laying his left hand lightly upon the latter’s head, he holds the two fingers of his right hand about one foot from the patient’s eyes at an upward angle so that the patient is compelled to slightly strain the eyes upward in order to see the fingers distinctly. The Doctor then says in a soothing and monotonous voice: “There is nothing to be afraid of in this process. You are about to undergo at your wish and mine the same mental transfiguration which happens to you every night of your life, that is to say, you will pass from a condition of active waking life into, first a drowsy, somnolent state in which you hear but do not heed greatly what is said to you, and in which you feel averse to making any voluntary motion; you will pass from that condition into a state of ordinary sleep in which you will be, as you are every night of your life, unconscious of what is happening about you. From this condition you will wake when I choose to wake you, greatly refreshed — 27 —
and strengthened, and you will note the disappearance of your pain.” While he is saying these words the Doctor moves his fingers with a slow, circular movement, having a circumference of about one foot, round and round in front of and below the patient’s eyes. He continues this circular movement of his fingers, at the same time requesting the patient to keep his eyes and his attention fastened only upon the movement of his fingers, for about five minutes, talking all the while to the patient in a monotonous tone of voice.

**The Intention of this Method.**—The idea is to soothe the patient’s nerves; to relieve him of all anxiety of mind concerning the mystery of the treatment he is about to undergo; to reassure him and make him thoroughly comfortable. It is also intended that by a concentration of the patient’s attention upon this simple act of moving the fingers there will be brought about in the patient’s brain that condition of cheerful fatigue which follows the concentration of the mind upon any not disagreeable and not exciting task. A drowsiness begins to take
possession of the patient. The voice of the operator sounds even more soothing and monotonous than before.

Sleep Suggestions.—The Doctor is saying: "Your eyes are getting heavy now; you are feeling drowsy; you are feeling that it would be an effort to move; you are not disturbed by any noise without, the blood is receding from the extremities, your hands and feet and head are becoming cooler, the heart’s action is diminished, the pulse is slower, the breath is easier, quieter, deeper and you are going gradually sound asleep." The Doctor pauses for a little while and then says still more quietly: "Close your eyes, sleep," at the same time laying his hands lightly upon the eyelids of the patient. He then says: "Resting quietly; all is well; your pain is getting gradually less. In a little while you will be sound asleep, and on awaking the pain will have entirely disappeared. Sleep quietly. Nothing will disturb you until I return." He then leaves the patient to himself for perhaps ten or fifteen minutes, and upon returning usually finds that the latter has passed from a state of drowsiness into a condition of light sleep, and that the headache is either greatly relieved or entirely gone. The Doctor informs the patient that the next day when he returns for treatment he will pass more easily into the drowsy condition, and that his sleep will be deeper, and that after a few treatments he will be able not only to cure any pain which may be present at the time of the treatment, but by this Verbal Suggestion will prevent a recurrence of the trouble. This is the method which is invariably followed in France in the treatment of a new patient. Nothing is said about Hypnotic Influence; no tests are imposed to discover whether the patient is in any degree under the influence or not; everything is arranged to quiet him, reassure him, and set his mind absolutely at rest.

A Second Treatment.—Accordingly, upon returning for treatment, the patient gets into the chair with confidence and without any misgiving as to what the result will be; and he becomes proportionately more quickly obedient to the suggestions of the Doctor, and is more profoundly affected. At this second sitting the Doctor says, after he has induced in the patient the drowsy condition in the manner aforesaid: "You will find that your eyes are very heavy indeed, and that you cannot open them." He lays his hand lightly upon the eyelids of the patient and says: "Your eyes are shut tight and you have no power to open them."
patient makes an ineffectual attempt to open his eyes, and perhaps, smiling languidly, gives up the task and relapses again into his condition of somnolence. The Doctor says: "All is well; your eyes are tightly shut and you have no power to open them. You will pass now into a condition of deeper sleep. Upon awakening you will not remember anything that has happened. Your memory will be obliterated for the time being. You will only be conscious of the fact that you have slept profoundly, and feel much benefited in health." The patient is now left to himself as before, for perhaps fifteen minutes, at the end of which time the Doctor re-enters the room, and passing his hand lightly across the forehead of the patient says:

**Conclusion of Second Treatment.**—"You have had a good rest and a refreshing sleep. You will have no more pains in your head, and your mental faculties will be much brighter and more alert for this rest. You will wake when I count three, and hereafter when I wish to Hypnotize you for your benefit you will pass at once into a condition of profound sleep. Now I shall wake you quietly and without any nervous shock; one, two, three—wide-awake." As the Doctor pronounces "three" the patient opens his eyes and confesses that he is without pain or discomfort of any kind.

**The Memory is Amenable to Suggestion.**—Perhaps he stares about him stupidly as one does who has been roused suddenly from a deep sleep, but he has no memory of having been spoken to from the time he closes his eyes until that moment. There are accordingly present in this patient all the necessary signs which point toward the possibility of inducing in him a profound condition of Hypnosis, and here for the present we may be content to leave the method of the Nancy School.
LESSON III.

The Art of Mesmerizing—The Authoritative Operator—The Method of Mesmerizing—Using the Long Pass—How to Know the Magnetic Sleep.

The Art of Mesmerizing.—Let us now take up for consideration the method of the early Magnetizers, as they styled themselves, and I prefer to put these directions in the form of personal instruction, as it were from me to you. First select for the purpose of experiment some one younger than yourself, but not one who has lived so long in the house with you as to be inclined toward any familiarity.

The Authoritative Operator.—In order to be at first successful you should find some person who looks up to you as one in authority, since the essential point in successful Mesmerism is the obedient quality in the patient. It will be also strongly in your favor if your patient is not well physically, and is looking toward Mesmerism as a possible means of relief from ill health.

The Method of Mesmerizing.—Seat your patient in a comfortable chair and sit directly in front of him; your eyes should be a little above the level of his eyes; make him perfectly comfortable, if necessary placing cushions at his back in order that his head may rest easily and without any physical strain whatever in the position in which he sits. Take his right hand in your left, and his left hand in your right. Lean forward until your face is about a foot from his. Desire him to gaze unflinchingly into one of your eyes. Impress upon him firmly the point that he must not allow his gaze to wander. He must not wink his eye unless he feels compelled to do so. You must talk to him in this manner: "You will feel a tingling first of all in your hands as I hold them, extending up your arm to the shoulders and gradually a numbness creeping over the body. Do not be uneasy at any sensations which may occur, and do not allow yourself to wonder at anything that may happen. No harm shall come to you, and you may repose absolute confidence in me.
When you can no longer keep your eyes open and fastened upon mine, close them and they will not come open again. You will then pass into a profound sleep, your whole body will feel warm and a genial current which will seem to you like an electric warmth will be sensed. When your eyes are closed I shall use passes over you which will have the effect of doubling the magnetic influence and distributing it evenly throughout the body.”

As you hold his hands in yours, press lightly the thumbs of your hands against the back of his hands alternately lightening or increasing the pressure, allowing your thumbs to rest half way across the back of his hands between the second and third knuckles. This pressure will exert a peculiar influence upon him, and will also hold his attention steadily to the work in hand. When he can no longer keep his eyes open, release one of his hands and close his eyes with your fingers, saying: “Relax now and sleep.” You may then proceed with the passes.

Using the Long Pass.—Rising from your chair, you bring both hands over his head and holding the points of your fingers about two inches from his face you proceed to bring them down over his body with a slow sweep, terminating at the knees.
Throw your hands out then to either side of you, palms upward, and bringing them together again over your head, bring them down in another sweep, slowly performed, from the head again to the knees. Repeat this process for about ten minutes, at the end of which time if you lift one of his arms it will probably remain in the position in which you place it. If it should fall again to his side repeat these slow long passes for another five minutes, at the end of which time he will probably be in that condition which is known as rapport; that is to say, he will be more or less under the magnetic influence. Do not try to lift his hand again, because he may be one of the lethargic kind of subjects who never become cataleptic. As the meaning of these terms will be fully explained later on it is not necessary to do more than mention them here. Say to him quietly, "You are now passing into the magnetic condition, and though you may be conscious of where you are, you cannot open your eyes." Wait a few moments and then say: "Your eyes will not open although you try to lift them." Pause here again and then say, "Try to lift them, they will not open." If you see that he makes an ineffectual at-
tempt to open his eyes you may understand that your patient is
in the same mental condition as was the patient of Dr. Liebeault
mentioned in the previous Lesson.

_How to Know the Magnetic Sleep._—But if there should
be no movement whatever from him, and if he should seem to
pay no attention whatever to your exhortation that he try to lift
his eyelids, you may take it for granted that you have induced
in him a deeper state of magnetic sleep, one which it is better for
you not to disturb; and you will therefore say to him as follows:
"Sleep profoundly and dream that you are traveling many thou-
sands of miles from here, visiting scenes and places you never
saw. Let your spirit go whither it will, and when you awake
in one hour from this time, you will tell me where you have been
and what you have seen and everything will be clearly impressed
upon your mind when you awake. Sleep for one hour and
awake of your own accord at the end of that time." Here we
leave this patient also.
LESSON IV.

The Method Practiced in India—What to do to Induce Sleep by this Means—Do Not Experiment in This Case.

The Method Practiced in India.—In this fourth Lesson I give you the method practiced by an English surgeon, Dr. Esdaile, who about the year 1847 made such good use of Hypnotism in his hospital practice at Calcutta, India, that the English government placed at his disposal a hospital specially prepared for the reception of patients to be operated upon in Mesmeric Anaesthesia. It is a method that is now practically unknown, and one which has never been fully given to the public. Its results, however, are so astounding, especially in the matter of inducing the deepest degrees of Hypnosis that this complete book of methods must give it a place of importance. We will again assume the places of instructor and pupil.

What to do to Induce Sleep by this Means.—Have in your room where patients are to be treated a long low couch in which the headrest is not more than six inches higher than the body of the couch. Let your patient lie full length upon the couch and seat yourself at its head. Bend over the couch in such a way that when your patient’s eyes are upturned to yours it is not difficult for him to keep his gaze riveted upon you. To make this more plain to you I should say that there must be in this case no great strain upon the eyesight of the patient. Now bend over the couch so that your face is not more than from four to six inches from your patient’s. Keep your eyes fastened upon his. Instruct him to keep his eyes fastened upon yours. Allow no sound to escape you. There should be no noise of any kind in the room or out of it to disturb you. Maintain this position if necessary for one hour to two hours, keeping in your mind the firm resolve that your patient must sleep. In half an hour or less his eyelids will quiver, but a word from you will redirect his attention to you and he will make another effort to keep them open. These efforts will become gradually less and less pronounced, until the sense of
weariness is so developed in him that he can no longer resist the sleep influence, and his eyes will close completely.

Do not experiment in this case.—When you have tried this method it will not be necessary for you to try any experiment with your patient with a view to testing whether or not he has passed into the Hypnotic condition. This method, provided your patient is not wilfully deceiving you, is invariably productive of the deeper stages of Hypnosis, and no such thing as a test is here necessary. Your patient is again in the condition known as MagneticSleep.
LESSON V.

HYPNOTIZING A NUMBER OF PERSONS—PREFATORY EXPLANATIONS—
NOTING THE SYMPTOMS—SUGGESTING THE IDEA OF SLEEP—ROUSING THE COMPANY—CONCLUSIONS DRAWN FROM THEIR TESTIMONY.

HYPNOTIZING A NUMBER OF PERSONS.—Keeping carefully in your mind the three methods which have been previously given you as advised, let us add to them a fourth, which is no less distinct from the others. Gather together some eight or ten people in a room, and request each one to look fixedly at a bright object, let us say a silver half dollar, held in the palm of the hand. Repress any indications of levity among your audience, by pointing out to them the fact that you mean to make of this an earnest investigation into psychic phenomena, and explain to them that any tendency toward merriment will have the effect of postponing results by distracting the attention of those engaged in the investigation.

PREFATORY EXPLANATIONS.—Explain in your prefatory talk that you do not intend to make any verbal suggestions to them during the performance, but that they will find their eyes gradually closing, the bright object becoming blurred and indistinct, and a general feeling of heaviness and drowsiness becoming marked. Allow your audience now to devote themselves earnestly to the simple task you have assigned to them. Stand in front of your circle and watch them all closely.

NOTING THE SYMPTOMS.—By and by you will notice one head begin to nod; then perhaps another; some of the more unruly ones will allow their attention to wander in the direction of these who show the influence more plainly, and you should be on the alert to restrain any sign of whispering or communication between the members of the circle, all such signs and all such noises having the tendency to rouse the true subjects.

SUGGESTING THE IDEA OF SLEEP.—When you notice that some two or three of your audience are decidedly affected, go down quietly among them, and speaking in a quiet tone of voice, so as not to arouse them from the condition of reverie in which they have placed themselves, imprint upon their minds the idea of sleep by saying the following words: “By keeping your eyes
fixed upon the bright object in your hands you have brought about in yourselves a lessening of the circulation of blood in the brain, consequently you feel drowsy and inclined to sleep. This drowsiness will increase, and will deepen as you continue to gaze fixedly at the object you hold. When the blood leaves the brain, sleep follows. Your fixity of attention upon the object you hold has brought about the required change in the circulation, and you will now gradually pass into the condition of sleep. Let nothing disturb you.”

Rousing the Company.—Some of those affected will now fall asleep, and in the course of about five minutes you may

arouse the whole company by saying: “When I count three you will all be wide-awake and will tell me how far and to what degree you were influenced.” When you count three they will all open their eyes and tell their experiences.

Conclusions Drawn from Their Testimony.—Some will say that they felt no tingling whatever; some will say that they felt drowsy; some will say that they were fast asleep. The first have been guilty of allowing their attention to wander; the second have been influenced, and upon repeated trials would no doubt pass into sleep; the last named would make good subjects, and may be said to have reached the same condition, this time self-induced, as was arrived at by the subjects in the preceding Lessons where entirely different means were employed to bring about this condition of subjectivity.
LESSON VI.

The Qualifications of a Good Operator—Question of Sex of No Importance—What Hypnotism Is—The Power to Hypnotize—The Importance of Assumption—Developing a Powerful Gaze.

The Qualifications of a Good Operator.—In the preceding Lessons you have been given the four distinct types of inducing Hypnosis which form the groundwork for a variety of methods which follow, and of which each operator selects the one which he finds most natural to himself to adopt with success. Before going into any further methods let us consider the qualifications necessary to make one a good operator.

Question of Sex of No Importance.—Although in these Lessons we shall speak of both operator and subject always as of the male gender, women make fully as good Hypnotists as men, and are just as easily influenced, but not more easily, to become good subjects. My experience has shown me that the susceptibility of both men and women to Hypnotic influence is just about even, and neither sex can be said to have any advantage over the other in this respect. A good operator must be very cleanly in his personal appearance, and be free from all offensive habits of speech or manner. He should be polite and persuasive, at the same time having in his tone and bearing the appearance of one who commands.

What Hypnotism Is.—The art of Hypnotizing is really the art of making an impression upon the mind of another person, and in order to make this impression deep and lasting the operator should never allow himself to give or accept any familiarity to or from his subjects or patients. This is a rule which will admit of no exceptions.

The Power to Hypnotize.—The power to Hypnotize may be summarized as being the power to command respect and obedience. For this reason, and because his authority as physician gives him the right to command, the doctor makes an admirable hypnotist. But this firmness of manner and dominant appear-
ance which is necessary to success may be acquired by anyone who studies these Lessons after a little practice.

THE IMPORTANCE OF ASSUMPTION.—The manner which is at first assumed, becomes later on natural, and even if at first you have no confidence in yourself it is necessary that you should assume a confident bearing and manner when dealing with a subject. You will be surprised at first to see how the things which you say are about to happen do happen. When, for instance, you tell a subject that he is becoming drowsy, even though you see no sign of drowsiness in that subject, it will shortly come about that he will give every evidence of being drowsy, and this phenomenon simply means that your confident assertion has made such an impression upon his mind that the thing which you have assumed to be true has become true. At first the effect of your words will astonish you, as I say, but after a little practice you will begin to see that all of your acquaintances are influenced by the suggestions that are made to them by others both directly and indirectly. The other necessary qualifications of the good operator are, an honest person, an upright character dealing fairly with all men, a clear eye, and most important of all a habit of looking every person straight in the eye while endeavoring to influence him.

DEVELOPING A POWERFUL GAZE.—For the special practice of operators, in order to develop the power of the fixed gaze, I shall advise that they spend ten minutes night and morning in their room practicing before the looking-glass the act of gazing at the reflection in the mirror without winking an eyelid. After regular practice of this kind it will be found that they are able to extend the time of looking without winking at any person or object from one to five minutes, and from five to ten, and sometimes as long as twenty minutes, without the eye becoming fatigued or suffused with tears. This practice will also have the effect of seeming to enlarge the eye by increasing the expansion between the lids, a result which is to be desired.
LESSON VII.

WHO MAKE THE BEST SUBJECTS—EXCEPTIONS TO THE RULE—WHAT CONSTITUTES A HARD SUBJECT?

WHO MAKE THE BEST SUBJECTS.—With reference to the class of people who make the best subjects, I have often been asked by my students to tell them some way of picking out from a crowd of people the persons most likely to pass into the somnambulistic condition at a glance. This is a matter which practice alone can make one expert in, but there are certain general indications which never mislead the student. These are as follows: Blondes are more easily influenced than brunettes. Men and women who have what is known as a faded appearance, whose eyes are for example of a faded blue which is yet not gray, whose hair is of a light shade of brown which has in it nothing of gold, whose mouths show pleasant temperaments and non-inquisitive dispositions, these make as a class good subjects.

EXCEPTIONS TO THE RULE.—Unfortunately no generalization upon this point can be accepted as accurate because in the experience of every Hypnotist there are exceptional cases where very strong-willed persons made admirable subjects, very pronounced brunettes proved to be first-class somnambulists, and many of the faded type proved refractory and hard to influence. It will give you a fair clue to your probable success with your patient to say that you may gauge your probable effect upon him in the induction of Hypnosis by the effect upon him of your manner and appearance while he is wide-awake. If he is cordial and complacent and obedient, or if he is yielding, or shows in his manner great fear of you which is not mixed with repugnance, you may take it for granted that you will be able to forcibly impress his mind. There is in some persons a rooted objection to Hypnosis which it is absolutely impossible to overcome and you may be wasting your time by working upon such people. It is not, I think, a question of fear, but of absolute distaste for the whole process. There is
no harm in a subject being afraid of you, because you can remove that feeling of fear in the course of one or two treatments so that in place of being afraid he comes to have absolute confidence in you. Also, as I will show later, the feeling of fear alone is sometimes sufficient to produce instant Hypnosis.

WHAT CONSISTSUTES A HARD SUBJECT?—The worst subjects are those who, being in the first place persons of weak will, have no interest in psychology, and have not sufficient wit to understand the genuineness of the force resident in themselves. They may be reached always by indirect Suggestion and in dealing with such people you should never rely upon verbal Suggestion alone, but should call to your aid an adjuvant such as electricity, with which you will be able to make a profound impression upon their minds.
LESSON VIII.

A TYPICAL CASE—HOW TO BEGIN TO INFLUENCE THE BOY—WHAT TO SAY—
The Purpose of This Method—Maintain Silence in the Room—
Affecting the Boy's Muscular Action—The First Stages of Catat­
lepSy or Muscular Rigidity—Removing the Rigidity—The Effect
of Your Suggestions—His Reason Is Affected—Further Evi-
dences of the Receptive State of His Mind—Sleeping in a Stand-
ing Position—Giving Quick, Positive Suggestions—An Experiment
in an Illusion of the Sense of Sight—Do Not Induce Fear in
Subjects—Active Somnambulism—Illusion of the Sense of Taste
—Inhibiting the Sense of Smell—The Use of Illusions as Ev-
dence—Hallucination of Sight—Changing Somnambulism Into
Sleep—Giving Educational Suggestions—in Case of Too Profound
Sleep.

A TYPICAL CASE.—We will now take for purposes of instruc-
tion such a case as follows: A friend comes to your office and
brings with him a young man. Your friend says: “I have heard
that you are a great Hypnotist, and I should very much like to
have a demonstration of your power upon this boy. He has no
objection to being hypnotized and will do anything you tell him.
He is a very backward boy in his studies and will not apply
himself to his work. His mother sent him to me for correc-
tion, but having heard of your success in this class of cases I
bring him to you in order that you may demonstrate the power
of Hypnotism upon him in the correction of the habit of lazi-
ness. See what you can do with him.” Here is a typical case
which occurs in the practice of every operator, and the right
method of procedure may be here given at length, so that the
student may know just how to proceed in such a case.

HOW TO BEGIN TO INFLUENCE THE BOY.—Approach the boy
with a firm, confident manner, and take his left hand in your
right, at the same time placing your left hand on his forehead,
and pushing back his head until he looks up into your eyes as
you stand above him. He will be somewhat afraid at this pro-
cedure. Tell him that you have no intention of hurting him, and
that he will really enjoy himself very much during the experi-
ments which are to follow. Tell him that you will not hurt him, or allow anyone else to hurt him; that you do not intend to run pins in him or put him to any pain, and that he may have full confidence in you. Talk to him reassuringly, at the same time making him keep his eyes fixed on yours as he stands upon his feet. Tell him that he must do just what you tell him to do, and that you will put him to sleep. Tell him that you are going to put him in a chair, and that you will give him a ten-cent piece to look at, or a silver half dollar; any bright object will answer the purpose just as well. Then impress upon him that nothing unusual or extraordinary will happen, but that his sleep will be a perfectly natural sleep. Put him then into a comfortable chair, put the bright object in his hand, bringing his hand to about four inches from his eyes, and tell him that after looking at the bright object for a little while he will become drowsy, then more drowsy, and finally he will be compelled to close his eyes and to sleep.

**What to Say.**—Repeat positively to him in the most em-
phatic manner some such directions as these: “Keep your eyes fixed upon the object in your hand. Pay no attention to anyone who comes into the room, and pay no attention to any noises you hear. Your eyelids will get heavier and heavier. You will become so drowsy that you will be unable to keep them open.” Go behind his chair and rest your right hand on the back of his neck, keeping the palm firmly pressed against his neck, but not in such a manner as to cause him any discomfort. Allow him a little while to get sleepy, as nothing is gained by hurrying matters. Here repeat the suggestion as follows: “Your eyes are becoming more and more heavy; you are getting more drowsy; in a little while you will be unable to keep your eyes open, but you must not close them until I tell you to do so. Now you can scarcely see the object, but keep looking at it and I will tell you when to close your eyes.”

The Purpose of this Method,—Keep talking positively but quietly to him in this manner; make your suggestions in such a tone of voice that they impress themselves upon his consciousness as facts. You are now driving into his mind the idea of sleep. Keep on talking to him; let him only listen to what you have to say to him. Because of your repeated suggestions to him his eyes in a little while will really begin to have the appearance of drowsiness and heaviness in the eyelids. Then say: “Your eyes are almost ready to close; you can scarcely keep awake.” Here make your tone of voice less commanding and more drowsy, using the very drowsiest intonation which you possess, drawing out your words and letting it appear that you are yourself fatigued and almost ready to fall asleep. Continue as follows: “Now your eyes must close; you cannot keep them open; they must close now and you will be asleep. Close them.” Keep your right hand upon the back of his neck as heretofore, and put your left hand upon his forehead, saying, “Sleep,” giving the command to sleep quietly but firmly. Sometimes the eyelids will quiver for a few seconds, sometimes longer. Very soon the subject will relax his muscles and settle back in his chair with a sigh of satisfaction. Let him remain so for some time saying nothing to him at all.

Maintain Silence in the Room.—Request the person who accompanied him to your office to remain perfectly quiet throughout the whole performance, making no noise to attract the attention of the subject, and offering no suggestions whatever
either to him or to you. This point should be insisted upon before the beginning of the treatment.

**Affecting the Boy's Muscular Action.**—After allowing your subject to rest for a few moments, say in a very low tone of voice: "You are fast asleep and nothing will wake you; nothing will hurt you; you can open your eyes when I tell you to do so, but you cannot open them if I tell you you cannot. You will remain asleep. Now I shall lift your arm and that will not disturb you. Nothing will awake you." Take your hand quietly away from his neck and stroke the arm nearest to you two or three times, then raise it quickly to a horizontal position, and say: "Your arm will remain fixed as I put it;" stroke it two or three times again and say, "You see that your arm remains fixed and you cannot take it down. It will stay in any position in which I place it; you are sound asleep, and you will do anything I tell you to do, but you cannot wake up until I tell you to wake." The arm will remain in the position in which it is placed, and you may then say: "No one can bend your arm or take it down until I give them leave."

**The First Stages of Catalepsy or Muscular Rigidity.**—
You can proceed so with the other arm, and it is a good plan to make both arms and legs rigid in this manner, provided that your subject is a boy or a young man who has nothing the matter with his general health, and upon whom a muscular experiment of this kind will have no exciting effect.

**Removing the Rigidity.**—When his limbs are all horizontally stretched in this manner you may say to him, "Now I shall gradually remove this influence and loosen your left arm by making a few passes over it from the wrist to the shoulder." Do so, and then say: "Now it is relaxed and easy and you can put it down." So proceed with the other arm, and always be careful in this experiment to thoroughly remove from the patient's mind any impression of muscular rigidity which you may have placed there in the course of the experiment. Repeat to him, "You are sound asleep, and you will do what I tell you to do. No one can wake you except myself."

**The Effect of Your Suggestions.**—You have now demonstrated in the case of this subject the control which you have over his muscular system. You have, by your repeated suggestions that he cannot do certain things which in his ordinary state he could do, driven into his mind the suggestion that it is impossible for him to, for instance, lower his arm. The result is that by the repetition of the Suggestion he has come to believe that what you say is a fact and he finds himself therefore to a certain degree at war with himself. He may, and subjects frequently do, seem to make strenuous efforts to lower his arm; but because of the fact that he believes he cannot, he is unable to do so. Now you should begin to understand the power of positive Suggestion when driven into the mind at the time when the reasoning faculties are not in their most active state.

**His Reason is Affected.**—While the boy is very drowsy and sleepy he does not reason as he would reason in his waking state. Therefore he merely accepts the fact that he cannot put down his arms and gives up trying. His brain is then in a receptive condition for further suggestions, and you may proceed with any experiments which suggest themselves to you in the way of demonstrating further muscular control over your subject.

**Further Evidences of the Receptive State of His Mind.**—For example, in precisely the same way as you demonstrated to his satisfaction or dissatisfaction that he could not lower his arm when you told him he could not you may prove to him and
to others present that he cannot open his eyes when you say he cannot; that he cannot close his mouth when you open it, and command it to remain open; and that he cannot move from any spot upon the floor when you say that he is transfixed there and incapable of movement.

Sleeping in a Standing Position.—You now stand him upon his feet and say, passing your hands rapidly down his head past the arms and down to his feet with a quick stroke, touch-

![Image](image-url)

**FIG. 13**

Sleeping Standing on His Feet

ing the clothing lightly, and repeating this double stroke a few times, "You can sleep just as easily and just as soundly standing upon your feet as sitting in the chair. You will open your eyes when I tell you to open them, and you will see what I tell you to see. You will also feel what I tell you to feel, everything will be real to you." You now say: "Although I should tell you to open your eyes you will not be wide awake; you will still be asleep; you will see some very curious things, but you will not be frightened at them, and you will not wonder how they came there; you will only know that you see them and that they are real to you."

Giving Quick, Positive Suggestions.—In this experiment
it is necessary that you should speak quickly and without hesitation. The idea is to impress at once upon the mind of your subject that what you say is a fact. If you hesitate, or speak in an uncertain tone of voice, you run the risk of letting him rouse himself sufficiently to question or doubt. Your business is simply to impress.

**An Experiment in an Illusion of the Sense of Sight.**

You now take an ordinary walking stick and lay it in the boy's hands, saying: "You are not afraid of snakes. You have always wanted to have a snake for a pet. Open your eyes and look at the snake which I have put in your hands. It will not bite you or hurt you. You are not afraid of it. Hold it tight or it will get away." The boy opens his eyes, and in the place of the stick sees, as he supposes, a snake, but as you have impressed upon him that he will not feel alarmed he does not experience any distaste for the reptile and will even fondle it affectionately. You could if you were so disposed instantly transform this feeling of affection into one of fear, by exclaiming: "Take care, or it will bite you!" All stage Hypnotists play in this
manner upon the fears and affections, that is to say the emotions, of their subjects.

Do Not Induce Fear in Subjects.—But it is just as easy to demonstrate the force of Hypnotism by making use only of tests which are pleasurable to the subject as by frightening him, and I strongly deprecate any use of this power for an inferior end.

Active Somnambulism.—This boy is now in the condition which is called Active Somnambulism. You have induced in his mind an illusion; that is to say, you have given him an object and transformed it by your suggestion into another object, forming an Illusion of the Senses. You now say to him: “Let us put the snake away,” and taking it out of his hands you lay it on one side. Then pass your hands rapidly over his face once or twice and say, “Sleep.” This is all that is necessary to transform the condition of Active Somnambulism into profound sleep.

Illusion of the Sense of Taste.—Let him stand for a moment swaying lightly upon his feet, and then say: “You are very fond of fruit. You like apples and oranges. Here is a very fine apple, one of a choice variety, and you can have it to eat. You will think you never tasted a finer apple or a sweeter one. Take it and eat it now.” You can then put in his hand an ordinary raw potato, and he will eat it with every evidence of satisfaction. Hitherto you have not asked him to speak to you, but you can now question him and he will answer. Ask him how he enjoys the apple, and if he does not at once reply give him a suggestion forcibly that he can speak just as well as he can when he is wide-awake. He will tell you then that he enjoys the apple very much and would like another. You have thus induced the illusion of the sense of taste.

Inhibiting the Sense of Smell.—You can take this same subject and in a little while you can educate him up to such a point of practice that you can positively inhibit the sense of smell to such a degree that a bottle of strong ammonia held under his nostrils will produce absolutely no effect whatever. He may then by suggestion be made to accept the bottle of ammonia as a bottle of eau de cologne and inhale the fumes with evident pleasure. There is no end to the variety of experiments which can be conducted in this matter of illusions of the senses, and it is not necessary here to do more than to give you the above directions as to how you are to proceed to induce such illusions. I have never found that any harm occurs to the sub-
ject from the induction of occasional non-injurious illusions, but their very frequent use is not to be countenanced.

THE USE OF ILLUSIONS AS EVIDENCE.—They are only useful as showing you beyond the possibility of a doubt that there resides in the human mind a power which is superior to the sense perception of every day life. They demonstrate the truth of Hypnotism and the power of Hypnotism and with this demonstration you should be perfectly content, without seeking to abuse it.

HALLUCINATION OF SIGHT.—You can now say to this boy,

![Image](image.png)

**FIG. 15 THE BOY THINKS STRONG AMMONIA IS A FRAGRANT SCENT.**

after having allowed him to rest for a moment, and commanded him to sleep, as in the above experiment, “When you open your eyes you will see sitting in the chair in the corner of the room your mother.” Of course you will take the trouble previously to find out that the boy’s mother is alive. “Your mother has come in to see what you are doing, and you will be very glad to meet her and talk with her. When you open your eyes you will go over to the corner of the room where she sits and talk with her, telling me what she says. Open your eyes and go to her.” At this the boy will walk over to his mother, after staring fixedly at some point in the room where he believes her
to be, and according to his disposition in the waking state he will hold a long or short conversation with her. If he is naturally a talkative boy he will be very garrulous and will ask her all manner of questions, at the same time showing great interest in her replies. You have thus induced in the boy a Hallucination; that is to say, you have created a picture of something in his mind which did not exist. You will thus perceive clearly the difference between Illusion and Hallucination.

Changing Somnambulism into Sleep.—Now go over to the boy, pass your hands over his eyes and say, “Sleep.” After this you will have no fear of Hypnotism, and you will go to sleep for me as soon as I lay my hand upon your head and say ‘sleep.’ It will not be necessary to go through any long process with you any more. You will sleep instantly at any time of the day whenever I wish it and command it. You will go over to your chair now and pass into a profound sleep, in which I shall give you the Suggestions necessary to cure the habit of laziness in you. Walk over to your chair and go soundly to sleep.” Now you allow the boy to rest in his chair for about five minutes, preserving absolute silence in the room.

Giving Educational Suggestions.—Then lay your hand upon his head impressively, saying: “You have been very backward in your studies and have been a very idle boy. It is not your nature to be idle or disobedient, and from this time on you will show an entirely different disposition. You will be eager to succeed in your class work at school; you will be obedient to your parents and a thoroughly good boy in every respect. Your health will be good and you will feel strong, active and happy from this time. Your disposition is naturally a very bright and good one and all the good in you will now come to the surface. We have thrown away and done with all disobedience and idleness from this time. Sleep now for ten minutes and at the end of that time you will awake remembering nothing of what has happened and feeling perfectly well in every way. You will not have any remembrance of any of the suggestions which have been given you, and there will be no trace in your mind of any of the delusions of the senses which have been produced in you. You will be perfectly sound and healthy in every respect. Sleep sound and wake at the end of ten minutes of your own accord.” Still preserving the silence in the room you should now take a seat at a little distance
from the boy, and at the end of the ten minutes, possibly almost at the second, possibly a little sooner, he will wake feeling healthy and well in every respect.

**In Case of Too Profound Sleep.**—Very rarely it happens that the subject passes into so profound a condition of sleep that he does not wake at the time suggested. Then it is only necessary for you to go over to his chair and lay your hand upon his head and say: "You have had a good rest and feel perfectly well and comfortable. When I count three, you will wake up, wide-awake. One, two, three, wake up." At this the subject will open his eyes and perhaps express some astonishment at the length of time that has elapsed by the clock since he first got into the chair. There is never any danger that the subject will sleep longer than you suggest, and that it will be impossible for you to wake unless you transgress some of the important directions which will be given you in this Course of Lessons. There is a danger and it must be fully understood that under certain circumstances a subject may continue to sleep and will resist all your efforts to wake him. I propose to show you later on why that takes place, and wherein you as operator are responsible for the induction of such a condition.
LESSON IX.

The Sub-conscious Mind.—Thus far you have been given only typical methods of inducing Hypnotism in your subjects. You are now ready for further instruction dealing with the part which the sub-conscious mind plays in these phenomena. A simple illustration will best convey to you the truth of the proposition that man is not a creature of one consciousness only; that there exists in him another consciousness which we call sub-consciousness.

Evidence of Double Consciousness.—You are well aware of the fact that when you dream at night you are making use of an intelligence or a consciousness which differs in its chief characteristics from the waking consciousness. The chief point of difference lies in the fact that dreams can scarcely be said to show much reason in their composition. It is this absence of the reasoning faculty which chiefly distinguishes consciousness from subconsciousness. In other respects sub-consciousness closely resembles the consciousness; that is to say the dream life is an almost exact counterpart of the waking life. The creations of our dream consciousness are molded by our waking experience; the people who appear in our dreams as existing realities are almost invariably the people whom we have known or do know in waking life. Therefore we may say that while these two conditions of mind, the waking and the sleeping, are distinct in themselves, they are closely allied to each other and have certain properties in common.

Properties in Common.—One of these properties is memory. But whereas memory in the waking man is a very treacherous and unstable servant, in sub-conscious life the memory is marvelously acute. In the sub-conscious mind there dwells
a record of all the events and happenings of one's life. It is
a diary of the soul, and it would seem that when the cloak of
waking consciousness, with its cares and anxieties, is lifted, this
sub-conscious memory yields up startling records of its reten­
tiveness and power. In this way men suddenly brought face to
face with death are conscious of realizing almost in an instant,
as in a panoramic view, the whole of the events of their past
lives. The veil between the conscious and the sub-conscious
is sometimes of a very thin texture, so much so that many people
pass a great part of their waking lives in abstraction or reveries,
and to them the sub-conscious is generally more real than the
conscious. By means of Hypnotism we are able to remove this
veil and to give to the individual the use of his sub-conscious
faculties in their full strength.

THE CREDULITY OF THE SUB-CONSCIOUS.—The sub-conscious
mind is ready to believe, and willing to believe, what you say to
it. It does not question or oppose your suggestions, even as
you yourself do not oppose your dreams when you experience
them every night of your life.

WHERE THE FORCE LIES.—Therefore Hypnosis may be de­
fin ed as a state of conscious rest, but sub-conscious activity,
and to put the matter in a nutshell, the reason why Hypnotism
is valuable as a curative power is because the force of the
individual lies in the sub-conscious mind. The motive power
is there. The waking mind commands, and, impressing its com­
mand upon the sub-conscious, the sub-conscious accepts, receives
and believes the suggestion given, and executes the command.
This is true of the individual in waking life, and it is true of the
individual in Hypnosis. The healing force is resident in the
sub-consciousness.

VIS MEDICATRIX NATURÆ.—It is a divine law of being that
nature will always endeavor unaided and without any con­
scious prompting, to remove disease and rectify disorders. But
occasionally through the wrong thought of the individual's wak­
ing mind the sub-consciousness is so impressed with error
and wrong belief that it is powerless to shake off without assist­
ance the evils that surround it. Hypnotism is simply a means
of introducing this assistance from without to the sub-con­
scious mind. The suggestions of the operator act as a guide
and help to the sub-conscious mind to combat its erroneous
beliefs, and to set again in motion that divine force of healing
which is the property of the sub-conscious mind. This is a most reasonable and beneficent law.

The Power of Belief.—The power to heal by Hypnotism is almost entirely the power of the patient to accept and believe the strengthening suggestions of health which by Hypnotism are forced upon the attention of the sub-conscious mind. Remember that in the waking consciousness the healing force is not apparent. It is a property of the sub-conscious economy, and can be developed by the individual himself for his own advantage by addressing himself in just the same way as the operator would address him in Hypnosis, or it can be developed by Hypnotism as explained in detail above. The point here made is that whether a man cures himself of an ailment or is cured by another, the means used to bring about the cure are identically the same, consisting of an impression made by a conscious upon a sub-conscious mind. The first means of cure we call Auto-suggestion, the other we call Hypnotism.
LESSON X.

The Difference Between Hypnosis and Natural Sleep.—I have already referred to the exalted memory of which evidence is given during Hypnosis. By that you will readily understand that I do not class Hypnotism and ordinary sleep under precisely the same heading. During Hypnosis the intelligence is abnormally acute. But if the subject be allowed to rest undisturbed by any of your suggestions he will always pass from Hypnosis into natural sleep. Therefore we may say that Hypnosis if evolved from sleep returns to it again.

Curing During Natural Sleep.—In just the same way as Hypnosis is evolved from artificial sleep it may be evolved from natural sleep. Cures are now being made every day in America by parents who have studied the principle of the sleep cure in correcting bad habits in their children, or in advancing them in their studies and improving their health by the simple means of talking to the children and getting answers from them while the children are asleep at night. The important point in this sleep treatment is that the parent or the operator shall secure the attention of the sleeper. This whole subject was first laid before the American public in a short treatise which I wrote in June, 1897, entitled “Education During Sleep,” and giving instances of cures which I had been able to perform in this way, such disorders as stammering, enuresis, chorea, nervousness, fears and bad habits, having readily yielded to this means of treatment. Remember what was said in the previous lesson about the power resident in the sub-conscious mind, and you will readily see the philosophy of the system.

The Method Reproduced in France.—About one year after
I published this discovery, Dr. Paul Farez contributed to the Revue de l'Hypnotisme of Paris a series of articles indorsing and corroborating my theory and results. It is now generally accepted among psychologists that educational and moral influences can be in this manner engraved upon the minds of the sleepers. The method to follow is always the same, and it is not necessary to waste much space in detailing it. You have been shown how to give positive Suggestion in the preceding Lessons. Let us suppose, since it is always easier to teach by illustration,

that you have a son who has fallen into the habit of stammering, a habit which is usually picked up by children in imitation of some one of their acquaintances. In order to treat this habit successfully you should say to your boy before he goes to bed at night, "I shall come to you to-night when you are sound asleep and talk to you. You will not be surprised to hear me speaking to you, and you will not take the trouble to wake up. But you will answer me when I speak to you."

**The Method of Giving Suggestions During Sleep.**—After allowing him ample time to go to sleep, you should go to him, and lying down beside him, begin stroking his forehead in order to quietly introduce into his mind without disturbing him to the point of wakefulness the knowledge that you are near him. Any-
thing like a shock will of course awaken him, and it would then be necessary for you in order to carry out this treatment to proceed exactly in the same manner as if you were hypnotizing a subject. That is to say you will tell him that all is right, and that he must close his eyes at once, and go to sleep again. Make your suggestions strongly emphatic to the effect that he is feeling drowsy and sleepy and will be sound asleep in a moment and that he will not awake when you talk to him. But the probability is that if you carry out directions properly he will not awake. You must now display great patience in slowly and gradually securing his attention. You must not hurry him or raise your voice. Speak in a very low and distinct tone but without hurry.

**Giving Quiet Suggestions.**—Say quietly “You are sleeping soundly and will not wake up. You hear me talking to you; nothing that I say will disturb your sleep. You can answer when I speak to you. Do you feel comfortable?” The probability is he will not answer you at first. It is necessary to educate him to the point of answering you without waking, and you will therefore continue to stroke his forehead quietly, thus attracting his attention gradually to yourself. Lay one finger lightly upon his mouth and say, “When I touch you on the mouth you will be able to speak; you can say ‘yes.’” Usually the boy’s lips will move, and he will seem to be trying to formulate a sound, but no sound will be heard. When you see this movement of the lips you may repeat your suggestion, and make the statement positively that on the next night he will be able to talk easily with you.

**Curing Stammering.**—Then proceed to give him the Suggestions necessary for the cure of stammering as follows: “You will find to-morrow that it is quite easy for you to talk without any hesitation in your speech. You will talk just as well and just as easily and as clearly as I do. You will not stammer or hesitate in your speech.” Repeat these suggestions to him once more making them very positive and emphatic; and then leave him. In the morning he will probably have no remembrance of what you have said to him, but you will notice a marked improvement in his speech and it may happen that during the day your Suggestions will come back through his sub-conscious memory to his conscious memory and he will recall what you said and how you said it. It may also happen that he will have no remembrance then or afterwards of anything that has transpired. These things depends chiefly upon the depth of the sleep induced.
THE PROCESS GROWS EASIER BY REPETITION.—On the next night and on succeeding nights when you talk to him you will find that you will have less difficulty in securing a response.

AN EXPERIMENT IN PASSIVE SOMNAMBULISM.—If you wish to try an experiment that will convince you of the influence which one mind may wield over another during natural sleep you can mold the dreams of any sleeper in whatever direction you wish. You can suggest to your boy that he is a soldier at the head of his troops and he will pass through all the exciting incidents of the battlefield in his dream. You can suggest to him that upon awaking he will remember the fight, and all about the enemy, and everything in fact which you have suggested as taking place, and he will give you in the morning a clear account of his vision. But he will have no memory of the fact that you suggested these things, and will believe that they were simply a real vision evolved by him. In just the same way as you have presented to his imagination the startling action of the battlefield you can suggest and impress upon his mind visions of pleasant repose and healthful rest. The law of the receptivity of the sub-conscious mind to suggestion is irrefutable. It works both ways. It can be used for evil as well as for good; therefore see to it that you use it only with the best intentions.
LESSON XI.

Post-Hypnotic Suggestions—How to Give Post-Hypnotic Suggestions—The Subject Makes Excuses for His Conduct—Strengthening the Suggestion—When These Suggestions Fail—Suggestions Can be Refused—The Length of Time These Experiments Hold Good—So-Called Instantaneous Hypnotism—How to Overcome the Resistance of the Subject—Why the Insistence of the Operator Succeeds—Where Danger Lies—What to do in Such Case—The Importance of Post-Hypnotic Suggestions.

Post-Hypnotic Suggestions.—Among the many phenomena of Hypnotism none occasions so much surprise or perplexity to the beholder as the effect of what is known as post-hypnotic suggestion. But if you will carefully study the Chapter dealing with the sub-conscious memory you will receive the clue to the remarkable phenomena of this state. They depend in a word upon the perfection of memory which is an attribute of the sub-conscious mind.

How to Give Post-Hypnotic Suggestions.—In order to give a post-hypnotic suggestion the operator should address his subject when the latter is sound asleep as follows: “Ten minutes after I wake you you will feel a strong desire to put on your hat and go back to your house. You will then pick up your hat and put it on and you will then immediately forget what you intended to do and will remain in your chair talking to me with your hat on. You will not know that I have suggested to you that you are to do this.” At the appointed time, viz.: ten minutes after he has been awakened, this subject will suddenly look round for his hat, having found it he will immediately put it on his head and sit down in his chair again. If you question him, he will say in all sincerity that he has not moved from his chair and that his hat is not upon his head. If you take his hat off and show it to him he will be for a moment non-plussed, but recovering himself he will say ‘yes,’ he intended to go home.

The Subject Makes Excuses for His Conduct.—He will say this rather than allow you to think that he was so deeply influ-
enced by your suggestions that he actually performed some act of which he was utterly unconscious. He will know, although he has no memory of what you have said to him, that he has been doing an apparently foolish thing at your suggestion and you will find in this case and invariably in all others that the subject has such a dislike to appear to be merely a machine which carries out your bidding that he will frame all kinds of excuses to make it appear that he knew perfectly well what he was doing. The subject has in this instance carried out a post-hypnotic suggestion, and as this line of experiments admits of a great number of variations it will be well to consider it here in more than one of its phases.

**Strengthening the Suggestion.**—In order to make a post-hypnotic suggestion more easily effective it is better to connect the suggestion with some act of your own which shall have a double bearing upon the suggestion itself, as for instance, suppose you say to your subject while he is asleep, "When you see me go out of the room you will get up from your chair and put the hands of the clock forward half an hour and will not remember that you have done so," you then make the post-hypnotic suggestion very easy of accomplishment because you connect the fulfillment of your suggestion with your act of leaving the room. Remembering the tenacity of the sub-conscious memory you will understand how it is that when you leave the room, your previous suggestion comes back to the subject's waking consciousness in the form of an impulse because he has not refused to accept it at the time it was given him.

**When These Suggestions Fail.**—The only post-hypnotic suggestions which are not carried out are those which are refused by the subject at the time the suggestion is given. If he accepts the suggestion and agrees that he will carry it out, any post-hypnotic suggestion that may be given will be carried out to the letter. But if you give a subject a suggestion which is distasteful to him or which is against his code of morals, he will refuse to entertain it at the time the suggestion is given, and it will not make the full impression upon his sub-conscious mind because of the opposition with which he meets it.

**Suggestions Can Be Refused.**—In order that a suggestion may be effective it must be firmly believed and accepted by the subject. I admit that in some instances very unpalatable suggestions are accepted by the subject and that he is apparently
against his will compelled to do certain things which in his waking state he would not do, but I have always found in a case of post-hypnotic suggestion that nothing very distasteful was ever accepted no matter how much pressure was brought to bear by the operator nor howsoever forcibly the suggestion was made. In presence of the operator the subject will sometimes, as I say, do things which in his waking state he would not do, but in the absence of the operator, when a post-hypnotic suggestion is usually carried out, he will not perform the acts suggested to him if they are disagreeable or unpleasant. This simplifies the process very much and puts it upon a reasonable basis.

The Length of Time These Experiments Hold Good.—A post-hypnotic suggestion may be given to the subject to take effect one week, one month or even one year from the time of the sitting and the acts suggested will be carried out faithfully by the subject exactly at the time appointed. This again is accounted for by the perfect memory of the sub-conscious mind.

So-called Instantaneous Hypnotism.—Here is another example of the most common form of post-hypnotic suggestion which is ever used, and one which stage operators invariably make use of upon the platform. If you say to your subject when he is hypnotized, "When I come into the room and say to you 'Sleep,' no matter what you are doing you will drop your work and go fast asleep," the effect is as suggested, namely, no matter what the subject may be doing he will pass into a condition of profound sleep just as soon as the operator enters the room and commands sleep.

How to Overcome the Resistance of the Subject.—Sometimes it happens that the subject resists the influence, and it then becomes a test whether the operator knows his business, or is easily disconcerted. If he knows his business, and has had experience in this work, he will ply the subject with verbal suggestions quickly, giving him no time to think, and positively, in order to impress his mind with the idea that what he says is happening, actually is happening. Suppose that the subject has refused to accept the suggestion of the operator and shakes his head saying, "I won't go to sleep and you have no power to make me drowsy." It would be a wrong method for the operator to stand still and repeat his suggestion of sleep. He should lay his hand on the boy's forehead and close his eyes with the other hand saying positively, "You can't keep awake if you try to. You want
to go to sleep; you feel drowsy; now you are going to sleep. Sleep soundly, standing on your feet.” If he passes his hand once or twice across the boy’s forehead sleep will follow as certainly as night will follow day.

**Why the Insistence of the Operator Succeeds.**—The boy is a somnambulist, that is to say he accepts suggestions readily. He has been hypnotized before by the same operator and he can be hypnotized again by the same operator. His opposition goes for nothing provided the operator understands how to drive the suggestion into the boy’s mind. You can always hypnotize a subject a second time whom you have hypnotized once. The only exception to this is when by bad management and bad suggestions you induce in the subject a feeling of intense nervousness, in which case neither you nor any other operator using the same means would be able to re-hypnotize the subject. This has happened several times within my experience, but the result has come about through the nervous irritability induced in the patient by the foolish experiments to which he has been subjected.

**Where Danger Lies.**—While upon this subject we may point out where the danger lies to the operator in being unable to awaken a subject whom he has hypnotized. The fault, as I stated above, lies invariably with the operator. If you were to try to impress upon the mind of a subject any suggestion which was repugnant to his nature, and which in his waking state he would vehemently object to he would do one of two things. He would either wake up at once, or he would pass into a condition of deeper sleep in which no suggestions of yours would have any perceptible effect upon him. He would refuse to be awakened, and you could not rouse him by any of the ordinary means employed to wake a person from sleep.

**What to Do in Such Case.**—If such a thing should ever happen in your experience the only course to follow is to leave your subject severely alone and allow him to sleep off his lethargy, and wake when he pleases. Do not try to arouse him, and do not allow anyone else to touch him. You can lay your hand upon his forehead and say, impressively, “As I see you do not wish to wake up at present you may sleep here as long as you want to and when you do awake, you will feel perfectly well and free from all nervousness. There will be no ill-effects whatever from this sleep and you may wake when you please.” If you then leave your subject alone nature will take her own time to bring him
so to speak from the depths of sub-conscious life to the surface again, and he will awake none the worse.

**The Importance of Post-Hypnotic Suggestions.**—Post-hypnotic suggestion is the most valuable of all the phenomena of Hypnotism because it has lasting effect upon the sub-consciousness. The ordinary suggestions which you would give to anyone of your patients, viz.: "You will feel much better when you awake and this improvement will be permanent," are really post-hypnotic suggestions because they deal with a state of mind which is to occur after the Hypnosis has terminated. Therefore you will readily understand the importance of post-hypnotic suggestion and its efficacy.
LESSON XII.

THE STATE OF CATALEPSY—HOW IT IS INDUCED—THE DANGER IN THIS CONDITION—THE STATE BECOMES INVOLUNTARY.

THE STATE OF CATALEPSY.—There is a condition of Hypnotism known as Catalepsy which is made much of by stage performers, but which I strongly advise you to let severely alone. Those of you who have seen hypnotic entertainments have witnessed the spectacle of a man or woman of slight physique carrying the weight of several hundred pounds while suspended between two chairs or tables, with no rest for the body other than that afforded by the head and feet of the subject. The condition is one of muscular rigidity, and with practice certain subjects develop an extraordinary degree of strength in this particular line.

HOW IT IS INDUCED.—Catalepsy is induced in the following manner: Suppose you were to take this boy whom you have put to sleep and in whom you have induced the illusions of the senses given in detail in a previous Lesson, and were to say to him, passing your hands repeatedly down his body from his head to his feet, "You are growing stiff all over; you are not a boy any longer; you are an iron rod, and it is impossible for you to bend yourself. Wherever I put you or however I place you you will remain as rigid as a corpse." Suppose you then take this boy as he falls back rigid in your arms and suspend him between two chairs, resting his head on one and his feet on the other, and you would have a typical state of stage Catalepsy. You would find his pulse-beat accelerated, and possibly there would be no other evidence upon the surface of the strain which he was enduring. Your suggestions to him should be, "You feel no strain whatever. You could bear any weight I choose to place upon you." The effect upon the beholder is sometimes startling. He may possibly try the feat himself in his waking state, and he will be surprised at the difficulty he experiences in thus supporting himself.

THE DANGER IN THIS CONDITION.—But although this
The phenomenon of Catalepsy is very good evidence of the peculiar power of the body when called into operation under suggestion there is a real danger in Catalepsy, which so far as I know no operator, and no Course of Instruction in Hypnotism, have ever yet pointed out. The danger is that this habit of straining the muscles in a continuous rigidity during sleep is very apt, like any other habit, to fasten itself upon the performer and the old story of Jekyll and Hyde may be unfortunately repeated. The moral of that remarkable book lay in the fact that against the wish of the hero, Dr. Jekyll, his inferior self fastened itself upon him and chose to assert its individuality.

The State Becomes Involuntary.—The danger in a continuous practice of Catalepsy is that during natural sleep it is quite likely that the subject will dream that he is on exhibition or that someone is inducing Catalepsy in him, and he will then pass during this natural sleep into a condition of muscular rigidity which may endure for several hours, and from which it may be found impossible to wake him. Such a muscular strain is good for no one physically, and the nervous system is impaired by its
continuance. One of the best stage cataleptics who has ever appeared on an American platform is now in an insane asylum in the East as a result of her involuntary entrance into this condition, coupled with the degree of damage which her nervous system had previously undergone through this training. A few of the minor experiments in Catalepsy will do no one any harm, but anything that savors of brutality in any degree is certain to recoil upon the operator, and may perhaps have serious consequences.
LESSON XIII.

Increasing the Muscular Strength by Hypnosis—Its Effect in Rendering the Senses Acute—Treating a Headache—The Rationale of Curing Pain—Making the Cure Permanent—Procedure in Cases of Rheumatism.

Increasing the Muscular Strength by Hypnosis.—You will find in the practice of Hypnotism that in some of your subjects the physical strength during Hypnosis is remarkably increased. They will be able under Hypnotic Suggestion to take up from the floor weights which they would be incapable of lifting while in their normal state.

Its Effect in Rendering the Senses Acute.—In the same way the sense of smell is by Suggestion rendered so acute that at a distance of many paces the subject will detect and describe odors which are indistinguishable to other members of the company. The sense of sight may be similarly sharpened so that he will be able to read very fine print, which in his waking state would require the aid of strong glasses. And lastly the sense of hearing may be strengthened to such a degree that a deaf person may hear a watch tick at a distance of several feet. You will understand how valuable this fact is to the doctor who uses Hypnotism as a medical agent. There are very many cases of deafness which have been cured by Hypnotism. The power in this case has been applied to wake the auditory nerve to an activity which in normal life it did not possess. Similarly the optic nerve may be strengthened by Suggestion until the failing sight is arrested, and even blindness is removed. In treating patients by Hypnotism for any disorder it is always best during the Hypnosis to manipulate the affected parts with the hands.

Treating a Headache.—In the treatment of headache, pass the hands frequently over the head, suggesting that all congestion is now removed; that the pain has departed and will not return, and especially rub the scalp thoroughly with the fingers in order to permit it to regain its relaxed condition. It has lately
been shown that Hypnotism cures headaches generally because of the relaxation which accompanies Hypnotism, which relaxation, extending as it does to the blood vessels, permits the congestion to subside, and so removes the pressure on the nerves which caused the pain. In curing rheumatism it is not sufficient to suggest to the patient simply that his rheumatism is gone and will not return. You will find that during the Hypnotic sleep you can lay your hand upon an inflamed joint which to touch in the waking state would have occasioned excessive agony. The cry of pain which the inflamed joint sends to the brain and which is transferred by the brain to consciousness, is not heard during Hypnosis. Your suggestion that there is no pain in the affected part is the most potent suggestion of the two. This is the command which the brain carries first to the consciousness, and which the consciousness assumes to be true.

The Rationale of Curing Pain.—The result is that you have cut off the communication between the brain, which is the interpreting agent, and the seat of the pain in the elbow, or the knee or the wrist or wherever the pain may be. Upon this principle all cures of inflammatory conditions are made by Hypnotism. It is the command of analgesia which you send to the brain which severs the connection between the old painful condition and the consciousness, and the result is that the pain is no longer felt.

Making the Cure Permanent.—By means of the force which lies as you have seen in a post-hypnotic suggestion you are now able to make this condition of analgesia permanent, so that when you say, "Your pain is absolutely gone and will not return," you are continuing to interrupt the communication between the brain and the seat of the pain, and the result is that the rheumatism subsides. If it should return, as it frequently does, in spite of your strong assertions to the contrary, it is necessary to re-hypnotize the patient and repeat the suggestions, remembering that this is the only form of cure which is absolutely natural in itself. It is bound to be successful in the end, because it is nature's own method of cure. No matter how often a disease may recur, under Hypnotic treatment its manifestations are bound to become less and less forcible until it is finally subdued altogether and eradicated from the system. These two forms of treatments, the treatment for headaches and the treatment for rheumatism, may be of course varied in many ways.
Procedure in Cases of Rheumatism.—In the treatment of rheumatic patients I invariably begin very gradually to manipulate the affected part, moving the arm if that happens to be the seat of the inflammation, gently to and fro, at first gradually, then more and more forcibly, impressing upon the patient continually and positively that the pain is departing; it is all passing away, and that it will not return. Always at the first treatment I have found it possible to induce the patient by suggestions to raise to its full stretch the arm which he had previously declared it caused him pain to think of moving.
LESSON XIV.

A VALUABLE PROCESS—EFFECTIVE IN THE ABSENCE OF THE OPERATOR—
HYNOTISM AT A DISTANCE.

A VALUABLE PROCESS.—Remembering the method of giving post-hypnotic suggestions you will find it now a very peculiar demonstration of your power and one which will greatly impress your patient if you adopt the following means of keeping in communication with him: put him to sleep, and when you are convinced that he is well under the influence, say to him: "I am going to give you a talisman which will secure you sound and refreshing sleep at any time when you are in need of it. No matter how wakeful you may be, whenever you take this object from your pocket or from any place where you may keep it for safe keeping, and your eyes fall upon it, you will pass at once into
a profound sleep." You will then take a piece of paper, or your own card would be preferable, and write upon it in bold letters the word "Sleep." Tell him now to open his eyes and look at the card which you place in his hand. As he does so repeat to him forcibly that whenever his eyes fall upon that particular card he will pass at once into profound Hypnosis. Say that he will hear your voice talking to him and telling him to go to sleep.

**Effective in the Absence of the Operator.**—It is a good plan to leave such a card as this with any one of your patients who may be suffering from insomnia, because, strange to say, although the patient may have been tossing about in a vain desire to secure sleep for half the night, just as soon as he finds this talisman or rests his eyes upon it the nervous equilibrium of the system is restored, and he falls asleep. Not the least part of this curious experiment is that the passage of time does not dim the force of the paper. It would be just as good in five years as to-day.

**Hypnotism at a Distance.**—You will find that whenever you have put a subject to sleep two or three times so that he is fully familiar with your tone of voice, and method of using suggestion, you can put him to sleep just as well over the telephone, or by letter, as if you were personally before him.
LESSON XV.

VALUE OF HYPNOTISM TO THE PHYSICIAN—HOW THE DOCTOR MAY USE SUGGESTION—THE EFFECTS PRODUCED—MAKE USE OF NO TESTS—THE ATTITUDE OF THE MEDICAL PROFESSION—THE SIMPLEST FORCES THE MOST POWERFUL.

VALUE OF HYPNOTISM TO THE PHYSICIAN.—In every physician's practice there are daily opportunities for the use of Hypnotism which in this day he is not slow to take advantage of. It is a well-known fact in every medical man's experience that there are certain cases of pain and insomnia consequent upon cerebral excitement, in which drugs are absolutely inert and in which unfortunately it is too often the practice to employ repeated injections of morphine from which dangerous beginning almost every case of morphine habit is started. The proper method for the physician to employ in all these cases, except where delirium is raging, is Hypnotic Suggestion. It is not necessary that the word "Hypnotism" should ever be mentioned, in connection with these cases, because it often has the effect of exciting still further the nerves of the patient, on account of the bad odor which clings about the word itself.

HOW THE DOCTOR MAY USE SUGGESTION.—It is only necessary for the physician to seat himself beside the patient, taking the latter's hand in his and saying very quietly and impressively: "It is better not to give you any drugs at present. There is a method by which I can check this pain that you are suffering, and give you sound and refreshing sleep. You need have no fear and anxiety concerning this and will only be required to do just as I tell you. Keep your eyes fastened upon mine, and do not under any circumstances look away from me. I shall take away the pain and in a little while you will grow drowsy and fall quietly asleep." Then the self-same suggestion of increasing drowsiness, etc., should be given to the patient which has been already detailed fully in preceding Lessons, bearing in mind the fact that in this case no experiments whatever in the matter of inducing rigidity of the arms by suggestion are necessary or advisable.

—74—
The Effects Produced.—Almost immediately in response to the physician's suggestion the pain will become less pronounced, and with the lessening of the pain the patient's receptivity to suggestion will be increased to such an extent that the succeeding suggestions will make a deep and still deeper impression upon the mind, so that sleep can be readily induced. When it appears that the patient is sleeping the physician should lay down the hand which he has been holding, and quietly stroke the arms from the shoulder downward, repeating very soothingly the formulas to the effect that the patient will pass into profound refreshing sleep and will awake refreshed and strengthened and free from all pain. In all such cases it is not even necessary to make the test of inhibition of muscular action. It is not even necessary to say to the patient: "You cannot open your eyes."

Make Use of No Tests.—Bear in mind that nothing in the nature of a test should be permitted. Content yourself with positive suggestion and the request that the patient shall not remove his eyes from your face. The alleviation of the pain and the subsequent sleep are both brought about by the tranquilizing effect upon the nerves which this novel method of treatment ensures, the indirect cause being that the patient's attention is diverted from his own trouble and fastened upon something else. As his attention wanders it must be brought back to the matter in hand, and as the human brain is not capable of experiencing at the same time two distinct emotions, it follows that the patient will cling to the one which is most agreeable and most conducive to his health. He is therefore inclined himself to give full attention to the suggestion of the physician, and by the repetition of the latter's words the positive and pronounced effect is produced upon the patient's mind and by mental action a result is secured which the most powerful drugs fail to attain.

The Attitude of the Medical Profession.—I could wish that every physician in the land fully understood the simplicity of Hypnotic Suggestion, but I am afraid that his training having been entirely material, he would be inclined to scoff at a means of treatment which was so extremely simple and bereft of all mystery. It has been the unfortunate rule of human interference in the divine law of cure that we gauge a remedy's value by its unpleasantness or difficulty. We value a surgical operation in proportion to its hazard. We estimate the value of a drug by its
destructive effect upon tissue, and its poisonous properties if administered in large doses.

**The Simplest Forces the Most Powerful.**—We do not understand as yet that the simplest agencies are also the mightiest, and that the force of suggestion is the most powerful factor in determining human happiness and health or misery and disease. The mind has always governed and the mind will always govern. We must therefore devote our study to the law of cure which shall most directly reach the mind.
LESSON XVI.

To Influence Nervous Women.—Among the many methods which have been devised for hypnotizing nervous women, there is one which I originated and practiced with much success for several years. It is strictly speaking another method which should only be used between operator and patient, and is best suited to the therapeutic side of this work.

The Counting Method.—Make your patient comfortable upon a couch, and then give her the following directions: “Do exactly as I tell you to do. I shall put you to sleep by counting certain numbers aloud, and as I count you are to open your eyes and close them again. Now close your eyes and keep them closed until I begin to count. Then when I count ‘one,’ open them for a second and look at me and then close them again. When I count ‘two,’ open them for a second and close them again,” etc. Then proceed quietly to count from one to twenty, allowing a pause of five seconds between each count. After reaching twenty go back to one again and count again from one to twenty, allowing a pause of ten seconds between each count. Again go back to one and this time allow a pause of fifteen seconds between each count.

I have never found it necessary to continue this method longer than the third count, by which time the patient had become so sleepy by the strain upon her attention due to her careful following of my directions, and her desire to attend to the simple exercise, that she speedily, with a few re-assuring suggestions, fell asleep.

Why This Method Succeeds.—The philosophy of this system is, first, that it asks nothing difficult of the patient. Secondly, it keeps alive the attention until drowsiness interferes. Thirdly, the mere act of opening and closing the eyes frequently induces a heavy feeling in the eyelids which is in itself a strong suggestion of sleep. Fourthly, the fact that the eyes are closed makes the patient more amenable to the suggestions of sleep and to the
idea of sleep, because the closing of the eyes shuts out the patient's view of surrounding objects, and the mind therefore becomes at once less active in its operations and less aggressive. Physicians have told me that they have succeeded in some of their most obstinate cases in inducing profoundest sleep by this means. It would be a great mistake to suppose that because one method will not apparently affect a patient therefore that patient cannot by any other method be put to sleep.

**Study Your Patients.**—You must always consider the disposition of the patient in determining his or her susceptibility to suggestion, and you must always allow novelty and excitement to be a disturbing factor in profound Hypnosis. Therefore do not be chagrined if your patient should inform you at the close of your repeated efforts to put her to sleep that she is not at all affected. Simply make the statement calmly that if she is human, and you are strongly of the opinion that she is, it is only necessary to find the right means to influence her in order to successfully induce Hypnosis.

**Never be Disconcerted.**—This is one secret of the hypnotist's success, that he should never allow himself to be at a loss, and he should never admit the possibility of defeat. It is a good plan to take a patient who has shown no disposition whatever to accept suggestion while lying upon the couch, or sitting in a chair, and stand him upon his feet, telling him to close his eyes, and that you will put him to sleep by the long magnetic passes. Then stand behind him and make long sweeping strokes from his head to his feet, accompanied by the verbal suggestion that he will feel the influence drawing him backward, and that a feeling of drowsiness will come upon him with ever-increasing force until he finally loses his equilibrium, and falls back into your arms.

**Value of a Change of Methods.**—It very often happens that by this change of method you may succeed in inducing profound sleep and somnambulism in a person whom you have regarded as an impossible subject. The explanation is that as no two men are identical in appearance or character, so no single method will have the same influence upon all. But out of the abundance of material here given you can extract something which will fit every individual, whether normal or abnormal, and a steady perseverance which admits of no defeat is bound in the end to win, since the secret of Hypnosis is essentially the secret of making an impression upon the mind of another.
LESSON XVII.

HYPNOTISM IN DENTISTRY—THE BRIGHT OBJECT AS A METHOD—AVOID THE WORD HYPNOTISM—WHY DENTISTS DO NOT OPENLY ADVOCATE HYPNOTISM.

HYPNOTISM IN DENTISTRY.—The numberless opportunities which occur in every dentist's practice to apply hypnotic suggestions to his patients as a means of inducing freedom from pain during operation upon the sensitive dentine are fully appreciated by anyone who is conversant with this science, and understands its application. But dentists as a class much prefer to make use of the insidious drug, cocaine, than to induce analgesia by the natural process which nature has given to man. The power to inhibit pain is resident in the individual, and any use of a drug for this purpose is an infraction of nature's laws which will be bitterly resented. There is no drug habit to-day which is so difficult to combat and which is so alarmingly upon the increase as the cocaine habit, and the promiscuous use of cocaine by physicians and dentists is a matter which requires state supervision, since very few are aware of the fact that cocaine to-day claims more victims than alcohol.

THE BRIGHT OBJECT AS A METHOD.—In every dentist's office there are highly polished silver-plated or nickel-plated discs and instruments. The bright object more aptly serves the purpose of holding the patient's attention than a dull object, and in order to lessen the pain of a dental operation and sometimes extinguish it altogether it is only necessary for the dentist to use very forcible verbal suggestions to his patient, requesting the latter to keep his eyes fixed upon the object in front of him, which should be placed about two feet away, and should be about from one to two inches in diameter.

AVOID THE WORD HYPNOTISM.—Here again it is unnecessary and even a mistake for the dentist to mention the word "Hypnotism" in connection with what is to follow. He should impress only upon his patient the fact that if the latter will follow direc-
tions there will be practically no pain experienced in connection with the operation. He can then proceed to induce sleep by means of the same formulas given in the preceding Lessons, and he will find very little difficulty in making that sleep profound. He should then address the sleeper just as he would address a person who was wide awake. He should say, "When I pass my hand over your face you will open your mouth, and it will remain open until I tell you to close it. You will not feel any pain or inconvenience or nervousness while I am filling this tooth; when I tell you to rise up and rinse your mouth out, you will not awaken. You will do everything that I tell you to do, but you will not wake up. After the operation is over you will not remember anything about it; you will have felt no pain, and you will feel no ill-effect whatever." Although dentists as a class do not appreciate the value to them in their daily practice of Hypnotic Suggestion as a means for alleviating pain, it is a fact to-day that a great many dentists in the United States use Hypnotism continually, and if they chose to do so could record many startling operations which have been painlessly performed by this agent.
WHY DENTISTS DO NOT OPENLY ADVOCATE HYPNOTISM.—
They do not publish the fact abroad because so great is the public ignorance that if it were known that Hypnotism were the agent used for performing their painless operations their practice would seriously suffer and they would run some danger of being persecuted. Perhaps the day is not far distant when Hypnotism will take its rightful place among those whose mission it is to relieve suffering as the greatest of nature's beneficent remedial agents.
LESSON XVIII.

HYPNOTISM AS A PAIN-DESTROYER.—At the time when Dr. Esdaile was performing major surgical operations in India under hypnotic anaesthesia, and when Dr. Elliotson was doing the same thing in England, the discovery of the value of chloroform and ether as aids in robbing surgery of its terrors threw Hypnotism completely in the shade, and practically quenched its light as an assistant to the surgeon. While chloroform has not been by any means an unmixed blessing, having slain almost as many of the human race as disease itself, we may recognize its value when wisely employed and substantiate its claim to recognition as a beneficent agent. But this does not alter the fact that there is a power resident in man which can inhibit and prevent the recurrence of pain.

THE POWER IN MAN.—The power is within, and it only remains to call it into action. It can be best brought out by the strong suggestion of another given during Hypnosis. The command, "There shall be no pain," is equivalent to a response from the patient to the effect that he agrees that he will feel no pain. It is therefore easy to understand that the power is essentially within the patient. It is his own power called into action by another. He may not know it; he may not believe it; you may not be able to convince him that this power is resident in himself. But the logical explanation of the whole matter is here.

THE DOUBLE NATURE OF THE POWER.—The forces of the body are always two-fold; they always run in parallel lines. There is always the impulsive force and the inhibitive force. The power to act and the power to check; the power to suffer, and the power to check suffering. The very fact that the patient is
able to feel pain is argument sufficient that he has also the power to still it.

The Exaltation of Religious Ecstasy.—There is a condition of exalted mental action which was typified in the case of the early Christian martyrs which is so far superior to physical suffering, that while the persons concerned were not in any sense in the condition of Hypnosis, but were in full possession of their waking faculties, they felt neither the heated iron, nor the whip, nor the fagot, even transforming physical pain into an ecstasy of joy. It does not bear upon the question to say that these people were fired by a religious frenzy, nor does it meet the case to say that they were inspired by God to overcome pain. The plain truth is that God has implanted in the human being a power to subdue and overcome pain which can be brought into action just as soon as the right stimulus is discovered and applied. In some cases this stimulus has been in the form of a sudden shock caused by disturbing news, as in the cases where bedridden persons have suddenly been cured of their ailments upon receipt of distressing intelligence. Or it may take the form of Hypnotic Suggestion, as when the operator commands the pain to depart.

The Healing Shrines.—Or it may take the form of a Shrine, as in the case of the famous grotto of Ste. Anne de Beaupre of Quebec, where many afflicted persons are annually healed of long-standing disorders; or it may take the form of an Auto-Suggestion and positive affirmation, as in the case of Christian Science and the New Thought generally. The fact for
you to remember is that the power is always real. It is there, and by whatever means it may be called into action, it is the same power.

**Inducing Passive Somnambulism to Allay Pain.**—If you are called upon to induce analgesia in a patient who is to undergo a painful surgical operation, at least two weeks beforehand the patient should be daily hypnotized, and it is well to repeat practically the same suggestions every day. These suggestions should take the following form: When your patient is in a profound sleep you should say to him: “I think it would please you to-day to take a trip into the country, and we will now go downstairs and enter the carriage which is waiting for us. We are now being driven out through the streets of the town a long distance into the fields; far away from all noise and bustle. We are now close to the edge of a magnificent forest. You see the trees in front of you; you hear the birds singing; you see the flowers growing at the edge of the forest, and the whole scene impresses you as one of wonderful beauty. We will get out here, and leave the carriage, and enjoy ourselves roaming through the forest. You will take this path to the left and I will take this one to the right, and we shall meet again later on. You will then tell me where you have been and what you have seen during your wanderings. You will feel a sense of great contentment and happiness within you, a feeling of freedom, as if you had at last cast away all suffering and pain, and were thoroughly enjoying yourself. Nothing will hurt you. You will feel absolutely no pain. You are incapable of feeling any pain whatever at this time.”

**Experiencing a Dream-Activity.**—You have now induced in your patient a condition of passive somnambulism, in which state he fully believes himself to be wandering in the forest. This is not a dream to him, but a reality, and the expressions of delight which escape his lips and the alteration in his expression show how firmly he holds the idea presented to him. He is for the time being, as you have suggested, completely happy. At this time it is best to subject him to various minor tests, such as forcibly pinching his flesh, at the same time dwelling upon the fact that he is far away in the forest, and forcibly repeating your suggestion that he cannot feel any pain; that he is perfectly happy and comfortable.

**The Repetition of the Dream.**—By repeating this same
vision to him day after day with such slight variations as may suggest themselves to you, you connect in his mind the trip to the forest with the idea of pleasure, and when the time for the operation comes it is well to repeat substantially the same suggestions which you have been giving him during the previous weeks of preparation. Put him to sleep before he is lifted out of bed to be carried to the operating table. In all these cases it is of course advisable to have a competent assistant at hand if the operation is to be a very painful one in order that chloroform may be at once administered in case the nervousness of the patient is strong enough to overcome the suggestions of the operator.

**Idiosyncrasies of Patients Under Hypnosis.**—Hypnotic anaesthesia is a very strange study, and no two subjects act exactly alike. In some cases a condition of profound lethargy is induced in the patient in which he will pay absolutely no attention to the operation. In others, he will positively sit up and himself assist in the operation, carrying out the directions of the surgeon in charge, and apparently watching the progress of the operation with as much interest as any attendant. In other cases the fear of the operation is sufficient to dispel the force of the hypnotic suggestion, and the patient wakes to the realization of pain. It is for the purpose of combating this nervousness that the surgeon will have at hand chloroform to use if necessary.

**The Effect of Coma.**—In the old days when the profound mesmeric sleep was induced by Dr. Esdaile, his patients passed into a condition of coma, resembling profound lethargy, which lasted for from five to seven hours. It was rarely that one of his patients wakened to consciousness during the progress of the operation, but when this did occur a simple command from the doctor to the patient was sufficient to send the latter back into profound sleep once more. Let your suggestions in this case be always in the direction of inducing a more and more profound condition of Hypnosis. I take issue with the operators of to-day who, having found it a matter of great ease to induce light conditions of hypnosis, have put forward the statement that in a large percentage of cases light hypnosis is as favorable to the induction of analgesia as deep hypnosis.

**A Plea for Deep Hypnosis.**—I submit the fact that no major operation has ever been performed painlessly upon the patient under light hypnosis induced by one of our modern operators. The value of the deep hypnosis is that the profound sleep
permits the operator to secure the implicit obedience of the patient's brain, and that consequently the suggestion that no pain will be felt is accepted as a truth by the patient. In light hypnosis such a suggestion would not be believed and would therefore be inert.
LESSON XIX.

THE FACTS REGARDING INSTANTANEOUS HYPNOTISM—A STAGE METHOD—
The Marvelous Action of Fear—Conducting Stage-Work—The Method Used—The Sudden Shock to the Understanding—Quick Suggestions—Hypnosis by Telepathy—These Cases Are Sometimes Met With—The Philosophy of Will Power in Mesmerism.

The Facts Regarding Instantaneous Hypnotism.—Although most of the claims put forward by interested persons to the effect that it is possible instantly by a word or glance to induce Hypnotism in persons whom one meets for the first time are in the main unreliable, it is a fact that instantaneous hypnosis is possible, though rare. It has already been explained to you how by post-hypnotic suggestion it would appear to the onlooker that the person plunged instantly into deep somnambulism at a touch from the operator was indeed instantaneously hypnotized, but you have been shown that this effect was due to the efficacy of the post-hypnotic suggestion which was previously given the subject to the effect that hereafter at any time if the operator so desired the subject would immediately fall asleep. You see that this is quite a different thing from suddenly hypnotizing a person whom you meet for the first time. There are, however, two methods, and two only, by which this remarkable feat can be accomplished.

A Stage Method.—The first can be used only with any likelihood of success upon the stage, because it requires for its successful operation the environment of the stage glare and glitter accompanied by a feeling of expectation and fear on the part of the subject, coupled with a strong belief in the power of the operator.

The Marvelous Action of Fear.—I have already spoken of the peculiar effect of fear in placing the subject in a susceptible condition. The fact is that fear creates a bewilderment in the brain of the subject in which it is possible to suddenly drive home a positive suggestion, with such force that it is permanently established in the mind of the subject. It is my belief that there never was and never will be such a thing as a miracle. And the power
which was given to the prophets of old was, in my opinion, simply a knowledge of the force of mind in conflict with matter. The story of Naaman the Syrian is familiar to all of us, as well as the retributive fate which overtook Gehazi, the servant of Elisha. In this day it would seem to be a startling result of fear following suggestion that a subject previously sound and healthy should be suddenly smitten with leprosy, but I am not prepared to deny the possibility of such a result, provided that a condition of extreme terror had first appeared in the subject, and was used as a foundation upon which to engrave the thought. Fear is paralyzing in its action upon the muscular system.

**Conducting Stage-work.**—In many stage performances it is usual for an operator after he has conducted a certain number of experiments with his ordinary subjects, whom he usually carries with him to ensure entertainment for the audience, to ask for volunteers to come upon the platform to be experimented upon. In these cases it sometimes happens that someone is driven by the laughter of his companions to assert that he is not afraid to let the professor operate on him, but the memory of what he has just witnessed and his own natural fear of some force which
he does not understand, combine to make him a prey to the live-
liest apprehensions, and though he shows a bold front, he is really
very much unnerved. Pride, however, will not allow him to
withdraw, and the result is that he puts the best face he can upon
the matter and mounts the platform. The professor is by reason
of his calling an expert in detecting such signs of fear in the coun-
tenance of his voluntary subjects, and he reads this man at a
glance. He knows that if he can catch him quickly and drive in
his suggestion he will have no trouble in putting his man into
a profound sleep, because his fear will render him an easy target
for quick suggestion. But the quick suggestion alone would not
be sufficient to induce the instant bewilderment of the senses which
is required to produce sudden hypnosis.

The Method Used.—The professor therefore steps forward
to the edge of the platform and as the subject gets one foot upon
the stage the professor suddenly claps one hand on the back of
the subject’s neck, which appears to the audience to be merely an
eager method of helping the subject on the stage. It really has
the effect of still further bewildering the subject, and without giv-
ing the latter further time the professor brings the palm of his
other hand with some force against the chin of the subject, thus
producing a sudden nervous jar to the spinal column, which has
the effect for the moment of deadening sensibility. It creates a
slight roaring in the ears and the subject feels as if his senses
were leaving him. It is at this moment that the professor calls
out sharply and peremptorily, “Sleep. Sleep quickly. You are,
going fast asleep at once.” In very many cases this method is
successful, and the subject’s eyes roll back in his head, and he is
forthwith in a condition of somnambulism. This is the instant-
taneous stage method which is absolutely genuine, but the
mechanism of which is not apparent to the audience. The jar un-
der the chin is scarcely noticeable to the audience and is not in any
sense of the word painful or brutal. It is very quickly done, and
usually very successful.

The Sudden Shock to the Understanding.—The other
instantaneous method by which it sometimes happens that a sub-
ject is put into somnambulism, without any of the intermediate
work of inducing sleep which has been elaborately gone into in
this Course of Lessons, is that of suddenly arresting the atten-
tion of the new subject; startling him when he is looking for
nothing of the kind. A silver pencil case is as good an object
as any other by which to induce this instantaneous hypnosis. The act is performed by suddenly thrusting before the subject's eyes some such bright object as a silver pencil case, and forcibly asserting that the subject cannot take his eyes from the object, and will be compelled to follow the object wherever it may be moved. Of course, you can see clearly that if the subject has time to reason this thing out he will know that there is no power in a silver pencil case which can attract him or draw him anywhere against his will, but the operator gives him no time to reason.

Quick Suggestions.—The subject is constantly plied with suggestions to the effect that he feels the pencil case drawing him; that he cannot take his eyes off it; that he must follow it; and that it is useless for him to try to withstand its influence. It frequently happens that a glassy look comes over the eyes of the subject, and he moves forward in the direction in which the pencil case is waved. As he moves, the operator lays his hands over his eyes, closes the lids, and says, "You are wide awake, but you cannot open your eyes." From this condition it is but a step toward the induction of somnambulism, with its attendant illusions and hallucinations.

Hypnosis by Telepathy.—There is one other method of instantaneous hypnosis which, however, is so uncertain in its nature that it can never be accepted as playing an important part in the use of this power. That is Hypnosis by Telepathy, or the induction of the hypnotic state by means of thought transference. In this case the operator has acquired the power of projecting his thought, and it sometimes happens that he makes a female subject so peculiarly en rapport with him that she is immediately conscious of his presence and of his power, although no word may have passed between them. In rare instances he may thus succeed by silently impressing her with the idea of sleep.

These Cases are Sometimes Met With.—While these cases are rare, they are none the less true, and the manifestation seems to be invariably of the same type, that is to say, the subject, on being awakened, declares that she distinctly heard some one, who seemed to her to be the operator, saying in her ear: "You must sleep; sleep at once." This power of projecting thought is one which every hypnotist should constantly practice. It is the practical operation of the Art of Concentration. Thought is Energy, and Thought-projecting is the projection of Energy by will or desire across space.
THE PHILOSOPHY OF WILL POWER IN MESMERISM.—The early mesmerists attached more importance to the effect of their will or desire in inducing sleep in their subjects than to the magnetism resident in the passes which they employed. It would be a good plan for you always to remember that in the production of any of these psychic phenomena your suggestions should be coupled with a strong will or purpose on your part to the effect that you desire such phenomena to occur.
LESSON XX.

Susceptibility of Subjects—One Method of Operating—Another Method Equally Successful—Self-Hypnosis—Rolling the Head—Magnetizing Water—Magnetizing Paper—Electricity as a Suggestion of Sleep—The Use of the Crystal—Seeing Things in the Crystal—Hypnosis Depends upon the Attention, Not upon the Circulation of the Blood—Increasing the Carbon in the System is a Method of Inducing Sleep—Converting Self-Hypnotism Into Hypnosis Proper—How to Use Auto-Suggestion—The Method of Inducing Muscular Fatigue.

Susceptibility of Subjects.—We will devote this Lesson to a consideration of more of these methods of Hypnotism which have been collected from the experience of the world’s best hypnotists, and from sources hitherto not accessible to the public. It is a common phrase among many operators when they have succeeded in inducing somnambulism that such and such a subject is “caught,” and there is much in this word, simple as it may seem. They mean to imply by this that when a subject has once reached a certain stage of Hypnosis, no more trouble will be experienced in keeping him at that point, or in reinducing the state as often as may be desired.

One Method of Operating.—A favorite method with one successful operator whom I knew was to put his subjects in a chair, in order to test them for the first hypnosis, and say to them: “Close your eyes. Now roll your eyes up under the lids as far back in the head as possible, looking as it were back into your own brain. Now suggest forcibly to yourself that you cannot possibly open your eyes; try your hardest to lift your eyelids, at the same time keeping your eyes rolled back in your head. You will find it impossible. You may try as hard as you like. Keep your thoughts up in your brain where your eyes are, and you will pass away at once into a profound hypnosis. You will hear nothing in the room, and will attend to nothing but the sound of my voice.” This method was frequently successful, and the fasten-
...ing of the eyelids was almost immediately followed by somnambulism.

ANOTHER METHOD EQUALLY SUCCESSFUL.—Another method of speedily inducing sleep is brought about by requesting the subject to squint downward at the point of the nose, thus inducing a strabismus of the eyes which is fatiguing to the optic nerve.

SELF-HYPNOSIS.—Another method, and one which you may test for yourself with advantage, in the matter of Auto-Hypnosis, for putting yourself to sleep at night, is to close the eyes until they are almost but not quite shut. Then permit the eyes to squint as they naturally will, but be careful not to close the eyelids entirely. The lids should be lowered to the point of almost complete closing, and the head thrown slightly back, permitting the glance to be directed to the feet. The result is corresponding heaviness in the eyelids which is the sure precursor of drowsiness and sleep.

ROLLING THE HEAD.—A frequent practice among stage hypnotists who wish to influence a refractory subject quickly is, after giving the subject a bright object to hold in the hand to gaze at for a short length of time, to roll the head round in a

**FIG. 22. ROLLING THE EYES UP UNDER THE LIDS**
circle some fifteen or twenty times, without violence, of course, but in such a manner as to disturb the circulation considerably. This has often the effect of relieving a previous congestion, and permitting drowsiness to follow.

Magnetizing Water.—It was a favorite custom of the early magnetizers to hold in their hands a small glass of water and placing two fingers of the right hand in the water in the presence of the patient, they pointed out that they would transfer their magnetism to the water by will force and that if the patient would drink this water he would immediately feel all the symptoms of approaching sleep and it would render the induction of the magnetic sleep very much easier and quicker.

Magnetizing Paper.—Some dispensed with the water, but magnetized two pieces of paper by holding them in the hand a little while in the presence of the patient and directing their thought on the paper. The paper was then given to the subject, with a request that he close his eyes and keep his thoughts fixed upon the sensations which he should experience by contact of the magnetized paper in his hands. The result was that the concentration of the patient speedily produced its effect, the mag-
netized paper no doubt contributed something, and the result was speedy hypnosis.

**Electricity as a Suggestion of Sleep.**—The use of the electric battery as an assistant to suggestion is not fully appreciated by the student of psychology. No more forcible suggestion can be given than the genial electric current from the battery, whether it be considered that it has a special effect upon the nervous system, or whether the effect is to be attributed only to the power of the sensation in concentrating a patient's thoughts upon the idea of impending sleep. Some of my patients have passed into a most profound condition of hypnosis under the stimulus of the gentle current of electricity coupled with forcible suggestion, although I had previously made but a slight impression upon them by use of verbal suggestion alone.

**The Use of the Crystal.**—As a means of developing concentration, which is a long step toward developing the ability to be hypnotized, I have often advised the use of the crystal for the development of what is known as "crystal gazing." This is a very peculiar quality which in some cases is so closely allied to Clairvoyance that it may be said to be identical with it, but in the majority of cases crystal-gazing merely induces in the subject that condition of conscious inactivity, and of sub-conscious activity, which is the sign manual of the somnambulistic condition. Take any clear polished surface, as for instance a silver disk, but a crystal is best for the purpose, and request your subject to sit down with this object in front of him for fifteen minutes every morning and evening, and wait, with his eyes fastened upon the disk for any pictures or images which may appear there spread out to his view.

**Seeing Things in the Crystal.**—This faculty of seeing things in the crystal develops with use, so that although the first dozen sittings may be productive of no result, the crystal-gazer gradually develops the power of seeing the reflection of images plainly portrayed upon the polished surface. He also finds himself able when this power is fully developed to project at will the picture of any person whom he desires to see. And the identity of this power with Clairvoyance is sometimes strikingly illustrated in this particular that the subject not only sees the image of the person he desires to see, but he sees in allegorical form a picture of what the person is doing at the time of
the sitting. He may also see written words in the crystal in connection with this picture, and may thus receive telepathic messages from the original of the picture.

**Hypnosis Depends Upon the Attention, Not Upon the Circulation of the Blood.**—It is not a fact that Hypnosis is so dependent upon the condition of the circulation that it can only be induced when the head is cool, and when the blood has left the brain. On the contrary, Hypnosis often occurs during a condition of cerebral congestion when there is every indication that the brain is engorged with blood. Hypnosis would seem to me to depend almost entirely upon the undivided attention of the patient, however that may be secured. Therefore I advise you to use upon your patients in addition to other methods the method of very slow and deep respiration, impressing upon them the fact that by confining their attention to the act of breathing they will pass just as easily into the hypnotic state as would be the case if their attention were fastened upon a bright object.

**Increasing the Carbon in the System is a Method of Inducing Sleep.**—It is also true that the reverse of this holds good, and in many cases patients who have stubbornly refused to yield to any other method will pass into profound Hypnosis if you instruct them to gradually repress breathing, making it very slow and insufficient for their needs so that a feeling of slight distress is occasioned. If you ask me for a clue to the phenomenal trance conditions induced in themselves by some of the Indian fakirs or holy men, I should say that they had developed the art of concentrating to a degree of perfection by fixing their attention upon the act of breathing and gradually shutting off the respiration to the point at which the system became saturated with carbonic acid. This is a process of slow poisoning which of course if carried to extremes would be productive of harm to the body, but provided it is undertaken without fear or anxiety its immediate effect is to still the heart’s action, and to induce a drowsiness by shutting out from the system the stimulating effect of the oxygen in the air, and thus inducing a torpor which is faintly paralleled every day of our lives upon our entrance into a room where the atmosphere is surcharged with carbonic acid. You will notice that in such a case a feeling of heaviness always follows, which speedily deepens into drowsiness. When by an act of the will the breathing is made less frequent, in this manner, drowsiness and deep sleep are self-induced. Thus is
brought about by concentration of the attention the condition of auto-hypnosis.

**Converting Self-hypnotism into Hypnosis Proper.**—If there is an operator at hand whose suggestions will be received by the subject, the condition of auto-hypnosis becomes then the condition of Hypnosis, and the subject obeys the suggestions of the operator. But if there is no operator at hand, the subject remains in the condition of auto-hypnosis until such time as he determines that he shall awake.

![Image ofhypnosis](image)

**How to Use Auto-suggestion.**—In this way he can before putting himself under the influence determine whether he shall sleep for an hour or two hours. He can give himself just the same suggestions which an operator would give him. He can remove pain in himself just as certainly as an operator can remove that pain for him. He cannot secure in himself the startling phenomena which the suggestion of another given during deep Hypnosis will produce, but he can cure himself of many minor ailments and treat himself positively for nervousness, lack of sleep, lack of confidence, defective memory, fatigue upon slight exercise, bad habits, etc. He can do very much for himself
in this way in the matter of improving his own character and health.

The Method of Inducing Muscular Fatigue.—A very important method of producing Hypnosis in a difficult subject who does not seem to be influenced by the ordinary methods is the following: Stand him upon his feet and tell him to take a long, deep breath, raising his arms and flexing them at the elbows; tell him while he holds this breath for eight seconds of time to make every muscle in his body rigid and hard; arms and legs and back can all be made rigid by an effort of his will during the time he is holding his breath. At the end of the eight seconds he must suddenly relax every muscle, and take eight seconds' rest, breathing slowly and deeply through the nose. Then let him repeat the same performance as above, taking another deep breath, and holding it for eight seconds, while he makes every muscle in his body rigid. Again let him relax every muscle for eight seconds and repeat this exercise for ten minutes. At the end of that time he will complain of pronounced physical fatigue and you may then put him into the chair and give him a bright object to look at. When his heart's action has sunk to the normal, it will not stop there, but because of the fatigue he has undergone it will finally beat more slowly than usual, and a feeling of lassitude accompanied by drowsiness will settle over him. At this time your verbal suggestions will be found to have an effect which they did not have when his brain and body were both active and innocent of all weariness.
LESSON XXI.

CLAIRVOYANCE; WHAT IT IS.—In Scotland, and more especially in Denmark, among the peasantry there it is a common thing to meet with people in whose families for centuries back the gift of what they call second-sight has been pronounced. This second-sight is only another name for what is now called Clairvoyance and seems to be the reflection of intuitive knowledge which is imparted to certain individuals owing to a super-normal mental condition. While Clairvoyance is common in this respect, it is also capable of development by Hypnosis, and many startling prophecies have been made by clairvoyant subjects under hypnotic control, showing that the power itself is not to be confused with the power to read the minds of those present, or to read the minds of those at a distance.

POINT OF DIFFERENCE BETWEEN CLAIRVOYANCE AND THOUGHT TRANSFERENCE.—The distinguishing line between true Clairvoyance and Telepathy is that the latter concerns itself only with things which have happened or are happening within the knowledge of some one with whom the subject is en rapport, while Clairvoyance concerns itself most nearly with prophecy or the foretelling of events which are yet to happen. The phenomena of Clairvoyance are varied and wonderful in the extreme, and after first giving you the necessary directions for inducing Clairvoyance in your best subjects I shall take the liberty of quoting one of the numerous examples on record of Clairvoyant powers given to some human beings and apparently denied to others.

— 99 —
How to Develop Clairvoyance in Subjects.—To develop Clairvoyance in your subject it is necessary that you select first of all only your best somnambulists, because a larger proportion of these will be found to pass into the Clairvoyant state than of those who go only into light conditions of Hypnosis. Where there is found a subject who has no memory upon waking of anything which has transpired during his sleep and who follows post-hypnotic suggestions accurately, and in whom you can induce the phenomena of sense illusions at will, such a subject will with training pass into the deeper condition of the "Clear Sight" or Clairvoyance. Such a one will develop not only an extraordinary accuracy in foretelling events, but he will be able to give clear accounts of things which are happening at a distance, being apparently able at will to send forth his spirit to roam where it will, while his body is recumbent in the chair.

Testing for Clairvoyance.—To test your subject for Clairvoyance begin by putting him into a profound sleep. Then, standing beside him, say: "Go farther and farther away. Sleep profoundly, and your spirit will be sufficiently liberated from the clay to permit it to travel where it will, bringing back tidings of what is happening in lands where you have never been." Add here a few suggestions to deepen the sleep and say: "You will report to me what you see. You will tell me as you go along what you see with the eye of the spirit. I am going to send you now across the sea and you will give me a clear account of what is passing in my home in England and describe for me the people you see and the places you visit. There are wings to the spirit, and you may take your flight at once. Now you are crossing the sea; now you have arrived; now tell me where you are and what you see before you."

A Clairvoyant Journey.—In this way you spread before your subject's eye a panorama, so to speak, of the journey which it is desired his spirit shall take. He will now in an imperfect way attempt to describe what he sees, and fluency will only come to him after repeated trials. Weigh well the evidence he brings you, and neither by word nor look discourage him by criticism. In order to develop Clairvoyance there must be given to the subject the most encouraging suggestions. He must be made to feel that his work is valuable, and though you may couple your directions with warnings that he is only to repeat just
what he sees he must be constantly helped and aided by your counsel.

Avoid Harsh Criticism.—You must lay aside in these cases the natural disposition to criticize and obstruct which is peculiar to every investigator. You must remember that you are not dealing with the normal individual, but with a highly sensitive organism, keenly alive to every suspicion of distrust, strongly disposed to resent injustice. You will not have much reason to complain of the honesty of clairvoyants whom you have thus developed through Hypnotism. It is much better to take a new subject and develop him, than to experiment with any professional. You are more likely in the first place to obtain trustworthy information, although I am willing and even anxious to admit that a very large proportion of professional mediums are thoroughly honest in their opinions and communications.

An Authentic Account of Rare Phenomena in Clairvoyance.—The following account of some of the phenomena of Clairvoyance were vouched for in the year 1842 by Rev. Leroy Sunderland, a well-known investigator, and it is printed here not because the feats here mentioned have not been frequently duplicated in modern times, but because the account itself is practically unknown to exist at present, and it fell into my hands in a curious way. After detailing some phenomena of the magnetic state the writer continues:

"Nobody but myself is capable of waking her. She would talk with no one but me, except that I had first willed that she should, and also placed the third person in contact with her, by placing their hands together.

Inhibition of Sense of Hearing.—"She could hear nothing but my voice or a noise made by me. I have seen G. fire a gun within a foot of her head without her showing any signs of hearing it. Her eyes closed, she will tell when I eat and drink, will tell accurately when I left the room and when I returned. You may bear in mind that none of us had seen anything of the kind and were unprepared for most of the phenomena.

Transference of Taste.—"One evening, while she was in this sleep, some apples, raisins and walnuts were passed around. I commenced eating an apple, when she remarked: 'These are good apples.' I then took up some raisins and asked her what I was eating. She told me correctly. G. handed me some vin-
egar, which I tasted, when she exclaimed: 'What do you want of this sour stuff?' G. next handed me some sugar, and so on, until we were satisfied she was conscious of whatever I was eating—she tasted whatever I tasted. Her position was such that she could not have seen what I was eating if her eyes had been open.

**Transference of Sensation.**—"We next discovered that, although herself insensible to corporeal pain, she felt sensibly any pain inflicted on me. Prick my hand, for instance, and she would jerk hers back, and perhaps rub it on the spot where mine was pricked. Pull my hair and she would say, 'Who is pulling my hair?'

**Transference of Thought.**—"I next discovered that she would often speak of subjects on which I was thinking, and finally, one evening, when we were testing her strange powers, I put a piece of apple in my mouth and remarked, 'These are good raisins that I am eating.' She replied: 'You need not attempt to deceive me—I know your motives and thoughts—yes, I can see your every thought.' I then directed a third person to write on a slip of paper several questions on what subjects they chose, such, however, as she would naturally be capable of answering. I then took the paper, and sitting by her side, put each question to her mentally; that is, without speaking or making any noise whatever. As I read the questions to myself, she would speak out and answer them, one after the other. Mind, I did not speak a word from the time of receiving the paper until she had answered the last question. By such and other experiments, we were convinced that she was truly aware of whatever was passing in my mind.

**Seeing the Internal Mechanism of the Body.**—"One evening when I had placed her in this state, I was laboring under a slight cold, attended with a cough. She was asked what would cure my cough. Her reply was, 'You must be careful or your cold will be settled on your lungs, for I see they are inflamed.' On questioning her farther I was fully convinced that she was conscious of seeing and knowing my, as well as her own, internal organization.

"Now I come to what to many appears the most extraordinary phenomena. I mean Clairvoyance, or the power of perceiving what is occurring at a distance.

"In this faculty, or in the exercise of it, she appeared to im-
prove at each sitting, the same as a person will excel in anything by practice; and our experiment in Clairvoyance had not advanced much at the time when she commenced falling into this sleep independently.

Tests in Clairvoyance.—"Enough, however, was elicited to prove that she could tell what had transpired in an adjoining room, and at a distance of two miles; and if at a distance of two miles, why not at a much greater distance? Those trials which afforded the most positive evidence of this power were like the following: Cousin G. or L. would go into another room and disarrange the furniture, upset the table or place chairs on the bed and make other changes from the usual position of affairs. On being asked to look into the room she would exclaim, 'What are those chairs on the bed for? Why are things in such confusion?'

"On being questioned further, she would describe the exact situation of things. Again I sent her spirit to my room, at the hotel down town, about two miles, and she described its contents, even a painting that is hanging on the wall. It was a room in which she had never been. Many trials of this kind have satisfied us that she in some way became conscious of things of which the natural perceptive faculties or the senses could not have informed her. In repeated instances she has informed me what was going on at father's and Captain W.'s; would tell it in a manner as natural as if she had been there. We had not, however, entered into any arrangement with anyone then to ascertain whether she told truly, therefore have no positive evidence.

Travelings of the Soul.—"On Christmas Eve, however, I directed her to go to W.'s; she immediately began as follows: 'Almira is sick.' On being asked how she seemed, and whether very sick, she replied: 'She has a cold and some fever, but is better, and is not as sick as I first thought.' On being asked what they were doing, she says: 'Father W. is sitting before the fire with his shoes off, warming his feet; Mother W. is also sitting there, holding the babe, and Eliza is upstairs dressing or undressing.' This must have been about 9 o'clock in the evening then. I have never asked any questions to learn the truth or falsehood of all this; but I received a letter of the 7th or 8th of January, from mother dated December 24 (day before Christmas), in which she says, 'Almira has had a slight attack of fever, attended with the rash, but is now much better.' On
being asked whether she saw these things, she would say: 'It does not seem as if I saw them with my eyes, but I know them. How it is that I know them, I cannot tell.'"

The Lucid Condition.—Such were some of the phenomena induced in a sensitive subject under the influence of Hypnosis. There is another quality which is peculiar to clairvoyants, which is called the faculty of diagnosing disease by spiritual insight. This condition used to have the name of Lucidity and it was considered at one time a certain effect of continued Hypnosis. I have found it, however, comparatively rare, but none the less true and inexplicable upon the theory of simple suggestion. When your subject is in the profound hypnotic sleep, and when you have led him on from this sleep to an exhibition of clairvoyant powers, he is frequently able with his spiritual eye to see before him the internal organs of the body, and to diagnose disease by means of this higher intuition. If, for instance, you ask him to examine yourself and say what the matter is with you, he will reply something as follows: "I see your brain distinctly." "I see your heart." "It seems to be enlarged," or, "It seems to be normal." "I see your lungs. One of your lungs is perforated; it looks to me as if it had been injured by tuberculosis."

Diagnosing by Clairvoyance.—In this way he will pass in review the organs of the body, and though it may tax your credulity to believe everything which one of these subjects tells you, you will come across certain phenomena having the appearance of revelations, which you will not be able to account for. Pursue this line of investigation for it is perhaps the one among all others which will best repay you for your trouble.
LESSON XXII.

HYPNOTISM IN THE CURE OF DRUG HABITS—FALLACIES OF MATERIAL TREATMENT—HOW TO TREAT DIPSOMANIA—HOW OFTEN TO GIVE TREATMENTS—THE MORPHINE AND COCAINE HABITS—THE DANGER OF THE ADVERTISED CURES—THE PHILOSOPHY OF THE "BREAD PILL"—ELECTRICITY AS AN ADJUVANT.

HYPNOTISM IN THE CURE OF DRUG HABITS.—For purposes of illustration I have made reference here and there throughout these Lessons to the curing of certain disorders, such as headaches, rheumatism, fears, etc. Perhaps the most important use to which Hypnotism can be put is in the reclaiming of the drunkard and the drug habitue. In these cases its power is unquestioned, and although there are at the present time throughout the land an enormous number of so-called cures for the alcohol, morphine and cocaine habits, when these cures are analyzed and sifted to their foundations they consist entirely of the hypodermic injection of strychnine, atropine, hyoscyamine, Indian hemp, or some other stimulating drug, coupled with the constant impression made upon the mind of the patient that he is to be forever cured of his habit by the treatments he is undergoing.

FALLACIES OF MATERIAL TREATMENT.—If you analyze this process a little further you will see that the remedies used are merely nerve tonics, and that the cure of the habit is brought about entirely by the mental action of the patient through suggestions given in the waking state. There is a truth which no practitioner can gainsay, viz., the cure of a habit must be psychological. The habit itself is the product of mental action. It is nothing you can cut with a knife. It is not tangible. It is a state of mind, and the only cure for any habit is by and through the mind. This statement admits of no argument. It is a self-evident truth and cannot be refuted. That which mental action creates, mental action can dissipate. The craving which is excited and nourished by the mind can be subdued and broken by the mind.

HOW TO TREAT DIPSOMANIA.—Your suggestions to a patient afflicted with the alcohol habit should be very emphatically given
during deep sleep, and should be of a very positive and strengthening nature. You should make suggestions to him in the following manner: "You have a power within you which you have never called into activity to help you break up this craving. This power or force is now being brought into active operation, and hereafter you will never feel yourself unable to resist the craving for stimulants which comes upon you. You will be free from any desire for alcohol in any form from this time forward. You have been living the life of a man absolutely a slave to the creation of his own brain. From this time on you will be free from this slavery. You will find that your will power is still ready to serve you, and you will again become a man with all a man's strength and purpose. You will feel no pain or annoyance because of the withdrawal of your accustomed stimulant. Every day you will feel stronger and less nervous, and the system will steadily regain health and its old time vigor."

How Often to Give Treatments.—For the first week give him hypnotic treatment twice a day. For the second week, treatment once a day will be found sufficient, and this plan may be followed until the end of the month to make the cure complete. All stimulants should of course be withdrawn from the time of the first treatment and a loathing and horror of alcohol should be forcibly impressed upon his mind while he is asleep.

The Morphine and Cocaine Habits.—The same course of treatment should be given in the cure of the opium habit and the cocaine habit, but you must remember that in these latter cases the drug taken invariably affects the brain to the extent of making the patient treacherous and deceitful. You cannot believe the sworn statement of anyone who is taking morphine or cocaine habitually. The moral sense is usually perverted and a colossal selfishness seems to obscure the patient’s perception of the principles of right and wrong. Morphine and cocaine should be entirely withdrawn from the first treatment. There should be no tapering off.

The Danger of the Advertised Cures.—Most of the widely advertised cures for the morphine habit which appear in the papers consist of the administration in small quantities of morphine and other drugs combined. There must be no tampering with the drug at all. The fears of the patient will greatly magnify his distress of mind and body and in these cases before proceeding to induce Hypnosis it is sometimes advisable
to give sulfonal to quiet the nervous system and permit you to induce profound sleep. As showing the marvelous effect of the imagination upon the patient it is sufficient to say that after you have used sulfonal in this way once or twice it is not necessary to continue its use, but if you will substitute for it an innocuous and tasteless powder, pouring the same into a glass of water in the presence of the patient and telling him that it will have the effect of speedily quieting him and allowing you to put him again profoundly asleep, he will believe that he is taking another dose of sulfonal and the effect of this belief upon his nervous system will be such that he will at once become quiet and passive.

The Philosophy of the "Bread Pill."—Thus is explained the potency of the "bread pill" which physicians administer to their patients as a placebo. The effect of the bread pill of course is nothing in itself, but backed up and supported by the imagination of the patient it has just the effect which the physician's suggestions declare it will have, another and typical instance of the effect of mind upon matter.

Electricity as an Adjuvant.—As a means of assisting in the cure of any drug habit by hypnotic suggestion I thoroughly indorse the use of mild currents of electricity combined with suggestion for the production of profound sleep. It sometimes happens that the verbal suggestion itself is believed by the patient to be insufficient to relieve him of his trouble, and the electricity comes in as a means of enforcing and strengthening suggestion. Never make the mistake of despising any means howsoever simple they may seem to you, of impressing the imagination of your patient.
LESSON XXIII.

How to Awaken Your Subject—The Awakening Pass—Always Remove Hallucinations—Involuntary Self-Hypnosis—Removing This Tendency—How to Safeguard the Subject—No Fatigue in Inducing Hypnosis.

How to Awaken Your Subject.—Always awaken your subject by the gradual method of counting "One, Two, Three—Wide-awake." Do not wake him with a snap of the fingers or by touching him upon the face or any part of the body. The effect upon his nerves would be the same as if you suddenly woke a person from his natural sleep by throwing cold water over him. Give him time to gradually come back from the depths of sub-consciousness to waking life. Some subjects who sleep very profoundly are dazed and dizzy for a little while after being waked up.

The Awakening Pass.—It is sufficient to allow them merely to rest in the chair for a little while, at the same time making light passes upward from the chin over the forehead with one hand and assuring them that the effect is speedily passing away and that they will be all right in a few moments.

Always Remove Hallucinations.—Should you induce illusions and hallucinations in any subject, always be careful to remove them just as soon as the experiment is concluded. Do not allow any impression which you have made upon the mind of your patient in the course of the evening's experiments to remain there unnoticed. Give strong and positive counter-suggestions, putting the subject again into profound sleep in order to make them. Assure him that he is well and strong, free from all nervousness, and that the ideas impressed upon him during his previous sleep are now and will forever be blotted out from his mind and that he will never suffer from such hallucinations while in the waking state.

Involuntary Self-Hypnosis.—You will find that many of your subjects become so much interested in the process of putting themselves to sleep, that they fall involuntarily into a con-
dition of Hypnosis during the day, and you may sometimes be called from your home for the purpose of waking up a subject whom you have not tried to influence that day, but who has put himself in a condition of sleep from which he will allow no one but you to arouse him.

Removing this tendency.—If you are called in such a case, take this opportunity of making most emphatic suggestions to your subject before you arouse him that he will never again be able to fall into a condition of hypnotic sleep unless you personally inform him that he is to do so. This is all that is necessary to guard against repetitions of this occurrence.

How to safeguard the subject.—Subjects who have been very often hypnotized become so susceptible to the influences that they assume a negative attitude, and in their daily lives are continually under the danger of being hypnotized by irresponsible operators. You should always safeguard your subjects by assuring them positively that no one else has the power to hypnotize them but you. Make this suggestion very positive
and emphatic, and repeat it at the end of each sitting in order that it may never lose weight with the subject. Do not try to induce Hypnosis when you are yourself very much fatigued or in a depressed frame of mind. If your subject is very sensitive he will telepathically receive your state of mind, and the result will not be good.

No Fatigue in Inducing Hypnosis.—You will not find that frequent hypnotizing is a drain upon your own forces. The power develops with use, and while it is not well at first to tire yourself in this practice, in a little while it is possible to continue it for several hours without any feeling of fatigue, and with a distinct and perceptible improvement in your general health.
LESSON XXIV.

QUESTIONS OF INTEREST—How Long Does the Influence Last?—Protection of the Subject—Hypnotism Does Not Weaken the Will—The Memory—Conclusion.

Q. What percentage of persons can be hypnotized?
A. Every human being who is mentally sound, and a large proportion of the mentally unsound or insane, can be hypnotized. Some speedily; others after repeated trials.

Q. Is not Hypnotism inclined to weaken the will?
A. Not unless suggestions are made to that effect repeatedly during Hypnosis. Counter-suggestions to the effect that the subject will be conscious of increasing determination of purpose, better concentration, more forcible individuality, more self-confidence should always be made, and in this manner Hypnotism by the force of suggestion actually strengthens the will instead of weakening.

Q. How long does the influence last after the subject has been waked?
A. The influence is at an end just as soon as the subject is waked unless a post-hypnotic suggestion has been given to take effect some time after the awakening.

Q. Suppose an individual has been in the first place hypnotized against his will, what protection has he against an unscrupulous operator?
A. If he has been hypnotized against his will by an unscrupulous operator, then he can be easily hypnotized again by someone who understands the case, and the evil influence removed never to return. Only extremely susceptible persons are ever hypnotized against their will. This is therefore an extreme case; not an average case.

Q. What protection has a hypnotized woman against an unscrupulous operator?
A. The protection which an instant return to consciousness gives her. It is impossible for the operator to prevent a subject from waking. No matter how imperative his commands may be, she can wake up in defiance of his objections, and when real danger threatens her she will invariably do so.

Q. Suppose a subject is hypnotized, and is given the suggestion that when he wakes he will have forgotten his name. Then suppose that the operator purposely disappears, how long will the memory be so affected?

A. It depends upon the individual. Sometimes the memory is affected for a day and a half. But usually the impression only remains until someone jogs the subject’s memory.

CONCLUSION.—The value of Hypnotism can scarcely be overestimated. It can cure nervous diseases, pains, and mental troubles. It can give happiness where only misery existed. It can break the hold a life-long melancholy has upon the spirit. It can shut off and even wipe out distressing memories as though they had never been. It can take the place of morphine as an analgesic in the hands of the competent operator. It can reduce and even prevent the pains of childbirth so that the process of maternity need no longer be dreaded. It can quicken the action of the mind and develop good qualities which had been long dormant. It can turn laziness into industry; disobedience into obedience; ingratitude and incivility into a regard for the opinions of others. It can cure such habits as Morphinism, Cocainism, and the Liquor Habit. It is now and always Nature’s own remedy; the means which Nature gives to man to correct and modify his own abnormalities. Lastly it affords a key to unlock the mysteries of the spirit of man, and will yet give us knowledge, positive knowledge, of the life beyond the grave. These are some of the advantages of Hypnotism, and in the face of these wonders how small a thing appears the danger of its possible misuse by those who are unfit to acquire knowledge of its power. The wisest plan is to give full knowledge upon all points; in ignorance only lies danger. When it is known how and why Hypnotism may be dangerous, half its danger is demolished. It is not difficult to find men whose motives are pure and whose purpose in using Hypnotism is only noble and good. The use of Hypnotism by parent upon child; by husband upon wife is invariably fraught with beneficent results. There is no evil in Hypnotism itself; the evil, if it exists, is in the hearts of men.

INTRODUCTION.

Magnetic Healing is that system of treatment by which Life-Energy is transferred by the Healer to the patient.

Magnetic Healing does not effect its cures by Thought-transference, Suggestion, Expectant Attention, or Hypnotism.

Magnetism and Hypnotism are distinct and separate sciences. Magnetic Healing and Hypnotic Influence must never be confused.

Magnetic Healing acts first upon the nerve centers, and its healthful influence is then communicated to the brain. Hypnotism acts first upon the brain, and its influence is then distributed to the nerves and fibers.

Whereas Hypnotism requires that the patient shall surrender something of his individuality and will-power into the keeping of another, and works best when sleep has been induced, Magnetic Healing asks no surrender of the patient’s will-power or consciousness, but works its best results when the patient is most fully conscious of all that is transpiring.

Whereas Hypnotism achieves its results by the effect of one brain upon another brain, Magnetic Healing performs its marvels by the effect of a transference of force from one body to another body. Whereas Hypnotism is of the Brain and theoretical, Magnetic Healing is of the Spirit and practical. For this reason, and because their training as servants of God fits them peculiarly for this ennobling work, clergymen make great Magnetic Healers.

The gift of healing is a spiritual endowment. It is dormant in every human being. It needs to be awakened; to be developed; to be used and nourished and cared for. It is the greatest of all the gifts.

Some have developed it in a minor degree; some have neglected it. All possess it. All have in them the germ, the seed of the quality. The purpose of this Course of Instruction is to develop in all my students whether they are at present strong and well, or sick and ailing, this great power which is lying unused,
and perhaps unknown, within. The gifts of God are not announced with blare of trumpets. The great forces of Nature are silent forces. The force of Magnetic Healing is potentially the same in all. It is silent in action. For some who have overlooked its existence it is silent forever. But in those who embrace it as a means of doing good it is ready at any moment to spring to life.
PART I.

THE PHILOSOPHY OF MAGNETIC HEALING.—From the earliest times of which we have record in history it has been noted that to certain favored people was given the power to cure disease and pain in their fellows by the laying on of hands. It is for you, my student, to recognize to-day that these very examples of which history has given us a record are evidence of a fact of stupendous importance, viz.: that every human being has a power which can be developed by practice to the point of curing disease in himself and in others by the application of vital magnetic force. I want you to think this over for a minute and understand just what is meant by it. It means firstly that there is in you perhaps only the germ of this curative power because you may have never yet had sufficient confidence in yourself to try to cure anyone else of pain or disease. You have been accustomed always to turn for relief to the physician or the chemist, not recognizing in yourself that power to alleviate these wrong conditions of which this course of instruction will treat.

ALL HAVE THE POWER.—The first thing to bear in mind is that all human beings are potentially the same in their powers, therefore, although I referred at the beginning of this chapter to certain persons as "favored" I did not mean that they were endowed by nature with special powers which are denied to you, but that they had made use of powers which you had not made use of but which are nevertheless contained within you and awaiting development.

POLARITY.—The next point for you to remember is that every human being is magnetic. Every human being attracts and
repels. He does this without knowing that he does it. The practice of Magnetic Healing is strictly the practice of using this magnetic force consciously, that is to say, projecting it upon others by determined effort.

The Hands.—Having grasped these points there is yet another for you to commit to memory, which is that in every human being the right hand is the positive hand and the left hand is the negative hand. In the practice of magnetic healing the secret of success is always to transmit your magnetism to the patient by means of the application of the right hand, using the left hand to close the circuit as it were, that is, to very strongly draw the current through the patient's body from your right hand to your left.

For an Example.—To make this point a little more clear, let us suppose that you are giving magnetic treatment to a patient who is suffering from rheumatism. I will give you later the proper application of the hands in the treatment of this and other diseases and I use this illustration now simply to explain to you very easily the philosophy of your method. Your patient has, as I say, rheumatism, and in order to treat him successfully you must determine and strongly will that you will pass a current of your wholesome nervous force, which is your vital magnetism, through that patient's body by the application of your right hand, the current to pass out of his body into your left hand and so back to you in the circuit.

Why the Hands are Used.—You are thus by your will power throwing magnetism into the patient through the medium of your hands, and the hands are chosen as the chief instruments in magnetic healing because magnetism passes off more freely from the palms of the hands and the finger tips than from any other part of the body. Now when that magnetic current returns to you through your left hand, it is not precisely the same either in quantity or quality, having been employed in restoring during its passage the nervous equilibrium of your patient. That is to say, your patient has absorbed a certain amount of force from you and his nervous system is now using this force for his own restoration to health. Obviously you could not continue to give magnetic treatments to a large number of people indiscriminately without losing health yourself if there were no means of replenishing the store of magnetic energy which you give out.
The Law of Giving.—But it is a beautiful provision of nature that the more freely you give, the more freely you shall receive, and whereas the average man who is only unconsciously magnetic gives off very little magnetism in his daily intercourse with human beings, and re-absorbs very little magnetism himself into his nervous system, the magnetic healer on the other hand makes a daily practice of assisting his fellow beings by the exercise of this beneficent power and is receiving a special influx of nervous energy from the quickened assimilation of food and air in the chemical laboratory of his body. In other words, when you determine to help others, you so quicken the vibrations of your own organism that you will receive supplies of strength from the inexhaustible source in proportion to the demands that are made upon you. No selfish person can be a thoroughly successful magnetic healer because the generous impulse which is required to set in motion in their full force these vibrations which feed the nerve currents is lacking. Have no fear, therefore, that in the practice of magnetic healing you will give off so much nervous energy that your own physical health will suffer, because the greater the demand upon you, the greater will be the supply accorded to you.

Where the Force is Manufactured.—Every human body is a laboratory for the manufacture of this nervous force. We might aptly liken the practice of magnetic healing to a Loan Company. The nervous energy in you represents the capital stock of the Loan Company. Should you continue to do a very conservative business, placing scarcely any loans, and using but a hundredth part of your capital, your business will be very much the same at the end of the year as when you began operations. You will have neither lost money nor made money; but should you place your capital out at interest, keeping your funds in a state of active circulation, your Loan Company will grow in power and importance in proportion to the amount of business it transacts. Similarly the magnetic healer makes his nervous energy draw interest for him instead of allowing it to rest idle in the vaults.

Value of Sympathy.—Now although every human being is capable of assisting by his magnetic force those other human beings who are in need of his power, the finest demonstrations of magnetic healing are given when there is a communion of thought and feeling between healer and patient. I cannot insist too
strongly upon this point that in order to attain the best results by magnetic healing your patient must look up to you gratefully as one who can and will cure him of his malady. It is not necessary for you to study minutely all the ramifications of the diseases classified by medical science to-day. We know scarcely anything of the nature of the diseases beyond the fact that all disease is a manifestation of disharmony or lack of ease. We are accustomed to regard the body as an intelligent machine capable of contracting and being cured of certain disturbances which we call diseases, but as a matter of fact the body is nothing but a carcass and is held together by force of attraction, and rendered intelligent by nerve substance, and any curative action of any method of healing whatsoever is only rendered possible by the action of nerve substance.

The Nerve-currents.—The nervous currents of the body have their home in and are drawn out by this nerve substance which is used by the intelligence of the individual. Therefore in order to cure disease it is necessary for you as a magnetic healer not only to employ your nervous force under the direction of your will to heal your patient, but to obtain from your patient that joyful accord of his intention, or will, with yours for his benefit, which completes the perfect circle of the union of wills between healer and patient.

The Power of Union.—When this union is established, when your patient is grateful to you, has faith in you, and is obedient to you, I do not know of any disease from simple headache to locomotor ataxia which cannot either be cured or greatly benefited by the application of magnetic force. I wish you to read this chapter over several times in order that you may grasp very clearly the central point of magnetic healing, which is that health is due to the harmonious condition of the nerve currents of the body; that disease is due to the disturbance of these nerve currents; and that the nerve currents themselves which are responsible for the diseased conditions are controlled and directed by the will.

The Composition of Nerves.—Magnetic forces are received first by the nervous system, and thence distributed to the blood and tissue. A Nerve is composed of fibrous matter, white, and vesicular matter, grey. It contains fat, albumen and water. The water is the medium of the nerve force, and thus the business of the nerve becomes at once a most important and most
complicated proceeding. Each nerve is composed of a bundle of nerve fibers or tubes, and each nerve trunk has numerous bundles or nerve fibers, each bundle having its sheath enabling it to conduct independently of the other. The nerves conduct; they convey information; they are intelligent; they are therefore the home or the seat of intelligence. The nerves receive and require nourishment from the blood; they require electricity; they convey sensation and feeling, as has been said, and they also convey nourishment, the nourishment which is of the Spirit, and the nourishment which is of the mind. There are two great systems of nerves, the Cerebro-Spinal and the Sympathetic; distinct and independent; yet closely connected and at times interdependent the one upon the other.

The Comprehensiveness of Magnetic Healing.—Magnetic Healing deals with the action of both nerve-systems, and is the first rational science of treatment to recognize the necessity of combining treatment of cerebro-spinal and sympathetic at one and the same time, forming by the hands of the Healer the required current from positive to negative. It will simplify the study of the nerve systems for you if we divide them bluntly into two kinds, the motor and the sensory. Motor nerves act upon muscles, and any stimulus to the motor nerves thus produces physical action. The Sympathetic Nerve System possesses two ganglionic chains running parallel with the whole vertebral column. The Cerebro-Spinal System includes the Cerebrum, the Cerebellum, the Medulla Oblongata, and the Spinal Cord.

How Nerves Feel.—In order to best illustrate how sensation is produced, I quote the following excellent definition by Dr. Babbitt, of Los Angeles, California, who has done as much as any modern investigator to familiarize his students with the principles of Light and Color, and the finer forces of nature which surround us.

“We will say a very keen sensation is felt at the knee. How is this done? The cutaneous sensory nerves carry their thermal fluid to the ganglion of the posterior spinal nerve, which immediately flashes up under the chemical stimulus of a motor nerve cell. The force connected with the spine is radiated by means of the motor nerves in all directions, but those nerves which connect immediately with the point of excitement at the knee would be especially active, as nature is ever aiming to establish circuits. But why
is pain felt at that particular point? Because it is the end of the circuit, the point where something violent has taken place to upset the smooth flow of the forces. But will the current to and from the spine alone cause this pain? Yes, to some extent, but that conscious sensation which discriminates as to the cause or nature of the pain must come from the frontal cortex of the brain as it receives the ethers which are radiated upon it from below, or as it perceives by means of the sight or hearing still more of the cause."

Nerves are Conscious.—The only criticism which I have to make to this excellent definition is that pain is sensed also without the aid of the understanding, the nerves struck having intelligence within them. In the light of modern research it has been made plain that the nerve contains within itself intelligence, and that the brain is no longer the sole interpreter of the organism. The message being first sensed and understood by the nerve, the brain is informed of the matter and aids the sensation by bestowing attention upon it.

The Purpose of Vital Magnetism.—In the ordinary course of events the pain would disappear as soon as the nerve-currents had re-established their harmony, and the province of Vital Magnetism in the stilling of pain is to support the electrical current of nerve-energy, to re-establish the interrupted circuit. The brain influencing the vaso-motor nerves, sends to the affected part fresh supplies of blood, causing redness of the part and inflammation. But the part which the brain itself bears in this matter is that of feverish solicitude, which is likely to do more harm than good. Here comes in the beneficent action of Magnetism, to re-establish harmony, and by so doing, to allay the pain and permit the flux of blood sent to the affected part to return again to its channels.

A Study of Pain.—The question of pain is such a vital one in the practice of Magnetic Healing, that I must give this matter further consideration before leaving it. You are aware from the study of Hypnotism that during hypnotic experiments pain is sometimes entirely absent in the subject, and this condition of freedom from sensation is held to be induced by the operator because of the dissociation of nerve fibers connected with the cortex leading up to the cortex from the seat of the pain. The position taken in this explanation is that when the cortex is, so to speak, put to sleep, the subject is unconscious of pain.
because there is no longer an active brain to interpret the sensation. This explanation is both correct and incorrect. It would be more exact to say that it is partially correct. By putting the cortex into a condition of insensibility the operator has merely distracted the attention of the patient from the seat of the pain, and has therefore relieved the patient of the obtrusive help which the brain would have sought to give if its attention had been centered upon the pain. Hypnotism thus relieves the patient of the unnecessary pain which the attention creates. But inasmuch as the shock of an operation may be felt during hypnosis, unattended by any unpleasant sensation of pain, we must recognize the presence of another vital and powerful force acting in obedience to the will of the operator, and the best interests of the subject. This Force is Vital Magnetism, the Force which governs sensation when it is called into action by harmonizing the nervous system of the individual, and strengthening the nerves to repel sensation. The patient who is surcharged with Vital Magnetism is indifferent to pain, and even if the cerebrum is active, he is unconscious of suffering.

The Superiority of Magnetic Healing.—Hence, the immense advantage on purely physical grounds of the Magnetic treatment over the hypnotic form. The Magnetic Healer introduces into the system of his patient by contact of hands with nerve centers, an access of energy which brings the vital resistance of the patient up to the point at which disharmony or pain is overcome and subdued. He does this with the full knowledge and understanding of the patient. He does not throw the patient upon his own resources, leaving him to subdue pain by his own force, though we have seen that in some hypnotic experiments this is effective. He takes from the Nervous Energy which is in himself to give to the patient, and thus it comes about that after magnetic treatments patients feel for many hours the benefit of this additional strength.
PART II.

Special Directions to the Magnetic Healer—Caring for the Hands—
Advantage of Perspiration—Cultivating Self-confidence—The
Basic Truth—Points on Behavior—The Importance of Gaze—The
Reason Why—Important Caution—The Breath in Healing—The
Secret of the Air—Conserving Energy.

Special Directions to the Magnetic Healer: The avenues through which magnetic force most easily passes from the healer to his patient are three: (1) the hands, (2) the eyes, (3) the breath. Inasmuch as the hands are of first importance we will deal with them at once.

Caring for the Hands.—Before beginning treatment always wash the hands thoroughly with soap and water. Then dry them carefully and rub the palms briskly together until strong heat is engendered and at the same time will that the blood shall be dirigated to the veins of the hands and arms. To hasten this result of heat in the hands it is a good plan after rubbing the hands together to spread the fingers out and holding the arms down by the side shake the hands loosely and with force, at the same time thinking of the arms as being hollow channels through which you desire to get the nerve force to the extremities of the fingers. When your hands are hot from this exercise, clap them together once or twice and rub the palms once more just before laying the hands upon the patient’s body.

Advantage of Perspiration.—It will be an additional advantage if the palms of the hands become moist during this exercise and you will be careful to remember that any evidence of perspiration in the palms of the hands during treatment is an excellent sign as showing the free egress of magnetic force from you to the patient.

Cultivating Self-confidence.—Always hold in your mind before giving treatment the thought that you can and will help your patient. While your patient is telling you his symptoms repeat to yourself in a firm, confident internal whisper the statement, “I can and will relieve him of his trouble. It is given to
me as my right to cure him. This power is mine to use for his
benefit and I can cure him.” Say this to yourself slowly and
firmly, repeating it over and over again, and the effect will be to
strengthen your confidence in yourself. Never allow your patient
to suppose that you have any doubts whatever as to your ability
to cure him. In fact, one of the secrets of success in magnetic
healing is to assume a calm assurance of power which no skep­
ticism can ruffle and which no opposition can break. You must
not think for a moment that because you assume a confidence
which you do not possess, therefore, you are acting a lie. You
are not an imposter.

THE BASIC TRUTH.—You have in your hands the great basic
truth of all healing which is that the mind forces govern disease,
and by your confident assurance you will awake in your patient a
feeling of respect for your power which though he may not
verbally confess it, rouses in him a confidence in your ability
to cure him, and this feeling of confidence on his part brings him
into the state of vibration in which it is easy for you to transmit
your magnetic force to him. Thus you see the tremendous im­
portance of the effect of your manner upon your patient. Never
hesitate or show any vacillation of method.

POINTS ON BEHAVIOR.—When you have heard his story, get
to work at once assuring him in the meantime that you can help
him, and if he expresses strong doubt on this point it is then that
your confident assurance of power and the absence of all uncer­
tainty on your part will be required to bring him to the right state
of mind in which he can receive benefit from you. Never allow
yourself to be browbeaten or confused by the arguments of your
patient. Let him understand plainly that you do not care to argue
with him; that you do not even seek to change his opinions by
argument, but that if you are to help him, as you intend to do, he
must drop his antagonism and simply remain a passive agent in
your hands in order that you may bring a force to bear upon him
for the relief of his pain and disease. There are very few men so
set in their ideas of opposition that they will not be willing to be at
least passive in the hands of one who is only anxious to restore
them to health. I never advise my students to explain their
theories of these life forces to their patients. It is, on the contrary,
easier to produce the profound effect which you seek, if your
patients are given to understand that you yourself do not know the
source of your power; that you yourself are but an instrument in
the hands of omnipotent intelligence. It is natural for every human being to respect that which he does not understand and to be attracted by a force beyond his comprehension.

No. 2—The Eye: As the hands are the instruments by which the magnetic force is directly applied to the body, the eye is the agent by which the impression is strengthened upon the mind of the patient.

The Importance of Gaze.—Therefore, it is necessary that you should cultivate a firm, steadfast gaze, and during your conversation with your patient you should be especially careful to make use of the fixed gaze which in my method of magnetic healing differs in manner from that employed in any other system of the kind of which I have knowledge. When speaking to your patient, wink your eyes as little as possible, cultivating not a stare, but an intent, powerful, interested look. Fasten your gaze upon the pupil of his left eye and do not permit your look to wander even for an instant either to his other eye or to a point midway between his eyes. The philosophy of this intent gaze centered upon the one point is that your will force is most easily transmitted to his mind through his left eye than through any other avenue.

The Reason Why.—It is the principle of the rifle ball as opposed to the principle of the scattered shotgun. You are fastening your gaze, which carries with it your powerful determination to heal, upon the most receptive point in his organism, that point where your whole force will meet with less resistance. In order to aid you in focusing your gaze upon this one point, I want you to imagine that when you are thus looking into his pupil you have the power of seeing right through the eye into the brain. This mental attitude will give your glance that deep intentness which is so great an assistance to your success. You will find after a little practice that when you are interested in your work it is scarcely necessary for you to wink the eyes at all and that they become stronger and brighter by their employment in this way. No matter how your patient’s gaze may wander to and from your eyes to the floor and back again, let him feel that your glance is boring right through him in its conscious­ness of power.

No. 3—The Breath: As the breath plays such an important role in the practice of Magnetic Healing, it is imperative that you
should be careful above all things to keep the mouth, throat and stomach sweet and clean.

**IMPORTANT CAUTION.**—Avoid the use of stimulants and tobacco, because anything which makes a disagreeable impression upon your patient counts strongly against your success. A *single disagreeable shock*, such as the odor of onions, is sometimes sufficient to prevent the patient from passing into the condition of nervous harmony which you seek to establish. There should not be the slightest odor of tobacco or alcohol about you, but on the other hand, some sweet smelling herb, such as thyme, lavender, or mint, used as a mouth wash, possesses pleasant properties as an indication of cleanliness and care on your part.

**THE BREATH IN HEALING.**—We shall see later on that there are other methods of using the breath in healing which are even equal to the laying-on of hands in the alleviation of pain, and the utmost care should therefore be exercised that the employment of this agent should be fraught with no disagreeable consequences to the patient. You will remember that in the old testament the breath is the means of restoring to life the widow's son and that still further back it is stated that God breathed into man the breath of life and he became a living soul. Indeed, it is largely through the atmosphere that the magnetic healer draws into himself by means of his lungs some of that power which he gives forth again as magnetic energy.

**THE SECRET OF THE AIR.**—It has long been held by the most advanced thinkers that in the air we breathe there is contained a force greater, yet more subtle than electricity, and without going into this question now, I may state it as my firm contention that this force *does* exist and that it can be applied to man's use only when by his *enlightened will* he draws it into his system to be given forth again for the benefit of others. In other words, you will be able to receive and assimilate that force from the atmosphere when you confidently demand that it shall be received into you for the strengthening of your magnetic energy. Therefore, the secret of obtaining this force from the atmosphere is by a *union* of your thought, your will, and act of breathing.

**CONSERVING ENERGY.**—One further direction is to be given to the student and this relates to the conserving of magnetic energy by a species of insulation. You will find that if your feet are wet, too much magnetic energy is given off throughout the day and is lost, having no direction. It is very necessary
then that the healer should be careful that his feet are covered with some dry, warm material, and if he use a sole of spun glass inside his shoe or slipper, the effect will be to still further conserve his energy. At night he should make a point of sleeping upon a bed on which glass castors are used, and though these points may seem trivial to the skeptic, the student will neglect no opportunity of taking reasonable precautions against the wasting of this important force.
PART III.

THE DEVELOPMENT OF MAGNETIC POWERS—WHERE THE FORCE IS—THE HEALER'S MANNER OF BREATHING—BREATHING EXERCISES—POSSIBLE ATTAINMENTS—ATTAINING FULL BREATHING—SENSING THE LIFE-FORCE—THE KEY TO LIFE.

THE DEVELOPMENT OF MAGNETIC POWERS: If you were possessed with the desire to heal others by magnetic treatments, and knew not how to preserve for yourself a larger proportion of energy than you gave out, ill-health would result to you as a consequence of your labor for the good of others. You would be draining yourself of the Life Energy without allowing opportunity for full recuperation. Therefore, knowledge of how to attract to yourself a large quantity of this force, and how to conserve and replenish this store of Energy, is necessary as a preliminary to your work as a Healer.

WHERE THE FORCE IS.—The supply of Force is inexhaustible. It is in the food we eat, and in the water we drink, but most accessible to us in the air we breathe. Whether he is waking or sleeping the Magnetic Healer is always a deep breather. He is conscious always of the beneficent invisible Spirit that is about him to strengthen him, and with each deep inspiration he draws into himself a portion of this power. He does this consciously, feeling the grandeur of being at harmony and at one with this Spirit of Power. When he eats it is with the feeling that he is taking sustenance into his body which is adding to his reserve-force. When he lies down to sleep, it is with the knowledge that he entrusts himself to the beneficent action of Divine Energy in rebuilding the worn-out cells of the body, and inspiring him for the task of the morrow.

THE HEALER'S MANNER OF BREATHING.—During the day you will not notice in him any point of difference in his manner of breathing to distinguish him from others except that his inspirations are very slow and complete, and that he seems to expand before your eyes as you sit opposite him. His mouth is closed. He breathes only through the nostrils, and you can—
not detect in him any spasmodic jerking of the shoulders or muscles, as he breathes. Only as he holds your hand in his, can you feel by the slight vibration which is imparted something of the Force which is passing from him to you. He does not give his method of development to the public eye, but in the seclusion of his home he practices those breathing exercises and rules of life which have made him the power he is, and have filled his Mind and Body alike with the Divine Energy which he is capable of imparting to you.

Breathing Exercises.—Here I give you the necessary breathing exercises to be practiced thrice a day for fifteen minutes for the first week. Be careful not to exceed these directions. There is a purpose in making them exact, and limiting your development according as you are able to bear it.

First Week.

Spend five minutes in the morning in preparing for the exercise which is to follow. Let your thoughts be centered upon this great work of Healing, and of the good which you may accomplish by its practice. Put yourself thus into harmony with the Divine Essence. The best time for following out these exercises is immediately following or preceding each meal, Breakfast, Lunch and Supper. They should not be practiced last thing at night during the first month. They are stimulating in their immediate effect, and the student is not at once able to regulate this additional inflow of force.

When you have given up five minutes to contemplation of the development of the Power, lie down upon a couch or bed and relax the muscles of the body so that each limb is limp and as far as possible forgotten. You have no attention to spare for any of the body's members.

When you are ready to begin, loosen your clothing so that you may breathe with ease, and take one long, deep inspiration, beginning with expansion of the abdomen, and carrying the breath up by one continued inhalation to the ribs and chest. This breath should be indrawn for eight seconds; it should then be held for eight seconds, and then slowly exhaled during eight seconds. Thus you fulfill with each breath the circle of twenty-four. Or, using another of the mystic figures of the East, you complete in one breath the equilateral triangle of Eight. You will not find this first step in development so easy as it reads on paper. You will be inclined to hurry; you may feel that it is necessary that you
should breathe more often; you may become fatigued, and even nauseated. Should this last occur, I pray you not to discontinue the exercise upon that account, as I hail such symptoms as pointing to the great need that existed in the system for better development. All unpleasant symptoms will disappear after a few sittings, and in their place will come an abounding and ever-increasing sense of Power.

This first exercise is necessary in order to give you what few possess; namely, a control of the Breathing, and a determination to master the tasks of Spirit-development. The time allowed for this exercise should not exceed ten minutes, having allowed five minutes of the prescribed fifteen for preparation.

Second Week.

The exercises for the second week should still occupy only fifteen minutes three times a day before or after meals, but they should be conducted as follows:

After allowing the usual five minutes for preparation, close the right nostril with the finger and inhale a deep breath, beginning as before with the complete expansion of the abdomen, followed by extending ribs and chest-walls. Inhale this breath through the left nostril for ten seconds, and then hold it for ten seconds, finally exhaling through the right nostril for ten seconds. The control of the breathing will manifest itself to you when you are able, without fatigue, to gradually exhale the breath for ten seconds. It thus takes thirty seconds to complete the breath, the inhalation and exhalation. In ten minutes the number of complete breaths in this Second Exercise is therefore twenty. Practice this exercise if necessary beyond the allotted time if you find much difficulty in accomplishing it. Do not leave it until you are perfect in its performance. After the first ten breaths, change the inhalation to the right nostril, exhaling through the left.

This exercise completes the procedure for the second week. When you have perfected yourself in this Exercise you may begin treating as many as three patients daily, in the manner which will be subsequently given you, but should not exceed this number. You should be conscious at the end of the second week of such an influx of vitality that it will not fatigue you to begin to give out to others something of that plenitude of Force which you are securing for yourself.

Third Week.

The Exercise for the Third Week of Preparation is more dif-
ficult than the preceding, and requires on the part of the student careful and serious attention.

It consists in the alternate use of the nostrils as in the preceding week; but each inhalation should occupy fifteen seconds; the breath should then be held only ten seconds; and the exhalation should be again fifteen seconds. Notice particularly the difficulty you experience in exhaling for fifteen seconds. But it should be learned. It is necessary to your development, and the rewards are great.

Fourth Week.

The Exercises for the Fourth Week are devoid of any restrictions in the matter of using first one nostril and then the other in the Breathing; but the time of inhaling is increased, if possible. Every inhalation should take twenty seconds; then hold the breath for ten seconds, and exhale it twenty seconds, thus concluding the breath. The time of the exercise may be extended from fifteen minutes to thirty minutes, including the necessary five minutes for preparation.

Possible Attainments.—Strange as it may seem to you who know nothing of the development through breathing, some students have been known to develop a capacity for inhaling and exhaling covering a period of five minutes for each complete breath. The earnest student, at the end of the fourth week, begins to feel in truth that exaltation of the spirit and bodily vigor which comes with the presence of large quantities of Nervous Energy in the system, revivifying and transfiguring him. In place of weakness he shows strength; the rich color that has superseded the pallor of his countenance shows how well his physical body appreciates the nourishment which it has received. The wasted form has filled out, and the clear light of the Spirit shines from the eye. There is no mistaking the eye of the Magnetic Healer; it is clear, penetrating, steadfast, yet not aggressive. Its expression is mild but constant.

Attaining Full Breathing.—After the fourth week the student should make the practice of deep breathing his constant aim. The muscles are now so strengthened that they are indifferent to any ordinary strain put upon them. He should begin to breathe deeply in the morning when he first wakes from slumber, and without tying himself down to any fixed hours for Exercise, he should make a point at least once a day of giving up thirty minutes to his Exercise while he reclines upon
a couch. Now his method should be to gradually extend and still further extend the length of time occupied by the inhalation. The student should, to fit him for attaining full Breathing Development, practice during the day, whenever the opportunity presents itself, the Act of Deep Inhalation and holding the breath. The point to be especially kept in mind at this stage is that the exhaling of the deep breath is not to take place with any loss of control over the act of breathing. It is to take place under the control of the will, and must be now and always gradually performed. As the length of the complete breath increases, the period of suspension, or holding of the breath, decreases in about the following proportion:

<table>
<thead>
<tr>
<th>Length of Complete Breath</th>
<th>Inhalation</th>
<th>Suspension</th>
<th>Exhalation</th>
</tr>
</thead>
<tbody>
<tr>
<td>24 seconds</td>
<td>8 seconds</td>

</tbody>
</table>

And so on as far as you deem it prudent to go, judging from the effect upon you. These figures are based upon the action of the normally developed lungs of a healthy man. The scale may be altered in just the ratio of one's relation to the normal, healthy condition.

Sensing the Life-force.—When this system is carried to perfection the student begins to experience what the Hindoos call the "spirit movement," when the Life Energy actually can be sensed in its distribution throughout the body by nerves and blood. Then disease has lost its hold upon the organism, and fatigue becomes a thing that is speedily remedied. Then even hunger and thirst become amenable to the control of the will, and the strength of the spirit asserts itself against the decay of the body.

The Key to Life.—The key that must unlock for man the gate of physical immortality, or the preservation of the body in perfect health for hundreds of years, lies, as the wise men of the East know, even at this day, in the Practice of Deep Breathing and Rules of Life. Do not let anyone disconcert you in this practice by pointing out that "It is only Deep Breathing!" We know what it is and we know what it can do. All I ask is that you give up the required time to the Exercises, and that you lose no
opportunity to develop your control of the Breath. By so doing you will generate for your own use more Magnetic Power than your body needs, and will store the surplus in the system for the healing of others. Its presence in your own body in sufficient quantities will make you proof against the attack of disease.

THE APPLICATION OF MAGNETIC HEALING: A GENERAL
TREATMENT: You must first learn what is meant by giving a gen-
eral treatment, which must precede the specific treatment for the
different diseases which will be mentioned hereafter. Remember
that this general treatment is to be used upon every patient at the
beginning of every treatment; whether you take a case for one
treatment only or for daily treatment for a month, you must al-
ways begin work by giving this general treatment, proceeding
from this to the specific treatment for the particular disease you
are called upon to treat. Having questioned your patient first as
to his symptoms and habits of life, paying particular attention as
to whether he is suffering from constipation among other things,
proceed to rub the hands briskly together and obtain the feeling
of heat and warmth in the palms and fingers concerning which
you have been already instructed. Now if your patient can come
to see you, it is very evident that he can sit up in a chair and you
therefore will dispose him comfortably in a chair in which the
back is slightly off the angle of the perpendicular, making him as
comfortable as possible. The idea is to make him rest by which
means he will be more thoroughly passive to your influence.

—25—
HOLDING THE ATTENTION.—In all your treatments request your patient to close his eyes, and this for two reasons, (1) that there may be less to distract his attention and (2) that he be not allowed to watch all your methods of procedure and so obtain an insight into your work under cover of receiving treatments himself. This is your own work and while you are willing to devote it to the benefit of humanity you should not be willing to give free instruction to the curious. Therefore, insist upon it that your patient's eyes shall remain closed throughout the treatment. Now inform him that you are going to project your magnetism upon him from head to foot for the purpose of putting his nervous system into harmony, and then while he sits comfortably in his chair with his feet planted firmly upon the floor and his hands resting upon his knees, you begin the use of the long passes.

THE LONG PASS: Stand in front of your patient and concentrate your mind upon the effect you intend to produce. Say to yourself, "I will relieve this patient of his pain. I will cure him of his disease. I will restore his nervous system to harmony. I will give him freely of my magnetism. I can do this by my knowledge of the law of sympathetic transmission of force." While you are thinking this to yourself, slowly raise both hands, the fingers being clenched, and in a wide sweep raise them above the patient's head, bringing them together and unclasping the fingers, at a point just above his forehead. Now spread your fingers out a little, keeping them easily apart but not rigid and very slowly bring them down past the forehead, face, chest, abdomen, to the knees, taking a full thirty seconds to complete this slow longitudinal pass. At the conclusion of the pass shake the hands as if you were throwing off the diseased condition of the patient, and clenching the fingers again bring them once more in a wide sweep before the patient's head, and repeat the process. Continue this for five minutes, during which time your patient will be almost certain to feel the stimulating effect of your magnetism.

EFFECTS TO BE NOTICED.—It may be that his heart beat will be quickened and that he will perceive a feeling of warmth due to the effect of your magnetism upon the circulation of his blood. At the same time he will experience no marked excitement, but the reverse effect will be noticed, viz., the calming influence upon his nerves. Speak reassuringly to him, giving him an indication
of the effects you intend to produce in him by this method. He is now in condition to receive the true magnetic treatment for the restoration of the equilibrium of his nerve force. The hands are the only instruments used in this general treatment for transferring vital magnetism to your patient and both hands should be employed in every case. It must be remembered again that the right hand is the positive, or projecting hand, and the left hand is the negative, or receiving hand.

**Special Treatment:** The principle of special treatment is to form a circuit with the patient’s body as the point of contact.
Between the two hands. The current is thus passed through the resistance, which is the patient's body, and returns to the Healer. The latter becomes conscious of the fact that the circuit is formed by the sensation of slight tingling in his left hand, and when this is felt, he withdraws his left hand from contact with the body, keeping his right in the same position as before. He then uses

![Diagram of Magnetic Healer treatment](image)

**Fig 2.—Making the Circuit.**

his left hand merely as a stimulus to the force, by tapping lightly with the fingers of the left hand from time to time upon the body, or stroking. More minute directions as to special treatment in special cases will be given further on. The point now is to describe how the Magnetic Healer treats, and why.

**Position of Hands.**—The Healer has directed the force into the body of the patient, by *forming the circuit* with both hands,
the right hand being placed upon the solar plexus, or pit of the stomach, and the other resting upon some portion of the spine. The position for the positive, or right hand, in all magnetic treatments, is always against the bare skin at the pit of the stomach when possible. This rule must never be interfered with unless it is offensive to the patient. It is true that the Force can be passed through clothing, but to be immediately efficacious, the positive hand of The Healer should rest lightly but firmly upon

the flesh of the patient. It is not so important that the left hand be applied to the flesh, but it is always better, when possible, to have the patient's clothing loosened so as to permit both hands to touch the flesh. However, in case the patient is of the opposite sex and of such a sensitive nature that the close contact seems indelicate, it is better to avoid this nervous antagonism by working a longer time, with both hands outside the clothing.
No good can be accomplished if the mode of treatment distresses the patient in any way.

The Abdominal Brain.—The Solar Plexus is a great nerve center, so important in its bearing upon the health of the patient, and so remarkable in its diffusing scope, that it has been given the name of the Abdominal Brain. No matter what the negative hand may be doing, the position of the right hand of the Healer never varies: it is always upon the Solar Plexus. The force so received from The Healer is radiated through the entire nervous system from head to foot; thence it sets in the direction of the Healer’s left hand, seeking to complete the circuit. When the Healer senses that the circuit has been completed, which sometimes happens in five, sometimes in ten minutes, sometimes in less than a minute, he withdraws his left hand from the spine, or wherever it may be resting, and proceeds to allow the Force to flow into the patient from his right hand alone.

Directing the Current.—After waiting thus for a few minutes, he touches the spine of the patient lightly with the tip of the third finger of his left hand. The effect is to at once cause a rush of Force to the point of contact, imparting to the patient a pleasant tingling not unlike a mild current of electricity. Sometimes this sensation is so slight as to be scarcely noticeable, but with the continued treatments it becomes more marked. The Healer allows his finger to rest in one place for a few seconds, and then proceeds to touch the spinal cord from end to end with the finger of the left hand, causing slight but now unmistakable shocks to be felt by the patient, who complains sometimes of excessive warmth at the points of contact. This tapping should proceed for five minutes, at the end of which time the patient will be conscious of great benefit derived in the form of additional strength imparted to his system, due to the presence of Nervous Energy in added quantities to the nerves and their branches.

Length of Treatment.—After the current is established, as described above, ten minutes is the longest treatment that should be given, and after each treatment the Healer should wash his hands and dry them carefully. Before beginning treatment he should see that his hands are warm and slightly moist. If the hands are cold, clap them or rub them briskly together before applying them to the patient. If they are dry, moisten them
slightly with water, allowing free escape of the Force through the pores of the skin.

**THE HEALER'S MANNER.**—The healer always greets his patient with a pleasant smile and kindly word. His speech breathes a spirit of Hope for the sufferer, and his touch is magic to dispel suffering. His bearing is dignified and confident. In giving these treatments it is not necessary that the left hand of the Healer should rest upon the flesh of the patient, though it is better, and results are more speedy, to so arrange matters when possible. But it is advisable that the right hand should be next the skin. The left will establish the circuit quite satisfactorily outside the clothing. There is no fixed rule to follow in giving treatments so far as the position of the patient is concerned. Nor can it be determined beforehand, whether the Healer shall stand or sit. In this he must be guided by the most comfortable position for his patient. The treatments may be given with advantage when the patient is in bed; but a reclining position upon a comfortable couch will answer the purpose as well. In some cases the sitting position is the most satisfactory.

**PRECAUTIONS TO BE OBSERVED.**—When the Healer is ready to give his treatment, he speaks reassuringly to the patient, explaining what he is going to do, and setting at rest the fears which everyone will experience who enters upon a plan of treatment to which he has been unaccustomed. It is always best, until full confidence has been established, and even afterwards, to have someone in the room in addition to the patient. This gives to the latter a feeling of security, and the beneficent influence will be more easily perceived. The first effect which the patient will notice will be in the form of an increased warmth of the body, penetrating sometimes unmistakably to the extremities of the limbs, sometimes accompanied by a tingling of the nerves and a quivering of the muscles.

**INCREASING THE VIBRATIONS.**—From the positive right hand of the Healer there often comes a slight but decided vibratory motion, as if the current were shaking its medium in its haste to enter upon its work. With practice in healing, these vibrations of the positive hand become more marked, due to the greatly increased flow of Energy from the palm and fingers. The Healer now advises the patient to breathe slowly and deeply, in order that the nervous system may draw into itself some of the Force from without.
THE CRISIS.—In all these treatments, the Healer looks always towards one certain effect, an effect which is known to physicians as “a crisis.” Crises have been recognized in disease from very early times. A favorable crisis is attended by sudden re-establishment of the secretions and excretions. In the light of our knowledge of the effect of Vital Magnetism it is easy for us to understand that the checking of the secretions and excretions, which is a prominent symptom of internal disorder, is due to the interruption of the Vital current in its circuit. A removal of this interruption and a re-establishment of the current by the addition of nervous energy sets again in motion the glandular processes of excretion and secretion. At the establishment of the crisis, the skin especially becomes bathed in perspiration and convalescence immediately follows.

THE FORCE THAT DIRECTS THE BLOOD.—The Healer deals first with the nervous system, knowing well that the power of repairing tissue is primarily located in the nerve-energy of the body. In other words, the power to arrest disease and repair the body is in the nerve fluid before it is infused into the blood, and exists as a Force independently of the Blood. The nervous system exercises a prime influence over nutrition and all organic processes, and it cannot be accepted that the changes in nutritive processes observed to follow the application of Magnetic Healing are only due to the variations in the size of the blood vessels supplying the affected parts, although this is doubtless a factor in producing results.

CONTRASTING MEDICAL SCIENCE.—Medical science has directed its efforts mainly to the selection of drugs which have in their action upon the system a sedative, anaesthetic and purgative effect. Thus the physician gives his attention to the treatment of symptoms, relying for the removal of the cause upon the effort of the system to expel matter foreign to it, and thus get rid of the “medicine” and the obstruction at the same time. Such a method must cause a smile. It is a confession that drugs are merely at their best intended to assist the intelligence of the body in driving out the intruder. The drug is a haphazard means of disturbing the Intelligence. It happens that the activity of the functions resulting from the introduction of the drug into the system is followed by a disappearance of the symptoms, the physician congratulates himself that he has found the
correct remedy and pays no attention to the fact that without Intelligence every drug must prove inert.

Surely, it is only reasonable to direct attention first to the controlling power, The Intelligence. Is it not better to act in union with that Intelligence than to disturb and irritate it? Is not this merely common sense? I am aware of the fact that medicines relieve certain conditions. Calomel, for example, acts upon the intestinal tract; rhubarb increases the peristaltic action of the bowels; opium paralyzes the cerebrum.

A Rational Method.—But the point I wish to make is that the functions of the body are primarily under the control of the Nervous system, and the rational method of treatment in any and all diseases is to reach function through the nervous system direct. Anything else is a slow and cumbersome method. Normal processes are most speedily established by the application of Nervous Magnetism in all disorders of the body.

Medical Methods.—When inflammatory deposits have been organized—have remained in the tissues until they have become hardened—many means are resorted to by physicians for their removal. This is confessedly a difficult matter by use of drugs. Electricity is used as an aid to the absorbents to take up the morbid accumulation; dry air at a temperature of 300 degrees Fahrenheit is sometimes applied; local applications of iodine, iodide of potassium, iodide of ammonium, and other drugs are used, though the iodides frequently prove most harmful; and finally the physician informs the patient that when inflammatory deposits have become organized they may be considered a fixture.

Magnetism Dissolves Deposits.—Magnetic Healers, however, have by no means concurred in this decision, and by directing their efforts to the controlling power they are enabled to re-establish harmony in the system and dissolve the morbid accumulations. There is a certain class of new and abnormal growth which baffle the physician and his armamentarium of drugs, but which yield readily to the application of Magnetic Healing. Such, for instance, is the excessive development of the epithelium of the sebaceous follicles in the form of verrucae, or common warts. These are morbid growths amenable to the dissolving action of the vital current. Cancer, that most dread of all diseases, probably originates in this way, by the trans-
plantation of epithelial cells to connective tissue. These cells having in themselves propagative and creative power, cause the abnormal growth, and for this class of disorders the only remedy known is the knife of the surgeon. Valuable lives are sacrificed every day because the physician will not perceive that, where there is creative power, there is Intelligence. Where there is the power to create abnormal growths, there must also be the power to check abnormal growths. There cannot be growth without Intelligence.

Cure for Cancer.—The cure indicated for cancers and for all abnormal growths is the application of Magnetic Healing in its inhibitive form. The intelligence which directs the nervous energy in ordinary diseases to reconstruct and build up the tissue is employed in these cases of abnormal growth for the dissolution and disintegration of the growths, and speedy resolution of the abnormal accumulation into the blood, to be thence excreted by the system, follows the application of Vital Force.

Relieving Pains.—For all pain which is an inseparable symptom of disease, Magnetic treatment is the specific remedy. There is no form of pain which this will not dissipate, as there is no form of disease which it cannot relieve and cure. The attention of the Magnetic Healer is first directed to the relief of pain by the introduction of Vital Force through the nervous system, leaving the eradication of the disease to the beneficent action of the same agent, working in harmony with the nervous energy of the patient.

Medical science has pronounced quinine its great auxiliary in lowering temperature in fever, but I have yet to hear of a case where Magnetic Treatment failed to reduce pulse-rate and temperature in one treatment. It is not necessary for the Magnetic Healer to inform himself accurately regarding the exact degree of the body's temperature. It is very necessary that the physician should do so, because in fevers where quinine, antipyrin, jaborandi and kindred agents have been blunderingly used to depress the temperature, the thermometer informs the physician when to discontinue further use of the drug lest the depression of temperature be carried beyond the point of recuperation, and collapse occur.

Specific Treatments.

Let us give our attention now to the commonest diseases which you will be called upon to treat and show how each is to be dealt
with by Magnetic Healing, always remembering your previous instruction in the general treatments.

HEADACHE: Request the patient, if the face is flushed, to sit upright in a chair. Place positive hand (right) on the solar plexus, and left hand at base of the brain, above the neck, back of the head.

Retain these positions for five minutes. If the face is pallid, showing anemia instead of local congestion, request the patient to lie upon a couch with head very slightly raised above the level
of the body. After five minutes, remove the left hand, and touch the scalp and forehead gently with the finger-tips, allowing the fingers to trail gently over the scalp, down the back of the head, with a drawing motion, down to the first or cervical division of the spine. This relaxes the scalp, and relieves the pressure on the nerve terminals which produced the pain.

**Asthma:** A dyspnoea or difficulty in breathing, due to chronic nervous spasm. Let the patient sit upright in a chair, and keeping right hand as always upon the solar plexus, place left hand on spine, flat, between the shoulder blades for five minutes. Then remove left hand and tap the spine lightly with finger-tips from top to bottom, the cervical, dorsal, and lumbar divisions of the spine. Instruct the patient while you are doing this to relax muscles and breathe from the abdomen. The spasm will be immediately relieved.

**Influenza or Grippe, Colds:** Lassitude and general depression, accompanied by pain throughout the body, and discharge of mucous from the nose.

Positive hand on Solar Plexus; negative hand on root of the nose and forehead for five minutes. Then trail the fingers of the left hand over the head of the patient from root of the nose to cervical division of the spine. Instruct in deep and powerful breathing from abdomen only.

**Chills:** Recurrent or intermittent, as in ague. Positive hand on solar plexus; negative hand on base of the brain, resting for ten minutes without tapping. Instruct in deep breathing.

**Fever:** If there is delirium, positive hand on solar plexus, and negative hand resting for five minutes at base of brain. After five minutes, with negative hand, stroke spine without tapping from top to bottom, using only finger-tips to make the stroke with, lightly, until delirium passes. If there is no delirium, positive hand on solar plexus, and negative hand at base of brain, as before. Then instruct in abdominal breathing, deep, regular breaths, eight seconds in duration without holding the breath between inhalation and exhalation. Secure regularity in breathing, keeping left hand in same position throughout the treatment. Watch for crisis, accompanied by perspiration, followed by sleep. The fever has passed.

**Rheumatism:** An inflammatory condition of the tissues (causing pain by compression of nerve fibers), resulting in for-

**Sciatica:** An inflammatory condition of the nerve substance itself. Treatment as in rheumatism.

**Nervous Prostration and Neurasthenia:** An irritable condition of the brain substance and nerves, due to imperfect nutrition through excitement and worry. Positive hand on solar plexus, negative hand resting at base of brain.

**Alcoholism, Morphinism and Cocainism:** Treatments twice daily for one month. Watch these cases carefully. There is deterioration of brain and nerve substance. Treatment by tapping the spine with fingers of left hand. Deep Breathing, and regular exercise by muscular contraction.

**Cataract of Head, Stomach, Kidneys, Bladder:** An inflammatory condition of mucous membranes. Treatment by positive hand on solar plexus; negative hand on affected part. Treatment by diet, deep breathing and exercise. Cataract is always due to impaired nutrition.

**Chronic Constipation:** A condition of lack of peristaltic action of the bowels and habitual contraction of sphincter muscle of the anus. Positive hand on solar plexus, negative hand on base of brain. Fluids, five pints of cool water daily sipped at frequent intervals, deep breathing and exercise, cure every case. This is the commonest of disorders, and should be first attended to in the treatment of all diseases.

**Dyspepsia:** Irritable condition of the digestive organs. Positive hand on solar plexus, negative hand at base of brain. Fluids as above.

**Paralysis:** If on left side, due to injury to right hemisphere of brain. If on right side, due to injury to left hemisphere. Treatment, positive hand on solar plexus, negative on affected part, tapping forcibly with side of the hand to restore sensation. If paralysis is complete, affecting both sides of the body, treatment is by positive hand on solar plexus, negative on spine, drawing finger-tips from top to bottom to restore currents.

**Apoplexy:** A suffusion of blood to the head, causing unconsciousness, and sometimes paralysis. Seat patient upright; apply positive hand to solar plexus, negative to base of brain, tapping spine from top to bottom.

**Bright's Disease:** An affection of the kidneys, which has not been satisfactorily met by the medical profession. Treatment by
breathing, and magnetism. Positive hand on solar plexus, negative on region of the kidneys.

Dropsy: A watery deposit in the tissues, causing swelling. Treatment, positive hand on solar plexus, negative at base of brain. Breathing and magnetism cure.

This lesson could be indefinitely prolonged, but sufficient instruction in treatment and the principles of treatment has been given to enable you to take under your care any case of disease that presents itself. Never forget to instil the importance of following the breathing directions given upon your patient's minds; since upon their earnest co-operation with you in much of the detail of Magnetic Healing their continued health depends. It is not sufficient to make your patient well; he must be taught also how to keep well, and prevent a recurrence of his disorder. In this respect Magnetic Healing fills all the needs of man.

Magnetizing by the Breath: It was impressed upon you in the earlier part of this course of lessons that magnetic energy could be transmitted by breathing, and it remains now to show you how the breath is used in the act of insufflation as it is called.

Hot Insufflation.—Insufflation is of two kinds, hot and cold. The hot insufflation is demonstrated by breathing upon a piece of flannel laid upon the seat of pain in the patient. The Healer puts his mouth close against the flannel and by breathing heavily upon it causes a sensation of great heat in the part. This breathing should be continued for several minutes, at the end of which time, in headaches, neuralgia, rheumatism, and in fact any acute pain it will be found that the trouble is very much relieved, if not entirely cured.

Before leaving the subject of hot insufflation there is a method by which the chronic constipation of the pronounced type can be entirely cured when using this process.

Directions: At the pit of the patient's stomach covering the solar plexus, lay a piece of flannel about 6 inches square against the bare skin. Now bending over the patient, apply your left hand to the lumbar or lower division of the spine, allowing the patient to lie upon that hand, palm upward, pressing against the spine. Now apply your mouth to the piece of flannel and breathe through the mouth upon it, inhaling air through the nose. The effect will be to almost immediately start peristaltic action in the patient and a lifelong habit of constipation may be broken up in this simple way.
COLD INSUFFLATION.—Cold insufflation has an exactly contrary effect and consists of blowing the breath upon the patient from a distance of several feet for the purpose of calming the nerves and clearing the brain. Cold insufflation is very useful in banishing drowsiness and stimulating the nerves of the patient to increasing activity. It is not especially valuable in curing or alleviating pains, but is a good thing to use at the conclusion of a treatment in order to restore the patient quickly to the full activity of the senses. The breath in cold insufflation should be directed upon the forehead and eyelids of the patient.

HOW TO MAGNETIZE OBJECTS: A very large part of the practice of the Magnetic Healer comes to him through correspondence from patients living at a distance and it is a matter of great importance to them that they should receive from the Healer articles magnetized by his force which can be applied by them to the seat of pain or for the cure of chronic conditions. You must understand therefore how to magnetize an article so that its curative properties shall be retained for the use of patients at a distance.

PREPARING BLOTTING PAPER.—One of the best and most easily handled articles for conveying magnetic force to a distance is blotting paper and the way to magnetize blotting paper is as follows: Take a piece of new blotting paper about the size of an ordinary envelope and sprinkle it on both sides with a few drops of water. Now heat your hands very hot by rubbing them together, shaking them, and clapping them with force one against the other, and then hold this blotting paper between the palms of the hands for two minutes impressing your concentrated thought upon the article, willing strongly that your magnetism shall be absorbed and retained by it for the benefit of your patient. So proceed with another piece of blotting paper the same size and having thus separately magnetized them, place the two pieces together, and hold them together between the palms of your hands for a minute or two. Now wrap them in clean white paper and post them to your patient, together with a letter giving full directions for use. In curing diseases of long standing, the paper is to be used by wearing it upon the part which it is desired to treat.

IN CASE OF SORES.—If desired for the cure of a sore or ulcer of long standing a thick piece of cloth should be laid upon the sore and then the blotting paper laid over the cloth. It is better that no one but the patient be allowed to handle the blotting paper before it is applied in order that there may be no diminu-
tion of magnetism. It is possible to magnetize almost any object from a ring to a piece of raw potato, so that such objects will have curative properties, but the blotting paper will be found to answer most purposes.

**How to Magnetize a Glass of Water:** It very often hap-

![Fig. 4.—Magnetizing a Glass of Water.](image-url)
agency. Take a glass and fill it with cold water. Hold the glass in the left hand. Point the fingers of the right hand and the thumb upon the surface of the water at the mouth of the glass, but do not allow the fingers to come in contact with the water. Now direct your attention upon the glass of water, having previously heated your hands to allow the accumulation of nervous energy at the points of the fingers as in the preceding preparation of the blotting paper. Five minutes work will magnetize a glassful or a jugful of water, provided care be taken that the vessel containing the water has a wide mouth and not a narrow neck. The patient should be instructed to take the water in doses of a wineglassful every thirty minutes for the first day; every hour the second day; and a wineglassful three times a day after this. It is an interesting experiment to set before a patient two glasses of water, one of which has been magnetized, and allow him to distinguish by the slightly metallic taste of the magnetized water which is which.
TO PROFESSIONAL HEALERS.

If it is your purpose to take up magnetic healing as a profession instead of merely a personal and private accomplishment, I would give you a word of advice, in the form of "don'ts"—perhaps the shortest way.

Don't hurry or appear anxious.
Don't drop your calm, pleasant, dignified and confident manner.
Don't allow flippancy or familiarity to creep into your relation with your patients. Don't be austere or gloomy, however.
Don't neglect extreme cleanliness in dress and person.
Don't make your fees too small; rather make them as large as you reasonably can, but,
Don't hesitate to do plenty of charity work; take all the work you can get—it advertises you.
Don't accept a fee that your patient cannot afford to pay.
Don't accept a fee, except for your time, when you have failed, for any reason, to benefit a case.
Don't take any acute or critical cases unless they are thrust upon you forcibly and voluntarily. The present condition of medical laws in most countries permits physicians to slay their patients by the thousands, but if someone dies on a healer's hands, great is the uproar—from the medical men.
Don't handle contagious diseases, for the same reason.
Don't practice at all unless you have a sweet, clean and pleasant office or room in which to work.
Don't argue or theorize with anyone. Hold yourself good-naturedly above it, telling them if they want instruction you will sell it at so much per lesson.
Don't keep bad company or neglect the conventionalities of society, which are intended for the public good.

upon any such hypotheses. The only explanation of such cures possible is that I was enabled to transmit Thought, Healing Thought, across distance in some manner, the mechanism of which is at present unknown to us. I do not expect to be able to teach you what Thought is, because if we knew that we should probably have arrived at the heart of the mystery of creation. I do not think that it will ever be given to man to know the composition of Thought.

The Purpose of This Chapter.—I want to teach you only how you may use Thought-transmission for the benefit of yourself and of others. If you know this, if you know how to do this, and how to use this power at will, you may be well content not to worry yourself about the composition of Thought or the analysis of Energy; it will be sufficient for you that you are enabled to do great good in the world. I think that you will find as I found that the projection of thought is an extremely simple matter. It is in my opinion so simple that its very simplicity has caused its amazing force to be overlooked in this age of difficulties surmounted.

The Force of Good-will.—All that is necessary in order to project thought successfully is the motive, the intent, the good purpose, the wish to help, to assist, some one sick and in suffering. This wish or this desire carries with it a full sense of power to do that which you wish to do. You can project thought because you desire to project thought, because your wish is good. It is very different in the field of action, but in the realm of thought you, a weak man or woman, are as powerful as the strongest; physically you may not be so, but in thought you are, I repeat, as strong as if you were physically whole and sound.

Avoid Self-distrust.—Bear this point very carefully in mind; throw out from your mind all self-distrust; do not believe that because you are yourself perhaps sick and weak therefore you cannot do any one any good. The reverse is true. Some of our greatest Magnetic Healers were by no means physically robust; but they, and all of my pupils, without exception bear witness to the fact that they gain strength themselves in the same proportion that they give strength to others; that while they send out to their patients and their friends, and even to their enemies, full currents of strength-giving healthful thought, they are constantly receiving back, as it were by a return current, renewed health, renewed hope and courage along the thought-plane.

The Law of Living.—The philosophy of this work is very
beautiful. It aptly bears out the teachings of Christ. It is a casting of bread upon the waters which returns again and again. It is a giving of alms which is restored to the giver an hundred fold. It is for many the gate not only to physical strength and health but to the unfoldment of the higher life within. The development of the spirit along the thought-plane is very marked among those who give themselves in thought to the pursuit of this noble work.

Natural Aids to Cure.—We must not overlook in the treatment of our patients those material aids to physical health which are the mainstay of every reasonably conducted sanitarium in the world to-day. While I may believe with many of the best thinkers of the age that the practice of medicine as we know it to-day is largely an experiment and uncertainty, yet we must not disparage the great work of those far-seeing physicians who have made the practice of preventive medicine their study; who have given their time to the better knowledge of Hygiene, of Diet, of Massage, of Electricity, Water and Rest, preferring to work with the reasonable and simple means which nature has placed in man's way for the improvement of his physical condition, rather than to experiment with dangerous drugs. Chief among these aids to health I place the right use of Breathing. I desire you especially to instruct your patients in a knowledge of the value of the right use of the lungs to man. In the Bible the word "spirit" is used in place of the strict meaning of the Greek word "Pneuma," the Breath. The importance of breathing is never properly enforced upon the young; if it were, there would be in this country no such thing as tuberculosis; no such thing as consumption; since every physician will agree with me that no child is ever born into this world having consumption developed in him. A proper exercise of the lungs would absolutely prevent the development of the germ of this terrible scourge, and I therefore make it a most important point in this Course of Instruction that you add to your knowledge and to your form of treatment the points contained in the following paragraph, and instruct your patients along these lines, besides following them yourself.

Breathing for Health.—In order that your patient may get the full benefit of this course of treatment he must pay particular attention to three things. The first is the act of breathing, the second is the drinking of sufficient cold water, in very small quan-
ties but very frequently, to greatly increase the quantity of blood in the system, and the third is the form of exercise for invalids which I have found most suitable for all—for weak or strong, young or old. Let us begin with directions for his improved form of breathing. He has been in the habit of taking a great many short and easy breaths in order to supply his body with sufficient oxygen to carry on its work. He has not probably once in the course of the day taken one full inhalation and exhalation. He has not taken in just as much air as his lungs could possibly hold and breathed out to the uttermost extent of compression which the lung-tissue is capable of. He must begin to understand that exhaling the breath, thus removing carbonic acid from the lungs, is just as important as inhaling.

Form of Breathing.—He must begin to breathe from the abdomen, instead of from the chest. Breathe from the abdomen and carry it upward to the chest so that he feels that he is actually taking into his body all the air it can possibly hold. Let this be done gradually and without spasmodic jerkings of the muscles. Ten such breaths as this in the morning first thing when he awakes, long, slow, gradual, complete, breaths. If he should be a poor sleeper, and should wake during the night he must repeat this operation, remembering this comforting fact, that he will do his system as much good by a half-hour’s exercise of this kind as though he were indulging in the profoundest slumber. This is the method which gives to the body oxygen to destroy waste matter and to give heat for the increase of the bodily temperature.

Expressing Suggestions.—With the expansion of the lungs he must say to himself, “I am taking in healing and strength with every breath”; every time he exhales a breath let it be with the words deeply thought, “I am getting rid of weakness, of disease and of pain.” Get these formulas by heart, use them by day and use them by night; never forget them. Whenever he goes out from the house into the open air, he must take ten such breaths; complete inhalations and exhalations; breathing only through the nose. This will set the blood tingling and the heart beating powerfully and well, quickening the circulation and carrying life and health throughout the body. This will also prevent the taking of colds.

Increasing Chest Expansion.—You will be surprised how greatly the chest expansion will increase under this process of breathing exercise; in the case of dyspepsia too and all
stomach troubles the abdominal breathing is as beneficial as massage and is sufficient in itself to cure many obstinate cases. Oxygen also is a great solvent. It is good for rheumatism. It burns and destroys the deposits in the system due to imperfect elimination of waste matter from the blood. Pay particular attention to the benefits to be derived from the deep breathing.

Solvent Properties of Fluids.—Now as to water-drinking. This is scarcely less important than the breathing. Every human being should take at least five pints of fluid of one kind or another during the day or as near that amount as he can. Neuralgia, headaches, pains of various kinds and degrees, can almost invariably be traced to an insufficient supply of moisture for the body’s operations. When the nerves are deprived of sufficient nourishment they cry aloud, and their cry we call pain. When the blood is not sufficiently recuperated by the drinking of enough fluids for the body’s welfare it draws upon the supply of fluid which the nerves themselves require; the result is that the nerves are starving for lack of moisture, and while the patient may appear to the eye to be only slightly anemic, the trouble is increasing with the passing of the years and soon assumes very serious proportions.

How to Drink Water.—Water should be drunk without ice, in small quantities, a sip at a time, a teaspoonful or a tablespoonful at once, with short intervals between, and while any form of fluid such as weak tea, coffee, cocoa, chocolate, etc., with the exception of alcoholic stimulants, is good, cool water is best. The effect of this continual water drinking is to clear the complexion, to give weight to the body, to give purity to the blood, and strength to the individual. Almost immediately a great change will be noticed. The laxative effects will at first be very marked, but afterwards this becomes a matter of no inconvenience. The improved sleep, the stronger respiration, the better heart’s action, the buoyancy of returning health are all to be largely attributed to this great cleansing agent, Cool Water.

A Caution.—Guard against drinking more than half a tumblerful at a time. Let there be a few moments rest between each teaspoonful or wineglassful, and the results will be unfailingly beneficial. There is no hour of the day when these instructions with regard to the drinking of water may not be followed. There is no hour of the day or night when this water-drinking,
conducted according to the plans here laid down, will be other than a benefit to your patient.

A New System of Exercise.—Having now attended to the refreshments, so to speak, of the body, let us complete the directions by taking up the necessary consideration of the Third Arm of the Tripod upon which the health of the body rests. This is summed up in what is known as Exercise. An invalid's idea of exercise is usually fraught with severe fatigue and some pain. The ideal form of Exercise which I recommend to you, and which carries with it no sense of fatigue whatever, is one which a few men have had the sense to copy from the animal kingdom.

Stretching.—If you have ever watched a cat stretching its limbs, and sharpening its claws, you will understand exactly what I mean by Pleasurable Exercise. I do not require you to go for long walks or to fatigue yourself by lifting heavy weights. You are only required to relax and contract the muscles of the whole body, beginning with the hands and ending with the feet. The special beauty of this form of exercise is that it can be performed just as well when you are lying down in bed as if you were standing up. It is as easy for an invalid to take this form of exercise as for a well person.

First Exercise on Waking.—The first exercise in the morning for you when you are practicing your long deep breathing is to throw your arms over your head while lying in bed, grasping the head of the bed and stretching arms and shoulders sufficiently to influence the heart's action to a marked degree during the intaking of the deep breath. You will notice the effect upon the pulse and upon the circulation at once. Then stiffen the muscles of the arms for a few moments and suddenly relax them; so with the abdomen and the legs; so with the feet. Practice this contracting and relaxing of the muscles, and practice the stretching of the body, especially from side to side during the day-time, taking a deep breath and bending over as far as you can bend on one side, then exhaling, taking another deep breath and bending over as far as you can bend on the other side. The effect will be to repair wasted tissue in the body, to bring about a quicker and healthier circulation, and to tone up the system to a better degree than would occur if you were taking outdoor exercise.

The System of Muscular Contraction.—The importance of exercise of a mild and invigorating type to the in-
valid can hardly be overestimated. There is another process somewhat similar to the foregoing, and not generally known to the public which is called the System of Contraction, and which is a simple method of developing the strength of the muscles by a purely natural process. Hitherto it has always been held by

our instructors in physical culture as essential to the development of the body that there shall be in connection with the exercise carried out a large amount of fatigue engendered by the severity of the training undergone. As a matter of fact, fatigue of any kind is directly adverse to the building up of the body. At no
time should either a sick or a well person use his strength in lifting weights or in straining the muscles in any manner by walking, running, etc., to the point at which extreme fatigue is felt by the body.

The Proper Method.—What is known as the System of Contraction is simply a healthy method of inducing through the muscular system a feeling of rest and relaxation following upon the contraction of the muscles of the body, and here I wish you to particularly note that this form of exercise is to be used as a preparation for the Distant Treatment for health which are to follow.

When to Use It.—That is to say, this exercise should be proceeded with about ten minutes before the hour set for the Distant Treatment arrives. Five minutes should be devoted to the exercise, and five minutes to restoring the system by complete relaxation to its condition of natural receptiveness, or passivity, thus restoring the equilibrium to the nerve-centers, quickening the pulse and heart's action, etc. The exercise is to be carried out as follows:

Imagine that you are about to raise from the floor a considerable weight. You would naturally in order to perform such a feat strain your muscles to a high tension. Act exactly as if the weight were in front of you, stoop down to the floor, straining all the muscles of the body as if in the act of lifting the weight, raise yourself gradually to your full height and slowly with muscles still contracted bring your hands together over your head, stretching them as high as possible, and raising yourself slowly to the tips of your toes. Then with the muscles still contracted lower yourself from the position of standing on tiptoe until your feet rest flat again upon the ground. This is the first exercise, and immediately your feet are firmly planted on the ground relax every muscle, resting while you count five.

How Often to Do This.—As a preliminary exercise it will be sufficient for the invalid to do this three times only at one sitting, watching the effect upon the body. If there follows a sense of pleasant languor and lassitude, the exercise is doing the work it should do. It is not intended to really tire the patient, and if not carried to excess it will not have the effect of inducing fatigue, but will on the other hand result in bringing about that change in metabolism, and the reconstruction of cell life, which is necessary to health. As the patient grows stronger there are infinite varieties of this exercise which will commend them-
selves to him, remembering that the general law to be followed is never actually to raise any weight; never to use clubs or dumbbells or to impose upon the muscles anything in the nature of a strain. A surprising development in the physical strength will come about merely through this system of contraction and relaxation of the muscles of the body. It is a form of exercise which in a modified way can be practiced by the invalid during his return to health at all times of the day whenever he feels the need of slight stimulus to the circulation.

**CORRESPONDING WITH PATIENTS.**—Here follows the form of letter which you should send out to your patients. You need not cover all these points; merely insist that your patients shall think strongly of you during their treatment and shall co-operate with you in your desire to help them.

Absent Treatment, Case No—— Date——

Dear——:

Your application for Absent Treatment from me has been received and your case will be arranged for as follows: You will receive one Treatment each day of one hour, or two Treatments of half an hour each, whichever will be most acceptable to you. If you will kindly fix the time which best suits you when you can have one hour devoted to quiet contemplation without danger of being disturbed or interrupted I will arrange my time, having respect to the distance which separates us, so that at the hour you choose I shall send you strong currents of healthful thought. I desire you during the treatment to keep yourself as far as possible in a quiet, attentive attitude of mind, to sit in a comfortable chair or remain in bed with the eyes closed, breathing slowly and deeply, waiting merely for the effects which are to follow. Devote a few minutes before the beginning of each treatment to pleasant thoughts in a comfortable attitude of body and mind, thus preparing the way for the health-thought which is to come. This strong, but quiet, potential energy which is to be directed for your strengthening and healing is in part resident in yourself. I shall use the force that is within you, and direct it and develop it. You have powers within that you do not dream of. These powers shall be brought into action with your co-operation earnestly given, and the result will surprise you. There is no reason why you should not mention to others that you are taking absent treatment, but I beseech you to take for your confidantes only such persons as will be in
sympathy with the idea, otherwise you are liable to arouse discordance and criticism, which will interfere with the quiet soothing flow of the vital health thought. From this time on allow nothing but hopeful, pleasant thought and speech to engage your attention. If for any reason you feel depressed or miserable simply think of me and you will soon make yourself a positive
force instead of a negative. Begin to assert yourself, and to realize your own powers for good, instead of being as you have been merely an object of attack for disease and weakness. If disease has heretofore marked you out as a good victim make a bargain with yourself now that you will from this time on present a determined front to its attack, realizing that the power to resist its encroachment is within you, and that as you use this power you will find it grow and develop to your need. Do not be afraid to use the force which is your own. You must receive now the assurance of my personal regard, and believe in my earnest desire to help you. Write and tell me at what time it will be best for you to receive Treatment, and I will then communicate with you by post card, telling you just on what day your Treatment will begin. If there is anything in the case which you have not yet told me about, do so now that I may fully understand it. At the end of your month's Treatment I request you to report to me concerning the progress you have made.

WRITE PERSONAL LETTERS ALWAYS.—This is the best form of letter which a Healer can send out to his patients. It is certainly much better that the Healer should write these letters personally than that he should have them printed, but I understand quite well that in the case of a large practice it is very difficult to personally write the many letters required. Nevertheless it should be done.

HOW TO GIVE THESE TREATMENTS.—I want to point out to you who are perhaps sick in body and who have taken up this line of work in the hope that in helping others you may help yourselves, that the projection of thought is merely an actual holding in the mind of a thought or idea of health. The manner in which you are personally to give this Treatment is as follows: You are to sit in a comfortable chair in a room as much secured from noise and interruption as possible, close the eyes, and hold in your hand the letter of the patient whom you wish to benefit, or hold in your mind the name of the person and his request. Repeat quietly to yourself the name and address of the patient. Go over rapidly in your mind the symptoms of which he complains, and then repeat to yourself this formula or something like it; "This patient complains of sickness...I project to him my healing thought, and call upon the power resident in him to meet me in this work of restoring harmony to his system. I cast out disease, which is lack of ease, and bespeak for him health re-
newed and returning happiness. Let this request be granted. I call upon the Great Power of Good Thought, which is Harmony, which is Universal Health, to aid me to reach this patient, and help him. This is my earnest demand." Repeat again to yourself the name of this patient, and couple with it the talismanic words "Health," "Happiness" "Harmony," "Peace." The Thought so projected does, according to my belief, fully reach the patient and is absorbed by his mind. There it expands and works within him, much as yeast ferments in flour and water. It is not necessary that you should give up any length of time to the consideration of each patient unless you particularly wish so to do. The hour's Treatment is for the patient, not for the Healer, this time is allowed the patient in order that the Thought may have time to fix itself fully upon his attention, and, so to speak, work thoroughly into his system. Five minutes and sometimes less is sufficient time for your part of the work.

The Reaction for Good Upon the Healer.—You will find it of especial value to hold in your mind the last thing at night the Health Thought for the benefit of some patient, whose case particularly appeals to you as claiming your sympathy and compassion. If you are in pain, such as treatment given to a friend will lighten your pain; if you are sleepless, such a treatment will be the speediest means of tranquillizing your own thought, restoring the nerve equilibrium, and introducing harmony into your own system; if you awake during the night, you may bear in mind that you can instantly reproduce sleep for yourself by calling up the affliction of some friend to your memory and giving that friend a Health Treatment.

A Final Word of Advice.—In every case I strongly advise you to inform your patients of what you are about to do. I do not for a moment say that you could not benefit them without their knowledge; I think you could; I think it is being done every day; I think that the Health Thought which is in its essence entirely good can give benefit without the knowledge or expectation of the patient, but I nevertheless think it better at all times to secure the cordial co-operation of my patients in this Treatment. You have now received full instructions what to do, and full instructions how to do it. It only remains for you now to apply this teaching.

Address all orders to Sydney Flower, 27 E. 22nd St., New York City, to insure prompt attention. Remit by POSTAL ORDER or EXPRESS ORDER. If currency or stamps is sent, register the letter. If personal check is used, add 10c for exchange fee. ORDERS FILLED THE DAY THEY ARE RECEIVED.

Thought Force (In Business and Every Day Life.)

BY WILLIAM WALKER ATKINSON.

A WONDERFULLY vivid book, answering the questions: Can I make my life more happy and successful through mental control? How can I affect my circumstances by my mental effort? Just how shall I go about it to free myself from my depression, failure, timidity, weakness and care? How can I influence those more powerful ones from whom I desire favor? How can I to recognize the causes of my failure and thus avoid them?

Can I make my disposition into one which is active, positive, high strung and masterful? How can I draw vitality of mind and body from an invisible source? How can I influence people at a distance by my mind alone? How can I retard old age, preserve health and good looks? How can I cure myself of illness, bad habits, nervousness, etc. "Thought-Force" gives an answer to questions like these. The book has been universally commended for its clearness and simplicity. Bound in Purple Silk Cloth, Gold Lettering. Price, $1.00, postpaid.

Nuggets of the New Thought

BY WILLIAM WALKER ATKINSON.

A SERIES OF ESSAYS by this forceful writer, constituting the cream of his magazine articles upon New Thought topics. The Famous "I Can and I Will" essay forms the opening chapter. "The Secret of the I AM," of which 40,000 copies have been sold, is also contained in this volume. We heartily commend this book as interpretative of the higher teaching. A most valuable gift book. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.

Bible Year Book of the New Thought

BY MARY F. HAYDON.

THIS is a beautiful book for all earnest readers of the Bible, consisting of extracts from the Old and New Testaments bearing directly upon New Thought teaching. Each extract from the Bible is given under each day of the year, so that there are 365 Texts, and each day in the year has its special message of comfort, strength and power; Under each Text is the Affirmation for the Day, which constitutes the daily thought of hope, courage and love to be carried in the mind for the sustaining of health and strength of body and mind. This book demonstrates to its readers the bountiful effect of good thought rightly held. Not the least beautiful tribute to the power of this book is the experience of the author, told in the introduction, of the effect produced upon her mind by the mere copying of these extracts from the Bible. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.
Memory Culture. (The Science of Observing, Remembering and Recalling.)

By William Walker Atkinson.

This work, just published, treats of a rational, natural, easily acquired system of developing the faculties of observation and memory, depending upon no tricks, catchwords, "patent methods," etc., but proceeding to gradually develop the faculties instead of loading down the memory with "methods." It points out the way by which the memory in general as well as the special memories of place, faces, names, dates, prices, etc., may be developed. This book also explains and gives instruction in the great Hindu system of memorizing, whereby the Orientals memorize their sacred teachings, philosophies, etc. Numerous examples and anecdotes illustrating the principles enunciated are given, and the lessons are accompanied with exercises calculated to materially strengthen and develop the mental faculties of observation, remembrance and recollection.

Chapters.
1. The Subconscious Storehouse.
2. Attention and Concentration.
3. Acquiring Impressions.
4. Eye Perception and Memory.
5. Exercises in Eye Perception.
6. Ear Perception and Memory.
7. Exercises in Ear Perception.
10. General Principles Regarding Impressions.

XL The Cumulative System of Memory Culture.
XII. The Ten-Question Thought System.
XIII. Memory of Figures, Dates and Prices.
XIV. Memory of Place.
XV. Memory of Faces.
XVI. Memory of Names.
XVII. Artificial Systems.

Training of Children in the New Thought.

By Frances Partlow.

This remarkable book, from the pen of the noted psychic, is a spontaneous tribute to our teaching by one who grasped the central truths of New Thought intuitively, and without a human guide. To some of us knowledge is a simpler process, comes more swiftly than by study, and in this book the singular success of a system of child culture; which was evolved unaided by the writer, and yet which runs exactly parallel with our New Thought teachings is apparent. It is a delightful companionable book. You feel in reading it that the writer is simply telling her experience in the training of her children, and it is beautiful to note how the result is logically what it should be under such guidance. The book is sorely needed by many parents who ask for just such a guide. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.

The New Thought Annual, Year 1902

We have been astonished at the demand for this volume. So much so that in justice to the public we have gathered it into a single book and bound the same in cloth, instead of offering it in two half-yearly volumes with paper covers as heretofore. We have also included the December, 1901, number. That number in which Mr. William Walker Atkinson began his writings for the New Thought Magazine, and which has proved to be the turning point in the lives of many ambitious men and women, who are now on the high road to success. For this change in their fortunes they thank Mr. Atkinson, giving him full praise for pointing the way. This work, therefore, contains December, 1901, and the twelve numbers of 1902, including courses of instruction in Self-Healing, Mental Science and every phase of New Thought Philosophy, by such vital writers as William Walker Atkinson, Elizabeth Towne, Ella Wheeler Wilcox, Uriel Buchanan, Nancy McKay Gordon, Sydney Flower, and others. All original, copyright matter. Boiled down into one volume at a cost of many thousands of dollars. You get it all for $1.00, and we lose money on this book. But the price of our books must be uniform, so that we make no advance in price. There are 220 pages of reading matter in this book. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.
The Law of The New Thought

BY WILLIAM WALER ATKINSON

THIS is a plain answer to the oft repeated questions, "What is The New Thought?" "What does it mean?" "What principles does it stand for?" "Is it different from what is called Mental Science, or Christian Science?"
The New Thought is quite different. It is so broad and comprehensive in its bearing upon human life and human happiness that it can only be defined by its name, New Thought. Mr. Atkinson's new book not only explains what the law is upon which New Thought is based, but teaches how it may be used to the greatest good of men. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.

The Heart of The New Thought

BY ELLA WHEELER WILCOX

A NEW book of original essays by this gifted woman, dealing with The New Thought in practice. This book is just off the press and the demand is enormous. A first edition of 50,000 copies has been ordered. It deals with the practice of New Thought in our daily lives. A helpful and inspiring book, fully equal to the very best work this author has done. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.

Mesmerism in India

BY JAMES ESDAILE, M. D.

A CLASSIC from the pen of a surgeon in the British army, stationed in India fifty years ago. A most fascinating work for the student of practical psychology, containing the plainest description of the methods then in vogue of inducing the artificial coma for the performance of painless surgical operations. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.

Personal Magnetism and Divine Science.

A MASTERLY work dealing with two phases of development: the mental, showing forth in self control and force of character; and the spiritual, as taught through Zoism, the new mental science. This book makes plain that which is known as the Law of Mental Currents, and teaches much that is new to the student of metaphysics. It is clearly and simply written, and has been warmly endorsed by Ella Wheeler Wilcox. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.

Hypnotism, Mesmerism and Magnetic Healing.

THIS is a book for physicians, dentists, osteopaths and professional nurses particularly, inasmuch as it deals with the theory and practice both of suggestive therapeutics and magnetic healing. It is intensely practical and gives the clearest directions how to proceed to induce the state of passivity necessary for the curing of disease by these means. It is considered by all authorities to be the most complete work, written purely for instruction's sake, ever put out. It is well illustrated. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.
Clairvoyance, Mind-Reading and Concentration.

This is a compilation of new, copyright works dealing with the practice of clairvoyance or crystal-gazing, human magnetism, auto-suggestion, concentration, and mind reading in its two aspects of muscle reading and true telepathy. This book really tells how to perform mind-reading. In this it is unique; no other work to our knowledge being really useful in this regard. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.

Palmistry and Mediumship.

Although this is the last of this series of books, it is in some respects the most important of any. A life-time of study and practice will not exhaust its stores of knowledge. It deals with Psychometry, Phrenology, Palmistry, Astrology, Mediumship, and Somnopathy. This last is a new word, coined by the author, Sydney Flower, to define his discovery of a new method of educating the young, i.e., during natural sleep. Of this method a lady writing in the Washington Post, of recent date, said: “I never punish my little ones; I simply wait till they are asleep, and then I talk to them, not loud enough, you understand, to wake them, but in a low voice. I tell them over and over that they must be good. I suggest goodness to them, for I think the mind is just as susceptible to suggestion during the natural sleep as during the working state. I concentrate my mind on it, and I am confident that before long all mothers will adopt my method. It is the best way I know of to bring up children.” This method is fully described by its discoverer in this work, and the endorsements of prominent physicians are given in full. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.

Joy Philosophy—By Elizabeth Towne.

This is the name of a new book by Elizabeth Towne, who is too well known to New Thought people to need an introduction or a word of praise. Her work speaks for itself, and praise would be tiresome when applied to work so valuable and well done. This book was written to help people to awaken their faith in the fuller intelligence which works subconsciously in us all; and to help them to arouse within themselves the joy of living in consciousness with the Limitless Self within each living person. We recommend this book to those of our readers who wish to get under the surface of things, and are willing to follow the investigations of a daring and original mind. Elizabeth Towne fills her own place in the New Thought world—a place distinctively her own. “Joy Philosophy” is a good book—a book which will brush some of the cobwebs from your minds. Read it and see for yourself.

The Mind’s Attainment—By Uriel Buchanan.

Every reader of New Thought literature is familiar with the charming literary style of Mr. Buchanan. This book, which is now ready and selling fast, expresses more nearly the high ideals of the author than anything he has hitherto published. It gives the essence of a beautiful and uplifting philosophy that cannot fail to benefit and instruct humanity. Silk Cloth, Purple and Gold. Price, $1.00, postpaid.
